2022 Proceedings of the
National Association of Insurance Commissioners

2022 Spring National Meeting
April 4 – 8, 2022

Held at the
Loews Kansas City, Hilton President Crowne Plaza,
& Kansas City Convention Center
Kansas City, Missouri
The NAIC is the authoritative source for insurance industry information. Our expert solutions support the efforts of regulators, insurers and researchers by providing detailed and comprehensive insurance information. The NAIC offers a wide range of publications in the following categories:

**Accounting & Reporting**
Information about statutory accounting principles and the procedures necessary for filing financial annual statements and conducting risk-based capital calculations.

**Consumer Information**
Important answers to common questions about auto, home, health and life insurance — as well as buyer’s guides on annuities, long-term care insurance and Medicare supplement plans.

**Financial Regulation**
Useful handbooks, compliance guides and reports on financial analysis, company licensing, state audit requirements and receiverships.

**Legal**
Comprehensive collection of NAIC model laws, regulations and guidelines; state laws on insurance topics; and other regulatory guidance on antifraud and consumer privacy.

**Market Regulation**
Regulatory and industry guidance on market-related issues, including antifraud, product filing requirements, producer licensing and market analysis.

**NAIC Activities**
NAIC member directories, in-depth reporting of state regulatory activities and official historical records of NAIC national meetings and other activities.

**Special Studies**
Studies, reports, handbooks and regulatory research conducted by NAIC members on a variety of insurance related topics.

**Statistical Reports**
Valuable and in-demand insurance industry-wide statistical data for various lines of business, including auto, home, health and life insurance.

**Supplementary Products**
Guidance manuals, handbooks, surveys and research on a wide variety of issues.

**Capital Markets & Investment Analysis**
Information regarding portfolio values and procedures for complying with NAIC reporting requirements.

**White Papers**
Relevant studies, guidance and NAIC policy positions on a variety of insurance topics.

CERTIFICATE OF INCORPORATION OF
NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS
a Nonstock Corporation

I. Name

The name of the Corporation is: National Association of Insurance Commissioners (NAIC).

II. Duration

The period of duration of the NAIC is perpetual.

III. Registered Office and Agent

The NAIC's Registered Office in the State of Delaware is to be located at: 1209 Orange St., in the City of Wilmington, Zip Code 19801. The registered agent in charge thereof is The Corporation Trust Company.

IV. Authority to Issue Stock

The NAIC shall have no authority to issue capital stock.

V. Incorporators

The name and address of the incorporator are as follows:

Catherine J. Weatherford
National Association of Insurance Commissioners
120 W. 12th St., Suite 1100
Kansas City, MO 64106

VI. Purpose

The NAIC is organized exclusively for charitable and educational purposes within the meaning of Section 501(c)(3) of the Internal Revenue Code of 1986, as amended (or the corresponding provision of any future United States Internal Revenue law), including without limitation, to assist state insurance regulators, individually and collectively, in serving the public interest and achieving the following fundamental insurance regulatory goals in a responsive, efficient and cost-effective manner, consistent with the wishes of its members:

(a) Protect the public interest, promote competitive markets and facilitate the fair and equitable treatment of insurance consumers.

(b) Promote, in the public interest, the reliability, solvency and financial solidity of insurance institutions.

(c) Support and improve state regulation of insurance.

VII. Restrictions

A. No substantial part of the activities of the Corporation shall be the carrying of propaganda, or otherwise attempting to influence legislation except as otherwise permitted by Section 501(h) of the Code and in any corresponding laws of the State of Delaware, and the Corporation shall not participate in or intervene
in including the publishing or distribution of statements concerning any political campaign on behalf of or in opposition to any candidate for public office.

B. For any period for which the Corporation may be considered a private foundation, as defined in Section 509(a), the Corporation shall be subject to the following restrictions and prohibitions:

1. The Corporation shall not engage in any act of self-dealing as defined in section 4941(d) of the Code.

2. The Corporation shall make distributions for each taxable year at such time and in such manner so as not to become subject to the tax on undistributed income imposed by section 4942 of the Code.

3. The Corporation shall not retain any excess business holdings as defined in section 4943(c) of the Code.

4. The Corporation shall not make any investments in such manner as to subject it to tax under section 4944 of the Code.

5. The Corporation shall not make any taxable expenditures as defined in section 4945(d) of the Code.

VIII. Membership

The NAIC shall have one class of members consisting of the Commissioners, Directors, Superintendents, or other officials who by law are charged with the principal responsibility of supervising the business of insurance within each State, territory, or insular possession of the United States. Members only shall be eligible to hold office in and serve on the Executive Committee, Committees and Subcommittees of the NAIC. However, a member may be represented on a Committee or Subcommittee by the member’s duly authorized representative as defined in the Bylaws. Only one official from each State, territory or insular possession shall be a member and each member shall be limited to one vote. Any insurance supervisory official of a foreign government or any subdivision thereof, which has been diplomatically recognized by the United States government, may attend and participate in all meetings of this Congress but shall not be a member and shall not have the power to vote.

IX. Activities

The NAIC is a nonprofit charitable and educational organization and no part of the net earnings or property for the corporation will inure to the benefit of, or be distributable to its members, directors, officers or other private individuals, except that the NAIC shall be authorized and empowered to pay reasonable compensation for services rendered by employees and contractors, and to make payments and distributions in furtherance of the purposes set forth in Article VI hereof.

X. Powers

The NAIC shall have all of the powers conferred by the Delaware General Corporation Law for non-profit corporations, except that, any other provision of the Certificate to the contrary notwithstanding, the NAIC shall neither have nor exercise any power, nor carry on any other activities not permitted: (a) by a corporation exempt from federal income tax under Section 501(c)(3) of the Internal Revenue Code of 1986, as amended (or the corresponding provision of any future United States Internal Revenue law); or (b) by a corporation contributions to which are deductible under Section 170(c)(2) of the Internal Revenue Code of 1986, as amended, (or the corresponding provision of any future United States Internal Revenue law).
XI. Immunity

All officers and members of the Executive Committee shall be immune from personal liability for any civil damages arising from acts performed in their official capacity, and shall not be compensated for their services as an officer or member of the Executive Committee on a salary or a prorated equivalent basis. The immunity shall extend to such actions for which the member of the Executive Committee or officer would not otherwise be liable, but for the Executive Committee member’s or officer’s affiliation with the NAIC. This immunity shall not apply to intentional conduct, wanton or willful conduct or gross negligence. Nothing herein shall be construed to create or abolish an immunity in favor of the NAIC itself. Nothing herein shall be construed to abolish any immunities held by the state officials pursuant to their individual state’s law.

XII. Exculpation and Indemnification

A member of the Executive Committee shall not be liable to the NAIC or its members for monetary damages for breach of fiduciary duty as a member of the Executive Committee, provided that this provision shall not eliminate or limit the liability of a member of the Executive Committee for any breach of the duty of loyalty to the NAIC or its members, for acts or omissions not in good faith, or which involve intentional misconduct or a knowing violation of law, or for any transaction from which the member of the Executive Committee involved derived an improper personal benefit. Any amendment, modification or repeal of the foregoing sentence shall not adversely affect any right or protection of a member of the Executive Committee of the Corporation hereunder in respect of any act or omission occurring prior to the time of such amendment, modification, or repeal. If the Delaware General Corporation Law hereafter is amended to authorize the further elimination or limitation of the liability of the members of the Executive Committee, then the liability of a member of the Executive Committee, in addition to the limitation provided herein, shall be limited to the fullest extent permitted by the amended Delaware General Corporation Law.

The NAIC shall indemnify to the full extent authorized or permitted by the laws of the State of Delaware, as now in effect or as hereafter amended, any person made or threatened to be made a party to any threatened, pending or completed action, suit or proceeding (whether civil, criminal, administrative or investigative, including an action by or in the right of the NAIC) by reason of the fact that the person is or was a member of the Executive Committee, officer, member, committee member, employee or agent of the NAIC or serves any other enterprise as such at the request of the NAIC.

The foregoing right of indemnification shall not be deemed exclusive of any other rights to which such person may be entitled apart from this Article XII. The foregoing right of indemnification shall continue as to a person who has ceased to be a member of the Executive Committee, officer, member, committee member, employee or agent and shall inure to the benefit of the heirs, the executors and administrators of such a person.

XIII. Dissolution

In the event of the dissolution of the NAIC, the Executive Committee shall, after paying or making provision for the payment of all of the liabilities of the NAIC, dispose of all the assets of the NAIC equitably to any state government which is represented as a member of the NAIC at the time of dissolution, provided that the assets are distributed upon the condition that they be used primarily and effectively to implement the public purpose of the NAIC, or to one or more such organizations organized and operated exclusively for religious, charitable, education, scientific, or literary purposes or similar purposes as shall at the time qualify: (a) as an exempt organization under Section 501(c)(3) of the Internal Revenue Code of 1986, as amended (or the corresponding provision of any future United States Internal Revenue law); and (b) as an organization contributions to which are deductible under Section 170(c) of the Internal Revenue Code of 1986, as amended (or the corresponding provision of any future United States Internal Revenue law), as the Executive Committee shall determine.
XIV. **Bylaws**

The Bylaws of the NAIC may prescribe the powers and duties of the several officers, members of the Executive Committee and members and such rules as may be necessary for the work of the NAIC provided they are in conformity with the Certificate of Incorporation.

XV. **Amendments**

This Certificate of Incorporation may be altered or amended at any meeting of the full membership (Plenary Session) of the NAIC by an affirmative vote of two-thirds of the members qualified to vote, or their authorized representatives, provided that previous notice of the proposed amendment has been mailed to all members by direction of the Executive Committee at least thirty (30) days prior to the meeting.

**IN WITNESS WHEREOF,** this Certificate of Incorporation has been signed this 4th day of October 1999.

/signature/
Catherine J. Weatherford, Incorporator

ADOPTED 1999, Proc. Third Quarter
BYLAWS OF THE
NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

ARTICLE I

Name, Organization and Location

The name of this corporation is NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS (NAIC). The NAIC is organized under the General Corporation Law of the State of Delaware. The NAIC may have one (1) or more office locations within or without the State of Delaware as the Executive Committee may from time to time determine.

ARTICLE II

Membership

The Membership of the NAIC shall be comprised of those persons designated as members in the Certificate of Incorporation. Each member of the NAIC shall have the power to vote and otherwise participate in the affairs of the NAIC as set forth herein or as required by applicable law. This power may be exercised through a duly authorized representative who shall be a person officially affiliated with the member’s department and who is wholly or principally employed by said department.

The organization may charge members an annual assessment, the amount of which shall be determined by the Executive Committee. Members failing to pay all NAIC assessments on a timely basis shall be placed in an inactive status. Members in an inactive status shall not have any voting rights and shall be denied membership on NAIC committees and task forces, access to mailings and services of the NAIC Offices, as well as access to zone examination processes and other benefits of membership in the NAIC.

The NAIC’s receipt of full payment from the inactive member of all current and past due assessments shall serve to immediately remove them from inactive status.

The Membership of the NAIC shall be subject to a conflict of interest policy and disclosure form as adopted by the members.

The Executive Committee is empowered to reinstate, in part or in whole, an inactive member’s participation on the committees and task forces, access to mailings and services of the NAIC Offices and satellite offices, as well as access to zone examination processes, and other benefits of membership in the NAIC upon good cause shown as determined by the Executive Committee.
ARTICLE III

Officers

The officers of the NAIC shall be a President, a President-Elect, a Vice President, and a Secretary-Treasurer. Annual officer elections shall be held at the last regular National Meeting of each calendar year or at such other plenary session as agreed to by the members. The voting membership, by secret ballot, shall elect officers as provided in these Bylaws. Officers’ terms shall be for one year, beginning on January 1 following their election. The officers shall hold office until their death, resignation, removal or the election and qualification of their successors, whichever occurs first. Any Officer may resign at any time by giving notice thereof in writing to the President of the NAIC. Any such resignation will take effect upon delivery if no date is specified, or as of its date, unless some other date is specified therein, in which event it will be effective as of that date. The acceptance of that resignation will not be necessary to make it effective.

If an interim vacancy occurs in the office of President, the President-Elect shall cease to hold his or her office effective immediately and shall assume the office of President. If an interim vacancy occurs in any one or more of the other officer positions, an interim election shall be held to fill the vacancy. No member may hold any office for more than two consecutive years. Notwithstanding the foregoing, at no time shall more than two officer positions be filled by members of the same Zone during the same term. Any officer may be removed from office by the affirmative vote of two-thirds (2/3) of the members, but only after a resolution for removal is adopted by two-thirds (2/3) of the Executive Committee whenever, in their judgment, the best interests of the NAIC would be served thereby.

The President shall serve as Chairman of the Executive Committee and shall preside at all special and regular meetings of the members. The President shall serve as the leader of the organization and its principal spokesperson. The President shall work closely with the Executive Committee to establish and achieve the strategic, business and operational goals of the organization; ensure appropriate policies and procedures for the organization are implemented and followed; and protect the integrity as well as the resources of the organization. After a member completes his or her term or terms as President, he or she shall not be able to hold another officer position for a period of twelve (12) months from the date such member completes his or her term or terms as President, which shall be referred to as a "waiting period"; provided however, the Executive Committee may waive the twelve month waiting period if warranted by exigent circumstances.

The President-Elect shall serve as Vice-Chairman of the Executive Committee. In the absence of the President at a duly convened meeting of the Executive Committee or at a regular or special meeting of the members, the President-Elect shall preside over such meeting to the extent of the President’s absence. The President-Elect shall perform such other duties and tasks as may be assigned by the President. Where the President does not run for re-election, the President-Elect shall become President at the conclusion of the President’s term of office.

The Vice President, in the absence of the President and President-Elect at a duly convened meeting of the Executive Committee or at a regular or special meeting of the members, shall preside over such meeting to the extent of the President’s and the President-Elect’s absence; and shall perform such other duties as may be assigned by the President or President-Elect, or in the absence thereof, by the Executive Committee.

The Secretary-Treasurer shall assist the President and, as applicable, the President-Elect or the Vice President in the conduct of meetings of the Executive Committee and members. For member meetings, the Secretary-Treasurer shall call the roll of the membership and certify the presence of a quorum and shall receive, validate and maintain all proxies for elections held at member meetings. The Secretary-Treasurer shall also recommend to the Executive Committee such policies and procedures to maintain the history and continuity of the NAIC. The
Secretary-Treasurer shall also assist the President and President-Elect in all matters relating to the budget, accounting, expenditure and revenue practices of the NAIC; including, but not limited to reviewing the financial information of the organization and consulting with NAIC management, independent auditors, and other necessary parties regarding the financial operations and condition of the organization.

ARTICLE IV

Executive Committee

The business and affairs of the NAIC shall be managed by and under the direction of the Executive Committee. The Executive Committee shall be made up entirely of members of the NAIC. The Executive Committee shall consist of the following members: the officers of the NAIC; the most recent past president; the twelve (12) members of the zones as provided for in Article V of these Bylaws. The members of the Executive Committee shall be subject to a conflict of interest policy as adopted by the members. Any Executive Committee member may resign at any time by giving notice thereof in writing to the members of the NAIC. Resignation as an Executive Committee member also operates as resignation as a Zone officer. Any such resignation will take effect upon delivery if no date is specified, or as of its date, unless some other date is specified therein, in which event it will be effective as of that date. The acceptance of that resignation will not be necessary to make it effective.

1. The Executive Committee shall have the authority and responsibility to:

   (a) manage the affairs of the NAIC in a manner consistent with the Certificate of Incorporation and Bylaws.

   (b) make recommendations to achieve the goals of the NAIC based upon either its own initiative or the recommendations of the Standing Committees or Subcommittees reporting to it, for consideration and action by the members at any NAIC Plenary Session.

   (c) create and terminate one or more Task Forces reporting to it to the extent needed and appropriate.

   (d) establish and allocate, from time to time, functions and responsibilities to be performed by each Zone.

   (e) to the extent needed and appropriate, oversee NAIC Offices to assist the NAIC and the individual members in achieving the goals of the NAIC.

   (f) submit to the NAIC at each National Meeting, during which a Plenary Session is held, its report and recommendations concerning the reports of the Standing Committees. All Standing Committee reports shall be included as part of the Executive Committee report.

   (g) plan, implement and coordinate communications and activities with other state, federal and local government organizations in order to advance the goals of the NAIC and promote understanding of state insurance regulation.

2. Duties and Operations of the Executive Committee.

   (a) The Executive Committee shall hold at least two (2) regular meetings annually at a designated time and place. Special meetings may be held when called by the President, or by at least three (3) members of the Executive Committee in writing. In any case, the Executive Committee shall meet at least once per calendar month. At least five (5) days notice shall be given of all regular and special meetings. Meetings
may be held in person or by means of conference telephone or other communication equipment by
means of which all persons participating in the meeting can hear each other, and such participation in a
meeting shall constitute presence in person at such meeting in accordance with applicable laws. The
presiding member of the Executive Committee shall only cast his or her vote in order to break a tie
vote. In addition, the Executive Committee may act by written consent as provided by law.

(b) The Executive Committee may, with the concurrence of two-thirds of the members of the Executive
Committee, establish rules for its conduct that shall not conflict with the Certificate of Incorporation and
Bylaws. Such rules may be changed only by a concurrence of two-thirds of the members of the
Executive Committee after twenty-four (24) hours notice to all members of the Executive Committee.

(c) Any action required or permitted to be taken at any meeting of the Executive Committee or any
committee thereof may be taken without a meeting if all members of the Executive Committee or such
committee, as the case may be, consent thereto in writing in accordance with applicable law.

(d) The Executive Committee shall cause to be kept minutes of its meeting and have information of any
action of a general character taken by it published to members qualified to vote.

(e) NAIC OFFICES

(i) The Executive Committee shall oversee an Executive Office and a Central Office with management
and staff personnel and appropriate resources for performance of duties and assigned
responsibilities. Additional satellite offices may be established as needed. The Executive Committee
shall have the authority to select, employ and terminate a Chief Executive Officer who shall not be
a member of the NAIC and who shall have the primary responsibility for the internal management
and functioning of the NAIC Offices within the direction of the Executive Committee, as well as other
duties assigned by the Executive Committee through execution of an Employment Agreement or
other authorization. The Chief Executive Officer appointed by the Executive Committee pursuant to
this section shall not be considered an officer for purposes of Article III hereof and shall not be a
member of the Executive Committee. The Executive Committee, through the Internal Administration
(EX1) Subcommittee, shall provide oversight and direction to the Chief Executive Officer regarding
Office operations.

(ii) Consistent with the purposes of the NAIC, the role of the NAIC Offices is to: (1) provide services to
the NAIC through support to the NAIC Committees, Subcommittees, Task Forces or otherwise; (2)
provide services to individual State insurance departments; and (3) develop recommendations for
consideration as to NAIC policy and administrative decisions of the NAIC.

(iii) In performing its role, subject to the oversight and direction specified in (paragraph i) the NAIC
Offices may engage in a variety of functions including but not limited to the following: research;
analysis; information gathering and dissemination; library services; data collection; data base
building and maintenance; report generation and dissemination; government liaison; non-regulatory
liaison; securities valuation; administration; litigation; legislative and regulatory drafting; and
educational development.

(iv) The Chief Executive Officer shall prepare an annual budget, related to the priorities of the NAIC, for
the NAIC Offices to be submitted through the EX1 Subcommittee to the Executive Committee, which
shall make its recommendations to the members of the NAIC for action at the next Plenary Session
of the NAIC.
3. Internal Administration (EX1) Subcommittee

The Internal Administration (EX1) Subcommittee shall be a Subcommittee reporting to the Executive Committee. Appointments of the Chair and Vice Chair of the Executive Subcommittee and members other than those specifically designated herein shall be made by the President and President-Elect.

This Subcommittee shall be comprised of the President, President-Elect, Vice President, the Secretary-Treasurer, the most recent past President, and three (3) other members of the Executive Committee. The presiding member of the Subcommittee shall only cast his or her vote in order to break a tie vote.

The Internal Administration (EX1) Subcommittee shall:

(a) Exercise such powers and authority as may be delegated to it by the Executive Committee.

(b) Generally oversee the NAIC Offices including, without limitation: (i) periodically monitor operations of the NAIC Offices, (ii) review and revise the budget of the NAIC, hold an annual hearing to receive public comments on the budget of the NAIC, and submit the revised budget to the Executive Committee, (iii) approve emergency expenditures which vary from the adopted budget and promptly certify its action in writing to the Executive Committee, (iv) evaluate the Chief Executive Officer and make appropriate recommendations to the Executive Committee, (v) assist the Chief Executive Officer in resolving competing demands for NAIC resources, (vi) review compensation of all senior management and (vii) quarterly prepare a report containing the current budget and expenditures which the Secretary-Treasurer shall present to the Executive Committee.

4. Audit Committee

The Executive Committee shall appoint an Audit Committee made up of at least four (4) members of the NAIC, including at least one member from each zone, in addition to the NAIC Secretary-Treasurer. The NAIC Secretary-Treasurer shall chair the Audit Committee. The Audit Committee shall report to the Executive Committee without any NAIC employees being present. The Audit Committee shall be directly responsible for the appointment, compensation, and oversight of the independent certified public accountant employed to conduct the audit. The Audit Committee shall also have the power, to the extent permitted by law, to: (i) initiate or review the results of an audit or investigation into the business affairs of the NAIC; (ii) review the NAIC’s financial accounts and reports; (iii) conduct pre-audit and post-audit reviews with NAIC staff, members and independent auditors; and (iv) exercise such other powers and authority as delegated to it by the Executive Committee.

ARTICLE V

Zones

To accomplish the purposes of the NAIC in a timely and efficient manner, the United States, its territories and insular possessions shall be divided into four Zones. Each Zone shall consist of a group of at least eight States, located in the same geographical area, with each State being contiguous to at least one other State in the group so far as practicable, plus any territory or insular possession that may be deemed expedient, all as determined by majority of the Executive Committee. Members of each Zone shall annually elect a Chairman, a Vice Chairman and a Secretary from among themselves prior to or during the last regular National Meeting of each calendar year or at such time as agreed to by the Zone members. The Chairman, Vice Chairman and Secretary of each Zone shall be members of the Executive Committee with terms of office corresponding to that of the officers. Each Zone shall perform such functions as are designated by the Executive Committee of the
NAIC or by the members of the NAIC as a whole or by the members of the Zone. Each Zone may hold Zone Meetings for such purposes as may be deemed appropriate by members of the Zone.

**ARTICLE VI**

**Standing Committees and Task Forces**

1. **General**

The Standing Committees shall not be subcommittees of the Executive Committee and shall have no power or authority for the management of the business and affairs of the NAIC. Each Standing Committee shall be composed of not more than 15 members, including a Chair and one or more Vice Chairs, appointed by the President and President-Elect, and such appointments shall remain effective until the succeeding President and President-Elect appoint members for the following year. Standing Committees shall meet at least twice a year at National Meetings and may meet more often at the call of the Chair as required to complete its assignments from the Executive Committee in a timely manner.

The Executive Committee shall make all assignments of subject matter to the Standing Committees and shall require coordination between Committees and Task Forces of the subject matter if more than one Committee or Task Force is affected. The format of the Committee reports shall be prescribed by the Executive Committee. All appointments or elections of members of the NAIC to any office or Committee of the NAIC shall be deemed the appointment or election of a particular member and shall not automatically pass to a successor in office.

2. **Specific Duties**

The Standing Committees of the NAIC, their duties and responsibilities shall be as follows:

(a) **Life Insurance and Annuities (A) Committee:** This Standing Committee shall consider issues relating to life insurance and annuities.

(b) **Health Insurance and Managed Care (B) Committee:** This Standing Committee shall consider issues relating to health and accident insurance and managed care.

(c) **Property and Casualty Insurance (C) Committee:** This Standing Committee shall consider issues relating to personal and commercial lines of property and casualty insurance, worker’s compensation insurance, statistical information, surplus lines, and casualty actuarial matters.

(d) **Market Regulation and Consumer Affairs (D) Committee:** This Standing Committee shall consider issues involving market conduct in the insurance industry; competition in insurance markets; the qualifications and conduct of agents and brokers; market conduct examination practices; the control and management of insurance institutions; consumer services of State insurance departments; and consumer participation in NAIC activities.

(e) **Financial Condition (E) Committee:** This Standing Committee shall consider both administrative and substantive issues as they relate to accounting practices and procedures; blanks; valuation of securities; the Insurance Regulatory Information System (IRIS), as it relates to solvency and profitability; the call, monitoring and concluding report of Zone Examinations; and financial examinations and examiner training.

(f) **Financial Regulation Standards and Accreditation (F) Committee:** This Standing Committee shall consider
both administrative and substantive issues as they relate to administration and enforcement of the NAIC Accreditation Program, including without limitation, consideration of standards and revisions of standards for accreditation, interpretation of standards, evaluation and interpretation of states’ laws and regulations, and departments’ practices, procedures and organizations as they relate to compliance with standards, examination of members for compliance with standards, development and oversight of procedures for examination of members for compliance with standards, qualification and selection of individuals to perform the examination of members for compliance with standards, and decisions regarding whether to accredit members.

(g) International Insurance Relations (G) Committee. This Standing Committee shall have the responsibility for issues relating to international insurance.

(h) Innovation, Cybersecurity and Technology (H) Committee. This Standing Committee shall consider issues related to cybersecurity, innovation, data security and privacy, and emerging technology issues.

3. Task Forces

The Executive Committee, its Subcommittee and the Standing Committees may establish one or more Task Forces, subject to approval of the Executive Committee. The parent Committee or Subcommittee, subject to approval of the Executive Committee, may vote to discontinue a Task Force once its charge has been completed.

Vacancies in the positions of Chair or Vice Chair of any Task Force shall be filled by the parent Committee or Subcommittee from within or outside the present Task Force membership; provided, however, that the chief insurance regulatory official of the state of the former Chair or Vice Chair shall become a member of the Task Force. A vacancy in the position of member shall be filled by the chief insurance regulatory official of the vacating member’s state.

If an existing Task Force is dealing with insurance issues that require continuing study, the Executive Committee may adopt the recommendation of the parent Committee or Subcommittee that the Task Force be designated a Standing Task Force. A Standing Task Force shall continue in effect until terminated by the Executive Committee.

ARTICLE VII

Meetings of the Membership

1. Regular Meetings

The NAIC shall hold at least two (2) regular meetings of the members ("National Meetings") each calendar year. Notice, stating the place, day and hour and any special purposes of the National Meeting, shall be delivered by the Executive Committee not less than ten (10) calendar days nor more than sixty (60) calendar days before the date on which the National Meeting is to be held, either personally, by mail or by other lawful means, to each member entitled to be present and vote at such meeting.

2. Special Meetings

Special meetings of the members may be called by any five (5) members of the Executive Committee by giving all members notice of such meeting at least ten (10) but not more than sixty (60) days prior thereto, or by any twenty (20) members of the NAIC by giving all members notice of such meeting at least thirty (30) but not more than sixty (60) days prior thereto. Notice of the special meeting shall state the place, day and hour of the
special meeting and the purpose or purposes for which the special meeting is called, and shall be delivered by
the persons calling the meeting within the applicable time period set forth herein, either personally, by mail or
by other lawful means, to each member entitled to be present and vote at such meeting.

3. Waiver of Notice; Postponement

Member meetings may be held without notice if all members entitled to notice are present (except when
members entitled to notice attend the meeting for the express purpose of objecting, at the beginning of the
meeting, because the meeting is allegedly not lawfully called or convened), or if notice is waived by those not
present. Any previously scheduled meeting of the members may be postponed by the Executive Committee (or
members calling a special meeting, as the case may be) upon notice to members, in person or writing, given at
least two (2) days prior to the date previously scheduled for such meeting.

4. Quorum

Except as otherwise provided by law or by the Certificate of Incorporation, the presence, by person or proxy, of
a majority of the members shall constitute a quorum at a member meeting, a meeting of a Standing Committee,
Task Force or a working group. The chairman of the meeting may adjourn the meeting from time to time,
whether or not there is such a quorum. The members present at a duly called member meeting at which a
quorum is present may continue to transact business until adjournment, notwithstanding the withdrawal of
enough members to leaveless than a quorum.

5. Any meeting of the NAIC may be held in executive session as defined in the NAIC policy on open meetings.
Any member may attend and participate in any meeting of the NAIC or any meeting of a Standing
Committee or Task Force whether or not such member has the right to vote. All National Meetings shall
provide for a Plenary Session of the NAIC as a whole in order to consider and take action upon the matters
submitted to the NAIC.

ARTICLE VIII

Elections

1. The election of officers of the NAIC shall be scheduled for the plenary session of the last National Meeting of
the calendar year or at such other plenary session as agreed to by the members.

2. At the beginning of such Plenary Session, the Secretary-Treasurer shall ascertain and announce the presence
of a quorum.

3. Upon the determination of a quorum, the chair shall briefly review the provisions of the Certificate of
Incorporation and Bylaws in regard to voting.

4. The President shall ask for and announce all proxies. Proxies shall be held by the Secretary-Treasurer or a
designee throughout the election session. Proxies shall be valid, subject to their term, until superseded by
the member and shall be governed by ARTICLE IX of the Bylaws.

5. Every individual voting by proxy must meet the requirements of Article II of the Bylaws of the NAIC which
requires that such a person be “...officially affiliated with the member’s (the member delegating authority to
vote) department, and is wholly or principally employed by said department.”

6. Prior to opening the nominations for office, the Chair shall appoint three (3) members of the NAIC to act as
voting inspectors. The voting inspectors shall distribute, collect, count and/or verify ballots, and report their findings to the Secretary-Treasurer. If a voting inspector is nominated for an office and does not withdraw as a candidate, he or she shall not be a voting inspector for the election of the office to which he or she is nominated and the chair shall appoint another voting inspector in his or her place.

7. The Chair shall announce the opening of nominations for offices in the following order:

(a) President. Provided, however, where the President does not run for re-election, the President-Elect shall become President at the conclusion of the President’s term of office. In those cases where the President runs for re-election or where a vacancy exists because the President–Elect fails or is otherwise unable to assume the Presidency, this office will be subject to an election.

(b) President-Elect.

(c) Vice President.

(d) Secretary-Treasurer.

8. Only members or duly authorized proxyholders may make nominations.

9. One nominating speech, not to exceed three (3) minutes in duration, shall be allowed for each nominee.

10. After nominations are closed for each office, each nominee must indicate whether he or she accepts the nomination and, if he or she accepts, shall be permitted to address the membership for a period of up to seven (7) minutes. Such addresses shall be given in the order by which the nominations were made.

11. The votes of members, in person or by proxy, constituting a majority of the quorum present at the meeting shall be necessary for election to such office. If no candidate receives a majority, the two candidates with the most votes will participate in a run-off election. The candidate with the most votes in the run-off election shall win such election.

12. Voting need not be by written ballot, unless otherwise required by these Bylaws, the Certificate of Incorporation, or applicable law.

ARTICLE IX

Proxies; Waiver of Notice

Where the delegation of power to vote or participate in the membership of the NAIC is required by ARTICLE II of these Bylaws to be in writing, such delegation must be effected by proxy. All proxies must be dated, give specific authority to a named individual who meets the requirements of ARTICLE II for duly authorized representatives, and meet any other applicable legal requirement. Documents such as electronic transmission, telegrams, mailgrams, etc. are acceptable as proxies if they otherwise meet the requirements contained herein and applicable law. Proxies should be maintained by NAIC Central Office staff. Notwithstanding the foregoing, a member may not vote by proxy in a meeting of the Executive Committee, Financial Regulation Standards and Accreditation (F) Committee in a vote concerning a state-specific item, Government Relations Leadership Council, or International Insurance Relations Leadership Group, or any respective subcommittees.

Whenever any notice is required to be given to any member (for a meeting of members or the Executive Committee) under the provisions of the Certificate of Incorporation, these Bylaws or applicable law, a written
waiver, signed by the person entitled to notice, or a waiver by electronic transmission by person entitled to
notice, whether before or after the time stated therein, shall be deemed equivalent to the giving of such notice.
Neither the business to be transacted at, nor the purpose of, any annual or special meeting of the members or
any committee, subcommittee or task force need be specified in any waiver of notice of such meeting.

Unless otherwise restricted by the Certificate of Incorporation or these Bylaws, Members may participate in a
meeting by means of conference telephone or by any means by which all persons participating in the meeting
are able to communicate with one another, and such participation shall constitute presence in person at the
meeting.

Any notice required under these Bylaws may be provided by mail, facsimile, or electronic transmission.

**ARTICLE X**

**Procedures; Books and Records**

The Executive Committee shall adopt policies and procedures for the conduct of meetings. In the event such
policies and procedures conflict with the NAIC’s Certificate of Incorporation or Bylaws, the Certificate of
Incorporation and Bylaws shall govern.

The books and records of the NAIC may be kept outside the State of Delaware at such place or places as may
from time to time be designated by the Internal Administration Subcommittee (EX1) of the Executive
Committee.

**ARTICLE XI**

**Amendments**

These Bylaws may be altered or repealed and new Bylaws may be adopted at any regular or special meeting of
the members by an affirmative vote, in person or by proxy, of a majority of the members entitled to vote at such
meeting; provided, however, that any proposed alteration (except to correct typographical or grammatical
errors or article, section or paragraph cross-references caused by other alterations, repeals, or adoptions) or
repeal of, or the adoption of any Bylaw inconsistent with, Article II [Membership], Article VII, Paragraph 2
[Special Meetings of Members] and Paragraph 4 [Quorum], Article VIII [Elections], or this Article XI
[Amendments] of these Bylaws (the “Supermajority Bylaws”) by the members shall require the affirmative vote,
in person or by proxy, of at least two-thirds (2/3) of the members entitled to vote at such meeting and provided,
further, that in the case of any such member action at a special meeting of members, notice of the proposed
alteration, repeal or adoption of the new Bylaw or Bylaws must be contained in the notice of such special
meeting. Corrections for typographical or grammatical errors or to article, section or paragraph cross-
references caused by other alterations, repeals or adoption, shall only be made if approved by the affirmative
vote of at least two-thirds (2/3) of the Executive Committee.

Amended September 2009, see 2009 Proc., Third Quarter
Amended October 2011, see Proc., Summer 2011
NAIC Policy Statement on Open Meetings  
Revised: April 1, 2014

The NAIC is the U.S. standard-setting and regulatory support organization created and governed by the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories. NAIC members are the elected and appointed state government officials who, along with their departments and staff, regulate the conduct of insurance companies and agents in their respective state or territory. The NAIC is committed to conducting its business openly. This policy statement applies to meetings of NAIC committees, subcommittees, task forces and working groups. It does not apply to Roundtable discussions, zone meetings, commissioners’ conferences, and other like meetings of the members. Applicable meetings will be open unless the discussion or action contemplated will include:

1. Potential or pending litigation or administrative proceedings which may involve the NAIC, any NAIC member, or their staffs, in any capacity involving their official or prescribed duties, requests for briefs of amicus curiae, or legal advice.

2. Pending investigations which may involve either the NAIC or any member in any capacity.

3. Specific companies, entities or individuals, including, but not limited to, collaborative financial and market conduct examinations and analysis.

4. Internal or administrative matters of the NAIC or any NAIC member, including budget, personnel and contractual matters, and including consideration of internal administration of the NAIC, including, but not limited to, by the Internal Administration (EX1) Subcommittee or any subgroup appointed thereunder.

5. Voting on the election of officers of the NAIC.

6. Consultations with NAIC staff members related to NAIC technical guidance, including, but not limited to, Annual and Quarterly Statement Blanks and Instructions, the Accounting Practices and Procedures Manual, and similar materials.

7. Consideration of individual state insurance department’s compliance with NAIC financial regulation standards by the Financial Regulation Standards and Accreditation (F) Committee or any subgroup appointed thereunder.

8. Consideration of strategic planning issues relating to federal legislative and regulatory matters or international regulatory matters.

9. Any other subject required to be kept confidential under any Memorandum of Understanding or other agreement, state or federal law or under any judicial or administrative order.

Because not all situations requiring a regulator to regulator discussion can be anticipated at the time a meeting is scheduled, a meeting convened in open session can move into regulator to regulator session on motion by the chair or other member approved by a majority of the members present. Public notice will be provided of all applicable meetings. The reason for holding a meeting in regulator only session will be announced when the meeting notice is published, at the beginning of any regulator only session, and when an open meeting goes into regulator only session.

This revised policy statement shall take effect upon adoption by the membership.
[NOTE: Effective Jan. 1, 1996, conference call meetings are included in the application of the policy statement, by action of the NAIC on June 4, 1995. This policy statement was originally adopted by the NAIC membership during the 1994 Fall National Meeting in Minneapolis, Minnesota, Sept. 18–20, 1994.]

*Revisions Adopted by the NAIC Membership, April 1, 2014*

</tbody>
</table>
Sept. 23, 1886: John K. Tarbox (MA) was elected President for the 1887 Convention; Samuel H. Cross (RI) was elected Vice-President; and Robert B. Brinkerhoff (Ohio chief clerk) was elected Secretary. Commissioner Tarbox died May 28, 1887. Auditor Cross was out of office effective June 1, 1887. Mr. Brinkerhoff was out of office effective June 3, 1887. Oliver Pillsbury (NH) was chosen to preside over the 1887 Convention. It is unknown who acted as Vice-President. Jacob A. McEwen (Ohio chief clerk) was chosen to act as Secretary.

Aug. 21, 1890: Charles B. Allan (Nebraska deputy auditor) was elected Secretary for the 1891 Convention; however, he resigned before the Convention assembled. Sept. 30, 1891: John J. Brinkerhoff (Illinois actuary) was elected Secretary for the 1891 Convention.
3. Sept. 18, 1895: William M. Hahn (OH) was elected President for the 1896 Convention and James R. Waddill (MO) was elected Vice-President; however, Superintendent Hahn was out of office effective June 3, 1886. Sept. 22, 1896: Superintendent Waddill was elected President for the 1896 Convention and Stephen W. Carr (ME) was chosen to act as Vice-President.

4. Sept. 23, 1896: James R. Waddill (MO) was elected President for the 1897 Convention and Stephen W. Carr (ME) was elected Vice-President; however, Mr. Waddill was out of office effective March 1, 1897. Sept. 7, 1897: Commissioner Carr was elected President for the 1897 Convention. It is unknown who acted as Vice-President.

5. Sept. 23, 1896: Frederick L. ‘Fred’ Cutting (MA) was elected Secretary for the 1897 Convention; however, he was out of office at the date of the Convention. Sept. 7, 1897: John J. Brinkerhoff (Illinois actuary) was elected Secretary for the 1897 Convention.

6. Sept. 7, 1897: Frederick L. ‘Fred’ Cutting (MA) was elected Secretary for the 1898 Convention; however, he declined the offer. Sept. 13, 1898: Edward T. Orear (MO) was elected President for the 1898 Convention.

7. Sept. 15, 1898: Elmer H. Dearth (MN) was elected President for the 1899 Convention; however, he was out of office at the date of the Convention. Sept. 5, 1899: Edward T. Orear (MO) was elected President for the 1899 Convention.

8. Sept. 20, 1900: John A. O’Shaughnessy (MN) was elected President for the 1901 Convention; however, he was out of office at the date of the Convention. September 1901: William H. Hart (IN) was elected President for the 1901 Convention.

9. Sept. 29, 1910: Theodore H. Macdonald (CT) was elected Vice-President for the 1911 Convention; however, he was out of office at the date of the Convention. It is unknown who acted as Vice-President.

10. Aug. 25, 1911: Harry R. Cunningham (MT) was elected Secretary for the 1912 Convention; however, he resigned before the Convention assembled. March 1912: Fitz Hugh McMaster (SC) was elected Secretary for the 1912 Convention.

11. Aug. 1, 1913: Willard Done (UT) was elected First Vice-President for the 1914 Convention; however, he resigned before the Convention assembled. It is unknown who acted as First Vice-President.

12. Aug. 31, 1917: Emory H. English (IA) was elected President for the 1918 Convention; Robert J. Merrill (NH) was elected First Vice-President; and Michael J. Cleary (WI) was elected Second Vice-President. November 1917: Mr. Merrill resigned as First Vice-President. Dec. 6, 1917: Mr. Cleary was elected First Vice-President for the 1918 Convention and Walter K. Chorn (MO) was elected Second Vice-President. Jan. 1, 1918: Mr. English resigned as President and Mr. Cleary was elected President for the 1918 Convention by the Executive (EX) Committee. It is unknown who acted as First Vice-President.

13. Aug. 31, 1917: Fitz Hugh McMaster (SC) was elected Secretary for the 1918 Convention; however, he resigned before the Convention assembled. Dec. 6, 1917: Joseph L. Button (VA) was elected Secretary for the 1918 Convention.

14. Sept. 12, 1919: John B. Sanborn (MN) was elected Second Vice-President for the 1920 Convention; however, he resigned before the Convention assembled. June 1920: Alfred L. Harty (MO) was chosen to act as Second Vice-President for the 1920 Convention.

15. Sept. 3, 1920: Frank H. Ellsworth (MI) was elected President for the 1921 Convention; Alfred L. Harty (MO) was elected First Vice-President; and Thomas B. Donaldson (PA) was elected Second Vice-President. Commissioner Ellsworth resigned effective April 30, 1921, as NAIC President and Michigan Insurance Commissioner. June 27, 1921: Superintendent Harty was elected President for the 1921 Convention by the Executive (EX) Committee; Commissioner Donaldson was elected First Vice-President; and Platt Whitman (WI) was elected Second Vice-President.

16. Sept. 8, 1922: Platt Whitman (WI) was elected President for the 1923 Convention; Herbert O. Fishback (WA) was elected First Vice-President; and John C. Luning (FL) was elected Second Vice-President. July 1, 1923: Commissioner Whitman resigned as President; Commissioner Fishback was elected President for the 1923 Convention by the Executive (EX) Committee; and Mr. Luning was elected First Vice-President by the Executive (EX) Committee. It is unknown who acted as Second Vice-President.
17. Sept. 18, 1925: William R. C. Kendrick (IA) was elected President for the 1926 Convention. January 1926: Commissioner Kendrick resigned as NAIC President and Harry L. Conn (OH) was elected President for the 1926 Convention. Commissioner Kendrick remained as Iowa Insurance Commissioner until March 1, 1926.

18. Nov. 19, 1926: Harry L. Conn (OH) was elected President for the 1927 Convention and Albert S. Caldwell (TN) was elected First Vice-President. April 15, 1927: Superintendent Conn resigned as NAIC President and Ohio Insurance Superintendent. May 3, 1927: Commissioner Caldwell was elected President for the 1927 Convention and James A. Beha (NY) was elected First Vice-President.

19. Sept. 26, 1928: Charles R. Detrick (CA) was elected President for the 1929 Convention; James A. Beha (NY) was elected First Vice-President; and Howard P. Dunham (CT) was elected Second Vice-President. Jan. 1, 1929: Superintendent Beha resigned as NAIC First Vice-President and New York Insurance Superintendent. Commissioner Dunham was elected First Vice-President for the 1929 Convention. April 24, 1929: Commissioner Detrick resigned as NAIC President and California Insurance Commissioner. Commissioner Dunham was elected President for the 1929 Convention; Clarence C. Wysong (IN) was elected First Vice-President; and Jess G. Read (OK) was elected Second Vice-President.

20. Sept. 19, 1929: Joseph L. Button (VA) was elected Secretary for the 1930 Convention; however, he resigned effective Oct. 15, 1929, as NAIC Secretary and Virginia Commissioner of Insurance and Banking. Dec. 10, 1929: Albert S. Caldwell (TN) was elected Secretary for the 1930 Convention.

21. Sept. 9, 1930: Clarence C. Wysong (IN) was elected President for the 1931 Convention; Jess G. Read (OK) was elected First Vice-President; and Clare A. Lee (OR) was elected Second Vice-President. January 1931: Commissioner Wysong resigned effective Jan. 1, 1931, as NAIC President and Indiana Insurance Commissioner; Commissioner Lee was no longer serving as Second Vice-President; and Commissioner Read was elected President by the Executive (EX) Committee for the 1931 Convention. June 17, 1931: Charles D. Livingston (MI) was elected First Vice-President by the Executive (EX) Committee for the 1931 Convention and William A. Tarver (TX) was elected Second Vice-President by the Executive (EX) Committee.

22. Oct. 20, 1932: William A. Tarver (TX) was elected President for the 1933 Convention; Garfield W. Brown (MN) was elected First Vice-President; and Daniel C. ‘Dan’ Boney (NC) was elected Second Vice-President. Commissioner Tarver resigned effective Feb. 10, 1933, as NAIC President and Texas Life Insurance Commissioner. Commissioner Brown was elected President for the 1933 Convention; Commissioner Boney was chosen to act as First Vice-President and George S. Van Schaick (NY) was chosen to act as Second Vice-President.

23. July 1935: It is unclear why no one acted as First Vice-President or Second Vice-President for the 1935 Convention.

24. June 23, 1939: J. Balch Moor (DC) was elected Vice-President; however, he died July 22, 1939, before the 1940 Convention assembled. John C. Blackall (CT) was elected Vice-President by the Executive (EX) Committee to fill the unexpired term.

25. June 6, 1945: Edward L. Scheufler (MO) was elected Vice-President for the 1946 Convention; however, he resigned effective Oct. 15, 1945, as NAIC Vice-President and Missouri Insurance Superintendent. Dec. 3, 1945: Robert E. Dineen (NY) was elected Vice-President by the Executive (EX) Committee for the 1946 Convention.

26. June 11, 1946: Jess G. Read (OK) was elected Secretary for the 1947 Convention; however, he died July 20, 1946. Sept. 4, 1946: Nellis P. Parkinson (IL) was elected Secretary by the Executive (EX) Committee to fill the unexpired term.

27. June 1953: George B. Butler (TX) was elected Vice-President; however, he died Sept. 28, 1953. It is unknown who acted as Vice-President for the November 1953 Convention. Nov. 30, 1953: Donald Knowlton (NH) was elected Vice-President by the Executive (EX) Committee to fill the unexpired term.

28. May 1956: George A. Bowles (VA) was elected Secretary; however, he died June 1, 1956. Paul A. Hammel (NV) was elected Secretary to fill the unexpired term.

29. June 1958: Arch E. Northington (TN) was elected President; however, he resigned effective Dec. 23, 1958, as NAIC President and Tennessee Insurance Commissioner. January 1959: Paul A. Hammel (NV) was elected President and Sam N. Beery (CO) was elected Vice-President by the Executive (EX) Committee to fill the unexpired term.

30. June 1962: Joseph S. Gerber (IL) was elected Vice-President; however, he resigned effective Jan. 29, 1963, as NAIC Vice-President and Illinois Insurance Director. The office of Vice-President was vacant for the June 1963 Convention.
31. June 1968: Charles R. Howell (NJ) was elected President; however, he resigned effective Feb. 28, 1969, as NAIC President and New Jersey Commissioner of Banking and Insurance. Ned Price (TX) was elected by the Executive (EX) Committee to fill the unexpired term.

33. A constitutional amendment moved NAIC officer elections from June to December (commencing December 1974), President Johnnie L. Caldwell (GA) served a six-month term.

34. Kenneth E. ‘Ken’ DeShetler (OH) was elected President; however, he resigned effective Jan. 13, 1975, as NAIC President and Ohio Insurance Director. William H. Huff, III (IA) was elected by the Executive (EX) Committee to fill the unexpired term.

35. H. Peter ‘Pete’ Hudson (IN) was elected President; however, he resigned as NAIC President and Indiana Insurance Commissioner effective Nov. 15, 1979. It is unknown who presided over the December 1979 Convention.

36. John W. Lindsay resigned effective Sept. 3, 1981, as NAIC Vice-President and South Carolina Insurance Commissioner. Johnnie L. Caldwell (GA) was elected by the Executive (EX) Committee to fill the unexpired term.

37. David J. Lyons resigned effective June 17, 1994, as NAIC Vice President but remained as Iowa Insurance Commissioner until July 31, 1994. A special interim Plenary election was held June 12, 1994: Arkansas Insurance Commissioner Lee Douglass was elected Vice President to serve June 17, 1994, to Dec. 31, 1994.

38. September 2001: NAIC members unanimously agreed that the 2001 Fall National Meeting should be canceled in the wake of the tragic events that occurred Sept. 11, 2001. The meeting had been scheduled for Sept. 22–25, 2001, at the Marriott and Westin Copley Place hotels in Boston, Massachusetts.

39. Ernst N. ‘Ernie’ Csiszar resigned effective Aug. 18, 2004, as NAIC President and South Carolina Director of Insurance. Approximately two weeks later, James A. ‘Jim’ Poolman resigned as NAIC Vice President but remained as North Dakota Insurance Commissioner. A special interim Plenary election was held Sept. 13, 2004, during the Fall National Meeting in Anchorage, Alaska: Pennsylvania Insurance Commissioner M. Diane Koken was elected President; Oregon Insurance Administrator Joel S. Ario was elected Vice President; and Maine Insurance Superintendent Alessandro A. ‘Al’ Iuppa was elected Secretary-Treasurer to serve from Sept. 13, 2004, to Dec. 31, 2004.

40. December 2004: NAIC members voted at its 2004 Winter National Meeting to adopt amendments to the NAIC Bylaws, which included the creation of a President-Elect position as an NAIC officer.

41. September 2005: NAIC members agreed to cancel the 2005 Fall National Meeting due to the devastation caused by Hurricane Katrina on Aug. 29, 2005. The meeting had been scheduled for Sept. 10–13, 2005, at the Sheraton hotel in New Orleans, Louisiana.

42. Eric P. Serna resigned effective June 14, 2006, as NAIC Secretary-Treasurer and New Mexico Superintendent of Insurance. A special Plenary interim election was held during the 2006 Summer National Meeting: New Hampshire Insurance Commissioner Roger A. Sevigny was elected Secretary-Treasurer to serve from June 14, 2006, to Dec. 31, 2006.

43. Michael T. McRaith resigned effective May 31, 2011, as NAIC Secretary-Treasurer and Illinois Director of Insurance. A special Plenary interim election was held via conference call May 16, 2011: North Dakota Insurance Commissioner Adam Hamm was elected Secretary-Treasurer to serve from May 31, 2011, to Dec. 31, 2011.

45. Michael F. ‘Mike’ Consedine resigned effective Jan. 20, 2015, as NAIC President-Elect and Pennsylvania Insurance Commissioner. A special Plenary interim election was held via conference call Feb. 8, 2015: Missouri Insurance Director John M. Huff was elected President-Elect to serve from Feb. 8, 2015, to Dec. 31, 2015.
46. Sharon P. Clark resigned effective Jan. 11, 2016, as NAIC President-Elect and Kentucky Insurance Commissioner. A special Plenary interim election was held in Bonita Springs, Florida, on Feb. 7, 2016: Wisconsin Insurance Commissioner Theodore K. ‘Ted’ Nickel was elected President-Elect; Tennessee Insurance Commissioner Julie Mix McPeak was elected Vice President; and Maine Insurance Superintendent Eric A. Cioppa was elected Secretary-Treasurer to serve from Feb. 7, 2016, to Dec. 31, 2017.

47. David C. Mattax, NAIC Secretary-Treasurer and Texas Insurance Commissioner, died in office April 13, 2017. A special Plenary interim election was held via conference call on May 12, 2017: South Carolina Insurance Director Raymond G. Farmer was elected Secretary-Treasurer to serve from May 12, 2017, to Dec. 31, 2017.

48. Gordon I. Ito resigned effective Dec. 31, 2018, as NAIC Vice President and Hawaii Insurance Commissioner. A special Plenary interim election was held in La Quinta, California, on Feb. 4, 2019: Florida Insurance Commissioner David Altmaier was elected Vice President to serve from Feb. 4, 2019, to Dec. 31, 2019.

49. March 11, 2020: Due to concerns about the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2020 Spring National Meeting in a virtual format. However, on March 23, 2020, the NAIC officers decided to suspend holding any further sessions of the virtual Spring National Meeting to allow NAIC members and staff more time to focus on the health emergency. The meeting had been scheduled for March 21–24, 2020, at the Phoenix Convention Center and the Sheraton Grand and Hyatt Regency hotels in Phoenix, Arizona.

50. June 10, 2020: Given the ongoing health challenges associated with holding large in-person meetings in the midst of the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2020 Summer National Meeting in a virtual format. The meeting had been scheduled for Aug. 8–11, 2020, at the Minneapolis Convention Center and the Hilton and Hyatt Regency hotels in Minneapolis, Minnesota.

51. Sept. 21, 2020: Given the ongoing health challenges associated with holding large in-person meetings in the midst of the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2020 Fall National Meeting in a virtual format. The meeting had been scheduled for Nov. 14–17, 2020, at the JW Marriott hotel in Indianapolis, Indiana.

52. Feb. 24, 2021: Given the ongoing health challenges associated with holding large in-person meetings in the midst of the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2021 Spring National Meeting in a virtual format. The meeting had been scheduled for April 10–13, 2021, at the Gaylord Texan Hotel and Convention Center in Grapevine, Texas.

53. June 1, 2021: Given the ongoing health challenges associated with holding large in-person meetings in the midst of the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2021 Summer National Meeting in a hybrid format. In-person meetings took place for NAIC members and interested parties as capacity allowed. Meetings were live-streamed for participants who attended virtually.

54. Oct. 27, 2021: Given the ongoing health challenges associated with holding large in-person meetings in the midst of the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2021 Fall National Meeting in a hybrid format. In-person meetings took place for NAIC members and interested parties as capacity allowed. Meetings were live-streamed for participants who attended virtually.

CALL TO ORDER

Dean L. Cameron, NAIC President

The 234th session of the National Association of Insurance Commissioners (NAIC) will now come to order. Good morning, my name is Dean Cameron. I am Idaho’s Insurance Commissioner and President of the NAIC. I am pleased to be here with you today and would like to welcome you to the 2022 NAIC Spring National Meeting.

INTRODUCTION OF HEAD TABLE

Dean L. Cameron, NAIC President

I am honored to introduce the members of our head table.

Honorable James J. Donelon, NAIC Past President and Louisiana Insurance Commissioner
Honorable Raymond G. Farmer, NAIC Past President and South Carolina Insurance Director
Honorable David Altmaier, NAIC Most Recent Past President and Florida Insurance Commissioner
Honorable Chlora Lindley-Myers, NAIC President-Elect, Missouri Insurance Director, and Meeting Host
Honorable Andrew N. Mais, NAIC Vice President and Connecticut Insurance Commissioner
Honorable Jon Godfread, NAIC Secretary-Treasurer and North Dakota Insurance Commissioner
Andrew J. Beal, NAIC Chief Operating Officer (COO) and Chief Legal Officer (CLO)
Michael F. Consedine, NAIC Chief Executive Officer (CEO)

Please welcome the members of our NAIC Spring National Meeting head table.

New Member Video

I would also like to recognize our newest members in this short video, which will be followed by a message from Missouri Governor Mike Parson. [New Member Video Plays.]

[Missouri Governor Video Plays.]

Introduction of Missouri Director

Dean L. Cameron, NAIC President

It is my pleasure to welcome NAIC President-Elect, Director of the Missouri Department of Commerce and Insurance, and our Meeting Host Chlora Lindley-Myers to share some thoughts.

Missouri Director of Insurance Speech

Welcome to Missouri! I am overjoyed to welcome you as guests here in Kansas City, and I am hoping for beautiful weather this week so you will stay around awhile and enjoy some of the great things we have to offer here in the Show Me State.

If you love BBQ, you are in the right place. There are well-known BBQ establishments all over Kansas City, including Jack Stack, Gates, and Q39, as well as the always changing landscape of new BBQ royalty you just have to try. In fact, this city is the home of the American Royal World Series of Barbecue, and it is the largest barbecue contest
in the world! While I am on the subject of “royal,” this is the home of the Kansas City Royals baseball team; or if football is more your thing, the Kansas City Chiefs are based here as well. Kansas City has the Sporting Kansas City major league soccer club; the Kansas City T-Bones; the American Association of Professional Baseball; and the Missouri Mavericks, our central hockey league team. Whatever sporting event you may like, we have them here.

Beyond BBQ and sports, Kansas City is a beautiful place to explore culture. It has anything you can imagine from the Kemper Museum of Contemporary Art to the Arabia Steamboat Museum. There is the Negro Leagues Baseball Museum, as well as the American Jazz Museum. Bear in mind, Missouri is the only state with two Federal Reserve Banks, one in St. Louis and one here in Kansas City; you will be glad to know Kansas City also has a Money Museum!

While Kansas City is certainly a place you could stay for days and never get bored, Missouri has a lot more to offer. From the eastern side of the state, St. Louis’ iconic Gateway Arch welcomes you to its historic downtown and riverfront entertainments. If you are an outdoor lover, Missouri is full of beautiful attractions to explore, including the Lake of the Ozarks, miles of trails and streams, and many opportunities for cave exploration for those of you who are not afraid of the dark! Please note, there is ALWAYS Branson with its many music shows and Silver Dollar City.

It is always wonderful to have an NAIC national meeting in Kansas City, and I hope we get to do it more often in the future. After all, when you have the meeting at the NAIC home base, it is sure to save a little bit of money for the organization!

I know we have a very busy week ahead, so let us roll up our sleeves and get ready.

While I am hopeful for great weather in Missouri this week during your stay here, I also want to be mindful of the states who are battling severe weather. Our thoughts are with you, your citizens, and your staff who we know are working hard to provide the help they need.

Thank you for coming, enjoy Missouri, and welcome to the Spring National Meeting!

PRESIDENTIAL ADDRESS

Dean L. Cameron, NAIC President

I wish you all could see the vision that I get to see from here. It is so good to be back in a room with all of you. Standing room only, traditional NAIC format. Grateful to have you in attendance and participating, and as I look out in the audience, I see the most important person in my life, my beautiful bride. Grateful to have her support. Thank you for your attendance and your participation. I am confident that you will find our meeting to be full of information and opportunity.

I would like to start by acknowledging what has been taking place the last few weeks in Ukraine. Our thoughts and prayers go out to the people in Ukraine. We pray for their safety, for their peace. We pray for their success in defending their homeland. We pray for those who are providing shelter and clothing and services, like Poland and other countries. We pray for the wisdom of our leaders to help bring an end to this suffering. I would like to take a moment of pause, a moment of silence and prayer, if you will, as you consider the plight of the individuals, the families, the elderly, the children, and yes, even the elected officials of our country and their country, as well as those men and women in particular fighting for and defending their country. We pray for their safety. Join with me in a moment of silence.

Thank you. Our world has changed dramatically, changed by the pandemic, the war, inflation, supply chain issues, and the lack of civil discourse. Our world is not the same, and frankly, neither are the challenges facing the NAIC. Recently, I reached out to some of our leaders and experienced members of our association, and I asked them what they believed and what the largest challenges and the current challenges are facing the NAIC. It will not
surprise you, some of the challenges that are identified, but it might surprise you on some others, and it may cause some contemplation. Here is a partial list of their thoughts:

1. Partisanship and political divisiveness, where there is an all-or-nothing approach, losing the ability to acknowledge that there is more than one side to an issue.

2. The inability to reach solutions in a timely manner on the issues of today.

3. The ability to attract and retain critical employees.

4. Enhanced communications between all related parties.

5. Attention deficit disorder, forgetting that our primary focus is consumer protection and financial solvency.

6. The accurate collection of appropriate and meaningful data.

7. The NAIC’s role, our influence, and our collaboration with other standard-setters both within our continent and abroad.

8. A growing concern about the growing coverage gap, especially among those that are in the low-to-moderate income levels and those of different races, ethnicities, or genders.

9. The NAIC’s credibility as a thought leader in insurance.

In my career as a legislator, I have heard the phrase, "Don't let the perfect be the enemy of the good" uttered many times, usually uttered in acknowledgment that despite our best efforts, we are unable to obtain the perfect legislation or solution. Perfectionism in today's world has become a real challenge in life. Just ask any parent who is trying to raise a teenager. It is not, however, just teenagers who are struggling with this view as they compare themselves on social media, but it is also adults who demonstrate, demand, and seek perfection at every facet. On occasion, we unrealistically believe we can have our cake and eat it too, as my mother used to say. We continue to look only through our own perspective and unsuccessfully fight for the perfect solution. When I first ran for the legislature, the expectation was to find compromise, to find solutions, and to look for the win-win. The solutions, the compromises, and the win-wins are still here today. We just need to look for them, and I am not just speaking to those of us as members. I am speaking to everybody in the room. In my 25 years of legislative service, I never voted for a perfect bill. That includes the ones I wrote. Think about that for a minute. I will let you do the math. Twenty-five years, with an average of 1,200 to 1,500 pieces of legislation a year. That is somewhere around 35,000 pieces of legislation; never a perfect bill. If we waited for a perfect bill, we would still be waiting. My legislative service taught me that you do not get a perfect solution, but you have to decide: is the compromise good enough to advance the ball? Is it good enough to accomplish most of the goal? Is three-fourths of a loaf still success?

I remember in my second year in the U.S. Senate (Senate), we had a newly elected governor, and I had been newly selected as the chair of the newly created Senate Committee on Commerce, Science, and Transportation, which handles all insurance and banking issues. Gov. Phil Batt (R-ID), an onion farmer from western Idaho, proposed workers’ compensation coverage for farm workers. This had been proposed before, mostly by the minority party, and never received a hearing or had a governor’s endorsement. I listened to my colleagues bemoan the proposal after he delivered his State of the State message. Some even declared his proposal dead on arrival. Legislators saw this proposal as burdensome, costly, and difficult for farmers and their communities, who are often struggling to survive. After hearing the naysayers, and as the chairman of the newly formed Senate Committee on Commerce, Science, and Transportation, of which the legislation would likely come through, and with the belief
that the U.S. House of Representatives (House) would not take the issue up, the proposal was landing on my plate.

With the knowledge that it might be putting my re-election in jeopardy, I approached Senate leadership with a plan, and they reluctantly agreed. I am sure they thought, "He's new. He's naïve. Let him try. In that way, we can show the governor that we made an attempt.” What they did not understand or comprehend was that I had a conviction that this was the right thing to do, and I had just finished a book called “7 Habits of Highly Effective People” by Stephen Covey. In that book, it taught me how to obtain “win-win” solutions.

Following that guidance, I invited interested parties, anybody who had a stake in the issue, but especially those who were opposed, to an evening meeting. At that meeting, I asked each of them to give me the reasons why we should not pass workers’ compensation to farm workers. I filled a chalkboard full of objections, concerns, and obstacles. I pushed to make sure we had every objection on the board. I asked over and over again, "Is there any other concern?" I am sure the opposition simply thought this thing is going to die by the sheer weight of their objections. I questioned to make sure I fully understood each objection and truly understood their perspective.

After I was convinced that I had every objection on the table, I invited them back to a meeting the next night. At that meeting, we started with the least difficult issue, and we took each objection one by one and discussed each. We worked to overcome each individual objection, whether we eliminated it as no longer being an objection, and we all agreed that it was not, or we put it on hold to discuss later. If we found an objection that we could not eliminate, we discussed ways to minimize the impact or mitigate the effects of those concerns. Mitigation might look like a change in the law modifying the rule or asking the state insurance fund for some accommodation. We met every night, excluding weekends, for three straight weeks, and we eliminated or mitigated each and every objection. The legislation was drafted, introduced, and to the surprise of many, all those concerned were now either supporting or neutral. There was no negative testimony in the committee, and I carried the bill on the Senate floor to a unanimous vote. Then, because of the momentum, the listening, and the collaboration, a few weeks later, the House, who said it would not entertain the issue, passed the legislation nearly unanimously, and it was signed into law.

Now, you should know this was not a perfect bill. It is what we had consensus on at the time to pass. In fact, just this last year, we repealed some provisions of minimum premium requirements that were put in place as part of mitigation to those concerned in the farm community. Now, I do not share this with you to pat myself on the back or to say this is about me, because it is not. I was simply a small part. I share it with you because of the lessons learned that might help us as we deal with even similar contentious issues.

Often, I hear challenges that we face, or the industry face, or our team faces. Honestly, at times, it feels like we are talking past each other, if we are talking at all. Sometimes, the concerns are thought about privately, without sharing them or putting them on the table to discuss. No resolution can be achieved if the other side does not even know a concern exists.

Then there is the situation where concerns or objections are presented but not fully understood, perhaps without the other side completely listening to the objection. Sometimes, even after concerns and objections are expressed or listened to, there is no attempt to mitigate or find the solution. What makes things even a little more difficult? As we send our wonderful staff to meetings to represent us without any authority to reach compromise, our staff are carrying our desires and at times do not have the ability to reach consensus. My friends, we cannot be the thought leader or maintain our state-based authority position if we are unable to find solutions. Our ability to find consensus is and will be used against us. Our inability leaves the door wide open for others to step into that void. We cannot completely protect consumers if we let others step into our role. We know for certain that consumers are better protected with our state-based system. We cannot help others participate in the industry or purchase affordable coverage or advance opportunities in life-saving careers and life-changing careers unless we are willing to listen and address the concerns and issues and find solutions.

© 2022 National Association of Insurance Commissioners
At our Spring National Meeting, we discuss sharing our thoughts and our concerns respectfully, thoughtfully, and professionally. I renew that reminder. When we discuss an item, we should feel, especially in our regulator-to-regulator sessions, that this is a safe place to share thoughts, concerns, and ideas. When we hear concerns of others, let us seek to understand, especially when we disagree. When we disagree, let us do so civilly and professionally.

We acknowledge that we have differences, different communities, different challenges, and even different philosophies. Those differences, however, if handled appropriately, are also a strength to our state-based system. The NAIC has a reputation of being thoughtful, deliberate, and nonpartisan.

I remember just five years ago, Idaho was attempting some creative approaches to get more Idahoans insured. Because of the rural nature of Idaho, we had several farmers and ranchers and families working from the land who could not qualify for the subsidy offered to others. We took a lot of heat for that approach, and we learned a lot.

I will never forget the many commissioners who said publicly, “We may not try Idaho’s approach in our state, but we defend their right to try it in his state.” The states can be and should be the laboratories of creativity and innovation. Insurance is not partisan, nor should it be. Insurance is principle-based, and we all have things we can agree on. The application of those principles might look slightly different in each of our states, but that is okay.

My friends, the NAIC has a 150-year rich history of leadership. Looking back at our founders in 1871, you will see the NAIC coming together in a fragile country, where the image of brother fighting brother on the battlefield was still fresh and vivid. Only months after our first meeting, the Great Chicago Fire raged; and on the same day it broke out, fires in Michigan and Wisconsin also broke out. The wildfire in and around Peshtigo, WI, is still the deadliest in U.S. history. In that year, and across 15 decades since, NAIC members and the insurance sector have risen to meet the challenges of that day, taking them head-on.

We have many good examples recently where we are making progress and a few where it is easy for us to get caught in the snares of divisiveness. Let us talk about the creation of the Innovation, Cybersecurity, and Technology (H) Committee. It is a great example of seeing the need and finding a solution. The challenge, and we are up to the challenge, is to find consensus in a timely manner on the many issues that the Committee will address. Remember, our answers need not be engraved in stone. The goal is progress, and I look forward to Commissioner Birrane’s leadership on that committee.

Long-term care (LTC) is another area where good strides have been made; yet, there is work to be done. Under Commissioner Scott A. White (VA) and Commissioner Michael Conway’s (CO) leadership, the multi-state review process should be a success, but it will only be a success if we support it. No, I am not saying we must agree on every review or adopt every review as recommended, but let us give the review careful consideration. Other concerns still plague us in LTC. We must carefully and thoughtfully consider these difficult issues; and yes, we can question whether the insurance industry can survive. Rather, rehabilitation is possible; and if it is possible, what does that look like?

On climate and resiliency, under Commissioner Ricardo Lara (CA), Commissioner David Altmaier (FL), and Director Raymond G. Farmer’s (SC) leadership, we have made good strides. In the past, they have been able to effectively remove the politics out of this politically charged issue. Resiliency and disaster mitigation seem to be an area where we can all agree and collaborate.

Then, there is race and insurance, another area that requires skilled navigation. Without question, we all oppose any unfair discrimination; and without question, we are opposed to the barriers that keep different races, ethnicities, and genders from accessing affordable coverage. We must identify those barriers this year and begin
removing them. That certainly includes ramping up our efforts in financial literacy. We believe, regardless of race, ethnicity, or gender, all should have the opportunity to participate in life-changing careers in the insurance field and the regulatory community. We know firsthand the difficulty of attracting and retaining skilled positions in our insurance departments. We need to promote better career opportunities for those of different races, ethnicities, and genders.

That is why I am especially proud to announce that the NAIC has taken steps to create the New Avenues in Insurance Careers (NAIC) Foundation, which will provide scholarships for specific careers in our departments. The foundation will be made up of a board of past members, past presidents, and others who are no longer serving as insurance commissioners. I have requested as inaugural officers our Past President and South Carolina Director Farmer; our former Past President and Kentucky Commissioner George Nichols III; and our former NAIC Chief Executive Officer (CEO), Past President, and Iowa Commissioner Terry Vaughan to serve as our inaugural officers.

While this will take a few months to get established, our goal is to award scholarships this year. We invite all the industry and interested parties to join with us in this lofty but life-changing endeavor. Per Executive (EX) Committee action yesterday, the NAIC will start with a contribution of $200,000 into the foundation.

Throughout our history, our membership has often been the best when our situations are the most difficult. Our commitment to the task at hand has withstood two world wars, 9/11, and countless natural disasters; and we have done this across political and geographic boundaries, striving to set an example of what can be accomplished in a world too often defined in divisiveness and discord. It is the NAIC way. Collaboration, collegiality, and communication position us to honor our commitment to consumers, as well as drawing on each other’s strengths and lifting one another up.

My grandfather used to say to me, "If you're not part of the solution, you're part of the problem." Therefore, I respectfully ask of you, are you part of the solution? Are you sharing your concerns? Are you listening to the concerns of others? Are you trying to find solutions and ways to mitigate those concerns?

This year, we commit ourselves in defining our future, our next 150 years. With your help, I will endeavor to follow in the footsteps of great NAIC leaders like Superintendent Eric A. Cioppa (ME), Director Farmer, and countless others that I could name. As we turn to the remainder of our 151st year, the future starts today, with the rest of our Spring National Meeting. I am honored and humbled to be part of you, to get to rub shoulders with you, and to be your president as we kick off the next 150 years. I am grateful to each of you as you endeavor to find solutions on these difficult issues.

Thank you for joining us today, both in-person and virtually. Let us avoid having the perfect be the enemy of the good. Rather, let us have the good be the friend of our success. Thank you. The meeting is adjourned.

ADJOURNMENT

Dean L. Cameron, NAIC President

Thank you. I look forward to meeting with state insurance regulators, industry leaders, and interested parties as we discuss the work being done at the NAIC. With that, I officially conclude this opening session of the 234th meeting of the NAIC.
Synopsis of the NAIC Committee, Subcommittee, and Task Force Meetings
2022 Spring National Meeting
April 4–8, 2022

TO: Members of the NAIC and Interested Parties
FROM: The Staff of the NAIC

Committee Action
NAIC staff have reviewed the committee, subcommittee, and task force reports and highlighted the actions taken by the committee groups during the 2022 Spring National Meeting. The purpose of this report is to provide NAIC members, state insurance regulators, and interested parties with a summary of these meeting reports.

EXECUTIVE (EX) COMMITTEE AND PLENARY (Joint Session)
April 8, 2022
1. Adopted the Long-Term Care Insurance Multistate Rate Review Framework (LTCI MSA Framework).
2. Ratified the selection of Superintendent Elizabeth Kelleher Dwyer (RI) as the state insurance regulator representative on the Financial Stability Oversight Council (FSOC).
3. Received the April 6 report of the Executive (EX) Committee. See the Committee listing for details.
4. Adopted by consent the committee, subcommittee, and task force minutes of the 2021 Fall National Meeting.
5. Received the report of the Life Insurance and Annuities (A) Committee. See the Committee listing for details.
6. Received the report of the Health Insurance and Managed Care (B) Committee. See the Committee listing for details.
7. Received the report of the Property and Casualty Insurance (C) Committee. See the Committee listing for details.
8. Received the report of the Market Regulation and Consumer Affairs (D) Committee. See the Committee listing for details.
9. Received the report of the Financial Condition (E) Committee. See the Committee listing for details.
10. Received the report of the Financial Regulation Standards and Accreditation (F) Committee. See the Committee listing for details.
11. Received the report of the International Insurance Relations (G) Committee. See the Committee listing for details.
12. Received the report of the Innovation, Cybersecurity, and Technology (H) Committee. See the Committee listing for details.
13. Received a status report on the state implementation of NAIC-adopted model laws and regulations.

EXECUTIVE (EX) COMMITTEE
April 6, 2022
1. Adopted the report of the joint meeting of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee, which met April 4 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings. During this meeting, the Committee and Subcommittee took the following action:
   A. Adopted its 2021 Fall National Meeting minutes.
   B. Adopted its March 21, 2022; Feb. 3, 2022; Jan. 14, 2022; and Oct. 12, 2021, minutes. During these meetings, the Committee took the following action:
      i. Approved an amicus brief In Re: Penn Treaty Network America Insurance Company.
iii. Approved the creation of the New Avenues in Insurance Careers (NAIC) Foundation to help individuals obtain skills relevant to the regulation and business of insurance. Scholarships will be awarded to students to fund college education, internships, and apprenticeships.
iv. Approved the release of the SERFF Modernization – 2022 Transition Stages Fiscal for public exposure.
v. Appointed Director Evan G. Daniels (AZ) to the National Insurance Producer Registry (NIPR) Board of Directors.
vi. Selected Los Angeles, CA, as the location of the 2026 Spring National Meeting.
vii. Reappointed Commissioner Andrew N. Mais (CT) to the International Association of Insurance Supervisors (IAIS) Executive Committee.

C. Adopted the March 30 report of the Audit Committee, including the 2021 Financial Audit Report.
D. Adopted the March 8 report of the Internal Administration (EX1) Subcommittee, including its amended 2022 charges to disband the Information Systems (EX1) Task Force.
E. Appointed Director Dean L. Cameron (ID) to the IAIS Executive Committee.
F. Approved initial funding from the NAIC for the creation of the New Avenues in Insurance Careers (NAIC) Foundation to help individuals obtain skills relevant to the regulation and business of insurance. Scholarships will be awarded to students to fund college education, internships, and apprenticeships.

2. Adopted the report of the Executive (EX) Committee, which met March 21, Feb. 3, and Jan. 14 pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings.
3. Adopted the report of the Climate and Resiliency (EX) Task Force. See the Task Force listing for details.
5. Adopted the report of the Long-Term Care Insurance (EX) Task Force. See the Task Force listing for details.
6. Adopted the report of the Special (EX) Committee on Race and Insurance. See the Committee listing for details.
7. Adopted a proposal to establish a Catastrophe Modeling Center of Excellence (COE) within the NAIC Center for Insurance Policy and Research (CIPR).
8. Adopted a proposed redesigned NAIC Climate Risk Disclosure Survey as a voluntary tool for state use.
9. Approved disbanding the SERFF Advisory Board.
10. Received the 2021 Annual Report of the NAIC Designation Program Advisory Board.
11. Received a status report on the NAIC State Ahead strategic plan implementation.
12. Received a status report on model law development efforts for amendments to: 1) the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171); 2) the Mortgage Guaranty Insurance Model Act (#630); 3) the Nonadmitted Insurance Model Act (#870); and 4) the Pet Insurance Model Act.
13. Heard reports from NIPR and the Interstate Insurance Product Regulation Commission (Compact).

Climate and Resiliency (EX) Task Force

April 6, 2022

1. Adopted its March 21 minutes, which included the following action:
   A. Adopted its 2021 Fall National Meeting minutes.
   B. Heard updates from its Innovation, Pre-Disaster Mitigation, and Solvency workstreams.
   C. Adopted a proposal to establish a Catastrophe Modeling Center of Excellence (COE) within the NAIC Center for Insurance Policy and Research (CIPR).
   D. Adopted a proposed redesigned NAIC Climate Risk Disclosure Survey as a voluntary tool for state use.
2. Heard a presentation from Zurich North America and Resilient Cities Network on their partnership to improve community resilience.
3. Heard a presentation from Munich Re on solutions to improve flood resilience through community insurance and nature-based mitigation.
4. Heard a federal update.
Government Relations (EX) Leadership Council
The Government Relations (EX) Leadership Council did not meet at the Spring National Meeting.

Long-Term Care Insurance (EX) Task Force
April 6, 2022
1. Adopted its 2021 Fall National Meeting minutes.
2. Received a report on the implementation plans for the Long-Term Care Insurance Multistate Rate Review Framework (LTCI MSA Framework). If adopted by the Executive (EX) Committee and Plenary, the LTCI MSA Framework is expected to be implemented by September. Implementation will involve tasks including, but not limited to: 1) drafting instructions for insurers and multistate actuarial (MSA) team members; 2) making technical updates to NAIC systems and processes to facilitate the MSA process; 3) developing a more detailed feedback process; and 4) initiating the MSA Associate Program.
3. Heard feedback from the American Council of Life Insurers (ACLI) on encouraging participation in the MSA process.
4. Heard an update on industry trends that could have an impact on the solvency of long-term care insurance (LTCI) companies and reserves. The Task Force will continue to monitor the impacts of COVID-19 and cost-of-care inflation.
5. Received a report on the development of the MSA Associate Program. A kick-off meeting was held with 16 state insurance department regulator volunteers. Future meetings will be scheduled. State insurance actuaries or other staff who are interested in joining may contact NAIC support staff.
6. Disbanded the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup. If any new topics related to reduced benefit options (RBOs) arise in the future, the Task Force will discuss them. At the request of consumer representatives, at a future meeting, the Task Force will discuss the topic of guidance for policyholders to better understand RBOs.
7. Adjourned into regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues relating to regulatory matters) of the NAIC Policy Statement on Open Meetings.

Special (EX) Committee on Race and Insurance
April 6, 2022
1. Adopted its 2021 Fall National Meeting minutes.
2. Received a status report from the following workstreams:
   A. Workstream One: Research/analyze the level of diversity and inclusion within the insurance industry.
   B. Workstream Two: Research/analyze the level of diversity and inclusion within the NAIC and state insurance regulator community.
   C. Workstream Three: Examine and determine which practices or barriers exist in the insurance sector that potentially disadvantage people of color and/or historically underrepresented groups in the property/casualty (P/C) line of business.
   D. Workstream Four: Examine and determine which practices or barriers exist in the insurance sector that potentially disadvantage people of color and/or historically underrepresented groups in the life insurance and annuities line of business.
   E. Workstream Five: Examine and determine which practices or barriers exist in the insurance sector that potentially disadvantage people of color and/or historically underrepresented groups in the health insurance line of business.

INTERNAL ADMINISTRATION (EX1) SUBCOMMITTEE
See the Executive (EX) Committee listing for details.
LIFE INSURANCE AND ANNUITIES (A) COMMITTEE

April 7, 2022

1. Adopted its 2021 Fall National Meeting minutes.
2. Adopted the report of the Accelerated Underwriting (A) Working Group, including its March 24 minutes. During this meeting, the Working Group took the following action:
   A. Adopted its Feb. 23 minutes, which included the following action:
      i. Discussed comments received on the Jan. 25 draft of the educational report about accelerated underwriting (AU) in life insurance.
   B. Discussed comments received on the March 4 draft of the educational report about AU in life insurance.
   C. Adopted the March 4 draft of the educational report about AU in life insurance.
3. Adopted the educational report about AU in life insurance as referred by the Accelerated Underwriting (A) Working Group.
5. Received an update from the Annuity Suitability (A) Working Group and learned that although 21 states have adopted the best interest revisions to the Suitability in Annuity Transactions Model Regulation (#275) and seven states have state insurance regulations pending, adoption by the remaining states remains a priority. The Working Group plans to meet in May to continue work on a frequently asked questions (FAQ) document to promote greater uniformity in the adoption of Model #275.
6. Adopted the report of the Life Actuarial (A) Task Force. See the Task Force listing for details.
7. Discussed having the Life Insurance Online Guide (A) Working Group focus on updating life insurance information on the NAIC website.
8. Heard a brief update from Workstream Four of the Special (EX) Committee on Race and Insurance that it hopes to focus on marketing and distribution in underserved communities.

Life Actuarial (A) Task Force

March 31, 2022 (in lieu of the Spring National Meeting)

1. Adopted its March 17, March 10, March 3, Feb. 24, Feb. 17, Feb. 10, Feb. 3, and Jan. 27 minutes. During these meetings, the Task Force took the following action:
   A. Exposed recommended models for economic scenario generator (ESG) field testing for a 21-day public comment period ending April 7.
   B. Heard an update from the American Academy of Actuaries (Academy) on the ESG model office testing. The Academy has developed separate model offices for universal life with secondary guarantees (ULSG) and variable annuities (VA).
   C. Exposed amendment proposal 2022-04—which proposes updates to the VM-20 prescribed swap spreads guidance considering the London Interbank Offered Rate (LIBOR) transition to the Secured Overnight Financing Rate (SOFR)—for a 44-day public comment period ending April 22.
   D. Adopted amendment proposal 2022-01, which clarifies the treatment of the pre-reinsurance ceded reserve and the reserve credit for retrocessions. This amendment proposal was previously exposed for a 21-day public comment period ending March 3.
   E. Agreed to forward a proposal to the Blanks (E) Working Group for changes to the VM-20 Reserves Supplement. This proposal was previously exposed for a seven-day public comment period ending March 2.
   F. Exposed amendment proposal 2022-02—which revises language and adds an explicit cross-reference to the VM-21 section—for a 21-day public comment period ending March 23.
   G. Exposed amendment proposal 2022-03—which updates cross-references and improves consistency between VM-20, Requirements for Principle-Based Reserves for Life Products, and VM-21—for a 21-day public comment period ending March 23.
H. Heard comments on the indexed universal life (IUL) exposure, which was designed as a step to potentially address IUL illustration issues. The IUL Illustration (A) Subgroup will consider the comments and appropriately revise the exposure.

I. Disbanded the Guaranteed Issue (GI) Life Valuation (A) Subgroup.

J. Exposed a proposed asset adequacy testing (AAT) actuarial guideline for a 35-day public comment period ending March 18.

K. Adopted its 2021 Fall National Meeting minutes.

L. Adopted amendment proposal 2021-11, which adds a section for other guidance and requirements for assumptions to VM-21, Requirements for Principle-Based Reserves for Variable Annuities.

M. Re-exposed amendment proposal 2020-12—which revises hedge modeling when future hedging strategies are not clearly defined—for a 47-day public comment period ending March 12.

2. Exposed recommended models for field testing the ESG for a public comment period ending April 7.

3. Adopted the report of the Experience Reporting (A) Subgroup, which has not met since the 2021 Fall National Meeting.

4. Adopted the report of the Index-Linked Variable Annuity (A) Subgroup, including its March 9, March 2, and Feb. 16 minutes. During these meetings, the Subgroup took the following action:
   A. Heard a presentation from the American Council of Life Insurers (ACLI) on interim nonforfeiture values.
   B. Heard comments on the index-linked variable annuity (ILVA) actuarial guideline.

5. Adopted the report of the IUL Illustration (A) Subgroup, which has not met since the 2021 Fall National Meeting.

6. Adopted the report of the Longevity Risk (E/A) Subgroup, which has not met since the 2021 Fall National Meeting.

7. Adopted the report of the Valuation Manual (VM)-22 (A) Subgroup, which has not met since the 2021 Fall National Meeting.

8. Adopted the report of the Variable Annuities Capital and Reserve (E/A) Subgroup, which has not met since the 2021 Fall National Meeting.

10. Adopted amendment proposal 2022-03.

11. Re-exposed amendment proposal 2020-12—which revises hedge modeling when future hedging strategies are not clearly defined—for a public comment period ending April 29.

12. Heard comments on the exposure of the proposed AAT actuarial guideline and discussed Task Force members’ recommended revisions. The document was then re-exposed for a public comment period ending May 2.

13. Heard an update on the key GEMS Equity Model considerations for the ESG and an update on the Academy model office results.

14. Heard an update from the Society of Actuaries (SOA) on research and education.

15. Heard an update on the activities of the Academy Life Practice Council.

**HEALTH INSURANCE AND MANAGED CARE (B) COMMITTEE**

**April 7, 2022**

1. Adopted its 2021 Fall National Meeting minutes.

2. Adopted the report of the Consumer Information (B) Subgroup, including its March 22 minutes. During this meeting, the Subgroup took the following action:
   A. Discussed potential work for 2022.
   B. Heard a presentation on consumer understanding of surprise medical bills.

3. Adopted the report of the Health Innovations (B) Working Group, which met April 4 and took the following action:
   A. Adopted its 2021 Fall National Meeting minutes.
   B. Heard a presentation from the federal Centers for Medicare & Medicaid Services (CMS) on its approach to the expected end of the COVID-19 public health emergency.
C. Heard presentations from the Oregon Health Authority (OHA) and the Massachusetts Health Connector about state preparations for the expected end of the COVID-19 public health emergency.

D. Heard a presentation from consumer representatives on suggested priorities to protect underserved consumers after the expected end of the COVID-19 public health emergency.

E. Heard a presentation from the NAIC Center for Insurance Policy and Research (CIPR) on updates to its research on the health disparity impacts of telehealth services and alternative payment models.

4. Adopted the report of the Health Actuarial (B) Task Force. See the Task Force listing for details.

5. Adopted the report of the Regulatory Framework (B) Task Force. See the Task Force listing for details.

6. Adopted the report of the Senior Issues (B) Task Force. See the Task Force listing for details.

7. Heard an update from the federal Center for Consumer Information and Insurance Oversight (CCIIO) on the implementation of the federal No Surprises Act (NSA) since its Jan. 1 launch date. The update highlighted the CMS’ activities supporting the implementation and enforcement of the NSA, including a No Surprises Help Desk and other web resources, such as frequently asked questions (FAQ) documents.

8. Adjourned into regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) and paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings.

Health Actuarial (B) Task Force
March 29, 2022 (in lieu of the Spring National Meeting)

1. Adopted its March 2 and Feb. 1 minutes, which included the following action:
   A. Adopted its proposal to revise the instructions for the health Statement of Actuarial Opinion (SAO).
   B. Discussed its proposal to revise the instructions for the health SAO.

2. Adopted the report of the Long-Term Care Actuarial (B) Working Group, including its March 9 minutes. During this meeting, the Working Group took the following action:
   A. Discussed the American Academy of Actuaries (Academy) and Society of Actuaries (SOA) Research Institute’s final Long-Term Care Insurance Mortality and Lapse Study.

3. Heard an update from the federal Center for Consumer Information and Insurance Oversight (CCIIO) on Uniform Rate Review Template (URRT) submissions via the System for Electronic Rates & Forms Filing (SERFF).

4. Heard an update on SOA research.

5. Heard an update from the Academy Health Practice Council.

6. Discussed a referral letter from the Health Risk-Based Capital (E) Working Group regarding asset adequacy testing (AAT) for long-term care insurance (LTCI) companies.

Regulatory Framework (B) Task Force
March 23, 2022 (in lieu of the Spring National Meeting)

1. Adopted its 2021 Fall National Meeting minutes.

2. Adopted the report of the Accident and Sickness Insurance Minimum Standards (B) Subgroup, including its March 21, March 7, and Feb. 14 minutes. During these meetings, the Subgroup took the following action:
   A. Continued discussion of revisions to Sections 1–7 of the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171) based on the comments received by the July 2, 2021, public comment deadline.
   B. Discussed its approach for reviewing and considering revisions to Model #171, including whether to begin its review of potential revisions for supplemental products first and then consider potential revisions for short-term, limited-duration (STLD) plans.
   C. Discussed how to address indemnity products in Model #171 given the different plan designs for this product, differing state approaches to regulating this product, and complex federal law and regulations related to the product.
3. Adopted the report of the Employee Retirement Income Security Act (ERISA) (B) Working Group, including its March 22 minutes. During this meeting, the Working Group took the following action:
   B. Agreed to continue the discussion of potential updates and issues to consider, including within the ERISA Handbook.
   C. Adjourned into regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings.

4. Adopted the report of the Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group, which met March 1 and Jan. 25 in regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues relating to federal legislative and regulatory matters) of the NAIC Policy Statement on Open Meetings.

5. Adopted the report of the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup, which met March 16 and took the following action:
   A. Adopted its 2021 Fall National Meeting minutes.
   B. Heard an update from Montana on its pharmacy benefit manager (PBM) law and steps it is taking to implement its provisions.
   C. Heard an update from the ERISA (B) Working Group on its work to revise the ERISA Handbook to add a case analysis of the Rutledge decision. The update included a commitment to work with the Subgroup as it begins work on its 2022 charge to develop a white paper that will include a discussion of state laws regulating PBM business practices, including the implications of the Rutledge decision—i.e., its progeny and impact—if any, on the state regulation of PBM business practices.
   D. Heard an update on work to compile state PBM laws and regulations to support the Subgroup’s 2022 charge to develop a white paper.

6. Heard an update from the Center on Health Insurance Reforms (CHIR) on its work on various projects of interest to the Task Force. The CHIR has developed an interactive map on the roles of federal and state officials on various aspects of the federal No Surprises Act (NSA). The CHIR is working on an issue brief based on interviews with 12 state departments of insurance (DOIs) on their approaches to NSA implementation. The CHIR is also studying the impacts of the COVID-19 public health emergency (PHE), including assessing preparations by the states for the end of the PHE and the impact of COVID-19 on small business health insurance. The CHIR also examined issues related to alternative types of coverage in lieu of federal Affordable Care Act (ACA)-compliant coverage. One issue focused on the misleading marketing of non-ACA compliant coverage during the COVID-19 special enrollment period (SEP). The CHIR’s future work includes: 1) studying state-based marketplace (SBM) outreach and advertising efforts during the most recent open enrollment period; 2) comparing network adequacy rules across the marketplaces and Medicaid managed care organizations (MCOs); 3) state efforts to improve compliance with the MHPAEA; and 4) SBM efforts to improve health equity.

7. Heard a discussion of the issue of health savings accounts (HSAs), high-deductible health plans (HDHPs), and prescription drug copayment accumulators. The discussion provided background information on prescription copayment assistance and its role in lowering patient out-of-pocket costs for prescription drugs. The speakers also discussed state laws with copayment accumulator policies, including states that ban copayment accumulators. The speakers discussed potential conflicts of state copayment accumulator ban laws with federal requirements related to HSA-qualified HDHP plans and continued eligibility to contribute to an HSA in light of such a law. The speakers discussed potential solutions and options to address this issue, including a suggestion that the Task Force consider developing a model bulletin that state DOIs can use to educate consumers on the issue. The speakers also suggested model language for those states that may be contemplating enacting legislation banning copayment accumulator use as a carve out for HSA-qualified HDHP plans to address any potential conflict with federal HSA-qualified HDHP plan requirements.
Senior Issues (B) Task Force

March 17, 2022 *(in lieu of the Spring National Meeting)*

1. Adopted its 2021 Fall National Meeting minutes.
2. Adopted its Feb. 25 and Feb. 8 minutes, which included the following action:
   A. Adopted a letter in support of the federal Centers for Medicare & Medicaid Services’ (CMS) proposed rule on stricter marketing guidelines for Medicare Advantage plans and Medicare Part D plans.
   B. Discussed the CMS’ proposed rule on stricter marketing guidelines for Medicare Advantage plans and Medicare Part D plans.
3. Adopted a letter to the CMS regarding the treatment of nonparticipating durable medical equipment (DME) suppliers under Medicare’s “Limitation on Beneficiary Liability.”
4. Discussed Medicare Part D beneficiaries being “crosswalked” from one Medicare prescription drug plan (PDP) to another.
5. Discussed the sale of access to home care masquerading as insurance.
6. Heard a federal legislative update report.

PROPERTY AND CASUALTY INSURANCE (C) COMMITTEE

April 7, 2022

1. Adopted its 2021 Fall National Meeting minutes.
2. Adopted the report of the Casualty Actuarial and Statistical (C) Task Force. See the Task Force listing for details.
3. Adopted the report of the Surplus Lines (C) Task Force. See the Task Force listing for details.
4. Adopted the report of the Title Insurance (C) Task Force. See the Task Force listing for details.
5. Adopted the report of the Workers’ Compensation (C) Task Force. See the Task Force listing for details.
6. Adopted the report of the Cannabis Insurance (C) Working Group, which met March 24 and took the following action:
   A. Adopted its 2021 Fall National Meeting minutes.
   B. Heard a presentation on the state of the union in the cannabis insurance industry from Jencap Specialty Insurance Services and Miller Nash. The presenters discussed the fast growth in the cannabis market, the need for greater depth of coverage options on certain insurance products, and legal implications on coverage concerns.
   C. Heard a report on federal cannabis-related legislative activities from NAIC staff.
   D. Requested that feedback on its 2022 work plan be sent to NAIC staff. The work plan includes: 1) monitoring cannabis-related federal legislation; 2) finishing updates on and moving for adoption of the *Understanding the Market for Cannabis Insurance* white paper by the Fall National Meeting; and 3) hearing presentations and panel discussions on emerging issues.
7. Adopted the report of the Catastrophe Insurance (C) Working Group, which met April 4 in joint session with the NAIC/Federal Emergency Management Agency (FEMA) (C) Advisory Group and took the following action:
   A. Adopted the Catastrophe Insurance (C) Working Group’s March 4 minutes, which included the following action:
      i. Adopted its 2021 Fall National Meeting minutes.
      ii. Heard a presentation on a survey sent to the states about the *Catastrophe Computer Modeling Handbook* (Handbook). Twenty-two states responded to the survey, and NAIC staff indicated that the purpose of the survey was to help the Working Group determine what information to include in the Handbook to make it a useful tool for state insurance regulators.
      iii. Discussed next steps on the Handbook. The Working Group created a drafting group to begin discussions and drafting updates to the Handbook. The drafting group will add updates to the Handbook addressing the perils of flood, and possibly convective storms and wildfire. The Handbook will address similarities and differences regarding state approaches to the use of catastrophe models, and the drafting group will consider adding a chart to the appendix that compiles a list of bulletins and regulations used around the country.
B. Adopted the NAIC/FEMA (C) Advisory Group’s March 25 minutes, which included the following action:
   i. Heard a presentation on the status of the National Flood Insurance Program (NFIP) Risk Rating 2.0. FEMA began rating existing policyholders under the new methodology April 1.
   ii. Heard a presentation from FEMA on the NFIP’s Community Rating System (CRS). The CRS provides NFIP premium discounts to communities that achieve specific metrics.
C. Heard an update on federal legislation. The NFIP is operating under an extension through Sept. 30, and the NAIC continues to support a long-term reauthorization. Some of the key bills regarding reauthorization of the NFIP include: 1) the NFIP Reauthorization and Reform Act of 2021; and 2) the Continuous Coverage for Flood Insurance Act. Risk Rating 2.0 began phase two of its implementation on April 1. A bipartisan group of coastal senators have tried unsuccessfully to urge FEMA to postpone Risk Rating 2.0 due to concern regarding premium hikes. The following bills have been introduced in the U.S. Senate: the Flood Insurance Pricing Transparency Act and the Community Disaster Resilience Zones Act of 2022.
D. Discussed Handbook updates. A drafting group of several state insurance regulators has been formed. The state insurance regulators who are members of the drafting group met March 29 to begin discussions regarding the drafting of the Handbook’s updates. Future drafting group meetings will include interested parties that have asked to be a part of the drafting group meetings.
E. Received an update from the Iowa Insurance Department on recent tornadoes. Iowa has had several recent catastrophic events in the past year. These events included a derecho, severe convective storms, and, most recently, tornadoes.
F. Received an update from the Tennessee Department of Commerce and Insurance on recent catastrophic events. Tennessee has experienced several catastrophic events in the past few months. These catastrophic events have included flooding, tornadoes, and wildfires.
G. Received an overview of FEMA regional meetings. The most recent FEMA regional meeting was held virtually in 2021 with FEMA Region 8, FEMA Region 9, and FEMA Region 10. FEMA Region 4 formed a Working Group following its regional meeting and is meeting every other month with FEMA colleagues to discuss issues related to disasters. FEMA Region 6 will hold a workshop on May 3 and May 4 in Oklahoma City; the event will be held virtually for those who are unable to attend in person.
H. Received an update on the NAIC Catastrophe Resource Center. NAIC staff are going to send a survey to the states soliciting feedback from state insurance regulators to help better meet their needs.
8. Adopted the report of the NAIC/FEMA (C) Advisory Group, which met April 4 in joint session with the Catastrophe Insurance (C) Working Group. See the Catastrophe Insurance (C) Working Group listing for details.
9. Adopted the report of the Terrorism Insurance Implementation (C) Working Group, which has not met since the 2021 Fall National Meeting.
10. Adopted the report of the Transparency and Readability of Consumer Information (C) Working Group, which has not met since the 2021 Fall National Meeting.
11. Adopted revised charges reappointing the Pet Insurance (C) Working Group with the charge to: “Complete the development of a model law to establish appropriate regulatory standards for the pet insurance industry.”
13. Heard a presentation from NAIC staff on private passenger auto (PPA) insurance results over the past 10 years.
14. Heard a presentation from CCC Intelligent Solutions and the University of South Carolina on pressures in the property/casualty (P/C) insurance industry.
15. Heard a federal update.
16. Heard a presentation from the University of Connecticut School of Law on a recent ordinance in San Jose, CA, requiring liability insurance for gun owners.
Casualty Actuarial and Statistical (C) Task Force
March 8, 2022 (in lieu of the Spring National Meeting)

1. Adopted its 2021 Fall National Meeting minutes.
2. Adopted its Feb. 18, Feb. 8, Jan. 24, and Jan. 10 minutes. During these meetings, the Task Force took the following action:
   A. Adopted the Dwelling Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance Report (Homeowners Report).
   B. Received a report on its 2022 charges.
   C. Adopted the report of the Actuarial Opinion (C) Working Group.
   D. Adopted the report of the Statistical Data (C) Working Group.
   E. Heard comments on referral Project #2019-49: Retroactive Reinsurance Exception.
   F. Discussed the regulatory review of random forest rate models.
3. Reported that it met Feb. 15 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss rate filing issues.
4. Reported that it held a Predictive Analytics Book Club meeting on Feb. 22. Willis Towers Watson (WTW) presented on the evaluation of models built in Emblem.
5. Adopted the report of the Actuarial Opinion (C) Working Group, including its March 1, Feb. 1, and Jan. 18 minutes. During these meetings, the Working Group took the following action:
   A. Adopted proposed property/casualty (P/C) Statement of Actuarial Opinion (SAO) instructions and referred them to the Blanks (E) Working Group for consideration.
6. Adopted the report of the Statistical Data (C) Working Group, including its Jan. 27 minutes. During this meeting, the Working Group took the following action:
   A. Adopted a plan to speed up the timeline of the Homeowners Report by collecting data from the most recent data year and collecting two years of data in 2022 to catch up to the new timeline.
   B. Decided to begin a review of the Statistical Handbook of Data Available to Insurance Regulators.
8. Adopted regulatory guidelines for the review of random forest rate models and an associated terminology document.
9. Heard a report about coordination with the Innovation, Cybersecurity, and Technology (H) Committee and Workstream Three of the Special (EX) Committee on Race and Insurance regarding potential bias issues in P/C rating.
10. Heard a presentation from the American Academy of Actuaries (Academy) about its P/C projects.
11. Discussed workers’ compensation loss cost multiplier forms. A small group will draft proposed revisions for future Task Force consideration.

Surplus Lines (C) Task Force
The Surplus Lines (C) Task Force did not meet at the Spring National Meeting

Title Insurance (C) Task Force
April 5, 2022
1. Adopted its 2021 Fall National Meeting minutes.
2. Received a report on how cyber-wire fraud cases referred by title agents are handled at the Virginia Bureau of Insurance. Discussion included an overview of requirements under Virginia Code § 38.2-625 Notice to Commissioner.
3. Heard a presentation on closing protection letter (CPL) language. The presentation included examples of state-specific information and how language differs in states with various exclusions.

4. Received a report on how CPLs are used in Louisiana and Ohio from a statutory and regulatory framework. Discussion included an overview of their purpose, relevant statues, and observations as to other jurisprudence.

5. Held a question-and-answer session on the cyber-wire fraud report and presentations.

6. Discussed its 2022 work plan. In the interest of time, comments were asked to be submitted to NAIC staff. The work plan includes:
   A. Holding a regulator-only meeting with the Consumer Financial Protection Bureau (CFPB).
   B. Discussing how use and language of CPLs vary by state.
   C. Hearing a presentation on the post-pandemic future of the title insurance industry.
   D. Having a roundtable discussion on rate regulation.
   E. Hearing a presentation from the industry on complications that arise from the required use of plans by some states that include rules or forms tailored to other lines of insurance.
   F. Reviewing Section 15C of the Title Insurers Model Act to determine if there is a need to make a recommendation to remove the requirement for on-site review of underwriting and claims practices.

**Workers’ Compensation (C) Task Force**

March 21, 2022 (in lieu of the Spring National Meeting)

1. Received a federal update regarding the monitoring of state workers’ compensation programs. There was language included in the original federal Build Back Better Act that provided for funding to the U.S. Department of Labor (DOL) Office of Workers’ Compensation Programs (OWCP) for “monitoring of state workers’ compensation programs.” The language in the bill that passed in the U.S. House of Representatives in November 2021 was an updated bill that did not include a specific reference to the oversight of state workers’ compensation programs. The outcome of the bill in the U.S. Senate remains uncertain.

2. Heard updates on cannabis, independent contractor, and single-payer health care state and federal legislation, as related to workers’ compensation. There has been legislation in each of these areas at both the state and federal levels, and the National Council on Compensation Insurance (NCCI) tracked more than 1,000 state and federal bills.

**MARKET REGULATION AND CONSUMER AFFAIRS (D) COMMITTEE**

April 7, 2022

1. Adopted its 2021 Fall National Meeting minutes.

2. Adopted its revised 2022 charges. The Privacy Protections (D) Working Group will be reporting to the Innovation, Cybersecurity, and Technology (H) Committee; the Speed to Market (H) Working Group will be reporting to the Market Regulation and Consumer Affairs (D) Committee; the Advisory Organization Examination Oversight (D) Working Group’s name was shortened to the Advisory Organization (D) Working Group; and the Antifraud Education Enhancement (D) Working Group was disbanded.

3. Adopted the report of the Antifraud (D) Task Force. See the Task Force listing for details.

5. Adopted the report of the Producer Licensing (D) Task Force. See the Task Force listing for details.

6. Adopted the report of the Advisory Organization (D) Working Group, which met March 22 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings.

7. Adopted the report of the Market Analysis Procedures (D) Working Group, including its March 3 minutes. During this meeting, the Working Group took the following action:
   A. Adopted its 2021 Fall National Meeting minutes.
   B. Reviewed its 2022 charges.
   C. Discussed the proposed standard ratios for the travel and short-term, limited-duration (STLD) Market Conduct Annual Statement (MCAS) blanks. Comments on the proposed ratios were requested by April 15.
D. Adopted a motion to add the disability insurance and lender-placed insurance MCAS data into the NAIC Market Analysis Review System (MARS).

8. Adopted the report of the Market Conduct Annual Statement Blanks (D) Working Group, including its March 17 minutes. During this meeting, the Working Group took the following action:
   A. Adopted its Nov. 22, 2021, minutes.
   B. Received an update on the life MCAS draft edits for accelerated underwriting (AU).
   C. Received an update on the “other health” MCAS drafting group. The data elements are close to conclusion, and another meeting will take place for a review of some additional definitions. The goal is for this to be completed by the end of April for the Working Group’s review.
   D. Adopted a proposal for home and auto digital claims interrogatories to be included in the 2023 MCAS reporting, which will be collected in 2024.
   E. Discussed the proposed lawsuit definitions and the placement of lawsuit data elements for the home and auto MCAS.
   F. Received guidance regarding the new “number of lawsuits closed with consideration for the consumer” data element for the home and auto MCAS.

9. Adopted the report of the Market Conduct Examination Guidelines (D) Working Group, including its March 10 minutes. During this meeting, the Working Group took the following action:
   A. Discussed its potential 2022 tasks.
   B. Discussed draft revisions to the Oct. 27, 2021, draft Chapter 21 of the Market Regulation Handbook. The comment deadline for this exposure was extended to April 15.
   C. Discussed draft revisions to the Oct. 27, 2021, draft Chapter 20 of the Market Regulation Handbook. The comment deadline for this exposure was extended to April 15

10. Adopted the report of the Market Regulation Certification (D) Working Group, including its March 22 minutes. During this meeting, the Working Group took the following action:
   A. Reviewed its 2022 charges and discussed the status of the Voluntary Market Regulation Certification Program.
   B. Heard an update on the Certification Program Scoring Matrix. The drafting group met March 9 to resume its work on a scoring matrix that would enable jurisdictions to do self-assessments, as well as provide a framework for scoring jurisdictions seeking certification under the Voluntary Market Regulation Certification Program. The drafting group plans to have the scoring matrix ready for the Working Group’s consideration by the Summer National Meeting.
   C. Reported that it plans to provide the Voluntary Market Regulation Certification Program, the implementation plan, and the scoring matrix to the Market Regulation and Consumer Affairs (D) Committee for consideration by the Fall National Meeting.
   D. Requested comments on any portion of the Voluntary Market Regulation Certification Program by April 15.

11. Adopted the report of the Privacy Protections (D) Working Group, which met April 4 and took the following action:
   A. Adopted its 2021 Fall National Meeting minutes.
   B. Reported that it met March 23 and March 9 in regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to draft its work plan.
   C. Reported that a group of subject matter experts (SMEs) met to draft revisions to the Preamble and the first three sections of the NAIC Insurance Information and Privacy Protection Model Act (#670) for the Working Group’s consideration.
   D. Heard updates on state and federal privacy legislation.
   E. Adopted its work plan.
   F. Received an update from the workstream team drafting the white paper on data ownership and use rights.

12. Adopted the report of the Speed to Market (D) Working Group, which has not met since the 2021 Fall National Meeting.
Antifraud (D) Task Force  
March 28, 2022 (in lieu of the Spring National Meeting)  
1. Adopted its 2021 Fall National Meeting minutes.  
2. Discussed a letter sent to the Task Force concerning racial bias and discrimination. The Task Force discussed the letter and asked for comments from any members or interested state insurance regulators. The Task Force heard comments from the Center for Economic Justice (CEJ). The Task Force advised that it would continue to monitor this potential topic and schedule additional meetings to discuss, if warranted.  
3. Disbanded the Antifraud Education Enhancement (D) Working Group. The Task Force determined that this Working Group’s current charge would be moved under the Task Force.  
4. Received an update from the Antifraud Technology (D) Working Group. The Working Group formed a subject matter expert (SME) group in 2021 to create a template for industry to use when creating the Antifraud Plan. It will expose the final draft of the template for comment. The Working Group will meet to discuss these comments and consider adoption of the template. Once adopted by the Working Group, the template will be presented to the Task Force for consideration of adoption.  
5. Received an update from the Improper Marketing of Health Insurance (D) Working Group. The Working Group has continued to meet monthly in regulator-to-regulator session.  
6. Heard a report on antifraud activity from the Coalition Against Insurance Fraud (Coalition).  
7. Heard an update from the National Health Care Anti-Fraud Association (NHCAA).

Market Information Systems (D) Task Force  
March 25, 2022 (in lieu of the Spring National Meeting)  
1. Adopted its 2021 Fall National Meeting minutes.  
2. Adopted its Dec. 3, 2021, minutes, which included the following action:  
   A. Revised its 2022 proposed charges to continue work on developing recommendations for the incorporation of artificial intelligence (AI) abilities in the NAIC Market Information Systems (MIS).  
3. Considered the Market Information Systems Research and Development (D) Working Group recommendations regarding the incorporation of AI in the NAIC MIS.  
4. Adopted the report of the Market Information Systems Research and Development (D) Working Group, which met March 16 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) and paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings, and took the following action:  
   A. Accepted a request to create or enhance a Market Conduct Annual Statement (MCAS) Personalized Information Capture System (PICS) event to notify subscribers on a recurring basis of outstanding waiver and extension requests.  
   B. Accepted a request to add a new Complaints Database System (CDS) coverage type code for telehealth.  
   C. Completed is review of the 2020 MIS data analysis metrics results.  
5. Heard a report on outstanding Uniform System Enhancement Request (USER) forms.  
6. Adopted the Market Information Systems Research and Development (D) Working Group’s MIS data analysis metrics and recommendations. Detailed reports were sent to each jurisdiction’s market analysis chief (MAC).

Producer Licensing (D) Task Force  
The Producer Licensing (D) Task Force did not meet at the Spring National Meeting.
FINANCIAL CONDITION (E) COMMITTEE

April 5, 2022

1. Adopted its 2021 Fall National Meeting minutes.

2. Adopted its Jan. 12 minutes. During this meeting, which was held in joint session with the Risk-Based Capital Investment Risk and Evaluation (E) Working Group, the Committee took the following action:
   A. Discussed Phase II of a bond factor proposal for structured and asset-backed securities (ABS).
   B. Discussed residual interests and the informal coordination that has already taken place among the Statutory Accounting Principles (E) Working Group, the Valuation of Securities (E) Task Force, and the various risk-based capital (RBC) formulas and RBC working groups.

5. Adopted the report of the Examination Oversight (E) Task Force. See the Task Force listing for details.

7. Adopted the report of the Receivership and Insolvency (E) Task Force. See the Task Force listing for details.

8. Adopted the report of the Reinsurance (E) Task Force. See the Task Force listing for details.

10. Adopted the report of the Valuation of Securities (E) Task Force. See the Task Force listing for details.

11. Adopted the report of the Financial Analysis (E) Working Group, which met April 4, Feb. 23, and Jan. 26 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss letter responses and financial results.

12. Adopted the report of the Group Capital Calculation (E) Working Group, including its Feb. 9 minutes. During this meeting, the Working Group took the following action:
   A. Adopted its 2021 Fall National Meeting minutes.
   B. Discussed comments received on possible changes to the 2022 group capital calculation.

13. Adopted the report of the Restructuring Mechanisms (E) Working Group, including its March 28 minutes. During this meeting, the Working Group took the following action:
   A. Adopted a referral to the Receivership and Insolvency (E) Task Force to consider a proposed new Request for NAIC Model Law Development related to the Property and Casualty Insurance Guaranty Association Model Act (#540).
   B. Discussed comments received on the previously exposed draft white paper.
   C. Exposed the draft white paper for a 30-day public comment period ending April 29.

14. Adopted the report of the National Treatment and Coordination (E) Working Group, including its March 9 minutes. During this meeting, the Working Group took the following action:
   A. Tabled proposal 2021-07 (Instructions Regarding Company Responses).
   B. Approved a response to the Chief Financial Regulator Forum, as recommended by the Domestic Surplus Lines Insurers Drafting Group.
   C. Heard an update on the Biographical Affidavit Database Project. During the development phase, industry and state insurance regulator user input is imperative to the development of the electronic application functionality. Interested parties should contact Jane Barr (NAIC).

15. Adopted the report of the Valuation Analysis (E) Working Group, which met March 23, Feb. 8, and Jan. 25 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss valuation items related to specific companies.

17. Received an update on certain committee-supported initiatives related to low interest rates and asset risk.
Accounting Practices and Procedures (E) Task Force
April 5, 2022
1. Adopted its 2021 Fall National Meeting minutes.
2. Adopted the report of the Statutory Accounting Principles (E) Working Group, which met April 4 and took the following action:
   A. Adopted its 2021 Fall National Meeting minutes.
   B. Adopted its March 2 and Jan. 27 minutes. During these meetings, the Task Force took the following action:
      i. During its March 2 meeting, the Working Group exposed agenda item 2021-19: Proposed Bond Definition, a revised principle-based bond definition, and a draft issue paper for a public comment period ending May 6. In addition, the motion directed NAIC staff to continue discussions with industry on the bond definition and develop proposed reporting changes and potential statutory accounting revisions for a subsequent exposure.
      ii. During its Jan. 27 meeting, the Working Group adopted the following statutory accounting principles (SAP) clarifications, which were effective for year-end 2021 reporting:
         a. Revisions reflect clarifications to life and health reinsurance disclosures and provide guidance to address audit inquiries. (Ref #2021-31)
         b. Revisions to Statement of Statutory Accounting Principles (SSAP) No. 108—Derivatives Hedging Variable Annuity Guarantees remove reference to the “standard scenario” to ensure consistency with VM-21, Requirements for Principle-Based Reserves for Variable Annuities. The revisions were effective for year-end 2021 reporting. (Ref #2021-18)
   C. Adopted the following clarifications to statutory accounting guidance:
      i. Revisions rejecting the following:
         a. Accounting Standards Update (ASU) 2021-05, Leases (Topic 842), Lessor s—Certain Leases with Variable Lease Payments for statutory accounting. (Ref #2021-29)
         b. ASU 2021-03, Intangibles — Goodwill and Other (Topic 350) – Accounting Alternative for Evaluating Triggering Events for statutory accounting. (Ref #2021-28)
         c. ASU 2021-04, Earnings Per Share (Topic 260), Debt—Modifications and Extinguishments (Subtopic 470-50), Compensation—Stock Compensation (Topic 718), and Derivatives and Hedging—Contracts in Entity’s Own Equity (Subtopic 815-40)—Issuer’s Accounting for Certain Modifications or Exchanges of Freestanding Equity-Classified Written Call Options for statutory accounting while incorporating guidance on how to account for changes in fair values for written call options. (Ref #2021-27)
         d. ASU 2021-06, Presentation of Financial Statements (Topic 205), Financial Services—Depository and Lending (Topic 942), and Financial Services—Investment Companies (Topic 946), Amendments to SEC Paragraphs Pursuant to SEC Final Rule Releases No. 33-10786, Amendments to Financial Disclosures about Acquired and Disposed Businesses, and No. 33-10835, Update of Statistical Disclosures for Bank and Savings and Loan Registrants as not applicable for statutory accounting. (Ref #2021-30)
      ii. Revisions reflect updated NAIC designation and designation category guidance adopted by the Valuation of Securities (E) Task Force to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) for residential mortgage-backed securities (RMBS) and commercial mortgage-backed securities (CMBS). (Ref #2021-23)
      iii. Adopted editorial revisions to update various terminology references of “substantive” and “nonsubstantive” to reflect “new SAP concept” and “SAP clarification.” (Ref #2021-26EP)
iv. Adopted agenda items resulting in blanks proposals without statutory revisions:

a. Adopted an agenda item supporting supplemental reporting of subsidiary, controlled, and affiliated (SCA) entities investments reported in Schedule D, Part 6, Section 1: Valuation of Shares of Subsidiary, Controlled or Affiliated Companies. The adoption reflects support for blanks proposal 2022-02BWG and did not result in statutory revisions. (Ref #2021-22)

b. Adopted an agenda item proposing to add a new general interrogatory to require disclosure pertaining to cryptocurrencies directly held or permitted for the remittance of premiums. This agenda item did not result in statutory revisions. However, adoption reflects support for the blanks proposal 2022-01BWG. (Ref #2021-24)

D. Exposed the following SAP clarifications:

i. Revisions incorporate: 1) updates from Financial Accounting Standards Board (FASB) Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 7, Presentation, which identifies factors to consider when deciding how items should be displayed on the financial statements; and 2) Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements, which updates the definitions of an asset and a liability. The Working Group exposed two draft issue papers for historical documentation of these SAP clarifications SSAP No. 4—Assets and Nonadmitted Assets and SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets. (Ref #2022-01)

ii. Revisions reject ASU 2021-09, Leases (Topic 842), Discount Rate for Lessees That Are Not Public Business Entities for statutory accounting. (Ref #2022-05)

iii. SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items: Revisions incorporate certain disclosures from ASU 2021-10, Government Assistance, Disclosures by Business Entities about Government Assistance of terms and provisions of assistance received. (Ref #2022-04)

iv. SSAP No. 25—Affiliates and Other Related Parties and SSAP No. 43R—Loan-Backed and Structured Securities: Revisions clarify the identification and reporting requirements for affiliated transactions and incorporate new reporting codes in the investment schedules to identify investments held that involve related parties. The new reporting requirements will identify investments acquired through, or in, related parties, regardless of if they meet the definition of an affiliate. (Ref #2021-21)

v. Revisions reject ASU 2021-08, Business Combinations, Accounting for Contract Assets and Contract Liabilities from Contracts with Customers for statutory accounting. Revisions in SSAP No. 68—Business Combinations and Goodwill also note that the intent is not to modify any U.S. generally accepted accounting principles (GAAP) for U.S. GAAP book value. (Ref #2022-07)

vi. SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies: Revisions propose to either eliminate the audited U.S. tax basis equity valuation exception or clarify that the U.S. tax basis equity audit shall occur at the investee level. (Ref #2022-02)

vii. SSAP No. 86—Derivatives: Revisions propose: 1) a new Exhibit A, which will replace both Exhibit A and Exhibit B of SSAP No. 86 that adopts with modification U.S. GAAP guidance in determining hedge effectiveness; and 2) revised measurement methods for excluded components in hedging instruments. The Working Group directed NAIC staff to continue to work with industry representatives on other elements within ASU 2017-12: Derivatives and Hedging: Targeted Improvements to Accounting for Hedging Activities. (Ref #2021-20)

viii. Revisions incorporate the practical expedient from ASU 2021-07, Compensation – Stock Compensation (Topic 718), Determining the Current Price of an Underlying Share for Equity-Classified Share-Based Awards for the current price input, a required component for option-pricing models used in determining fair value for share-based payments. (Ref #2022-06)

ix. Interpretation (INT) 22-01: Freddie Mac When-Issued K-Deal (WI Trust) Certificates: Revisions support a draft interpretation to clarify that investments in the Freddie Mac “When Issued K-Deal” (WI) Program are in scope of SSAP No. 43R. (Ref #2022-08)
x. Blanks Proposal: Exposed an agenda item that expressed support for a blanks proposal with instructional changes to Schedule T, the State Page, and Accident and Health Policy Experience Exhibit (AHPEE) to clarify guidance for premium adjustments. The instructions clarify that all premium adjustments, including but not limited to federal Affordable Care Act (ACA) premium adjustments related to the risk adjustment program, shall be allocated as premium in the respective jurisdiction. This agenda item does not result in statutory revisions. (Ref #2022-03)

xi. The comment period for items exposed is June 3, except for agenda items 2021-21, 2022-03, and 2022-08, which have a May 6 comment deadline to allow for adoption consideration during an interim meeting anticipated for May.

E. Reviewed comments and directed NAIC staff on the following items:
   i. Bond Proposal Project: Received comments and an update regarding potential reporting options to revise Schedule D, Part 1: Long-Term Bonds. The update included preliminary responses to certain aspects of those comments. The Working Group directed NAIC staff to proceed with developing an illustration of reporting revisions for subsequent exposure. (Ref #2019-21)
   ii. SSAP No. 22R—Leases: Reviewed comments on prior exposed revisions intending to clarify that in any scenario in which a lease terminates early, all remaining leasehold improvements shall be immediately expensed. The Working Group directed NAIC staff to continue to work with interested parties to refine the guidance for subsequent consideration. (Ref #2021-25)
   iii. Received an update that the Working Group and the Valuation of Securities (E) Task Force received a comment letter from the American Council of Life Insurers (ACLI) regarding a proposed amendment to the P&P Manual to permit unguaranteed and unrated subsidiary obligors in working capital finance investment (WCFI) transactions. As the Working Group does not have an exposure on this topic, the Working Group noted receipt but does not plan to address comments at this time; the comment letter will be included in the Valuation of Securities (E) Task Force minutes.

F. Received an update on U.S. GAAP exposures.

G. Received an update on the Working Group referral of agenda item 2019-49: Retroactive Reinsurance Exception regarding diversity in companies applying the retroactive reinsurance exception, which allows prospective reporting. The Casualty Actuarial and Statistical (C) Task Force discussed this item on March 8. The Task Force directed and formed a small group to further work on this, including drafting instructional revisions to Schedule P — Analysis of Losses and Loss Expenses.

3. Adopted the report of the Blanks (E) Working Group, which met March 29 and took the following action:
   A. Adopted its Nov. 16, 2021, minutes, which included the following action:
      i. Adopted proposal 2021-14BWG – Expand the number of lines of business reported on Schedule H to match the lines of business reported on the health statement. Modify the instructions so they will be uniform between life/fraternal and property.
      ii. Adopted its editorial listing and approved the State Filing Checklists content.
      iii. Rejected proposal 2021-11BWG requesting to add a new annual statement supplement to the property/casualty (P/C) statement to capture exposure data for annual statement lines 4, 19.1, 19.2, and 21.2 of the Exhibit of Premiums and Losses.
      iv. Deferred proposal 2021-13BWG, which adds a new supplement to capture premium and loss data for annual statement lines 17.1, 17.2, and 17.3 of the Exhibit of Premiums and Losses (State Page) – Other Liability by more granular lines of business for a public comment period ending March 4.
      v. Exposed seven new proposals for a public comment period ending March 4.
B. Adopted its editorial listing and the following proposals:
   i. **2021-15BWG** – Add a footnote to Exhibit 7 in the life/fraternal statement and the health statement (life supplement) to capture the amount of Federal Home Loan Bank (FHLB) funding agreements reported in Column 1 through Column 6 of the exhibit (2021-16 SAPWG).
   ii. **2021-16BWG Modified** – For Note 9 – Income Taxes, remove the 9C illustration instructions for the deferred tax asset (DTA) and deferred tax liability (DTL) components, which state, “reporting entities should disclose those items included as ‘Other’ (Lines 2a13, 2e4, 3a5 and 3b3) as additional lines for those items greater than 5% in the printed/PDF filing document,” as the illustration is not set up to accommodate variable lines. Add formulas for calculation of total and subtotal on the illustration for 9C. For Note 15 – Leases, modify the illustrations to add a “Thereafter” line and add a “Total” formula.
   iii. **2021-17BWG Modified** – Modify the Analysis of Operations by Lines of Business in the health blank to include all of health lines of business included in the Life/Fraternal Analysis of Operations by Lines of Business – Accident and Health. Add instructions for the new columns and adjust the column references. Add the health blank Analysis of Operations by Lines of Business as a supplement to the life/fraternal blank with instructions and crosschecks. Add crosscheck to the health blank Analysis of Operations by Lines of Business to the Life/Fraternal Analysis of Operations by Lines of Business – Accident and Health instructions.
   iv. **2021-19BWG Modified** – Add columns and lines to U&I (Parts 1, 2, 2A, 2B, and 2D) and the Exhibit of Premiums, Enrollment and Utilization in the annual statement to bring the lines of business reporting in line with Life/Fraternal and Property. Add columns and lines to the Exhibit of Premiums, Enrollment and Utilization and U&I Analysis of Claims Unpaid quarterly pages. The appropriate adjustments to the instructions are also being made.
   v. **2021-20BWG Modified** – Starting at Line 72 of the Life/Fraternal Five-Year Historical, add or delete lines that do not capture the specific lines of business reported on the Life/Fraternal Analysis of Operations by Lines of Business detail pages for life (individual and group), annuities (individual and group), and accident and health (A&H) for Line 33 of those pages.
   vi. **2021-21BWG Modified** – Add instruction to the Investment Schedules General Instructions to exclude non-rated residual tranches or interests from being reported as bonds on Schedule D, Part 1, and add lines to Schedule BA for the reporting those investments (2021-15 SAPWG).
   vii. **2021-23BWG Modified** – Add a line category for Residual Tranches or Interests in the Asset Valuation Reserve Equity and Other Invested Asset Component blank, and renumber the lines below the addition. Modify instructions as appropriate for the added lines.

**Capital Adequacy (E) Task Force**

March 28, 2022 (in lieu of the Spring National Meeting)

1. Adopted its 2021 Fall National Meeting minutes.
2. Adopted its Jan. 27, 2022; and Dec. 20, 2021, minutes. During these meetings, the Task Force took the following action:
   A. Adopted the 2021 Catastrophe Event List.
   B. Discussed the appointment of a new risk-based capital (RBC) working group and solicited membership for the Risk-Based Capital Investment Risk and Evaluation (E) Working Group.
3. Adopted the report of the Health Risk-Based Capital (E) Working Group, including its March 18 minutes. During this meeting, the Working Group took the following action:
   A. Adopted its Feb. 25, 2022; Jan. 28, 2022; and Dec. 16, 2021, minutes, which included the following action:
      i. Referred the Health Test Language Proposal to the Blanks (E) Working Group.
      ii. Referred a memorandum to the Health Actuarial (B) Task Force.
      iii. Adopted proposal 2021-18-H as modified for instructions in evaluating the investment yield adjustment in the underwriting risk factors.
   iv. Received the American Academy of Actuaries (Academy) report on the H2 – Underwriting Risk Review.
v. Reviewed the investment yields of the six-month U.S. Treasury bonds for the investment income adjustment.
B. Discussed next steps in moving forward on the H2 – Underwriting Review project with the Academy.
C. Adopted its 2022 working agenda.

4. Adopted the report of the Life Risk-Based Capital (E) Working Group, including its March 23 minutes. During this meeting, the Working Group took the following action:
A. Adopted its 2021 Fall National Meeting minutes.
B. Adopted its March 10, 2022; Jan. 20, 2022; and Dec. 16, 2021; minutes. During these meetings, the Working Group took the following action:
i. Discussed the Academy’s C2 Work Group recommendation on mortality.
ii. Discussed the asset valuation reserve (AVR) and bond factor changes.
iii. Adopted guidance on bond factor changes.
C. Adopted its working agenda
D. Discussed reinsurance and comfort trusts.
E. Discussed bond funds.

5. Adopted the report of the Property and Casualty Risk-Based Capital (E) Working Group, including its March 23 minutes. During this meeting, the Working Group took the following action:
A. Adopted the report of the Catastrophe Risk (E) Subgroup, including its March 22 minutes. During this meeting, the Subgroup took the following action:
i. Adopted its 2021 Fall National Meeting minutes.
ii. Adopted its Feb. 22 and Jan. 25 minutes. During these meetings, the Working Group took the following action:
b. Adopted proposal 2021-17-CR (Adding Wildfire Peril for Informational Purposes Only), which the Subgroup exposed for a 60-day public comment period ending Feb. 13, 2022.
c. Received an update from the Catastrophe Model Technical Review Ad Hoc Group. The update included the discussion of the survey questions created by the members within the group, which was based on Actuarial Standard of Practice (ASOP) No. 38—Catastrophe Modeling (for All Practice Areas).
d. Discussed three different kinds of catastrophe models that deviate from the vendor models. The Subgroup will focus on discussing the vendor catastrophe models with adjustments or different weight first.
e. Discussed the issue of double-counting in the R5 component. The Subgroup asked the interested parties to review the current methodology and provide comments in the upcoming meetings.
f. Discussed the possibility of adding flood peril in the Rcat component. The industry asked the Subgroup to consider the materiality issue with respect to whether the flood peril is warranted, given the exposure of the industry.
g. Heard a presentation from Milliman on the private flood market.
iii. Discussed its 2022 working agenda.
iv. Discussed the insured loss threshold for wildfire peril. The Subgroup considered following the same minimum 25 million insured losses per event threshold as the other perils.
v. Exposed proposal 2021-17-CR MOD (Wildfire Information-Only Reporting Exemption) for a 14-day public comment period ending April 5. This proposal allows an exemption for those companies where the modeling requirements would impose a cost and compliance burden during the for informational purposes only period.
vi. Discussed the independent model review instruction in the Rcat component. The Subgroup heard comments from the Missouri Department of Commerce and Insurance regarding the Rcat instructions.
vii. Discussed the issue of double counting in the R5 component.
C. Adopted proposal 2021-17-CR (Adding Wildfire Peril for Informational Purposes Only).
D. Adopted proposal 2021-14-P (R3 Factor Adjustment).
E. Exposed proposal 2022-01-P (Removing Trend Test for Informational Purposes Only Footnote) for a 30-day public comment period ending April 22.
F. Heard an update on current property/casualty (P/C) risk-based capital (RBC) projects from the Academy.
6. Adopted the report of the Risk-Based Capital Investment Risk and Evaluation (E) Working Group, including its March 22 minutes. During this meeting, the Working Group took the following action:
   A. Adopted its Feb. 22 minutes, which included the following action:
      i. Discussed its appointment, charges, and the Financial Condition (E) Committee’s direction.
      ii. Heard a high-level overview of investment development from NAIC staff.
      iii. Discussed desired outcomes investment reporting perspectives and next steps.
   B. Adopted its working agenda.
   C. Discussed comments received on its request to solicit feedback.
   D. Discussed next steps.
10. Adopted proposal 2021-14-P (Re Factor Adjustment).
11. Adopted its working agenda.

Examination Oversight (E) Task Force
The Examination Oversight (E) Task Force did not meet at the Spring National Meeting.

Financial Stability (E) Task Force
April 5, 2022 (joint session with the Macroprudential (E) Working Group)
1. Adopted its Feb. 22 minutes, which included the following action:
   A. Received an update from the Macroprudential (E) Working Group.
   B. Adopted the “Regulatory Considerations Applicable (But Not Exclusive) to Private Equity (PE) Owned Insurers” document.
   D. Adopted the Working Group’s Feb. 1 minutes, which included the following action:
      i. Adopted the “Regulatory Considerations Applicable (But Not Exclusive) to Private Equity (PE) Owned Insurers” document.
      ii. Received an update on the 2021 LST Framework, including scope criteria.
      iii. Received an update on the NAIC macroprudential risk assessment system.
2. Adopted the Working Group’s March 2 minutes, which included the following action:
   A. Received an update on the NAIC macroprudential risk assessment system.
   B. Exposed the NAIC macroprudential risk assessment process for a public comment period ending March 21.
3. Received an update from the Working Group.
4. Adopted the NAIC macroprudential risk assessment system.
5. Heard an international update, which included an update on the International Association of Insurance Supervisors’ global monitoring exercise and the consultation on liquidity stress testing (LST).
Receivership and Insolvency (E) Task Force
April 6, 2022
1. Adopted its 2021 Fall National Meeting minutes.
2. Received a report from the Receiver’s Handbook (E) Subgroup on the progress of the development of revisions to the Receiver’s Handbook for Insurance Company Insolvencies. The drafting group is currently working on Chapter 5. The Subgroup expects to meet to expose revisions to several chapters for public comment.
3. Received a referral from the Restructuring Mechanisms (E) Working Group and exposed a draft Request for NAIC Model Law Development for the Property and Casualty Insurance Guaranty Association Model Act (#540) for a 30-day public comment period ending May 6. The request focuses on addressing potential gaps in Model #540 provisions to ensure guaranty fund coverage for policies after insurance business transfer (IBT) or corporate division (CD) transactions.
4. Heard a presentation from the National Conference of Insurance Guaranty Funds (NCIGF), including recommendations to improve pre-receivership coordination and information sharing between state insurance departments and guaranty funds. The Task Force agreed to refer the issue to the Receivership Law (E) Working Group for further consideration.
5. Heard an update on federal activities. The NAIC’s proposed State Insurance Receivership Priority (SIRP) Act establishes a time limit in the Federal Priority Act (FPA) for the U.S. Department of Justice (DOJ) to file claims of the U.S. to insolvent insurance company estates and ensure state insurance regulators are not held personally liable if claims of the government are not paid first. Several members of the Task Force and NAIC staff are working with U.S. Rep. Madeleine Dean’s (D-PA) office to finalize the SIRP Act. It is expected to be introduced to the U.S. House of Representatives in 2022.
6. Heard an update on international activities. The International Association of Insurance Supervisors (IAIS) is conducting a survey of member jurisdictions to gather information to inform the development of an application paper on policyholder protection schemes. The U.S. recently completed its in-person meetings for the IAIS-targeted jurisdictional assessments regarding the holistic framework, which included an assessment of insurance resolution.

Reinsurance (E) Task Force
March 22, 2022 (in lieu of the Spring National Meeting)
1. Adopted its 2021 Fall National Meeting minutes.
2. Adopted the report of the Reinsurance Financial Analysis (E) Working Group, which met March 3, 2022, and Dec. 20, 2021, in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings. During these meetings, the Working Group took the following action:
   A. Approved proposed revisions to the Uniform Checklist for Reciprocal Jurisdiction Reinsurers.
   C. Completed the reviews of certified reinsurers and reciprocal jurisdiction reinsurers.
3. Exposed revisions to the Uniform Checklist for Reciprocal Jurisdiction Reinsurers.
4. Received a status report on the reinsurance activities of the Mutual Recognition of Jurisdictions (E) Working Group.
5. Received a status report on the states’ implementation of the 2019 revisions to the Credit for Reinsurance Model Law (#785), the Credit for Reinsurance Model Regulation (#786), and the implementation of the Term and Universal Life Insurance Reserve Financing Model Regulation (#787).

Risk Retention Group (E) Task Force
The Risk Retention Group (E) Task Force did not meet at the Spring National Meeting.
Valuation of Securities (E) Task Force

April 5, 2022 (in lieu of the Spring National Meeting)

1. Adopted its 2021 Fall National Meeting minutes.
2. Discussed comments received on a proposed amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) to update the definition of “principal protected securities” (PPS), which was exposed for a 60-day public comment period ending Feb. 11.
3. Discussed comments received on a proposed amendment to the P&P Manual to update the definition of “other non-payment risk assigned a subscript “S,” which was exposed for a 60-day public comment period ending Feb. 11.
4. Exposed a proposed referral to the Blanks (E) Working Group to add fixed income analytical risk measures to investments reported on Schedule D, Part 1 for a 45-day public comment period ending May 20.
5. Discussed comments received on a proposed amendment to the P&P Manual to add guidance on the designation of Schedule BA assets with fixed income characteristics, which was exposed for a 60-day public comment period ending Feb. 11.
6. Adopted a proposed amendment to the P&P Manual to permit unguaranteed and unrated subsidiary obligors in working capital finance investments (WCFI) transactions, with Securities Valuation Office (SVO) discretion, which was exposed for a 60-day public comment period ending Feb. 11.
7. Discussed comments received on an NAIC staff report on the use of NAIC designations by other jurisdictions in the regulation of insurers, which was exposed for a 60-day public comment period ending Feb. 11.
8. Received a report from SVO staff on the 2021 year-end carry-over filings.
9. Received a staff report on projects of the Statutory Accounting Principles (E) Working Group.
10. Received a staff update on new residential mortgage-backed securities (RMBS)/commercial mortgage-backed securities (CMBS) thresholds and price breakpoints.
11. Received a staff update on the ad hoc credit rating provide study group.

FINANCIAL REGULATION STANDARDS AND ACCREDITATION (F) COMMITTEE

April 5, 2022

1. Adopted its 2021 Summer National Meeting minutes.
2. Adopted, immediately by reference, revisions made during 2021 to NAIC publications that are required for accreditation purposes (e.g., the Accounting Practices and Procedures Manual [AP&P Manual]) and were deemed insignificant.
4. Exposed the 2021 revisions to the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450) to be acceptable for accreditation but not required for a 30-day public comment period ending May 6. The revisions address the continuation of essential services through affiliated intercompany agreements with an insurer that is placed into receivership.
5. Exposed the proposed updates to the Preamble of the Accreditation Program Manual to reference VM-21, Requirements for Principle-Based Reserves for Variable Annuities, for a 30-day public comment period ending May 6. The proposed revisions serve as a reference for how captives that reinsure variable annuity business are addressed in the accreditation standards.
6. Reported that it met April 4 in regulator-to-regulator session, pursuant to paragraph 7 (consideration of individual state insurance department’s compliance with NAIC financial regulation standards) of the NAIC Policy Statement on Open Meetings, and took the following action: 1) discussed state-specific accreditation issues; and 2) awarded continued accreditation to the insurance departments of Alabama, Mississippi, and North Carolina.
INTERNATIONAL INSURANCE RELATIONS (G) COMMITTEE
April 7, 2022

1. Adopted its 2021 Fall National Meeting minutes.
2. Adopted its Jan. 18 minutes, which included the following action:
   A. Approved the submission of the NAIC comments on the International Association of Insurance Supervisors (IAIS) draft Application Paper on Macroprudential Supervision.
3. Discussed international efforts on sustainability and climate, including a presentation by the Sustainable Insurance Forum (SIF) on its mission and workstreams and by Liberty Mutual on how it is addressing these issues.
4. Heard an update on recent activities and priorities of the IAIS, including: 1) the comparability assessment process for the aggregation method (AM); 2) an update on the targeted jurisdictional assessments (TJAs) as part of the implementation of the holistic framework; 3) recommendations from the Climate Risk Steering Group; and 4) a survey of membership on diversity, equity, and inclusion (DE&I) initiatives.
5. Heard an update on international activities, including: 1) recent and upcoming meetings, events, and speaking engagements with international regulators; 2) the Spring 2022 International Fellows Virtual Program; and 3) upcoming meetings and participation in workstreams at the Organisation for Economic Co-operation and Development (OECD) Insurance and Private Pensions Committee.

INNOVATION, CYBERSECURITY, AND TECHNOLOGY (H) COMMITTEE
April 5, 2022

1. Adopted structural and charge revisions, which included the following action:
   A. Moved the Speed to Market (H) Working Group to the Market Regulation and Consumer Affairs (D) Committee.
   B. Moved the Privacy Protections (D) Working Group from the Market Regulation and Consumer Affairs (D) Committee to the Innovation, Cybersecurity, and Technology (H) Committee.
   C. Modified the charge to the Privacy Protections (H) Working Group to add the words “data ownership and use rights” to the charge.
   D. Appointed a new working group, the Innovation in Technology and Regulation (H) Working Group, and adopted its proposed charges.
2. Adopted the report of the Big Data and Artificial Intelligence (H) Working Group, which met April 5 and took the following action:
   A. Discussed its 2022 work plan, which includes the following four workstreams:
      i. The first workstream will continue the survey work regarding industry’s use of artificial intelligence (AI)/machine learning (ML). The subject matter experts (SMEs) involved in this workstream will continue the analysis of the AI/ML private personal auto (PPA) survey data, use PPA survey data and experience to inform the development of an AI/ML homeowners survey, and develop an AI/ML life insurance survey. The homeowners survey will be issued in June, and the life insurance survey will be issued in August. Company responses will be collected on a confidential basis. All the survey results will culminate in the publication of a white paper to provide insights on the industry’s use of data and AI/ML in these three lines of business. This white paper will not identify specific company practices. The Working Group intends to publish the white paper by the Fall National Meeting.
      ii. The second workstream will focus on the review of third-party data and model vendors to determine the appropriate regulatory framework for monitoring and overseeing industry’s use of third-party data and model vendors. This work will be completed by the Fall National Meeting with suggestions for implementation of deliverables to be considered by the Committee.
      iii. The third workstream will gather data and evaluate information on governance models/frameworks and software tools/resources from various sources, including: vendors; academics; industry; and international supervisory authorities, which could assist state insurance regulators in overseeing and monitoring industry’s use of data and AI/ML and eliminate unintended bias in such use. This work will involve coordination with other NAIC committees engaged in similar efforts.
iv. The fourth workstream is focused on how to implement the expectations outlined in the “NAIC Principles on Artificial Intelligence (AI)” and provide suggestions on next steps, which could include regulatory guidance such as model governance. The other workstreams will help inform the recommendations for this workstream. Because of this, the final deliverable of this workstream is not anticipated to be presented to the Committee until fall 2023.

B. Received an update on the PPA AI/ML preliminary survey results. The update provided a summary of the company response regarding the use of AI/ML broken down by the functional areas of claims, fraud detection, marketing, rating, underwriting, and loss prevention. The preliminary analysis reflects that 155 of the 193 companies that responded to the survey are or will be using AI/ML within claims operations; 111 companies are or will be using AI/ML within fraud detection; 103 companies are or will be using AI/ML within marketing; 77 companies are or will be using AI/ML within rating; 59 companies are or will be using AI/ML within underwriting; and only three companies have AI/ML implemented in production for loss prevention. The preliminary results also reflected that 82% of rate models are developed internally, while 18% are developed by a third party. The NAIC will continue to work with state insurance regulators to analyze the results of the PPA AI/ML survey.

3. Adopted the report of the Cybersecurity (H) Working Group, including its March 23 minutes. During this meeting, the Working Group took the following action:
   A. Reviewed its charges and discussed potential projects, including:
      i. The development of a cybersecurity response plan to aid state insurance regulators in situations where cybersecurity events take place within the insurance industry.
      ii. The development of a cybersecurity survey to better understand cybersecurity practices by insurers.
      iii. The development of cybersecurity-related training that would be beneficial to state insurance regulators.
   B. Heard a report on state, federal, and international cybersecurity efforts.

4. Adopted the report of the E-Commerce (H) Working Group, including its March 30 minutes. During this meeting, the Working Group took the following action:
   A. Heard a summary of the recent state and industry surveys regarding the federal Uniform Electronic Transactions Act (UETA), actions taken by states regarding e-commerce both during and because of the COVID-19 pandemic, and industry concerns and recommendations moving forward with e-commerce.
   B. Discussed its overall work plan and timelines moving forward.

5. Received a report on the Casualty Actuarial and Statistical (C) Task Force predictive model review process. The report included an update on the Task Force’s meetings on rate filing issues and its predictive analytics webinars called the “Book Club.” The Task Force has reviewed 54 rate models and produced 127 reports to assist state insurance regulators with model reviews.

6. Received a report from the Privacy Protections (D) Working Group, which met April 4 and took the following action:
   A. Heard updates on state and federal privacy legislation.
   B. Discussed comments received from the American Council of Life Insurers (ACLI) and the Health Coalition on the Working Group’s 2022 work plan.

7. Discussed various Committee-level projects, including:
   A. The creation of a new Collaboration Forum that will serve as a platform for multiple NAIC committees to work together to identify and address foundational issues and develop a common framework that can inform the specific workstreams in each group. The first Collaboration Forum will be on algorithmic bias.
   B. The development of a portal or library of resources related to innovation, cybersecurity, data and consumer privacy, and technology, tentatively called the “ICT-Hub.”
   C. The creation of a forum to facilitate training and education of state insurance regulators on innovation and technology topics, supervisory technology (SupTech) issues, and potential ways that data and technology might affect the insurance sector in the future.

8. Received an update on implementation of the Insurance Data Security Model Law (#668) and the Unfair Trade Practices Act (#880) revised language specific to rebating.
NAIC/CONSUMER LIAISON COMMITTEE

April 8, 2022

1. Adopted its 2021 Fall National Meeting minutes.
2. Heard a presentation on the demise of the auto insurance appraisal clause by the Automotive Education & Policy Institute (AEPI). This presentation is important to consumers, insurers, and state insurance regulators, as the clause helps protect consumers and the auto repair insurance industry.
3. Heard a presentation on modernizing market regulation data collection by the Center for Economic Justice (CEJ).
4. Heard a presentation on the role of state insurance regulators in addressing discriminatory benefit design by the National Center for Transgender Equality (NCTE), the Disability Rights Education and Defense Fund (DREDF), and the HIV+ Hepatitis Policy Institute. This presentation is important to consumers, insurers, and state insurance regulators because discrimination harms everyone throughout the insurance industry.
5. Heard a presentation, “The Urgency of Now: Mental Health Parity and an Ongoing Pandemic,” by the National Women’s Law Center (NWLC) and the Georgetown University Center on Health Insurance Reforms (CHIR). This presentation is important to consumers, insurers, and state insurance regulators because it encourages compliance with federal mental health parity requirements.
6. Heard a presentation, “Standard Plan Design: Federal Developments and Lessons Learned in States,” by the Leukemia & Lymphoma Society (LLS) and the Colorado Children’s Campaign. This presentation is important to consumers, insurers, and state insurance regulators because it helps insurers and state insurance regulators provide standard plans that address developments at the federal level.

NAIC/AMERICAN INDIAN AND ALASKA NATIVE LIAISON COMMITTEE

April 6, 2022

1. Adopted its 2021 Fall National Meeting minutes.
2. Heard a presentation on communication and outreach within the Indian culture by Montana Indian Ministries. This presentation is important to consumers and state insurance regulators to assist in understanding, educating, and protecting tribal consumers.
3. Heard a presentation on Montana’s experience with the federal Affordable Care Act (ACA) and its COVID-19/pandemic response by the Montana Department of Public Health and Human Services. This presentation is important to state insurance regulators as they share experiences to further enhance consumer protections.
4. Heard a presentation on consumer outreach and education about fraud by the Coalition Against Insurance Fraud (CAIF). This presentation is important to consumers, industry, and state insurance regulators as they work together to combat insurance fraud within tribal communities.
5. Heard an announcement that two presenters from the Blue Cross and Blue Shield of New Mexico will speak at a Liaison Committee meeting that will be scheduled before the Summer National Meeting.
6. Distributed the results of the state insurance regulator and consumer representative surveys about the goals of the Liaison Committee for 2022. The survey results will be discussed at a later date.
EXECUTIVE (EX) COMMITTEE AND PLENARY

Executive (EX) Committee and Plenary, April 8, 2022, Minutes ................................................................. 3-2
Adopted the Long-Term Care Insurance Multistate Rate Review Framework (LTCI MSA Framework)
(Attachment One) ........................................................................................................................................... 3-8
Report on States’ Implementation of NAIC-Adopted Model Laws and Regulations (Attachment Two)....... 3-48
Executive (EX) Committee and Plenary  
Kansas City, Missouri  
April 8, 2022

The Executive (EX) Committee and Plenary met in Kansas City, MO, April 8, 2022. The following Committee and Plenary members participated: Dean L. Cameron, Chair (ID); Chlora Lindley-Myers, Vice Chair (MO); Andrew N. Mais, Vice President (CT); Jon Godfread, Secretary-Treasurer (ND); David Altmair, Most Recent Past President (FL); Lori K. Wing-Heier (AK); Jim L. Ridling represented by Mark Fowler (AL); Alan McClain represented by Russ Galbraith (AR); Peni Itula Sapini Teo represented by Elizabeth Perri (AS); Evan G. Daniels represented by Jon Savary (AZ); Ricardo Lara (CA); Michael Conway (CO); Karima M. Woods (DC); Trinidad Navarro (DE); John F. King (GA); Colin M. Hayashida (HI); Doug Ommen (IA); Dana Popish Severinghaus represented by Shannon Whalen (IL); Amy L. Beard represented by Victoria Hastings (IN); Vicki Schmidt (KS); Sharon P. Clark (KY); James J. Donelon (LA); Gary D. Anderson (MA); Kathleen A. Birrane (MD); Timothy N. Schott (ME); Anita G. Fox (MI); Grace Arnold (MN); Mike Chaney (MS); Troy Downing (MT); Mike Causey represented by Jackie Obusek (NC); Eric Dunning (NE); Chris Nicolopoulos (NH); Marlene Caride represented by Justin Timmerman (NJ); Russell Toal (NM); Barbara D. Richardson (NV); Adrienne A. Harris represented by My Chi To (NY); Judith L. French (OH); Glen Mulready represented by Brian Downs (OK); Andrew R. Stolfi (OR); Michael Humphreys (PA); Alexander S. Adams Vega represented by Brenda Perez (PR); Elizabeth Kelleher Dwyer (RI); Raymond G. Farmer represented by Daniel Morris (SC); Larry D. Deiter (SD); Carter Lawrence represented by Toby Compton (TN); Cassie Brown (TX); Jon Pike (UT); Scott A. White (VA); Tregenza A. Roach (VI); Michael S. Pieciak represented by Rosemary Raszka (VT); Mike Kreidler (WA); Nathan Houdek (WI); Allan L. McVey (WV); and Jeff Rude (WY).

1. **Adopted the LTCI MSA Framework**

Commissioner White reported that on Dec. 12, 2021, the Long-Term Care Insurance (EX) Task Force adopted the Long-Term Care Insurance Multistate Rate Review Framework (LTCI MSA Framework). The LTCI MSA Framework has been a cornerstone goal of the Task Force and a key component in achieving the NAIC’s long-term care insurance (LTCI) initiatives. The LTCI MSA Framework was developed in an open process with input from both state insurance regulators and industry. The LTCI MSA Framework outlines a process for a timely, consistent state-based approach to reviewing LTCI rate increase filings. Through the LTCI MSA Framework, state insurance regulators seek to reduce or eliminate existing cross-state rate inequities and improve rate level parity across states. The LTCI MSA Framework outlines the operational and actuarial aspects of a rate review, the benefits of using the multistate actuarial (MSA) process for both states and insurers, and the detailed Rate Advisory Report that will contain an analysis and recommendation for states’ consideration. States retain the authority to perform their own review and make their own determinations on final rate approval. A critical component for the future success of the MSA process is through both state insurance department and insurer participation. The MSA process is expected to be implemented and operational by September 2022.

Commissioner McVey made a motion, seconded by Director Fox, to adopt the LTCI MSA Framework (Attachment One). The motion passed with New York abstaining.

2. **Ratified the Selection of State Insurance Regulator Representatives on the FSOC**

Commissioner Navarro made a motion, seconded by Director Dunning, to ratify the Executive (EX) Committee appointment of Superintendent Dwyer to the Financial Stability Oversight Council (FSOC) as the non-voting state insurance regulator representative. The motion passed unanimously.
3. **Received the Report of the Executive (EX) Committee**

Director Cameron reported that the Executive (EX) Committee met April 6 and adopted the April 4 report of the joint meeting of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee.

The Committed adopted the report of the Executive (EX) Committee, which met March 21, Feb. 3, and Jan. 14 and took the following action: 1) approved the System for Electronic Rates & Forms Filing (SERFF) Modernization – 2022 Transition Stages Fiscal Impact Statement after a 10-day public comment period; 2) discussed composition of the Government Relations (EX) Leadership Council; 3) approved the appointment of Director Daniels to serve on the National Insurance Producer Registry (NIPR) Board of Directors beginning in February 2022; 4) selected Los Angeles, CA, for the 2026 Spring National Meeting site location; and 5) approved the NAIC filing an amicus brief in the case of *In Re: Penn Treaty Network America Insurance Company (In Liquidation), In Re: American Network Insurance Company (In Liquidation).*

The Committee adopted the reports of its task forces: 1) the Climate and Resiliency (EX) Task Force; 2) the Government Relations (EX) Leadership Council; 3) the Long-Term Care Insurance (EX) Task Force; and 4) the Special (EX) Committee on Race and Insurance.

The Committee also: 1) adopted the proposal to establish a Catastrophe Modeling Center of Excellence (COE) within the NAIC’s Center for Insurance Policy and Research (CIPR); 2) adopted the proposed redesigned NAIC Climate Risk Disclosure Survey as a voluntary tool for state use; 3) approved disbanding the SERFF Advisory Board; and 4) received the 2021 Annual Report of the NAIC Designation Program Advisory Board activities.

The Committee received a status report on the NAIC State Ahead strategic plan implementation.

The Committee received a status report on model law development efforts for amendments to: 1) the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act* (#171); 2) the *Mortgage Guaranty Insurance Model Act* (#630); 3) the *Nonadmitted Insurance Model Act* (#870); and 4) the Pet Insurance Model Act.

The Committee heard reports from NIPR and the Interstate Insurance Product Regulation Commission (Compact).

4. **Adopted by Consent the Committee, Subcommittee, and Task Force Minutes of the 2021 Fall National Meeting**

Director Lindley-Myers made a motion, seconded by Commissioner Mais, to adopt by consent the committee, subcommittee, and task force minutes of the 2021 Fall National Meeting. The motion passed unanimously.

5. **Received the Report of the Life Insurance and Annuities (A) Committee**

Director French reported that the Life Insurance and Annuities (A) Committee met April 7. During this meeting, the Committee: 1) adopted its 2021 Fall National Meeting minutes; 2) adopted the report of the Accelerated Underwriting (A) Working Group, including its interim meeting minutes and the *Accelerated Underwriting in Life Insurance Educational Report*; and 3) heard an update on the U.S. Department of Labor (DOL) Fiduciary Rule for retirement advice.

The Committee heard an update from the Annuity Suitability (A) Working Group that 21 states have adopted the best interest revisions to the *Suitability in Annuity Transactions Model Regulation* (#275), and seven states have state insurance regulations pending. Adoption by the remaining states remains a priority. The Working Group
plans to meet in May to continue work on a Frequently Asked Questions (FAQ) document to promote greater uniformity in the adoption of Model #275.

The Committee also: 1) adopted the report of the Life Actuarial (A) Task Force; 2) discussed having the Life Insurance Online Guide (A) Working Group focus on updating life insurance information on the NAIC website; and 3) heard an update from Workstream Four of the Special (EX) Committee on Race and Insurance that it hopes to focus on marketing in underserved communities.

6. Received the Report of the Health Insurance and Managed Care (B) Committee

Commissioner Downing reported that the Health Insurance and Managed Care (B) Committee met April 7. During this meeting, the Committee adopted its 2021 Fall National Meeting minutes.

The Committee heard from Jeff Wu (Center for Consumer Information and Insurance Oversight—CCIIO), Deputy Director for Policy at the CCIIO, on the Biden administration’s activities of interest to the Committee. His update focused on the implementation and enforcement of the federal No Surprises Act (NSA) since it became effective Jan. 1. He discussed the federal Centers for Medicare & Medicaid Services’ (CMS’s) outreach efforts and tools created, such as a No Surprises Help Desk, new FAQ documents, and other web resources. He also discussed the CMS’s role in the enforcement of the NSA and its interactions with the states regarding NSA enforcement.

The Committee received an update from Workstream Five of the Special (EX) Committee on Race and Insurance that agreed that its focus should center on identifying demographic-based barriers to the acquisition and use of health insurance and creating strategies for mitigating or removing such barriers and understanding the role health insurance can play in addressing inequities in health outcomes and social determinates of health.

The Workstream also agreed on a framework for executing those objectives, including the specific topics it will cover during the year: benefit design and consumer empowerment and engagement. The Workstream plans to meet at least monthly to hear from various stakeholders, such as consumer groups, academics, and industry; and it would like to hold listening sessions, potentially in conjunction with Zone meetings, with community-based individuals and organizations who work with racially disadvantaged and historically underserved and underrepresented populations.

The Committee adopted its subgroup, working group, and task force reports and their interim meeting minutes.

The Committee adjourned into a regulator-to-regulator session with CCIIO representatives to candidly discuss any issues with the implementation of the NSA to date.

7. Received the Report of the Property and Casualty Insurance (C) Committee

Commissioner Chaney reported that the Property and Casualty Insurance (C) Committee met April 7. During this meeting, the Committee adopted its 2021 Fall National Meeting minutes.

The Committee adopted the reports of its task forces and working groups: 1) the Casualty Actuarial and Statistical (C) Task Force; 2) the Surplus Lines (C) Task Force; 3) the Title Insurance (C) Task Force; 4) the Workers’ Compensation (C) Task Force; 5) the Cannabis Insurance (C) Working Group; 6) the Catastrophe Insurance (C) Working Group; 7) the Terrorism Insurance Implementation (C) Working Group; and 8) the Transparency and Readability of Consumer Information (C) Working Group.

The Committee adopted revised charges reappointing the Pet Insurance (C) Working Group with the charge to “Complete the development of a model law to establish appropriate regulatory standards for the pet insurance
industry.” The Committee adopted an extension until the Summer National Meeting for revisions to the proposed Pet Insurance Model Act.

The Committee also: 1) heard a presentation from NAIC staff on private passenger auto (PPA) insurance results over the past 10 years; 2) heard a presentation from Susanna Gotsch (CCC Intelligent Solutions) and Robert Hartwig (University of South Carolina) regarding inflationary pressures in the property/casualty (P/C) insurance industry; 3) heard a federal update; and 4) heard an update from Peter Kochenburger (University of Connecticut School of Law) on a recent ordinance in San Jose, CA, requiring liability insurance for gun owners.

8. Received the Report of the Market Regulation and Consumer Affairs (D) Committee

Commissioner Pike reported that the Market Regulation and Consumer Affairs (D) Committee met April 7. During this meeting, the Committee adopted its 2021 Fall National Meeting minutes.

The Committee adopted its revised 2022 charges. The Privacy Protections (D) Working Group will now report to the Innovation, Cybersecurity, and Technology (H) Committee; the Speed to Market (H) Working Group will now report to the Market Regulation and Consumer Affairs (D) Committee; the Advisory Organization Examination Oversight (D) Working Group name was shortened to the Advisory Organization (D) Working Group; and the Antifraud Education Enhancement (D) Working Group was disbanded.

The Committee adopted the reports of its task forces and working groups: 1) the Antifraud (D) Task Force; 2) the Market Information Systems (D) Task Force; 3) the Producer Licensing (D) Task Force; 4) the Advisory Organization Examination Oversight (D) Working Group; 5) the Market Analysis Procedures (D) Working Group; 6) the Market Conduct Annual Statement Blanks (D) Working Group; 7) the Market Conduct Examination Guidelines (D) Working Group; 8) the Market Regulation Certification (D) Working Group; 9) the Privacy Protections (D) Working Group; and 10) the Speed to Market (D) Working Group.

The Improper Marketing of Health Insurance (D) Working Group under the Antifraud (D) Task Force is a priority this year as the group continues to coordinate state efforts to monitor the marketing of health plans and coordinate appropriate enforcement actions.

The Market Regulation Certification (D) Working Group was reappointed to focus on establishing and maintaining standards that promote sound practices relating to the market conduct examination, market analysis, and related continuum functions performed for insurance consumer protection. The Working Group will review suggested updates submitted by pilot states to the draft voluntary certification program.

9. Received the Report of the Financial Condition (E) Committee

Commissioner White reported that the Financial Condition (E) Committee met April 5. During this meeting, the Committee: 1) adopted its Jan. 12, 2022, and 2021 Fall National Meeting minutes, which included the following action: a) adopted the Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation; b) adopted the RefAWG Review Process for Passporting Certified and Reciprocal Jurisdiction Reinsurers; and c) exposed a request for comment suggesting a revised approach to risk-based capital (RBC) requirements for structured securities and other asset-backed securities (ABS).

The Committee adopted the reports of its task forces and working groups: 1) the Accounting Practices and Procedures (E) Task Force; 2) the Capital Adequacy (E) Task Force; 3) the Financial Stability (E) Task Force; 4) the Reinsurance (E) Task Force; 5) the Valuation of Securities (E) Task Force; 6) the Group Capital Calculation (E) Working Group; 7) the Restructuring Mechanisms (E) Working Group; and 8) the National Treatment and Coordination (E) Working Group.
The Committee also: 1) received an extension request from the Mortgage Guaranty Insurance (E) Working Group on its work on Model #630; and 2) received an update on certain committee-supported initiatives related to low interest rates and asset risk.

Note: Items adopted within the Financial Condition (E) Committee’s task force and working group reports that are considered technical, noncontroversial, and not significant by NAIC standards—i.e., they do not include model laws, model regulations, model guidelines, or items considered to be controversial—will be considered for adoption by the Executive (EX) Committee and Plenary through the Financial Condition (E) Committee’s technical changes report process. Pursuant to this process, which was adopted by the NAIC in 2009, a listing of the various technical changes will be sent to the NAIC members shortly after completion of the Spring National Meeting, and the members will have 10 days to comment with respect to those items. If no objections are received with respect to a particular item, the technical changes will be considered adopted by the NAIC membership and effective immediately.

10. Received the Report of the Financial Regulation Standards and Accreditation (F) Committee

Director Wing-Heier reported that the Financial Regulation Standards and Accreditation (F) Committee met April 4 in regulator-to-regulator session, pursuant to paragraph 7 (consideration of individual state insurance department’s compliance with NAIC financial regulation standards) of the NAIC Policy Statement on Open Meetings, and: 1) discussed state-specific accreditation issues; and 2) voted to award continued accreditation to the insurance departments of Alabama, Mississippi, and North Carolina.

The Committee also met April 5 in open session and adopted its 2021 Summer National Meeting minutes.

The Committee also: 1) adopted, immediately by reference, 2021 revisions to NAIC publications that are required for accreditation purposes (e.g., the Accounting Practices and Procedures Manual (AP&P Manual)) and were deemed insignificant; and 2) exposed an update to the examination coordination guidelines recommended by the Financial Examiners Handbook (E) Technical Group for a 30-day public comment period ending May 6.

The Committee exposed the 2021 revisions to the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450) to be acceptable for accreditation but not required, for a 30-day public comment period ending May 6. The revisions address the continuation of essential services through affiliated intercompany agreements with an insurer that is placed into receivership.

The Committee exposed the proposed updates to the Preamble of the Accreditation Program Manual to reference VM-21, Requirements for Principle-Based Reserves for Variable Annuities, for a 30-day public comment period ending May 6. The proposed revisions serve as a reference for how captives that reinsure variable annuity business are addressed in the accreditation standards.

11. Received the Report of the International Insurance Relations (G) Committee

Commissioner Anderson reported that the International Insurance Relations (G) Committee met April 7. During this meeting, the Committee adopted its Jan. 18, 2022, and 2021 Fall National Meeting minutes.

The Committee discussed international efforts on sustainability and climate, including a presentation by the Sustainable Insurance Forum (SIF) on its mission and workstreams and by Liberty Mutual on how it is addressing these issues.

The Committee heard an update on international activities, including: 1) recent and upcoming meetings, events, and speaking engagements with international regulators; 2) the Spring 2022 International Fellows Virtual
Program; and 3) upcoming meetings and participation in workstreams of the Organisation for Economic Co-operation and Development (OECD) Insurance and Private Pensions Committee.

Commissioner Anderson noted that registration is open for the 2022 International Insurance Forum to be held May 12–13 in Washington, DC.

12. Received the Report of the Innovation, Cybersecurity, and Technology (H) Committee

Commissioner Birrane reported that the Innovation, Cybersecurity, and Technology (H) Committee met April 5. During this meeting, the Committee adopted structural and charge revisions, which included the following action: a) moved the Speed to Market (H) Working Group to the Market Regulation and Consumer Affairs (D) Committee; b) moved the Privacy Protections (D) Working Group from the Market Regulation and Consumer Affairs (D) Committee to the Innovation, Cybersecurity, and Technology (H) Committee; c) modified the charge to the Privacy Protections (H) Working Group to add the words “data ownership and use rights”; and d) appointed a new working group, the Innovation in Technology and Regulation (H) Working Group, and adopted its proposed charges.

The Committee adopted the reports of its task forces and working groups: 1) the Big Data and Artificial Intelligence (H) Working Group; 2) the Cybersecurity (H) Working Group; and 3) the E-Commerce (H) Working Group.

The Committee received a report on the Casualty Actuarial and Statistical (C) Task Force predictive model review process, including rate filing issues and its predictive analytics webinars called the “Book Club.” The Task Force has reviewed 54 rate models and produced 127 reports to assist state insurance regulators with model reviews.

The Committee received a report from the Privacy Protections (D) Working Group, which met April 4 and took the following action: 1) heard updates on state and federal privacy legislation; and 2) discussed comments received from the American Council of Life Insurers (ACLI) and the Health Coalition on the Working Group’s 2022 work plan.

The Committee discussed various committee-level projects, including: 1) the creation of a new Collaboration Forum that will serve as a platform for multiple NAIC committees to work together to identify and address foundational issues and develop a common framework that can inform the specific workstreams in each group. The first Collaboration Forum will be on algorithmic bias; 2) the development of a portal or library of resources related to innovation, cybersecurity, data and consumer privacy, and technology tentatively called the “ICT-Hub”; and 3) the creation of a forum to facilitate training and education of state insurance regulators on innovation and technology topics, SupTech issues, and potential ways that data and technology might affect the insurance sector in the future.

The Committee received an update on the implementation of the Insurance Data Security Model Law (#668) and the Unfair Trade Practices Act (#880) revised language specific to rebating.

13. Received a Report on the States’ Implementation of NAIC-Adopted Model Laws and Regulations

Director Cameron referred attendees to the written report for updates on the states’ implementation of NAIC-adopted model laws and regulations (Attachment Two).

Having no further business, the Executive (EX) Committee and Plenary adjourned.

Long-Term Care Insurance Multistate Rate Review Framework

Draft as of December 12, 2021

NAIC Long-Term Care Insurance (EX) Task Force
PREFACE

The Long-Term Care Insurance Multistate Rate Review Framework (LTCI MSA Framework) was drafted by the Ad Hoc Drafting Group of the NAIC Long-Term Care Insurance (EX) Task Force. The Ad Hoc Drafting Group consists of representatives from state insurance departments in Connecticut, Minnesota, Nebraska, Texas, Virginia, and Washington.

The LTCI MSA Framework was adopted by the NAIC Long-Term Care Insurance Multistate Rate Review (EX) Subgroup and the Long-Term Care Insurance (EX) Task Force on Dec. 12, 2021, and the NAIC Executive Committee and Plenary on [insert date].

I. INTRODUCTION

A. Purpose

The NAIC charged the Long-Term Care Insurance (EX) Task Force with developing a consistent national approach for reviewing current long-term care insurance (LTCI) rates that results in actuarially appropriate increases being granted by the states in a timely manner and eliminates cross-state rate subsidization. Considering that charge and the threat posed by the current LTCI environment both to consumers and the state-based system (SBS) of insurance regulation, the Task Force developed this framework for a multi-state actuarial (MSA) LTCI rate review process (MSA Review).

This framework is based upon the extensive efforts of the Long-Term Care Insurance Multistate Rate Review (EX) Subgroup, including its experience with a pilot program conducted by the pilot program’s rate review team (Pilot Team). As part of that pilot program, the Pilot Team reviewed LTCI premium rate increase proposals and issued MSA Advisory Reports recommending actuarially justified state-by-state rate increases. This framework aims to institutionalize a refined version of the Pilot Team’s approach to create a voluntary and efficient MSA Review that produces reliable and nationally consistent rate recommendations that state insurance regulators and insurers can depend upon. The MSA Review has been designed to leverage the limited LTCI actuarial expertise among state insurance departments by combining that expertise into a single review process analyzing in force LTCI premium rate increase proposals or rate proposal1 and producing an MSA Advisory Report for the benefit and use of all state insurance departments. Note that rate decrease proposals can be contemplated within the MSA Review. The same concepts of this MSA Framework would be applied, if such a rate decrease proposal is received for MSA Review. The goal of this framework is to create a process that will not only encourage insurers to submit their LTCI products for multi-state review, but also provide insurance departments the requisite confidence in the MSA Review so they will voluntarily utilize the Multistate Actuarial LTCI Rate Review Team’s (MSA Team’s) recommendations when conducting their own state level reviews of in force LTCI rate increase filings.2 Ultimately, the MSA Review is designed to foster as much consistency as possible between states in their respective approaches to rate increases.

The purpose of this document is to function as a framework for the MSA Review that communicates to NAIC members, state insurance department staff, and external stakeholders how the MSA Review works to the benefit of state insurance departments and how insurers might engage in the MSA Review. This MSA framework is intended to communicate the governance, policies, procedures, and actuarial methodologies supporting the MSA Review. State insurance regulators can utilize the information and guidance contained herein to understand the basis of the MSA Team’s MSA Advisory Reports. Insurance companies can access the information and guidance contained herein to understand how to engage in the MSA Review, and how the MSA Advisory Report may affect the insurer’s in force LTCI premium rate increase filing decisions and interactions with individual state insurance regulators.

This document will be maintained by NAIC staff under the oversight of the Task Force and be revised as directed by the Task Force or an appointed subgroup. This document will be part of the NAIC library of official publications and copyrighted.

B. State Participation in the MSA Review

The MSA Review of an insurer’s rate proposal will be available to state insurance departments who are both an Impacted State and a Participating State. These are defined as follows.

- “Impacted State” is defined as the domestic state, or any state for which the product associated with the insurer’s in force LTCI premium rate increase proposal is or has been issued.

---

1 “Premium rate increase proposal(s)” or “rate proposal(s)” in this document refers only to an insurer’s request for review of a proposed in force LTCI premium rate increase or decrease under the MSA Review.

2 The term “rate increase filing” or “rate filing(s)” in this document refers only to the in force LTCI premium rate request(s) that is submitted to individual state departments of insurance (DOI) for a regulatory decision. Filings refer to both rate increase filings and rate decrease filings.
“Participating State” is defined as any impacted state insurance department that agrees to participate in the MSA Review. Participation is voluntary as described in Section IE(1) below. Participation may include activities such as, but not limited to, receiving notifications of rate increase proposals in System for Electronic Rate and Form Filing (SERFF), participation in communication/webinars with the MSA Team, and access to the MSA Advisory Report.

Note that state participation is expected to increase in the future as the MSA Review process continues to be developed and refined.

C. General Description of the MSA Review

The MSA Review provides for a consistent actuarial review process that will result in an MSA Advisory Report, which state insurance departments may consider when deciding on an insurer’s rate increase filing or to supplement the state’s own review process.

The MSA Review is conducted by a team of state’s regulatory actuaries with expertise in LTCI rate review. Each review will be led by a designated member of the MSA Team. The review process is supported by NAIC staff and Interstate Insurance Product Regulation Commission (Compact) staff, who will administratively assist insurers in making requests to utilize the MSA process and facilitate communication between the insurer, the MSA Team and [Participating/Impacted TBD] States. The NAIC’s electronic infrastructure, SERFF, will be used to streamline the rate proposal and review process. Although the administrative services of Compact staff and SERFF’s Compact filing platform are utilized in the MSA Review, MSA rate proposals are reviewed, and MSA Advisory Reports are prepared by the MSA Team. MSA rate proposals are not Compact filings, and Compact staff will not have any role in determining the substantive content of the MSA Advisory Reports.

The MSA Review begins when an insurer expresses interest in an MSA Review being performed for an in force LTCI rate proposal to the MSA Team through SERFF or supporting NAIC or Compact staff. The eligibility of the rate proposal will be reviewed and determined by the MSA Team with assistance, as needed, from supporting staff.

The MSA Review of eligible rate proposals will resemble a state-specific rate review process utilizing consistent actuarial standards and methodologies. The MSA Team will apply the Minnesota and Texas approaches to calculate recommended, approvable rate increases. While aspects of the Minnesota and Texas approaches may result in lower rate increases than those resulting from loss ratio-based approaches and are outside the pure loss ratio requirements contained in many states’ laws and rules, the approaches fall in line with legal provisions that rates shall be fair, reasonable, and not misleading. The MSA Team will review support for the assumptions, experience, and projections provided by the insurer and perform validation steps to review the insurer-provided information for reasonableness. The MSA Team will document how the proposal complies with the regulatory approach utilized by the MSA Team for Participating States. See Section V for more details on the actuarial review.

Throughout the MSA Review, the MSA Team will provide updates to the insurer. The MSA Team will deliver the final MSA advisory Report to the insurer and address any questions the insurer has about the results of the Review.

Additionally, the review will consider reduced benefit options (RBOs) that are offered in lieu of the requested rate increases and factor in non-actuarial considerations.

At the completion of the review, the MSA Team will draft an MSA Advisory Report for Participating States and insurers that provides both summary and detail information about the rate proposal, the review methodologies, the analysis and other considerations of the team, and the recommendation for rate increases as outlined in Appendix A. The MSA Advisory Report will also indicate whether the recommendation differs from the insurer’s proposal. Participating States can utilize the MSA Advisory Report or supplement their own state’s rate review with it as

---

3 Certain processes for Impacted vs. Participating States are yet to be determined (TBD).
described in the following Section ID. Participating States may also utilize the information filed with the MSA Team in addition to the Advisory Report as appropriate.

The rate proposal, review process, actuarial methodologies, and other review considerations are detailed within this framework document and accompanying appendices.

D. Benefits of Participating in the MSA Review

Both state insurance regulators and insurers will benefit by participating in the MSA Review in multiple ways. For state insurance regulators:

- First, they will be able to leverage the demonstrated expertise of the MSA Team in reviewing in force LTCI rate increase filings in their state. It is recognized that multiple states may not have significant actuarial expertise with LTCI, so participation in the MSA Review will allow those states to build on the specific, dedicated LTCI actuarial expertise of the MSA Team.
- Second, state insurance regulators will be able to utilize the MSA Team to promote consistency of actuarial reviews among filings submitted by all insurers to states and actuarial reviews across all states. Because the MSA Team is using the same dedicated approach to in force LTCI rate increase reviews, states who utilize the MSA Team will have the benefit of using the same consistent methodology that is relied upon by other state insurance departments when reviewing in force LTCI rate increase filings in their state.
- Third, the MSA Review allows for more state regulatory actuaries to work with or under the supervision of qualified actuaries, which affords them an opportunity to establish LTCI-specific qualifications in making actuarial opinions. This is particularly important when we consider that requirements to be a qualified actuary include years of experience under the supervision of another already qualified actuary in that subject matter.
- Finally, participating in the MSA Review will allow all state insurance regulators to share questions and information regarding a particular rate proposal or review methodologies; thus, increasing each state’s knowledge base in this area and promoting a more consistent national approach to in force LTCI rate review.

Note that states’ use of and reliance on the MSA Advisory Report is expected to increase in the future as the MSA Review continues to be developed and refined, and the benefits of the MSA Review described above become more evident.

Long-Term Care (LTC) insurers will likewise see multiple benefits in participating in the MSA Review:

- First, by utilizing the MSA Review and through the receipt of MSA information and the MSA Advisory Report from the MSA Team, insurers should see increased efficiency and reduced timelines for nationwide premium rate increase filings. As the MSA Team delivers the MSA Advisory Report for a rate proposal to Participating States, it has functionally reduced the review time for each state, meaning that LTC insurers should see more efficient and timely reviews from these states.
- Second, participating in the MSA Review will provide LTC insurers with one consistent recommendation to be used when making rate increase filings to all states, thus reducing the carrier’s workload in developing often widely differing filings for states’ review.

E. Disclaimers and Limitations

State Authority Over Rate Increase Approvals

The MSA Advisory Report is a recommendation to Participating States based upon the methodologies adopted by the MSA Review. The recommendations are not specific to, and do not account for, the requirements of any specific state’s laws or regulations. The MSA Review is not intended, nor should it be considered, to supplant or otherwise replace any state’s regulatory authority, responsibility, and/or decision making. Each state remains ultimately responsible for approving, partially approving, or disapproving any rate increase in accordance with applicable state law.
A Participating State’s use of the MSA Advisory Report’s recommendations with respect to one filing does not require that state to consider or use any MSA Advisory Report recommendations with respect to any other filing. The MSA Review in no way: 1) eliminates the insurer’s obligation to file for a rate increase in each Participating State; or, 2) modifies the substantive or procedural requirements for making such a filing. While encouraged to adopt the recommendations of the MSA Review in each of their state filings, insurers are not obligated to align their individual state rate filings with the recommendations contained within the MSA Advisory Report.

The MSA Advisory Reports, including the recommendations contained therein, are only for use by Participating States in considering and evaluating rate filings. The MSA Advisory Reports or their conclusions shall not be utilized by any insurer in a rate filing submitted to a non-Participating State, nor shall the MSA Advisory Reports be used outside of each state insurance regulator’s own review process or challenge the results of any individual state’s determination of whether to grant, partially grant, or deny a rate increase.

Information Sharing Between State Insurance Departments

The MSA Review, including, but not limited to, meetings, calls, and correspondence on insurer-specific matters are held in regulator-to-regulator sessions and are confidential. In addition, if certain information and documents related to specific companies that are confidential under the state law of an MSA Team member or a Participating State need to be shared with other state insurance regulators, such sharing will occur as authorized by state law, and pursuant to the Master Information Sharing and Confidentiality Agreement (Master Agreement) between states that governs the sharing of information among state insurance regulators. Through the Master Agreement, state insurance regulators affirm that any confidential information received from another state insurance regulator will be maintained as confidential and represent that they have the authority to protect such information from disclosure.

Confidentiality of the Rate Proposal

Members of the MSA Team and Participating States affirm and represent that they will provide any in force LTCI rate proposal, as discussed herein with the same protection from disclosure, if any, as provided by the confidentiality provisions contained within their state’s laws and regulations.

Confidentiality of the MSA Reports

Likewise, members of the MSA Team and Participating States affirm and represent that they will provide any MSA Advisory Report(s), as discussed herein with the same protection from disclosure, if any, as provided by the confidentiality provisions contained within their state’s laws and regulations for rate filings.

F. Governing Body and Role of the NAIC Long-Term Care Insurance (EX) Task Force

The Long-Term Care Insurance (EX) Task Force is expected to remain in place for the foreseeable future to oversee the implementation of the MSA Review, and related MSA Advisory Reports, and to provide a discussion forum for MSA-related activities. The Task Force or any successor will continuously evaluate the effectiveness and efficiency of the MSA Review for the benefit of state insurance regulators and provide direction, as needed. The Task Force may create one or more subgroups to carry out its oversight responsibilities.

Membership and leadership of the Task Force will be selected by the NAIC president and president-elect as part of the annual committee assignment meeting held in January. Selection of the membership and leadership may consider a variety of criteria, including commissioner participation, insurance department staff competencies, market size, domestic LTC insurers, and other criteria considered appropriate for an effective governance system.
II. MSA TEAM

The MSA Team comprises state insurance department actuarial staff. MSA Team members are chosen by their skill set and LTCI actuarial experience. The Long-Term Care Insurance (EX) Task Force, or its appointed subgroup, will determine the appropriate experience and skill set for qualifying members for the MSA Team. It is expected that state participants will provide expertise and technical knowledge specifically regarding the array of LTCI products and solvency considerations. The desired MSA Team membership composition should include a minimum of five and up to seven members.

Membership must follow the requirements below and be approved by the chair of the Task Force or the chair of an appointed subgroup. The following outlines the qualifications, duties, participation expectations and resources required for MSA Team members.

A. Qualifications of an MSA Team Member

To be eligible to participate as a member of the MSA Team, a state insurance regulator is required to:

- Hold a senior actuarial position in a state insurance department in life insurance, health insurance, or LTCI.
- Be recommended by the insurance commissioner of the state in which the actuary serves.
- Have over five years of relevant LTCI insurance experience.
- Hold an Associate of the Society of Actuaries (ASA) designation.
- Currently participates as a member of the Long-Term Care Insurance Multistate Rate Review (EX) Subgroup (or an equivalent Subgroup appointed by the Long-Term Care Insurance (EX) Task Force) and the LTC Pricing (B) Subgroup.
- Be a member of the American Academy of Actuaries (Academy) (at least one member).

Additionally, the following qualifications are preferred:

- Hold a Fellow of the Society of Actuaries (FSA) designation
- Have spent at least one year engaged in discussions of either the Task Force or its appointed Subgroup

As both state insurance regulators and the MSA Review may benefit by developing and expanding specific LTCI actuarial expertise through participation in this process, having one or more suitably experienced and qualified actuaries participate in and supervise the work of the MSA Team is critical to the viability of the MSA process. Participation also provides opportunities for additional actuaries to meet the requirements of the U.S. Qualification Standards applicable to members of the Academy and other U.S. actuarial organizations as they relate to LTCI.

Consideration will be given to joint membership where two actuaries within a state combine to meet the criteria stated above.

Consultants engaged by the state insurance department would not be considered for MSA Team membership.

B. Duties of an MSA Team Member

- Active involvement with the MSA Team, with an expected average commitment of 20 hours per month (see Section IV for details of the MSA Review and activities of a team member).
- Participate in all MSA Team calls and meetings (unless an extraordinary situation occurs).
- Review and analyze materials related to MSA rate proposals.
- Provide input on the MSA Advisory Reports, including regarding the recommended rate increase approval amounts.
- Maintain confidentiality of MSA Team meetings, calls, correspondence, and the matters discussed therein to the extent permitted by state law and protect from disclosure any confidential information received pursuant to the Master Agreement. MSA Team members should communicate any request for public disclosure of MSA information or any obligation to disclose.
- Active involvement within NAIC LTCI actuarial groups.
D. Willingness to provide expertise to assist other states.

C. Participation of an MSA Team Member

Except for webinars and other general communications with state insurance departments, participation in the MSA Review conference calls and meetings related to the review of a specific rate proposal will be limited to named MSA Team members, supporting NAIC or Compact staff members who will be assisting the MSA Team, and the chair and vice chair of the Long-Term Care Insurance (EX) Task Force, or its appointed subgroup. Other interested state insurance regulators (e.g., domiciliary state insurance regulators) may be invited to participate on a call at the discretion of the MSA Team or the chair or vice chair of the Task Force or its appointed subgroup.

D. MSA Associate Program

The MSA Associate Program within the MSA Framework is intended to encourage and engage state insurance regulators to become actively involved in the MSA process. Additionally, a benefit of the program is to provide an educational opportunity for state insurance department regulatory actuaries that wish to gain expertise in LTCI. Regulatory actuaries can participate with varying levels of involvement or for different purposes as described. Regulatory actuaries may participate:

- As a mentee. The mentee would participate in aspects of the MSA Review. An MSA Team member will serve as a mentor to another state regulatory actuary and provide one-on-one guidance.
- To gain more knowledge and understanding of the Minnesota and Texas actuarial approaches.
- To share their own expertise through feedback to the MSA Team on MSA Advisory Reports to better enhance the overall MSA process.
- To participate on an ad hoc limited basis, i.e., where a regulatory actuary would like to participate but is unable to make the required time commitment.
- To meet the U.S. Qualification Standards applicable to members of the Academy and other U.S. actuarial organizations as they relate to LTCI by serving under the supervision of a qualified actuary on the MSA Team.
- To serve as a peer reviewer of the MSA Advisory Reports.

E. Conflicts, Confidentiality, and Authority of the MSA Team

Authority of the MSA Team

Members of the MSA Team serve on a purely voluntary basis, and any member’s participation shall not be viewed or construed to be any official act, determination, or finding on behalf of their respective jurisdictions.

Disclosures and Confidentiality Obligations, as Applicable

All members of the MSA Team acknowledge and understand that the MSA Review, including, but not limited to, meetings, calls, and correspondence are confidential and may not be shared, transmitted, or otherwise reproduced in any manner. Additionally, all members of the MSA Team affirm and represent that they will: a) provide any in force LTCI rate proposal with the same protection from disclosure, if any, as provided by the confidentiality provisions contained within their state’s laws and regulations; and, b) provide any MSA Advisory Report with the same protection from disclosure, if any, as provided by the confidentiality provisions contained within their state’s laws and regulations for rate filings.

Conflict of Interest Avoidance Procedures and Certifications

No member of the MSA Team may own, maintain, or otherwise direct any financial interest in any company or its affiliates subject to the regulation of any individual state, nor may any member serve or otherwise be affiliated with the management or board of directors in any company or its affiliates subject to the regulation of any individual
state. All conflicts of interest, whether real or perceived are prohibited and no member of the MSA Team shall engage in any behaviors that would result in or create the appearance of impropriety.

F. Required NAIC and Compact Resources

The MSA Team will require administrative and technical support from the NAIC. As the MSA Review develops, it is expected that NAIC support resources will play an integral role in managing the overall program. Administrative staff support will be needed to support MSA Team communications and manage record keeping for underlying workpapers and final MSA Advisory Reports associated with each rate proposal, etc. Additionally, it is possible that limited actuarial support will be needed for the analysis of rate proposals, including preparing data files, gathering information, performing limited actuarial analysis procedures, drafting MSA Advisory Reports, and monitoring interactions among the state insurance departments and the MSA Team. Dedicated staff support for the ongoing work of the Long-Term Care Insurance (EX) Task Force will be needed as well. As more experience with rate proposal volumes and average analysis time is gained, the full complement of human resources required will be better understood.

The MSA Team and supporting NAIC and Compact staff will use the NAIC SERFF electronic infrastructure to receive insurer rate increase proposals and correspond with insurers. As needed, the MSA Team or supporting NAIC and Compact staff may communicate with the insurer outside of SERFF. The material substance of such communication can be documented within SERFF. NAIC and Compact staff will communicate with insurers only at the direction of the MSA Team. Compact staff will perform administrative work related to MSA rate increase proposals at the direction of the MSA Team and as described in this framework.

III. REQUESTING AN MSA REVIEW

A. Scope and Eligibility of a Rate Proposals for MSA Review

The following are the preferred eligibility criteria for requesting an MSA Review of a rate proposal.

- Must be an in force LTCI product (individual or group).
- Must be seeking a rate increase in at least 20 states and must affect at least 5,000 policyholders nationwide.
- Includes any stand-alone LTCI product approved by states, not by the Compact.
- For Compact-approved products meeting certain criteria, the Compact office will provide the first-level advisory review subject to the input and quality review of the MSA.

It is recognized that rate proposals vary from insurer to insurer. The above criteria and the timelines provided below are general guidelines. The MSA Team has the authority to weigh the benefits of the MSA Review for state insurance departments and the insurer against available MSA Team resources when considering the eligibility of rate proposals and the timeline for completion. Based on these considerations, the MSA Team, at its discretion, may elect to perform an MSA Review on a rate proposal that does not satisfy the above eligibility criteria.

The MSA Team reserves the right to deny a proposal that does not meet eligibility criteria. An insurer will be notified if the proposal for an MSA Review is denied.

An insurer may ask questions for more information about a potential rate proposal through communication to supporting NAIC and Compact staff and the MSA Team. This will be accomplished through a Communication Form that will be available on the Compact web page. Supporting NAIC and Compact staff will work with the insurer to complete the necessary steps to assess eligibility, discuss any technical or other issues, and answer questions.

The insurer will have access to primary and supplementary checklists in Appendix B that provide guidance to the insurer for information that should be included in a complete MSA rate proposal requested through the NAIC’s SERFF application.
B. Process for Requesting an MSA Review

As noted in Section IC above, the MSA Review will utilize the Compact’s multistate review platform within the NAIC’s SERFF application and its format for in force LTCI rate increase proposals. Therefore, a state may participate in the MSA Review without being a member of the Compact. The following describes a few key elements of the process for insurers and state insurance regulators:

- The insurer will work with NAIC and Compact support staff and the MSA Team to make a seamless rate increase proposal.
- Instructions containing a checklist for information required to be included in the rate increase proposal, as reflected in Appendix B, will be available to insurers through the Compact’s web page or within SERFF.
- The insurer shall include in the rate proposal a list of all states for which the product associated with the rate increase proposal is or has been issued. Participating States will have access to view the insurer’s rate proposal and review correspondence in SERFF.
- Fee schedule for using the MSA Review [TBD].
- Rate increase proposals for MSA Review within SERFF will be clearly identified as separate from Compact filings.
- The supporting NAIC and Compact staff through SERFF will notify the Impacted States upon receipt of the rate increase proposal with the SERFF Tracking Number.
- The MSA Team may utilize a “queue” process for managing workload and resources for incoming rate increase proposals through SERFF.
- The MSA Team may utilize Listserv or other communication means for inter-team communications.
- The MSA Team’s review of objections and insurer responses are completed through SERFF.

C. Certification

The insurer shall provide certifications signed by an officer of the insurer that it acknowledges and understands the non-binding effect of the MSA Review and MSA Advisory Report. The certification shall also provide, and the insurer shall agree, that it will not utilize or otherwise use the MSA Review and/or the resulting MSA Advisory Report to challenge, either through litigation or any applicable administrative procedure(s), any state’s decision to approve, partially approve, or disapprove a rate increase filing except when: 1) the individual state is a (Participating/Impacted State [TBD]) that affirmatively relied on the MSA Review and/or the MSA Advisory Report in making its determination; or 2) the individual state consents in writing to use of the MSA Review and/or the MSA Advisory Report.

Failure to abide by the terms of the insurer’s certification will result in the insurer and its affiliates being excluded from any future MSA Reviews, and it will permit the MSA Team to terminate, at its sole discretion, any other ongoing review(s) related to the insurer and its affiliates.

Should the MSA Team exclude any insurer and its affiliates for failure to adhere to its certification, the MSA Team, at its sole discretion, may permit the insurer and its affiliates to resume submitting rate proposals for review upon written request of the insurer.

IV. REVIEW OF THE RATE PROPOSAL

A. Receipt of a Rate Proposal

The MSA rate review process begins when an insurer expresses interest in an MSA Review being performed for a rate proposal. This interest can be expressed through completion of a Communication Form, which will be available through the Compact web page. The initial request will be reviewed by the MSA Team lead reviewer and/or supporting NAIC and Compact staff. Once an insurer has completed this initial communication and meets the criteria
for requesting an MSA Review, the insurer will work with supporting NAIC and Compact staff and the MSA Team to complete the rate increase proposal in SERFF. The MSA Team will be notified, via SERFF, when the rate increase proposal is available for review.

The supporting NAIC and Compact staff will notify (Participating/Impacted States [TBD]) via SERFF or e-mail when rate increase proposals are submitted, correspondence between the MSA Team and insurer is sent or received in SERFF, the MSA Advisory Report is available, and other pertinent activities occur during the review.

B. Completion of the MSA Review

The MSA Team shall designate a lead reviewer to perform the initial review of each rate proposal. Once the rate increase proposal is made through SERFF, the MSA Review will resemble a state-specific review process.

The MSA Team will meet periodically to discuss the review and determine any needed correspondence with the insurer. Objections and communications with filers will be conducted through SERFF, like any state-specific filing or Compact filing, to maintain a record of the key review items. Other supplemental communication between the insurer and the MSA Team or supporting NAIC and Compact staff, may occur, such as conference calls or emails, as appropriate.

The timeframe for completing the MSA Team’s review and drafting the MSA Advisory Report will be dependent upon the completeness of the rate proposal and the size and complexity of the block of policies for which the rate increase applies. The MSA Team may utilize a “queue” process for managing workload and resources for incoming rate increase proposals through SERFF. The timeliness of any necessary communication between the MSA Team and the insurer to resolve questions or request/receive additional information about the rate proposal will affect the completion of the review.

As the MSA Team completes its review: 1) the insurer will receive initial communication of a completed review, and a final MSA Advisory Report with recommendations will be drafted and communicated to state insurance departments within the next month, which may serve as a signal for a potential ideal time for the insurer to prepare to submit the state-specific filings to each state; and 2) the insurer will receive sufficient information regarding the MSA Team’s recommendation to allow the insurer an opportunity to review the recommendation and in the event that the MSA Team recommendation differs from the proposal submitted by the insurer, the insurer will be given the opportunity to interact with the MSA Team in order to ask questions, and understand the MSA Team’s reasoning.

C. Preparation and Distribution of the MSA Advisory Report

Upon completion of the actuarial review, the MSA Team will prepare a draft MSA Advisory Report for the rate proposal. The reports will be made available within SERFF “reviewer notes” for Participating States. Supporting NAIC and Compact staff will maintain a distribution list and send notifications of the availability of reports to Participating States. Consultants engaged by state insurance department staff to perform rate reviews would be given access to the MSA Advisory Report, subject to the terms of the agreement between the consultant and the Participating State insurance department.

Consultants who are bound by the actuarial Code of Professional Conduct, adopted by the Academy of Actuaries, the Society of Actuaries (SOA) and the Conference of Consulting Actuaries (CCA), should consider whether receipt of the MSA Advisory Report is acceptable under Precept 7 regarding Conflicts of Interest. For other professions, similar consideration should be made if bound by similar professionalism standards.

Prior to finalizing the MSA Advisory Report, the MSA Team will present the draft MSA Advisory Report to Participating States on a regulatory-only call, as deemed necessary, to provide an overview of the recommendations and respond to questions from Participating States.
The MSA Team will issue the final MSA Advisory Report to the Participating States and the insurer after consideration of any comments and questions from Participating States.

The MSA Advisory Report will include standardized content, as reflected in Appendix A, with modifications, as necessary, for any unique factors specific to the rate proposal. The content and format are based on feedback received from state insurance departments and the Long-Term Care Insurance (EX) Task Force during the pilot project.

The content and format of the MSA Advisory Report may be modified in the future under the direction of the Task Force, or an appointed subgroup, as the MSA Team gains more experience in generating the reports and receives more feedback from Participating states and the insurer, through this process.

D. Timeline for Review and Distribution of the MSA Advisory Report

The draft MSA Advisory Report will be made available to Participating States for a two-week comment period prior to being finalized. The following timeline for this comment period and distribution of the final MSA Advisory Report will be adhered to as close as possible, barring timing delays due to holidays or other unexpected events. Note that the MSA Review is intended to occur before filings are made to the state insurance departments, therefore not affecting state insurance departments’ required timelines for review. However, use of the MSA Advisory Report by the state is expected to reduce the amount of time required for the state to complete its review.

Pre-Distribution - Share the draft MSA Advisory Report with the insurer. The insurer will be given the opportunity to interact with the MSA Team to ask questions and understand the MSA Team’s reasoning.

- Day 1 – Distribution of a draft MSA Advisory Report to all Participating States.
- Day 5-7 – Regulator-to-regulator conference call of all Participating States during which the MSA Team will present the recommendations in the MSA Advisory Report and seek comments from states.
- Day 21 – Deadline for comments on the draft MSA Advisory Report.
- Day 35 – Distribution of the final MSA Advisory Report, with consideration of comments, to Participating States and the insurer.
- Date TBD by the Insurer – Individual rate increase filings submitted to each state insurance department.
- Date TBD by each state’s DOI – Approval or disapproval of the rate increase filing submitted in each state.

E. Feedback to the MSA Team

At the direction of the Long-Term Care Insurance (EX) Task Force, or an appointed subgroup, state insurance departments will be requested to periodically provide data and feedback on their state rate increase approval amounts and their state’s use of and reliance on the MSA Advisory Reports. The following items may be considered in a feedback survey:

1. The number of rate proposals made with the MSA Review Team.
2. The number of rate proposals reviewed by the MSA Review Team.
3. Information regarding states approval of MSA recommendations.
4. Feedback on additional information states requested.
5. Feedback regarding how the review process and methodology could be improved.

State responses will be confidential pursuant to the Master Agreement, and aggregated results of feedback surveys will not specifically identify state responses. The MSA Team and state insurance regulators welcome feedback from insurers on their experience using the MSA Review Process. This collective feedback will aid the Task Force in understanding the practical effects of the MSA Review in achieving the goal of developing a more consistent state-based approach for reviewing LTCI rate proposals that result in actuarially appropriate increases being granted by the states in a timely manner and eliminates cross-state rate subsidization. The feedback will also help refine the review process, improve future reports to better meet participants’ needs, and make updates to this MSA Framework. Finally, the feedback will assist NAIC leadership in making decisions regarding the technology and staff.
resources needed for the continued success of the project. Aggregated feedback results will be shared with Participating States and insurers as determined appropriate.

V. ACTUARIAL REVIEW

A. MSA Team’s Actuarial Review Considerations

In conducting its actuarial review of a rate proposal, the MSA Team will consider assumptions, projections, and other information provided by the insurer as outlined in Appendix B. The MSA actuarial review process will be evaluated and evolve over time as more rate proposals are reviewed.

The Minnesota and Texas approaches ensure remaining policyholders do not make up for losses associated with past policyholders. Professional judgment is used to address agreed upon policy issues, including the handling of incomplete or non-fully credible data. The Minnesota approach also considers adverse investment expectations related to the decline in market interest rates, and a cost-sharing formula is applied. The Texas approach ensures rate changes reflect prospective changes in expectations. More detail of each approach is provided in the following sections.

The MSA Team will consider the following in performing their review, applying their expertise and professional judgement to the review, and reviewing the actuarial formulas and results:

- Review insurer experience, insurer narrative explanation, and relevant industry studies.
- Assess reasonability of assumptions for lapse, mortality, morbidity, and interest rates.
- Validate and adjust or request new projections of claim costs and premiums by year.
  - Validate that the patterns of claims and premium projections over time reasonably align those reflected in the assumptions.
  - Adjust or request new projections of claims and premium to the extent that any underlying assumptions are deemed unreasonable or unsupported by the MSA Team. Any differences will initially result in correspondence between the MSA Team and the insurer via SERFF.
  - After verifying loss ratio compliance, apply both the Minnesota and Texas approaches for each rate proposal submitted.

In developing a recommendation, the MSA Team will apply a balanced approach and professional judgement for each rate proposal based on the characteristics of the block reviewed to determine the most appropriate method. The MSA Team’s recommendation will not be the lowest or the highest percentage method just because it is the lowest or the highest. Rather, the recommendation may be the result of either the Texas or Minnesota approach, a blend of the two approaches: or using professional judgement, the MSA Team may recommend a rate increase outside of these two approaches. Other methods may evolve over time that may be incorporated into the future process that generate similar or unique results. In applying professional judgement, (e.g., when considering the extent to which less-than-fully credible older-age morbidity should be projected to cause adverse experience), a balanced approach is applied as opposed to denying a rate increase, which could lead to a spike in the future, or approving the rate increase as if there was full credibility, which could lead to rates that could be too high. As the MSA Team reviews more rate proposals, it will consider and evaluate the characteristics of the rate proposals as it refines the blending of the two methods.

The MSA Team will consider how to reflect the differences in the histories of states’ rate approvals. Current approach includes:

- The MSA Team’s recommendation results in the same rate per unit in each state following the current rate increase round, leading to higher percentage rate increases in states that approved lower rate increases in the past.
- Analysis of state cost differences affecting justifiable rate increases will continue. As of May 2021, there does not appear to be substantial evidence that policyholders who purchased policies in lower-cost states should receive lower percentage rate increases. Part of the reason is that there was a tendency for people
in lower-cost areas to purchase less coverage. Their premium rates will continue to be lower than rates for policyholders with more coverage, even if percentage rate increases are the same.

- Any recommendation from the MSA Team for a catch-up increase aims to achieve only current rate equity between states and not lifetime rate equity between states.

**Consideration of Solvency Concerns**

If concerns exist regarding an insurer’s financial solvency and the impact of rate increases on future solvency, each state DOI, by their authority over rate approval, has the flexibility to consider solvency adjustments in these rare instances. In rare, non-typical circumstances, adjustments could be considered within the MSA Review, including consultation with states as part of the MSA Advisory Report comment period.

**Follow-Up Proposals on the Same Block**

Any subsequent rate increase proposal to the MSA Team on a block of business previously reviewed by the MSA Team needs to involve the development of adverse experience and/or expectations. In the absence of adverse experience or expectation development, the MSA Team will consider a reasonable explanation from an insurer for an increase in credibility of morbidity data of being the reason for a rate increase. Prior rate increases would need to be implemented before the implementation of a subsequent rate increase. The MSA Team will not consider a new rate increase proposal on a block that did not receive the full percentage rate increase requested without the experience, expectation, or credibility criteria noted above. If an insurer did not receive the full percentage rate increase and has no adverse changes in experience or expectations, the insurer should work directly with the applicable state DOI.

**B. Loss Ratio Approach**

Key aspects of the loss ratio approach to the actuarial review of rate changes include:

1. At policy issuance, pricing based on a lifetime loss ratio target is typically established. A common target is 60%, which means the present value of claims is targeted to equal 60% of the present value of premiums. In some instances, products may be priced with a projected lifetime loss ratio in excess of 60%. The remainder goes towards sales-related costs, administrative expenses, expenses related to claims, and profit. Note that 60% is a required minimum loss ratio under the pre-rate stability rules; newer policies may be priced with lower expected loss ratios. Refer to state law or regulation modeled from the *Long-Term Care Insurance Model Regulation* (#641), Section 19 for more details on compliance with loss ratio standards.

2. As lapses and mortality have generally been lower than expected, more people have reached ages where claims tend to occur than originally expected. In some cases, this has resulted in a substantial increase in the present value of claims; thus, resulting in substantially higher expected lifetime loss ratios than originally targeted. For companies where morbidity expectations have increased over original assumptions, lifetime loss ratios would be even higher.

3. The loss ratio approach increases future premiums to a level, referred to as make-up premium, such that the original loss ratio target is once again attained.

4. The loss ratio approach, one of the minimum standards in many states’ statutes, is evaluated by the MSA Team. However, there is general recognition that this approach produces rate increases that are too high and do not recognize other typical statutory standards, such as fair and reasonable rates.

   a. The loss ratio approach also does not recognize actuarial considerations such as the shrinking block issue, where past losses being absorbed by a shrinking number of remaining policyholders would lead
to unreasonably high-rate increases. This concern was the main driver of the Minnesota, Texas, and other approaches.

b. The loss ratio approach shifts all the risk to the policyholders. If the insurer is allowed to always return to the 60% loss ratio, there may be a lower incentive for more appropriate initial pricing.

5. For rate-stabilized business, lifetime loss ratios are broken out, such as in a 58%/85% pattern, where the 58% reflects the portion of initial premiums and the 85% reflects the portion of the increased premium available to pay the claims. For relevant blocks, this standard is analyzed by the MSA Team. If this standard produced lower increases than the Minnesota and Texas approaches, it would produce the recommended rate increase.

C. Minnesota Approach

Key aspects of the Minnesota approach to the actuarial review of rate changes include:

1. Blended if-knew / makeup approach to address the shrinking block issue.
   a. The if-knew concept is to estimate a premium that would have been charged at issuance of the policy if information we know now on factors such as mortality, lapse, interest rates, and morbidity was available then.
   b. The makeup concept is for a premium to be charged going forward to return the block to its original lifetime loss ratio.
   c. The blending method helps ensure concepts discussed in public NAIC Long-Term Care Pricing (B) Subgroup calls from 2015 to 2019⁴ are incorporated, including the concept that rates will not substantially rise as the block shrinks, as policyholder persistency falls over time.

2. Cost-sharing formula that increases the insurer’s burden as cumulative rate increases rise.
   a. This addition to the insurer’s burden moves rates away from a direction that could potentially be seen as misleading. The insurer likely had or should have had more information on the likelihood of large rate increases than the consumer had at the time the policy was issued.

3. Assumption review.
   a. Verification that the insurer’s original and current assumptions are indeed drivers of the magnitude increase in lifetime loss ratio presented by the insurer.
   b. Verification of appropriateness of current assumptions.
      i. A combination of credible insurer experience, relevant industry experience, and professional judgement is applied.
      ii. For areas of uncertainty, such as older-age morbidity, conservatism may be added to the insurer-provided assumptions. This conservatism can be released as credible experience develops.

4. Interest rate / investment return component
   a. The Minnesota approach considers changes in expectations regarding interest rates and related investment returns in a manner consistent with how other key assumptions are considered. Reasons include:
      i. Changes in market interest rates are among the key factors driving profits and losses associated with blocks of LTC business.
      ii. In the Minnesota approach, all factors impacting the business are considered.
         1. If interest rates rise, this would tend to lead to lower rate increase approvals. Note, in this scenario, if interest rate changes were not considered, it is possible an insurer would get approval for rate increases even when profits on the block were higher than expected.
         2. If interest rates fall, this would tend to lead to higher rate increase approvals.

To prevent shifting of “good assets” and “bad assets” to supporting LTC rates and prevent an insurer from increasing rates based on risky investments turned into losses, an index of average corporate bond yields (e.g., Moody’s) is relied on to reflect experience and current expectations.

Original pricing typically includes an assumption on investment returns, for which premiums and other positive cash flows are assumed to accumulate. This forms the interest component of the original assumption.

The original pricing investment return in Section VC(4)iv is compared to the average corporate bond yields in Section VC(4)iii to determine the adversity associated with the interest rate factor.

5. Original Assumption Adjustment

a. If original mortality, lapse, or investment return assumptions were out of line with industry-average assumptions at the time of original pricing, the original premium is replaced by a “benchmark premium.”

i. This results in a lower rate increase.

ii. This adjustment wears off over 20 years from policy issue.

1. The rationale for the wearing off of this adjustment is the assumption that no insurer would intentionally underprice a product, knowing it would suffer losses for 20 years and then hope to offset a portion of that loss with a rate increase.

iii. This adjustment is intended to prevent for example, an insurer underpricing a product, gaining market share, and then immediately requesting a rate increase.

D. Texas Approach

The Texas approach to the actuarial review of rate changes was developed in response to the NAIC Long-Term Care Pricing (B) Subgroup’s discussions regarding the recoupment of past losses in LTCI rate increases. The Texas approach relies upon a formula intended to prevent the recoupment of past losses by calculating the actuarily justified rate increase for premium-paying policyholders based solely on projected future (prospective) claims and premiums.

Key aspects of the Texas approach to the actuarial review of rate changes include:

1. Past losses are assumed by the insurer and not by existing policyholders. An approach that considers past claims in the calculation of the rate increase, such as a lifetime loss ratio approach, permits, the recoupment of past losses to some extent.

2. Calculates the rate increase needed to fund the prospective premium deficiency for active, premium-paying policyholders based on an actuarially supported change in assumption(s). This ensures that active policyholders do not pay for the past claims of policyholders who no longer pay premium.

3. Data Requirements for Calculation:

a. The following calendar year projections, including totals, for current premium-paying policyholders only, prior to the rate increase, all discounted at the maximum valuation interest rate:

i. Present Value of Future Benefits (PVFB) under current assumptions.

ii. PVFB under prior assumptions (from prior rate increase filing, or if no prior increase, from original pricing).

iii. Present Value of Future Premiums (PVFP) under current assumptions.

iv. PVFP under prior assumptions (from prior rate increase filing, or if no prior increase, from original pricing).

1. Note that for all four projections above, the projection period is typically 40–50 years: although, some companies project for 60 or more years.

To emphasize, these projections should only include active policyholders currently paying premium and should not include any policyholders not paying premium (e.g., policies on waiver, on claim, or paid up) regardless of the reason. Projections under current actuarial assumptions must not include
policyholder behavior as a result of the proposed premium rate increase, such as a shock lapse assumption.

Also, the insurer should identify and explain any estimates or adjustments to the data, as applicable.

4. Assumptions
   a. Rate increases are commonly driven by a change to the persistency, morbidity, mortality assumption, or a combination of the three.
   b. Verification that assumption change(s) are supported by credible data.
   c. The interest rate is the same for all four projections. This ensures that interest rate risk is assumed by the insurer, not the policyholder.

The formula used in the Texas approach is provided in Appendix C.

E. RBOs

In 2020, the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup of the Long-Term Care Insurance (EX) Task Force, developed a list of RBO principles to provide guidance for evaluating RBO offerings in Appendix D.

RBOs in the MSA Advisory Report

As part of the MSA Review, the MSA Team will perform a limited review of the reasonableness of RBOs included in the rate proposal that are extracontractual. The MSA Advisory Report will highlight how the insurer demonstrates the proposed RBOs’ reasonableness. Note that the MSA Team will not perform an assessment of RBOs in relation to individual state specific requirements for RBOs. The purpose of the guidance in the MSA Advisory Report is to provide initial information about the RBOs with which the state insurance regulators can then utilize to perform a more detailed assessment specific to their state’s requirements. As the MSA Review develops and as the Subgroup continues its work, this area of review may evolve.

Future RBOs

As the industry continues to innovate new RBOs for consumers, the MSA Review will likewise develop and evolve to consider the reasonableness of RBOs. Additionally, as the MSA Review evolves, additional regulatory expertise with RBOs may be added to the MSA Team in the future. To achieve more consistency across states in their understanding and consideration of RBOs, the Task Force will encourage its appointed Subgroup and/or an appropriate NAIC actuarial committee or group to collectively consider new RBOs as they arise. This process will provide for input and technical advice from actuaries and non-actuarial experts to the state insurance departments as they exercise their authority in considering RBOs as part of rate filings. States and insurers are therefore encouraged to discuss new and developing RBOs through this process.

F. Non-Actuarial Considerations

The Long-Term Care Insurance (EX) Task Force continues to review and consider non-actuarial considerations affecting states’ approval or disapproval of LTCI rate changes to develop consensus among jurisdictions and develop recommendations for application of these considerations. These considerations include such topics as:

1. Caps or limits on approved rate changes.
2. Phase-in of approved rate changes over a period of years.
3. Waiting periods between rate change requests.
4. Considerations of prior rate change approvals and disapprovals.
5. Limits or disapproval on rate changes based solely or predominately on the number of policyholders in a particular state.
6. Limits or disapproval on rate changes based on attained age of the policyholder.
7. Fair and reasonableness considerations for policyholders.
8. The impact of the rate change on the financial solvency of the insurer.

Considerations in the MSA Advisory Report

As part of the MSA Review, the MSA Team will identify relevant aspects of the insurer’s rate proposal, based on the information provided by the insurer, which may be affected by a state’s non-actuarial considerations. Note that the MSA Team will not perform a state-by-state review of each state’s non-actuarial considerations, statutes, or practices. Instead, the MSA Team will highlight in the MSA Advisory Report those aspects of the rate proposal that relate to or that may be affected by non-actuarial considerations. The purpose of this guidance in the MSA Advisory Report is to prompt state insurance regulators to contemplate those affected aspects of the rate proposal when completing their individual state’s rate review. For example, the MSA Advisory Report may highlight:

- If cumulative rate increases are high, as this may affect the cost-sharing formula.
- If a rate proposal is for a block of business where the average policyholder age is predominately 85 or above, as this may affect states that consider age caps.
- If it is determined that the block of business will likely continue to incur substantial financial losses and impose a potential solvency concern, as this may affect the potential need for adjustments to the cost-sharing formula.
- Aspects of the coordination of rate and reserving review, as this may signify adjustments to the methodology assumptions used by the MSA Team in its review.

Future Non-Actuarial Considerations

The MSA Review will continue to develop and evolve as it is implemented. To achieve more consistency and minimize the number of differences across states in their application of other non-actuarial considerations in rate review criteria for LTCI rate filings, the Task Force will encourage its appointed Subgroup, or an appropriate NAIC actuarial committee or group, to collectively consider new future non-actuarial considerations as they arise. This process will provide for input and technical advice from actuaries to states as they exercise their authority in considering non-actuarial factors. States are therefore encouraged to discuss new and developing practices and/or recommendations in this area.

VI. APPENDICES

A. Appendix A – MSA Advisory Report Format

The MSA Advisory Report that is distributed to Participating State insurance departments and the insurer will generally follow a template that includes the following information. Note that degree of rigor in the review and the details and content of the MSA Advisory Report will depend on the magnitude of rate increase and the complexity of the rate proposal and the insurer’s financial condition. See also the sample MSA Advisory Report in Exhibit A.

1. Executive Summary.
   a. Overall recommended rate increase, before consideration of different states’ history of approvals.

2. Disclaimers.
   a. Purpose and intent of how states should use the MSA Advisory Report.
   b. Disclaimer that the MSA Review and findings shall not be considered an approval of the rate schedule increase filing, nor shall it be binding on the states or the insurer.
   c. Statement that the in force rate increase filing submitted to the respective states shall be subject to the approval of each state, and each state’s applicable state laws and regulations shall apply to the entire rate schedule increase filing.

3. Background on the MSA Review.
4. **Explanation of the insurer’s Proposal.**
   a. The explanation will be based on the aspects of the insurer’s rate proposal, which may include details as to whether the rate increase submitted for review involved different types of coverages or groupings.

5. **Summary of the MSA Team’s rate review analysis, including these aspects:**
   a. Actuarial review.
      i. The summary of the review and the MSA Team’s recommendation will be based on the aspects of the insurer’s rate proposal, and may include specific details of the review, for example analysis of projections, assumptions, margins, or other aspects.
   b. Summary of consideration of differences in the history of state’s rate increase approvals.
   c. Non-actuarial considerations and findings.
   d. Financial solvency-related aspects and adjustments.
   e. Review for reasonableness and clarity of RBOs.
   f. Summary information about the mix of business.

6. **Appendices.**
   a. Summary of the drivers of the rate proposal.
   b. Details regarding the Minnesota and Texas approaches as applied to the rate proposal.
   c. Summary of rate proposal correspondence.
   d. Examples of rate increases if an RBO is not selected.
   e. Potential cost-sharing formula for typical circumstances.

**B. Appendix B – Information Checklist**

At the request of the former Long-Term Care Insurance (B/E) Task Force, the Long-Term Care Pricing (B) Subgroup developed a single checklist that reflects significant aspects of LTCI rate increase review inquiries from all states. In this context, “checklist” means the list or template of inquiries that states typically send at the beginning of reviews of state-specific rate increase filings.

This document contains aspects of the *NAIC Guidance Manual for Rating Aspect of the Long-Term Care Insurance Model Regulation*¹ (Guidance Manual) and checklists developed by several other states. This consolidated checklist is not intended to prevent a state from asking for additional information. The intent is to take a step toward moving away from 50 states having 50 different checklists to a more efficient process nationally to provide the most important information needed to determine an approvable rate increase. To keep the template at a manageable length, it is anticipated that this template will result in states attaining 90–100% of the information necessary to decide on approvable rate increases. State and block specifics will generate the other 0-10% of requests. As states apply this checklist, it or an improved version may be considered for a future addition to the Guidance Manual.

**Information Required for an MSA Review of a Rate Proposal**

The following provides a checklist of information necessary for a complete rate proposal to the MSA Review. This checklist is consistent with the “Consolidated, Most Commonly Asked Questions – States’ LTC Rate Increase Reviews”⁶ as adopted by the Health Actuarial (B) Task Force on March 23, 2018.

1. **Identify all states for which the product associated with the rate proposal is or has been issued.**

2. **New premium rate schedule, percentage increase for each rating scenario such as issue age, benefit period, elimination period, etc., from the existing and original rates.**

---

² https://content.naic.org/sites/default/files/inline-files/cmte_b_ltc_price_sg_180323_ltc_increase_reviews%20%289%29.docx
a. Provide rate increase percentages by policy form number and clear mapping of these numbers to any alternative terminology describing policies stated in the actuarial memorandum and other supporting documents.
b. Provide the cumulative rate change since inception, after the requested rate increase, for each of the rating scenarios.

3. Rate increase history that reflects the filed increase.
   a. Provide the month, year, and percentage amount of all previous rate revisions.
   b. Provide the SERFF MSA numbers associated with all previous rate revisions.

4. Actuarial memorandum justifying the new rate schedule, which includes:
   a. Lifetime loss ratio projection, with earned premiums and incurred claims discounted at the maximum valuation interest rate.
      i. The projection should be by year.
      ii. Provide the count of covered lives and count of claims incurred by year.
      iii. Provide separate experience summaries and projections for significant subsets of policies with substantially different benefit and premium features. Separate projections of costs for significant blocks of paid-up and premium-paying policies that should be provided.
      iv. Provide a comparison of state versus national mix of business. In addition, a state may request separate state and national data and projections. The insurer should accompany any state-specific information with commentary on credibility, materiality, and the impact on requested rate increase.

5. Reasons for the rate increase, including which pricing assumptions were not realized and why.
   a. Attribution analysis - presents the portion of the rate increase allocated to and the impact on the lifetime loss ratio from each change in assumption.
   b. Related to the issue of past losses, explain how the requested rate increase covers a policyholder’s own past premium deficiencies and/or subsidizes other policyholders’ past claims.
   c. Provide the original loss ratio target to allow for comparison of initially assumed premiums and claims and actual and projected premiums and claims.
   d. Provide commentary and analysis on how credibility of experience contributed to the development of the rate proposal.

6. Statement that policy design, underwriting, and claims handling practices were considered.
   a. Show how benefit features (e.g., inflation and length of benefit period) and premium features (e.g., limited pay and lifetime pay) impact requested increases.
   b. Specify whether waived premiums are included in earned premiums and incurred claims, including in the loss ratio target calculation; provide the waived premium amounts and impact on requested increase.
   c. Describe current practices with dates and quantification of the effect of any underwriting changes. Describe how adjustments to experience from policies with less restrictive underwriting are applied to claims expectations associated with policies with more restrictive underwriting.

7. A demonstration that actual and projected costs exceed anticipated costs and the margin.

8. The method and assumptions used in determining projected values should be reviewed considering reported experience and compared to the original pricing assumptions and current assumptions.
   a. Provide applicable actual-to-expected ratios regarding key assumptions.
   b. Provide justification for any change in assumptions.

9. Combined morbidity experience from different forms with similar benefits, whether from inside or outside the insurer, where appropriate to result in more credible historical claims as the basis for future claim costs.
a. Explain the relevance of any data sources and resulting adjustments made relevant to the current rate proposal, particularly regarding the morbidity assumption.

b. A comparison of the population or industry study to the in force related to the rate proposal should be performed, if applicable.

c. Explain how claims cost expectations at older ages and later durations are developed if data is not fully credible at those ages and durations.

d. Provide the year of the most recent morbidity experience study.

   a. Comparison with asset adequacy testing reserve assumptions.
      i. Explain the consistency regarding actuarial assumptions between the rate proposal and the most recent asset adequacy (reserve) testing.
      ii. Additional reserves that the insurer is holding above Health Insurance Reserves Model Regulation (#10) formula reserves should be provided, (such as premium deficiency reserves and LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves (AG 51) reserves.
   c. Provide actuarial assumptions from original pricing and most recent rate increase proposal and have the original actuarial memorandum available upon request.

11. Provide the following calendar year projections, including totals, for current premium paying nationwide policyholders only, prior to the rate increase, all discounted at the maximum valuation interest rate*:
   a. Present value of future benefits (PVFB) under current assumptions
   b. PVFB under prior assumptions (from prior rate increase filing, or if no prior increase, from original pricing).
   c. Present value of future premiums (PVFP) under current assumptions.
   d. PVFP under prior assumptions (from prior rate increase filing, or if no prior increase, from original pricing).

*To emphasize, these projections should include only active nationwide policyholders currently paying premium, and they should not include any policyholders not paying premium, regardless of the reason. Projections under current actuarial assumptions must not include policyholder behavior as a result of the proposed premium rate increase, such as a shock lapse assumption or benefit reduction assumption.

   b. Also, please identify the maximum valuation interest rate and ensure that it is the same for all four projections.

12. The Guidance Manual checklist items: 1) summaries (including past rate adjustments); 2) average premium; 3) distribution of business, including rate increases by state; 4) underwriting; 5) policy design and margins; 6) actuarial assumptions; 7) experience data; 8) loss ratios; 9) rationale for increase; and 10) reserve description.

13. Assert that analysis complies with Actuarial Standards of Practice (ASOPs), including 18 and 41.

14. Numerical exhibits should be provided in Microsoft Excel spreadsheets with active formulas maintained, where possible.

15. Rate Comparison Statement of renewal premiums with new business premiums, if applicable.

16. Policyholder notification letter should be clear and accurate.
   a. Provide a description of options for policyholders in lieu of or to reduce the increase.
   b. If inflation protection is removed or reduced, is accumulated inflation protection vested?
   c. Explain the comparison of value between the rate increase and policyholder options.
d. Are future rate increases expected if the rate increase is approved in full? If so, how is this communicated to policyholders?
e. How are partnership policies addressed?

17. Actuarial certification and rate stabilization information, as described in the Guidance Manual, and contingent benefit upon lapse information, including reserve treatment.

Supplemental Information

As part of the Long-Term Care Insurance (EX) Task Force’s pilot project in 2020–2021, the following supplemental information was identified by the MSA Team as beneficial; and, therefore, the Task Force may be requested to assist in the MSA Review.

1. Benefit utilization:
   a. Provide current, prior rate increase, and original assumptions, including first-projection year through ultimate utilization percentages for 5% compound inflation, lesser inflation, and zero inflation cells.
   b. Explain how benefit utilization assumptions vary by maximum daily benefit.
   c. Provide the cost of care inflation assumption implied in the benefit utilization assumption.

2. Attribution of rate increase
   a. Provide the attribution of rate increase by factor: morbidity, mortality, lapse, investment, and other.
   b. For the morbidity factor, break down the attribution by incidence, claim length, benefit utilization, and other.
   c. Provide information on the assumptions that are especially sensitive to small changes in assumptions.

3. RBOs
   a. Provide the history of RBOs offered and accepted for the block.
   b. Provide a reasonability analysis of the value of each significant type of offered RBO.

4. Investment returns:
   a. Provide original and updated / average investment return assumptions underlying the pricing.
   b. Explain how the updated assumption reflects experience.

5. Expected loss ratio:
   a. With respect to the initial rate filing and each subsequent rate increase filing, provide the target loss ratio.
   b. Provide separate ratios for lifetime premium periods and non-lifetime premium periods and for inflation-protected and non-inflation-protected blocks.

6. Shock lapse history:
   a. Provide shock lapse data related to prior rate increases on this block.

7. Waiver of premium handling:
   a. Explain how policies with premiums waived are handled in the exhibits of premiums and incurred claims.
   b. Explain how counting is appropriate (as opposed to double counting or undercounting).

8. Actual-to-expected differences:
   a. Explain how differences between actual and expected counts or percentages (in the provided exhibits) are reflected or not reflected in assumptions.

9. Assumption consistency with the most recent asset adequacy testing:
a. Explain the consistency or any significant differences between assumptions underlying the rate increase proposal and those included in Actuarial Guideline 51 testing.

C. Appendix C—Actuarial Approach Detail

Minnesota Approach

Details on the key aspects of the Minnesota approach to the actuarial review of rate changes include:

1. Review of current assumptions for appropriateness, reasonableness, justification, and support.
   a. A combination of credible insurer experience, relevant industry experience, and professional judgement is applied.

2. If-knew premium and makeup premium aspects – aggregate application.
   a. Makeup percentage:
      i. \( \left\{ \frac{\text{PV (claims)}}{\text{original LLR}} - \text{PV (past premium)} \right\} / \text{PV (future premium)} - 1 \).
      ii. To ensure past increases are not doubled counted, past premiums in the formula in 2.a.i should reflect actual rate level, including past increases; while PV (future premium) in 2.a.i. should be based upon the original rate level.
   b. If-k new percentage:
      i. \( \frac{\text{PV (claims)}}{\text{PV (premiums)}} / \text{original LLR} - 1 \).
      ii. Premiums in the formula are at the original rate level.
      iii. The concept is to estimate a premium that would have been charged at issuance of the policy if information we know now on factors such as mortality, lapse, interest rates, and morbidity was available then.
   c. Definitions and explanations:
      i. PV means present value.
      ii. LLR means lifetime loss ratio.
      iii. Interest rates underlying PVs and LLRs are based on:
         1. For original PVs and LLRs, the interest rate is the investment return assumed in original pricing. Note that this rate is typically different than the statutory LLR discount rate.
         2. For current PVs, the interest rates are the average corporate bond yields over time for each year minus 0.25% (to account for expected defaults). For projections beyond the current year, phasing over five years of the current rate to a target rate (currently 4%) is assumed.
      iv. PV calculations are based on actual, current experience and expectations for persistency, morbidity, and interest rate.
      v. Insurer-provide premium and claim cash flows may be adjusted based on assumption review.
      vi. Makeup percentage is similar to that attained by the loss ratio approach.

3. If-knew premium and makeup premium aspects – sample policy-level verification.
   a. Over a range of issue years, issue ages, benefit periods, and inflation protection:
      i. Calculate an estimate of the original premium.
         1. Based on original pricing assumptions for persistency, morbidity, investment returns, and expenses.
         2. Apply first principles.
            a. For each policy year, calculate PV of claims and expenses, applying mortality, lapse, morbidity, and expenses, discounting at original investment rates.
            b. Add the PV of claims expenses for each policy year to attain PV of claims & expenses at issue.
            c. Divide by the sum of the PV of an annuity of 1 per year.
d. Multiply \((b / c)\) times \((1 + \text{originally assumed profit percentage})\) to attain the original premium.

e. This premium provides the basis for comparison against the makeup and if-knew premium.

3. Replace the original premium with a benchmark premium.
   a. If the benchmark premium is higher than the original premium and original pricing (reflected in mortality, lapse, and investment return assumptions) was out of line with industry-average assumptions at the time of original pricing.
   b. The benchmark premium is phased back into the original premium proportionally over 20 years from issue.
   c. The benchmark aspect is intended to prevent for example, an insurer underpricing a product, gaining market share, and then immediately requesting a rate increase.

ii. Calculate an estimate of the makeup premium.
   1. Calculate the original dollar PV of profits for the sample policy using original pricing assumptions.
   2. Calculate an updated dollar PV of profits for the sample policy using:
      a. Actual history of premiums and claims.
      b. Expectations of future claims.
      c. “Backed into” makeup premium.
   3. Note that attaining the same dollar PV of profits for a sample policy leads to a lower makeup premium than attaining the same percentage PV of profits (as a percentage of premium).
      a. The reason for targeting the dollar instead of percentage is to avoid the dollar amount of profit being higher as premium rates increase.

iii. Calculate an estimate of the if-knew premium.
   1. The calculation is the same as for the original premium, except it is based on current assumptions instead of original pricing assumptions.
      b. Verifying the impact on expectation changes on rates
         i. While lapse, mortality, and interest rate experience and assumptions are fairly routine to track (for determination of the rate impact), morbidity experience and assumptions tend to be difficult to track.
         ii. A combination of information is relied up to estimate the impact of morbidity expectation deviations (from original pricing) on rates. This information includes:
            1. Original and current claim incidence and claim length by age and other factors. Incidence and length are tracked separately for some companies and combined for others.
            2. Experience
            3. Impact on LLR of changes in expectations of morbidity.
            4. Industry information and trends (for reasonableness checks).
      c. Assumptions underlying the calculations of estimates of premiums may be adjusted as part of the review. For instance:
         i. If sample policy verification shows less impact on rates due to changes in lapse, mortality, interest rate, and morbidity expectations than demonstrated in the insurer’s aggregate projections, past or projected premiums or claims may be adjusted in the original, makeup, or if-knew premium calculations.
         ii. If there is wide variance in practice among companies in morbidity assumptions at ages where data is of low credibility, adjustments may be made to help ensure similar situations resulting in similar rate increase approval amounts.
            1. A balanced approach is pursued, recognizing that providing full or zero credit for partially credible experience may result in harmful consequences (excessive rates or later rate shocks).
            2. Any reductions to rate increases caused by lack of credible experience can potentially be reversed in subsequent rate increase requests as credibility increases.
iii. Similar adjustments may apply when incomplete or inconsistent information is provided by the insurer (after initial attempts to resolve significant differences or gaps).

4. Reconciliation of aggregate and sample policy applications.
   a. In many cases, the aggregate and sample policy applications will result in similar current LLRs.
   b. In other cases, some steps are taken to understand the difference, including additional requests for information.
   c. Because the sample policy application considers information only related to premium-paying policyholders, it is possible that differences between the aggregate and sample policy application are caused by inclusion of past premiums and all claims related to non-premium payers in the aggregate information.
   d. When reconciliation occurs after rounds of communication, decisions will be made based on the information provided.

5. Blending – same for aggregate and sample policy applications.
   a. The weighting towards the makeup premium is the percentage of original policyholders remaining.
   b. The weighting towards the if-knew premium is the percentage of original policyholders no longer having active policies, or 1 minus the percentage in ii.
   c. The blending of the if-knew premium and makeup premium helps ensure remaining policyholders are not held responsible for paying for adverse experience associated with past policyholders.
   d. The blending also helps limit cumulative rate increases at later durations; as the percentage of remaining policyholders approaches zero, the blended approval amount approaches the if-knew premium.

6. Cost-sharing formula that increases the insurer burden as cumulative rate increases rise.
   a. The cumulative-since-issue, weighted if-knew / makeup premium-based increase is reduced by:
      i. No haircut for the first 15%.
      ii. 10% for the portion of cumulative rate increase between 15% and 50%.
      iii. 25% for the portion of cumulative rate increase between 50% and 100%.
      iv. 35% for the portion of cumulative rate increase between 100% and 150%.
      v. 50% for the portion of cumulative rate increase in excess of 150%.

7. Reduction for past rate increase:
   a. Take 1 plus the cost-sharing-adjusted blend amount and divide by 1 plus the previous, cumulative rate increases, then subtract 1. This is the approvable rate increase.

8. Summary.
   a. Review current assumptions.
   b. Calculate aggregate if-knew premium and makeup premium amounts. Calculate the blended amount.
   c. Calculate the sample policy estimated original premium, if-knew premium, and makeup premium. Calculate the blended amount.
   d. Reconcile aggregate and sample policy blended amounts. Set this blended amount aside.
   e. Apply the cost-sharing formula to the blended amount.
   f. Deduct past rate increases.
   g. Example – if:
      i. The original premium is $1,000
      ii. Makeup premium is $3,000.
      iii. If-knew premium is $1,500.
iv. 60% of policyholders remain.
v. Past rate increases are 50%:
vi. Blended amount is:
  1. $3,000 / $1,000 * 0.60 +
  2. $1,500 / $1,000 * 0.40
  3. – 1 =
  4. 180% + 60% – 1 = 240% – 1 = 140%
vii. Cost sharing is:
  1. 100% * 0.15 +
  2. 90% * 0.35 +
  3. 75% * 0.5 +
  4. 65% * 0.4 =
  5. 110%
viii. Deduction for past rate increases results in:
  1. (1 + 1.1) / (1 + 5) – 1 =
  2. 40%

Texas PPV Formula

Details on the PPV Formula of the Texas approach to the actuarial review of rate changes include the following. To reiterate, the formula is limited to active, premium-paying policyholders.

For rate stabilized policies:

\[
\text{rate increase} \% = \frac{\Delta PV \text{(future incurred claims)} - \left( \frac{0.58 + 0.85C}{1 + C} \right) \Delta PV \text{(future earned premiums)}}{0.85 PV_{\text{current}} \text{(future earned premiums)}}
\]

Where:

\( \Delta \) indicates the change in PV due to the change in actuarial assumptions between the time of the last rate increase (or original pricing if no prior rate increase) and the current assumptions.

\( C \) is the cumulative % rate increase to date. For example, if the current rate (prior to the proposed rate increase) is 50% higher than the rate at initial pricing, then \( C = 0.5 \).

The \( \text{current} \) subscript in the denominator indicates that the PV should be computed using current assumptions. The future earned premiums in the formula are based on the current premiums prior to the proposed rate increase. (State insurance regulators may wish to consider the addition of margin to the rate increase. For example, the \( \Delta PV \text{(future incurred claims)} \) term in the above formula could be multiplied by \( (1 + \text{margin}) \).

For pre-rate stabilized policies, we use 0.6 in place of 0.58 and 0.8 in place of 0.85:

\[
\text{rate increase} \% = \frac{\Delta PV \text{(future incurred claims)} - \left( \frac{0.6 + 0.8C}{1 + C} \right) \Delta PV \text{(future earned premiums)}}{0.8 PV_{\text{current}} \text{(future earned premiums)}}
\]
Prior to the time that Texas adopted the PPV approach, a past requested rate increase may have been reduced by the state insurance regulator by a method other than the PPV approach. In this situation, for a current filing, the state insurance regulator may make adjustments to the current approvable amount based on what would have been approved had PPV been used in the prior filing.

D. Appendix D—Principles of RBOs Associated with LTCI Rate Increases

In 2020, the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup of the Long-Term Care Insurance (EX) Task Force, was charged to “Identify options to provide consumers with choices regarding modifications to long-term care insurance (LTCI) contract benefits where policies are no longer affordable due to rate increases.” In completing this charge, the Subgroup developed the following list of RBO principles to provide guidance for evaluating RBO offerings.

Principles and Issues

As related to:

1. Fairness and equity for policyholders who elect an RBO:
   - If some policyholders facing a rate increase are being offered an RBO but not others, an adequate explanation is needed.
   - Each RBO should provide reasonable value relative to the default option of accepting the rate increase and maintaining the current benefit level.

2. Fairness and equity for policyholders who choose to accept rate increases and continue LTCI coverage at their current benefit level:
   - The extent of potential anti-selection should be analyzed, with consideration of the impact on the financial stability of the remaining block of business and the resulting effect on the remaining policyholders.

3. Clarity of communication with policyholders eligible for an RBO:
   - Policyholders should be provided with maximum opportunity and adequate information to make decisions in their best interest.
   - Companies should present RBOs in clear and simple language, format, and content, with clear instructions on how to proceed and whom to contact for assistance.

4. Consideration of encouragement or requirement for an insurer to offer certain RBOs:
   - State insurance regulators should evaluate legal constraints, the impact on remaining policyholders and insurer finances, and the impact on Medicaid budgets if encouraging or requiring reduced LTCI benefits.

5. Exploration of innovation, particularly where an outcome of improved health and lower claim costs are possible:
   - Regulators and interested parties should continue to study the idea of offerings being made by insurers including potentially being tied to rate increases (e.g., providing hand railings for fall prevention in high-risk homes) and identifying the pros and cons of such an approach.
Widely Established RBOs in Lieu of Rate Increases

1. Reduce inflation protection going forward, while preserving accumulated inflation protection.
2. Reduce daily benefit.
3. Decrease benefit period/maximum benefit pool.
4. Increase elimination period.
5. Contingent nonforfeiture (CNF).
   i. Claim amount can be the sum of past premiums paid.
   ii. Only receive that benefit if the policyholder qualifies for a claim.

Less Common RBOs for Potential Discussion

1. Cash buyout.
2. Copay percentage on benefits.

As the industry continues to innovate new RBOs for consumers, such as the two listed above, the MSA Review will likewise develop and evolve to consider the reasonableness of these RBOs. The Task Force will encourage its appointed Subgroup or an appropriate NAIC actuarial committee or group, to collectively consider new RBOs, as they arise, that provides for input and technical advice from actuaries to states as they exercise their authority in considering RBOs as part of rate filings.

E. Appendix E—Guiding Principles on LTCI RBOs Presented in Policyholder Notification Materials

In 2020, the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup of the Long-Term Care Insurance (EX) Task Force adopted the following guiding principles to ensure quality of consumer notices of rate increases and RBOs. This section seeks to provide guiding principles in answering this question: “What are the recommendations for ensuring long-term care insurance policyholders have maximized opportunity to make reduced benefit decisions that are in their best interest?”

To complete the charge, the Subgroup 1) evaluated the quality of consumer notices and RBO materials presented to policyholders; 2) considered the relevant lessons learned and consumer focus group studies from the liquidation of LTC insurer Penn Treaty Network America; 3) reviewed existing RBO consumer notice checklists or principles from multiple states (i.e., Nebraska, Pennsylvania, Texas, and Vermont); and 4) addressed stakeholder comments on RBO principles.

This document is intended to establish consistent high-level guiding principles for LTCI RBOs presented in policyholder notification materials. These principles are guidance and do not carry the weight of law or impose any legal liability.

Recognizing that each component outlined in these principles will not apply in all circumstances, this section:

- **RECOMMENDS** that insurance companies recognize these fundamental principles.
- **CALLS ON** all insurance companies to consider the following principles in communicating RBOs available to consumers in the event of a rate increase.
- **UNDERLINES** that the following principles are complementary and should be considered as a whole.

**Filing Rate Action Letters**

Insurers should consider:

- Sending rate actions after the state has approved the rate action filing.
- Making the rate action effective on a policy anniversary date, recognizing that the Long-Term Care Insurance Model Regulation (#641) allows for the next anniversary date or next billing date.
• Mailing rate increase notification letters at least 45 days prior to the date(s) a rate action becomes effective, consistent with any applicable state laws and/or regulations.
• Sending rate increase notifications each year for rate increases that are phased-in over multiple years.
• Disclosing all associated future planned rate increases approved by state insurance regulators in the initial and phased-in rate increase notification letters.
• Filing rate action letter templates in the NAIC SERFF rate increase filing to include statements of variability and sample letters highlighting the differences between the communications, consistent with any applicable state laws and/or regulations.
• Presenting innovative options to state insurance regulators prior to filing new RBOs.
  o This enables state insurance regulators to evaluate potential anti-selection, adverse morbidity, and implications to consumers and future claims experience.

Readability and Accessibility

Insurers should consider:

• Drafting a rate action letter that is easy to follow, flows logically, and displays the essential information and/or the primary action first, followed by the nonessential information.
• Presenting the RBOs in a way that is comprehensible, memorable, and adjusted to the needs of the audience.
• Using cover pages, a table of contents, glossaries, plain language, headers, maximized white space, and appropriate font size and reading level for the intended audience.
• Using illustrative tools, such as bullet points or illustrations, as appropriate, and graphs or charts enabling a side-by-side comparison.
• Including definitions of complex terms; and if a term, subject, or warning is repeated throughout the communication, consider making the language consistent throughout the document.
• Including a Q&A section that is succinct but answers the commonly asked questions in plain language.
• Providing appropriate accommodations for policyholders with disabilities or policyholders for whom English is not a first language.

Identification

Insurers should consider drafting the RBO communication in a way that helps policyholders understand:

• What is happening.
• Why it is happening to them.
  o Ensure the letter does not negatively reference the state insurance department.
• When it is happening.
• What they can do about it.
• How they take action.

Communication Touch and Tone

Insurers should consider:

• Drafting the communication in a way that helps policyholders envision or reflect on the reason(s) why they purchased an LTCI policy.
• Conveying as much empathy as possible regarding the impact a rate action(s) may have on policyholders.
• Presenting RBOs fairly, refraining from the use of bolding, repeating, or emphasizing one option over another.
• Displaying the policyholder’s ability to maintain current benefits by paying the increased premium.
• Using word choices that appreciate how those words could influence a policyholder’s decision.
For instance, consider using “now” instead of “must”; or consider using “mitigation options,” “offset premium impact” or “manage an increase” instead of “avoid an increase.”

Consultation and Contact Information

The insurer should consider listing multiple contacts in the communication in an easy-to-identify location to include phone number, email address, and website when available. For example:

- Customer service.
- Lapse notifier.
- Insurance producer.
- State insurance department.
- State Health Insurance Assistance Program (SHIP).

The insurer should consider suggesting policyholders consult a family member or other trusted advisor, such as:

- Lapse notifier.
- Insurance producer.
- Financial advisor.
- Certified personal accountant or tax advisor (in the event cash buyouts are offered).

Understanding Policy Options

Insurers should consider the presentation of the communication by:

- Identifying what necessitated the communication on the first page.
  - For example, the header could say, “Your Long-Term Care Premiums Are Increasing.”
- Including the RBOs with the rate action letter.
- Limiting the number of options displayed on the letter to no more than four or five.
- Identifying which RBO(s) have limited time frames.
- Advising policyholders that they can ask about reducing their benefits at any time, regardless of a rate increase.
- Providing enough information in the communication to make a decision.
  - If supplemental materials (e.g., insurer’s website) are provided, they would enhance the policyholder’s understanding, but not be necessary to use when making a decision.

Insurers should consider indicating the window of time to act by:

- Clearly indicating what the policyholder’s premium will increase to and by when.
- Displaying the due date(s) in an easy-to-identify location and repeating it multiple times throughout the document.
- Clearly differentiating due date(s) for each RBO, if available for a limited time.

Insurers should consider including disclosures regarding rate increase history by:

- Disclosing that future rate actions could occur.
- Advising if prior rate actions have or have not occurred to include:
  - Policy form(s) impacted.
  - Calendar year(s) the policy form(s) was available for purchase.
  - Percentage of increase approved to include the minimum and maximum if they vary by benefit type.
- Reminding policyholders that their policy is guaranteed renewable.
Insurers should consider advising policyholders of their current benefits:

- For example, the communication could disclose the policyholder’s current benefits to include:
  - Daily maximum amount.
  - Inflation option.
  - Current pool of benefits for policies with a limited pool of benefits.

Insurers should consider personal needs decision-making by:

- Only listing RBOs that are available to the policyholder.
- Calling on policyholders to reflect on how each option could impact them personally.
- Prompting policyholders to consider their unique situation to include their current age, health conditions, financial position, availability of caregivers, spouse or partner impacts, and the potential need for institutionalized care.
- Reminding policyholders to consider the cost of care in the area and setting where they expect to receive care.
- Informing policyholders of factors that impact LTC costs, such as:
  - The average cost of care for in-home care, assisted living, and nursing home care in their area.
  - The inflation rate of the cost of care for in-home and nursing home care in their area.
  - The average age and duration of an LTC claim for in-home and nursing home care.
  - Factors that influence the age, duration, and cost of a claim.
- Disclosing to policyholders when an RBO falls below the cost of care in their area.
- Calculating for policyholders the number of days or months a paid-up option could cover based on the cost of care in their area.
  - Buyout or cash-out disclosures.
    - The cash offerings, if any, should disclose to policyholders that the option could result in a taxable event, and they should consult with their certified personal accountant and/or tax advisor before electing this option.

Insurers should consider the value of each option by:

- Disclosing if the RBOs may not be of equal value and are dependent on the unique situation of each policyholder.

Insurers should consider communicating the impact of options by:

- Displaying the options in a way that enables policyholders to compare options, including details such as:
  - Daily/monthly benefit.
  - Benefit period.
  - Inflation option.
  - Maximum lifetime amount.
  - Premium increase percentage and/or new premium.
  - Nonforfeiture (NFO) or contingent nonforfeiture (CNF) amount.
  - If the policy is Partnership qualified, changes to benefits may impact Partnership status.
  - Current premium.
- Providing a series of questions to help policyholders contemplate the implications of each action, such as:
  - What will happen if they take no action?
  - What will happen if they make no payment before the policy anniversary date?
  - If they accept the full increase without reducing their benefits, how will they handle potential future rate increases?
If they elect the cash buyout, there could be tax implications.
- If they elect a paid-up NFO, how long will the reduced benefit last if they had a claim?
- If they were to increase their elimination period from 30 days to 100 days, do they have enough funds to cover those expenses?
- Partnership policies: Will reducing the benefits remove Partnership qualification? If so, the letter should explain that their asset protection may be removed or reduced.

When rate actions span over multiple years, insurers should consider:

- Disclosing the full rate increase amount, how it is spread out across multiple years, and all associated future planned rate increases approved by state insurance regulators.
- Specifying if the premium increase referenced is the first, second, third, last, etc.
- Offering CNF based on the full increase amount and offered with each phase of the rate action.
- Notifying policyholders at least 45 days in advance of each phase of the rate increase, consistent with any applicable state laws and/or regulations.

VII. EXHIBITS

A. EXHIBIT A—SAMPLE MSA ADVISORY REPORT

FROM: Long-Term Care Insurance (LTCI) Multistate Actuarial Rate Review Team
DATE: [Date]
RE: ABC Insurance Company – Block LTC1 – Draft of Initial MSA Advisory Report

---

Executive Summary

The LTCI Multistate Actuarial Rate Review Team (MSA Team) recommends a rate increase of 35% to be approved for inflation-protected products and 20% to be approved for products with no inflation, related to ABC Company’s block.

Higher rate increases are recommended for states where past cumulative rate increases below 55% have been approved. Reduced benefit options (RBOs) may be selected to help manage the impact of the rate increase.

Analysis by the MSA Team resulted in the recommended rate increase being consistent with that resulting from the actuarially justified Texas and Minnesota approaches. The recommended rate increases are below the increases that would have resulted from the lifetime loss ratio approach and the rate stability rules.

Background

The MSA Team was formed to assist the Long-Term Care Insurance (EX) Task Force in developing a consistent national approach for reviewing LTCI rates, which results in actuarially appropriate increases being granted by the states in a timely manner and eliminates cross-state rate subsidization.

The members are: [List names and state of members]. Starting in the first half of 2020, the MSA Team accepted rate increase proposals as part of a pilot program. The MSA Review became operational on [insert date].

This MSA Advisory Report is related to the rate increase proposal filed by ABC Company for its LTC 1 block sold between 2003 and 2006. The MSA Team’s actuarial analysis is provided below. The intention is that states can utilize

---

Information contained in this sample report is an example only and is not derived from any actual rate filing.
this analysis and feel comfortable accepting the MSA Advisory Report recommendation when taking action on the upcoming ABC filings that will be made to the states.

The MSA Review and findings shall not be considered an approval of the rate schedule increase filing, nor shall it be binding on the states or the insurer. As this is a state-approved product, each state will ultimately be responsible for approving, partially approving, or disapproving the rate increase. A goal of the Task Force is for as much consistency as possible to occur between states in the rate increase approvals.

**Insurer’s Proposal**

ABC Company requests a rate increase of 60% to be approved for inflation-protected products and 40% to be approved for products with no inflation.

In addition, ABC Company is requesting higher rate increases for states that did not grant full approval of prior rate increase requests.

**Workstream-Related Review Aspects**

**Actuarial Review**

At the direction of the Long-Term Care Insurance Multistate Rate Review (EX) Subgroup, the MSA Team applied the Minnesota and Texas approaches to calculate the recommended, approvable rate increases. Aspects of the Minnesota approach that result in lower rate increases than those resulting from loss ratio-based approaches contained in many states’ laws and rules include:

- Reduction in rate increases at later policy durations to address shrinking block issues.
- Elimination of rate increases related to inappropriate recovery of past losses.

Minnesota also has additional unique aspects: 1) consideration of adverse investment expectations related to the decline in market interest rates, 2) adjustments to projected claim costs to ensure the impact of uncertainty is adequately borne by the insurer; and 3) a cost-sharing formula applied in typical circumstances.

Even though these additional aspects are outside the pure loss-ratio requirements, they fall in line with legal provisions that rates shall be fair, reasonable, and not misleading.

The Minnesota approach, including application of the typical-circumstance cost-sharing formula, results in an approvable rate increase of 35% for inflation-protected products and 20% for products with no inflation protection.

The Texas approach results in an approvable rate increase of 29% in aggregate.

The MSA Team’s recommendation, in consideration of the Minnesota and Texas approaches, is to approve a rate increase of 35% for inflation-protected products and 20% for products with no inflation protection.

Higher rate increases are recommended for states where past cumulative rate increases below 55% have been approved.

The MSA Team reviewed support for the assumptions, experience, and projections provided by the insurer and performed validation steps to review the insurer-provided information for reasonableness. Details regarding the actuarial review are provided in Appendix 1. Also, the initial submission and subsequent correspondence between the insurer and the MSA Team are available on SERFF. The SERFF tracking number is ABCC-123456789.

**Consideration of Differences in Histories of States’ Rate Increase Approvals**
According to the Historical Rate Level Summary, Appendix D in the insurer proposal, past rate increase approvals by state have varied and can be categorized as follows:

- 25 states have granted full or near-full approval of ABC Company’s past requests (at or near 55%, cumulative).
- 18 states have granted cumulative approvals averaging 45%.
- Five states have granted cumulative approvals averaging 27%.
- Two states have granted cumulative approvals averaging 15%.

The insurer’s stated goal is to bring rates in all states up to an equivalent rate level. Currently, the average annual premium rates for a policyholder range from below $1,700 in some states (with the lowest past approvals) to over $2,200 in other states (with the highest past approvals).

The MSA Team’s recommendation is based on a goal of rates per benefit unit being uniform between states going forward.

A table of examples of recommended rate increases based on past cumulative approval history is provided in Appendix 2.

Non-actuarial & Valuation/Solvency Considerations

Non-actuarial considerations, including flexibility regarding the phase-in of rate increases, waiting periods between rate increases being coordinated with phase-in periods, and other issues are being discussed at the Task Force and the Subgroup.

Even with future claims potentially being reduced due to COVID-19-related behavioral impact, ABC Company will continue to experience substantial losses on this block.

Regarding coordination of rate and reserving reviews, the insurer states that assumptions underlying the rate increase proposal are consistent with assumptions underlying the reserve adequacy testing.

RBOs – Review for Reasonableness

Unless a rider was purchased, ABC Company policyholders facing a rate increase will be offered the following applicable options in lieu of a rate increase:

1) Extending the elimination period.
2) Decreasing the benefit period.
3) Reducing future inflation accumulation.

The insurer produced rate tables which demonstrate that the RBOs provide reasonable value in relation to a case of a policyholder retaining full benefits and paying the full rate increase.

Financial Impact for Insurer

The requested rate increase associated with recent adverse development would result in around $50 million of reduced losses for this block according to information contained in the actuarial memorandum.

Mix of Business

From the insurer’s actuarial memorandum:

Enrollees:
- Total enrollees as of date of proposal: 15,000
- Inflation protection: 9,000 (inflation protection) and 6,000 (no inflation)
- Benefit period: 8,500 (lifetime benefits) and 6,500 (limited benefits)

Product type: Expense reimbursement:
- Average issue age: 58
- Average attained age: 75
- Annualized premium: $30 million; $2,000 average per policyholder

Appendix 1

Drivers of Rate Increase Proposal – Summary

The primary drivers, summarized in the insurer actuarial memorandum, were lower lapses and longer average claim length. The insurer assumptions were based on actual-to-expected adjustments, based in part by insurer experience that has become more credible in recent years. The assumptions were determined to be reasonable and in line with industry and actuarial averages.

Details Regarding Minnesota Approach

For an average (in terms of benefit period and issue age), 5% compound inflation-protected cell:
- Makeup cumulative rate increase: 177% (the increase from original rates needed going forward to get the block to the financial position contemplated at original pricing)
  - This increase is equal to the increase that would result from a pure loss ratio approach.
- If-knew cumulative rate increase: 36% (the increase from original rates needed if the insurer could go back to the past and reprice the product given information it knows now)
- Proportion of original policyholders remaining in force, based on insurer original and updated assumptions: 62%
- Blended if-knew / makeup cumulative rate increase since issue: 123%
  - $0.62 \times 177\% + (1 - 0.62) \times 36\%, \text{ adjusted for rounding}
- Insurer cost share based on Minnesota formula (see Appendix 3): 12%
- Recommended cumulative rate increase since issue: 109%
  - $1 \times 0.12 \times 1.23, \text{ adjusted for rounding}
- Past cumulative rate increases: 55%
- Actuarial recommended rate increase from current rates: 35%
  - $(1 + 1.09) / (1 + 0.55) - 1, \text{ adjusted for rounding}$
- Final actuarial recommended rate increase from current rates (for the inflation-protected cell): 35%
  - Minimum of calculated approval rate of 35% and insurer proposal of 60%.
- Using the same methodology, the final actuarial recommended rate increase from current rates (for the non-inflation-protected cell): 20%

Note that the Minnesota approach includes the reflection of declining interest rates which tends to lead to adverse investment returns compared to expectations in original pricing. Also, where applicable, insurer morbidity assumptions are adjusted downward due to a lack of credible support at extremely high ages, and a general lack of complete support for aspects of morbidity assumptions, including uncertainty regarding future benefit utilization.

Details Regarding Texas Approach

- Insurer Calculation (aggregate): 52%

PPV calculations
- Texas Life & Health Actuarial Office (LHAO) PPV Calculation (aggregate): 29%
LHAO Comments

- For the purposes of the MSA report, and as a component of the calculation of the approvable rate increase, Texas recommends an actuarially justified PPV calculated amount of 29%.

Texas rate stabilized PPV Formula:

\[
\text{rate increase } \% = \frac{\Delta PV(\text{future incurred claims}) - \left( \frac{58 + 85 \cdot C}{1 + C} \right) \Delta PV(\text{future earned premiums})}{85 \cdot PV_{\text{current}}(\text{future earned premiums})}
\]

Reconciliation of Minnesota and Texas Approaches

The Texas PPV calculated amount of 29% aligns well with the Minnesota approach’s recommended rate increase of 35% for inflation-protected policies and 20% for non-inflation-protected policies when the distribution of inflation-protected vs. non-inflation-protected cells is applied. The MSA Team’s recommended rate increase is 35% for inflation-protected policies and 20% for non-inflation-protected policies.

Recommended rate increases by state, in consideration of various histories of rate increase approvals, are listed in Appendix 2.

Correspondence Summary

- Template information request for multi-state rate increase filings, based on the list adopted by the Health Actuarial (B) Task Force on March 23, 2018.
- New premium rate schedule, percentage increase for each rating scenario such as issue age, benefit period, elimination period, etc., from the existing and original rates.
- Rate increase history that reflects the filed increase.
- Actuarial Memorandum justifying the new rate schedule, which includes:
  - Lifetime loss ratio projection, with earned premiums and incurred claims discounted at the maximum valuation interest rate.
  - Reasons for the rate increase, including which pricing assumptions were not realized and why.
  - Statement that policy design, underwriting, and claims handling practices were considered.
  - A demonstration that actual and projected costs exceed anticipated costs and the margin.
  - The method and assumptions used in determining projected values should be reviewed in light of reported experience and compared to the original pricing assumptions and current assumptions.
  - Combined morbidity experience from different forms with similar benefits, whether from inside or outside the insurer, where appropriate to result in more credible historical claims as the basis for future claim costs.
    - Comparison with asset adequacy testing reserve assumptions.
    - Provide actuarial assumptions from original pricing and most recent rate increase filing, and, have the original actuarial memorandum available upon request.
  - Guidance Manual Checklist items: summaries, including past rate adjustments; average premium; distribution of business, including rate increases by state; underwriting; policy design and margins; actuarial assumptions; experience data; loss ratios; rationale for increase; and reserve description.
  - Assert that analysis complies with Actuarial Standards of Practice, including No. 18 and No. 41.
  - Numerical exhibits should be provided in Microsoft Excel spreadsheets with active formulas maintained, where possible.
- Rate Comparison Statement of renewal premiums with new business premiums, if applicable.
• Policyholder notification letter – should be clear and accurate.
  o Provide a description of options for policyholders in lieu of or to reduce the increase.
  o If inflation protection is removed or reduced, is accumulated inflation protection vested?
  o Explain the comparison of value between the rate increase and policyholder options.
  o Are future rate increases expected if the rate increase is approved in full? If so, how is this communicated to policyholders?
  o How are partnership policies addressed?

• Supplementary information, based on a list developed by the MSA Team following the review of initial pilot program proposals:
  o Information on benefit utilization.
  o Attribution of rate increase by factor.
  o RBO history and reasonability analysis.
  o Investment returns.
  o Expected loss ratio.
  o Shock lapse history.
  o Waiver of premium handling.
  o Actual-to-expected differences.
  o Assumption consistency with Actuarial Guideline 51 asset adequacy testing.

• Following initial review of the proposal, additional information was requested by the MSA Team related to:
  o Original pricing assumptions.
  o Lapse assumption by duration.
  o Premiums and incurred claims by calendar year based on original assumptions.
  o Distribution of in force by inflation protection.
  o Loss ratios by lifetime/non-lifetime benefit period and with/without inflation protection.
  o Description of waiver of premium handling in premium and claim projections.
  o Commentary on COVID-19 short-term and long-term LTC impact.

Appendix 3

Potential Cost-Sharing Formula for Typical Circumstance
Cumulative rate increase since issue date is haircut by:

- No haircut for the first 15%.
- 10% for the portion of cumulative rate increase between 15% and 50%.
- 25% for the portion of cumulative rate increase between 50% and 100%.
- 35% for the portion of cumulative rate increase between 100% and 150%.
- 50% for the portion of cumulative rate increase in excess of 150%.

Example: if the pre-cost sharing Minnesota approach results in a cumulative 210% rate increase since issue:

- Break 210% into the following components: 15%, 35%, 50%, 50%, 60%
- Post haircut approval is 100% of 15% + 90% of 35% + 75% of 50% + 65% of 50% + 50% of 60%
- = 15% + 32% + 38% + 33% + 30%
- = 147%

Justification for the cost-sharing formula is that the insurer should have had more information about the possibility of triple-digit rate increases than the consumer had.

Adjustments to the formula may be desired when an insurer’s solvency position is dependent on a certain level of rate increase approval. That is not the case with this insurer or proposal.
The National Association of Insurance Commissioners (NAIC) is the U.S. standard-setting and regulatory support organization created and governed by the chief insurance regulators from the 50 states, the District of Columbia and five U.S. territories. Through the NAIC, state insurance regulators establish standards and best practices, conduct peer review, and coordinate their regulatory oversight. NAIC staff supports these efforts and represents the collective views of state regulators domestically and internationally. NAIC members, together with the central resources of the NAIC, form the national system of state-based insurance regulation in the U.S.

For more information, visit www.naic.org.
State Implementation Reporting of NAIC-Adopted Model Laws and Regulations

Executive (EX) Committee

- Amendments to the *Unfair Trade Practices Act* (#880)—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2021 Spring National Meeting. Two states have enacted the revisions to this model.

Life Insurance and Annuities (A) Committee

- Amendments to the *Annuity Disclosure Model Regulation* (#245)—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2021 Summer National Meeting. NAIC staff are not aware of any state activity regarding this model.

- Amendments to the *Suitability in Annuity Transactions Model Regulation* (#275)—These revisions were adopted by the Executive (EX) Committee and Plenary during the February 13, 2020, conference call. Seven states have enacted the revisions to the model.

- Amendments to the *Standard Nonforfeiture Law for Individual Deferred Annuities* (#805)—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2020 Fall National Meeting. 14 states have adopted the revisions to this model.

Health Insurance and Managed Care (B) Committee

- Amendments to the *Accident and Sickness Insurance Minimum Standards Model Act* (#170)—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2019 Spring National Meeting. NAIC staff are not aware of any state activity regarding this model.

- Amendments to the *Health Maintenance Organization Model Act* (#430)—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2020 Fall National Meeting. One state has enacted this model.

- Amendments to the *Insurance Holding Company System Regulatory Act* (#440)—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2020 Fall National Meeting. Seven states have adopted the revisions to this model.

- Amendments to the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450)—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2020 Fall National Meeting. Two states have adopted the revisions to this model.
Property and Casualty Insurance (C) Committee

- Adoption of the Real Property Lender-Placed Insurance Model Act (#631)—This model was adopted by the Executive (EX) Committee and Plenary at the 2021 Spring National Meeting. NAIC staff are not aware of any state activity regarding this model.

Financial Condition (E) Committee

- Amendments to the Credit for Reinsurance Model Law (#785)—These revisions were adopted by the Executive (EX) Committee and Plenary during the June 26, 2019, conference call. 47 states have enacted this model.

- Amendments to the Credit for Reinsurance Model Regulation (#786)—These revisions were adopted by the Executive (EX) Committee and Plenary during its June 26, 2019, conference call. 31 states have enacted this model.

Executive (EX) Committee
Kansas City, Missouri
April 6, 2022

The Executive (EX) Committee met in Kansas City, MO, April 6, 2022. The following Committee members participated: Dean L. Cameron, Chair (ID); Chlora Lindley-Myers, Vice Chair (MO); Andrew N. Mais, Vice President (CT); Jon Godfread, Secretary-Treasurer (ND); David Altmaier, Most Recent Past President (FL); Lori K. Wing-Heier (AK); Michael Conway (CO); Trinidad Navarro (DE); Doug Ommen (IA); James J. Donelon (LA); Gary D. Anderson (MA); Kathleen A. Birrane (MD); Anita G. Fox (MI); Glen Mulready (OK); Andrew R. Stolfi (OR); Carter Lawrence (TN); and Scott A. White (VA). Also participating were: Barbara D. Richardson (NV); and Elizabeth Kelleher Dwyer (RI).

1. **Adopted the April 4 Report of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee**

   Director Cameron reported that the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee met April 4 in joint session. The meeting was held in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) and paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings.

   During this meeting, the Committee and Subcommittee: 1) adopted its 2021 Fall National Meeting minutes; and 2) adopted its March 21, 2022; Feb. 3, 2022; Jan. 14, 2022; and Oct. 12, 2021, minutes, which included the following action: a) approved the NAIC filing an amicus brief for *In Re: Penn Treaty Network America Insurance Company*; b) approved the System for Electronic Rates & Forms Filing (SERFF) Modernization – 2022 Transition Stages Fiscal Impact Statement after public exposure; c) approved the establishment of a foundation to promote diversity in the insurance regulatory community; d) approved the release of the SERFF Modernization – 2022 Transition Stages Fiscal for public exposure; e) appointed Director Evan G. Daniels (AZ) to the National Insurance Producer Registry (NIPR) Board of Directors; f) selected Los Angeles, CA, as the location of the 2026 Spring National Meeting; and g) reappointed Commissioner Mais to the International Association of Insurance Supervisors (IAIS) Executive Committee.

   The Executive (EX) Committee also adopted the report of the Audit Committee, which met March 30, including the 2021 Financial Audit Report.

   The Executive (EX) Committee also: 1) adopted the report of the Internal Administration (EX1) Subcommittee, which met March 8, including its amended 2022 charges; 2) appointed Director Cameron, NAIC President, to the IAIS Executive Committee; and 3) approved initial funding from the NAIC for the establishment of a foundation.

   Commissioner Donelon made a motion, seconded by Commissioner Mais, to adopt the April 4 report of the joint meeting of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee. The motion passed unanimously.

2. **Adopted its March 21, Feb. 3, and Jan. 14 Interim Meeting Report**

   Commissioner Altmaier made a motion, seconded by Director Lindley-Myers, to adopt the Executive (EX) Committee’s March 21, Feb. 3, and Jan. 14 interim meeting report (Attachment One). The motion passed unanimously.
3. **Adopted the Reports of its Task Forces**

Commissioner Altmaier made a motion, seconded by Director Lindley-Myers, to adopt the reports of the: 1) Climate and Resiliency (EX) Task Force; 2) Government Relations (EX) Leadership Council; 3) Long-Term Care Insurance (EX) Task Force; and 4) Special (EX) Committee on Race and Insurance (Attachment Two). The motion passed unanimously.

4. **Adopted the Proposal to Establish a Catastrophe Modeling Center of Excellence (COE) Within the NAIC’s Center for Insurance Policy and Research (CIPR)**

Commissioner Altmaier reported that the Climate and Resiliency (EX) Task Force was charged with evaluating the use of modeling by carriers and their reinsurers concerning climate risk. To facilitate that work, the Technology Workstream, led by Commissioner Donelon, exposed a proposal last September for the NAIC’s Center for Insurance Policy and Research (CIPR) to create a Catastrophe Model Center of Excellence (COE). The proposed COE has three goals: 1) to provide insurance departments with access to catastrophe modeling documentation and aid state insurance regulators in distilling technical information; 2) to work with catastrophe model vendors to develop education and training materials for state insurance regulators; and 3) to conduct applied research using models to explore options for improving resilience from natural hazards.

The Workstream received positive feedback on the proposal from state insurance regulators and the industry. NAIC staff created a frequently asked questions (FAQ) document to address questions about the purpose and scope of work to be developed by the COE. The proposal and the FAQ document were posted on the Climate and Resiliency Resource web page.

The Workstream adopted the proposal on Nov. 22, 2021, and submitted the recommendation to the Task Force on Dec. 14, 2021. Receiving no further comments, the Task Force adopted the proposal during its virtual meeting on March 21. Later this year, a fiscal will be presented to Executive (EX) Committee to address the resource and funding needs for this initiative.

Commissioner Altmaier made a motion, seconded by Commissioner Donelon, to adopt the proposal to establish a COE within the NAIC’s CIPR (Attachment Three). The motion passed unanimously.

5. **Adopted the Proposed Redesigned NAIC Climate Risk Disclosure Survey**

Commissioner Altmaier reported that the Executive (EX) Committee charged the Climate and Resiliency (EX) Task Force with considering appropriate climate risk disclosures within the insurance sector, including evaluation of the Climate Risk Disclosure Survey and alignment with other sectors and international standards.

The Climate Risk Disclosure Workstream, led by Commissioner Stolfi and Superintendent Dwyer, completed that work and adopted a revised Climate Risk Disclosure Survey on March 11. The revised survey is aligned with the Financial Stability Board’s (FSB’s) Task Force for Climate-Related Financial Disclosures (TCFD) framework, which the participating states have encouraged companies to use for the last two reporting years. The survey includes guiding questions specific to insurance to assist insurers required to submit the survey on an annual basis. The survey will remain a voluntary tool for states to use at their discretion, and it provides a considerable amount of leeway for state insurance regulators to offer insurers in terms of content reported and timelines for submission. The Workstream held multiple exposure periods and made changes to both the content of the survey and the timelines for reporting based on the feedback they received.

Commissioner Altmaier noted that many jurisdictions are placing an emphasis on climate disclosure, including the Federal Insurance Office (FIO), which has been instructed to look for gaps in the insurance regulatory framework.
regarding climate risk. By adopting the proposed changes to the Climate Risk Disclosure Survey to align it with Task Force on Climate-Related Financial Disclosures (TCFD) guidance, we are strengthening our argument that state insurance regulators are best suited to address any potential gaps. Implementing the revised survey provides state insurance regulators with a supervisory tool to assess how climate-related risks may affect the insurance industry, while allowing flexibility for states and aligning with international climate risk disclosure frameworks. Having a common framework for state insurance regulators reduces redundancy in reporting requirements for insurers. On March 21, the Climate and Resiliency (EX) Task Force voted to adopt the revised Climate Risk Disclosure Survey.

Commissioner Altmaier also noted that voting yes on the motion does not obligate states to use or in any way support the survey; it simply facilitates use of this uniform product to collect climate-related risk information from insurers writing business in the participating states.

Commissioner Altmaier made a motion, seconded by Director Fox, to adopt the proposed redesigned NAIC Climate Risk Disclosure Survey as a voluntary tool for state use (Attachment Four).

Commissioner Mulready made a substitute motion, seconded by Commissioner Lawrence, to adopt the proposed redesigned NAIC Climate Risk Disclosure Survey as a voluntary tool for state use and allowing insurance companies which meet the premium threshold in a calendar year a delayed survey response until the following calendar year.

Commissioner Stolfi commented that new companies coming on board and responding to the survey were discussed at the Workstream level. A company that has not responded previously to the survey would have until 2023 to respond, as provided for in the table on page 2 of the survey. This would also apply for companies when they first reach the $1 million point. They would have until the following year to respond. Commissioner Stolfi added that companies usually know when they are approaching different regulatory triggers, and they can plan for their participation in responding. If they request an extension, we would be prepared to respond to that, but even in that case the survey is very clear that any participating state has a lot of discretion to allow whatever flexibility they want as it’s a voluntary state survey.

Commissioner Lawrence qualified that his second to the substitute motion was not an opposition to the original motion but an addition, and he expressed his continued support for the state-based system of regulation as the forum to address this issue.

The substitute motion failed. The Committee then voted on the original motion to adopt the proposed redesigned NAIC Climate Risk Disclosure Survey as a voluntary tool for state use. The motion passed unanimously.

6. **Approved Disbanding the SERFF Advisory Board**

Commissioner Richardson reported that the NAIC is undertaking a multi-year, multi-million-dollar project to modernize the SERFF platform. As part of this effort, the Executive (EX) Committee is looking at governance of the SERFF system and how to streamline state insurance regulator, industry, and consumer input.

The proposal before the Committee (Attachment Five) is to disband the current SERFF Advisory Board due to the overlap in its responsibilities with both the Committee and the group of state insurance regulators overseeing the SERFF Modernization project, as well as with the Speed to Market (H) Working Group and the SERFF Product Steering Committee (PSC).

Policy issues related to rate and form filing are within the purview of the Working Group, and SERFF system issues are reviewed by the PSC, the SERFF Oversight Group, and ultimately the Executive (EX) Committee. Industry and consumer input has and will continue to be considered on all issues related to SERFF.
The Advisory Board received comments from Birny Birnbaum (Center for Economic Justice—CEJ) that the proposal
to do away with the Advisory Board would do away with the role for consumer representative input into the SERFF
system and its modernization. The primary consumer interest in SERFF relates to the SERFF Filing Access public
access feature. The NAIC staff supporting the SERFF Modernization project are committed to seeking consumer
input when that portion of the project is reached. Consumer representatives are also welcomed to participate at
both the Working Group and the PSC.

Commissioner Godfread made a motion, seconded by Commissioner Mais, to disband the SERFF Advisory Board.
The motion passed unanimously.

7. Received the 2021 Annual Report of the NAIC Designation Program Advisory Board Activities

Commissioner Clark provided an update on the NAIC Designation Program Advisory Board’s activities and 2021
achievements for the NAIC Insurance Regulator Professional Designation Program (Attachment Six). At year-end,
enrollment totaled 3,021. State insurance regulators have earned 1,704 professional insurance regulation
designations. To date, all but one territory have at least one employee enrolled in the designation program.

Commissioner Clark noted that the Advisory Board met monthly in 2021 to discuss policy recommendations,
renewal credits, the future of the program, and how to best promote awareness and support.

Commissioner Clark also reported some notable accomplishments in 2021, including implementing the Certemy
program management system and selecting an online proctoring service, Integrity Advocate, with implementation
scheduled for 2022.

The Advisory Board is strategizing for the future of the program and how it can best serve members and state
insurance regulators. Commissioner Clark encouraged members to make additional recommendations that would
enhance the program for use by the states.

8. Received a Status Report on the NAIC State Ahead Strategic Plan Implementation

Director Cameron provided an update on NAIC State Ahead implementation efforts. State Ahead is a three-year
strategic plan for the organization intended to further advance the products, services, and support the NAIC
provides to state insurance regulators in order to better meet the changing regulatory landscape. Overall, NAIC
staff continue to make good progress on the many State Ahead projects (Attachment Seven). Planning has begun
at the member level for the next iteration of the strategic plan.

9. Received a Report of Model Law Development Efforts

Director Cameron presented a written report on the progress of ongoing model law development efforts
(Attachment Eight).

10. Heard a Report from the NIPR Board of Directors

Director Deiter reported that the NIPR Board of Directors met April 4. During this meeting, the Board accepted
the 2021 independent financial audit conducted by RSM, a professional services firm. The audit report is part of
NIPR’s 2021 Annual Report released on April 4. The Annual Report highlights NIPR’s 2021 accomplishments,
including processing 42.5 million credentialing and report transactions on behalf of state departments of
insurance (DOIs), a year-over-year increase of 11.9%. NIPR had $61.6 million in revenue, representing a 29%
increase from 2020. It moved over $1 billion in state licensing fees from NIPR to DOIs, a 13.5% increase over last
year. Through February, NIPR revenues are 5.5% over budget and 9% over 2021.
NIPR is proud to announce several important initiatives that help fulfill its mission to provide cost-effective, streamlined, and uniform producer licensing services. NIPR continues to implement the Contact Change Request service for business entities, which allows industry to update email, telephone, and address changes required by states in one place. To date, NIPR has 31 state insurance departments using the service and has processed more than 18,000 transactions. This service provides an electronic solution for the states and industry, reducing time and cost for industry and state insurance regulators.

In 2022 the Massachusetts Division of Insurance authorized NIPR to process producer appointments and terminations on behalf of Massachusetts. NIPR is now processing producer appointments and terminations for all states. Massachusetts now offers the full array of NIPR’s online licensing services to all its producers and public adjusting.

Earlier this year, the Kansas Insurance Department began offering NIPR’s online licensing services to insurance producers and adjusters following the implementation of significant legislation designed to simplify and streamline the credentialing process.

11. Heard a Report from the Compact

Commissioner Birrane reported that the Interstate Insurance Product Regulation Commission (Compact) met April 5. During the meeting, the Compact adopted amendments to its bylaws. Many of these amendments came from recommendations made during the 2020 independent governance review conducted by Squire Patton Boggs.

One of the amendments made was to formalize the position of the past chair of the Compact in order to promote continuity and consistency of leadership. Superintendent Dwyer is the Compact’s past chair.

The members also voted to stay the effectiveness of the Uniform Standard for in-force rate increases for South Carolina for 120 days. It was also reported that South Carolina has a pending omnibus bill, which has a provision to repeal its participation in the Compact. The Compact received a favorable independent audit report. In 2021, the Compact ended the year with positive revenue of over $700,000. The Compact’s annual report was released April 5.

In March, the Compact made its third of 10 annual payments to the NAIC to service the outstanding debt incurred when the NAIC provided lines of credit to the Compact in its early years.

The Compact Governance Committee reported that it will release its recommendation with respect to the issue of implied congressional consent next week. This recommendation arises from the Colorado Supreme Court ruling and the outside legal counsel governance review, which found that the Compact has a compelling case that it received a form of congressional consent in 2006.

The Governance Committee has spent much of the past year working on this matter and is prepared to issue a position statement for further member review, as well as make it available publicly for notice and comment before considering it for adoption at the Compact’s next in-person meeting.

There are two new members of the Compact Consumer Advisory Committee. The Compact Management Committee appointed former Nebraska Insurance Director Bruce R. Ramge and former West Virginia Commissioner Jane Cline to serve as representatives on the Consumer Advisory Committee. Both are fully retired.

Having no further business, the Executive (EX) Committee adjourned.
EXECUTIVE (EX) COMMITTEE
March 21, 2022 / February 3, 2022 / January 14, 2022

Summary Report

The Executive (EX) Committee met March 21, Feb. 3, and Jan. 14, in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings. During these meetings, the Committee:

1. Approved the System for Electronic Rates & Form Filings (SERFF) Modernization – 2022 Transition Stages Fiscal Impact Statement after a 10-day public comment period.

2. Discussed composition of the Government Relations Leadership Council (GRLC).

3. Appointed Director Evan G. Daniels (AZ) to serve on the National Insurance Producer Registry (NIPR) Board of Directors beginning in February 2022.

4. Selected Los Angeles, CA, for the 2026 Spring National Meeting site location.

5. Approved the NAIC filing an amicus brief in the case of In Re: Penn Treaty Network America Insurance Company (In Liquidation), In Re: American Network Insurance Company (In Liquidation).

NAIC Support Staff Hub/Member Meetings/Spring 2022/Cmte/Ex/Att 1 InterimMtgReport.docx
REPORT OF THE EXECUTIVE (EX) COMMITTEE TASK FORCES

Climate and Resiliency (EX) Task Force—The Climate and Resiliency (EX) Task Force met April 6 and took the following action: 1) adopted it March 21 minutes; 2) heard a presentation from Zurich North America and Resilient Cities Network on their partnership to improve community resilience; 3) heard a presentation from Munich Re America on solutions to improve community flood mitigation; and 4) heard a federal update. During its March 21 meeting, the Task Force adopted a proposal for the NAIC Center for Insurance Policy and Research (CIPR) to create a Catastrophe Model Center of Excellence, as well as the revised Climate Risk Disclosure Survey for states to use voluntarily at their discretion.

Government Relations (EX) Leadership Council—The Government Relations (EX) Leadership Council did not meet at the Spring National Meeting. The Leadership Council meets weekly in regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to discuss federal legislative and regulatory developments affecting insurance regulation.

Long-Term Care Insurance (EX) Task Force—The Long-Term Care Insurance (EX) Task Force met April 6 and took the following action: 1) adopted its 2021 Fall National Meeting minutes; 2) received a report on the implementation of the Long-Term Care Insurance Multistate Rate Review Framework (LTCI MSA Framework), which, upon adoption by the NAIC Executive (EX) Committee and Plenary, is anticipated to be implemented by September 2022; 3) heard a report on industry trends and factors affecting reserve levels; and 4) heard a report on the LTCI Multi-State Actuarial (MSA) Associate Program. Following the open meeting, the Task Force met in regulator-to-regulator session pursuant to policy paragraph #8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings.

Special (EX) Committee on Race and Insurance—The Special (EX) Committee on Race and Insurance met April 6 and took the following action: 1) adopted its 2021 Fall National Meeting minutes; 2) received reports from its five workstreams; 3) discussed the Innovation, Cybersecurity, and (H) Committee Coordination Forum – Detecting and Addressing Unfair Bias; and 4) heard an update on the State Diversity Leaders Forum.

- Workstream One of the Special Committee is focused on researching and analyzing the level of diversity and inclusion within the insurance sector. The Workstream met in regulator-to-regulator session in October to receive an update from California and New York on their respective diversity, equity, and inclusion (DE&I) efforts and the diversity-related industry data that these states are collecting. The Workstream also met with stakeholders in November 2021 to better understand industry diversity-related programs, how companies are measuring progress, and what state insurance regulators can do to support these efforts. In terms of next steps, the Workstream co-chairs are working to outline proposed recommendations, as well as action steps for the Workstream to consider. The Workstream is also monitoring efforts by the U.S. House Committee on Financial Services’ Subcommittee on Diversity and Inclusion, which plans on having a hearing and producing a report on DE&I within the insurance sector. Much of what Chairwoman Maxine Waters (D-CA) and Chairwoman Joyce Beatty (D-OH) plan to evaluate falls within the charges of Workstream One: seeking additional engagement from stakeholders to understand the efficacy of diversity-related programs, how companies measure their progress, and collecting input on any existing gaps in available industry diversity-related data. The Workstream will collaborate with the Special Committee in anticipation of the hearings and subsequent report.
• Workstream Two of the Special Committee has gathered responses to the zone level survey examining best practices and initiatives that state insurance departments may consider when promoting DE&I in their offices. The Workstream will soon develop a method and forum to share diversity and inclusion information among state insurance regulators. Much of Workstream Two’s recent work has been conducted by Evelyn Boswell, NAIC Director of Diversity, Equity, and Inclusion, through the State Diversity Leaders Forum. The Forum provides a space for diversity leaders in each state to come together and discuss best practices in promoting diversity in their respective insurance departments. Ms. Boswell provided an update on this work during the Special (EX) Committee on Race and Insurance’s meeting on April 6.

• Workstream Three of the Special Committee is focused on property/casualty (P/C) insurance issues. The Workstream co-chairs have met with leadership from the Innovation, Cybersecurity, and Technology (H) Committee, the Big Data and Artificial Intelligence (H) Working Group, the Accelerated Underwriting (A) Working Group and the Casualty Actuarial and Statistical (C) Task Force to discuss issues surrounding algorithmic auditing and how best to work together to understand such auditing. The Workstream plans to hear from various experts in the field to determine what education or tools state insurance regulators might need to evaluate algorithms and models to detect unfair bias. Workstream Three met March 22 in regulator-to-regulator session, pursuant to paragraph 3 (special companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss algorithmic auditing, as well as each of its charges.

• Workstream Four of the Special Committee is focused on life insurance. The co-chairs have met to discuss how best to focus the Workstream’s efforts in 2022 and have specifically explored having presenters that could talk more about the Workstream charge to “continue research and analysis related to insurance access and affordability issues, including the marketing, distribution, and access to life insurance products in minority communities, including the role that financial literacy plays.” The Workstream hopes to meet following the Spring National Meeting to confirm the Workstream focus for 2022 and hear additional presentations to inform its work.

• Workstream Five of the Special Committee met Dec. 20, 2021. During this meeting, the Workstream discussed a revised draft Principles for Data Collection document based on its discussions during its Dec. 3, 2021, meeting and adopted the document. The Workstream recently met in a regulator-to-regulator session to discuss its focus for 2022. The Workstream plans to focus on identifying race-related barriers to the acquisition and use of health insurance, creating strategies for mitigating or removing such barriers, discussing the role health insurance can play in addressing racially based inequities in health outcomes, and addressing social determinants of health. The Workstream hopes to meet at least monthly to hear from various stakeholders, such as consumer groups, academics, and industry related to these issues with a focus on benefit design and consumer empowerment.
A Proposal to Establish a Catastrophe (CAT) Modeling “Center of Excellence” (COE) within the NAIC’s Center for Insurance Policy & Research (CIPR)

September 20, 2021

Introduction

The leadership and members of the NAIC have determined natural CAT risks and resiliency to be a top priority and organized several workstreams to pursue objectives intended to help ensure homes and businesses are protected from insured perils arising from natural CATs, while keeping markets stable through financially strong insurers and reinsurers. For example, the Catastrophe Risk (E) Subgroup has spent many years working to develop risk-based capital (RBC) factors for hurricane and earthquake exposures and, more recently, grappling with how best to address wildfire, flood, and convection storm perils. Separately, the Catastrophe Insurance (C) Working Group is charged with maintaining the NAIC State Disaster Response Plan, the Disaster Assistance Program, and the Catastrophe Computer Modeling Handbook. The Working Group has also commenced work to determine ways in which the private flood market can be facilitated and monitored by the state insurance regulators. The Climate and Resiliency (EX) Task Force has taken on significant work, which will require a deeper understanding of all aspects of climate and natural CAT risks. Further, many state insurance regulators are taking on new roles in working to create risk resilient communities within their jurisdictions.

Given these increased pressures and new roles, state insurance regulators need to improve their understanding of the CAT modeling technologies used by insurers and reinsurers. This means having access to the same knowledge, insights, and tools used by insurers. In doing so, state insurance regulators can more effectively engage with insurers and state and federal policymakers when discussing how best to maintain critical insurance coverages for their states’ economies and developing new regulatory policy. The NAIC can play an instrumental role fulfilling these needs.

In this regard, the Technology Workstream of the Climate and Resiliency (EX) Task Force was assigned the task of considering the potential application of technology, such as early warning systems and predictive modeling tools, to better understand and thereby evaluate insurers’ climate and natural CAT

© 2022 National Association of Insurance Commissioners
risk exposures. In particular, the Technology Workstream was tasked with determining whether technical support services were needed by state insurance departments regarding the industry’s use of CAT models.

To help facilitate the members’ consideration of such a need, NAIC/CIPR staff conducted two presentations on June 7 and Aug. 6, 2021, wherein staff laid out a range of support services for state insurance departments when encountering the use of commercial CAT models by insurers in rate making processes, solvency functions, and/or other insurance business decisions (e.g., strategic, reinsurance, claims management). NAIC/CIPR staff addressed potential support services in the areas of: 1) facilitating access to CAT modeling documentation; 2) providing technical education and training; and 3) conducting applied research to proactively address regulatory climate risk and resilience priorities. Finally, an additional related benefit highlighted is the ability to provide future support services for other modeled CAT risk beyond climate and natural CATs, including casualty/liability, cyber, terrorism, and infectious diseases such as pandemics. This additional support work could potentially influence other NAIC related committee activities, as appropriate.

Proposal

As outlined in the introduction above, the time has arrived for the NAIC to establish a permanent support group—i.e., the NAIC CAT Modeling COE—to provide the NAIC and state system of insurance regulation with the necessary technical expertise, tools, and information to effectively regulate the insurers and reinsurers exposed to catastrophic events for a secure and stable insurance marketplace. We believe this COE would be best positioned within the NAIC’s CIPR given CIPR’s: 1) existing knowledge, expertise, and recent NAIC applied research track record in this field; and 2) its ability to effectively work with modelers and state insurance regulators from a neutral perspective within the NAIC. Below is a complementary and integrated series of technical support services envisioned by the COE:

1) Facilitating insurance department access to CAT modeling documentation and assistance in the distilling of this information.

2) Providing general technical education/training materials on the mechanics of commercial models and treatment of perils and risk exposures.

3) Conducting applied research analysis utilizing various model platforms to proactively answer the regulatory “so what” questions that may need to be addressed for regulatory resilience priorities.

The first element from above provides for the CAT Modeling COE to facilitate insurance department access to CAT modeling documentation and other information, as well as centralizing accumulated knowledge and expertise to aid in the deciphering and distillation of CAT models. The COE would assist
with managing both CAT model vendor relationships and insurance department needs. As such, the COE would be briefed on the modeling technologies and inputs in a similar fashion as insurers and reinsurers are and have access to the same modeling documentation to develop internal expertise. This knowledge and expertise would then be actively shared with state insurance regulators for use in regulatory processes and other considerations. Critically, this information would be collected and stored on an NAIC regulator-only technological platform with proper CAT modeling vendor Data Use Agreements (DUAs) in place to allow for proprietary model information sharing, part of which has been a stumbling block to regulatory access to date.

The second element from above provides for technical education/training materials on the mechanics of commercial models and treatment of perils and risk exposures for state insurance regulators. Importantly, this technical training would be utilized to enhance regulatory operational activities, thereby bringing the science to operations. For example, it would allow for state insurance departments and the NAIC to reimagine the NAIC *Catastrophe Computer Modeling Handbook*, which could become the foundational authoritative literature on state insurance regulator use of CAT models. As state insurance regulators gain more practice with these models, the NAIC is also well-positioned to develop best practices on industry use, as well as state insurance regulator use. Consequently, the NAIC *Financial Condition Examiners Handbook* and the *NAIC Own Risk and Solvency Assessment (ORSA) Guidance Manual* could be improved to account for the latest developments and best practices in CAT risk assessment. Further from a solvency perspective, both the development of related RBC CAT charges and climate stress testing would benefit greatly from such a technical foundation.

The third element from above provides for conducting applied research analysis to utilize various model platforms to proactively answer the regulatory “so what” questions that may need to be addressed. CAT models are not limited to use by the insurance industry; they are tools for CAT risk assessment. State insurance regulators can apply these tools in much the same way as the industry, albeit for regulatory resilience priorities (e.g., how to increase the uptake and proliferation of home hardening activities related to hurricane and wildfire risk). Such mitigation activities are critical to reduce expected losses and improve the availability and affordability of coverage currently and in a future warming climate. Applied research utilizing CAT models can demonstrate the economic value of such mitigation activities, laying the proper foundation for policy discussions to address increasing property owner mitigation implementation.

Lastly, it is important to note that these identified support services will not be taking the place of individual state department of insurance (DOI) activities involving CAT models, such as model and rate filing reviews, nor will the CAT Modeling COE be approving vendor models. Rather, the support services will allow the COE to engage with state insurance regulators as a trusted partner with a sufficient level
of CAT modeling expertise to enable the conduction of ongoing CAT modeling regulatory activities more effectively.

**Plan of Action**

In the past year, many of the above support services have already transpired and/or are currently underway. These include: 1) regulator-only technological platform infrastructure development and DUA executions; 2) NAIC Insurance Summit and CIPR events focused on CAT modeling education concerning wildfire and flood models, CAT model climate change incorporation and climate risk assessment, and casualty CAT modeling; 3) successful completion of a California, Colorado, and Oregon DOI wildfire mitigation report and wildfire CAT model technical documentation done in conjunction with the Insurance Institute for Business & Home Safety (IBHS) and Risk Management Solutions (RMS), which was further leveraged by the Catastrophe Risk (E) Subgroup for wildfire RBC factor development and the Catastrophe Insurance (C) Working Group *Catastrophe Computer Modeling Handbook* updates. Therefore, this proposal will not be to start such CAT modeling COE support service activities, but rather to build upon and leverage these activities for further enhancement and formalization at the NAIC.

Following the meeting of the Technology Workstream on Aug. 6, 2021, the proposal was released to the member states for further comments and questions. Comments were considered, and a revised proposal was approved for public exposure by the Technology, Solvency, and Pre-Disaster Mitigation Workstreams on Sept. 20, 2021.

Following the Sept. 20 regulator-only meeting, the proposal was released to interested parties for further comment and questions for 30 days. Comments will be considered by the Technology Workstream following this feedback and revisions may be made to the proposal, as agreed upon.

If the proposal advances through the above process steps, it will be prepared for recommendation to the Climate Risk and Resiliency (EX) Task Force at the NAIC 2021 Fall National Meeting in San Diego, CA.

We anticipate there would be no new charges associated with creation of the COE; i.e., the expenses associated with the COE resources would be effectively absorbed by the NAIC budget and have no special assessments, fee for services, etc. These resources may include: 1) recruiting a vendor/insurance department CAT modeling relationship manager and a CAT model research analyst; 2) funding for education/training development and implementation and the licensing and/or running of models for applied research to support and/or enhance regulatory operational activities; and 3) addressing regulatory resilience priorities.
Conclusion

In the face of extreme weather and the future climate significantly affecting property insurance markets, state insurance regulators need to have access to the same knowledge, insights, and CAT modeling tools used by insurers and reinsurers to assess and address climate risk and resiliency; i.e., knowledge and tools that are available for state insurance regulators to access, understand, and utilize. To accomplish this, we propose that the NAIC establish a permanent support group—i.e., the NAIC CAT Modeling COE—housed within the NAIC’s research unit; i.e., CIPR. We have laid out a proposal and plan of action that would build upon the work that the NAIC/CIPR has already been conducting around climate and CAT risks and allows the NAIC/CIPR to bring science to the operation of the DOIs in a way that is additive to the existing regulatory system, easy to access, and tailored to the needs of the state insurance regulators.

CATModelCOE Proposal
NAIC/Center for Insurance Policy and Research (CIPR) Catastrophe Model
Center of Excellence (COE)
Frequently Asked Questions (FAQ)
November 16, 2021

Governance & Oversight

Topic: Vendor and Insurer Continued Engagement with Departments of Insurance (DOIs)

Is the intent for the COE to become the primary point of contact between state insurance regulators and modelers?

No. As stated in the proposal, “identified support services will not be taking the place of state DOI activities involving CAT models, such as model and rate filing reviews, nor will the CAT Modeling COE be approving vendor models.” However, we do envision the COE providing access to CAT modeling expertise to support state insurance regulator understanding, training, etc.

Will state insurance regulators continue to be open to discussions with modelers (and insurers) about models?

Yes. In fact, the COE will seek to improve communication between state insurance regulators and modelers/insurers, supplying state insurance regulators with expertise and information to help facilitate such discussions.

Topic: Transparency and Potential Bias of Modeled Results/Usage

How will the COE engage with interested stakeholders to remain transparent?

Most NAIC support resources interact with a committee for reporting and oversight. In this instance, at least for now, we propose that the catastrophe resource center will report to the Technology Workstream under the Climate and Resiliency (EX) Task Force, as well as coordinate with the Property and Casualty Insurance (C) Committee.

How will the COE work to ensure impartiality of vendor models?
The COE will make every effort to engage with all vendors willing to participate for all perils with available technical documentation. Furthermore, the COE will establish a governance structure to ensure that partiality is not provided to any model or vendor.

**Would the COE be engaging to connect learnings from the CAT model to specific insurer rate-making, solvency, and/or business—i.e., strategic, reinsurance, claims management—decisions?**

The COE support services will not take the place of state DOI activities involving CAT models, such as model and rate filing reviews, nor will the CAT Modeling COE be approving vendor models. The COE will work to understand models objectively from a general sense, not for individual rate filings or solvency assessments. We acknowledge that each insurer has their own risk profile that would need to be considered on an individual basis, which is outside the scope of the COE.

**Topic: Objective Science**

**Would the kind of information the COE conveys be facts-based or would it include opinions or analysis?**

The information provided to the state DOIs would be fact-based with relevant objective analysis, as requested. Providing this type of information to states highlights the importance of the placement of the COE within the NAIC’s independent research center, the CIPR.

**Topic: Addressing Regulatory “So What” Questions Through Applied Research**

**What are regulatory “so what” questions in support service #3 of the proposal conducting applied research analysis?**

State insurance regulators are responsible for maintaining well-functioning competitive insurance markets. Forward-looking models can be utilized to help analyze market performance, especially regarding the need for improved resilience. As stated in the proposal, CAT models are tools for catastrophe risk assessment. State insurance regulators can apply these tools in much the same way as the industry, albeit for regulatory resilience priorities. For example, models can be used to identify high-risk areas and where proliferation of home hardening activities can improve resilience to natural hazards, including hurricane, flood, severe convective storm, tornado, wildfire, and earthquake. Such mitigation activities are critical to reduce probable losses. Lower losses over time can improve the availability and affordability of coverage in the future. Applied research utilizing CAT models can demonstrate the economic value of mitigation activities. One
description provided via public comments that we considered useful is, “conducting applied research analysis that utilizes or analyzes the potential to utilize CAT models to further public and private risk mitigation and resiliency efforts; benefits and opportunities at the individual consumer or business; or public agency at the community, regional, state, or national level.”

**Regarding conducting applied research analyses utilizing CAT models, we would like to understand the research and support expectations from the COE on modelers.**

We envision working with modelers on applied research activities as applicable. We are requesting funding to allow for modeler engagement.

**Depending on the expected level of granularity for COE work, additional questions may be relevant, such as whether the COE (NAIC/CIPR) would need to be prepared to go to a hearing to testify or respond to discovery?**

It is not anticipated that the COE would maintain granular information about individual insurer use of CAT models. The level of detail would be around the actual CAT model to provide education and training to state DOIs.

**Will the COE be used to conduct research and analysis into the markets for CAT models. Will conflicts of interest or market failures distort the use of CAT models?**

No. It is not envisioned that the COE would set out to conduct this type of research and analysis.

**Implementation Considerations**

**Topic: COE Communication of Various Results, Information, and Observations to DOIs**

Given the complexity of models and breadth of expertise required to build and maintain them, there is a risk that any third party cannot adequately communicate the nuances and justification of models. Will the COE plan to coordinate model presentations from the modelers, rather than only relaying this information second-hand?

Yes. The COE would plan to coordinate model presentations from modelers.

**How will information, observations, and/or questions about models be conveyed to state insurance departments? What kind of output will be generated?**

We plan to hire a relationship manager responsible for communicating with the CAT model vendors and state insurance regulators. A regulator-only technology platform will help facilitate information sharing with state insurance regulators.
Research output could take multiple forms depending upon the nature of the analysis undertaken.

**What kinds of data fields will be included? Will others provide input into the design?**

The data fields selected would be contingent on the models being used and the research project under consideration. Data fields would follow from model inputs and outputs.

**Will the COE reviews and/or output be designed to be geography-specific?**

Yes. That is possible.

**Once a model has been reviewed, what renewal process is envisioned?**

Models will not be reviewed, nor would they be posted on the state insurance regulator-only website. However, model technical documentation and information will be updated as new versions of the models are released.

**Topic: Model Vendor Intellectual Property (IP) Protection**

**How will the COE safeguard intellectual property of the participating CAT model vendors?**

All modeling documentation, access, and usage will be centralized and monitored through the COE via legally binding data use agreements. The NAIC has an extensive track record of experience in collecting and protecting proprietary information. The actual models will not be posted on the state insurance regulator website, only the model documentation will be posted.

**Topic: Interaction with Modelers and Other External Experts**

**Will modelers engage in discussions with the COE about specific models? Do you expect insurers would be involved in model-related discussions?**

Yes. The COE would be engaged with modelers on the modeling technologies and inputs in a similar fashion as insurers and reinsurers and have access to the same modeling documentation to develop internal expertise. It is possible that insurers could be involved in model-related discussions with the COE, but the COE will not review individual insurer’s use of models.

**Is the CIPR planning to license and use modeler software or engage in paid consulting studies for their research and development of processes?**
Yes, depending on COE resources and the specific research use case. The CIPR would be willing to either license modeler software and/or engage in paid consulting studies for research and educational/training purposes, as directed by the appropriate NAIC authorities.

**How will results and underlying assumptions from licensed models be communicated to state insurance regulators?**

Any use of a licensed model, including distribution of modeled results, would be subject to the model license agreement and/or model vendor negotiated research consulting contract. Underlying assumptions from the various models utilized would be collected via the model technical documentation as part of the model vendor data use agreement. Note that it is possible that the model technical documentation, including underlying model assumptions, could be collected through a COE data use agreement without an associated model-based research project. If we were to license a model, the actual model would not be posted on the state insurance regulator-only website.

**Will modelers be involved in establishing workflows, best practices, agendas, and expectations of the COE, including timing?**

We anticipate that modelers will be actively engaged with the COE staff, advising on these items as appropriate.

**How many vendors is the COE considering supporting?**

The COE will not be “supporting” vendors, but rather the COE will collect model documentation and engage with model vendors. The COE will engage with any model vendor serving insurance markets where the information is relevant to state insurance regulators.

**Does the COE anticipate looking to external experts for some of the implementation or ongoing work?**

Yes. External collaboration would be welcome, whether that be with industry experts, public agencies, or the academic community.

**Topic: Resources - Staffing and Funding**

**How many states do you expect to be interfacing with the COE?**

The COE will be a resource of the NAIC potentially interfacing with all 56 jurisdictions.
Beyond recruiting for the identified new roles of CAT modeling relationship manager and CAT model research analyst, how many people at the NAIC/CIPR will be contributing to COE activities? Do you expect that to change over time?

The CIPR director, the NAIC solvency enterprise risk management (ERM) advisor, and potentially Property and Casualty Insurance (C) Committee staff support will have a role in supporting the work of the COE. We anticipate that additional technical and administrative support resources may be necessary as the workload and demand for services evolve with demonstrated success.

Will the staffing level proposed by the NAIC be able to provide meaningful analysis in the broad category of catastrophe modeling?

Prior to the creation of the COE, CIPR and NAIC staff have provided meaningful analysis on wildfire CAT modeling and applied wildfire resilience research. We aim to build off this success and need to start somewhere. Every little bit helps for the states, as stated by one industry commenter, “[t]he staffing issues mentioned above regarding experts at the NAIC are even larger for state insurance departments. Most states are not going to have enough or the right staff to review these models. They will have to rely on others to evaluate catastrophe model validity, and most likely will have to rely heavily on the decisions and evaluations made by others.”

Have long-term plans been prepared? Are there budget implications?

No long-term plan has been developed for the COE. The expenses associated with the COE would be subject to the NAIC budget process and have no special assessments or fees for service.
PROPOSED REDESIGNED NAIC CLIMATE RISK DISCLOSURE SURVEY

INTENT AND PURPOSE

The Climate Risk Disclosure Survey is a voluntary risk management tool for state insurance regulators to request from insurers on an annual basis a non-confidential disclosure of the insurers’ assessment and management of their climate-related risks.

The purpose of the Climate Risk Disclosure Survey is to:

- Enhance transparency about how insurers manage climate-related risks and opportunities.
- Identify good practices and vulnerabilities.
- Provide a baseline supervisory tool to assess how climate-related risks may affect the insurance industry.
- Promote insurer strategic management and encourage shared learning for continual improvement.
- Enable better-informed collaboration and engagement on climate-related issues among regulators and interested parties.
- Align with international climate risk disclosure frameworks to reduce redundancy in reporting requirements.

BACKGROUND

The NAIC adopted the original Climate Risk Disclosure Survey in 2010 and it has since been administered by the California Department of Insurance. In 2021, fifteen states participated in the climate risk disclosure survey initiative, up from six states in prior years. Because any insurer writing business in a participating state is required to submit their survey response annually, adding nine states in 2021, increased the market coverage from approximately 70% in 2020 to nearly 80% of the market in 2021 based on direct premium written.

In 2021, the Financial Stability Oversight Council (FSOC) produced a series of recommendations for financial regulators to enhance supervision, data analysis, staff resources, and regulatory cooperation related to climate risk. This included a recommendation to consider enhancing public reporting requirements for climate-related risks in a manner that builds on the four core elements of the Task Force on Climate-Related Financial Disclosure (TCFD), to the extent consistent with the U.S. regulatory framework and the needs of U.S. regulators and market participants.

This revised survey responds to FSOC’s recommendations and incorporates international best practices in adopting a TCFD aligned framework for US insurers to report on climate risks when requested by their state regulator.

The TCFD framework is structured around four thematic areas that are core elements.
for how insurers operate—governance, strategy, risk management, and metrics and targets. The four thematic areas are supported by key climate-related financial disclosures—referred to as recommended disclosures—that build out the framework with information that will help regulators and others understand how reporting organizations assess and approach climate-related issues.

INTRODUCTORY GUIDANCE

Timeline and expectation for reporting
We expect that every company who will be asked to complete the survey in 2022 will have already completed the existing NAIC survey or filed a TCFD report; nearly all companies having participated for several prior years. The table below outlines the timing and other expectations for reporting in 2022 and 2023 as the new survey is phased in. If a company has not previously responded to the NAIC survey, it should be given until 2023 to first respond.

<table>
<thead>
<tr>
<th>Reporting Year</th>
<th>Expectation Regarding Content</th>
<th>Deadline for Completion</th>
</tr>
</thead>
</table>
| 2022           | • If the insurer has already completed a TCFD for this reporting year, they can submit it as is.  
• If the insurer has not already completed a TCFD for this reporting year, they should make their best effort to complete the survey below or include such information in their TCFD filing, as is requested below.  
• Closed-ended questions are voluntary for 2022, and states may opt out of requesting responses to closed-ended questions. | To allow additional time for insurers to move to the new reporting structure, submission deadlines should be moved from Aug. 31 to Nov. 30. Extensions may be granted by the state that initiated the request to the company or the lead state for the group filing. |
| 2023           | Insurers are expected to address the content of the entire TCFD aligned survey below, to the best of their ability. | In accordance with prior years, submissions are due from insurers by Aug. 31st. Extensions may be granted by the state that initiated the request to the company. |

Threshold and voluntary state participation
The reporting threshold remains consistent with the threshold implemented each year since 2013. All insurers with countrywide premium written of at least $100 million, licensed to write in any of the participating states/territories, are required to complete and submit their survey on an annual basis. As of 2021, the following states/territories participate: California,

**Confidentiality and best effort basis**
While the existing NAIC survey and TCFD contain sufficient overlap in the analysis required to answer, we recognize that many insurers will be moving to a new reporting framework in the TCFD. Insurers should make their best effort to answer each question honestly and completely, keeping in mind that the information contained in the filing will be made public. During the transition to the TCFD aligned survey, state insurance regulators should work closely with insurers to provide as much flexibility as possible in terms of responding to the survey and deadlines. Confidential information should not be included in this public disclosure unless it is intended to be made public. If additional detail is requested by a state insurance regulator, that request will be handled directly between the regulator and insurer.

**Materiality**
There is no requirement to provide information that is immaterial to an assessment of financial soundness (insurers may choose to disclose such information voluntarily, with no implication that such information is in fact material). Insurers should justify their materiality assessment. For the definition of materiality, refer to the Financial Condition Examiners Handbook and/or the U.S. Securities and Exchange Commissioner Accounting Bulletin: No. 99, if applicable.

Consistent with TCFD guidance, the Strategy and Metrics and Targets Sections involve an assessment of materiality, except for the question on Scope 1 and Scope 2 greenhouse gas emissions within the Metrics and Targets Section. Disclosures related to Governance and Risk Management Sections do not involve an assessment of materiality.

**Assessing financial impact of climate-related risks and opportunities**
The financial impacts of climate-related issues on an insurer are driven by the specific climate-related risks and opportunities to which the insurer is exposed and its strategic and risk management decisions on seizing those opportunities and managing those risks (i.e., accept, avoid, pursue, reduce, or share/transfer). Once an insurer assesses its climate-related issues and determines its response to those issues, it can then consider actual and potential financial impacts on revenues, expenditures, assets and liabilities, and capital and financing.¹

Consistent with the TCFD Guidelines, determining whether an individual organization is or may be affected financially by climate-related issues usually depends on:

- the organization’s **exposure** to, and anticipated effects of, specific climate-related risks and opportunities;
- the organization’s planned **responses** to manage (i.e., accept, avoid, pursue, reduce, or share/transfer) its risks or seize opportunities; and

¹ [https://assets.bbhub.io/company/sites/60/2021/07/2021-TCFD-Implementing_Guidance.pdf](https://assets.bbhub.io/company/sites/60/2021/07/2021-TCFD-Implementing_Guidance.pdf), pg.9
• the implications of the organization’s planned responses on its income statement, cash flow statement, and balance sheet.²

Importantly, an organization should assess its climate-related risks and opportunities within the context of its businesses, operations, and physical locations in order to determine potential financial implications. In making such an assessment, an organization should consider (1) current and anticipated policy constraints and incentives in relevant jurisdictions, technology changes and availability, and market changes and (2) whether an organization’s physical locations or suppliers are particularly vulnerable to physical impacts from climate change.³

See pages 10-12 of the TCFD’s Implementation Recommendation Report for more guidance on assessing exposure, response and implications.

ADDITIONAL SPECIFIC GUIDANCE

One of the several benefits of aligning with the TCFD is that it allows insurers to benefit from years of guidance and supporting material developed and being regularly updated by the TCFD and other organizations.

For those insurers new to TCFD reporting, the Implementation Recommendation Report provides a useful guide. It contains guidance for all sectors on each of the four thematic areas of governance, strategy, risk management and metrics and targets. For example, in relation to the risk management disclosure to describe the insurers’ processes for identifying and assessing climate-related risks, it provides the following guidance:

<table>
<thead>
<tr>
<th>Organizations should describe their risk management processes for identifying and assessing climate-related risks. An important aspect of this description is how organizations determine the relative significance of climate-related risks in relation to other risks.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Organizations should describe whether they consider existing and emerging regulatory requirements related to climate change (e.g., limits on emissions) as well as other relevant factors considered.</td>
</tr>
<tr>
<td>Organizations should also consider disclosing the following:</td>
</tr>
<tr>
<td>- processes for assessing the potential size and scope of identified climate-related risks and</td>
</tr>
<tr>
<td>- definitions of risk terminology used or references to existing risk classification frameworks used.⁴</td>
</tr>
</tbody>
</table>

The same document also provides supplemental insurance-sector specific guidance. For example, for the same disclosure question, it provides:

<table>
<thead>
<tr>
<th>Insurance companies should describe the processes for identifying and assessing climate-related risks on re-/insurance portfolios by geography, business division, or product segments, including the following risks:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- physical risks from changing frequencies and intensities of weather-related perils;</td>
</tr>
<tr>
<td>- transition risks resulting from a reduction in insurable interest due to a decline in value, changing energy costs, or implementation of carbon regulation; and</td>
</tr>
<tr>
<td>- liability risks that could intensify due to a possible increase in litigation.</td>
</tr>
</tbody>
</table>

Notably, this general and supplemental guidance is not required to be included in a TCFD report. Rather, it is designed to support an insurer in developing climate-related financial disclosures consistent with the TCFD framework, including by providing context and suggestions for implementing the recommended disclosures.

The disclosures identified in bullet points in this survey are intended to be supplemental, insurance-sector specific guidance. They have been developed by the NAIC to respond to the TCFD and FSOC recommendations that regulators enhance public reporting requirements for climate-related risks in a manner that builds on the TCFD’s four core elements. They are designed to further support insurers’ in developing their disclosures by providing context and suggestions for the information a regulator may expect.

Additional guidance published by the TCFD includes:

*The Use of Scenario Analysis in Disclosure of Climate-Related Risks and Opportunities* (2017) provides information on types of climate-related scenarios, the application of scenario analysis, and the key challenges in implementing scenario analysis to support an organization’s disclosure of the resilience of its strategy, taking into consideration different climate-related scenarios.

*Guidance on Risk Management Integration and Disclosure* (2020) describes considerations for organizations interested in integrating climate-related risks into their existing risk management processes and disclosing information on their risk management processes in alignment with the Task Force’s recommendations.

*Guidance on Metrics, Targets, and Transition Plans* (2021) describes recent developments around climate-related metrics and users’ increasing focus on information describing organizations’ plans for transitioning to a low-carbon economy. The guidance also describes a set of cross-industry, climate related metric categories (described in Appendix 2: Cross-Industry,

---

Climate-Related Metric Categories) that the Task Force believes are applicable to all organizations.

The FSB frequently produces content to assist companies in creating TCFD reports, the knowledge hub with related content is accessible at https://www.tcfdhub.org/.

SURVEY QUESTIONS

To provide clear direction for achieving a robust, insurance-sector specific TCFD report, narrative and closed ended questions follow, grouped into the TCFD’s four topics: governance, strategy, risk management and metrics and targets.

The statements listed next to numbers and letters are directly taken from the TCFD Framework and should be fully addressed in the insurer’s response. As discussed in detail above, insurers should consider including the bulleted items in their response to the TCFD statement above it. For additional guidance on sector specific content to consider including, refer to the Implementation Recommendation Report.

Governance

1. Disclose the insurer’s governance around climate-related risks and opportunities. In disclosing the insurer’s governance around climate-related risks and opportunities insurers should consider including the following:
   - Identify and include any publicly stated goals on climate-related risks and opportunities.
   - Describe where climate-related disclosure is handled within the insurer’s structure, e.g., at a group level, entity level, or a combination. If handled at the group level, describe what activities are undertaken at the company level.
   A. Describe the board and/or committee responsible for the oversight of climate-related risks and opportunities.

   In describing the position on the board and/or committee responsible for the oversight of managing the climate-related financial risks, insurers should consider including the following:
   - Describe the position on the board and/or committee responsible for the oversight of managing the climate-related financial risks.
   B. Describe management’s role in assessing and managing climate-related risks and opportunities.

Strategy

2. Disclose the actual and potential impacts of climate-related risks and opportunities on the insurer’s businesses, strategy, and financial planning where such information is material.

   In disclosing the actual and potential impacts of climate-related risks and opportunities on the insurer’s businesses, strategy and financial planning, insurers should consider including the following:
   - Describe the steps the insurer has taken to engage key constituencies on the topic of climate risk and resiliency.
• Describe the insurer’s plan to assess, reduce, or mitigate its greenhouse gas emissions in its operations or organizations.*
  A. *Describe the climate-related risks and opportunities the insurer has identified over the short, medium, and long term.*

In describing the climate-related risks and opportunities the insurer has identified over the short, medium, and longer term, insurers should consider including the following:

- Define short, medium, and long-term, if different than 1-5 years as short term, 5-10 years as medium term, and 10-30 years as long term.

B. *Describe the impact of climate-related risks and opportunities on the insurer’s business, strategy, and financial planning.*

In describing the impact of climate-related risks and opportunities on the insurer’s business, strategy, and financial planning, insurers should consider including the following:

- Discuss if and how the insurer provides products or services to support the transition to a low carbon economy or helps customers adapt to climate-related risk.
- Discuss if and how the insurer makes investments to support the transition to a low carbon economy.

C. *Describe the resilience of the insurer’s strategy, taking into consideration different climate-related scenarios, including a 2 degree Celsius or lower scenario.*

**Risk Management**

3. *Disclose how the insurer identifies, assesses, and manages climate-related risks.*

In disclosing how the insurer identifies, assesses, and manages climate-related risks, insurers should consider including the following:

- Describe how the insurer considers the impact of climate-related risks on its underwriting portfolio, and how the company is managing its underwriting exposure with respect to physical, transition, and liability risk.*
- Describe any steps the insurer has taken to encourage policyholders to manage their potential physical and transition climate-related risks, if applicable.*
- Describe how the insurer has considered the impact of climate-related risks on its investment portfolio, including what investment classes have been considered.*

  A. *Describe the insurers’ processes for identifying and assessing climate-related risks.*

In describing the insurers’ processes for identifying and assessing climate-related risks, insurers should consider including the following:

- Discuss whether the process includes an assessment of financial implications and how frequently the process is completed.*

  B. *Describe the insurer’s processes for managing climate-related risks.*

  C. *Describe how processes for identifying, assessing, and managing climate-related risks are integrated into the insurer’s overall risk management.*
In describing how processes for identifying, assessing, and managing climate-related risks are integrated into the insurer’s overall risk management, insurers should consider including the following:

- Discuss whether climate-related risks are addressed through the insurer’s general enterprise-risk management process or a separate process and how frequently the process is completed.
- Discuss the climate scenarios utilized by the insurer to analyze its underwriting risks, including which risk factors the scenarios consider, what types of scenarios are used, and what timeframes are considered.
- Discuss the climate scenarios utilized by the insurer to analyze risks on its investments, including which risk factors are utilized, what types of scenarios are used, and what timeframes are considered.

**Metrics and Targets**

4. Disclose the metrics and targets used to assess and manage relevant collateralized risks and opportunities where such information is material.

In disclosing the metrics and targets used to assess and manage relevant collateralized risks and opportunities where such information is material, insurers should consider including the following:

- Discuss how the insurer uses catastrophe modeling to manage the climate-related risks to your business. Please specify for which climate-related risks the insurer uses catastrophe models to assess, if any.
  
  A. Disclose the metrics used by the insurer to assess climate-related risks and opportunities in line with its strategy and risk management process.

In disclosing the metrics used by the insurer to assess climate-related risks and opportunities in line with its strategy and risk management process, insurers should consider including the following:

- In describing the metrics used by the insurer to assess and monitor climate risks, consider the amount of exposure to business lines, sectors, and geographies vulnerable to climate-related physical risks [answer in absolute amounts and percentages if possible], alignment with climate scenarios, [1 in 100 years probable maximum loss, Climate VaR, carbon intensity], and the amount of financed or underwritten carbon emissions

  B. Disclose Scope 1, Scope 2, and if appropriate, Scope 3 greenhouse gas (GHG) emissions, and the related risks.

  C. Describe the targets used by the insurer to manage climate-related risks and opportunities and performance against targets.
Closed-ended questions directly correspond to the narrative above, allowing for explanation and qualification of the yes/no answers. Closed-ended questions are voluntary for reporting year 2022 and individual states may elect not to request them.

**Governance**
- Does the insurer have publicly stated goals on climate-related risks and opportunities? (Y/N)
- Does your board have a member, members, a committee, or committees responsible for the oversight of managing the climate-related financial risk? (Y/N)
- Does management have a role in assessing climate-related risks and opportunities? (Y/N)
- Does management have a role in managing climate-related risks and opportunities? (Y/N)

**Strategy**
- Has the insurer taken steps to engage key constituencies on the topic of climate risk and resiliency? (Y/N) *
- Does the insurer provide products or services to support the transition to a low carbon economy or help customers adapt to climate risk? (Y/N)
- Does the insurer make investments to support the transition to a low carbon economy? (Y/N)
- Does the insurer have a plan to assess, reduce or mitigate its greenhouse gas emissions in its operations or organizations? (Y/N)*

**Risk Management**
- Does the insurer have a process for identifying climate-related risks? (Y/N)
  - If yes, are climate-related risks addressed through the insurer’s general enterprise-risk management process? (Y/N)
- Does the insurer have a process for assessing climate-related risks? (Y/N)
  - If yes, does the process include an assessment of financial implications? (Y/N)
- Does the insurer have a process for managing climate-related risks? (Y/N)
- Has the insurer considered the impact of climate-related risks on its underwriting portfolio? (Y/N/Not Applicable)*
- Has the insurer taken steps to encourage policyholders to manage their potential climate-related risks? (Y/N)*
- Has the insurer considered the impact of climate-related risks on its investment portfolio? (Y/N)*
- Has the insurer utilized climate scenarios to analyze their underwriting risk? (Y/N)
- Has the insurer utilized climate scenarios to analyze their investment risk? (Y/N)

**Metrics and Targets**
- Does the insurer use catastrophe modeling to manage your climate-related risks? (Y/N)
- Does the insurer use metrics to assess and monitor climate-related risks? (Y/N)
- Does the insurer have targets to manage climate-related risks and opportunities? (Y/N)
- Does the insurer have targets to manage climate-related performance? (Y/N)
* Asterisks represent questions derived from the original Climate Risk Disclosure Survey.

NAIC Support Staff Hub/Member Meetings/Spring 2022/Cmte/Ex/Att 4 ClimateRiskDisclosureSurvey.pdf
MEMORANDUM

TO: NAIC Executive (EX) Committee

FROM: Kay Noonan

DATE: March 23, 2022

RE: SERFF Advisory Board

The NAIC’s System for Electronic Rates and Forms Filing (SERFF) was launched collaboratively by regulators and industry more than 22 years ago to provide an efficient process for product filing and review. Today, 53 jurisdictions accept SERFF filings made by more than 6500 industry users. The NAIC is currently engaged in a multi-year SERFF modernization effort. The overall modernization is a $20 million-dollar, three year project and all expenditures are subject to Executive (EX) Committee approval, with input from an Oversight group of state regulators.

As the SERFF modernization efforts move forward, the Executive (EX) Committee has also been considering modernizing the governance of SERFF and the avenues for regulator, industry, and consumers into the SERFF system. Given the overlap between the roles of the Executive (EX) Committee, the SERFF Oversight Group, the Product Steering Committee, the Speed to Market (D) Working Group and the SERFF Advisory Board, the proposal before the Committee is to disband the SERFF Advisory Board and streamline industry and consumer input into SERFF operations through the other available forums.

The Speed to Market (D) Working Group will continue to be the primary forum for public policy discussions related to rate and form filing and review. Meetings of the Working Group are open. The Product Steering Committee which currently reports to the SERFF Advisory Board will now report to the Speed to Market (D) Working Group and will be the primary source of industry and consumer input into the SERFF modernization efforts. Meeting of the PSC are open to all SERFF users and membership of the PSC includes both regulator and industry representatives, as well as two representatives from the IIPRC.

The current SERFF Advisory Board held a meeting on Feb. 24, 2022, to discuss the proposal. The NAIC Members participating supported the proposal. An industry representative participating commented that the SERFF oversight group and the PSC have been very effective in gathering feedback and prioritizing work on behalf of the industry and would support the change if that transparency continues. The minutes of the Feb. 24, 2022 meeting are attached to this memorandum.

Birny Birnbaum raised a concern that if the SERFF Advisory is disbanded there will not be a formal role for consumers to provide input into the development and operation of SERFF. The primary consumer interest in SERFF relates to the operation of the SERFF Filing Access (SFA) Function. Consumer representatives can participate in any meeting of the Product Steering Committee where that functionality is discussed. Based on consumer input to date, there are changes to SFA contemplated. NAIC SERFF staff will specifically seek consumer feedback when the modernization efforts reach that point.
The SERFF Advisory Board met Feb. 24, 2022. The following Advisory Board members participated: Barbara D. Richardson, Chair (NV); Doug Ommen (IA); Russell Toal (NM); Carter Lawrence represented by Brian Hoffmeister (TN); Birny Birnbaum (Center for Economic Justice—CEJ); Andrea Davey (Athene Annuity and Life Company); Susan Gould (The Hanover Insurance Group); Phyllis Hollerbach (Zurich North America); and Karen Schutter (Interstate Insurance Product Regulation Commission—Compact). There was no representation from Kansas or Rhode Island.

1. **Discussed Continued State Insurance Regulator, Industry, and Consumer Representative Input Related to the Operation of SERFF**

Commissioner Richardson called the meeting to order. She discussed the purpose of this meeting, the history of the System for Electronic Rates & Forms Filing (SERFF) Advisory Board (SAB), the current forums for discussing SERFF operations and development efforts, and the current support for disbanding the SAB.

As the SERFF modernization effort moves forward and the NAIC reviews its overall governance structure, the Executive (EX) Committee is considering disbanding the SAB and focusing on the other venues for industry and consumer input into the continued development and management of SERFF. SERFF is a product of the NAIC that is operated for the benefit of state insurance regulators, industry, and consumers. The NAIC has undertaken a substantial SERFF modernization effort overseen by the Executive (EX) Committee. The SERFF modernization effort has been informed by industry and consumer input through: 1) numerous interviews during the SERFF Assessment phase to gather industry and consumer feedback (2019-2020); 2) regular and ongoing reporting to the SERFF Product Steering Committee (PSC); 3) regular and ongoing workshops with the SERFF PSC; and 4) capability-specific focus groups with the SERFF PSC. As the modernization efforts continue, NAIC and SERFF staff hope to continue to utilize the PSC as the primary source of industry and consumer input. Those meetings are open to all SERFF users. That group will report up through the Speed to Market (EX) Working Group, and the NAIC is in the process of revising the charges for that group to accurately reflect its role. The Executive (EX) Committee oversight of SERFF has been informed by an ad hoc committee of state insurance regulators—i.e., the SERFF Oversight Group—and the NAIC expects that to continue. As of today, the SERFF Oversight Group is made up of nine state insurance regulators: 1) Commissioner Andrew N. Mais (CT); 2) Superintendent Eric A. Cioppa, who will be replaced given his retirement, (ME); 3) Commissioner Richardson (NV); 4) Superintendent Toal (NM); 5) Commissioner Jon Godfread (ND); 6) Tynesia Dorsey (OH); 7) Superintendent Elizabeth Kelleher Dwyer (RI), representing the Compact; 8) Nancy Clark (TX); and 9) Molly Nollette (WA). Given the overlap between the roles of the Executive (EX) Committee, the SERFF Oversight Group, the PSC, and the SAB, this proposal will streamline industry and consumer input into SERFF operations.

The current plan is for the Executive (EX) Committee to consider disbanding the SERFF Advisory Board at the Executive Committee’s April meeting.

Commissioner Ommen said he supports the change. His experience and engagement with the Speed to Market (EX) Working Group showcases that there are other avenues to keep updated with SERFF modernization efforts and current redundancies in reporting.

Ms. Gould stated that she attends the PSC meetings, and the SERFF Oversight Group is doing a great job with gathering feedback and prioritizing work on behalf of the industry. She reiterated the importance of the industry
continuing to have input opportunities going forward, and she would support the change so long as there is continued transparency.

Mr. Birnbaum mentioned his concern with the SAB disbanding, as he believes this is the only forum where the consumer group can share consumer concerns related to SERFF. He mentioned that there are no consumer seats on the PSC, and it is unclear where else there is opportunity and enablement for consumer participation regarding requests or answers to questions regarding the application. He requested that the proposed change be formalized into documentation so he and his colleagues could review and provide feedback at the upcoming Executive (EX) Committee meeting in April. Kay Noonan (NAIC) will add this item to the agenda and provide the action item ahead of said meeting.

Having no further business, the SERFF Advisory Board adjourned.
To: Members of the NAIC Executive Committee  
From: Commissioner Sharon Clark, Kentucky Department of Insurance  
Chair, NAIC Insurance Regulator Professional Designation Program Advisory Board  
Date: April 6, 2022  
Subject: 2021 Annual Report of NAIC Designation Program Advisory Board Activities

In October of 2006, the NAIC launched the Insurance Regulator Professional Designation Program (“Designation Program”), a formal credentialing program designed for regulators, by regulators to establish structured training and development paths for insurance department employees. In that same year, the Internal Administration (EX1) Subcommittee directed the program’s Advisory Board to present a brief annual report of program benchmarks and board activities. This memorandum, with its supplemental charts, sets forth an account of the program’s year in review.

Program Enrollments
We continued our outreach to states and have seen increased interest and enrollments across the board. In 2021, the Designation Program surpassed 3,000 enrollments, bringing the total number of enrollments since 2006 to 3,021.

By year-end, earned designation totals were as follows: 1,227 APIR designees, 452 PIR designees, 22 SPIR designees, and 3 IPIR designees.

The Designation Program Mentoring Network
States have been encouraged to appoint a “mentor” that can serve as a liaison between the Department and the NAIC’s Education & Training Department as a means of disseminating information about the program to interested regulators, and to assist candidates as they have questions. Most mentors have earned an NAIC Designation or are currently working toward one.

Designation Program Advisory Board Meetings
The Designation Program Advisory Board met monthly throughout 2020 via WebEx to discuss policy matters and other issues. Discussion items included policy recommendations and promotion of the program to increase awareness and participation.

2021 Accomplishments
Significant accomplishments of 2021 include:

- Fully rolled out the new program management system (Certemy) to streamline and automate many of the processes done manually. Work was completed with a soft rollout of the new system in February 2021, with a full rollout in late March 2021.
- Began work to select an online proctoring service vendor, which will roll out in 2022.
About the Insurance Regulator Professional Designation Program Advisory Board
The 2020 Advisory Board was composed of Laura Arp (NE Department of Insurance), Rachel Chester (RI Insurance Division), Eric Fletcher (ID Department of Insurance) and Scott Sanders (GA Department of Insurance).

Kentucky Commissioner Sharon Clark chaired the 2021 Advisory Board.

In addition to overseeing Designation Program policy and advising NAIC Education Department staff on designation program policy administration, the board members work on outreach to regulators during NAIC Zone Meetings and other regulatory meetings. Additional information about the Designation Program can be found by visiting the NAIC website: http://naic.org/education_designation.htm

Model Law Development Report

Amendments to the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171)—Amendments to Model #171 are required for consistency with the federal Affordable Care Act (ACA). Therefore, they did not require approval of a Request for NAIC Model Law Development by the Executive (EX) Committee. At the 2015 Fall National Meeting, the Regulatory Framework (B) Task Force discussed the proposed revisions to this model. The Task Force met Feb. 11, 2016, and appointed the Accident and Sickness Insurance Minimum Standards (B) Subgroup to work on revisions to this model. The Subgroup has been meeting on a regular basis since the 2016 Spring National Meeting, and it plans to continue meeting until it completes its work. During its meetings, the Subgroup has discussed several issues, including its approach for revising the model’s disability income insurance coverage provisions, and it decided preliminarily to review the Interstate Insurance Product Regulation Commission’s (Compact’s) approach. After pausing its work due to the ACA’s potential repeal, replacement, or modification—and the possible impact on the provisions of this model, as well as the Subgroup’s preliminary proposed revisions to the model—the Subgroup began meeting again in May 2018. Revisions to the Supplementary and Short-Term Health Insurance Minimum Standards Model Act (#170) were adopted by the full NAIC membership at the 2019 Spring National Meeting. The Subgroup has been meeting to consider revisions to Model #171 for consistency with the revised Model #170 since the 2019 Summer National Meeting discussion on comments received on Sections 1–5 of Model #171. In December 2019, the Subgroup set a public comment period ending Feb. 7, 2020, to receive comments on Sections 6–7 of Model #171. Due to the COVID-19 health emergency, the Subgroup has not scheduled any meetings. Any future meetings will depend on when a new co-chair is appointed and the duration of the COVID-19 health emergency. As requested, the Subgroup received comments from stakeholders on Sections 6–7 of Model #171. A new Subgroup co-chair has been appointed. The Subgroup met June 7, 2021, to discuss the status of the proposed revisions to Model #171 and its next steps. The Subgroup decided to establish a new public comment period ending July 2, 2021, to receive comments on Sections 1–7 of Model #171. The Subgroup did not meet at the 2021 Fall National Meeting. Since the 2021 Summer National Meeting, the Subgroup has been meeting to discuss possible revisions to Model #171 based on the comments received by the July 2, 2021, public comment deadline. During some of these meetings, the Subgroup heard from industry presenters about the products currently covered under Model #171 and the products to be covered under Model #171 after it is revised. The Subgroup is continuing its discussions of revisions to Model #171. Currently, it is focused on revisions related to fixed indemnity products.

Amendments to the Mortgage Guaranty Insurance Model Act (#630)—The Executive (EX) Committee approved a Request for NAIC Model Law Development for amendments to Model #630 at the 2013 Summer National Meeting. The Mortgage Guaranty Insurance (E) Working Group has developed proposed changes to the model, which have been exposed for comment, and subsequent changes have been made to address the comments. However, the Working Group has been focused on the development of a capital model, which is currently incorporated as a requirement in the model, but further changes are expected to be made to that model before adoption can occur. The Working Group has requested an extension from the Financial Condition (E) Committee, which is expected to be considered at the Spring National Meeting, which would continue work on the capital model until the 2023 Spring National Meeting.

Amendments to the Nonadmitted Insurance Model Act (#870)—The Executive (EX) Committee approved a Request for NAIC Model Law Development for amendments to Model #870 at the 2021 Spring National Meeting. The amendments will modernize the model and bring it into alignment with the federal Nonadmitted and Reinsurance Reform Act (NRRA). The Surplus Lines (C) Task Force met Aug. 5, 2021, and appointed a drafting group to work on the revisions to Model #870.
New Model: Pet Insurance Model Act—The Executive (EX) Committee approved a Request for NAIC Model Law Development at the 2019 Summer National Meeting. The Pet Insurance (C) Working Group held numerous meetings to draft the model law to define a regulatory structure for pet insurance and address issues such as producer licensing, policy terms, coverages, claims handling, premium taxes, disclosures, arbitration, and preexisting conditions. The Working Group adopted the Pet Insurance Model Act on Aug. 4, 2021, and the Property and Casualty Insurance (C) Committee adopted it on Nov. 10, 2021. The Model was removed from the Executive (EX) Committee and Plenary agenda at the 2021 Fall National Meeting. The Pet Insurance (C) Working Group will consider additional revisions prior to considering the model for adoption. Because the work on the Pet Insurance Model Act is not yet completed, an additional request for extension is expected by the Property and Casualty Insurance (C) Committee at the 2022 Spring National Meeting.
CLIMATE AND RESILIENCY (EX) TASK FORCE

Climate and Resiliency (EX) Task Force April 6, 2022, Minutes................................................................. 4-44
Climate and Resiliency (EX) Task Force March 21, 2022, Minutes (Attachment One) ............................ 4-48

   (COE) Proposal (Attachment One-A)........................................................................................................... 4-53
Climate Risk Disclosure Survey (Attachment One-B) .............................................................................. 4-64

© 2022 National Association of Insurance Commissioners
1. **Adopted its March 21 Minutes**

Commissioner Altmaier said the Task Force met March 21. During this meeting, the Task Force took the following action: 1) heard reports from its workstreams; 2) adopted a proposal for the NAIC’s Center for Insurance Policy and Research (CIPR) to create a catastrophe model center of excellence (COE); and 3) adopted a revised Climate Risk Disclosure Survey for state insurance departments to voluntarily use at their discretion.

Commissioner Richardson made a motion, seconded by Ms. Biehn, to adopt the Task Force’s March 21 minutes (Attachment One). The motion passed unanimously.

2. **Heard a Presentation from Zurich North America and Resilient Cities Network Regarding Their Partnership to Improve Community Resilience**

Ricardo Lara said Zurich North America and Resilient Cities Network formed a partnership last year to mitigate the effect of flooding on urban communities in Houston, TX, and Boston, MA. Earlier this month, they established a resilient community impact fund to facilitate investment for the projects.

Brandon Fick (Zurich North America) said Zurich North America and the Z Zurich Foundation partnered with Resilient Cities Network for a three-year commitment to help customers and communities adapt and become more resilient to the increasing frequency and severity of extreme weather events. Natural disasters are expensive and disruptive for societies, and the impact is exacerbated for vulnerable populations. Based on Zurich North America’s commitment to helping communities and improving sustainability, it created the Z Zurich Foundation, which is a Swiss-based charitable foundation. Two of the pillars of the Z Zurich Foundation are climate adaptation and social equity.
Mr. Fick said insurers have an opportunity to work closely with key stakeholders, including governments and non-governmental organizations to align on key performance indicators and strategic vision, as well as identify the tools and resources available from each stakeholder. He said Zurich North America developed a flood resilience tool many years ago, which is continuously updated and expanded to include additional perils. He said Houston and Boston were selected as initial areas of focus, but they plan to develop future projects in other cities. He said the partnership identified Houston and Boston as the initial areas of focus due to several factors, including local poverty level, state and local leadership’s prioritization of the vulnerable population, Zurich North America’s customer base in the area, and the prevalence of natural hazards, particularly around flood and extreme temperatures in the region. Zurich North America will leverage its customer base in these areas to help educate and inform local populations and support public policy.

Stewart Sarkozy-Banoczy (Resilient Cities Network) said Resilient Cities Network is interested in building equitable resilience and focusing on the pre-event mindset rather than reactive recovery. He said Zurich North America and Resilient Cities Network started with a common language, common definitions, and a common goal, which helped the participants quickly gain trust in each other and form a collective vision. Resilient Cities Network is a leading global network focused on urban resilience, led by cities and connected to chief resilience officers. The organizations’ goals are to empower, mobilize, and implement resilience strategies. The team has conducted site visits, reviewed and trained on the flood resilience tool, launched joint organization committees, hosted training and events, and announced the call for co-funding for the Resilient Community Impact Fund (RCIFund).

Mr. Sarkozy-Banoczy said to involve and empower local communities, the team works with local leaders to create a multi-hazard, multi-shock, and stress testing tool to identify the resilience of the city and the local communities. Zurich North America created the tool for flood risk, and as a partnership with Resilient Cities Network, they are working to expand it to include other perils, including extreme heat. The tool can be used to pinpoint vulnerabilities, as well as support their goal to identify return on resilience value. In addition to the tool, a key driver is identifying communities that are already receiving public assistance. Mr. Sarkozy-Banoczy said they are looking into resilience in terms of affordable housing, community facilities, and nature-based solutions. They are considering the role of community development financial institutions (CDFIs), investors, and other stakeholders in delivering better outcomes and co-benefits resulting in resilience dividends and return on investment.

Mr. Sarkozy-Banoczy said Resilient Cities Network has operations in cities across the country and plans to take the key learnings discovered through its work in Boston and Houston to benefit projects in other regions. Future work has already been slated for Charleston, SC; New Orleans, LA; and Chicago, IL.

Director Farmer expressed gratitude to the Z Zurich Foundation for its Post-Event Review Capability (PERC) following South Carolina’s historic flooding in 2015. He asked Mr. Fick and Mr. Sarkozy-Banoczy to elaborate on the collateral benefits of the partnership. Mr. Fick and Mr. Sarkozy-Banoczy said through the partnership, they continually learn and grow to expand the benefits into additional communities.

Commissioner Anderson asked what it would look like for other companies to participate in the program. Mr. Fick said other companies could invest in the fund and bring knowledge and expertise to the table to maximize the benefits for vulnerable communities.

Mr. Bradner expressed interest in connecting Resilient Cities Network with the local network in Connecticut for a future resilience project. Mr. Sarkozy-Banoczy said a good way to start is building out the resilience tool to identify return on resilience value, working with CDFIs and Green Banks, and identifying the greatest needs, including the effect on broader sectors in the area.
Commissioner Lara asked how Resilient Cities Network is approaching extreme heat. Mr. Sarkozy-Banoczy said two years ago, it began working with chief resilience officers, through their communities of practice, to discuss issues and develop best practices regarding extreme heat.

Commissioner Donelon asked if any other insurers expressed interest in joining the partnership. Mr. Fick said Zurich North America looks forward to partnering with others in the industry to circumvent issues with insurability. Mr. Sarkozy-Banoczy said Resilient Cities Network is having conversations with potential partners to add expertise, knowledge, and funding to the identified projects.

Commissioner Woods expressed interest in engaging with Resilient Cities Network for a future project in the District of Columbia.

3. **Hear a Presentation from Munich Re Regarding Solutions to Improve Community Flood Mitigation**

Raghuveer Vinukollu (Munich Re) said Munich Re has taken a top-down approach to risk mitigation to develop an understanding of the impact on coverage. He said Munich Re views climate risk as systemic, and it includes multiple components; i.e., the hazard, the vulnerability, and the exposure. Over time, and as extreme weather events occur at greater frequency and severity, local communities will need to adapt to their identified risk. Mr. Vinukollu said Munich Re collaborated with The Nature Conservancy and the University of California, Santa Cruz to develop a technical paper, “Financing coastal resilience by combining nature-based risk reduction with insurance” to identify the trade-off between risk reduction and risk transfer. By linking mitigation action to risk reduction, they were able to monetize the risk reduction and calculate the savings to be passed through to the customer in premium reduction. Mr. Vinukollu said insurance is a feedback loop with two variables that influence the premium based on the value at risk, the average annual loss, and the standard deviation. In periods of increasingly frequent and severe storms, the value at risk and the standard deviation increase, creating market disruptions. The market disruption plays out in issues with affordability and rate adequacy.

Mr. Vinukollu said drawing upon its learnings in the technical paper, Munich Re again worked with The Nature Conservancy, this time on a study of inland flooding along the Missouri River in the southern part of Nebraska and the northwest region of Missouri. Through this effort, they identified a community-based solution to increase take-up rates and drive down the cost of coverage.

Mr. Vinukollu said in Missouri and Nebraska combined, there were only 15,967 National Flood Insurance Program (NFIP) policies in 2018, and the average premium was $942. In the area affected by the failed levee system, there were only 142 NFIP policies, and the average premium was $1,166. Because damages from inland flooding and extreme precipitation are rarely a total loss, the average claim was only $15,000, so the cost of coverage was high relative to the loss experience. Multiple flooding events occurred in 2019, including the Missouri River. Total flood losses in 2019 were estimated to be $20 billion, but only $200 million was insured.

Munich Re worked with the U.S. Army Corps of Engineers and The Nature Conservancy to develop a pricing model, accounting for the levee setback. The levees needed to be rebuilt; by acquiring land adjacent to the river, they were able to set back the levees, reduce the risk for nearby properties, and provide a nature-based solution. The Nature Conservancy worked to acquire the land, and the U.S. Army Corps of Engineers was able to set back the levees, allowing the river to expand. Munich Re calculated the risk reduction from the levee setback and used the modeling to develop pricing for a community-based solution. The risk reduction from the levee setback provides savings on the flood insurance coverage for residents. Spreading the risk and increasing the penetration through a community-based product drives down the price even further. The original cost of an NFIP policy in the identified area near the levee was $1,166. The cost of coverage with the levee setback in place decreased to $581. If purchased on a community, mandated basis with the levee setback in place, the cost of coverage decreased to
$313. Reducing the policy limits to match the average claim amount, the cost of coverage can become even more affordable.

4. **Heard a Federal Update**

Brooke Stringer (NAIC) said on March 21, the U.S. Securities and Exchange Commission (SEC) voted 3-1 to issue a proposal for comment, which would require publicly traded companies to disclose their direct and indirect climate change contributions. In its proposed ruling, the SEC cited the work of the Financial Stability Board’s (FSB’s) Task Force on Climate-Related Financial Disclosures (TCFD) and the Greenhouse Gas (GHG) Protocol.

Ms. Stringer said the Federal Insurance Office (FIO) is expected to complete its report assessing climate-related issues or gaps in insurance supervision and regulation by the end of 2022. The NAIC submitted a comment letter in November 2021, in response to the FIO’s request for information.

Ms. Stringer said the NAIC supports the Disaster Mitigation and Tax Parity Act (S.2432/H.R.4675) introduced by U.S. Sen. Dianne Feinstein (D-CA) and U.S. Rep. Glenn Thompson (R-PA). The Act would ensure that state-based disaster mitigation grants receive the same federal tax exemptions as federal mitigation grants. Ms. Stringer said in the week leading up to the meeting, the U.S. Senate (Senate) Committee on Homeland Security and Governmental Affairs approved the Community Disaster Resilience Zones Act of 2022 (S. 3875), advancing it to the full Senate. Chairman Gary Peters (D-MI) and Ranking Member Rob Portman (R-OH) sponsored the bill, and the Reinsurance Association of America (RAA) has been a strong proponent. The bill would amend the Stafford Disaster Relief and Emergency Assistance Act to make permanent the National Risk Index, or a similar tool, and utilize its data to identify and designate community disaster resilience zone communities that are the most at risk to natural hazards. This would allow the Federal Emergency Management Agency (FEMA) to identify communities in need of assistance for mitigation projects.

Having no further business, the Climate and Resiliency (EX) Task Force adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/2022 Spring National Meeting/Executive (EX) Committee/Climate and Resiliency (EX) Task Force
The Climate and Resiliency (EX) Task Force met March 21, 2022. The following Task Force members participated: Ricardo Lara, Co-Chair, Mike Peterson, Deborah Halberstadt, Kara Voss, Rabab Charafeddine, and Camilo Pizzaro (CA); David Altmair, Co-Chair, Christina Huff, Susanne Murphy, and Alexis Bakofsky (FL); Colin M. Hayashida, Co-Vice Chair (HI); James J. Donelon, Co-Vice Chair, Tom Travis, and Stewart Guerin (LA); Kathleen A. Birrane, Co-Vice Chair, and Alexander Borkowski (MD); Barbara D. Richardson, Co-Vice Chair (NV); Andrew R. Stolfi, Co-Vice Chair, represented by Aeron Teverbaugh, Ying Liu, and David Dahl (OR); Elizabeth Kelleher Dwyer, Co-Vice Chair, Matt Gendron, and Jack Broccoli (RI); Raymond G. Farmer, Co-Vice Chair (SC); Lori K. Wing-Heier and Alex Reno (AK); Alan McClain (AR); Jim L. Ridling and Erick Wright (AL); Michael Conway represented by Peg Brown (CO); Andrew N. Mais represented by William Arfanis, George Bradner, and Wanchin Chou (CT); Karima M. Woods and Sharon Shipp (DC); Trinidad Navarro represented by Frank Pyle and Christina Miller (DE); Doug Ommen, Travis Grassel, and Kim Cross (IA); Dana Popish Severinghaus, C.J. Metcalf, Shannon Whalen, Patrice Dziire, and Susan Berry (IL); Sharon P. Clark (KY); Gary D. Anderson, Rachel M. Davison, and Caleb Huntington (MA); Eric A. Cioppa represented by Sandra Darby (ME); Anita G. Fox represented by Parker Fisher and Renee Campbell (MI); Grace Arnold represented by Peter Teved Arkansas (MN); Chlorinda Lindley-Myers, John Rehagen, Jo LeDuc, and Shannon Schroeder (MO); Mike Chane (MS); Troy Downing represented by Bob Biskupiak (MT); Mike Causey represented by Michelle Osborne and Jackie Obusek (NC); Jon Godfread represented by Matt Fischer, Chris Aufenthie, Holly Brockman, and John Arnold (ND); Eric Dunning represented by Connie Van Slyke, Justin Schrader, Martin Swanson and Lindsay Crawford (NE); Marlene Caride and Jesse Kolodin (NJ); Adrienne A. Harris represented by Bob Kasinow, Avani Shaw, and Sahana Zutshi (NY); Judith L. French, Lori Barron, Tynesia Dorsey, and Meredith Craig (OH); Michael Humphreys, Melissa Greiner, David Buono, and Katie Merritt (PA); Alexander S. Adams Vega and Natalia Maldonado (PR); Carter Lawrence represented by Bill Huddleston and Stephanie Cope (TN); Scott A. White represented by Greg Chew (VA); Tregenza A. Roach represented by Suzette Richards, Glendina Matthews, and Cheryl Charleswell (VI); Michael S. Picciak represented by Mary Block, Marcia Violette, Karla Nuesl, Isabelle Turpin Keiser, Nick Marineau, and Rosemary Rasza (VT); Mike Kreidler, Jay Bruns, and Byron Welch (WA); Nathan Houdek, Sarah Smith, Rebecca Rebholz, and Darcy Paskey; (WI); and Jeff Rude (WY). Also participating were: Tate Flott and Shannon Lloyd (KS); Kate Kixmiller (IN); Marianne Baker (TX); and Tracy Klausmeier (UT).

1. **Adopted its 2021 Fall National Meeting Minutes**

Commissioner Caride made a motion, seconded by Superintendent Dwyer, to adopt the Task Force’s Dec. 14, 2021, minutes ([see NAIC Proceedings – Fall 2021, Climate and Resiliency (EX) Task Force](#)). The motion passed unanimously.

2. **Heard Reports from its Workstreams**

   a. **Innovation Workstream**

Commissioner Hayashida said that in 2022, the Innovation Workstream will continue to explore innovative products that address coverage gaps created by natural catastrophes. He said the Workstream will hear a presentation from the Demex Group on April 13. The Demex Group provides solutions to assess risks from natural hazards and designs coverage options for commercial enterprises.
All meetings of the Innovation Workstream are posted on the Climate and Resiliency Resource catalog innovative product offerings.

b. **Pre-Disaster Mitigation Workstream**

Commissioner Richardson said that in 2022, the Pre-Disaster Mitigation Workstream will continue participating in multi-agency stakeholder educational efforts on coverage gaps and pre-disaster mitigation related to climate risks. The Workstream will consider the risks associated with all perils, identify mitigation actions at the community and individual property level, and prioritize consumer education and awareness of coverage gaps that exist due to natural catastrophes. The Workstream will continue to explore state and industry-driven mitigation actions, including mitigation grant programs, building code advocacy, and risk assessment tools.

Commissioner Richardson said the Workstream is planning to host a virtual meeting in May to hear presentations on the benefits of and funding options for prescribed burns to reduce the risk of wildfire. She said Workstream members are mindful not just of the risk for property damage, but also the risk of new or worsening health conditions and loss of life. The Workstream plans to explore how mitigation can help reduce human-related risks in addition to the property impacts.

c. **Solvency Workstream**

Commissioner Birrane said the Solvency Workstream held a series of public meetings in 2021 and then issued a set of questions to solicit input on potential enhancements to existing regulatory financial solvency tools. Many commenters suggested that enhancements would be most appropriate to the *Financial Condition Examiners Handbook* and the *NAIC Own Risk and Solvency Assessment Guidance Manual* (ORSA Guidance Manual). On March 21, the Workstream released for comment draft referral letters to the Financial Examiners Handbook (E) Technical Group and the Own Risk and Solvency Assessment (ORSA) Implementation (E) Subgroup. Comments will be accepted through April 20. The Solvency Workstream will hold a public meeting following the comment deadline to consider the comments received and finalize the referral letters.

Commissioner Birrane said after finalizing the referrals regarding the *Financial Condition Examiners Handbook* and the *NAIC Own Risk and Solvency Assessment Guidance Manual*, the Workstream will begin considering the need for updates to the *Financial Analysis Handbook*. Later in 2022, the Workstream will host presentations to gather information on scenario analysis and stress testing.

3. **Adopted the Proposal for the CIPR to Create a Catastrophe Model Center of Excellence**

Commissioner Donelon said the Technology Workstream adopted the proposal for the NAIC’s Center for Insurance Policy and Research (CIPR) to create a Catastrophe Model Center of Excellence (COE) on Nov. 22 following multiple discussions and an open comment period. The recommendation was reported to the Climate and Resiliency (EX) Task Force on Dec. 14 during the 2021 Fall National Meeting. The purpose of the COE is three-fold. First, it will provide state insurance departments with access to catastrophe modeling documentation and provide assistance distilling the technical information received. The information shared by catastrophe modelers will be protected through data use agreements and provided to state insurance regulators through a permissioned resource. This resource is already built and has gone through NAIC legal review. Two catastrophe modelers have already signed data use agreements to share information. Second, the COE will provide general technical education and training materials on the mechanics of commercial models, as well as the treatment of perils and risk exposures. It will provide fact-based, unbiased information to state insurance regulators and will work with all vendors who choose to provide information. It is recommended that a governance structure be put in place to ensure transparency and impartiality. Third, the COE will conduct applied research using model platforms to address regulatory
questions concerning resilience priorities. It will report to the Technology Workstream quarterly and to the Catastrophe Insurance (C) Working Group as appropriate.

Commissioner Richardson made a motion, seconded by Commissioner Chaney, to adopt the proposal for the NAIC’s CIPR to create a COE (Attachment One-A). The motion passed unanimously.

4.  **Adopted the Revised Proposed Climate Risk Disclosure Survey**

Superintendent Dwyer said that in early 2021, the Climate Risk Disclosure Workstream began holding public meetings to hear from interested stakeholders, including academic organizations, climate risk reporting agencies, investment management firms, insurers, industry representatives, state insurance regulators, and consumer groups. The Workstream solicited feedback from stakeholders in the spring of 2021 to guide its work before drafting a revised Climate Risk Disclosure Survey (survey) to companies. Four states participated in the initial drafting: California, New York, Oregon and Washington. The first draft was exposed for comment on Nov. 15, 2021. Commissioner Stolfi presented on that draft during the Task Force’s Dec. 14, 2021, meeting. The Workstream then held an open meeting on Jan. 26, 2022, to hear from the commenters. The draft was updated pursuant to comments received. Notable revisions include content added to the introduction regarding confidentiality, materiality, and guidance consistent with the Financial Stability Board’s (FSB’s) Taskforce on Climate-Related Financial Disclosures (TCFD). All multiple-choice questions were removed, questions considered to be duplicative were eliminated, and compound “yes or no” questions were separated. The “yes or no” questions were made voluntary, and the bulleted questions under the TCFD statements were made into guidance for how insurers would address the TCFD statements, not separate questions an insurer must answer.

The Workstream met again on Feb. 28, 2022, to expose the latest draft and take additional comments. Based on comments following that meeting, the Workstream decided that any insurer who had already completed their TCFD in 2022 may submit it as is, without modification. The reporting deadline was extended for 2022, from Aug. 31 to Nov. 30. The introduction was updated to include clarification regarding reporting deadlines and expectations for content to include in the insurers’ response and provide flexibility for state departments to offer extensions at their discretion. Additionally, states may elect not to even request that companies voluntarily answer the “yes or no” questions. Superintendent Dwyer said according to the latest TCFD update, more than 120 state insurance regulators and government organizations support the TCFD. The Financial Stability Oversight Council (FSOC) report issued in October 2021 encouraged all members to consider enhancing climate-related disclosure requirements and offered TCFD as an example.

Under the proposed Climate Risk Disclosure Workstream recommendation, the survey would remain elective for state use. The reporting threshold for insurers would remain the same at $100 million in direct premium written and licensed in any one of the 15 participating states. The Workstream is not aware of any new states joining this year, so it is anticipated that all insurers required to report this year will have reported an NAIC Climate Risk Disclosure Survey in the past. If there are any new insurers who recently crossed the reporting threshold, their deadline is Aug. 30, 2023, instead of Nov. 30, 2022. Additionally, states can use their discretion to offer extensions to companies. Participating states send letters to companies to request the information so insurers should make requests for accommodation to the state that sent the letter. The Climate Risk Disclosure Workstream adopted the revised survey during its March 11 meeting.

Director French asked if language could be added to the survey specifying that any new companies be given an extra year for reporting in 2023 and beyond. Superintendent Dwyer said states have discretion to offer leeway for all companies, not limited to new companies. She and Commissioner Altmaier said the survey is voluntary for states to use and, therefore, are provided with a lot of flexibility in terms of implementation. Superintendent
Dwyer said comments received very early on were supportive of moving to the TCFD, which is what the Workstream has proposed.

Dennis Burke (Reinsurance Association of America—RAA) said the U.S. Securities and Exchange Commission (SEC) exposed its proposed climate disclosure within the last few hours and requested that the Task Force pause the vote until the SEC proposal can be fully reviewed to determine how it compares to the revised NAIC survey.

David Snyder (American Property Casualty Insurance Association—APCIA) said APCIA is requesting that insurers who had been previously submitting the eight-question NAIC survey be given until 2023 to submit the revised survey. Mr. Snyder expressed concern regarding the public nature of the disclosure. He also requested alignment between the revised survey and regulator-only content that may be recommended by the Solvency Workstream via referrals to relevant Financial Condition (E) Committee groups.

Patrick Reeder (American Council of Life Insurers—ACLI) said companies have concerns about moving from the eight-question survey to the proposed survey in the proposed time frame. Mr. Reeder also expressed concerns regarding the public nature of reporting and confidentiality concerns of insurers. He said there has not been enough time to review the proposed SEC requirements, but the time frame for reporting would be staged over a three- to four-year period depending on the size of the company and the content of reporting.

Jonathan Rodgers (National Association of Mutual Insurance Companies—NAMIC) said NAMIC would like assurance for companies new to reporting. He requested that new companies not be required to report in the initial year. This would apply to companies just crossing the reporting threshold, as well as companies added due to increased state participation.

Commissioner Altmaier said that the Task Force will review the SEC proposal, but given that it is only a proposal at this time and there will be additional time to compare the disclosure frameworks, he would prefer not to delay the Task Force vote to wait for the SEC determination, which will likely not be finalized until December 2022. He said the Workstream has included guidance to insurers regarding confidentiality within the introduction of the survey. Commissioner Altmaier said the Workstream has included in the draft a significant amount of flexibility in the content and timeline for reporting, as well as discretion to the participating states.

Superintendent Dwyer said the request to delay any climate risk disclosure until 2023 is a step back since companies have already been reporting the eight-question NAIC Climate Risk Disclosure Survey in prior years. She said she is unaware of any new companies being asked to report, and industry representatives have been unable to name any upon request. She said companies that have never participated in the NAIC Climate Risk Disclosure Survey, should there be any, have already been exempted from reporting in 2022. Ms. Teverbaugh said the Workstream included bulleted items to assist companies in determining the type of information to include in a TCFD, easing them into the process.

Amy Bach (United Policyholders) encouraged members to continue making progress on this important initiative. Commissioner Lara said the Workstream will review the SEC guidance but intends to keep moving forward, including through additional guidance to companies, striving for consistency, and aligning the survey to the TCFD framework. Ms. Teverbaugh said there is so much flexibility already built into the voluntary survey for states to use, it seems unnecessary to undermine the state discretion by adding language to limit their timeline for implementation. Acting Commissioner Humphreys (PA) said Pennsylvania began participating in 2021, and few companies had concerns with completing the survey in the same calendar year. Commissioner Humphreys said the state had flexibility to work with companies with concerns and offered extensions upon request. Commissioner Anderson said Massachusetts had a similar experience to Pennsylvania, having joined as a participating state in 2021.
Director French made a motion, seconded by Commissioner Donelon, to amend the survey based on NAMIC’s suggestion to extend the reporting deadline for new companies in 2023 and future years.

The motion to amend the survey did not pass.

Director Lindley-Myers made a motion, seconded by Commissioner Kreidler to adopt the revised survey (Attachment One-B).

The motion passed.

Having no further business, the Climate and Resiliency (EX) Task Force adjourned.
A Proposal to Establish a Catastrophe (CAT) Modeling “Center of Excellence” (COE) within the NAIC’s Center for Insurance Policy & Research (CIPR)

September 20, 2021

Introduction

The leadership and members of the NAIC have determined natural CAT risks and resiliency to be a top priority and organized several workstreams to pursue objectives intended to help ensure homes and businesses are protected from insured perils arising from natural CATs, while keeping markets stable through financially strong insurers and reinsurers. For example, the Catastrophe Risk (E) Subgroup has spent many years working to develop risk-based capital (RBC) factors for hurricane and earthquake exposures and, more recently, grappling with how best to address wildfire, flood, and convection storm perils. Separately, the Catastrophe Insurance (C) Working Group is charged with maintaining the NAIC State Disaster Response Plan, the Disaster Assistance Program, and the Catastrophe Computer Modeling Handbook. The Working Group has also commenced work to determine ways in which the private flood market can be facilitated and monitored by the state insurance regulators. The Climate and Resiliency (EX) Task Force has taken on significant work, which will require a deeper understanding of all aspects of climate and natural CAT risks. Further, many state insurance regulators are taking on new roles in working to create risk resilient communities within their jurisdictions.

Given these increased pressures and new roles, state insurance regulators need to improve their understanding of the CAT modeling technologies used by insurers and reinsurers. This means having access to the same knowledge, insights, and tools used by insurers. In doing so, state insurance regulators can more effectively engage with insurers and state and federal policymakers when discussing how best to maintain critical insurance coverages for their states’ economies and developing new regulatory policy. The NAIC can play an instrumental role fulfilling these needs.

In this regard, the Technology Workstream of the Climate and Resiliency (EX) Task Force was assigned the task of considering the potential application of technology, such as early warning systems and predictive modeling tools, to better understand and thereby evaluate insurers’ climate and natural CAT
risk exposures. In particular, the Technology Workstream was tasked with determining whether technical support services were needed by state insurance departments regarding the industry’s use of CAT models.

To help facilitate the members’ consideration of such a need, NAIC/CIPR staff conducted two presentations on June 7 and Aug. 6, 2021, wherein staff laid out a range of support services for state insurance departments when encountering the use of commercial CAT models by insurers in rate making processes, solvency functions, and/or other insurance business decisions (e.g., strategic, reinsurance, claims management). NAIC/CIPR staff addressed potential support services in the areas of: 1) facilitating access to CAT modeling documentation; 2) providing technical education and training; and 3) conducting applied research to proactively address regulatory climate risk and resilience priorities. Finally, an additional related benefit highlighted is the ability to provide future support services for other modeled CAT risk beyond climate and natural CATs, including casualty/liability, cyber, terrorism, and infectious diseases such as pandemics. This additional support work could potentially influence other NAIC related committee activities, as appropriate.

Proposal

As outlined in the introduction above, the time has arrived for the NAIC to establish a permanent support group—i.e., the NAIC CAT Modeling COE—to provide the NAIC and state system of insurance regulation with the necessary technical expertise, tools, and information to effectively regulate the insurers and reinsurers exposed to catastrophic events for a secure and stable insurance marketplace. We believe this COE would be best positioned within the NAIC’s CIPR given CIPR’s: 1) existing knowledge, expertise, and recent NAIC applied research track record in this field; and 2) its ability to effectively work with modelers and state insurance regulators from a neutral perspective within the NAIC. Below is a complementary and integrated series of technical support services envisioned by the COE:

1) Facilitating insurance department access to CAT modeling documentation and assistance in the distilling of this information.
2) Providing general technical education/training materials on the mechanics of commercial models and treatment of perils and risk exposures.
3) Conducting applied research analysis utilizing various model platforms to proactively answer the regulatory "so what" questions that may need to be addressed for regulatory resilience priorities.

The first element from above provides for the CAT Modeling COE to facilitate insurance department access to CAT modeling documentation and other information, as well as centralizing accumulated knowledge and expertise to aid in the deciphering and distillation of CAT models. The COE would assist
with managing both CAT model vendor relationships and insurance department needs. As such, the COE would be briefed on the modeling technologies and inputs in a similar fashion as insurers and reinsurers are and have access to the same modeling documentation to develop internal expertise. This knowledge and expertise would then be actively shared with state insurance regulators for use in regulatory processes and other considerations. Critically, this information would be collected and stored on an NAIC regulator-only technological platform with proper CAT modeling vendor Data Use Agreements (DUAs) in place to allow for proprietary model information sharing, part of which has been a stumbling block to regulatory access to date.

The second element from above provides for technical education/training materials on the mechanics of commercial models and treatment of perils and risk exposures for state insurance regulators. Importantly, this technical training would be utilized to enhance regulatory operational activities, thereby bringing the science to operations. For example, it would allow for state insurance departments and the NAIC to reimagine the NAIC Catastrophe Computer Modeling Handbook, which could become the foundational authoritative literature on state insurance regulator use of CAT models. As state insurance regulators gain more practice with these models, the NAIC is also well-positioned to develop best practices on industry use, as well as state insurance regulator use. Consequently, the NAIC Financial Condition Examiners Handbook and the NAIC Own Risk and Solvency Assessment (ORSA) Guidance Manual could be improved to account for the latest developments and best practices in CAT risk assessment. Further from a solvency perspective, both the development of related RBC CAT charges and climate stress testing would benefit greatly from such a technical foundation.

The third element from above provides for conducting applied research analysis to utilize various model platforms to proactively answer the regulatory “so what” questions that may need to be addressed. CAT models are not limited to use by the insurance industry; they are tools for CAT risk assessment. State insurance regulators can apply these tools in much the same way as the industry, albeit for regulatory resilience priorities (e.g., how to increase the uptake and proliferation of home hardening activities related to hurricane and wildfire risk). Such mitigation activities are critical to reduce expected losses and improve the availability and affordability of coverage currently and in a future warming climate. Applied research utilizing CAT models can demonstrate the economic value of such mitigation activities, laying the proper foundation for policy discussions to address increasing property owner mitigation implementation.

Lastly, it is important to note that these identified support services will not be taking the place of individual state department of insurance (DOI) activities involving CAT models, such as model and rate filing reviews, nor will the CAT Modeling COE be approving vendor models. Rather, the support services will allow the COE to engage with state insurance regulators as a trusted partner with a sufficient level
of CAT modeling expertise to enable the conduction of ongoing CAT modeling regulatory activities more effectively.

**Plan of Action**

In the past year, many of the above support services have already transpired and/or are currently underway. These include: 1) regulator-only technological platform infrastructure development and DUA executions; 2) NAIC Insurance Summit and CIPR events focused on CAT modeling education concerning wildfire and flood models, CAT model climate change incorporation and climate risk assessment, and casualty CAT modeling; 3) successful completion of a California, Colorado, and Oregon DOI wildfire mitigation report and wildfire CAT model technical documentation done in conjunction with the Insurance Institute for Business & Home Safety (IBHS) and Risk Management Solutions (RMS), which was further leveraged by the Catastrophe Risk (E) Subgroup for wildfire RBC factor development and the Catastrophe Insurance (C) Working Group Catastrophe Computer Modeling Handbook updates. Therefore, this proposal will not be to start such CAT modeling COE support service activities, but rather to build upon and leverage these activities for further enhancement and formalization at the NAIC.

Following the meeting of the Technology Workstream on Aug. 6, 2021, the proposal was released to the member states for further comments and questions. Comments were considered, and a revised proposal was approved for public exposure by the Technology, Solvency, and Pre-Disaster Mitigation Workstreams on Sept. 20, 2021.

Following the Sept. 20 regulator-only meeting, the proposal was released to interested parties for further comment and questions for 30 days. Comments will be considered by the Technology Workstream following this feedback and revisions may be made to the proposal, as agreed upon.

If the proposal advances through the above process steps, it will be prepared for recommendation to the Climate Risk and Resiliency (EX) Task Force at the NAIC 2021 Fall National Meeting in San Diego, CA.

We anticipate there would be no new charges associated with creation of the COE; i.e., the expenses associated with the COE resources would be effectively absorbed by the NAIC budget and have no special assessments, fee for services, etc. These resources may include: 1) recruiting a vendor/insurance department CAT modeling relationship manager and a CAT model research analyst; 2) funding for education/training development and implementation and the licensing and/or running of models for applied research to support and/or enhance regulatory operational activities; and 3) addressing regulatory resilience priorities.
Conclusion

In the face of extreme weather and the future climate significantly affecting property insurance markets, state insurance regulators need to have access to the same knowledge, insights, and CAT modeling tools used by insurers and reinsurers to assess and address climate risk and resiliency; i.e., knowledge and tools that are available for state insurance regulators to access, understand, and utilize. To accomplish this, we propose that the NAIC establish a permanent support group—i.e., the NAIC CAT Modeling COE—housed within the NAIC’s research unit; i.e., CIPR. We have laid out a proposal and plan of action that would build upon the work that the NAIC/CIPR has already been conducting around climate and CAT risks and allows the NAIC/CIPR to bring science to the operation of the DOIs in a way that is additive to the existing regulatory system, easy to access, and tailored to the needs of the state insurance regulators.

CATModelCOE Proposal
NAIC/Center for Insurance Policy and Research (CIPR) Catastrophe Model
Center of Excellence (COE)
Frequently Asked Questions (FAQ)
November 16, 2021

Governance & Oversight

Topic: Vendor and Insurer Continued Engagement with Departments of Insurance (DOIs)

Is the intent for the COE to become the primary point of contact between state insurance regulators and modelers?

No. As stated in the proposal, “identified support services will not be taking the place of state DOI activities involving CAT models, such as model and rate filing reviews, nor will the CAT Modeling COE be approving vendor models.” However, we do envision the COE providing access to CAT modeling expertise to support state insurance regulator understanding, training, etc.

Will state insurance regulators continue to be open to discussions with modelers (and insurers) about models?

Yes. In fact, the COE will seek to improve communication between state insurance regulators and modelers/insurers, supplying state insurance regulators with expertise and information to help facilitate such discussions.

Topic: Transparency and Potential Bias of Modeled Results/Usage

How will the COE engage with interested stakeholders to remain transparent?

Most NAIC support resources interact with a committee for reporting and oversight. In this instance, at least for now, we propose that the catastrophe resource center will report to the Technology Workstream under the Climate and Resiliency (EX) Task Force, as well as coordinate with the Property and Casualty Insurance (C) Committee.

How will the COE work to ensure impartiality of vendor models?
The COE will make every effort to engage with all vendors willing to participate for all perils with available technical documentation. Furthermore, the COE will establish a governance structure to ensure that partiality is not provided to any model or vendor.

**Would the COE be engaging to connect learnings from the CAT model to specific insurer rate-making, solvency, and/or business—i.e., strategic, reinsurance, claims management—decisions?**

The COE support services will not take the place of state DOI activities involving CAT models, such as model and rate filing reviews, nor will the CAT Modeling COE be approving vendor models. The COE will work to understand models objectively from a general sense, not for individual rate filings or solvency assessments. We acknowledge that each insurer has their own risk profile that would need to be considered on an individual basis, which is outside the scope of the COE.

**Topic: Objective Science**

**Would the kind of information the COE conveys be facts-based or would it include opinions or analysis?**

The information provided to the state DOIs would be fact-based with relevant objective analysis, as requested. Providing this type of information to states highlights the importance of the placement of the COE within the NAIC’s independent research center, the CIPR.

**Topic: Addressing Regulatory “So What” Questions Through Applied Research**

**What are regulatory “so what” questions in support service #3 of the proposal conducting applied research analysis?**

State insurance regulators are responsible for maintaining well-functioning competitive insurance markets. Forward-looking models can be utilized to help analyze market performance, especially regarding the need for improved resilience. As stated in the proposal, CAT models are tools for catastrophe risk assessment. State insurance regulators can apply these tools in much the same way as the industry, albeit for regulatory resilience priorities. For example, models can be used to identify high-risk areas and where proliferation of home hardening activities can improve resilience to natural hazards, including hurricane, flood, severe convective storm, tornado, wildfire, and earthquake. Such mitigation activities are critical to reduce probable losses. Lower losses over time can improve the availability and affordability of coverage in the future. Applied research utilizing CAT models can demonstrate the economic value of mitigation activities. One
Regarding conducting applied research analyses utilizing CAT models, we would like to understand the research and support expectations from the COE on modelers.

We envision working with modelers on applied research activities as applicable. We are requesting funding to allow for modeler engagement.

Depending on the expected level of granularity for COE work, additional questions may be relevant, such as whether the COE (NAIC/CIPR) would need to be prepared to go to a hearing to testify or respond to discovery?

It is not anticipated that the COE would maintain granular information about individual insurer use of CAT models. The level of detail would be around the actual CAT model to provide education and training to state DOIs.

Will the COE be used to conduct research and analysis into the markets for CAT models. Will conflicts of interest or market failures distort the use of CAT models?

No. It is not envisioned that the COE would set out to conduct this type of research and analysis.

Implementation Considerations

Topic: COE Communication of Various Results, Information, and Observations to DOIs

Given the complexity of models and breadth of expertise required to build and maintain them, there is a risk that any third party cannot adequately communicate the nuances and justification of models. Will the COE plan to coordinate model presentations from the modelers, rather than only relaying this information second-hand?

Yes. The COE would plan to coordinate model presentations from modelers.

How will information, observations, and/or questions about models be conveyed to state insurance departments? What kind of output will be generated?

We plan to hire a relationship manager responsible for communicating with the CAT model vendors and state insurance regulators. A regulator-only technology platform will help facilitate information sharing with state insurance regulators.
Research output could take multiple forms depending upon the nature of the analysis undertaken.

**What kinds of data fields will be included? Will others provide input into the design?**

The data fields selected would be contingent on the models being used and the research project under consideration. Data fields would follow from model inputs and outputs.

**Will the COE reviews and/or output be designed to be geography-specific?**

Yes. That is possible.

**Once a model has been reviewed, what renewal process is envisioned?**

Models will not be reviewed, nor would they be posted on the state insurance regulator-only website. However, model technical documentation and information will be updated as new versions of the models are released.

**Topic: Model Vendor Intellectual Property (IP) Protection**

How will the COE safeguard intellectual property of the participating CAT model vendors?

All modeling documentation, access, and usage will be centralized and monitored through the COE via legally binding data use agreements. The NAIC has an extensive track record of experience in collecting and protecting proprietary information. The actual models will not be posted on the state insurance regulator website, only the model documentation will be posted.

**Topic: Interaction with Modelers and Other External Experts**

Will modelers engage in discussions with the COE about specific models? Do you expect insurers to be involved in model-related discussions?

Yes. The COE would be engaged with modelers on the modeling technologies and inputs in a similar fashion as insurers and reinsurers and have access to the same modeling documentation to develop internal expertise. It is possible that insurers could be involved in model-related discussions with the COE, but the COE will not review individual insurer’s use of models.

Is the CIPR planning to license and use modeler software or engage in paid consulting studies for their research and development of processes?
Yes, depending on COE resources and the specific research use case. The CIPR would be willing to either license modeler software and/or engage in paid consulting studies for research and educational/training purposes, as directed by the appropriate NAIC authorities.

How will results and underlying assumptions from licensed models be communicated to state insurance regulators?

Any use of a licensed model, including distribution of modeled results, would be subject to the model license agreement and/or model vendor negotiated research consulting contract. Underlying assumptions from the various models utilized would be collected via the model technical documentation as part of the model vendor data use agreement. Note that it is possible that the model technical documentation, including underlying model assumptions, could be collected through a COE data use agreement without an associated model-based research project. If we were to license a model, the actual model would not be posted on the state insurance regulator-only website.

Will modelers be involved in establishing workflows, best practices, agendas, and expectations of the COE, including timing?

We anticipate that modelers will be actively engaged with the COE staff, advising on these items as appropriate.

How many vendors is the COE considering supporting?

The COE will not be “supporting” vendors, but rather the COE will collect model documentation and engage with model vendors. The COE will engage with any model vendor serving insurance markets where the information is relevant to state insurance regulators.

Does the COE anticipate looking to external experts for some of the implementation or ongoing work?

Yes. External collaboration would be welcome, whether that be with industry experts, public agencies, or the academic community.

Topic: Resources – Staffing and Funding

How many states do you expect to be interfacing with the COE?

The COE will be a resource of the NAIC potentially interfacing with all 56 jurisdictions.
Beyond recruiting for the identified new roles of CAT modeling relationship manager and CAT model research analyst, how many people at the NAIC/CIPR will be contributing to COE activities? Do you expect that to change over time?

The CIPR director, the NAIC solvency enterprise risk management (ERM) advisor, and potentially Property and Casualty Insurance (C) Committee staff support will have a role in supporting the work of the COE. We anticipate that additional technical and administrative support resources may be necessary as the workload and demand for services evolve with demonstrated success.

Will the staffing level proposed by the NAIC be able to provide meaningful analysis in the broad category of catastrophe modeling?

Prior to the creation of the COE, CIPR and NAIC staff have provided meaningful analysis on wildfire CAT modeling and applied wildfire resilience research. We aim to build off this success and need to start somewhere. Every little bit helps for the states, as stated by one industry commenter, “[t]he staffing issues mentioned above regarding experts at the NAIC are even larger for state insurance departments. Most states are not going to have enough or the right staff to review these models. They will have to rely on others to evaluate catastrophe model validity, and most likely will have to rely heavily on the decisions and evaluations made by others.”

Have long-term plans been prepared? Are there budget implications?

No long-term plan has been developed for the COE. The expenses associated with the COE would be subject to the NAIC budget process and have no special assessments or fees for service.
PROPOSED REDESIGNED NAIC CLIMATE RISK DISCLOSURE SURVEY

INTENT AND PURPOSE
The Climate Risk Disclosure Survey is a voluntary risk management tool for state insurance regulators to request from insurers on an annual basis a non-confidential disclosure of the insurers’ assessment and management of their climate-related risks.

The purpose of the Climate Risk Disclosure Survey is to:
- Enhance transparency about how insurers manage climate-related risks and opportunities.
- Identify good practices and vulnerabilities.
- Provide a baseline supervisory tool to assess how climate-related risks may affect the insurance industry.
- Promote insurer strategic management and encourage shared learning for continual improvement.
- Enable better-informed collaboration and engagement on climate-related issues among regulators and interested parties.
- Align with international climate risk disclosure frameworks to reduce redundancy in reporting requirements.

BACKGROUND
The NAIC adopted the original Climate Risk Disclosure Survey in 2010 and it has since been administered by the California Department of Insurance. In 2021, fifteen states participated in the climate risk disclosure survey initiative, up from six states in prior years. Because any insurer writing business in a participating state is required to submit their survey response annually, adding nine states in 2021, increased the market coverage from approximately 70% in 2020 to nearly 80% of the market in 2021 based on direct premium written.

In 2021, the Financial Stability Oversight Council (FSOC) produced a series of recommendations for financial regulators to enhance supervision, data analysis, staff resources, and regulatory cooperation related to climate risk. This included a recommendation to consider enhancing public reporting requirements for climate-related risks in a manner that builds on the four core elements of the Task Force on Climate-Related Financial Disclosure (TCFD), to the extent consistent with the U.S. regulatory framework and the needs of U.S. regulators and market participants.

This revised survey responds to FSOC’s recommendations and incorporates international best practices in adopting a TCFD aligned framework for US insurers to report on climate risks when requested by their state regulator.

The TCFD framework is structured around four thematic areas that are core elements
for how insurers operate—governance, strategy, risk management, and metrics and targets. The four thematic areas are supported by key climate-related financial disclosures—referred to as recommended disclosures—that build out the framework with information that will help regulators and others understand how reporting organizations assess and approach climate-related issues.

INTRODUCTORY GUIDANCE

Timeline and expectation for reporting
We expect that every company who will be asked to complete the survey in 2022 will have already completed the existing NAIC survey or filed a TCFD report; nearly all companies having participated for several prior years. The table below outlines the timing and other expectations for reporting in 2022 and 2023 as the new survey is phased in. If a company has not previously responded to the NAIC survey, it should be given until 2023 to first respond.

<table>
<thead>
<tr>
<th>Reporting Year</th>
<th>Expectation Regarding Content</th>
<th>Deadline for Completion</th>
</tr>
</thead>
</table>
| 2022           | • If the insurer has already completed a TCFD for this reporting year, they can submit it as is.  
• If the insurer has not already completed a TCFD for this reporting year, they should make their best effort to complete the survey below or include such information in their TCFD filing, as is requested below.  
• Closed-ended questions are voluntary for 2022, and states may opt out of requesting responses to closed-ended questions. | To allow additional time for insurers to move to the new reporting structure, submission deadlines should be moved from Aug. 31 to Nov. 30. Extensions may be granted by the state that initiated the request to the company or the lead state for the group filing. |
| 2023           | Insurers are expected to address the content of the entire TCFD aligned survey below, to the best of their ability. | In accordance with prior years, submissions are due from insurers by Aug. 31st. Extensions may be granted by the state that initiated the request to the company. |

Threshold and voluntary state participation
The reporting threshold remains consistent with the threshold implemented each year since 2013. All insurers with countrywide premium written of at least $100 million, licensed to write in any of the participating states/territories, are required to complete and submit their survey on an annual basis. As of 2021, the following states/territories participate: California,
Confidentiality and best effort basis
While the existing NAIC survey and TCFD contain sufficient overlap in the analysis required to answer, we recognize that many insurers will be moving to a new reporting framework in the TCFD. Insurers should make their best effort to answer each question honestly and completely, keeping in mind that the information contained in the filing will be made public. During the transition to the TCFD aligned survey, state insurance regulators should work closely with insurers to provide as much flexibility as possible in terms of responding to the survey and deadlines. Confidential information should not be included in this public disclosure unless it is intended to be made public. If additional detail is requested by a state insurance regulator, that request will be handled directly between the regulator and insurer.

Materiality
There is no requirement to provide information that is immaterial to an assessment of financial soundness (insurers may choose to disclose such information voluntarily, with no implication that such information is in fact material). Insurers should justify their materiality assessment. For the definition of materiality, refer to the Financial Condition Examiners Handbook and/or the U.S. Securities and Exchange Commissioner Accounting Bulletin: No. 99, if applicable.

Consistent with TCFD guidance, the Strategy and Metrics and Targets Sections involve an assessment of materiality, except for the question on Scope 1 and Scope 2 greenhouse gas emissions within the Metrics and Targets Section. Disclosures related to Governance and Risk Management Sections do not involve an assessment of materiality.

Assessing financial impact of climate-related risks and opportunities
The financial impacts of climate-related issues on an insurer are driven by the specific climate-related risks and opportunities to which the insurer is exposed and its strategic and risk management decisions on seizing those opportunities and managing those risks (i.e., accept, avoid, pursue, reduce, or share/transfer). Once an insurer assesses its climate-related issues and determines its response to those issues, it can then consider actual and potential financial impacts on revenues, expenditures, assets and liabilities, and capital and financing.1

Consistent with the TCFD Guidelines, determining whether an individual organization is or may be affected financially by climate-related issues usually depends on:

- the organization’s exposure to, and anticipated effects of, specific climate-related risks and opportunities;
- the organization’s planned responses to manage (i.e., accept, avoid, pursue, reduce, or share/transfer) its risks or seize opportunities; and

---

the implications of the organization’s planned responses on its income statement, cash flow statement, and balance sheet.²

Importantly, an organization should assess its climate-related risks and opportunities within the context of its businesses, operations, and physical locations in order to determine potential financial implications. In making such an assessment, an organization should consider (1) current and anticipated policy constraints and incentives in relevant jurisdictions, technology changes and availability, and market changes and (2) whether an organization’s physical locations or suppliers are particularly vulnerable to physical impacts from climate change.³

See pages 10-12 of the TCFD’s Implementation Recommendation Report for more guidance on assessing exposure, response and implications.

**ADDITIONAL SPECIFIC GUIDANCE**

One of the several benefits of aligning with the TCFD is that it allows insurers to benefit from years of guidance and supporting material developed and being regularly updated by the TCFD and other organizations.

For those insurers new to TCFD reporting, the Implementation Recommendation Report provides a useful guide. It contains guidance for all sectors on each of the four thematic areas of governance, strategy, risk management and metrics and targets. For example, in relation to the risk management disclosure to describe the insurers’ processes for identifying and assessing climate-related risks, it provides the following guidance:

- Organizations should describe their risk management processes for identifying and assessing climate-related risks. An important aspect of this description is how organizations determine the relative significance of climate-related risks in relation to other risks.

- Organizations should describe whether they consider existing and emerging regulatory requirements related to climate change (e.g., limits on emissions) as well as other relevant factors considered.

- Organizations should also consider disclosing the following:
  - processes for assessing the potential size and scope of identified climate-related risks and
  - definitions of risk terminology used or references to existing risk classification frameworks used.⁴

---

² [https://assets.bbhub.io/company/sites/60/2021/07/2021-TCFD-Implementing_Guidance.pdf](https://assets.bbhub.io/company/sites/60/2021/07/2021-TCFD-Implementing_Guidance.pdf), pg.10
The same document also provides supplemental insurance-sector specific guidance. For example, for the same disclosure question, it provides:

```
Insurance companies should describe the processes for identifying and assessing climate-related risks on re-/insurance portfolios by geography, business division, or product segments, including the following risks:
- physical risks from changing frequencies and intensities of weather-related perils;
- transition risks resulting from a reduction in insurable interest due to a decline in value, changing energy costs, or implementation of carbon regulation; and
- liability risks that could intensify due to a possible increase in litigation.5
```

Notably, this general and supplemental guidance is not required to be included in a TCFD report. Rather, it is designed to support an insurer in developing climate-related financial disclosures consistent with the TCFD framework, including by providing context and suggestions for implementing the recommended disclosures.

The disclosures identified in bullet points in this survey are intended to be supplemental, insurance-sector specific guidance. They have been developed by the NAIC to respond to the TCFD and FSOC recommendations that regulators enhance public reporting requirements for climate-related risks in a manner that builds on the TCFD’s four core elements. They are designed to further support insurers’ in developing their disclosures by providing context and suggestions for the information a regulator may expect.

Additional guidance published by the TCFD includes:

- **The Use of Scenario Analysis in Disclosure of Climate-Related Risks and Opportunities (2017)** provides information on types of climate-related scenarios, the application of scenario analysis, and the key challenges in implementing scenario analysis to support an organization’s disclosure of the resilience of its strategy, taking into consideration different climate-related scenarios.

- **Guidance on Risk Management Integration and Disclosure (2020)** describes considerations for organizations interested in integrating climate-related risks into their existing risk management processes and disclosing information on their risk management processes in alignment with the Task Force’s recommendations.

- **Guidance on Metrics, Targets, and Transition Plans (2021)** describes recent developments around climate-related metrics and users’ increasing focus on information describing organizations’ plans for transitioning to a low-carbon economy. The guidance also describes a set of cross-industry, climate related metric categories (described in Appendix 2: Cross-Industry,

---

Climate-Related Metric Categories) that the Task Force believes are applicable to all organizations.

The FSB frequently produces content to assist companies in creating TCFD reports, the knowledge hub with related content is accessible at https://www.tcfdhub.org/.

SURVEY QUESTIONS
To provide clear direction for achieving a robust, insurance-sector specific TCFD report, narrative and closed ended questions follow, grouped into the TCFD’s four topics: governance, strategy, risk management and metrics and targets.

The statements listed next to numbers and letters are directly taken from the TCFD Framework and should be fully addressed in the insurer’s response. As discussed in detail above, insurers should consider including the bulleted items in their response to the TCFD statement above it. For additional guidance on sector specific content to consider including, refer to the Implementation Recommendation Report.

Governance
1. Disclose the insurer’s governance around climate-related risks and opportunities. In disclosing the insurer’s governance around climate-related risks and opportunities insurers should consider including the following:
   - Identify and include any publicly stated goals on climate-related risks and opportunities.
   - Describe where climate-related disclosure is handled within the insurer’s structure, e.g., at a group level, entity level, or a combination. If handled at the group level, describe what activities are undertaken at the company level.
   A. Describe the board and/or committee responsible for the oversight of climate-related risks and opportunities.
   In describing the position on the board and/or committee responsible for the oversight of managing the climate-related financial risks, insurers should consider including the following:
      - Describe the position on the board and/or committee responsible for the oversight of managing the climate-related financial risks.
   B. Describe management’s role in assessing and managing climate-related risks and opportunities.

Strategy
2. Disclose the actual and potential impacts of climate-related risks and opportunities on the insurer’s businesses, strategy, and financial planning where such information is material. In disclosing the actual and potential impacts of climate-related risks and opportunities on the insurer’s businesses, strategy and financial planning, insurers should consider including the following:
   - Describe the steps the insurer has taken to engage key constituencies on the topic of climate risk and resiliency.*i
Describe the insurer’s plan to assess, reduce, or mitigate its greenhouse gas emissions in its operations or organizations.*

A. Describe the climate-related risks and opportunities the insurer has identified over the short, medium, and long term.

In describing the climate-related risks and opportunities the insurer has identified over the short, medium, and long term, insurers should consider including the following:

- Define short, medium, and long-term, if different than 1-5 years as short term, 5-10 years as medium term, and 10-30 years as long term.

B. Describe the impact of climate-related risks and opportunities on the insurer’s business, strategy, and financial planning.

In describing the impact of climate-related risks and opportunities on the insurer’s business, strategy, and financial planning, insurers should consider including the following:

- Discuss if and how the insurer provides products or services to support the transition to a low carbon economy or helps customers adapt to climate-related risk.
- Discuss if and how the insurer makes investments to support the transition to a low carbon economy.

C. Describe the resilience of the insurer’s strategy, taking into consideration different climate-related scenarios, including a 2 degree Celsius or lower scenario.

Risk Management

3. Disclose how the insurer identifies, assesses, and manages climate-related risks.

In disclosing how the insurer identifies, assesses, and manages climate-related risks, insurers should consider including the following:

- Describe how the insurer considers the impact of climate-related risks on its underwriting portfolio, and how the company is managing its underwriting exposure with respect to physical, transition, and liability risk.*
- Describe any steps the insurer has taken to encourage policyholders to manage their potential physical and transition climate-related risks, if applicable.*
- Describe how the insurer has considered the impact of climate-related risks on its investment portfolio, including what investment classes have been considered.*

A. Describe the insurers’ processes for identifying and assessing climate-related risks.

In describing the insurers’ processes for identifying and assessing climate-related risks, insurers should consider including the following:

- Discuss whether the process includes an assessment of financial implications and how frequently the process is completed.*

B. Describe the insurer’s processes for managing climate-related risks.

C. Describe how processes for identifying, assessing, and managing climate-related risks are integrated into the insurer’s overall risk management.
In describing how processes for identifying, assessing, and managing climate-related risks are integrated into the insurer’s overall risk management, insurers should consider including the following:

- Discuss whether climate-related risks are addressed through the insurer’s general enterprise-risk management process or a separate process and how frequently the process is completed.
- Discuss the climate scenarios utilized by the insurer to analyze its underwriting risks, including which risk factors the scenarios consider, what types of scenarios are used, and what timeframes are considered.
- Discuss the climate scenarios utilized by the insurer to analyze risks on its investments, including which risk factors are utilized, what types of scenarios are used, and what timeframes are considered.

**Metrics and Targets**

4. Disclose the metrics and targets used to assess and manage relevant collateralized risks and opportunities where such information is material.

In disclosing the metrics and targets used to assess and manage relevant collateralized risks and opportunities where such information is material, insurers should consider including the following:

- Discuss how the insurer uses catastrophe modeling to manage the climate-related risks to your business. Please specify for which climate-related risks the insurer uses catastrophe models to assess, if any.
  
  A. Disclose the metrics used by the insurer to assess climate-related risks and opportunities in line with its strategy and risk management process.

  In disclosing the metrics used by the insurer to assess climate-related risks and opportunities in line with its strategy and risk management process, insurers should consider including the following:

  - In describing the metrics used by the insurer to assess and monitor climate risks, consider the amount of exposure to business lines, sectors, and geographies vulnerable to climate-related physical risks [answer in absolute amounts and percentages if possible], alignment with climate scenarios, [1 in 100 years probable maximum loss, Climate VaR, carbon intensity], and the amount of financed or underwritten carbon emissions.

  B. Disclose Scope 1, Scope 2, and if appropriate, Scope 3 greenhouse gas (GHG) emissions, and the related risks.

  C. Describe the targets used by the insurer to manage climate-related risks and opportunities and performance against targets.
Closed-ended questions directly correspond to the narrative above, allowing for explanation and qualification of the yes/no answers. Closed-ended questions are voluntary for reporting year 2022 and individual states may elect not to request them.

**Governance**
- Does the insurer have publicly stated goals on climate-related risks and opportunities? (Y/N)
- Does your board have a member, members, a committee, or committees responsible for the oversight of managing the climate-related financial risk? (Y/N)
- Does management have a role in assessing climate-related risks and opportunities? (Y/N)
- Does management have a role in managing climate-related risks and opportunities? (Y/N)

**Strategy**
- Has the insurer taken steps to engage key constituencies on the topic of climate risk and resiliency? (Y/N) *
- Does the insurer provide products or services to support the transition to a low carbon economy or help customers adapt to climate risk? (Y/N)
- Does the insurer make investments to support the transition to a low carbon economy? (Y/N)
- Does the insurer have a plan to assess, reduce or mitigate its greenhouse gas emissions in its operations or organizations? (Y/N)*

**Risk Management**
- Does the insurer have a process for identifying climate-related risks? (Y/N)
  - If yes, are climate-related risks addressed through the insurer’s general enterprise-risk management process? (Y/N)
- Does the insurer have a process for assessing climate-related risks? (Y/N)
  - If yes, does the process include an assessment of financial implications? (Y/N)
- Does the insurer have a process for managing climate-related risks? (Y/N)
- Has the insurer considered the impact of climate-related risks on its underwriting portfolio? (Y/N/Not Applicable)*
- Has the insurer taken steps to encourage policyholders to manage their potential climate-related risks? (Y/N)*
- Has the insurer considered the impact of climate-related risks on its investment portfolio? (Y/N)*
- Has the insurer utilized climate scenarios to analyze their underwriting risk? (Y/N)
- Has the insurer utilized climate scenarios to analyze their investment risk? (Y/N)

**Metrics and Targets**
- Does the insurer use catastrophe modeling to manage your climate-related risks? (Y/N)
- Does the insurer use metrics to assess and monitor climate-related risks? (Y/N)
- Does the insurer have targets to manage climate-related risks and opportunities? (Y/N)
- Does the insurer have targets to manage climate-related performance? (Y/N)
* Asterisks represent questions derived from the original Climate Risk Disclosure Survey.
GOVERNMENT RELATIONS (EX) LEADERSHIP COUNCIL

The Government Relations (EX) Leadership Council did not meet at the Spring National Meeting.
Draft: 4/12/22

Long-Term Care Insurance (EX) Task Force
Kansas City, Missouri
April 6, 2022

The Long-Term Care Insurance (EX) Task Force met in Kansas City, MO, April 6, 2022. The following Task Force members participated: Scott A. White, Chair (VA); Michael Conway, Vice Chair (CO); Lori K. Wing-Heier represented by Anna Latham (AK); Jim L. Ridling represented by Jimmy Gunn (AL); Evan G. Daniels (AZ); Ricardo Lara represented by Susan Bernard (CA); Andrew N. Mais (CT); Karima M. Woods represented by Philip Barlow (DC); Trinidad Navarro represented by Tanisha Merced (DE); David Almtaier represented by John Reilly (FL); Colin M. Hayashida (HI); Doug Ommen (IA); Dean L. Cameron (ID); Dana Popish Seeveringhaus (IL); Amy L. Beard represented by Scott Shover (IN); Vicki Schmidt represented by Nicole Boyd (KS); Sharon P. Clark represented by Rob Roberts (KY); James J. Donelon (LA); Gary D. Anderson (MA); Timothy N. Schott (ME); Anita G. Fox represented by Karen Dennis (MI); Grace Arnold represented and Fred Andersen (MN); Chlora Lindley-Myers represented by Jo LeDuc (MO); Mike Chaney (MS); Troy Downing represented by Kati McGrath Ellis (MT); Mike Causey represented by Jackie Obusek (NC); Eric Dunning (NE); Barbara D. Richardson represented by David Cassetty (NV); Judith L. French represented by Laura Miller (OH); Glen Mulready represented by Eli Snowbarger (OK); Andrew R. Stolfi (OR); Michael Humphreys (PA); Elizabeth Kelleher Dwyer (RI); Raymond G. Farmer (SC); Larry D. Deiter represented by Jill Kruger (SD); Carter Lawrence represented by Stephanie Cope (TN); Cassie Brown represented by Chris Herrick (TX); Jon Pike (UT); Michael S. Pieciak represented by Kevin Gaffney (VT); Mike Kreidler (WA); Nathan Houdek (WI); and Allan L. McVey (WV).

1. ** Adopted its 2021 Fall National Meeting Minutes **

Commissioner McVey made a motion, seconded by Commissioner Kreidler, to adopt the Task Force’s Dec. 12, 2021, minutes (see NAIC Proceedings – Fall 2021, Long-Term Care Insurance (EX) Task Force). The motion passed unanimously.

2. ** Received the Report on the Implementation Plans for the LTCI MSA Framework **

Commissioner White said the Long-Term Care Insurance Multistate Rate Review Framework (LTCI MSA Framework) is expected to be adopted during the Executive (EX) Committee and Plenary meeting on April 8. Upon adoption, the Task Force have given itself until September to work through implementation issues and have the Multistate Actuarial (MSA) Process operational.

Commissioner Conway said there are three categories of tasks planned for the implementation of the LTCI MSA Framework.

Commissioner Conway said NAIC staff-level tasks include: 1) identifying if any technical updates need to be made to the NAIC’s System for Electronic Rates & Forms Filings (SERFF) application; 2) adding the MSA; and 3) differentiating MSA filings. He said NAIC staff have begun to work on drafting filing instructions for insurers and any legal forms and disclaimers, as noted in the LTCI MSA Framework. Closer to implementation, a web page will be set up to house the instructions, checklists, and any other forms for insurers.

As part of the implementation process, instructions for the MSA Team will be developed to document such things as communication channels, review controls, and process instructions to aid MSA Team members. This documentation may take longer to complete as the MSA Team gains more experience with MSA reviews. Mr. Andersen and members of the MSA Team are developing the new MSA Associate Program.
Commissioner Conway said the second category of implementation topics is focused on items that may require consideration by the Long-Term Care Insurance Multistate Rate Review (EX) Subgroup or the Task Force. The Subgroup may be asked to review and approve any forms or instructions, as deemed necessary. The Subgroup and the Task Force will develop a plan to promote the MSA Process to both insurers and state insurance regulators to encourage use of the program, which will be critical to the future success of this program and achieving the goals of the Task Force. He said while the LTCI MSA Framework outlines on a high-level basis the development of a process for feedback to the Subgroup and Task Force for future evaluation of the program, this feedback process will need to be further developed. This will include identifying data points and how that data will be collected. For example, feedback requested from participating insurers versus feedback from state insurance regulators. Based on the feedback and the experience of the MSA Team in conducting reviews, the Subgroup will address any future updates that may be necessary to the LTCI MSA Framework.

Commissioner Conway said two topics would be Executive (EX) Committee level consideration. The first item to address would be if additional NAIC full-time employees are needed to facilitate the MSA Process. The second item would be if filing fees should be charged to the insurer for use of the MSA. This is noted as a “to be determined” topic in the LTCI MSA Framework; however, this is expected to be a long-term consideration and not an immediate consideration.

3. Heard From the ACLI on Participation in the MSA Process

Jan M. Graeber (American Council of Life Insurers—ACLI) said the ACLI has a strong desire for the MSA Process to work, but there needs to be balance from both insurers and state insurance regulators. She said general reactions from member companies that participated in the MSA Pilot Program are mixed and vary by insurer. Feedback differs between insurers that participated early in the pilot compared to those that participated later. Ms. Graeber said the process changed the conversation, and states seem to be more informed on the issues and challenges of long-term care insurance (LTCI). The process of developing the LTCI MSA Framework seemed to spread knowledge and awareness. However, it has not moved the needle on consistency of the approved amount of rate increase across states. Even states that were supportive of the process did not forego their own methodology, making companies feel as though the MSA Process was just another step added to the review. Ms. Graeber said she feels this could be overcome if states and insurers are willing to participate and rely on the results of the recommendation.

Ms. Graeber said knowing where states stand will be essential for insurers to be willing to use the process. There is not a mechanism that is meant to encourage states to participate and be accountable. As a starting point, the ACLI would encourage state insurance commissioners to affirmatively express whether they support the MSA Process and the results of the rate review recommendation. If commissioners are supportive, they should ensure they communicate that message to their staff that perform the necessary review. Member companies that participated in the MSA Pilot Program have indicated that this may not have been the case.

Ms. Graeber said the ACLI is supportive of the MSA Associate Program and encourages the Task Force to leverage expertise of the ACLI actuaries to help educate junior-level staff on LTCI.

Ms. Graeber said there is recognition of the issues that occurred with LTCI when it was originally priced; i.e., insurers have filed for rate increases for these products, and now policyholders must grapple with rates that are very different from what they expected. Policyholders may not have recognized at the beginning how much the benefit pools would grow or the value of those benefit pools. Ms. Graeber said policyholders may have benefit pools more than $500,000 to $750,000, where the premium paid is small. This is not sustainable and in conflict with the fundamental insurance principle that premiums need to be reasonable in relationship to the underlying benefit. The ACLI thinks it is time to ensure that actuarially justified rates are approved so policyholders can make informed decisions and meaningful coverage. Ms. Graeber said insurers need predictably and sufficiently of the
MSA recommendation. A question would be what method will be applied to the filing and what criteria is being used to evaluate which methodology is applied. Ms. Graeber said the ACLI recommends engaging in a dialogue on the issues and questions that need to be addressed. This may help further refine the current process so insurers will have greater insight into how the process will work, and state insurance regulators will have a better sense of the level of industry engagement. Ms. Graeber said she believes most insurers are willing to submit to a consistent process but are reluctant to waive their understanding of how the process works in exchange for a potentially more efficient process. She said the problem of LTCI needs collective, long-term solutions.

Commissioner Conway asked if ACLI members believe the MSA Process has more certainty than the current state-by-state review. Ms. Graeber said the answer is no. When insurers were going to an individual state, they knew what to expect from that state. Even though the LTCI MSA Framework outlines the two methodologies, there is a blend of methodologies applied or one methodology over another. Insurers will file what they believe is an actuarially justified rate increase. To the extent that there are adjustments or blending, the insurer needs to understand and be able to take those adjustments and blending into account when developing longer-term objectives. She said member insurers said there were status updates given during the review process. However, there needs to be more dialogue between the reviewer and the insurer that submitted the filing to ensure both understand how the information and data in the filing is being interpreted.

Commissioner White said the Task Force is in the MSA Pilot Project stage and will continue to take insurer and stakeholder feedback to improve the MSA Process, so everyone has more comfort with the MSA Process moving forward.

4. **Heard an Update on LTCI Industry Trends**

Mr. Andersen said there are two teams of state insurance regulators. One group looks at rates. A second group is a subset of the Valuation Analysis (E) Working Group that reviews insurers’ Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves (AG 51) filings to focus on reserves and solvency. This group communicates findings to NAIC leadership, domestic state insurance departments, and other NAIC groups. Two trends have been reviewed this year: 1) cost-of-care inflation trends, which have been observed over the past five years and are now a credible trend. This affects policies with 5% inflation protected benefits. Some insurers have strengthened benefit utilization assumptions, which is the amount of actual daily benefit spent on care; and 2) the impact of COVID-19, which was thought to be short-term. Mr. Andersen said this will continue to be studied, specifically if there is a shift from facility care to home care.

5. **Received a Report on the MSA Associate Program**

Commissioner White said the MSA Associate Program is intended to develop and sustain the LTCI MSA Framework by filling the MSA Team with a diverse pool of qualified actuaries. It is understood that as actuaries retire or leave state regulatory roles, there is a need to be prepared to fill the positions on the MSA Team when that occurs and to get fresh perspectives from other actuaries.

Mr. Andersen said the strength of state regulatory knowledge on LTCI is important to both state insurance departments and industry. The MSA Associate Program has many opportunities, including having more state insurance department actuaries become part of the MSA Process and adding to the general educational level on LTCI actuarial issues. It also allows the current MSA Team to learn from actuaries in other states. Mr. Andersen said 16 state actuaries from various states have signed up for the program. He said an initial introductory call was held to discuss backgrounds and how the group can get engaged in the MSA Process and educational opportunities. He said state actuaries or other staff involved in LTCI wishing to join can reach out to him or NAIC staff.
6. **Disbanded the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup**

Commissioner White said at the 2021 Fall National Meeting, the Task Force adopted two work products from the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup. The Subgroup was given 2022 charges if the 2021 work of the Subgroup was not completed before the end of the year. However, the charges of the Subgroup were completed in 2021, and there are currently no tasks that require the Subgroup’s attention. If new related topics arise in the future in this area, the Task Force can consider re-establishing a Subgroup.

Commissioner Conway made a motion, seconded by Commissioner McVey, to disband the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup. The motion passed unanimously.

Bonnie Burns (California Health Advocates) said there needs to be simplification of the consumer notices of rate increases. The notices may be confusing, and consumers may not know which notices to give their attention to. Ms. Burns said consumers believe the only options available to them are the options provided by the insurer. She believes there needs to be regulatory scrutiny of the notices and consumers’ reactions to the notices. She said there needs to be attention given to consumers that receive the notices and how they make decisions in their best interest.

Brenda J. Cude (University of Georgia) said she agrees with Ms. Burns. She said she is working on an NAIC Center for Insurance Policy and Research (CIPR) project to gain an understanding of consumer reactions on reduced benefit options (RBOs) and consumers’ questions. She said they have talked to financial planners who should have a higher level of understanding than the consumer of RBOs. The financial planners have a better understanding of what the consumers’ reactions are, and they have their own questions. That research could contribute to this discussion.

Commissioner White said the Task Force can put this issue on the agenda for the next Task Force meeting to consider where to address the concern.

Having no further business, the Long-Term Care Insurance (EX) Task Force adjourned.
SPECIAL (EX) COMMITTEE ON RACE AND INSURANCE

Special (EX) Committee on Race and Insurance April 6, 2022, Minutes .............................................................. 4-81
Draft: 4/22/22

Special (EX) Committee on Race and Insurance
Kansas City, Missouri
April 6, 2022

The Special (EX) Committee on Race and Insurance met in Kansas City, MO, April 6, 2022. The following Special Committee members participated: Dean L. Cameron, Co-Chair (ID); Chlora Lindley-Myers, Co-Chair (MO); Raymond G. Farmer, Chair Emeritus (SC); Andrew N. Mais, Co-Vice Chair (CT); Jon Godfrey, Co-Vice Chair (ND); Lori K. Wing-Heier (AK); Jim L. Ridling (AL); Alan McClain (AR); Ricardo Lara (CA); Michael Conway (CO); Karima M. Woods (DC); David Altmaier (FL); Colin M. Hayashida (HI); Doug Ommen (IA); Vicki Schmidt (KS); Sharon P. Clark (KY); Gary D. Anderson (MA); Kathleen A. Birrane (MD); Timothy N. Schott (ME); Anita G. Fox (MI); Grace Arnold (MN); Edward M. Deleon Guerrero (MP); Troy Downing (MT); Mike Causey (NC); Eric Dunning (NE); Marlene Caride (NJ); Barbara D. Richardson (NV); Adrienne A. Harris represented by My Chi To (NY); Judith L. French (OH); Glen Mulready (OK); Andrew R. Stolfi (OR); Michael Humphreys (PA); Elizabeth Kelleher Dwyer (RI); Larry D. Deiter (SD); Carter Lawrence (TN); Cassie Brown (TX); Jon Pike (UT); Scott A. White (VA); Tregenza A. Roach (VI); Michael S. Pieciak (VT); Mike Kreidler (WA); Nathan Houdek (WI); Allan L. McVey (WV); and Jeff Rude (WY).

1. Adopted its 2021 Fall National Meeting Minutes

Commissioner McVey made a motion, seconded by Commissioner Mais, to adopt the Special (EX) Committee on Race and Insurance’s Dec. 14, 2021, minutes (see NAIC Proceedings – Fall 2021, Special (EX) Committee on Race and Insurance). The motion passed unanimously.

2. Received a Status Report on Workstream One

Director Lindley-Myers said, “I hope that as you hear these reports you appreciate the continued work being done to identify barriers to access to insurance careers and insurance products and the challenging efforts towards identifying and removing any unfair discrimination.”

Director Lindley-Myers noted that the NAIC is monitoring efforts by the U.S. House of Representatives (House) Financial Services Subcommittee on Diversity and Inclusion, which plans on having a hearing and producing a report on diversity, equity, and inclusion (DE&I) within the insurance sector. NAIC staff met with Chairwoman Maxine Waters’ (D-CA) office about its efforts, and they are aware that letters and surveys went out to many in the industry. The NAIC plans to continue following the work of the Subcommittee in anticipation of the hearings and the subsequent report.

Executive Deputy Superintendent To reported that Workstream One is charged with continuing research and analysis to identify issues and develop specific recommendations on action steps state insurance regulators and companies can take to improve the level of diversity and inclusion in the industry, including: 1) seeking additional engagement from stakeholders to understand the efficacy of diversity-related programs, how companies measure their progress, and what state insurance regulators can do to support these efforts; and 2) collecting input on any existing gaps in available industry diversity-related data.

Since the adoption of its 2021/2022 charges, the Workstream has met in regulator-only session three times and held two open calls with stakeholders.

In October 2021, the Workstream heard a presentation from California and New York regarding their respective DE&I efforts and the diversity-related industry data that these states are collecting.
In November 2020, the Workstream held a public call with stakeholders to discuss actions companies can take to foster a more inclusive environment to gain more diverse executives and board members, as well as how state insurance regulators can support these efforts.

In November 2021, the Workstream held another public call with stakeholders to better understand industry diversity-related programs, how companies are measuring progress, and what state insurance regulators can do to support these efforts.

State insurance regulators were pleased by the industry’s willingness to step up, and they asked three of the presenters from the second stakeholder call to present to the full Special (EX) Committee on Race and Insurance during the 2021 Fall National Meeting: 1) the American Property Casualty Insurance Association (APCIA) and Dr. Leroy Nunery II; 2) the Blue Cross and Blue Shield of Illinois; and 3) Zurich.

In terms of next steps, the Workstream co-chairs are working to outline proposed recommendations and action steps for the Workstream to consider.

State insurance regulators want to support the insurance industry in increasing diversity and inclusion at all levels of their organizations and be of assistance in bringing more and diverse talent into the applicant pool.

3. **Received a Status Report on Workstream Two**

Commissioner Clark reported that Workstream Two has gathered responses to the zone-based survey examining best practices and initiatives state insurance departments may consider when promoting DE&I in their departments. The Workstream will soon meet to discuss a method and forum to share diversity and inclusion best practices among state insurance regulators.

Commissioner Mulready stated that the NAIC continues its work implementing diversity initiatives. Much of the Workstream’s recent work has been conducted by Evelyn Boswell (NAIC), Director of Diversity, Equity, and Inclusion, through the State Diversity Leaders Forum. This Forum provides a space for diversity leaders in each state to come together and discuss best practices in promoting diversity in their respective insurance departments. Commissioner Mulready encouraged commissioners to send Ms. Boswell their department’s diversity contact information.

4. **Received a Status Report on Workstream Three**

Director Wing-Heier reported on interactions the leadership and members of Workstream Three have had in recent months to address the Workstream’s charges. Much of the focus of the Workstream has been on how to address Charge F, which addresses continuing research and analysis of insurance, legal, and regulatory approaches to addressing unfair discrimination, disparate treatment, proxy discrimination, and disparate impact, as well as making recommendations for statutory or regulatory changes and additional steps, including developing analytical and regulatory tools to assist state insurance regulators in defining, identifying, and addressing unfair discrimination.

Leadership from the Workstream, the Innovation, Cybersecurity, and Technology (H) Committee, the Accelerated Underwriting (A) Working Group, the Big Data and Artificial Intelligence (H) Working Group, and the Casualty Actuarial and Statistical (C) Task Force met with Cathy O’Neil (O’Neil Risk Consulting & Algorithmic Auditing—ORCAA) earlier this year as a follow-up to a presentation she gave to the Workstream late last year. The primary focus of this discussion was on algorithmic auditing and what tools or education state insurance regulators might need to better identify and address any unfair bias that can occur in algorithms or other models.
From this discussion, this same group of commissioners had further conversations about how to meet with similar experts—i.e., academics, consultants, start-ups, or others—who have expertise in artificial intelligence (AI), machine learning (ML), and algorithms. The idea discussed on the March 22 Workstream call is that the Committee can create a forum where all groups can hear from subject matter experts (SMEs) in one forum; then, individual groups, such as the Workstream, can take that knowledge and apply it to their specific charges.

On the March 22 call, the Workstream also discussed recent papers from the Casualty Actuarial Society (CAS) released examining approaches to defining and measuring fairness in predictive models and examining issues of racial bias in the financial industry, and the Workstream explored at what stage the Workstream might want to understand the different ways these terms are defined. Finally, the Workstream reviewed the status of each of its charges and how best to address them.

5. **Received a Status Report on Workstream Four**

Director French reported that while Workstream Four has yet to meet in 2022, the co-chairs have been meeting to discuss how best to focus its efforts in 2022. This year, the Workstream will focus on the charge to “continue research and analysis related to insurance access and affordability issues, including the marketing, distribution, and access to life insurance products in minority communities, including the role that financial literacy plays,” exploring options for presentations to help the Workstream identify how state insurance regulators and the NAIC might be able to advance equity in the marketing and distribution of life insurance in underserved communities.

Director French has met with representatives from Nationwide, a charter member of the Financial Alliance for Racial Equity (FARE). FARE is a partnership of financial services organizations, associations, and historically black colleges and universities (HBCUs). The FARE mission statement is “to increase racial diversity, drive greater equity, and foster inclusion within the financial services industry and the communities served.”

Founding members of FARE include Morgan Stanley, M Financial Group, NFP, Miami Life, Huntington, the Employee Benefit Research Institute (EBRI), the American College of Financial Services, and Nationwide Financial in partnership with HBCUs, including Hampton University, Lincoln University, Virginia State University, Virginia Union University, Winston-Salem State University, and Howard University.

The Workstream will schedule a panel presentation with FARE members and invite other workstreams to participate. The goal is to present state insurance regulators and the NAIC with practical strategies and opportunities for better meeting the needs of underserved communities.

The Workstream will begin holding open meetings and have significant progress to report to the Special (EX) Committee on Race and Insurance at the Summer National Meeting.

6. **Received a Status Report on Workstream Five**

Commissioner Birrane provided the Workstream Five report and highlighted the Workstream’s work to date and plans for the next few months.

Since the Workstream’s last update to the Special (EX) Committee on Race and Insurance at the 2021 Fall National Meeting, the Workstream met in open session in December 2021 and adopted its draft Principles for Data Collection document.

Commissioner Arnold and Commissioner Birrane stepped into the co-chair positions in January. Commissioner Birrane thanked previous co-chairs, Commissioner Lara and Commissioner Altman, for the foundational work they
led from the inception of the Special Committee. Commissioner Birrane said she and Commissioner Arnold discussed with the previous co-chairs the work they envisioned for the Workstream in 2022.

The Workstream then met in regulator-only session to discuss its focus and full work plan for 2022. The Workstream agreed that its focus should center on: 1) identifying demographic-based barriers to the acquisition and use of health insurance and creating strategies for mitigating or removing such barriers; and 2) understanding the role health insurance can play in addressing inequities in health outcomes and social determinates of health.

The Workstream also agreed on a framework for executing those objectives, including the specific topics the Workstream will focus on this year: 1) benefit design, including examining provider network design and benefit structures; and 2) consumer empowerment and engagement.

The first topic is foundational, as it is critically important that products are inclusive in design and carriers consider the actual health needs of certain communities (e.g., whether formularies are designed to ensure that medications that treat conditions more prevalent among certain demographic groups are offered with no or minimal co-pays, what preventative services look like, and how wellness programs are designed and promoted). Scales and Fitbits may be great incentives for some people to focus on their health, but nutritional support and transportation may be far more important for people whose health is affected by their environment. Likewise, what the network looks like, not only in the traditional sense of the availability of appointments, but the impact of the kind of provider and the cultural competency of providers on the willingness and ability of people to utilize services, must be considered. The model of picking up the phone or going online to navigate physician appointment systems in not familiar or comfortable for everyone, so how carriers are ensuring that their networks take into consideration how care is sought must also be considered.

With respect to the second topic, consumer engagement and empowerment, the Workstream will look at successful strategies for enrollments and facilitating consumer understanding of how to access care through insurance and how to navigate claims issues.

The Workstream also discussed what its end work product should be with respect to these topics and is looking at the development of a guide for state insurance regulators that compiles information about barriers and presents potential tools and strategies for state insurance regulators to use to address these barriers.

The Workstream is mapping out a schedule for completing its work on these topics before the end of the year, and it hopes to meet at least monthly to hear from various stakeholders, such as consumer groups, academics, and industry on the topics it has identified as its focus for this year; i.e., benefit design and consumer empowerment.

With respect to the second objective, the Workstream discussed holding listening sessions, potentially in conjunction with Zone meetings, with community-based individuals and organizations who work with various disadvantaged and historically underserved and underrepresented populations to facilitate a ground zero understanding of how insurance can impact the health outcomes and social determinants of health.

Acting Commissioner Humphreys noted that Pennsylvania looks forward to supporting the Workstream and the document on data principles in the collection of race and ethnicity data. Pennsylvania is moving forward with a statement of policy, which is a statement that Pennsylvania will not enforce existing guidance that prohibits insurers on an application from asking for race and ethnicity information on a voluntary basis and subject to privacy and other protections.
7. **Discussed the Innovation, Cybersecurity, and Technology (H) Committee Collaboration Forum – Detecting and Addressing Unfair Bias**

Commissioner Birrane provided an update on the Collaboration Forum that has been established within the Innovation, Cybersecurity, and Technology (H) Committee and the work on algorithmic bias that will be the first project of the Forum.

For context, an important and foundational charge of the Committee is facilitating coordination and collaboration among NAIC work groups, also called related groups, that are addressing issues that concern innovative technologies, cybersecurity, and privacy. The Committee leadership met with the leadership of all other letter committees and other relevant groups, such as the Special (EX) Committee on Race and Insurance Workstreams Three, Four, and Five, to establish a framework for interface between the Committee and those related groups. The Collaboration Forum has been established within the Committee for coordination and collaboration among related groups on innovation, cybersecurity, and technology topics that are of broad impact to ensure foundational matters are addressed and decided with the full complement of SMEs and disciplines involved. There are very few things within the industry that are not affected by innovation, cybersecurity, and technology issues, and when those issues are being addressed by multiple working groups, it is important that to consider where a common framework is necessary and ensure that that common framework is established through consensus so each group can move forward with confidence from that firm foundation as they address the application of the pertinent issues within the scope of their charges.

When an innovation, cybersecurity, and technology related topic being addressed by multiple NAIC working groups is identified and it is agreed that collaboration and coordination is important, a project will be established within the Collaboration Forum. The members of the project will be the leadership of each NAIC working group that is working on the topic and any other state that wishes to join. There will be a chair and vice chairs, as necessary, for each project, and the project members will identify the scope of their collaborative work, like what common elements are to be determined, what the deliverable is, and what the work plan and time frame are. Projects will operate like any other NAIC working group, meetings will generally be open, and the work will be inclusive and transparent with opportunity for stakeholder input.

The first project of the Collaboration Forum is the Algorithmic Bias Project. Algorithmic bias describes systematic errors in AI/ML driven computing systems that result in discriminatory outcomes. Insurers make important decisions about marketing, underwriting, pricing, claim processing, and fraud detection using predictive models that are developed through the application of ML supported computing to data. All are aware that unfair bias can and does creep into AI/ML driven decisional systems and complex predictive models, resulting in unfair discrimination. Therefore, it is important that state insurance regulators are well educated and informed about algorithmic bias, how to address it both with respect to governance frameworks and best practices designed to eliminate or mitigate the risk of such bias and methods for detecting such bias.

There are many NAIC workstreams that are focused on algorithmic bias, including the Casualty Actuarial and Statistical (C) Task Force, the Big Data and Artificial Intelligence (H) Working Group, the Antifraud Technology (D) Working Group, the Accelerated Underwriting (A) Working Group, and the Special (EX) Committee on Race and Insurance’s Workstream Two. Director Wing-Heier and Commissioner Richardson, co-chairs of the Workstream, recognized the need for coordination for the purposes of both consistency and efficiency, and they called a joint meeting, which then blossomed into the Algorithmic Bias Project.

This project will be focused on methods that can be used or relied upon by state insurance regulators in evaluating models used by insurers for unfair bias. A series of educational sessions will be hosted with the objective of developing a practical guide for state insurance regulators that identifies the concerns and provides viable options and tools for state insurance regulators to use.
The next step is to bring together the full complement of related groups and solidify the scope of the Special Committee’s work, which includes looking at: 1) where along the continuum of activity from data creation to model application the Project should focus; 2) with respect to any such activity, what the foundational concepts, definitions, and elements are that underlie each group’s work in this area; and 3) what the necessary common framework is that each group should respect and work from in carrying out their specific charges. All expected deliverables, work plans, and time frames will be made public.

This project will enable NAIC members to come together to address this important topic in a coordinated, efficient, and collaborative manner; it will also be a test case for the Collaboration Forum and what will necessarily be the iterative process of standing up this function.

8. **Heard an Update on the State Diversity Leaders Forum**

Ms. Boswell provided an update on behalf of Workstream Two on the State Diversity Leaders Forum. Looking at the charges of the Workstream, the State Diversity Leaders Forum determined that its mission is to create a communication forum for best practices in DE&I in which each jurisdiction’s insurance department has access to education, guidance, and collaboration with stakeholders; can share and learn ideas to incorporate in their organizations; offers feedback for regulatory training coursework that will be provided by the NAIC; and enables the NAIC and its regulated entities to fully fulfill their mission. A regulator-only website is being created where NAIC members can access the best practices and resources identified by the forum. The forum started with about a dozen state insurance regulators and now has over 20 members. States are encouraged to send their contacts to Ms. Boswell to be included in the forum.

Having no further business, the Special (EX) Committee on Race and Insurance adjourned.
Draft: 4/12/22

Life Insurance and Annuities (A) Committee
Kansas City, Missouri
April 7, 2022

The Life Insurance and Annuities (A) Committee met in Kansas City, MO, April 7, 2022. The following Committee members participated: Judith L. French, Chair, and Peter Weber (OH); Carter Lawrence, Vice Chair (TN); Jim L. Ridling (AL); Karima M. Woods represented by Philip Barlow (DC); Colin M. Hayashida represented by Melissa Hamada (HI); Doug Ommen (IA); Vicki Schmidt (KS); Marlene Caride (NJ); Barbara D. Richardson (NV); Adrienne A. Harris represented My Chi To (NY); Cassie Brown and Mike Boerner (TX); Scott A. White and Craig Chupp (VA); and Nathan Houdek (WI). Also participating was: Fred Andersen (MN).

1. **Adopted its 2021 Fall National Meeting Minutes**

Commissioner White made a motion, seconded by Commissioner Caride, to adopt the Committee’s Dec. 15, 2021, minutes (see NAIC Proceedings – Fall 2021, Life Insurance and Annuities (A) Committee). The motion passed unanimously.

Commissioner Arnold gave the report of the Accelerated Underwriting (A) Working Group. She said the Working Group met Feb. 23 and March 24 in lieu of meeting at the Spring National Meeting. She explained that during each meeting, the Working Group reviewed the most recent draft of the *Accelerated Underwriting in Life Insurance Educational Report*, and stakeholders were given an opportunity to highlight their comments. She said the Working Group unanimously adopted the March 4 draft of the Educational Report during its March 24 meeting.

Commissioner Arnold explained that the Educational Report started with an outline exposed for public comment in late 2020. She said an ad hoc group made up of six or so state insurance regulators convened to draft the Educational Report and synthesize comments that were incorporated into subsequent drafts. She explained that starting with the outline, sections of the report were completed and released for comment, with each set of comments incorporated into the next exposure draft. She said stakeholders had many opportunities to comment as the paper was developed, which included the ability to comment on previous sections in light of later sections. She explained that the first section of the report was exposed for comment in May 2021, additional sections were exposed in July 2021, the entire paper was exposed for comment in November 2021, and a revised draft was exposed for comment in January. The March 4 draft was exposed for a final two-week comment period to identify any novel issues or errors of fact, and it was adopted by the Working Group on March 24.

Commissioner Arnold said the Working Group made every effort to keep this document narrowly focused on accelerated underwriting in life insurance, recognizing that there are a lot of other groups at the NAIC working on related issues, including the Innovation, Cybersecurity, and Technology (H) Committee and several of its working groups. She explained that the Educational Report is intended to impart information gathered by the Working Group through presentations. It identifies issues and makes broad recommendations, largely following the lead of the NAIC Principles on Artificial Intelligence. Commissioner Arnold emphasized that the Working Group does not envision this Educational Report being the final word on accelerated underwriting in life insurance, rather it provides a solid start.
Ms. To asked for more information about what the Working Group plans to do next, specifically whether it plans to address the questions forwarded by Birny Birnbaum (Center for Economic Justice—CEJ) during the Feb. 23 meeting. Commissioner Arnold said she envisions the Working Group working on regulatory guidance, which it can accomplish under its current charge. She said there will be a need to coordinate and be consistent with the efforts of the other groups working on similar issues, particularly the Innovation, Cybersecurity, and Technology (H) Committee and its work on algorithmic auditing. She said there is a specific need for guidance for state insurance regulators with respect to accelerated underwriting in life insurance, and she envisions the development of specific questions states could ask and approaches to take.

Mr. Birnbaum said he participated, along with Brendan Bridgeland (Center for Insurance Research—CIR) and Peter Kochenburger (University of Connecticut School of Law), and he did not think the Educational Paper was particularly good. He said it did not say anything other than watch out for unfair discrimination, which is so obvious and vague it is almost not worth mentioning. He encouraged the Working Group to work on specific guidance for the use of accelerated underwriting. He gave a couple of examples of specific guidance he would like to see. He mentioned that consumer protections in place for the use of credit information in home and auto insurance should be extended to life insurance. He also said the use of facial analytics is known to be biased against people of color in law enforcement and should be targeted for regulatory review if it is used in accelerated underwriting. Mr. Kochenburger said he agrees with Mr. Birnbaum and would like to see specific recommendations around transparency, which the Educational Report rightly highlights as a recommendation. He said specific guidance for state insurance regulators, consumer, and industry about what transparency means and how it is to be accomplished in the context of increasingly sophisticated models and without special expertise is the kind of specific recommendation that he would welcome from the Working Group.

Commissioner Houdek made a motion, seconded by Commissioner Lawrence, to adopt the report of the Accelerated Underwriting (A) Working Group, including its March 24 (Attachment One) and Feb. 23 (Attachment One-A) minutes, as well as the March 4 draft Accelerated Underwriting in Life Insurance Educational Report (Attachment Two). The motion passed with New York abstaining.

3. Heard a Federal Update on the Implications of the DOL Fiduciary Rule

Brooke Stringer (NAIC) explained that the U.S. Department of Labor (DOL) indicated that it is planning to work on a revised Fiduciary Rule for retirement advice, and the Government Relations (EX) Leadership Committee is interested in feedback from the Life Insurance and Annuities (A) Committee and its stakeholders.

Ms. Stringer said state insurance regulators, the DOL, the U.S. Securities and Exchange Commission (SEC), and the Financial Industry Regulatory Authority (FINRA) all have a role in the administration and enforcement of standards for retirement plans and products within their jurisdiction. She said depending on the financial products offered and the financial services provided, an insurance agent could be subject to overlapping regulations at the state and federal level, particularly if they work with products or provide services related to 401(k) plans covered by the federal Employee Retirement Income Security Act of 1974 (ERISA). She said it is anticipated that the DOL will soon unveil a new Fiduciary Rule for retirement advice this spring.

Ms. Stringer explained that the DOL started its work on a Fiduciary Rule in 2010, which was withdrawn. Then, the Obama administration proposed and finalized a Fiduciary Rule for retirement plans. In that rule, the definition of fiduciary required that retirement advisors act in the best interests of their clients and put their clients’ interests above their own. The NAIC has not taken a position on that Fiduciary Rule, but it submitted two comment letters over the years that were included in the meeting materials.

Ms. Stringer explained that in 2018, the U.S. Court of Appeals for the Fifth Circuit vacated the Obama administration’s Fiduciary Rule for retirement advice. She said in 2020, the Trump administration released its own
proposed rule. That new rule included exemptions to fiduciary conduct if providers adhered to “impartial conduct standards” modeled after the SEC’s Regulation Best Interest. The Trump administration rule was supposed to go into effect in 2021, but the Biden administration delayed enforcement through early 2022.

Ms. Stringer said since last year, the DOL has indicated that further guidance would be forthcoming, and the potential for further rulemaking was included on its regulatory agenda. She said the NAIC does not know specifics, but it believes the DOL guidance is likely to revisit the definition of fiduciary, along with potential additional changes to the existing prohibited transaction exemptions.

Patrick C. Reeder (American Council of Life Insurers—ACLI) said a fiduciary standard is not a bad standard, and it is an appropriate legal standard for situations where there is an ongoing relationship providing financial advice. He said the problem with the DOL proposal is that it is a fiduciary-only approach, which would eliminate commission-based sales; i.e., the way that lower and mid-range clients buy products. He said the DOL should recognize the changes that have taken place since 2017. He said both the SEC’s Regulation Best Interest standard and the NAIC best interest revisions to the Suitability in Annuity Transactions Model Regulation (#275) provide a strong standard of care that is vigorously enforced. He said state insurance regulators have a strong story to tell, and the DOL needs to hear from the NAIC.

Jason Berkowitz (Insured Retirement Institute—IRI) said the states have done a great job adopting the best interest revisions to Model #275. He said a fiduciary relationship is appropriate when there is a special relationship of trust and confidence. He said the best interest standards emulate the fiduciary standard but ensure that the small and mid-sized savers are not disadvantaged. He said he does not agree with assertions that annuity suitability is not robust, and he said the regulatory environment has changed. He encouraged the NAIC to reach out to the DOL and to report how things are working.

Micah Hauptman (Consumer Federation of America—CFA) said there are gaps in the current regulatory framework. He said he does not believe consumers’ reasonable expectations are being met. He said the DOL should require a fiduciary duty, regardless of what products are being sold or how they are being sold. He said consumers all expect and deserve high quality advice without the taint of conflicts of interest.

4. **Adopted the Report of the Life Actuarial (A) Task Force**

Mr. Boerner said the report of the Life Actuarial (A) Task Force was included in the materials, but he is going to highlight three of the efforts going on at the Task Force. He said the first topic was the economic scenario generator (ESG). In 2017, the American Academy of Actuaries (Academy) informed the Task Force that it did not have the resources to continue to maintain the prescribed ESG. He said the need for a replacement ESG was further heightened in 2019 when the Financial Stability (E) Task Force noted a potential deficiency in the prescribed ESGs related to a limited reflection of extended periods of low and even negative interest rates. At that time, the Financial Stability (E) Task Force requested that the Valuation Analysis (E) Working Group assess the macroprudential risk to insurance organizations in the U.S. with a focus on variable annuity writers.

In July 2019, the Life Actuarial (A) Task Force and the Life Risk-Based Capital (E) Working Group requested that NAIC staff consider issuing a Request for Proposal (RFP) for a vendor to build and maintain a new ESG to be used in the determination of statutory reserves and capital. Mr. Boerner said development of this RFP included extensive work with state insurance regulators and ESG subject matter experts (SMEs) from the life insurance industry. He said the NAIC issued the RFP in March 2020. Six companies submitted proposals, and Conning was selected as the ESG vendor and approved by the Executive (EX) Committee in September 2020.

After the contract with Conning was in place, state insurance regulators worked in ESG Drafting Group calls with Conning, NAIC staff, and industry SMEs. He said there were weekly calls over most of the past year to develop
recommendations to the Task Force and the Working Group for a June field test. He said these recommendations relate to scenarios from a Treasury model, scenarios from an Equity model, and scenarios from a Corporate Bond model.

Mr. Boerner explained that some of the significant collaborative work over this past year includes: 1) development of acceptance criteria for the Treasury model, which included statistics and input from SMEs; 2) development of scenarios by Conning for an alternative Treasury calibration requested by SMEs. These scenarios are included as one of the proposed Treasury models to field test; and 3) work performed by Conning to alter the international equity indices, as requested by SMEs, to align the fund’s expected returns on a risk/reward basis relative to the U.S. large cap fund for the Equity model.

Mr. Boerner also said another example of the collaborative work is the plans for Conning to work on the development of a Simplified Corporate Bond model, which is requested by SMEs to have full transparency for this model. While Conning’s Corporate Bond model reproduces key dynamics of bond returns, some of the information in their model is proprietary. Given the amount of work needed to develop this Simplified Corporate Bond model, it will not be available for the June field test, and the Conning Corporate Bond model will be used instead. However, the intent is for the Simplified Corporate Bond model to have similar scenarios to the Conning Corporate Bond model so the use of the Conning model will be relevant for this June field test.

Mr. Boerner said weekly ESG Field Test calls have now replaced the weekly ESG Drafting Group calls to expedite preparation for the June field test. These calls continue to have industry SME representation. He said achieving the June field test is very important to help determine the impact on industry reserves and capital and help state insurance regulators understand the materiality of technical issues brought up by the industry SMEs. He said there are other weekly ESG planning calls, which include ACLI and Academy representation to support planning for future efforts and calls of the ESG initiative. He said joint Task Force and Working Group calls will also continue. He said the upcoming April 14 joint call will include discussion of comments requested on an exposure regarding models proposed for the June field test.

Mr. Boerner said some key next steps prior to the ESG June Field Test include: 1) any refinement of the recommended ESG models for field testing; 2) building out field test specifications, instructions for participants, and a results template; 3) determining the final set of field test participants and field test product coverage; and 4) preparing the necessary scenario sets for delivery to field test participants.

Mr. Boerner said next steps after the June field test include: 1) analysis of the field test results; 2) adjustments of ESG models, as appropriate; 3) development of the Simplified Corporate Bond model, as mentioned previously; and 4) planning for a field test early next year of expected adjustments to models.

Mr. Andersen gave an update on the Asset Adequacy Testing Actuarial Guideline. He said the Asset Adequacy Testing Actuarial Guideline was part of a coordinated NAIC effort regarding the oversight of the increase in private equity and complex assets in the life insurance industry. He explained that the Task Force is focused on aspects related to reserve adequacy, and it is working to help ensure life insurers involved in complex assets will be able to pay claims even if those assets do not perform as expected.

Mr. Andersen said the Task Force met March 31 to discuss comments on a first draft of an actuarial guideline that would provide documentation and sensitivity testing requirements on life insurers engaged in such activity. He said he expects that a guideline will be adopted by the NAIC at the Summer National meeting. He explained that partly due to the aggressive timeframe, some of the more controversial aspects that were in the first draft, including application of guardrails that could directly affect the financials of some insurers, will likely be deferred to later discussions that are not part of the aggressive 2022 time frame.
Mr. Andersen explained that the resulting documentation and sensitivity tests that will likely be included in the 2022 guideline adoption will provide information to state insurance regulators, including: 1) analysis of the risks of the complex assets; 2) details underlying the assumptions on how those assets will perform; 3) expectations on the sophistication of the company models matching the complexity of the assets; and 4) assurance that any counterparty risk related to reinsurance deals are considered and documented. He said he anticipates movement to turn the first draft into a final draft that is ready for adoption over the next several weeks. He said Committee members should follow the activities of the Task Force if they are interested in the topic.

Mr. Weber gave an update on the Indexed-Linked Variable Annuity Actuarial Guideline. He explained that in the summer of 2021, the Life Insurance and Annuities (A) Committee directed the Task Force to set up a subgroup to study index-linked variable annuities (ILVAs) with the charge to: “Provide recommendations and changes, as appropriate, to nonforfeiture, or interim value requirements related to index-linked variable annuities.”

Mr. Weber explained that ILVAs, also known as registered index-linked annuities (RILAs), have become very popular over the past five to 10 years. He said they fill a space in the market between fixed indexed annuities and traditional variable annuities. He said ILVAs are filed in the states as variable annuity products and are exempted from the Standard Nonforfeiture Law for Individual Deferred Annuities (#805). He said the main issue the Subgroup is trying to address is that if a product is exempted from the consumer protection of nonforfeiture requirements as a variable product, then it must behave like a variable product. It is important that values provided at surrender of an ILVA are consistent with how a variable product provides surrender values. Mr. Weber said to that end, the Subgroup exposed a proposed actuarial guideline in November 2021. He said many comments were received and incorporated into a second draft exposed April 1 for a 30-day public comment period.

Mr. Birnbaum said indexed universal life (IUL) insurers are using unrealistic crediting rates with unrealistic expectations. He said state insurance regulators tried to reign them in, most recently with Actuarial Guideline XLIX—The Application of the Life Illustrations Model Regulation to Policies With Index-Based Interest (AG 49) and then Actuarial Guideline XLIX-A—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest to Policies Sold On or After December 14, 2020 (AG 49-A), but insurers continue to game the system and illustrate unrealistic and deceptive policy accumulations. He said these discreet fixes are not solving the problem. He said the problem is the illustrations; they do not show risk. He said annuity illustrations requirements do not cap crediting rates, so insurers turn to bespoke indexes created by investment banks by data mining historical experience to falsely present potential future earnings. He said some illustrations show investment returns higher than the cost of a loan, which falsely suggest that it makes sense for people to borrow money to invest in life insurance products. He said insurance producers become de facto investment advisors. He said the Committee needs to address illustrations and engage experts in consumer disclosures to address these issues.

Mr. Boerner made a motion, seconded by Mr. Chupp, to adopt the report of the Life Actuarial (A) Task Force. The motion passed unanimously.

5. Discussed Next Steps for the Life Insurance Online Guide (A) Working Group

Director French gave a brief history of the Life Insurance Online Guide (A) Working Group. She explained that the Working Group initially considered developing an online resource that could allow for a deep dive into complex content in a way that would not be possible in paper format. She also said the Working Group struggled with how best to structure the content, as well as how it might look and function.

Director French said the idea of a decision tree came up, but while a decision tree could be a great in theory, it is, for several reasons, beyond the scope of what the Working Group or even the NAIC can undertake. She said her goal is to come up with something achievable.
Director French explained that the details about life insurance are state-specific. She also said the NAIC is not where people are going to go to find out about life insurance, nor can the NAIC provide any advice about what life insurance to purchase. She said people need to go to their state or an insurance producer.

Director French asked Laura Kane (NAIC) to give an overview of what is on the NAIC website. She explained that information about what is currently on the NAIC website will enable the Committee to better consider what content should be added to the website and what the Working Group can reasonably achieve under its charge.

Ms. Kane gave an overview of the statistics collected for the life insurance pages on the NAIC website. She said there have been 23,147 unique page views over the past year. She explained the breakdown of the percentage of those who viewed the pages. She said 13% were age 18–24, 21% were age 25–34, 23% were age 35–44, 20% were age 45–54, 13% were age 55–64, and 10% were age 65 or older. Of those, the 23% that were age 35–44 spent the most time on page, the 13% that were age 18–24 spent the second-most amount of time, and the 10% who were age 65 or older spent the least amount of time.

Ms. Kane explained that the purpose of the consumer pages is to: 1) educate consumers about the purpose of each insurance type; 2) guide consumers to know what to ask a licensed agent; 3) remind consumers to check their state’s department of insurance (DOI) website to confirm that the agent and the company are licensed in the state; and 4) let consumers know their state DOI is there to help with any questions or issues. She summarized the information that is on the web pages and identified information that she found on some other DOI websites that might be good to consider including on the NAIC website. For example, Kansas has good shopping tips, Nevada has a good “Understand the products you are buying” section, New York has a good statement of purpose around life insurance, and Texas has a good chart comparing the major types of life insurance. Ms. Kane mentioned that the NAIC could consider linking to a glossary of terms, as well as translating the Buyers Guide to Spanish and other languages.

Director French asked for volunteers to work with her staff and Ms. Kane to participate on the Working Group to update the NAIC web pages on life insurance.

6. **Heard an Update on Workstream Four of the Special (EX) Committee on Race and Insurance**

Director French updated the Committee on Workstream Four of the Special (EX) Committee on Race and Insurance. She explained that she is the Workstream Four co-chair, along with Commissioner Caride. She said the Workstream will be focusing its efforts on the marketing, distribution, and access to life insurance products in minority communities, including the role that financial literacy plays. She said the plan is to schedule some presentations focusing on this issue.

Having no further business, the Life Insurance and Annuities (A) Committee adjourned.
The Accelerated Underwriting (A) Working Group of the Life Insurance and Annuities (A) Committee met March 24, 2022. The following Working Group members participated: Grace Arnold, Chair (MN); Nathan Houdek, Vice Chair (WI); Jason Lapham (CO); Russ Gibson (IA); Cynthia Amann (MO); Chris Aufenthie (ND); Lori Barron (OH); and David Hippen (WA).

1. **Adopted its Feb. 23 Minutes**

Commissioner Arnold said the first agenda item was to adopt the Accelerated Underwriting (A) Working Group’s Feb. 23 meeting minutes. During this meeting, the Working Group reviewed comments on the Jan. 25 draft of the accelerated underwriting (AU) in life insurance educational report.

Ms. Amann made a motion, seconded by Mr. Aufenthie, to adopt the Working Group’s Feb. 23 minutes (Attachment One-A).

2. **Discussed Comments Received on the March 4 Draft of the AU in Life Insurance Educational Report**

Commissioner Arnold reminded the Working Group that during its Feb. 23 meeting, the Working Group discussed comments on the Jan. 25 draft of the AU in life insurance educational report. As a result of the comments received on the Jan. 25 draft and the discussions during the Feb. 23 meeting, the report was revised, and the March 4 draft was exposed for a 14-day public comment period ending March 18. Commissioner Arnold said that several interested parties had submitted written comments on the March 4 draft, which are posted on the Working Group’s web page.

   a. **University of Georgia**

Brenda J. Cude (University of Georgia) briefly summarized her comment letter. She said that she is concerned that the paper makes no mention of the great need for consumer information and education about AU, yet the paper indirectly makes the case for the need to inform and educate consumers on this topic. She said, at a minimum, she would like the Working Group to consider a charge for the future that could involve creating some language that state insurance departments could use to inform and educate consumers. She also said that these materials could be useful for other educators, as well to help consumers understand this topic. She said she envisions a Working Group similar to the Consumer Information (B) Subgroup to work on consumer-facing materials.

   b. **ACLI**

David Leifer (American Council of Life Insurers—ACLI) briefly summarized the ACLI comments. He said that the ACLI had some minor language suggestions to the paper. He explained that one suggestion was to repeat the language within the definition of AU that says “which may include the use of non-traditional, non-medical data” to other places in the paper where it is not explicitly included.
### c. Academy

Sue Bartholf (American Academy of Actuaries—Academy) said that the Academy’s Life Underwriting and Risk Classification Work Group has been following the work of this Working Group and appreciates that this paper is a high-level synthesis of the presentations provided to the Working Group. She said that the Academy remains concerned that because it is a summary, it does not necessarily capture all of the variations in accelerating underwriting and the different perspectives of those commenting. She said that given that this paper has the potential to become a resource for policymakers, regulators, and others, the Academy has submitted the following language for inclusion in the opening paragraph to explicitly call out the limitations of the paper:

*This paper is a high-level summary of the comments provided to and work done by the Accelerated Underwriting (A) Working Group. It is not intended to be a comprehensive document and does not address all the differences and nuances of accelerated underwriting programs or all underwriting practices used by life insurers. It is a point-in-time paper of the rapidly evolving underwriting process.*

Commissioner Arnold said she appreciates the Academy’s comments and that there are a number of places in the paper that contextualize the information as being representative of this point in time. She said that the Working Group understands that these processes are evolving.

### d. Pilotbird

Evgeny Aleksandrov (Pilotbird) said he had submitted comments suggesting that the potential benefits of AU to consumers should have more emphasis in the paper.

### e. CEJ

Birny Birnbaum (Center for Economic Justice—CEJ) said that the draft report did not fulfill its charge to “[c]onsider the use of external data and data analytics in accelerated life underwriting, including consideration of the ongoing work of the Life Actuarial (A) Task Force on the issue and, if appropriate, drafting guidance for the states.” He said the definition in the paper does not focus on external data; rather, it incorrectly says that AU may include nontraditional, non-medical data, when that is in fact the distinguishing feature of AU. He said that if all insurers were doing was applying machine learning (ML) and artificial intelligence (AI) to traditional medical data, that would represent an evolution—not the revolution he is seeing.

Mr. Birnbaum also said the report offers no guidance to the states and references only that states and regulators should be guided by current law related to fair trade practices and unfair discrimination and develop and update relevant laws to adapt to developing practices to avoid unfair trade practices and unfair discriminatory practices. He said these statements suggest that no specific guidance, authorities, or resources are needed. He said the report is six years too late to be meaningful or useful. He said the report represents a lack of insight after six years of study. He recommended the Working Group discard the report and refocus efforts on addressing its charge.

Mr. Birnbaum asked for feedback regarding the Working Group’s thinking with respect to the comments he submitted in the form of questions at the last national meeting. He said that the Working Group has not been transparent in its decision-making. He asked why, in particular, the Working Group was not recommending that states apply the same requirements they apply to consumer credit information.

Commissioner Arnold said that the Working Group hopes, as its next work product, to develop regulatory guidance that builds on the report. She said that the drafting group did discuss Mr. Birnbaum’s comments and will likely
have future conversations that Mr. Birnbaum is welcome to participate in as it considers what is feasible with current resources.

f. University of Connecticut School of Law

Peter Kochenburger (University of Connecticut School of Law) said he understands that the paper is not likely to be abandoned, but he said he is interested in the reasoning behind why some of Mr. Birnbaum’s comments were not included in the paper. He said he is pleased to hear the work is going to continue and asked about the process and whether there was a timeline.

Commissioner Arnold said she anticipates that if the Life Insurance and Annuities (A) Committee adopts the Report, there would then be a discussion of next steps for the Working Group at the Life Insurance and Annuities (A) Committee meeting at the Spring National Meeting. She anticipated that next steps would include work for the remainder of this year.

3. Adopted the March 4 Draft of the AU in Life Insurance Educational Report

Commissioner Arnold said that she appreciates all the comments, but the Working Group is not planning to make any additional changes to the paper.

Ms. Amann made a motion, seconded by Commissioner Houdek, to adopt the March 4 draft of the AU in life insurance educational report (Attachment Two). The motion passed unanimously.

Commissioner Arnold said that the plan is to have the paper go through a final editorial review to fix any grammatical or typographical errors. The Life Insurance and Annuities (A) Committee will consider the paper for adoption at the upcoming Spring National Meeting. Once adopted, it will become a Committee work product, be part of the NAIC Proceedings, and posted on the Life Insurance and Annuities (A) Committee page.

Having no further business, the Accelerated Underwriting (A) Working Group adjourned.
The Accelerated Underwriting (A) Working Group of the Life Insurance and Annuities (A) Committee met Feb. 23, 2022. The following Working Group members participated: Grace Arnold, Chair (MN); Nathan Houdek, Vice Chair (WI); Jason Lapham (CO); Russ Gibson (IA); Cynthia Amann (MO); Chris Aufenthie (ND); Lori Barron (OH); and Lichiou Lee (WA).

1. **Discussed Comments Received on the Jan. 25 Draft Accelerated Underwriting in Life Insurance Educational Report**

Commissioner Arnold explained that she will be chairing the Working Group in 2022 along with Commissioner Houdek as vice chair. She reminded the Working Group that it last met Dec. 6, 2021, to discuss the Nov. 8, 2021, draft Accelerated Underwriting in Life Insurance Educational Report. As a result of the comments received on the Nov. 8, 2021, draft and the discussions during the Dec. 6, 2021, call, the report was revised; and the Jan. 25 draft Accelerated Underwriting in Life Insurance Educational Report (Attachment One-A1) was exposed for a public comment period ending Feb 11. Commissioner Arnold explained that the purpose of the virtual meeting today is to discuss comments received on the latest draft.

   a. **Academy Comment**

   Linda Lankowski (American Academy of Actuaries—Academy) explained that the Life Underwriting and Risk Classification Work Group of the Academy submitted a comment letter on the Jan. 25 draft Accelerated Underwriting in Life Insurance Educational Report. She highlighted a couple of main points that are raised in the Academy comment letter. She explained that the revisions made to the footnote in the report involving Actuarial Standard of Practice (ASOP) No. 12 need some additional revisions. She explained that the bullet point referencing ASOP No. 12 describes a practice that would not be allowed under ASOP No. 12. The letter suggests revising the current bullet that says, “Non-traditional data may be used to predict mortality, but the actual or reasonably anticipated experience may not correlate to risk of insurance loss” to say, “In accordance with ASOP No. 12, an actuary needs to demonstrate that a relationship between a risk characteristic and an expected outcome exists. This standard applies for any data used, traditional or non-traditional.” Ms. Lankowski also mentioned that not all accelerated underwriting (AU) programs are discussed with actuaries and data scientists, and underwriters do not have standards of practice like actuaries do.

   Ms. Lankowski said the Academy comment letter reiterates a couple of points included in the Academy’s previous letter regarding recommendations that indicate that they refer to state insurance regulators’ and form reviewers’ current responsibilities when they would actually be new requirements. She also said this paper, and the definition in particular, is likely to be used in other contexts, and it is particularly important to get it right. She said AU uses traditional and non-traditional data, and the definition of AU needs to accurately reflect that.

   b. **ACLI Comment**

   David Leifer (American Council of Life Insurers—ACLI) gave some brief highlights of the ACLI comment letter. He said the comment letter suggests having a more thorough discussion of traditional underwriting before turning to AU and comparing the two.
Mr. Leifer also mentioned that the ACLI continues to have concerns about the definition of AU in life insurance included in the most recent draft of the report. He explained that the ACLI believes that this definition will be used by other groups and in other contexts, which makes its accuracy particularly important. He said the following definition in the Jan. 25 draft is a little too broad:

Accelerated underwriting is life insurers’ use of big data, artificial intelligence and machine learning to underwrite life insurance in an expedited manner. For example, a process to replace traditional underwriting and allow some applications to have certain medical requirements, e.g., paramedical exams and fluid collection, waived. What distinguishes accelerated underwriting from traditional life insurance underwriting is the use of non-traditional, non-medical data using predictive models or machine learning.

Mr. Leifer said the ACLI is concerned that this definition may bring in things that are not commonly understood to be AU. He said the ACLI prefers the definition in the Nov. 8, 2021, draft, with a very minor tweak, to the version in the current draft, which would read:

Accelerated underwriting in life insurance is a process to replace traditional underwriting and allow some applications to have certain medical requirements, e.g., paramedical exams and fluid collection, waived. The process generally uses predictive models or machine learning algorithms to analyze data pertaining to the applicant, which may includes both traditional and non-traditional underwriting data provided by the applicant directly, as well as data obtained through external sources.

Commissioner Arnold asked for the ACLI to share the specific things the current definition of AU may include that it should not. She explained that one of the challenges in drafting a definition of AU is that there does not appear to be a common understanding of what AU is or how it is used in practice, so specifics regarding what the ACLI sees as the practical implication of the current definition would be helpful. Mr. Leifer said he would share specifics with Jennifer R. Cook (NAIC) following the meeting.

c. **CEJ Comments**

Birny Birnbaum (Center for Economic Justice—CEJ) opposed the ACLI proposal to return to the Nov. 8, 2021, definition of AU. He said the ACLI proposal does not define what AU is but rather addresses the purpose of AU. He disagreed with the ACLI comment that the Jan. 25 definition is overly broad. He said the Nov. 8, 2021, definition is not useful in the context of educating state insurance regulators and stakeholders about AU to find a basis for recommendations for insurers and state insurance regulators regarding the use of AU. He said the proposed definition serves no purpose other than to promote AU. He said the proposed ACLI definition fails to identify the key distinguishing factors between traditional underwriting and AU, which is the use of new sources of data intended to be used with predictive modeling.

Mr. Birnbaum asked why the Working Group is not making recommendations based on its research. He said state insurance regulators need to improve their capabilities and authorities to address some of the issues that have arisen with AU in the same way that state insurance regulators who work on homeowners and auto insurance have said they need new authorities and resources. He posed the following questions to understand the Working Group’s thinking and start a discussion:

1. Why are you not recommending that states apply the same requirements for the use of consumer credit information in life insurance as those found for personal auto and homeowners, including filing of models for review and limitations on certain types of consumer data, such as medical debt?
2. Why are you not recommending that states routinely require life insurers to report the sources and uses of non-medical information in underwriting so state insurance regulators, and policymakers, stay current on insurer practices?

3. Why are you not recommending that states require life insurers to file AU models with state insurance regulators for review prior to use?

4. Why have you not identified the use of biometric information as a topic of particular concern given the racial bias in facial recognition and other biometric tools? As a corollary, why have you not discussed the Illinois Biometric Information Privacy Act (BIPA) as a model for consumer protection regarding insurers’ collection, use, and handling of biometric information?

5. Why are you not recommending that the NAIC expand the scope of its algorithmic assessment resource to include the review of AU models?

6. Why are you not recommending a requirement for insurers to test their AU models for racial bias, particularly given the industry’s history of race-based pricing and the racial bias found in various types of non-traditional data?

7. Why are you not recommending that at least the federal Fair Credit Reporting Act (FCRA) consumer protections—i.e., disclosure, access, error correction, recalculation—be applied to all data sources used in AU?

8. Why are you not recommending robust data collection to enable state insurance regulators to examine how insurers’ use of AU affects the availability and affordability of insurance, particularly in traditionally underserved communities and markets?

9. Why are you not recommending new training for state market conduct personnel regarding oversight of insurers’ AU practices? As a corollary, why are you not recommending that the Market Conduct Examination Guidelines (D) Working Group develop standards and procedures for the market conduct examinations you suggest related to AU?

10. Finally, what is the basis for your conclusion that existing authorities and resources are sufficient for consumer protection?

Commissioner Arnold said the questions Mr. Birnbaum posed provide the Working Group with a lot to consider with respect to future work. She reiterated that the educational paper was purposefully narrowly focused on the current state and making basic recommendations. She said the Working Group hopes to get additional information from the Big Data and Artificial Intelligence (H) Working Group survey looking into AU in life insurance, which would provide some additional information for the Accelerated Underwriting (A) Working Group and inform future work.

Mr. Birnbaum said he has been struck by the movement of this issue around to different working groups within the NAIC, and he asked the Working Group, as the subject matter experts (SMEs), to address the issue of AU in life insurance. He also asked the Working Group to advise the Market Conduct Annual Statement Blanks (D) Working Group to finish the AU edits to the life insurance Market Conduct Annual Statement (MCAS) it is holding pending a final definition by the Accelerated Underwriting (A) Working Group. He said the Working Group needs to explain that there may be slightly different definitions depending on the context in which they are being used, but if the edits are not finished by June 1, data will not be collected until 2025.
d. **Comment from Consumer Representatives**

Brendan Bridgeland (Center for Insurance Research—CIR) and Peter Kochenburger (University of Connecticut School of Law) submitted a joint comment letter. Mr. Bridgeland said a current flaw of the paper, in his and Mr. Kochenburger’s opinion, is that there are not enough recommendations. He said he supports the list of questions mentioned by Mr. Birnbaum. He mentioned that the paper states that state insurance regulators should be guided by current law, and it almost seems to suggest that this as an optional practice. The comment letter suggests adding the following language to point to the need for additional action, “When examining accelerated underwriting practices, regulators should be guided by current laws related to fair trade practices and unfair discrimination, and also recognize that the use of big data and artificial intelligence over the last five years has demonstrated that these standards need to be updated to meet these new challenges, and perhaps new regulatory tools added.” He said state insurance regulators should avoid playing catch-up to the practices in the marketplace.

Mr. Bridgeland also suggested that certain practices should be called out as requiring a heightened level of caution. He specifically mentioned that criminal history data has inherent racial bias, and facial analysis and facial recognition programs have a particular potential to lead to unfair outcomes. He mentioned the documentary film “Coded Bias” that the NAIC screened in March 2021, which explored the racial bias of facial recognition technology.

Commissioner Arnold said the educational paper will be revised based on the comments submitted and the discussion today. She said what she hopes will be a final draft of the paper will be exposed for a two-week public comment period limited to new issues and errors of fact. She said the Working Group will meet to consider adoption of the revised educational paper, and it plans to bring it to the Life Insurance and Annuities (A) Committee for its consideration at the Spring National Meeting.

Having no further business, the Accelerated Underwriting (A) Working Group adjourned.
DRAFT January 25, 2022

Revision marks show changes from the Nov. 8, 2021 Draft
Comments should be sent to Jennifer Cook at jcook@naic.org by close of business February 11, 2022.

Abbreviated Summary of Presentations
National Association of Insurance Commissioners (NAIC) Principles on Artificial Intelligence (AI)
Casualty Actuarial and Statistical (C) Task Force Regulatory Review of Predictive Models White Paper

Introduction

In 2019, the National Association of Insurance Commissioners (NAIC) established the Accelerated Underwriting (A) Working Group to consider the use of external data and data analytics in accelerated life insurance underwriting, including consideration of the ongoing work of the Life Actuarial (A) Task Force on the issue and, if appropriate, draft guidance for the states. In addition, the 2021 charges of the Special Committee on Race and Insurance direct the working group to include an assessment of and recommendations, as necessary, regarding the impact of accelerated underwriting on minority populations. A more detailed procedural background can be found in the appendix. This paper is the output of over a year’s work by regulators to understand the current state of the industry and its use of accelerated underwriting. It summarizes what the Working Group has learned over the past year, contextualizes that learning and the topic of accelerated underwriting within other NAIC work and standard regulatory product evaluation processes, and makes recommendations for regulators and insurers when evaluating accelerated underwriting.

Accelerated underwriting in life insurance may provide potential benefits to both consumers and insurers, if applied in a fair and non-discriminatory manner. In order to fairly deliver the benefits of more convenient and cost-effective processes, regulators and insurers should be guided by current law related to fair trade practices and unfair discrimination. Regulators and insurers should continue to monitor accelerated underwriting practices as they develop to avoid unfairly discriminatory practices. Much of the discussion in this paper is framed in these general terms. The Working Group believes the charge to specifically address the impact on minority populations is included in these terms, and we have provided examples to illustrate the impact on minority populations. Future work products of the Working Group may address the charge from the Special Committee on Race and Insurance in more detail.

What is Accelerated Underwriting?

Throughout this paper, we use the term accelerated underwriting in life insurance. We propose the following as a definition:

Accelera ted underwriting is life insurance insurers’ use of big data, artificial intelligence and machine learning to underwrite life insurance in an expedited manner. For example, is a process to replace traditional underwriting and allow some applications to have certain medical requirements, e.g., paramedical exams and fluid collection, waived. The process generally uses predictive models or machine learning algorithms to analyze data pertaining to the applicant, which includes both What distinguishes accelerated underwriting from traditional life insurance underwriting is and the use of non-traditional underwriting data provided by the applicant directly, as well as data obtained through external sources, non-medical data using predictive models or machine learning.

Predictive models examine data sets for patterns to predict and assign the risk category, e.g., a model developer enters data points (potentially hundreds of thousands), and the model finds patterns and identifies future
predictions of risk and assigns an insured to a risk category. Machine learning algorithms are a process or set of rules executed to solve an equation, e.g., a life insurance underwriter uses a set of rules to place an individual insured in a particular risk category. The ‘learning’ part of machine learning means that those programs change how they process data over time, much as humans change how they process data by learning. Machine learning often falls into two groups: supervised or unsupervised. The difference between the two is whether the program is directed to analyze patterns or is self-automated.

Predictive models or machine learning trains a system to make judgments when exposed to data that is unfamiliar to serve as a substitute for human-centric decision making. These are both subcategories of artificial intelligence, which should not be confused with a static rule-based algorithm.

Life insurance underwriting is the process of determining eligibility and classifying applicants into risk categories to determine the appropriate rate to charge for transferring the financial risk associated with insuring the applicant. Traditional life insurance underwriting involves, among other elements, assessing the applicant’s physical health, along with other financial and behavioral elements, then determining whether an applicant is eligible for coverage and the risk class to which that individual belongs. Accelerated underwriting relies on non-traditional, non-medical data used within predictive models or machine learning algorithms to perform some of the tasks of an underwriter. The exact parameters of the application of accelerated underwriting vary by insurer.

Presentations made to the Working Group indicated that life insurers use accelerated underwriting in primarily two ways: 1) Accelerated underwriting is used to triage applicants, where unsuccessful applicants are re-routed to traditional underwriting, and successful ones continue through the accelerated underwriting process; or 2) Accelerated underwriting is used to rate applicants based on risk categories.

Most predictive or machine learning algorithms used in life insurance underwriting are in their second or third generation. The COVID-19 pandemic sped up the adoption of accelerated underwriting in the industry as both consumers and insurers looked for options to purchase and write policies that relied more on technology and involved less in-person contact. This has highlighted the need for ongoing monitoring of the machine learning algorithms—both their development and their uses in the marketplace.

Presentations made to the Working Group indicated that adverse underwriting decisions are sometimes reviewed by human underwriters. Companies presenting to the Working Group stated that the accelerated underwriting process is less cumbersome, costs less than traditional underwriting, it expedites the process and requires less

1 For a more detailed discussion of predictive models in property and casualty insurance, see the Casualty Actuarial and Statistical (C) Task Force Regulatory Review of Predictive Models White Paper, Adopted by the Property and Casualty Insurance (C) Committee on Dec. 8, 2020.
2 The Big Data and Artificial Intelligence (EX) Working Group developed a survey to conduct analysis on private passenger automobile (PPA) insurers’ use and governance of big data, as used in an artificial intelligence (AI) and machine learning (ML) system. The survey is being conducted under the examination authority of Connecticut, Illinois, Iowa, Louisiana, Nevada, North Dakota, Pennsylvania, Rhode Island, and Wisconsin. This analysis will help inform the Working Group in completing its long-term goals of developing guidance and recommendations to update the existing regulatory framework for the use of big data and AI, including how to monitor and oversee the industry’s compliance with the NAIC’s AI principles. The survey work may be expanded to other lines of insurance as needed, such as life insurance and homeowners insurance. For the purposes of the survey only, AI/ML is defined as, “an automated process in which a system begins recognizing patterns without being specifically programmed to achieve a pre-determined result.” This is different from a standard algorithm that consists of a process or set of rules executed to solve an equation or problem in a pre-determined fashion, and evolving algorithms are considered a subset of AI/ML.
consumer involvement in the purchase and improves the underwriting experience for consumers, shortens issue times, and increases policy acceptance rates. 3

General Discussion of Issues and Recommendations

Increasing automation of life insurance underwriting – Life insurers reliance on an increasingly automated underwriting process that uses non-traditional, non-medical data presents new regulatory challenges. Regulators must ensure that the process is fair, transparent, and secure. With regard to accelerated underwriting in life insurance, this concern pertains to input data, the predictive model or machine learning algorithm, and the results of the process. One particular challenge is the potential for unfair discrimination. Due to the fact accelerated underwriting relies on non-traditional, non-medical data and predictive models or machine learning algorithms, it may lead to unexpected or unfairly discriminatory outcomes even though the input data may not be overtly discriminatory. It is critical to test the conclusions up front, on the back end, as well as, randomly, to ensure the machine learning algorithm does not produce unfairly discriminatory ratings or ones that are not actuarially sound. Testing can also be important in determining if a machine learning algorithm is accurate across demographic categories. Such scrutiny is especially important when behavioral data is utilized. Behavioral data may include gym membership, one’s profession, marital status, family size, grocery shopping habits, wearable technology, and credit attributes. Although medical data has a scientific linkage with mortality, behavioral data may lead to questionable conclusions as correlation may be confused with causation without reasonable explanation.

Recommendations

Consistent with the AI Principles approved by the NAIC in 20204, the use of accelerated underwriting in life insurance should be fair and transparent to regulators, consumers and policymakers. Companies should be accountable for operating in compliance with applicable laws, and the process and data companies used needs to be secure. To accomplish these objectives, regulators should dialogue with consumers, life insurers, and third-party vendors to determine if consumer data is being used in problematic or unfair ways or generating unfair outcomes.

Insurers and other parties involved in accelerated underwriting in life insurance should:

- Take steps to ensure data inputs are transparent, accurate, reliable, and the data itself does not have any unfair bias.
- Ensure that the use of external data sources, algorithms or predictive models are based on sound actuarial principles with a valid explanation or rationale for any claimed correlation or causal connection.
- Ensure that the predictive models or machine learning algorithm within accelerated underwriting has an intended outcome and that outcome is being achieved.

4 See National Association of Insurance Commissioners (NAIC) Principles on Artificial Intelligence (AI) – Fair and Ethical a. AI actors should respect the rule of law throughout the AI life cycle. This includes, but is not limited to, insurance laws and regulations, such as those relating to trade practices, unfair discrimination, access to insurance, underwriting, privacy, consumer protection and eligibility practices, rate making standards, advertising decisions, claims practices, and solvency. b. Consistent with the risk-based foundation of insurance, AI actors should proactively engage in responsible stewardship of trustworthy AI in pursuit of beneficial outcomes for consumers and to avoid proxy discrimination against protected classes. AI systems should not be designed to harm or deceive people and should be implemented in a manner that avoids harmful or unintended consequences and corrects and Remedies for such consequences when they occur.
• Ensure that the predictive models or machine learning algorithm achieve an outcome that is not unfairly discriminatory.
• Be able to provide the reason(s) for an adverse underwriting decision to the consumer and all information upon which the insurer based its adverse underwriting decision.
• Take steps to protect consumer privacy and ensure consumer data is secure.
• Have a mechanism in place to correct mistakes if found.
• Produce information upon request as part of regular rate and policy reviews or market conduct examinations.
Input data

Predictive models or machine learning algorithms within the accelerated underwriting process rely heavily on data and multiple variables. Examples of the variables used by some accelerated underwriting models include customer disclosures, prescription history, digital health records, credit attributes, medical information bureau data, public records, motor vehicle reports, smartphone apps, consumer activity wearables, claim acceleration tools, individual consumer risk development systems, purchasing history, behavior learned through cell phone usage, and social media. Because accelerated underwriting relies on predictive models or machine learning algorithms that use non-traditional, non-medical data, it may lead to unexpected or unfairly discriminatory outcomes, even though the input data may be facially neutral.

Traditional Data

Traditional data used in life insurance underwriting includes data collected through a traditional underwriting process. This data may include the following:

- Application data, e.g., medical records, prescription questions, vocation questions, financial profile
- Tele-interview
- Medical records
- Data from the Medical Information Bureau (MIB) \(^5\)
- Data from Motor Vehicle Records
- Prescription drug history
- Public records, e.g., criminal records, bankruptcy records, civil litigation, etc.
- Paramedical or medical exam, including EKG’s in some instances
- Fluids, e.g., blood, urine, swab/saliva test to determine tobacco usage
- Financial and tax information

Considerations for use of Traditional Data

- Traditional data has a long and established history in the life insurance industry. Carriers, producers, and consumers are generally familiar with the process.
- Traditional data has a history of usage by insurance carriers. Trained underwriters and producers have years of experience and often understand the process well.
- The relationship of the traditional data elements to the risk is well established and consumers generally understand how most of the elements impact their risk classification or premium charged.
- State statutes and case laws were developed based on the use of traditional data containing consumer protections created under the assumption that this was the type of data collected or reviewed during an underwriting process.
- Presentations made to the Working Group represented that time and costs associated with obtaining and reviewing some types of traditional data are significant.

FCRA Data

\(^5\) This data is subject to the Fair Credit Reporting Act (FCRA).
Some data used in traditional and accelerated underwriting is subject to the federal Fair Credit Reporting Act (FCRA), which protects the privacy of consumer report information. If an insurer uses data subject to FCRA in its underwriting, which means applicants:

1. Should have a right to be told if this information is used to deny insurance, and
2. Have the ability to request the data a consumer reporting agency is providing to an insurer, and
3. Have the right to ask a consumer reporting agency to correct any errors in the data.

Considerations for use of FCRA Data
- FCRA data is readily available.
- FCRA data is updated regularly.
- FCRA data is already used in life and property/casualty lines of business.
- There is existing regulation and oversight by the Federal Trade Commission (FTC) and Consumer Financial Protection Bureau (CFPB).
- Not all FCRA data is useful/relevant to life insurance underwriting.
- If there is a dispute about findings the accuracy of FCRA data, a consumer will have to obtain additional information and formally dispute these findings.
- FCRA data is extensive and accessing such data may result in access to non-usable credit attributes. In other words, significantly more data may be collected than is needed to determine risk.
- As additional rating factors are introduced via insurance scores or with specific data elements, unfair discrimination, including disparate impact, may be introduced or amplified.
- FCRA data may be used to predict mortality, but there may not be a reasonable explanation for that correlation.6

Non-traditional Data

Non-traditional data used in life insurance underwriting may include the following:
- Public records, e.g., assessor data, genealogy records, criminal records, court filings, voter information
- Property/casualty data from adjacent carrier(s)
- Marketing and social data, e.g., shopping habits, mortgage amount/lender, occupation and education, and social media, etc.
- Professional licenses
- Biometric data, e.g., voice recognition analysis, used to determine smoking status, facial analysis, and other analytics based on personal physical features and characteristics
- Facial recognition
- Wearable devices

Considerations for use of Non-traditional Data
- Non-traditional data may be used to predict mortality, but there may not be a reasonable explanation for that correlation the actual or reasonably anticipated experience may not correlate to risk of insurance loss.7

6 See Actuarial Standards of Practice (ASOP) No. 12
7 See Actuarial Standards of Practice (ASOP) No. 12, Section 3.2.1 (“The actuary should select risk characteristics that are related to expected outcomes. A relationship between a risk characteristic and an expected outcome, such as cost, is demonstrated if it can be shown that the variation in actual or reasonably anticipated experience correlates to the risk characteristic.”)
• As additional rating factors are introduced via insurance scores or with specific data elements, disparate impact across and between demographic groups may be introduced or amplified.
• Non-traditional data may not have the same consumer protections as FCRA and traditional data. For example:
  o There may not be a clear path for consumers to know how data affected their application and how inaccurate data may be corrected.
  o The type and purpose of data accessed are not required to be disclosed to the consumer.
  o There may be privacy concerns about the extent of the use of non-traditional data.

**FCRA Data**

Some data used in traditional and accelerated underwriting is subject to the federal Fair Credit Reporting Act (FCRA), which protects the privacy of consumer report information. If an insurer uses data subject to FCRA in its underwriting, applicants:

1. Have a right to be told if this information is used to deny insurance,
2. Have the ability to request the data a consumer reporting agency is providing to an insurer, and
3. Have the right to ask a consumer reporting agency to correct any errors in the data.

**Considerations for use of data subject to FCRA:**

- FCRA data is readily available.
- FCRA data is updated regularly.
- FCRA data is already used in life and property/casualty lines of business.
- There is existing regulation and oversight by the Federal Trade Commission (FTC) and Consumer Financial Protection Bureau (CFPB).
- Not all FCRA data is useful/relevant to life insurance underwriting.
- If there is a dispute about the accuracy of FCRA data, a consumer has to obtain additional information and formally dispute these findings.
- FCRA data is extensive and accessing such data may result in access to non-usable credit attributes. In other words, significantly more data may be collected than is needed to determine risk.
- As additional rating factors are introduced via insurance scores or with specific data elements, unfair discrimination, including disparate impact, may be introduced or amplified.
- FCRA data may be used to predict mortality, but there may not be a reasonable explanation for that correlation.⁸

**Recommendations**

Existing regulations apply to accelerated underwriting programs in the same way as traditional underwriting programs. State Departments of Insurance (DOIs) have broad regulatory authority to make inquiries into the processes and procedures of life insurers in order to investigate potential unfair trade practices. Complaints about underwriting practices are opportunities for DOIs to review a life insurer’s use of accelerated underwriting and data collection methods. Additional DOI actions may include market conduct and on-site examinations as appropriate under existing authority.

---

⁸ See Actuarial Standards of Practice (ASOP)
Specifically, examiners may:

- Review the life insurer’s underwriting practices and underwriting guidelines during an examination or upon initial submission of the policy rates and forms and confirm the proper use of the data elements.
- Request that explanation provided to the consumer for any negative action taken by the life insurer adequately informs the consumer as to why a particular action was taken without the consumer having to make additional inquiries.
- Request information about source data regardless of whether the data or score is provided by a third party.

Form and rate reviewers may:

- Request that the life insurer provides information about how a predictive model or machine learning algorithm will be used.
- Consider requiring the filing of models used to analyze data.
- Consider questioning the extent to which data elements correlate to applicant risk.
- Request information about source data regardless of whether the data or score is provided by a third party.

Life insurers and third-party vendors have a responsibility to understand the data they are using. To accomplish this, life insurers should conduct post-issue audits and data analysis and make these audits and analysis available to regulators upon request. For example, analyses such as evaluating claims and lapse rates may be helpful. Life insurers and third-party vendors should ensure data inputs are accurate and reliable.

Life insurers and third-party vendors should ensure that the external data sources, algorithms, or predictive models are developed with sufficient internal controls and oversight and based on sound actuarial principles with a valid explanation or rationale for any claimed correlation and causal connection.

Data Privacy

Data privacy—a consumer’s ability to retain control over what data can be shared about them and with whom—is not a concern unique to accelerated underwriting in life insurance. Protecting consumer privacy is an issue across all lines of insurance and is the subject of the NAIC Privacy Protections (D) Working Group, formed in 2019 under the parent committee of Market Regulation and Consumer Affairs (D) Committee.

The Working Group’s charge is to review the state insurance privacy protections regarding the collection, use, and disclosure of information gathered in connection with insurance transactions, and make recommended changes, as needed, to certain NAIC models and other existing federal or state statutes.  

9 The Working Group has focused its reviews on the Insurance Information and Privacy Protection Model Act #670, and the Privacy of Consumer Financial and Health Information Regulation Model Act #672 – both drafted in response to the enactment of GLBA, and #668 – the Insurance Data Security Model Act, enacted in 2019/20. With a great deal of research assistance from NAIC Legal Staff, the Working Group prepared a gap analysis – upon which it continues to work. The Working Group is also reviewing the consumer data privacy protections other than those already in these models, such as the numerous provisions contained in federal acts such as the Fair Credit Reporting Act (FCRA), the Gramm-Leach Bliley Act (GLBA), the Health Insurance Portability and Affordability Act (HIPAA), Electronic Health Records (EHR), etc. The Working Group is also analyzing the various provisions of recently enacted legislation, such as California’s Consumer Privacy Act (CCPA) and its Consumer Data Privacy Regulation (CCPR), Virginia’s and Colorado’s recently enacted Consumer Privacy Protection laws, certain provisions of the European General Data Protection Regulation (GDPR), the NAIC’s Record...
The primary focus of the Working Group is on the six consumer data privacy rights or types of consumer data privacy protections identified in the NAIC’s Member adopted *Strategy for Consumer Data Privacy Protections* policy statement. The secondary focus is on issues such as notice requirements and standards, disclosure of information collected, disclosure of shared information, requirements to disclose sources of information, requirements to disclose business purposes, and a requirement to disclose third party involvement. The current assignments for the Working Group are intended to create a framework for the policy statement: defining the parameters of these consumer rights by offering suggested definitions, examples of consumer risks, and what may not be protected in federal laws or not covered under NAIC Model laws.

The Privacy Protections Working Group’s policy statement will address the following consumer privacy rights:  
1) Right to opt-out of data sharing  
2) Right to opt-in of data sharing  
3) Right to correct information  
4) Right to delete information  
5) Right to data portability  
6) Right to restrict the use of data  

The Accelerated Underwriting (A) Working Group will continue to watch the work of this group. If at any point issues unique to accelerated underwriting arise, we will endeavor to address them in a future work product.

---

For purposes of the Working Group’s paper, the use of the term “right” should be read as a basic protection, or, denoting access to making a request and not as a guarantee of having the requested right acted upon in the manner as the consumer requests.

For purposes of the Working Group’s paper there is a distinction between an individual’s data and information that results from the use of this data, e.g., the insurance score that results from the use of an algorithm.
Appendix A: Additional Procedural Background

At the 2019 NAIC Summer National Meeting, the Life Insurance and Annuities (A) Committee discussed a referral it had received from the Big Data (EX) Working Group. The Big Data Working Group had discussed the use of predictive models in accelerated underwriting in life insurance, instead of medical examinations and the collection of fluids. The Big Data Working Group agreed that the issue would be most appropriately addressed by the life insurance subject matter experts and voted to refer the issue of the use of external data and data analytics in accelerated underwriting in life insurance to the Life Insurance and Annuities (A) Committee (Committee).12

The Committee discussed the referral and acknowledged that there are a multitude of issues surrounding insurers’ use of data models and data analytics; issues that extend into many areas of insurance and overlap with the work of several groups at the NAIC. In addition to the Big Data (EX) Working Group, there is the Innovation and Technology (EX) Task Force, the Artificial Intelligence (EX) Working Group, the Casualty Actuarial and Statistical (C) Task Force, and the Privacy Protections (D) Working Group. The Life Actuarial Task Force was also looking at the use of accelerated underwriting in life insurance from an actuarial perspective, including looking at any potential impact on insurer solvency.

The Committee agreed that an effort to delve into accelerated underwriting in life insurance would need to be narrowly focused while taking into account the work of these other NAIC groups touching on the same topic.

Robert Muriel (IL) chaired the Working Group and Grace Arnold (MN) was the vice-chair. The following were Working Group members: Jason Lapham (CO); Russ Gibson (IA); Rich Piazza (LA); Cynthia Amann (MO); Rhonda Ahrens and Laura Arp (NE); Ross Hartley and Chris Aufenthie (ND); Lori Barron (OH); Elizabeth Kelleher Dwyer (RI); Lichiou Lee (WA); Mark Afable (WI). In January 2021, Commissioner Afable became chair of the Working Group and the rest of the membership remained the same.

The Working Group met for the first time on Oct 2, 2019, and developed a work plan to accomplish its charge. The work plan contemplated the Accelerated Underwriting (A) Working Group progressing through three phases with the goal of completing its charge by the 2020 Fall National Meeting. The first phase was focused on information-gathering. The second phase focused on identifying the issues and deciding on a work product, with the final phase devoted to drafting.

During the information gathering phase, the Working Group heard 15 presentations from varying stakeholders, including an academic (Professor Patrick Brockett13), insurance companies, consulting firms (Deloitte and Milliman), a consumer advocate (Birny Birnbaum—CEJ), the American Academy of Actuaries, lawyers from 2 Illinois law firms (Foley & Lardner and Edelson), a machine learning assurance company (Monitaur), and a data analytics company (Verisk). Several of the presentations were held in regulator-only meetings when requested by presenters in order to share proprietary and confidential company-specific information.

Regulators from the Working Group volunteered to participate in two ad hoc groups to tackle the second and third phases of its work plan: There was an ad hoc NAIC liaison group to ensure awareness of and coordination with any work, including guidelines or protocols, developed by other NAIC groups, past and present, that related

---

13 Gus Wortham Chair in Risk Management and Insurance at the University of Texas at Austin and Editor, North American Actuarial Journal.
to the Working Group. There was also an ad hoc drafting group that agreed to take the information gathered, identify issues, recommend and draft a work product for review and approval by the Working Group.

In November 2020, the ad hoc drafting group shared with the Accelerated Underwriting (A) Working Group a proposed draft outline for an educational report exploring accelerated underwriting in life insurance to provide guidance to regulators, industry, and consumer advocates, and other stakeholders. In February 2021, the ad hoc groups merged.

Artificial Intelligence/Machine Learning (AI/ML)

AI/ML describes an automated process in which a system begins recognizing patterns without being specifically programmed to achieve a pre-determined result. This is different from a standard algorithm in that an algorithm is a process or set of rules executed to solve an equation or problem in a pre-determined fashion. Evolving algorithms are considered a subset of AI/ML.

Artificial Intelligence / Machine Learning Systems include:

• Systems that adapt and adjust to new data and experience without manual human intervention.
• Systems that arrive at results for which the outcomes and the stepwise approach toward the outcomes were not configured in advance by a human programmer.
• Systems that dynamically respond to conditions in the external environment without the specific nature of such responses being known in advance to the designers of the systems.
• Systems that utilize neural networks and/or deep-learning algorithms, such as supervised, semi-supervised, and unsupervised learning algorithms.
• Systems that engage in automatic speech recognition, facial recognition, image recognition, text recognition, natural language processing, generation of customer-specific recommendations, automated customer communications (e.g., chatbots with non-preprogrammed prompts), autonomous or semi-autonomous vehicle operation or data gathering, or any other approach that does not require either preprogramming or a manual human intervention in every instance of an action or decision.
• Systems that automatically generate adaptive responses based on interactions with a consumer or third party.
• Systems that determine which data elements to rely upon, in a non-preprogrammed fashion, among a variety of possible alternatives.

Artificial Intelligence / Machine Learning Systems are not:

• Static “scorecards” that deterministically map consumer or other risk characteristics to treatments or decisions. (However, an AI/ML system may use the output of such static “scorecards” as input data for the AI/ML system to consider.)
• Systems with solely preprogrammed decision rules (e.g., “If A, then B” applied invariably in all situations).
• Tables of point or factor assignments in rating plans.
• Static rate making and/or predictive modeling methodologies, including linear regression, generalized linear modeling (GLM), or generalized additive modeling (GAM). Purely informational static databases, such as databases used to obtain reference amounts for claim settlements, or static databases pertaining to consumer characteristics or experience, regardless of the...
amount of information in the database. However, if AI/ML is used to create a static predictive model, that AI/ML system is considered within the scope of this survey.

- Deterministic “phone trees” that navigate consumers through pre-recorded voice prompts.
- Any approach that an insurer could have realistically utilized in the year 2000 or prior.

**AI/ML Use Descriptions and/or Explanations**

**Underwriting: AI/ML Uses**

- Automated Approval: Approving an application without human intervention on that particular application.
- Automated Denial: Denying an application without human intervention on that particular application.
- Underwriting Tier Determination: Decisions regarding the criteria to use to establish specific named or numbered categories (called tiers) which utilize combinations of attributes that affect an insurer’s underwriting decision.
- Company Placement: Decisions regarding which of several affiliated companies within an insurance group will accept an individual risk.
- Input into Non-Automated Approval Decision: Providing data, analysis, or recommendations regarding a decision to approve an application in a situation where a human decision-maker still has the ability and responsibility to affirmatively consider this information and make a decision independently of the AI/ML system. In this situation, the AI/ML system cannot automatically approve the application, and protocols exist that ensure that each recommendation from the AI/ML system is actively reviewed and not adopted by default.
- Input into Non-Automated Denial Decision: Providing data, analysis, or recommendations regarding a decision to deny an application in a situation where a human decision-maker still has the ability and responsibility to affirmatively consider this information and make a decision independently of the AI/ML system. In this situation, the AI/ML system cannot automatically deny the application, and protocols exist that ensure that each recommendation from the AI/ML system is actively reviewed and not adopted by default.
- Automate Processing Thru the Agency Channel: Enabling agencies to receive certain information about applicants automatically without specifically requesting that information and/or to provide quotes to the applicants and/or recommend a decision regarding the application to the agent without being based on preprogrammed decision rules.

Abbreviated Summary of Presentations
National Association of Insurance Commissioners (NAIC) Principles on Artificial Intelligence (AI)
Casualty Actuarial and Statistical (C) Task Force Regulatory Review of Predictive Models White Paper

Introduction

In 2019, the National Association of Insurance Commissioners (NAIC) established the Accelerated Underwriting (A) Working Group to consider the use of external data and data analytics in accelerated life insurance underwriting, including consideration of the ongoing work of the Life Actuarial (A) Task Force on the issue and, if appropriate, draft guidance for the states. In addition, the 2021 charges of the Special Committee on Race and Insurance direct the working group to include an assessment of and recommendations, as necessary, regarding the impact of accelerated underwriting on minority populations. A more detailed procedural background can be found in the appendix. This paper is the output of over a year’s work by regulators to understand the current state of the industry and its use of accelerated underwriting. It summarizes what the Working Group has learned over the past year, contextualizes that learning and the topic of accelerated underwriting within other NAIC work and standard regulatory product evaluation processes, and makes recommendations for regulators and insurers when evaluating accelerated underwriting.

Accelerated underwriting in life insurance may provide potential benefits to both consumers and insurers, if applied in a fair and non-discriminatory manner. In order to fairly deliver the benefits of more convenient and cost-effective processes, regulators and insurers should be guided by current law related to fair trade practices and unfair discrimination. Regulators and insurers should also continue to monitor accelerated underwriting practices as they develop and update, when necessary, relevant laws to adapt to these developing practices to avoid unfair trade practices and unfairly discriminatory practices. Much of the discussion in this paper is framed in these general terms. The Working Group believes the charge to specifically address the impact on minority populations is included in these terms. Future work products of the Working Group may address the charge from the Special Committee on Race and Insurance in more detail.

What is Accelerated Underwriting?

Throughout this paper, we use the term accelerated underwriting in life insurance. For purposes of this paper, we based our work on the following definition:

Accelerated underwriting is the use of big data, artificial intelligence, and machine learning to underwrite life insurance in an expedited manner. The process generally uses predictive models and machine learning algorithms to analyze applicant data, which may include the use of non-traditional, non-medical data, provided either by the applicant directly or obtained through external sources. The process is typically used to replace all or part of traditional underwriting in life insurance and to allow some applications to have certain medical requirements waived, such as paramedical exams and fluid collection.

Predictive models examine data sets for patterns to predict and assign the risk category, e.g., a model developer enters data points (potentially hundreds of thousands), and the model finds patterns and identifies future
predictions of risk and assigns an insured to a risk category.¹ Machine learning algorithms are a process or set of rules executed to solve an equation², e.g., a life insurance underwriter uses a set of rules to place an individual insured in a particular risk category. The ‘learning’ part of machine learning means that those programs change how they process data over time, much as humans change how they process data by learning. Machine learning often falls into two groups: supervised or unsupervised. The difference between the two is whether the program is directed to analyze patterns or is self-automated.

Predictive models or machine learning trains a system to make judgments when exposed to data that is unfamiliar to serve as a substitute for human-centric decision making. These are both subcategories of artificial intelligence, which should not be confused with a static rule-based algorithm.

Life insurance underwriting is the process of determining eligibility and classifying applicants into risk categories to determine the appropriate rate to charge for transferring the financial risk associated with insuring the applicant. Traditional life insurance underwriting involves, assessing the applicant’s physical health, along with other financial and behavioral elements, then determining whether an applicant is eligible for coverage and the risk class to which that individual belongs. Accelerated underwriting relies both on traditional and non-traditional, non-medical data used within predictive models or machine learning algorithms to perform some of the tasks of an underwriter. The exact parameters of the application of accelerated underwriting vary by insurer.

Presentations made to the Working Group indicated that life insurers use accelerated underwriting in primarily two ways: 1) Accelerated underwriting is used to triage applicants, where unsuccessful applicants are re-routed to traditional underwriting, and successful ones continue through the accelerated underwriting process; or 2) Accelerated underwriting is used to rate applicants based on risk categories.

Most predictive or machine learning algorithms used in life insurance underwriting are in their second or third generation. The COVID-19 pandemic sped up the adoption of accelerated underwriting in the industry as both consumers and insurers looked for options to purchase and write policies that relied more on technology and involved less in-person contact. This has highlighted the need for ongoing monitoring of the machine learning algorithms—both their development and their uses in the marketplace.

Presentations made to the Working Group indicated that adverse underwriting decisions are sometimes reviewed by human underwriters. Companies presenting to the Working Group stated that the accelerated underwriting process is less cumbersome, costs less than traditional underwriting, it expedites the process and requires less

---

¹ For a more detailed discussion of predictive models in property and casualty insurance, see the Casualty Actuarial and Statistical (C) Task Force Regulatory Review of Predictive Models White Paper, Adopted by the Property and Casualty Insurance (C) Committee on Dec. 8, 2020.

² The Big Data and Artificial Intelligence (EX) Working Group developed a survey to conduct analysis on private passenger automobile (PPA) insurers’ use and governance of big data, as used in an artificial intelligence (AI) and machine learning (ML) system. The survey is being conducted under the examination authority of Connecticut, Illinois, Iowa, Louisiana, Nevada, North Dakota, Pennsylvania, Rhode Island, and Wisconsin. This analysis will help inform the Working Group in completing its long-term goals of developing guidance and recommendations to update the existing regulatory framework for the use of big data and AI, including how to monitor and oversee the industry’s compliance with the NAIC’s AI principles. The survey work may be expanded to other lines of insurance as needed, such as life insurance and homeowners insurance. For the purposes of the survey only, AI/ML is defined as, “an automated process in which a system begins recognizing patterns without being specifically programmed to achieve a pre-determined result.” This is different from a standard algorithm that consists of a process or set of rules executed to solve an equation or problem in a pre-determined fashion, and evolving algorithms are considered a subset of AI/ML.

© 2022 National Association of Insurance Commissioners
consumer involvement in the purchase, improves the underwriting experience for consumers, shortsens issue times, and increases policy acceptance rates.  

General Discussion of Issues and Recommendations

Life insurers reliance on an increasingly automated underwriting process that uses non-traditional, non-medical data presents new regulatory challenges. Regulators must ensure that the process is fair, transparent, and secure. With regard to accelerated underwriting in life insurance, this concern pertains to input data, the predictive model or machine learning algorithm, and the results of the process. One particular challenge is the potential for unfair discrimination. Due to the fact accelerated underwriting relies on non-traditional, non-medical data and predictive models or machine learning algorithms, it may lead to unexpected or unfairly discriminatory outcomes even though the input data may not be overtly discriminatory. It is critical to test the conclusions up front, on the back end, as well as, randomly, to ensure the machine learning algorithm does not produce unfairly discriminatory ratings or ones that are not actuarially sound. Testing can also be important in determining if a machine learning algorithm is accurate across demographic categories. Such scrutiny is especially important when behavioral data is utilized. Behavioral data may include gym membership, one’s profession, marital status, family size, grocery shopping habits, wearable technology, and credit attributes. Although medical data has a scientific linkage with mortality, behavioral data may lead to questionable conclusions without reasonable explanation.

Recommendations

Consistent with the Artificial Intelligence Principles approved by the NAIC in 2020, the use of accelerated underwriting in life insurance should be fair and transparent to regulators, consumers, and policymakers. Companies must operate in compliance with applicable laws, and the process and data companies use need to be secure. To accomplish these objectives, regulators should dialogue with consumers, life insurers, and third-party vendors to determine if consumer data is being used in problematic or unfair ways or generating unfair outcomes.

Insurers and other parties involved in accelerated underwriting in life insurance should:

- Take steps to ensure data inputs are transparent, accurate, reliable, and the data itself does not have any unfair bias.
- Ensure that the use of external data sources, algorithms or predictive models are based on sound actuarial principles with a valid explanation or rationale for any claimed correlation or causal connection.
- Ensure that the predictive models or machine learning algorithm within accelerated underwriting has an intended outcome and that outcome is being achieved.
- Ensure that the predictive models or machine learning algorithm achieve an outcome that is not unfairly discriminatory.

4 See National Association of Insurance Commissioners (NAIC) Principles on Artificial Intelligence (AI) – Fair and Ethical a. AI actors should respect the rule of law throughout the AI life cycle. This includes, but is not limited to, insurance laws and regulations, such as those relating to trade practices, unfair discrimination, access to insurance, underwriting, privacy, consumer protection and eligibility practices, rate making standards, advertising decisions, claims practices, and solvency. b. Consistent with the risk-based foundation of insurance, AI actors should proactively engage in responsible stewardship of trustworthy AI in pursuit of beneficial outcomes for consumers and to avoid proxy discrimination against protected classes. AI systems should not be designed to harm or deceive people and should be implemented in a manner that avoids harmful or unintended consequences and corrects and remediates for such consequences when they occur.
• Be able to provide the reason(s) for an adverse underwriting decision, whether the decision is based on data subject to FCRA or not, to the consumer and all information upon which the insurer based its adverse underwriting decision.
• Take steps to protect consumer privacy and ensure consumer data is secure.
• Have a mechanism in place to correct mistakes if found.
• Produce information upon request as part of regular filing submissions reviews or market conduct examinations.

Input data

Predictive models or machine learning algorithms within the accelerated underwriting process rely heavily on data and multiple variables. Examples of the variables used by some accelerated underwriting models include customer disclosures, prescription history, digital health records, credit attributes, medical information bureau data, public records, motor vehicle reports, smartphone apps, consumer activity wearables, claim acceleration tools, individual consumer risk development systems, purchasing history, behavior learned through cell phone usage, and social media. Because accelerated underwriting relies on predictive models or machine learning algorithms that use non-traditional, non-medical data, it may lead to unexpected or unfairly discriminatory outcomes, even though the input data may be facially neutral.

Traditional Data

Traditional data used in life insurance underwriting includes data collected through a traditional underwriting process. This data may include the following:
• Application data, e.g., medical records, prescription questions, vocation questions, financial profile
• Tele-interview
• Medical records
• Data from the MIB (formerly known as Medical Information Bureau) 5
• Data from Motor Vehicle Records
• Prescription drug history
• Public records, e.g., criminal records, bankruptcy records, civil litigation, etc.
• Paramedical or medical exam, including EKG’s in some instances
• Fluids, e.g., blood, urine, swab/saliva test to determine tobacco usage
• Financial and tax information

Considerations for use of Traditional Data
• Traditional data has a long and established history in the life insurance industry. Carriers, producers, and consumers are generally familiar with the process.
• Traditional data has a history of usage by insurance carriers. Trained underwriters and producers have years of experience and often understand the process well.
• The relationship of the traditional data elements to the risk is well established and consumers generally understand how most of the elements impact their risk classification or premium charged.

5 This data is subject to the Fair Credit Reporting Act (FCRA).
State statutes and case laws were developed based on the use of traditional data containing consumer protections created under the assumption that this was the type of data collected or reviewed during an underwriting process.

Presentations made to the Working Group represented that time and costs associated with obtaining and reviewing traditional data are significant.

Non-traditional Data

Non-traditional data used in life insurance underwriting may include the following:

- Public records, e.g., assessor data, genealogy records, court filings, voter information
- Property/casualty data from adjacent carrier(s)
- Marketing and social data, e.g., shopping habits, mortgage amount/lender, occupation and education, and social media, etc.
- Professional licenses
- Biometric data, e.g., voice analysis, facial analysis, and other analytics based on personal physical features and characteristics
- Wearable devices

Considerations for use of Non-traditional Data

- Per Actuarial Standard of Practice (ASOP) No. 12, an actuary needs to demonstrate that a relationship between a risk characteristic and an expected outcome exists. This standard applies for any data used, traditional or non-traditional. Consumers may not generally understand how non-traditional data elements impact their risk classification or premium charged.
- As additional rating factors are introduced via insurance scores or with specific data elements, disparate impact across and between demographic groups may be introduced or amplified.
- Non-traditional data may not have the same consumer protections as FCRA and traditional data. For example:
  - There may not be a clear path for consumers to know how data affected their application and how inaccurate data may be corrected.
  - The type and purpose of data accessed are not required to be disclosed to the consumer.
  - There may be privacy concerns about the extent of the use of non-traditional data.

FCRA Data

Some data\(^7\) used in traditional and accelerated underwriting is subject to the federal Fair Credit Reporting Act (FCRA), which protects the privacy of consumer report information. If an insurer uses data subject to FCRA in its underwriting, applicants:

1. Have a right to be told if this information is used to deny insurance or take other adverse action\(^8\),
2. Have the ability to request the data a consumer reporting agency is providing to an insurer, and
3. Have the right to ask a consumer reporting agency to correct any errors in the data.

---

\(^7\) FCRA applies to consumer reports. Please see 15 U.S. Code § 1681a(d).

\(^8\) FCRA defines adverse action, in part, as “a denial or cancellation of an increase in any charge for, or a reduction or other adverse or unfavorable change in the terms of coverage or amount of, any insurance, existing or applied for, in connection with the underwriting of insurance[].” 15 U.S. Code § 1681a(k).
Considerations for use of data subject to FCRA:

- FCRA data is readily available.
- FCRA data is updated regularly.
- FCRA data is already used in life and property/casualty lines of business.
- There is existing regulation and oversight by the Federal Trade Commission (FTC) and Consumer Financial Protection Bureau (CFPB).
- Not all FCRA data is useful/ relevant to life insurance underwriting.
- If there is a dispute about the accuracy of FCRA data, a consumer has to obtain additional information and formally dispute these findings.
- FCRA data is extensive and accessing such data may result in access to non-usable credit attributes. In other words, significantly more data may be collected than is needed to determine risk.
- As additional rating factors are introduced via insurance scores or with specific data elements, unfair discrimination, including disparate impact, may be introduced or amplified.

Recommendations

Existing regulations apply to accelerated underwriting programs in the same way as traditional underwriting programs. State Departments of Insurance (DOIs) have broad regulatory authority to make inquiries into the processes and procedures of life insurers in order to investigate potential unfair trade practices. Complaints about underwriting practices are opportunities for DOIs to review a life insurer’s use of accelerated underwriting and data collection methods. Additional DOI actions may include market conduct and on-site examinations as appropriate under existing authority.

Specifically, examiners may:

- Review the life insurer’s underwriting practices and underwriting guidelines during an examination or upon initial submission of the policy rates and forms and confirm the proper use of the data elements.
- Request that explanation provided to the consumer for any negative action taken by the life insurer adequately informs the consumer as to why a particular action was taken without the consumer having to make additional inquiries.
- Request information about source data regardless of whether the data or score is provided by a third party.

Form and rate reviewers may:

- Request that the life insurer provides information about how a predictive model or machine learning algorithm will be used.
- Consider requiring the filing of models used to analyze data.
- Consider questioning the extent to which data elements correlate to applicant risk.
- Request information about source data regardless of whether the data or score is provided by a third party.

Life insurers and third-party vendors have a responsibility to understand the data they are using. To accomplish this, life insurers should conduct post-issue audits and data analysis and make these audits and analysis available to regulators upon request. For example, analyses such as evaluating claims and lapse rates may be helpful. Life insurers and third-party vendors should ensure data inputs are accurate and reliable.
Life insurers and third-party vendors should ensure that the external data sources, algorithms, or predictive models are developed with sufficient internal controls and oversight and based on sound actuarial principles with a valid explanation or rationale for any claimed correlation and causal connection.

**Data Privacy**

Data privacy—a consumer’s ability to retain control over what data can be shared about them and with whom—is not a concern unique to accelerated underwriting in life insurance. Protecting consumer privacy is an issue across all lines of insurance and is the subject of the NAIC Privacy Protections (D) Working Group, formed in 2019 under the parent committee of Market Regulation and Consumer Affairs (D) Committee.

The Working Group’s charge is to review the state insurance privacy protections regarding the collection, use, and disclosure of information gathered in connection with insurance transactions, and make recommended changes, as needed, to certain NAIC models and other existing federal or state statutes. 9

The primary focus of the Working Group is on the six consumer data privacy rights or types of consumer data privacy protections identified in the NAIC’s Member adopted Strategy for Consumer Data Privacy Protections policy statement. The secondary focus is on issues such as notice requirements and standards, disclosure of information collected, disclosure of shared information, requirements to disclose sources of information, requirements to disclose business purposes, and a requirement to disclose third party involvement. 9

The current assignments for the Working Group are intended to create a framework for the policy statement: defining the parameters of these consumer rights by offering suggested definitions, examples of consumer risks, and what may not be protected in federal laws or not covered under NAIC Model laws.

The Privacy Protections Working Group’s policy statement will address the following consumer privacy rights: 10

1) Right to opt-out of data sharing
2) Right to opt-in of data sharing
3) Right to correct information
4) Right to delete information
5) Right to data portability

---

9 The Working Group has focused its reviews on the Insurance Information and Privacy Protection Model Act #670, and the Privacy of Consumer Financial and Health Information Regulation Model Act #672 – both drafted in response to the enactment of GLBA, and #668 – the Insurance Data Security Model Act, enacted in 2019/20. With a great deal of research assistance from NAIC Legal Staff, the Working Group prepared a gap analysis — upon which it continues to work. The Working Group is also reviewing the consumer data privacy protections other than those already in these models, such as the numerous provisions contained in federal acts such as the Fair Credit Reporting Act (FCRA), the Gramm-Leach Bliley Act (GLBA), the Health Insurance Portability and Affordability Act (HIPAA), Electronic Health Records (EHR), etc. The Working Group is also analyzing the various provisions of recently enacted legislation, such as California’s Consumer Privacy Act (CCPA) and its Consumer Data Privacy Regulation (CCPR), Virginia’s and Colorado’s recently enacted Consumer Privacy Protection laws, certain provisions of the European General Data Protection Regulation (GDPR), the NAIC’s Record Retention Model Regulation and the NAIC’s Unfair Claims Practice Model Act (UCPA). There are a lot of jurisdictional issues that remain to be sorted through.

10 For purposes of the Working Group’s paper, the use of the term “right” should be read as a basic protection, or, denoting access to making a request and not as a guarantee of having the requested right acted upon in the manner as the consumer requests.
6) Right to restrict the use of data\textsuperscript{11}

The Accelerated Underwriting (A) Working Group will continue to watch the work of this group. If at any point issues unique to accelerated underwriting arise, we will endeavor to address them in a future work product.

\textsuperscript{11} for purposes of the Working Group’s paper there is a distinction between an individual’s data and information that results from the use of this data, \textit{e.g.}, the insurance score that results from the use of an algorithm.
Appendix A: Additional Procedural Background

At the 2019 NAIC Summer National Meeting, the Life Insurance and Annuities (A) Committee discussed a referral it had received from the Big Data (EX) Working Group. The Big Data Working Group had discussed the use of predictive models in accelerated underwriting in life insurance, instead of medical examinations and the collection of fluids. The Big Data Working Group agreed that the issue would be most appropriately addressed by the life insurance subject matter experts and voted to refer the issue of the use of external data and data analytics in accelerated underwriting in life insurance to the Life Insurance and Annuities (A) Committee (Committee).¹²

The Committee discussed the referral and acknowledged that there are a multitude of issues surrounding insurers’ use of data models and data analytics; issues that extend into many areas of insurance and overlap with the work of several groups at the NAIC. In addition to the Big Data (EX) Working Group, there is the Innovation and Technology (EX) Task Force, the Artificial Intelligence (EX) Working Group, the Casualty Actuarial and Statistical (C) Task Force, and the Privacy Protections (D) Working Group. The Life Actuarial Task Force was also looking at the use of accelerated underwriting in life insurance from an actuarial perspective, including looking at any potential impact on insurer solvency.

The Committee agreed that an effort to delve into accelerated underwriting in life insurance would need to be narrowly focused while taking into account the work of these other NAIC groups touching on the same topic.

Robert Muriel (IL) chaired the Working Group and Grace Arnold (MN) was the vice-chair. The following were Working Group members: Jason Lapham (CO); Russ Gibson (IA); Rich Piazza (LA); Cynthia Amann (MO); Rhonda Ahrens and Laura Arp (NE); Ross Hartley and Chris Aufenthie (ND); Lori Barron (OH); Elizabeth Kelleher Dwyer (RI); Lichiou Lee (WA); Mark Afable (WI). In January 2021, Commissioner Afable became chair of the Working Group and the rest of the membership remained the same.

The Working Group met for the first time on Oct 2, 2019, and developed a work plan to accomplish its charge. The work plan contemplated the Accelerated Underwriting (A) Working Group progressing through three phases with the goal of completing its charge by the 2020 Fall National Meeting. The first phase was focused on information-gathering. The second phase focused on identifying the issues and deciding on a work product, with the final phase devoted to drafting.

During the information gathering phase, the Working Group heard 15 presentations from varying stakeholders, including an academic (Professor Patrick Brockett¹³), insurance companies, consulting firms (Deloitte and Milliman), a consumer advocate (Birny Birnbaum—CEJ), the American Academy of Actuaries, lawyers from 2 Illinois law firms (Foley & Lardner and Edelson), a machine learning assurance company (Monitaur), and a data analytics company (Verisk). Several of the presentations were held in regulator-only meetings when requested by presenters in order to share proprietary and confidential company-specific information.

Regulators from the Working Group volunteered to participate in two ad hoc groups to tackle the second and third phases of its work plan: There was an ad hoc NAIC liaison group to ensure awareness of and coordination with any work, including guidelines or protocols, developed by other NAIC groups, past and present, that related to the Working Group. There was also an ad hoc drafting group that agreed to take the information gathered, identify issues, recommend and draft a work product for review and approval by the Working Group.

¹³ Gus Wortham Chair in Risk Management and Insurance at the University of Texas at Austin and Editor, North American Actuarial Journal.
In November 2020, the ad hoc drafting group shared with the Accelerated Underwriting (A) Working Group a proposed draft outline for an educational report exploring accelerated underwriting in life insurance to provide guidance to regulators, industry, and consumer advocates, and other stakeholders. In February 2021, the ad hoc groups merged.

Artificial Intelligence/Machine Learning (AI/ML)

AI/ML describes an automated process in which a system begins recognizing patterns without being specifically programmed to achieve a pre-determined result. This is different from a standard algorithm in that an algorithm is a process or set of rules executed to solve an equation or problem in a pre-determined fashion. Evolving algorithms are considered a subset of AI/ML.

Artificial Intelligence / Machine Learning Systems include:

- Systems that adapt and adjust to new data and experience without manual human intervention.
- Systems that arrive at results for which the outcomes and the stepwise approach toward the outcomes were not configured in advance by a human programmer.
- Systems that dynamically respond to conditions in the external environment without the specific nature of such responses being known in advance to the designers of the systems.
- Systems that utilize neural networks and/or deep-learning algorithms, such as supervised, semi-supervised, and unsupervised learning algorithms.
- Systems that engage in automatic speech recognition, facial recognition, image recognition, text recognition, natural language processing, generation of customer-specific recommendations, automated customer communications (e.g., chatbots with non-preprogrammed prompts), autonomous or semi-autonomous vehicle operation or data gathering, or any other approach that does not require either preprogramming or a manual human intervention in every instance of an action or decision.
- Systems that automatically generate adaptive responses based on interactions with a consumer or third party.
- Systems that determine which data elements to rely upon, in a non-preprogrammed fashion, among a variety of possible alternatives.

Artificial Intelligence / Machine Learning Systems are not:

- Static “scorecards” that deterministically map consumer or other risk characteristics to treatments or decisions. (However, an AI/ML system may use the output of such static “scorecards” as input data for the AI/ML system to consider.)
- Systems with solely preprogrammed decision rules (e.g., “If A, then B” applied invariably in all situations).
- Tables of point or factor assignments in rating plans.
- Static rate making and/or predictive modeling methodologies, including linear regression, generalized linear modeling (GLM), or generalized additive modeling (GAM). Purely informational static databases, such as databases used to obtain reference amounts for claim settlements, or static databases pertaining to consumer characteristics or experience, regardless of the...
amount of information in the database. However, if AI/ML is used to create a static predictive model, that AI/ML system is considered within the scope of this survey.

- Deterministic “phone trees” that navigate consumers through pre-recorded voice prompts.
- Any approach that an insurer could have realistically utilized in the year 2000 or prior.

**AI/ML Use Descriptions and/or Explanations**

- **Underwriting**: AI/ML Uses
  - Automated Approval: Approving an application without human intervention on that particular application.
  - Automated Denial: Denying an application without human intervention on that particular application.
  - Underwriting Tier Determination: Decisions regarding the criteria to use to establish specific named or numbered categories (called tiers) which utilize combinations of attributes that affect an insurer’s underwriting decision.
  - Company Placement: Decisions regarding which of several affiliated companies within an insurance group will accept an individual risk.
  - Input into Non-Automated Approval Decision: Providing data, analysis, or recommendations regarding a decision to approve an application in a situation where a human decision-maker still has the ability and responsibility to affirmatively consider this information and make a decision independently of the AI/ML system. In this situation, the AI/ML system cannot automatically approve the application, and protocols exist that ensure that each recommendation from the AI/ML system is actively reviewed and not adopted by default.
  - Input into Non-Automated Denial Decision: Providing data, analysis, or recommendations regarding a decision to deny an application in a situation where a human decision-maker still has the ability and responsibility to affirmatively consider this information and make a decision independently of the AI/ML system. In this situation, the AI/ML system cannot automatically deny the application, and protocols exist that ensure that each recommendation from the AI/ML system is actively reviewed and not adopted by default.
  - Automate Processing Thru the Agency Channel: Enabling agencies to receive certain information about applicants automatically without specifically requesting that information and/or to provide quotes to the applicants and/or recommend a decision regarding the application to the agent without being based on preprogrammed decision rules.

Life Actuarial (A) Task Force
Virtual Meeting (in lieu of meeting at the 2022 Spring National Meeting)
March 31, 2022

The Life Actuarial (A) Task Force met March 31, 2022. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Ted Chang and Ahmad Kamil (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Trinidad Navarro represented by Charles Santana (DE); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and Ben Slutske (MN); Chlora Lindley-Myers represented by William Leung and John Rehagen (MO); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT).

1. **Adopted its March 17, March 10, March 3, Feb. 24, Feb. 17, Feb. 10, Feb. 3, and Jan. 27 Minutes**

The Task Force met March 17, March 10, March 3, Feb. 24, Feb. 17, Feb. 10, Feb. 3, and Jan. 27. During these meetings, the Task Force took the following action: 1) disbanded the Guaranteed Issue (GI) Life Valuation (A) Subgroup; 2) adopted its 2021 Fall National Meeting minutes; 3) adopted amendment proposal 2021-11, which adds a section for other guidance and requirements for assumptions to VM-21, Requirements for Principle-Based Reserves for Variable Annuities; 4) adopted amendment proposal 2022-01, which clarifies the treatment of the pre-reinsurance ceded reserve and the reserve credit for retrocessions; 5) forwarded a proposal to the Blanks (E) Working Group; 6) exposed amendment proposal 2022-02, which revises language in VM-31, PBR Actuarial Report Requirements for Business Subject to a Principle-Based Valuation, including explicit cross-references to the VM-21; 7) exposed amendment proposal 2022-03, which updates cross-references and improves consistency between VM-20, Requirements for Principle-Based Reserves for Life Products and VM-21; 8) exposed amendment proposal 2022-04, which proposes updates to the VM-20 prescribed swap spreads guidance in light of the London Interbank Offered Rate (LIBOR) transition to Secured Overnight Financing Rate (SOFR); and 9) exposed models for field testing the economic scenario generator (ESG).

Mr. Chupp made a motion, seconded by Mr. Leung, to adopt the Task Force’s March 17 (Attachment One), March 10 (Attachment Two), March 3 (Attachment Three), Feb. 24 (Attachment Four), Feb. 17 (Attachment Five), Feb. 10 (Attachment Six), Feb. 3 (Attachment Seven), and Jan. 27 (Attachment Eight) minutes. The motion passed unanimously.

2. **Adopted the Report of the Longevity Risk (E/A) Subgroup**

Mr. Andersen made a motion, seconded by Mr. Weber, to adopt the report of the Longevity Risk (E/A) Subgroup (Attachment Nine). The motion passed unanimously.

3. **Adopted the Report of the Variable Annuities Capital and Reserves (E/A) Subgroup**

Mr. Andersen made a motion, seconded by Mr. Weber, to adopt the report of the Variable Annuities Capital and Reserves (E/A) Subgroup (Attachment Ten). The motion passed unanimously.
4. **Adopted the Report of the Experience Reporting (A) Subgroup**

Mr. Andersen made a motion, seconded by Mr. Weber, to adopt the report of the Experience Reporting (A) Subgroup (Attachment Eleven). The motion passed unanimously.

5. **Adopted the Report of the VM-22 (A) Subgroup**

Mr. Slutsker said the Subgroup has not met since the middle of 2021. He said a proposal for a revised VM-22, Statutory Maximum Valuation Interest Rates for Income Annuities, received from the Annuity Reserves and Capital Working Group (ARCWG) of the American Academy of Actuaries (Academy), was exposed in July 2021. He said the Subgroup plans to meet April 13 to discuss plans for addressing the exposure comments. The planned approach is provided in the Subgroup report. Mr. Slutsker noted that the Subgroup has two drafting groups actively working on the development of appropriate assumptions for the VM-22 standard projection amount (SPA) and a separate drafting group working on the development of pension risk transfer assumptions.

Mr. Slutsker made a motion, seconded by Mr. Chupp, to adopt the report of the VM-22 (A) Subgroup (Attachment Twelve). The motion passed unanimously.

6. **Adopted the Report of the Index-Linked Variable Annuity (A) Subgroup**

Mr. Weber said the Subgroup’s charge is to provide recommendations and changes to nonforfeiture interim value requirements for index-linked variable annuities (ILVAs). He said the products are filed as variable contracts and, therefore, should behave as such. He said that while the initially recommended guideline proposal was very prescriptive, the current proposal (Attachment Thirteen) allows a company to determine interim values in any manner it chooses, as long as the company demonstrates that the interim values are materially consistent with the principles of the guideline. He said the current proposal will be exposed after the Task Force meeting.

Mr. Weber made a motion, seconded by Mr. Leung, to adopt the report of the Index-Linked Variable Annuity (A) Subgroup, including its March 9 (Attachment Fourteen), March 2 (Attachment Fifteen), and Feb. 16 (Attachment Sixteen) minutes. The motion passed unanimously.

7. **Adopted the Report of the IUL Illustration (A) Subgroup**

Mr. Andersen said the Indexed Universal Life (IUL) Illustration (A) Subgroup discussed comments on the exposure of the early analysis of the effectiveness of Actuarial Guideline XLIX-A—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest Sold on Or After December 14, 2020 (AG 49-A) during its Feb. 24 meeting. He said there is consensus that AG 49-A has effectively addressed previously identified IUL product designs, including multipliers and buyouts. He said it is thought that newly developed product designs, such as those with volatility-controlled indices, still need to be addressed. He said there is evidence that some products with uncapped volatility-controlled indices illustrate more favorably than traditional IUL with capped Standard & Poor’s (S&P’s) 500 indices. He said the Subgroup will meet in the second quarter to develop recommendations to address this issue. The recommendations will be forwarded to the Task Force for consideration.

Mr. Andersen made a motion, seconded by Mr. Chupp, to adopt the verbal report of the IUL Illustration (A) Subgroup. The motion passed unanimously.
8. **Adopted Amendment Proposal 2022-02**

Ms. Hemphill said amendment proposal 2022-02 clarifies the reporting documentation language in VM-31. She said the language now parallels language in VM-21.

Mr. Leung made a motion, seconded by Mr. Chupp, to adopt amendment proposal 2022-02 (Attachment Seventeen). The motion passed unanimously.

9. **Adopted Amendment Proposal 2022-03**

Ms. Hemphill said amendment proposal 2022-03 updates cross references and revises language to maintain consistency between VM-20 and VM-21.

Mr. Leung made a motion, seconded by Mr. Chupp, to adopt amendment proposal 2022-03 (Attachment Eighteen). The motion passed unanimously.

10. **Re-Exposed Amendment Proposal 2020-12**

Ms. Hemphill said revisions were made to the previously exposed version of amendment proposal 2020-12 (Attachment Nineteen) to reflect comments submitted by the Academy and the American Council of Life Insurers (ACLI). She said the Academy comment letter (Attachment Twenty) agreed with the general principle of having the company reflect its hedging strategy but recommended revising VM-21 to replace the E-factor approach with the methodology used in VM-20. She said implementing that change would require a large structural change that is beyond the scope of the proposal and would have a major impact on some companies. Consequently, the Task Force rejected the recommendation.

Ms. Hemphill said the second Academy recommendation removes optionality for liquidating hedges when the elimination is not consistent with the company investment strategy. The third Academy recommendation is to remove the 1.0 limitation on the E-factor for hedging strategies that are less than 6 months old. She said revisions to the amendment proposal were made to incorporate these recommendations.

Ms. Hemphill said the ACLI comment letter (Attachment Twenty-One) requested a longer path to implementation to allow companies more preparation time. She noted that the amendment proposal was initially exposed 14 months ago, and the Task Force has been consistent in communicating its intent to address the key issues. She also indicated that discussion of the implementation timeline is premature for this re-exposure.

The second ACLI comment requests that indexed credit derivative programs be reflected in the principle-based reserving (PBR) models. Ms. Hemphill said the issue is beyond the scope of the proposal. She mentioned that the Valuation Manual (VM)-22 (A) Subgroup is working on that issue. She said when the Subgroup’s work is complete, it could be considered for VM-21.

Ms. Hemphill said the ACLI’s comment on the on the E-factor was similar to the Academy’s E-factor comment and will be covered by the response provided to the Academy. She said the remaining ACLI comments, except the recommended change to the carve-out for future hedging strategies, are reflected in the revisions being considered for re-exposure. She verbally walked through a detailed review of the changes to the proposal.

Craig Morrow (Academy) said the Academy prefers the VM-20 approach to hedge assets because the VM-21 approach requires bifurcation of the hedging strategy into that which applies to existing hedge assets and that which applies to future hedge assets. He said such bifurcation may not be possible. He said the Academy is also
concerned that the VM-21 approach assumes that CTE-70 (adjusted) is greater than CTE-70 (best efforts), which does not consistently hold true.

Ms. Hemphill agreed with the Academy comments but reiterated that the change required to address the issue is outside of the scope of the proposal. Brian Bayerle (ACLI) asked if the VM-22 language to address indexed crediting will be available for inclusion in this proposal. Ms. Hemphill said the VM-22 changes will be added to VM-21 through a separate amendment proposal.

Mr. Leung made a motion, seconded by Mr. Wallman, to re-expose amendment proposal 2020-12 (Attachment Twenty-Two) for a 30-day public comment period ending April 29. The motion passed unanimously.

11. Discussed Comments on the Proposed AAT Actuarial Guideline Exposure

Mr. Andersen said activities related to the involvement of life insurers with private equity firms and complex assets has increased in the last few years. He said several NAIC groups have initiated projects to address the potential issues arising from the increased activities, including the valuation of complex assets, accounting issues, and capital charges. He said the Task Force focus is on reserves and asset adequacy issues, with ensuring reserve sufficiency even when the complex assets do not perform as expected being a key aspect of its focus. He noted that the private equity funding has often been tied to offshore reinsurance activity, which can affect the risks and the reserves.

Mr. Andersen said the Task Force exposed the first draft of an asset adequacy testing (AAT) guideline (Attachment Twenty-Three) in February, with a goal of having the guideline in place for yearend 2022. He summarized the comments received from the ACLI (Attachment Twenty-Four), the Utah Insurance Department (Attachment Twenty-Five), Lombard International (Attachment Twenty-Six), John Hancock (Attachment Twenty-Seven), Western & Southern Financial Group (Attachment Twenty-Eight), Northwestern Mutual (Attachment Twenty-Nine), Equitable (Attachment Thirty), New York Life (Attachment Thirty-One), Everlake Life (Attachment Thirty-Two), and the Academy (Attachment Thirty-Three). He focused the discussion on: 1) guardrails and assumed net yields; 2) modeling of reinsurance ceded to assuming companies that do not submit an actuarial opinion and memorandum to state insurance regulators; and 3) the scope of assets. He said other issues, such as improving the clarity and organization of the draft guideline, as well as the handling of equities, will be addressed in a subsequent draft.

Mr. Yanacheak expressed concern that the guardrail is dependent upon the current U.S. Department of the Treasury (Treasury Department) yield curve instead of using current market rates. He said he is additionally concerned about implementing a guardrail without having studied its impact. Mr. Andersen said using the Treasury curve is intended to avoid penalizing companies that have purchased assets with expected returns that are higher than the current market. He suggested deferring discussion of that aspect of the guardrail. Mr. Leung suggested using a sensitivity test and deferring the implementation of the guardrail.

Mr. Boston, Ms. Eom, and Mr. Weber expressed support for having a sensitivity test applied to both current and reinvestment assets. Mr. Carmello expressed support for applying the guardrail to current assets and reinvestments. Mr. Tsang expressed support for having a sensitivity test on current assets and a guardrail on assumed reinvestment asset yields. Mr. Wallman said the guardrail should be applied on a company-by-company basis and not included in the guideline. Mr. Andersen said, based on the comments provided, most Task Force members favor using sensitivity tests to identify net yield outliers. He said that after studying the year-end 2022 results, state insurance regulators can decide whether to pursue Valuation Manual revisions to implement guardrails.
Mr. Andersen said a section of the guideline addresses reinsurance arrangements where a business issued by a U.S. domiciliary company is ceded to an offshore reinsurer that is not subject to state insurance regulations, and in many cases does not provide asset adequacy testing to state insurance regulators. He said that if the asset adequacy testing is not performed on that business by the assuming company, the guideline requires that it be performed by the ceding company. He said some comment letters expressed the concern that such a regulatory change would be too much too soon, and it may be disruptive to the other reinsurance initiatives, such as the Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance (Covered Agreement) and qualified reciprocal jurisdictions. He said other comment letters supported the revision, noting the increase in reinsurer activity associated with complex assets and private equity firms.

Mr. Leung said the most recent revisions to Actuarial Standard of Practice (ASOP) No. 11, Treatment of Reinsurance or Similar Risk Transfer Programs Involving Life Insurance, Annuities, or Health Benefit Plans in Financial Reports, strengthen the documentation and reporting requirements for reinsurance risks, including adding a requirement for disclosing those risks in the actuarial memorandum. He suggested that requiring companies to follow ASOP No. 11 will address the issues to which Mr. Andersen referred. Mr. Andersen noted that ASOP No. 11 is referenced in the proposed actuarial guideline. Mr. Rehagen said he is concerned that the proposed guideline broadly addresses the issue in a manner that may affect all reinsurance transactions with non-U.S. insurers, possibly in violation of the Covered Agreement. He voiced his support for requiring companies to follow ASOP No. 11 instead of using the language in the proposed actuarial guideline. Mr. Andersen said that given the need to have the guideline effective for yearend 2022 and the desire to avoid violating the Covered Agreement, pointing to ASOP No. 11 may be the best solution for the short-term.

Mr. Andersen said companies are concerned that too many of their assets may be considered within the scope of the revised guideline. He said the guideline has been revised to specify which assets can be excluded. He asked Task Force members if the guideline should exclude vanilla junk bonds among the assets that are in scope because such assets are not complex. Mr. Carmello opined that the guideline should continue to include junk bonds. Mr. Chang suggested narrowing the scope will allow the guideline to focus on the more complex assets. Ms. Eom agreed that the scope should be more limited. Mr. Andersen said the decisions made during the Task Force discussion will be reflected in a revised guideline, which will be exposed for public comment in a few days.

12. Heard an Update on the ESG

Scott O’Neal (NAIC) presented a slide deck (Attachment Thirty-Four) on the status of the ESG. The first part of the presentation discussed an ESG field test scheduled to begin in June. He said the Treasury model, equity model, and corporate model comprise the three components of the ESG that will be field tested. He said there are two GEMS Treasury model calibrations being field tested: 1) the Conning calibration with a generalized fractional floor; and 2) an alternative calibration, developed by the Academy Economic Scenario Generator Work Group (ESGWG), with a shadow floor. He said the recommendation for the equity model is to use the existing GEMS equity model, including the equity-Treasury linkage. The calibration of the equity model will also be changed to account for changes made to the Treasury model and to align the fund returns on a risk/reward basis. He said the GEMS corporate model will be used in its existing form.

Mr. O’Neal noted that significant impacts to reserves and capital were observed in the Academy variable annuity model office results. He identified characteristics of the GEMS equity model that may be potential drivers of the reserve and capital differences and discussed how the model office results may be changed by lowering volatility parameters. He highlighted the differences in the calibration of the expected mean equity returns and standard deviations in the GEMS model and the currently prescribed Academy Interest Rate Generator (AIRG) as key factors in the variation in wealth ratios seen in the model office results. In particular, he noted that the higher steady state volatility of the GEMS equity model leads to returns that produce a wider distribution of wealth ratios in
both tails of the distribution. He said the equity-Treasury linkage and the low interest rate environment assumption also contribute to lower expected returns in the early projection period, which lowers the entire distribution of returns. He shared that setting the GEMS equity model using the 16.1% volatility of the current AIRG model results in a significant increase in the year 30 gross wealth factor in the low return tail of the scenario distribution. He concluded that if state insurance regulators desire to improve model office results, the next step would be to determine an appropriate volatility level.

Mr. O’Neal said that while it is difficult to identify historically strong relationships between equities and treasury bonds, the equity-Treasury linkage is based on the theory that investors demand equity returns in excess of those offered by risk-free assets to compensate for the additional risk. He said several commenters have noted that the linkage could cause reserve and capital volatility. He said that issue will be studied further in model office testing and field testing. He noted that the ability of the GEMS equity model jump process to capture large equity market movements will also be evaluated in the field test.

Jason Kehrberg (ESGWG) discussed the responses (Attachment Thirty-Five) to questions on the March 17 presentation to the Task Force of Academy model office results. He caveated that the model office results are based on simplified products and investment strategies of a single cell using time zero reserves and, therefore, are limited.

Albert Zlogar (ESGWG) presented new variable annuity model office results (Attachment Thirty-Six) reflecting new Conning scenario sets added since the March 17 presentation. He said the new scenario sets have been recalibrated to lower volatility. He said that change resulted in lower ratios of reserves to cash value. He noted that the cumulative wealth ratio results seem to indicate that further discussion of the equity-Treasury linkage may be needed.

13. Heard an Update on SOA Research and Education

Dale Hall (Society of Actuaries—SOA) gave a presentation (Attachment Thirty-Seven) on SOA research. He informed the Task Force that the SOA Preferred Mortality Project Oversight Group (PM POG) is being replaced by the SOA, Academy, Life Actuarial (A) Task Force, ACLI, and NAIC Communications group. He said the group’s scope will extend beyond issues related to preferred mortality to now cover all life insurance and annuity valuation needs.

Mr. Hall shared data from recently prepared SOA reports, including reports on group annuity mortality, overall U.S. population mortality, individual life COVID-19 claims, and group life COVID-19 mortality.

14. Heard an Update on the Recent Activities of the Academy LPC

Ben Slutsker (Academy Life Practice Council [LPC]) gave a presentation (Attachment Thirty-Eight) on the LPC’s recent activities. He highlighted Academy accomplishments, such as the recent Academy webinars. He mentioned the upcoming Spring 2022 Life Policy Update webinars and a Fall 2022 webinar on VM-31 reviews. He said recent Academy activities include model office testing for the ESG, proposing an amendment facilitating the transition from LIBOR to SOFR, and presenting the Life Risk-Based Capital (E) Working Group with recommendations for updated C-2 mortality factors. He noted that the LPC has published a new version of the VM-21 Variable Annuity Practice Note.

Donna Claire (LPC Life Experience Committee) said the Life Experience Committee will assist practicing actuaries and state insurance regulators in the determination of what to consider when developing principle-based assumptions for life insurance and annuity products. She said the committee will work with the Task Force, the
SOA, and the Actuarial Standards Board (ASB) with respect to appropriate changes to the *Valuation Manual*, mortality tables, practice notes, and standards of practice.

Having no further business, the Life Actuarial (A) Task Force adjourned.

SharePoint/NAICSupportStaffHub/Member Meetings/Spring 2022/TF/LifeActuarial/NationalMeeting/LATFSpring 2022 Minutes
1. Exposed Recommended Models for ESG Field Testing

Pat Allison (NAIC) said over the last year, a drafting group has been working to provide a recommendation for scenario sets to use in field testing a new prescribed economic scenario generator (ESG) to the Task Force and the Working Group. She said the Recommended Models for ESG Field Testing presentation provides high-level recommendations on the Treasury, Equity, and Corporate models for the field test. She noted that the last page of the presentation deck includes links to documentation and additional information, and further details (e.g., scenarios, scenario statistics, etc.) will be provided shortly.

Ms. Allison said the Equity model is linked to the Treasury model by the short Treasury rate. She said due to changes in the Treasury model, the Equity model calibration must also be updated. Additionally, she said a Sharpe ratio approach with a 5% corridor will be used to set the expected returns for the diversified international equity, aggressive international equity, and U.S. aggressive equity indices because the initially observed expected returns for those categories appear to be low. She noted that the Corporate model needs a calibration update to maintain its risk/reward consistency with the Treasury returns. The remainder of the presentation comprised an overview of each of the three models.

The Task Force and the Working Group agreed, without objection, to expose the Recommended Models for ESG Field Testing presentation (Attachment One-A) for a 21-day public comment period ending April 7.

2. Heard an Update on the Academy Model Office

Jason Kehrberg (American Academy of Actuaries—Academy) said the Academy has developed separate model offices for universal life with secondary guarantees (ULSG) and variable annuities (VA). He said the Academy was asked to use the models to test the impact of selected economic scenario sets on statutory reserves and capital. The Task Force was presented with an overview of the model offices on its March 3 call.
Mr. Kehrberg said the current presentation (Attachment One-B) focuses on the model office results for the selected economic scenario sets. He said the ULSG reserves were calculated based on the yield curve as of December 2020. He noted that the Academy chose to run the unfloored Conning calibration even though it was previously determined earlier that only the floored calibration would be considered in the final analysis. He said the reserve based on the Academy Interest Rate Generator (AIRG) was expected to be low relative to the Conning calibrations because the AIRG generated higher rates. He pointed out that although the reserves for the Conning calibration with the generalized fractional floor and the American Council of Life Insurers (ACLI) reference model were similar in amount, that does not imply that the underlying scenario sets are similar. He said one of the preliminary conclusions from the ULSG model office is that due primarily to the “low for long” requirements, the effect of any of the scenario sets on reserves is expected to be very large.

Albert Zlogar (Academy) discussed the VA model office update. He said the results are like the ULSG results in that the AIRG produced the lowest reserve and the Conning calibrations produced much higher reserve amounts mostly due to the low equity return scenarios. He encouraged participants to take time to review the conclusions.

Having no further business, the Life Actuarial (A) Task Force and Life Risk-Based Capital (E) Working Group adjourned.

Agenda

1. Background
2. Summary of Recommended ESG Models for Field Testing
3. Overview of Recommended Treasury, Equity, and Corporate Models
4. Links to Additional Resources
5. Questions and Comments

Appendices:
- Appendix 1: Generalized Fractional Floor
- Appendix 2: Treasury Model Acceptance Criteria
Background

- For over a year, regulators on the ESG Drafting Group have been meeting with subject-matter experts to develop a recommendation to the Life Actuarial (A) Task Force and the Life RBC (E) Working Group for scenario sets to use in field testing a new prescribed ESG for reserves and capital calculations.

- This presentation provides their high-level recommendations on the Treasury, Equity, and Corporate models to include in field testing.

- The ESG field test is planned to begin during the first week of June, so it is necessary to bring more regulators and interested parties into the discussions. These recommendations will be exposed for comment until close of business April 7th, 2022.

- Links to documentation and additional information are included on slide 9 of this presentation. After the updates noted on slide 4 have been made, scenario files will be added to Conning’s website and links to additional resources will be added to slide 9 (e.g., scenario statistics).

Overview of Recommended Treasury Models for Field Test

Model #1. Conning Calibration and Generalized Fractional Floor
• The Conning calibration, paired with a floor, was designed to meet the acceptance criteria that were chosen by regulators for the Treasury scenarios.
• A generalized fractional floor (see Appendix 1) has been applied to the scenarios resulting from the Conning calibration to reduce the frequency and severity of negative interest rates.

Pros:
• Achieves the acceptance criteria for “Low for Long” Treasury rates while also producing a significant representation of high interest rates
• The generalized fractional floor with a 40 BP threshold and a 20% factor allows for significant control of negative interest rates without severe compression of the scenario distribution in early projection years

Cons:
• The calibration generates more frequent and severe negative interest rates than several commenters feel is reasonable
• The highest rate produced in the set of 10,000 scenarios is 39%
• The frequency of yield curve inversions is elevated vs. history, and inversions can persist for many years
• For scenarios that are inverted, the average level of inversions is significantly higher than historical average levels of inversion

*Across 10,000 scenarios projected for 100 years, 0.16% of 1 year UST rates are between 20-25% and 0.03% are greater than 25%. Over the first 30 years, 1.6% of scenarios have rates of 20% or more.

Model #2. Alternative Calibration and Shadow Floor
• The Alternative Calibration was designed to produce realistic term premiums and yield curve behavior over time and fit a wide variety of historical yield curves. It was also adapted to meet regulator objectives.
• A shadow-rate floor methodology has been applied to reduce the frequency and severity of negative interest rates produced by the Alternative Calibration.

Pros:
• Significantly closer alignment of inversion frequencies and levels between scenarios and historical data
• Shadow floor methodology is specifically designed to preserve the arbitrage-free scenario property

Cons:
• Compressed distribution of scenarios in the earlier projection periods
• Less reflection of high interest rate scenarios
• High negative rate frequency in early years
Overview of Recommended Equity Model for Field Test

GEMS® Equity Model with Equity-Treasury Linkage

- The GEMS® Equity Model is designed to produce realistic equity return behavior and includes volatility clustering, jumps in returns that are more frequent during volatile periods, dividend cash flows that are negatively correlated with price returns, and fat return distribution tails.
- The GEMS® Equity Model also includes a linkage to the Treasury model, which produces lower average cumulative equity returns when interest rate levels are lower and vice-versa.

Pros:
- The GEMS® Equity Model is able to produce scenarios that capture the key dynamics that impact equity returns
- The equity-Treasury linkage will produce scenarios that adequately capture the risk of low equity returns paired with a low interest rate environment
- The equity-Treasury linkage reflects that investors typically demand equity returns in excess of those offered by risk-free assets to compensate for bearing risk.

Cons:
- The inclusion of a linkage between Treasury rate levels and equity returns may add significant volatility and procyclicality to period-to-period calculations of reserves and capital
- Higher starting levels of interest rates will produce scenarios with less reflection of low equity returns paired with low or high interest rate scenarios
- Some commenters believe this linkage to the Treasury model is a simplification not supported by historical data or economic research and may not promote sound risk management

Overview of Recommended Corporate Model for Field Test

GEMS® Corporate Model

- The GEMS® Corporate Model captures the key dynamics that influence bond returns, including stochastic spreads, credit rating transitions, and defaults.
- The bond fund returns produced by the GEMS® Corporate Model will be used to model policyholder separate account investments in bond funds and general account insurer investments in bond funds, where applicable.

Pros:
- The GEMS® Corporate model is able to produce scenarios that reflect the key dynamics of bond fund returns
- Does not require buildout of a separate corporate model

Cons:
- Due to the proprietary nature of the GEMS® Corporate model, full documentation of the model will not be available to the public

Note: An alternative corporate model has been discussed at the ESG Drafting Group meetings and is currently being developed.

• Q&A Document
• Treasury Model Documentation
• Corporate Model Documentation
• Equity Model Documentation

Questions and Comments
Please contact Scott O’Neal (soneal@naic.org) with questions or comments.
Appendix 1: Generalized Fractional Floor

- The Conning GEMS Treasury model has the capability of producing negative interest rates, which have been a feature prevalent in other countries currently and in recent history.
- While the basic formula for the generalized fractional floor (see below) is relatively simple, the implementation of the floor in the Conning Calibration is more complex. In this particular implementation, the Treasury model is fit to an implicit yield curve that is chosen such that the actual yield curve is matched at time zero after the floor has been applied.
- Applying a generalized fractional floor methodology to the scenarios from the Conning Treasury calibration allows for increased control of the frequency and severity of negative interest rates.
- After testing, Conning has chosen a threshold value of 40 BPs and a factor of 20% to reduce the frequency and severity of negative interest rates while ensuring that other regulator objectives, such as low for long, are met.

**Generalized Fractional Floor Formula:**

- If Unfloored Rate < Adjustment Threshold,
  - Floored Rate = Adjustment Threshold + Factor * (Unfloored Rate - Adjustment Threshold)
- Otherwise,
  - Floored Rate = Unfloored Rate

**Example:**

Unfloored Rate = -1%  Threshold = 40BPs  Factor = 20%
Floored Rate = 0.4% + 20%*(-1% - 0.4%) = 0.12%

Appendix 2: Treasury Model Acceptance Criteria

<table>
<thead>
<tr>
<th>Item</th>
<th>Category</th>
<th>Acceptance Criteria</th>
</tr>
</thead>
</table>
| 1.   | Low For Long | a) At least 10% of scenarios should have a 10-year geometric average of the 20-year UST that is below 1.45%*  
|      |           | b) At least 5% of scenarios should have a 30-year geometric average of the 20-year UST that is below 1.45%* |
| 2.   | Prevalence of High Rates, Upper Bound on Treasury Rates | a) The scenario set should reasonably reflect history, with some allowance for more extreme high and low interest rate environments  
|      |           | b) Upper Bound:  
|      |           | i. 20% is >= 99th percentile on the 3M yield fan chart, and no more than 5% of scenarios have 3M yields that go above 20% in the first 30 years  
|      |           | ii. 20% is >= 99th percentile on the 10Y yield fan chart, and no more than 5% of scenarios have 10Y yields that go above 20% in the first 30 years |

*1.45% was the current level of the 20-year UST at 12/31/20.

</table>
| 3.   | Lower Bound on Negative Interest Rates, Arbitrage Free Considerations | Apply the following guidance for negative rates:  
   a) All maturities could experience negative interest rates  
   b) Interest rates may remain negative for multi-year time periods  
   c) Rates should generally not be lower than -1.5% |
| 4.   | Initial Yield Curve Fit, Yield Curve Shapes in Projection, and Steady State Yield Curve Shape | a) Review initial actual vs. fitted spot curve differences for a sampling of 5 dates representing different shapes and rate levels for the entire curve and review fitted curves qualitatively to confirm they stylistically mimic the different actual yield curve shapes  
   b) The frequency of different yield curve shapes in early durations should be reasonable considering the shape of the starting yield curve (e.g. a flatter yield curve leads to more inversions).  
   c) The steady state curve has normal shape (not inverted for short maturities, longer vs shorter maturities, or between long maturities) |
Background

- The Academy’s Economic Scenario Working Group (ESWG) developed two model offices (Universal Life with Secondary Guarantees (ULSG) and Variable Annuities (VA))
- The National Association of Insurance Commissioners’ (NAIC’s) ESG Drafting Group asked the ESWG to use its model offices to test the impact of selected economic scenario sets on statutory reserves and capital
- Statutory reserves and capital are expected to increase under the NAIC’s new “low-for-long” interest rate criteria (which the AIRG does not meet)
- The ESWG provided an overview of its model offices on the 3/3/22 LATF call
- This 3/17/22 presentation to LATF provides actual model office results for the economic scenario sets that have been selected by the Drafting Group
  - ULSG/VM-20
  - VA/VM-21
- The ESWG is available to run additional economic scenario sets through its model offices as needed
Update on ULSG/VM-20 Model Office ESG Testing

Jason Kehrberg, MAAA, FSA

Agenda for VM-20 Model Office Update

1. Changes and New Info
2. December 2020 Stochastic Reserves
3. Scenario Reserve Distributions
4. Sample Scenario Projections
5. December 2019 Stochastic Reserves
6. Preliminary Conclusions
7. Caveats
VM-20 Model Office – Changes Since 3/3/22

- Guaranteed minimum crediting rate = 2% (was 3.25%; done to be more in line with current ULSG products, many of which use 1%)
- Units increased so premiums = $12,000 each anniversary (was $8,507; a scaling choice that won’t impact comparisons between results)
- Borrowing rate = 105% of 1-year Treasury rate to be consistent with GPVAD discount rate (was 3-month Treasury rate + 1%)
- No other changes since 3/3/22

VM-20 Model Office – Additional Info

- Using a single model point issued on the valuation date to a female non-smoker age 45
- Using annual reinvestment frequency
  - Cash flows within year accumulate with interest at 3-month Treasury rate
- Assuming investment expense of 10 basis points (provided for completeness since not in 3/3/22 overview presentation; not a key assumption)
- Solving for starting assets solved within 0.1% of reserve
December 2020 Stochastic Reserves

Scenario Reserve Distributions

- Note: Conning (Unfloored) line goes as high as 536,865, but graph is cut off to help with the scale
Sample Scenario Projections

- The graphs on the next 6 slides are samples of a good scenario, followed by the worst* scenarios for each of the 5 scenario sets
  - *Only 1,000 out of 10,000 scenarios were run
- Each scenario has the same general pattern of flows:
  - Premiums collected in early years builds up the asset base
  - Deaths and lapses over time decrease the incoming premiums and increase the outgoing claims
- Blue line is the projection of total assets
- Black line (dotted) is the Discount rate = 105% of 1 Year Treasury rate (prescribed)
- Orange line is a present value to valuation date of (-total assets)
  - Referred to as the “Present value of accumulated deficiencies” (PVAD)
  - The maximum PVAD referred to as the Greatest PVAD (GPVAD)

Sample Good Scenario

- Assets remain positive, and PVAD remains lower than the negative of starting assets

Starting Assets = 18,511

GPVAD = -18,511

Scenario Reserve = 0
AIRG, Worst Scenario

Starting Assets = 18,511
GPVAD = 34,424
Scenario Reserve = 55,935

- Relatively higher 1-Year Treasury discount rates reduces the GPVAD

Conning (Unfloored), Worst Scenario

Starting Assets = 39,202
GPVAD = 497,663
Scenario Reserve = 536,865

- Very negative 1-Year discount rates over many years leads to extremely large GPVAD
Conning (with GFF), Worst Scenario

- This scenario has several years where the GA asset portfolio is earning less than the 2% minimum crediting

**Starting Assets = 31,828**

**GPVAD = 195,913**

**Scenario Reserve = 227,741**

Strommen, Worst Scenario

- Similar to the last slide, but a little less asset deficiency

**Starting Assets = 28,561**

**GPVAD = 163,055**

**Scenario Reserve = 191,616**
ACLI Reference, Worst Scenario

Starting Assets = 31,666
GPVAD = 160,211
Scenario Reserve = 191,877

- Similar to the last 2 slides, but discount rates remain near 0%

December 2019 Stochastic Reserves

</tbody>
</table>
Preliminary Conclusions

- Impact to reserves expected to be very large under any of the scenario sets considered
  - Primarily due to the new “low-for-long” requirements, which are not present in the current AIRG
  - High premiums used in this model office is very conservative and limits the value of the secondary guarantee
  - Lower premiums would strengthen the secondary guarantee and make the product riskier, which would be expected to produce even greater impacts
- Conning’s unfloored scenarios produces some extreme scenario reserves
  - Primarily due to discounting deficiencies at 105% of 1-Year Treasury, which can be extremely negative

Caveats

- Intended as an illustrative single data point (single model point issued on valuation date; no future sales) for assessing materiality and relative impact to reserve levels and volatility from a change to the scenarios
- Selected ULSG product has exposure to interest rates only, no exposure to equity or bond fund returns
- Not intended to:
  - Cover wide variety of life products available on the market
  - Reflect a full distribution of issue ages / genders within the given product
  - Thoroughly test all the underlying assumptions
  - Be used as a basis for assessing appropriateness of an Economic Scenario Generator
Update on VA/VM-21 ESG Model Office Testing

Albert Zlogar, MAAA, FSA

Agenda for VA Model Office Update

1. Product specification and model updates since 3/3/22
2. Listing of product specifications and assumptions
3. VM-21 Reserve and C3P2 Total Asset Requirement (TAR) method description
4. Sample Scenario Reserve calculations
5. Summary of results – all scenario sets
6. Preliminary conclusions
7. Large Cap Equity Fund return comparisons
8. Scenario reserve distributions
9. Preliminary sensitivity testing
10. Caveats
VM-21 Model Office – Changes Since 3/3/22

- Guaranteed Lifetime Withdrawal Benefit (GLWB) maximum lifetime withdrawal percentages by attained age band at income election were reduced at ages 70+ to be more in line with current products. The attained age 70 percentage used for these tests was reduced from 5.50% to 5.00%.
- Model refinement made to more accurately calculate discounting of accumulated asset deficiencies to calculate GPVAD (refined net earned rate vector on additional assets (NAER), etc.)
- No other changes since 3/3/22
- The current product specifications and assumptions used for these test results are shown in the next 4 slides

Product Specifications

- Variable Annuity with a GLWB and Guaranteed Minimum Death Benefit (GMDB) (details on next slide)
- Seven-year surrender charge period
- Single model point issued to age 60 male on the valuation date with single premium of $100,000
- Premium/fund allocation: all of the single premium is invested in separate account funds, allocated 80% U.S. large cap equity and 20% long term U.S. corporate bond funds
  - Monthly fund rebalancing to maintain 80/20 mix.

1. Prorata reduction in guaranteed benefit base for any WDs taken in excess of (a) or (b), where (a) is the annual 10% free WD amount prior to income election, and (b) is the GLWB guaranteed annual withdrawal amount after income election. Upon income election, the fund value reduces dollar for dollar as WD’s are taken until fund value exhausts to zero. Excess WD’s taken above the lifetime WD amount cause a prorata reduction in the Benefit Base and effect the income amount.

</tbody>
</table>

2. GLWB withdrawal rate %

3. Benefits based on Max [actual fund value, premium accum. at 5% compounded] after this period if time allows, may test a ratchet benefit enhancement (max anniv value) calculated on the roll-up benefit base, deducted monthly from fund value

4. Guaranteed Minimum Benefit base stops accumulating at 5% after this period of income election, which defines the lifetime max annual income amount.

5. 5-year waiting period from issue required prior to income election.

6. Benefits taken above the lifetime WD amount cause a prorata reduction in the Benefit Base and effect the income amount.

Liability Assumptions

- Used VM-21 prescribed Additional Standard Projection Amount (ASPA) assumptions for lapse, mortality and expense (broadly reflects average industry experience):
  - Lapse rates decrease as guaranteed benefit is more in the money and zero when fund value exhausts, and reflect policy duration (pre/post SC period, ultimate)
    - In-the-moneyness(t) for GLWB defined as GAPV future income benefit(t) > current fund value(t)
    - GAPV discount rate is 10 year US T-bond as of the valuation date
  - Mortality 2012 IAM, improvement scale G2, VM-21 ASPA Fx factors
  - Expense: $100 per policy + $7e per fund value annual maintenance & overhead

- Exception to prescribed ASPA assumptions used for GLWB income election:
  - Instead of ASPA-WD delay cohort method (many multiple election date cohorts), assumed 100% election at end of contract year 10 (highest guaranteed benefit base roll-up duration), at attained age 70 in this case
  - Assumed 100% of maximum GLWB withdrawal percentage (applied to max of EoY 10 fund value or benefit base) is taken as lifetime income amount at year 10 election
  - Both of the above (timing and amount) are more conservative than prescribed and industry experience and were assumed for initial modeling convenience and time constraints
    - Industry experience shows multiple election dates occur as well as < 100% of max WD rate taken

- No other partial withdrawals, Required Minimum Distributions (RMDs) or non-conforming/excess withdrawals assumed other than the GLWB withdrawals
Asset Assumptions

- Starting asset amount = separate account cash surrender value
- No starting general account investments, and there is initial borrowing of the SA surrender charge amount to top-up separate account to the full $100k deposit – borrowed at initial 7-year bond rate with monthly P&I paydown
- General account investment/reinvestment strategy:
  - Invest positive cash flows in 50%/50% mix of AA/A non-callable corporate bonds
    - Use prescribed tables (from VM-20) for spreads (current and long term) and default costs
    - 9 basis points (bp) annual investment expense
  - Bond maturity mix 1 to 30 years; starts longer and shortens over time to maintain reasonable match to liability cash flows
  - If there is a shortfall, borrow at same strategy/rates as reinvestment (“negative assets approach”), therefore borrowing rates are the same as reinvestment rates
- Initially no hedging or reinsurance was modeled, as there has not been time to reflect this.
- Monthly model time steps, 40 projection years (when no material liabilities remain)
- 10,000 scenarios were run for each scenario set

VM-21 Reserve Method Description

- Reserve and C3P2 Risk-Based Capital (RBC) and TAR calculated per VM-21:
- Reserve = Stochastic Reserve + Additional Standard Projection Amount (ASPA), where
  - Stochastic Reserve = Conditional Tail Expectation (CTE)70 of 10,000 Scenario Reserves
  - Scenario Reserve for this model segment = Max (aggregate cash surrender value (CSV), Starting Assets + Greatest Present Value of Accumulated Deficiencies (GPVAD))
  - Starting assets = CSV, so scenario GPVAD is portion of reserve held in general account to ensure all guaranteed liability cash flows and expenses (in excess of those funded by separate account) are paid off to the end of the projection for the scenario
  - Discount rates to calculate GPVAD = net earned rates on additional available assets invested up front to back the GPVAD (NAER)
  - ASPA = add-on to stochastic reserve if base assumptions are less conservative than prescribed assumptions (not applicable for these tests, i.e., ASPA=0, since assumptions used are not less conservative than prescribed)
- C3P2 RBC uses macro tax adjustment (MTA) method in these tests:
  - C3 amount = max(0, 25% * ((CTE98 + ASPA - Statutory Reserve) x (1-Federal Income Tax (FIT) rate) – (Statutory Reserve - Tax Reserve) x FIT rate)))
Sample Scenario Reserve Calculations

Before discussing the full scenario set results, it is useful to review the mechanics and key amounts of the scenario reserve calculation.

The next 3 slides discuss and show graphs of this detail for 2 of the 3,000 scenario reserves comprising the CTE70 stochastic reserve.

Sample Scenario Reserve Calculations

- The next 2 slides and graphs illustrate the calculations for high and low scenario reserve amounts (driven by scenario fund returns, interest rates, investment yields and borrowing costs).
- Each has the same general pattern of starting and projected asset amounts and flows, particularly for the CTE70 scenarios:
  - Green line is the separate account assets (fund value); starts at deposit and grows or declines based on scenario fund returns net of fees, and as fund value is released on surrender, death and GLWB withdrawal payments while fund value is positive.
  - Blue line is the general account assets/deficiencies prior to the scenario reserve assets added in. Starts negative (initial SA SC borrowing) and grows in early years as fee income is invested (net of expenses and some GMDB and GLWB claims in excess of fund value released). Then declines after separate account fund value exhausts and continuing GMDB + GLWB claims and expenses are paid out. Declines below zero (accumulated deficiency) for many of the CTE70 scenarios.
  - Orange line is the PV of the blue line assets and deficiencies, discounted at the net earned rates on additional assets (NAER). The greatest of the projected year-end PV of negative of the deficiencies (GPVAD) is the scenario reserve needed to be invested up front to eliminate the blue line projection year-end deficiencies.
  - Yellow line is the new projection of the blue line general account assets but now including the initial scenario reserve assets and shows the projected year-end deficiencies have been eliminated.
- Tables of separate account returns and NAER discount rates driving the results are also shown.
High Reserve Scenario

Separate account assets exhaust after 12 years. Must add general account assets ($41,793) up front to fund future guaranteed income & death benefits and expenses.

Low Reserve Scenario

Separate account assets last for 20 years. Must add relatively small amount of general account assets ($1,004) up front to fund future guaranteed income & death benefits and expenses.
Summary of Results – All Scenario Sets

The next 2 slides summarize the:
• Stochastic CTE70 reserves and
• C3 Phase 2 Total Assets Required (TAR)

For the following scenario sets tested:
1. AIRG scenarios
2. ACLI reference SLV model (version 1)
3. Conning GEMS with Generalized Fractional Floor (GFF)
4. Strommen with Shadow Rate Floor (version 4B)
5. Conning GEMS unfloored 12/31/2020 valuation date scenarios developed in October 2021

In addition, a “hybrid” set of scenarios was tested for 3, 4 and 5 above, by replacing the U.S. large cap equity fund scenarios with the AIRG U.S. large cap equity fund scenarios (as an initial simplistic rough test to get a feel for impact of removing the equity risk premium linkage to overnight UST scenario rates).

</table>

Hybrid scenario results are a simplistic initial rough test to get an initial feel for the impact of removing the equity risk premium linkage to scenario short term overnight UST rates.

Preliminary Conclusions

- Impact to reserves is very large under the 3 Conning ESG scenario sets (Oct unfloored, GFF, Stroemmen SRF) relative to current AIRG or ACLI reference model.
- Ratios of reserves and TAR to CSV are significantly higher - general account reserves are almost triple the AIRG & ACLI reserves for GEMS GFF and Stroemmen SRF, and more than triple using the GEMS unfloored set.
- The 3 Conning scenario sets have lower equity returns at 12/31/2020 in part due to very low (zero and negative) short overnight rates, as Conning’s equity risk premium (ERP) used in the return scenario generation is linked to overnight interest rate. The AIRG and ACLI reference equity return ESGs do not have this linkage.
- Specifically the GEMS Large Cap expected equity return is roughly the Overnight Rate plus a fixed ERP. The link happens at every node of the simulation, so the short-term expected equity return is constantly changing. Early year very low and negative Overnight simulated rates can materially reduce the simulated equity returns. As the average yields rise in these scenarios, there will be a general rise in the average Large Cap return, but the overall impact cumulative appears to be lower returns as shown on slide 36 which compares left tail equity returns across the sets (left tail more relevant for this particular product).
- At 12/31/2019 the short term rates were >100bp higher than at 12/31/2020, so it will be interesting to see these 2019 results when scenarios are available.
  - Would expect to see potential “artificial”/non-economic changes in reserves and TAR 2019 versus 2020 using Conning scenarios just due to this rate linkage impact on equity scenarios, and
  - Higher procyclical volatility with rate linkage – e.g., in force blocks at 12/31/2019 will be deeper in money at 12/31/2020 and the 2020 equity return scenarios would have been significantly lower than 12/31/2019.
- May result in higher hedge costs depending on hedging target (e.g., if hedging statutory results).
Preliminary Conclusions

- Reserves and TAR for the 3 Conning scenario sets also higher due to the “low for long” interest rate requirements, which are not present in the current AIRG.

- Initial impressions are that for the Conning scenarios (GEMS GFF, Stroommen SRF, Oct unfloored), the low equity return scenarios are more of a driver of the large reserve and TAR impacts than the low for long interest rate scenarios for this particular product, but still analyzing all of the scenario results to confirm (these tests were only just recently run).

- (Although as noted on prior slide the overnight interest rates are one of the drivers of the equity returns)

- For example the “hybrid” scenario results shown (using Conning GEMS GFF interest rate and LT corporate bond fund returns but using AIRG equity returns) have reserve and TAR amounts that are very similar to the AIRG and ACLI reference model results.

</tbody>
</table>

Initial comments:

2 Accumulated deficiency is worse when rates are higher due to higher borrowing costs, but GPVAD (general account reserve) is lower. Some of this can be caused by differences in NAER vector for the initial GPVAD investment ("additional assets") and the ongoing emerging average earned rates and borrowing rates on the other general account assets from fee income investments and deficiency borrowing. Thus can have a lower reserve (higher NAER) even though ending deficiency is worse. Still reviewing.

3 Accumulated deficiency is less when rates are lower due to lower borrowing costs, but GPVAD (general account reserve) is higher.

2 & 3 Thus the reserve impact is slightly asymmetric for UST sensitivity ($3,068 higher reserve for test 3 versus $2,861 lower reserve for test 2).

4 Relatively low favorable impact of the higher equity returns for this scenario - separate account still declines quickly to zero even after adding +25bp to very low returns. Also the required rebalancing to maintain 80/20 fund mix dampens the beneficial effect of the higher equity fund return sensitivity as it moves some of the higher return to the LT corporate bond fund each month.

5 Combined impact is close to sum of the parts tests 2+4.

Note - similar sensitivity impacts for other scenarios will be different - depending on level of general and separate account assets, etc. More analysis to come, using different scenarios and other sensitivities.
Caveats

- Intended as an illustrative single data point (single representative model point issued on valuation date; no future sales; not an in-force block) for assessing materiality and relative impact to reserve levels and volatility from a change to the scenarios
  - Companies should consider testing their own products using their own models.

- Not intended to:
  - Cover wide variety of products available on the market
  - Reflect a full distribution of issue ages / genders within the given product
  - Reflect different starting in-force block conditions (guaranteed benefit moneyness, etc.)
  - Thoroughly test all the underlying assumptions
  - Be used as a basis for assessing appropriateness of an Economic Scenario Generator

Questions?

The Life Actuarial (A) Task Force met March 10, 2022. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Ben Bock, Ted Chang, Ahmad Kamil, and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Trinidad Navarro represented by Eric Dunning and Derek Wallman (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Judith L. French represented by Peter Weber (OH); Michael Humphreys represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT).

1. **Exposed Amendment Proposal 2022-04**

   Alan Routhenstein (American Academy of Actuaries—Academy) gave a presentation (Attachment Two-A) on the Academy proposal for replacing swap spreads based on the London Interbank Offered Rate (LIBOR) with those based on the Secured Overnight Financing Rate (SOFR). The swap spreads are used for the modeled reserve asset and derivative calculations under VM-20, Requirements for Principle-Based Reserves for Life Products; VM-21, Requirements for Principle-Based Reserves for Variable Annuities; and VM-22, Statutory Maximum Valuation Interest Rates for Income Annuities.

   Mr. Routhenstein said there are three questions for the Task Force and commenters to consider: 1) Should the NAIC start publishing SOFR swap spreads in 2022 (and if so, how should the amendment proposal address this)?; 2) What is the practical number of spread adjustment parameters to use?; and 3) Should the NAIC consider payment frequency and day count enhancements to improve accuracy?

   Pat Allison (NAIC) said the current Valuation Manual language allows for the transition from LIBOR to SOFR, but it does not seem to allow for publishing both sets of rates. She agreed to request the NAIC Legal Department offer an opinion on whether the NAIC has the authority to publish both sets of rates.

   Mr. Leung made a motion, seconded by Mr. Chou, to expose amendment proposal 2022-04 (Attachment Two-B), including the questions for commenter consideration and some minor reference clarifications, for a 44-day public comment period ending April 22. The motion passed unanimously.

2. **Adopted Amendment Proposal 2022-01**

   Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI comment letter (Attachment Two-C) supports the adoption of amendment proposal 2022-01. Sheldon Summers (Claire Thinking) said his comment letter (Attachment Two-D) points out that the retrocessionaire in a coinsurance agreement does not have the right to increase premiums in the same way the initial yearly renewable term (YRT) reinsurer would. He recommends setting $\frac{1}{2} cx$ as the reserve floor but requiring modeling for the deterministic and stochastic reserves if the coinsurance retrocessionaire believes the initial YRT reinsurer has less of an incentive to increase the YRT reinsurance premium rates on a timely basis due to the risk being transferred via the coinsurance treaty.
Ms. Hemphill said while she understands the comments, she believes that modeling the retrocession with the current VM-20 requirements would result in a reserve that is not materially different from the $\frac{1}{2} cx$ treatment, and the intent was to clarify the current requirements. Mr. Slutsker concurred. He said the intent of the proposal was to clarify the process in place for retrocessions. He expressed an openness to considering a broader scope in the future.

Mr. Slutsker made a motion, seconded by Mr. Chupp, to adopt amendment proposal 2022-01 (Attachment Two-E). The motion passed unanimously.

Having no further business, the Life Actuarial (A) Task Force adjourned.
APF 2022-__: SWAP SPREADS AND LIBOR TRANSITION TO SOFR – UPDATED VM-20 PRESCRIBED SWAP SPREADS GUIDANCE IN LIGHT OF THE LONDON INTER-BANK OFFERED RATE (LIBOR) TRANSITION TO THE SECURED OVERNIGHT FINANCING RATE (SOFR)

Life Actuarial Task Force (LATF) March 10, 2022

f. Appendix 1 – A deep dive on the Academy’s rationale for this APF
   1) 1a - Why does the APF add over 4 pages to VM-20?
   2) 1b - Why is the 3-month Spread Adjustment being proposed for estimating 1-year to 30-year SOFR swap spreads?
   3) 1c - How were Spread Adjustments defined in Bloomberg calculations?
   4) 1d - What alternative ways to estimate historical SOFR swap spreads were considered & why were they not used?

Questions for discussion:

1) Q1: Should the NAIC start publishing SOFR swap spreads in 2022 (and if so, how should the APF address this)?
2) Q2: What is the practical number of Spread Adjustment parameters to use?
3) Q3: Should we consider Payment Frequency and Day Count enhancements to improve accuracy?

Executive Summary (1 of 2)

- Background
  - Swap spreads are used for VM modeled reserve asset and derivative calculations under VM-20, VM-21 and VM-22
  - Bank regulators and a group of private market participants called Alternative Reference Rates Committee (ARRC) have agreed that for interbank USD interest rate swaps executed after 2021, the floating rate needs to be based on an index other than the London Interbank Offered Rate (LIBOR), with similar changes for swaps in other currencies
  - During 2021 the swap market evolved such that the definition of a standard n-year interest rate swap changed in January 2022 to be a SOFR swap (for which the floating rate is based on SOFR) from the historical LIBOR swap (for which the floating rate is LIBOR)
  - As a result, VM-20 instructions for how the NAIC will calculate and publish swap spreads needs to be updated for Current Benchmark Swap Spreads (published monthly) and Long-Term Benchmark Swap Spreads (published quarterly)
  - The Academy is recommending that LATF consider exposing this APF for 30-45 days and adopting shortly thereafter, so the NAIC can start publishing updated spread tables that could be used for 2022 valuations
  - The attached APF is proposing updates to these three VM-20 sections:
    - Section 9.F.8.d Procedure for Setting Prescribed Gross Asset Spreads
    - Appendix 2.F Current Benchmark Swap Spreads
    - Appendix 2.G Long-Term Benchmark Swap Spreads
Executive Summary (2 of 2)

- The APF proposes that
  - 3-month LIBOR be replaced with 3-month SOFR swap rate
  - 6-month LIBOR be replaced with 6-month SOFR swap rate
  - 1-year LIBOR swap rate be replaced with 1-year SOFR swap rate
  - ...
  - 30-year LIBOR swap rate be replaced with 30-year SOFR swap rate

- Because there aren’t 15 years of historical SOFR Swap data for the NAIC to use to calculate Long-Term Benchmark Swap Spreads, the APF proposes an estimation formula
  - Estimated historical current SOFR swap rate = corresponding LIBOR swap rate – Spread Adjustment

- Question 1 on slides 21-22 discusses: Should the NAIC should start publishing SOFR swap spreads in 2022 (and if so, how should the APF address this)?
- Questions 2 & 3 on slides 23-27 discuss: Should the APF should be refined to increase calculation accuracy at the cost of increased complexity?

Where are Swap Spreads applicable?

- Examples of assets and derivative instruments for which the updated swap spread guidance would be applicable include
  - Floating rate corporate bonds and floating rate asset backed securities
  - Interest rate swaps (e.g., insurer receives a fixed rate and pays a floating rate)
  - Interest rate caps (e.g., insurer receives the excess if any of a floating rate over a specified fixed rate)
  - Interest rate floors (e.g., insurer receives the excess if any of a specified fixed rate over a floating rate)
  - Swap options (e.g., insurer has the right to enter an interest rate swap)

- Also, some companies use swap spreads to define swap curves used to calculate derivative portfolio and liability benchmark market values at each node in cash flow projection models
Highlights of NAIC Staff’s 8/12/21 deck (1 of 2)

- Companies with LIBOR in one or more contracts will need to take action, which varies by contract type
- Future LATF Actions Needed
  - Identify the replacement for LIBOR.
  - Adopt the replacement for LIBOR when the NAIC determines that LIBOR is no longer effective. This will enable the NAIC to begin publishing the 3-month and 6-month rates.
  - Amend the Valuation Manual to specifically identify the replacement for 3-month and 6-month USD LIBOR.
  - Determine whether the process for calculating Long Term Benchmark Swap Spreads needs to be changed, given that there is no 15-year history for LIBOR’s replacement.

Detailed Summary of APF’s enhancements to NAIC Staff recommendations

- Continue to calculate NAIC prescribed swap spreads as the average of those calculated by JP Morgan and Bank of America, based on methodologies specified in the APF
- Identify the replacements for 3m & 6m LIBOR as 3m & 6m SOFR swap rates
- Identify the replacements for 1y to 30y LIBOR swap spreads as 1y to 30y SOFR swap spreads
- In order to prescribe Long-Term Benchmark Swap Spreads, estimate historical current SOFR swap spreads over 15 years using Spread Adjustments published by Bloomberg (rather than estimate historical SOFR based on the 7/15/19 FRB “Historical Proxies” publication – discussed on slides 16-19)
- Define for each maturity “m” and historical business day “u” before 2022:
  - historical current SOFR swap spread(m,u) = historical current LIBOR swap spread(m,u) – Spread Adjustment(m,u)
- Define Spread Adjustment(m,u) either as (discussed in detail on slides 14-15):
  - Two parameters published by Bloomberg on 3/5/2021 (6-month Spread Adjustment for m = 6 months, and 3-month Spread Adjustment for all other values of m); or
  - Official values or estimates of about 7,500 parameters published by Bloomberg (6-month and 3-month parameters for each of about 250 business days per year, over 15 years)
- Facilitate appointed actuary use of NAIC prescribed SOFR swap spreads also for 2022 valuation dates

Appendix 1 – A deep dive on the Academy’s rationale for this APF

- 1a - Why does the APF add over 4 pages to VM-20?
- 1b - Why is the 3-month Spread Adjustment being proposed for estimating 1-year to 30-year SOFR swap spreads?
- 1c - How were Spread Adjustments defined in Bloomberg calculations?
- 1d - What alternative ways to estimate historical SOFR swap spreads were considered & why were they not used?
Appendix 1a - Why does the APF add over 4 pages to VM-20?

- This APF addresses technical issues with the LIBOR transition to SOFR
  - Because the timing for how SOFR is determined & published is different than for LIBOR, 3-month and 6-month LIBOR cannot be replaced with 3-month and 6-month SOFR, but instead:
    - 3-month LIBOR needs to be replaced in VM-20 with the 3-month SOFR swap rate, and
    - 6-month LIBOR needs to be replaced in VM-20 with the 6-month SOFR swap rate
  - Because SOFR swaps are replacing LIBOR swaps, VM-20 needs to specify how estimated historical current SOFR swap spreads are determined, so there is 15 years of historical data to calculate Long Term Benchmark Swap Spreads
- This APF provides two alternative definitions of Spread Adjustment, and when one of them is chosen by LATF, the other will be deleted and the revised APF should be about ½ page shorter
- This APF provides transition year guidance for valuation dates during 2022 (see slides 21-22) to facilitate appointed actuary use of NAIC prescribed SOFR swap spreads also for 2022 valuation dates, and the guidance includes about 1.25 pages of drafting

Appendix 1b - Why is the 3-month Spread Adjustment being proposed for estimating 1-year to 30-year SOFR swap spreads?

- The historical market convention for LIBOR swaps was for floating rate payments to be 3-month LIBOR paid on a quarterly basis
- Bank regulators and the ARRC agreed to define Spread Adjustment (in https://data.bloomberglp.com/professional/sites/10/LIBOR-Fallback-Rate-Adjustments-Rule-Book.pdf) to equate
  - A stream of n-month LIBOR payments; and
  - A stream of n-month SOFR payments + Spread Adjustment(n-month)
- Thus, by subtracting a 3-month Spread Adjustment from 1-year to 30-year historical LIBOR swap spreads over a period of time, we estimate using swap industry definitions the 1-year to 30-year historical SOFR swap spreads that would have been applicable over such time period
Appendix 1c - How were Spread Adjustments defined in Bloomberg calculations?

- The definition in the IBOR Fallback Rate Adjustments Rule Book specifies that (for USD n-month Spread Adjustments)
  - For dates after 3/5/2021, Spread Adjustments equal those of 3/5/2021
  - On or prior to 3/5/2021, Spread Adjustment = the 5-year median (over a “median period”) of the difference between n-month LIBOR and estimated n-month SOFR determined on a compounded in-arrears basis
  - The “median period” for business day “u” ends n months and two business days before “u” and starts 5 years earlier
- The example in Appendix 1 of this 12/14/21 Bloomberg document illustrates the calculation:

Ap. 1d - What alternative ways to estimate historical SOFR swap spreads were considered & why were they not used? (1 of 4)

- We contemplated that perhaps, rather than use the IBOR Fallback Rate Adjustments Rule Book 5-year mean approach, instead either
  - We use a 15-year median, mean or conditional mean might be more consistent with the 15-year prescribed observation period used for calculating Long Term Benchmark Swap Spreads; or
  - We estimate historical SOFR using the approach in FRB’s 7/15/19 “Historical Proxies” paper, and then calculate estimated 3-month and 6-month SOFR swap rates and SOFR swap spreads
- Such calculations required a basic principles approach starting with raw data, and involved several steps including attempts to match results published by the FRB and Bloomberg
Ap. 1d - What alternative ways to estimate historical SOFR swap spreads were considered & why were they not used? (2 of 4)

- As a 1st step, we obtained actual SOFR data starting with April 2018, and then estimated older historical SOFR using:
  - This regression formula (SOFR = Survey Rate + 0.38 * (GCF - Survey Rate - 0.05)) from a 7/15/19 FRB paper found at https://www.federalreserve.gov/econres/notes/feds-notes/historical-proxies-for-the-secured-overnight-financing-rate-20190715.htm; and
  - Data from these websites:
    - FRBNY Repo “Survey Rate” from https://www.newyorkfed.org/markets/opsolicy/operating_policy_180309
    - “GCF” (General Collateral Financing) Repo Index rate from https://www.dtcc.com/charts/dtcc-gcf-repo-index

- As a 2nd step, we prepared the estimated SOFR graph below (replicating Figure 4 in the 7/15/19 FRB paper) and exactly matched FRB’s calculation of SOFR Index as of 12/31/21, giving us confidence in our SOFR calculations.

Ap. 1d - What alternative ways to estimate historical SOFR swap spreads were considered & why were they not used? (3 of 4)

- As a 3rd step, we extracted data to let us directly estimate historical LIBOR spreads and SOFR spreads:
  - LIBOR data from http://iborate.com/usb-libor/; and

- As a 4th step, we tried to replicate Bloomberg’s 3-month and 6-month Spread Adjustment calculations as of 3/5/21, and came sufficiently close as follows:

<table>
<thead>
<tr>
<th></th>
<th>3m</th>
<th>6m</th>
</tr>
</thead>
<tbody>
<tr>
<td>AAA</td>
<td>0.25713%</td>
<td>0.42408%</td>
</tr>
<tr>
<td>Bloomberg</td>
<td>0.26161%</td>
<td>0.42820%</td>
</tr>
<tr>
<td>Difference</td>
<td>-0.0048%</td>
<td>-0.00418%</td>
</tr>
</tbody>
</table>

- As a 5th step, we extracted 7 to 10y Treasury and Investment Grade Corporate yield data from these websites to estimate which dates were included as of yearend 2021 in the NAIC’s conditional mean calculations:
  - Corporate: https://fred.stlouisfed.org/series/BAMLC4AOC710YEY
Ap. 1d - What alternative ways to estimate historical SOFR swap spreads were considered & why were they not used? (4 of 4)

- As a 6th step, we calculated 15-year means, medians and conditional means as of 12/31/21 of daily Spread Adjustments that were estimated based on the IBOR Fallback Rate Adjustments Rule Book, with results relative to the 3/5/21 Bloomberg factors within 4 bps for 3-month and within 6 bps for 6-month, and we concluded that was not a big enough difference to warrant a departure from the Bloomberg 3/5/21 Spread Adjustments. Below are summary statistics.

<table>
<thead>
<tr>
<th>Spread Adjustment Summary Stats</th>
<th>3-month</th>
<th>6-month</th>
</tr>
</thead>
<tbody>
<tr>
<td>15y Mean</td>
<td>0.23274%</td>
<td>0.37077%</td>
</tr>
<tr>
<td>15y Median</td>
<td>0.22091%</td>
<td>0.37183%</td>
</tr>
<tr>
<td>Cond1 Mean</td>
<td>0.35535%</td>
<td>0.38538%</td>
</tr>
</tbody>
</table>

- As a 7th step, we also estimated historical 3m and 6m SOFR swap spreads and rates using our estimated historical SOFR Index calculated based on https://www.newyorkfed.org/markets/reference-rates/additional-information-about-reference-rates#sofr_ai_calculation_methodology. We concluded that in a vacuum such approach had some merits (e.g. fewer 2021 negative rates and spreads) vs. the Spread Adjustment approach in the IBOR Fallback Rate Adjustments Rule Book, but was undesirable because it was much more complicated and its estimated historical SOFR Index approach would be inconsistent with the Rule Book, which has been adopted and likely reflected in numerous insurers’ swap agreements.

Questions for discussion

- Q1: Should the NAIC start publishing SOFR swap spreads in 2022 (and if so, how should the APF address this)?

- Q2: What is the practical number of Spread Adjustment parameters to use?

- Q3: Should we consider Payment Frequency and Day Count enhancements to improve accuracy?
Q1: Should the NAIC start publishing SOFR swap spreads in 2022 (and if so, how should the APF address this)? (1 of 2)

The Issue:
- The 2022 VM was finalized in July 2021, and requires the NAIC to publish
  - Current Benchmark LIBOR swap spreads (monthly)
  - Long-Term Benchmark Swap Spreads (quarterly)
- The market evolved dramatically since then, where:
  - In 2021 Q4 SOFR swaps trading volume overtook LIBOR swaps trading volume
  - In 2022 all (or almost all) swaps trading is SOFR swaps
- For valuations during 2022 for insurers with assets or derivatives affected by the LIBOR transition to SOFR
  - Some insurers will have already transitioned models to use SOFR swap spreads
  - Some insurers will need more time, with models still based on LIBOR swap spreads
  - A LATF declaration that 3m & 6m LIBOR are replaced with 3m & 6m SOFR swap rates will alone not provide sufficient clarity
  - The 2022 VM did not contemplate that 1y to 30y swap spreads also need to transition from LIBOR to SOFR swaps
  - At some point the NAIC might no longer have enough data to publish benchmark LIBOR swap spreads
  - The VM doesn’t specify how the NAIC might calculate prescribed Long-Term Benchmark Swap Spreads based on SOFR swaps
  - Appointed actuaries will need to utilize more judgment than for 2023 valuation dates (when this APF becomes effective)
- It would help companies and regulators if in 2022 both LIBOR and SOFR swap spreads are published

Q1: Should the NAIC start publishing SOFR swap spreads in 2022 (and if so, how should the APF address this)? (2 of 2)

1. The Academy’s proposed APF provides clarity for 2022 valuation dates
   A. Require the NAIC to publish
      i. Benchmark LIBOR swap spreads to the extent the data is still available
      ii. Benchmark SOFR swap spreads once the data becomes available
   B. Specify how the NAIC will calculate Long Term Benchmark SOFR Swap Spreads
2. Potential alternatives that LATF might consider
   A. A revised APF could be silent on 2022 and let actuaries use judgment: Delete the “during 2022” guidance, change “on or before Dec 31, 2021” guidance to be “before 2023” guidance, and don’t specify what the NAIC should publish for 2022 (NAIC would publish LIBOR and SOFR swap spreads as suggested by “1” above, without a VM-20 requirement to do so)
   B. Same as “2.A”, but with a different parenthetical: (as implied by 2022 VM drafting, NAIC would switch, on a transition date it determines and announces, from publishing LIBOR swap spreads to publishing SOFR swap spreads as required for 2023)
   C. Same as “2.A” or “2.B”, but provide some guidance in an Actuarial Guideline, the VM-20 Practice Note and/or some other form of guidance provided by LATF

What approach does LATF prefer?
Q2: What is the practical number of Spread Adjustment parameters to use? (1 of 3)

- Alternatives currently drafted within the APF are
  - 2 parameters: 0.26161% (3-month USD LIBOR Spread Adjustment) and 0.42826% (6-month USD LIBOR Spread Adjustment) published on 3/5/21 by Bloomberg in https://assets.bbhub.io/professional/sites/10/IBOR-Fallbacks-LIBOR-Cessation_Announcement_20210305.pdf, as the applicable on and after 3/5/21
    - 0.26161% would apply for 3-month SOFR swap spreads, and for 1y to 30y SOFR swap spreads
    - 0.42826% would apply for 6-month SOFR swap spreads
  - About 7,500 parameters: official or estimated 3-month and 6-month Spread Adjustments, as defined in https://data.bloomberg.com/professional/sites/10/IBOR-Fallback-Rate-Adjustments-Rule-Book.pdf (the “Rule Book”), for each business day (there are about 250 each year) over the 15-year prescribed observation period, noting that the parameters on 3/5/21 apply for the subsequent business days in 2021, where for each business day “u”
    - 3-month Spread Adjustment (“u”) would apply on “u” for 3-month SOFR swap spreads, and for 1y to 30y SOFR swap spreads
    - 6-month Spread Adjustment (“u”) would apply on “u” for 6-month SOFR swap spreads

- Note the APF states “have JP Morgan and Bank of America calculate SOFR swap spreads (or provide the components so that the NAIC can calculate the bank's SOFR swap spreads) on each business day over the prescribed observation period”

- The next page has data to help discuss whether the additional accuracy warrants the additional complexity

---

Q2: What is the practical number of Spread Adjustment parameters to use? (2 of 3)

- Graphic illustrations of business day Academy Approx. (7,500 parameters) vs Bloomberg 3/5/21 (2 parameters)

![Average Future Val Date Impact (% on Swap Spreads of Level Spread Adjustment as an Approximation vs. Daily Spread Adjustments](image)

Q3 for discussion: Should we consider Payment Frequency and Day Count enhancements to improve accuracy? (1 of 2)

- Historically for prescribed benchmark swap spreads (for LIBOR swaps)
  - VM-20 has been silent on payment frequency and day count basis
  - The NAIC has been subtracting Treasury Yields from Swap Rates
  - For 1-year to 30-year maturities, “Semiannual, 30/360” (which is basically the same as bond-equivalent) has presumably been applicable
  - For 3-month and 6-month maturities, presumably the NAIC’s LIBOR data was quoted on an Actual/360 basis, though it is not clear whether the NAIC’s T-Bill data was quoted on a Bank Discount basis or on a Coupon Equivalent basis

- Prospectively for prescribed benchmark swap spreads (for SOFR swaps)
  - Accuracy would be improved if additional guidance were provided within the APF to ...
    - Specify the payment frequency and day count basis for prescribed SOFR swap spreads; and
    - Include additional steps, to be applied by the NAIC, to convert extracted data to the prescribed basis for SOFR swap spreads
  - However, this would make the APF more complex, increase the amount of work for NAIC staff, warrant a longer LATF exposure period, and lengthen the time until LATF adopts the APF
Q3 for discussion: Should we consider Payment Frequency and Day Count enhancements to improve accuracy? (2 of 2)

- To expedite APF adoption, the Academy recommends that for benchmark SOFR swap spreads
  - This APF should be not specify a payment frequency or day count basis
  - After adopting this APF, LATF should ask the Academy to research and recommend whether the APF should be refined
- Relevant historical background for LIBOR swap spreads
  - Quarterly, Actual/360 applies for 3-month LIBOR
  - Semiannual, Actual/360 applies for 6-month LIBOR
  - 3-month and 6-month T-Bills are often quoted on a Bank Discount basis or on a Coupon Equivalent basis
  - Quarterly, Actual/360 has historically applied for the floating rate payments on 1y to 30y LIBOR swaps
  - Semiannual, 30/360 has historically applied for the fixed rate payments on 1y to 30y LIBOR swaps
- Relevant background for SOFR swap spreads
  - Quarterly, Actual/360 applies for 3-month SOFR
  - Semiannual, Actual/360 applies for 6-month SOFR
  - Annual, Actual/360 is the new market convention for the floating rate on 1y to 30y SOFR swaps
  - Annual, Actual/360 is the new market convention for the fixed rate on 1y to 30y SOFR swaps

Questions?

- Contact: Devin Boerm (boerm@actuary.org)
In addition to commenting on the APF, commenters are also asked to provide feedback on the following questions presented in the Academy PowerPoint file (see the 3/10 LATF call materials):

1. Should the NAIC start publishing SOFR swap spreads in 2022 (and if so, how should the APF address this)?
2. What is the practical number of Spread Adjustment parameters to use? Should we consider Payment Frequency and Day Count enhancements to improve accuracy?

*Please send comments to Reggie Mazyck @ RMazyck@NAIC.Org by close of business on April 22nd, 2022.*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
Alan Routhenstein, on behalf of the American Academy of Actuaries’ Life Reserves Work Group, Annuity Reserves and Capital Work Group, and Variable Annuity Reserves and Capital Work Group

Title of the Issue:
Swap Spreads and London Inter-Bank Offered Rate (LIBOR) transition to the Secured Overnight Financing Rate (SOFR) - Updated VM-20 prescribed swap spreads guidance in light of the LIBOR transition to SOFR.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

January 1, 2022 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

Proposed edits to VM-20 for LIBOR transition to SOFR are shown in the attached Appendix

4. State the reason for the proposed amendment? (You may do this through an attachment.)

   a. Bank regulators and a group of swap market participants have agreed that for interbank interest rate swaps executed after 2021, the floating rate needs to be based on an index other than LIBOR.
   b. During 2021 the swap market evolved such that the definition of a standard n-year interest rate swap changed in January 2022 to be a SOFR swap (for which the floating rate is based on SOFR) from the historical LIBOR swap (for which the floating rate is LIBOR).
   c. As a result, VM-20 instructions for how the NAIC will calculate and publish swap spreads needs to be updated for:
      i. Current Benchmark swap spreads (as of each month end); and
      ii. Long-Term Benchmark swap spreads (as of each quarter end)
   d. Given that 2022 is a transition year, it would be helpful for companies and regulators if the NAIC publishes both LIBOR and SOFR swap spreads to the extent data is available.
   e. The associated presentation provides further background and rationale for this proposal.

NAIC Staff Comments:
Appendix

Proposed amendments to VM-20 for APF 2022-[ ] on Swap Spreads and LIBOR transition to SOFR

d. Interest rate swap spreads over Treasuries shall be prescribed by the NAIC for use throughout the cash-flow model wherever appropriate for transactions and operations including, but not limited to, purchase, sale, settlement, cash flows of derivative positions and reset of floating rate investments. A current and long-term swap spread curve shall be prescribed for year one and years four and after, respectively, with yearly grading in between. In order to accommodate a banking industry decision to replace London Interbank Offered Rate (LIBOR) with Secured Overnight Financing Rate (SOFR), and given that the banking industry is implementing this transition during 2021 – 2023, the NAIC’s procedure to calculate swap spreads is distinct for each of the following three time periods:

i. For valuation dates and interim month-end dates on or before December 2021, the current prescribed curve shall be the LIBOR swap curve (for which 3-month and 6-month points represent spreads over Treasuries for 3-month and 6-month LIBOR), and the long term swap spread curve shall be calculated based on 15-year moving averages.

ii. For valuation dates and interim month-end dates during 2022, given that this year will be a transition year because the Life Actuarial (A) Task Force in early 2022 will have declared 3-month and 6-month SOFR swap rates as the replacements for 3-month and 6-month LIBOR for VM-20 benchmark swap spreads,

1) Current and long-term LIBOR swap spreads will continue to be prescribed and published to the extent the data is still available, and

2) Current and long term SOFR swap spreads will be prescribed and published, as described for a month-end date after 2022, once the data becomes available.

iii. For valuation dates and interim month-end dates after 2022, the current prescribed curve shall be the SOFR swap curve (for which 3-month and 6-month points represent spreads over Treasuries for the 3-month and 6-month SOFR swap rate, defined herein as the fixed rate one party pays at the end of three months or six months in exchange for receiving at such time 3-month or 6-month SOFR calculated on a compounded in arrears basis). Long term SOFR swap curve spreads, given that the SOFR swap market did not emerge before late 2021 and that SOFR is a new index for which there is no official data before April 2, 2018, shall be calculated based on 15 year moving averages of prescribed estimates of historical current SOFR swap spreads.

Deleted: The three month and six month points on the swap spread curves shall be the market observable values for these tenors. Currently, this shall be the corresponding

Deleted: When the NAIC determines LIBOR is no longer effective, the NAIC shall recommend a replacement to

Deleted: which

Deleted: effective upon adoption by the Task Force.
VM-20 Appendix 2.F Current Benchmark Swap Spreads:

1. Extract data from Bank of America and JP Morgan:
   a. For a month-end date on or before December 2021, for tenors of one-year to thirty-years, extract LIBOR swap spread data determined as of the last business day of the month by maturity. For Bank of America data, convert the swap rate for each maturity to a swap spread by subtracting the corresponding maturity Treasury yield from the swap rate. For JP Morgan, the swap spread is provided for each maturity.
   
   b. For a month-end date during 2022,
      i. extract LIBOR swap data to the extent the data is available from both Bank of America and JP Morgan, and
      ii. once the data becomes available, have JP Morgan and Bank of America calculate SOFR swap spreads (or provide the components so that the NAIC can calculate the bank’s SOFR swap spreads) as described for a month-end date after 2022.
   
   c. For a month-end date after 2022, have JP Morgan and Bank of America calculate SOFR swap spreads (or provide the components so that the NAIC can calculate the bank’s SOFR swap spreads).
      i. For each maturity “m” = 0.25, 0.5, 1 … 30 years, and the last business day “u” of the month:
         1) \[ \text{SOFR swap spread}(m,u) = \text{SOFR swap rate}(m,u) - \text{Treasury yield}(m,u). \]
   
   [Drafting Note: 3-month and 6-month SOFR swap rates are defined herein as the fixed rate one party pays at the end of three months or six months in exchange for receiving at such time 3-month SOFR or 6-month SOFR, calculated on a compounded in arrears basis.]

2. Calculate benchmark spreads:
   a. For a month-end date on or before December 2021, average the Bank of America LIBOR swap spread with the JP Morgan LIBOR swap spread by maturity determined as of the last business day of the month.
   
   b. For a month-end date during 2022,
      i. average the LIBOR swap spread data by maturity as before 2022 to the extent the data continues to be available, and
      ii. average the SOFR swap spread data by maturity once the data becomes available.
   
   c. For a month-end date after 2022, average the Bank of America SOFR swap spread with the JP Morgan SOFR swap spread by maturity.

3. Publish the Current Benchmark Swap Spreads by maturity in a table:
   a. For a month-end during 2022, publish LIBOR swap spreads to the extent the data is still available, publish SOFR swap spreads once the data becomes available, and clarify in each column of published current swap spreads whether the spreads are LIBOR swap spreads or SOFR swap spreads.
   
   b. For a month-end after 2022, indicate in the publication that these are SOFR swap spreads.
VM-20 Appendix 2.G Long-Term Benchmark Swap Spreads:

1. Extract data from Bank of America and JP Morgan:
   a. For a quarterly valuation date on or before December 2021, extract data to calculate historical current LIBOR swap spreads. More specifically, extract daily LIBOR swap spread data over the prescribed observation period (rolling 15-year period) ending on the last business day of the quarter. For Bank of America data, convert the daily swap rate for each maturity to a swap spread by subtracting the corresponding maturity Treasury yield from the swap rate. For JP Morgan, the daily swap spread is provided for each maturity.
   b. For a quarterly valuation date during 2022,
      i. extract LIBOR swap data to the extent the data is still available from both Bank of America and JP Morgan, over the prescribed observation period (rolling 15 year period) ending on the last business day of the quarter, and
      ii. once the data becomes available, have JP Morgan and Bank of America calculate SOFR swap spreads (or provide the components so that the NAIC can calculate the bank’s SOFR swap spreads) on each business day over the prescribed observation period (rolling 15-year period) ending on the last business day of the quarter, as described for a quarterly valuation date after 2022 and before 2037.
   c. For a quarterly valuation date after 2022 and before 2037, have JP Morgan and Bank of America calculate SOFR swap spreads (or provide the components so that the NAIC can calculate the bank’s SOFR swap spreads) on each business day over the prescribed observation period (rolling 15-year period) ending on the last business day of the quarter, as follows:
      i. For each business day “u” after 2021 and within the prescribed observation period (rolling 15 year period),
         1) For each maturity “m” = 0.25, 0.5, 1 ... 30 years,
            a) SOFR swap spread(m,u) = SOFR swap rate(m,u) - Treasury yield(m,u).
      ii. For each business day before 2022 and within the prescribed observation period (rolling 15 year period), utilize Bloomberg’s 2021-03-05 published USD Spread Adjustments as follows:
         1) For each maturity “m” = 3 or 6 months, and business day “u” prior to 2022,
            a) SOFR swap spread(3 months,u) = LIBOR swap spread(3 months,u) - 0.26161\% (the USD 3-month Spread Adjustment)
            b) SOFR swap spread(6 months,u) = LIBOR swap spread(6 months,u) - 0.42826\% (the USD 6-month Spread Adjustment)
      ii. For each business day before 2022 and within the prescribed observation period (rolling 15 year period), utilize official or estimated 3-month and 6-month Spread Adjustments, as defined in the 2020-10-08 Bloomberg publication entitled “IBOR Fallback Rate Adjustments Rule Book”, applicable on each business day before 2022 as follows:
         1) For each maturity “m” = 0.25 or 0.5, and business day “u” prior to 2022,
1. a) SOFR swap spread(3 months, u) = LIBOR swap spread(3 months, u) - USD 3-month Spread Adjustment(u)
b) SOFR swap spread(6 months, u) = LIBOR swap spread(6 months, u) - USD 6-month Spread Adjustment(u)

2) For each maturity “m” = 1 … 30, and business day “u” prior to 2022,
a) SOFR swap spread(m, u) = LIBOR swap spread(m, u) - USD 3-month Spread Adjustment(u)

b) For a quarterly valuation date in or after 2037, have JP Morgan and Bank of America calculate SOFR swap spreads (or provide the components so that the NAIC can calculate the bank’s SOFR swap spreads), over the prescribed observation period (rolling 15-year period) ending on the last business day of the quarter, as follows:
   i. For each maturity “m” = 0.25, 0.5, 1 … 30 years,

   1) SOFR swap spread(m, u) = SOFR swap rate(m, u) - Treasury yield(m, u).

2. Calculate historical current swap curves:
   a. For quarterly valuation date on or before December 2021, average the daily Bank of America current LIBOR swap spread data with the daily JP Morgan current LIBOR swap spread data by maturity over the prescribed observation period (rolling 15 year period).

   b. For a quarterly valuation date during 2022,
      i. average the daily Bank of America current LIBOR swap spread data with the daily JP Morgan current LIBOR swap spread data by maturity over the prescribed observation period (rolling 15-year period), to the extent the data continues to be available, and
      ii. average the daily Bank of America current SOFR swap spread data with the daily JP Morgan current SOFR swap spread data by maturity over the prescribed observation period (rolling 15-year period), once the data becomes available.

   c. For a quarterly valuation date after 2022, average the daily Bank of America current SOFR swap spread data with the daily JP Morgan current SOFR swap spread data by maturity over the prescribed observation period (rolling 15-year period).

3. Calculate benchmark spreads as the 85% conditional mean for each of the 32 maturity categories (three-month, six-month, one-year, two-year, … 30-year)
   a. For a quarterly valuation date on or before December 2021, each LIBOR swap curve maturity calculation shall be using the same business trading days as were used in the 85% conditional mean for long-term bonds spreads.

   b. For a quarterly valuation date during 2022, each swap curve maturity calculation shall be using the same business trading days as were used in the 85% conditional mean for long-term bonds spreads, where
      i. LIBOR swap curve calculations shall be performed to the extent the data continues to be available, and
      ii. SOFR swap curve calculations shall be performed once the data becomes available.

   c. For a quarterly valuation date after 2022, each SOFR swap curve maturity calculation shall be using the same business trading days as were used in the 85% conditional mean for long-term bonds spreads.

4. Publish the Long-Term Benchmark Swap Spreads in a table.
   Among tables published on the NAIC website (See Subsection H):
   a. Table J shows Long-Term Benchmark Swap Spreads.
i. For valuation dates during 2022, publish LIBOR swap spreads to the extent the data is still available, publish SOFR swap spreads once the data becomes available, and clarify in each column of published long-term swap spreads whether the spreads are LIBOR swap spreads or SOFR swap spreads.

ii. For valuation dates after 2022, indicate in the publication that these spreads are SOFR swap spreads.

Mike Boerner  
Chair, NAIC Life Actuarial Task Force (LATF)

Re: APF 2022-01

Dear Mr. Boerner:

The American Council of Life Insurers (ACLJ) appreciates the opportunity to submit feedback on the exposed APF 2022-01.

ACLJ is fully supportive of clarifying requirements for retrocessions of YRT business. We appreciate such commonsense clarifications within the Valuation Manual, and we welcome the adoption of this amendment by LATF during a future meeting.

Thank you for your consideration,

Mr. Mike Boerner  
Chair, Life Actuarial (A) Task Force  
National Association of Insurance Commissioners

Subject: APF 2022-01 – Clarifying Retrocessions

Dear Mr. Boerner,

My comment is with respect to the reserve that should be set up by the assuming party of a coinsurance agreement that retrocedes non-guaranteed YRT reinsurance business. Under APF 2022-01 this reserve would be ½ cx.

Whereas the reinsurer of a non-guaranteed YRT reinsurance agreement has the right to increase the YRT reinsurance premium rates, the reinsurer of a coinsurance agreement that is compliant with Appendix A-791 of the Accounting Practices and Procedures Manual will generally not have the right to increase the coinsurance reinsurance premiums.

I recommend having ½ cx as the reserve floor (assuming YRT reinsurance premiums are paid annually), but require modeling (for determining the DR and SR, as applicable) if the coinsurance treaty reinsurer believes the reinsurer of the YRT treaty may have less of an incentive to increase the YRT reinsurance premium rates on a timely basis due to its retrocession of the assumed business via the coinsurance treaty.

Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
Rachel Hemphill, Texas Department of Insurance
Ben Slutsker, Minnesota Department of Commerce

Title of the Issue:
Clarify retrocessions of YRT business.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-20 Section 8.C.18
January 1, 2022 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

In reviewing companies filing PBR in 2020 for retrocessions of YRT business, companies appropriately treated the pre-reinsurance reserve as 1/2cx and the reserve credit as 1/2cx following VM-20 Section 8.C.18’s instruction for handling non-guaranteed YRT or similar business. However, reviewing these filings raised that the Valuation Manual should be made more clear for such retrocessions. Note that if a company had instead been required to model these retrocessions that are dependent on the YRT, then following the requirements that they “project cash flows consistent with the above outlined treatment for non-guaranteed YRT or similar arrangements”, the company would have had to model cashflows consistent with the 1/2cx treatment for the underlying reinsurance (i.e., a partial year’s cashflows) and then modeled the retrocession terms applied to those partial year cashflows. This would have been unnecessary effort for materially the same result. The inefficiency of the alternative further supports clarifying that this is not the required treatment.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

NAIC Staff Comments:

W:\National Meetings\2010...\TF\LHA\
When the reinsurance ceded or assumed is on a non-guaranteed YRT or similar basis, the corresponding reinsurance cash flows do not need to be modeled. This includes retrocession arrangements covering non-guaranteed YRT reinsurance and similar agreements. Rather, for a ceding company, the post-reinsurance-ceded DR or SR shall be the pre-reinsurance-ceded DR or SR pursuant to Section 8.D.2, plus any applicable provision pursuant to Section 8.C.15 and Section 8.C.17, minus the NPR reinsurance credit from Section 8.B. For an assuming company, the DR or SR for the business assumed on a non-guaranteed YRT or similar basis shall be set equal to the NPR from Section 3.B.8, plus any applicable provision pursuant to Section 8.C.16 and Section 8.C.17. In the case where there are also other reinsurance arrangements that are not on a non-guaranteed YRT or similar basis, the reinsurance credit shall include the modeled reinsurance credit reflecting those other reinsurance arrangements. In particular, where there are also other reinsurance arrangements that are dependent on the non-guaranteed YRT or similar arrangements, actuarial judgment shall be used to project cash flows consistent with the above outlined treatment for non-guaranteed YRT or similar arrangements.
The Life Actuarial (A) Task Force met March 3, 2022. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Ben Bock, Ted Chang, Ahmad Kamil, and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Trinidad Navarro represented by Charles Santana (DE); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severyinghaus represented by Bruce Sartain and Vincent Tsang (IL); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT).

1. **Agreed to the Forward Blanks Proposal for Changes to the VM-20 Reserves Supplement**

   Jennifer Frasier (NAIC) said Mr. Leung submitted a comment on the proposal for modifying the Life, Accident and Health/Fraternal annual statement blanks and instructions for the VM-20 Supplement. Mr. Leung suggested changing the term “not rejected” to “allowed” for consistency throughout the document. Ms. Frasier said the phrase “and the Supplemental Exhibits and Schedules Interrogatories (Quarterly Statement)” should be added to the sentence in the “Items to be Changed” section on page 1.

   The Task Force agreed, without objection, to forward the proposal (Attachment Three-A) to the Blanks (E) Working Group, after making the changes that Mr. Leung and Ms. Frasier suggested.

2. **Exposed Amendment Proposal 2022-02**

   Ms. Hemphill said amendment proposal 2022-02 clarifies the language in Section 3.F.9.h.ii of VM-31, PBR Actuarial Report Requirements for Business Subject to a Principle-Based Valuation. She said the revised language parallels the language in VM-21, Requirements for Principle-Based Reserves for Variable Annuities, that the VM-31 language is intended to verify.

   Mr. Chupp made a motion, seconded by Mr. Weber, to expose amendment proposal 2022-02 (Attachment Three-B) for a 21-day public comment period ending March 23. The motion passed unanimously.

3. **Exposed Amendment Proposal 2022-03**

   Ms. Hemphill said amendment proposal 2022-03 provides cleanup, updates cross-references and improves the consistency between VM-20, Requirements for Principle-Based Reserves for Life Products, and VM-21.

   Mr. Chupp made a motion, seconded by Mr. Weber, to expose amendment proposal 2022-03 (Attachment Three-C) for a 21-day public comment period ending March 23. The motion passed unanimously.
4. **Heard an Academy Update on Model Office Testing**

Jason Kehrberg (American Academy of Actuaries—Academy) provided an overview (Attachment Three-D) of the economic scenario generator (ESG) model office testing. Al Zlogar (Academy) presented the model office specifications for a variable annuity product with a guaranteed lifetime withdrawal benefit and a guaranteed minimum death benefit. He said the model office testing will show the reserve, the risk-based capital (RBC), and the total asset requirement (TAR) calculated per VM-21. Mr. Kehrberg presented the model office specifications for VM-20 reserves. He said the Academy plans to share model office results during the Task Force’s March 17 meeting.

Having no further business, the Life Actuarial (A) Task Force adjourned.

** This section must be completed on all forms. Revised 7/18/2018
IDENTIFICATION OF ITEM(S) TO CHANGE

VM-20 Reserves Supplement Blank:
- Part 2: Add Question 3, a disclosure of the year that the Life PBR Exemption was actively filed and a confirmation of the eligibility criteria in the case of ongoing exemptions. Also, correct references to a state “granting” an exemption, since this is often not the case (e.g., the exemption may be “not rejected”).

VM-20 Reserves Supplement Instructions:
- Add instructions for the new disclosure item, Question 3. Also, correct references to a state “granting” an exemption, since this is often not the case (e.g., the exemption may be “not rejected”).

Supplemental Exhibits and Schedules Interrogatories (Quarterly Statement):
- For Question 8, add instructions for how to respond if the company is utilizing the ongoing exemption. The same instructions can also be found in the Valuation Manual, Section II, Subsection 1.G.1.
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL

VM-20 RESERVES SUPPLEMENT – PART 2

Life PBR Exemption

This section of the Supplement should be completed by a company that was allowed a Life PBR Exemption by its state of domicile. Depending on state requirements, “allowed” may mean “granted”, “acknowledged”, “not rejected”, or similar language.

If a company was allowed a Life PBR Exemption by its state of domicile, the company must indicate the source of the Life PBR Exemption, which could be defined in a state statute, a state regulation or in the NAIC-adopted Valuation Manual. If the source of the Life PBR Exemption is not the NAIC-adopted Valuation Manual, the company must disclose the criteria of the state’s Life PBR Exemption that the company has met, and the company must disclose the minimum reserve requirements that are required by the state of domicile. If the minimum reserve requirements of the state of domicile are the same as those specified in the NAIC-adopted Valuation Manual, the company may indicate: “Same as NAIC VM”. If the criteria for the Life PBR Exemption is the same as or substantially similar to the NAIC-adopted Valuation Manual, the company must also disclose the calendar year that the Life PBR Exemption was filed with and not rejected by its state of domicile. If that calendar year is prior to the year of the annual statement, then the company must confirm that they meet the criteria for an ongoing exemption.

Companies whose individual ordinary life business is exempted from the requirements of VM-20 pursuant to a Life PBR Exemption are not required to complete Part 1 of this VM-20 Supplement.
### Life PBR Exemption

For The Year Ended December 31, 20__

(To Be Filed by March 1)

<table>

SUPPLEMENTAL EXHIBITS AND SCHEDULES INTERROGATORIES

The following supplemental reports are required to be filed as part of your statement filing. However, in the event that your company does not transact the type of business for which the special report must be filed, your response of NO to the specific interrogatory will be accepted in lieu of filing a “NONE” report and a bar code will be printed below. If the supplement is required of your company but is not being filed for whatever reason enter SEE EXPLANATION and provide an explanation following the interrogatory questions.

Response

Detail Eliminated To Conserve Space

8. Will the Life PBR Statement of Exemption be filed with the state of domicile by July 1st and electronically with the NAIC with the second quarterly filing per the Valuation Manual (by August 15)? (2nd Quarter Only) The response for 1st and 3rd quarters should be N/A. A NO response resulting with a bar code is only appropriate in the 2nd quarter. In the case of an ongoing statement of exemption, enter “SEE EXPLANATION” and provide as an explanation that the company is utilizing an ongoing statement of exemption. .................................

Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
PBR Staff of Texas Department of Insurance

Title of the Issue: APF to fix language that is hard to follow.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

Section 3.F.9.h.ii
January 1, 2022 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

VM-31 Section 3.F.9.h.ii:
ii. Documentation that the implied volatility scenarios generated do not result in a lower TAR than that obtained by assuming that the implied volatility at all ITM levels at a given time step in a given scenario is equal to the realized volatility of the underlying asset scenario over the same time period as required by VM-21 Section 8.D.3.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Amendment Proposal Form

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
PBR Staff of Texas Department of Insurance

Title of the Issue:

General cleanup, including updating cross-references, better consistency between VM-20 and VM-21, where reasonable, and making clarifying edits:

1. **Update cross-references:** Add a reference to the newly added VM-21 Section 12 (general assumption setting) alongside the reference to Section 10 in the Guidance Note after Principle 3 in VM-21.

2. **Update cross-references:** Existing section references are too general to be useful for the asset spread assumptions discussed in VM-21 Section 4.D.4.a.iii and 4.D.4.a.iv.

3. **VM-20/VM-21 Consistency:** VM-21 Sections 4.D.5.a and 4.D.5.b should be made consistent with VM-20; new Sections 4.D.5.c and 4.D.5.d were also added to be consistent with VM-20 where appropriate.

4. **Clarifying Edits:** Avoid the SPA partial withdrawal assumptions from requiring modeling less than the RMD amount for tax qualified contracts with ages greater than or equal to the RMD age in VM-21 Section 6.C.4.

5. **Update cross-references:** Correct section reference errors in VM-21 Sections 6.C.4 and 6.C.5.

6. **Clarifying Edits:** Revenue sharing income assumption requirements need clarification, and language needs cleaning up in VM-20, VM-21, and VM-31.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

   Issue 1: VM-21 Section 1.B
   Issue 3: VM-21 Section 4.D.5
   Issue 4: VM-21 Section 6.C.4
   Issue 5: VM-21 Section 6.C.4 and 6.C.5

   January 1, 2022 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

   See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)
1. Add a reference to the newly added Section 12 (general assumption setting Section 12 added by APF 2021-11 for the 2023 Valuation Manual) alongside the reference to Section 10 in the Guidance Note after Principle 3.
4. The current SPA partial withdrawals assumption does not consider the RMD requirement for tax-qualified contracts with ages greater than or equal to the federal RMD age. Some companies assumed this was intended to be reflected, but it should be clarified in VM-21.
6. Both VM-20 and VM-21 need to clarify that the haircut prescribed for the non-contractually guaranteed revenue sharing is only a guardrail which is neither redundant to nor a substitution for the margin determination requirements of VM-20 Section 9.G.6 and VM-21 Section 4.F.5.c. Two guidance notes from VM-20 should be added to VM-21 for appropriate consistency. The reporting requirement language which is already in VM-31 should be removed from VM-20 and the reporting requirement in VM-31 is augmented and clarified.

VM-21 Section 1.B (Guidance Note after Principle 3)

Guidance Note: The intent of Principle 3 is to describe the conceptual framework for setting assumptions. Section 10 provides the requirements and guidance for setting contract holder behavior assumptions and includes alternatives to this framework if the company is unable to fully apply this principle. More guidance and requirements for setting assumptions in general are provided in Section 12.

VM-21 Section 4.D.4.a.iii and Section 4.D.4.a.iv

iii. For purchases of public non-callable corporate bonds, use the gross asset spreads over Treasuries prescribed in VM-20 Section 9.F.8.a through Section 9.F.8.c. (For purposes of this subsection, “public” incorporates both registered and 144a securities.) The prescribed spreads reflect current market conditions as of the model start date and grade to long-term conditions based on historical data at the start of projection year four;

iv. For transactions of derivative instruments associated with fixed income investments, reflect the prescribed assumptions in VM-20 Section 9.F.8.d for interest rate swap spreads;

VM-21 Section 4.D.5

5. Cash Flows from Invested Assets

a. Cash flows from general account fixed income assets and derivative asset programs associated with these assets, including starting and reinvestment assets, shall be reflected in the projection as follows:
   i. Model gross investment income and principal repayments in accordance with the contractual provisions of each asset and in a manner consistent with each scenario. Grouping of assets is allowed if the company can demonstrate that grouping does not materially understate the modeled reserve that would have been obtained using a seriatim approach,
ii. Reflect asset default costs as prescribed in VM-20 Section 9.F and anticipated investment expenses through deductions to the gross investment income.

iii. Model the proceeds arising from modeled asset sales and determine the portion representing any realized capital gains and losses.

iv. Reflect any uncertainty in the timing and amounts of asset cash flows related to the paths of interest rates, equity returns or other economic values directly in the projection of asset cash flows. Asset defaults are not subject to this requirement, since asset default assumptions must be determined by the prescribed method in VM-20 Section 9.F.

b. Cash flows from general account equity assets—i.e., non-fixed income assets having substantial volatility of returns, such as common stocks and real estate—and derivative asset programs associated with these assets, including starting and reinvestment assets, shall be reflected in the projection as follows:

i. Determine the grouping for asset categories and the allocation of specific assets to each category in a manner that is consistent with that used for separate account assets, as discussed in Section 4.A.2.

ii. Project the gross investment return including realized and unrealized capital gains in a manner that is consistent with the stochastically generated scenarios.

iii. Model the timing of an asset sale in a manner that is consistent with the investment policy of the company for that type of asset. Reflect expenses through a deduction to the gross investment return using prudent estimate assumptions.

c. Determine cash flows for each projection interval for all other general account assets by modeling asset cash flows on other assets that are not described in Sections 4.D.5.a and 4.D.5.b using methods consistent with the methods described in Sections 4.D.5.a and 4.D.5.b. This includes assets that are a hybrid of fixed income and equity investments.

d. Determine cash flows or total investment returns as appropriate for each projection interval for all separate account assets as follows:

i. Determine the grouping for each variable fund and subaccount (e.g., bonds funds, large cap stocks, international stocks, owned real estate, etc.) as described in Section 4.A.2.

ii. Project the total investment return for each variable fund and subaccount in a manner that is consistent with the prescribed returns described in Section 4.A.2 and Section 8.C.3.

VM-21 Section 6.C.4 (Intro)

4. Partial Withdrawals

Partial withdrawals required contractually or previously elected (e.g., a contract operating under an automatic withdrawal provision, or that has voluntarily enrolled in an automatic withdrawal program, on the valuation date) are to be deducted from the Account Value in each projection interval consistent with the projection frequency used, as described in Section 4.F, and according to the terms of the contract. However, if a GMWB or hybrid GMIB contract’s automatic withdrawals results in partial withdrawal amounts in excess of the GMWB’s guaranteed maximum annual withdrawal amount or the maximum amount above which withdrawals reduce the GMIB basis by the same dollar amount as the withdrawal amount (the “dollar-for-dollar maximum withdrawal amount”), such automatic withdrawals shall be revised such that they equal the GMWB’s guaranteed maximum annual withdrawal amount or the GMIB’s dollar-for-dollar maximum withdrawal amount. However, for tax qualified contracts with ages greater than or equal to the federal RMD age, if the prescribed withdrawal amount is below the RMD amount, the withdrawal amount may be reset to the RMD amount.

Guidance Note: Companies are expected to model withdrawal amounts consistent with the RMD amount where applicable and where practically feasible; however, it is understood that this level of modeling sophistication may not be available for all companies.
For any contract not on an automatic withdrawal provision as described in the preceding paragraph, depending on the guaranteed benefit type, other partial withdrawals shall be projected as follows but shall not exceed the free partial withdrawal amount above which surrender charges are incurred and may be floored at the RMD amount for tax qualified contracts with ages greater than or equal to the federal RMD age:

**VM-21 Section 6.C.5**

5. Withdrawal Delay Cohort Method

To model the initial withdrawal for certain GMWBs and hybrid GMIBs as discussed in Sections 6.C.4.h and 6.C.4.j, the actuary shall adopt a modeling approach whereby a contract is split into several copies (referred to as “cohorts”), each of which is subsequently modeled as a separate contract with a different initial withdrawal period. The contract Account Value, bases for guaranteed benefits, and other applicable characteristics shall be allocated across the cohorts based on different weights that are determined using the method discussed below in this section.

**VM-21 Section 4.A.5.f**

1. The amount of net revenue-sharing income assumed in a given scenario shall be applied with a margin to reflect any uncertainty but shall not exceed the sum of (i) and (ii), where:
   
   i. Is the contractually guaranteed net revenue-sharing income projected under the scenario; and
   
   ii. Is the company’s estimate of non-contractually guaranteed net revenue-sharing income before reflecting any margins for uncertainty multiplied by the following factors:

   - 1.00 in the first projection year.
   - 0.95 in the second projection year.
   - 0.90 in the third projection year.
   - 0.85 in the fourth projection year.
   - 0.80 in the fifth and all subsequent projection years.

**Guidance Note:** Provisions such as one that gives the entity paying the revenue-sharing income the option to stop or change the level of income paid would prevent the income from being guaranteed. However, if such an option becomes available only at a future point in time, and the revenue up to that time is guaranteed, the income is considered guaranteed up to the time the option first becomes available.
The company is responsible for reviewing the revenue-sharing agreements that apply to that group of policies and verifying compliance with these requirements. The amount of net revenue-sharing income assumed in a given scenario shall be applied with a margin to reflect any uncertainty but shall not exceed the sum of (a) and (b), where:

a. Is the contractually guaranteed GRSI, net of applicable expenses, projected under the scenario.

b. Is the company’s estimate of non-contractually guaranteed net revenue-sharing income before reflecting any margins for uncertainty multiplied by the following factors:

 VM-31 Section 3.D.7.c

Revenue-Sharing Margins – The level of margin in the prudent estimate assumptions for revenue-sharing income and description of the rationale for the margin for uncertainty. Also, a demonstration that the amounts of net revenue-sharing income, after reflecting margins, do not exceed the limits set forth in VM-20 Section 9.G.8.

 VM-31 Section 3.F.7.c

c. Revenue-Sharing Margins – The level of margin in the prudent estimate assumptions for revenue-sharing income and a description of the rationale for the margin for uncertainty. Also, a demonstration that the amounts of net revenue-sharing income, after reflecting margins, do not exceed the limits set forth in VM-21 Section 4.A.5.f.
ECONOMIC SCENARIO GENERATOR WORK GROUP UPDATE ON MODEL OFFICE TESTING

March 3, 2022—2 p.m. EST

VM-21 ESG Model Office Testing

Variable Annuities with Guaranteed Lifetime Withdrawal Benefit (GLWB) and Guaranteed Minimum Death Benefit (GMDB)

Albert Zlogar, MAAA, FSA
Agenda

1. Product Specifications
2. Reserve Method
3. Liability Assumptions
4. Asset Assumptions
5. Caveats

Product Specifications

- Variable Annuity with a GLWB and GMDB (details on next slide)
- Seven-year surrender charge period
- Single model point issued to a male age 60 on the valuation date with single premium of $100,000
- Premium/fund allocation: all of the single premium is invested in separate account funds, allocated 80% U.S. large cap equity and 20% long term U.S. corporate bond funds
  - Monthly rebalancing to maintain 80/20 mix.
Product Specifications

### Variable Annuity Base contract

- **Issue age**: 60
- **Single premium at issue**: $100,000
- **Fund allocation**: 80% US large cap equity / 20% US LT Corp bond, rebalanced monthly
- **M&E risk charges (annul.)**: 1.30% (applied to fund value)
- **Inv mgmt fee (annul.)**: 0.75% (half of this fee comes back to company as guaranteed revenue sharing)
- **Surrender charge period**: 7 years
- **SC % of deposit**: 8, 7, 6, 5, 4, 3, 2%

#### Guaranteed Benefits

<table>
<thead>
<tr>
<th>GLWB</th>
<th>GMDB</th>

<td>Benefit Base Rollup %</td>
<td>5%</td>
</tr>
<tr>
<td>Rollup period</td>
<td>10 years</td>
</tr>
<tr>
<td>Ratchet or reset</td>
<td>No</td>
</tr>
</tbody>
</table>

#### Guarantors

- **Pro-rata**
- **Pro-rata**

#### GLWB withdrawal rate %

| Attained Age 59-64 | 4.00% |
| Attained Age 65-69 | 5.00% |
| Attained Age 70-74 | 5.50% |
| Attained Age 75-79 | 6.00% |

#### GLWB withdrawal rate %

1. **Pro-rata reduction in guaranteed benefit base for any WDs taken in excess of (a) or (b), where (a) is the annual 10% free WD amount prior to income election, and (b) is the GLWB guaranteed annual withdrawal amount after income election.**
   - Upon income election, the fund value reduces dollar for dollar as WDs are taken until fund value exhausts to zero. Any excess WD’s taken above the lifetime WD amount cause a prorata reduction in the Benefit Base and effect the income amount.

#### Examples of potential GLWB lifetime income benefits at different income election ages and return scenarios

</table>
Reserve Method

- Reserve and C3P2 Risk-Based Capital (RBC) and Total Asset Requirement (TAR) calculated per VM-21:
  - Reserve = Stochastic Reserve + Additional Standard Projection Amount (ASPA), where
    - Stochastic Reserve = Conditional Tail Expectation (CTE) of 10,000 Scenario Reserves
    - Scenario Reserve for this model segment = Max (aggregate cash surrender value (CSV), Starting Assets + Greatest Present Value of Accumulated Deficiencies (GPVAD))
    - Starting assets = CSV, so scenario GPVAD is portion of reserve held in general account to ensure all liability cash flows are paid off to the end of the projection for the scenario
    - Discount rate = net earned rates on additional assets backing GPVAD
    - ASPA = add-on if base assumptions are less conservative than prescribed assumptions (not applicable for these tests, i.e., ASPA=0, since assumptions used are not less conservative than prescribed)
- C3P2 RBC uses macro tax adjustment (MTA) method:
  - C3 amount = max(0, 25% * ((CTE98 + ASPA - Statutory Reserve) x (1-Federal Income Tax (FIT) rate) - (Statutory Reserve - Tax Reserve) x FIT rate))

Liability Assumptions

- Used ASPA prescribed assumptions for lapse, mortality and expense (broadly reflects average industry experience)
  - Lapse rates decrease as guaranteed benefit is in the money
    - (In-the-money (ITM)(t) for GLWB defined as PV future income benefits(t) > current fund value(t))
  - Mortality 2012 IAM, improvement scale G2, VM-21 ASPA Fx factors
  - Expense
    - $100 per policy + 7bp on fund value annual maintenance & overhead
- Exception to ASPA assumptions used for GLWB income election:
  - Simplified from ASPA WD delay cohort method (many multiple election dates) to one or two dates (e.g., 100% elect at year 10, or a mix of election year 5, 10, 15 cohorts)
Asset Assumptions

- Starting asset amount = CSV, all in the separate account funds
  - General account investments occur gradually over first ~10-20 years (depending on scenarios) as fee revenues (net of expenses and any excess GMDB payments) are collected, to fund future guaranteed benefits
- General account investment/reinvestment strategy
  - Invest 50%/50% in AA/A non-callable corporate bonds
    - Use prescribed tables (from VM-20) for defaults/spreads
  - 9 basis points (bp) annual investment expense
  - Maturity mix 30/20/10/7/5/1-year bonds; starts longer and shortens over time to maintain reasonable match to liability cash flows (next slide shows sample liability cash flow profile)
  - If there is a shortfall, borrow at same strategy as reinvestment (“negative assets approach”); initial “CARVM allowance” borrowing at 7-year bond rate
- Initially no hedging or reinsurance modeled. Considering adding this but time may not permit.

Sample scenario liability cash flow profile

![Sample scenario annual general account liability cash flows](image)

Developed by the Academy Economic Scenario Generator Work Group
Caveats

- Intended as illustrative limited data points for assessing materiality and relative impact to reserve and C3 RBC levels from a change to the scenarios
- Not intended to:
  - Cover wide variety of annuity products available on the market
  - Reflect a full distribution of issue ages / genders within the given product
  - Thoroughly test all the underlying assumptions
Agenda

1. Reserve Methodology
2. Product Specifications
3. Liability Assumptions
4. Asset Assumptions
5. Caveats

Reserve Methodology

- VM-20 reserve = Max (SR, DR, NPR), where
  - SR = Stochastic Reserve
  - DR = Deterministic Reserve
  - NPR = Net Premium Reserve

- DR: Model office uses method “B,” which solves for minimum starting assets to ensure all liability cashflows are paid off to the end of projection
  - DR is omitted from the model office if a deterministic scenario (i.e., Stochastic Exclusion Test scenario #12) is not provided

- SR: CTE70 of Scenario Reserves (Starting assets + GPVAD)
  - 1,000 scenarios picked out of 10,000 with Academy methodology
  - Use starting assets solved from the DR run (if DR > SR), or solve for starting assets within 2% of the SR (if SR > DR)
Product Specifications

- Universal Life product with a Secondary Guarantee (ULSG)
- Crediting rate is based on General Account (GA) portfolio rates (see asset slide for GA reinvestment strategy)
- Guaranteed minimum crediting rate = 3.25%
- Guaranteed to not lapse until age 110 if minimum premiums are paid (even if policyholder fund value is exhausted)
- Cost of insurance risk charges based on 2015 Valuation Basic Table (VBT) Relative Risk (RR) 100 mortality table
- 2% premium tax
- $64 annual expense charges (with 2% inflation)
- Acquisition fees = $214 + $1.20 per 1,000 of face amount
- 20-year surrender charge period
- Single model point issued at valuation date to a female non-smoker age 45 with $1 million face amount

Liability Assumptions

- **Mortality**
  - 2015 VBT RR 100 Gender / Smoker distinct Age Last Birthday
  - VM-20 2019 mortality improvement to valuation date
  - Prescribed industry mortality provisions for adverse deviations (PAD)

- **Lapse**
  - Canadian Institute of Actuaries (CIA) Term to 100 Gender distinct / Smoker distinct

- **Expense**
  - Consistent with 2020 Generally Recognized Expense Table (GRET) factors with 2% inflation and 5% expense margin

Asset Assumptions

- **Starting asset portfolio**
  - 50%/50% in AA/A 20-year corporate bonds
  - Amount scaled to the calculated VM-20 reserve at valuation date

- **General account reinvestment strategy**
  - Invest positive cashflows 50%/50% in AA/A 20-year corporate bonds
    - Use 2020 prescribed VM-20 tables for defaults/spreads

  - If there is a shortfall:
    - Sell from existing assets until exhausted
    - Otherwise, borrow at 3-month Treasury + 1%
Caveats

- Intended as an illustrative single data point for assessing materiality and relative impact to reserve levels and volatility from a change to the scenarios
- Selected ULSG product has exposure to interest rates only, no exposure to equity or bond fund returns
- Not intended to:
  - Cover wide variety of life products available on the market
  - Reflect a full distribution of issue ages / genders within the given product
  - Thoroughly test all the underlying assumptions
  - Be used as a basis for assessing appropriateness of an Economic Scenario Generator

Life Actuarial (A) Task Force
Virtual Meeting
February 24, 2022

The Life Actuarial (A) Task Force met Feb. 24, 2022. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Ben Bock, Ted Chang, Ahmad Kamil, and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Trinidad Navarro represented by Charles Santana (DE); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Bruce Sartain and Vincent Tsang (IL); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); Jessica K. Altman represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT).

1. Exposed a Blanks Proposal for Changes to the VM-20 Reserves Supplement

Jennifer Frasier (NAIC) presented a proposal for modifying the VM-20, Requirements for Principle-Based Reserves for Life Products, Supplement in the Life, Accident and Health/Fraternal annual statement blank and instructions to reflect that the Life Principle-Based Reserving (PBR) Exemption is revised to allow an ongoing statement of exemption. The proposed changes will be effective for the 2022 annual statement blanks.

Mr. Leung made a motion, seconded by Mr. Chou, to expose the proposal (Attachment Four-A) for a seven-day public comment period ending March 2. The motion passed unanimously.

2. Discussed Comments on the IUL Exposure

Mr. Andersen said a survey of state insurance regulators reported that Actuarial Guideline XLIX-A—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest to Policies Sold On or After December 14, 2020 (AG 49-A) has effectively addressed the indexed universal life (IUL) product features, including multipliers and buy-up accounts that were previously concerning. He said state insurance regulators have discovered new IUL Illustration problems caused by combining volatility-controlled funds and fixed bonuses to produce illustrations more favorable than those produced using the traditional capped Standard & Poor’s 500 index (S&P 500). He said the IUL exposure (Attachment Four-B) is designed as a step to potentially address that issue. He asked Task Force members to consider three categories of options for how to address the issue: 1) changes that entail a small amount of work and might require a slight tweak to AG 49-A; 2) changes that restrict IUL illustrations such that they illustrate similar to traditional universal life (UL); and 3) changes requiring an extensive amount of work and that have a greater impact than the first category but still allow IUL illustrations that are more favorable than UL illustrations.

Seth Detert (Securian Life) said the Securian comment letter (Attachment Four-C) agrees that the multiplier and buy-up illustration issues have been largely resolved. He said Securian believes the current practice of illustrating volatility-controlled indices does not meet the intent of AG 49-A and should be quickly addressed. He said Securian specifically supports regulatory changes that would extend the 145-basis point (bp) limit, which AG 49-A applies to benchmark index accounts, to illustrations of option profits in excess of the 145-bp for non-benchmark index accounts.
Mr. Andersen said the Valmark comment letter (Attachment Four-D) expresses the need for a more robust solution for the IUL illustration problem. Valmark provided a paper (Attachment Four-E) on the complexity of IUL marketing materials and an example (Attachment Four-F) of the methodology for a particular product.

Alicia Carter (American Academy of Actuaries—Academy) said the Academy comment letter (Attachment Four-G) notes that AG 49-A has had the intended effect for products with multipliers and other index enhancements. She said if the Task Force decides to update AG 49-A, the Academy recommends that either an additional limit be applied to the illustrated option profit or the benchmark index account limit be aligned with the option spend by allowing multiple benchmark index accounts.

Brian Lessing (Equitable) said Equitable’s comment letter (Attachment Four-H) is a reminder of the proposal it submitted in 2020 and indicates how that proposal might be applicable to the volatility-controlled funds issue. He asked that the proposal be considered if the Task Force decides to revise AG 49-A.

Mr. Andersen said the Allianz comment letter (Attachment Four-I) provides the company’s perspective on the consumer value of volatility-controlled indices.

Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI comment letter (Attachment Four-J) provides commentary on the use of volatility-controlled funds with fixed bonuses. He said the ACLI is seeking clarity from the Task Force on how state insurance regulators would prefer to proceed. He said a potential path could be to require additional disclosures.

Mr. Andersen read the comment letter (Attachment Four-K) from an anonymous source. The commenter expressed agreement with the findings in the IUL exposure. The letter detailed the commenter’s list of existing AG 49-A issues.

Jerry Vanderzanden (Coalition of Concerned Insurance Professionals—Coalition) said the Coalition comment letter (Attachment Four-L) articulates their view of the current IUL illustration challenges. He highlighted some specific points they consider important: 1) the use of account specific fixed interest bonuses can produce illustrated gains as large as the multiplier strategies that led to the development of AG 49-A; 2) volatility-controlled indices used in conjunction with fixed bonuses to augment performance is the easiest way to work the strategy, but it is not the only way; and 3) the Task Force is encouraged to develop a holistic solution that addresses the lookback methodology.

Birny Birnbaum (Center for Economic Justice—CEJ) said if the purpose of the illustration is to help consumers understand the product, whether an IUL illustrates better than a UL is irrelevant. He said while the Task Force is focusing on addressing the current IUL practices that are inconsistent with the purpose of illustrations, the CEJ asks that the Life Insurance and Annuities (A) Committee take broader actions like reengineering illustrations to help consumers better understand how a product operates, addressing the conflict of interest with the index provider also providing the hedging product, and stopping the use of back testing as a basis for future performance.

Mr. Andersen said the IUL Illustration (A) Subgroup will consider the comments and appropriately revise the exposure.
3. **Disbanded the GI Life Valuation (A) Subgroup**

Reggie Mazyck (NAIC) announced that the Task Force agreed via e-vote to disband the Guaranteed Issue (GI) Life Valuation (A) Subgroup. The Subgroup charges have been absorbed by the Task Force.

Having no further business, the Life Actuarial (A) Task Force adjourned.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

Changing the reporting for the Life PBR Exemption, corresponding to changes in the Life PBR Exemption in the Valuation Manual.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date:

Other Comments:

** This section must be completed on all forms.

Revised 7/18/2018
IDENTIFICATION OF ITEM(S) TO CHANGE

VM-20 Reserves Supplement Blank:
- Part 2: Add Question 3, a disclosure of the year that the Life PBR Exemption was actively filed and a confirmation of the eligibility criteria in the case of ongoing exemptions. Also, correct references to a state “granting” an exemption, since this is often not the case (e.g., the exemption may be “not rejected”).

VM-20 Reserves Supplement Instructions:
- Add instructions for the new disclosure item, Question 3. Also, correct references to a state “granting” an exemption, since this is often not the case (e.g., the exemption may be “not rejected”).

Supplemental Exhibits and Schedules Interrogatories (Quarterly Statement):
- For Question 8, add instructions for how to respond if the company is utilizing the ongoing exemption. The same instructions can also be found in the Valuation Manual, Section II, Subsection 1.G.1.
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL

VM-20 RESERVES SUPPLEMENT – PART 2

Life PBR Exemption

This section of the Supplement should be completed by a company that was allowed a Life PBR Exemption by its state of domicile. Depending on state requirements, “allowed” may mean “granted”, “acknowledged”, “not rejected”, or similar language.

If a company was allowed a Life PBR Exemption by its state of domicile, the company must indicate the source of the Life PBR Exemption, which could be defined in a state statute, a state regulation or in the NAIC-adopted Valuation Manual. If the source of the Life PBR Exemption is not the NAIC-adopted Valuation Manual, the company must disclose the criteria of the state’s Life PBR Exemption that the company has met, and the company must disclose the minimum reserve requirements that are required by the state of domicile. If the minimum reserve requirements of the state of domicile are the same as those specified in the NAIC-adopted Valuation Manual, the company may indicate: “Same as NAIC VM”. If the criteria for the Life PBR Exemption is the same as or substantially similar to the NAIC-adopted Valuation Manual, the company must also disclose the calendar year that the Life PBR Exemption was filed with and not rejected by its state of domicile. If that calendar year is prior to the year of the annual statement, then the company must confirm that they meet the criteria for an ongoing exemption.

Companies whose individual ordinary life business is exempted from the requirements of VM-20 pursuant to a Life PBR Exemption are not required to complete Part 1 of this VM-20 Supplement.
VM-20 RESERVES SUPPLEMENT – PART 2
Life PBR Exemption
For The Year Ended December 31, 20__
(To BeFiled by March 1)

Life PBR Exemption as defined in the NAIC adopted Valuation Manual (VM):

1. Has the company been allowed a Life PBR Exemption from the reserve requirements of VM-20 of the Valuation Manual by their state of domicile? Yes [   ] No [   ]

2. If the response to Question 1 is “Yes”, then check the source of the “Life PBR Exemption” definition (Check either 2.1, 2.2 or 2.3)

2.1 NAIC Adopted VM [   ]

2.2 State Statute (SVL) [   ]
   a. Is the criteria in the State Statute (SVL) different from the NAIC adopted VM? Yes [   ] No [   ]
   b. If the answer to “a” above is “Yes”, provide the criteria that the state has used to grant the Life PBR Exemption (e.g., Group/Legal Entity criteria) and the minimum reserve requirements that are required by the state of domicile (if the minimum reserve requirements are the same as the Adopted VM, write SAME AS NAIC VM):

2.3 State Regulation [   ]
   a. Is the criteria in the State Regulation different from the NAIC adopted VM? Yes [   ] No [   ]
   b. If the answer to “a” above is “Yes”, provide the criteria of the state’s Life PBR Exemption that the company has met and the minimum reserve requirements that are required by the state of domicile (if the minimum reserve requirements are the same as the Adopted VM, write SAME AS NAIC VM):

3. If the criteria for the “Life PBR Exemption” is the same as or substantially similar to the NAIC adopted VM (i.e., Question 2.1 is checked or Question 2.2.a is “No” or Question 2.3.a is “No”), then provide the most recent year that the company filed a statement of exemption that was not rejected. If such calendar year is not the current calendar year for this statement, also provide confirmation that the company meets the criteria for utilizing an ongoing statement of exemption, meaning that none of the following apply:

   a. the company fails to meet either of the conditions in VM Section II, Subsection 1.G.2,
   b. the policies exempted contain those in VM Section II, Subsection 1.G.3,
   c. the domiciliary commissioner contacted the company prior to Sept. 1 and notified them that the statement of exemption was rejected.

Deleted: filed and been granted

Deleted: granted

Deleted: the state has used to grant the Life PBR Exemption (e.g., Group/Legal Entity criteria and the...
QUARTERLY STATEMENT BLANK – LIFE/FRATERNAL

SUPPLEMENTAL EXHIBITS AND SCHEDULES INTERROGATORIES

The following supplemental reports are required to be filed as part of your statement filing. However, in the event that your company does not transact the type of business for which the special report must be filed, your response of NO to the specific interrogatory will be accepted in lieu of filing a “NONE” report and a bar code will be printed below. If the supplement is required of your company but is not being filed for whatever reason enter SEE EXPLANATION and provide an explanation following the interrogatory questions.

Response

Detail Eliminated To Conserve Space

8. Will the Life PBR Statement of Exemption be filed with the state of domicile by July 1st and electronically with the NAIC with the second quarterly filing per the Valuation Manual (by August 15)? (2nd Quarter Only) The response for 1st and 3rd quarters should be N/A. A NO response resulting with a bar code is only appropriate in the 2nd quarter. In the case of an ongoing statement of exemption, enter SEE EXPLANATION and provide an explanation that the company is utilizing an ongoing statement of exemption. 

............................................
IUL Illustration exposure as follow-up to 12/8/21 LATF session

Please send your comments to Reggie Mazyck (RMazyck@NAIC.Org)

By COB February 4
Request for comments:

In general, the indexed universal life illustrations post-AG 49-A have shown lower credited rates and related values than we saw prior to AG 49-A. However, those illustrated rates and values may not be lowered by as much as contemplated when the Guideline was adopted.

A key issue identified is an increased use of volatility-controlled funds. These funds rebalance between equities and fixed income as equity volatility fluctuates.

In certain subsets of history, the uncapped volatility-controlled funds performed better than capped S&P 500 funds. Our research found that some insurers are or are potentially planning on using this result to only use a portion of the hedge budget (the amount of assets left over after funding the zero-return floor) on providing the upside potential and using the remainder to fund a fixed bonus to the policyholders.

In some insurers’ minds, this allows them to illustrate volatility-controlled funds plus the fixed bonus more favorably than a traditional, capped S&P 500 index.

That is the main issue regulators have identified at this point. We would welcome comments, by February 4, 2022, on whether and how to address that issue in early 2022.

Background on IUL illustration issue:

NAIC model regulation 582 contains standards for life insurance illustrations. A key component of Model 582 is the illustrated scale, which constrains how non-guaranteed elements such as credited interest rates are presented to life insurance customers. Limits to what can be illustrated include that they should be no more favorable than current credited rates and past credited rates.

In 2015, because of range of practice regarding handling of exotic indices and how to look back at past credited rates, and because loan arbitrage, AG 49 was developed. The thought was that IUL had unique aspects that were not appropriately clarified in the model reg, and therefore an AG was needed.

AG 49 eliminated the favorability of illustrating exotic indices, defined the lookback method, constrained loan arbitrage, and required an alternate, more conservative scale to be illustrated side by side with the illustrated scale.

In 2020, IUL products which applied fees to purchase multipliers were identified as an issue – these led to higher illustrated performance than contemplated when AG 49 was developed.

This led to adoption of AG 49-A. It appears that IUL products no longer contain multipliers that illustrate more favorably than products without multipliers.

Background on volatility-controlled funds:

Volatility-controlled funds have been around for at least 10 years. With variable annuities, compared to pure equity funds, they can provide downside protection to the company and the policyholder.
The way they work is a volatility-controlled fund may be heavy in equities during low equity volatility environments and then when volatility goes up (usually following a stock market downturn), the fund will shift away from equities and towards fixed income securities. The thought process is that further market downturns are more likely during volatile times than during stable times. The market movement can go either way at any time; therefore, long-term comparisons between volatility-controlled funds and 100% equity funds may be mixed.

In IUL, with S&P equity funds, to be able to ensure a non-negative return floor when the stock market goes down but provide upside when the stock market goes up, the upside potential is typically capped. So, instead of your AV going down 30% when the market goes down 30% and up 30% when the market goes up 30%, the range of AV movement may be between 0% and 10%.

In IUL, with volatility-controlled funds, the downside protection is still there. However, these funds may be marketed as uncapped but not provide close to the upside potential as an uncapped S&P 500 fund.

Prices in the stock and derivatives market drive how high the cap is for capped S&P 500 funds and may drive the portion of a volatility-controlled fund that’s in equities. Part of the person’s account value, called a hedge budget, is invested in these derivatives to provide the upside potential.

There is one or more company that has had this fund strategy in place in the past and several others that have started to incorporate this fund strategy after AG 49-A was adopted.
Dear Fred,

Securian Financial respectfully presents these comments in response to the NAIC IUL Illustrations (A) Subcommittee request for comments on the findings from the Q3 Post AG49-A IUL survey.

Securian believes the Post AG49-A IUL survey demonstrates that AG49-A accomplished one of the main goals set forth by the Subcommittee:

- That products with charged for multipliers and/or buy-up accounts illustrate substantially similar to those products without the additional charges.

However, with new developments in the industry AG49-A appears to have fallen short of the second stated goal:

- That within an illustration there is consistent treatment of policy features such as multipliers, index bonuses, participating loan crediting, and non-benchmark indices across the industry.

Specifically, after AG49-A, as noted by the request for comment letter, we are seeing an increase in the utilization of volatility-controlled indices in conjunction with fixed bonuses. Carriers are utilizing this combination to drive meaningfully higher illustrated results.

In direct contrast to the intent of AG49-A, carriers are illustrating much more aggressively with these volatility-controlled indices relative to their own S&P 500 BIA accounts.

Securian does not believe there is anything inherently wrong with fixed account value based bonuses. Fixed account value bonuses are not specific to IUL and they have been part of the individual life products for decades. In addition, fixed bonuses were discussed rather extensively during the drafting of AG-49A and from those discussions LATF determined it was appropriate to illustrate them, in hopes of furthering consumer understanding on the differences between products.

Volatility-controlled indices have also been in the insurance industry for years. They have been prevalent in Fixed Index Annuities for a decade (or more) and there have been a small amount of them available for on IUL contracts for the last 5 to 10 years. We are seeing an increase in the availability and utilization of volatility-controlled index in the industry and Securian supports that direction. Volatility-controlled indexes provide options for our clients that can reasonably provide more stable index returns over a long period of time.

However, Securian does think that the current practice of how volatility-controlled indexes are being illustrated in the industry does not meet the intention of AG49 or AG49-A and should be addressed in...
the very near future. Specifically, the 145% limit should be applied to all accounts, not just the BIA account. Let me explain further.

Within AG-49 the determination of the maximum illustrated rate for the BIA account is limited to 145% of the Annual Net Investment Earnings Rate used to support the index. We think this guardrail should also be applied to non-BIA accounts. What we are seeing in the industry can be illustrated by a simple example:

- Let’s consider a carrier that has a 4% Annual Net Investment Earnings Rate and they spend that amount on the BIA account. This translates to a maximum illustrated rate of 4% * 1.45% = 5.8%.
- The carrier also has a volatility-controlled index that costs 3% to hedge which allows the carrier to offer a 1% fixed bonus on that indexed account to get a total 4% cost.
- The volatility-controlled index’s 30 year look back rate is at or above the maximum BIA rate of 5.8% in this example. Most carriers are then illustrating the volatility-controlled index at 5.8%.
- By illustrating the volatility-controlled index at 5.8% they are illustrating a hedge payoff of (5.8%/3%) = 1.93% which is excess of the 1.45% guardrail of the BIA.
- The increased illustrated hedging payoff in excess of the 145% BIA guardrail is what Securian believes is the main driver higher illustrated values for volatility-controlled indices.
- If volatility-controlled indices were limited in illustrating a maximum of 1.45% hedge payoff you would get a max illustrated rate in this example of 3%*1.45% = 4.35%.
- Using the example above with an adjustment to AG49-A to limit the hedge payoff to 145% of the volatility-controlled index you would get a total crediting rate of 4.35% plus the 1% fixed bonuses for a total crediting rate of 5.35% versus what is being currently being illustrated in the industry of 5.8% plus a 1% fixed bonus for a total crediting rate of 6.8%.

Securian believes there are several ways to change AG49-A to make it clearer/enforce that the 145% guardrail applies to all illustrated indexes. If desired by LATF we are ready to work with our industry peers to put forth draft language to address what we see is the crux of the concern presented by LATF from the findings of the post AG49-A survey.

Respectfully,

Seth Detert, Securian Financial

Securian Financial is the marketing name for Securian Financial Group, Inc. and its affiliates. Insurance products are issued by its affiliated insurance companies. Securities and investment advisory services offered through Securian Financial Services, Inc., registered investment advisor, member FINRA/SIPC.
January 31, 2022

Mr. Reggie Mazyck, Life Actuary
National Association Insurance Commissioners
IUL Illustration (A) Subgroup
11353 Liberty Street
Fulton, MD 20759

Via Email @ rmazyck@naic.org and VIA Overnight Delivery

Dear Mr. Mazyck and Members of the Committee:

Thank you for the opportunity to comment on what Index Universal Life ("IUL") promoters call "proprietary indexes" and what the committee refers to as volatility-controlled funds. I commend the NAIC for again turning to address continued abuses and misleading consumer information with IUL life illustrations. In our experience, the core issue with IUL continues to be the inappropriate marketing of IUL through overly aggressive, highly complex illustrations leading consumers to have unreasonable expectations of far higher credits to their policies than they have, or will ever, receive from these products. The consumer is left with a myriad of resulting issues including loss of protection, additional outlays, and even income tax exposure.

I am CEO and Chairman of the Valmark Financial Group. We believe in the importance of life insurance products in protecting families and businesses. We are proud of our role in helping advisors put in place over $60 billion of insurance protection for clients and have extensive experience with all kinds of life insurance issued through scores of carriers. Our group also weighed in with a comment letter in May 2020 as part of the NAIC’s and this Committee’s attempt to address IUL abuse through Actuarial Guideline XLIX-A ("AG 49-A"). Our company works with and though 126 independently owned financial services firms that offer a wide range of financial products including life insurance and annuity products.

The financial professionals in these firms have clients and prospects who come to them for second opinions on schemes that utilize proprietary indexes as a key element in selling IUL contracts. Because of my writings and social media posts on IUL sales abuses in the marketplace, consumers who either purchased one of these programs or who were close to committing millions of dollars in premiums (some on a leveraged basis) have also sought me out for a second opinion. Additionally, we have helped our financial professionals work through dozens of additional proposals and in-force plans sold by other agents.

In the last 2 years since AG 49-A was put in place, we have seen dozens of proposed and in-force IUL plans -- many featuring these proprietary indexes. A significant number of these policies are also leveraged though premium financing using external bank debt. In our opinion, AG 49-A and its narrow focus on certain types of bonuses did not stop IUL illustration abuse, AG49-A just moved the locus of the abuse to illustrations with proprietary indexes especially as cap rates have continued to fall. To put it bluntly, every time regulatory action is taken to rein in abuse,
the product promoters find new ways to circumvent both the spirit and language of the regulations.

It has become abundantly clear that proprietary indexes’ heavy reliance upon back-tested models further inflates consumer expectations of returns even to the point of where consumers believe the AG 49-A limited illustration are a “conservative baseline” for the returns they will likely see. They have little or no understanding that these back-tested returns for a hypothetical index that did not exist during the time measured, nor for the discretionary contractual elements that could negatively impact them. It is inherently misleading to apply today’s economic climate (portfolio yields, options pricing, market volatility) that determine cap rates, participation rates, thresholds to a past economic period which would have had different factors at play in every year of the back-tested models.

We believe that proprietary indexes just take the abuse of IUL to a new level and are purposefully designed to maximize IUL sales, by leading the consumer to believe that they will get higher returns than a capped S&P 500 index, while reducing financial risk and costs for the issuer. These indexes evade the purpose and spirit of previous attempts by the NAIC to restrain unethical marketing of IUL products in AG 49. Our concern with these indices’ centers on 3 key issues: First, these products are far too complex for consumers to understand and in fact even most of the agents who sell them do not know how they work. Second, the use of back tested returns is misleading to consumers and set unreasonable expectations of return. And third, the structure of these proprietary index options lets insurance companies indirectly do exactly what AG 49-A was meant to prohibit with bonuses and multipliers.

**The complexity of index calculations is not understood by consumers buying these products and most people selling them**

Our first exposure to these proprietary indexes was in Index annuity products, before these indexes were featured in IUL products. (See enclosed whitepaper, All That Glitters Is Not Gold, that Valmark produced to help our advisors better understand how one of these indexes functioned in an annuity.) In that paper, we document the wide divergence between what the contract language provided, and the marketing materials inferred the customer would receive. Presumably, after the client had paid their premium, they could read the 26-page contract and the 156-page index description and have all of 10 days to determine if their purchase was in their best interest. If the policyholder had a Ph.D. in finance, they could, theoretically, make an informed decision on the many variables that would impact their policy’s performance, including various policy charges and the myriad of ways the insurance company could change the cap or spreads as well as fund allocations to low-yielding buckets in the index and ultimately discontinue and substitute indexes at their unilateral discretion. The whitepaper took a team of experienced professionals several days to dissect these documents and outline our understanding of this one investment option in a single contract. We have yet to meet a single policyholder who we believe understands these complexities to make an informed decision.
Back-tested returns used in marketing materials and illustration lead consumers to believe that they will earn substantially more than they are likely to earn

Previous regulatory attempts to reign the “overpromise risk” has primarily focused on aggressive IUL illustrations. Proprietary indexes usually magnify this problem. One illustration we reviewed from a leading IUL carrier showed a “30-year historical index performance” with multiplier credits averaging 10.73% with various range of returns over 10, 15, 20, and 25 years all earning no less than 9.46% in the illustration materials. The clear implication of the entire presentation was that the 6.33% AG 49-A limited rate was a baseline that was certain to be exceeded and very conservative. Under these conditions, of course it made sense to borrow millions of dollars to buy this policy.

We’ve subsequently examined the actual returns of the proprietary index annuity we focused on in our 2019 whitepaper. The results are telling. The average return was far less than standard equity returns and in a 5-year period (where equity markets were up substantially, averaging between 16% and 18% per year depending upon whether you included dividends), the proprietary index averaged a return of less than 4% a year. See the following table for actual returns:

Not unsurprisingly, back-tested returns often assume that all the unfavorable contractual levers that can be pulled by companies, at the expense of the consumer, will not be pulled. Again, not unsurprisingly, these back-tested returns often assume initial caps, participation rates, spreads and multipliers are maintained during their entire lookback period. This practice in based upon the erroneous assumption that today’s underlying economic climate remained the same for the entirety of the back testing period -- including portfolio yield, options pricing, options budget, volatility, and options demand. The hindsight of knowing which markets, at which times, performed well leads to what amounts to “time machine investing.” Historically a switch to

---

1,2 For the sake of demonstrating relative expected past performance of an index compared to the expected past performance of the Nationwide New Heights fixed indexed annuity using the JP Morgan Mosaic II index allocation, the hypothetical calculations used the following methodology. Actual annual Mosaic II index performance for calendar years beginning January 2017 through November 2021 was taken and reduced each calendar year by the 1.50% spread currently applied to the Mosaic indexed annuity allocation Strategy A as of February 1, 2022. These new annual returns were then used to calculate the total return of an investment in 2-year term increments to reflect the 2-year term on the indexed annuity strategy, with 0% being the lowest possible return over a 2-year term. These returns do not reflect any actual performance or client experience. Actual client performance in the Nationwide New Heights indexed annuity is based on index allocation, declared rate allocation, declared rate, strategy spreads, and index performance during the 2-year term from contract anniversary to contract anniversary. Clients should reference their account with Nationwide to see their actual performance.
fixed income, when rates were falling, produced positive results, but it would not if bond yields increased from our current historical lows. If we could go back in time and build an index, why not build a FAANG index which invests in the five most popular, best-performing, American technology companies: Meta (formerly known as Facebook), Amazon, Apple, Netflix, and Alphabet (formerly known as Google)?

In fact, the original AG 49 was instituted, in part, to address exotic indexes projecting significant returns through their cherry-picking of esoteric indexes, like the Hang Seng, in years of outsized returns.

We have consistently argued that even the basic assumption underlying AG 49, allowing companies to assume a 45% options profit to support their cap rates, is unsustainable and unrealistic. Time has borne this belief out. Instead of avoiding the decline in interest rates, IUL policies have magnified these declines as drops in cap rates have produced dramatically lower illustrated rates.

**The complexity of IUL is well beyond the ability of most consumers to understand**

IUL policies are the most complex form of life insurance sold today. It takes an immense technical knowledge of life insurance to fully comprehend the mechanics of IUL especially when coupled with the use of a proprietary index. Meticulous reading by well-informed and experienced professionals still may not spot the deception by omission or inference rampant in many IUL illustrations. We’ve included with this letter an example of the methodology of one such index – the S&P Prism Index. Does the average consumer understand “trend signals,” “a binary position indicator,” “90-day volatility of excess returns,” “the 200-day excess return of each sub-index,” “scaled volatilities,” and “inverse weights with regard to target volatility?” Will these consumers actually “refer to the Risk Control indices section of the index mathematics document for equations 55, 56, 59, and 60, where the underlying index is the reference index calculated above and: \( K_{n} = \text{Min} (100\% \times 0.5, \text{Realized Volatility}_{n}) \)” It’s doubtful they will. In fact, it’s simply preposterous to believe a consumer (or their agent) is equipped to comprehend these complexities.

**Proprietary indexes exploit a loophole in AG 49-A**

Proprietary indexes were designed to hide the drop in standard capped indexes like the S&P 500 that IUL products have historically had and lock in lower options prices. These proprietary indexes, the creation of very smart investment bankers, are designed to be good for the profitability of life insurance companies because they are predictable. At times when options prices are high, these proprietary indices reduce exposure to indexes and options costs. These theoretical excess options profits can be used to support multipliers and bonuses.

Others that have followed this debate will opine more clearly how these proprietary indexes allow the very loopholes in AG49-A to continue. Theoretical excess options budgets are being used to support the very bonuses that NAIC sought to address with AG-49 A magnifying illustrated values.
Conclusion
Unfortunately, the disappointment IUL policyholders are experiencing today is not new to the life business. As bond and crediting rates have dropped over the last 30 years, general account products have seen declines in credited rates, unachieved projections, and disappointed policyholders. Life insurance ended up costing more and paying less in benefits than expected. A new and quite disturbing trend is the tremendous amount of leverage consumers are being encouraged to take on through IUL premium financed bank loans. Consumers of various economic means are unknowingly betting significant parts of their liquid net worth on the arbitrage between bank loans and what they believe will be credited to IUL policies. This is an uninformed bet against loaded dice with little or perhaps no prospect of winning for the policyholder.

We continue to see overly aggressive IUL premium financed proposals and transactions harming consumers in very significant ways. This activity emanates primarily from insurance-only licensed producers who operate with no oversight of their sales materials or advice and without the supervision of a FINRA-registered broker-dealer or the Securities & Exchange Commission. These proposals and transactions often involve millions of dollars in a complex product that neither they nor consumers fully understand. Their advice to consumers to leverage the purchase of these complex products and pledge an illiquid investment against loans, sometimes which exceed the client’s entire liquid net worth, to pay for the purchase of IUL policy boarders on criminal. There is no real financial arbitrage in these transactions, just regulatory arbitrage.

The NAIC needs to investigate these practices and create a much more robust solution for dealing with this problem rather than attempting superficial changes to how IUL is illustrated. I would welcome the opportunity to share with the committee numerous actual examples of this abuse should the NAIC decide to address this ongoing problem. Again, thank you for the opportunity to be part of your effort to protect consumers.

Sincerely,

Lawrence J. Rybka, JD, CFP®

ALL THAT GLITTERS IS NOT GOLD
A REVIEW OF NATIONWIDE’S NEW HEIGHTS® 8 FIXED INDEXED® ANNUITY
J.P. MORGAN MOZAIC IISM INDEX

BY: LAWRENCE J. RYBKA, JD, CFP® AND JESSICA RORAR, CFP®

Who wouldn’t want an investment that provided market-like returns? Even better, an investment that provided year-to-year consistency of returns and “no downside risk,” especially in today’s volatile market? On the surface, that is what the Nationwide New Heights® Fixed Indexed Annuity with an equity indexed strategy developed and sponsored by J.P. Morgan claims to offer to clients. The marketing pitch contained within the sales brochure, the website, and accompanying video (referred to in this article as “the large print”) includes claims regarding:

- Tax deferral;
- Earnings that are “protected against downside market risk,” translated by non-fiduciaries during the sales process as “no downside market risk;”
- An Index designed to provide consistent positive returns in both good and bad market environments;
- Broad diversification across 15 global asset classes from several countries;
- An index with hypothetical, back-tested average annual return from 12/1996 that is within 21 basis points of the S&P 500 annual return for that time period;
- A hypothetical return with “72% less volatility” and none of the dramatic dips during turbulent market events like 1999’s dot-com bubble or 2008’s financial crisis with its ensuing Great Recession;
- A momentum investment strategy which capitalizes on focusing upon investment areas with superior performance in the preceding six months;
- No caps on the client’s upside unlike most fixed indexed annuities; and finally,
- An optional life time income rider that promises increasing guaranteed lifetime income that you cannot outlive and where “your income can only go up and will never go down.”

The job of a good financial advisor is to really know his or her client and be able to know if a given product is suitable to meet a specific client’s goals. The difference between a great salesperson and true financial advisor acting in a client’s best interest, also referred to as a fiduciary, involves much more than just watching a 4-minute video and passing on a wholesaler’s marketing points and graphs to a client. It requires the advisor to be an advocate for the client, to really test the product’s claims and to read both the large and the fine print of the contract. Only with this level of diligence and scrutiny, including truly understanding how the product works and the possible downsides of that product, should any advisor make a recommendation to a client, and then only to clients whose circumstances warrant it. The ultimate test, after really understanding these elements, is to apply the Golden Rule and ask, on behalf of the client, “Is this something into which I would put a large portion of my own money?”

The Nationwide New Heights® Fixed Indexed Annuity is an equity indexed annuity, issued by an insurance company and regulated by state insurance regulations. Neither the advisor, nor the policyholder, are given the pre-purchase benefit of a Securities & Exchange Commission reviewed prospectus, as they would with a variable annuity. Instead, the contract is filed with the department of insurance and can then be sold by insurance agents appointed with the company. What the client will actually get in terms of financial results from this type of product is not driven so much by equity markets, but by contractual provisions.
including: charges, riders and other important provisions. The Nationwide New Heights® Fixed Indexed Annuity has several index options the client can choose from including those that track: the S&P 500® Index, the MSCI EAFE® Index, the NYSE® Zebra Edge® Index and finally, the J.P. Morgan Mozaic IISM Index which includes several indexes that rotate in a manner that will be described later. This product has several optional riders including a lifetime income and an enhanced death benefit rider both available at an additional, ongoing charge.

“The Large Print Giveth and the Small Print Taketh Away”

The most important things a client would want to know about Nationwide’s New Heights® 8 Fixed Indexed Annuity, or any indexed annuity or life insurance product, is usually found in the “fine print” of the written contract and not the marketing materials. Under most state insurance laws, the client has 10 days from receipt of the contract (ordinarily delivered at the time of purchase) to decide whether they want to return the policy and receive their money back (referred to as a “free look”) or keep the policy. Interestingly, while the brochures and video highlighting the attractive features of Nationwide’s New Heights® 8 Fixed Indexed Annuity are available through a product-specific marketing website hosted by Nationwide, the actual contract is not and can only be obtained from the carrier upon request.

If a client had a PhD in Finance, or perhaps was an experienced securities lawyer, and read the 83-page New Heights® 8 Fixed Indexed Annuity contract or the 156-page J.P. Morgan Mozaic IISM Index Supplement, here are some of the things they would find within “the small print:"

- **Tax deferral** – This claim is true - as it is of all annuities, with a caveat that applies to clients who make withdrawals from any annuity prior to age 59½ where gains on the contract would be subject to a 10% early withdrawal federal tax penalty. Additionally, all withdrawals may be subject to ordinary income tax as well.

- **“No downside risk”** – This is mostly true with Nationwide New Heights® 8 Fixed Indexed Annuity as it is with most indexed annuities. The money deposited into the contract is primarily invested by the insurance carrier in bonds. These funds allow the company to bring the client’s account value back to the invested principal year-to-year if negative performance occurs in the client’s selected investment strategy. The “upside” is produced by the carrier’s investment in derivatives, mostly futures contracts on the respective indexes available within the product, either the S&P 500® Index, the MSCI EAFE® Index, the NYSE® Zebra Edge® Index, or the J.P. Morgan Mozaic IISM. However, if there is an optional rider added to the policy, there is no longer a “0% downside” due to the rider fees that are deducted annually from the policy. The living benefit rider costs between 95-115bps and the death benefit rider costs between 50-80bps. These riders cannot be added in conjunction with each other.

Additionally, there is an initial risk of loss of principal with the surrender charge of 8% in the first policy year. See Figure 1 for the decreasing Contingent Deferred Sales Charge schedule for the New Heights® 8 Fixed Indexed Annuity. Also note that in the first year of the policy, no free withdrawals are allowed.

- **Broad diversification across 15 global asset classes in several countries** – In addition to the S&P 500® Index, the MSCI EAFE® Index and the NYSE® Zebra Edge® Index, the New Heights® 8 Fixed Indexed Annuity offers policy holders the ability to link or allocate their policies to the J.P. Morgan Mozaic IISM Index. This relatively complex index, requiring 156-pages to fully describe its strategy, contains 15 “Basket Constituents” comprised of various “Equity Constituents,” “Bond Constituents,” as well as “Commodity Constituents.” The insurance carrier does not directly invest in the underlying index to which the account is allocated to, but rather in derivatives (mainly futures contracts). It is important to note that since there is no direct investment in the securities upon which the index returns are based, there are no dividends earned as would be the case when securities are directly owned. Nor is the cash value of the annuity invested in a fund managed by J.P. Morgan, rather J.P. Morgan has licensed use of its Mozaic IISM Index to Nationwide. Also, J.P. Morgan may unilaterally terminate the Mozaic IISM Index on short notice as J.P. Morgan is “under no obligation to continue compiling, calculating, maintaining or sponsoring the Index.” One would presume this must mean that if the Mozaic IISM Index was terminated, the client would have an option to allocate their funds to one of the remaining index strategies. A critical fact that every client must understand is that this contract gives the insurance carrier the authority to unilaterally and “at its sole discretion” revise the crediting factors within the client’s chosen index allocation. Additionally, the carrier could allocate as much as 95% of the client’s funds into a “declared rate” bucket also known as a fixed account that has a minimum crediting rate of 0%, significantly decreasing the potential for returns shown in Figure 2.

Figure 3–J.P. Morgan Mozaic II™ Index & S&P 500 Price Index

The J.P. Morgan Mozaic II™ Index would have provided positive calendar year returns every year for more than 20 years.

From 11/1/96 to 12/31/17. Note: The J.P. Morgan Mozaic II™ Index was established on 12/28/16. Performance shown is back-tested by applying the index strategy to historical financial data when all components are available and was designed with the benefit of hindsight. Back-tested performance is hypothetical and has been provided for informational purposes only. The S&P 500 Price Index results are actual performance for the full period. Past performance is not indicative of nor does it guarantee future performance. The hypothetical data above does not take index fees or transaction costs into account.

Source: J.P. Morgan Mozaic II SM Index Marketing Brochure
The claim in Figure 3 bears much scrutiny. It shows returns from December 1996 through December 2017 for J.P. Morgan’s Mozaic IISM Index compared to the S&P 500 Index (excluding dividends). The J.P. Morgan’s Mozaic IISM Index has only actually been in existence for 2 years, established on 12/28/2016. In 2017, the index returned 6.68% vs. S&P 500’s 19.42%. In 2018, J.P. Morgan’s Mozaic IISM Index returned -0.50% vs. S&P 500’s -6.24%. The rest of the results and the accompanying graph come from what is commonly referred to as “hypothetical back testing.” Said another way, this means that if the J.P. Morgan Mozaic IISM index existed in 1996 and investors could go back in a time machine to invest directly in the index, then and only then would the investor have experienced these hypothetical returns. On another hand, if one could go back in that same time machine to 1996 and, with the benefit of hindsight, buy stock in Apple, Google or Microsoft, and then switch to bonds in both 2000 and 2007, then their returns would definitely beat the S&P 500, the J.P. Morgan Mozaic IISM Index and every investor in the world - including Warren Buffet. Note these types of hypothetical back-tested models are not permitted within sales material when offering SEC-registered securities and their use to predict future performance is deemed inappropriate by FINRA, yet are permitted in the sales materials associated with products that are only regulated by state insurance regulators.

- **Volatility smoothing to less than half the volatility of the S&P 500** – Again, the hypothetical, back-tested results demonstrate that, with the benefit of hindsight, volatility can be significantly reduced. However, there are three important “values” to which advisors and their clients must pay close attention:

  - **Contract Value** – The contract value has a 0% floor for index returns, meaning that if the index has a return of -5%, the client holding the policy will have a 0% return for the term. Fees associated with optional living benefit or death benefit riders can be deducted from the contract value however.

  - **Minimum Guaranteed Contract Value (MGCV)** – MGCV is the minimum amount defined in the policy that the contract owner is guaranteed to receive upon surrender of the annuity after the application of any surrender charges and/or market value adjustments. This value is equal to 87.5% of the premium deposited into the contract and will grow at a guaranteed 1% each year, shown in Figure 4. This is conveniently left out of illustrations and can only be found in the contract specimen received after purchase.

  - **Surrender Value** – The Nationwide New Heights Fixed Indexed Annuity offers 4 different surrender schedules from which to choose: 8, 9, 10 or 12 years. The surrender value is the amount of cash you can walk away with at any given point in time. It is the greater of the MGCV or your contract value minus any surrender penalties and built-up rider fees.
- **No caps on the client’s upside unlike most Equity Index Annuities** – It is true that this contract does not, like most indexed annuities, have the typical cap of 5 or 5.5% on the upside of the indexes referenced. In fact, there is one choice that offers the client 117% of the return on the J.P. Morgan Mozaic Index II™ described previously with no cap as shown in Figure 5 below.

</tbody>
</table>

Again, one must read the fine print in the contract to understand how this crediting method works and how it can be changed. Not only can the investor be reallocated 95% to a fixed account, but the company can and does charge a spread on the index strategy. By contract, the insurance carrier can increase the annual spread it charges on this index. The contract gives the carrier the right to increase this spread to as much as the original spread plus 5% per index strategy. This bears repeating for emphasis. *The contract allows the insurance company to increase the charge against earnings to 500 to 600 basis points on the J.P. Morgan Mozaic II™ Index and up to 685 basis points on the S&P 500 and up to 695 basis points EAFE Index.* Thus, if the “uncapped” J.P. Morgan Mozaic II™ Index strategy produced a 6% return and the client elected the 117% participation option in Figure 5, the crediting would be 7.02% (6% X 117%). The insurance company could reduce these earnings back to 1.02% by applying the maximum spread of 6% (7.02%-6%), shown in Figure 2. The hypothetical back-tested performance chart in Figure 3 shows only the J.P. Morgan Mozaic II™ Index performance, not what is credited to client’s accounts via participation rates and/or spreads.

- **There is an optional lifetime income rider that promises increasing guaranteed lifetime income that you cannot outlive.** – The rider is called The Nationwide High Point 365® Lifetime Income Benefit rider. For the New Heights® 8 Fixed Indexed Annuity, the rider cost is 95 basis points. The income base increases at 1% compound for the first 10 years of the policy and the living benefit rider cannot be turned on until the 5th policy anniversary. This is a very important point that is unique to the New Heights product. Most riders can be turned on at any time after policy issuance. The New Heights® High Point 365® rider offers inflexibility by mandating that withdrawals under the rider can’t occur until the 5th anniversary. If the client wants to pay 115bps for the rider, they can have a 3% bonus added to their rider value, contract value and death benefit. The 3% bonus is based upon the purchase payment of the policy. As if this wasn’t complex enough, the withdrawal bands are different for each client based on the age the client purchased the policy, the age they decide to turn on income (must wait at least 5 years) and whether it is a single or joint lifetime income stream. Therefore, a 60-year old client who purchases the New Heights® 8 Fixed Indexed Annuity policy with the non-bonus version of the High Point 365® Lifetime Income Benefit rider with $100K deposit, is guaranteed to have a $6,295.55 annual income stream for life if income is turned on at the 5th anniversary. Withdrawal bands are shown below in Figure 6.
Conclusion

Even though Nationwide’s New Heights 8® Fixed Indexed Annuity is only a state regulated annuity contract, FINRA’s Notice to members 05-50 and 12-03 on complex products requires broker dealers to monitor and train on products while imposing heightened supervision upon them. FINRA Notice 12-03 requires that “the registered representative also should discuss the scenarios in which the product may perform poorly.”

Although this product offers little risk of loss of principal, outside being subject to steep surrender charges, financial advisors must use caution to temper what could lead to inflated client expectations created by the marketing materials. Advisors must thoroughly understand the entire annuity contract and its limitations on the crediting methodology. This may be an appropriate product for fixed income clients who are willing to trade illiquidity for the potential of a higher tax-differed return. This product offers safety of principal for a portion of their savings and provides the potential for lifetime income. An informed purchaser must take into account that the entire value and safety of principal is completely predicated on the claims-paying ability of the issuing company - Nationwide Life and Annuity Insurance Company, a subsidiary of Nationwide Insurance Company. As such, it would be prudent to diversify a client’s investments and have only a portion of any client’s investment in this product or any other product supported by the general account assets of an insurance carrier.

The J.P. Morgan Mozaic IISM Index methodology may have the potential of exceeding index returns of other equity indexed annuities, by a slight margin, as it did in 2017. A recent study by Cannex which looked at the entire index annuity market concluded the average return for all equity index annuity products using the S&P 500 Index with the traditional caps would be 3.18%. The highest observed cap in the study was a 6.1% cap with 100% participation rate giving this product a predicted average return of 3.58% over a longer-term using Monte Carlo simulation. Thus, in its first year, this product using the J.P. Morgan Mozaic IISM Index methodology exceeded other index methodologies. It must also be noted however, that it substantially trailed the S&P 500. Looking forward, it would be best to set the client expectation well below the marketing materials featuring back-tested J.P. Morgan Mozaic IISM Index return of 6.30%. A more pragmatic outlook would have returns slightly higher than the industry average of 3.18% from the Cannex study on all equity index annuities. Various disclosures and cautions within the “fine print” of the contract with Nationwide and J.P. Morgan’s Index documentation make this point abundantly clear.
The contract provisions give very wide latitude to Nationwide to change the index, the index allocations from equities to bonds and, most importantly, the spread on charges against these credits for the index. We can think of no securities product registered with the SEC that would provide this degree of latitude in potential charges. Any prospect for returns higher than a typical indexed annuity is highly dependent on these factors. If an insurance carrier exercised the options available to it and increased spreads or allocated assets mostly to the fixed account, it is likely the product would produce returns only slightly higher than 1% a year.

If the client is looking for guaranteed income in future years, there are many other annuity options that offer greater upside potential with the added safety of separate account protection.

“The Valmark Fit”
With Valmark’s Comprehensive Annuity Review and Evaluation Service™ (CARES™), we have the ability to analyze new annuity policies being recommended to clients or existing policies already owned, by comparing them to a benchmark annuity that fits the client’s objective. We have four different outputs based on the following objectives: Income, Death Benefit with Income, Death Benefit or Accumulation. The CARES™ Process clearly articulates to clients the large and small print that might be murky in insurance carrier marketing material. At Valmark we understand that annuities can be complex, whether they are fixed, indexed or variable. The CARES™ Process is designed to help provide clarity on these products that your clients desire and deserve.

ABOUT THE AUTHORS

Lawrence J. Rybka, JD, CFP®
Lawrence J. Rybka is President and Chief Executive Officer of Valmark Financial Group, which includes a broker dealer, an investment advisor and Executive Insurance Agency (the nation’s first producer group). Valmark serves 120 premier independently-owned and run wealth management/transfer firms in 31 states. Over the last 29 years, Larry has authored over a dozen articles in U.S. financial industry journals about the future of financial advice. Two of his articles were recognized with industry awards: the Journal of the American Society of CLU and ChFC’s Author Award as well as the CFP Board’s Article Award. He is also co-author of one of the CCH Tools and Techniques Books with Steven Leimberg. Larry’s industry leadership also includes terms on the Boards of AALU and the MDRT Foundation. He has also served as the Chair for various committees in the industry, including twice as the AALU Chair of the Regulatory Reform Committee and CFP Board of Examiners.

Jessica Rorar, CFP®
Jessica Rorar is a Senior Planner at Valmark Financial Group, responsible for aspects of case design, marketing and implementation of annuity solutions within clients’ retirement and estate plans. Jessica oversees a team that assists Valmark Member Firms with annuity policy reviews, through various processes, to meet the unique needs and best interests of each client.
Although this product is technically a “fixed annuity” and, therefore, not a security, it offers contract holders no true “fixed interest” return, unless invested in the fixed account. Rather, all returns are dependent upon, or “linked to,” an external equity reference or an equity index. See: Page 7 of Appendix A, New Heights 8th Sample Contract (Run Date 03/16/17). For illustration purposes here, the author has chosen to discuss a product linked to J.P. Morgan Mozaic IISM Index.

Introduction

Index Objective and Highlights

The S&P PRISM Index is an index of indices designed to measure the performance of an inverse risk weighted basket of three component indices after accounting for technical and fundamental indicators. The three underlying component indices each represent a different asset class, as defined below:

<table>
<thead>
<tr>
<th>Underlying Component Index</th>
<th>Asset Class Represented</th>
</tr>
</thead>
<tbody>
<tr>
<td>S&amp;P 500 ER (3M Libor) Index</td>
<td>Equities</td>
</tr>
<tr>
<td>S&amp;P GSCI Excess Return Index</td>
<td>Commodities</td>
</tr>
<tr>
<td>S&amp;P 10-Year U.S. Treasury Note Futures Excess Return Index</td>
<td>Fixed Income</td>
</tr>
</tbody>
</table>

Please refer to Index Construction for details on each index’s allocation to equities, commodities, and fixed income.

Supporting Documents

This methodology is meant to be read in conjunction with supporting documents providing greater detail with respect to the policies, procedures and calculations described herein. References throughout the methodology direct the reader to the relevant supporting document for further information on a specific topic. The list of the main supplemental documents for this methodology, and the hyperlinks to those documents, is as follows:

<table>
<thead>
<tr>
<th>Supporting Document</th>
<th>URL</th>
</tr>

<td>Index Mathematics Methodology</td>
</tr>
</tbody>
</table>

This methodology was created by S&P Dow Jones Indices to achieve the aforementioned objective of measuring the underlying interest of each index governed by this methodology document. Any changes to or deviations from this methodology are made in the sole judgment and discretion of S&P Dow Jones Indices so that the index continues to achieve its objective.
Index Construction

Approach

The index allocates among three sub-indices based on their respective realized volatilities and a multiplier that is applied to its volatility. The resulting index of indices forms the underlying non-risk controlled index.

The underlying Commodity and Treasury futures sub-indices are calculated and published by S&P DJI on a daily basis as excess return indices.

The third underlying sub-index, the S&P 500 ER (3M Libor) Index, is calculated as follows and is based on the S&P 500 TR Index using the 3-month LIBOR for the interest rate:

**S&P 500 ER (3M Libor) Index (SP500 ER3ML)**

\[
SP500\ ER3ML_t = SP500\ ER3ML_{t-1} \times (1 + SP500\ 3ML_t\ Excess\ Return)
\]

\[
SP500\ 3ML_t\ Excess\ Return = \left( \frac{SP500\ TR\ Index_t}{SP500\ TR\ Index_{t-1}} \right) - \left( InterestRate_{t-1} \times \frac{NumDays_t}{360} \right) - 1
\]

**Step 1: Trend Signals and Volatilities**

Before calculating the weights in the non-risk controlled index, three trend signals are calculated. For each sub-index, the following process is used to calculate a binary “position indicator” series of 1 or 0:

A. Calculate the 200 day simple moving average of the underlying sub-indices.
B. Calculate a trend signal based on the following rule:

$$\text{Trend Signal}_{asset,t} = \begin{cases} 1, & \text{if } \text{Index}_{asset,t} > 200\text{DMA}_{asset,t} \\ 0, & \text{otherwise} \end{cases}$$

C. Create two series, $UpCount_t$ and $DownCount_t$, that serve as counting indices. These indices will start at 0 on the 200th day, and increment each day thereafter.

$$UpCount_{asset,200} = DownCount_{asset,200} = 0$$

$$UpCount_{asset,t} = \begin{cases} UpCount_{asset,t-1} + 1, & \text{if Trend Signal}_{asset,t-1} = 1 \\ 0, & \text{otherwise} \end{cases}$$

$$DownCount_{asset,t} = \begin{cases} DownCount_{asset,t-1} + 1, & \text{if Trend Signal}_{asset,t-1} = 0 \\ 0, & \text{otherwise} \end{cases}$$

D. Finally, calculate the binary “position indicator” as follows:

$$\text{Position Indicator}_{asset,t} = \begin{cases} 1, & \text{if } UpCount_{asset,t} > 4 \\ 0, & \text{otherwise} \end{cases}$$

E. For each sub-index, compute the 90 day volatility of excess returns

$$\text{Volatility}_{asset,t} = \sqrt{\frac{\sum_{i=0}^{89} (\text{DailyReturn}_{asset,i} - \text{AvgDailyReturn}_{asset})^2}{89}} \times \sqrt{252}$$

Where,

$$\text{DailyReturn}_{asset,t} = \frac{\text{Index}_{asset,t}}{\text{Index}_{asset,t-1}} - 1$$

$$\text{AvgDailyReturn}_{asset} = \frac{\sum_{i=0}^{89} \text{Index}_{asset,t-i} - 1}{90}$$

Step 2: Rank Long Sub-Index Returns

A. For each sub-index, compute the 200 day excess return

$$200 \text{ Day Return}_{asset,t} = \frac{\text{Index}_{asset,t}}{\text{Index}_{asset,t-200}} - 1$$

B. For each sub-index on an excess return basis, plus cash (which has a daily excess return of 0), rank the 200 day excess returns on day t across sub-index, with 1 being the highest return, and 4 being the lowest return.

C. Compute the trailing 5 day average rank for equities and fixed income.
Step 3: Volatility Scalars

A. Calculate a yield curve multiplier that is based on a lagged 120 day 60 day average of the spread between the 10-year U.S. Treasury rate and the 3-month U.S. Treasury rate as follows:

\[
Yield\ Curve\ Multiplier_t = \begin{cases} 
1, & \text{if } \frac{\sum_{i=1}^{60} 10\ Year\ Rate_{t-119-i} - 3\ Month\ Tbill\ Rate_{t-119-i}}{60} > 0 \\
5, & \text{Otherwise}
\end{cases}
\]

B. Calculate a bond trend indicator:

\[
Bond\ Trend\ Position_t = \begin{cases} 
1, & \text{if } Position\ Indicator_{bond,t} = 1 \\
10, & \text{if } Position\ Indicator_{bond,t} = 0 \text{ AND } (10\ Year\ Rate_t - 3\ Month\ Tbill\ Rate_t) < 0 \\
1, & \text{Otherwise}
\end{cases}
\]

C. Calculate the earnings yield and reference 10-year yield as:

\[
EY_t = Earnings\ Yield = \frac{1}{1\ yr\ forward\ PE_{t,s&p500}} \\
10Y_t = 10 - Year\ Yield\ at\ time\ t
\]

D. Calculate equity and bond volatility multipliers.

<td>1</td>
<td></td>
</tr>
<tr>
<td>&lt;&gt; 4</td>
<td>&gt;= 2%</td>
<td>&lt;&gt; 1</td>
<td></td>
</tr>
</tbody>
</table>

Step 4: Inverse Volatility Weighting

A. Calculate the scaled volatilities for both equities and fixed income as:

\[
Equity\ Vol_t = Volatility_{Equity,t} \times Equity\ Mult_t \\
Fixed\ Income\ Vol_t = Volatility_{Fixed\ Income,t} \times Fixed\ Income\ Mult_t
\]

B. Determine the inverse weights with regard to the target volatility:

\[
Inverse_{Equity,t} = \frac{5.5\%}{Equity\ Vol_t} \\
Inverse_{Fixed,t} = \frac{5.5\%}{Fixed\ Income\ Vol_t}
\]
C. Calculate the final weights for each sub-index:

\[
Final \ Weight_{asset,t} = \frac{Inverse_{asset,t}}{\sum_{asset} Inverse_{asset,t}}
\]

Step 5: Reference Index Calculation

A. Calculate the index return:

\[
Weighted \ Avg \ Return_t = \sum Final \ Weight_{asset,t-2} \times Excess \ Daily \ Return_{asset,t}
\]

\[
Ref \ Index \ Return_t = \begin{cases} 
0.75 \times Weighted \ Avg \ Return_t, \text{if } Equity \ Mult_{t-2} + Fixed \ Income \ Mult_{t-2} = 15 \\
Weighted \ Avg \ Return_t, \text{Otherwise}
\end{cases}
\]

B. Final step is to calculate the reference index level

\[
Ref \ Index \ Level_t = Ref \ Index \ Level_{t-1} \times (1 + Ref \ Index \ Return_t)
\]

Step 6: Final Index Level

In order to calculate the final index levels, a risk control methodology is applied. Please refer to the Risk Control Indices section of the index mathematics document for equations 55, 56, 59 and 60, where the underlying index is the reference index calculated above and:

\[
K_{rb} = \min(100\%, \frac{5.5\%}{Realized \ Volatility_{t-2}})
\]
Index Maintenance

Rebalancing

The index is rebalanced on US business days after the market close. If a component of the index is not published on the rebalancing date, the prior value of that component is used. As part of the rebalancing process, the weights of the various asset class components are determined based on the sub-indices weights in the benchmarks as described in Index Construction.

Corporate Actions

For information on Corporate actions, please refer to S&P Dow Jones Indices’ Equity Indices Policies & Practices.

Currency of Calculation and Additional Index Return Series

In addition to the indices detailed in this methodology, additional return series versions of the indices may be available, including, but not limited to: currency, currency hedged, decrement, fair value, inverse, leveraged, and risk control versions. For a list of available indices, please refer to S&P DJI’s All Indices by Methodology Report.

For information on the calculation of different types of indices, please refer to S&P Dow Jones Indices’ Index Mathematics Methodology.

Base Date and History Availability

Index history availability, base date and base value are shown in the table below.

<table>
<thead>
<tr>

Index Governance

Index Committee

S&P Dow Jones Indices’ Factor Indices Index Committee maintains the index. The Committee meets regularly. At each meeting, the Committee reviews matters that may affect index constituents, statistics comparing the composition of the index to the market, and any significant market events. In addition, the Index Committee may revise index policy covering rules for selecting constituents, treatment of dividends, share counts or other matters.

S&P Dow Jones Indices’ considers information about changes to its indices and related matters to be potentially market moving and material. Therefore, all Index Committee discussions are confidential.

S&P Dow Jones Indices’ Index Committees reserve the right to make exceptions when applying the methodology if the need arises. In any scenario where the treatment differs from the general rules stated in this document or supplemental documents, clients will receive sufficient notice, whenever possible.

In addition to the daily governance of indices and maintenance of index methodologies, at least once within any 12-month period, the Index Committee reviews the methodology to ensure the indices continue to achieve the stated objectives, and that the data and methodology remain effective. In certain instances, S&P Dow Jones Indices may publish a consultation inviting comments from external parties.

For information on Quality Assurance and Internal Reviews of Methodology, please refer to S&P Dow Jones Indices’ Equity Indices Policies & Practices Methodology.
Index Policy

Holiday Schedule

The index is calculated on all U.S. equity market business days.

A complete holiday schedule for the year is available at www.spdji.com.

Rebalancing

The index committee may change the date of a given rebalancing for reasons including market holidays occurring on or around the scheduled rebalancing date. Any such change will be announced with proper advance notice where possible.

Unexpected Exchange Closures

For information on Unexpected Exchange Closures, please refer to S&P Dow Jones Indices’ Equity Indices Policies & Practices Methodology.

Recalculation Policy

For information on the recalculation policy, please refer to S&P Dow Jones Indices’ Equity Indices Policies & Practices Methodology.

For information on Calculations and Pricing Disruptions, Expert Judgment and Data Hierarchy, please refer to S&P Dow Jones Indices’ Equity Indices Policies & Practices Methodology.

Contact Information

For questions regarding an index, please contact: index_services@spglobal.com.
Index Dissemination

Index levels are available through S&P Dow Jones Indices’ Web site at www.spdji.com, major quote vendors (see codes below), numerous investment-oriented Web sites, and various print and electronic media.

**Tickers**

The table below lists headline indices covered by this document. All versions of the below indices that may exist are also covered by this document. Please refer to S&P DJI’s All Indices by Methodology Report for a complete list of indices covered by this document.

February 3, 2022

Mr. Mike Boerner  
Chair, Life Actuarial Task Force (LATF)  
National Association of Insurance Commissioners (NAIC)  

Re: IUL Exposure from the December 8, 2021 LATF Session  

Dear Mr. Boerner,  

The American Academy of Actuaries\(^1\) Life Illustrations Work Group (the “Work Group”) is pleased to provide comments to the LATF on the Indexed Universal Life (IUL) Exposure from the December 8, 2021, session.

As described in the IUL Exposure, some volatility control index accounts have a lower hedge budget than a capped S&P 500 index account but illustrate at the same lookback rate as the Benchmark Index Account (“BIA”). These accounts illustrate at the same lookback rate as the BIA because their option profits (hedge returns relative to hedge costs) are assumed to be higher than the option profits for the BIA. The remaining net investment earnings that are not put toward purchasing options may then be used to offer a fixed bonus, which results in higher illustrated values than those under the BIA.

Although the illustrated values for these accounts can be higher, as noted in the IUL Exposure, the differences may be smaller in magnitude than the illustrations of multipliers or other index enhancements that were addressed by AG 49-A. Indeed, the Work Group notes that AG 49-A has largely had the intended effect that products with multipliers and other index enhancements should not illustrate any better than products without these features.

However, if LATF decides an update to AG 49-A is needed, the Work Group suggests consideration of either of the following approaches that could be used to address current practices:

(A) **Apply an additional limit to the illustrated option profit (e.g., 45%)**  
This approach would apply a fixed predetermined limit to the illustrated option profit, similar, in concept, to the current limit of 145% of the net investment earned rate. However, it differs from the net investment earned rate as it would place a limit on the illustrated option profit for each account. LATF could apply a limit to the illustrated

---

\(^1\) The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
option profit by requiring an amendment to AG 49-A that would bring the illustrated option profits of volatility control indices more in line with the illustrated option profits of other indices. However, this approach could still result in some index accounts illustrating somewhat higher policy values than what the BIA would produce (although more limited than today). An appropriate factor, such as 45% or something else, would have to be determined.

(B) Align BIA limit with option spend through multiple BIAs
Under this approach, the illustrated index rate for each index account would be limited to the lookback rate for a BIA with the same amount spent on hedging. BIAs with lower hedge budgets would have lower caps, and therefore lower lookback rate limits would be applied to the index accounts that use lower hedge budgets. The Work Group notes that multiple BIAs were allowed under AG 49 for cap buy-up accounts but were eliminated under AG 49-A, so we suggest language could be borrowed from AG 49 and applied to indices with lower hedge budgets without reversing decisions that have already been made for multipliers and buy-ups. In contrast to approach (A), approach (B) would not result in some index accounts illustrating higher policy values than the BIA and would not require an agreed-upon appropriate factor. While drafting language for approach (B) may be more difficult and therefore may take more time than for approach (A), the Work Group notes that approach (B) may be a more comprehensive solution.

Changes to AG 49-A that make index accounts illustrate more similarly may result in reduced customer understanding because the differences are not shown in the illustrated values. The Work Group also notes that the approaches described in (A) and (B) do not place limits on the illustration of fixed bonuses, because fixed bonuses do not appear to be the core issue.

In addition, the Work Group notes that there were some questions during the December 8, 2021, LATF session about how volatility control index accounts work and how they may perform relative to other index accounts, such as those based on the S&P 500. The Work Group notes that these questions could be addressed via disclosures.

The Work Group appreciates the efforts of the LATF and IUL Illustration Subgroup to review AG 49 and AG 49-A. If you have any questions or would like further input on the above topics, please contact Khloe Greenwood, life policy analyst, at greenwood@actuary.org.

Sincerely,

Alicia Carter, MAAA, FSA
Chairperson, Life Illustrations Work Group
American Academy of Actuaries
Dear Mr. Andersen,

Equitable provides the following comments in response to the December 9, 2021 IUL Exposure, both as a reminder of Equitable’s 2020 proposal (attached), and also to indicate how the proposal would relate to illustrations of Volatility Controlled Funds (VCFs). More specifically, Equitable believes that reconsideration of its 2020 proposal is appropriate if it is decided that substantive changes to AG 49-A are necessary in order to address regulators’ concerns.

In essence, Equitable’s 2020 proposal would uniformly guardrail illustrations (1) by tying illustrated index credits to the option budget, and (2) by imposing a guardrail on assumed excess returns irrespective of the mechanics of the strategy. We think such an approach would be sensible under a “no free lunch” assumption.

One reason for adoption of AG 49-A was regulators’ concern that additional fees charged by insurers to fund multipliers and other indexed enhancements exposed policy owners to the risk that such relatively expensive policies would underperform policies without such fees and enhancements, if illustrated index performance did not materialize. While VCFs as described in the exposure document wouldn’t present the same concern (since the illustrated performance wouldn’t be reliant on charging additional fees), such VCFs could nevertheless expose policyholders to additional risk that loaned policies will collapse due to insufficient net policy value, if illustrated loan arbitrage (including the fixed bonus) doesn’t actually materialize.

It should be noted that any problem posed by relatively high values illustrated for VCFs isn’t primarily related to fixed bonuses. Any unused hedge budget for a VCF could be used in many other ways to increase illustrated values, such as to reduce COI charges or expense charges. In fact, fixed bonuses are a relatively transparent way of providing higher illustrated values, as compared to COI or other charge reductions which may be much less visible to policyholders.

The philosophy behind AG 49 was to use a traditional capped S&P 500 indexed account (the BIA) as a guardrail against overly optimistic illustrations. In order to achieve the subsequent goal that products with indexed enhancements should not illustrate better than products without such enhancements, AG 49-A in effect limited each company’s illustrated hedge budget to not exceed such company’s annual net investment earnings rate (ANIER).

While the limitation of the illustrated hedge budget to each company’s ANIER achieved the immediate objective of regulators, it does not comport well with the expected decline of current portfolio ANIERs given today’s far lower prevailing investment yields. In contrast, Equitable’s proposal limited the amount of each indexed account’s hedge budget that can be used to support illustrated indexed credits to the greater of the ANIER and 5%. This higher limit was based on the belief that (1) policyholders may reasonably seek contracts with greater market exposure than what can be created by a hedge budget supported only by prevailing yields on high quality assets, and (2) better governance of illustrated rates of return under Equitable’s proposal would allow for more latitude in the illustration of hedge budgets that rely in part on moderate supplemental charges and not exclusively on investment returns.

However, please note that Equitable’s proposed limit on the amount of the hedge budget that could be used to support the illustrated scale to max (ANIER, 5%) would limit the use of higher charges to support illustration of higher multipliers or other indexed enhancements, similar to the existing AG 49-A. It would also have the effect of limiting illustrated loan leverage.
One important element of Equitable’s proposal for AG 49-A was (1) the continuation from AG 49 of the allowance for more than one BIA and (2) the corresponding requirement that the assumptions for account charges and additional amounts credited (i.e., fixed bonuses) must be consistent between each BIA and the indexed accounts for which it acts as a guardrail. This protective feature of AG 49 was not included in the ACLI proposal for AG 49-A that was ultimately adopted.

Under Equitable’s proposal, for a VCF as described in the exposure document, the corresponding BIA would need to provide a fixed bonus that was at least as high as that provided by the VCF, and charges for the BIA could not be increased beyond the charges for the VCF, ensuring consistency between the hedge cost assumptions of the VCF and the BIA guardrail. More importantly, this aspect of Equitable’s proposal would ensure consistency of charge and credit assumptions between BIAs and all future indexed accounts they govern (not just VCFs), ensuring continued future efficacy of the BIA guardrails.

Equitable’s proposal integrated the best elements of the Independent Proposal and the ACLI proposal that was ultimately adopted – this integration is explained in detail in the table on page 3 of the proposal. Equitable’s proposal to this extent represented a compromise between the two approaches.

By replacing the look back approach to computing the BIA guardrail with the Black Scholes formula for option valuation plus a reasonable risk premium (we suggested 20% rather than 45%), Equitable’s proposal would have the added benefit of encouraging insurers to move away from dependence on “certain subsets of history” in evaluating past performance, and toward a more standardized and uniform method based on modern financial theory and practice. Under Equitable’s proposal, total illustrated index credits (including any indexed enhancements) would be limited to at most 6% (computed as 120% of 5%) per annum, except for insurers who have ANIERs of greater than 5% per annum.

Equitable’s attached 2020 proposal was written during the period of development leading up to adoption of the final version of AG 49-A, and hence the redline of the ACLI’s proposal that was submitted at that time (attached) would need to be updated. Equitable would welcome the chance to participate in any such effort, should regulators decide that substantive changes to AG 49-A are needed.

Thanks very much for the opportunity to share our thoughts with you and the other members of the IUL Illustration (A) Subgroup on these important matters.
Equitable 5-27-2020 Comments on AG 49 Integrated Proposal
Mr. Fred Andersen  
Chair, NAIC Indexed Universal Life (IUL) Illustration (A) Subgroup  

Re: IUL Exposure  

Mr. Andersen,  

Allianz appreciates the opportunity to provide comments on the matters discussed in the LATF IUL Exposure from December, 2021. Allianz offers a variety of allocations with various crediting methods and indexes to consumers. When the cost of hedging any given allocation changes, it is possible to have better historical performance than the S&P500 at a lower cost. In these cases, a company can decide what they would like to do with this excess hedge budget and what the consumer may find most valuable, whether it be higher caps/rates, fixed bonuses, lower charges, or other unique features. The decision on where to provide additional value occurs across all allocations, whether or not they are a Volatility Control Index (VCI). When there are situations where hedging costs are lower and the allocation provides historical outperformance compared to the S&P500, we think it is valuable to the consumer to reflect the additional affordable benefits that are offered within the current restrictions of AG 49-A. Because VCIs are specifically highlighted in the LATF letter and Allianz has offered VCIs for over 8 years, we wanted to provide our perspective on the consumer value of VCIs.  

Allianz History  
Allianz began offering allocations tied to VCIs on its Fixed Index Annuity (FIA) and IUL products in 2013 and 2014 respectively. The benefits of offering an index with a volatility control mechanism include diversification, stability in rate renewal, stability in and strong credit performance, and unique benefits only available with VCIs. Because of these benefits, allocations tied to VCIs offer and have delivered unique value to our policyholders and they are an important part of our index line-up.  

VCIs are indexes that have some type of mechanism to control volatility. This mechanism can range from a defined formulaic approach, to active management, to something in between. The VCIs that Allianz offers on our IUL products use a defined formula that rebalances between an equity component and fixed income/cash components on a daily basis. The purpose of this daily rebalancing is to hit a specific volatility target, thus controlling the volatility of the index. Generally speaking, equities are more volatile than fixed income, so the indexes will allocate more heavily to equity in times of low volatility and more heavily to fixed income in times of high volatility.  

Benefits of Volatility Controlled Indexes  

Diversification  
The combination of equity and fixed income can provide a diversification benefit and the VCIs we offer have both equity and fixed income components, leading to more diversification than a standard equity only index. VCI performance can benefit when either equity or fixed income does well, or if one of the components does not perform well, the other component can offset that low performance and allow the policyholder to still get a credit. This allows the policyholder to experience positive results in many different market environments, not only when the equity market is strong.
Diversification through fixed income can bring risks, and a common question raised about VCIs is will their high allocation to fixed income lead to underperformance in rising interest rate environments and is their good historical performance due to decreasing interest rates over the last 20 years. It is true that fixed income allocations will likely underperform when interest rates rise, but because of the diversification VCIs offer, the overall impact on long term performance of the VCI will vary based on all components of the index, including the equity component. The chart below compares the relationship of interest rates with the performance of the first VCI we offered, the Bloomberg US Dynamic Balance Index over the last 20 years.

**Note:** The Bloomberg US Dynamic Balance Index has been active since 2013, index performance before that is based on the underlying components of the index and the prescribed formula used to balance between the components.

While the general trend in rates has been down over the last 20 years, there have been several periods of sustained rate increases or rate spikes, like 2003-2006, 2009, 2017-2018, or 2021. The performance of the Bloomberg US Dynamic Balance Index during those periods is mixed, some really good, some moderate, and some flat. This is because market volatility and the performance of the equity component are material considerations of the VCI performance. In fact, over the last 10 years, interest rates have risen slightly and the performance of the index has been strong, mainly due to lower volatility and strong equity performance.

Because of the diversification offered by VCIs, the performance of the index is also able to weather equity market downturns, like the ones in 2002, 2008/2009, 2018, and 2020. The graph above shows that the VCI did not suffer large losses during those periods. This was due to the volatility control mechanism allocating away from equities when volatility spiked during the market downturns, further enhancing the benefits of diversification of the VCI.

**Stable Rate Renewal**
Volatility is a key driver of hedging costs and market volatility can fluctuate greatly from year-to-year. For a capped S&P500 allocation, changes in market volatility will lead to changes in hedging costs and therefore changes in the offered cap. This can lead to large changes in caps on a year-to-year basis and large changes in the historical lookback used for setting maximum illustrated rates in AG49. By contrast, VCIs target a stable volatility, leading to more stable option costs and therefore more stable affordable participation rates. On a year-to-year basis, the policyholder is less likely to experience large changes in participation rates and large changes in the AG49 lookback. This provides the policyholder a more stable and predictable experience over the life of their contract and creates historical lookbacks that rely less on current market conditions and are more representative of what would have actually been experienced over the historical period.
Stable and Strong Credit Performance

The VCIs we offer target a low and controlled volatility, so the index will increase and decrease more slowly than a higher volatility index, like an equity index. More stable index values lead to more stable credits, which is a benefit for IUL policyholders where product fees are present and timing of high or low credits can impact long term policy performance. Stable credits also better align with IUL illustrations, which do not show the variability of index performance.

The higher stability in credits a VCI can achieve is illustrated below by comparing the distribution of historical performance over the last 20 years between the Bloomberg US Dynamic Balance Index allocation and our capped S&P500 allocation. The analysis uses currently offered caps and participation rates and it can be seen that the distribution of the Bloomberg US Dynamic Balance Index credits are more evenly distributed than the S&P500 credits, which are more barbell shaped and have more instances where the policyholder does not receive a credit.

![Distribution of Credits - 2001-2021](image)

Note: The Bloomberg US Dynamic Balance Index has been active since 2013, index performance before that is based on the underlying components of the index and the prescribed formula used to balance between the components.

What can also be seen in the analysis above is that Bloomberg US Dynamic Balance Index allocation offers more potential upside than the capped S&P500 allocation. This strong historical performance is seen in the differences in historical lookbacks between the VCI allocations we offer and the capped S&P500, with the VCI allocations outperforming the S&P500 allocation by 2-3% on average.

Allianz started offering allocations tied to the Bloomberg US Dynamic Balance Index on our IUL policies in 2014, so in addition to strong historical lookback performance, we have 7 full years of credits that have been realized by our policyholders. Over that time, our allocation to this VCI has averaged 1.25% higher credits per year than the S&P500 allocation and both of the allocations have performed above the AG49 maximum allowed illustrated credit.

Unique Benefits Available to VCIs

The composition of the VCIs we offer allow us to offer unique benefits to our policyholders. Hedging for the VCIs we offer currently cost less than options for S&P500. We are able to take the hedging savings and offer a variety of benefits for the policyholder to choose from, including higher participation rates, a multiplier bonus, or a fixed bonus, all with a unique lock feature on top of these other benefits.

Our lock feature allows a policyholder to “lock-in” their index performance at any point during their crediting period instead of waiting until their policy anniversary, giving the policyholder a level of control over their policy that they cannot get with any other index. We have seen tremendous interest in this benefit since we introduced it in 2019 and we are only able to offer it because of the stable option costs for VCIs.

Summary

Allianz has offered allocations tied to VCIs since 2013. Our policyholders that have allocated to these indexes have benefited from diversification, stability in renewal rates, stability in and strong credit performance, and features like Index Lock. These policyholders have realized credits that exceed our S&P500 allocations and have been the recipients of additional benefits because of the lower and more stable option costs associated with the VCIs. The VCIs we offer and the additional benefits tied to them make up an important part of our product offering and give our policyholders valuable choice in their allocations. In order to have a fully informed and educated consumer when selecting their allocation choice, we feel that the additional benefits and value VCIs provide should be reflected while still adhering to the current AG 49-A illustration restrictions.

Thank you for the opportunity to provide these comments.

Mr. Mike Boerner  
Chair, NAIC Life Actuarial Task Force (LATF)  

Mr. Fred Andersen  
Chair, NAIC Indexed Universal Life (IUL) Illustration (A) Subgroup (IUL Subgroup)  

Re: IUL Exposure  

Dear Messrs. Boerner and Andersen:  

The American Council of Life Insurers (ACLJ) appreciates the opportunity to submit the following comments on the exposed document pertaining to IUL illustrations.  

ACLJ appreciates the hard work of LATF and the IUL Subgroup in the development of AG 49-A and the continued monitoring of IUL illustrations. The primary goal of AG 49-A was to reduce the illustrated values on multiplier accounts, which per the exposure appears to have been successful. Our understanding is that some regulators believe that the overall level of illustrated values did not decrease as much as regulators may have envisioned. ACLJ is committed to working with regulators to develop appropriate requirements that allow consumers to understand the value and risks of the policies they purchase.  

ACLJ would like to provide some commentary on the use of volatility-controlled funds with a fixed bonus. Volatility-controlled indexes have relatively low hedge costs associated with the options supporting the indexes, which enables companies to also provide a fixed bonus. These fixed bonuses are not linked to the performance of the indexes; such bonuses are just one way to provide product enhancements and do so in a transparent way. We have provided an appendix with several examples that demonstrate the mechanics of these index strategies and show how these products may have similar illustrated values as similarly situated products without volatility-controlled indexes.  

ACLJ seeks clarity on how regulators prefer to proceed. AG 49-A was designed to target multipliers and similar products and appears to have been successful in doing so. The question appears to be what additional refinements are needed. If the level of illustrated values resulting from current practices for volatility-controlled funds and similar features is deemed reasonable, a disclosure-only approach that could apply to all new inforce illustrations issued since the effective date of AG 49-A...
may provide better education to consumers about the risks associated with these features. If regulators believe the level of the illustrated values is unreasonable, we would ask regulators to provide clear objectives for a revised guideline so industry can work with regulators to address their concerns.

We appreciate the consideration of our comments and look forward to discussing on a future call. Thank you.

Sincerely,

cc: Reggie Mazyck, NAIC
Appendix - Examples

The following examples are approximate values showing how the credited rates might behave between different simplified products. All examples assume the NIER is 4%.

Baseline – BIA: S&P one-year point-to-point with a 100% participation rate, solved for cap, zero floor, no multiplier, no bonus

For the BIA, the hedge budget is 4%. Based on the average option cost over the last 10 years, that would provide an 8.5% cap, which would translate to a 5.45% credited rate using the AG 49-A prescribed lookback methodology.

Scenario 1: S&P one-year point-to-point with a 100% participation rate, solved for cap, zero floor, no multiplier, 50 bp fixed bonus

For this index strategy, the hedge budget is 3.5%. This results in a 7.25% cap, which would translate to a 4.76% illustrated indexed rate before the fixed bonus, and a 5.26% illustrated rate after the fixed bonus. This example illustrates that AG 49-A allows for a lower hedge budget even independent of volatility-controlled funds. When an S&P account provides a fixed bonus for the same total cost as an S&P account without the bonus, it results in a lower illustrated rate.

Scenario 2: Volatility-Controlled index strategy with a 150% participation rate, no cap, zero floor, no multiplier, solved for fixed bonus.

For this index strategy, assume that the hedge cost for a 100% participation rate is 2.333%. Also assume that at a 150% participation rate, the prescribed lookback methodology produced returns greater than or equal to the 5.45% BIA rate. Set the participation rate to 150%. The hedge budget now needs to be 150% of 2.333%, or 3.5%. This difference leaves 50 bps for the fixed bonus. The resulting indexed credits plus fixed bonus is 5.45% + 0.50% = 5.95%. We note that different participation rates or hedge budgets could be used to achieve different fixed bonus percentages.

Scenario 3: S&P one-year point-to-point with a 100% participation rate, solved for cap, zero floor, no multiplier, 50 bp fixed bonus

This index strategy would be similar to the BIA but with an additional 50 bp bonus, so the resulting indexed credits plus fixed bonus is 5.45% + 0.50% = 5.95%. Such a strategy would require the bonus to be paid for elsewhere in the product design, such as higher COIs or other charges, resulting in a net result on illustrated values that is similar to the BIA account.

The following chart shows how the hedge budget for each scenario above is reflected in the determination of the maximum illustrated index credits for the account as well as the limit on the assumed earned interest rate underlying the disciplined current scale for the account, as prescribed in sections 4 and 5 of AG 49-A.

* BIA = Best Interest Account

The American Council of Life Insurers (ACL) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACL’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACL’s 200 member companies represent 94 percent of industry assets in the United States.

acl.com
Dear Mr. Boerner and Mr. Andersen,

Thank you for the opportunity to comment on AG 49-A.

I concur with the findings noted in the exposure:

- Some carriers allow illustrations of certain index accounts to reflect account credits that exceed the maximum provided by the Benchmark Index Account (BIA) under AG 49-A
- These illustrations are for accounts based on proprietary volatility-controlled indexes that:
  - Backcast at least as well as the BIA has performed historically,
  - Have lower hedging costs than the BIA, and
  - Are paired with a fixed bonus that is not offered with the BIA
- For these accounts, some carriers allow account credits to include index credits as high as the BIA plus a fixed bonus (supported by the hedging cost savings) resulting in total account credits higher than the BIA.

I believe these illustrations are an issue under AG 49-A:

- **These illustrations violate the spirit of the regulation** – AG 49-A placed a limit on illustrated performance so that no index account could show account credits exceeding those of the BIA, thereby ensuring no illustration was overly aggressive. While the regulation at the time was aimed at accounts with multipliers, it was clear that the intention was for the maximum limit to apply to all types of accounts. Volatility-controlled index account illustrations directly circumvent these guardrails by allowing higher illustrated rates.
- **These illustrations are supported by imprudent assumptions:**
  - **Reliance on backcasting** – Carriers justify the illustrated performance of volatility-controlled index accounts with hypothetical backcast performance, not real historical performance. Hypothetical backcasting is subject to survivorship bias, can be a poor indicator of future performance, and should be treated with a high degree of skepticism. Afterall, it is very easy to create winning index strategies in retrospect.
  - **Reliance on excessive hedging profits** – In order for volatility-controlled index accounts to offer index credits as large as the BIA but with lower hedging costs, the illustrations must implicitly assume hedging profits greater than the profits assumed from hedging programs supporting the BIA and, in the case of some carriers, greater than the 45% hedging profit limit in AG 49-A (a limit that is already generous). These are very large levels of profit to assume from a new and untested asset.

Put simply, these illustrations present consumers with a rosy view of the future supported by scant evidence. These aggressive practices should be addressed swiftly. In the near-term regulators should:

- Clarify that no index account illustration may exceed the illustrated performance of the BIA (something that was clear in the intention of AG 49-A, despite current practices to the contrary)
- Amend AG 49-A to ensure the 45% options profit maximum applies to all hedging programs

In the longer-term regulators should consider ensuring better consumer understanding of novel index accounts through additional disclosure requirements.
These actions will allow carriers to continue to offer volatility-controlled index accounts and other new and innovative features, while immediately curtailing aggressive illustration practices. To be clear, there is nothing inherently wrong with volatility-controlled indexes, fixed bonuses, or other innovative features. Carriers should continue to innovate, but action is needed when such innovation results in overly optimistic illustrations.

As you know, the life insurance industry plays a vital role in providing financial security for families. Aggressive illustrations like those being shown today risk the opposite effect, transferring risk to consumers by setting unrealistic expectations about policy performance. AG 49-A and its predecessor have protected consumers by ensuring a realistic connection between index account credits and the hedging programs that back them. LATF and the IUL Illustration Subgroup must act to assure that AG 49-A can continue to provide this protection to consumers in the future.

Thanks again for the opportunity to comment.

Sincerely,

Anonymous
Fred,

We commend the IUL Illustrations Subgroup for once again addressing the issue of potential abuses in Indexed UL illustrations and appreciate the opportunity to comment. While AG 49-A was extremely effective at limiting the specific illustrated impacts of buy-up caps and multipliers, it left open other strategies to augment illustrated performance beyond what was intended by the Subgroup. We are disappointed – but not surprised – that many life insurers have pursued the particular strategy that was described during the Fall LATF meeting of combining “volatility-controlled funds” with a fixed interest bonus to augment illustrated performance.

**Overview of the Strategy to Increase Illustrated Performance**

One of the core tenants of AG 49-A is that the illustrated crediting rate for any indexed account should be limited to the illustrated crediting rate for the Benchmark Index Account (BIA). However, AG 49-A allows for the addition of fixed interest bonuses to the illustrated crediting rate and to illustrated loan arbitrage. It also prescribes that the illustrated rate for any non-BIA account be determined by the same methodology as the BIA – which is the hypothetical historical lookback methodology described in Section 4.

However, using the hypothetical historical lookback methodology, some indexed strategies generate higher illustrated rates than others while having the same hedge costs. In other words, the illustrated “option profits” for these strategies are higher than the BIA. Therefore, life insurers can reduce the hedge cost of a non-BIA account so that the illustrated rate matches the BIA and then redeploy the savings into a fixed interest bonus. The fixed interest bonus is then added to total illustrated crediting rate for the account. A step-by-step diagram of the strategy is shown in the graph below using hypothetical figures:

The net result is that this strategy is a fully AG 49-A compliant, zero-cost way to augment the illustrated performance of a non-BIA account (or a subset of accounts) beyond the maximum BIA illustrated rate. However, it is not the only way to augment illustrated performance of non-BIA accounts under AG 49-A, as we detailed in our 2020 letter (below) to the Subgroup. We are concerned that if the Subgroup addresses only this particular strategy, life insurers will simply move on to other, more nuanced but no less effective strategies.
It is also important to note that this strategy is the *opposite* of the multiplier strategies defended by some life insurers during the last inquiry in that it reduces option exposure – rather than increases, as with a multiplier – in order to augment illustrated performance. Under the assumption of perpetual, sustainable and structural “option profits” that has long been propagated by some life insurers, reducing exposure to options is actually a detriment to policyholder performance – despite the fact that, under AG 49-A, it produces *better* illustrated performance.

### The Current State of Indexed UL Illustrations

To demonstrate the current state of the market and the impact of this strategy on illustrated performance, the benchmark below shows illustrated income figures for the life insurers who combine fixed interest bonuses with specific indexed crediting strategies. The benchmark figures are based on a 45-year-old Preferred Male with $1 million in premium being paid over 7 years and income (using indexed loans) being taken from years 21 to 40. The S&P 500 account is the BIA, if offered, or the account that most closely resembles the BIA if the BIA is hypothetical and not available for allocation.

</tbody>
</table>

It is readily apparent from the last column in the preceding table that combining a non-BIA account with a fixed interest bonus is a powerful tool for augmenting illustrated performance under AG 49-A. The percentage increases in income are broadly equivalent to what was seen in the market using buy-up caps and multipliers prior to AG 49-A, the subject of the last round of inquiry and action by the Subgroup. This is not a matter of a “minor” tweak or the need for disclosure.

### The Role of “Volatility-Controlled Funds”

Any index or payoff structure with higher illustrated “option profits” than the BIA, including “volatility-controlled funds,” will allow the life insurer to execute a strategy using a fixed interest bonus that increases the illustrated performance of a non-BIA account beyond what is illustrated in the BIA. While there may be merits (or demerits) to the particulars of “volatility-controlled funds,” the fact is that these funds/indices are not a necessary ingredient to executing the strategy and augmenting illustrated performance. They are simply the easiest, most consistent and likely most profitable way.

Further, there are several life insurers in market who offer “volatility-controlled funds” without fixed interest bonuses. These life insurers illustrate the “volatility-controlled funds” at the same overall performance as the BIA, which is consistent with the intent of AG 49-A. Therefore, in our view, the nature of “volatility-controlled funds” should be outside the scope of this discussion. Instead, our view is that the Subgroup would be best served by focusing on the particular strategy by which some life insurers are using non-BIA account specific bonuses to augment illustrated performance in ways that were not intended by AG 49-A.
Potential Solutions
We strongly recommend that the Subgroup consider following through on its previously stated commitment to explore a holistic and permanent solution in the event that the Subgroup is reconvened to address yet another issue facing Indexed UL illustrations.

We continue to believe, as we detailed in our 2020 letter appended below, that an illustration methodology for Indexed UL rooted in standard fair-market option valuation – a methodology used the world over by option practitioners – will produce a framework that cannot be meaningfully gamed and will produce more consistent, consumer-friendly and economically indicative results than the current AG 49 / AG 49-A framework.

Again, thank you for the opportunity to comment and we look forward to working with the Subgroup to implement a lasting solution for Indexed UL illustrations.

Letter submitted to IUL Illustration Subgroup on 2/21/2020

Fred,

Thank you for the opportunity to comment on potential revisions to AG49. While we see merits in the Supplemental Option Budget approach, we believe that it is unable to address the full spectrum of designs that could lead to effective illustrated rates well in excess of the AG49 maximum illustrated rate for the Benchmark Index Account (BIA). For example, it is not effective for dealing with the implications of alternative crediting strategies and hybrid indices that have higher imputed option profits based on the hypothetical historical lookback methodology in AG49 Section 4(A), which already provide for means of illustrating returns well in excess of the BIA maximum illustrated rate in products available for sale today. It is also not clear how the concept of a Supplemental Option Budget would interact with persistency funded multipliers, bonuses or cash infusions, as are commonly found on Indexed UL products currently in market.

As a result, we believe that alternatives to the Supplemental Option Budget approach should be considered that will better align Indexed UL illustrations to Fixed Indexed Annuity illustrations and address the full spectrum of potential indexed crediting and product designs. This letter outlines an alternative methodology with specific AG49 language recommendations. We believe that the changes we are proposing to AG49 will accomplish the goals set forth by the regulators while maintaining the ability for life insurers to clearly differentiate crediting strategies and products on the basis of risk and return characteristics using historical index return data.

Our recommendation is for two primary modifications to AG49. The first is to move the hypothetical historical lookback methodology currently used in 4(A) to the crediting rate reports described in Section 7. We also recommend that Section 7 be augmented to encompass best case, worst case and most recent case historical returns over 10 years, aligning Indexed UL illustrations with Fixed Indexed Annuity illustrations. Finally, we recommend that Section 7 be clarified to allow any additional credits or charges contractually related to providing indexed interest which, again, is in accordance with Fixed Indexed Annuity illustrations. Taken together, these changes will augment the insurer’s ability to show how variability of returns can impact crediting performance in a variety of scenarios for each indexed crediting option, thereby increasing consumer understanding of the crediting mechanics and potential risks and returns of the strategies.

Second, we recommend using an option valuation methodology for Section 4(A) with pricing inputs being drawn from the previous calendar year. We recommend using the Black-Scholes formula, a universally accepted valuation methodology for derivatives, including call options, and is commonly applied to the valuation of financial products containing derivatives-based payoffs, such as warrants and retail structured products. Replacing 4(A) with an option valuation formula aligns the maximum illustrated rate with the denominator for all indexed-linked credits in the contract, regardless of whether they are funded through the insurer’s portfolio yield, additional policy charges or persistency. This modification to 4(A) will eliminate the illustrated benefits of multipliers and buy-up caps.

It would also align the illustrated benefits of alternative crediting strategies and hybrid indices with the Benchmark Index Account. There would be differences in the illustrated rates for the various accounts based solely on the fair market value of the options, which is a true and reasonable indicator to consumers of the current intrinsic value of the indexed crediting option. However, consumers would still be able to see the potential risks and rewards of these strategies in the hypothetical historical crediting reports described in Section 7 based on historical index returns. By combining these two approaches, consumers will be able to make an informed decision about choosing an indexed crediting strategy based on both the current fair-market valuation.
of the replicating options for the strategy (Section 4(A)) and its potential to deliver performance in a variety of historical return scenarios (Section 7).

The changes to the AG49 language proposed herein would accomplish the following goals stated by regulators:

1. Standardizing illustrated rates across Benchmark Index Account options, in accordance with the stated goals of the original Indexed UL Illustration Subgroup in 2013.
2. Limiting the ability for alternative crediting strategies and indices to illustrate more advantageously than traditional indices and crediting strategies, in accordance with the stated goals of the original subgroup.
3. Ensuring that products with multipliers illustrate similarly to products without multipliers, in accordance with the recent vote taken by the IUL Illustration Subgroup.
4. Ensuring that products with buy-up caps illustrate similarly to products without buy-up caps, in accordance with the vote taken at the most recent NAIC meeting in Austin.
5. Bringing Indexed UL illustrations into alignment with Fixed Indexed Annuity illustrations.
6. Maintaining of the majority of the current AG49 language, including the 145% factor for illustration actuary testing, thereby avoiding a time-intensive rework of the guideline.

The language proposed herein would also satisfy the following concerns raised by life insurers:

1. Continuing to provide for the ability of life insurers to differentiate their products and crediting methodologies by demonstrating the potential for different indexed crediting options to offer different risk/return profiles, including multipliers, buy-up caps and proprietary/hybrid indices.
2. Providing for illustrated loan arbitrage to a similar degree as Whole Life, thereby ensuring that Indexed UL is not at a competitive disadvantage to Whole Life in terms of illustrated loan treatment.
3. Providing for the continued illustration of persistency-based, embedded multipliers and bonuses, thereby ensuring that Indexed UL is not at a competitive disadvantage to other types of Universal Life products.

Specific AG49 language changes, with accompanying comments, are appended. We appreciate the opportunity to comment and respectfully submit our proposal.

Suggested AG49 Language Modifications

1. Replace 4(A) with:

A. Calculate the value of the replicating option trades for the Benchmark Index Account over the preceding calendar year, based on the Black-Scholes formula using the following inputs calculated on each trading day:
   i. Average closing implied volatility for 12-month, at-the-money S&P 500 call options
   ii. Average closing implied volatility for out-of-the-money 12-month S&P 500 call options with a normalized strike price equal to the currently declared cap
   iii. Average dividend yield on the S&P 500
   iv. Average 12-month LIBOR

This section is designed to replicate the reasonable price of replicatively hedging the current index parameters in the Benchmark Index Account. An alternative approach may be for the NAIC to publish standard tables of the estimated price for hedging index participation parameters at defined intervals (0.25%, for example) with allowance for insurers to interpolate between the datapoints. This would limit the degree to which insurers with identical index participation parameters would have different illustrated performance. LIBOR may also be exchanged for another measure of Risk Free Rates.

2. Replace 4(B) with:

B. The value calculated in 4(A) shall be the maximum credited rate(s) for the illustrated scale.

3. Remove 3(A) – The Alternate Scale

4. Replace 4(C) with:

C. For other Index Accounts using other equity, bond, and/or commodity indexes, and/or using other crediting methods, the illustration actuary shall use actuarial judgement to determine the maximum credited rate for the illustrated scale. The determination shall reflect the fundamental characteristics of the Index Account as relates to the inputs for the Black-Scholes valuation formula, including realized volatility, implied volatility, volatility targets (if applicable), embedded fees (if applicable), deduction of an interest rate component (if applicable), dividend participation (if applicable) and other factors that may apply.

This section is designed to ensure that products using different crediting methodologies, indices or combinations of the two illustrate in the same methodology as the Benchmark Index Account in accordance with their fundamental, underlying characteristics

5. Replace 7 with the following:
A. A table showing the minimum and maximum of a geometric average for any available Benchmark Index Account using the following methodology:
   i. Calculate the geometric average annual credited rate for each applicable Benchmark Index Account for the 25-year period starting on 12/31 of the calendar year that is 66 years prior to the current calendar year (e.g., 12/31/1949 for 2015 illustrations) and for each 25-year period starting on each subsequent trading day thereafter, ending with the 25-year period that ends on 12/31 of the prior calendar year.
   ii. Calculate the arithmetic average of the geometric average annual returns in all 25-year periods

B. For each Index Account illustrated, a table showing actual annual historical index changes and corresponding hypothetical interest rates using current index parameters, including any applicable asset-based charges and asset-based interest bonuses or index credit multipliers paid within the first 10 years of the policy:
   i. The 10-year period with the lowest calculated returns within the period referenced in 7(A)(i)
   ii. The 10-year period with the highest calculated returns within the period referenced in 7(A)(i)
   iii. The most recent 10-year historical period as calculated on the final trading day of the preceding calendar year

C. If an index has not been in existence for 10 years, the table shall replace the figures with the maximum available back-tested performance.

This section is designed to bring Indexed UL illustrations into alignment with Fixed Index Annuity illustrations. These demonstrations will also provide latitude for insurers to demonstrate the potential risk and return profiles of various crediting strategies, indices and policy mechanisms.

The following sections of AG49 were not altered for the following reasons:

5. There is no need to change the 145% provision in 5(A) as it will provide a cushion for the inevitable mismatches between the standardized illustrated price of the replicating options calculated in 4(A) and the insurer’s own pricing for options, expectations of prices or cap-setting process. Retaining the 145% will allow insurers who have economies of scale in hedging, are supporting higher caps with higher policy charges or other designs to illustrate benefits and costs accordingly. However, it may be advisable to adopt some of the clarifications to this language previously proposed in other comment letters.

6. There is no need to change the 100 basis points allowance for illustrated loan arbitrage. As with Section 5, there are inevitable mismatches between what an insurer is willing to charge on a loan and the value of what it may credit by providing current index participation parameters. This section preserves the ability for insurers to reflect those changes. However, it may be prudent to add clarifying language about the inclusion of illustrated bonuses and multipliers for the 100bps allowance.
The Life Actuarial (A) Task Force met Feb. 17, 2022, in joint session with the Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Ben Bock, Ted Chang, Ahmad Kamil, and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Dana Popish Severinghaus represented by Bruce Sartain and Vincent Tsang (IL); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Judith L. French represented by Peter Weber (OH); Jessica K. Altman represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT). The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Thomas Reedy (CA); Wanchin Chou (CT); Mike Yanacheak (IA); Vincent Tsang (IL); Fred Andersen (MN); William Leung (MO); Derek Wallman (NE); Seong-min Eom (NJ); Bill Carmello (NY); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. Discussed the ESG

Scott O’Neal (NAIC) provided an update (Attachment Five-A) on the economic scenario generator (ESG). He said the ESG Drafting Group is considering two candidates for the Treasury Model. The candidates are the Conning calibration with a generalized fractional floor and an alternative calibration with a shadow rate floor, which introduces a floor rate believed to preserve the arbitrage-free property of the scenarios. He said the field test will help determine which floor to use for the ESG. He noted that the Conning calibration met all the acceptance criteria prioritized by the drafting group for use in the field test.

Mr. O’Neal said the drafting group discussed key recommendations for the setup of the equity and corporate models. The recommendations include: 1) retaining the ESG equity-treasury linkage (supported primarily by the state insurance regulators on the drafting group); 2) using a Sharpe ratio approach with a 5% corridor to represent international equities; 3) capturing initial market conditions by allowing the recent market volatility to affect equity scenarios; and 4) including both the simplified and the complex Conning GEMS corporate model in the field testing. Mr. O’Neal said the drafting group is working to address questions on the structure of the field test and scope of business to include. He said the field test will begin in June and run to September. Results are expected to be presented to the public by November. Pat Allison (NAIC) said the response to the initial request for field test participation resulted in companies offering to test a broad range of products. She said a follow-up request, with more details on the field test, is forthcoming.

Brian Bayerle (American Council of Life Insurers—ACLI) discussed the ACLI comments (Attachment Five-B). The comments indicated general concerns, as well as concerns specific to the treasury and equity models. Mr. Bayerle said the ACLI does not believe the Conning GEMS model meets the need for determining life insurance and annuity reserves. He said the limited documentation available for the Conning GEMS model is an issue of concern. He said ACLI experts have just offered an alternative model that is understandable and transparent. He stated the ACLI preference for using that model instead of the Conning GEMS model. Jason Kehrberg (American Academy of
Actuaries—Academy) said the Academy also questions the suitability of the Conning GEMs model for life insurance reserving. He said the Academy has offered proposals for changes to the modeling of interest rates, equity returns, and fixed income returns. He said the Academy is working to provide model office results for the current candidates for the field test for discussion on a future call.

Having no further business, the Life Actuarial (A) Task Force and Life Risk-Based Capital (E) Working Group adjourned.

https://naiconline.sharepoint.com/:w:/r/sites/NAICSsupportStaffHub/Member Meetings/2022 NAIC Meetings/Spring National Meeting/Committee Meetings/LIFE INS and ANNUITIES (A) COMMITTEE/Life Actuarial (A) TF/LATF Calls/02 17/Feb 17 Minutes.docx
ESG Update to the Life Actuarial (A) Task Force and the Life RBC (E) Working Group

2/17/22

Agenda

1. ESG Project Status
2. Information on Treasury scenario set candidates for field testing
   a) Conning Calibration and Generalized Fractional Floor (“Non-shadow”)
   b) Alternative Calibration and Shadow Floor (“Shadow”)
3. Key Decisions for Equity and Corporate Models
4. Field Test Considerations
5. Questions and Comments
ESG Project Status

• Over the past year the ESG Drafting Group, which is composed of regulators, subject-matter experts, Conning staff and NAIC Staff, has been working to develop a calibration that will work for use in the upcoming ESG Field Test.
• While public status updates were delivered periodically over this time, more frequent touchpoints will be needed as we move towards the June target for a field test to:
  • receive input from all stakeholders, and to
  • position regulators to be able to make the final recommendation for scenarios to be used in the field test.
• The ESG Drafting Group is currently considering two Treasury model calibration candidates for field testing, as described on the slide 7.
• Additionally, the ESG Drafting Group is also considering key properties of the Equity and Corporate models as outlined in slide 12.
ESG Project Status – Next Steps

- The ESG Field Test is expected to be conducted from June through August 2022.
- Once results are compiled by the NAIC, aggregated results of the field test are expected to be presented starting in September 2022.
- After regulators review the field test results, changes may be desired to the calibration of the ESG used in field testing. In that case Conning would begin work in the 4th quarter of 2022 to modify the ESG calibration as appropriate. A follow-up to the field test could be conducted for companies to test this new set of scenarios in the first quarter of 2023.
- After field testing, regulators may approve the ESG for use in determining statutory reserves and capital. For implementation in 2024, amendments to the valuation manual would have to be approved by the Life Actuarial (A) Task Force by June of 2023 according to the normal process. The Life RBC (E) Working Group changes to C3 Phase I and C3 Phase II instructions need to be adopted by June of 2024 for use in 2024 RBC calculations.

Information on Treasury Scenario Set Candidates for Field Testing
Treasury Model Candidates

The ESG Drafting Group is currently considering two Treasury model candidates for field testing.

<table>
<thead>
<tr>
<th>Conning Calibration and Generalized Fractional Floor</th>
<th>Alternative Calibration and Shadow Floor</th>
</tr>
</thead>
<tbody>
<tr>
<td>• The Conning calibration, paired with a floor, was designed to meet the acceptance criteria that were chosen by regulators for the Treasury scenarios.</td>
<td>• There were several motivations behind the Alternative Calibration including:</td>
</tr>
<tr>
<td>• A generalized fractional floor has been applied to the scenarios resulting from the Conning calibration to reduce the frequency and severity of negative interest rates. More details on the generalized fractional floor are shown on slide 8.</td>
<td>• producing realistic term premiums and yield curve behavior over time, and</td>
</tr>
<tr>
<td>• Additional analysis of the scenarios from the Conning calibration and generalized fractional floor will be discussed in the next section.</td>
<td>• fitting a wide variety of historical yield curves.</td>
</tr>
</tbody>
</table>

Generalized Fractional Floor Formula:

If Unfloored Rate < Adjustment Threshold,

Floored Rate = Adjustment Threshold + Factor * (Unfloored Rate - Adjustment Threshold)

Otherwise,

Floored Rate = Unfloored Rate

Example:

Unfloored Rate = -1%  Threshold = 40BPs  Factor = 20%
Floored Rate = 0.4% + 20%*(-1% - 0.4%) = 0.12%

• The Conning GEMS Treasury model has the capability of producing negative interest rates, which have been a feature prevalent in other countries currently and in recent history.
• While the basic formula for the generalized fractional floor (see below) is relatively simple, the implementation of the floor in the Conning Calibration is more complex. In this particular implementation, the Treasury model is fit to an implicit yield curve that is chosen such that the actual yield curve is matched at time zero after the floor has been applied.
• Applying a generalized fractional floor methodology to the scenarios from the Conning Treasury calibration allows for increased control of the frequency and severity of negative interest rates.
• After testing, Conning has chosen a threshold value of 40 BPs and a factor of 20% to reduce the frequency and severity of negative interest rates while ensuring that other regulator objectives, such as low for long, are met.
## Prioritized Acceptance Criteria: Conning Calibration Results

<table>
<thead>
<tr>
<th>Item</th>
<th>Category</th>
<th>Acceptance Criteria</th>
<th>Criteria Met?</th>
</tr>
</thead>
</table>
| 1.   | Low For Long | a) At least 10% of scenarios should have a 10-year geometric average of the 20-year UST that is below 1.45%*  
       |          | b) At least 5% of scenarios should have a 30-year geometric average of the 20-year UST that is below 1.45%* | a) 10-year threshold: 19.5% - PASS  
       |          |                     | b) 30-year threshold: 5.2% - PASS |
| 2.   | Prevalence of High Rates, Upper Bound on Treasury Rates | a) The scenario set should reasonably reflect history, with some allowance for more extreme high and low interest rate environments  
       |          | b) Upper Bound:  
       |          | i. 20% is >= 99th percentile on the 3M yield fan chart, and no more than 5% of scenarios have 3M yields that go above 20% in the first 30 years  
       |          | ii. 20% is >= 99th percentile on the 10Y yield fan chart, and no more than 5% of scenarios have 10Y yields that go above 20% in the first 30 years | a) PASS  
       |          |                     | b) PASS |

*1.45% was the current level of the 20-year UST at 12/31/20.

## Prioritized Acceptance Criteria: Conning Calibration Results (cont.)

Field Test Considerations

Field Test Considerations - Background

- Regulators, NAIC staff, American Academy of Actuaries volunteers, and representatives of the American Council of Life Insurers that form a ESG Field Test Planning Group are collaborating to develop specifications for the ESG field test, a set of instructions for field test participants, and a results template for participating companies to record results.
- The ESG Field Test Planning Group is currently working to address the following questions, among others:
  - Do multiple scenario sets, representing additional valuation dates or sensitivities, need to be included in the field test?
  - Should some portion of the field test be made optional to increase participation?
  - What survey questions can be added to the field test to better understand participant results?
  - Does model office testing need to be performed alongside the field test?
  - Should an attribution analysis be performed by participants to understand the drivers of results?
### Field Test Considerations - Scope

**VM-20**
- All individual life insurance policies issued on or after the operative date of VM-20, or issued during the transition period, if elected by the company. Smaller insurance companies may obtain an exemption.
- Stochastic reserves, Deterministic reserves, and stochastic exclusion ratio test (SERT) values will need to be field tested.

**VM-21/C3 Phase II**
- Variable deferred or immediate annuity contracts whether or not they have GMDBs or VAGLBs, group annuity contracts containing GMDBs or VAGLBs, and policies or contracts with guarantees similar in nature to GMDBs or VAGLBs where there is no other explicit reserve requirement.
- Stochastic Reserves and CTE with Prescribed Assumptions will need to be field tested. The CTE 70 metric will need to be tested for reserves and the CTE 98 metric will be tested for TAR.

**VM-22/C3 Phase I**
- Include certain annuities (with the exception of indexed annuities) and single premium life insurance for C3 Phase I testing.
- VM-22 methodology changes will be deferred to the VM-22 field test, and therefore VM-22 calculations are out of scope for this field test.

For Item A, the ESG Drafting group is working to specify the Treasury, Corporate, and Equity models for use in the field test. The ESG would then be exposed for public comment. Any tweaks to the ESG and associated tools following comment are also included in this step.
Questions & Comments
Comments on Economic Scenario Generator Progress

February 17, 2022

ACLl Principles of ESG Effort

- NAIC prescribed scenario generator should be “fit for purpose” and produce a reasonable baseline set of economic scenarios.

- There should be a balance between complexity, transparency, ease of use, and stability of scenario generator parameters.

- Scenarios should reflect “history plus”: a reflection of economic dynamics from relevant history as well as an appropriate distribution of worse-than-history tail events, particularly around low-for-long interest rate conditions.
Concerns Surrounding the Models

1) General concerns
   - “Fit for Purpose”
   - Potential volatility

2) Treasury Model
   - Negative Interest Rates
   - Curve Shapes

3) Equity Model
   - Linkage to Interest Rates
   - Incomplete Recalibration of Equity Model Parameters

4) Corporate Model
   - Conning Simplified Model Limitations
   - Transparency

Treasury Model
Treasury Model – Negative Interest Rates

- GEMS-type models are known for producing excessively frequent and severe negative interest rates, particularly in low-rate environments.
- GEMS is producing an unreasonable number of negative interest rates.
  - Before including a floor, more than half the rates were negative in the near-term and up to 30% of rates were negative in the steady-state as of 12/31/20.
- Further, the model (without a floor) is producing rates near -9%.
- Floors are generally used to address outliers. ACLI has serious reservations about a floor that overrides rates at some point in nearly every scenario and will have significant implications elsewhere.

Treasury Model – Negative Interest Rates (Unfloored)

- Direct flooring approaches are likely to affect all scenarios and override up to half of the rates in a given month.
- Approaches that start with a "shadow" rate curve would generate even more negative scenarios to floor.
- The choice of floor is likely to be a key driver of rate levels used to calculate reserves and capital.
**Treasury Model – Negative Interest Rates**

- In the unfloored scenarios, about 50% of rates are negative in the initial months and 30% of rates are negative in the steady state.

- In the subset of available Conning floored scenarios, up to 60% of rates are negative in the initial months, 30% of rates are negative in the early years, and 20% of rates are negative in the steady state.

**Treasury Model – Yield Curve Shapes**

- Curve shapes, including frequency and severity of inversions, are inconsistent with historical dynamics and economics.

- This is problematic as it could:
  - Create significant non-economic costs to companies whose investment and hedging strategies are sound in real world applications but might generate significant reserves due to the differences.
  - Incent ALM mismatches.
Treasury Model – Yield Curve Shapes

- The frequency of yield curve inversions generally varies by rate levels. Controlling for rate level differences, inversions may be roughly twice as frequent in the 10/2021 scenarios as in historical data.
- Conning floored results show similar inversion frequencies.

Equity Model

Equity Model – Concerns with the Linkage to Interest Rates

- Conning assumes a constant mean relationship between equities and interest rates in each individual month (i.e., Expected equity return = Expected short-term interest rate + a random component).
  - This simplification is not supported by historical data or economic research.

- This simplification results in counterintuitive results and creates:
  1. “Mark to Model” relationships that can result in artificial volatility
  2. Procyclical results
  3. Scenario distributions that vary in their level of conservatism/aggressiveness from reporting period to period
Equity Model – Concerns with the Incomplete Recalibration of Equity Model Parameters

- Interest rates are a key input in Conning’s equity model.
  - Current interest rate models under consideration have significant differences vs. Conning’s standard calibration.

- Defaulting to Conning’s calibration for other parameters (after changing the underpinnings of the model) has led to an unsupported ~45% decrease in median 30-year cumulative equity returns (and more extreme decreases in lower percentiles) based on 12/31/20 conditions.

- Conning’s incomplete recalibration also includes scenarios where broad equity indices become worthless.

Equity Model – Concerns with the Incomplete Recalibration of Equity Model Parameters

- While theoretically possible, projecting that equity indices become essentially worthless in some scenarios is extreme for reserve and capital projections and may cause operational issues (e.g., scenario selection).
Equity Model – Concerns with the Incomplete Recalibration of Equity Model Parameters

- The S&P 500 (price index) has negative returns over 30 years in ~18% scenarios even though this has never been observed in history, even using data since 1928.

Corporate Model
Corporate Model – Concerns

- Limited substantive documentation is currently available for the GEMS corporate model, and there are structural issues with the Conning proposed simplified model (including contradictions with prescribed VM credit assumptions and credit market dynamics and excessive cumulative credit related returns).

- Experts have offered a transparent and understandable alternative that appears to track closely with the GEMS corporate model.

- Since we are unaware of a meaningful implementation limitation on such a model, we would favor the transparent approach.

Recommendations

- Develop appropriate acceptance criteria (including contemplation of reference models) to facilitate an industry field study for maximal return on effort. Current criteria are not sufficient to assess economic scenarios, including potential non-economic behavior.

- Engage in a substantive discussion of model limitations and consider structural modifications (interest rates, corporate) and calibration refinements (equity) in the existing model form once more robust criteria are established.

- If continued analysis suggests untenable characteristics of the model remain, we believe it is critical that LATF begin contemplating alternatives.
### Appendix: Equity Result Comparison YE2019 to YE2020

1. Exposed a Proposed Actuarial Guideline for Asset Adequacy Testing

Mr. Andersen said the proposed actuarial guideline addresses the increased use of complex assets in asset adequacy testing (AAT) modeling to support reserves. He said the guideline provides background for activities and findings leading to its development. He said while many complex assets tend to be associated with private equity firms, complex assets are also used by insurance companies with traditional ownership. He noted that the development of the guideline is associated with a broad NAIC effort, including coordination by the Macroprudential (E) Working Group, to establish regulatory practices related to private equity-owned insurers. He said the role of the Task Force is to ensure reserves are adequate even when complex assets do not perform as predicted. He said the focus of the guideline is on projected high net yield assets. The proposed effective date of the guideline is Dec. 31.

Mr. Andersen said the scope of the guideline covers life insurers with: 1) over $5 billion in actuarial reserves; or 2) over $500 million of actuarial reserves and over 5% of the assets supporting those reserves considered high yield. He said approximately 86 companies fall under the first criterion, and approximately 100 companies fall under the second criterion.

Mr. Carmello suggested that using the current U.S. Treasury rate to determine the investment grade net yield benchmark is better than using the U.S. Treasury rate on the asset purchase date. Mr. Chang said the Scope section should be adjusted for reinsurance agreements where a portion of the supporting assets are held by the reinsurer. Mr. Carmello said he is in favor of having the scope of the guideline apply to all life insurers. Mr. Leung said perhaps there are general principles that would apply to all companies; companies with high yielding assets would be subjected to additional requirements. Mr. Wallman stated his preference for continuing with sensitivity testing for year-end 2023 instead of moving to the proposed investment constraints.

Mr. Andersen made a motion, seconded by Mr. Leung, to expose the AAT actuarial guideline (Attachment Six-A) for a 35-day public comment period ending March 18. The motion passed unanimously.
2. **Exposed Amendment Proposal 2022-01**

Ms. Hemphill said amendment proposal 2022-01 clarifies the language in Section 8C(18) of VM-20, Requirements for Principle-Based Reserves for Life Products, that is applicable to retrocessions of yearly renewable term (YRT) business. Mr. Slutsker said the proposal clarifies that the same treatment that applies to the reinsurer also applies to the retrocessionaire.

Mr. Slutsker made a motion, seconded by Mr. Chupp, to expose amendment proposal 2022-01 (Attachment Six-B) for a 21-day public comment period ending March 3. The motion passed unanimously.

Having no further business, the Life Actuarial (A) Task Force adjourned.

Actuarial Guideline AAT – DRAFT FOR LATF CONSIDERATION

APPLICATION OF THE VALUATION MANUAL FOR TESTING THE ADEQUACY OF LIFE INSURER RESERVES

Background

The NAIC Valuation Manual (VM-30) contains actuarial opinion and supporting actuarial memorandum requirements, including requirements for asset adequacy testing. Regulators have observed a lack of uniform practice in the implementation of asset adequacy testing. The variety of practice in incorporating the risk of complex assets into testing does not provide regulators comfort as to reserve adequacy. Examples of complex assets are structured securities, including asset-backed securities and collateralized loan obligations, as well as assets originated by the company or affiliated or contracted entity. An initial increase of this activity has been noted in support of general account annuity blocks; however, recent activity was noted in other life insurer blocks.

This Guideline is intended to provide uniform guidance and clarification of requirements for the appropriate support of certain assumptions for asset adequacy testing performed by life insurers. In particular, this Guideline:

1. Helps ensure reserve adequacy and claims-paying ability in moderately adverse conditions, including conditions negatively impacting cash flows from complex assets;

2. Clarifies how margins for uncertainty are established such that the greater the uncertainty the larger the margin and resulting reserve;

3. Ensures recognition that higher expected gross returns from assets are, to some extent, associated with higher risk, and that assumptions fit reasonably within the risk-return spectrum;

4. Requires sensitivity testing regarding complex assets currently supporting or assumed to provide future support for life insurer business;

5. Identifies expectations in practice regarding the valuation of complex assets;

6. Establishes a process for researching and monitoring the risks associated with complex assets;

7. Reflects that while complex assets tend to have higher uncertainty regarding timing and amount of cash flows than in more traditional investments, because complex assets are difficult to classify, and the regulatory concern is regarding the projected net yields and cash flows from those assets, the focus of the Guideline will be on assets deemed to be high-yield assets; and

8. Requires additional documentation of investment fee income relationships with affiliated entities or entities close to the company.

Note: It is anticipated that the requirements contained in this Guideline will be incorporated into the NAIC Valuation Manual (VM-30) at a future date, effective for a future valuation year. This Guideline will cease to apply to annual statutory financial statements at the time the corresponding VM-30 requirements become effective.

Text

1. Effective Date

This Guideline shall be effective for reserves reported in the December 31, 2022 and subsequent annual statutory financial statements.
statements.

2. Scope

This Guideline shall apply to all life insurers with:

A. Over $5 billion of actuarial reserves or

B. Over $500 million of actuarial reserves and over 5% of supporting assets in the category of Projected High Net Yield Assets, as defined in Section 3.B.

Actuarial reserve amounts are included in the amounts in A and B whether directly written or assumed through reinsurance and are determined before any reinsurance ceded credit.

3. Definitions

A. Investment Grade Net Yield Benchmark. A net yield calculated as i + ii – iii:

   i. For current assets, the Treasury rate at the asset purchase date for the time to maturity associated with the asset; for reinvestment assets, the Treasury rate related to the projected interest rate scenario at the projected asset purchase date for the time to maturity associated with the asset.

   ii. The spread found in Table F for existing assets and Table H for reinvestment assets, found in the VM-20 / VM-21 / VM-22 Tables tab on the principle-based reserve page of the NAIC website (NAIC website), using PBR Credit Rating 9 and the weighted average life of the associated asset.

   iii. The default cost found in Table A on the NAIC website, using PBR Credit Rating 9 and the weighted average life of the associated asset.

   iv. For assets such as equities or equity-like instruments without a clear weighted average life, apply judgment in establishing an appropriate weighted average life for this exercise and disclose the approach applied. If judgment is difficult to apply due to the circumstances, apply a weighted average life of 20 years.

B. Projected High Net Yield Assets. Assets where assumed, future net yields (net of default risk and other risk impacting timing and amount of cash flows) are higher than the Investment Grade Net Yield Benchmark. Included are currently held assets and reinvestment assets, including equities and equity-like instruments.

   i. Aggregation considerations

      (a) The comparison between assumed net yields from each asset and the Investment Grade Net Yield Benchmark shall be done at a level of granularity that is consistent with or more granular than how the assets are grouped, i.e., compressed, in the asset adequacy testing model.

      (b) For companies that model assets for each Committee on Uniform Securities Identification Procedures (CUSIP) number, this exercise is intended to be performed for each individual CUSIP.

      (c) For companies that group similar assets for asset adequacy testing modeling purposes, the companies may provide results at such level, or alternatively, for each individual asset.

   ii. For assets that do not have an explicit weighted average life or term to maturity (such as equities or equity-like instruments), the company shall disclose the method used to determine the appropriate weighted
average life used for comparing to the Investment Grade Net Yield Benchmark.

iii. For purposes of the comparison between assumed net yields from each asset and the Investment Grade Net Yield Benchmark, investment expenses shall be excluded.

4. Asset Adequacy Considerations for Analysis of Business Supported by Any Projected High Net Yield Assets

A. The actuarial memorandum should provide documentation on net return assumptions, including gross asset spreads, default costs, recovery rate assumptions. The memorandum should also identify and explain the types of risks present in the projected high net yield assets.

B. The actuarial memorandum shall detail the process to determine the assumed net yields on currently held assets and assets projected to be obtained in the future (reinvestments).

   i. This includes specifically identifying the assumed gross asset yield and all key components deducted to arrive at the assumed net asset yield, including but not limited to credit risk, liquidity risk, and investment expenses.

   ii. Include considerations of the underlying assets (e.g., debt instruments, securitization structure) and timing of expected payments when modeling.

   iii. An explanation shall also be provided for any future reinvestment strategy assumptions that differ from current practices and experience.

C. For projected high net yield assets, a detailed explanation shall be provided in the actuarial memorandum describing the extent to which higher expected gross returns from these assets are associated with higher risk. It shall also include, for the aspect of any higher expected gross returns not assumed to be associated with higher risk, an explanation of how overperforming assets with expected returns lying outside the risk-return spectrum can be assumed to persist and be available for reinvestments throughout the projection period.

Provide commentary on factors that could impact whether the conditions that may have contributed to past high net yields for certain asset classes would continue or not continue into the future in a moderately adverse environment including the potential of increased demand for such assets leading to declining available yield.

D. The actuarial memorandum should provide commentary on how, related to projected high net yield assets, there is consistency with the standard valuation law concept that margins for uncertainty should be established such that the greater the uncertainty the larger the margin and resulting reserve. Asset-related factors identified as being volatile and impactful through sensitivity testing or other means should contain an appropriate margin to reflect this volatility and impact.

E. Where significant risks associated with a complex asset are not adequately captured with traditional modeling techniques associated with simple assets like corporate bonds, more rigorous modeling of those risks should occur.

   i. Where necessary to adequately reflect the risk, multi-scenario testing of those risks specific to complex assets should be performed.

      (a) For example, investments that may provide a higher expected return in part due to limited information, niche skill sets, or other factors may require unique scenarios (for instance to adequately capture credit or liquidity risk) to fully encompass potential sources of loss.

      (b) Asset cash flows should be appropriately projected to reflect anticipated liquidity in a stressed market. If current models do not support analysis of this type of risk, then new model aspects should be developed; otherwise, if such model aspects are not developed, sufficient additional conservatism to reflect this risk shall be applied.
(c) To the extent that the process for modeling or otherwise evaluating the risks is complex, and the potential for disconnect between reality and modeling increases, an additional margin to assumption(s) should be applied. Any such margin shall be applied in the direction of asset adequacy testing results being less favorable.

ii. Note that a robust conditional tail expectation calculation considering all key risks specific to complex assets would likely show tail losses (from low probability, high impact events) affect asset adequacy results.

iii. A company may use simplifications, approximations, and modeling efficiency techniques if the company can demonstrate that the use of such techniques does not make asset adequacy testing results more favorable. These techniques may be less appropriate if the amount of complex, high-yielding assets becomes a higher percentage of total assets.

iv. Actuarial Standards of Practice (ASOPs), including ASOP No. 7 and No. 56 contain additional guidance on the use of models in the analysis of cash flows.

F. In asset adequacy testing, when an asset is projected to be available for sale, a fair value of that asset is established. Per fair value methodology, fair value should represent the price at which the security could be sold, based on market information. Fair value should only be determined internally (by the insurance or investment management company) when the market-based value cannot be obtained. When the fair value of complex assets is determined internally, the company shall provide a step-by-step description of the approach used to calculate the fair value of such assets.

In addition, when the fair value of complex assets is determined internally, two sensitivity tests should be performed (and the impact on asset adequacy testing results presented):

i. Assume a haircut to the internally derived fair values of 5%;

ii. Assume a haircut to internally derived fair values that the company deems reasonable given the commensurate level of anticipated uncertainty.

G. With respect to privately-originated assets, such as assets originated by the company, within the company’s group, or within an entity closely tied to a company’s group (inclusive of the company’s investment manager), practices to help ensure accurate valuation of those assets should be documented in the actuarial memorandum. Also, assumed net cash flows from assets should be net of all explicit or implicit fees or expenses, such as origination fees, as well as reflective of other asset-related risks including credit risk, illiquidity risk, and other market risks.

In particular, please disclose and detail how the following are appropriately reflected in the net cash flows:

i. Contractual agreements in place between such entities.

ii. Any measures related to the valuation of such privately-originated assets resulting from practices to ensure that the valuation is appropriate and accurate.

iii. Revenue sharing, e.g., performance fees, between the entity responsible for providing investment or other types of services and the insurer, if applicable.

H. Investment expenses, whether paid to an external asset manager or to internal investment management staff, as well as additional expenses that are directly attributable to the specific investments, should be commensurate with the complexity of the assets and reflected in the net yield assumed in asset adequacy testing.

I. In cases where fees are expected to be paid by the insurer, an appropriate amount of future expected fees should be modeled as part of the asset adequacy testing.
J. The actuarial memorandum should contain a detailed description of research and monitoring conducted related to trends impacting risks associated with the insurer's complex assets or industry-wide or market-wide assets of similar type.

K. In cases where material amounts of reserves are ceded to an entity that does not submit a VM-30 actuarial memorandum or where reinsurance counterparty risk is material, the company shall perform asset adequacy testing on the business that includes the ceded reserves. Depending on the circumstances including risk exposure, simplified asset adequacy testing techniques may be appropriate, as noted in ASOP No. 22. Relevant aspects of ASOP No. 11 not in conflict with this section should be considered in the asset adequacy testing.

L. Please identify if any borrowing is modeled beyond to address very short-term liquidity needs. Also, please verify borrowing and reinvestment rates to ensure that projections are not materially benefiting from arbitrage advantages.

{Drafting note: comments would be appreciated on the inclusion of board of director and senior management responsibilities on the quality of complex asset-related assumptions similar to those stated in VM-G}

5. Constraints, Sensitivity Tests, and Attribution Analysis related to Assumptions on Projected High Net Yield Assets

A. Constraint for year-end 2023 with early testing for year-end 2022

   i. For the year-end 2022 VM-30 actuarial memorandum, perform and disclose the asset adequacy testing results from the following sensitivity test. For the sensitivity test, assume individual asset (or asset group when there is asset compression) net yields for both current assets and projected reinvestment assets do not exceed net yields on public non-callable corporate bonds with gross asset spreads and asset default costs by projection year that are consistent with PBR Credit Rating 10, i.e., by using PBR Credit Rating 10 rather than PBR Credit Rating 9 and otherwise following the spread and default calculations for the Investment Grade Net Yield Benchmark.

   ii. For reserves reported in the December 31, 2023 and subsequent annual statutory financial statements, assumed individual asset (or asset group when there is asset compression) net yields for both current assets and projected reinvestment assets shall not exceed net yields on public non-callable corporate bonds with gross asset spreads and asset default costs by projection year that are consistent with PBR Credit Rating 10.

   {Drafting note: comments would be appreciated on the pros and cons of an individual asset-specific versus aggregate (VM-20-type) constraint and/or sensitivity test}

   iii. For the constraint and the early testing, any favorable impact to asset adequacy testing results due to borrowing at a rate lower than the rate at which positive cash flows are reinvested in the same time period, should be removed.

B. Perform an attribution analysis for any current assets or projected reinvestment assets assumed to produce net returns in excess of the Investment Grade Net Yield Benchmark, as follows:

   i. Please quantify the assumed excess net returns attributable to the following factors:

      (a) Credit risk (in excess of credit risk on corporate bonds with PBR Credit Rating 9, if not already reflected in the default assumption)

      (b) Illiquidity risk

      (c) Volatility and other risks (please identify and describe these risks in detail)
ii. For each of the factors contributing to assumed net returns in excess of the Investment Grade Net Yield Benchmark, please explain why the factor is not assumed to contribute to additional losses (tail or otherwise) related to the risks.

iii. Where appropriate, apply judgment and provide commentary on the supporting rationale of how the expected excess return is estimated across the various risk components.

iv. Examples of Attribution Analysis:

Example 1:
Current collateralized loan obligation (CLO), attained in the year 2018
Assumed annual net return: 5.7%
Investment Grade Net Yield Benchmark (similar issue date and weighted average life): 4.5%
Assumed excess net return: 1.2%

Attribution:
(a) Excess credit risk (if not already reflected in default cost) 0.2%
(b) Illiquidity risk 0.4%
(c) Volatility and other risks [provide detailed description] 0.6%

Explanation of why each factor is not assumed to contribute to additional losses related to the risks:
[provide explanations]

Example 2:
Assumed reinvestment in an asset-backed security
Assumed annual net return: 5.2%
Investment Grade Net Yield Benchmark (similar issue date and weighted average life): 3.3%
Assumed excess net return: 1.9%

Attribution:
(a) Excess credit risk (if not already reflected in default cost) 0.4%
(b) Illiquidity risk 0.5%
(c) Volatility and other risks [provide detailed description] 1.0%

Explanation of why each factor is not assumed to contribute to additional losses related to the risks:
[provide explanations]
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

**Identification:**
Rachel Hemphill, Texas Department of Insurance
Ben Slutsker, Minnesota Department of Commerce

**Title of the Issue:**
Clarify retrocessions of YRT business.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-20 Section 8.C.18
January 1, 2022 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

In reviewing companies filing PBR in 2020 for retrocessions of YRT business, companies appropriately treated the pre-reinsurance reserve as 1/2cx and the reserve credit as 1/2cx following VM-20 Section 8.C.18’s instruction for handling non-guaranteed YRT or similar business. However, reviewing these filings raised that the Valuation Manual should be made more clear for such retrocessions. Note that if a company had instead been required to model these retrocessions that are dependent on the YRT, then following the requirements that they “project cash flows consistent with the above outlined treatment for non-guaranteed YRT or similar arrangements”, the company would have had to model cashflows consistent with the 1/2cx treatment for the underlying reinsurance (i.e., a partial year’s cashflows) and then modeled the retrocession terms applied to those partial year cashflows. This would have been unnecessary effort for materially the same result. The inefficiency of the alternative further supports clarifying that this is not the required treatment.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

NAIC Staff Comments:

W:\National Meetings\2010\...\TF\LHA\
When the reinsurance ceded or assumed is on a non-guaranteed YRT or similar basis, the corresponding reinsurance cash flows do not need to be modeled. This includes retrocession arrangements covering non-guaranteed YRT reinsurance and similar agreements. Rather, for a ceding company, the post-reinsurance-ceded DR or SR shall be the pre-reinsurance-ceded DR or SR pursuant to Section 8.D.2, plus any applicable provision pursuant to Section 8.C.15 and Section 8.C.17, minus the NPR reinsurance credit from Section 8.B. For an assuming company, the DR or SR for the business assumed on a non-guaranteed YRT or similar basis shall be set equal to the NPR from Section 3.B.8, plus any applicable provision pursuant to Section 8.C.16 and Section 8.C.17. In the case where there are also other reinsurance arrangements that are not on a non-guaranteed YRT or similar basis, the reinsurance credit shall include the modeled reinsurance credit reflecting those other reinsurance arrangements. In particular, where there are also other reinsurance arrangements that are dependent on the non-guaranteed YRT or similar arrangements, actuarial judgment shall be used to project cash flows consistent with the above outlined treatment for non-guaranteed YRT or similar arrangements.
The Life Actuarial (A) Task Force met Feb. 3, 2022. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Ben Bock, Ahmad Kamil, and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Bruce Sartain and Vincent Tsang (IL); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); Jessica K. Altman represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT).

1. **Adopted its 2021 Fall National Meeting Minutes**

   Mr. Chupp made a motion, seconded by Mr. Tsang, to adopt the Task Force’s Dec. 8, 2021, minutes (see NAIC Proceedings – Fall 2021, Life Actuarial (A) Task Force). The motion passed unanimously.

2. **Adopted Amendment Proposal 2021-11**

   Ms. Hemphill said amendment proposal 2021-11 (Attachment Seven-A) was re-exposed after several small changes. She said the amendment proposal augments VM-21, Requirements for Principle-Based Reserves for Variable Annuities, with sections providing guidance on general assumptions, assumption margins, and expenses. Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI is generally supportive of the changes, but it has concerns about the regulatory value of the sensitivity testing the proposal adds to VM-21, as discussed in its comment letter (Attachment Seven-B). He suggested that clarification of why the additional sensitivity tests are needed would be helpful. Ms. Hemphill responded that the sensitivity tests are necessary for companies and state insurance regulators to understand the material risks. She suggested that the proposal be adopted as exposed.

   Mr. Leung made a motion, seconded by Mr. Chupp, to adopt amendment proposal 2021-11. The motion passed unanimously.

3. **Re-Exposed Amendment Proposal 2020-12**

   Ms. Hemphill said a drafting group of state insurance regulators and NAIC staff revised the previous draft of amendment proposal 2020-12 to create the current version. She said the concept of a seasoned hedging strategy that appeared in earlier drafts of the proposal is replaced with the concept of a future hedging strategy. She discussed the proposed changes to VM-01, Definitions for Terms in Requirements; VM-20, Requirements for Principle-Based Reserves for Life Insurance; VM-21; and VM-31, PBR Actuarial Report Requirements for Business Subject to a Principle-Based Valuation. She noted that a core change to VM-20 requires that where documentation of future hedging strategies is incomplete, the stochastic reserve must be increased to reflect that future hedging strategies are not clearly defined. She said VM-21 has a similar change that requires an increase in the error factor (E) if the hedging program is not clearly defined.
Mr. Bayerle asked if adoption of the amendment proposal will necessitate changes to accounting requirements. Ms. Hemphill said to the extent that changes are made to the definition of clearly defined hedging strategy (CDHS), coordination with *Statement of Statutory Accounting Principles (SSAP) No. 108—Derivatives Hedging Variable Annuity Guarantees* may be required.

Mr. Chupp made a motion, seconded by Mr. Leung, to re-expose amendment proposal 2020-12 (Attachment Seven-C) for a 47-day public comment period ending March 21. The motion passed unanimously.

Having no further business, the Life Actuarial (A) Task Force adjourned.

Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
PBR Staff of Texas Department of Insurance

Title of the Issue:
Add a section for other assumptions requirement in VM-21 which covers general guidance and requirements for assumptions, and expense assumptions.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-21 Section 1.C.2.b, VM-21 Section 12, VM-21 Section 13, VM-21 Section 1.B, VM-21 Section 10.A, VM-31 Section 3.F.3.d, VM-31 Section 3.F.13.d

January 1, 2021 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

A new section is needed in VM-21 to provide general guidance and requirements for assumptions, similar to VM-20, to address assumption reporting issues identified in VM-21 PBR report reviews, e.g., some companies don’t discuss regular assumption reviews for any necessary updates. In addition, this section provides the specific requirements for assumptions that have not been covered in previous sections of VM-21, i.e., the expense assumptions. VM-21 is not very explicit about expenses (e.g., whether they are fully allocated or include one-time expenses). For VM-20, we have had some material impacts from how companies treat one-time expenses that may be multi-year but temporary. Companies could understate expenses if there is no adjustment for periodic or other recurrent expenses in expense study years where they do not occur. This APF is to make the VM-21 expense assumption requirement explicit and consistent with what is specified in VM-20 Section 9.E. The new section can also be used to cover any other assumptions requirements that need to be addressed in the future. The reporting requirement of the sensitivity testing and the impact of margin analysis is added to VM-31 to help regulators better understand how companies comply with the newly added assumption guidance and requirements.
VM-21 Section 1.C.2.b

a) Liability risks

i. Reinsurer default, impairment or rating downgrade known to have occurred before or on the valuation date.

ii. Mortality/longevity, persistency/lapse, partial withdrawal and premium payment risks.

iii. Utilization risk associated with guaranteed living benefits.

iv. Anticipated mortality trends based on observed patterns of mortality improvement or deterioration, where permitted.

v. Annuitization risks.

vi. Additional premium dump-ins (high interest rate guarantees in low interest rate environments).

vii. Applicable expense risks, including fluctuation in maintenance expenses directly attributable to the business, future commission expenses, and expense inflation/growth.

VM-21 Section 12 (new)

Section 12: Other Guidance and Requirements for Assumptions

A. Overview

This section provides guidance and requirements in general for setting prudent estimate assumptions when determining either the stochastic reserve or the reserve for any contracts determined using the Alternative Methodology. It also provides specific guidance and requirements for expense assumptions.

B. General Assumption Requirements

1. The company shall use prudent estimate assumptions for risk factors that are not stochastically modeled by applying margins to the anticipated experience assumptions if such risk factors have been categorized as material risks by following Section 1.B Principle 3 and requirements in Section 12.C.

2. The company shall establish the prudent estimate assumptions for risk factors in compliance with the requirements in Section 12 of Model #820 and must periodically review and update the assumptions as appropriate in accordance with these requirements.

3. The company shall model the following risk factors stochastically unless the company elects the Alternative Methodology defined in Section 7.
a. Interest rate movements (i.e., Treasury interest rate curves).

b. Equity performance (e.g., Standard & Poor’s 500 index [S&P 500] returns and returns of other equity investments).

4. If the company elects to stochastically model risk factors in addition to the economic scenarios, the requirements in this section for determining prudent estimate assumptions for these risk factors do not apply.

It is expected that companies will not stochastically model risk factors other than the economic scenarios, such as contract holder behavior or mortality, until VM-21 has more specific guidance and requirements available. Companies shall discuss with domiciliary regulators if they wish to stochastically model other risk factors.

5. The company shall use its own experience, if relevant and credible, to establish an anticipated experience assumption for any risk factor. To the extent that company experience is not available or credible, the company may use industry experience or other data to establish the anticipated experience assumption, making modifications as needed to reflect the circumstances of the company.

a. For risk factors (such as mortality) to which statistical credibility theory may be appropriately applied, the company shall establish anticipated experience assumptions for the risk factor by combining relevant company experience with industry experience data, tables or other applicable data in a manner that is consistent with credibility theory and accepted actuarial practice.

b. For risk factors (such as utilization of guaranteed living benefits) that do not lend themselves to the use of statistical credibility theory, and for risk factors (such as some of the lapse assumptions) to which statistical credibility theory can be appropriately applied but cannot currently be applied due to lack of industry data, the company shall establish anticipated experience assumptions in a manner that is consistent with accepted actuarial practice and that reflects any available relevant company experience, any available relevant industry experience, or any other experience data that are available and relevant. Such techniques include:

i. Adopting standard assumptions published by professional, industry or regulatory organizations to the extent they reflect any available relevant company experience or reasonable expectations.

ii. Applying factors to relevant industry experience tables or other relevant data to reflect any available relevant company experience and differences in expected experience from that underlying the base tables or data.
due to differences between the risk characteristics of the company experience and the risk characteristics of the experience underlying the base tables or data.

iii. Blending any available relevant company experience with any available relevant industry experience and/or other applicable data using weightings established in a manner that is consistent with accepted actuarial practice and that reflects the risk characteristics of the underlying contracts and/or company practices.

c. For risk factors that have limited or no experience or other applicable data to draw upon, the assumptions shall be established using sound actuarial judgment and the most relevant data available, if such data exists.

d. For any assumption that is set in accordance with the requirements of Section 12.B.5.c, the qualified actuary to whom responsibility for this group of contracts is assigned shall use sensitivity testing and disclose the analysis performed to ensure that the assumption is set at the conservative end of the plausible range.

e. The qualified actuary, to whom responsibility for this group of contracts is assigned, shall annually review relevant emerging experience for the purpose of assessing the appropriateness of the anticipated experience assumption. If the results of statistical or other testing indicate that previously anticipated experience for a given factor is inadequate, then the qualified actuary shall set a new, adequate, anticipated experience assumption for the factor.

6. The company shall sensitivity test material risk factors that are not stochastically modeled and examine the impact on the stochastic reserve. The company shall update the sensitivity tests periodically as appropriate. The company may update the tests less frequently, but no less than every 3 years, when the tests show less sensitivity of the stochastic reserve to changes in the assumptions being tested or the experience is not changing rapidly. Providing there is no material impact on the results of the sensitivity testing, the company may perform sensitivity testing:

   a. Using samples of the contracts in force rather than performing the entire valuation for each alternative assumption set.

   b. Using data from prior periods.

Guidance Note: Sensitivity testing every risk factor on an annual basis is not required. For some risk factors, it may be reasonable, in lieu of sensitivity testing, to employ statistical measures for margins, such as adding one or more standard deviations to the anticipated experience assumption.

Commented [RH2]: Regarding ACLI comment (unrelated EDIT): Having an understanding both of uncertainty and the impacts of different types of variation are necessary in margin development (and reviewing the appropriateness of margin development). See, just for example, VM-21 Section 10.C. No change is needed for ACLI comment.

However, while reviewing we saw that adding “material” before “risk factors” would be a good clarifying edit in the first sentence.
The company shall vary the prudent estimate assumptions from scenario to scenario within the stochastic reserve calculation in an appropriate manner to reflect the scenario-dependent risks.

C. Assumption Margins

The company shall include margins to provide for adverse deviations and estimation error in the prudent estimate assumptions for all risk factors that are not stochastically modeled or prescribed, subject to the following:

1. The level of margin applied to the anticipated experience assumptions may be determined in aggregate or independently as discussed in Section 1.B Principle 3. It is not permissible to set a margin less toward the conservative end of the spectrum to recognize, in whole or in part, implicit or prescribed margins that are present, or are believed to be present, in other risk factors.

Risks that are stochastically modeled (e.g., interest rates, equity returns) or have prescribed margins or guardrails (e.g., assets, revenue sharing) shall be considered material risks. Other risks generally considered to be material include, but are not limited to, mortality, contract holder behavior, maintenance and overhead expenses, inflation and implied volatility. In some cases, the list of material risks may also include acquisition expenses, partial withdrawals, policy loans, annuitizations, account transfers and deposits, and/or option elections that contain an element of anti-selection.

2. The greater the uncertainty in the anticipated experience assumption, the larger the required margin, with the margin added or subtracted as needed to produce a larger modeled TAR than would otherwise result. For example, the company shall use a larger margin when:

   a. The experience data have less relevance or lower credibility.
   
   b. The experience data are of lower quality, such as incomplete, internally inconsistent or not current.
   
   c. There is doubt about the reliability of the anticipated experience assumption, such as, but not limited to, recent changes in circumstances or changes in company policies.
   
   d. There are constraints in the modeling that limit an effective reflection of the risk factor.

3. In complying with the sensitivity testing requirements in Section 12.B.6 above, greater analysis and more detailed justification are needed to determine the level of uncertainty when establishing margins for risk factors that produce greater sensitivity on the stochastic reserve.
4. A margin is permitted but not required for assumptions that do not represent material risks.

5. A margin should reflect the magnitude of fluctuations in historical experience of the company for the risk factor, as appropriate.

6. The company shall apply the method used to determine the margin consistently on each valuation date but is permitted to change the method from the prior year if the rationale for the change and the impact on the stochastic reserve is disclosed.

D. Expense Assumptions

1. General Prudent Estimate Expense Assumption Requirements

In determining prudent estimate expense assumptions, the company:

a. May spread certain information technology development costs and other capital expenditures over a reasonable number of years in accordance with accepted statutory accounting principles as defined in the Statements of Statutory Accounting Principles.

Guidance Note: Care should be taken with regard to the potential interaction with the inflation assumption below.

b. Shall assume that the company is a going concern.

c. Shall choose an appropriate expense basis that properly aligns the actual expense to the assumption. If values are not significant, they may be aggregated into a different base assumption.

Guidance Note: For example, death benefit expenses should be modeled with an expense assumption that is per death incurred.

d. Shall reflect the impact of inflation.

e. Shall not assume future expense improvements.

f. Shall not include assumptions for federal income taxes (and expenses paid to provide fraternal benefits in lieu of federal income taxes) and foreign income taxes.

g. Shall use assumptions that are consistent with other related assumptions.
h. Shall use fully allocated expenses.

Guidance Note: Expense assumptions should reflect the direct costs associated with the block of contracts being modeled, as well as indirect costs and overhead costs that have been allocated to the modeled contracts.

i. Shall allocate expenses using an allocation method that is consistent across company lines of business. Such allocation must be determined in a manner that is within the range of actuarial practice and methodology and consistent with applicable ASOPs. Allocations may not be done for the purpose of decreasing the stochastic reserve.

Guidance Note: For example, the combining of two similar blocks of business on the same administrative system may yield some expense savings on a per unit basis, but any future cost of the system conversion should also be considered in the final assumption. If all costs for the conversion are in the past, then there would be no future expenses to reflect in the valuation.

j. Shall reflect expense efficiencies that are derived and realized from the combination of blocks of business due to a business acquisition or merger in the expense assumption only when any future costs associated with achieving the efficiencies are also recognized.

Guidance Note: For example, the combining of two similar blocks of business on the same administrative system may yield some expense savings on a per unit basis, but any future cost of the system conversion should also be considered in the final assumption. If all costs for the conversion are in the past, then there would be no future expenses to reflect in the valuation.

k. Shall reflect the direct costs associated with the contracts being modeled, as well as an appropriate portion of indirect costs and overhead (i.e., expense assumptions representing fully allocated expenses should be used), including expenses categorized in the annual statement as “taxes, licenses and fees” (Exhibit 3 of the annual statement) in the expense assumption.

l. Shall include acquisition expenses associated with business in force as of the valuation date and significant non-recurring expenses expected to be incurred after the valuation date in the expense assumption.

m. For contracts sold under a new policy form or due to entry into a new product line, the company shall use expense factors that are consistent with the expense factors used to determine anticipated experience assumptions for contracts from an existing block of mature contracts taking into account:

i. Any differences in the expected long-term expense levels between the block of new contacts and the block of mature contracts.

ii. That all expenses must be fully allocated as required
under Section 12.D.1.h above.

2. Margins for Prudent Estimate Expense Assumptions

The company shall determine margins for expense assumptions following Section 12.C.

VM-21 Section 13

Section 13: Allocation of the Aggregate Reserve to the Contract Level

VM-21 Section 1.B

Principle 3: The implementation of a model involves decisions about the experience assumptions and the modeling techniques to be used in measuring the risks to which the company is exposed. Generally, assumptions are to be based on the conservative end of the confidence interval. The choice of a conservative estimate for each assumption may result in a distorted measure of the total risk. Conceptually, the choice of assumptions and the modeling decisions should be made so that the final result approximates what would be obtained for the stochastic reserve at the required CTE level if it were possible to calculate results over the joint distribution of all future outcomes. In applying this concept to the actual calculation of the stochastic reserve, the company should be guided by evolving practice and expanding knowledge base in the measurement and management of risk.

Guidance Note: The intent of Principle 3 is to describe the conceptual framework for setting assumptions. Section 10 provides the requirements and guidance for setting contract holder behavior assumptions and includes alternatives to this framework if the company is unable to fully apply this principle. More guidance and requirements for setting assumptions in general are provided in Section 12.

VM-21 Section 10.A

Section 10: Contract Holder Behavior Assumptions

A. General

Contract holder behavior assumptions encompass actions such as lapses, withdrawals, transfers, recurring deposits, benefit utilization, option election, etc. Contract holder behavior is difficult to predict accurately, and variance in behavior assumptions can significantly affect the results. In the absence of relevant and fully credible empirical data, the company should set behavior assumptions as guided by Principle 3 in Section 1.B and Section 12.

VM-31 Section 3.F.3.d

3. Liability Assumptions and Margins – A listing of the assumptions and margins used in the projections to determine the stochastic reserve, including a discussion of the source(s) and the rationale for each assumption:

a. Premiums and Subsequent Deposits – Description of premiums and subsequent deposits.
b. **Interest Crediting Strategy** – Description of the interest crediting strategy.

c. **Commissions** – Description of commissions, including any commission chargebacks.

d. **Expenses Other than Commissions** – Description and listing of insurance company expenses other than commissions, such as overhead, including:

i. Method used to allocate expenses to the contracts included in a principle-based valuation under VM-21 and a statement confirming that expenses have been fully allocated in accordance with VM-21 Section 12.D.1.h.

ii. Method used to apply the allocated expenses to model segments or sub-segments within the cash-flow model.

iii. Identification of types of costs that were spread, and for how many years, if any cost spreading was done pursuant to VM-21 Section 12.D.1.a.

iv. Method used to determine margins.

**VM-31 Section 3.F.13.c (new)**

c. **Sensitivity Tests** – For each distinct product type for which margins were established:

i. List the specific sensitivity tests performed for each risk factor or combination of risk factors, other than those discussed in Section 3.F.3.h.vi and 3.F.3.i.ii.

ii. Indicate whether the reserve was calculated based on the anticipated experience assumptions or prudent estimate assumptions for all other risk factors while performing the tests.

iii. Provide the numerical results of the sensitivity tests for both reserves and capital.

iv. Explain how the results of sensitivity tests were used or considered in developing assumptions.

**VM-31 Section 3.F.13.d (new)**

d. **Impact of Margin**

i. Company can perform the impact of margin analysis using off-cycle data. The analysis can be done less frequently than annual unless there is change or update in the margins, but not less frequently than every 3 years.

ii. **Impact of Margins for Each Risk Factor** – The impact of margins on the stochastic reserve for each risk factor, or group of risk factors, that has a material impact on the stochastic reserve, determined by subtracting (i) from (ii), expressed in both dollar amounts and percentages. For the purposes of this analysis, calculate the CTE without requiring that the scenario reserve for any scenario be no less than the cash surrender value.
(1) The CTE70(best efforts), as outlined in VM-21 Section 9.C, but with the reserve calculated based on the anticipated experience assumption for the risk factor and prudent estimate assumptions for all other risk factors.

(2) The CTE70(best efforts), as outlined in VM-21 Section 9.C, for that group of contracts as reported.

(3) Repeat the impact analysis using the same method on CTE(98) levels.

iii. Aggregate Impact of Margins – the aggregate impact of all margins on the stochastic reserve for that group of contracts determined by subtracting (1) from (2), expressed in both dollar amounts and percentages. For the purposes of this analysis, calculate the CTE without requiring that the scenario reserve for any scenario be no less than the cash surrender value:

(1) The CTE70(best efforts), as outlined in VM-21 Section 9.C, for that group of contracts, but with the reserve calculated based on anticipated experience assumptions for all risk factors prior to the addition of any margins.

(2) The CTE70(best efforts), as outlined in VM-21 Section 9.C, for that group of contracts as reported.

(3) Repeat the impact analysis using the same method on CTE(98) levels.

iv. Impact of Implicit Margins – For purposes of the disclosures required in 13.d.ii and 13.d.iii above:

(1) If the company believes the method used to determine anticipated experience assumptions includes an implicit margin, the company can adjust the anticipated experience assumptions to remove this implicit margin for this reporting purpose only. If any such adjustment is made, the company shall document the rationale and method used to determine the anticipated experience assumption.

(2) Since the company is not required to determine an anticipated experience assumption or a prudent estimate assumption for risk factors that are prescribed (i.e., interest rate movements, equity performance, default costs and net spreads on reinvestment assets), when determining the impact of margins, the prescribed assumption shall be deemed to be the prudent estimate assumption for the risk factor, and the company can elect to determine an anticipated experience assumption for the risk factor, based on the company’s anticipated experience for the risk factor. If this is elected, the company shall document the rationale and method used to determine the anticipated experience assumption.

Commented [RH6]: Regarding ACLI comment (EDIT): While we were not implying CTE(98) is equal to TAR, we acknowledge that since the directional impacts on CTE(70) and CTE(98) may differ, it is not true that the impact on CTE(98) must be positive. Delete guidance note. Request regulator input on whether they want a full TAR impact analysis or whether they are ok following up if the CTE(70) and CTE(98) directional impacts differ and the combined impact is unclear.

Senior Actuary

January 14, 2022

Mr. Mike Boerner
Chair, NAIC Life Actuarial Task Force (LATF)

Re: APF 2021-11

Dear Mr. Boerner:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit the following comments on the December re-exposure of APF 2021-11.

ACLI remains supportive of requirements that ensure appropriate assumptions and margins are used in the computation of reserves. We do, however, continue to have concerns regarding the regulatory value of the sensitivity testing this APF would add to VM-21. During the December 8\textsuperscript{th} LATF discussion, regulators suggested these sensitivities should be required to help regulators better understand the risks and levels of the margins. ACLI would suggest, then, explicitly linking sensitivity testing to margin setting, and for LATF to consider what required sensitivities are truly value-added versus those that do not have clear regulatory value. For the former request, we suggest that all references to sensitivity testing include the qualifier "...to the extent needed to determine margins." These references include VM-20 9.A.7, VM-20 9.D.4, VM-21 10.C, and VM-31 3.D.4.h. For the latter request, perhaps at a future meeting regulators could walk through the required sensitivities in the valuation manual and better help companies understand how regulators are using them in their reviews.

We appreciate the consideration of our comments and look forward to discussing on a future call. Thank you.

Sincerely,

[Signature]

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
Hedging Drafting Group of LATF

Title of the Issue:
Reflect all future hedging strategies in VM-20 and VM-21. Revise hedge modeling to increase E factor (VM-21) or residual risk (VM-20) when future hedging strategies are not clearly defined.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

January 1, 2022 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

2. Add a definition for “future hedging strategy,” consistent with the definition for CDHS and the current VM-01 definition of “derivative program,” which VM-01 notes includes hedging programs.
3. Add a definition for “hedging transactions,” taken from the APPM but modified slightly to be consistent with Valuation Manual terminology.
4. Reflect all of a company’s future hedging strategies, but reflect the additional error (VM-21) or residual risk (VM-20) that is presented by a future hedging strategy not being clearly defined.
5. Remove optionality for liquidating currently held hedges (despite liquidation not being a part of the company investment strategy) if not modeling a future hedging strategy.
6. New hedging strategies (<6 months experience) have an E factor of 1.0 for VM-21. For comparison, the current draft VM-22 only allows modeling hedges after they have been in place for 6 months. When only CDHS were modeled in VM-21, new hedging strategies with no experience had E factors as low as 0.5 even without meaningful analysis. This treatment was much too lenient for new hedging strategies.

**NAIC Staff Comments:**

W:\National Meetings\2010\...(TF\LHA)
The term “clearly defined hedging strategy” (CDHS) means a future hedging strategy for which the following attributes are clearly documented:

a. The specific risks being hedged (e.g., cash flow, fee income, policy interest credits, delta, rho, vega, etc.).

b. The hedging objectives.

c. The material risks that are not hedged (e.g., variation from expected mortality, withdrawal, and other utilization or decrement rates assumed in the hedging strategy, etc.).

d. The financial instruments used to hedge the risks.

e. The hedging strategy’s trading rules, including the permitted tolerances from hedging objectives.

f. The metrics, criteria, and frequency for measuring hedging effectiveness.

g. The conditions under which hedging will not take place and for how long the lack of hedging can persist.

h. The group or area, including whether internal or external, responsible for implementing the hedging strategy.

i. Areas where basis, gap or assumption risk related to the hedging strategy have been identified.

j. The circumstances under which hedging strategy will not be effective in hedging the risks.

Guidance Note: For purposes of the CDHS documented attributes, “effectiveness” need not be measured in a manner as defined in SSAP No. 86—Derivatives in the AP&P Manual.

The term “future hedging strategy” is a derivative program undertaken by a company to manage risks through one or more future hedging transactions, including the future purchase or sale of hedging instruments and the opening and closing of hedging positions.

A future hedging strategy may be dynamic, static or a combination thereof. A strategy involving the offsetting of the risks associated with products falling under the scope of different requirements within the Valuation Manual (e.g., VM-20, VM-21, or VM-22) does not qualify as a future hedging strategy.

The term “hedging transaction” means a derivative(s) transaction which is entered into and maintained to reduce:

a. The risk of a change in the fair value, the value on a statutory, GAAP, or other basis, or cash flow of assets and liabilities which the company has acquired or incurred or has a firm commitment to acquire or incur or for which the company has a forecasted acquisition or incurrence; or

b. The currency exchange rate risk or the degree of foreign currency exposure in assets and liabilities which the company has acquired or incurred or has a firm commitment to acquire or incur or for which the company has forecasted acquisition or incurrence.
A company may not exclude a group of policies for which there is one or more future hedging strategies supporting the policies from SR requirements, except in the case where all future hedging strategies supporting the policies are solely associated with product features that are determined to not be material under Section 7.B.1 due to low utilization.

VM-20 Section 7.E.1.g

Notwithstanding the above requirements, the modeled reserve shall be the higher of that produced by the modeled company investment strategy and that produced by substituting an alternative investment strategy in which the fixed income reinvestment assets have the same weighted average life (WAL) as the reinvestment assets in the modeled company investment strategy and are all public non-callable corporate bonds with gross asset spreads, asset default costs and investment expenses by projection year that are consistent with a credit quality blend of 50% PBR credit rating 6 (A2/A) and 50% PBR credit rating 3 (Aa2/AA).

Policy loans, equities and derivative instruments associated with the execution of future hedging strategies supporting the policies are not affected by this requirement.

VM-20 Section 7.K

K. Modeling of Derivative Programs

1. When determining the DR and the SR, the company shall include in the projections the appropriate costs and benefits of derivative instruments that are currently held by the company in support of the policies subject to these requirements. The company shall also include the appropriate costs and benefits of anticipated future derivative instrument transactions associated with the execution of future hedging strategies supporting the policies, as well as the appropriate costs and benefits of anticipated future derivative instrument transactions associated with non-hedging derivative programs (e.g., replication, income generation) undertaken as part of the investment strategy supporting the policies, provided they are normally modeled as part of the company’s risk assessment and evaluation processes.

2. For each derivative program that is modeled, the company shall reflect the company’s established investment policy and procedures for that program; project expected program performance along each scenario; and recognize all benefits, residual risks and associated frictional costs. The residual risks include, but are not limited to: basis, gap, price, parameter estimation and variation in assumptions (mortality, persistency, withdrawal, etc.). Frictional costs include, but are not limited to: transaction, margin (opportunity costs associated with margin requirements) and administration. For future hedging strategies supporting the policies, the company may not assume that residual risks and frictional costs have a value of zero, unless the company demonstrates in the PBR Actuarial Report that “zero” is an appropriate expectation. VM-21 Section 1.B Principle 5 applies as a general principle for the modeling of future hedging strategies.

3. In circumstances where one or more material risk factors related to a derivative program are not fully captured within the cash-flow model used to calculate CTE 70, the company shall reflect such risk factors by increasing the SR as described in Section 5.E.
4. In circumstances where documentation outlining the future hedging strategies is incomplete, the company shall reflect the future hedging strategies not being clearly defined by increasing the SR as described in Section 5.E. To support no increase to the SR, there should be very robust documentation outlining each future hedging strategy. In particular, the SR shall be at least as great as the SR that would result if a future hedging strategy were not reflected in the SR, if the documentation is materially incomplete for any of the individual CDHS attributes (a) through (j), as listed in VM-01.

Any increases required to the SR to reflect that documentation is not available to support that the future hedging strategies are clearly defined shall be in addition to increases to the SR pursuant to Section 7.K.3 above.

**Guidance Note:** Section 5.E requires that the company “Determine any additional amount needed to capture any material risk included in the scope of these requirements but not already reflected in the cash-flow models using an appropriate and supportable method and supporting rationale.” In the case of a derivative program that is a future hedging strategy, Section 7.K.3 requires such an increase for disconnects between the hedge modeling and the future hedging strategy, while Section 7.K.4 requires such an increase for disconnects between the loosely defined future hedging strategy and what may actually take place.

**VM-20 Section 7.L (Remove entire Section 7.L)**

**VM-21 Section 1.D.2 (Delete entire definition and renumber subsequent sections VM-21 Section 1.D.3 and VM-21 Section 1.D.4)**

**VM-21 Section 4.A.4**

Modeling of Hedges

a. For a company that does not have a future hedging strategy supporting the contracts:
   
   i. The company shall not consider the cash flows from any future hedge purchases or any rebalancing of existing hedge assets in its modeling, since they are not included in the company’s investment strategy supporting the contracts.

   ii. Existing hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the starting assets.

b. For a company with one or more future hedging strategies supporting the contracts, the detailed requirements for the modeling of hedges are defined in Section 9. The following paragraphs are a high-level summary and do not supersede the detailed requirements.

   i. The appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the projections used in the determination of the SR.
ii. The projections shall take into account the appropriate costs and benefits of hedge positions expected to be held in the future through the execution of the future hedging strategies supporting the contracts. Because models do not always accurately portray the results of hedge programs, the company shall, through back-testing and other means, assess the accuracy of the hedge modeling. The company shall determine a SR as the weighted average of two CTE values; first, a CTE70 (“best efforts”) representing the company’s projection of all of the hedge cash flows, including future hedge purchases, and a second CTE70 (“adjusted”) which shall use only hedge assets held by the company on the valuation date and no future hedge purchases. These are discussed in greater detail in Section 9. The SR shall be the weighted average of the two CTE70 values, where the weights reflect the error factor (E) determined following the guidance of Section 9.C.4.

iii. The company is responsible for verifying compliance with all requirements in Section 9 for all hedging instruments included in the projections.

iv. The use of products not falling under the scope of these requirements (e.g., equity-indexed annuities) as a hedge shall not be recognized in the determination of accumulated deficiencies.

VM-21 Section 4.D.4.b

Notwithstanding the above requirements, the SR shall be the higher of that produced by the modeled company investment strategy and that produced by substituting an alternative investment strategy in which the fixed income reinvestment assets have the same weighted average life (WAL) as the reinvestment assets in the modeled company investment strategy and are all public non-callable corporate bonds with gross asset spreads, asset default costs, and investment expenses by projection year that are consistent with a credit quality blend of 50% PBR credit rating 6 (A2/A) and 50% PBR credit rating 3 (Aa2/AA).

Policy loans, equities and derivative instruments associated with the execution of future hedging strategies supporting the contracts are not affected by this requirement.

VM-21 Section 6.B.3.a.ii – Footnote (Footnote at Bottom of Page 21-23)

Throughout this Section 6, references to CTE70 (adjusted) shall also mean the SR for a company that does not have a future hedging strategy supporting the contracts as discussed in Section 4.A.4.a.

VM-21 Section 6.B.3.b.ii

Calculate the Prescribed Projections Amount as the CTE70 (adjusted) using the same method as that outlined in Section 9.C (which is the same as SR following Section 4.A.4.a for a company that does not have a future hedging strategy supporting the contracts) but substituting the assumptions prescribed by Section 6.C. The calculation of this Prescribed Projections Amount also requires that the scenario reserve for any given scenario be equal to or in excess of the cash surrender value in aggregate on the valuation date for the group of contracts modeled in the projection.

VM-21 Section 6.B.5
VM-21 Section 9

Section 9: Modeling of Hedges under a Future Hedging Strategy

A. Initial Considerations

1. Subject to Section 9.C.2, the appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the calculation of the SR, determined in accordance with Section 3.D and Section 4.D.

2. If the company is following one or more future hedging strategies supporting the contracts, in accordance with an investment policy adopted by the board of directors, or a committee of board members, the company shall take into account the costs and benefits of hedge positions expected to be held by the company in the future along each scenario based on the execution of the hedging strategy, and it is eligible to reduce the amount of the SR using projections otherwise calculated. The investment policy must clearly articulate the company’s hedging objectives, including the metrics that drive rebalancing/trading. This specification could include maximum tolerable values for investment losses, earnings, volatility, exposure, etc. in either absolute or relative terms over one or more investment horizons vis-à-vis the chance of occurrence.

Company management is responsible for developing, documenting, executing and evaluating the investment strategy, including the hedging strategy, used to implement the investment policy.

3. For this purpose, the investment assets refer to all the assets, including derivatives supporting covered products and guarantees. This also is referred to as the investment portfolio. The investment strategy is the set of all asset holdings at all points in time in all scenarios. The hedging portfolio, which also is referred to as the hedging assets, is a subset of the investment assets. The hedging strategy is the hedging asset holdings at all points in time in all scenarios. There is no attempt to distinguish what is the hedging portfolio and what is the investment portfolio in this section. Nor is the distinction between investment strategy and hedging strategy formally made here. Where necessary to give effect to the intent of this section, the requirements applicable to the hedging portfolio or the hedging strategy are to apply to the overall investment portfolio and investment strategy.

4. This particularly applies to restrictions on the reasonableness or acceptability of the models that make up the stochastic cash-flow model used to perform the projections, since these restrictions are inherently restrictions on the joint modeling of the hedging and non-hedging portfolio. To give effect to these requirements, they must apply to the overall investment strategy and investment portfolio.

B. Modeling Approaches

1. The analysis of the impact of the hedging strategy on cash flows is typically performed using either one of two types of methods as described below. Although a hedging strategy normally would be expected to reduce risk provisions, the nature of the hedging strategy and the costs to implement the strategy may result in an increase in the amount of the SR otherwise calculated. Particular attention should be given to VM-21 Section 1.B Principle 5 for the modeling of future hedging strategies.
2. The fundamental characteristic of the first type of method, referred to as the “explicit method,” is that hedging positions and their resulting cash flows are included in the stochastic cash-flow model used to determine the scenario reserve, as discussed in Section 3.D, for each scenario.

3. The fundamental characteristic of the second type of method, referred to as the “implicit method,” is that the effectiveness of the current hedging strategy on future cash flows is evaluated, in part or in whole, outside of the stochastic cash-flow model. There are multiple ways that this type of modeling can be implemented. In this case, the reduction to the SR otherwise calculated should be commensurate with the degree of effectiveness of the hedging strategy in reducing accumulated deficiencies otherwise calculated.

4. Regardless of the methodology used by the company, the ultimate effect of the current hedging strategy (including currently held hedge positions) on the SR needs to recognize all risks, associated costs, imperfections in the hedges and hedging mismatch tolerances associated with the hedging strategy. The risks include, but are not limited to: basis, gap, price, parameter estimation and variation in assumptions (mortality, persistency, withdrawal, annuitization, etc.). Costs include, but are not limited to: transaction, margin (opportunity costs associated with margin requirements) and administration. In addition, the reduction to the SR attributable to the hedging strategy may need to be limited due to the uncertainty associated with the company’s ability to implement the hedging strategy in a timely and effective manner. The level of operational uncertainty varies indirectly with the amount of time that the new or revised strategy has been in effect or mock tested.

5. A safe harbor approach is permitted for reflection of future hedging strategies supporting the contracts for those companies whose modeled hedge assets comprise only linear instruments not sensitive to implied volatility. For companies with option-based hedge strategies, electing this approach would require representing the option-based portion of the strategy as a delta-rho two-Greek hedge program. The normally modeled option portfolio would be replaced with a set of linear instruments that have the same first-order Greeks as the original option portfolio.

C. Calculation of SR (Reported)

1. The company shall calculate CTE70 (best efforts)—the results obtained when the CTE70 is based on incorporating the future hedging strategies supporting the contracts (including both currently held and future hedge positions) into the stochastic cash-flow model on a best efforts basis, including all of the factors and assumptions needed to execute the future hedging strategies supporting the contracts (e.g., stochastic implied volatility). The determination of CTE70 (best efforts) may utilize either explicit or implicit modeling techniques.

2. The company shall calculate a CTE70 (adjusted) by recalculating the CTE70 assuming the company has no future hedging strategies supporting the contracts, therefore following the requirements of Section 4.A.4.a.
3. Because most models will include at least some approximations or idealistic assumptions, CTE70 (best efforts) may overstate the impact of the hedging strategy. To compensate for potential overstatement of the impact of the hedging strategy, the value for the SR is given by:

\[ SR = CTE70 \text{ (best efforts)} + E \times \max[0, CTE70 \text{ (adjusted)} - CTE70 \text{ (best efforts)}] \]

4. The company shall specify a value for \( E \) (the “error factor”) in the range from 5% to 100% to reflect the company’s view of the potential error resulting from the level of sophistication of the stochastic cash-flow model and its ability to properly reflect the parameters of the hedging strategy (i.e., the Greeks being covered by the strategy), as well as the associated costs, risks and benefits. The greater the ability of the stochastic model to capture all risks and uncertainties, the lower the value of \( E \). The value of \( E \) may be as low as 5% only if the model used to determine the CTE70 (best efforts) effectively reflects all of the parameters used in the hedging strategy. If certain economic risks are not hedged, yet the model does not generate scenarios that sufficiently capture those risks, \( E \) must be in the higher end of the range, reflecting the greater likelihood of error. Likewise, simplistic hedge cash-flow models shall assume a higher likelihood of error.

5. The company shall conduct a formal back-test, based on an analysis of at least the most recent 12 months, to assess how well the model is able to replicate the hedging strategy in a way that supports the determination of the value used for \( E \).

6. Such a back-test shall involve one of the following analyses:

a. For companies that model hedge cash flows directly (“explicit method”), replace the stochastic scenarios used in calculating the CTE70 (best efforts) with a single scenario that represents the market path that actually manifested over the selected back-testing period and compare the projected hedge asset gains and losses against the actual hedge asset gains and losses—both realized and unrealized—observed over the same time period. For this calculation, the model assumptions may be replaced with parameters that reflect actual experience during the back-testing period. In order to isolate the comparison between the modeled hedge strategy and actual hedge results for this calculation, the projected liabilities should accurately reflect the actual liabilities throughout the back-testing period; therefore, adjustments that facilitate this accuracy (e.g. reflecting actual experience instead of model assumptions, including new business, etc.) are permissible.

To support the choice of a low value of \( E \), the company should ascertain that the projected hedge asset gains and losses are within close range of 100% (e.g., 80–125%) of the actual hedge asset gains and losses. The company may also support the choice of a low value of \( E \) by achieving a high R-squared (e.g., 0.80 or higher) when using a regression analysis technique.

b. For companies that model hedge cash flows implicitly by quantifying the cost and benefit of hedging using the fair value of the hedged item (an “implicit method” or “cost of reinsurance method”), calculate the delta, rho and vega coverage ratios in each month over the selected back-testing period in the following manner:

i. Determine the hedge asset gains and losses—both realized and unrealized—incurred over the month attributable to equity, interest rate, and implied volatility movements.

ii. Determine the change in the fair value of the hedged item over the month attributable to equity, interest rate, and implied volatility movements. The hedged item should be defined in a manner that reflects the proportion of risks hedged (e.g., if a company elects to hedge 50% of a contract’s market risks, it should quantify the fair value of the hedged item as 50% of the fair value of the contract).
D. Additional Considerations for CTE70 (best efforts)

ii. Calculate the delta coverage ratio as the ratio between (i) and (ii) attributable to equity movements.

iv. Calculate the rho coverage ratio as the ratio between (i) and (ii) attributable to interest rate movements.

v. Calculate the vega coverage ratio as the ratio between (i) and (ii) attributable to implied volatility movements.

vi. To support the company’s choice of a low value of E, the company should be able to demonstrate that the delta and rho coverage ratios are both within close range of 100% (e.g., 80–125%) consistently across the back-testing period.

vii. In addition, the company should be able to demonstrate that the vega coverage ratio is within close range of 100% in order to use the prevailing implied volatility levels as of the valuation date in quantifying the fair value of the hedged item for the purpose of calculating CTE70 (best efforts). Otherwise, the company shall quantify the fair value of the hedged item for the purpose of calculating CTE70 (best efforts) in a manner consistent with the realized volatility of the scenarios captured in the CTE (best efforts).

c. Companies that do not model hedge cash flows explicitly, but that also do not use the implicit method as outlined in Section 9.C.6.b above, shall conduct the formal back-test in a manner that allows the company to clearly illustrate the appropriateness of the selected method for reflecting the cost and benefit of hedging, as well as the value used for E.

7. A company that does not have 12 months of experience to date shall set E to a value that reflects the amount of experience available, and the degree and nature of any change to the hedge program. For a material change in strategy, with less than 6 months of history, E should be 1.0. However, E may be lower than 1.0 if at least 6 months of reliable experience is available and/or if the change in strategy is a minor refinement rather than a material change in strategy.

The following examples are provided as guidance for determining the E factor when there has been a change to the hedge program:

- The error factor should be temporarily 100% for material changes in hedge methodology (e.g., moving from a fair-value based strategy to a stop-loss strategy).
- An increase in the error factor may not always be needed for minor refinements to the hedge strategy (e.g., moving from swaps to Treasury futures).

8. The company shall set the value of E reflecting the extent to which the hedging program is clearly defined. To support a value of E below 1.0, there should be very robust documentation outlining all future hedging strategies. To the extent that documentation outlining any of the future hedging strategies is incomplete, the value of E shall be increased. In particular, the value of E shall be 1.0 if documentation is materially incomplete for any of the individual CDHS attributes (a) through (i), as listed in VM-01.

Any increases required to the value of E to reflect that documentation is not available to support that the future hedging strategies are clearly defined shall be in addition to increases to the value of E to reflect a lack of historical experience or to reflect the back-testing results, subject to an overall ceiling of 1.0 for E.
If the company is following one or more future hedging strategies supporting the contracts, the fair value of the portfolio of contracts falling within the scope of these requirements shall be computed and compared to the CTE70 (best efforts) and CTE70 (adjusted). If the CTE70 (best efforts) is below both the fair value and CTE70 (adjusted), the company should be prepared to explain why that result is reasonable.

For the purposes of this analysis, the SR and fair value calculations shall be done without requiring the scenario reserve for any given scenario to be equal to or in excess of the cash surrender value in aggregate for the group of contracts modeled in the projection.

E. Specific Considerations and Requirements

1. As part of the process of choosing a methodology and assumptions for estimating the future effectiveness of the current hedging strategy (including currently held hedge positions) for purposes of reducing the SR, the company should review actual historical hedging effectiveness. The company shall evaluate the appropriateness of the assumptions on future trading, transaction costs, other elements of the model, the strategy, the mix of business and other items that are likely to result in materially adverse results. This includes an analysis of model assumptions that, when combined with the reliance on the hedging strategy, are likely to result in adverse results relative to those modeled. The parameters and assumptions shall be adjusted (based on testing contingent on the strategy used and other assumptions) to levels that fully reflect the risk based on historical ranges and foreseeable future ranges of the assumptions and parameters. If this is not possible by parameter adjustment, the model shall be modified to reflect them at either anticipated experience or adverse estimates of the parameters.

2. A discontinuous hedging strategy is a hedging strategy where the relationships between the sensitivities to equity markets and interest rates (commonly referred to as the Greeks) associated with the guaranteed contract holder options embedded in the variable annuities and other in-scope products and these same sensitivities associated with the hedging assets are subject to material discontinuities. This includes, but is not limited to, a hedging strategy where material hedging assets will be obtained when the variable annuity account balances reach a predetermined level in relationship to the guarantees. Any hedging strategy, including a delta hedging strategy, can be a discontinuous hedging strategy if implementation of the strategy permits material discontinuities between the sensitivities to equity markets and interest rates associated with the guaranteed contract holder options embedded in the variable annuities and other in-scope products and these same sensitivities associated with the hedging assets. There may be scenarios that are particularly costly to discontinuous hedging strategies, especially where those result in large discontinuous changes in sensitivities (Greeks) associated with the hedging assets. Where discontinuous hedging strategies contribute materially to a reduction in the SR, the company must evaluate the interaction of future trigger definitions and the discontinuous hedging strategy, in addition to the items mentioned in the previous paragraph. This includes an analysis of model assumptions that, when combined with the reliance on the discontinuous hedging strategy, may result in adverse results relative to those modeled.

3. A strategy that has a strong dependence on acquiring hedging assets at specific times that depend on specific values of an index or other market indicators may not be implemented as precisely as planned.

4. The combination of elements of the stochastic cash-flow model—including the initial actual market asset prices, prices for trading at future dates, transaction costs and other assumptions—should be analyzed by the company as to whether the stochastic cash-flow model permits hedging strategies that make money in some scenarios without losing a reasonable amount in some other scenarios. This includes, but is not limited to:

   a. Hedging strategies with no initial investment that never lose money in any scenario and in some scenarios make money.
b. Hedging strategies that, with a given amount of initial money, never make less than accumulation at the one-period risk-free rates in any scenario but make more than this in one or more scenarios.

5. If the stochastic cash-flow model allows for such situations, the company should be satisfied that the results do not materially rely directly or indirectly on the use of such strategies. If the results do materially rely directly or indirectly on the use of such strategies, the strategies may not be used to reduce the SR otherwise calculated.

6. In addition to the above, the method used to determine prices of financial instruments for trading in scenarios should be compared to actual initial market prices. In addition to comparisons to initial market prices, there should be testing of the pricing models that are used to determine subsequent prices when scenarios involve trading financial instruments. This testing should consider historical relationships. For example, if a method is used where recent volatility in the scenario is one of the determinants of prices for trading in that scenario, then that model should approximate actual historic prices in similar circumstances in history.

VM-31 Section 3.C.5

Assets and Risk Management – A brief description of the asset portfolio, and the approach used to model risk management strategies, such as hedging, and other derivative programs, including a description of any future hedging strategies supporting the policies, and any material changes to the hedging strategies from the prior year.

VM-31 Section 3.D.6.f

Risk Management – Detailed description of model risk management strategies, such as hedging and other derivative programs, including any future hedging strategies supporting the policies and any adjustments to the SR pursuant to VM-20 Section 7.K.3 and VM-20 Section 7.K.4, specific to the groups of policies covered in this sub-report and not discussed in the Life Summary Section 3.C.5. Documentation of any future hedging strategies should include documentation addressing each of the CDHS documentation attributes.

a. Investment Officer on Investments – A certification from a duly authorized investment officer that the modeled company investment strategy, including any future hedging strategies supporting the policies, is representative of and consistent with the company’s investment policy and that documentation of the CDHS attributes for any future hedging strategies supporting the policies are accurate.

b. Qualified Actuary on Investments – A certification by a qualified actuary, not necessarily the same qualified actuary that has been assigned responsibility for the PBR Actuarial Report or this sub-report, that the modeling of any future hedging strategies supporting the policies is consistent with the company’s actual future hedging strategies and was performed in accordance with VM-20 and in compliance with all applicable ASOPs, and the alternative investment strategy as defined in VM-20 Section 7.E.1.g reflects the prescribed mix of assets with the same WAL as the reinvestment assets in the company investment strategy.

VM-31 Section 3.E.5

Assets and Risk Management – A brief description of the general account asset portfolio, and the approach used to model risk management strategies, such as hedging and other derivative programs, including a description of any future hedging strategies supporting the contracts, and any material changes to the hedging strategies from the prior year.

VM-31 Section 3.F.8

Hedging and Risk Management – The following information regarding the hedging and risk management assumptions used by the company in performing a principle-based valuation under VM-21:

a. Strategies – Detailed description of risk management strategies, such as hedging and other derivative programs, including any future hedging strategies supporting the contracts, specific to the groups of contracts covered in this sub-report.
   i. Descriptions of basis risk, gap risk, price risk and assumption risk.
   ii. Methods and criteria for estimating the a priori effectiveness of the strategy.
   iii. Results of any reviews of actual historical hedging effectiveness.

b. CDHS – Documentation addressing each of the CDHS documentation attributes for any future hedging strategies supporting the contracts.

c. Strategy Changes – Discussion of any changes to the hedging strategy during the past 12 months, including identification of the change, reasons for the change, and the implementation date of the change.

d. Hedge Modeling – Description of how the hedge strategy was incorporated into modeling, including:
   i. Differences in timing between model and actual strategy implementation.
   ii. For a company that does not have a future hedging strategy supporting the contracts, confirmation that currently held hedge assets were included in the starting assets.
   iii. Evaluations of the appropriateness of the assumptions on future trading, transaction costs, other elements of the model, the strategy, and other items that are likely to result in materially adverse results.
   iv. Discussion of the projection horizon for the future hedge strategy as modeled and a comparison to the timeline for any anticipated future changes in the company’s hedge strategy.
   v. If residual risks and frictional costs are assumed to have a value of zero, a demonstration that a value of zero is an appropriate expectation.
   vi. Any discontinuous hedging strategies modeled, and where such discontinuous hedging strategies contribute materially to a reduction in the SR, any evaluations of the interaction of future trigger definitions and the discontinuous hedging strategy, including any analyses of model assumptions that, when combined with the reliance on the discontinuous hedging strategy, may result in adverse results relative to those modeled.
   vii. Disclosure of any situations where the modeled hedging strategies make money in some scenarios without losing a reasonable amount in some other scenarios, and an explanation of why the situations are not material for determining the CTE 70 (best efforts).
   viii. Results of any testing of the method used to determine prices of financial instruments for trading in scenarios against actual initial market prices, including how the testing considered historical relationships. If there are substantial discrepancies, disclosure of the interaction of the model’s assumptions and documentation as to why the model-based prices are appropriate for determining the SR.
   ix. Any model adjustments made when calculating CTE 70 (adjusted), in particular, any liquidation or substitution of assets for currently held hedges.
e. Error Factor (E) and Back-Testing – Description of E, the error factor, and formal back-tests performed, including:

i. The value of E, and the approach and rationale for the value of E used in the reserve calculation.

ii. For companies that model hedge cash flows using the explicit method, as described in VM-21 Section 9.C.6.a, and have 12 months of experience, an analysis of at least the most recent 12 months of experience and the results of a back-test showing that the model is able to replicate the hedging results experienced in a way that justifies the value used for E. Include at least a ratio of the actual change in market value of the hedges to the modeled change in market value of the hedges at least quarterly.

iii. For companies that model hedge cash flows using the implicit method, and have 12 months of experience, as described in VM-21 Section 9.C.6.b, the results of a back-test in which (a) actual hedge asset gains and losses are compared against (b) proportional fair value movements in hedged liability, including:

a) Delta, rho and vega coverage ratios in each month over the back-testing period, which may be presented in a chart or graph.

b) The implied volatility level used to quantify the fair value of the hedged item, as well as the methodology undertaken to determine the appropriate level used.

iv. For companies that do not model hedge cash flows using either the explicit method or the implicit method, as described in VM-21 Section 9.C.6.c, and have 12 months of experience, the results of the formal back-test conducted to validate the appropriateness of the selected method and value used for E.

v. For companies that do not have 12 months of experience, the basis for the value of E that is chosen based on the guidance provided in VM-21 Section 9.C.7, considering the actual history available and the degree and nature of any changes made to the hedge strategy.

vi. The basis for the magnitude of adjustment or lack of adjustment for the value of E chosen based on the robustness of the documentation outlining the future hedging strategy.

g. Safe Harbor for Future Hedging Strategies – If electing the safe harbor approach for a future hedging strategy supporting the contracts, as discussed in VM-21 Section 9.C.8, a description of the linear instruments used to model the option portfolio.

g. Hedge Model Results – Disclosure of whether the calculated CTE 70 (best efforts) is below both the fair value and CTE 70 (adjusted), and if so, justification for why that result is reasonable, as discussed in VM-21 Section 9.D.

VM-31 Section 3.F.12.e

CTEPA – If using the CTEPA method, a summary including:

i. Disclosure (in tabular form) of the scenario reserves using the same method and assumptions as those used by the company to calculate CTE 70 (adjusted) as outlined in VM-21 Section 9.C (or the SR following VM-21 Section 4.A.4.a for a company that does not have a future hedging strategy supporting the contracts), as well as the corresponding scenarios reserves substituting the assumptions prescribed by VM-21 Section 6.C.

ii. Summary of results from a cumulative decrement projection along the scenario whose reserve value is closest to the CTE 70 (adjusted), as outlined in VM-21 Section 9.C (or the SR following VM-21 Section 4.A.4.a for a company that does not have a future hedging strategy supporting the contracts), under the assumptions outlined in VM-21 Section 6.C. Such a cumulative decrement projection shall include, at the end of each projection year, the projected proportion (expressed as a percent of the total projected account...
value) of persisting contracts as well as the allocation of projected decrements across death, full surrender, account value depletion, elective annuitization, and other benefit election.

iii. Summary of results from a cumulative decrement projection, identical to (ii) above, but replacing all assumptions outlined in VM-21 Section 6.C with the corresponding assumptions used in calculating the SR.

VM-31 Section 3.F.16.a and Section 3.F.16.b

a. Investment Officer on Investments – A certification from a duly authorized investment officer that the modeled asset investment strategy, including any future hedging strategies supporting the contracts, is consistent with the company’s current investment strategy except where the modeled reinvestment strategy may have been substituted with the alternative investment strategy, and that documentation of the CDHS attributes for any future hedging strategies supporting the contracts are accurate.

b. Qualified Actuary on Investments – A certification by a qualified actuary, not necessarily the same qualified actuary that has been assigned responsibility for the PBR Actuarial Report or this sub-report, that the modeling of any future hedging strategies supporting the contracts is consistent with the company’s actual future hedging strategies and was performed in accordance with VM-21 and in compliance with all applicable ASOPs.
The Life Actuarial (A) Task Force met Jan. 27, 2022. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); JIm L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Ben Bock, Ahmad Kamil, and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Bruce Sartain and Vincent Tsang (IL); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); Jessica K. Altman represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT).

1. Discussed Comments on an Actuarial Guideline on Asset Adequacy Testing

Mr. Andersen said the Task Force is part of a coordinated NAIC effort to address issues arising from the increase in insurers actively participating with private equity firms or the increasing complexity of assets. Some goals of the efforts include gaining a clearer picture of alternative assets used by insurers, investment management relationships, fee arrangements, affiliated arrangements, accounting, the classification of certain investments, rating agency practices, reinsurance practices, risk-based capital (RBC), and reserves. Mr. Andersen said the focus of the Task Force is on the effects of the modeling of complex assets on reserve adequacy testing. He said the concept of an actuarial guideline leading to clarity on these reserving issues was exposed in September 2021, with a follow-up concept document (Attachment Eight-A) exposed at the Fall National Meeting.

Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI comment letter (Attachment Eight-B) advocates a principle-based framework that leverages the expertise of appointed actuaries. He said the definition of complex assets should focus on the novel aspects of the assets and be flexible enough to adapt to new asset classes as they develop in response to changing economic environments. He said the ACLI is proposing a definition of complex assets, a set of disclosure requirements, and guidance on additional disclosures for year-end 2022 reporting. He said state insurance regulators consider materiality in the application of the guideline.

Jason Kehrberg (American Academy of Actuaries—Academy) said page 2 of the Academy comment letter (Attachment Eight-C) summarizes the Academy’s recommendation. He said the Academy suggests that additional disclosures and guidance may be warranted but warns against the implementation of constraints that could discourage investment in complex assets. He reviewed the Academy’s proposed documentation requirements for inflated net yields. Mr. Andersen said the concept of increasing margins for uncertainty in instances where there is limited or unreliable historical data will be key. Len Mangini (Academy) said disclosures should include the setting, testing, and governance of reserves. Mr. Leung asked what asset class constraints might discourage investments in those assets. Mr. Kehrberg gave the example of limiting a company’s portfolio to no more than 10% of a particular asset class. Mr. Andersen asked if the ACLI could provide company feedback on whether the VM-20, Requirements for Principle-Based Reserves for Life Products, asset constraints have led to a change in company asset strategies. Mr. Serbinowski asked if constraints on valuation rules applied to a particular asset class might be more acceptable by the Academy. Mr. Kehrberg said the Academy would prefer that the requirements be principle-based.
Aaron Sarfatti (Equitable) said the Equitable comment letter (Attachment Eight-D) encourages the Task Force to regard asset adequacy testing as the primary reserve. Steve Tizzoni (Equitable) said the strengthening of the asset adequacy testing standards is necessary to achieve harmonization across reserve determination and testing. He said more than disclosure is necessary to achieve reform. Mr. Mangini said Canada has previously dealt with the issue of constraints. He said companies were forced to map one of their exotic assets to a similar index and cap the returns on the asset to match the index returns. Mr. Serbinowski said having constraints will help moderate actuarial judgment.

Having no further business, the Life Actuarial (A) Task Force adjourned.

Regarding the concept of an actuarial guideline focusing on modeling of complex or high-yielding assets in asset adequacy testing:

- Provide comments on the types of documentation that would be helpful to be provided in an asset adequacy testing memorandum to address the various risks associated with complex assets.

- Provide comments on the types of constraints that may be helpful to address concerns regarding non-uniform practices associated with modeling of complex assets in asset adequacy testing to ensure appropriate addressing of all key risks.

- Provide comments on the role of the Appointed Actuary in a case, for example, where the life insurer has experienced substantial increase in the complexity of assets, potentially supporting actuarial reserves.

Mr. Fred Andersen  
Chief Life Actuary, Minnesota Department of Commerce

Re: December Exposure of Proposed Actuarial Guideline on Complex Assets in Asset Adequacy Testing

Dear Messrs. Boerner and Andersen:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit the following comments on the December exposure of the proposed Actuarial Guideline to address the modeling of complex assets in Asset Adequacy Testing (AAT).

Consistent with our prior letter, ACLI suggests an initial approach of providing disclosures within the Valuation Manual, coupled with more immediate guidance to address the immediate concerns of regulators. ACLI recommends three components for the regulatory guidance: 1) a clear definition of “complex assets” in VM-01; 2) requirements for disclosures in VM-30 based on the materiality of the assets, the level of complexity of the asset, and the assumed net yield of the asset; 3) state disclosure request for YE 2022 to reflect the requirements for the 2023 Valuation Manual.

1) Definition of Complex Assets

ACLI suggests the following preliminary definition for consideration by LATF; if deemed beneficial, there could be a guidance note that provides examples of the types of assets in and out of scope of this definition.

The term “complex assets” means structured securities and asset-backed securities with
a) materially different uncertainty in the timing and amount of cashflows than otherwise present in traditional bond investments, and
b) limited historical data available to set assumptions around the expected performance of such assets.

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2138

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 260 member companies represent 94 percent of industry assets in the United States.

The rationale of this definition was to provide a flexible, principle-based approach to enable regulators to better understand the assets under consideration. Simple comparison to the yield of rated traditional bonds may be inadequate due to significant differences in cash flows; further, focusing on yield alone may fail to capture risks associated with these assets.

2) Disclosure requirements

ACLJ suggests the following principles around disclosures for inclusion in VM-30:

i) Materiality: Consistent with our prior comment letter, guidance should include size/materiality thresholds for both the size of the block and the material use of complex assets. Immaterial current or projected amounts of complex assets should be exempt from additional disclosure requirements.

ii) Level of disclosure: Disclosure requirements should be linked to both the complexity and the net yield of the asset. The greater complexity and assumed net yields for such assets, the more robust the disclosures should be to justify the assumptions used in the projection of such assets.

iii) Transparency on initial and future yield assumptions: Disclosure requirements should support the initial and future yield assumptions, nature of the risks, and demonstrate that modeling adequately recognizes risks associated with such assets.

iv) Sensitivity testing: To the extent constraints or guardrails are deemed necessary to address regulator concerns in addition to enhanced disclosures, they should be considered in the context of sensitivity testing within the asset adequacy testing process.

3) Additional guidance on additional disclosures for YE 2022 reporting

ACLJ appreciates the concern of regulators regarding the use of these assets and would like to work with regulators to develop a path forward that maintains the asset adequacy requirements within VM-30 and provides guidance to companies before 2023. ACLJ suggests a guidance letter from LATF or individual regulators to provide these additional disclosures either within or as a supplement to the Actuarial Opinion for the reporting year before such an amendment can be operative in the Valuation Manual.

We appreciate the consideration of our comments and look forward to discussing on a future call.

Thank you.

Sincerely,

[Signature]

Mr. Mike Boerner  
Chair, Life Actuarial (A) Task Force (LATF)  
National Association of Insurance Commissioners

Re: Second exposure draft of concept and questions on a proposal for an actuarial guideline on asset adequacy testing focusing on the modeling of complex or high-yielding assets.

Dear Mr. Boerner,

The Asset Modeling and Reporting Task Force of the American Academy of Actuaries\(^1\) (the Task Force) is pleased to provide the following comments on the second exposure of concept and questions on a proposal for an actuarial guideline on asset adequacy testing (AAT), which reads as follows:

*Regarding the concept of an actuarial guideline focusing on modeling of complex or high-yielding assets in asset adequacy testing:*

- Provide comments on the types of documentation that would be helpful to be provided in an asset adequacy testing memorandum to address the various risks associated with complex assets.
- Provide comments on the types of constraints that may be helpful to address concerns regarding non-uniform practices associated with modeling of complex assets in asset adequacy testing to ensure appropriate addressing of all key risks.
- Provide comments on the role of the Appointed Actuary in a case, for example, where the life insurer has experienced substantial increase in the complexity of assets, potentially supporting actuarial reserves.

The Task Force’s previous [comment letter](#) identified several actuarial standards of practice (ASOPs) that currently exist for actuaries when modeling complex or high-yielding assets in AAT. The Task Force is expanding upon its first letter in response to the additional context Fred Andersen presented at the 12/8/2021 LATF meeting.

---

\(^1\) The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
Complex and high-yielding assets can be beneficial to the insurance industry if the assets’ exposure and assumptions are appropriately disclosed and their risks are appropriately understood and modeled. While ASOPs and existing statutory guidance currently apply to actuaries when modeling complex or high-yielding assets in AAT, additional disclosures and principle-based guidance would provide regulators with sufficient information to evaluate how well such guidance has been followed. Therefore, the Task Force suggests that additional disclosures and perhaps principle-based guidance may be warranted. However, the Task Force does not recommend implementing constraints to discourage investment in such assets.

For the implementation of these additional disclosures and principle-based guidance, the Task Force suggests amending the 2023 Valuation Manual via an amendment proposal form (APF) in the first half of this year and referencing the APF as appropriate guidance for year-end 2022 AAT work. Given that APFs require new disclosures and demonstrations, states could “early adopt” them because APFs are considered informational. Thus, regulators could adopt the additional disclosures and principle-based guidance for year-end 2022 AAT work without the need for an actuarial guideline. This would not be true if an APF also contain prescriptions or constraints.

One benefit for regulators from following this approach would be comparisons of assumptions between VM-30 for AAT and VM-31 for principle-based reserving (PBR) modeling if disclosure requirements are added to VM-30. The Task Force also notes that there could be benefits to adding similar disclosures to VM-G, so that board members and senior management (i.e., non-actuaries) would be responsible for items such as asset assumptions, asset valuations, reasonableness of the affiliated advisory firm compensation, and performance fees related to the actual returns of the assets themselves.

Please see Attachment A for more specific comments on the eight areas of concern mentioned in Fred Andersen’s presentation at the 12/8/2021 LATF meeting.

Thank you for your consideration of these comments. Please contact Academy life policy analyst Khloe Greenwood (greenwood@actuary.org) with any questions.

Jason Kehrberg, MAAA, FSA
Chairperson, Asset Modeling and Reporting Task Force
American Academy of Actuaries
Attachment A—Specific comments on eight areas of concern mentioned in Fred Andersen’s presentation at the 12/8/2021 LATF meeting

1. Inflated net yields

With regards to inflated net yields, the Task Force notes that additional LATF guidance would be appropriate regarding considerations an actuary would need to address for modeling assets with net yields that materially exceed those of traditional insurance company investments (such as investment-grade issuer obligations with fixed payment streams, or structured assets purchased from affiliates). The Task Force recommends that the guidance include principle-based requirements for recognition of the risks associated with these higher-yielding assets, which would be applicable when an actuary is setting yield or total return assumptions on such assets. The Task Force recommends that risks include default risk, equity risk, prepayment variability (i.e., from residential mortgage-backed securities (RMBS) as well as callable bonds), extension risk (i.e., also for RMBS as well as cash flow waterfalls of subordinate tranches in non-agency structured securities), complexity of cash flows (e.g., structured notes), and illiquidity risk. Examples of appropriate principle-based guidance are listed below:

a. Including all material risks in the asset modeling (including the related asset liability management [ALM] impacts, for example the risk of selling other assets or borrowing at high rates if illiquid assets can’t be sold to meet policyholder obligations)

b. Considering specific, relevant, and credible historical experience for the higher-yielding assets in setting assumptions related to the asset risks

c. Using appropriate industry data, adjusted for the asset characteristics, when credible experience does not exist

d. Increasing margins for uncertainty in instances in which there is limited historical data, where the historical data is inconsistent, or where there is reason to believe most recent historical experience is not reliable

e. Considering the asset underwriting in determining appropriate assumptions for default

f. Considering the underlying assets (e.g., debt instruments, securitization structure) and timing of expected payments when modeling structured securities

g. Using modeling approaches that capture asset payment uncertainty, such as stress testing and stochastic modeling to set margins for uncertainty and/or in determining reserves that encompass moderately adverse conditions for all risks

h. Limiting borrowing, both cost and amount, such that it is reasonable under moderately adverse conditions

i. Considering the illiquidity of these assets and applying appropriate market value haircuts to assets if they must be sold in the future to meet policyholder obligations

j. Applying the above guidance as appropriate for hypothetical future assets (in other words, applying the above considerations for higher yielding reinvestment assets purchased during the projection as well as actual assets in-force at the start of the projection)
k. Recognizing that any extra yield also entails extra risk (which aligns in general with efficient markets), and assessing the potential for short-term stress scenarios

l. Requiring disclosure in the AOM of the above information, including details of the sources of additional yield (i.e., which portion is due to illiquidity, additional default, prepayment, subordinated tranches, etc.)

m. Recognizing any structural elements that are specific to different investment vehicles (e.g., funding commitments for private equity funds and redemption gates for hedge funds)

2. Internal modeling of asset values

With regards to documentation and disclosure, there are many ASOPs that an Appointed Actuary considers when developing an Actuarial Opinion. More specifically, in relation to complex assets, ASOP No. 7, *Analysis of Life, Health, or Property/Casualty Insurer Cash Flows*, clearly states prudent techniques that actuaries should consider when evaluating cashflows including sensitivity to economic factors, reviewing a range of scenarios, sensitivity testing of key factors (which is highlighted again in ASOP No. 55, *Capital Adequacy Assessment*), internal consistency across assumptions, length of projection period, limitations on asset liquidity and quality, cost of maintaining the assets, historical experience and other factors. ASOP No. 41, *Actuarial Communications*, specifically requires an actuary to communicate the extent of reliance and responsibility on others.

With regards to the role of an Appointed Actuary, other useful guidance for Appointed Actuaries to consider with respect to evaluating complex assets include:

a. ASOP No. 22, *Statements of Opinion Based on Asset Adequacy Analysis by Actuaries for Life or Health Insurers*, provides guidance with respect to reliance on others for supporting analysis. It provides that when practicable, the actuary should review the analysis for reasonability and consistency.

b. ASOP No. 56, *Modeling*, indicates that “the actuary should assess whether the structure of the model is appropriate for the intended purpose.” The Reliance on Experts section further provides that the actuary may consider the extent to which the model has been reviewed or validated by experts in the applicable field including known material differences of opinion among experts. It also specifically provides for considering a review by another qualified professional.

c. The applicable asset adequacy actuarial practice notes also offer further industry practice, including purchasing software from multiple vendors and using independent checking spreadsheets. While this guidance is not binding, it provides helpful educational material for actuaries.

d. In conclusion, when using a model, there is already substantial practice for an appointed actuary and ASOP No. 56 specifically provides for considering a review by another qualified professional.

With regards to constraints, if insurance regulators determine that more constraints are necessary for the valuation of complex illiquid assets, then the Task Force suggests refining the definition of
“complex and illiquid assets” to follow consistent classifications already established under Fair Value Financial Accounting Standard (FAS) 157 (Accounting Standards Codification (ASC) 820), which classifies assets and liabilities as level 1, 2 and 3. This classification system is more “principles-based” by using the available information to determine the appropriate asset classification level:

a. Level 1—values are taken from quoted prices in an active market of identical assets and liabilities.

b. Level 2—values can be based on observable prices of similar assets and liabilities. These inputs are used in valuation techniques when there is no quoted price in an active market or where there is not enough frequency of transactions for identical assets.

c. Level 3—values require the use of unobservable inputs to determine the value of an asset or liability when there is no active market for identical or similar assets or liabilities and there are no observable inputs. The unobservable inputs require independent judgment regarding market participant assumptions about the assets or liabilities and should use available information that can be reasonably found without incurring undue costs.

This general classification would be consistent with GAAP terminology and cover all types of complex assets that are currently available as well as complex assets that may evolve in the future.

3. Collateralized loan obligation (CLO) performance

With regard to principle-based guidance, to address concerns about recent CLO recovery data, the Task Force recommends language similar to 1 above.

4. Investment manager relationships and investment expenses

With regard to considerations pertaining to investment manager relationships and investment expenses, a key issue is ensuring an unreasonable amount of money is not moving from the insurer to a potentially affiliated investment manager. There are various views on how the money exiting the insurer in different manners could be modeled. For AAT, some insurers set investment expense assumptions in a simplistic manner, not considering the complexity of the asset or costs incurred for asset acquisition and management. The Task Force’s comments focus on the AAT treatment, because the broader considerations are not necessarily actuarial in nature.

Actuaries typically reflect any existing contractual agreements for investment expenses in AAT modeling. If new agreements will be needed during the AAT projection horizon, actuaries develop appropriate assumptions for future investment expenses that are consistent with existing agreements, management practices, asset characteristics/complexity, projected scenarios, etc. This includes reflecting any material provisions at an appropriate level of detail (ASOP No. 56), e.g., not using blended investment expense rates that don’t consider material changes in the projected asset mix. Some actuaries may consider doing a dynamic validation of investment expenses with specific accounting for affiliate transactions.
5. **Creation of structured assets**

When modeling a structured asset, actuaries set considerations consistently regardless of whether a structured asset is securitized by the insurance company’s affiliated asset manager, a third-party asset manager, or an independent third party. Structured assets rely on the ability to model the underlying collateral as well as the loss structures/tranches of the investment.

Modeling structured assets purchased from an independent third party requires reliance on readily available market data, which could limit the actuaries’ ability to explicitly model the structure. However, if an insurer or its affiliate has direct involvement in the securitization, additional insight into the structure and underlying collateral could be used to enhance the asset model, project cash flows, and measure tail risk.

Here again, the Task Force points to the considerations in item 1 above.

6. **Offshore/affiliated reinsurance**

Insurers that use complex assets that have raised the concerns of regulators and prompted this request for comment may also use reinsurance or securitizations as risk mitigation tools for the products backed by these complex assets. Furthermore, the complex assets themselves may involve securitizations of underlying items. As discussed below, revised ASOP No. 11, *Treatment of Reinsurance or Similar Risk Transfer Programs Involving Life Insurance, Annuities, or Health Benefit Plans in Financial Reports* (effective December 1, 2022) would apply to actuaries involved with these insurers if they are subject to U.S. ASOPs. The Task Force recognizes that some insurers using complex assets may retain all their risks and the assets themselves might not be securitized. In that case, the following comments regarding revised ASOP No. 11 may not apply.

As stated in our summary comments on the first page of this letter, the Task Force suggests using an APF to create new disclosures in VM-20 and VM-31 based on ASOP No. 11 so that regulators can determine how well the requirements in ASOP No. 11 were followed. Additionally, the Task Force recommends education as an adjunct to the ASOP No. 11 guidance and the new disclosures given the new guidance in the recently revised ASOP No. 11.

With that context, the Task Force delves into reinsurance and newly revised ASOP No. 11, which has been adopted by the ASB and will be effective for actuaries’ work product produced on or after December 1, 2022. Its requirements would apply whether or not new disclosures take the form of an APF or an actuarial guideline, and whether or not a state chose to “early adopt” new disclosures if effectuated through an APF for the 2023 VM.

Section 1.2 of ASOP No. 11 states, “This standard applies to actuaries when performing actuarial services in connection with preparing, determining, analyzing, or reviewing financial reports for internal or external use that reflect reinsurance or similar risk transfer programs on life insurance, annuities, or health benefit plans.” This is clearly consistent with our prior comment letter suggesting that all product lines be in scope (e.g., life, annuities, LTD, LTC).
Section 2.16 broadly defines a Reinsurance Program to not only include formal reinsurance treaties but “similar risk transfer programs” and explicitly mentions securitizations. This clearly provides support for new disclosures where the assets themselves are securitizations of underlying items, but also for insurers that use securitizations rather than reinsurance to transfer portions of the risks, such as selling various tranches to other parties. It also includes insurers that use reinsurance to cede complex asset risks to a reinsurer (or a reinsurer ceding these risks to a retrocessionnaire).

Section 2.6 explicitly lists statutory financial statements, asset adequacy analysis reports, and experience reports as being in scope. This provides justification for adding parallel disclosures about the complex assets in question to both VM-30 and VM-31.

Section 2.17 defines Service Providers as adjunct parties to a reinsurance agreement that provide services integral to the reinsurance agreement. It explicitly lists investment advisors and investment managers as being Service Providers. We recommend that the new disclosures consider not just the investment assumptions and models, but also the role that such advisors or asset managers have as the actuary’s source of investment assumptions, models, and values.

Section 2.11 defines Non-Guaranteed Reinsurance Elements (NGREs) as “Any premium, charge, or benefit within a reinsurance program that affects reinsurance costs or values, [and] is not guaranteed in the reinsurance program.” Investment returns that affect reinsurance costs or values and are not guaranteed would meet the definition of an NGRE.

Section 3.2(a) indicates that the actuary should consider how treaty terms and conditions (including NGREs) impact expected reinsurance cash flows. This is relevant because asset performance can influence modeled cash flows and modeled asset performance depends on the form of the asset assumptions, the values they take, whether they are stochastic or scenario-based, etc.

Section 3.2(b) indicates that the actuary should take into account how activities performed by Service Providers impact reinsurance cash flows, 3.2(g) indicates that the actuary should take into account the impact of incentives and disincentives contained in fees paid to third parties, and 3.2(h) explicitly mentions the actuary taking into account the impact of the investment policy on reinsurance cash flows. Therefore, we suggest disclosures be added on advisor compensation, performance (or lack of performance), and details of the Investment Policy Statement and how it aligns with the assumptions and models to calculate of reserves and perform AAT on those reserves.

Section 3.3(a) requires the actuary consider the impact of reinsurance on the net retained business; 3.3(c) requires the actuary consider the reasonableness, individually and in aggregate, of assumptions regarding the risks associated with the net retained business that are impacted by the existence of a reinsurance program; and 3(d) requires the actuary consider the impact of the reinsurance program on the investment policy of the holder or manager of the assets associated with the net retained business. Together, these section 3.3 requirements may address the concern regulators have with the use of captives and “offshore reinsurance.” ASOP No. 11 requires U.S. actuaries involved with a domestic regulated entity to comply with section 3 for both ceded and
retained reserves and consider how the mere presence of reinsurance or securitizations impact the cash flows that are used to calculate reserves or test their adequacy. The regulator therefore has recourse to the domestic actuary even if some or all risks on a complex asset are transferred out of their jurisdiction, e.g., to an offshore entity outside the U.S. or into the capital markets.

In summary, regardless of whether risk is transferred using reinsurance or securitization, section 2 and section 3 of ASOP No. 11 require actuaries establishing reserves, actuaries involved with the PBR Actuarial Report, and Appointed Actuaries rendering the adequacy opinion reserves to consider the following in their work:

a. How an investment advisor or manager is compensated and how this might incent them.

b. The consequences of non-performance or underperformance of the assets or the investment advisor on both the ceded and retained cash flows.

c. The extent to which asset performance is an NGRE and thus could impact NGEs such as credited rates to insureds, or policyholder behavior through dynamic lapse formulas.

7. Trend toward higher-yielding, less liquid assets

These assets can be difficult to sell, so an important consideration for cash flow testing is whether results rely on an assumption that an illiquid asset can be sold, as well as the amount for which it can be sold. This trend is broad-based but is also currently small relative to the overall investment portfolios of life insurers.

As noted in the Task Force’s summary statements above, with appropriate additional disclosures and principle-based guidance, the Task Force notes that insurers can effectively use complex and high-yielding assets if actuaries follow the relevant requirements in the ASOPs. As such, the Task Force does not recommend implementing constraints to discourage investment in such assets given the advantages such assets can offer if their exposure and assumptions are appropriately disclosed, and their risks, including liquidity, are appropriately understood, and modeled. However, the Task Force also notes that what might have been a good AAT assumption when such assets comprise a few percent of total starting assets may need to be rethought as such assets become a more material percentage of starting assets, e.g., a large position in complex and high-yielding assets may warrant more sophisticated modeling and/or more granular assumptions.

Here again, the Task Force points to the considerations in item 1 above.
8. **Actuarial assumption impact**

The use of aggressive actuarial assumptions is not supported or in accordance with actuarial requirements for asset adequacy analysis. ASOP No. 22, for example, requires the actuary to consider whether the reserves and other liabilities being tested are adequate under moderately adverse conditions. If the underlying assumptions are aggressive then this would not meet the moderately adverse conditions requirement. Additionally, ASOP No. 22 was recently modified (with an effective date of June 2022) to provide more clarity in certain areas. A notable modification was the addition of specific guidance on trends in assumptions as well as margins for adverse deviation. If actuaries deviate from these requirements, then they must disclose the deviation along with the rationale for such deviation. Actuaries are also required to provide adequate disclosure of the assumptions such that one could determine their reasonability (e.g., ASOP No. 22, ASOP No. 41, and VM-30).

Regarding the reference to borrowing, it’s important that actuaries model the company’s actual investment and disinvestment policy as best they can as it is the cash flows from the assets that pay future claims and expenses. Models are simplified representations of processes, and an exact replication of the actual investment policy may be difficult to achieve. This may be due to model limitations and/or modeling requirements (e.g., new business cash flows are not modeled in asset adequacy analysis but will impact future cash flows). Borrowing may be modeled when it is part of the company investment policy or, for example, to limit excessive asset sales due to model limitations. In any event, consideration of the amount of borrowing modeled, the underlying borrowing rate, and the documentation and disclosure of such is addressed in various actuarial and regulatory documents:

a. ASOP No. 7 provides that to the extent the insurer’s investment strategy contemplates borrowing to cover negative cash flows, the actuary should consider whether the funds borrowed pursuant to the strategy are reasonable in relation to the insurer’s existing indebtedness, borrowing capacity, and cost of borrowing funds.

b. Under ASOP No. 56, the actuary should make reasonable efforts to confirm that the model structure, data, assumptions, governance and controls, and model testing and output validation are consistent with the intended purpose for which it is being used. In asset adequacy analysis/cash flow testing, this includes the projection of future asset cash flows in a manner representative of the actual investment policy. This includes the impact of the modeling of borrowing.

c. The 2017 Academy practice note *Asset Adequacy Analysis* discusses modeling practices when negative cash flow occurs. Small negative cash flow may be covered by short-term borrowing at the prevailing short-term rate applicable to the company. In instances of large amounts of borrowing, the actuary would typically check to see whether this is creating excessive leverage. If so, the investment and disinvestment assumptions would be changed or in some instances, the borrowing rate would be changed to the average reinvestment rate.

d. Although the following items do not directly apply to asset adequacy analysis, they further support the modeling of reasonable borrowing assumptions.
• RBC Instructions for C-3 Phase I—If negative cash flow is modeled by borrowing, the actuary needs to make sure that the amount and cost of borrowing are reasonable for that particular C-3 scenario.

• VM-21—The cost of borrowing cannot be lower than the rate at which positive cash flows are reinvested, although a Guidance Note indicates that this language is not intended to impose a literal requirement, but rather to prevent excessively optimistic borrowing assumptions. Note that VM-20 also has language regarding borrowing but it is less prescriptive and points to the company’s investment policy and cost of borrowing.

In summary, there are numerous requirements regarding assumptions that apply to asset adequacy analysis. Actuaries adhering to such requirements typically would not incorporate aggressive actuarial assumptions in asset adequacy analysis.

If the NAIC determines the current requirements are not specific enough to foster adherence, the Task Force suggests adding specific disclosure to VM-30, which documents the adherence of assumptions to the various requirements and points to considerations listed in item 1 above to help address any additional regulatory concerns, e.g., related to the modeling of borrowing.
Equitable appreciates the opportunity to further comment on the concept of developing an Actuarial Guideline on the modeling of complex or high-yielding assets in Asset Adequacy Testing (AAT).

As noted in our December 2021 letter, Equitable supports establishing an aggregate credit spread cap of a single-A corporate bond spread plus a modest illiquidity premium (c. 20bps) as a guardrail. The proposed constraint would cap the weighted-average spread across all assets. Our rationale is as follows:

A. **Harmonization with Principle-Based Reserve (PBR) methodologies:** NAIC has used PBR methodologies to establish liability reserves for life and annuity products, including spread caps on reinvestment and inforce assets. For those products governed under prior valuation rules, a spread constraint would provide a PBR-consistent methodology for liabilities where AAT is the *de facto* reserve in the current rate environment.

B. **Guardrail on Total Asset Requirements:** Reserve and Capital frameworks adjust to the risk / return profile of investments in their calculations. The lack of a spread constraint within current AAT calculations can facilitate a significant reduction in reserves – which is not accounted for in asset risk capital – and ultimately materially reduces total asset requirements. An aggregate spread constraint applied to all assets, including equities backing general account liabilities, provides a guardrail against overly optimistic reserves that lower the total asset requirement below what is prudent.

Additionally, a spread constraint guardrail serves as a preventative measure against the scenario of a regulator attempting to liquidate an insurer but finding that no buyer will underwrite with the same spread optimism and thus be obligated to take on material impairments. Further, we distinguish a guardrail ("boundary setting") from prescription ("parameter specification") and contend guardrails ultimately further long-run PBR adoption by avoiding the type abuses by a minority of companies that undermine confidence in the overall PBR framework.

C. **Aggregate Spread Constraint is Simpler and More Effective than a Targeted Constraint on Complex or High-yielding Assets:** A spread constraint in aggregate...
simplifies the regulatory framework by (a) removing the need to demarcate between complex and high-yielding assets vs. other assets and (b) reducing the regulator burden to “catch” overly optimistic assumptions of spread recognition in the complex and high-yielding assets. It is more effective than a targeted approach because it allows for offsetting levels of optimism and conservatism across a diverse investment portfolio, and because it safeguards the totality of the reserve from overly optimistic spread recognition. Moreover, regulators should take comfort that an aggregate guardrail safeguards against an underlying commercial motivation for optimism in spread recognition in complex or high-yielding assets – lower reserves and greater dividend capacity – which exist across all assets. Nevertheless, if the preference of regulators were to limit the scope of the spread constraint, we believe it could be applied to just the subset of complex and high-yielding assets. In this event, we would propose that the modest illiquidity premium reflected in our proposal could be increased moderately (e.g. an additional c. 20bps) as a result of the narrower scope focused on assets that are inherently more illiquid.

D. **Constraint is Easier to Monitor than Documentation:** A constraint is a lower burden for regulators to monitor as it reduces the reliance on the regulator to identify and challenge overly optimistic assumptions of spread recognition in complex and high-yielding assets. Documentation can enhance regulator understanding of the basis for spread recognition but does not reliably harmonize reserves or protect the integrity of the total asset requirement.

The remainder of this letter expands the first two arguments.

**A. Harmonization with Principle-Based Reserve (PBR) methodologies**

A spread constraint would support harmonization with broader liability governance for principle-based reserves as established in VM-20, VM-21, and VM-22. Equitable supports establishing an aggregate credit spread cap of a single-A corporate bond spread plus a modest illiquidity premium over all assets (not just complex). The single-A curve is recognized in the insurance industry as an appropriate measure of fair value and we believe that adding a modest illiquidity premium is appropriate to reflect the ability of insurers to realize such a premium given the long-dated nature of their liabilities. While harmonization could also be considered for risk free interest rates, it is not necessary to address immediately as part of the implementation of a credit spread guardrail.

While we support full harmonization of credit constraints across PBR and AAT frameworks, we modify narrowly the approach to VM-20 and VM-21. The inforce asset guardrail under VM-20 and VM-21 are primarily based on corporate bond defaults – not net yields – and thus do not sufficiently guardrail complex, high-yielding assets that can exhibit significantly higher defaults in stress environments. The reinvestment spread guardrails (50% ‘A’/50% ‘AA’ spreads, no illiquidity premium) are likely too restrictive. We therefore suggest applying a construct similar to the VM-20 and VM-21 reinvestment cap on such inforce assets but based on the current ‘A’ spreads with a modest (c.20bps) illiquidity premium. Such a spread constraint works similarly to the caps already contained with VM-20/VM-21 and thus would not be difficult to implement.
The chart below compares the spread constraints within VM-20, VM-21, the proposed VM-22 framework, and the NY Special Considerations Letter (NY SCL) to Equitable’s proposed AAT guardrail:

<table>
<thead>
<tr>
<th>Reserve Regime</th>
<th>Inforce Asset Requirements</th>
<th>Reinvestment Asset Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Proposed AAT guardrail</td>
<td>Spreads on all assets capped at current ‘A’ spreads plus a modest illiquidity premium (c.20bps) in aggregate</td>
<td>Same as Inforce requirement</td>
</tr>
<tr>
<td>VM-20 and VM-21</td>
<td>Inforce assets subject to 85th percentile defaults and temporary (&lt;4yr) aggregate cap at BBB corporate spreads</td>
<td>Reinvestment spreads subject to a 50% ‘A’ / 50% ‘AA’ aggregate corporate bond spread cap without illiquidity premium</td>
</tr>
<tr>
<td>VM-22</td>
<td>Same as VM-20/VM-21</td>
<td>Reinvestment assets subject to aggregate cap based on 5% Treasury, 15% AA, 40% A, 40% BBB corporate spread mix</td>
</tr>
<tr>
<td>NY SCL (AAT)</td>
<td>Inforce assets subject to a spread cap based on long term averages of 50% A / 50% AA, and spread cap applied on an asset-by-asset basis</td>
<td>Same as Inforce requirement</td>
</tr>
</tbody>
</table>

Of the c.$6.5 TN in life insurance assets (excluding capital & surplus) at YE 2020 in the below chart, PBR approaches will govern approximately 70% by 2025. The remaining 30% of reserves under non-PBR approaches are primarily grandfathered business which would have otherwise been subject to VM-20 and secondarily other types of liabilities. This material block of non-PBR liabilities relies on the AAT reserving requirement when establishing reserves given the current low rate environment (where market rates are materially below the historical Statutory Valuation Law rates commonly in the range of 4-6%).

An aggregate spread guardrail for these $2.1 TN in non-PBR reserves would harmonize the regulatory liability governance framework, at least for assumed underlying investment returns, across all life insurance reserves.

1 This figure assumes VM-22 is implemented in 2025 and with no grandfathering of liabilities. All figures shown in chart are as of 12/31/20.
B. Guardrail on Total Asset Requirements

Higher spread assumptions under AAT reduce reserves – with a 175 bp increase in spread assumption on a 20yr GIC\(^2\) reducing reserves by 22% as of December 2020 as shown in the below chart. Structurally, this reserve reduction creates surplus which will only grow with investment optimism.

**Decrease in GIC Liability relative to A-rated credit curve**

![Graph showing decrease in liability](chart)

Source: Liability cashflow model with treasury assumptions as of 12/30/2020

The below chart illustrates how increased spread assumptions can generate surplus in excess of the C-1 capital. If higher than expected defaults or lower reinvestment yields in the future eroded this spread, it is apparent that the C-1 capital could be insufficient to support policyholder claims.

**Total asset requirement by spread assumption**

10yr GIC, % of assets

![Graph showing total asset requirement](chart)

Source: Liability cashflow model with treasury assumptions as of 12/30/2020

1 C1 capital is estimated as undiversified bond factor for NAIC 2 rated asset at 1.26% at 400% RBC ratio

\(^2\) The illustrated GICs in the two following charts are hypothetical, plain vanilla GICs maturing at initial principal with a 2.5% minimum guaranteed annual interest rate.
The above chart illustrates the relative impact of appropriately reflecting investment risk/return profiles in reserving. While capital can offset some of the investment risk, the current latitude in AAT could facilitate reductions in total assets which are multiples of the investment risk capital. Credit spread limits are an important part of a principle-based framework. Such limits ensure reserves do not rely on excessive amounts of credit spread in excess of industry investment and pricing practices.

NAIC observations of current practices – e.g., high spreads and reinvestment yield assumed to persist over 30 years, corporate bond defaults applied to other complex assets – support the need for a guardrail. However, the constraint would be designed to maintain the industry’s ability to compete based on investment strategies and differentiation in investment sourcing, illiquidity premium, etc. An effective constraint addresses the excessive optimism but does not infringe on competitive investment strategies.

* * * * * * * * *

Equitable appreciates the opportunity to comment on this exposed proposal and looks forward to working with regulators to reach an appropriate framework for modeling of complex and other assets within the Asset Adequacy Testing framework. We are available to discuss our comments further as desired.

Sincerely,

Aaron Sarfatti, ASA
Chief Risk Officer, Equitable

To: Mike Boerner, Chair  
The Life Actuarial (A) Task Force

Subject: The Report of the Experience Reporting (A) Subgroup to the Life Actuarial (A) Task Force

The Experience Reporting (A) Subgroup has not met since the Fall National Meeting. Upcoming projects include monitoring the plans for collecting life insurance mortality and policyholder behavior data using the NAIC as the statistical agent, starting to develop mandatory reporting of variable annuity data, and continuing to work on evaluating actuarial aspects of accelerated underwriting.
March 31, 2022

From: Ben Slutsker, Chair  
The VM-22 (A) Subgroup

To: Mike Boerner, Chair  
The Life Actuarial (A) Task Force

Subject: The Report of the VM-22 (A) Subgroup to the Life Actuarial (A) Task Force

The VM-22 (A) Subgroup has not met since the Fall National Meeting. Prior to the Fall National Meeting, the following events occurred:

- In July 2021, the American Academy of Actuaries’ proposed draft of VM-22 language was exposed, along with two sets of definitions for payout and accumulation annuity reserving categories.
- Eight comment letters were received from interested parties and Subgroup members during the public exposure period, three of which included specific mark-ups to the proposed VM-22 draft.
- All mark-ups and comment letters have been consolidated into a single redline version of the proposed VM-22 draft, which will serve as the basis for discussions going forward.

Calls for the Subgroup will start up again on April 13, the first of which will be a 90-minute call. The latest draft of the VM-22 proposal includes 378 comments, which are divided into four tiers:

1. The first tier focuses on foundational and critical issues, for which there are four topics:
   a. Structure of definitions and scope for VM-22 principle-based requirements
   b. Reinvestment guaranty on the mix of credit qualities
   c. Selecting one of the two exposed reserve category definitions for product aggregation
   d. Whether to develop a small company exemption, analogous to the exemption in VM-20

2. The second tier will focus on 26 highly substantive comments, which include items such as longevity reinsurance, the transition period, and scope of the exclusion test.

3. The third tier will focus on 88 moderately substantive, highly technical comments.

4. The fourth tier consists of the remaining 258 comments, which were deemed either editorial, non-substantive, or non-controversial. These comments already have associated preliminary revisions made in the draft to address and will be eventually re-exposed. Only items for which there are additional comments or objections will be addressed.

The Subgroup will proceed by focusing its discussion on first tier issues, and then working its way down through the other three tiers. The objective of this approach is to use the Subgroup’s time efficiently by focusing on the most substantive issues prior to discussing more detailed and less substantive items.

Aside from reviewing the draft VM-22 language, the Subgroup will continue working on developing a standard projection amount. The Subgroup has decided to recommend a standard projection amount to the Life Actuarial Task Force but has not decided on whether to recommend such as a disclosure-only
item or as a minimum floor. There are currently two NAIC drafting groups: one led by Seong-min Eom (NJ) working on development of mortality assumptions and another led by Vincent Tsang (IL) working on policyholder behavior assumptions. The goal will be to target a draft of the Standard Projection Amount to discuss during Subgroup calls in the Fall.

The Subgroup is also targeting a VM-22 field test to be held in the coming year. The current plan is for the field test to be run jointly by the Academy, ACLI, and NAIC. The goal will be to test the latest proposed non-variable annuity principles-based framework in comparison to the current statutory requirements and will include both reserve and capital calculations. A draft of specifications for the field test has been previously exposed by the Subgroup. The field test may also employ the use of a consultant to utilize for projections and analysis of the field test results. Note the timing of a field test for non-variable annuities is still being discuss and will be dependent on the timing of the NAIC Economic Scenario Field Test.

Lastly, Seong-min Eom (NJ) is leading the NAIC PRT Drafting Group, which is focusing on developing mortality assumptions for annuities covering the non-U.S. population, primarily from pension risk transfer transactions. The Drafting Group is seeking to identify a mortality assumption to use for reserving requirements prior to the implementation of principles-based reserves, which will also eventually be incorporated into principles-based reserves upon its effectiveness.
Actuarial Guideline ILVA
Nonforfeiture Requirements for Index Linked Variable Annuity Products Supported by Non-Unitized Accounts

Background

The purpose of this guideline is to specify the conditions under which an Index-Linked Variable Annuity (ILVA) is consistent with the definition of a variable annuity and exempt from Model 805 and specify nonforfeiture requirements consistent with variable annuities.

A number of insurers have developed and are issuing annuity products with credits based on the performance of an index with caps on returns, participation rates, spreads or margins, or other crediting elements, which include limitations on loss such as a floor or a buffer. These products are not unitized and do not invest directly in the assets whose performance forms the basis for the credits. However, unlike traditional non-variable indexed annuities, these annuities may reflect negative index returns.

There is no established terminology for these annuity products. These products go by several names, including structured annuities, registered index-linked annuities (RILA), or index-linked variable annuities, among others. This guideline refers to these products as index-linked variable annuities (ILVA).

Variable annuities are exempted from the scope of NAIC Model 805, Standard Nonforfeiture Law for Individual Deferred Annuities, however, NAIC Model 805 does not define the term "variable annuity".

NAIC Model 250, Variable Annuity Model Regulation, defines variable annuities as “contracts that provide for annuity benefits that vary according to the investment experience of a separate account” Section 7B of NAIC Model 250 provides that "to the extent that a variable annuity contract provides benefits that do not vary in accordance with the investment performance of a separate account" the contract shall satisfy the requirements of the NAIC Model 805.

The application of the NAIC Model 250 to a traditional variable annuity with unitized values is straightforward. The unitized feature provides an automatic linkage between annuity values and the investment experience of a separate account. Daily values (market values of the separate account assets) are the basis of all the benefits, including surrender values.

The fact that ILVA products are not unitized means they do not have values determined directly by the market prices of the underlying assets. Therefore, this guideline sets forth principles and requirements for determining values, including death benefit, withdrawal amount, annuitization amount or surrender values, such that an ILVA is considered a variable annuity and thereby exempt from Model 805. An ILVA that does not comply
with the principles and requirements of this guideline is not considered a variable annuity and therefore is subject to Model 805.

Drafting Note: This guideline interprets the term “variable annuity” for purposes of exemption from Model 805. It is not intended to modify the definition of a variable annuity under Model 250.

Scope

This guideline applies to any index-linked annuity exempt from the NAIC Model 805 on the basis that it is a variable annuity provided through non-unitized separate account(s) and includes index-linked crediting features that are built into policies or contracts (with or without unitized subaccounts) or added to such by rider, endorsement, or amendment.

This guideline does not apply to an annuity contract or a subaccount of an annuity contract that is subject to the requirements of NAIC Model 805, Standard Nonforfeiture Law for Individual Deferred Annuities.

Principles

This guideline is based on the following principles:

1. There exists a package of derivative assets that replicates the index credits provided by an index strategy at the end of an index term.
2. The value of the package of derivative assets can be determined daily using assumptions consistent with observable market values.
3. Interim Values defined in the contract provide equity to both the contract holder and the company where the Interim Values are consistent with the value of the Hypothetical Portfolio over the index term.

Definitions

“Derivative Asset Proxy” means a package of hypothetical derivative assets designed to replicate credits provided by an Index Strategy at the end of an Index Term.

“Fixed Income Asset Proxy” is a hypothetical fixed income asset.

“Hypothetical Portfolio” means a hypothetical portfolio composed of a Fixed Income Asset Proxy and a Derivative Asset Proxy.

“Interim Value” mean the Strategy Value at any time other than the start date and end date of an Index Term.

“Index Strategy” means a method used to determine index credits with specified index or indices and cap, buffer, participation rate, spread, margin or other index crediting elements.
“Index Strategy Base” means the notional amount used to determine index credits that does not change throughout the Index Term except for withdrawals, transfers, deposits, and explicit charges.

“Index Strategy Term” means the period of time from the term start date to the term end date over which an index change and index credit is determined.

“Strategy Value” means the value, attributable to an Index Strategy, used in determining values including death benefit, withdrawal amount, annuitization amount or surrender values.

**Text**

Index Strategy Base must equal the Strategy Value at an Index Term start date.

The value of the Fixed-Income Asset Proxy:

a. At the beginning of the Index Term equals the Index Strategy Base less Derivative Asset Proxy value;
   b. At the end of the Index Term equals the Index Strategy Base; and
   c. Earns interest at a level rate.

The value of the Hypothetical Portfolio at any time is the sum of the Fixed-Income Asset Proxy value and the Derivative Asset Proxy value less a provision for the cost of unwinding the hedge positions not to exceed 10 bps.

Contracts in the scope of this guideline must provide Interim Values that are consistent with the value of the Hypothetical Portfolio over the index term.

If a contract provides Interim Values determined using a methodology other than a Hypothetical Portfolio methodology as described in this guideline, the company must demonstrate that the contractually defined Interim Values will be materially consistent with the Interim Values that would be produced using the Hypothetical Portfolio methodology for each combination of Index Strategy and Index Strategy Term under a reasonable number of economic scenarios.

Drafting Note: Acceptable economic scenarios over which consistency should to be demonstrated is yet to be determined. Considerations are the Academy Interest Rate Generator and/or defined deterministic scenarios including shocks that trigger Index Strategy parameters including but not limited to caps, floors and buffers.

The company must provide an actuary’s certification that the provisions of this guideline are being met.
Assumptions used to value the Derivative Asset Proxy including yields, implied volatility, risk-free rate, and dividend yield must be consistent with the observable market prices of derivative assets, whenever possible.

ILVA nonforfeiture benefits must comply with Section 7 of Model 250 with net investment return consistent with the requirements for determining Interim Values in this guideline.

The company (or actuary) must describe the Derivative Asset Proxy and the assumptions used to calculate its value at any time.

Effective Date
Index-Linked Variable Annuity (A) Subgroup
Virtual Meeting
March 9, 2022

The Index-Linked Variable Annuity (A) Subgroup met March 9, 2022. The following Subgroup members participated: Peter Weber, Chair (OH); Tomasz Serbinowski, Vice Chair (UT); Sarvjit Samra (CA); Vincent Tsang (IL); Derek Wallman (NE); David Wolf (NJ); Bill Carmello and Michael Cebula (NY); Mike Boerner, Rachel Hemphill, and Mengting Kim (TX); Craig Chupp (VA); and David Hippen (WA).

1. Heeded a Presentation on Interim Nonforfeiture Values

Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI interim value presentation (Attachment Fourteen-A) shows that Method 2 of the proposal jointly submitted by the ACLI and the Committee of Annuity Insurers (CAI) discussed on the Feb. 16 Subgroup call provides a fair and equitable value and allows consumers to track their assets. Rachel D’Anna (Brighthouse Financial), Allen Tang (Brighthouse Financial), and Michael Drislane (Brighthouse Financial) presented an analysis incorporating historical scenarios to compare the application of Method 2 to the application of the interim value determination in the initial version of the index-linked variable annuity (ILVA) guideline proposal. Mr. Tang said the results are presented over one-year, three-year, and six-year scenarios. He said the slides demonstrate that on average, when looking at 1,000 plausible scenarios, the pro rata method produces an expected value that is within 1% of the value provided when using the proposed interim value method.

Mr. Weber said the Subgroup seems to favor Method 1 of the ACLI/CAI proposal. He asked how the pro rata method compares with Method 1. Ms. D’Anna said Method 1 allows for a different range of options. She said the initial proposal would fit within that range of options. She opined that a comparison of the pro rata method to other Method 1 options would yield results like those observed in the comparison of the initial proposal. Mr. Serbinowski expressed discomfort with blanketly accepting the pro rata method based on the demonstration of the success of one specific pro rata method. Ms. D’Anna said wording can be developed to address that issue. Mr. Hippen said the initial guidance seemed to be structured to prevent abusive products. He suggested that protective language is needed. He suggested that the ACLI expand its demonstration to include various product designs, including designs that are not acceptable. Mr. Serbinowski asked if it might be possible to develop a pro rata value certification method. Ms. D’Anna said that sounds reasonable. Mr. Wallman asked if consumers could be given a choice between the initial proposal and the pro rata method.

Having no further business, the Index-Linked Variable Annuity (A) Subgroup adjourned.

RILA Interim Value Approaches
March 9, 2022

Historical Analysis

• Interim values determined using actual observable market data between 2013 – 2021; initial investment of $100,000

• Pro-Rata Interim Value
  – Equal to initial investment plus change in index value subject to accrued cap/buffer
  – Cap and buffer accrued linearly throughout contract term

• Black-Scholes Interim Value
  – Equal to hypothetical portfolio value
  – Fixed Income Asset + Derivative Asset (OTM Call, ATM Call, OTM Put)

Stochastic Analysis

• 1000 real-world scenarios generated from two robust economic scenario generators

Index-Linked Variable Annuity (A) Subgroup
Virtual Meeting
March 2, 2022

The Index-Linked Variable Annuity (A) Subgroup met March 2, 2022. The following Subgroup members participated: Peter Weber, Chair (OH); Tomasz Serbinowski, Vice Chair (UT); Sarvjit Samra (CA); Vincent Tsang (IL); Derek Wallman (NE); David Wolf (NJ); Bill Carmello and Michael Cebula (NY); Mike Boerner, Sandra Dodson, Rachel Hemphill, and Mengting Kim (TX); Craig Chupp (VA); and David Hippen (WA). Also participating was: William Leung (MO).

1. Discussed Comments on the ILVA Actuarial Guideline

Mr. Weber said comments from the American Academy of Actuaries (Academy) and joint comments from the American Council of Life Insurers (ACLI) and the Committee of Annuity Insurers (CAI) were heard on the Feb. 16 call. He indicated that a drafting group is incorporating some of those comments into the next draft of the Indexed-Linked Variable Annuity (ILVA) actuarial guideline. He said the ACLI/CAI provided an alternative guideline proposing two methods for determining interim values. He noted that some Subgroup members were supportive of Method 1 of the ACLI/CAI alternative guideline. Most Subgroup members were not supportive of Method 2.

David Hanzlik (CUNA Mutual Group) said the CUNA Mutual Group comments (Attachment Fifteen-A) are supportive of the ACLI/CAI alternative, as they address the core concerns raised in the CUNA Mutual Group letter. He said a specific concern is that the proposed ILVA guideline does not accommodate a product design that credits the full index performance, subject to a cap and floor. He said Method 2 of the ACLI/CAI alternative guideline accommodates that product design.

Sarah Wood (Insured Retirement Institute—IRI) said the IRI comment letter (Attachment Fifteen-B) is supportive of the ACLI/CAI comments, including the alternative actuarial guideline. She said the IRI is concerned about the potential market disruption if products that currently provide pro rata interim values are not accommodated. Mr. Serbinowski asked if there are acceptable alternatives, such as setting an effective date far enough into the future so companies could develop compliant products, that could effectively address the potential market disruption issue. Mr. Weber said the market disruption issue is better suited for discussion by the Life Insurance and Annuities (A) Committee. He suggested that the guideline could include a drafting note that informs the Committee on the issue and provides a recommendation. Mr. Serbinowski said the guideline should not be applied to existing contracts. He said an effective date should be chosen that allows companies time to develop new products that comply with the guideline.

Jonathan Clymer (Prudential) said the Prudential comment letter (Attachment Fifteen-C) focused on the explicit fee versus the spread-based approach. He said the currently marketed ILVA products are fundamentally designed as a spread-based product. He said the proposed guideline may have many interpretations, including some that are not beneficial to consumers. He noted that such interpretations could disrupt the marketplace by limiting consumer choice, harming product simplicity, and stifling innovation. He said the Prudential comment letter suggests a clarification to the proposed guideline that would allow either a spread-based or fee-based approach. He said the spread-based approach would be accomplished by requiring an actuarial certification that the spreads are reasonable. Mr. Serbinowski asked if the ACLI Method 1 sufficiently addresses the Prudential concerns. Mr. Clymer responded that if both the spread-based and fee-based approaches are allowed, the concern will be sufficiently addressed.
Mr. Leung asked if an actuarial guideline has the authority to supersede existing model regulations. Mr. Serbinowski suggested removing any references to general accounts or separate accounts from the guideline. He said it should focus on the application of nonforfeiture values to these products for any products that claim exemption from the Standard Nonforfeiture Law for Individual Deferred Annuities (#805).

Mr. Weber said some comments will be incorporated into the proposed guideline. He said the drafting group would work to have a revised draft for discussion during the March 31 Life Actuarial (A) Task Force meeting.

Having no further business, the Index-Linked Variable Annuity (A) Subgroup adjourned.

Mr. Peter Weber, Chair
Mr. Tomasz Serbinowski, Vice Chair
Index-Linked Variable Annuity (A) Subgroup
National Association of Insurance Commissioners
1100 Walnut Street Ste 1500
Kansas City, MO 64106

Dear: Messrs. Weber and Serbinowski

On behalf of the companies of CUNA Mutual Group (CUNA Mutual), we are pleased to provide comments to the National Association of Insurance Commissioner’s (NAIC) Index-Linked Variable Annuity (A) Subgroup (Subgroup) on the proposed Actuarial Guideline ILVA: The Application of Model 250 to Variable Products Supported by Non-Unitized Separate Accounts (Actuarial Guideline). CUNA Mutual is the nation’s leading provider of financial products and services to credit unions and credit union members. Through our companies, we serve as an insurer, a retirement plan services provider, a broker dealer, and a registered investment advisor. We make available various insurance and investment products to credit unions, millions of credit union members, and middle-income consumers across the United States. As part of the cooperative movement, we embrace the credit union philosophy of “people helping people” and believe a brighter financial future should be accessible to everyone.

Like the Subgroup, CUNA Mutual is focused on working to address the retirement savings crisis facing our country today. We appreciate Subgroup efforts to develop a uniform standard for Index-Linked Variable Annuity (ILVA) interim values which we hope will result in increased consumer access to ILVA products and protections. CUNA Mutual has been serving consumers in the ILVA space for over eight years and our experience shows ILVAs are an incredibly impactful tool in helping middle market customers create guaranteed retirement income. We take pride in helping those who make a modest income. It is in the spirit of supporting our customers that we offer these comments.

While we share the Subgroup’s interest in providing a framework for states to approve ILVAs as a form of variable annuity under the NAIC’s Variable Annuity Model Regulation #250 (Model Regulation 250), we believe changes are required to the proposed Actuarial Guideline to ensure it is workable. As drafted, we believe the Actuarial Guideline may prevent ILVAs currently on the market from qualifying as available to consumers going forward. Without amendment, the proposed Actuarial Guideline could cause significant market disruption, limit industry’s ability to offer these valuable products, and impede future ILVA product innovation.
CUNA Mutual endorses the comments and industry proposal submitted by the American Council of Life Insurers and Committee of Annuity Insurers (Industry). Industry’s proposal provides a workable, alternative Actuarial Guideline for Model Regulation 250 which establishes a principles-based framework and provides equity to both contract owners and ILVA issuers. The Industry proposal accommodates a broad spectrum of ILVA products on the market today and enables product innovation in the future.

If the Industry draft does not advance, we recommend the Subgroup instead use NAIC’s Modified Guaranteed Annuity Model Regulation #255 (Model Regulation 255) as the basis for industry standards related to ILVAs, amend Model Regulation 250, or create a new, principles-based Model Regulation framework.

The following concerns and recommendations are most critical to CUNA Mutual to ensure ongoing marketplace opportunities for the company’s ILVA products.

**Adjust scope to carve out and allow ILVAs with interim values in which full index performance is immediately recognized.**

CUNA Mutual recommends the Subgroup adjust the scope of the Actuarial Guideline to carve out and allow ILVAs with interim values in which full index performance is immediately recognized. The company offers two ILVAs under which the contracts immediately credit the index return, bounded by a constant cap and floor during each crediting term. These contracts are simple to understand and use and ensure transparent equity to the customer and issuer. The mechanics are illustrated in the charts below. A 1-year Index Term with 11.5% cap and -10% floor is assumed.

Note that under the steady index increase and decrease examples the policyholder return matches the index until the cap and floor are reached.
“Method 2” in Industry’s revised proposed actuarial guideline would accommodate these designs.

**Clarify that spread based products are acceptable.**

The drafting note on page 4 of the draft Actuarial Guideline states, “any profit provisions, spreads, and expenses should be reflected as explicit charges disclosed in the contract.” CUNA Mutual respectfully recommends this sentence be omitted. ILVAs are fundamentally spread based, which enables simplicity, transparency, and the financial value our customers seek.

**Adjust ILVA guidance basing interim values on derivative assets to ensure reasonable equity between decrementing and persisting contract holders.**

To ensure reasonable equity between decrementing and persisting contract holders, CUNA Mutual suggests the Subgroup adjust ILVA guidance basing interim values on derivative assets. Specifically, CUNA Mutual respectfully recommends the Subgroup make the following adjustments to the Actuarial Guidance:

- In the “Text” section, add an assumption that permits accounting for the costs of unwinding derivatives prior to expiration. The current draft assumes frictionless trading of equity derivatives, raising an equity issue as it allows decrementing contract holders to shift these costs to persisting contract holders. Consumers accept and are comfortable with breakage costs when contracts are ended mid-stream and the Actuarial Guideline should recognize these costs.

- Add a provision that allows interim value to account for unamortized option costs versus the current Fixed-Income Asset Proxy approach. Such a provision would accommodate smoother amortization of option costs ensuring decrementing and persisting policyholders accrue benefits at the same rate. The current Actuarial Guideline draft can introduce discontinuities into option cost amortization. In turn, this may tilt benefits to decrementing policyholders at the expense of persisting policyholders. The Industry intends to provide a numerical example demonstrating this concern.

“Method 1” in Industry’s revised proposed actuarial guideline contains language that accommodate these recommendations.

**Amend language concerning interest rate related market value adjustments to ensure alignment with underlying risks.**

The proposed Actuarial Guideline includes a defined Fixed-Income Asset Proxy, which implies fixed income assets must have the same maturity date as the Index Term end date. In practice, many index terms are shorter (e.g., 1 year) than CDSC periods and actual investment strategies used to support the contractual guarantees. To ensure alignment with underlying risks, CUNA Mutual supports revisions to clarify that the guideline does not limit how interest rate market value adjustments may be applied. CUNA Mutual believes the Industry’s proposed draft appropriately clarifies this issue.
Confirm the Actuarial Guideline is not intended to clarify the NAIC’s Modified Guaranteed Annuity Model Regulation #255 and does not exclude ILVAs from qualifying under Model Regulation #255.

ILVAs meet the requirements of the NAIC’s Modified Guaranteed Annuity Model Regulation #255 (Model Regulation 255). While the Subgroup seeks to clarify marketplace opportunities for ILVAs under Model Regulation 250 through the Actuarial Guideline, CUNA Mutual respectfully requests that nothing in the Actuarial Guideline should be construed to limit ILVAs as permitted under Model Regulation 255. Though Model Regulation 255 is not widely adopted in states, there are jurisdictions where industry currently relies on Model Regulation 255 to deliver ILVAs to consumers.

In closing, CUNA Mutual appreciates the Subgroup’s consideration of these comments. Like others in the industry, we work hard each day to bring financial products and services to the people who need them most. ILVAs are fundamentally spread based products and insurer practices regarding how underlying assets are held vary. We believe any Actuarial Guideline promulgated by the Subgroup should confirm these critical aspects of the product to ensure their viability for middle market consumers who are increasingly choosing ILVAs as a source of guaranteed retirement income.

Please reach out with any questions or if we can offer additional information to support these comments.

Sincerely,

David L. Hanzlik

NAIC Index-Linked Variable Annuity Subgroup
Peter Weber, Chair & Tomasz Serbinowski, Vice-Chair

Re: Proposed Actuarial Guideline ILVA (“The Application of Model 250 to Variable Products Supported by Non-Unitized Separate Accounts”)

Dear Mr. Weber and Mr. Serbinowski:

On behalf of our members, the Insured Retirement Institute, Inc. (“IRI”)1 appreciates the opportunity to comment on the proposed Actuarial Guideline (“Proposal”) put forth by the Index-Linked Variable Annuity Subgroup (“Subgroup”). We acknowledge the significant work by the Subgroup to put forth this Proposal, but we believe that significant changes are needed to make this workable for the industry.

IRI received and reviewed the comments on the Proposal by the American Council of Life Insurers (“ACLI”) and the Committee of Annuity Insurers (“CAI”), dated January 27, 2022. With ACLI and CAI’s permission, IRI shared this letter with our membership.

Following discussion with our members, IRI supports ACLI and CAI’s comments with respect to its requests and recommendations regarding the Proposal, including the Alternative Actuarial Guideline that is being put forth for consideration.

We would also like to take this opportunity to reiterate some key issues of concern for our members as it relates to the current Proposal. As you know, there are different approaches to determining interim values, and while we support the need for guidance to state regulators in reviewing Registered Index-Linked Annuity (“RILA”) product filings, the current Proposal as it stands is too restrictive and eliminates certain approaches to determining values (such as the prorated interim value approach). This is problematic because it would cause serious disruption to the current market, which would be detrimental to the industry and consumers alike.

---

1 IRI is the leading association for the entire supply chain of insured retirement strategies, including life insurers, asset managers, and distributors such as broker-dealers, banks, and marketing organizations. IRI members account for more than 95 percent of annuity assets in the U.S., the top 10 distributors of annuities ranked by assets under management and are represented by financial professionals serving millions of Americans. IRI champions retirement security for all through leadership in advocacy, awareness, research, and the advancement of digital solutions within a collaborative industry community.
Additionally, the allowance of different approaches to determining values leads to innovation and a variety of product options, which ultimately benefits consumers who are looking to achieve their financial goals. To further innovation and prevent market disruption, our members support an approach that maintains flexibility and is principles-based. As such, we respectfully request that the Subgroup consider the recommendation, including the Alternative Actuarial Guideline, put forth in ACLI’s and CAI’s comment letter.

On behalf of IRI and our members, thank you again for the opportunity to provide these comments. We would be happy to discuss further with you and look forward to continued collaboration and partnership with the Subgroup.

Sincerely,

Sarah E. Wood

Re: ILVA Subgroup Exposure of Actuarial Guideline ILVA: The Application of Model 250 to Variable Products Supported by Non-Unitized Separate Accounts

Dear Messrs. Weber and Serbinowski:

Prudential Financial thanks the Index Linked Variable Annuity Subgroup ("Subgroup") for the opportunity to comment on the exposure of “Actuarial Guideline ILVA – The Application of Model 250 to Variable Products Supported by Non-Unitized Separate Accounts” (“Exposure”). We appreciate the Subgroup’s efforts in drafting the Exposure and exposing for a period of public comment. The draft forms a basis for Index Linked Variable Annuities (“ILVA”) however, we believe an enhancement is necessary to reflect the design model of products in the marketplace. This modification would maximize customer access while enhancing simplicity and allowing for future innovation.

The main consideration that the Exposure should address is that the ILVA product is fundamentally designed as a spread based product and not as an explicit fee product. The Exposure could be interpreted to require that the profit provisions, spread, and expenses be presented as an explicit fee disclosed in the contract which differs from the design of the product in the marketplace. The explicit fee approach would remove simplicity and result in an unnecessary disruption to the ILVA marketplace and impact consumer product choice.

Our proposal would be a clarification in language of the Exposure to promote consumer choice to spread based or explicit fee type products. Specifically, we recommend a new requirement, in the form of an actuarial certification to regulators attesting that spreads are reasonable based upon the current economic environment.

Our proposed language (redlines) is as follows:

Drafting Note: The difference is expected to be small, as any profit provisions, spreads, and expenses may be reflected as explicit charges disclosed in the contract. If profit provisions, spreads, and expenses are not reflected as explicit charges disclosed in the contract, then the company must provide an actuarial certification to regulators that the spreads recognized to cover profit provisions and expenses are reasonable in the current economic environment. Analysis would be available upon request. Any explicit charges deducted at the beginning of the Index Term would decrease the Index Option Value for the purpose of the comparison to the Hypothetical Portfolio value. There may need to be a provision for recognition of periodic charges to be assessed over the Index Term in the comparison required above.
We view the analysis for this actuarial certification consistent with the Securities and Exchange Commission’s (SEC) Reasonableness Memorandums. These SEC memorandums confirm that the fees being charged are in-line with the fees within the industry and therefore are reasonable. Insurers would perform a similar analysis around the index parameters to confirm that they are reasonable based upon the competitors’ index parameters. This analysis would be disclosed to regulators upon request.

Prudential feels that the proposal, as outlined, would allow for a viable solution via the additional certification that would avoid any unnecessary disruption in the ILVA marketplace and preserve consumer choice.

Thank you for consideration of these comments.

Jonathan Clymer, FSA, MAAA
Vice President & Actuary
The Index-Linked Variable Annuity (A) Subgroup met Feb. 16, 2022. The following Subgroup members participated: Peter Weber, Chair (OH); Tomasz Serbinowski, Vice Chair (UT); Sarvjit Samra (CA); Vincent Tsang (IL); Derek Wallman (NE); Kevin Clarkson and David Wolf (NJ); Bill Carmello and Michael Cebula (NY); Mike Boerner, Mengting Kim, and Rachel Hemphill (TX); Craig Chupp (VA); and David Hippen (WA).

1. Discussed Comments on the ILVA Actuarial Guideline

Beth Keith (American Academy of Actuaries—Academy) said the Academy comment letter (Attachment Sixteen-A) provided conceptual comments, not recommendations for specific changes. She said the comments covered three areas within the actuarial guideline: 1) the scope; 2) the terminology; and 3) the hypothetical portfolio considerations. Mr. Chupp and Mr. Serbinowski questioned whether it is necessary for the proxy values proposed in recommendation 11 to be calculated monthly. Ms. Keith agreed to have her group consider that issue.

Brian Bayerle (American Council of Life Insurers—ACLI) and Stephen Roth (Committee of Annuity Insurers—CAI) said their organizations’ views are jointly presented in their comment letter (Attachment Sixteen-B). Mr. Bayerle said they are concerned that the guideline could affect all spread-based products, resulting in market disruptions. He said they believe the guideline is too prescriptive and may not allow the flexibility to change as with economic conditions. He noted that they have an operational concern related to the guideline’s effect on company separate accounts, which may also affect how the registered indexed-linked annuities (RILAs) are viewed by the U.S. Securities and Exchange Commission (SEC). He said the industry-proposed draft guideline (Attachment Sixteen-C) addresses these issues. A spreadsheet (Attachment Sixteen-D) is provided to illustrate some of their concerns about the proposed actuarial guideline. Subgroup members agreed that the ACLI and the CAI should demonstrate why Method 2 in the spreadsheet example should be considered a viable option.

Mr. Weber said discussion of the remaining comments will continue on the March 2 Subgroup call.

Having no further business, the Index-Linked Variable Annuity (A) Subgroup adjourned.

National Association of Insurance Commissioners (NAIC)

Re: Proposed Actuarial Guideline ILVA, The Application of Model 250 to Variable Products Supported by Non-Unitized Separate Accounts (“Proposed Actuarial Guideline”)

Dear Mr. Weber,

The American Academy of Actuaries1 Index-Linked Variable Annuity Work Group (the “Work Group”) appreciates the opportunity to provide comments on the Proposed Actuarial Guideline.

Currently there is a wide range of practices related to index-linked variable annuity (ILVA) nonforfeiture that are not reflected in the actuarial guideline. This is a complex topic with a relationship to several NAIC model laws with many components to address. At this time, the Work Group is not providing any specific language changes, but offers the following conceptual comments for your consideration:

Scope of Actuarial Guideline:

1. The work group suggests more clarification related to the application of the Proposed Actuarial Guideline to Models 805, 250, and 255. Specifically, if an ILVA product falls under this Proposed Actuarial Guideline, it is unclear how the various provisions of the model laws are addressed by this guideline or would otherwise continue to apply. Of additional interest is how an index account (with a guaranteed zero floor) offered in a fixed index annuity (FIA) could be treated within an ILVA.

2. The Proposed Actuarial Guideline states that it “does not apply to products supported by a general account.” Therefore, these scenarios would not be considered: non-insulated separate accounts supported by general accounts; insulated separate accounts supported by general accounts (if there is a shortfall); and the assets/derivatives supporting ILVA products often held in the general account. Therefore, we encourage using broader language to identify the scope of the guideline.

3. The Proposed Actuarial Guideline recognizes that not all ILVA products reflect the market value of fixed income assets; however, there is text within the draft that assumes market values are used. For example, the assumptions text appears to be written with the

---

1 The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
assumption that the fixed-income asset proxy value reflects market values. The Work Group suggests that the guideline should allow for different approaches consistently throughout the text.

4. The drafting note in the Proposed Actuarial Guideline is not clear, and seems to imply that all ILVA products have explicit charges. However, some ILVA products are spread-based or a combination of spread- and fee-based. Therefore, the Work Group suggests clarifying this drafting note.

Terminology within Actuarial Guideline:

5. The Work Group found the term “Index Option Value” to be unclear, because it would be expected that this term describes the value of an option rather than an entire contract value. The Work Group recommends using Indexed Account Value as it would better describe the index portion of the contract value.

6. The Work Group notes that it may be easier to define hypothetical portfolio value, fixed-income asset proxy value, and the derivative asset proxy value, because most uses of these defined terms seem to be referring to their values. The guideline could then specify in its definitions that the fixed-income asset proxy value may be a market or book value depending on product design and that the derivative asset proxy value should be a market value.

7. The Proposed Actuarial Guideline states that the product filing must quantify the maximum difference between the value of the hypothetical portfolio and the index option value at the beginning of the index term. However, it is unclear how these values could be different because they are defined to be equal. The Work Group encourages clarification.

Hypothetical portfolio considerations in Actuarial Guideline:

8. The third principle in the Proposed Actuarial Guideline states that the hypothetical portfolio must be designed to perfectly hedge the benefit guarantees at the end of the term. The Work Group suggests additional clarification regarding: is the expectation of a perfect hedge for each individual who persists or for the aggregate in-force population (which would recognize various decrements)?

9. The Proposed Actuarial Guideline allows the determination of interim values to be based on actual assets or a hypothetical portfolio of assets. The use of actual assets could lead to very different interim values for two products that are otherwise similar, because there is a wide variety of current company approaches to these assets. With respect to hedge assets, the use of a hypothetical portfolio of static hedges may produce more understandable and/or consistent interim values across insurers.

10. The Proposed Actuarial Guideline states that the assumptions used to value the hypothetical portfolio should be based on market prices. However, if there are market prices, then it is expected those prices would be used to determine values, and assumptions would not be needed. If there are no market prices, then assumptions would be needed, but they could not be based on market prices. Therefore, the Work Group encourages clarification.
11. The Proposed Actuarial Guideline allows the hypothetical portfolio to be valued using static or dynamic assumptions. For proxy values that reflect market values, the assumptions should be dynamic and reviewed frequently, potentially as often as monthly intervals.

The Academy’s Work Group appreciates the efforts of the Index-Linked Variable Annuity (A) Subgroup on this Proposed Actuarial Guideline. If you have any questions or would like further dialogue on the above topics, please contact Khloe Greenwood, life policy analyst, at greenwood@actuary.org.

Sincerely,

Beth Keith, MAAA, FSA

LATF Index-Linked Variable Annuity (ILVA) (A) Subgroup

RE: ILVA Subgroup Exposure of Actuarial Guideline ILVA: The Application of Model 250 to Variable Products Supported by Non-Unitized Separate Accounts

Dear Messrs. Weber and Serbinowski:

The American Council of Life Insurers (ACLI)1 and the Committee of Annuity Insurers (CAI)2 appreciate the opportunity to submit comments on the ILVA Subgroup’s exposure of Actuarial Guideline ILVA: The Application of Model 250 to Variable Products Supported by Non-Unitized Separate Accounts (Exposure).

We recognize the considerable effort that went into producing the Exposure. Your leadership of the Interstate Insurance Product Regulation Commission’s (IIPRC) Actuarial Working Group formed a foundation which enabled the Subgroup to develop the Exposure in a timely manner. Guidance providing state regulators with a consistent understanding of the elements to consider in reviewing registered index-linked annuity (RILA) or ILVA product filings is critical to facilitating the continued growth and evolution of a product segment that provides customers with important access to insurance guarantees. RILA products are fundamentally spread-based products; they eliminate barriers that can be created by explicit fees which make it harder for people to get needed protections for their family and their retirement.

We appreciate that the Exposure initiates a starting point to demonstrate how these products might fit into the current NAIC framework for variable annuity nonforfeiture considerations but, in our opinion, there are critical changes that need to be addressed to ensure a final guideline will be workable. There are technical aspects of the Exposure which do not align with the realities of how RILA products are...

1 The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 94 percent of industry assets in the United States.

2 The Committee of Annuity Insurers is a coalition of life insurance companies that issue annuities. It was formed in 1981 to address legislative and regulatory issues relevant to the annuity industry and to participate in the development of public policy with respect to securities, state regulatory and tax issues affecting annuities. The CAI’s current 31 member companies represent approximately 80% of the annuity business in the United States.
manufactured, and instituting the Interim Value framework as drafted could adversely impact the core design principles used to create RILAs. Additionally, it appears to us that the Exposure is too restrictive and would not meet some of the Subgroup’s own objectives, including fostering product innovation responsive to the lifetime income challenge that retirement presents for millions of Americans.

We understand that the Subgroup does not want to see the RILA market disrupted, particularly since it is clearly meeting an investor need that was not previously being met with other annuity or investment products. Neither do we. Consequently, the ACLI and CAI have worked diligently throughout the comment period to create a revised proposed Actuarial Guideline (Proposal) which builds on the Exposure, is principles-based, recognizes the diversity of RILA designs in the marketplace and would accommodate ongoing innovation. We respectfully request that the Subgroup consider exposing the Proposal, as a refinement of the Exposure, for public comment. We believe it can work as an Actuarial Guideline (AG) under Model 250. However, if upon review, the Subgroup does not believe that modification of the Exposure, as reflected in the Proposal, is a workable alternative, then we would suggest that an approach other than an AG under Model 250 may need to be considered (revision to variable annuity definition in Model 250, creation of a new model regulation, etc.).

Some Key Points About RILAs

As you know, the RILA market has seen substantial growth over the past several years. This is due in part to the fact that RILAs, because they lie between conventional fixed indexed annuities and conventional unit-linked variable annuities on the risk/reward spectrum, are consistent with the investment objectives and risk tolerances of many retirement savers. But it is also due to the diversity of RILA product designs, the number of carriers offering these products, and the fact that RILAs are being distributed and offered through a variety of different distribution channels that have afforded meaningful RILA choices to consumers.

RILAs are registered as securities with the U.S. Securities and Exchange Commission. Investors receive robust prospectus disclosures about the features of the specific RILA they are considering, including examples demonstrating how the Interim Value calculations work in a variety of economic scenarios. Prospectus disclosures also detail the particular investment risks associated with that RILA’s features (including risk of loss and any product feature limitations) that should be considered before purchasing the product. In addition, of course, recommendations made to a retail customer to purchase a RILA must follow the best interest procedures required by the SEC’s Regulation Best Interest.

Unlike conventional variable annuities, RILAs are fundamentally spread-based products, not fee-based products. Insurers manufacture RILA products by investing in fixed income assets with a return that covers the cost of liability benefits, expenses and profit/risk margins. In this respect, RILAs share many core manufacturing concepts with fixed indexed annuities. The spread-based chassis is also similar to other products treated as variable annuities that are exempt from the NAIC’s Standard Nonforfeiture Law for Individual Deferred Annuities (Model 805), such as modified guaranteed (MGA or MVA) annuities. As we will demonstrate in the examples discussed below, a spread-based manufacturing model can improve the customer value proposition (relative to a fee-based model) due to the insurer’s ability to invest in longer-term assets while prudently managing asset/liability risks. While the application of the Model 250 definition of a variable annuity may not be as straightforward for RILAs as it is for conventional unit-linked variable annuities, the relationship between contract benefits and the

---

3 Note that in this context, the terms “spread-based” and “fee-based” are used to refer to a product manufacturing model, not the mechanics of the crediting strategies offered within index-linked products (where spreads and fees may be among the crediting parameters applied to index performance).
value of derivative instruments that can be used to replicate index credits demonstrates the necessary conditions for RILAs to be treated as variable annuities under Model 250.

Because RILAs provide variable benefits, insurers use separate accounts for their RILA products. However, for some insurers, the ability to offer attractive index-linked crediting strategies and other product features is often related to the ability to hold some of the assets supporting RILAs in insurers’ general accounts. Therefore, there are a variety of practices regarding the “geography” of separate account and general account assets supporting RILAs. This flexibility does not impact the core value proposition of the product because the separate account structure does not need to provide unitized values for a RILA, and the flexibility is beneficial because it allows insurers to take the approach that they determine can deliver the product most efficiently to the market. We recognize that the details of separate account operations are not the focus of the Exposure, but this topic is relevant to the dialog, and we want to underscore the importance that unintended interpretation of provisions in an AG focused on Interim Values does not result in restrictions in other areas.

The Proposal

As noted above, in our opinion, critical changes need to be made to the Exposure to make it workable. The attached Proposal builds upon the Exposure but reflects certain important changes to the Principles and Text sections. Certain terms have been added to the Definitions section that relate to the revised Text. Clarifying statements and changes also have been made to the Background and Scope sections.

The fundamental starting point is the principles that should govern RILA/ILVA Interim Values. The Proposal is built on a core principle with which everyone agrees: any methodology employed to calculate Interim Values must provide equity to both contract holders (whether persisting or terminating) and the company based on the risks assumed during an Index Term. This closely tracks the first principle in the Exposure. However, because RILAs are not unit-linked, Interim Value mechanics are integrated with other asset/liability risk management considerations. The Proposal recognizes that a range of approaches can be taken to maintain equity with these considerations in mind. Additionally, for the reasons noted previously, any AG under Model 250 needs to recognize that RILAs are fundamentally spread-based products and that insurers employ a variety of practices with respect to where assets supporting the products are maintained. For this reason, it is both too simplistic and too restrictive to further define equity to mean that Interim Values must approximate the actual market values of the separate account assets as the Exposure does.

Instead, as reflected in the Proposal, the relationship between contract benefits and the value of derivative instruments that can be used to replicate index credits demonstrates the necessary conditions for RILAs to be treated as variable annuities under Model 250. Therefore, the second principle set forth in the Proposal recites that there may exist a hypothetical portfolio of derivative assets that is designed to replicate the index credits provided by an Index Strategy at the end of an Index Term. The third principle is that the Interim Value must demonstrate a relationship between the value of that hypothetical derivative portfolio and the contract benefits over the course of an Index Term, and further that this relationship should be materially consistent in a variety of economic environments.

The Text section in the Proposal builds upon these three principles. It begins by expressly acknowledging that Interim Values can be determined using multiple methods so long as the method used is consistent with the principles. It then references and summarizes two example methods that generally correspond to methods currently in the marketplace. The summaries of those two methods are intended to provide a safe harbor for Interim Value methods corresponding to what is described.
Illustrative Examples

To supplement the proposed revisions to the Actuarial Guideline, we have constructed several illustrative examples. The attached Excel file ("ACLI and CAI Interim Value Demonstrations 1-27-22.xlsx") provides a detailed explanation of the analysis. These examples are intended to highlight the previously mentioned technical concerns about the Exposure and how the Proposal improves the alignment between key product manufacturing concepts and the framework for Interim Values. We’d like to focus in particular on the following observations:

- Because RILAs are manufactured as spread-based products, the insurer’s fixed income investment horizon is often longer than the term of the index-linked crediting strategies. The option budget available to determine the crediting parameters (cap rate, participation rate, etc.) is a function of the yield earned on these fixed income assets and the target spread determined by the insurer. Our concern is that the conditions outlined in the Exposure regarding the value of the Fixed Income Asset Proxy are inconsistent with this reality. To achieve a conceptually similar outcome that produces a more intuitive emergence of Interim Values, the Proposal provides an alternative framework that focuses on amortization of the option budget rather than the accrual of a hypothetical zero-coupon bond.

- The Excel file also includes an example comparing the determination of the option budget for a hypothetical RILA under spread-based and fee-based manufacturing models. This example demonstrates that the spread-based approach has the potential to deliver better customer value through both a higher option budget and the absence of a fee assessed against the account value. This is not meant to be an exhaustive comparison of different product designs, but reinforces the importance of aligning the Interim Value framework with the core principles used to manufacture RILA products.

- In addition to highlighting the technical concerns with the Exposure, the examples provide illustrative Interim Values under both Method 1 and Method 2 from the Proposal. A range of economic scenarios are pre-populated in the Excel file, and the results can be compared in both tabular and graphical formats. While there are differences in the calculation mechanics between Method 1 and Method 2, the examples show that they provide a similar emergence of Interim Values. This also reinforces the concept that even though Method 2 does not involve a direct valuation of derivative assets, the value of the Derivative Asset Proxy and the Interim Value are materially consistent in a variety of economic environments.

Conclusion

The ACLI and the CAI appreciate the opportunity to comment on the Exposure. We stand ready to help the Subgroup achieve its goals while also working to ensure that our members can continue to effectively serve the investment and retirement needs of their customers with innovative RILA products that offer attractive benefits and protections. It is in that spirit that we urge the Subgroup to carefully consider the Proposal and our request that it be exposed for public review and comment. We look forward to continued collaboration with the Subgroup to develop guidance to satisfy our shared objective of equity to both contract holders and insurers in the design and administration of RILA/ILVA products.

---

4 As noted in the Excel file, some RILAs include explicit fees that are used to increase the insurer’s option budget. These products are still fundamentally spread-based and are manufactured differently than conventional unit-linked variable annuities.
Respectfully submitted,

Proposed Actuarial Guideline from the American Council of Life Insurers (ACLI) and the Committee of Annuity Insurers (CAI) (January 27, 2022)

Actuarial Guideline ILVA
The Application of Model 250 to Variable Products Supported by Non-Unitized Separate Accounts

Background

Variable annuities are exempted from the scope of NAIC Model 805, Standard Nonforfeiture Law for Individual Deferred Annuities. The Model does not define the term "variable annuity". NAIC Model 250, Variable Annuity Model Regulation, provides requirements for nonforfeiture benefits for those variable annuities defined as "contracts that provide for annuity benefits that vary according to the investment experience of a separate account or accounts maintained by the insurer as to the policy or contract."

Section 7B of Model 250 provides that "to the extent that a variable annuity contract provides benefits that do not vary in accordance with the investment performance of a separate account" the contract shall satisfy the requirements of Model 805.

The application of the Model 250 to a traditional variable annuity with unit-linked values is straightforward. The unit-linked feature provides an automatic linkage between annuity values and the investment experience of a separate account. Market values of the separate account assets are the basis of contractual benefits, including surrender values.

In recent years, a number of insurers have introduced new annuity products with index-linked crediting features. Credits are based on the performance of an index, subject to the limits of certain parameters (cap rates, participation rates, etc.) when the index return is positive, and a level of downside protection when the index return is negative. These annuity products are not unit-linked and do not invest in the underlying indices whose performance forms the basis for the index-linked credits. However, derivative instruments can be used to replicate the index-linked credits. Changes in the values of these derivative instruments over the course of a crediting period can create an indirect relationship between asset values and annuity benefits.

There is no established terminology for these annuity products. These products go by several names, including hybrid annuities, structured annuities, registered index-linked annuities, or index-linked variable annuities, among others. This guideline refers to them as index-linked variable annuities (ILVA).

The fact that ILVA products are not unit-linked means they don't have values determined by the market values of the underlying assets. They provide a structure instead where underlying assets held by the insurer will be managed to ensure that contractual liabilities can be satisfied. During an indexed crediting term, they provide interim values defined by contractual provisions to account for withdrawals, death benefits, etc. that may occur during an index term.
ILVA products are registered with the SEC because they are subject to the Securities Act of 1933, but they are not considered variable annuities under the Investment Act of 1940 because they do not provide a pass-through of separate account investment experience. As stated previously, a variable annuity under Model 250 means a policy or contract that provides annuity benefits that vary according to the investment experience of a separate account or accounts managed by the company for policies and contracts. Model 250 by its terms does not require that:

1. Annuity benefits vary directly with, or reflect a pass-through of, the investment experience of a separate account or accounts (i.e., daily unit-linked values), or
2. Assets be invested to perfectly replicate index credits provided.

The purpose of this guideline is to clarify the application of Models 805 and 250 to ILVAs. Specifically, the guideline provides conditions under which a non-unit-linked product can be considered to provide annuity benefits that vary according to the investment experience of a separate account, and therefore meet the requirements of a variable annuity under Model 250 and be exempt from Model 805.

Scope

This guideline applies to any annuity contract exempt from Model 805 and subject to Model 250, on the basis that it is variable and that it is not unit-linked. This guideline is not meant to clarify Model 255 (Modified Guaranteed Annuity Model Regulation) and does not exclude ILVAs from qualifying under Model 255.

This guidance applies to index-linked crediting features that are provided through contracts or policies supported by an underlying non-unit-linked separate account(s) (with or without unit-linked subaccounts) or contracts or policies added to such by rider, endorsement, or amendment. This guidance applies to both insulated and non-insulated separate account products.

This guideline does not apply to products subject to the requirements of NAIC Model 805, Standard Nonforfeiture Law for Individual Deferred Annuities.

Definitions

“Interim Value” means the value, attributable to one or more index options, used in determining contractual values such as the death benefit, transfer amount, withdrawal amount, annuitization amount or surrender value at any time other than the start date and end date of an index term.

“Index Strategy” means a method used to determine index credits with a specified index or indices and cap, trigger, contingent yield, buffer, barrier, floor, participation rate, spread, fee, margin or other index crediting elements.

“Index Option Base” means the well-defined base value in an index option on any date. This value reflects any Index Strategy allocations at the start of the Index Term, adjusted for any subsequent transaction activity (withdrawals, fee deductions, index credits, etc.).
"Index Term" means the period of time from the term start date to the term end date. A term may end due to contract holder actions or product features (e.g., a specified end date, a “lock-in” feature, etc.).

“Derivative Asset Proxy” means a package of hypothetical derivative assets designed to replicate index credits provided by an Index Strategy at the end of an Index Term.

“Interest Rate MVA” means a market value adjustment that reflects the change in the market value of hypothetical fixed income assets due to interest rate and/or credit spread movements, as well as investment and reinvestment risk.

**Principles**

This guideline is based on the following principles:

1. The Interim Value methodology must provide equity to both the contract holder and the company based upon the risks assumed during an Index Term.
2. There may exist a hypothetical portfolio of derivative assets designed to replicate the index credits provided by an Index Strategy at the end of an Index Term.
3. The Interim Value methodology must demonstrate a relationship between the value of the hypothetical portfolio of derivative assets and the contract benefits over the course of an Index Term. This relationship should be materially consistent in a variety of economic environments.

**Text**

Interim values can be determined using multiple methods. Two potential methods consistent with the above principles are described below. Other methods can be used provided that consistency with the principles can be demonstrated.

**Example Method 1**

In the first method, the Interim Value is based on the value of the derivative assets designed to replicate index credits at the end of the Index Term, as represented by the market value of the Derivative Asset Proxy. Because the initial cost to purchase the derivative assets represents a fixed cost to hedge a benefit provided at the end of the Index Term, the initial value of the Derivative Asset Proxy may be amortized over the length of the Index Term.

The Interim Value (without accounting for any applicable Interest Rate MVA) at any time during an Index Term is the Index Option Base, plus the current value of the Derivative Asset Proxy, less the unamortized initial value of the Derivative Asset Proxy. Note that many reasonable methods exist to amortize the initial value of the Derivative Asset Proxy. Examples include (but are not limited to):

1. Linear amortization over the Index Term
2. Accrual of a zero-coupon bond yield over the Index Term
Assumptions used to value the Derivative Asset Proxy may include implied volatility, risk-free rate, dividend yield, and other parameters required for the valuation method of the derivatives. These assumptions:

1. Must be supported by market prices of the underlying derivative instruments at the start of the Index Term. If well-defined market prices and/or closed form valuation models do not currently exist due to the nature of the Index Strategy, then the method for estimating must be described in the Actuarial Memorandum;
2. May be static throughout the Index Term or may be dynamic. If dynamic assumptions are used, the assumptions must be based on market prices or estimated values of the Derivative Asset Proxy at the time of valuation;
3. May include provisions for frictional costs (transaction costs, bid/ask spread, etc.) that impact the value of the Derivative Asset Proxy if exited prior to the end of the Index Term.

The Interim Value may also include an Interest Rate MVA and/or other provisions to manage risks and costs of exiting before the end of the Index Term, such as a pro-rata ceiling limit.

On the term end date, the Interim Value (without accounting for any applicable Interest Rate MVA) must equal the Index Option Base (including index credits).

**Example Method 2**

The second Interim Value method approximates the value of the Derivative Asset Proxy and defines the Interim Value during an Index Term in a transparent and simple fashion based on index performance, the crediting parameters for a given Index Strategy, and the time elapsed in the Index Term. It provides accrual from the initial Index Option Base to the Index Option Base plus the intrinsic value of the Derivative Asset Proxy. The Interim Value will generally move with the value of the derivative assets designed to replicate index credits at the end of the Index Term.

Under this method:

1. On the term end date, the Interim Value (without accounting for any applicable Interest Rate MVA) must equal the Index Option Base (including index credits).
2. During the Index Term, the Interim Value (without accounting for any applicable Interest Rate MVA) must grade into the upside crediting potential (cap rate, participation rate, etc.) and the downside protection (buffer protection, floor protection, etc.) at least as quickly as linearly.

**Certifications**

The company (or actuary) must describe the Interim Value methodology and the assumptions used to calculate its value at any time. The company must provide an actuary's certification that the provisions of this guideline are being met.
Scholes

The firm of Scholes Limited has made an in-depth study of the potential market for a new product and intends to offer a comprehensive range of options for marketing and distribution.

The financial analysis indicates that the potential market for the new product is extensive, with a significant number of consumers expressing interest in the product.

In conclusion, the firm of Scholes Limited is confident that the new product will be well-received by the market and that it will be profitable for the firm to invest in its development and marketing.

Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
PBR Staff of Texas Department of Insurance

Title of the Issue:
APF to fix language that is hard to follow.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document
where the amendment is proposed:

Section 3.F.9.h.ii
January 1, 2022 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify
the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the
verbiage. (You may do this through an attachment.)

VM-31 Section 3.F.9.h.ii:
ii. Documentation that the implied volatility scenarios generated do not result in a lower TAR than that obtained by
assuming that the implied volatility – at all ITM levels – at a given time step in a given scenario is equal to the realized
volatility of the underlying asset scenario over the same time period as required by VM-21 Section 8.D.3.

For a company not using the safe harbor described in Section 9.B.5, any implied volatility scenarios generated using
a non-prescribed scenario generator shall not result in a TAR less than that obtained by assuming that the implied
volatility level – at all ITM levels – at a given time step in a given scenario is equal to the realized volatility of the
underlying asset scenario over the same time period. In other words, the TAR shall not be reduced by
assumptions of any realizable spread between implied volatility and realized volatility. For the
purposes of demonstrating compliance with this standard, a company may rely on only the
values from the stochastic calculations and exclude impacts from the additional
standard projection and the alternative methodology.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

VM-31 Section 3.F.9.h.ii: Sentence is confusing and doesn’t make sense grammatically. Revised based on the parallel
language in VM-21, which this VM-31 reporting item is intended to verify:

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by
the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
PBR Staff of Texas Department of Insurance

Title of the Issue:
General cleanup, including updating cross-references, better consistency between VM-20 and VM-21, where reasonable, and making clarifying edits:

1. **Update cross-references:** Add a reference to the newly added VM-21 Section 12 (general assumption setting) alongside the reference to Section 10 in the Guidance Note after Principle 3 in VM-21.

2. **Update cross-references:** Existing section references are too general to be useful for the asset spread assumptions discussed in VM-21 Section 4.D.4.a.iii and 4.D.4.a.iv.

3. **VM-20/VM-21 Consistency:** VM-21 Sections 4.D.5.a and 4.D.5.b should be made consistent with VM-20; new Sections 4.D.5.c and 4.D.5.d were also added to be consistent with VM-20 where appropriate.

4. **Clarifying Edits:** Avoid the SPA partial withdrawal assumptions from requiring modeling less than the RMD amount for tax qualified contracts with ages greater than or equal to the RMD age in VM-21 Section 6.C.4.

5. **Update cross-references:** Correct section reference errors in VM-21 Sections 6.C.4 and 6.C.5.

6. **Clarifying Edits:** Revenue sharing income assumption requirements need clarification, and language needs cleaning up in VM-20, VM-21, and VM-31.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

   Issue 1: VM-21 Section 1.B
   Issue 3: VM-21 Section 4.D.5
   Issue 4: VM-21 Section 6.C.4
   Issue 5: VM-21 Section 6.C.4 and 6.C.5

January 1, 2022 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

   See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)
1. Add a reference to the newly added Section 12 (general assumption setting Section 12 added by APF 2021-11 for the 2023 Valuation Manual) alongside the reference to Section 10 in the Guidance Note after Principle 3.

4. The current SPA partial withdrawals assumption does not consider the RMD requirement for tax qualified contracts with ages greater than or equal to the federal RMD age. Some companies assumed this was intended to be reflected, but it should be clarified in VM-21.

6. Both VM-20 and VM-21 need to clarify that the haircut prescribed for the non-contractually guaranteed revenue sharing is only a guardrail which is neither redundant to nor a substitution for the margin determination requirements of VM-20 Section 9.G.6 and VM-21 Section 4.F.5.c. Two guidance notes from VM-20 should be added to VM-21 for appropriate consistency. The reporting requirement language which is already in VM-31 should be removed from VM-20 and the reporting requirement in VM-31 is augmented and clarified.

VM-21 Section 1.B (Guidance Note after Principle 3)

**Guidance Note:** The intent of Principle 3 is to describe the conceptual framework for setting assumptions. Section 10 provides the requirements and guidance for setting contract holder behavior assumptions and includes alternatives to this framework if the company is unable to fully apply this principle. More guidance and requirements for setting assumptions in general are provided in Section 12.

VM-21 Section 4.D.4.a.iii and Section 4.D.4.a.iv

iii. For purchases of public non-callable corporate bonds, use the gross asset spreads over Treasuries prescribed in VM-20 Section 9.F.8.a through Section 9.F.8.c. (For purposes of this subsection, “public” incorporates both registered and 144a securities.) The prescribed spreads reflect current market conditions as of the model start date and grade to long-term conditions based on historical data at the start of projection year four;

iv. For transactions of derivative instruments associated with fixed income investments, reflect the prescribed assumptions in VM-20 Section 9.F.8.d for interest rate swap spreads;

VM-21 Section 4.D.5

5. Cash Flows from Invested Assets
   a. Cash flows from general account fixed income assets and derivative asset programs associated with these assets, including starting and reinvestment assets, shall be reflected in the projection as follows:
      i. Model gross investment income and principal repayments in accordance with the contractual provisions of each asset and in a manner consistent with each scenario. Grouping of assets is allowed if the company can demonstrate that grouping does not materially underestimate the modeled reserve that would have been obtained using a seriatim approach.
ii. Reflect asset default costs as prescribed in VM-20 Section 9.F and anticipated investment expenses through deductions to the gross investment income.
iii. Model the proceeds arising from modeled asset sales and determine the portion representing any realized capital gains and losses.
iv. Reflect any uncertainty in the timing and amounts of asset cash flows related to the paths of interest rates, equity returns or other economic values directly in the projection of asset cash flows. Asset defaults are not subject to this requirement, since asset default assumptions must be determined by the prescribed method in VM-20 Section 9.F.

b. Cash flows from general account equity assets—i.e., non-fixed income assets having substantial volatility of returns, such as common stocks and real estate—and derivative asset programs associated with these assets, including starting and reinvestment assets, shall be reflected in the projection as follows:
   i. Determine the grouping for asset categories and the allocation of specific assets to each category in a manner that is consistent with that used for separate account assets, as discussed in Section 4.A.2.
   ii. Project the gross investment return including realized and unrealized capital gains in a manner that is consistent with the stochastically generated scenarios.
   iii. Model the timing of an asset sale in a manner that is consistent with the investment policy of the company for that type of asset. Reflect expenses through a deduction to the gross investment return using prudent estimate assumptions.

c. Determine cash flows for each projection interval for all other general account assets by modeling asset cash flows on other assets that are not described in Sections 4.D.5.a and 4.D.5.b using methods consistent with the methods described in Sections 4.D.5.a and 4.D.5.b. This includes assets that are a hybrid of fixed income and equity investments.
d. Determine cash flows or total investment returns as appropriate for each projection interval for all separate account assets as follows:
   i. Determine the grouping for each variable fund and subaccount (e.g., bonds funds, large cap stocks, international stocks, owned real estate, etc.) as described in Section 4.A.2.
   ii. Project the total investment return for each variable fund and subaccount in a manner that is consistent with the prescribed returns described in Section 4.A.2 and Section 8.C.3.

VM-21 Section 6.C.4 (Intro)

4. Partial Withdrawals

Partial withdrawals required contractually or previously elected (e.g., a contract operating under an automatic withdrawal provision, or that has voluntarily enrolled in an automatic withdrawal program, on the valuation date) are to be deducted from the Account Value in each projection interval consistent with the projection frequency used, as described in Section 4.F, and according to the terms of the contract. However, if a GMWB or hybrid GMIB contract’s automatic withdrawals results in partial withdrawal amounts in excess of the GMWB’s guaranteed maximum annual withdrawal amount or the maximum amount above which withdrawals reduce the GMIB basis by the same dollar amount as the withdrawal amount (the “dollar-for-dollar maximum withdrawal amount”), such automatic withdrawals shall be revised such that they equal the GMWB’s guaranteed maximum annual withdrawal amount or the GMIB’s dollar-for-dollar maximum withdrawal amount. However, for tax qualified contracts with ages greater than or equal to the federal RMD age, if the prescribed withdrawal amount is below the RMD amount, the withdrawal amount may be reset to the RMD amount.

Guidance Note: Companies are expected to model withdrawal amounts consistent with the RMD amount where applicable and where practically feasible; however, it is understood that this level of modeling sophistication may not be available for all companies.
For any contract not on an automatic withdrawal provision as described in the preceding paragraph, depending on the guaranteed benefit type, other partial withdrawals shall be projected as follows but shall not exceed the free partial withdrawal amount above which surrender charges are incurred and may be floored at the RMD amount for tax qualified contracts with ages greater than or equal to the federal RMD age:

**VM-21 Section 6.C.5**

5. Withdrawal Delay Cohort Method

To model the initial withdrawal for certain GMWBs and hybrid GMIBs as discussed in Sections 6.C.4.h and 6.C.4.j, the actuary shall adopt a modeling approach whereby a contract is split into several copies (referred to as "cohorts"), each of which is subsequently modeled as a separate contract with a different initial withdrawal period. The contract Account Value, bases for guaranteed benefits, and other applicable characteristics shall be allocated across the cohorts based on different weights that are determined using the method discussed below in this section.

**VM-21 Section 4.A.5.f**

1. The amount of net revenue-sharing income assumed in a given scenario shall be applied with a margin to reflect any uncertainty but shall not exceed the sum of (i) and (ii), where:
   
   i. Is the contractually guaranteed net revenue-sharing income projected under the scenario; and
   
   ii. Is the company’s estimate of non-contractually guaranteed net revenue-sharing income before reflecting any margins for uncertainty multiplied by the following factors:

   - 1.00 in the first projection year.
   - 0.95 in the second projection year.
   - 0.90 in the third projection year.
   - 0.85 in the fourth projection year.
   - 0.80 in the fifth and all subsequent projection years.

   **Guidance Note:** Provisions such as one that gives the entity paying the revenue-sharing income the option to stop or change the level of income paid would prevent the income from being guaranteed. However, if such an option becomes available only at a future point in time, and the revenue up to that time is guaranteed, the income is considered guaranteed up to the time the option first becomes available.
7. The company is responsible for reviewing the revenue-sharing agreements that apply to that group of policies and verifying compliance with these requirements.

8. The amount of net revenue-sharing income assumed in a given scenario shall be applied with a margin to reflect any uncertainty but shall not exceed the sum of (a) and (b), where:
   a. Is the contractually guaranteed GRSI, net of applicable expenses, projected under the scenario.
   b. Is the company’s estimate of non-contractually guaranteed net revenue-sharing income before reflecting any margins for uncertainty multiplied by the following factors:

VM-31 Section 3.D.7.c

c. Revenue-Sharing Margins – The level of margin in the prudent estimate assumptions for revenue-sharing income and description of the rationale for the margin for uncertainty. Also, a demonstration that the amounts of net revenue-sharing income, after reflecting margins, do not exceed the limits set forth in VM-20 Section 9.G.8.

VM-31 Section 3.F.7.c

c. Revenue-Sharing Margins – The level of margin in the prudent estimate assumptions for revenue-sharing income and a description of the rationale for the margin for uncertainty. Also, a demonstration that the amounts of net revenue-sharing income, after reflecting margins, do not exceed the limits set forth in VM-21 Section 4.A.5.f.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force Amendment Proposal Form

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
Hedging Drafting Group of LATF

Title of the Issue:
Reflect all future hedging strategies in VM-20 and VM-21. Revise hedge modeling to increase E factor (VM-21) or residual risk (VM-20) when future hedging strategies are not clearly defined.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

January 1, 2022 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

2. Add a definition for “future hedging strategy,” consistent with the definition for CDHS and the current VM-01 definition of “derivative program”, which VM-01 notes includes hedging programs.
3. Add a definition for “hedging transactions,” taken from the APPM but modified slightly to be consistent with Valuation Manual terminology.
4. Reflect all of a company’s future hedging strategies, but reflect the additional error (VM-21) or residual risk (VM-20) that is presented by a future hedging strategy not being clearly defined.
5. Remove optionality for liquidating currently held hedges (despite liquidation not being a part of the company investment strategy) if not modeling a future hedging strategy.
6. New hedging strategies (<6 months experience) have an E factor of 1.0 for VM-21. For comparison, the current draft VM-22 only allows modeling hedges after they have been in place for 6 months. When only CDHS were modeled in VM-21, new hedging strategies with no experience had E factors as low as 0.5 even without meaningful analysis. This treatment was much too lenient for new hedging strategies.
* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

NAIC Staff Comments:

W:\National Meetings\2010\TF\LHA\
The term “clearly defined hedging strategy” (CDHS) means a future hedging strategy for which the following attributes are clearly documented:

a. The specific risks being hedged (e.g., cash flow, fee income, policy interest credits, delta, rho, vega, etc.).
b. The hedging objectives.
c. The material risks that are not hedged (e.g., variation from expected mortality, withdrawal, and other utilization or decrement rates assumed in the hedging strategy, etc.).
d. The financial instruments used to hedge the risks.
e. The hedging strategy’s trading rules, including the permitted tolerances from hedging objectives.
f. The metrics, criteria, and frequency for measuring hedging effectiveness.
g. The conditions under which hedging will not take place and for how long the lack of hedging can persist.
h. The group or area, including whether internal or external, responsible for implementing the hedging strategy.
i. Areas where basis, gap or assumption risk related to the hedging strategy have been identified.
j. The circumstances under which hedging strategy will not be effective in hedging the risks.

Guidance Note: For purposes of the CDHS documented attributes, “effectiveness” need not be measured in a manner as defined in SSAP No. 86—Derivatives in the AP&P Manual.

The term “future hedging strategy” is a derivative program undertaken by a company to manage risks through one or more future hedging transactions, including the future purchase or sale of hedging instruments and the opening and closing of hedging positions.

A future hedging strategy may be dynamic, static or a combination thereof. A strategy involving the offsetting of the risks associated with products falling under the scope of different requirements within the Valuation Manual (e.g., VM-20, VM-21, or VM-22) does not qualify as a future hedging strategy.

The term “hedging transaction” means a derivative(s) transaction which is entered into and maintained to reduce:

a. The risk of a change in the fair value, the value on a statutory, GAAP, or other basis, or cash flow of assets and liabilities which the company has acquired or incurred or has a firm commitment to acquire or incur or for which the company has a forecasted acquisition or incurrence; or
b. The currency exchange rate risk or the degree of foreign currency exposure in assets and liabilities which the company has acquired or incurred or has a firm commitment to acquire or incur or for which the company has a forecasted acquisition or incurrence.
VM-20 Section 6.A.1.b

A company may not exclude a group of policies for which there is one or more future hedging strategies supporting the policies, from SR requirements, except in the case where all future hedging strategies supporting the policies are solely associated with product features that are determined to not be material under Section 7.B.1 due to low utilization.

VM-20 Section 7.E.1.g

Notwithstanding the above requirements, the modeled reserve shall be the higher of that produced by the modeled company investment strategy and that produced by substituting an alternative investment strategy in which the fixed income reinvestment assets have the same weighted average life (WAL) as the reinvestment assets in the modeled company investment strategy and are all public non-callable corporate bonds with gross asset spreads, asset default costs and investment expenses by projection year that are consistent with a credit quality blend of 50% PBR credit rating 6 (A2/A) and 50% PBR credit rating 3 (Aa2/AA).

Policy loans, equities and derivative instruments associated with the execution of future hedging strategies supporting the policies are not affected by this requirement.

VM-20 Section 7.K

K. Modeling of Derivative Programs

1. When determining the DR and the SR, the company shall include in the projections the appropriate costs and benefits of derivative instruments that are currently held by the company in support of the policies subject to these requirements. The company shall also include the appropriate costs and benefits of anticipated future derivative instrument transactions associated with the execution of future hedging strategies supporting the policies, as well as the appropriate costs and benefits of anticipated future derivative instrument transactions associated with non-hedging derivative programs (e.g., replication, income generation) undertaken as part of the investment strategy supporting the policies, provided they are normally modeled as part of the company’s risk assessment and evaluation processes.

2. For each derivative program that is modeled, the company shall reflect the company’s established investment policy and procedures for that program; project expected program performance along each scenario; and recognize all benefits, residual risks and associated frictional costs. The residual risks include, but are not limited to: basis, gap, price, parameter estimation and variation in assumptions (mortality, persistency, withdrawal, etc.). Frictional costs include, but are not limited to: transaction, margin (opportunity costs associated with margin requirements) and administration. For future hedging strategies supporting the policies, the company may not assume that residual risks and frictional costs have a value of zero, unless the company demonstrates in the PBR Actuarial Report that “zero” is an appropriate expectation. VM-21 Section 1.B Principle 5 applies as a general principle for the modeling of future hedging strategies.

3. In circumstances where one or more material risk factors related to a derivative program are not fully captured within the cash-flow model used to calculate CTE 70, the company shall reflect such risk factors by increasing the SR as described in Section 5.E.
4. In circumstances where documentation outlining the future hedging strategies is incomplete, the company shall reflect the future hedging strategies not being clearly defined by increasing the SR as described in Section 5.E. To support no increase to the SR, there should be very robust documentation outlining each future hedging strategy. In particular, the SR shall be at least as great as the SR that would result if a future hedging strategy were not reflected in the SR, if the documentation is materially incomplete for any of the individual CDHS attributes (a) through (j), as listed in VM-01.

Any increases required to the SR to reflect that documentation is not available to support that the future hedging strategies are clearly defined shall be in addition to increases to the SR pursuant to Section 7.K.3 above.

Guidance Note: Section 5.E requires that the company “Determine any additional amount needed to capture any material risk included in the scope of these requirements but not already reflected in the cash-flow models using an appropriate and supportable method and supporting rationale.” In the case of a derivative program that is a future hedging strategy, Section 7.K.3 requires such an increase for disconnects between the hedge modeling and the future hedging strategy, while Section 7.K.4 requires such an increase for disconnects between the loosely defined future hedging strategy and what may actually take place.

VM-20 Section 7.L (Remove entire Section 7.L)

VM-21 Section 1.D.2 (Delete entire definition and renumber subsequent sections VM-21 Section 1.D.3 and VM-21 Section 1.D.4)

VM-21 Section 4.A.4

Modeling of Hedges

a. For a company that does not have a future hedging strategy supporting the contracts:

i. The company shall not consider the cash flows from any future hedge purchases or any rebalancing of existing hedge assets in its modeling, since they are not included in the company’s investment strategy supporting the contracts.

ii. Existing hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the starting assets.

b. For a company with one or more future hedging strategies supporting the contracts, the detailed requirements for the modeling of hedges are defined in Section 9. The following paragraphs are a high-level summary and do not supersede the detailed requirements.

i. The appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the projections used in the determination of the SR.

Guidance Note: It is important to note that strategies involving the offsetting of the risks associated with other products outside of the scope of these requirements is not a clearly defined hedging strategy.

Deleted: L. Clearly Defined Hedging Strategy

A clearly defined hedging strategy must identify:

- The specific risks being hedged (e.g., cash flow, policy interest rate, etc.)
- The hedge objectives
- The hedge trading rules, including the permitted tolerances from hedging objectives
- The metrics for measuring hedging effectiveness
- The criteria used to measure hedging effectiveness
- The frequency of measuring hedging effectiveness
- The conditions under which hedging will not take place
- The person or persons responsible for implementing the hedging strategy
- Areas where basis, gap or assumption risk related to the hedging strategy have been identified
- The circumstances under which hedging strategy will not be effective in hedging the risks
- Hedging strategies involving the offsetting of the risks associated with other products outside of the scope of these requirements is not a clearly defined hedging strategy.

Guidance Note: For purposes of the above criteria, “effectiveness” need not be measured in a manner as defined in SSAP No. 16—Derivatives in the AP&P Manual.

Deleted: The term “clearly defined hedging strategy” (CDHS) is defined in VM-01. In order to be designated as a CDHS, the strategy must meet the principles outlined in Section 1.B (particularly Principle 3) and shall, at a minimum, identify:

- The specific risks being hedged (e.g., delta, rho, vega, etc.)
- The hedge objectives
- The risks not being hedged (e.g., variation from expected mortality, withdrawal, and other utilization or decrement rates assumed in the hedging strategy, etc.)
- The financial instruments used to hedge the risks
- The hedge trading rules, including the permitted tolerances from hedging objectives
- The metrics for measuring hedging effectiveness
- The criteria used to measure hedging effectiveness
- The frequency of measuring hedging effectiveness
- The conditions under which hedging will not take place
- The person or persons responsible for implementing the hedging strategy

Deleted: O. Measurement of Hedging Effectiveness

The measurement of hedging effectiveness shall be determined in a manner that is appropriate for the specific hedging strategies involved. The measurement period shall reflect the time horizon of the hedging strategy, and the measurement method shall consider the specific risks being hedged.

Guidance Note: It is important to note that strategies involving the offsetting of the risks associated with other products outside of the scope of these requirements is not a clearly defined hedging strategy.

Deleted: The measurement of hedging effectiveness for purposes of this guidance shall be determined in a manner as defined in SSAP No. 16—Derivatives in the AP&P Manual.
ii. The projections shall take into account the appropriate costs and benefits of hedge positions expected to be held in the future through the execution of the future hedging strategies supporting the contracts. Because models do not always accurately portray the results of hedge programs, the company shall, through back-testing and other means, assess the accuracy of the hedge modeling. The company shall determine a SR as the weighted average of two CTE values; first, a CTE70 (“best efforts”) representing the company’s projection of all of the hedge cash flows, including future hedge purchases, and a second CTE70 (“adjusted”) which shall use only hedge assets held by the company on the valuation date and no future hedge purchases. These are discussed in greater detail in Section 9. The SR shall be the weighted average of the two CTE70 values, where the weights reflect the error factor (E) determined following the guidance of Section 9.C.4.

iii. The company is responsible for verifying compliance with all requirements in Section 9 for all hedging instruments included in the projections.

iv. The use of products not falling under the scope of these requirements (e.g., equity-indexed annuities) as a hedge shall not be recognized in the determination of accumulated deficiencies.

VM-21 Section 4.D.4.b

Notwithstanding the above requirements, the SR shall be the higher of that produced by the modeled company investment strategy and that produced by substituting an alternative investment strategy in which the fixed income reinvestment assets have the same weighted average life (WAL) as the reinvestment assets in the modeled company investment strategy and are all public non-callable corporate bonds with gross asset spreads, asset default costs, and investment expenses by projection year that are consistent with a credit quality blend of 50% PBR credit rating 6 (A2/A) and 50% PBR credit rating 3 (Aa2/AA).

Policy loans, equities and derivative instruments associated with the execution of future hedging strategies supporting the contracts are not affected by this requirement.

VM-21 Section 6.B.3.a.ii - Footnote (Footnote at Bottom of Page 21-23)

Throughout this Section 6, references to CTE70 (adjusted) shall also mean the SR for a company that does not have a future hedging strategy supporting the contracts as discussed in Section 4.A.4.a.

VM-21 Section 6.B.3.b.ii

Calculate the Prescribed Projections Amount as the CTE70 (adjusted) using the same method as that outlined in Section 9.C (which is the same as SR following Section 4.A.4.a for a company that does not have a future hedging strategy supporting the contracts) but substituting the assumptions prescribed by Section 6.C. The calculation of this Prescribed Projections Amount also requires that the scenario reserve for any given scenario be equal to or in excess of the cash surrender value in aggregate on the valuation date for the group of contracts modeled in the projection.

VM-21 Section 6.B.5
Cash flows associated with hedging shall be projected in the same manner as that used in the calculation of the CTE70 (adjusted) as discussed in Section 9.C or Section 4.A.4.a for a company without a future hedging strategy supporting the contracts.

**VM-21 Section 9**

**Section 9: Modeling of Hedges under a Future Hedging Strategy**

**A. Initial Considerations**

1. Subject to Section 9.C.2, the appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the calculation of the SR, determined in accordance with Section 3.D and Section 4.D.

2. If the company is following one or more future hedging strategies supporting the contracts, in accordance with an investment policy adopted by the board of directors, or a committee of board members, the company shall take into account the costs and benefits of hedge positions expected to be held by the company in the future along each scenario based on the execution of the hedging strategy, and it is eligible to reduce the amount of the SR using projections otherwise calculated. The investment policy must clearly articulate the company’s hedging objectives, including the metrics that drive rebalancing/trading. This specification could include maximum tolerable values for investment losses, earnings, volatility, exposure, etc. in either absolute or relative terms over one or more investment horizons vis-à-vis the chance of occurrence. Company management is responsible for developing, documenting, executing and evaluating the investment strategy, including the hedging strategy, used to implement the investment policy.

3. For this purpose, the investment assets refer to all the assets, including derivatives supporting covered products and guarantees. This also is referred to as the investment portfolio. The investment strategy is the set of all asset holdings at all points in time in all scenarios. The hedging portfolio, which also is referred to as the hedging assets, is a subset of the investment assets. The hedging strategy is the hedging asset holdings at all points in time in all scenarios. There is no attempt to distinguish what is the hedging portfolio and what is the investment portfolio in this section. Nor is the distinction between investment strategy and hedging strategy formally made here. Where necessary to give effect to the intent of this section, the requirements applicable to the hedging portfolio or the hedging strategy are to apply to the overall investment portfolio and investment strategy.

4. This particularly applies to restrictions on the reasonableness or acceptability of the models that make up the stochastic cash-flow model used to perform the projections, since these restrictions are inherently restrictions on the joint modeling of the hedging and non-hedging portfolio. To give effect to these requirements, they must apply to the overall investment strategy and investment portfolio.

**B. Modeling Approaches**

1. The analysis of the impact of the hedging strategy on cash flows is typically performed using either one of two types of methods as described below. Although a hedging strategy normally would be expected to reduce risk provisions, the nature of the hedging strategy and the costs to implement the strategy may result in an increase in the amount of the SR otherwise calculated. Particular attention should be given to VM-21 Section 1.B Principle 5 for the modeling of future hedging strategies.
2. The fundamental characteristic of the first type of method, referred to as the "explicit method," is that hedging positions and their resulting cash flows are included in the stochastic cash-flow model used to determine the scenario reserve, as discussed in Section 3.D, for each scenario.

3. The fundamental characteristic of the second type of method, referred to as the "implicit method," is that the effectiveness of the current hedging strategy on future cash flows is evaluated, in part or in whole, outside of the stochastic cash-flow model. There are multiple ways that this type of modeling can be implemented. In this case, the reduction to the SR otherwise calculated should be commensurate with the degree of effectiveness of the hedging strategy in reducing accumulated deficiencies otherwise calculated.

4. Regardless of the methodology used by the company, the ultimate effect of the current hedging strategy (including currently held hedge positions) on the SR needs to recognize all risks, associated costs, imperfections in the hedges and hedging mismatch tolerances associated with the hedging strategy. The risks include, but are not limited to: basis, gap, price, parameter estimation and variation in assumptions (mortality, persistency, withdrawal, annuitization, etc.). Costs include, but are not limited to: transaction, margin (opportunity costs associated with margin requirements) and administration. In addition, the reduction to the SR attributable to the hedging strategy may need to be limited due to the uncertainty associated with the company’s ability to implement the hedging strategy in a timely and effective manner. The level of operational uncertainty varies indirectly with the amount of time that the new or revised strategy has been in effect or mock tested.

Guidance Note: No hedging strategy is perfect. A given hedging strategy may eliminate or reduce some but not all risks, transform some risks into others, introduce new risks, or have other imperfections. For example, a delta-only hedging strategy does not adequately hedge the risks measured by the "Greeks" other than delta. Another example is that financial indices underlying typical hedging instruments typically do not perform exactly like the separate account funds, and hence the use of hedging instruments has the potential for introducing basis risk.

5. A safe harbor approach is permitted for reflection of future hedging strategies supporting the contracts for those companies whose modeled hedge assets comprise only linear instruments not sensitive to implied volatility. For companies with option-based hedge strategies, electing this approach would require representing the option-based portion of the strategy as a delta-rho two-Greek hedge program. The normally modeled option portfolio would be replaced with a set of linear instruments that have the same first-order Greeks as the original option portfolio.

C. Calculation of SR (Reported)

1. The company shall calculate CTE70 (best efforts)—the results obtained when the CTE70 is based on incorporating the future hedging strategies supporting the contracts (including both currently held and future hedge positions) into the stochastic cash-flow model on a best efforts basis, including all of the factors and assumptions needed to execute the future hedging strategies supporting the contracts (e.g., stochastic implied volatility). The determination of CTE70 (best efforts) may utilize either explicit or implicit modeling techniques.

2. The company shall calculate a CTE70 (adjusted) by recalculating the CTE70 assuming the company has no future hedging strategies supporting the contracts, therefore following the requirements of Section 4.A.4.a.
3. Because most models will include at least some approximations or idealistic assumptions, CTE70 (best efforts) may overstate the impact of the hedging strategy. To compensate for potential overstatement of the impact of the hedging strategy, the value for the SR is given by:

\[ \text{SR} = \text{CTE70 (best efforts)} + E \times \max[0, \text{CTE70 (adjusted)} – \text{CTE70 (best efforts)}] \]

4. The company shall specify a value for \( E \) (the “error factor”) in the range from 5% to 100% to reflect the company’s view of the potential error resulting from the level of sophistication of the stochastic cash-flow model and its ability to properly reflect the parameters of the hedging strategy (i.e., the Greeks being covered by the strategy), as well as the associated costs, risks and benefits. The greater the ability of the stochastic model to capture all risks and uncertainties, the lower the value of \( E \). The value of \( E \) may be as low as 5% only if the model used to determine the CTE70 (best efforts) effectively reflects all of the parameters used in the hedging strategy. If certain economic risks are not hedged, yet the model does not generate scenarios that sufficiently capture those risks, \( E \) must be in the higher end of the range, reflecting the greater likelihood of error. Likewise, simplistic hedge cash-flow models shall assume a higher likelihood of error.

5. The company shall conduct a formal back-test, based on an analysis of at least the most recent 12 months, to assess how well the model is able to replicate the hedging strategy in a way that supports the determination of the value used for \( E \).

6. Such a back-test shall involve one of the following analyses:

   a. For companies that model hedge cash flows directly ("explicit method"), replace the stochastic scenarios used in calculating the CTE70 (best efforts) with a single scenario that represents the market path that actually manifested over the selected back-testing period and compare the projected hedge asset gains and losses against the actual hedge asset gains and losses – both realized and unrealized – observed over the same time period. For this calculation, the model assumptions may be replaced with parameters that reflect actual experience during the back-testing period. In order to isolate the comparison between the modeled hedge strategy and actual hedge results for this calculation, the projected liabilities should accurately reflect the actual liabilities throughout the back-testing period; therefore, adjustments that facilitate this accuracy (e.g., reflecting actual experience instead of model assumptions, including new business, etc.) are permissible.

   To support the choice of a low value of \( E \), the company should ascertain that the projected hedge asset gains and losses are within close range of 100% (e.g., 80–125%) of the actual hedge asset gains and losses. The company may also support the choice of a low value of \( E \) by achieving a high R-squared (e.g., 0.80 or higher) when using a regression analysis technique.

   b. For companies that model hedge cash flows implicitly by quantifying the cost and benefit of hedging using the fair value of the hedged item (an “implicit method” or “cost of reinsurance method”), calculate the delta, rho and vega coverage ratios in each month over the selected back-testing period in the following manner:

      i. Determine the hedge asset gains and losses—both realized and unrealized—incurred over the month attributable to equity, interest rate, and implied volatility movements.

      ii. Determine the change in the fair value of the hedged item over the month attributable to equity, interest rate, and implied volatility movements. The hedged item should be defined in a manner that reflects the proportion of risks hedged (e.g., if a company elects to hedge 50% of a contract’s market risks, it should quantify the fair value of the hedged item as 50% of the fair value of the contract).

   Attachment Nineteen
   Life Actuarial (A) Task Force
   3/31/22

© 2022 National Association of Insurance Commissioners
iii. Calculate the delta coverage ratio as the ratio between (i) and (ii) attributable to equity movements.

iv. Calculate the rho coverage ratio as the ratio between (i) and (ii) attributable to interest rate movements.

v. Calculate the vega coverage ratio as the ratio between (i) and (ii) attributable to implied volatility movements.

vi. To support the company’s choice of a low value of E, the company should be able to demonstrate that the delta and rho coverage ratios are both within close range of 100% (e.g., 80–125%) consistently across the back-testing period.

vii. In addition, the company should be able to demonstrate that the vega coverage ratio is within close range of 100% in order to use the prevailing implied volatility levels as of the valuation date in quantifying the fair value of the hedged item for the purpose of calculating CTE70 (best efforts). Otherwise, the company shall quantify the fair value of the hedged item for the purpose of calculating CTE70 (best efforts) in a manner consistent with the realized volatility of the scenarios captured in the CTE (best efforts).

c. Companies that do not model hedge cash flows explicitly, but that also do not use the implicit method as outlined in Section 9.C.6.b above, shall conduct the formal back-test in a manner that allows the company to clearly illustrate the appropriateness of the selected method for reflecting the cost and benefit of hedging, as well as the value used for E.

7. A company that does not have 12 months of experience to date shall set E to a value that reflects the amount of experience available, and the degree and nature of any change to the hedge program. For a material change in strategy, with less than 6 months of history, E should be 1.0. However, E may be lower than 1.0 if at least 6 months of reliable experience is available and/or if the change in strategy is a minor refinement rather than a material change in strategy.

The following examples are provided as guidance for determining the E factor when there has been a change to the hedge program:

- The error factor should be temporarily 100% for material changes in hedge methodology (e.g., moving from a fair-value based strategy to a stop-loss strategy).

- An increase in the error factor may not always be needed for minor refinements to the hedge strategy (e.g., moving from swaps to Treasury futures).

8. The company shall set the value of E reflecting the extent to which the hedging program is clearly defined. To support a value of E below 1.0, there should be very robust documentation outlining all future hedging strategies. To the extent that documentation outlining any of the future hedging strategies is incomplete, the value of E shall be increased. In particular, the value of E shall be 1.0 if documentation is materially incomplete for any of the individual CDHS attributes (a) through (j), as listed in VM-01.

Any increases required to the value of E to reflect that documentation is not available to support that the future hedging strategies are clearly defined shall be in addition to increases to the value of E to reflect a lack of historical experience or to reflect the back-testing results, subject to an overall ceiling of 1.0 for E.

D. Additional Considerations for CTE70 (best efforts)
If the company is following one or more future hedging strategies supporting the contracts, the fair value of the portfolio of contracts falling within the scope of these requirements shall be computed and compared to the CTE70 (best efforts) and CTE70 (adjusted). If the CTE70 (best efforts) is below both the fair value and CTE70 (adjusted), the company should be prepared to explain why that result is reasonable.

For the purposes of this analysis, the SR and fair value calculations shall be done without requiring the scenario reserve for any given scenario to be equal to or in excess of the cash surrender value in aggregate for the group of contracts modeled in the projection.

E. Specific Considerations and Requirements

1. As part of the process of choosing a methodology and assumptions for estimating the future effectiveness of the current hedging strategy (including currently held hedge positions) for purposes of reducing the SR, the company should review actual historical hedging effectiveness. The company shall evaluate the appropriateness of the assumptions on future trading, transaction costs, other elements of the model, the strategy, the mix of business and other items that are likely to result in materially adverse results. This includes an analysis of model assumptions that, when combined with the reliance on the hedging strategy, are likely to result in adverse results relative to those modeled. The parameters and assumptions shall be adjusted (based on testing contingent on the strategy used and other assumptions) to levels that fully reflect the risk based on historical ranges and foreseeable future ranges of the assumptions and parameters. If this is not possible by parameter adjustment, the model shall be modified to reflect them at either anticipated experience or adverse estimates of the parameters.

2. A discontinuous hedging strategy is a hedging strategy where the relationships between the sensitivities to equity markets and interest rates (commonly referred to as the Greeks) associated with the guaranteed contract holder options embedded in the variable annuities and other in-scope products and these same sensitivities associated with the hedging assets are subject to material discontinuities. This includes, but is not limited to, a hedging strategy where material hedging assets will be obtained when the variable annuity account balances reach a predetermined level in relationship to the guarantees. Any hedging strategy, including a delta hedging strategy, can be a discontinuous hedging strategy if implementation of the strategy permits material discontinuities between the sensitivities to equity markets and interest rates associated with the guaranteed contract holder options embedded in the variable annuities and other in-scope products and these same sensitivities associated with the hedging assets. There may be scenarios that are particularly costly to discontinuous hedging strategies, especially where those result in large discontinuous changes in sensitivities (Greeks) associated with the hedging assets. Where discontinuous hedging strategies contribute materially to a reduction in the SR, the company must evaluate the interaction of future trigger definitions and the discontinuous hedging strategy, in addition to the items mentioned in the previous paragraph. This includes an analysis of model assumptions that, when combined with the reliance on the discontinuous hedging strategy, may result in adverse results relative to those modeled.

3. A strategy that has a strong dependence on acquiring hedging assets at specific times that depend on specific values of an index or other market indicators may not be implemented as precisely as planned.

4. The combination of elements of the stochastic cash-flow model—including the initial actual market asset prices, prices for trading at future dates, transaction costs and other assumptions—should be analyzed by the company as to whether the stochastic cash-flow model permits hedging strategies that make money in some scenarios without losing a reasonable amount in some other scenarios. This includes, but is not limited to:

   a. Hedging strategies with no initial investment that never lose money in any scenario and in some scenarios make money.
b. Hedging strategies that, with a given amount of initial money, never make less than accumulation at the one-period risk-free rates in any scenario but make more than this in one or more scenarios.

5. If the stochastic cash-flow model allows for such situations, the company should be satisfied that the results do not materially rely directly or indirectly on the use of such strategies. If the results do materially rely directly or indirectly on the use of such strategies, the strategies may not be used to reduce the SR otherwise calculated.

6. In addition to the above, the method used to determine prices of financial instruments for trading in scenarios should be compared to actual initial market prices. In addition to comparisons to initial market prices, there should be testing of the pricing models that are used to determine subsequent prices when scenarios involve trading financial instruments. This testing should consider historical relationships. For example, if a method is used where recent volatility in the scenario is one of the determinants of prices for trading in that scenario, then that model should approximate actual historic prices in similar circumstances in history.

VM-31 Section 3.C.5

Assets and Risk Management – A brief description of the asset portfolio, and the approach used to model risk management strategies, such as hedging, and other derivative programs, including a description of any future hedging strategies supporting the policies, and any material changes to the hedging strategies from the prior year.

VM-31 Section 3.D.6.f

Risk Management – Detailed description of model risk management strategies, such as hedging and other derivative programs, including any future hedging strategies supporting the policies and any adjustments to the SR pursuant to VM-20 Section 7.K.1 and VM-20 Section 7.K.2, specific to the groups of policies covered in this sub-report and not discussed in the Life Summary Section 3.C.5. Documentation of any future hedging strategies should include documentation addressing each of the CDHS documentation attributes.

a. Investment Officer on Investments – A certification from a duly authorized investment officer that the modeled company investment strategy, including any future hedging strategies supporting the policies, is representative of and consistent with the company’s investment policy and that documentation of the CDHS attributes for any future hedging strategies supporting the policies are accurate.

b. Qualified Actuary on Investments – A certification by a qualified actuary, not necessarily the same qualified actuary that has been assigned responsibility for the PBR Actuarial Report or this sub-report, that the modeling of any future hedging strategies supporting the policies is consistent with the company’s actual future hedging strategies and was performed in accordance with VM-20 and in compliance with all applicable ASOPs, and the alternative investment strategy as defined in VM-20 Section 7.E.1.g reflects the prescribed mix of assets with the same WAL as the reinvestment assets in the company investment strategy.

VM-31 Section 3.E.5
Assets and Risk Management – A brief description of the general account asset portfolio, and the approach used to model risk management strategies, such as hedging and other derivative programs, including a description of any future hedging strategies supporting the contracts, and any material changes to the hedging strategies from the prior year.

VM-31 Section 3.F.8

Hedging and Risk Management – The following information regarding the hedging and risk management assumptions used by the company in performing a principle-based valuation under VM-21:

a. Strategies – Detailed description of risk management strategies, such as hedging and other derivative programs, including any future hedging strategies supporting the contracts, specific to the groups of contracts covered in this sub-report.
   i. Descriptions of basis risk, gap risk, price risk and assumption risk.
   ii. Methods and criteria for estimating the a priori effectiveness of the strategy.
   iii. Results of any reviews of actual historical hedging effectiveness.

b. CDHS – Documentation addressing each of the CDHS documentation attributes for any future hedging strategies supporting the contracts.

b. Strategy Changes – Discussion of any changes to the hedging strategy during the past 12 months, including identification of the change, reasons for the change, and the implementation date of the change.

d. Hedge Modeling – Description of how the hedge strategy was incorporated into modeling, including:
   i. Differences in timing between model and actual strategy implementation.
   ii. For a company that does not have a future hedging strategy supporting the contracts, confirmation that currently held hedge assets were included in the starting assets.
   iii. Evaluations of the appropriateness of the assumptions on future trading, transaction costs, other elements of the model, the strategy, and other items that are likely to result in materially adverse results.
   iv. Discussion of the projection horizon for the future hedge strategy as modeled and a comparison to the timeline for any anticipated future changes in the company’s hedge strategy.
   v. If residual risks and frictional costs are assumed to have a value of zero, a demonstration that a value of zero is an appropriate expectation.
   vi. Any discontinuous hedging strategies modeled, and where such discontinuous hedging strategies contribute materially to a reduction in the SR, any evaluations of the interaction of future trigger definitions and the discontinuous hedging strategy, including any analyses of model assumptions that, when combined with the reliance on the discontinuous hedging strategy, may result in adverse results relative to those modeled.
   vii. Disclosure of any situations where the modeled hedging strategies make money in some scenarios without losing a reasonable amount in some other scenarios, and an explanation of why the situations are not material for determining the CTE 70 (best efforts).
   viii. Results of any testing of the method used to determine prices of financial instruments for trading in scenarios against actual initial market prices, including how the testing considered historical relationships. If there are substantial discrepancies, disclosure of the substantial discrepancies and documentation as to why the model-based prices are appropriate for determining the SR.
   ix. Any model adjustments made when calculating CTE 70 (adjusted), in particular, any liquidation or substitution of assets for currently held hedges.
e. Error Factor (E) and Back-Testing – Description of E, the error factor, and formal back-tests performed, including:
   i. The value of E, and the approach and rationale for the value of E used in the reserve calculation.
   ii. For companies that model hedge cash flows using the explicit method, as described in VM-21 Section 9.C.6.a, and have 12 months of experience, an analysis of at least the most recent 12 months of experience and the results of a back-test showing that the model is able to replicate the hedging results experienced in a way that justifies the value used for E. Include at least a ratio of the actual change in market value of the hedges to the modeled change in market value of the hedges at least quarterly.
   iii. For companies that model hedge cash flows using the implicit method, and have 12 months of experience, as described in VM-21 Section 9.C.6.b, the results of a back-test in which (a) actual hedge asset gains and losses are compared against (b) proportional fair value movements in hedged liability, including:
       a) Delta, rho and vega coverage ratios in each month over the back-testing period, which may be presented in a chart or graph.
       b) The implied volatility level used to quantify the fair value of the hedged item, as well as the methodology undertaken to determine the appropriate level used.
   iv. For companies that do not model hedge cash flows using either the explicit method or the implicit method, as described in VM-21 Section 9.C.6.c, and have 12 months of experience, the results of the formal back-test conducted to validate the appropriateness of the selected method and value used for E.
   v. For companies that do not have 12 months of experience, the basis for the value of E that is chosen based on the guidance provided in VM-21 Section 9.C.7, considering the actual history available and the degree and nature of any changes made to the hedge strategy.
   vi. The basis for the magnitude of adjustment or lack of adjustment for the value of E chosen based on the robustness of the documentation outlining the future hedging strategy.

f. Safe Harbor for Future Hedging Strategies – If electing the safe harbor approach for a future hedging strategy supporting the contracts, as discussed in VM-21 Section 9.C.8, a description of the linear instruments used to model the option portfolio.

g. Hedge Model Results – Disclosure of whether the calculated CTE 70 (best efforts) is below both the fair value and CTE 70 (adjusted), and if so, justification for why that result is reasonable, as discussed in VM-21 Section 9.D.

VM-31 Section 3.F.12.c

CTEPA – If using the CTEPA method, a summary including:
   i. Disclosure (in tabular form) of the scenario reserves using the same method and assumptions as those used by the company to calculate CTE 70 (adjusted) as outlined in VM-21 Section 9.C (or the SR following VM-21 Section 4.A.4.a for a company that does not have a future hedging strategy supporting the contracts), as well as the corresponding scenarios reserves substituting the assumptions prescribed by VM-21 Section 6.C.

   ii. Summary of results from a cumulative decrement projection along the scenario whose reserve value is closest to the CTE 70 (adjusted), as outlined in VM-21 Section 9.C (or the SR following VM-21 Section 4.A.4.a for a company that does not have a future hedging strategy supporting the contracts), under the assumptions outlined in VM-21 Section 6.C. Such a cumulative decrement projection shall include, at the end of each projection year, the projected proportion (expressed as a percent of the total projected account
value) of persisting contracts as well as the allocation of projected decrements across death, full surrender, account value depletion, elective annuitization, and other benefit election.

iii. Summary of results from a cumulative decrement projection, identical to (ii) above, but replacing all assumptions outlined in VM-21 Section 6.C with the corresponding assumptions used in calculating the SR.

VM-31 Section 3.F.16.a and Section 3.F.16.b

a. Investment Officer on Investments – A certification from a duly authorized investment officer that the modeled asset investment strategy, including any future hedging strategies supporting the contracts, is consistent with the company’s current investment strategy except where the modeled investment strategy may have been substituted with the alternative investment strategy, and that documentation of the CDHS attributes for any future hedging strategies supporting the contracts are accurate.

b. Qualified Actuary on Investments – A certification by a qualified actuary, not necessarily the same qualified actuary that has been assigned responsibility for the PBR Actuarial Report or this sub-report, that the modeling of any future hedging strategies supporting the contracts is consistent with the company’s actual future hedging strategies and was performed in accordance with VM-21 and in compliance with all applicable ASOPs.

Re: APF 2020-12; Hedging strategies in VM-20 and VM-21

Dear Mr. Boerner,

The American Academy of Actuaries\(^1\) Life Valuation Committee (LVC) appreciates the opportunity to provide comments on APF 2020-12 regarding hedging in VM-20 and VM-21.

As various Academy Life Practice Council (LPC) groups have stated in the past, the LVC believes companies should model their investment strategies as part of a principle-based reserve calculation, which includes the modeling of hedging activities. With respect to VM-21, the LPC/LVC recommends that a principle-based approach for hedges that applies margins for modeling and strategy risks be adopted. This eliminates the need for VM-21 metrics such as conditional tail expectation (CTE) 70 (adjusted) and the error “E” factor that results in questionable measurements of the error/residual risk margin for hedging strategies.

Additionally, the LVC does not believe the concept of a clearly defined hedging strategy (CDHS) or “future hedging strategy” definition is needed in a principle-based approach. However, we understand that the NAIC may wish to incorporate guardrails that would highlight the necessity for companies to reflect higher margins for certain hedging strategies.

Below are additional comments and recommendations for three of the stated reasons contained in the proposal.

1. **Reflect all of a company’s future hedging strategies but reflect the additional error (VM-21) or residual risk (VM-20) that is presented by a future hedging strategy not being clearly defined.**

   The LVC agrees that companies should be required to model their hedging strategies and recommends that a more principle-based approach (conceptually similar to the current VM-20) in determining the margin for error/residual risk be incorporated in VM-21.

---

\(^1\) The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
The VM-21 approach currently uses a weighted average of CTE70 (best efforts) and CTE70 (adjusted) to determine an error/residual margin. CTE70 (adjusted) is determined by only using hedge assets held by the company as of the valuation date. It assumes the investment strategy for such hedge assets is to runoff the assets or to convert them to cash/other general account assets. Neither of these options may be representative of the company’s actual hedging policy. A metric that does not reflect a company’s investment policy is not principle-based and is less likely to properly reflect the error/residual risk one is trying to measure. Additionally, we note that if CTE70 (adjusted) is less than CTE70 (best efforts), the error/residual risk is assumed to be $0. This is also not principle-based and fails to properly measure the underlying risk. In order to properly measure the underlying risk, companies should model their investment strategy (CTE70 best efforts) and then apply an appropriate level of margin.

A VM-20-like principle-based approach to modeling hedge cash flows is consistent with how other cash flows are projected; margins are added to best estimate cash flows with the level of such margins based on the confidence in the modeling of the cash flows. Such an approach avoids issues associated with trying to bifurcate hedging between in force and future hedges or multiple hedging strategies. It also eliminates the current lack of a margin when CTE70 (adjusted) is less than CTE70 (best efforts).

2. **Remove optionality for liquidating currently held hedges (despite liquidation not being a part of the company investment strategy) if not modeling a future hedging strategy.**

The LVC recommends that companies model their investment strategies, with appropriate margins. Companies should not have the option to liquidate currently held hedges as this would not be consistent with their investment strategy. Moving to a VM-20-like principle-based approach in the modeling of hedges would remove the need for this option.

3. **New hedging strategies (<6 months experience) have an E factor of 1.0 for VM-21. For comparison, the current draft VM-22 only allows modeling hedges after they have been in place for 6 months. When only CDHS were modeled in VM-21, new hedging strategies with no experience had E factors as low as 0.5 even without meaningful analysis. This treatment was much too lenient for new hedging strategies.**

The reserve requirement should encourage companies to adopt strategies that serve to reduce risk. Limiting E factors for new hedging strategies can have the unintended effect of discouraging hedging strategies that reduce risk. Adopting the principle-based approach in VM-20 would eliminate the need for an E factor and allow companies to pursue hedging strategies without the potential for an increase in reserve created by artificial limits.

Investment strategies, including hedging strategies, will change over time. These changes may be marginal, such as minor modifications to sector allocations, credit limits, or hedge targets. At other times—such as during changes in a company’s risk appetite—the changes may be more substantial. In either event, changes in strategies should be reflected in the reserves as they are adopted by the company. Redeterminations of the error/residual margin calculations should be required when significant changes occur and be supported by robust simulation testing or other meaningful analysis. Changes should be clearly disclosed with adequate supporting documentation.
Thank you for your consideration of these comments. We would be pleased to answer any questions you may have and to provide additional support as needed. Please feel free to contact Devin Boerm, the Academy’s deputy director of public policy, to arrange for discussion of these comments.

Sincerely,

Craig Morrow

Chair, NAIC Life Actuarial Task Force (LATF)  
Re: APF 2020-12  

Dear Mr. Boerner:  

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit comments on the re-exposure of APF 2020-12.  

Historically, many carriers have understood the PBR framework to require an insurer to satisfy elevated CDHS criteria for hedging strategies to be included within PBR modeling. This approach was established in consideration of (a) regulator concerns about assuming ongoing future hedging activity, (b) the existence of strategies with non-statutory targets, and (c) modeling challenges associated with the incorporation of hedge cash flows in stochastic models.  

The APF proposes to consider future hedging activity as a form of reinvestment, with CDHS criteria becoming minimum documentation requirements.  

ACLI can potentially support the APF but believes that several improvements are needed, as follows:  

1. A long runway should be provided for implementation;  
2. Provisions for indexed credit derivative programs should be incorporated;  
3. The existing VM-21 E factor guidance for new or substantially modified strategies should be retained;  
4. The CTE70 (adjusted) run in VM-21 should allow companies to use either a run-off or liquidation basis;  
5. The exception within the definition of “future hedging strategy” should be clarified, and time should be given for further industry review; and  
6. Outreach should be conducted to provide assurance that the proposed changes will not reintroduce undesirable incentives that led to the VA reform project.  

Each of these provisions is explained below.  

1. A long runway should be provided for implementation
The APF requires all “future hedging strategies” to be incorporated within PBR models. Implementing this on an explicit basis (or, in VM-21, developing the formal analysis to support an implicit basis), will require advanced modeling and analytical capabilities that some carriers do not currently possess. At present, a company that does not have a CDHS under VM-21 performs a simple run-off or cash-out of existing hedges. For non-PBR purposes such as business planning, stochastic modeling is typically not required, and it is common to layer the effects of hedging on top of modeled cash flows.

The APF will require some carriers to make significant new investments in modeling infrastructure, involving systems, coding, testing, and controls. Some may require external resources. In short, significant lead time would be necessary for this APF to be enacted smoothly and successfully throughout the industry.

We do not believe it is realistic for this APF to take effect prior to the 2024 Valuation Manual. For some carriers, a more expeditious implementation may be possible, but it would be necessary to insert a transition regime to accommodate carriers that need time to develop the necessary modeling infrastructure. An extended implementation runway or transition regime would also aid carriers with capital planning, should the APF have material financial impacts.

2. Provisions for indexed credit derivative programs should be incorporated

ACLI believes that indexed credit derivative programs must be reflected in PBR models to produce a reasonable valuation of indexed products, including IUL and RILAs. These derivative programs are used to support crediting rates, are fundamental to product design, and more closely resemble ALM general account crediting rate investment strategies than GMxB hedging strategies.

The APF, however, can be interpreted as applying a “one size fits all” approach to derivative programs. ACLI disagrees with this philosophy from a proportionality standpoint: it seems appropriate for straightforward derivative payoffs that offset indexed interest credits to merit different treatment relative to dynamic strategies that involve daily trading.

We recommend two modifications. First, the existence of an indexed credit derivative program should not eliminate the ability for a VM-20 product to satisfy the VM-20 stochastic exclusion test, as currently dictated by VM-20, Section 6.A.1.b. We see little reason why VM-20 should always require stochastic modeling for indexed products. If an indexed product, including derivatives, has material interest rate and/or equity price risk, the Stochastic Exclusion Test will still require the calculation of the Stochastic Reserve.

Second, within VM-21, the APF should include an approach similar to the American Academy of Actuaries’ VM-22 proposal that haircuts the returns of indexed credit derivative programs in the Stochastic Reserve and eliminates the CTE70 (adjusted) calculation. In its VM-22 presentation, the American Academy of Actuaries proposed a haircut as low as 1% for indexed products. Although this haircut needs additional calibration, ACLI supports the language and approach used in the VM-22 draft.
These two changes would “right-size” the treatment of indexed credit derivative programs based on the nature and risk of the investment strategy and align treatment across VM sections.

3. **Existing VM-21 E factor guidance for new or substantially modified strategies should be retained**

ACLI supports the principle that VM-21 E factors should be higher when greater uncertainty exists, such as when a new strategy is introduced or when a strategy is not “clearly defined.”

For VM-21 strategies with less than six months of history, the APF, while consolidating the guidance between sections 9.A.7 and 9.C.5, proposes significant increases to the E factors. While we support consolidating the guidance, we do not support the E factor increases.

The APF would require the E factor to be 1.0 for VM-21 CDHS strategies with less than six months of history, effectively establishing the Stochastic Reserve as the maximum of CTE70 (best efforts) and CTE70 (adjusted) for the first six months after the introduction of a new or substantially modified hedging strategy. At present, strategies can have E factors less than 1.0 using at least three months of experience, mock testing, or implementation of the strategy on similar products.

The rigor around a CDHS, as well as VM-G requirements, should alleviate concerns about “window dressing” and eliminate the need for a blanket six-month “waiting period.” In addition, the formation of a hedging strategy is always subject to internal governance, which includes an assessment of the effects of the strategy on multiple frameworks (e.g., GAAP/IFRS, internal economic, liquidity, and tax). In most states, the filing of a derivatives use plan is required. These guardrails mitigate against the possibility of “window dressing”.

We also view mock testing as useful for establishing an E factor and hedging credit during the initial months following the introduction of a new or substantially modified hedging strategy in light of the internal governance that underpins hedging activity. We would support the development of regulatory guidance for mock testing practices, but we would need to better understand regulatory concerns to address the substance of this guidance.

We consider the current E factor guidance for new or substantially modified strategies to be conceptually appropriate. By disallowing specified alternatives for historical experience, the APF requires an E factor of 1.0. Disallowing these alternatives would introduce unrealistic prudence, cliff effects, and volatility, leading to perverse disincentives to hedge or to improve existing strategies. The Task Force should retain the current provisions of VM-21 that allow new strategies to have E factors less than 1.0.

4. **The CTE70 (adjusted) run in VM-21 should allow companies to use either a run-off or liquidation basis**

The APF is unclear regarding the VM-21 CTE70 (adjusted) run, which is used in both the Stochastic Reserve and the Standard Projection Amount. At present, CTE70 (adjusted) is CTE70
“assuming the company has no CDHS, therefore following the requirements of Section 4.A.4.a.” The APF rewrites the first part of this provision to say that CTE70 (adjusted) is CTE70 “assuming the company has no future hedging strategies supporting the contracts,” which implies liquidation. But rewritten Section 4.A.4.a says that “existing hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the starting assets,” which, if anything, implies run-off. The guidance appears contradictory and unclear.

ACLI believes that company optionality is the preferred solution. Because CTE70 (adjusted) is an artificial construct, neither the runoff of in-force hedges nor liquidation is necessarily a good representation of the company’s actual strategy. The more reasonable approach might depend on the nature of the program and the tenor of the derivative instruments used. We recommend that both runoff and liquidation options be permitted, at the discretion of the company.

5. The exception within the definition of “future hedging strategy” should be clarified, and time should be given for further industry review

The APF defines “future hedging strategy” as “a derivative program undertaken by a company to manage risks through one or more future hedging transactions.” The definition includes an exception: “A strategy involving the offsetting of the risks associated with products falling under the scope of different requirements within the Valuation Manual (e.g., VM-20, VM-21, or VM-22) does not qualify as a future hedging strategy.”

This language needs careful consideration, because it defines whether a derivative program is to be subject to or excluded from PBR modeling and documentation requirements. To avoid ambiguity, ACLI recommends the following wording clarifications, followed by additional time for study: “A derivative program undertaken by a company to manage strategy involving the offsetting of the risks associated with products falling under the scope of different requirements of the Valuation Manual (e.g., VM-20, VM-21, or VM-22) does not qualify as a future hedging strategy.”

6. Outreach should be conducted to provide assurance that the proposed changes will not reintroduce undesirable incentives that led to the VA reform project

The updated variable annuity framework was intended to address drivers of the old framework that led carriers to form captive reinsurers. Oliver Wyman’s discussions with carriers indicated that many captives were intended to address challenges related to hedging. For example, hedging strategies designed to manage financial outcomes under non-statutory frameworks were producing unintuitive outcomes when applied to the statutory reserves and capital. To mitigate these outcomes, major changes were made to AG43/VM-21 and C3P2, and an interest-rate only accounting solution (SSAP 108) was introduced.

The APF proposes to overhaul the treatment of hedging within the new framework. By promoting the reflection of additional hedging within PBR models and including provisions that are not sufficiently principle-based, the APF may exacerbate the challenges that carriers face when
managing to both statutory and non-statutory frameworks. The APF may run the risk of reversing, at least in part, the outcomes of the VA reform project.

It has been our understanding that the Valuation Analysis Working Group had been planning to contact individual carriers to discuss the potential effects of the APF. It is unclear if any carrier has been contacted to date. We urge the Task Force members who are members of VAWG to undertake this outreach prior to finalization of this APF.

Thank you for your consideration,

B Barfeili

cc: Reggie Mazyck, NAIC
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

**Identification:**
Hedging Drafting Group of LATF

**Title of the Issue:**
Reflect all future hedging strategies in VM-20 and VM-21. Revise hedge modeling to increase E factor (VM-21) or residual risk (VM-20) when future hedging strategies are not clearly defined.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

January 1, 2022 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

2. Add a definition for “future hedging strategy,” consistent with the definition for CDHS and the current VM-01 definition of “derivative program”, which VM-01 notes includes hedging programs.
3. Add a definition for “hedging transactions,” taken from the APPM but modified slightly to be consistent with Valuation Manual terminology.
4. Reflect all of a company’s future hedging strategies, but reflect the additional error (VM-21) or residual risk (VM-20) that is presented by a future hedging strategy not being clearly defined.
5. Remove optionality for liquidating currently held hedges if the company does not have a future hedging strategy. Language has been added for consideration to keep this optionality for the adjusted run for a company that does have a future hedging strategy (which would not be modeled in the adjusted run), as the drafting group is interested in additional input on this item. A reporting item to disclose the impact of any such liquidation is added, to provide additional regulator comfort if this optionality is included in the final adopted edits.
6. New hedging strategies (those without at least 12 months experience or 3 months of experience and robust mock testing) have an E factor of 1.0 for VM-21, unless they are new hedging strategies backing a newly introduced or newly acquired product or block of business, which may have an E factor as low as 0.3. Moreover, with prior domestic regulator approval, which should mitigate regulator concerns that strategy changes implemented just before year end may allow for manipulation of results, robust
mock testing is sufficient to allow an E factor lower than 1.0. Note that the current draft VM-22 only allows modeling hedges after they have been in place for 6 months, and we would recommend that be revised to be in line with these changes. When only CDHS were modeled in VM-21, new hedging strategies with no experience had E factors as low as 0.5 even without meaningful analysis. This treatment was much too lenient for new hedging strategies.
The term “clearly defined hedging strategy” (CDHS) means a future hedging strategy for which the following attributes are clearly documented:

- The specific risks being hedged (e.g., cash flow, fee income, policy interest credits, delta, rho, vega, etc.).
- The hedging objectives.
- The material risks that are not hedged (e.g., variation from expected mortality, withdrawal, and other utilization or decrement rates assumed in the hedging strategy, etc.).
- The financial instruments used to hedge the risks.
- The hedging strategy’s trading rules, including the permitted tolerances from hedging objectives.
- The metrics, criteria, and frequency for measuring hedging effectiveness.
- The conditions under which hedging will not take place and for how long the lack of hedging can persist.
- The group or area, including whether internal or external, responsible for implementing the hedging strategy.
- Areas where basis, gap or assumption risk related to the hedging strategy have been identified.
- The circumstances under which hedging strategy will not be effective in hedging the risks.

Guidance Note: For purposes of the CDHS documented attributes, “effectiveness” need not be measured in a manner as defined in SSAP No. 86—Derivatives in the AP&P Manual.

- The term “future hedging strategy” is a derivative program undertaken by a company to manage risks through one or more future hedging transactions, including the future purchase or sale of hedging instruments and the opening and closing of hedging positions.

A future hedging strategy may be dynamic, static or a combination thereof. A strategy involving the offsetting of the risks associated with products falling under the scope of different requirements within the Valuation Manual (e.g., VM-20, VM-21, or VM-22) does not qualify as a future hedging strategy.

- The term “hedging transaction” means a derivative(s) transaction which is entered into and maintained to reduce:
  a. The risk of a change in the fair value, the value on a statutory, GAAP, or other basis, or cash flow of assets and liabilities which the company has acquired or incurred or has a firm commitment to acquire or incur or for which the company has a forecasted acquisition or incurrence; or
  b. The currency exchange rate risk or the degree of foreign currency exposure in assets and liabilities which the company has acquired or incurred or has a firm commitment to acquire or incur or for which the company has forecasted acquisition or incurrence.
VM-20 Section 6.A.1.b

A company may not exclude a group of policies for which there is one or more future hedging strategies supporting the policies from SR requirements, except in the case where all future hedging strategies supporting the policies are solely associated with product features that are determined to not be material under Section 7.B.1 due to low utilization.

VM-20 Section 7.E.1.g

Notwithstanding the above requirements, the modeled reserve shall be the higher of that produced by the modeled company investment strategy and that produced by substituting an alternative investment strategy in which the fixed income reinvestment assets have the same weighted average life (WAL) as the reinvestment assets in the modeled company investment strategy and are all public non-callable corporate bonds with gross asset spreads, asset default costs and investment expenses by projection year that are consistent with a credit quality blend of 50% PBR credit rating 6 (A2/A) and 50% PBR credit rating 3 (Aa2/AA).

Policy loans, equities and derivative instruments associated with the execution of future hedging strategies supporting the policies are not affected by this requirement.

VM-20 Section 7.K

K. Modeling of Derivative Programs

1. When determining the DR and the SR, the company shall include in the projections the appropriate costs and benefits of derivative instruments that are currently held by the company in support of the policies subject to these requirements. The company shall also include the appropriate costs and benefits of anticipated future derivative instrument transactions associated with the execution of future hedging strategies supporting the policies, as well as the appropriate costs and benefits of anticipated future derivative instrument transactions associated with non-hedging derivative programs (e.g., replication, income generation) undertaken as part of the investment strategy supporting the policies, provided they are normally modeled as part of the company’s risk assessment and evaluation processes.

2. For each derivative program that is modeled, the company shall reflect the company’s established investment policy and procedures for that program; project expected program performance along each scenario; and recognize all benefits, residual risks and associated frictional costs. The residual risks include, but are not limited to: basis, gap, price, parameter estimation and variation in assumptions (mortality, persistency, withdrawal, etc.). Frictional costs include, but are not limited to: transaction, margin (opportunity costs associated with margin requirements) and administration. For future hedging strategies supporting the policies, the company may not assume that residual risks and frictional costs have a value of zero, unless the company demonstrates in the PBR Actuarial Report that “zero” is an appropriate expectation. VM-21 Section 1.B. Principle 5 applies as a general principle for the modeling of future hedging strategies.

3. In circumstances where one or more material risk factors related to a derivative program are not fully captured within the cash-flow model used to calculate CTE 70, the company shall reflect such risk factors by increasing the SR as described in Section 5.E.
4. In circumstances where documentation outlining the future hedging strategies is incomplete, the company shall reflect the future hedging strategies not being clearly defined by increasing the SR as described in Section 5.E. To support no increase to the SR, there should be very robust documentation outlining each future hedging strategy. In particular, the SR shall be at least as great as the SR that would result if a future hedging strategy were not reflected in the SR, if the documentation is materially incomplete for any of the individual CDHS attributes (a) through (j), as listed in VM-01.

Any increases required to the SR to reflect that documentation is not available to support that the future hedging strategies are clearly defined shall be in addition to increases to the SR pursuant to Section 7.K.3 above.

Guidance Note: Section 5.E requires that the company “Determine any additional amount needed to capture any material risk included in the scope of these requirements but not already reflected in the cash-flow models using an appropriate and supportable method and supporting rationale.” In the case of a derivative program that is a future hedging strategy, Section 7.K.3 requires such an increase for disconnects between the hedge modeling and the future hedging strategy, while Section 7.K.4 requires such an increase for disconnects between the loosely defined future hedging strategy and what may actually take place.

VM-20 Section 7.L (Remove entire Section 7.L)

VM-21 Section 1.D.2 (Delete entire definition and renumber subsequent sections VM-21 Section 1.D.3 and VM-21 Section 1.D.4)

VM-21 Section 4.A.4

Modeling of Hedges
a. For a company that does not have a future hedging strategy supporting the contracts:
   i. The company shall not consider the cash flows from any future hedge purchases or any rebalancing of existing hedge assets in its modeling, since they are not included in the company’s investment strategy supporting the contracts.
   ii. Existing hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the starting assets.

b. For a company with one or more future hedging strategies supporting the contracts, the detailed requirements for the modeling of hedges are defined in Section 9. The following paragraphs are a high-level summary and do not supersede the detailed requirements.

Deleted: L. Clearly Defined Hedging Strategy
   A clearly defined hedging strategy must identify:
   - The specific risks being hedged (e.g., cash flow, policy interest credits, delta, rho, vega, etc.)
   - The hedge objectives.
   - The risks that are not hedged (e.g., variation from expected mortality, withdrawal, and other utilization or decrement rates assumed in the hedging strategy, etc.)
   - The financial instruments used to hedge the risks.
   - The hedge trading rules, including the permitted tolerances from hedging objectives.
   - The metrics for measuring hedging effectiveness.
   - The criteria used to measure hedging effectiveness.
   - The frequency of measuring hedging effectiveness.
   - The conditions under which hedging will not take place.
   - The person or persons responsible for implementing the hedging strategy.
   - Areas where basis, gap or assumption risk related to the hedging strategy have been identified.
   - The circumstances under which hedging strategy will not be effective in hedging the risks.
   - Hedging strategies involving the offsetting of the risks associated with other products outside of the scope of these requirements are not a clearly defined hedging strategy.

Guidance Note: For purposes of the above criteria, “effectiveness” need not be measured in a manner as defined in SSAP No. 16—Derivatives in the AP&P Manual.

Deleted: The term “clearly defined hedging strategy” (CDHS) is defined in VM-01. In order to be designated as a CDHS, the strategy must meet the principles outlined in Section 1.B (particularly Principle 3) and shall, at a minimum, identify:
   - The specific risks being hedged (e.g., delta, rho, vega, etc.)
   - The hedge objectives.
   - The risks that are not hedged (e.g., variation from expected mortality, withdrawal, and other utilization or decrement rates assumed in the hedging strategy, etc.)
   - The financial instruments that will be used to hedge the risks.
   - The hedge trading rules, including the permitted tolerances from hedging objectives.
   - The metrics for measuring hedging effectiveness.
   - The criteria used to measure hedging effectiveness.
   - The frequency of measuring hedging effectiveness.
   - The conditions under which hedging will not take place.
   - The person or persons responsible for implementing the hedging strategy.

Guidance Note: It is important to note that strategies involving the offsetting of the risks associated with V/A guarantees with other products outside of the scope of these requirements (e.g., equit... [1]

Deleted: CDHS

Deleted: The hedge assets may then be considered in one of two ways:

Deleted: (b) Include the asset cash flows from any contractual payments and maturity values in the projection model, or

No hedge positions — in which case the hedge positions held on the valuation date are replaced with cash and/or other general account assets in an amount equal to the aggregate market value of these hedge positions.

Guidance Note: If the hedge positions held on the valuation date are replaced with cash, then as with any other cash, such as...

Deleted: CDHS
i. The appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the projections used in the determination of the SR.

ii. The projections shall take into account the appropriate costs and benefits of hedge positions expected to be held in the future through the execution of the future hedging strategies supporting the contracts. Because models do not always accurately portray the results of hedge programs, the company shall, through back-testing and other means, assess the accuracy of the hedge modeling. The company shall determine a SR as the weighted average of two CTE values; first, a CTE70 ("best efforts") representing the company’s projection of all of the hedge cash flows, including future hedge purchases, and a second CTE70 ("adjusted") which shall use only hedge assets held by the company on the valuation date and no future hedge purchases. These are discussed in greater detail in Section 9. The SR shall be the weighted average of the two CTE70 values, where the weights reflect the error factor \( \frac{1}{2} \) determined following the guidance of Section 9.C.4.

iii. The company is responsible for verifying compliance with all requirements in Section 9 for all hedging instruments included in the projections.

iv. The use of products not falling under the scope of these requirements (e.g., equity-indexed annuities) as a hedge shall not be recognized in the determination of accumulated deficiencies.

**VM-21 Section 4.D.4.b**

Notwithstanding the above requirements, the SR shall be the higher of that produced by the modeled company investment strategy and that produced by substituting an alternative investment strategy in which the fixed income reinvestment assets have the same weighted average life (WAL) as the reinvestment assets in the modeled company investment strategy and are all public non-callable corporate bonds with gross asset spreads, asset default costs, and investment expenses by projection year that are consistent with a credit quality blend of 50% PBR credit rating 6 (A2/A) and 50% PBR credit rating 3 (Aa2/AA).

Policy loans, equities and derivative instruments associated with the execution of future hedging strategies supporting the contracts are not affected by this requirement.

**VM-21 Section 6.B.3.a.ii – Footnote (Footnote at Bottom of Page 21-23)**

Throughout this Section 6, references to CTE70 (adjusted) shall also mean the SR for a company that does not have a future hedging strategy supporting the contracts as discussed in Section 4.A.4.a.

**VM-21 Section 6.B.3.b.ii**

Calculate the Prescribed Projections Amount as the CTE70 (adjusted) using the same method as that outlined in Section 9.C (which is the same as SR following Section 4.A.4.a for a company that does not have a future hedging strategy supporting the contracts) but substituting the assumptions prescribed by Section 6.C. The calculation of this Prescribed Projections Amount also requires that the scenario reserve for any given scenario be equal to or in excess of the cash surrender value in aggregate on the valuation date for the group of contracts modeled in the projection.

Cash flows associated with hedging shall be projected in the same manner as that used in the calculation of the CTE70 (adjusted) as discussed in Section 9.C or Section 4.A.4.a for a company without a future hedging strategy supporting the contracts.

### VM-21 Section 9

#### Section 9: Modeling of Hedges under a Future Hedging Strategy

**A. Initial Considerations**

1. Subject to Section 9.C.2, the appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the calculation of the SR, determined in accordance with Section 3.D and Section 4.D.

2. If the company is following one or more future hedging strategies supporting the contracts, in accordance with an investment policy adopted by the board of directors, or a committee of board members, the company shall take into account the costs and benefits of hedge positions expected to be held by the company in the future along each scenario based on the execution of the hedging strategy, and it is eligible to reduce the amount of the SR using projections otherwise calculated. The investment policy must clearly articulate the company’s hedging objectives, including the metrics that drive rebalancing/trading. This specification could include maximum tolerable values for investment losses, earnings, volatility, exposure, etc. in either absolute or relative terms over one or more investment horizons vis-à-vis the chance of occurrence. Company management is responsible for developing, documenting, executing and evaluating the investment strategy, including the hedging strategy, used to implement the investment policy.

3. For this purpose, the investment assets refer to all the assets, including derivatives supporting covered products and guarantees. This also is referred to as the investment portfolio. The investment strategy is the set of all asset holdings at all points in time in all scenarios. The hedging portfolio, which also is referred to as the hedging assets, is a subset of the investment assets. The hedging strategy is the hedging asset holdings at all points in time in all scenarios. There is no attempt to distinguish what is the hedging portfolio and what is the investment portfolio in this section. Nor is the distinction between investment strategy and hedging strategy formally made here. Where necessary to give effect to the intent of this section, the requirements applicable to the hedging portfolio or the hedging strategy are to apply to the overall investment portfolio and investment strategy.

4. This particularly applies to restrictions on the reasonableness or acceptability of the models that make up the stochastic cash-flow model used to perform the projections, since these restrictions are inherently restrictions on the joint modeling of the hedging and non-hedging portfolio. To give effect to these requirements, they must apply to the overall investment strategy and investment portfolio.

**B. Modeling Approaches**

1. The analysis of the impact of the hedging strategy on cash flows is typically performed using either one of two types of methods as described below. Although a hedging strategy normally would be expected to reduce risk provisions, the nature of the hedging strategy and the costs to implement the strategy may result in a

---

Deleted: CDHS

...
in an increase in the amount of the SR otherwise calculated. Particular attention should be given to VM-21 Section 1.B Principle 5 for the modeling of future hedging strategies.

2. The fundamental characteristic of the first type of method, referred to as the “explicit method,” is that hedging positions and their resulting cash flows are included in the stochastic cash-flow model used to determine the scenario reserve, as discussed in Section 3.D, for each scenario.

3. The fundamental characteristic of the second type of method, referred to as the “implicit method,” is that the effectiveness of the current hedging strategy on future cash flows is evaluated, in part or in whole, outside of the stochastic cash-flow model. There are multiple ways that this type of modeling can be implemented. In this case, the reduction to the SR otherwise calculated should be commensurate with the degree of effectiveness of the hedging strategy in reducing accumulated deficiencies otherwise calculated.

4. Regardless of the methodology used by the company, the ultimate effect of the current hedging strategy (including currently held hedge positions) on the SR needs to recognize all risks, associated costs, imperfections in the hedges and hedging mismatch tolerances associated with the hedging strategy. The risks include, but are not limited to: basis, gap, price, parameter estimation and variation in assumptions (mortality, persistency, withdrawal, annuitization, etc.). Costs include, but are not limited to: transaction, margin (opportunity costs associated with margin requirements) and administration. In addition, the reduction to the SR attributable to the hedging strategy may need to be limited due to the uncertainty associated with the company’s ability to implement the hedging strategy in a timely and effective manner. The level of operational uncertainty varies indirectly with the amount of time that the new or revised strategy has been in effect or mock tested.

Guidance Note: No hedging strategy is perfect. A given hedging strategy may eliminate or reduce some but not all risks, transform some risks into others, introduce new risks, or have other imperfections. For example, a delta-only hedging strategy does not adequately hedge the risks measured by the “Greeks” other than delta. Another example is that financial indices underlying typical hedging instruments typically do not perform exactly like the separate account funds, and hence the use of hedging instruments has the potential for introducing basis risk.

A safe harbor approach is permitted for reflection of future hedging strategies supporting the contracts for those companies whose modeled hedge assets comprise only linear instruments not sensitive to implied volatility. For companies with option-based hedge strategies, electing this approach would require representing the option-based portion of the strategy as a delta-rho two-Greek hedge program. The normally modeled option portfolio would be replaced with a set of linear instruments that have the same first-order Greeks as the original option portfolio. Calculation of SR (Reported)

1. The company shall calculate CTE70 (best efforts)—the results obtained when the CTE70 is based on incorporating the future hedging strategies supporting the contracts (including both currently held and future hedge positions) into the stochastic cash-flow model on a best efforts basis, including all of the factors and assumptions needed to execute the future hedging strategies supporting the contracts (e.g., stochastic implied volatility). The determination of CTE70 (best efforts) may utilize either explicit or implicit modeling techniques.

2. The company shall calculate a CTE70 (adjusted) by recalculating the CTE70 assuming the company has no future hedging strategies supporting the contracts, therefore following the requirements of Section 4.A.4.a.
However, for a company with a future hedging strategy supporting the contracts, existing hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements may be considered in one of two ways for the CTE70 (adjusted):

a) Include the asset cash flows from any contractual payments and maturity values in the projection model; or
b) No hedge positions – in which case the hedge positions held on the valuation date are replaced with cash and/or other general account assets in an amount equal to the aggregate market value of these hedge positions.

Guidance Note: If the hedge positions held on the valuation date are replaced with cash, then as with any other cash, such amounts may then be invested following the company’s investment strategy.

A company may switch from method a) to method b) at any time, but it may only change from b) to a) with the approval of the domiciliary commissioner.

3. Because most models will include at least some approximations or idealistic assumptions, CTE70 (best efforts) may overstate the impact of the hedging strategy. To compensate for potential overstatement of the impact of the hedging strategy, the value for the SR is given by:

\[ SR = CTE70 \text{(best efforts)} + E \times \max[0, CTE70 \text{(adjusted)} - CTE70 \text{(best efforts)}] \]

4. The company shall specify a value for \( E \) (the “error factor”) in the range from 5% to 100% to reflect the company’s view of the potential error resulting from the level of sophistication of the stochastic cash-flow model and its ability to properly reflect the parameters of the hedging strategy (i.e., the Greeks being covered by the strategy), as well as the associated costs, risks and benefits. The greater the ability of the stochastic model to capture all risks and uncertainties, the lower the value of \( E \). The value of \( E \) may be as low as 5% only if the model used to determine the CTE70 (best efforts) effectively reflects all of the parameters used in the hedging strategy. If certain economic risks are not hedged, yet the model does not generate scenarios that sufficiently capture those risks, \( E \) must be in the higher end of the range, reflecting the greater likelihood of error. Likewise, simplistic hedge cash-flow models shall assume a higher likelihood of error.

5. The company shall conduct a formal back-test, based on an analysis of at least the most recent 12 months, to assess how well the model is able to replicate the hedging strategy in a way that supports the determination of the value used for \( E \).

6. Such a back-test shall involve one of the following analyses:

a. For companies that model hedge cash flows directly (“explicit method”), replace the stochastic scenarios used in calculating the CTE70 (best efforts) with a single scenario that represents the market path that actually manifested over the selected back-testing period and compare the projected hedge asset gains and losses against the actual hedge asset gains and losses – both realized and unrealized – observed over the same time period. For this calculation, the model assumptions may be replaced with parameters that reflect actual experience during the back-testing period. In order to isolate the comparison between the modeled hedge strategy and actual hedge results for this calculation, the projected liabilities should accurately reflect the actual liabilities throughout the back-testing period; therefore, adjustments that facilitate this accuracy (e.g. reflecting actual experience instead of model assumptions, including new business, etc.) are permissible.

To support the choice of a low value of \( E \), the company should ascertain that the projected hedge asset gains and losses are within close range of 100% (e.g., 80–125%) of the actual hedge asset gains and losses. The
company may also support the choice of a low value of E by achieving a high R-squared (e.g., 0.80 or higher) when using a regression analysis technique.

b. For companies that model hedge cash flows implicitly by quantifying the cost and benefit of hedging using the fair value of the hedged item (an “implicit method” or “cost of reinsurance method”), calculate the delta, rho and vega coverage ratios in each month over the selected back-testing period in the following manner:

   i. Determine the hedge asset gains and losses—both realized and unrealized—incur ed over the month attributable to equity, interest rate, and implied volatility movements.

   ii. Determine the change in the fair value of the hedged item over the month attributable to equity, interest rate, and implied volatility movements. The hedged item should be defined in a manner that reflects the proportion of risks hedged (e.g., if a company elects to hedge 50% of a contract’s market risks, it should quantify the fair value of the hedged item as 50% of the fair value of the contract).

   iii. Calculate the delta coverage ratio as the ratio between (i) and (ii) attributable to equity movements.

   iv. Calculate the rho coverage ratio as the ratio between (i) and (ii) attributable to interest rate movements.

   v. Calculate the vega coverage ratio as the ratio between (i) and (ii) attributable to implied volatility movements.

   vi. To support the company’s choice of a low value of E, the company should be able to demonstrate that the delta and rho coverage ratios are both within close range of 100% (e.g., 80−125%) consistently across the back-testing period.

   vii. In addition, the company should be able to demonstrate that the vega coverage ratio is within close range of 100% in order to use the prevailing implied volatility levels as of the valuation date in quantifying the fair value of the hedged item for the purpose of calculating CTE70 (best efforts). Otherwise, the company shall quantify the fair value of the hedged item for the purpose of calculating CTE70 (best efforts) in a manner consistent with the realized volatility of the scenarios captured in the CTE (best efforts).

c. Companies that do not model hedge cash flows explicitly, but that also do not use the implicit method as outlined in Section 9.C.6.b above, shall conduct the formal back-test in a manner that allows the company to clearly illustrate the appropriateness of the selected method for reflecting the cost and benefit of hedging, as well as the value used for E.

appropriate prudent estimate to account for additional uncertainty in anticipated hedging experience beyond
that of a robust hedging program already in existence. E may also be lower than 1.0 if the change in strategy
is a minor refinement rather than a material change in strategy, though still subject to the minimum error
factor specified in Section 9.C.4 and with an appropriate prudent estimate to account for any additional
uncertainties associated with the refinement.

The following examples are provided as guidance for determining the E factor when there has been a change to
the hedge program. These examples are not intended to be exhaustive, and a company must support the
determination of whether a hedge methodology change is material based on a review of the company’s specific
change in methodology.

1. The error factor should be temporarily 100% for material changes in hedge methodology (e.g., moving
from a fair-value based strategy to a stop-loss strategy) without robust mock testing.
2. An increase in the error factor may not always be needed for minor refinements to the hedge strategy (e.g.,
moving from swaps to Treasury futures).

8. The company shall set the value of E reflecting the extent to which the hedging program is clearly defined.
To support a value of E below 1.0, there should be very robust documentation outlining all future hedging
strategies. To the extent that documentation outlining any of the future hedging strategies is incomplete,
the value of E shall be increased. In particular, the value of E shall be 1.0 if documentation is materially
incomplete for any of the individual CDHS attributes (a) through (j), as listed in VM-01.

Any increases required to the value of E to reflect that documentation is not available to support that the
future hedging strategies are clearly defined shall be in addition to increases to the value of E to reflect a
lack of historical experience or to reflect the back-testing results, subject to an overall ceiling of 1.0 for E.

Guidance Note: Companies must use judgment both in determining an E factor and in applying this
requirement in the case where there are multiple future hedging strategies, particularly where some may be
CDHS and some may not be CDHS. In this case, the SR should be ensured to be no less than the CTE(70)
reflecting the future hedging strategies that are CDHS and not reflecting those that are not CDHS.
Companies with multiple future hedging strategies with very different levels of effectiveness or with
multiple future hedging strategies that include both CDHS and non-CDHS should discuss with their
domestic regulator.

D. Additional Considerations for CTE70 (best efforts)

If the company is following one or more future hedging strategies supporting the contracts, the fair value of the
portfolio of contracts falling within the scope of these requirements shall be computed and compared to the CTE70
(best efforts) and CTE70 (adjusted). If the CTE70 (best efforts) is below both the fair value and CTE70 (adjusted),
the company should be prepared to explain why that result is reasonable.

For the purposes of this analysis, the SR and fair value calculations shall be done without requiring the scenario
reserve for any given scenario to be equal to or in excess of the cash surrender value in aggregate for the group of
contracts modeled in the projection.

E. Specific Considerations and Requirements

1. As part of the process of choosing a methodology and assumptions for estimating the future effectiveness of
the current hedging strategy (including currently held hedge positions) for purposes of reducing the SR, the
company should review actual historical hedging effectiveness. The company shall evaluate the
appropriateness of the assumptions on future trading, transaction costs, other elements of the model, the
strategy, the mix of business and other items that are likely to result in materially adverse results. This
includes an analysis of model assumptions that, when combined with the reliance on the hedging strategy, are likely to result in adverse results relative to those modeled. The parameters and assumptions shall be adjusted (based on testing contingent on the strategy used and other assumptions) to levels that fully reflect the risk based on historical ranges and foreseeable future ranges of the assumptions and parameters. If this is not possible by parameter adjustment, the model shall be modified to reflect them at either anticipated experience or adverse estimates of the parameters.

2. A discontinuous hedging strategy is a hedging strategy where the relationships between the sensitivities to equity markets and interest rates (commonly referred to as the Greeks) associated with the guaranteed contract holder options embedded in the variable annuities and other in-scope products and these same sensitivities associated with the hedging assets are subject to material discontinuities. This includes, but is not limited to, a hedging strategy where material hedging assets will be obtained when the variable annuity account balances reach a predetermined level in relationship to the guarantees. Any hedging strategy, including a delta hedging strategy, can be a discontinuous hedging strategy if implementation of the strategy permits material discontinuities between the sensitivities to equity markets and interest rates associated with the guaranteed contract holder options embedded in the variable annuities and other in-scope products and these same sensitivities associated with the hedging assets. There may be scenarios that are particularly costly to discontinuous hedging strategies, especially where those result in large discontinuous changes in sensitivities (Greeks) associated with the hedging assets. Where discontinuous hedging strategies contribute materially to a reduction in the SR, the company must evaluate the interaction of future trigger definitions and the discontinuous hedging strategy, in addition to the items mentioned in the previous paragraph. This includes an analysis of model assumptions that, when combined with the reliance on the discontinuous hedging strategy, may result in adverse results relative to those modeled.

3. A strategy that has a strong dependence on acquiring hedging assets at specific times that depend on specific values of an index or other market indicators may not be implemented as precisely as planned.

4. The combination of elements of the stochastic cash-flow model—including the initial actual market asset prices, prices for trading at future dates, transaction costs and other assumptions—should be analyzed by the company as to whether the stochastic cash-flow model permits hedging strategies that make money in some scenarios without losing a reasonable amount in some other scenarios. This includes, but is not limited to:
   a. Hedging strategies with no initial investment that never lose money in any scenario and in some scenarios make money.
   b. Hedging strategies that, with a given amount of initial money, never make less than accumulation at the one-period risk-free rates in any scenario but make more than this in one or more scenarios.

5. If the stochastic cash-flow model allows for such situations, the company should be satisfied that the results do not materially rely directly or indirectly on the use of such strategies. If the results do materially rely directly or indirectly on the use of such strategies, the strategies may not be used to reduce the SR otherwise calculated.

6. In addition to the above, the method used to determine prices of financial instruments for trading in scenarios should be compared to actual initial market prices. In addition to comparisons to initial market prices, there should be testing of the pricing models that are used to determine subsequent prices when scenarios involve trading financial instruments. This testing should consider historical relationships. For example, if a method is used where recent volatility in the scenario is one of the determinants of prices for trading in that scenario, then that model should approximate actual historic prices in similar circumstances in history.

VM-31 Section 3.C.5
Assets and Risk Management – A brief description of the asset portfolio, and the approach used to model risk management strategies, such as hedging, and other derivative programs, including a description of any future hedging strategies supporting the policies, and any material changes to the hedging strategies from the prior year.

VM-31 Section 3.D.6.f

Risk Management – Detailed description of model risk management strategies, such as hedging and other derivative programs, including any future hedging strategies supporting the policies and any adjustments to the SR pursuant to VM-20 Section 7.K.3 and VM-20 Section 7.K.4, specific to the groups of policies covered in this sub-report and not discussed in the Life Summary Section 3.C.5. Documentation of any future hedging strategies should include documentation addressing each of the CDHS documentation attributes.

a. Investment Officer on Investments – A certification from a duly authorized investment officer that the modeled company investment strategy, including any future hedging strategies supporting the policies, is representative of and consistent with the company’s investment policy and that documentation of the CDHS attributes for any future hedging strategies supporting the policies are accurate.

b. Qualified Actuary on Investments – A certification by a qualified actuary, not necessarily the same qualified actuary that has been assigned responsibility for the PBR Actuarial Report or this sub-report, that the modeling of any future hedging strategies supporting the policies is consistent with the company’s actual future hedging strategies and was performed in accordance with VM-20 and in compliance with all applicable ASOPs, and the alternative investment strategy as defined in VM-20 Section 7.E.1.g reflects the prescribed mix of assets with the same WAL as the reinvestment assets in the company investment strategy.

VM-31 Section 3.E.5

Assets and Risk Management – A brief description of the general account asset portfolio, and the approach used to model risk management strategies, such as hedging and other derivative programs, including a description of any future hedging strategies supporting the contracts, and any material changes to the hedging strategies from the prior year.

VM-31 Section 3.F.8

Hedging and Risk Management – The following information regarding the hedging and risk management assumptions used by the company in performing a principle-based valuation under VM-21:

a. Strategies – Detailed description of risk management strategies, such as hedging and other derivative programs, including any future hedging strategies supporting the contracts, specific to the groups of contracts covered in this sub-report.
   i. Descriptions of basis risk, gap risk, price risk and assumption risk.
   ii. Methods and criteria for estimating the a priori effectiveness of the strategy.
iii. Results of any reviews of actual historical hedging effectiveness.

b. CDHS – Documentation addressing each of the CDHS documentation attributes for any future hedging strategies supporting the contracts.

c. Strategy Changes – Discussion of any changes to the hedging strategy during the past 12 months, including identification of the change, reasons for the change, and the implementation date of the change.

d. Hedge Modeling – Description of how the hedge strategy was incorporated into modeling, including:
   i. Differences in timing between model and actual strategy implementation.
   ii. For a company that does not have a future hedging strategy supporting the contracts, confirmation that currently held hedge assets were included in the starting assets.
   iii. Evaluations of the appropriateness of the assumptions on future trading, transaction costs, other elements of the model, the strategy, and other items that are likely to result in materially adverse results.
   iv. Discussion of the projection horizon for the future hedge strategy as modeled and a comparison to the timeline for any anticipated future changes to the company’s hedge strategy.
   v. If residual risks and frictional costs are assumed to have a value of zero, a demonstration that a value of zero is an appropriate expectation.
   vi. Any discontinuous hedging strategies modeled, and where such discontinuous hedging strategies contribute materially to a reduction in the SR, any evaluations of the interaction of future trigger definitions and the discontinuous hedging strategy, including any analyses of model assumptions that, when combined with the reliance on the discontinuous hedging strategy, may result in adverse results relative to those modeled.
   vii. Disclosure of any situations where the modeled hedging strategies make money in some scenarios without losing a reasonable amount in some other scenarios, and an explanation of why the situations are not material for determining the CTE 70 (best efforts).
   viii. Results of any testing of the method used to determine prices of financial instruments for trading in scenarios against actual initial market prices, including how the testing considered historical relationships. If there are substantial discrepancies, disclosure of the substantial discrepancies and documentation as to why the model-based prices are appropriate for determining the SR.
   ix. Any model adjustments made when calculating CTE 70 (adjusted), in particular, any liquidation or substitution of assets for currently held hedges. If there is liquidation or substitution of assets for currently held hedges, disclosure of the impact on the adjusted run.

e. Error Factor ($E$) and Back-Testing – Description of $E$, the error factor, and formal back-tests performed, including:
   i. The value of $E$, and the approach and rationale for the value of $E$ used in the reserve calculation.
   ii. For companies that model hedge cash flows using the explicit method, as described in VM-21 Section 9.C.6.a, and have 12 months of experience, an analysis of at least the most recent 12 months of experience and the results of a back-testing that showing the model is able to replicate the hedging results experienced in a way that justifies the value used for $E$. Include at least a ratio of the actual change in market value of the hedges to the modeled change in market value of the hedges at least quarterly.
   iii. For companies that model hedge cash flows using the implicit method, and have 12 months of experience, as described in VM-21 Section 9.C.6.b, the results of a back-test in which (a) actual hedge asset gains and losses are compared against (b) proportional fair value movements in hedged liability, including:
      a) Delta, rho and vega coverage ratios in each month over the back-testing period, which may be presented in a chart or graph.
b) The implied volatility level used to quantify the fair value of the hedged item, as well as the methodology undertaken to determine the appropriate level used.

iv. For companies that do not model hedge cash flows using either the explicit method or the implicit method, as described in VM-21 Section 9.C.6.c, and have 12 months of experience, the results of the formal back-test conducted to validate the appropriateness of the selected method and value used for E.

v. For companies that do not have 12 months of experience, the basis for the value of E that is chosen based on the guidance provided in VM-21 Section 9.C.7, considering the actual history available, mock testing performed, and the degree and nature of any changes made to the hedge strategy.

vi. The basis for the magnitude of adjustment or lack of adjustment for the value of E chosen based on the robustness of the documentation outlining the future hedging strategy.

g. Safe Harbor for Future Hedging Strategies – If electing the safe harbor approach for a future hedging strategy supporting the contracts, as discussed in VM-21 Section 9.C.8, a description of the linear instruments used to model the option portfolio.

VM-31 Section 3.F.12.c

CTEPA – If using the CTEPA method, a summary including:

i. Disclosure (in tabular form) of the scenario reserves using the same method and assumptions as those used by the company to calculate CTE 70 (adjusted) as outlined in VM-21 Section 9.C (or the SR following VM-21 Section 4.A.4.a for a company that does not have a future hedging strategy supporting the contracts), as well as the corresponding scenarios reserves substituting the assumptions prescribed by VM-21 Section 6.C.

ii. Summary of results from a cumulative decrement projection along the scenario whose reserve value is closest to the CTE 70 (adjusted), as outlined in VM-21 Section 9.C (or the SR following VM-21 Section 4.A.4.a for a company that does not have a future hedging strategy supporting the contracts), under the assumptions outlined in VM-21 Section 6.C. Such a cumulative decrement projection shall include, at the end of each projection year, the projected proportion (expressed as a percent of the total projected account value) of persisting contracts as well as the allocation of projected decrements across death, full surrender, account value depletion, elective annuitization, and other benefit election.

iii. Summary of results from a cumulative decrement projection, identical to (ii) above, but replacing all assumptions outlined in VM-21 Section 6.C with the corresponding assumptions used in calculating the SR.

VM-31 Section 3.F.16.a and Section 3.F.16.b

a. Investment Officer on Investments – A certification from a duly authorized investment officer that the modeled asset investment strategy, including any future hedging strategies supporting the contracts, is consistent with the company’s current investment strategy except where the modeled reinvestment strategy may have been substituted with the alternative investment strategy, and that documentation of the CDHS attributes for any future hedging strategies supporting the contracts are accurate.
b. Qualified Actuary on Investments – A certification by a qualified actuary, not necessarily the same qualified actuary that has been assigned responsibility for the PBR Actuarial Report or this sub-report, that the modeling of any future hedging strategies supporting the contracts is consistent with the company’s actual future hedging strategies and was performed in accordance with VM-21 and in compliance with all applicable ASOPs.
Actuarial Guideline AAT – DRAFT FOR LATF CONSIDERATION

APPLICATION OF THE VALUATION MANUAL FOR TESTING THE ADEQUACY OF LIFE INSURER
RESERVES

Background

The NAIC Valuation Manual (VM-30) contains actuarial opinion and supporting actuarial memorandum requirements, including requirements for asset adequacy testing. Regulators have observed a lack of uniform practice in the implementation of asset adequacy testing. The variety of practice in incorporating the risk of complex assets into testing does not provide regulators comfort as to reserve adequacy. Examples of complex assets are structured securities, including asset-backed securities and collateralized loan obligations, as well as assets originated by the company or affiliated or contracted entity. An initial increase of this activity has been noted in support of general account annuity blocks; however, recent activity was noted in other life insurer blocks.

This Guideline is intended to provide uniform guidance and clarification of requirements for the appropriate support of certain assumptions for asset adequacy testing performed by life insurers. In particular, this Guideline:

1. Helps ensure reserve adequacy and claims-paying ability in moderately adverse conditions, including conditions negatively impacting cash flows from complex assets;

2. Clarifies how margins for uncertainty are established such that the greater the uncertainty the larger the margin and resulting reserve;

3. Ensures recognition that higher expected gross returns from assets are, to some extent, associated with higher risk, and that assumptions fit reasonably within the risk-return spectrum;

4. Requires sensitivity testing regarding complex assets currently supporting or assumed to provide future support for life insurer business;

5. Identifies expectations in practice regarding the valuation of complex assets;

6. Establishes a process for researching and monitoring the risks associated with complex assets;

7. Reflects that while complex assets tend to have higher uncertainty regarding timing and amount of cash flows than in more traditional investments, because complex assets are difficult to classify, and the regulatory concern is regarding the projected net yields and cash flows from those assets, the focus of the Guideline will be on assets deemed to be high-yield assets; and

8. Requires additional documentation of investment fee income relationships with affiliated entities or entities close to the company.

Note: It is anticipated that the requirements contained in this Guideline will be incorporated into the NAIC Valuation Manual (VM-30) at a future date, effective for a future valuation year. This Guideline will cease to apply to annual statutory financial statements at the time the corresponding VM-30 requirements become effective.

Text

1. Effective Date

This Guideline shall be effective for reserves reported in the December 31, 2022 and subsequent annual statutory financial
2. **Scope**

This Guideline shall apply to all life insurers with:

A. Over $5 billion of actuarial reserves or

B. Over $500 million of actuarial reserves and over 5% of supporting assets in the category of Projected High Net Yield Assets, as defined in Section 3.B.

Actuarial reserve amounts are included in the amounts in A and B whether directly written or assumed through reinsurance and are determined before any reinsurance ceded credit.

3. **Definitions**

A. **Investment Grade Net Yield Benchmark.** A net yield calculated as \( i + ii - iii \):

   i. For current assets, the Treasury rate at the asset purchase date for the time to maturity associated with the asset; for reinvestment assets, the Treasury rate related to the projected interest rate scenario at the projected asset purchase date for the time to maturity associated with the asset.

   ii. The spread found in Table F for existing assets and Table H for reinvestment assets, found in the VM-20 / VM-21 / VM-22 Tables tab on the principle-based reserve page of the NAIC website (NAIC website), using PBR Credit Rating 9 and the weighted average life of the associated asset.

   iii. The default cost found in Table A on the NAIC website, using PBR Credit Rating 9 and the weighted average life of the associated asset.

   iv. For assets such as equities or equity-like instruments without a clear weighted average life, apply judgment in establishing an appropriate weighted average life for this exercise and disclose the approach applied. If judgment is difficult to apply due to the circumstances, apply a weighted average life of 20 years.

B. **Projected High Net Yield Assets.** Assets where assumed, future net yields (net of default risk and other risk impacting timing and amount of cash flows) are higher than the Investment Grade Net Yield Benchmark. Included are currently held assets and reinvestment assets, including equities and equity-like instruments.

   i. Aggregation considerations

   (a) The comparison between assumed net yields from each asset and the Investment Grade Net Yield Benchmark shall be done at a level of granularity that is consistent with or more granular than how the assets are grouped, i.e., compressed, in the asset adequacy testing model.

   (b) For companies that model assets for each Committee on Uniform Securities Identification Procedures (CUSIP) number, this exercise is intended to be performed for each individual CUSIP.

   (c) For companies that group similar assets for asset adequacy testing modeling purposes, the companies may provide results at such level, or alternatively, for each individual asset.

   ii. For assets that do not have an explicit weighted average life or term to maturity (such as equities or equity-like instruments), the company shall disclose the method used to determine the appropriate weighted
average life used for comparing to the Investment Grade Net Yield Benchmark.

iii. For purposes of the comparison between assumed net yields from each asset and the Investment Grade Net Yield Benchmark, investment expenses shall be excluded.

4. Asset Adequacy Considerations for Analysis of Business Supported by Any Projected High Net Yield Assets

   A. The actuarial memorandum should provide documentation on net return assumptions, including gross asset spreads, default costs, recovery rate assumptions. The memorandum should also identify and explain the types of risks present in the projected high net yield assets.

   B. The actuarial memorandum shall detail the process to determine the assumed net yields on currently held assets and assets projected to be obtained in the future (reinvestments).

      i. This includes specifically identifying the assumed gross asset yield and all key components deducted to arrive at the assumed net asset yield, including but not limited to credit risk, liquidity risk, and investment expenses.

      ii. Include considerations of the underlying assets (e.g., debt instruments, securitization structure) and timing of expected payments when modeling.

      iii. An explanation shall also be provided for any future reinvestment strategy assumptions that differ from current practices and experience.

   C. For projected high net yield assets, a detailed explanation shall be provided in the actuarial memorandum describing the extent to which higher expected gross returns from these assets are associated with higher risk. It shall also include, for the aspect of any higher expected gross returns not assumed to be associated with higher risk, an explanation of how overperforming assets with expected returns lying outside the risk-return spectrum can be assumed to persist and be available for reinvestments throughout the projection period.

      Provide commentary on factors that could impact whether the conditions that may have contributed to past high net yields for certain asset classes would continue or not continue into the future in a moderately adverse environment including the potential of increased demand for such assets leading to declining available yield.

   D. The actuarial memorandum should provide commentary on how, related to projected high net yield assets, there is consistency with the standard valuation law concept that margins for uncertainty should be established such that the greater the uncertainty the larger the margin and resulting reserve. Asset-related factors identified as being volatile and impactful through sensitivity testing or other means should contain an appropriate margin to reflect this volatility and impact.

   E. Where significant risks associated with a complex asset are not adequately captured with traditional modeling techniques associated with simple assets like corporate bonds, more rigorous modeling of those risks should occur.

      i. Where necessary to adequately reflect the risk, multi-scenario testing of those risks specific to complex assets should be performed.

         (a) For example, investments that may provide a higher expected return in part due to limited information, niche skill sets, or other factors may require unique scenarios (for instance to adequately capture credit or liquidity risk) to fully encompass potential sources of loss.

         (b) Asset cash flows should be appropriately projected to reflect anticipated liquidity in a stressed market. If current models do not support analysis of this type of risk, then new model aspects should be developed; otherwise, if such model aspects are not developed, sufficient additional conservatism to reflect this risk shall be applied.
(c) To the extent that the process for modeling or otherwise evaluating the risks is complex, and the potential for disconnect between reality and modeling increases, an additional margin to assumption(s) should be applied. Any such margin shall be applied in the direction of asset adequacy testing results being less favorable.

ii. Note that a robust conditional tail expectation calculation considering all key risks specific to complex assets would likely show tail losses (from low probability, high impact events) affect asset adequacy results.

iii. A company may use simplifications, approximations, and modeling efficiency techniques if the company can demonstrate that the use of such techniques does not make asset adequacy testing results more favorable. These techniques may be less appropriate if the amount of complex, high-yielding assets becomes a higher percentage of total assets.

iv. Actuarial Standards of Practice (ASOPs), including ASOP No. 7 and No. 56 contain additional guidance on the use of models in the analysis of cash flows.

F. In asset adequacy testing, when an asset is projected to be available for sale, a fair value of that asset is established. Per fair value methodology, fair value should represent the price at which the security could be sold, based on market information. Fair value should only be determined internally (by the insurance or investment management company) when the market-based value cannot be obtained. When the fair value of complex assets is determined internally, the company shall provide a step-by-step description of the approach used to calculate the fair value of such assets.

In addition, when the fair value of complex assets is determined internally, two sensitivity tests should be performed (and the impact on asset adequacy testing results presented):

i. Assume a haircut to the internally derived fair values of 5%;

ii. Assume a haircut to internally derived fair values that the company deems reasonable given the commensurate level of anticipated uncertainty.

G. With respect to privately-originated assets, such as assets originated by the company, within the company’s group, or within an entity closely tied to a company’s group (inclusive of the company’s investment manager), practices to help ensure accurate valuation of those assets should be documented in the actuarial memorandum. Also, assumed net cash flows from assets should be net of all explicit or implicit fees or expenses, such as origination fees, as well as reflective of other asset-related risks including credit risk, illiquidity risk, and other market risks.

In particular, please disclose and detail how the following are appropriately reflected in the net cash flows:

i. Contractual agreements in place between such entities.

ii. Any measures related to the valuation of such privately-originated assets resulting from practices to ensure that the valuation is appropriate and accurate.

iii. Revenue sharing, e.g., performance fees, between the entity responsible for providing investment or other types of services and the insurer, if applicable.

H. Investment expenses, whether paid to an external asset manager or to internal investment management staff, as well as additional expenses that are directly attributable to the specific investments, should be commensurate with the complexity of the assets and reflected in the net yield assumed in asset adequacy testing.

I. In cases where fees are expected to be paid by the insurer, an appropriate amount of future expected fees should be modeled as part of the asset adequacy testing.
J. The actuarial memorandum should contain a detailed description of research and monitoring conducted related to trends impacting risks associated with the insurer’s complex assets or industry-wide or market-wide assets of similar type.

K. In cases where material amounts of reserves are ceded to an entity that does not submit a VM-30 actuarial memorandum or where reinsurance counterparty risk is material, the company shall perform asset adequacy testing on the business that includes the ceded reserves. Depending on the circumstances including risk exposure, simplified asset adequacy testing techniques may be appropriate, as noted in ASOP No. 22. Relevant aspects of ASOP No. 11 not in conflict with this section should be considered in the asset adequacy testing.

L. Please identify if any borrowing is modeled beyond to address very short-term liquidity needs. Also, please verify borrowing and reinvestment rates to ensure that projections are not materially benefiting from arbitrage advantages.

{Drafting note: comments would be appreciated on the inclusion of board of director and senior management responsibilities on the quality of complex asset-related assumptions similar to those stated in VM-G}

5. Constraints, Sensitivity Tests, and Attribution Analysis related to Assumptions on Projected High Net Yield Assets

A. Constraint for year-end 2023 with early testing for year-end 2022

i. For the year-end 2022 VM-30 actuarial memorandum, perform and disclose the asset adequacy testing results from the following sensitivity test. For the sensitivity test, assume individual asset (or asset group when there is asset compression) net yields for both current assets and projected reinvestment assets do not exceed net yields on public non-callable corporate bonds with gross asset spreads and asset default costs by projection year that are consistent with PBR Credit Rating 10, i.e., by using PBR Credit Rating 10 rather than PBR Credit Rating 9 and otherwise following the spread and default calculations for the Investment Grade Net Yield Benchmark.

ii. For reserves reported in the December 31, 2023 and subsequent annual statutory financial statements, assumed individual asset (or asset group when there is asset compression) net yields for both current assets and projected reinvestment assets shall not exceed net yields on public non-callable corporate bonds with gross asset spreads and asset default costs by projection year that are consistent with PBR Credit Rating 10.

{Drafting note: comments would be appreciated on the pros and cons of an individual asset-specific versus aggregate (VM-20-type) constraint and/or sensitivity test}

iii. For the constraint and the early testing, any favorable impact to asset adequacy testing results due to borrowing at a rate lower than the rate at which positive cash flows are reinvested in the same time period, should be removed.

B. Perform an attribution analysis for any current assets or projected reinvestment assets assumed to produce net returns in excess of the Investment Grade Net Yield Benchmark, as follows:

i. Please quantify the assumed excess net returns attributable to the following factors:

   (a) Credit risk (in excess of credit risk on corporate bonds with PBR Credit Rating 9, if not already reflected in the default assumption)

   (b) Illiquidity risk

   (c) Volatility and other risks (please identify and describe these risks in detail)
ii. For each of the factors contributing to assumed net returns in excess of the Investment Grade Net Yield Benchmark, please explain why the factor is not assumed to contribute to additional losses (tail or otherwise) related to the risks.

iii. Where appropriate, apply judgment and provide commentary on the supporting rationale of how the expected excess return is estimated across the various risk components.

iv. Examples of Attribution Analysis:

Example 1:

Current collateralized loan obligation (CLO), attained in the year 2018
Assumed annual net return: 5.7%
Investment Grade Net Yield Benchmark (similar issue date and weighted average life): 4.5%
Assumed excess net return: 1.2%

Attribution:
(a) Excess credit risk (if not already reflected in default cost) 0.2%
(b) Illiquidity risk 0.4%
(c) Volatility and other risks [provide detailed description] 0.6%

Explanation of why each factor is not assumed to contribute to additional losses related to the risks: [provide explanations]

Example 2:

Assumed reinvestment in an asset-backed security
Assumed annual net return: 5.2%
Investment Grade Net Yield Benchmark (similar issue date and weighted average life): 3.3%
Assumed excess net return: 1.9%

Attribution:
(a) Excess credit risk (if not already reflected in default cost) 0.4%
(b) Illiquidity risk 0.5%
(c) Volatility and other risks [provide detailed description] 1.0%

Explanation of why each factor is not assumed to contribute to additional losses related to the risks: [provide explanations]

Mr. Mike Boerner  
Chair, NAIC Life Actuarial Task Force (LATF)

Mr. Fred Andersen  
Chief Life Actuary, Minnesota Department of Commerce

Re: Actuarial Guideline Asset Adequacy Testing

Dear Messrs. Boerner and Andersen:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit the following comments on the proposed Actuarial Guideline on Asset Adequacy Testing (AAT, collectively Guideline).

Executive Summary

ACLI is generally supportive of modernizing AAT regulation. ACLI also supports such modernization being applied to the industry’s use high net yield assets as the use of such assets in an informed, controlled way enables industry to make, support, and critically deliver on policyholder benefits. ACLI supports the legitimate regulatory attention to the projected net yields for such assets and would support the development of further analysis, documentation, disclosures, and sensitivity testing to inform the Appointed Actuary’s opinion and facilitate dialogue with the domestic regulator regarding the use of such assets. We believe these efforts will address regulatory concerns by increasing transparency into AAT assumptions across the industry and enabling further regulator evaluation.

ACLI has significant concerns with this Guideline:

- ACLI does not support the wholesale application of a cap on yields as such a constraint is not actuarially sound, is prescriptive and is unduly limiting.
- ACLI does not support the proposed requirement for reinsurance, as it is potentially disruptive and creates a host of issues that conflict with other reinsurance-related initiatives of state regulators.
- ACLI feels the scope of assets in this Guideline is overly expansive and would impact far more assets than we believe the regulators intended.
In light of these concerns and the additional comments listed below, ACLI does not believe the proposed Guideline would meet the regulators’ stated objectives.

ACLI is committed to working with regulators to address their concerns in a feasible, targeted, and timely way. We support independent and informed assumption setting consistent with the principles of AAT and the applicable ASOPs. We hope that additional engagement and exposures of this Guideline will lead to a holistic analysis of the issues and reasonable guidance for Appointed Actuaries.

We offer the following commentary on the various sections of the Guideline.

Section 1 – Effective Date

ACLI supports making enhancements to the asset assumption disclosures, including adding sensitivities for AAT as part of the December 31, 2022 asset adequacy analysis. Given the intent that “the requirements contained in this Guideline will be incorporated into the NAIC Valuation Manual (VM-30) at a future date”, we strongly encourage the development of a corresponding APF in tandem with future developments of this Guideline. This approach ensures at the end of this process, regulators can adopt changes for the 2024 NAIC Valuation Manual. ACLI also supports an explicit ending effective date for this Guideline corresponding to the effective date of the corresponding NAIC Valuation Manual changes.

Section 2 – Scope

ACLI supports significant restriction of the scope of the Guideline. We think it is critical to establish the appropriate scope of assets in this Guideline. The definition in the current exposure is overly expansive and would impact far more assets than we believe the regulators intended. Through additional dialogue of regulators, industry, and interested parties, an appropriate principles-based scope can be developed.

Clearly defining the scope will take time beyond the exposure period. In concept, validating higher spreads associated with certain assets that otherwise have similar quality and duration to rated public bonds may be appropriate. Such assets may reflect a different risk profile than traditional fixed income assets and justify greater disclosure and explanation in the Actuarial Memorandum. Equities are another example of an asset class that involve a very different kind of risk and may require a different approach when presenting sensitivities and yield disclosure, with potential consideration for publicly traded versus private equity positions.

Section 3 – Definitions

ACLI has two suggestions regarding the proposed definitions.

First, the development of a formal definition of the term “complex assets” would be beneficial.

Second, section 3.A.i mixes purchase/book yield concepts and market yield concepts. Because it may be difficult to obtain accurate historical information, it may be preferable to use a current market view for purposes of identifying high net yield assets. However, any relevant analysis, documentation, disclosures, or sensitivities should then be applied on a book yields basis. For future purchases, ACLI supports the proposed use of long-term spreads.

© 2022 National Association of Insurance Commissioners
Section 4 – Asset Adequacy Considerations for Analysis of Business Supported by Any Projected High Net Yield Assets

ACLI does not support the reinsurance component of the Guideline. On its face, the requirement appears to circumvent broader NAIC initiatives related to reinsurance collateral, including the Covered Agreement and Reciprocal Jurisdictions, which effectively convey confidence in the regulatory regimes of non-U.S. jurisdictions. Further, the material counterparty risk requirement potentially challenges the Actuarial Opinion of the reinsurer that files a VM-30 report.

In addition to those jurisdictional considerations, we note that the use of the term “asset adequacy testing” is ambiguous and therefore leads to different interpretations. If “asset adequacy testing” is intended to mean “asset adequacy analysis,” the requirement is redundant, as the Appointed Actuary is already required to assess the collectability of reinsurance in forming the Actuarial Opinion. However, if “asset adequacy testing” is intended to mean “cash flow testing,” the requirement would create a significant new operational burden and would require extensive use of hypothetical assets and judgmental assumptions that may make it challenging for the Appointed Actuary to gain comfort with the results. It is also unclear how results from the proposed testing would impact net AAT results, reinsurance credit taken, reinsurance reserves held and any action that the regulator expects from or will undertake based on the results of such analysis.

Overall, it is unclear what problem the reinsurance component of the draft Guideline fixes. We believe that this initiative should maintain the focus on the use of high net yield assets rather than expanding the scope to include reinsurance issues. Therefore, the reinsurance component should be removed from the Guideline because it is unrelated to the issues underlying high net yield assets.

Section 5 - Constraints, Sensitivity Tests, and Attribution Analysis related to Assumptions on Projected High Net Yield Assets

ACLI opposes the inclusion of the prescribed constraint on “Projected High Net Yield Assets”. This fundamentally changes the nature of asset adequacy testing and moves cash flow testing away from the “principles-based” framework that has long been the underpinning of such testing. The approach outlined in the Guideline supersedes the professional judgment of the Appointed Actuary to fulfill their responsibilities according to presently accepted ASOPs. NAIC Model 820 already provides regulators with the necessary authority to compel an Appointed Actuary to change an assumption that regulators do not believe is reasonable or appropriate.

Further, there are credible arguments for credit spreads exceeding the benchmark spreads (e.g., liquidity, structure, complexity, size, and expertise). ACLI supports enhanced documentation and support in such instances rather than arbitrary limitations.

Analysis, Documentation, Disclosures, and Sensitivity Testing

ACLI believes that regulatory concerns can be addressed through a package of analysis, documentation, disclosures, and sensitivity testing. Some of the requirements in the Guideline may have merit, but others seem disproportionately burdensome. ACLI requests more time to work with regulators to establish appropriate and value-added provisions to more effectively address the concerns of regulators.
Sensitivities are a valuable tool in understanding the volatility and risk of assumptions on AAT results, which is why we are largely supportive of providing enhanced sensitivities. Sensitivities can also reflect the inherent link between policyholder obligations and the supporting assets. We would like to work with regulators to determine which sensitivities would be most beneficial and appropriate. We ask for more time than the current exposure period allows to develop such a proposal that maintains the requirement that Appointed Actuaries continue to apply professional judgement.

Summary

In summary, ACLI would like to continue to work with regulators to develop appropriate scope, definitions, disclosures, and sensitivities for the proposed Guideline. The constraint on high net yield assets should be removed from the Guideline because it is damaging to the industry and policyholders, and the reinsurance aspects of the Guideline should be removed because they are unrelated to the issues underlying high net yield assets.

ACLI is working on developing specific recommendations to the Guideline reflecting the comments above. We appreciate consideration of those recommendations and questions generated from our work as they are more fully developed.

ACLI is appreciative of your consideration of our comments and looks forward to a future discussion.

Thank you for your consideration,

[Signature]

cc: Reggie Mazyck, NAIC
Utah Insurance Department received the following comments on the proposed guideline from one of the insurers domiciled in the state.

**Section 4E**

--Characterization of all assets that aren’t plain vanilla corporate bonds as “complex” seems a bit broad/shallow; an asset that is privately underwritten and not publicly traded is not necessarily complex.

--The sensitivity testing instructions here are quite vague; incorporating this into an actuarial model would require more clear instruction.

--Implementing a margin means that an insurer with an investment strategy that includes some less traditional assets is automatically penalized, when in fact these investments may have even stronger covenants, protection, and subordination than traditional publicly-traded bonds.

**Section 4F**

Seems very broad and punitive for all private assets; 5% of a material portion of an insurer’s portfolio can be a very large number.

**Section 4K**

Foreign/Alien reinsurers often perform their own versions of AAT that may not conform to VM-30 requirements exactly, but are very similar. These results should be acceptable in place of the ceding company having to perform additional AAT on the same business.

**Section 5A**

We’re happy to include extra sensitivity tests where helpful/illustrative, but including this as a constraint would have drastic negative impacts on probably a lot of insurance companies. As of 12/31/2021, here are the net yields for a 5-year asset calculated per the Investment Grade Net Yield Benchmark.

<table>
<thead>
<tr>
<th>Current Assets</th>
<th>Reinvested Assets</th>
</tr>
</thead>
<tbody>
<tr>
<td>1) 5yr Treasury</td>
<td>1.26%</td>
</tr>
<tr>
<td>2) 5yr Spread, PBR Rating 10</td>
<td>1.40%</td>
</tr>
<tr>
<td>3) 5yr Default Cost, PBR Rating 10</td>
<td>0.77%</td>
</tr>
<tr>
<td><strong>1 + 2 - 3 =</strong></td>
<td><strong>1.89%</strong></td>
</tr>
</tbody>
</table>

Therefore, if this were a constraint of CFT modeling, any insurer that offers a traditional fixed deferred annuity or MYGA with a crediting rate over 2-3% would automatically lose money in the projection. This seems unreasonable and highly punitive towards smaller, younger, and/or lower-rated insurance companies that already have a higher cost of capital than their larger competitors.

**Section 5B**

--This would be extremely labor-intensive to perform for every in-force asset and would pose a big resource issue for a smaller firm that doesn’t have a huge actuarial staff and/or dedicated ALM resources.
--Additionally, some assets are often held for shorter terms (1-2 years or less), which would mean that new assets would have to be documented each year for CFT. This would compound the labor/resource issue.

--If a reasonable form of aggregation of similar assets were allowed, this analysis would be much less onerous.

--A formal definition of ‘volatility risk’ would be helpful. Otherwise, this may be difficult to quantify.
Dear Ms. Brown:

Lombard International Life Assurance Company (Lombard International) appreciates the opportunity to comment on the Life Actuarial (A) Task Force exposure of the Asset Adequacy Testing Actuarial Guideline draft.

Lombard International’s feedback on the draft relates to clarifying the definition of the term *Actuarial Reserves*. Lombard believes that Separate Account reserves ("Green Book" reserves) should not be considered Actuarial Reserves and therefore Separate Account reserves would not be applied to the reserve thresholds laid out in the Scope section of the proposed AAT requirements. Only reserves held in the Insurance Company’s General Account would be applied towards the proposed limits in the new AAT memo.

Separate Account Reserves are held dollar-for-dollar to match the Separate Account Assets of the company. As such there is no “Actuarial” component to calculate the Separate Account Reserves. The insurance company holds these assets for the express benefit of the individual policy owner and does not control the investment decisions of the assets held in the Separate Accounts. Further, these assets cannot be used to satisfy the general obligations of the insurance company. As such the investment return assumptions related to separate account assets would have at best a minimal indirect impact on the ability of the insurer to meet its General Account liability obligations. Reserves held as a result of any secondary guarantees related to the performance of these separate account assets would be held in the General Account and would clearly be included when determining the total Actuarial Reserves of the Company.

Similar to Separate Account Assets and Reserves, Lombard believes that reserves associated with Life Insurance Policy Loans made to policyholders should also be excluded from the calculation of actuarial Reserves. For reporting and reserving purposes, Policy Loans are treated exactly like Separate Account Assets. Therefore, they should receive the same exclusion for the reasons listed above.

If the term Actuarial Reserves was already intended to only incorporate General Account reserves, we suggest updating the Scope to explicitly state this or to add the term “Actuarial Reserves” to the Definitions in Section 3 in order to provide full clarity.

In closing, Lombard once again would like to thank the task force for providing an opportunity to receive industry feedback on the Guideline draft.
Respectfully Submitted,

Scott Hedgepeth

Re: John Hancock Comments on Draft Actuarial Guideline for AAT Related to Complex Asset Modeling

Dear Messrs. Boerner and Andersen:

John Hancock1 appreciates the opportunity to comment on the draft actuarial guideline presented for comment at LATF on February 10.

While we are supportive of the letter submitted by the ACLI, we submit this letter with additional, more specific comments for your consideration.

Executive Summary

As presented at LATF on December 8, 2021, insurance regulators have identified the need to better understand risks associated with modeling complex or high yielding assets for Asset Adequacy Testing (AAT). While we understand the concerns that have been articulated, we believe that the exposed proposal could have a number of adverse consequences on how companies conduct business and hence, ultimately, on policyholders. We would like to partner with you to find a solution that addresses the concerns and at the same time mitigates the adverse consequences.

The proposed guideline imposes a “one-solution-fits-all” approach for all asset classes and all companies by setting a constraint on complex/high yielding assets and reinsurance. Reducing all asset returns to the equivalent of a BBB bond is excessively generic and punitive as it ignores the fact that investing in a diverse basket of asset classes represents a valuable risk mitigation strategy when these assets are paired with the liabilities of an insurance company through a robust Asset/Liability management strategy. We, therefore, fully support ACLI’s position that better documentation of the risks and return experience associated with these assets should address regulatory concerns. We’d envision this documentation to be comprehensive, inclusive of data supporting the underlying assumptions and margins along with corresponding rationale for the way in which the assets have been modeled. This reporting could include measures of the variability of results and sensitivities on asset margins.

This more fulsome disclosure would enable the domiciliary regulator to assess the reasonableness of the Appointed Actuary’s assumptions and discuss any concerns individually with a company. Such a focused approach would be much more appropriate from a risk oversight perspective and – unlike the

---

1 John Hancock is a unit of Manulife Financial Corporation, a leading international financial services provider that helps people make their decisions easier and lives better by providing financial advice, insurance, and wealth and asset management solutions. Manulife Financial Corporation trades as MFC on the TSX, NYSE, and PSE, and under 945 on the SEHK. One of the largest life insurers in the United States, John Hancock supports more than ten million Americans with a broad range of financial products, including life insurance, long term care and annuities.
framework outlined in the exposed draft - would not impose restrictive constraints across the industry that, being generic, would be arbitrary in nature, much less risk sensitive and which could constrain investment strategies in a manner detrimental to the offerings of our products and their pricing. Setting constraints for Asset Adequacy Testing is not appropriate and could have far reaching consequences. Additionally, as part of the risk framework, the Appointed Actuary could more formally report to the Board, not only on Asset Adequacy but also on risks related to specific asset classes, such as a governance infrastructure covering the aspects of policies, procedures, controls and resources in the context of assumptions and margins.

Increased Disclosure – Relating to Experience

As asset cash flows are projected for Asset Adequacy Testing, the asset assumptions and margins should be based on experience, similar to what may be done for liability assumptions today for the purpose of AAT. For example, when liability cashflows are projected, the Appointed Actuary may leverage the company’s own observed experience for mortality, lapse, etc. in setting the assumptions. A similar approach could be applied to all asset assumptions, including growth/income/yield, expenses, and default, among others. To the extent that a company has extensive experience with data supporting it, the Asset Adequacy Testing assumptions should reflect that experience. Margins should also be set considering uncertainties. ASOP22 already provides guidance to the Appointed Actuary in setting assumptions and margins.

To complement the disclosures on assumption/margin selection, sensitivity analysis could be performed. One way to make the sensitivity relevant to the underlying asset portfolio would be to test asset assumptions by adjusting the margins and report the results.

The Actuarial Opinion Memorandum should include documentation and rationale supporting these assumptions and margins along with results from sensitivity testing. While documentation standards may be considered, a simple approach could be to make sure that there is clear rationale on “why the assumptions/margins were selected”. The documentation could also include Actual/Expected reporting, similar to what may be done on liabilities. For example, the Appointed Actuary could demonstrate the appropriateness of a company’s own assumptions by relating the assumption to the actual experience observed for both assets and liabilities.

Finally, formalizing the AAT corporate governance guidance where the Appointed Actuary expands the reporting to the Board beyond Asset Adequacy results could also help increase transparency in AAT. This reporting could include a description of risks related to governance infrastructure (policies, procedures, controls and resources), assumptions and margins. This approach to more formal governance reporting for Asset Adequacy could be incorporated into VM-G – Corporate Governance for Principle-Based Reserves.

We believe that increased transparency and disclosure would address the regulators’ concerns whilst additionally strengthening Board governance and oversight.

Risk Management

Today, insurance companies leverage the benefits of diversification of asset classes to help mitigate risks and to maintain strong yields during a variety of economic cycles. Portfolio diversification should be a part of any investment strategy to manage Asset/Liability risks and ensure appropriate protection for policyholders. A diversified portfolio allows a company to take on measured risk matched to its liability profile; for example, long tail liabilities are generally supported by assets held for a similar period. Having a diverse mix of public and private investments has a variety of incidental societal and economic benefits, the value of which should not be underestimated (for example through investments in roads and infrastructure, agriculture and real property). Arbitrary constraints could lead companies to adjust their investment strategies, which in turn could negatively impact policyholders, public and

---

2 Actuarial Standard or Practice #22 on Asset Adequacy Analysis
private bond issuers and to some extent, the companies we invest in.

Insurance companies already set capital aside to cover losses that could be more than moderately adverse. A constraint on yield as part of AAT would amount to a double charge for certain complex or high yielding assets. This double charge could lead companies to change their investment strategy.

Finally, regulators should consider the role that reinsurance plays as an effective risk mitigation technique that allows companies to distribute risk. The AAT guideline proposes a constraint on reinsurance that could negatively impact insurance companies’ use of reinsurance and therefore could lead to less diversification of risk. An alternative to a reinsurance constraint in AAT could be to ensure that companies have a robust and demonstrated reinsurance management process in place.

An actuarial guideline for AAT that limits yields on assets or requires testing gross of reinsurance could lead a company to take action that may result in more risk or could have negative impact on policyholders through more limited product offerings or higher pricing to cover the higher regulatory requirements. Increased disclosures, sensitivities and an open dialogue between companies and their domestic regulators would provide increased transparency for those assets, mitigating concerns more effectively than broad constraints on returns could ever deliver.

Conclusion

The existing guidance and standards already provide direction to the Appointed Actuary on modeling assets and liabilities, including the selection of assumptions and margins based on the risks. These references also apply to modeling of complex or high yielding assets. Guiding the Appointed Actuaries to increase transparency to regulators and Boards should be sufficient to facilitate more robust discussions with domiciliary regulators and key stakeholders. This increased transparency should include modeling, governance infrastructure, selection of assumptions and margins and discussion of risks. We believe that such an approach would effectively address the concerns raised by LATF members while, at the same time, mitigating the negative impact to policyholders, the industry and the economy, more broadly, as outlined above.

For these reasons, we join ACLI in our opposition to adding rigid and arbitrary constraints in Asset Adequacy Testing for both the asset yield and reinsurance.

We are committed to working with regulators, bilaterally and with ACLI, to help address the concerns raised by better defining documentation standards, proposed sensitivities and strengthening the governance approach.

Mr. Fred Andersen
Chief Life Actuary, Minnesota Department of Commerce

Re: Asset Adequacy Testing Actuarial Guideline

Dear Messrs. Boerner and Andersen:

Western & Southern Financial Group, Inc. appreciates the opportunity to comment on the exposed Actuarial Guideline for Asset Adequacy Testing ("AAT").

Given the timing of the release of the exposure, we are not commenting on all aspects of it. Western & Southern Financial Group would, however, like to specifically comment on the proposed requirements around Documentation, Sensitivity Testing and a Constraint for AAT.

Documentation
We believe that additional asset documentation would be helpful in facilitating AAT conversations between Appointed Actuaries and regulators. It would be particularly helpful for regulators, as they would see the same reporting across all companies. Given our initial review of the exposure and our own assets, we believe that requiring individual asset level documentation would be quite onerous and potentially unhelpful given the amount of data involved. Determining the attribution of all of the various types of spread components over an entire historical portfolio would be difficult and would very likely lead to aggregate simplifications. Due to that likelihood and the cost-benefit considerations at issue, we suggest considering aggregate spread documentation split out by asset classes, which would more quickly and easily convey to regulators how much each spread component drives asset yields by asset class.

Constraint/Sensitivity Testing
Asset Adequacy Testing is a test on the adequacy of reserves and, in our view, one could consider it as a principles based reserve. In other contexts within the Valuation Manual, the NAIC has included asset constraints (e.g., VM-20 asset spreads and asset reinvestment mix) and liability constraints (e.g., VM-21 additional standard projection amount). The exposure of this draft is due to the NAIC observing certain aggressive practices regarding assets backing liabilities and asset modeling practices. Providing a Constraint would be in line with other
Mr. Mike Boerner  
Mr. Fred Andersen  
Page 2

current reserving practices and would provide a consistent approach to avoid overly optimistic assumptions. Western & Southern Financial Group supports the utilization of a Constraint or “guardrail” in connection with AAT.

Due to the use of historical book yields and current market spreads, our understanding of the exposure suggests that more assets are scoped in than previously contemplated (including, e.g., equities and below investment grade fixed income), and note that this approach would result in a very prescriptive asset assumption within AAT. We believe the original intent was to scope in fewer assets, focusing on complex or high-yielding assets with uncertain credit sensitivities and particular liquidity concerns, rather than well-understood asset classes with a long historical performance record. We respectfully submit that a more targeted approach would address regulators’ legitimate concerns while appropriately narrowing the scope of reporting, such that the Constraint would be more of a boundary or guardrail than a prescription. We further believe that providing an initial Sensitivity Test, which would align with the Constraint, would be helpful for regulators to understand how sensitive results are to asset assumptions. Adopting a consistent Sensitivity Test and Constraint across the industry would also help regulators consistently see impacts and potential issues among companies.

Most importantly, we believe that adopting a clear and consistent standard impacting all companies is important, as a consistent standard helps facilitate a high level of assurance that companies are appropriately reserving for their obligations to policyholders.

Regarding the specific drafting notes as requested in the exposure, we would like to provide the following comments for consideration.

{Drafting note: comments would be appreciated on the inclusion of board of director and senior management responsibilities on the quality of complex asset-related assumptions similar to those stated in VM-G}

The Appointed Actuary meets with the Board every year and presents on the results. We believe the current process is an adequate process for Board involvement.

Thank you for the opportunity to comment on the exposure,

Sincerely,

David Todd Henderson, FSA, MAAA, CERA  
SVP Chief Actuary and Chief Risk Officer, Western & Southern Financial Group

Re: Proposed Actuarial Guideline for Asset Adequacy Testing

Dear Messrs. Boerner and Andersen:

Northwestern Mutual appreciates the opportunity to submit comments on the proposed Actuarial Guideline on Modeling Complex or High Yielding Assets in Asset Adequacy Testing.

We support the development of a guardrail on assumed net investment yields for certain asset types to be used in asset adequacy testing and that testing be applied both to direct reserves and to ceded reserves not tested elsewhere.

Northwestern Mutual supports this ultimately being implemented as a guardrail to be met in testing rather than only a disclosure. This ensures that asset adequacy results are not based on net yields relative to the risks that may be excessive for these hard-to-model assets and allows for comparability across companies. This also provides more predictable guidance to the appointed actuary doing the testing. However, we believe more time should be taken to ensure that the guardrail is appropriate for all assets currently in scope. Examples of areas of possible refinement include the treatment of equities under the guardrail (since the characteristics of the risk are different than fixed income assets) and the introduction of an appropriate illiquidity premium for private asset classes. As such, beginning the guardrail as a disclosure and sensitivity test while additional refinements are made is a prudent approach.

We also believe that ceded reserves that are not asset adequacy tested should be addressed. Without this change, it is difficult to ensure that the primary insurer’s liabilities to policyholders are being supported by reserves (whether held by the primary insurer or a reinsurer) that meet the moderately adverse standard. We believe the choice of reinsuring business should not be a reason why testing would not be performed.
Re: Proposed Actuarial Guideline for Asset Adequacy Testing

In addition, more work needs to be done to better understand the practical limitations for the appointed actuary in testing ceded reserves and if other simplified approaches can ensure that reserves meet the moderately adverse standard. Similar to implementing guardrails for direct business, it may also be prudent to implement this first as a disclosure.

Sincerely,

Jason T. Klawonn, FSA, MAAA
Vice-President & Chief Actuary
EQUITABLE

DATE: March 23, 2022

FROM: Aaron Sarfatti, Chief Risk Officer; Steve Tizzoni, Head of Actuarial Regulatory Affairs

Equitable appreciates the opportunity to further comment on the concept of developing an Actuarial Guideline on the modeling of complex or high-yielding assets in Asset Adequacy Testing (AAT).

As noted in our December 2021 and January 2022 letters, Equitable continues to support establishing a credit spread guardrail within AAT. Equitable believes an AAT credit spread guardrail: (1) is consistent with current principles-based reserving approaches, (2) prevents gross abuses within the statutory reserve and capital framework that regulators are rightly concerned about, (3) aids the appointed actuary in determining asset adequacy and (4) is easier to implement and monitor than robust but voluminous documentation.

Further, while compressed development timelines may not support guardrail implementation for YE2022 filings, we encourage the NAIC to underscore its intent to establish a guardrail applicable to both retained business and ceded reinsurance. We observe few other viable paths for the NAIC to maintain confidence in reserve integrity amid rising scrutiny of offshore reinsurance from stakeholders ranging from industry insiders, media outlets, trade publications, the NAIC itself, the Federal Reserve and, most recently, the US Senate.

The remainder of this letter is organized to outline the basis of this support and recommend paths forward:

1) Executive summary – To outline principal arguments and positions
2) Recommendations on guardrail design
3) Recommendations on application to ceded reinsurance
I. Executive Summary

Equitable supports the creation of a guardrail inclusive of both direct and ceded liabilities. Our primary reasons for support include the following:

A. Guardrails are justified empirically by the observed excessive net yields assumed

B. Guardrails are conceptually consistent with Principles-Based Reserve methodologies and do not represent “prescription”

C. Guardrails are more practical and effective than disclosure alone

D. The efficacy of the proposed guardrail design would be enhanced by targeted changes

E. The application to ceded reinsurance is a pragmatic and necessary step to ensure resilience of entities who ceded business to jurisdictions without analogous guardrails

F. The mechanics of the guardrail application to ceded insurance require clarification

G. Regulators should consider phase-ins for ceded businesses given its profound impact on companies with significant offshore reinsurance

A. **Guardrails are justified empirically by the observed excessive net yields assumed**

The NAIC survey-based observations indicating median net yields of 7+% projected in perpetuity for certain classes of widely held securities that went unchecked by appointed actuaries and regulators is *prima facie* evidence of the need for a guardrail. Such optimism in assumptions for unearned spreads can degrade reserves supported by such assets by 40+%

B. **Guardrails are conceptually consistent with Principles-Based Reserves (PBR) methodologies and are not “prescription”**

Including a credit spread guardrail in AAT is consistent with existing statutory reserving approaches. As noted in our previous letters, VM-20, VM-21, and the NY Special Considerations Letter (NY SCL) all require some form of a spread cap as a guardrail to ensure reasonable asset spread assumptions in reserve calculations. For those products governed under prior valuation rules, AAT is the *de facto* reserve in the current rate environment and including a spread guardrail in AAT would be consistent with current industry practices regarding principle-based reserves.

Further, a guardrail safeguards the integrity of principles-based reserves. A guardrail represents boundary setting and not the parameters specification associated with prescription. Guardrails ultimately further PBR adoption by preventing abuses by a minority of companies that undermine confidence in the overall PBR framework.

C. **Guardrails are more practical and effective than disclosure alone**

As noted in our previous letters, a constraint is less burdensome for regulators to monitor, as it reduces the reliance on the regulator to identify and challenge overly optimistic assumptions of spread recognition in complex and high-yielding assets. While documentation of assumptions can enhance regulator understanding of the regulated entity’s basis for spread recognition, it neither (a) ensures uniform regulator treatment across states nor (b) reliably protects the integrity of the total asset requirement in the face of questionable judgment or lax oversight. This is especially true given regulator resource constraints and in light of the proposed robust disclosures that, while valuable, may be of limited effectiveness due to their sheer volume.
Moreover, the guardrail aids the Appointed Actuary in determining asset adequacy for assets that are new or where there is either limited internal or external knowledge or data. A guardrail ensures that actuaries who may not be familiar with certain emerging high-yielding assets classes are using appropriate asset assumptions within AAT.

**D. The efficacy of the proposed guardrail design would be enhanced with targeted changes**

Recommended enhancements are detailed below, but highlights include:

- Use of market yields to concentrate the guardrail only on assumed unearned spread
- Changing the ratings index to A- from BBB- to align better with market practice
- Adding a modest illiquidity premium to reflect enhanced earnings potential for less liquid, non-public assets – while also giving companies the “benefit of the doubt” in gray areas
- Application as an aggregate yield cap, not a security-specific cap, so as not to punish companies with bar-belled net yield profiles and to establish a total budget for assumed unearned spread per projection year

**E. The application to ceded reinsurance is a pragmatic and necessary step to ensure resilience of entities who ceded business to jurisdictions without analogous guardrails**

A common feature of reinsurance transactions is the use of offshore entities that lack guardrails analogous to the current proposal. The application of such guardrails to ceded reinsurance is the most pragmatic and effective way to safeguard offshore reserve integrity against the same excessive spreads that motivated the proposed AAT guardrail. Absent this provision, we anticipate even greater migration of reserves to offshore jurisdictions that readily permit such lenience and, in turn, further exposure of onshore entities to lax offshore reserve standards. Moreover, the use of AAT is more practical and expedient than other mitigation paths such as re-opening jurisdictional reciprocity and prohibiting the use of lower quality letters of credit to fund any onshore reserve deficiencies.

**F. The mechanics of the guardrail application to ceded insurance require clarification**

As detailed in Section III, we think the mechanics of the guardrail application to ceded reinsurance require clarification, particularly with respect to the treatment of trust assets and the allocation of any entity-wide deficiencies to specific treaties.

**G. Regulators should consider phase-ins for ceded businesses given its profound impact on companies with significant offshore reinsurance**

Our understanding is that the offshore reserves for many offshore companies reflect aggregate earned spreads of c.100bps or more than the proposed guardrail. In this circumstance, a liability with a typical 10-year duration would experience a reserve deficiency of c.10+. The management teams of companies who ceded such liabilities (many recently transacted) will require considerable time and effort to restructure their balance sheets, perhaps more time than the present deadline allows. If this were the concern, regulators could also consider enforcing the proposed reinsurance constraints only for transactions effective after a defined date in order to limit the growth of future reinsurance transactions that rely on lenient offshore requirements.
II. **Recommended Enhancements to Current Spread Constraint Design**

We believe an aggregate spread cap based on Single-A corporate spreads plus a modest illiquidity premium applied on a market value basis remains the most effective and appropriate design for an AAT spread guardrail. As such, we offer the following suggestions and associated rationale for the currently proposed spread guardrail. Our key recommendation is that the guardrail be applied based on a market value basis.

<table>
<thead>
<tr>
<th>Topic</th>
<th>Recommendation</th>
<th>Commentary</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Key Recommendation: Spread Guardrail Definition – Market Value vs. Book Value</strong></td>
<td>• Define the spread cap based on market value, instead of book value.</td>
<td>• Market value spread is superior to book value in incorporating market information about risk to cash flows. • Market value is sufficiently audited to be reliable. • The book-value based constraint as currently formulated will have the unintended consequence of reducing spreads on highly rated corporate bonds purchased in periods of compressed spreads. • Market value approach is the same approach utilized by the NY SCL.</td>
</tr>
<tr>
<td><strong>Level of Aggregation for Spread Guardrail</strong></td>
<td>• Formulate credit spread guardrail or cap in the aggregate, rather than at the individual asset level.</td>
<td>An Aggregate Guardrail would: • Allow for some diversification across assets and asset categories while also being easier and more effective to implement. • Allow some reflection of legitimate excess spread unique to certain assets to the extent other, higher-grade assets are below the constraint. • Ameliorate concerns regarding the one-size fits all approach taken by the current proposal.</td>
</tr>
<tr>
<td><strong>Inclusion of Equities in the Actuarial Guideline</strong></td>
<td>• If aggregate guardrail is adopted: Apply the spread guardrail to equities and equity-like investments backing general account liabilities. • If aggregate guardrail is not pursued: Exclude GA equity investments from the guardrail but govern by other measures, such as the immediate shock and subsequent cap on net returns utilized in the NY SCL.</td>
<td>• Additional investment risk should not reduce reserves beyond what is prudent. • Lack of a guardrail on any one asset class (equities) could have unintended consequence of increasing investment in that asset class.</td>
</tr>
<tr>
<td><strong>Reflection of Illiquidity Premium</strong></td>
<td>• Include a modest illiquidity premium within the spread guardrail.</td>
<td>Including a modest illiquidity premium within the constraint will: • Acknowledge the ability of insurers to reliably realize an illiquidity premium given the long-dated nature of their liabilities and ability to invest in private markets.</td>
</tr>
</tbody>
</table>
Maintain the industry’s ability to compete based on differentiated investment strategies while still addressing the excessive optimism in projected asset yields that regulators are rightly concerned about.

**Level of Guardrail**
- Set the appropriate level for the proposed guardrail dependent on whether the guardrail is applied in aggregate or restricted to high yield assets.
  - **If the guardrail is applied in aggregate:** Set the spread cap on slightly higher credit ratings, such as A or A-, plus a modest illiquidity premium.
  - **If the guardrail is applied solely to high yielding assets:** Maintaining the BBB-spread proposed is not unreasonable. However, if and when C1 reforms for structured securities are enacted, use the same models at a confidence level like CTE70 to calibrate guardrails for assets with bespoke C1 charges.
- Single A curve is recognized in the industry as an appropriate measure of fair value and is the emergent standard for spread recognition in other public accounting regimes (FASB, IAIS, VM-22)
- As of 12/31/21, the proposed BBB-spread (net of default costs) is actually c. 10bps more conservative than a spread cap based on A-, BBB+ or BBB rated bonds.
- This is the result of the significant default costs associated with BBB- bonds and the low spread environment as of 12/31/21. Formulating the guardrail as BBB+ or BBB plus an illiquidity premium would result in a more reliable and less volatile spread cap.
- For assets with bespoke C1 charges, setting the guardrail consistent with the C1 capital modeling ensures consistency in spread recognition between reserves and capital.

**Reinvestment Spreads vs. Current Spreads**
- Harmonize guardrail for existing and reinvestment assets, as currently the reinvestment yields are materially less restrictive than for currently held assets.
- Address via grading from current spreads to long term reinvestment spreads over the period of several years, consistent with current VM-21 and VM-22 frameworks.
- Significant disconnects between existing and reinvestment assets could encourage modeling practices that project significant asset turnover in early years to realize the immediately higher reinvestment spreads, which we do not believe is the intent of the guideline.
- We would, however, guard against situations when current spreads are elevated and above long-term spreads. In those situations, history suggests swift mean reversion of those elevated spreads over a period of no more than 1 year.

**III. Recommendations on Application to Ceded Reinsurance**

The current language requires that a company perform asset adequacy testing on business that includes a ceded reserve if the reinsurer does not file a VM-30 report. While we support the intent of the guidance as noted above, there are practical considerations that must be clarified.

There is limited guidance for how gross asset adequacy testing is defined and should be performed – especially when the insurer has minimal information about the reinsurance assets that are backing the ceded reserves. Key questions include: (i) what assets should be used in the gross AAT calculation when there are no trust assets supporting the ceded reserves and (ii) in the
event there are no trust assets and the assuming reinsurer has an entity wide AAT deficiency, how such asset deficiency is assigned to different treaties.

Additional guidance regarding how the results of the proposed testing would impact net AAT results, gross reserves, and reserve credits taken at the ceding company is also necessary. For example, if the results of testing indicated that reinsurance assets for a particular treaty were insufficient, guidance must be provided whether the ceding insurer should (1) compel the reinsurer to increase collateral, (2) reduce reinsurance reserve credit taken, (3) reduce overall AAT margins to reflect the insufficiency or (4) some combination of the above.

We do believe that with these additional clarifications, the proposed application of AAT to ceded reinsurance is a pragmatic and effective way to ensure the resilience of entities that have ceded significant amounts of business offshore.

* * * * * * * *

Equitable appreciates the opportunity to comment on this exposed proposal and looks forward to working with regulators to reach an appropriate framework for modeling of high yielding assets within the Asset Adequacy Testing framework. We are available to discuss our comments further as desired.

Sincerely,

Aaron Sarfatti, ASA

Mr. Fred Anderson
Chief Life Actuary, Minnesota Department of Commerce

Attention: Reggie Mazyck (rmazyck@naic.org)

Re: Proposed Actuarial Guideline for Asset Adequacy Testing (AAT)

Dear Messrs. Boerner and Anderson,

New York Life Insurance Company (NYL) appreciates the opportunity to comment on the draft Actuarial Guideline for Asset Adequacy Testing (AAT). We strongly support the ongoing efforts of the NAIC to develop an actuarial guideline focused on the appropriate modeling of complex or high-yielding assets. We believe it is important for the Appointed Actuary to reflect, and regulators to understand, the risks associated with these assets in AAT. Given the increased use of these complex assets, an actuarial guideline would improve consistency in their modeling, offer greater transparency and enhance the quantification of risks associated with these asset classes. It is our view that this guideline would significantly strengthen the solvency of the life insurance industry and protect consumers by ensuring the ability of companies to meet current and future policyholder obligations.

New York Life Insurance Company, a Fortune 100 company founded in 1845, is the largest mutual life insurance company in the United States\(^1\) and one of the largest life insurers in the world. New York Life has the highest financial strength ratings currently awarded to any U.S. life insurer from all four of the major credit rating agencies\(^2\). Headquartered in New York City, New York Life’s family of companies offers life insurance, retirement income, investments and long-term care insurance.

**Net Yield Guardrails in Asset Adequacy Testing Safeguard Solvency and Promote Consistency**

NYL supports the use of guardrails in AAT as a practical way to ensure that the net yield of assets used to back statutory reserves receive regulatory focus commensurate with the

\(^1\) Based on revenue as reported by "Fortune 500 ranked within Industries, Insurance: Life, Health (Mutual),” Fortune magazine, 6/2/2021. For methodology, please see [http://fortune.com/fortune500/](http://fortune.com/fortune500/).

\(^2\) Individual independent rating agency commentary as of 9/30/2021: A.M. Best (A+++), Fitch (AAA), Moody’s Investors Service (Aaa), Standard & Poor’s (AA+).
importance that regulators have accorded to this risk area while bringing greater discipline to AAT.

The emergence and increased usage of complex and high yielding assets have improved the assumed earnings rate on invested cash flows. Given this, we believe it is critical that the risk associated with these assets be appropriately reflected in reserving and accounting standards. Regulators have observed that the assumed net yields on these asset classes reflect favorable spreads without necessarily adding an adequate provision to account for increased risk. If insurers’ reliance on the sustained outperformance of these assets when setting reserves is not addressed, this growing trend may pose a potential solvency risk for the life insurance industry. The life insurance industry has been resilient through various financial and other crises, and this is in large part due to the strong solvency protections afforded by the state regulatory system. We believe that the use of guardrails in setting the net yields for complex and high yielding assets is not only appropriate but critical to ensuring that strong solvency protections continue.

In addition, the increasing dependence on high yielding assets to support long duration liabilities has, in turn, increased the degree of reliance counted upon by Appointed Actuaries to set assumptions for the risks underlying these assets and has potentially created increased pressure to rely on aggressive assumptions for their net yields. This may result in inconsistency in assumed net yields for similarly rated assets among different companies despite having a similar level of risk.

It has been suggested that relying solely on additional disclosure requirements and sensitivity testing would provide satisfactory insight into the assumptions used with respect to these asset classes. We disagree and believe that such an approach is too weak to effectively address regulatory concerns. Relying solely on sensitivity testing and documentation for these complex and high yielding assets will potentially expand and exacerbate the questionable modeling practices that regulators have begun to observe. In contrast, establishing guardrails around the modeling of complex and high yielding assets will ensure that AAT appropriately reflects the risks inherent in these assets and therefore enhance both transparency and consistency across insurers, allowing regulators to better understand the underlying risks.

While NYL is supportive of guardrails, we acknowledge that the specific guardrail definitions in the draft Actuarial Guideline will require further development and refinement. Consequently, we support the draft’s measured approach to introduce the guardrails as sensitivity tests for year-end 2022 with the goal of transitioning to guardrails the following year and thereby allowing more time to vet and develop appropriately conservative guardrails.

**Net Yield Guardrails do not Diminish the Role of the Appointed Actuary, and are Entirely Consistent with the Discretion Accorded to the Appointed Actuary under the Standard Valuation Law**

AAT is by definition a judgement-based exercise that relies on the expertise, integrity and discretion of the Appointed Actuary. We believe that regulators should take great care not to impinge on the judgement and discretion of the Appointed Actuary. However, we do not believe adding guardrails for complex and high yielding assets impinges upon Appointed Actuary discretion.
Under the Standard Valuation Law, the Appointed Actuary must form “an opinion ... as to whether the reserves and related actuarial items held in support of the policies and contracts ... when considered in light of the assets held by the company with respect to the reserves and related actuarial items ... make adequate provision for the company’s obligations under the policies and contracts...”3 Any proposed guardrails will have no impact on this requirement, nor on the Appointed Actuary’s use of discretion and judgement in forming such opinion.

In fact, Appointed Actuaries do not rely on their own judgment in setting all critical assumptions, particularly in areas where they lack sufficient expertise. In these situations, Appointed Actuaries instead rely on others, and obtain reliance statements.4 In particular, Appointed Actuaries often rely on others to set investment-related assumptions, particularly spread and default assumptions, with respect to which the Appointed Actuary may have limited expertise. This does not limit the Appointed Actuary’s judgment or discretion, but instead facilitates appropriate assumption setting and analysis. Similarly, establishing guardrails on certain asset-related assumptions is entirely appropriate and does not impede the role of the Appointed Actuary.

Greater Transparency into Reinsured Liabilities and Supporting Assets

The use of offshore reinsurance transactions, sidecars and similar structures has increased in recent years and the NAIC has rightfully identified this as one area of concern that needs to be understood:

“Insurers’ use of offshore reinsurers (including captives) and complex affiliated sidecar vehicles to maximize capital efficiency, reduce reserves, increase investment risk, and introduce complexities into the group structure.”5

We support the NAIC’s continued efforts to explore this and related issues. In addition, in the interim, we support efforts to bring greater transparency and consistency to these transactions and therefore support the proposed requirement to include certain ceded reserves (and the related assets) in AAT. While we appreciate the practical challenges associated with this proposal, we believe there is significant value in providing regulators with a view into reinsured liabilities. Given this, we would suggest including additional guidance to help companies navigate the practical challenges (e.g., sourcing appropriate asset data).

* * *

3 Standard Valuation Law, NAIC Model 820, Section 3.B(2). See also Section 3.A(2)(a).

4 Section 3.A.1.d of Section 30 of the Valuation Manual specifically contemplates this sort of reliance: “A reliance section (see Section 3.A.6) describing those areas, if any, where the appointed actuary has relied upon other experts for data, assumptions, projections or analysis (e.g., anticipated cash flows from currently owned assets, including variation in cash flows according to economic scenarios), supported by a statement of each such expert in the form prescribed by Section 3.A.12.”

We are grateful for your time and attention to our comments. Please let us know if you need any additional information or if you would like to discuss this letter with us.

RE: Proposed Actuarial Guideline Asset Adequacy Testing ("AAT")

Everlake has the following commentary on the proposed AAT Actuarial Guideline (AAT AG).

The AAT AG is a significant proposal requiring additional study and input to ensure that:

- the regulatory solvency framework supports the diverse assets that stand behind insurance products, including retirement services, long term care and other long-term liabilities,
- regulatory concerns are addressed through the appropriate mechanism, and
- the strengths of the current solvency framework are considered.

Everlake supports enhancements to the regulatory solvency framework that would improve AAT documentation and transparency as described below. We encourage the Task Force to consider the recommendations in this letter, and the adverse impact the AAT AG will have on the insurance market.

While we agree that the regulatory concern on the increased use of higher yielding assets is appropriate and needs to be addressed, we have significant concerns with several aspects of the proposal. We share your concern that additional documentation, disclosure and sensitivities are warranted, and we would like to work with regulators to develop these requirements to adequately address regulatory concerns. However, we do not support the constraint on spreads for reasons outlined below. We also believe the reinsurance requirement does not belong in this AG and should be removed.
Overview and Background

Over the last decade, the insurance industry has implemented substantial, healthy, and necessary innovation with respect to assets and risk management. Core aspects of that innovation have involved expanding and optimizing the asset classes used to back liabilities and improving asset and liability modeling techniques that consider expected liquidity requirements and policyholder behavior. At the same time, developments in the capital markets, such as ultra-low and even negative interest rates, have forced responsible companies to question the efficacy of continuing to purchase such instruments under the premise of conservatism. Consumers have benefited by expanding the pool of assets available to support long-term liabilities and diversifying asset risk. This has been achieved while increasing crediting rates and reducing costs for the same premium. Adding certain growth-oriented assets may increase short term volatility but can also substantially reduce the risk of failing short of satisfying one’s liabilities over the long term by utilizing diversification as a risk mitigator. Higher yielding assets have been integral to the innovations in the insurance industry. Insurance products have evolved to be an effective and efficient means to meet this macroeconomic consumer need.

At the same time, we recognize challenges that regulators face; needing the tools to validate whether the asset innovation is truly in the best interests of policyholders and assuring that insurance companies are taking and managing risk appropriately, in part through how particular assets are aligned with appropriate liabilities.

We maintain that:

- regulations should foster asset diversification that allows insurers to meet the growing need for affordable insurance products;
- in addition to reserves, asset risk is addressed through established measurements and processes including Risk Based Capital and Enterprise Risk Management ("ERM") Frameworks; and
- the current AAT framework is strong, with decades of successful field testing through multiple economic cycles.

The overall asset requirements of insurance companies have grown, and over the next decade is expected to grow substantially. Moreover, the contribution to overall enterprise risk from adding higher yielding assets will not be the same for each company; it crucially depends on the interdependence of such risk factors with other portfolio assets, the amount of capital held, and with the characteristics of individual company liability factors as well. Assets must be evaluated in the context of the liabilities they support.

We’ve outlined below our concerns with the proposal and have included an early view on potential solutions to these concerns.

Elimination of the cap on net investment returns

Higher net returns are not just a function of the credit rating of the asset. Other characteristics of the assets that can lead to higher returns including illiquidity premiums, underwriting complexity and skill required to price assets. Illiquidity is addressed by the liquidity risk of the liabilities supported by the assets. Underwriting assets is addressed by the skilled professionals and risk management programs employed by the industry. Cashflow timing variability also contributes to greater yields but can be
diversified away in the asset portfolio or by supporting long duration liabilities not dependent on early period cash flows.

Over the past decade (including periods of market dislocation), many higher yielding investment grade asset classes have performed more favorably (from a yield and default standpoint) than similarly rated traditional corporate bonds. For example, the charts here compare the spread over risk free rate and historical realized defaults for A and BBB rated CLOs with comparably rated corporate bonds. This data illustrates that the higher spread achieved with investment grade CLOs are not associated with higher realized defaults. In fact, the opposite is true: CLOs have lower realized defaults than similarly rated corporate bonds.

**Our Concern:** Imposing a cap on returns that is based solely on the credit risk of a comparable corporate bond ignores other characteristics that generate higher yield. Moreover, a diversified portfolio that includes higher yielding investment grade assets can provide higher net returns on a risk-adjusted basis than a non-diversified portfolio that is limited to lower returning assets.

**Potential Solution:** Yields in excess of the credit risk associated with the asset, specifically asset illiquidity, cash flow timing variability, or recovery, is typically addressed in ERM Frameworks, integrating risk management governance, including the liability consideration, can give comfort to external stakeholders that yields can be achieved under moderately adverse conditions. The analysis supporting the current C1 charges clearly shows that equity markets recover, and long-term excess returns are achieved. Similar analysis could be prepared in consideration of a company’s liabilities to show that illiquidity premium is an appropriate source of return when investing to fund illiquid long term liabilities.
Potential Solution: The concern over high returns can also be addressed by increased disclosure of the liabilities supported and the matching of the assets and liabilities, namely through projected cash flow reports and sensitivities exhibited through these cash flow reports. Disclosure and documentation of return assumptions can be supported by the data and rationale for spread assumptions.

Our Concern: Companies manage shortfall risk as well as credit, market and liquidity risks. The punitive nature of caps will bias the industry to overinvesting in traditional fixed income assets replacing credit and liquidity risk with shortfall risk.

Strength of the Current Frameworks: The current AAT framework has decades of successful field testing through multiple economic cycles that models the actual risk/return characteristics of the currently held assets. Further, the projections provide statistically calibrated forward looking views on the performance of the portfolio under moderately adverse conditions. The current framework maintains a consistent approach across all relevant assumptions, including actuarial, policyholder behavior, expense, and asset assumptions. Appointed Actuaries are accountable to understand the business and they are best equipped to develop a moderately adverse set of assumptions. This approach has provided useful information to regulators and management to assess asset adequacy throughout a range of market stress and interest rate environments. This framework has worked well for the industry and has advanced and informed many companies’ Asset Liability Matching (“ALM”) and investment strategies. Additionally, regulators have engaged sophisticated actuarial and investment firms to review and opine on the Appointed Actuary reports. These reviews are both productive and insightful for both the company and the regulator.

Our Concern: Under the proposed framework, all yields are capped at a level achievable with public non-callable BBB bonds. There is no “one size fits all” solution for assessing risk and setting reserves, and we are concerned that this yield constraint is counterproductive for the industry and regulators. A single cap on an assumption is a major paradigm shift from the principles based framework, and this overrides the informed analysis by professionals who are fully integrated into a company’s risks and reserves. Creating an artificial constraint on investment modeling will diminish the informational value of the asset adequacy exercise and does not support regulators or companies in developing thoughtful and informed views on asset adequacy, ALM and risk and return. The proposed reserve requirements are also based on an arbitrary investment constraint, representing a portfolio with no diversification and no prudent, informed risk vs. return asset selection for policyholders. The proposed framework will likely cause insurers to hold artificially higher, excess reserve levels that are not aligned with economic reality. These costly additional reserves may ultimately harm policyholders via rate changes and impacts to non-guaranteed element management.

The industry conducts businesses that span the spectrum of liability profiles. We specialize in different kinds of products across a broad spectrum that range from liabilities that mimic traditional fixed income assets, to liabilities that are exceedingly long and illiquid, to liabilities that are short, to liabilities that are asset intensive, etc. To provide this diverse range of products, the industry must have the flexibility to make asset/liability decisions that support our own unique blocks of business.

Our Concern: The proposed AAT AG discourages asset diversification by requiring a cap on returns. It could lead to structural disincentives to higher yielding asset portfolios by creating unfair reserve increases and, in turn, creating shortfall risk. This would have significant public policy implications given that insurers rely upon higher yielding assets to satisfy their long-term obligations to policyholders.
Scoping of Assets for Additional Disclosure

An important step is proper scoping of assets for which more disclosure is necessary.

**Concern:** As currently drafted, the guideline is excessively broad and would include assets of a very straightforward and well understood nature.

**Potential Solution:** A consideration would be to focus on projected market yields compared to similarly rated and similar weighted average life ("WAL") corporate bonds, but with a margin for deviation due to typical market conditions (spread variance within a rating class), as well as recognition of illiquidity premium. This would more appropriately define the scope of assets warranting further disclosure.

We support additional disclosure and sensitivity testing

**Strength of the Current Frameworks:** Regulators today have existing authority to require individual insurance companies to provide additional information and sensitivities related to their specific books of business. In many cases, regulators have used that authority to gain additional company specific insight and can engage in dialogue with the appointed actuary to ensure proper modeling and reasonableness of assumptions considering the liabilities being supported.

We support constructive improvements to the framework and agree that disclosures should be enhanced to address the growing usage of higher-yielding assets and facilitate regulatory and insurer dialogue.

Targeted refinements to the proven existing frameworks, expanded AAT disclosures and regulators’ existing authority to require individual companies to provide supplemental data addresses the concern over individual companies taking potentially excessive risk. **Everlake believes that the best path forward is for regulators to take additional time to gather industry input to develop broadly informed and vetted solutions to their concerns.**

Elimination of the new reinsurance requirement on ceded reserves

The reinsurance proposal is not a good fit within the proposed actuarial guideline. The AAT AG addresses concerns over higher yielding assets, not the treatment of reinsurance.

**Concern:** The reinsurance requirement replaces dialogue between regulator and Appointed Actuaries and should be removed from the AAT AG. This topic can be addressed as a separate discussion between Appointed Actuaries and Regulators.

**Concern:** Perhaps the most significant concern with the reinsurance requirement is that it appears to conflict with broader NAIC initiatives regarding the regulation of reinsurance collateral required from reinsurers from qualified and reciprocal jurisdictions. This could be viewed as circumventing credit for reinsurance rules and the existing Covered Agreements.

**Potential Solution:** If regulators are concerned with the credit for reinsurance or the impact of reinsurance on the cash flow testing results for a specific company, the regulator should discuss the concern directly with the company, and make appropriate adjustments as needed, rather than imposing “one size fits all” reinsurance requirement on all companies.
Conclusion

Higher yielding assets are critical to the long-term success of the insurance industry and should not be discouraged if the exposure and assumptions are accurately disclosed, and the risks are appropriately understood and modeled. Everlake is committed to appropriate ALM to ensure obligations to policyholders are satisfied, and in that spirit, we support efforts of regulators to ensure AAT procedures are serving their intended purpose.

However, we believe the proposed AAT AG is too restrictive which over the long run will be harmful to policyholders by disincentivizing companies from achieving the overall best risk-adjusted investment results for the benefit of their policyholders. While we support regulatory efforts to improve disclosure and sensitivity analysis to ensure matching of assets and liabilities properly takes into account complexities and riskiness of supporting assets, constraints without reference to economic analysis, such as artificial limits on yields, should not be adopted.

The constraint should be removed as it is damaging to the industry and policyholders and discriminates against companies that can demonstrate higher credit spreads. It creates an arbitrary benchmark that is not equitable across companies and not consistent with liability assumption margins.

We are supportive of additional disclosure, transparency and sensitivities, which should go a long way in remediating regulator concerns around higher yielding assets in AAT.

Reinsurance does not belong in the AAT AG and should be removed.

We stand ready to engage with you to address regulatory concerns, with a view towards ensuring our industry as a whole can continue to deliver on its promise of providing policyholders with insurance products supported by solid well performing asset portfolios.

Thank you for the opportunity to comment on the proposed AAT AG. We look forward to continuing the dialogue and jointly developing solutions that address the concerns raised by regulators.

Chair
Life Actuarial (A) Task Force (LATF)
National Association of Insurance Commissioners

Re: Comments on the exposed draft Actuarial Guideline on Asset Adequacy Testing

Dear Mr. Boerner,

The Asset Modeling and Reporting Task Force of the American Academy of Actuaries (“the Task Force”) is pleased to provide the following comments on the draft Actuarial Guideline (AG) on Asset Adequacy Testing (AAT) which was exposed during LATF’s February 10 meeting.

The Task Force appreciates the need to provide guidance in this area and believes that appointed actuaries should be able to explain the drivers of asset performance and how they’ve reflected the asset risks in their AAT. We support the principle-based guidance and required disclosures in the AG which will help facilitate consistent practice by appointed actuaries and understanding by regulators. However, the Task Force believes the constraints in the AG (e.g., arbitrary yield caps) are at odds with the independence and judgment appointed actuaries need to perform AAT given the wide variety of products and risk profiles of insurers. We strongly recommend the AG focus on principle-based guidance and required disclosures instead of prescribing non-principle-based constraints which could hamper the appointed actuary’s ability to assess the risks affecting an insurer’s specific mix of assets and liabilities, and how to best reflect those risks in AAT.

Regarding the AG’s scope, the Task Force believes company-wide exclusions from the AG should be based on a company’s current and future asset portfolio, not an arbitrary company size threshold (whether measured on a gross or net basis). For example, exclusions could be allowed based on a defined maximum weighted average assumed spread in AAT or defined criteria on the mix of assets a company uses for asset adequacy testing, e.g., considering the quality, volatility, and liquidity characteristics of those assets.

Regarding the AG’s method of identifying high risk assets based solely on asset ratings, we note that due to limitations of and potential inconsistencies among ratings of complex assets, the asset rating alone does not always provide sufficient information regarding an asset’s risk profile. Therefore, we suggest using principle-based approaches to identify assets with high risk relative to their yield, rather than basing their identification solely on asset ratings.

Regarding reinsurance, we note that U.S. actuaries are required to follow ASOP 11, Treatment of Reinsurance or Similar Risk Transfer Programs Involving Life Insurance, Annuities, or Health Benefit Plans in Financial Reports, which has recently been revised (with an effective date of December 1, 2022). Our task force believes that the judgment of the appointed actuary, following actuarial standards of practice in revised ASOP 11, is preferable to prescribing certain situations when AAT must be performed on a gross basis.
Regarding the treatment of equities in the AG, we believe it will be difficult to apply some of the requirements in the exposed AG to equities and suggest considering the development of separate guidance that is specific to the treatment of equities.

The exposure specifically asked for comments on the pros and cons of an individual asset-specific versus aggregate sensitivity test as required in Section 5.A of the AG. The Task Force believes that many companies would perform 5.A’s sensitivity test at the individual asset (or asset group when there is asset compression) level, however we recommend leaving this decision up to the appointed actuary since some companies may need or want to perform this sensitivity test at more aggregate levels for practical reasons, e.g., when portfolios are managed to an aggregate mix of assets. Also, in line with our comments regarding constraints above, the Task Force believes it is appropriate that the sensitivity test in Section 5.A remain a disclosed sensitivity test, rather than becoming a prescribed constraint in 2023 as is currently the case in the AG.

The exposure specifically asked for comments on the inclusion of board of director and senior management responsibilities on the quality of complex asset-related assumptions like those stated in the Valuation Manual’s Governance section (VM-G). Our task force believes that the inclusion of such responsibilities would be beneficial. If additional such responsibilities are added to VM-G we recommend materiality be a consideration.

The Task Force is concerned the amount of work required to comply with the AG by year-end 2022 will be a challenge for some appointed actuaries. In particular, the seriatim attribution analysis required in Section 5.B requires extensive effort, and judgment on how elements are attributed, so we suggest considering alternatives such as limiting the analysis to a handful of assets, postponing the analysis to year-end 2023, doing the analysis at a more aggregate level, or relying on the other required disclosures in Section 4. In addition, if a company is required to make certain model enhancements per Section 4.E, implementing those enhancements in a well-governed and controlled environment by year-end 2022 may be challenging.

Finally, the Task Force appreciates the urgency on this issue however we would prefer the requirements in the AG be implemented directly through the Valuation Manual’s section on the Actuarial Opinion and Memorandum (VM-30) rather than first being implemented as an Actuarial Guideline to accomplish an earlier effective date for the requirements.

Thank you for your consideration of these comments. Please contact the Academy’s deputy director for public policy Devin Boerm (boerm@actuary.org), with any questions.

Sincerely,

Jason Kehrberg, MAAA, FSA
Chairperson
Asset Modeling and Reporting Task Force
American Academy of Actuaries
Agenda

1. Review Summary of Recommended ESG Models for Field Testing
2. Discuss Key Differences between the GEMS® and AIRG Equity Models
   a. Expected Mean Return and Standard Deviation
   b. Link between Equity and Treasury Model
   c. Equity Model Jump Process
3. Questions and Comments
Summary of Recommended ESG Models for Field Testing

<table>

| Treasury | 1. Field test two GEMS® Treasury model candidates  
| | a. Conning Calibration and Generalized Fractional Floor  
| | b. Alternative Calibration and Shadow Floor  
| | i. Note: The Alternative Calibration will be adjusted ahead of field testing  |
| Equity | 2. Utilize the existing GEMS® equity model with equity-Treasury linkage based on the short Treasury rate for field testing. Additionally, apply the following calibration updates:  
| | a. Update the equity model calibration to account for changes made to the Treasury model  
| | b. Apply a Sharpe-ratio approach with a 5% corridor to set the expected returns for the diversified international equity, aggressive international equity, and US aggressive equity indices  |
| Corporate | 3. Include GEMS® corporate model in initial field testing with the calibration updated for consistency with other generated returns on a risk/reward basis.  |

Key Differences between the GEMS® and AIRG Equity Models

- Model office testing presented by the American Academy of Actuaries has shown that the scenario sets proposed for field testing resulted in significant impacts to reserves and capital for the Variable Annuity (VA) model office as compared to the results produced with scenarios from the prescribed generator.
- Today’s presentation will focus on some of the potential drivers of reserve and capital differences resulting from moving to the GEMS® Equity Model from the ESG prescribed in VM-20 and VM-21. The discussion will also provide some information on a recalibrated version of the GEMS® Equity Model with lower volatility.
Expected Mean Return and Standard Deviation

- The AIRG Equity Model is calibrated using historical data generally from 1955 - 2003* to set the expected mean return and volatility. The GEMS® Equity Model uses historical data back 25 years, but also considers the expected returns and volatility of other domestic and international equity funds to ensure alignment on a risk/reward basis.
- The GEMS® Equity Model has higher volatility than the AIRG in the steady state - which could be a significant source of differences in reserves between the GEMS® and AIRG scenarios. The GEMS® higher volatility leads to returns that are both higher and lower across the scenarios in each period. Over time and across scenarios, those higher and lower returns compound to produce a wider distribution of cumulative equity returns, or wealth ratios, in both tails of the scenario distribution.
- The GEMS® Equity model has similar returns to the AIRG in the steady state, but lower expected returns in the earlier projection period due to the Equity-Treasury linkage and low interest rate environment. Lower mean returns shift the entire distribution of returns lower.

- Both GEMS® and the AIRG have long-term expected returns (8.6%) that are lower than historical returns. The historical periods below show similar average returns (11.8%-12%) that are significantly higher.
- The volatility in the AIRG aligns with the historical data since 1957 (the start of the S&P 500).
- Volatility in the GEMS® ESG is higher than the historical volatility since 1957, but lower than the volatility that considers data back to 1900.
- The inclusion of data after 2003 does not dramatically change the mean but would reduce the volatility slightly.
Historical Prolonged Periods of Negative Cumulative Returns

- After a recession or depression, there have been some extended periods of equity market recovery. This is important to reflect in the scenarios due to the long-term nature of some insurance liabilities.
- The graph on the right illustrates a time period from the late 1920s to the mid 1940s where an investor in the S&P index would not have been able to recoup the original investment value upon sale.

![Historical S&P Index Cumulative Total Returns 1929-1945](image)

Modeled Prolonged Periods of Negative Cumulative Returns

- Both the AAA ESG and GEMS® can produce equity scenarios that exhibit low returns over an extended period of time. This is largely driven by volatility and the expected return. If there is enough volatility or if there are low enough expected returns, low for long equity scenarios will be produced.
- As of 12/30/20, GEMS® produced 12 scenarios with cumulative negative returns over a 30-year projection compared to 3 scenarios for the AAA ESG out of 10,000 scenario projections.
- Reserves and capital are driven by scenarios in the tail. The extreme scenarios illustrated on the right represent significant risks to companies that issue guarantees on separate equity fund allocations.

VA model office testing shows a large increase to reserves and capital for the recommended field test model candidates. To help understand the extent to which equity model volatility impacts the results, Conning adjusted the volatility parameters of the model so that the resulting steady state standard deviation was in-line with the current AIRG model (i.e. 16.1% vs the GEMS® Baseline of 17.3%). The chart below shows the material impact that this change can have on long-term, cumulative equity returns, especially at the lower percentiles. For example, the 1st percentile of the Gross Wealth Factor at the end of the 30th projection year is up from a little over 39% to a little over 55%.

If regulators would like to pursue changes to the GEMS® Equity Model volatility, a next step would be to determine the desired level of volatility.

Additionally, if a change is made to the volatility in the U.S. Diversified Large Cap fund, other funds will need to be adjusted to ensure alignment on a risk/reward basis across funds.

Link between Equity and Treasury Model

It is difficult to see strong relationships between equities and Treasuries because the equity market is so volatile. However, investors typically demand equity returns in excess of those offered by risk-free assets to compensate for bearing risk. Today’s low yields imply lower equity returns.

The graph on the right illustrates how changing the initial Treasury levels can influence the distribution of equity returns at the end of the 12th month of the projection. Increases to interest rate levels will shift the equity distribution upwards, and vice-versa.

Several commenters have noted that the equity-Treasury linkage could cause reserve and capital volatility from period to period.

*Impact of Changing Initial Treasury Yield
S&P 500 Total Return, 12 Month Projections with 9/30/20 Start

*Illustrative results only, these charts have not been updated for the latest calibration
Equity Model Jump Process

The graph on the right depicts quarterly total returns from the S&P 500 equity scenarios generated by the AIRG and GEMS® models as compared to the actual Q1 2020 S&P 500 quarterly total return. While both ESGs failed to capture the severe downside Q1 2020 actual return, the jump process in the GEMS® equity model included scenarios with larger negative quarterly returns.

*Actual vs. Projected Q1 2020 S&P 500 Total Returns

Prepared by Conning. Sources: Academy Interest Rate Generator v 7.1.201905 and GEMS® Economic Scenario Generator scenarios

*Illustrative results only, these charts have not been updated for the latest calibration

Equity Model Jump Process, continued

For Q2 2020, both ESGs again missed the large Q2 2020 S&P 500 quarterly total return, but the jump process in the GEMS® equity model produced scenarios with higher quarterly S&P 500 returns. Some commenters have suggested that the large up and down equity market movements produced from ESG models with a jump process may “wash out” over the long term. However, the potential impacts of large equity market movements on hedging programs that are rebalanced periodically or GMXB in-the-moneyness warrant inclusion in field testing.

*Actual vs. Projected Q2 2020 S&P 500 Total Returns

Responses to questions on Academy’s 3-17-2022 model office results presentation to the Life Actuarial Task Force (LATF)

Please note that when we refer to “the new/Conning scenarios” we are referring to the version (i.e., calibration) we tested and presented model office results for on the 3/17/22 LATF call.

1. From Ted Chang:
   a. While the scenario reserves are increased as we all expect, the magnitude of their increase is kind of alarming and makes me wonder whether the new scenarios are too severe or the AIRG amounts are way too inadequate.

   Take into consideration, these are limited model office results which are based on simplified products and investment strategies and only consider time zero reserves on a single cell. There is also a fair amount of judgment involved as to whether the new scenarios are too severe or the AIRG scenarios are too inadequate.

   Regarding interest rates, we know the AIRG scenarios fall short of the NAIC’s new low-for-long interest rate criteria, but some actuaries may think the new interest rate scenarios are a bit severe.

   Regarding equity returns, the new equity scenarios have fatter and more severe tails than the AIRG equity scenarios, with many more equity scenarios losing a more significant portion of their value by the time guaranteed withdrawal benefits are elected (e.g., 30% to 60%+ reduction in cumulative equity returns). Also, unlike the AIRG equity scenarios which are independent of interest rate returns, the new equity scenarios assume a constant mean equity risk premium over interest rates. This makes equity scenarios produced by the new ESG dependent on the starting yield curve which might introduce some procyclical volatility to reserve and capital levels from one valuation date to the next.

   b. Would it be helpful/meaningful to calculate and compare with their respective deterministic reserves, if readily doable, for the purpose of assessing the appropriateness of those SR amounts?

   Before calculating/comparing Deterministic Reserve (DR) levels, we suggest revisiting new methodology that has been proposed for determining the DR scenario. When applied to the new 12/31/2019 scenarios the new methodology resulted in a severe DR scenario with interest rates going down to negative levels and staying there. We have developed an alternative methodology for determining the DR scenario which we look forward to presenting and discussing with LATF on a future call.

   c. What makes the last discount rate 3.75% as shown on Slide 29 out of line while the corresponding one on Slide 30 with low reserve is pretty much in line with others?

   This is due to differences in the two scenario’s interest rates which impact the yield on purchased reinvestment assets. The chart below illustrates how scenario 8025’s interest rates are significantly higher starting in projection year 27, which is why the cumulative annualized Net Asset Earn Rates (NAERs) shown on the upper right of slides 29 and 30 start to diverge after 30 years. Note that the NAERs will differ some from the weighted average interest rates in the chart below because the cash flows...
the NAERs are based on also impacted by spreads, defaults, and investment expenses.

![Weighted average annualized UST rates used for reinvestment by projection year]

2. Is it possible to isolate the impacts for both/either of the models from the following scenario features?
   a. Inversions
   b. Negative Interest Rates
   c. Very High Interest Rates

   It is difficult to isolate the impacts of such features in a given set of economic scenarios because there is no simple and objective method for “turning off” such features in order to directly evaluate their impact. Instead, metrics quantify the prevalence of such features in a given set of economic scenarios. Those metrics can then be compared between scenario sets to get an indication of the degree to which the features signified by those metrics may be impacting results.

   The Universal Life with Secondary Guarantees (ULSG) model office results are largely driven by low/negative interest rates, as can be seen in ULSG results for the unfloored scenario set. However, it is important to note that the ULSG model office uses a rather simple investment/reinvestment strategy (50/50 mix of A/AA 20-year corporate bonds) and single new business cell. Results for actual ULSG inforce blocks with more complicated reinvestment strategies could be more sensitive to inversions and very high interest rates. Even with the field test, it may be difficult to pinpoint how scenario features impact ULSG reserves, which is why it is important to evaluate the economic scenarios independently of the reserves, e.g., by developing robust acceptance criteria that are consistent with economic history while still reflecting regulatory targets.

   Given its liability and asset assumptions, the Variable Annuity (VA) model office results are driven more by equity returns than interest rates. Similar to the ULSG model office, the VA model office uses a single new business cell and
invests/reinvests general account assets into a 50/50 mix of A/AA corporate bonds, but it is slightly more complex in that it reinvests into bonds across the maturity spectrum (not just 20-year). Attributing VA impacts between equity returns and interest rates can be challenging, not to mention attributing VA impacts to different features seen within the equity return scenarios and interest rate scenarios. We suggest contemplating a consistent approach in the field test to help attribute impacts to various scenario features. We also note that criteria on Gross Wealth Factors (GWFs) are especially useful because they describe the cumulative impact of scenario rates which many insurance products (especially VA) are sensitive to.

3. Both models provided results for newly issued business.
   a. Is it possible that due to the smaller size of reserves/TAR for newly issued business as compared to inforce business that the resulting differences between each ESG model are magnified? For example, for ULSG we would expect to see a humped shape reserve pattern as the modeled policies age and get closer to claim payment before dropping off due to decrements.
      Yes, it is possible. But it is also possible that relative impacts could be larger on inforce business. The field test may be able to provide additional insight into this.
   b. How would the reserve/TAR differences between the ESG models look for an inforce product?
      Given the simple nature of our model offices we would expect them to produce directionally similar results if the same products were modeled on an inforce basis. But it is important to note that reserve/TAR differences (whether on new business or inforce) could vary significantly depending on company specific product features, in-the-moneyness of guarantees, type and extent of market dependence in assumptions, investment/hedging strategy, etc. The field test should provide insight into the impacts on inforce business.

4. ULSG Model Specific Questions
   a. How much do the results change if you change the discount rate to be 105% of the 1-year UST if positive and 95% of the 1-year UST when the 1-year UST is negative?
      We have not performed this calculation but would not expect a modest change like this to have a significant impact on results. We also do not understand the rationale behind such a change to the discount rate methodology.
   b. What do the results look like with 10,000 scenarios?
      We would expect them to be similar on our rather simple ULSG model office, so we ran with 1,000 scenarios to save time.
   c. Why do the results on slide 7 look so similar for the Conning GFF, Alternative Shadow, and Reference model?
      Those results are similar because reserves on this ULSG product and reinvestment strategy are primarily driven by low interest rates and all three of those models are calibrated to the same NAIC low-for-long interest rate criteria. Results may not be as similar for other, more complicated, ULSG products and reinvestment strategies.

5. VA Model Specific Questions
   a. For the “3 hybrid” results on slides 32 and 33:
      - What bond fund scenarios were utilized – Conning or AIRG?
        Conning bond fund returns were used. Only the equity scenarios were replaced.
      - Can you provide more insight into why the reserves and TAR were less than those for the “1 AIRG” run?
This is likely due to the level of bond fund returns from the Conning scenarios, and how those scenarios were paired with equity returns from the AIRG scenarios to produce the “hybrid” scenarios we used for our analysis. We are performing analysis to see if we can provide additional information that could help quantify the impact due to the level of bond fund returns in the Conning scenarios versus the impact of pairing those Conning bond fund returns with AIRG equity returns.

b. On slide 32, would it be possible to also show the Guaranteed Benefit Reserve along with a % change from the “1 AIRG” run?
   We added this information to the table in Appendix A on the next page.

c. Can you provide more information on the drivers of the reserve increase?
   The primary drivers are the equity returns and bond fund returns in the first 10 to 20 years of the projection that drive the separate account fund value (80/20 mix). A secondary driver is the impact of interest rates on any reinvestment into general account assets.

Hybrid scenario results are a simplistic initial rough test to get an initial feel for the impact of removing the equity risk premium linkage to scenario short term overnight US rates.
UPDATE ON MODEL OFFICE ECONOMIC SCENARIO GENERATOR (ESG) TESTING

Presentation to Life Actuarial Task Force - March 31, 2022

Update on VA/VM-21 ESG Model Office Testing

Additional scenario testing results
Agenda for VA Model Office Update

1. Changes since 3/17/22 – new scenario sets added
2. Summary of results
3. Scenario reserve distributions
4. Fund value exhaust year statistics
5. Equity scenario gross wealth factor and cumulative annualized total return comparisons
6. Preliminary conclusions
7. Caveats

VM-21 Model Office – Changes Since 3/17/22

- New model office testing was done for scenario sets recently added:
  1. Conning GEMS with Generalized Fractional Floor (GEMS GFF) as of 12/31/2019 valuation date
  2. An alternative version of the GEMS GFF 12/31/2019 and 12/31/2020 U.S. large cap equity scenarios using a lower equity volatility assumption
  3. No other changes – same product specs, assumptions and investment strategy (1-30 year bonds, no hedging) as 3/17/22 presentation.
Summary of Results – All Scenario Sets

The next slide summarizes the:

- Stochastic CTE70 reserves and
- C3 Phase 2 RBC after-tax Total Assets Required (TAR)
  - both expressed as a percentage of the initial Cash Surrender Value
  - CSV is 100% in the separate account;
  - excess over 100% CSV is the general account portion of reserve (i.e., the CTE70 GPVAD) and TAR

For the following scenario sets tested (yellow highlighted new since 3/17/22):

1. AIRG scenarios, 12/31/2019 and 12/31/2020 valuation dates
2. ACLI reference SLV model (version 1), 12/31/2019 and 12/31/2020
3a. Conning GEMS with Generalized Fractional Floor (GFF), 12/31/2019 and 12/31/2020
3b. Same as 3a but using lower equity volatility assumption
4. Strommen with Shadow Rate Floor (version 4B), 12/31/2020 valuation date
5. Conning GEMS unfloored 12/31/2020 valuation date scenarios developed in October 2021

In addition, a “hybrid” set of scenarios was tested for 3a above, by replacing the U.S. large cap equity fund scenarios with the AIRG U.S. large cap equity fund scenarios (as an initial rough test to get a feel for impact of removing the equity risk premium linkage to overnight UST scenario rates).

### Summary of Results

Hybrid scenario results are a rough test to get an initial feel for the impact of removing the equity risk premium linkage to scenario short term overnight UST rates. The bond fund returns and UST rates used are from the corresponding non-hybrid scenario sets.
Scenario Reserve Distributions

GEMS GFF 12/31/2019 highest 30% Scenario reserves

GEMS GFF 12/31/2020 highest 30% Scenario reserves

Fund value exhaustion statistics

For this product and 80/20 equity/bond fund allocation, fund values exhaust during years ~10 to 20 for scenarios requiring general account reserve above CSV to fund future expenses and guaranteed benefits.

Fees in all years and GLWB withdrawals in years 11+ decrease fund values in all scenarios.

Cumulative fund returns (wealth ratios) over the first 20 years are a critical driver of reserve and capital amounts for these tests.

</table>

These are annual effective rates that accumulate over the given period to the gross wealth ratios on prior slides. GEMS cumulative annualized equity returns lower than AIRG, driving higher reserves, which are most sensitive to cumulative returns over 20 years (returns after 20 years not as relevant for this product and fund allocation due to fund value exhaustion).

Differences significantly more negative for 12/31/2020, increasing reserves relative to 12/31/2019.
Preliminary Conclusions

- AAA equity scenario ESG compared to GEMS:
  - AIRG ESG has no formulaic linkage between the equity returns and Treasury yields.
    - There is an implicit expected equity risk premium in the long term / steady state if you consider expected equity returns vs. the mean reversion interest rate parameter
    - The AIRG was calibrated to specific targets, and given its structure and inputs, it will continue to meet those targets at all future points in time
    - Equity scenario distribution does not change based on initial market conditions
  - GEMS links expected equity return to current short Treasury Yield. Initially and at every node, the expected equity return is the overnight rate plus a fixed equity risk premium.
    - Therefore the short-term expected equity return is constantly changing based on changes in the simulated overnight rate, produces different expected equity returns across start dates, and makes the equity returns impacted by Treasury model’s mean reversion.
    - Actual scenario total returns also impacted by structural model differences and calibration parameter choices (i.e., the choice made to not update certain Conning Standard Calibration equity parameters and instead accept left tail returns that are significantly lower)
    - GEMS equity return wealth ratios are more volatile and pro-cyclical, and these model office results for this product design and fund allocation indicate this translates to reserves and capital being more volatile and pro-cyclical (at least for unhedged results).

Preliminary Conclusions (continued)

- For this product design and fund allocation, the impact to reserves is very large under the 3 Conning ESG scenario sets tested (GFF, Strommen SRF, GEMS unfloored) relative to current AIRG or ACLI reference model
  - Ratios of reserves and TAR to CSV are significantly higher - general account reserves are more than double the AIRG & ACLI reserves for GEMS GFF and Strommen SRF, and more than triple using the GEMS unfloored set
  - Primary driver is more severe (lower) cumulative equity return distributions in the first ~20 years for the GEMS scenario sets (though this is in part driven by the form of the linkage to interest rates).
  - Secondary driver is the “low for long” interest rate requirements, which are not present in the current AIRG. More work in process to understand these drivers.
  - At 12/31/2020 the short term rates more than 100bp lower than at 12/31/2020, producing higher reserves.
  - Form of linkage of expected equity returns to short term interest rates may drive artificial volatility in reserves and capital.
  - May cause non-intuitive risk management decisions/hedging (e.g., suggests that companies may need to hedge more overnight rates or hold more capital for the stat volatility for changes in overnight rates even if the liabilities and assets do not have an inherent dependence on overnight rates).
  - The “hybrid” scenario results shown (using Conning GEMS GFF interest rate and LT corporate bond fund returns but using AIRG equity returns) have reserve and TAR amounts that are very similar to the AIRG and ACLI reference model results.
Caveats

- Intended as an illustrative single data point (single representative model point issued on valuation date; no future sales; not an in-force block) for assessing materiality and relative impact to reserve levels and volatility from a change to the scenarios
  - No hedging reflected in results – company results may vary depending on hedging strategy.
  - Companies should consider testing their own products using their own models.

- Not intended to:
  - Cover wide variety of products available on the market
  - Reflect a full distribution of issue ages / genders within the given product
  - Reflect different starting in-force block conditions (guaranteed benefit moneyness, etc.)
  - Thoroughly test all the underlying assumptions
  - Be used as a basis for assessing appropriateness of an Economic Scenario Generator

- Purpose
  - Monthly calls with entities involved in valuation table/assumption development
  - Covers all life and annuity valuation needs
  - Provide status updates on current valuation efforts
  - Discuss anticipated future efforts
  - Coordinate resources
  - Charter, in development, to clarify purpose/roles/membership term
- Membership
  - SOA, Academy, LATF, ACLI & NAIC representatives
  - Valuation/assumption work group leaders

Preliminary 2015-2018 Group Annuity Mortality
Preliminary 2015-2018 Group Annuity Mortality

- Current study indicates higher A/E ratios on a lives basis, lower A/E ratios on an income basis compared to 2011-2014 study

</table>

Preliminary 2015-2018 Group Annuity Mortality

- Mortality improvement in 2015-2018 study data
  - 0.3% slower than Scale AA during 2015-2018 on both a lives and income basis
  - Roughly the same as Scale MP-2020 on a lives basis, 0.1% faster on an income basis
  - For the 2007-2014 study, improvement was 2.0% faster than Scale AA by lives and 0.9% faster by income
  - Pri-2012 annuitant table produces smoother A/E ratio pattern by age at younger retiree ages
    - GAM 1994 developed as a blend of experience for active and retiree lives, so there is a spike in A/E ratios under age 65.
U.S. Population Mortality Observations: Updated with 2020 Experience

2020 Overall U.S. Population Historical Mortality Rates

- 2020 Mortality Rate = 895.4/100,000 (0.9%)
- First time in U.S. history over 3 millions deaths in one year
- 91.3 deaths/100,000 due to COVID
- 16.8% increase over 2019
- Highest increase on record (1918: +11.7%)
- 2020 highest rate since 2003
- Without COVID, increase over 2019 = 4.9% (last highest 1936: +5.6%)
2020 U.S. Population Mortality Rates by Age

- Mortality rates were lower in 2020 than 2019 for ages under 5
- Younger adults, aged 15-44, saw most of their increase from non-COVID CODs
- Older ages were impacted by COVID much more than non-COVID CODs

2020 U.S. Population Mortality Rates by Cause of Death

- Heart disease had 4.2% increase – largest increase in 20 years
- Cancer continued its steady improvement
- Accidents, diabetes, liver, hypertension, assaults had very large increases
- Deaths from suicides down but story varies by age group

</table>
Heart Disease – Historical Annual Death Rates

- Steady decrease until 2012; relatively flat thereafter
- 2015 and 2020 only years with an increase
- Heart Disease is #1 cause of death and key driver of historical overall improvement in mortality

*Age-adjusted

Diabetes – Historical Annual Death Rates

- 2005-2009 saw decreasing mortality rates
- Fairly level rates over 2009-2019
- 2020 mortality rate at 2005 levels

*Age-adjusted
Opioid Deaths – Historical Annual Death Rates

- Steady increase, excluding 2018
- 2018 was only year with improvement
- Big portion of accidental death increase
  - Accidental deaths increased 16.3%
  - Accidents w/o Opioid increased 6.8%

*Age-adjusted

Suicides

- Suicides saw improvement of 3.5% over all ages
- Younger age groups saw an increase in mortality

Life Practice Council Update

Ben Slutsker, MAAA, FSA
Vice President, Life Practice Council

Agenda

- Webinars and Events
- Recent and Ongoing Activities
- Life Experience Committee
- Professionalism

© 2022 American Academy of Actuaries. All rights reserved. May not be reproduced without express permission.
Webinars and Events

Recent
- Winter 2022 Life Policy Update Webinar (January)

Upcoming
- ASOP No. 2 Webinar, on Nonguaranteed Elements—*The Revised ASOP No. 2: What You Need to Know* (April 5)
- ASOP No. 11, *Treatment of Reinsurance or Similar Risk Transfer Programs Involving Life Insurance, Annuities, or Health Benefit Plans in Financial Reports*—Webinar (May 12)
- Life Policy Update Webinar (May 2022)
- Webinar on VM-31 PBR Actuarial Report Reviews (Fall 2022)

Recent Activity

- Presented potential Academy model office testing for the National Association of Insurance Commissioners (NAIC) economic scenario generator proposals

- Proposed an amendment proposal form to LATF on transitioning from LIBOR to SOFR (APF 2022-04)

- Presented recommendations on updated C-2 mortality factors to the NAIC’s Life Risk-Based Capital (E) Working Group
Recent Activity (continued)

- Submitted comments to LATF on high yielding asset actuarial guideline for asset adequacy analysis
- Provided comments to LATF related to the Actuarial Guideline 49 exposure
- Shared a comment letter with the Index-Linked Variable Annuity (A) Subgroup on the nonforfeiture interim value actuarial guideline exposure

Recent Activity (continued)

- Published an updated version of the VM-21 Variable Annuity Practice Note
- Submitted comments to the NAIC Life Risk-Based Capital (E) Working Group on the Pension Risk Transfer in light of C-2 longevity risk charges
- Submitted comments to Accelerated Underwriting (A) Working Group
- Submitted comments on APF 2020-12, hedging strategies, to LATF
Ongoing Activities

- Developing fixed annuity principle-based approach joint field study for non-variable annuities in coordination with the NAIC and ACLI
- Providing input on economic scenario generator transition and field study
- Continue providing comments and ideas related to active LATF issues: high-yielding asset actuarial guideline, nonforfeiture, and Actuarial Guideline 49

Life Experience Committee

- Assist practicing actuaries and regulators with respect to assumptions regarding life insurance and annuity products
- First goal: Addressing mortality questions such as:
  - How COVID-19 should be reflected in PBR/asset adequacy/RBC calculations
  - Modeling a product where mortality improvement is both a positive and a negative
  - Changes to be made to reflect accelerated underwriting
- Other projects
  - Review other assumptions, such as lapse, benefit utilizations
Life Experience Committee (continued)

☐ Work with the SOA, which does the experience studies and develops the CSO Tables
  - Interface with LATF with respect to any changes needed to the Valuation Manual, Actuarial Guidelines and RBC
  - Write practice notes to assist the practicing actuary who works with mortality and other assumptions
  - Interface with the Actuarial Standards Board with respect to any changes needed to actuarial standards of practice

Professionalism

☐ The Actuarial Standards Board (ASB) adopted revisions to the following actuarial standards of practice (ASOPs):
  - ASOP No. 2, Nonguaranteed Elements for Life Insurance and Annuity Products (Effective June 2022)
  - ASOP No. 22, Statements of Actuarial Opinion Based on Asset Adequacy Analysis for Life Insurance, Annuity, or Health Insurance Reserves and Other Liabilities (Effective June 2022)
  - ASOP No. 38, Catastrophe Modeling (Effective Dec. 2021)
Professionalism (continued)

- The ASB is currently working on the following ASOPs:
  - ASOP No. 7, Analysis of Life, Health, or Property/Casualty Insurer Cash Flows
  - ASOP No. 10, Methods and Assumptions for Use in Life Insurance Company Financial Statements Prepared in Accordance with U.S. GAAP
  - ASOP No. 12, Risk Classification
  - ASOP No. 24, Compliance with the NAIC Life Insurance Illustrations Model Regulation
  - ASOP No. 40, Compliance with the NAIC Valuation of Life Insurance Policies Model Regulation with Respect to Deficiency Reserve Mortality
  - ASOP No. 41, Actuarial Communications
  - New ASOPs on reinsurance pricing and actuarial opinions without asset adequacy analysis

HEALTH INSURANCE AND MANAGED CARE (B) COMMITTEE

Health Insurance and Managed Care (B) Committee April 7, 2022, Minutes ........................................................ 6-2
Consumer Information (B) Subgroup March 22, 2022, Minutes (Attachment One).................................................... 6-5
   Federal No Surprises Act (NSA) Presentation Handout (Attachment One-A) .......................................................... 6-8
Health Innovations (B) Working Group April 4, 2022, Minutes (Attachment Two) ...................................................... 6-12
The Health Insurance and Managed Care (B) Committee met in Kansas City, MO, April 7, 2022. The following Committee members participated: Glen Mulready, Chair (OK); Troy Downing, Co-Vice Chair (MT); Russell Toal Co-Vice Chair (NM); Lori K. Wing-Heier (AK); Michael Conway (CO); John F. King represented by Steve Manders (GA); Amy L. Beard (IN); Anita G. Fox (MI); Grace Arnold (MN); Chris Nicolopoulos (NH); Andrew R. Stolfi (OR); Michael Humphreys (PA); Jon Pike (UT); Mike Kreidler (WA); and Allan L. McVey (WV). Also participating were: Karima M. Woods (DC); Dana Popish Severinghaus (IL); Vicki Schmidt (KS); and Edward M. Deleon Guerrero (NMI).

1. **Adopted its 2021 Fall National Meeting Minutes**

Commissioner McVey made a motion, seconded by Director Wing-Heier, to adopt the Committee’s Dec. 15, 2021, minutes (see NAIC Proceedings – Fall 2021, Health Insurance and Managed Care (B) Committee). The motion passed unanimously.

2. **Adopted its Subgroup, Working Group, and Task Force Reports**

Commissioner Stolfi made a motion, seconded by Commissioner McVey, to adopt the following reports: 1) the Consumer Information (B) Subgroup, including its March 22 minutes (Attachment One); 2) the Health Innovations (B) Working Group, including its April 4 minutes (Attachment Two); 3) the Health Actuarial (B) Task Force; 4) the Regulatory Framework (B) Task Force; and 5) the Senior Issues (B) Task Force. The motion passed unanimously.

3. **Received an Update on the Special (EX) Committee on Race and Insurance Workstream Five’s Work**

Commissioner Arnold provided an update to the Committee on Workstream Five’s work to date as the new Workstream co-chair for 2022. She said that along with Commissioner Birrane, the other Workstream Five co-chair for 2022, she met with the Workstream’s 2021 co-chairs, Commissioner Ricardo Lara (CA) and former Commissioner Jessica K. Altman (PA), to discuss the Workstream’s 2021 work and potential 2022 work. She said that following this meeting, the Workstream met in a regulator-to-regulator session to discuss its focus and work plan for 2022.

Commissioner Arnold said the Workstream discussed and agreed its focus should center on: 1) identifying demographic-based barriers to the acquisition and use of health insurance and creating strategies for mitigating or removing such barriers; and 2) understanding the role health insurance can play in addressing inequities in health outcomes and social determinates of health. She said the Workstream also agreed on a framework for executing on those objectives, including the specific topics it will cover this year.

With respect to the first objective, Commissioner Arnold said the Workstream decided that the topics it will focus on this year will be: 1) benefit design, which includes examining provider network design and benefit structures; and 2) consumer empowerment and engagement. She said the first topic is foundational because it is critically important that products are inclusive in design and that carriers consider the actual health needs of certain communities. She provided examples of what the Workstream would be examining: “Are prescription drug formularies designed to assure that medications that treat conditions more prevalent among Black or Brown people are offered with no or minimal co-pays?” and “What do preventative services look like, and how are wellness programs designed and promoted?” She said the use of scales and Fitbits in wellness programs may be a great incentive for some people to focus on their health, but nutritional support and transportation may be far

© 2022 National Association of Insurance Commissioners
more important for people whose health is affected by their environment. Similarly, the Workstream will be
considering, with respect to benefit design, what the network looks like, not only in the traditional sense of the
availability of appointments, but also looking at the impact of the kinds of providers and the cultural competency
of providers on the willingness and ability of people to use services.

Commissioner Arnold said that with respect to the second topic, consumer engagement and empowerment, the
Workstream will be looking at successful strategies for enrollments and for facilitating consumer understanding
of how to access care through insurance and how to navigate claim issues.

Commissioner Arnold said the Workstream also discussed what its end work product should be. She said the
Workstream is considering developing a guide for state insurance regulators that compiles information about
barriers and presents potential tools and strategies for state insurance regulators to use to address them. She said
the Workstream is mapping out a schedule for completing its work before the end of the year. The Workstream
hopes to meet at least monthly to hear from various stakeholders—such as consumer groups, academics, and
industry—on the topics it has identified as its focus for this year: benefit design and consumer empowerment.

Commissioner Arnold said that with respect to the second objective, the Workstream also discussed holding
listening sessions, potentially in conjunction with Zone member meetings, with community-based individuals and
organizations who work with racially disadvantaged and historically underserved and underrepresented
populations to facilitate a ground zero understanding of the determinants of health and how insurance can affect
that.

4. Heard an Update from the CCIIO on NSA Implementation

Jeff Wu (federal Center for Consumer Information and Insurance Oversight—CCIIO) provided an update on the
steps the federal Centers for Medicare & Medicaid Services (CMS) has taken to date in implementing the federal
No Surprises Act (NSA) since its launch Jan. 1.

Mr. Wu said the CMS created a No Surprises Help Desk, which consumers and providers can call to ask questions
or file complaints. Consumers and providers can also file a complaint online. He said the CMS created a consumer
web form and a provider web form to assist in submitting online complaints. He said the CMS also has created a
document providing helpful tips on how to complete a complaint form. The CMS also has developed several sets
of frequently asked questions (FAQ)—provider FAQ, good faith estimates FAQ, and independent dispute
resolution (IDR) updates FAQ.

Mr. Wu discussed the CMS’ NSA outreach and education efforts targeted at consumers and providers. He also said
the CMS also has specifically conducted lots of outreach to consumers and providers related to the good faith
estimates for uninsured or self-pay individuals provision. He said the CMS is leveraging its contacts with
organizations such as the Kaiser Family Foundation (KFF), the federal Consumer Financial Protection Bureau
(CFPB), and the Commonwealth Fund to assist it in these education efforts.

Mr. Wu discussed NSA enforcement and its interaction with state law. He reiterated that the states are the primary
enforcers of the NSA. Under the statute, the CMS will only enforce a provision with respect to the applicable
regulated parties if the CMS determines that a state is not substantially enforcing a provision. He said that the
CCIIO recognizes that the states are in different positions as far as NSA enforcement is concerned and that it is
committed to working with the states to address any implementation and enforcement issues. He explained that
the CCIIO has held meetings with the states to discuss NSA enforcement and recently published a series of
Consolidated Appropriations Act of 2021 (CAA) enforcement letters that outline the CMS’ understanding of the
federal Public Health Service Act (PHSA) provisions, as extended or added by the CAA, that each state is enforcing
directly or through a collaborative enforcement agreement and the provisions the CMS will enforce. These letters
also communicate whether the federal IDR process and federal patient-provider dispute resolution process apply in each state and in what circumstances.

Commissioner Mulready asked about the status of, and timeline for resolving, the Texas Medical Association (TMA) v. United States Department of Health and Human Services (HHS) case, which challenged the Biden administration’s Sept. 30, 2021, interim final rule that directed arbiters under the IDR process to presume that the median in-network rate is the appropriate out-of-network rate and limit when and how other statutory factors come into play. The U.S. District Court for the Eastern District of Texas, Tyler Division, ruled Feb. 23 that the NSA unambiguously establishes the framework for deciding payment disputes and concluded that the interim final rule conflicted with the statutory text and must be set aside under the federal Administrative Procedure Act (APA). The court also ruled that the HHS improperly bypassed the APA’s notice and comment requirements, and thus the interim final rule must be set aside for this additional reason. Mr. Wu said the HHS has no idea when there could be a final resolution of the case, but meanwhile, the CMS is moving forward with implementing the NSA provisions, including the IDR process provisions.

Commissioner Mulready asked about the nature of the calls the CMS has received through the No Surprises Help Desk. Mr. Wu said the calls received have changed over time. He said that Initially, the calls involved general questions about the NSA. He said that currently the Help Desk is receiving more specific questions about the NSA’s provisions and complaints, which are mostly complaints about billing and related issues.

Having no further business, the Health Insurance and Managed Care (B) Committee adjourned into regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities or individuals) and paragraph 8 (consideration of strategic planning issues) of the NAIC Statement on Open Meetings.
The Consumer Information (B) Subgroup of the Health Insurance and Managed Care (B) Committee met March 22, 2022. The following Subgroup members participated: Mary Kwei, Chair, and Joy Hatchette (MD); Debra Judy, Vice Chair, and Jill Mullen (CO); Yada Horace and Anthony L. Williams (AL); Kathy McGill and Randy Pipal (ID); Patrice Dzire (IL); Jenifer Groth and Alex Peck (IN); LeAnn Crow and Brenda Johnson (KS); Judith Watters (ME); Gregory Maus and Sherri Mortensen-Brown (MN); Camille Anderson-Weddle, Carrie Couch, Amy Hoyt, and Michelle Vickers (MO); Charlette C. Borja (MP); Robert Croom and Kathy Shortt (NC); Michael Anderson, Laura Arp, and Jordan Blades (NE); Donna Dorr, Cuc Nguyen, Kelli Price, Mike Rhoads, and Rebecca Ross (OK); David Buono (PA); Gretchen Brodkorb, Candy Holbrook, and Jill Kruger (SD); Brian Hoffmeister and Scott McAnally (TN); Heidi Clausen, Ryan Jubber, and Shelley Wiseman (UT); Jane Beyer (WA); and Barbara Belling, Diane Dambach, Monica Hale, and Darcy Paskey (WI). Also participating was: Jana Jarret (OH).

1. Discussed Potential Work Products for the Year

Ms. Kwei asked the Subgroup to think through projects it could take on for the year. She reviewed projects from 2021, including an addendum to the Frequently Asked Questions on Health Care Reform (FAQ) document, five consumer guides on the claims process, updates to the main body of the FAQ document, and a consumer alert on the federal No Surprises Act (NSA).

Ms. Kwei asked for ideas for new projects. She said the consumer alert on the NSA focused on the basics, but there is a lot more in the law. She said good faith estimates and continuity of care provisions were two topics the Subgroup may want to address this year.

Ms. Judy said the two provisions would be helpful, but there is uncertainty on timing because of the lack of federal rules, as well as what consumer guidance federal officials may release on these topics.

Ms. Kruger said the presentation from Brenda J. Cude (University of Georgia) and Lisa Groshong (Center for Insurance Policy and Research—CIPR) could inform the Subgroup’s choice of projects for the year.

Harry Ting (Health Consumer Advocate) said the Subgroup should consider strategies to encourage consumers to consult more often with departments of insurance (DOIs). He suggested efforts to quantify consumer contacts with DOIs to identify which states are especially effective in engaging consumers. He said this could be done through a survey of states. Ms. Judy said she would appreciate knowing which states do consumer engagement well. Ms. Shortt and Ms. Kruger agreed that this would be valuable information.

Dr. Ting said Subgroup members should think about what the best way is to measure these issues. Ms. Arp said states may not track web access to materials, which is likely the most common way consumers access information from DOIs. She said reaching out to the provider community could also be useful because they are important stakeholders in balance billing protections.

Dr. Cude suggested collecting information about the barriers to measuring impact, such as why states cannot track website usage. Eric Ellsworth (Consumers Checkbook) said much previous work has focused on helping consumers
understand the current system, not in making the system easier to navigate for consumers. He said DOIs should seek to close gaps on behalf of consumers. Ms. Kwei said such work may exceed the charge of the Subgroup. Mr. Ellsworth asked what group at the NAIC would be more appropriate for work to simplify consumer processes. Ms. Kwei said she would follow up to suggest other groups.

Ms. Kwei asked for volunteers to work on a draft survey of states to collect information on their consumer engagement practices. Ms. Shortt, Ms. Judy, Mr. Williams, Holly Blanchard (Regulatory Insurance Advisors LLC), and Dr. Ting said they would be happy to work on a survey. Dr. Cude said she would be interested in reviewing initial ideas from the volunteers.

Ms. Kwei said the survey work would be the Subgroup’s initial priority, and the Subgroup could look at other topics under the NSA once there is more clarity on federal actions. She said the Subgroup would consider updates to the FAQ document later in the year.

2. **Heard a Presentation on Consumer Understanding of Surprise Bills and Balance Bills**

Ms. Kwei said Dr. Cude and Ms. Groshong collaborated on a survey of consumers and asked to share results with the Subgroup.

Dr. Cude said a handout (Attachment One-A) has the key information from the presentation. She said surprise billing is harmful to consumers, and $88 billion in medical bills appears on consumer credit reports. Ms. Groshong said the CIPR provides data and research on insurance topics, and she works on consumer issues and understanding. She said a survey collected information from more than 2,000 adults in 2020; it included questions on health insurance and specifically surprise billing. She said consumers have reasonable knowledge of basic insurance terms like co-pay and deductible. However, they generally were not able to define surprise medical bills in the way the term is used in the NSA.

Ms. Groshong said respondents were provided with the formal definition of surprise (out-of-network) medical bills. She said about 40% said they received a surprise bill under this definition, and 15% were unsure. She said media coverage of surprise billing may have increased since the survey was fielded and added to consumer understanding. She said both the NSA and state legislation addresses surprise billing, but there is still a need for more consumer education on the topic.

Ms. Groshong said she and Dr. Cude identified several states that have worked to educate consumers on surprise bills. Dr. Cude said state DOI websites may confuse consumers with different headlines for surprise bill sections. She said it is useful for states to provide a definition of surprise bills at the outset so consumers understand the circumstances covered by state or federal law protections. She said consumers will use their own definition if they are not provided with the correct one. She said they may believe they are protected against any bill that is a surprise. She encouraged states to use 8th or 9th grade level writing to ease understanding. She said the Subgroup’s 2021 document on the NSA may be somewhat confusing because it begins by discussing balance billing rather than surprise billing.

Ms. Groshong said there are ways to educate consumers by using plain language and clear definitions. Dr. Cude said there is no common understanding without a clear definition.

Ms. Kwei asked about the most useful way to present a definition. Dr. Cude said state insurance regulators should use any and all ways to reach consumers (e.g., social media and website users may be different audiences). Ms.
Groshong said the most effective way can be to use storytelling about consumers who have received surprise bills. She said myth-and-fact sheets are not effective because they reinforce myths as well as facts. Dr. Cude said many state DOI websites are not using the Subgroup’s consumer guide on the NSA.

Mr. Ellsworth asked what evidence is available on how consumers understand explanations of benefits and other insurance documents. Dr. Cude said studies that ask consumers to apply knowledge from documents would be more helpful in addressing that question than the 2020 consumer survey. She said consumers’ estimation of themselves as a financial manager is more important than their knowledge as measured by a multiple-choice survey.

Ms. Groshong said further research could investigate consumers’ understanding of issues beyond surprise billing.

Having no further business, the Consumer Information (B) Subgroup adjourned.
Surprise Billing Presentation
to NAIC’s Consumer Information (B) Subgroup

March 22, 2022

Brenda J. Cude, PhD, NAIC Consumer Representative and Professor Emeritus, University of Georgia;
bcuda@uga.edu

Lisa Groshong, PhD, Communication Research Scientist, NAIC’s Center for Insurance Policy and Research; lgroshong@naic.org

Surprise medical billing hurts consumers

Surprise medical bills are a major source of financial hardships for patients (Cooper et al., 2018). According to a Kaiser Family Foundation survey, one-third of the large troubling medical bills received by insured, working-age adults are charges from out-of-network providers (Hamel et al., 2016). Unexpected medical bills harm consumers; 37% of adult Americans could not cover an unexpected $400 expense without borrowing or selling assets (Board of Governors of the Federal Reserve System, 2020).

CIPR surprise billing survey

NAIC’s Center for Insurance Policy and Research is the research group within NAIC that provides data and analysis about insurance issues and topics, including a recent overview of the No Surprises Act.

In July 2020, CIPR surveyed about 2,000 people about their health insurance knowledge and experience, using SurveyMonkey’s Audience Panel.

**About 70% of survey respondents correctly answered questions about health insurance concepts.**

<table>
<thead>
<tr>
<th>Concept</th>
<th>Correct</th>
<th>Incorrect</th>
</tr>
</thead>
<tbody>
<tr>
<td>Define copay</td>
<td>1267</td>
<td>535</td>
</tr>
<tr>
<td>Define deductible</td>
<td>1256</td>
<td>546</td>
</tr>
<tr>
<td>Pre-existing/A CA</td>
<td>1306</td>
<td>496</td>
</tr>
<tr>
<td>Preventive care/A CA</td>
<td>1388</td>
<td>414</td>
</tr>
</tbody>
</table>

The majority of respondents correctly answered questions about health insurance concepts, including the definitions of deductibles and copay. And they knew that insurance must cover pre-existing conditions and preventive care under the Affordable Care Act.
But only about one in five respondents chose the correct definition of “surprise medical bill” (a bill for the charges when you use a provider who is outside your health insurance network, even if you didn’t choose the outside provider) from among four choices. In fact, the correct definition ranked third among the four options. The other answer choices were A bill for charges you think your insurance company has already paid, A bill for services or medications that you don’t think you ever received, and A bill for services or medications that the insurance company said it would pay but now it won’t (the most popular choice).

**Surprise bill receipt**

After we asked respondents to try to define the term, we provided our definition. We then asked if respondents or their family members had ever received a surprise out-of-network medical bill. Forty percent reported that they or a family member had; another 15% weren’t sure.

In our further analysis, we used a subsample of people who had health insurance through an employer. In that group, respondents ages 45 to 60 were more likely to report having received a surprise medical bill than those ages 18 to 29. Given that 40% of medical procedures at hospitals and surgery centers are performed on patients aged 45-64, it makes sense that people in this age group are more likely to encounter surprise billing (Hall et al., 2017).

**Legislation**

We fielded our survey in 2020, well before the federal No Surprises Act went into effect in January 2022. Under the act, providers and health plans treat many out-of-network services as if they were in-network in terms of patient cost-sharing, except related to ground transportation. Unlike existing state legislation, the federal law protects consumers with employer-sponsored health plans.

We don’t know how consumers would respond to our survey today, but we suspect that news coverage has increased general awareness of surprise billing. But we’re still uncertain how well people will
understand what’s meant by surprise billing given the general lack of understanding we saw in the survey.

**Consumer outreach**

Rules about surprise billing are now being enforced through both state and federal legislation. This may result in ongoing consumer confusion. Further, a lack of uniform understanding of the term indicates a need for more consumer information and education efforts related to surprise medical billing.

The next section highlights some useful examples of surprise billing consumer outreach, both as models to emulate and cautionary examples to avoid.

The Alabama Department of Insurance uses a **straightforward definition**:

Surprise billing occurs when a patient receives a balance bill after unknowingly receiving care from an out-of-network provider or an out-of-network facility, such as a hospital. This can occur in emergency and non-emergency situations.

Montana’s department offered a **concise yet detailed overview** of the federal legislation:

On January 1\textsuperscript{st} of this year, the No Surprises Act (NSA) went into effect protecting individuals with private health insurance from surprise medical bills. In other words, if you are insured from a company that is not Medicare or Medicaid and receive emergency medical care or a scheduled procedure at an in-network facility then, in most circumstances, you will not be billed at ‘out of network’ rates.

New Mexico also offers a straightforward **definition**:

A surprise bill is when a person, through no fault of their own, unknowingly or unavoidably receives health care services from providers outside their insurance company’s network and then is billed directly for that care.

Messages should be crafted carefully to ensure they are easy for consumers to interpret. For example, this description of the legislation could easily be misinterpreted:

Effective January 1, 2022, the federal No Surprises Act provides new protections for unexpected or excessive medical bills consumers may receive from health care providers, including hospitals, physicians, ambulances, and other medical professionals.

This example provides valuable information—but is written at about a 20th grade reading level, far above the 8th grade level that readability experts recommend:
The law protects patients from receiving and paying surprise medical bills above the patient’s in-network rate from health care providers for emergency care or, in certain circumstances, unanticipated out-of-network care, such as at an in-network health care facility from an out-of-network provider and including lab/pathology services. Cost sharing amounts, which include coinsurance, copayments, and deductibles, are limited to the patient’s lower in-network amounts.

NAIC Consumer Information Subgroup Resource

In 2020, the NAIC Consumer Information Subgroup created New Protections from Surprise Medical Bills, a two-page document plus two pages of examples of surprise medical billing. This document includes clear and concise language about surprise medical billing. In hindsight and with the insights gained from this survey, Brenda Cude would now recommend flipping the first two sections (What is balance billing? What is surprise billing?) to discuss surprise billing first.

Readability resources

Microsoft Word includes a tool that will display readability scores with documents. Instructions are here. Resources for writing in plain language to a wide range of readers are available at the Centers for Disease Control and Prevention’s health literacy website.

The digital publication The Pudding has an interesting resource about writing in plain language.

References

The Health Innovations (B) Working Group of the Health Insurance and Managed Care (B) Committee met in Kansas City, MO, April 4, 2022. The following Working Group members participated: Andrew R. Stolfi, Chair (OR); Laura Arp, Co-Vice Chair (NE); Nathan Houdek and Jennifer Stegall, Co-Vice Chairs (WI); Anthony Williams (AL); Sarah Bailey (AK); Doug Ommen and Andria Seip (IA); Julie Holmes (KS); Cynthia Amman (MO); John Arnold (ND); Maureen Belanger (NH); Nancy Clark and Chris Herrick (TX); Tanji Northrup (UT); Molly Nollette (WA); and Erin Hunter (WV). Also participating were: Weston Trexler (ID); and Katie Merritt (PA).

1. **Adopted its 2021 Fall National Meeting Minutes**

Commissioner Houdek made a motion, seconded by Ms. Nollette, to adopt the Working Group’s Dec. 11, 2021, minutes (*see NAIC Proceedings – Fall 2021, Health Insurance and Managed Care (B) Committee, Attachment Five*). The motion passed unanimously.

2. **Heard Presentations on Coverage Changes Associated with the End of the Covid-19 PHE**

Commissioner Stolfi said state Medicaid programs have been limiting redeterminations during the pandemic, but this pause will end after the Covid-19 public health emergency (PHE) ends. He said maintaining coverage for individuals who leave Medicaid will take coordination between federal officials, states, and health plans as well as public education. He said a recent report from State Health and Value Strategies outlines steps state insurance regulators can take to aid in this transition.

Anne Marie Costello (federal Centers for Medicare & Medicaid Services—CMS, federal Center for Medicaid and Children Health Insurance Program—CHIP Services) presented on planning the CMS has performed to prepare for the resumption of redeterminations and resources available for states. She said the CMS is committed to assuring individuals remain covered as the public health emergency ends. She said states received enhanced federal match for Medicaid if they paused redeterminations. She said states will have 12 months to renew eligibility for all enrollees once the PHE ends. She said 15 million individuals will be at risk for Medicaid coverage terminations, about half for procedural reasons. She said it may have been 2-3 years since state Medicaid agencies had been in contact with some enrollees. She said states have prepared communications strategies, they but are waiting for the PHE to end before launching public communications. She said CMS has gathered toolkits for states and other guidance at the website Medicaid.gov/unwinding. She said preparing for the end of the PHE is the highest priority for the CMS.

Jeff Grant (federal Center for Consumer Information and Insurance Oversight—CCIIO) presented on strategies for making Marketplace coverage accessible for individuals who leave Medicaid. He said the CMS is working to smooth transitions when appropriate, including implementing policy and operational flexibilities. He said the CCIIO has paused certain data matching issues and special enrollment period verifications to prevent unnecessarily blocking people from getting coverage. He said the Administration supports extending subsidies currently in place under the federal American Rescue Plan Act (ARPA). He said CCIIO is examining its data capabilities to keep track of coverage transitions and perform targeted outreach. He said the CMS Office of Communications is pursuing a chase campaign to encourage individuals to enroll. He said state-regulated plans are important partners, particularly those that offer Medicaid managed care plans as well as Marketplace plans.
He said the CMS is asking such plans to coordinate across their lines of business and to make a commitment to year-round enrollment. He said issuers should be aware of all the guidance the CMS is putting out.

Commissioner Stolfi asked if the CMS has identified what states can do beyond a communications and outreach campaign and how much flexibility would be available under a waiver. Ms. Costello said states are doing a lot in addition to communications, such as planning systems changes, making process improvements, working to improve renewal rates, and enhancing staff capacity. She said fair hearing processes are also being improved and streamlined. She said there are a number of suggestions for steps states can take as well as waiver authorities outlined in a recent State Health Official letter. Mr. Grant said time is of the essence, so states should approach the CMS early if they want to do something different. He said some states with state-based exchanges are exploring streamlined applications and enrollment, which may be called auto-enrollment in some states. He said states would receive 60 days warning before the PHE ends, so the current assumption is that the current deadline of April 16 would be extended, likely until July.

Jeremy Vandehey (Oregon Health Authority—OHA) presented on his agency’s preparations for the end of the PHE. He said every state is facing this issue. He said Oregon has 300,000 more Medicaid enrollees since before the PHE and is likely to lose a similar number once eligibility determinations resume. He said state survey data show Oregon has the lowest uninsured rate ever, largely due to the policy of pausing redeterminations, with disproportionate improvement among Black residents. He said Oregon saw gains in what had been called the “churn population,” those who transition off and on Medicaid, sometimes moving to federal Affordable Care Act (ACA) marketplace eligibility. He said the Oregon legislature passed a bill to provide flexibility and direct OHA to develop a new program to provide more continuous coverage to the churn population with income just over Medicaid eligibility. He said the Oregon legislature’s goal is to maintain coverage as much as possible, rather than the prior practice of frequent coverage changes. He said Oregon will perform redeterminations first on those who are likely to remain eligible and only later address those at higher risk for coverage loss. He said the legislation also calls for a bridge plan that would be developed in a waiver application, either a basic health plan under the ACA or a state innovation waiver. He said most individuals go between Medicaid and no insurance, not Medicaid and Marketplace coverage. He said the bridge plan would allow them to continue to have coverage through their Medicaid managed care plan by allowing them to continue coverage even when an individual’s income rises to 200% of the federal poverty level. He said this approach could be a pathway for other states in the future. He said the end of the PHE is an opportunity for Medicaid and other coverage sources to work together in ways they have not in the past. Commissioner Stolfi said the Oregon’s plan would address not only the end of the PHE, but the problem of churn in coverage that pre-dated it.

Marissa Woltmann (Massachusetts Health Connector—Connector) gave a presentation on how the Massachusetts state-based marketplace is working to maintain coverage for individuals who leave Medicaid after the end of the PHE. She said both federal and state subsidies are available through the Connector. She said Connector enrollment has dropped as individuals who move to Medicaid have stayed there over the last two years. She said the Connector expects about 100,000 people to enroll after leaving Medicaid. She said the expiration of enhanced federal subsidies would complicate the transition to the individual market for many enrollees. She said the Connector has worked to reduce administrative burden, establish automatic special enrollment periods for those losing Medicaid, and support individuals who need to use paper documents. She said the Connector is adding an option for automatic enrollment for those with $0 premiums and is looking to maintain continuity of care for those who transition. She said clear messaging will be critical in reaching individuals who need to transition coverage. She said the transition is a high stakes project that requires collaboration across many entities. Commissioner Stolfi asked about how health insurance premium rates might be affected by the influx of enrollees from Medicaid. Ms. Woltmann said projections have not yet been developed, but because several Medicaid managed care plans also participate in the state’s individual market, they likely have good data on the
expected cost of these enrollees. Commissioner Stolfi said Oregon expects more enrollees from Medicaid could lead to a better risk pool in the individual market.

Wayne Turner (National Health Law Program—NHLP) and Karen Seigel (Health Equity Solutions) presented on suggestions for insurance regulators to address the end of the PHE. Mr. Turner said consumer representatives have met over the last two months to develop recommendations for regulators. He said large coverage losses are possible. He said some individuals will transition coverage, but others will be unlawfully terminated from Medicaid and maintaining coverage for them as they go through the process is important. He said some consumers may not know they have lost coverage until they need a service and are denied coverage and these may be the ones who come to state insurance regulators. Ms. Seigel said people of color have less access to employer-sponsored coverage while people with disabilities may have less access to receiving and understanding important information send to them about their coverage. She said working with community-based organizations can help assist individuals who experience these challenges. She said FAQs and other messaging should be clear and community organizations can help workshop messaging. She said consumers will need assistance both in enrolling in plans and in using their coverage. Mr. Turner said transitions are often not smooth, so there will be disruptions to care. He referenced the Health Benefit Plan Network Access and Adequacy Model Act (H#74) and its provisions on continuity of care provisions, which have been adopted in some state laws. He said Departments of Insurance should link consumers to other resources, including Medicaid, the Marketplace, state prescription drug assistance programs, and others. He encouraged regulators to examine health insurers’ payment of commissions for ACA marketplace products and network adequacy.

Jackson Williams (Dialysis Patient Citizens—DPC) urged regulators to consider the ongoing care needs of individuals with chronic diseases, not just continuity of care for patients who are in the middle of an acute care episode.

3. Received an Update on Research into Health Disparities

Kelly Edmiston (NAIC) presented an update on research he conducted with the Center for Insurance Policy and Research (CIPR) colleagues on the health disparities impacts of the rise in telehealth services and the move to alternative payment models. He said the end of the PHE has some implications for telehealth policy as some restrictions on telehealth use were relaxed during the PHE.

Mr. Edmiston said the CIPR’s overall assessment on telehealth is that it provides a significant opportunity to increase access to care and reduce disparities, but at the same time it creates the possibility for a new disparity among vulnerable populations who lack access to the digital tools or to culturally competent care.

Mr. Edmiston said alternative payment models can be vulnerable to opportunist behavior from providers, so the models should be adjusted to account for this challenge. He said different alternative payment models all have features that may create incentives to treat vulnerable populations differently and inequitably. He said value-based payments have pros and cons regarding health disparities. He said the highest cost patients have the greatest opportunity to reduce costs and there are incentives for care coordination in value-based payments. He said that risk adjustment mechanisms in value-based care are not sophisticated enough to remove incentives to avoid high-risk patients.

Mr. Edmiston said the CIPR could help in developing ideas for how the Working Group could present evaluation findings in response to its charges from the Special (EX) Committee on Race and Insurance. Commissioner Stolfi said the Working Group would solicit feedback from members and interested parties, then he would work with
the CIPR and the Working Group vice chairs and support staff to write an evaluation or recommendations for the Special (EX) Committee on Race and Insurance.

Having no further business, the Health Innovations (B) Working Group adjourned.

Health Actuarial (B) Task Force
Virtual Meeting (in lieu of meeting at the 2022 Spring National Meeting)
March 29, 2022

The Health Actuarial (B) Task Force met March 29, 2022. The following Task Force members participated: Andrew N. Mais, Chair, represented by Paul Lombardo (CT); Russel Toal, Vice Chair, and Julie Weinberg (NM); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Lan Brown (CA); Michael Conway represented by Eric Unger (CO); Doug Ommen represented by Klete Geren (IA); Dean L. Cameron represented by Weston Trexler (ID); Amy L. Beard represented by Stephen Chamblee (IN); Vicki Schmidt represented by Nicole Boyd (KS); Kathleen A. Birrane represented by Jeff Ji (MD); Eric A. Cioppa represented by Marti Hooper (ME); Anita G. Fox represented by Kevin Dyke (MI); Grace Arnold represented by Julia Lyng and Fred Andersen (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Michael Muldoon (NE); Marlene Caride represented by Seong-min Eom (NJ); Judith L. French represented by Laura Miller (OH); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Jim Laverty (PA); Raymond G. Farmer represented by Andrew Dvorine (SC); Cassie Brown represented by Aaron Hodges (TX); and Mike Kreidler represented by Lichiou Lee (WA).

1. **Adopted its March 2 and Feb. 1 Minutes**

The Task Force met March 2 and Feb. 1. During these meetings, the Task Force took the following action:

1) adopted a proposal to revise the instructions for the health Statement of Actuarial Opinion (SAO);

2) discussed a proposal to revise the instructions for the health SAO.

Mr. Toal made a motion, seconded by Mr. Leung, to adopt the Task Force’s March 2 (Attachment One) and Feb. 1 (Attachment Two) minutes. The motion passed unanimously.

2. **Adopted the Report of the Long-Term Care Actuarial (B) Working Group, Including its March 9 Minutes**

Mr. Lombardo said the Working Group met March 9 to discuss the American Academy of Actuaries (Academy) and Society of Actuaries (SOA) Research Institute’s final *Long-Term Care Insurance Mortality and Lapse Study*.

Mr. Schallhorn made a motion, seconded by Mr. Unger, to adopt the report of the Long-Term Care Actuarial (B) Working Group (Attachment Three). The motion passed unanimously.

3. **Heard an Update from the CCIIO on URRT Submissions via SERFF**

Megan Mason (federal Center for Consumer Information and Insurance Oversight—CCIIO) and Brandy Woltkamp (NAIC) gave an update on Uniform Rate Review Template (URRT) submissions via the System for Electronic Rates & Forms Filing (SERFF).

Ms. Woltkamp said in the first quarter of 2022, the SERFF team undertook a process change for effective rate review states. All URRT and supporting documents for rate changes for qualified health plans (QHPs) and non-QHPs in a single risk pool will now be submitted within SERFF. She said new web services were created to validate the URRT and to submit those documents to the federal Centers for Medicare & Medicaid Services (CMS) at the same time the documents are submitted to the state within a SERFF filing. She said the web services will be updated if the items are updated post submission as well. Ms. Woltkamp said the final piece of the new web services is the ability for the states to submit their determination within SERFF. She said the creation of the new web services removes duplicate work for issuers and states by submitting documentation in SERFF and the Health Actuarial (B) Task Force.
Insurance Oversight System (HIOS) URRT module. She said if there are questions regarding the rate review process, please contact ratereview@cms.hhs.gov, and if there are questions regarding the new SERFF process, please contact serffhelp@naic.org.

4. **Heard an Update on SOA Research**

Dale Hall (SOA) gave an update on SOA research activities (Attachment Four).

5. **Heard an Update from the Academy Health Practice Council**

Barbara Klever (Blue Cross Blue Shield Association—BCBSA) gave an update on Academy Health Practice Council activities (Attachment Five).

6. **Discussed a Referral Letter from the Health Risk-Based Capital (E) Working Group**

Mr. Lombardo introduced a referral letter (Attachment Six) from the Health Risk-Based Capital (E) Group asking the Task Force to consider adding a sentence to *Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves* (AG 51) that would indicate that regardless of the blank an insurer files, asset adequacy testing is required if the criteria for mandatory AG 51 filing are met.

Mr. Andersen said the Long-Term Care Valuation (B) Subgroup will consider and discuss the referral during its next meeting.

Having no further business, the Health Actuarial (B) Task Force adjourned.
The Health Actuarial (B) Task Force met March 2, 2022. The following Task Force members participated: Andrew N. Mais, Chair, represented by Paul Lombardo (CT); Russel Toal, Vice Chair, represented by Julie Weinberg (NM); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Lan Brown (CA); Michael Conway represented by Eric Unger (CO); Doug Ommen represented by Klete Geren (IA); Amy L. Beard represented by Stephen Chamblee (IN); Vicki Schmidt represented by Nicole Boyd (KS); Kathleen A. Brrane represented by Jeff Ji (MD); Eric A. Cioppa represented by Marti Hooper (ME); Anita G. Fox represented by Kevin Dyke (MI); Grace Arnold represented by Julia Lyng (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Michael Muldoon (NE); Marlene Caride represented by Seong-min Eom (NJ); Glen Mulreadly represented by Andrew Schallhorn (OK); Cassie Brown represented by Aaron Hodges (TX); Mike Kreidler represented by Lichiou Lee (WA); and Allan L. McVey represented by Joylynn Fix (WV).

1. **Adopted its Proposal to Revise Instructions for the Health Annual Statement SAO**

Mr. Lombardo presented the Task Force’s proposal as exposed for public comment (Attachment One-A) to revise the language in Section 4, Section 5, Section 7, and Section 9 of the instructions for the health Statement of Actuarial Opinion (SAO) and comments received from the New York State Department of Financial Services (Attachment One-B), the Pennsylvania Insurance Department (Attachment One-C), the Washington State Office of the Insurance Commissioner (Attachment One-D), and UnitedHealth Group (UHG) (Attachment One-E).

The Task Force agreed to not delete “under the terms of its contracts and agreements” from Section 7E as suggested by comments from the Washington State Office of the Insurance Commissioner.

Mr. Dyke made a motion, seconded by Mr. Leung, to adopt the proposal as revised during the meeting. The motion passed unanimously. Mr. Lombardo said the proposal will be forwarded to the Blanks (E) Working Group for its consideration.

Having no further business, the Health Actuarial (B) Task Force adjourned.

Anticipated Effective Date: Annual 2022

IDENTIFICATION OF ITEM(S) TO CHANGE

See the following page for details of proposed changes.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to revise the language in sections 4, 5, 7 and 9 of the orange blank annual statement instructions related to the actuarial opinion to ensure that all items (actuarial assets and liabilities) within the scope of the statement of actuarial opinion are treated consistently. Currently, reserves and liabilities are referenced in sections 4, 5, 7 and 9 of the orange blank annual statement instructions. Since actuarial assets are included in the scope of the actuarial opinion, it is important that these instructions provide guidance to appointed actuaries that apply to all actuarial items, assets as well as liabilities, included in the scope of the actuarial opinion.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date:__________________________________________________

Other Comments:

** This section must be completed on all forms. Revised 7/18/2018
IDENTIFICATION OF ITEM(S) TO CHANGE

Instructions to Annual Health Statement Blank, Actuarial Opinion (Actuarial Opinion Instructions):

Modify section 1A. (Definitions), of the actuarial opinion instructions to add definitions of “actuarial asset” and “actuarial liability”.

Modify section 4 (Identification section), section 5 (Scope section), and section 7 (Opinion section) of the actuarial opinion instructions to ensure that the opinion’s prescribed wording clearly indicates that the actuary’s opinion covers actuarial assets as well as actuarial liabilities.

Modify section 9 of the actuarial opinion instructions to ensure that guidance related to the type of opinion rendered by an appointed actuary covers both actuarial assets and actuarial liabilities.

Section 1

1A. Definitions

“Insurer” means an entity authorized to write accident and health contracts under the laws of any state and which files on the Health Blank.

“Actuarial Memorandum” means a document or other presentation prepared as a formal means of conveying the appointed actuary’s professional conclusions and recommendations, of recording and communicating the methods and procedures, of assuring that the parties addressed are aware of the significance of the appointed actuary’s opinion or findings and that documents memorandum is further described in Section 1C.

“Actuarial asset” means an actuarial item presented as an asset in the annual statement and included in the scope of the Statement of Actuarial Opinion.

“Actuarial liability” means an actuarial item presented as a liability in the annual statement and included in the scope of the Statement of Actuarial Opinion.

Section 4

4. The IDENTIFICATION section should specifically indicate the appointed actuary’s relationship to the company, qualifications for acting as appointed actuary, date of appointment, and should specify that the appointment was made by the Board of Directors, or its equivalent or by a committee of the Board.

A person who is not a Member of the American Academy of Actuaries but is recognized by the Academy as qualified must attach, each year, a copy of the approval letter from the Academy.

This section should contain only one of the following:

For a Member of the American Academy of Actuaries who is an employee of the organization, the opening paragraph of the opinion should contain all the following sentences if the appointed actuary is using the prescribed wording:

“I, (name and title of actuary), am an employee of (named organization) and a member of the American Academy of Actuaries. I was appointed on [date of appointment] in accordance with the requirements of the annual statement instructions. I meet the Academy qualification standards for rendering the opinion.”

For a consultant who is a Member of the American Academy of Actuaries, the opening paragraph of the opinion should contain all the following sentences if the appointed actuary is using the prescribed wording:

“I, (name and title of consultant), am associated with the firm of (name of firm). I am a member of the American Academy of Actuaries and have been retained by the (name of organization) to render an opinion with regard to loss reserves, actuarial liabilities, actuarial assets, and related items. I was appointed on [date of appointment] in accordance with the requirements of the annual statement instructions. I meet the Academy qualification standards for rendering the opinion.”

Section 5:
5. The SCOPE section should contain only the following statement (including all specified lines even if the value is zero) if the appointed actuary is using the prescribed wording:

“I have examined the assumptions and methods used in determining loss reserves, actuarial liabilities, actuarial assets, and related items listed below, as shown in the annual statement of the organization as prepared for filing with state regulatory officials, as of December 31, 20__.

Section 7:

7. The OPINION section should include only the following statement if the appointed actuary is using the prescribed wording:

“In my opinion, the amounts carried in the balance sheet on account of the items identified above:

A. Are in accordance with accepted actuarial standards consistently applied and are fairly stated in accordance with sound actuarial principles;

B. Are based on actuarial assumptions relevant to contract provisions and appropriate to the purpose for which the statement was prepared;

C. Meet the requirements of the Insurance Laws and regulations of the state of [state of domicile] and: (Use of one the following phrases, as appropriate, is considered prescribed wording. Replacing “[list states]” with an actual list of states in parentheses is also considered prescribed wording.)

the loss reserves and actuarial liabilities are at least as great as the minimum aggregate amounts required by any state,

or

the loss reserves and actuarial liabilities are at least as great as the minimum aggregate amounts required by any state with the exception of the following states [list states]. For each listed state a separate statement of actuarial opinion was submitted to that state that complies with the requirements of that state;

D. Make a good and sufficient provision for all unpaid claims and other actuarial liabilities of the organization under the terms of its contracts and agreements;

E. Make a reasonable provision for all actuarial assets of the organization under the terms of its contracts and agreements;

F. On a combined basis, make a reasonable provision for all actuarial assets and actuarial liabilities of the organization under moderately adverse conditions;

G. Are computed on the basis of assumptions consistent with those used in computing the corresponding items in the annual statement of the preceding year-end; and

H. Include appropriate provision for all actuarial items that ought to be established.

Section 9:

9. If the appointed actuary is able to form an opinion that is not qualified, adverse or inconclusive as those terms are defined below, he or she should issue a statement of unqualified opinion. If the opinion is adverse, qualified or inconclusive, the appointed actuary should issue an adverse, qualified or inconclusive opinion explicitly stating the reason(s) for such opinion. In all circumstances the category of opinion should be explicitly identified in the TABLE of KEY INDICATORS section of the Actuarial Opinion.

An adverse opinion is an actuarial opinion in which the appointed actuary determines that the reserves and actuarial liabilities are not good and sufficient, actuarial assets are not reasonable, or the actuarial assets and
actuarial liabilities on a combined basis are not reasonable under moderately adverse conditions. (An adverse opinion does not meet one or more of items D, E, or F of Section 7.)

When, in the actuary’s opinion, the reserves, actuarial liabilities, or actuarial assets included in the scope of the opinion for a certain item or items are in question because they cannot be reasonably estimated or the actuary is unable to render an opinion on those items, the actuary should issue a qualified opinion. Such a qualified opinion should state whether the stated reserve amount makes a good and sufficient provision for the actuarial liabilities associated with the specified reserves; actuarial assets are reasonable; and combined actuarial assets and actuarial liabilities are reasonable under moderately adverse conditions, except for the item or items to which the qualification relates. The actuary is not required to issue a qualified opinion if the actuary reasonably believes that the item or items in question are not likely to be material. (A qualified opinion does not meet one or more of the items A, B, C or H of Section 7.)

The actuary’s ability to give an opinion is dependent upon data, analyses, assumptions and related information that are sufficient to support a conclusion. If the actuary cannot reach a conclusion due to deficiencies or limitations in the data, analyses, assumptions or related information, then the actuary should issue an inconclusive opinion. An inconclusive opinion shall include a description of the reasons a conclusion could not be reached.

I think we should look for more consistency with the life actuarial opinion. Life has actuarial assets (deferred premiums are all I can think of right now) and I can’t recall how they are handled in the opinion. I believe the life opinion also uses the phrase “adequate” under moderately adverse conditions which seems more prudent than “reasonable”. We don’t want the tail (actuarial assets) wagging the dog (solvency).

Eric,

I believe there may be a typo of an unintended comma before the words "are not good and sufficient" in the second paragraph of Section 9. (Most easily seen when the document is in a "No Markup" status.)

Please feel free to let me know if you need further clarification regarding the location of this likely unintended comma.

** This section must be completed on all forms. Revised 7/18/2018
IDENTIFICATION OF ITEM(S) TO CHANGE

Instructions to Annual Health Statement Blank, Actuarial Opinion (Actuarial Opinion Instructions):

Modify section 1A. (Definitions), of the actuarial opinion instructions to add definitions of “actuarial asset” and “actuarial liability”.

Modify section 4 (Identification section), section 5 (Scope section), and section 7 (Opinion section) of the actuarial opinion instructions to ensure that the opinion’s prescribed wording clearly indicates that the actuary’s opinion covers actuarial assets as well as actuarial liabilities.

Modify section 9 of the actuarial opinion instructions to ensure that guidance related to the type of opinion rendered by an appointed actuary covers both actuarial assets and actuarial liabilities.

Section 1

1A. Definitions

“Insurer” means an entity authorized to write accident and health contracts under the laws of any state and which files on the Health Blank.

“Actuarial Memorandum” means a document or other presentation prepared as a formal means of conveying the appointed actuary’s professional conclusions and recommendations, of recording and communicating the methods and procedures, of assuring that the parties addressed are aware of the significance of the appointed actuary’s opinion or findings and that documents memorandum is further described in Section 1C.

“Actuarial asset” means an actuarial item presented as an asset in the annual statement and included in the scope of the Statement of Actuarial Opinion.

“Actuarial liability” means an actuarial item presented as a liability in the annual statement and included in the scope of the Statement of Actuarial Opinion.

Section 4

4. The IDENTIFICATION section should specifically indicate the appointed actuary’s relationship to the company, qualifications for acting as appointed actuary, date of appointment, and should specify that the appointment was made by the Board of Directors, or its equivalent or by a committee of the Board. A person who is not a Member of the American Academy of Actuaries but is recognized by the Academy as qualified must attach, each year, a copy of the approval letter from the Academy.

This section should contain only one of the following:

For a Member of the American Academy of Actuaries who is an employee of the organization, the opening paragraph of the opinion should contain all the following sentences if the appointed actuary is using the prescribed wording:

“I, (name and title of actuary), am an employee of (named organization) and a member of the American Academy of Actuaries. I was appointed on [date of appointment] in accordance with the requirements of the annual statement instructions. I meet the Academy qualification standards for rendering the opinion.”

For a consultant who is a Member of the American Academy of Actuaries, the opening paragraph of the opinion should contain all the following sentences if the appointed actuary is using the prescribed wording:

“I, (name and title of consultant), am associated with the firm of (name of firm). I am a member of the American Academy of Actuaries and have been retained by the (name of organization) to render an opinion with regard to loss reserves, actuarial liabilities, actuarial assets, and related items. I was appointed on [date of appointment] in accordance with the requirements of the annual statement instructions. I meet the Academy qualification standards for rendering the opinion.”

Section 5:
5. The SCOPE section should contain only the following statement (including all specified lines even if the value is zero) if the appointed actuary is using the prescribed wording:

“I have examined the assumptions and methods used in determining loss reserves, actuarial liabilities, actuarial assets, and related items listed below, as shown in the annual statement of the organization as prepared for filing with state regulatory officials, as of December 31, 20__.

Section 7:

7. The OPINION section should include only the following statement if the appointed actuary is using the prescribed wording:

“In my opinion, the amounts carried in the balance sheet on account of the items identified above:

A. Are in accordance with accepted actuarial standards consistently applied and are fairly stated in accordance with sound actuarial principles;

B. Are based on actuarial assumptions relevant to contract provisions and appropriate to the purpose for which the statement was prepared;

C. Meet the requirements of the Insurance Laws and regulations of the state of [state of domicile] and:
   (Use of one the following phrases, as appropriate, is considered prescribed wording. Replacing “[list states]” with an actual list of states in parentheses is also considered prescribed wording.)
   the loss reserves and actuarial liabilities are at least as great as the minimum aggregate amounts required by any state,
   or
   the loss reserves and actuarial liabilities are at least as great as the minimum aggregate amounts required by any state with the exception of the following states [list states]. For each listed state a separate statement of actuarial opinion was submitted to that state that complies with the requirements of that state;

D. Make a good and sufficient provision for all unpaid claims and other actuarial liabilities of the organization under the terms of its contracts and agreements;

E. Make a reasonable provision for all actuarial assets of the organization;

F. On a combined basis, make a reasonable provision for all actuarial assets and actuarial liabilities of the organization under moderately adverse conditions;

G. Are computed on the basis of assumptions consistent with those used in computing the corresponding items in the annual statement of the preceding year-end; and

H. Include appropriate provision for all actuarial items that ought to be established.

Section 9:

9. If the appointed actuary is able to form an opinion that is not qualified, adverse or inconclusive as those terms are defined below, he or she should issue a statement of unqualified opinion. If the opinion is adverse, qualified or inconclusive, the appointed actuary should issue an adverse, qualified or inconclusive opinion explicitly stating the reason(s) for such opinion. In all circumstances the category of opinion should be explicitly identified in the TABLE of KEY INDICATORS section of the Actuarial Opinion.

An adverse opinion is an actuarial opinion in which the appointed actuary determines that the reserves and actuarial liabilities, are not good and sufficient, actuarial assets are not reasonable, or the actuarial assets and actuarial liabilities on a combined basis are not reasonable under moderately adverse conditions. (An adverse opinion does not meet one or more of items D, E, or F of Section 7.)
When, in the actuary’s opinion, the actuarial liabilities or actuarial assets included in the scope of the opinion for a certain item or items are in question because they cannot be reasonably estimated or the actuary is unable to render an opinion on those items, the actuary should issue a qualified opinion. Such a qualified opinion should state whether the stated amounts make a good and sufficient provision for the actuarial liabilities; whether the stated amounts make a reasonable provision for actuarial assets; and whether the aggregation of actuarial assets and actuarial liabilities makes an appropriate provision for the intended purpose of the opinion. The only exception(s) being for the item or items to which the qualification relates. The actuary is not required to issue a qualified opinion if the actuary reasonably believes that the item or items in question are not likely to be material. (A qualified opinion does not meet one or more of the items A, B, C or H of Section 7.)

The actuary’s ability to give an opinion is dependent upon data, analyses, assumptions and related information that are sufficient to support a conclusion. If the actuary cannot reach a conclusion due to deficiencies or limitations in the data, analyses, assumptions or related information, then the actuary should issue an inconclusive opinion. An inconclusive opinion shall include a description of the reasons a conclusion could not be reached.
February 24, 2022

Mr. Paul Lombardo, Chair
Health Actuarial (B) Task Force
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

Via electronic mail to Eric King.

Re: Proposed changes to the Health Annual Statement instructions for the Actuarial Opinion.

Dear Mr. Lombardo:

I am writing on behalf of UnitedHealth Group with regard to the proposed changes to the Health Annual Statement instructions for the Actuarial Opinion, as exposed for comment by your Task Force on February 9, 2022. We appreciate the opportunity to offer our comments.

We have some concerns about the newly added Sections 7.E and 7.F in the proposal. To begin with, we do not believe that the Appointed Actuary should be made to address the provision for assets (7.E) separately from the provision for liabilities (7.D). The Appointed Actuary’s concern should be the “actuarial balance sheet” (i.e., the actuarial assets and liabilities) as a whole; it is all of those items in combination that affect the reporting entity’s capital and surplus. There does not seem to be any valid reason to have the Appointed Actuary attest to various pieces of the actuarial balance sheet in isolation. Furthermore, it is unclear what a “reasonable provision” for the actuarial assets would be, outside of the context of the actuarial liabilities and the desired degree of conservatism in those liabilities. Therefore, we do not believe that the proposed Section 7.E is appropriate.

We have two concerns about Section 7.F. First, we are concerned that the phrase “on a combined basis” does not add clarity as to exactly what the Appointed Actuary is attesting to. Second, as just noted, we do not believe that the actuarial balance sheet should be segmented for purposes of attestation. Adding Section 7.F as proposed would still leave a separate attestation for the liabilities only (7.D).
We suggest, therefore, that the proposed Sections 7.E and 7.F be deleted, and that Section 7.D be revised to address the actuarial balance sheet in its totality. For example, the revised Section 7.D might read:

D. Make a good and sufficient provision for all unpaid claims and other actuarial liabilities of the organization under the terms of its contracts and agreements, when the actuarial liabilities are reduced by any overstatement (or increased by any understatement) of the actuarial assets; [added material underlined]

We believe that this would make the nature of the Appointed Actuary’s attestation much more explicit. We note two further points about this suggested language.

- The objection raised on the February 1 call to the word “overstatement” does not apply here. Then, the concern was the amount of overstatement: it would not be reasonable to require an adverse opinion if the overstatement were only $1. Here, that concern would not occur, because reducing the liabilities by $1 would be entirely appropriate, and presumably would not affect the Appointed Actuary’s ability to issue an unqualified opinion.

- We feel it is entirely appropriate to recognize an understatement of the actuarial assets as an additional source of conservatism. We understand that regulators prefer, from a financial reporting perspective, that deficiencies in any one line item should not be made up by excesses in another line item; each line item should be reported appropriately. However, it should not be the Appointed Actuary’s role to police the company’s reporting. That is much better dealt with by the auditors who must sign off on the audited financial statements, and by the insurance department financial analysts and financial examiners who review the financial statements. As we have indicated above, the Statement of Actuarial Opinion should address the actuarial liabilities and assets from an overall perspective, not piecemeal.

We would be happy to discuss these comments with you and the Task Force.

James R. Braue  
Senior Director, Actuarial Services  
UnitedHealth Group

cc: Eric King, NAIC  
     Randi Reichel, UnitedHealth Group
The Health Actuarial (B) Task Force met Feb. 1, 2022. The following Task Force members participated: Andrew N. Mais, Chair, represented by Paul Lombardo (CT); Russel Toal, Vice Chair, represented by Julie Weinberg (NM); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Lan Brown (CA); Michael Conway represented by Eric Unger (CO); Doug Ommen represented by Klete Geren (IA); Dean L. Cameron represented by Weston Trexler (ID); Amy L. Beard represented by Stephen Chamblee (IN); Vicki Schmidt represented by Nicole Boyd (KS); Eric A. Cioppa represented by Marti Hooper (ME); Anita G. Fox represented by Kevin Dyke (MI); Chlora Lindley-Myers represented by William Leung (MO); Marlene Caride represented by Seong-min Eom (NJ); Judith L. French represented by Lilane Fox (OH); Glen Mulready represented by Andrew Schallhorn (OK); Jessica K. Altman represented by Jim Laverty (PA); Cassie Brown represented by R. Michael Markham (TX); Scott A. White represented by David Shea (VA); and Mike Kreidler represented by Lichiou Lee (WA).

1. Discussed its Proposal to Revise Instructions for the Health Annual Statement SAO

Mr. Lombardo said the Task Force needs to revisit its proposal (Attachment Two-A) to revise the language in Section 4, Section 5, Section 7, and Section 9 of the instructions for the health Statement of Actuarial Opinion (SAO) to ensure all items—actuarial assets and liabilities—within the scope of the SAO are treated consistently and provide a final recommendation to the Blanks (E) Working Group. He said the American Academy of Actuaries (Academy) provided comments on Section 7D that express concern that the proposed language may be too cumbersome, and there is the potential for a different interpretation of the language than expected. He said the Academy suggested the addition of the language, “Do not overstate actuarial assets,” to Section 7E. Mr. Dyke suggested the addition of the language, “Make a reasonable provision for all actuarial assets of the organization under the terms of its contracts and agreements.” Mr. Lombardo said the Task Force will work with the Academy to draft final language for Section 7E and other revisions. He said once a final version has been drafted, it will be exposed for a 15-day public comment period.

Having no further business, the Health Actuarial (B) Task Force adjourned.

Anticipated Effective Date: Annual 2021

**IDENTIFICATION OF ITEM(S) TO CHANGE**

See the following page for details of proposed changes.

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to revise the language in sections 4, 5, 7 and 9 of the orange blank annual statement instructions related to the actuarial opinion to ensure that all items (actuarial assets and liabilities) within the scope of the statement of actuarial opinion are treated consistently. Currently, reserves and liabilities are referenced in sections 4, 5, 7 and 9 of the orange blank annual statement instructions. Since actuarial assets are included in the scope of the actuarial opinion, it is important that these instructions provide guidance to appointed actuaries that apply to all actuarial items, assets as well as liabilities, included in the scope of the actuarial opinion.

**NAIC STAFF COMMENTS**

Comment on Effective Reporting Date: ________________________________

Other Comments: __________________________________

** This section must be completed on all forms. Revised 7/18/2018 **
IDENTIFICATION OF ITEM(S) TO CHANGE

Instructions to Annual Health Statement Blank, Actuarial Opinion (Actuarial Opinion Instructions):

Modify section 1A. (Definitions), of the actuarial opinion instructions to add definitions of “actuarial asset” and “actuarial liability”.

Modify section 4 (Identification section), section 5 (Scope section), and section 7 (Opinion section) of the actuarial opinion instructions to ensure that the opinion’s prescribed wording clearly indicates that the actuary’s opinion covers actuarial assets as well as actuarial liabilities.

Modify section 9 of the actuarial opinion instructions to ensure that guidance related to the type of opinion rendered by an appointed actuary covers both actuarial assets and actuarial liabilities.

Section 1

1A. Definitions

“Insurer” means an entity authorized to write accident and health contracts under the laws of any state and which files on the Health Blank.

“Actuarial Memorandum” means a document or other presentation prepared as a formal means of conveying the appointed actuary’s professional conclusions and recommendations, of recording and communicating the methods and procedures, of assuring that the parties addressed are aware of the significance of the appointed actuary’s opinion or findings and that documents memorandum is further described in Section 1C.

“Actuarial asset” means an actuarial item presented as an asset in the annual statement and included in the scope of the Statement of Actuarial Opinion.

“Actuarial liability” means an actuarial item presented as a liability in the annual statement and included in the scope of the Statement of Actuarial Opinion.

Section 4

4. The IDENTIFICATION section should specifically indicate the appointed actuary’s relationship to the company, qualifications for acting as appointed actuary, date of appointment, and should specify that the appointment was made by the Board of Directors, or its equivalent or by a committee of the Board. A person who is not a Member of the American Academy of Actuaries but is recognized by the Academy as qualified must attach, each year, a copy of the approval letter from the Academy.

This section should contain only one of the following:

For a Member of the American Academy of Actuaries who is an employee of the organization, the opening paragraph of the opinion should contain all the following sentences if the appointed actuary is using the prescribed wording:

“I, (name and title of actuary), am an employee of (named organization) and a member of the American Academy of Actuaries. I was appointed on [date of appointment] in accordance with the requirements of the annual statement instructions. I meet the Academy qualification standards for rendering the opinion.”

For a consultant who is a Member of the American Academy of Actuaries, the opening paragraph of the opinion should contain all the following sentences if the appointed actuary is using the prescribed wording:

“I, (name and title of consultant), am associated with the firm of (name of firm). I am a member of the American Academy of Actuaries and have been retained by the (name of organization) to render an opinion with regard to loss reserves, actuarial liabilities, actuarial assets, and related items. I was appointed on [date of appointment] in accordance with the requirements of the annual statement instructions. I meet the Academy qualification standards for rendering the opinion.”
5. The SCOPE section should contain only the following statement (including all specified lines even if the value is zero) if the appointed actuary is using the prescribed wording:

“I have examined the assumptions and methods used in determining loss reserves, actuarial liabilities, actuarial assets, and related items listed below, as shown in the annual statement of the organization as prepared for filing with state regulatory officials, as of December 31, 20__.

Section 7:

7. The OPINION section should include only the following statement if the appointed actuary is using the prescribed wording:

“In my opinion, the amounts carried in the balance sheet on account of the items identified above:

A. Are in accordance with accepted actuarial standards consistently applied and are fairly stated in accordance with sound actuarial principles;

B. Are based on actuarial assumptions relevant to contract provisions and appropriate to the purpose for which the statement was prepared;

C. Meet the requirements of the Insurance Laws and regulations of the state of [state of domicile] and:
   (Use of one the following phrases, as appropriate, is considered prescribed wording. Replacing “[list states]” with an actual list of states in parentheses is also considered prescribed wording.)
   the loss reserves and actuarial liabilities are at least as great as the minimum aggregate amounts required by any state,
   or
   the loss reserves and actuarial liabilities are at least as great as the minimum aggregate amounts required by any state with the exception of the following states [list states]. For each listed state a separate statement of actuarial opinion was submitted to that state that complies with the requirements of that state;

D. Make a good and sufficient provision for all unpaid claims and other actuarial liabilities of the organization under the terms of its contracts and agreements;

E. Make a reasonable provision for all actuarial assets of the organization under the terms of its contracts and agreements;

F. Are computed on the basis of assumptions consistent with those used in computing the corresponding items in the annual statement of the preceding year-end; and

G. Include appropriate provision for all actuarial items that ought to be established.

Section 9:

9. If the appointed actuary is able to form an opinion that is not qualified, adverse or inconclusive as those terms are defined below, he or she should issue a statement of unqualified opinion. If the opinion is adverse, qualified or inconclusive, the appointed actuary should issue an adverse, qualified or inconclusive opinion explicitly stating the reason(s) for such opinion. In all circumstances the category of opinion should be explicitly identified in the TABLE of KEY INDICATORS section of the Actuarial Opinion.

An adverse opinion is an actuarial opinion in which the appointed actuary determines that the reserves and liabilities, when considered in combination with any actuarial assets included in the scope of the opinion, are not good and sufficient. (An adverse opinion does not meet item D of Section 7.)

When, in the actuary’s opinion, the reserves or actuarial assets included in the scope of the opinion for a certain item or items are in question because they cannot be reasonably estimated or the actuary is unable to render an opinion on those items, the actuary should issue a qualified opinion. Such a qualified opinion should state
whether the stated reserve amount makes a good and sufficient provision for the liabilities associated with the
specified reserves, when considered in combination with any actuarial assets included in the scope of the
opinion, except for the item or items to which the qualification relates. The actuary is not required to issue a
qualified opinion if the actuary reasonably believes that the item or items in question are not likely to be
material. (A qualified opinion does not meet one or more of the items A, B, C or F of Section 7.)

The actuary’s ability to give an opinion is dependent upon data, analyses, assumptions and related information
that are sufficient to support a conclusion. If the actuary cannot reach a conclusion due to deficiencies or
limitations in the data, analyses, assumptions or related information, then the actuary should issue an
inconclusive opinion. An inconclusive opinion shall include a description of the reasons a conclusion could not
be reached.
The Long-Term Care Actuarial (B) Working Group of the Health Actuarial (B) Task Force met March 9, 2022. The following Working Group members participated: Tomasz Serbinowski, Chair (UT); Jennifer Li (AL); Lisa Luo (CA); Paul Lombardo (CT); Lilyan Zhang (FL); Nicole Boyd (KS); Marti Hooper (ME); Fred Andersen (MN); Michael Muldoon (NE); Russel Toal (NM); Bill Carmello (NY); Laura Miller (OH); Andrew Schallhorn (OK); Andrew Dvorine (SC); and Aaron Hodges (TX).

1. **Discussed an LTCI Mortality and Lapse Study**

   Mr. Serbinowski said the American Academy of Actuaries (Academy) and Society of Actuaries (SOA) Research Institute’s Final Long-Term Care Insurance (LTCI) Mortality and Lapse Study (Attachment Three-A) as provided in response to a request (Attachment Three-B) from the Long-Term Care Valuation (B) Subgroup will be reviewed and considered for adoption by the Working Group.

   Warren Jones (Retired) and Bob Yee (PricewaterhouseCoopers) gave an overview of the study. Superintendent Toal asked if the study can be updated with an actual-to-expected analysis using more current experience data. The Working Group agreed to submit a request to the Academy and the SOA with parameters for the actual-to-expected analysis.

   Having no further business, the Long-Term Care Actuarial (B) Working Group adjourned.

I. INTRODUCTION

On May 5, 2016, the Long-Term Care Valuation (B) Work Group of National Association of Insurance Commissioners’ (NAIC’s) Health Actuarial (B) Task Force’s Long-Term Care Actuarial Working Group (LTCAWG) requested recommendations from the American Academy of Actuaries (Academy)\(^1\) and the Society of Actuaries Research Institute (SOA)\(^2\) to replace the mortality and lapse bases for statutory minimum reserves. A copy of the request is included in Appendix 1 to this report.

The Academy and SOA created a Long-Term Care Valuation Work Group (Work Group) to address the request. The Work Group is chaired by Warren Jones, the Mortality Subgroup is led by Bruce Stahl, and the Lapse Subgroup is led by Bob Yee. The Work Group has provided regular updates to the LTCAWG at national meetings and provided opportunities for the LTCAWG members to ask questions regarding the work in progress.

This report presents the recommended lapse tables in Appendix 3, and recommended mortality tables in Appendix 4, and describes the methodology and process in developing these tables.

---

\(^1\) The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

\(^2\) Serving as the research arm of the Society of Actuaries, the SOA Research Institute provides objective, data-driven research bringing together tried and true practices and future-focused approaches to address societal challenges and business needs. The Institute provides trusted knowledge, extensive experience and new technologies to actuaries, employers, regulators, research funders and the public, to help them effectively identify, predict and manage risks.
II. BACKGROUND

The minimum statutory reserve basis for long-term care (LTC) insurance is documented in the NAIC Valuation Manual VM-25: Health Insurance Reserves Minimum Reserve Requirements. The mortality table specified for currently new issues is the 1994 Group Annuity Mortality (GAM) Table. The lapse rate specified is the lesser of x% of the voluntary lapse rate used in the calculation of gross premiums and y%, where x and y vary by policy year:

- For policy year one (1), x is 80% and y is 6%.
- For policy years two (2) through four (4), x is 80% and y is 4%.
- For policy years five (5) and later, x is 100% and y is 2%, except for group insurance, for which y is 3%.

Both the mortality and lapse bases for the minimum reserve requirements have been revised over the years with the changes to apply to new issues only. The mortality basis has been that for whole life insurance or payout annuities.

General Approach

Our charge is to develop recommended mortality and lapse tables for valuation on both a total-lives basis and an active-lives basis. This charge dictates the approach we have chosen to develop such tables.

Valuation tables are conservative in nature. A logical method is to develop basic tables based on experience first and then consider the margins to be added. Because the mortality and lapse tables would be used in combination, it is desirable for both tables to be as consistent as possible with respect to the data source and the factors that the tables vary by. The Work Group recognizes the likelihood of the under-reporting of death for healthy policyholders. Thus, the delineation between death and lapse is not always clear. Consistency in both data source and factors can facilitate the assessment of combined deaths and lapses for reasonableness checks.

Source of Data

The Work Group defined the base mortality table to be the 2012 Individual Annuity Mortality Table. Further, development of mortality margins and the lapse assumption is to be based on the recent SOA/LIMRA LTC Voluntary Lapse and Mortality Experience Study (the Study). It is comprised of experience data from 2000 through 2011 for 22 companies. From the aggregate data, we observed trends during the study period, especially for lapse. Accordingly, we selected the observation period 2008-2011 to reflect more recent trends. Furthermore, the Study identified certain participating companies with relatively more accurate data submitted. Data from 10 companies (Definition 2 [DEFN 2] companies) satisfied the following conditions:

1. Deaths are separately identified from lapses,
2. Unknown terminations are less than 25% of total terminations, and
3. Performed matching with Social Security death records within the previous three years from the date of submission.
Apart from some preliminary comparisons between DEFN 2 data and the full dataset, we further restricted our data to these DEFN 2 companies. We compared our tabulated lapse counts and exposures with the published summary data from the SOA. We concluded that our data is reasonably representative of corresponding summary data from the Study. The DEFN 2 companies represent approximately 70% of the industry experience for the exposure period used.

The following table shows the summary statistics of the DEFN 2 subset of data:

<table>
<thead>
<tr>
<th></th>
<th>Total Lives</th>
<th>Active Lives</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Counts</td>
<td>Exposure Years</td>
</tr>
<tr>
<td>Mortality—Individual</td>
<td>142,647</td>
<td>9.4MM</td>
</tr>
<tr>
<td>Lapse—Individual</td>
<td>197,000</td>
<td>9.4MM</td>
</tr>
<tr>
<td>Lapse—Group</td>
<td>302,000</td>
<td>4.9MM</td>
</tr>
</tbody>
</table>

3 The mortality was derived using individual mortality and tested using both individual and group data. Also, the figures in this line include 19,599 deaths from “Substandard” and “Unknown” risk classes that do not appear in the “Death Count Totals” table later in this report.

4 The lapse count is the same for Total Lives and Active Lives as the immaterial number of disabled life lapses that were ignored.

5 Ibid.
III. MORTALITY

Purpose and Scope

The Mortality Subgroup worked to identify reasonable mortality tables to be used in setting statutory reserves for individual LTCI policies, either as a particular set of tables or as guidance that the NAIC could expect from insurers.
