The Work Group further recognized that the NAIC allows principle-based reserving for life insurance and that, therefore, the NAIC may be interested in guidance for a similar approach with LTCI mortality. Guidance for principle-based reserving may be of particular interest when considering marital status and underwriting risk classes.

When setting mortality assumptions in accordance with actuarial standards of practice (ASOPs) for LTC (e.g., ASOP 186), it is appropriate to consider the effects of both selection and class of applicants on expected mortality experience (section 3.2.2). Consequently, in addition to other potential mortality rate differentiators, the analysis considered risk class and marital status, representing both selection and class of applicants.

Data Quality

Addressing data quality under ASOP 23, Data Quality, the Work Group relied upon the Society of Actuaries’ Intercompany Study from 2015 to make sure the data was “clean” and as uniform as possible for complex and diverse data that came from 10 insurance companies.

The Work Group sought to follow the ASOP on credibility procedures (ASOP 25) in its work. Industry data is more relevant than general population data for two reasons. First, the selection process when issuing LTCI, from both the applicants’ and the insurers’ perspectives, may result in the insured population being a low mortality subset of the general population. Second, a mortality study of this nature requires consideration of numerous cells of data. The number of deaths in a given cell may or may not be credible. Looking at data from multiple insurers increases the number of cells that are credible.

6 Actuarial Standards Board; Actuarial Standard of Practice No. 18, Long-Term Care Insurance; May 2011.
7 Actuarial Standards Board; Actuarial Standard of Practice No. 23, Data Quality; December 2016.
8 Actuarial Standards Board; Actuarial Standard of Practice No. 25, Credibility Procedures; December 2013.
To assess data credibility with respect to rate development, it is a common practice to consider 1,082 or more counts in a particular cell in Tables 2 and 3 below to be fully credible. It is also typical to assign a lower count number to annotate partial credibility for a cell. For example, a minimum count of 271 can be considered as partially credible. Using 271 deaths as a measure, the majority of the cells in Table 2 below can be considered as partially credible.

Full credibility means that there is a 90% probability that the observed rate is within 5% of the true underlying result. Some practitioners would accept as low as 200 data points as minimally credible (approximately 40% partial credibility).

Corresponding to 1,082 as full credibility, 271 counts means that there is a 90% probability that the observed rate is within 10% of the true underlying rate.

As important as using multiple contributors is to enhance credibility, using multiple contributors also compromises the uniformity of the data and, in that sense, reduces the credibility. For example, the study identified marital status based in part on the presence of a spouse discount, and some insurers apply a spouse discount based on the legal status of being married alone, while others require both spouses to apply for coverage, and still others require both spouses to be issued policies. Similarly, the data recorded whether policies were preferred, standard, or substandard risks, but each insurer defines the health

---

11 The study variable “marital status” is based on a combination of the data fields “marital status at issue” and “marital discount.” In the case where marital status at issue was provided, that field was used. For approximately 43% of the policies submitted for the study, marital status at issue was not provided. For 37% of the policies, the marital status at issue was not provided but the marital discount was provided (and was used to define the study marital status variable for those policies). For the remaining policies (approximately 20%), neither marital status at issue nor marital discount were provided; these cases were coded as marital status = “unknown.”

12 The SOA study defined the risk class using “Premium Class” as “The class in which the policy was issued relative to the base policy.” If an underwriting discount or load was given, then preferred or substandard was provided by the company. The data provided did not permit aligning across companies.
status of the risk in different ways following its own particular underwriting guidelines. The NAIC may want to address this lack of homogeneity when determining what mortality table standards to set for statutory reserves.

The Work Group also chose to rely on statistical metrics to identify the significance of the variables associated with each policy. The statistical metrics help to identify interactions among the variables, allowing the Work Group to minimize the number of parameters needed for setting mortality tables. They also help to identify which variables the NAIC may want each insurer to consider more closely when setting reserves for LTCI, using the information as guidance.

When setting tables using the statistically identified variables, the Work Group employed smoothing techniques that generated reasonable outcomes. Part of the analysis involved an iterative smoothing process. At younger and older ages where data was sparse, we used the slope of the 2012 Individual Annuity Mortality Basic tables (2012 IAM) as a guide.

Before converting the smoothed tables as guidance for deriving the valuation tables, the Work Group decided to apply mortality improvement to recognize that LTC insured mortality has likely improved since the time of the experience period 2008–2011. A separate section on mortality improvement is provided below.

A valuation table is expected to be conservative; for longevity risks such as with LTCI, “conservative” means using lower mortality than expected. Past annuity tables have essentially used mortality rates that are 90% of the experience, with modifications for very old ages beyond 100. The Work Group recommended using the 90% factor once again and capping the mortality of the valuation table at 0.400, which generally limits the mortality at very old ages. A large majority of insurers’ actual mortality experience exceeded this proposed mortality factor.

The Work Group does not think the NAIC should ignore marital status and risk class because, despite the lack of homogeneity in the definitions, these variables still proved to be influential in the prediction of the actual mortality.

The Work Group does not necessarily think the NAIC should use marital status and risk class without any consideration for specific insurer definitions and practices. As stated previously, insurers treat these differently, and, while these items had a high statistical significance, the effect of these items will likely vary according to the definition followed or practices used by each insurer.

The Work Group did not have the data necessary to identify the specific values for each marital status definition or risk class identification. Therefore, adjusting for these variables may not be practical without the NAIC granting individual companies the ability to justify how their mortality might appropriately vary from the findings identified in this report. If the NAIC allowed individual insurers to justify such differences, each insurer could easily add margin by applying a similar conservative factor of 90% to the mortality rates that it identifies.
Methods

Issue Ages

The data was consistent with measuring age as age last birthday (ALB). No tables are offered to convert the findings to age nearest birthday (ANB).

Exposures

For policyholders who died within a particular period, the Work Group chose to use the full exposure, meaning the count of lives at the beginning of the period being measured; for everyone else, the Work Group chose to use the exact (daily) exposure (for example, a policy that lapsed three months into its policy year was treated as having one-fourth of an exposure year for that particular year). This method of calculating exposure is consistent with the Balducci Hypothesis, which essentially assumes mortality rates decrease during the exposure period. As a reminder, the Balducci assumption may have distortions when the mortality rates are relatively high and credibility is low. Please see “Experience Study Calculations” written by David Atkinson and John McGarry on behalf of the SOA. Please also note that the manner used to derive mortality rates in this study relied heavily on the 2012 IAM slope at very old ages where the lack of credibility is of greatest concern (the method is described later). The 2012 IAM study also used the Balducci method and smoothing.

Predictive Variables

LIMRA developed a statistical Generalized Linear Model and other statistical methods to identify variables that had the greatest significance in explaining the mortality experience and might be most appropriate for use in projecting future experience.

Initially, the analysis recognized nine variables: sex, attained age, policy year, coverage type (whether nursing home only, home health care only, comprehensive, or other), an indicator for the presence of an automatic increasing benefit, an indicator that the policy has had a rate increase, the underwriting risk class (Preferred, Standard, or Substandard), marital status, and an indicator for whether the policy had an unlimited maximum benefit period.

Some factors were represented by multiple indicator variables. For example, Premium Risk Class was represented by three indicators. (For Table 4, we identified the highest Wald Chi-Square value from the group of indicators.)
Table 4 shows a measure of the significance of the variables under a Poisson distribution and is generally representative of other measures. Under other distributions, the factor “Gender” had greater statistical significance yet, even here, we deemed the significance to be strong.

Table 4. Significant Covariates Using Poisson Distribution

<table>
<thead>

<tr>
<td>Policy Year</td>
<td>110</td>
</tr>
<tr>
<td>Gender</td>
<td>6</td>
</tr>
<tr>
<td>Automatic Increasing Benefit Maximums</td>
<td>0</td>
</tr>
</tbody>
</table>

For example, using the standard Chi-squared test in the Poisson distribution, most of the factors had a probability of being statistically significant at over 0.9999. Gender had a probability of being statistically significant at 0.9884, compared to the Automatic Increasing Benefit Maximum at only 0.2639.

The factors (variables) were selected based on (1) those that had a high rate of responses (some variables had a relatively high number of missing values), (2) those that had a material influence on the mortality (sometimes a variable appeared to be statistically significant but only trivially altered the mortality rate), and (3) those that were not redundant (not statistically correlated with other factors). Such analysis reduced the initial nine to five: sex, age, policy year, underwriting risk class, and marital status. (Age can be identified either at issue age or attained age because the presence of policy year correlates the two age measurements.)

The findings, therefore, provide tables that include the five predictive variables. For two of the variables—underwriting class and marital status—the underlying data is not homogeneous by contributing company because contributing insurers derive or define these differently, and presumably the differences for some insurers could be larger for some than others. The findings provide a set of tables that offer the option to exclude underwriting risk class and marital status. The NAIC may want to consider the optionality of these two variables.
Development of Tables

The Work Group noticed that the selection period in the data appeared to be about 20 years, and that the number of deaths in policy years 21 and over was not very credible. The Work Group, consisting primarily of LTCI actuaries, then relied heavily upon Susan Willeat, an actuary from RGA with many years of experience in deriving mortality tables. She initially identified a set of ultimate tables prior to identifying selection factors. She increased the number of deaths from policy years 15 to 20 to estimate the ultimate mortality, and she did so iteratively in order to find a good fit. Starting with an increase of anywhere between 2% and 4%, she narrowed the annualized increases to an average of 3%. Therefore, the death counts from policy year 15 were increased by a factor of 1.036 in order to identify the number of deaths expected without any value from initial underwriting. She adjusted the death counts for policy years 16 through 20 in a similar manner. For example, she increased death counts from policy year 19 by a factor of 1.032, and from policy year 20 by a factor of 1.03.

Willeat used the ultimate rates for quinquennial age bands to improve credibility. This result required a 1.02 overall “true-up” factor to match the actual experience. The Work Group then identified a trend line by applying Gompertz’s law (mortality increases exponentially) through the Excel GROWTH function. This resulted in a pattern for ages 60 to 89 (in five-year age bands) that the Work Group considered to be materially inconsistent with the actual data, so the Work Group modified the approach to find two suitable trend lines. Then, the Work Group followed through with applying selection factors and calculated final actual to expected factors. The female actual data had only a small departure from ages 75 to 79, while the male actual data had a major departure that the Work Group deemed unusable. The Work Group decided to apply the female ratios to the male data in order to get a better fit.

Next, the Work Group graduated the curves for ages 60 to 89 using the Karup-King six-point graduation technique and then extended the table to younger and older ages using the slope of the 2012 IAM as a guide. Initially, the Work Group tried to set the expected mortality rates at younger ages using 90% of the 2012 IAM, but iteratively found that 100% for males and 120% for females appeared to be a better fit to the actual data. For older ages, the Work Group floored the Karup-King results at 107% of the 2012 IAM for males and 101% for females. See Figures 1 and 2 below.
Figure 1. Male Ultimate Mortality Rates, Age Last Birthday

Figure 2. Female Ultimate Mortality Rates, Age Last Birthday
Applying the Excel "add trendline" options to the issue-age adjusted data, the Work Group found a best fit selection pattern with an R-square value of 0.9967. It was a POWER function in the form $y = 0.1736\times^{0.5775}$. The Work Group modified this slightly to allow policy year 21 to be exactly at 100%, so the equation became $y = 0.175\times^{0.5775}$.

Further review suggested that there was less value from selection at younger issue ages than at older but longer selection periods at younger issue ages than older. For issue ages below 65, the Work Group extended the selection period to 30 years and, for issue ages above 70, reduced the selection period to 10 years. The Work Group graded the selection period between these issue ages.

Then, the Work Group returned to validate the results by determining the actual-to-expected ratios, as shown in Tables 5 and 6.

</tbody>
</table>

The Work Group followed similar methods for deriving tables by adding underwriting risk classes and marital status, both separately and together, and for deriving tables for Active Lives.

Being healthier than the disabled lives, the mortality rates for the Active Lives are smaller than for Total Lives. At very old ages, the mortality of Active Lives is as high as that for Total Lives. Beginning around attained age 90, the ultimate Active Lives mortality begins to converge to that of the Total Lives to the point they are equal at ages above 100.

**Procedures**

The Work Group initially worked in coordination with the Lapse Subgroup to make sure that the findings of the two Subgroups (1) would be consistent and (2) could be used in conjunction with each other. Insurers of LTCI typically know when a policy terminates, but they do not necessarily know the reason. Often deaths and lapses can be misreported or not be identified at all. Comparing the data to the Social Security Database is one way to clarify which of the terminated policies were due to death. This database is not without error, yet the Subgroups believed that using it to adjust the data was more credible than otherwise. Therefore, the two Subgroups agreed to use a restricted number of contributors identified as “Definition 2” (DEFN 2).
Early in the process, the Work Group recognized that few of its members had experience in deriving mortality tables. Therefore, the group relied heavily upon guidance provided by Marianne Purushotham of LIMRA, as well as previous studies performed by the SOA, in order to identify how to calculate the actual mortality rates and how to identify the predictive variables (please see Methods above, particularly “Exposure” and “Predictive Variables”). When the Work Group reached the point of developing mortality tables, it relied heavily upon Susan Willeat.

The study period is the four-year period 2008 to 2011. The central year of the study’s exposure was 2010; to adjust the study to 2020, the Work Group applied the G2 mortality improvement assumptions for 11 years. If subsequent issue years are to have improvement, the same annual improvement figures can be applied. The Work Group applied G2 mortality improvement during the study but did not measure the actual mortality improvement.

Finally, the Work Group chose to follow similar Provisions for Adverse Deviation (PAD) as used by those who had derived mortality tables for annuity valuation tables in the past.

</tr>
</tbody>
</table>

The Work Group tested the number of contributors of data whose mortality would have been higher than the mortality using a similar PAD as used for the 2012 IAM. The grading was performed over the same ages as the 2012 IAM but with slightly different and rounded factors. As shown in Figure 3, seven of the 10 had mortality that was higher overall than identified by the recommended table with this PAD.
Six out of 10 companies had less than or equal to 100% actual deaths to expected deaths based on the fitted table before the application of the margin. (Less than 100% A/E implies that the recommended table is inadequate in reflecting their experience.) The number of companies to have actual-to-expected ratios below 100% may reasonably be expected to be about half of the total unless a small number have an inordinate amount of weight. Six is about half. By lowering the expected deaths by 10%, only three companies remain under 100% A/E. The 70% coverage is adequate as a valuation table provided that the sample of 10 companies is a fair representation of the industry. If the margin were to cover 80% or 90% of the companies, the expected deaths would need to be reduced by 16% or 22%, figures which seem extreme considering that one company’s experience is less credible than the whole, and that other mortality table provisions for adverse deviation are not that high. However, with more data or a more precise explanation of the existing data, an actuary may sufficiently demonstrate that a company has different mortality than the industry. For example, if hypothetically a particular company had a spouse discount only when the married applicant also had a healthy spouse apply for coverage, while most other companies required only that the applicant be married regardless of the status of the spouse, the particular company’s actual-to-expected ratio could be low. Similarly, the reverse could be true. If hypothetically, a particular company had a relatively weak requirement for spouse discounts, then the actual-to-expected ratio could be high.
Disclosures

1. The Work Group relied upon the following reports and parties to perform its work.
   a. SOA Long Term Care Experience Study Committee for the collection of the data.
   b. LIMRA, MIB, and Willis Towers Watson for “cleaning” the data (part of the SOA Long-
      Term Care Experience Study Committee work).
   c. The SOA report titled “Experience Study Calculations” by David Atkinson and John
      McGarry.\textsuperscript{13}
   d. Marianne Purushotham and LIMRA for calculating the exposure and identifying the
      statistical significance of predictive variables.
   e. Susan Willeat of RGA Reinsurance Company for developing the mortality tables.

2. The findings of this study have important limitations as follows.
   a. The data was for traditional, stand-alone LTCI. Mortality for combination or hybrid
      products may differ. Also, what represents provision for adverse experience on
      combination products will likely differ. Similarly, the mortality may differ for other
      products that have some features in common with LTCI (i.e., short-term care products).
   b. The Social Security Database may not be as accurate as expected and, therefore, the
      mortality assignments for terminations may be misleading.
   c. The predictive variables may not be defined consistently among the contributors. This is
      particularly true for marital status and underwriting risk class.
   d. The data for later policy durations and extremely old ages may not be fully credible.
   e. The trend or mortality improvement from 2010 to 2020 based on the 2012 IAM may not
      have represented the LTCI insured population.

3. Recommendations for further study
   a. Update this study when mortality at extremely old ages and later policy durations
      becomes more credible.
   b. While individual insurance companies are not the intended users of the findings from this
      study, they may find value in identifying mortality within their own definitions of marital
      status and underwriting risk class, particularly if they have maintained their definitions
      over the entire population within the data being analyzed. Insurance companies may
      want to compare their own mortality to this study.

Mortality Tables

The mortality tables presented in this report should be used with the full understanding of how they were derived and the purpose for which they were intended.

Basic tables are without margin (they are smoothed and extrapolated actual experience with the ability to apply G2 mortality improvement for a specified period of improvement).

Total or Active Lives may be selected, as well as the following parameters:
- Sex, Issue age, and Policy year
- Sex, Marital status, Issue age, and Policy year
- Sex, Underwriting risk class, Issue age, and Policy year
- Sex, Marital status, Underwriting risk class, Issue age, and Policy year

Valuation tables are derived by multiplying the “Expected” mortality rates by a factor of 0.90 with the margin factor grading to 1.00 at very old ages.

Mortality Improvement

Mortality improvement is observed in the general population and all insured lines of business. Mortality improvement scales are almost always based on Social Security Administration general population data over decades of time.

The Work Group is recommending the G2 Scale developed by the American Academy of Actuaries/Society of Actuaries Payout Annuity Table Team in the development of the 2012 Individual Annuity Reserving Table (2012 IAR). The recommended improvement starts from the midpoint of the observation period for the mortality data, 2008 to 2011 inclusive to the end of 2020 (i.e., 11 years of improvement).

ASOP No. 18, *Long-Term Care Insurance*, 14 section 3.2.8 “Change-over-Time Assumptions” requires the actuary to consider assumptions that change over time. Mortality improvement from the period observed to the period for which the assumption is to be used should be considered. The LTCAWG may consider alternative projection scale(s) to that recommended by the Work Group. The impact of improvement to the ultimate basic (without margin) mortality is illustrated in Table 8 below.

The G2 scale is recommended for improvement from the observation period to the end of 2020 for both total life mortality and active life mortality. The Work Group chose the G2 scale as it is a contemporary mortality improvement scale developed from Social Security Administration’s mortality data. The G2 scale was developed by the 2012 IAR Work Group. We note that the ultimate LTC mortality table developed by the Work Group has a substantially similar shape and level as the 2012 IAM table. The Work Group is not making any recommendations for disabled life mortality as that is outside of the scope of the request from the LTCAWG.

---

14 Actuarial Standards Board; Actuarial Standard of Practice No. 18, *Long-Term Care Insurance*, May 2011.
Additionally, an alternative the LTCAWG may consider is improvement of total life mortality and active life mortality beyond 2020, either for all policies for which the recommended mortality would apply (i.e., calendar year), or by issue year with no improvement beyond the issue year.

We used the Actuarial Guideline 51 (AG51) sample cells to show the sensitivity of applying the mortality improvement to 2020 and applying it indefinitely beyond 2020 for policies issued in 2020.

The following reserve amounts in Table 8 are for illustrative purposes only to provide an indication of how the mortality improvement might affect them. The interest rate used for discounting was 3.50%. The decrements are based on the recommendations in this report, assuming a Preferred premium rate class. The underlying incidence rates were based on the SOA 2015 LTC Experience Study’s GLM model #2, without diagnosis. They were increased to account for the impact of the elimination period on the incidence. The claim terminations were calculated using the SOA 2015 LTC Experience Study’s GLM model #2, applying the same continuance assumption during the elimination period as used to adjust the incidence. The recoveries were set at the difference between the total terminations and assumed disabled lives mortality. Mortality could not be higher than total terminations. The utilization was set at 100%.

The Work Group offers the following additional observations with respect to mortality improvement for valuation:

1. There is currently no known industry study on LTC mortality trends. There is evidence of mortality improvement trends in both general and annuitant populations. Because mortality experience for Individual Annuitants and LTC policyholders appear to have similar shapes (see figures 4 and 5, below), it is reasonable to assume that mortality improvement exists in LTC as well.

**Figure 4. Female Ultimate Mortality Rates, Age Last Birthday**

![Figure 4: Female Ultimate Mortality Rates, Age Last Birthday]
2. If no future mortality improvements are assumed in the valuation of liabilities, the valuation tables may be inadequate in the future if there is indeed future improvement and the built-in margin for conservatism is eroded. This may be an acceptable position if industry experience can be monitored in a timely manner.

3. With respect to the choice of G2 scale for LTC, there is a possibility that LTC policyholders have greater improvement than annuitants because they tend to have a higher socioeconomic status. Again, timely industry experience monitoring is necessary.

4. In a first-principle valuation method, active and disabled policyholders are modeled separately (disabled policyholders tend to have materially higher mortality than active policyholders). A decision needs to be made on whether mortality improvement applies to both active and disabled policyholders or to actives only.

   a. There is evidence of disabled lives mortality improvement in Social Security disabled beneficiaries’ data. There is also evidence of improvement in disabled retired persons’ data (RP-2000 and RP-2014 tables). However, the definition of disability varies considerably among disabled populations.

   b. From a comparison of five-year survival rates of disabled samples in the National Long-Term Care Surveys, there is no evidence of mortality improvement.\textsuperscript{15} Comparison of

disabled mortality rates by calendar year using the 2000–2011 SOA LTC Inter-Company Study is inconclusive with respect to mortality improvement trends.

c. Requiring mortality improvement on total lives may be inconsistent with not requiring improvement on disabled lives.

d. For financial projections and valuation under generally accepted accounting principles (GAAP), industry practice has been to assume mortality improvement on active policyholders only.

e. Disabled mortality improvement is an unresolved issue in LTC. A reasonable approach is to allow companies to choose disabled mortality improvement or not. AG51 may consider requiring sensitivity analysis with respect to this assumption.

5. Currently, there is no conclusive indication whether COVID-19 will have a permanent impact on future LTC mortality experience. The coronavirus may subside, and vaccines may be effective so that the impact on mortality is only temporary. On the other hand, herd immunity may be difficult to develop, so the impact may linger. Early data suggests that COVID-19 has a relatively flat excess percentage of mortality across ages above 60. It is, therefore, unclear how COVID-19 may affect future mortality improvement trends. If COVID-19’s impact is permanent, then the recommended tables will likely have additional margins.
IV. LAPSE

Developmental Process

Similar to the mortality tables, the following general steps were taken to derive the recommended lapse tables:

- Check reasonableness of provided data using published SOA summary data.
- Determine predictive factors for lapse tables.
- Develop raw rates.
- Smooth rates.
- Develop factors.
- Calculate expected lapses based on preliminary proposed rates with factors.
- Compare actual lapses to expected lapses.

Study Period

As noted previously, lapse data from the DEFN 2 participating companies for the most recent four-year period (2008–2011) of the 2000–2011 SOA LTC Intercompany Study was used for the lapse tables. As suggested by Figure 6 below, there appears to be a declining trend in lapses, perhaps impacted by improved death coding over the SOA study period from 2000 to 2011, especially at the later policy durations beyond year 13.

Figure 6. Lapse Rates by Policy Duration and Study Period, All Issue Ages, DEFN 2 Companies
Lapse and Exposure Definitions

The recommended lapse tables to be developed pertain to voluntary lapses. Voluntary lapses are defined as policy terminations due to nonpayment of premium, group termination, policy conversion, and other terminations with unknown causes. Terminations due to benefit exhaustion were excluded. However, it is possible that certain companies might have classified benefit exhaustions as other terminations with unknown causes.

Annual lapse rates for the recommended tables are ratios of counts over exposures. Both counts and exposures are tabulated on a policy year basis. During any policy year, a policy contributed to a lapse count if the policy lapsed during the policy year. Because almost all LTC policies waive premiums during claim, we assumed that the lapse counts are the same on both total-lives and active-lives bases.

Exposures are also determined on a policy year basis. A full year of total-lives exposure for lapse (consistency with mortality) is assigned if a policy is in force at the beginning of the policy year and still in force at the end of the policy year or if the policyholder lapsed during the policy year. If the policy terminated for any other reasons, a partial year of exposure is assigned based on the month during which the policy terminated.

For active lives lapse exposures, the policy must not be on claim at the beginning of the policy year. If a policy becomes active during a policy year, partial exposure is assigned from the first month of being active.
Data Credibility

Based on the selected data, Figures 7 and 8 below summarize the lapse counts by issue age group and policy duration with respect to credibility, using 1,082 counts or more as a measure of full credibility.

Figure 7. Minimum of Number of Individual Lapses and 1,082 (Full Credibility) by Issue Age Group and Policy Duration

![Graph showing lapse counts by issue age group and policy duration with 47% partial credibility.]

Figure 8. Minimum of Number of Group Lapses and 1,082 (Full Credibility) by Issue Age Group and Policy Duration

![Graph showing lapse counts by issue age group and policy duration with 55% partial credibility.]

© 2022 National Association of Insurance Commissioners
The graphs indicate that the majority of the developed rates in issue age and duration cells are fully credible, except for certain cells in the later policy durations.

As shown in the graph for individual lapses (Figure 7), lapse counts for policy duration 11 and over for the issue age group Under 55 are only partially credible. Thus, it is inadvisable to split the Under 55 issue age group further. This also holds for group lapses (Figure 8) in the issue age group 60 and over for policy duration beyond the sixth year. Any further subdivision would render the results not credible.

**Predictive Variables**

LIMRA, the statistical agent for the Study, performed a multivariate analysis of the tabulated lapse data. A logistic regression model with forward selection produced the following ranked results of factor significance based on Wald Chi-Square:

<table>
<thead>
<tr>
<th>Significant Covariates (Wald Chi-Square)</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Factor</strong></td>
</tr>
<tr>
<td>Policy Year</td>
</tr>
<tr>
<td>Premium Status</td>
</tr>
<tr>
<td>Attained Age</td>
</tr>
<tr>
<td>Underwriting Type</td>
</tr>
<tr>
<td>Periodic Premium Level</td>
</tr>
<tr>
<td>Marital Status</td>
</tr>
<tr>
<td>Premium Mode</td>
</tr>
<tr>
<td>Physician Statement</td>
</tr>
<tr>
<td>Marital Discount</td>
</tr>
<tr>
<td>Rate Increase Indicator</td>
</tr>
</tbody>
</table>

Policy year, attained age, underwriting type, premium level, and marital status appeared to be key factors for table development.

These findings are consistent with the results from the corresponding model for mortality. Accordingly, the Work Group decided that the factors for both mortality and lapse should be as identical as possible. That is, the lapse table will utilize policy year, attained age (in the form of issue age and policy duration), underwriting type, and marital status as factors.

For group LTC business, the vast majority of certificates are guaranteed issue and marital status is typically not known. Therefore, these factors would not apply to group business.
Development of Tables

As shown in Figures 9 and 10, raw individual and group lapse rates for total lives by issue age group and policy duration were determined as ratios of lapse counts over exposures.

**Figure 9. Raw Lapse Rates by Issue Age, Group and Policy Duration, Individual, Total Lives**

With respect to the raw individual lapse rates, we noted that later policy duration lapse rates tended to be increasing, especially at the older issue age groups. This phenomenon can at least be partially attributed to the under-reporting of deaths upon policy termination, which occurs more frequently at
later policy durations and older attained ages. Due to the declining trend by calendar year, the Work Group believes it is prudent to be conservative at the later policy durations. Accordingly, the raw lapse rates were adjusted to be non-increasing by policy duration.

Note that, for group lapse rates, policy durations from year 11 through 15 were aggregated in order to improve data credibility at these durations.

To derive the recommended lapse rates for total lives by issue age group and policy duration, the raw rates were smoothed by fitting them to either a 2-degree polynomial or a power function. A polynomial or power equation was chosen by visualizing the fit in an Excel graph. Figures 11 and 12 below display the recommended lapse rates.

**Figure 11. Smoothed Lapse Rates by Issue Age Group and Policy Duration**
The recommended lapse tables for active lives were developed in a similar fashion by substituting active lives exposures for total lives exposures. The numerators of the ratios, the numbers of active lives lapses, are assumed to be the same as for total lives lapse rates. Because almost all long-term care policies have waiver of premium benefits, very few policies lapsed while the policyholders were on claim.
Underwriting Risk Class and Marital Status Factors for Individual Business

The underwriting risk class and marital factors for total lives individual lapses were determined by policy duration only with the same factors applying to all issue age groups. Lapse rates by policy duration for the three underwriting classes—preferred, standard, and substandard—were first calculated. The factors are the ratios of these lapse rates to the overall durational lapse rates without underwriting distinction. These factors for the three classes were smoothed to arrive at the final proposed factors. A similar process was also performed for marital status. Figures 13 and 14 below show the raw and the smoothed factors.

Figure 13. Raw and Smoothed Factors for Underwriting Class

![Graph showing raw and smoothed factors for underwriting class]

- Preferred: $y = -0.0178x + 1.177$

© 2022 National Association of Insurance Commissioners
Because the lapse rates for active lives are not materially different than those of total lives, the recommended factors derived from total lives lapses can equally apply to active lives lapse rates.

The underwriting risk class and marital status factors are not applicable to the recommended group lapse rates because most of the group business was guaranteed issue and marital status is generally unknown.
Development of Margin Recommendation

The recommended lapse tables and factors represent best estimates of future long-term care lapse events based on past experience. In order to use these tables for valuation purposes, a margin of conservatism should be added to cover a company’s variation from industry experience. The Work Group was able to obtain lapse data from individual participating companies that made up the aggregate data for the recommended lapse table construction. A ratio of actual lapses to expected lapses based on the recommended lapse tables was calculated for each company. The results are shown in Figure 15:

**Figure 15. Actual-to-Expected Lapses, Individual Total Lives, by Company, Without Margins, Policy Years 11 & Over**

One company with an abnormally high actual-to-expected ratio was excluded in the comparison. The actual-to-expected ratio for two out of nine companies was above 100%. However, a 15% margin on the recommended lapse tables would result in six out of nine companies’ actual lapses exceeding the newly expected number of lapses based on the more conservative lapse tables. Accordingly, the Work Group recommends a 15% margin.
Comparison of Recommended Lapse Tables With Actual Experience

In order to assess the reasonableness of the recommended lapse tables relative to past experience, the Work Group performed a series of comparisons.

Figure 16 compares the actual total lives Individual lapses by policy duration to the expected number of lapses based on the recommended lapse tables.

**Figure 16. Actual-to-Expected Lapses, Individual Total Lives, by Policy Duration, With and Without Margins**

The greater-than-100% actual-to-expected ratio beyond the ninth duration is due to the restriction of non-increasing lapse rates by policy duration. The overall actual-to-expected is 106%. With the margin, the overall actual-to-expected is 125%. The Work Group believes the recommended lapse rates by policy durations relative to actual experience are reasonable in light of the declining trends in recent experience years.
The Individual total lives actual lapses to expected by issue age group are shown in Figure 17.

**Figure 17. Actual-to-Expected Lapses, Individual Total Lives, by Issue Age Group, With and Without Margins**

The non-increasing limitation by policy duration has the greatest impact on issue ages 70 and over.
Figure 18 shows the total lives individual actual-to-expected ratios by marital status and underwriting risk class.

The actual-to-expected ratios are relatively close to the overall actual-to-expected without the margin.

The total lives group actual lapses to expected by policy duration are provided in Figure 19:

Figure 19. Actual-to-Expected Lapses, Group Total Lives, by Policy Year, With and Without Margins
Without margin, the actual-to-expected ratios are relatively stable during the first eight policy durations but slightly exceed 100% thereafter. The Work Group believes the slight conservatism is justified due to the significance of the lapse rates at higher durations for valuation purposes.

The total lives group actual lapses to expected by issue age group are shown in Figure 20:

**Figure 20. Actual-to-Expected Lapses, Group Total Lives, by Issue Age Group, With and Without Margins**

The corresponding comparisons for actives lives lapses produced similar results as for total lives lapses. These comparisons are presented in Appendix 2.

**Recommended Lapse Tables**

The recommended lapse tables for total lives and active lives are shown in Appendix 3. The individual lapse rates vary by issue age group, policy duration, marital status and underwriting class. The group lapses rates vary by issue age group and policy duration.
V. TOTAL TERMINATION

A policy may lapse because the policyholder died. Verification of death is not always possible, and results vary from company to company. Accordingly, the delineation between voluntary lapse and death is not precise for long-term care insurance. The Work Group performed a check on total terminations (i.e., combining lapses and deaths) to ensure that the recommended lapse and mortality tables reasonably represent actual combined experience.

The lapse and death components that made up the total lives individual actual-to-expected are shown in Figure 21:

Figure 21. Actual-to-Expected Mortality and Lapse, Individual Total Lives, With and Without Margins

During the study period 2008–2011, there were approximately 79,000 deaths and 200,000 lapses. The slightly aggressive actual-to-expected deaths are more than offset by the conservatism from that for lapses. For terminations that occurred beyond policy year 15, there were 11,000 deaths and only 8,800 lapses.

The individual total lives actual total terminations are slightly greater than the expected with and without margins beyond the 10th policy duration, as seen in Figure 22:
As shown in Figure 23 below, the actual-to-expected is slightly increasing by issue age group:

**Figure 23. Actual-to-Expected Total Terminations, Individual Total Lives, by Issue Age Group, With and Without Margins**
For group business, the actual total terminations are slightly less than the expected without margins beyond the 15th policy year, as shown in Figures 24 and 25 below:

**Figure 24. Actual-to-Expected Mortality and Lapse, Group Total Lives, With and Without Margins**

**Figure 25. Actual-to-Expected Total Terminations, Group Total Lives, by Policy Duration, With and Without Margins**

The actual total terminations are greater than the expected with margins for all policy durations.
By issue age group, the group total lives actual total terminations are equal to or slightly greater than the expected without margins for all issue age groups. As seen in Figure 26, actual total terminations are greater than the expected with margins for all issue age groups.

**Figure 26. Actual-to-Expected Total Terminations, Group Total Lives, by Issue Age Group, With and Without Margins**

The relationship of actual-to-expected total terminations for actives lives is very similar to that for total lives.

In conclusion, the Work Group is satisfied with the recommended tables in that the implied total terminations are consistent with actual experience.
VI. APPENDICES

Appendix 1—LTCAWG Request

5/5/16

The Long-Term Care Valuation (B) Work Group of the NAIC Health Actuarial (B) Task Force’s Long-Term Care Actuarial (B) Working Group requests assistance from the American Academy of Actuaries (Academy) and the Society of Actuaries (SOA) with the following:

1) Develop a replacement mortality table for the current statutorily prescribed long-term care (LTC) mortality basis for active life reserves (ALR), the 1994 Group Annuity Mortality Static Table. The replacement mortality table is to be based on the 2012 Individual Annuity Mortality Table, and should vary, where appropriate, by issue age, gender, and individual versus group policy. Consider whether it would be prudent to develop a margin for conservatism to be applied to the table for ALR. Such a margin may be in the form of select and ultimate factors reflective of data studied in the recent SOA/Life Insurance Research Marketing Association (LIMRA) LTC Voluntary Lapse and Mortality Experience Study.

2) Develop a proposal to replace the current statutorily prescribed LTC voluntary lapse parameters. The proposal is to be developed using data from the recent SOA/Life Insurance Research Marketing Association (LIMRA) LTC Voluntary Lapse and Mortality Experience Study, and should vary, where appropriate, by issue age, gender, policy duration, individual versus group policy as well as by the presence of specific benefits features that show evidence of producing different lapse experience historically than others.

3) For both items above, consider whether the required assumptions used for determining ALR should be modified depending upon whether the morbidity tables used in determining ALR are based on an active lives only or an all lives approach.

Please provide updates on progress as, available, and provide final results for mortality and lapses separately if they are completed at different times.

Thank You,

Perry Kupferman, Chair, Long-Term Care Actuarial (B) Working Group

LTC Mortality
Tables.xlsx

The Long-Term Care Valuation (B) Subgroup of the NAIC Health Actuarial (B) Task Force’s Long-Term Care Actuarial (B) Working Group requests the assistance of the Society of Actuaries with the following:

- Evaluation of the appropriateness of using the 2012 Individual Annuity Reserving Tables (2012 IAR), or an appropriate percentage of it, as a mortality basis for individual long-term care insurance reserving for policies issued after a given future date instead of the currently used 1994 Group Annuity Mortality Table (1994 GAM).

- Evaluation of the appropriateness of using 2012 IAR, or an appropriate percentage of it, as a mortality basis for group long-term care insurance reserving for policies issued after a given future date instead of the currently used 1994 Group Annuity Mortality Table (1994 GAM).

Ideally, the Society of Actuaries will provide the Long-Term Care Valuation (B) Subgroup with periodic progress updates, culminating in a recommendation for or against the use of the 2012 IAR as a mortality basis for long-term care insurance reserving.

### American Academy of Actuaries

**Health Practice Council**

**Spring 2022 Updates**

Barbara Klever, MAAA, FSA  
Vice Chairperson, Health Practice Council  
American Academy Of Actuaries

March 29, 2022—NAIC Health Actuarial (B) Task Force (HATF) Meeting

---

### Public Policy and the Academy

The Academy, through its public policy work, seeks to address pressing issues that require or would benefit from the application of sound actuarial principles. The Academy provides unbiased actuarial expertise and advice to public policy decision-makers and stakeholders at the state, federal, and international levels in all areas of actuarial practice.

---

### About the American Academy of Actuaries

The Academy assists public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy and its boards also set qualification, practice, and other professionalism and ethical standards for actuaries credentialed by one or more of the five U.S.-based actuarial organizations in the United States.

- Climate Change and Health
Health Equity

- Discussion Briefs:
  - Health Equity from an Actuarial Perspective (2021)
  - Health Equity and Financial Pricing (2021)
  - Health Equity and Pricing of Health Insurance (2021)
  - Health Equity, and Provider Contract/Network Development (2021)
  - Health Equity and Risk-Based Premium Regulation (2021)
  - Data Collection for Measurement of Health Disparities (forthcoming)

- Comment letters:
  - Comment Letter to the Colorado Division of Insurance on the implementation of Colorado Revised Statutes (C.R.S.) § 25-19-706(2) (2022). This new section prohibits health discrimination based on certain personal characteristics—race, color, national or ethnic origin, sex, sexual orientation, disability, gender identity, or gender expression—as any insurer practice that unfairly discriminates against individuals with these characteristics (2022)
  - Request for Information on Annuity Whether or not Actual Practice

COVID-19: Implications for Health Care Utilization and Spending

- Issue Briefs / Papers:
  - Considerations for Reflecting the Impact of COVID-19 in Medicaid Managed Care Plan Rate Setting (2021)

Health Insurance Coverage

- Issue Briefs:
  - Drivers of 2023 Health Insurance Premium Changes (forthcoming)

- Comment Letters:
  - Comments on Draft 2023 Actuarial Value (AV) Calculator Methodology (2022)
  - Comments on 2023 Notice of Benefit and Payment Parameters (NBPP) (2022)
  - Comments to HHS, DOL, and the Treasury on the No Surprises Act (2021)

Long-Term Care

- Comment Letters
  - Comment letter to CMS on the Proposed Rule for the 2023 Policy and Technical Changes to the Medicare Advantage and Medicare Prescription Drug Benefit Programs (comments involved D-OHPs and MLRs) (2022)
  - Reports
    - Long-Term Care Insurance Mortality and Lapse Study (2021)
    - Request from NAIC Long Term Care Actuarial Working Group (LTCAWG)
    - Presentation to NAIC HATF in November 2021; discussion with NAIC LTCAWG in March 2023
### Medicare Sustainability

- **Statements/Testimony**
  - *Statement for the Record* to the U.S. Senate Committee on Finance Subcommittee on fiscal responsibility and economic growth on the Hospital Insurance Trust Fund and the future of Medicare financing (2022)

### Payment and Delivery Reform

- **Issue Briefs / Paper**
  - *Issue Brief on Hospital Price Variation* (2022)
- **Comment Letters**
  - *Comments on 2023 Notice of Benefit and Payment Parameters (NBPP)* (2022)
  - *Comments to CMS on Payment Parameters Proposed Rule* (2021)

### Climate Change and Health

- In November of 2021, the Academy launched the Climate Change Joint Task Force
  - Membership is comprised of the Health Practice Council (HPC), the Casualty Practice Council (CPC), and the Risk Management and Financial Reporting Council (RMFRC)
- **Comment Letters**
  - *Comment letter* to the RFI from the U.S. Department of the Treasury and FIO on Climate-Related Financial Risk and the Insurance Sector (2021)—and forthcoming to the Department of Labor on Environmental, Social, and Governance (ESG)

### HPC NAIC Workstreams—HATF

- **Health Actuarial (B) Task Force (HATF)**
  - Request for comments on proposal to modify the definition of “actuarial assets” as used in the instructions for the Health Statement of Actuarial Opinion (SAO)
  - *April* and *May* 2021 Academy comment letters
  - March 2, 2022, NAIC HATF meeting to finalize language within the Health SAO
**HPC NAIC Workstreams—HRBC**

- **Health Risk-Based Capital (E) Working Group (HRBC)**
  - Request for Comprehensive Review of the H2—Underwriting Risk Component and Managed Care Credit Calculation in the Health Risk-Based Capital Formula
    - July 2021 Academy comment letter
    - January 2022 Academy report
      - Exposed for comments by NAIC HRBC until March 16, 2022; comments discussed on March 18 HRBC call. HRBC has asked whether an educational presentation by the rating agency would be possible to the Working Group.

**HPC NAIC Workstreams—LTC (EX)**

- **NAIC Long-Term Care Insurance (EX) Task Force Long-term Care Insurance MSA Framework.** Academy comments on:
  - Long-Term Care Insurance (LTC) Multistate Rate Review Framework
  - Actuarial Sections
  - Operational and Actuarial Sections, Sept. 2021 Exposures
- **Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup**
  - Academy comments on exposure draft, Issues Related to LTC Wellness Benefits

**HPC NAIC Workstreams—LTCAWG**

- **NAIC Long-Term Care Actuarial (B) Working Group**
- **Long-Term Care Insurance Mortality and Lapse Study**
  - Report released November 2021
    - Developed by the Long Term Care Valuation Work Group of the American Academy of Actuaries and the Society of Actuaries Research Institute
    - Presentation to NAIC HATF in November 2021
- Discussion during March 9, 2022, NAIC LTCAWG meeting. NAIC will contact Academy on next steps on the potential use of more recent data for an updated report.

**2022 HPC Hill Visits (virtual)**

- **Thursday, March 10, and Friday, March 11, 2022**
- 19 meetings via zoom; over 20 Academy volunteers
- Issues discussed included Medicaid and the unwinding of the public health emergency, Medicare program sustainability, health equity, telehealth, COVID-19, price transparency, prescription drug prices, LTC, and the Affordable Care Act (ACA)
Academy 2022 Annual Meeting and Public Policy Forum

- American Academy of Actuaries 2022 “Annual Meeting and Public Policy Forum” in Washington, DC
- TBA - October or early November 2022

MEMORANDUM

TO: Commissioner Andrew N. Mais (CT), Chair of the Health Actuarial (B) Task Force and Fred Andersen (MN), Chair of the Long-Term Care Valuation (B) Subgroup

FROM: Steve Drutz (WA), Chair of the Health Risk-Based Capital (E) Working Group

DATE: Feb. 25, 2022

RE: AG 51 – Asset Adequacy Testing

The Health Risk-Based Capital (E) Working Group established the Health Test Ad Hoc Group in 2018 to review the health test language within the Annual Statement Instructions due to inconsistencies in reporting of health business across the different blanks, as well as a significant amount of health business reported on the life and fraternal blank. Currently, a company passes the health test if the following requirements are met:

- The values for the premium and reserve ratios in the Health Statement Test equal or exceed 95% for both the reporting and prior year.

  AND

- The entity passing the Health Statement Test is licensed and actively issuing and/or renewing business in five states or less.

  AND

- At least 75% of the entity’s current year premiums are written in its domiciliary state.

  OR

- The values for the premium and reserve ratios in the Health Statement Test equal 100% for both the reporting and prior year, regardless of the number of states in which the entity is licensed.

The intent of the Ad Hoc Group was to evaluate if changes were warranted to the health test because of industry changes since its original development. The Ad Hoc Group has drafted a phase 1 proposal that will delete the requirements for an entity being licensed and actively issuing and/or renewing business in five states or less and at least 75% of the entity’s current year premiums being written in their domicile state. The Ad Hoc Group is continuing to evaluate the current 95% premium and reserve ratios.

Through the evaluation and discussion of the 95% reserve ratio, there was a question brought up as to whether an entity would still be required to perform asset adequacy testing of long-term care (LTC)
business if the entity moved from the life blank to the health blank. It is the Ad Hoc Group’s understanding that asset adequacy testing is required, regardless of the blank if the criteria for asset adequacy testing are met. The Working Group is asking the Health Actuarial (B) Task Force to consider adding a sentence to Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves (AG 51) that would indicate that regardless of the blank the entity files, asset adequacy testing is required by the entity if the criteria are met.

This clarification would help to make it abundantly clear that all companies with LTC exposure that are subject to asset adequacy testing would still be required to meet these requirements, regardless of the blank they are filing on.

If you have any questions regarding the suggested clarification, please contact Crystal Brown (cbrown@naic.org).

The Regulatory Framework (B) Task Force met March 23, 2022. The following Task Force members participated: Vicki Schmidt, Chair (KS); Sharon P. Clark, Vice Chair (KY); Lori K. Wing-Heier represented by Sarah Bailey (AK); Jim L. Ridling represented by Anthony L. Williams, William Rodgers, and Yada Horace (AL); Evan G. Daniels represented by Erin Klug (AZ); Ricardo Lara represented by Tyler McKinney and Wendy Hill (CA); Michael Conway represented by Kate Harris and Debra Judy (CO); Andrew N. Mais represented by Jared Kosky and Paul Lombardo (CT); Karima M. Woods represented by Howard Liebers (DC); Trinidad Navarro represented by Susan Jennette (DE); David Altmaier represented by Chris Struk and James Dunn III (FL); Doug Ommen (IA); Dean L. Cameron represented by Kathy McGill (ID); Amy L. Beard represented by Alex Peck and Cory Best (IN); Gary D. Anderson represented by Kevin Beagan (MA); Eric A. Cioppa represented by Robert Wake (ME); Anita G. Fox represented by Renee Campbell, Chad Arnold, and Karen Dennis (MI); Grace Arnold represented by Galen Benshoof and Sherri Mortensen-Brown (MN); Chlora Lindley-Myers (MO); Mike Causey represented by Ted Hamby and Robert Croom (NC); Jon Godfread represented by Chrystal Bartsuka (ND); Eric Dunning and Laura Arp (NE); Chris Nicolopoulos represented by Michelle Heaton and Jason Dexter (NH); Marlene Caride represented by Chanell McDevitt (NJ); Russell Toal (NM); Judith L. French represented by Laura Miller and Marjorie Ellis (OH); Glen Mulready represented by Andrew Schallhorn (OK); Andrew R. Stolfi represented by Jesse O’Brien (OR); Michael Humphreys (PA); Patrick Tigue represented by Patrick Smock (RI); Larry D. Deiter represented by Jill Kruger and Candy Holbrook (SD); Carter Lawrence represented by Scott McAnally (TN); Cassie Brown represented by Rachel Bowden (TX); Jon Pike represented by Shelley Wiseman and Heidi Clausen (UT); Scott A. White represented by Julie Blauvelt, Bob Grissom, Bradley Marsh, and James Young (VA); Mike Kreidler represented by Molly Nollette and Jane Beyer (WA); Nathan Houdek (WI); and Allan L. McVey (WV). Also, participating was: Erica Weyhenmeyer (IL).

1. **Adopted its 2021 Fall National Meeting Minutes**

Commissioner Clark made a motion, seconded by Ms. Kruger, to adopt the Task Force’s Nov. 30, 2021, minutes (see NAIC Proceedings – Fall 2021, Regulatory Framework (B) Task Force). The motion passed unanimously.

2. **Adopted its Subgroup and Working Group Reports**

   a. **Accident and Sickness Insurance Minimum Standards (B) Subgroup**

Ms. Arp said the Subgroup met March 21, March 7, Feb. 14, 2022, and Dec. 6, 2021. She said that during these meetings, the Subgroup continued its discussion of revisions to Sections 1–7 of the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act* (#171) based on the comments received by the July 2, 2021, public comment deadline. The Subgroup also discussed its approach for reviewing and considering revisions to Model #171, including whether to begin its review of potential revisions for supplemental products first and then consider potential revisions for short-term, limited-duration (STLD) plans.

Ms. Arp said the Subgroup devoted most of its discussion during its March meetings on how to address indemnity products in Model #171 given the different plan designs for this product, differing state approaches to regulating this product, and complex federal law and regulations related to this product. She said the Subgroup requested comments, including redline language, to revise Section 7B—Hospital Indemnity or Other Fixed Indemnity Coverage to address the issues raised during the Subgroup’s discussions. She said any comments received will be discussed during the Subgroup’s April 18 meeting.
Ms. Arp said that in an effort to educate stakeholders on the types of products to be regulated under Model #171, the Subgroup has also had extensive discussions on these types of products, their purpose, how they are marketed, and how they are sold. She said she anticipates a significant amount of the Subgroup’s work will be focused on adding provisions to Model #171 regulating STLD plans. She said this work will be extensive because of the product’s characteristics and the lack of existing language in Model #171 regulating it.

Ms. Arp said the Subgroup’s goal is to finish its work revising Model #171 by the end of the year and forward the revised model to the Task Force for its consideration.

b. **ERISA (B) Working Group**

Mr. Wake said the Employee Retirement Income Security Act (ERISA) (B) Working Group met March 22. During this meeting, the Working Group exposed a revised draft case summary of *Rutledge v. Pharmaceutical Care Management Association (PCMA)* for inclusion in the *Health and Welfare Plans Under the Employee Retirement Income Security Act: Guidelines for State and Federal Regulation* (ERISA Handbook) for a 30-day public comment period ending April 21. The Working Group also discussed potential updates and issues to consider for inclusion in the ERISA Handbook. Mr. Wake said the Working Group adjourned into regulator-to-regulator session, pursuant to paragraph 2 (pending investigations which may involve either the NAIC or any member in any capacity), paragraph 3 (specific companies, entities or individuals), paragraph 8 (consideration of strategic planning issues), and paragraph 9 (any other subject required to be kept confidential) of the NAIC Policy Statement on Open Meetings.

Superintendent Toal asked if the Working Group will be able to come to some consensus related to the regulation of pharmacy benefit managers (PBMs) and ERISA preemption because New Mexico and most likely other states are looking for some direction with respect to their regulatory authority. Mr. Wake said he believes that some of these issues are within the purview of the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup. He said he believes the Working Group will be able to state what is the law at this point. He noted that many of the issues related to ERISA preemption are still being litigated with the federal circuit courts taking different approaches. He said that when a case does not involve insurance, the Working Group does not have a “right” or “wrong” view. Mr. Wake said that the recent wave of state laws regulating PBMs do not really involve insurance regulation, but the states have deliberately decided for public policy reasons that such regulation is important and to the extent federal law allows it, they want to regulate PBMs and the field of pharmacy benefits even if such regulation falls outside of the insurance regulatory sphere.

c. **MHPAEA (B) Working Group**

Ms. Weyhenmeyer said most of the Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group meetings to date have been in regulator-to-regulator session to provide the opportunity for Working Group members and interested state insurance regulators to discuss MHPAEA enforcement and compliance issues, including its last meeting on March 1. She said that during its March 1 meeting, the Working Group discussed potential changes to the mental health parity chapter of the *Market Regulation Handbook*. She explained that the Working Group will review the chapter and forward any suggested revisions to the Market Conduct Examination Guidelines (D) Working Group for its consideration. She explained that stakeholders will have the opportunity to comment on any suggested changes to the mental health parity chapter during the Market Conduct Examination Guidelines (D) Working Group’s discussions of the revisions.

Ms. Weyhenmeyer said that during its March 1 meeting, the Working Group also discussed potential agenda items for its April 5 meeting at the Spring National Meeting. She said the Working Group plans to hold an open session during which it plans to hear: 1) a presentation from Illinois and Washington on a designation in behavioral health parity analysis under development by the Insurance Regulatory Examiners Society (IRES); 2) a presentation from
d. Pharmacy Benefit Manager Regulatory Issues (B) Subgroup

Ms. Arp said the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup met March 16. During this meeting, the Subgroup adopted its 2021 Fall National Meeting minutes. The Subgroup also heard a presentation from the Montana Department of Insurance (DOI) on its PBM law and implementation. NAIC staff provided an update on their work to compile state PBM laws and regulations regulating PBM business practices.

Ms. Arp said that during its April 4 meeting at the Spring National Meeting, the Subgroup plans to hear an update from the Oklahoma DOI on its PBM law and implementation, as well as suggestions on best practices and lessons learned. The Subgroup also will hear from Oregon on PBM regulation and beyond, including its efforts related to prescription drug transparency and affordability. She said the Subgroup welcomes additional presentations from the states on an ongoing basis on what they are doing with respect to PBM regulation consistent with the Subgroup’s 2022 charge. She said the Subgroup also will hear from the NAIC consumer representatives. They will provide a consumer perspective on the Subgroup’s 2022 charge to develop a white paper on PBM business practices, including a discussion on the impact the Rutledge decision has, if any, on state regulation PBM business practices.

Ms. Arp said that with respect to the Subgroup’s future meetings, the Subgroup conducted a survey of its members early this year to gain information on which speakers would be most helpful for the Subgroup to hear from in terms of background presentations on PBM regulation. She also noted that the Subgroup’s 2022 charge is broader than PBM regulation. As a result, the Subgroup will need to broaden its discussion to get a better understanding of the entire prescription drug supply chain. She said one of the Subgroup’s first speakers will be Dr. Neeraj Sood from the University of Southern California (USC), who will present in April on his latest work on prescription drug pricing and supply chain economics. The Subgroup plans to receive background presentations throughout the period before the Summer National Meeting.

Ms. Arp said the Subgroup hopes to begin writing the white paper after it completes its background presentations. She said the Subgroup will establish small ad hoc groups to work on specific issues and/or components of the paper with a goal of completing its work by the Fall National Meeting. She said the Subgroup knows there is a lot of interest in PBM regulation, particularly state activities related to PBM regulation. The Subgroup is compiling information it receives from the states and posting it on the Subgroup’s web page. Ms. Arp explained that because an analysis of the Rutledge decision is part of its 2022 charge to develop a white paper, the Subgroup will rely on the expertise of the ERISA (B) Working Group and await its analysis of the decision to incorporate in the white paper.

Commissioner Clark suggested that the Subgroup provide notice of its upcoming meetings to all state insurance regulators. Ms. Arp agreed to work with NAIC staff to ensure that notice of the Subgroup meetings, including specific planned speakers and presentations, is provided.

Commissioner Schmidt requested that the states send information to the Subgroup and NAIC staff on their PBM laws, including those recently enacted during just concluded legislative sessions. She said the Subgroup is compiling these laws as a resource for the states, and it is important that it is as accurate and up to date as possible because stakeholders are looking at it.
Commissioner Clark made a motion, seconded by Ms. Nollette, to adopt the following reports: the Accident and Sickness Insurance Minimum Standards (B) Subgroup, including its March 21, 2022 (Attachment One), March 7, 2022 (Attachment Two), Feb. 14, 2022 (Attachment Three), and Dec. 6, 2021 (Attachment Four) minutes; the ERISA (B) Working Group, including its March 22 minutes (Attachment Five); the MHPAEA (B) Working Group; and the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup, including its March 16 minutes (Attachment Six). The motion passed unanimously.

3. Heard an Update on the CHIR’s Work

Maanasa Kona (Center on Health Insurance Reforms—CHIR, Georgetown University Health Policy Institute) provided an update on the CHIR’s recent and forthcoming work. She highlighted the work the CHIR has been doing related to the implementation of the federal No Surprises Act (NSA). Ms. Kona said that because the NSA does not include provisions related to surprise bills for ground ambulance services, the CHIR decided that it was important to understand what the states have done in this area. She said the CHIR compiled information on state protections for ground ambulance surprise bills to provide such a resource. She said the CHIR has a new interactive map on the roles of federal and state officials on various aspects of the NSA—issuer enforcement, provider enforcement, and the interaction between federal and state balance billing laws. She said the interactive map can be found on the Commonwealth Fund’s website. Ms. Kona said the CHIR expects to soon publish an issue brief based on interviews with 12 state DOIs on their approaches to NSA implementation.

Ms. Kona said the CHIR is continuing its work related to the COVID-19 public health emergency (PHE), including research on state preparations for the end of the PHE based on interviews with Medicaid and state-based marketplace (SBM) officials from 11 states. She said other work the CHIR is doing related to the COVID-19 PHE includes examining the lack of compliance with COVID-19 testing coverage mandates and studying the impact of COVID-19 on small business health insurance.

Ms. Kona said the CHIR is also continuing to examine issues with alternative types of noncompliant federal Affordable Care Act (ACA) coverage. One such issue is the misleading marketing of such plans during the COVID-19 Special Enrollment Period (SEP). She noted that data from Massachusetts on health care sharing ministries (HCSMs) revealed that their finances put consumers at risk. She said the CHIR recently released an issue brief on state “easy enrollment” programs, which found that such programs have gained momentum and potentially lay the groundwork for additional efforts to expand coverage. The CHIR plans CHIRblog posts on SBM outreach and advertising efforts during the most recent Open Enrollment Period (OEP). She said the CHIR is also planning a state spotlight on California’s CHIRblog post.

Ms. Kona said the CHIR has released other issue briefs of potential interest and reading, including issue briefs on 1) leveraging the new federal health care transparency rules to contain costs; and 2) network adequacy standards and oversight. She said upcoming issue briefs and CHIRblog posts include comparing network adequacy rules across marketplaces and Medicaid managed care organizations (MCOs), state efforts to improve federal MHPAEA compliance; and SBM efforts to improve health equity.

3. Heard a Discussion on the HSA, HDHP, and Prescription Drug Copayment Accumulator Issue

Carl Schmid (HIV + Hepatitis Policy Institute) and Jeffrey Klein and Roy Ramthun (American Bankers Association [ABA] Health Savings Account [HSA] Council) discussed the HSA, high-deductible health plan (HDHP), and prescription drug copayment accumulator issue.

The discussion highlighted the importance of prescription copayment assistance to consumers and its role in helping to reduce out-of-pocket costs. The speakers discussed: 1) the percentage of plans in states with copayment accumulator policies and states with laws banning copayment accumulators; 2) potential conflicts of
state copayment accumulator ban laws with federal requirements related to HSA-qualified HDHP and continued eligibility to contribute to an HSA in light of such a law; and 3) potential solutions and options to address this issue, including a suggestion that the Task Force consider developing a model bulletin that state DOIs can use to educate consumers on the issue. The speakers also suggested model language for those states that may be contemplating enacting legislation banning copayment accumulator use as a carve-out for HSA-qualified HDHP plans to address any potential conflict with federal HSA-qualified HDHP requirements.

Kris Hathaway (America’s Health Insurance Plans—AHIP) said AHIP submitted a comment letter to the Task Force on two issues it believes affects many health care consumers and purchasers: 1) copayment coupons, which AHIP believes increase costs for consumers for drug manufacturers’ own financial gain; and 2) HSA-qualified HDHP eligibility to contribute to an HSA in light of state laws banning copayment accumulators. She acknowledged the Task Force’s current discussion of the second issue during this meeting. She said AHIP urges the Task Force to consider taking additional action following this meeting to address this issue, including: 1) raising this issue with the federal agencies charged with implementing the HSA Internal Revenue Service (IRS) law and requesting updated clarifying guidance; 2) educating state legislators about the potential impacts banning coupon accumulators may have on HSA coverage and encourage an exemption or safe harbor language within any proposed legislation that has been initiated in their states; and 3) in states that have passed laws, supporting new legislation to exempt HSAs from these laws.

With respect to the issue of copayment coupons, Ms. Hathaway said AHIP recommends that the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup include the issue of coupons as part of its white paper because it is an issue of critical importance to premiums for a state’s entire population. The paper should include information that enlists a better understanding of the market and the impact of copayment coupons, as well as offer specific guardrails that protect consumers equally.

Having no further business, the Regulatory Framework (B) Task Force adjourned.
The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met March 21, 2022. The following Subgroup members participated: Laura Arp, Co-Chair (NE); Andy Schallhorn, Co-Chair (OK); Debra Judy (CO); Chris Struk (FL); Robert Wake (ME); Cynthia Amann (MO); Glynda Daniels (SC); Rachel Bowden (TX); Shelley Wiseman and Heidi Clausen (UT); Anna Van Fleet, Mary Block, and Christine Menard-O’Neil (VT); and Ned Gaines (WA).

1. Discussed Revisions to Model #171

The Subgroup continued its discussion of revisions to the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171). The Subgroup focused its discussion on indemnity products and how best to address regulating such products in the Model #171 revisions given the different product designs, variation in state insurance regulation of the product and federal law and regulations related to the product, and the concept of “excepted benefits.”

Ms. Arp asked for comments on whether a product should be considered an indemnity product when there is a reference price list for procedures the plan would pay for provided outside and not as a part of the contract or policy. Ms. Daniels said South Carolina has a company selling a product designed like this and that South Carolina considers that product to be an indemnity product. She said South Carolina has issued a bulletin that specifies what types of products sold in South Carolina will be considered indemnity products. Ms. Daniels described the provisions in the bulletin. She explained that the key language in the bulletin that South Carolina relies on in determining whether a product is an indemnity product is in Section II, item 2—“The benefits are paid in a fixed dollar amount per period of hospitalization or illness and/or per service (for example, $100/day or $50/visit) regardless of the amount of expenses incurred and without regard to the amount of benefits provided with respect to the event or service under any other health coverage.” She said for the product Ms. Arp is referring to, using the language in this bulletin and because it proposes to pay a fixed amount and would pay that amount directly to the consumer, South Carolina determined that it is a fixed indemnity product. Ms. Arp asked what is meant by the language “regardless of the amount of the expenses incurred.” She said when a plan has a price list, which may be calculated using a percentage of what Medicare would pay for a procedure, it uses that as a basis to pay for a procedure, and that is the cost of the expense the consumer incurred. Ms. Daniels said that South Carolina decided that even if the price is determined by a percentage of Medicare, that is still a fixed amount and given that, it determined that it is a fixed indemnity plan.

Ms. Bowden said she understands the different interpretations of what is considered a fixed indemnity product. She said Texas does not have the language “regardless of the amount of the expenses incurred” in its fixed indemnity plan definition regulations. She said Texas approved the sale of the plan in Texas as an “other fixed indemnity” product because it did not seem to “fit” any other category. She said she hopes that the revisions to Model #171 will help states like Texas clarify what is and is not a type of fixed indemnity product. The Model #171 revisions need to provide language that substantively distinguishes the excepted benefit plans from major medical coverage. Ms. Bowden said she personally believes it is problematic to allow what she would consider a type of fixed indemnity product using a reference-based pricing list, which could be seen as essentially offering major medical coverage without being subject to any of the same standards and consumer protections as federal Affordable Care Act (ACA)-compliant major medical coverage.
Ms. Bowden said she would like the Model #171 revisions to address this in some manner and provide more guidance around the “regardless of the amount of the expenses occurred” language.

The Subgroup discussed whether it would be beneficial to add language to Model #171 clarifying this issue. J.P. Wieske (Health Benefits Institute—HBI) said that if the Subgroup wants to add clarifying language, it can probably be done. He cautioned, however, that not all states have taken the same approach to fixed indemnity coverage, including in determining what is and is not fixed indemnity coverage. Given this, the Subgroup might have to add a drafting note explaining this and alerting states that they may want to use other language that is consistent with their regulations for this type of coverage.

The Subgroup also discussed the need for the model revisions to require disclosures and marketing for these products to include clear information on their purpose, how they are intended to be used, the benefits they offer, and what they do and not do with respect to coverage.

Chris Petersen (Arbor Strategies LLC) pointed out that this is a minimum standards model and highlighted the differences in how states regulate them. He suggested that the Subgroup consider language highlighting this in a drafting note. He also urged the Subgroup not to align language in the model with federal regulations because they could change and have changed from presidential administration to presidential administration. Ms. Arp said that she believes there is a need for the Subgroup to clarify these issues with indemnity products because based on discussions she has participated in, the states are looking for clarity.

Lucy Culp (Leukemia & Lymphoma Society—LLS) expressed support for the Subgroup revising the disclosures for fixed indemnity products for more clarity in the language about what benefits they offer and add requirements on where the disclosure language should be placed in the policy, such as the first page or cover page. Ms. Arp agreed that it is important that the Subgroup revise Model #171 to require meaningful disclosures, which ultimately make it easier for state insurance regulators to determine compliance. Ms. Bowden said she does not believe this discussion about indemnity products is a minimum standards issue. She believes it is a definitional and possibly scope issue. “What does fixed indemnity mean?” “What is the scope of this model?” There are many valid interpretations of what this term means and the model’s scope.

Ms. Arp said that based on the discussion during this meeting, there appears to be some desire to provide clarity around fixed indemnity coverage. She asked Subgroup members, interested state insurance regulators, and interested parties to submit language for the Subgroup’s consideration during its April 18 meeting defining “fixed indemnity.” Specifically, she asked for redline language for provision “B. Hospital Indemnity or Other Fixed Indemnity Coverage” and its drafting note on pages 12–13 of the Model #171 working draft that would provide clarity on fixed indemnity coverage—what it is and what it is not.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.
The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met March 7, 2022. The following Subgroup members participated: Laura Arp, Co-Chair (NE); Andy Schallhorn, Co-Chair, represented by Cuc Nguyen, Landon Hubbart, and Rebecca Ross (OK); Debra Judy (CO); Howard Liebers (DC); Chris Struk (FL); Robert Wake (ME); Camille Anderson-Weddle (MO); Shari Miles (SC); Rachel Bowden (TX); Shelley Wiseman and Heidi Clausen (UT); and Ned Gaines (WA).

1. Discussed Revisions to Model #171

Jolie H. Matthews (NAIC) reviewed a revised draft of proposed revisions to the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171) based on the Subgroup’s discussions to date. She highlighted some of the more substantive anticipated revisions, including: 1) adding a new section, Section 5—Definitions, to include terms used in the model; 2) adding language to Section 4—Applicability to address how revisions to the model will affect policies and contracts in effect prior to the date the revised model is adopted by the state; and 3) revisions to Section 6—Policy Definitions, formally Section 5, to address an insurer’s ability to alter the policy definitions, but only in a manner that does not restrict coverage. She also pointed out that many of the anticipated revisions reflect changes intended to make Model #171 consistent with its companion model, the Supplementary and Short-Term Health Insurance Minimum Standards Model Act (#170) (formerly known as the Accident and Sickness Insurance Minimum Standards Model Act). She explained that as part of its review, the Subgroup will have to review those suggested revisions for accuracy.

Ms. Bowden suggested that the Subgroup consider adding a definition of “excepted benefits” consistent with the federal definition for that term to the proposed new definitions section. She said having such a definition could possibly allow the use of it to distinguish it from short-term, limited-duration (STLD) plans. She said having this term could also assist in establishing the structure of Model #171 as not applying to major medical coverage. Chris Petersen (Arbor Strategies LLC) said currently, the term “excepted benefits” is not used in Model #171. Ms. Bowden agreed. She said her suggestion contemplates the Subgroup actively looking to use the term to address the issues she highlighted as it moves forward with its review of Model #171 and to help state departments of insurance (DOIs) align with federal regulations with respect to what products are considered excepted benefits. Mr. Petersen suggested that when the Subgroup reviews the product standards for the products regulated under Model #171, it considers whether the standards are consistent with the federal definition of “excepted benefits” instead of defining the term. The Subgroup discussed Ms. Bowden’s suggestion and the concept of “excepted benefits.” The Subgroup also discussed different plan designs submitted to the states for form filing approval that seem to blur what may be considered under federal law and regulations as an excepted benefit or a limited benefit type of coverage, particularly with respect to certain types of indemnity products and reference-based pricing.

Ms. Bowden reiterated that she would like the model revisions to be clear that if a product does not satisfy the excepted benefits structure, it is not an excepted benefit product. She said Model #171 needs to be clear on this, particularly given the emergence of innovative products that seem to blur the lines between major medical products and supplemental products. The Subgroup discussed adding a definition of “excepted benefits” as a placeholder until it completes its review of the product standard provisions. The Subgroup also discussed adding language in Section 7—Supplementary and Short-Term Health Insurance Minimum Standards for Benefits, specifically Section 7B—Hospital Indemnity or Other Fixed Indemnity Coverage, to address this issue. The
Subgroup also discussed the different treatment of individual products and group products in the federal rules and Model #171.

Ms. Arp said the issue of excepted benefits she has encountered most frequently concerns indemnity products. She asked for comments from stakeholders on a product structured as an indemnity product that looks like a charge master or fee schedule. Cindy Goff (American Council of Life Insurers—ACLI) noted that this type of product has been an issue since before the federal Affordable Care Act’s (ACA’s) enactment because of the desire by some companies to sell so-called “mini-meds,” which are no longer allowed to be sold. She urged the Subgroup to be cautious about including overly prescriptive language, such as limiting the number of benefits and other potentially restrictive product designs, in Model #171 given that it is a minimum standards model.

Ms. Arp asked the Subgroup to consider as it moves forward with its work whether: 1) the revisions should include language clarifying the scope of indemnity products and what reference pricing means in relation to these products; or 3) the Subgroup should not include such language to avoid potential unintended consequences of including such language because the issues with indemnity products are old long-standing issues, and as such, it would be better to leave Model #171 as is.

Ms. Bowden said the Subgroup should align the language in Model #171 on fixed indemnity plans with the federal regulations. She said whether the Subgroup should add clarifying language and how it should be added, such as in a drafting note or another approach, would be something the Subgroup could think about and decide later.

The Subgroup decided to continue its discussions on indemnity plans and other issues discussed during this meeting during its next meeting March 21. The Subgroup also plans to discuss as it moves forward with its work whether it wants to review the comments and consider revisions to Model #171 for supplemental products first and go back and consider revisions to Model #171 for STLD plans after completing that review.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.
The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met Feb. 14, 2022. The following Subgroup members participated: Laura Arp, Co-Chair (NE); Andy Schallhorn, Co-Chair (OK); Chris Struk (FL); Robert Wake (ME); Camille Anderson-Weddle, Amy Hoyt, and Cynthia Amann (MO); Rachel Bowden (TX); Heidi Clausen (UT); Anna Van Fleet, Mary Block, Christine Menard-O’Neil, and Jamie Gile (VT); and Ned Gaines (WA).

1. **Continued Discussion of Revisions to Model #171**

The Subgroup continued its discussion of revisions to the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171)* based on the comments received, beginning with the policy definition of “preexisting condition” in Section 5L—Policy Definitions.

Ms. Arp acknowledged the Subgroup’s extensive discussion of this policy definition during its last meeting. She expressed a desire to find a middle ground on how to define “preexisting condition” for supplemental products and short-term, limited-duration (STLD) plans. The Subgroup discussed different approaches, including, for supplemental products, eliminating the so-called prudent layperson standard language in the definition and retaining the two-year look-back and developing a different policy definition of “preexisting condition” for STLD plans. After additional discussion, the Subgroup agreed, for supplemental products, to delete the prudent layperson standard language and consider developing another policy definition for “preexisting condition” for STLD plans.

The Subgroup discussed its approach for considering revisions to Model #171 after it completes its review and discussion of the comments received on Section 5—Policy Definitions. Ms. Arp asked for comments on whether the Subgroup moving forward should first discuss revisions to Model #171 in the context of supplemental products while keeping in mind whether and how the provisions would apply to STLD plans. The Subgroup discussed Ms. Arp’s suggestion. During the discussion, some stakeholders suggested that other types of products also would need to be considered separately, such as limited scope dental plans and disability income protection plans. The discussion also included how Model #171’s companion model, the *Supplementary and Short-Term Health Insurance Minimum Standards Model Act (#170)* (formerly known as the *Accident and Sickness Insurance Minimum Standards Model Act*), treats STLD plans differently from supplemental products. The Subgroup discussed different approaches. One approach discussed removing language from the policy definitions related to minimum standards and placing it in the substantive provisions for those products. Another approach discussed the possibility of developing different model regulations for the various products regulated under Model #170.

Ms. Arp reiterated her suggestion for the Subgroup to begin with the approach of focusing on supplemental products while keeping in mind the similarities or differences and application for other products, such as STLD plans. The Subgroup continued the discussion of possible approaches, including discussing whether the Subgroup needed to work on the STLD plan provisions first because there is already a regulatory framework for supplemental products. Some stakeholders agreed and suggested that as part of this work, the Subgroup look at whether a particular provision: 1) only applies to STLD plans; 2) only applies to supplemental products; or 3) applies to both types of products.
After additional discussion and to assist the Subgroup on deciding its approach in moving forward with its review, NAIC staff agreed to develop a working draft of Model #171 reflecting the Subgroup’s discussions to date. The Subgroup plans to discuss the working draft and continue its discussions on the approach to take for its discussions of revisions to Model #171 during its next meeting March 7.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.
The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met Dec. 6, 2021. The following Subgroup members participated: Andy Schallhorn, Co-Chair (OK); Chris Struk (FL); Robert Wake (ME); Sherri Mortensen-Brown (MN); Camille Anderson-Weddle, Amy Hoyt, and Carrie Couch (MO); Gayle Woods (OR); Shari Miles (SC); Rachel Bowden (TX); Shelley Wiseman and Heidi Clausen (UT); Anna Van Fleet, Emily Brown, Mary Block, Christine Menard-O’Neil, and Jamie Gile (VT); Ned Gaines (WA); and Nathan Houdek and Jennifer Stegall (WI).

1. Continued Discussion of Revisions to Model #171

The Subgroup continued its discussion of revisions to the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171) based on the comments received, beginning with the definition of “partial disability” in Section 5J. Jolie H. Matthews (NAIC) said after the Subgroup previously discussed the comments received on this definition, particularly the NAIC consumer representatives’ comments, the NAIC consumer representatives withdrew their comments, leaving the provision unchanged. The Subgroup confirmed the decision to leave Section 5J unchanged.

The Subgroup next discussed the definition of “physician” in Section 5K. Ms. Matthews explained that the Subgroup’s previous discussion of this provision concerned the perceived lack of clarity of some of the language in the definition and whether the Subgroup should try to clarify it. Mr. Schallhorn asked the Subgroup if anyone had any suggestions for clarifying the language. J.P. Wieske (Health Benefits Institute—HBI) said the intent of the language in Section 5K(2) is to address potential fraud by restricting certain individuals who may have a personal relationship with the insured from being considered a “physician” for the purposes of this model. In response to the Washington Department of Insurance’s (DOI’s) question about the meaning of the terms “qualified physician” and “licensed physician” in Section 5K(1), Mr. Wieske also said he believes this language is intended to restrict an insurer from raising an issue about certain providers, for the purposes of making a claim for any provider of medical care and treatment, if the services provided are within the scope of the provider’s licensed authority and are provided pursuant to applicable laws. After additional discussion, the Subgroup decided to leave the language unchanged.

The Subgroup next discussed the definition of “preexisting condition” in Section 5L. Ms. Matthews explained that the Subgroup’s previous discussions ended with this definition. She also noted that the Subgroup received additional comments on this definition as part of its request for comments on Sections 1–7 ending July 2. Mr. Schallhorn said America’s Health Insurance Plans (AHIP) suggests separate definitions of “preexisting condition” for supplementary products and short-term, limited-duration (STLD) plans. He asked for comments.

Mr. Wake said he believes there should be one definition of “preexisting condition” but different look-back periods for these two types of coverages. The Subgroup discussed his comments, including the implications of changing the definition on existing policies and contracts. Lucy Culp (Leukemia & Lymphoma Society—LLS) asked about the typical length of a look-back period, such as six months or 12 months. Mr. Wieske said for some types of products, it would probably be about a two-year look-back period. He explained that these types of products typically have limited medical underwriting. As such, the purpose of the look-back period is to protect against an individual purchasing, for example, a cancer-only policy when they knew they had cancer prior to the policy purchase.
The Subgroup discussed potential differences in the typical look-back period for supplementary products and STLD plans. Some interested parties favored a two-year look-back period for both types of coverages as a minimum standard. Other interested parties expressed support, generally, for shorter look-periods for all coverage types. Ms. Culp said the NAIC consumer representatives suggest a six-month look-back period. Chris Petersen (Arbor Strategies LLC) said based on the provisions in the Supplementary and Short-Term Health Insurance Minimum Standards Model Act (#170) (formerly known as the Accident and Sickness Insurance Minimum Standards Model Act), the companion model for Model #171, revising the definition of “preexisting condition” to provide for a six-month look-back period would not be possible. He said AHIP could support a two-year look-back period for supplementary products. For STLD plans, he said AHIP would be open to discussing a shorter look-back period because it is a different type of coverage; although, AHIP does not believe a shorter look-back period is needed. Cindy Goff (American Council of Life Insurers—ACLI) said the ACLI supports a two-year look-back period for supplementary products, but the ACLI has no position on STLD plans because none of its members sell such coverage.

The Subgroup continued its discussions regarding the look-back periods and the provision in Section 7A and Section 7B of Model #170 related to this issue. The Subgroup also discussed whether it should separate the look-back period provision from the policy definition of “preexisting condition” because it affects whether a condition is in fact a “pre-existing condition.” The Subgroup also discussed whether the preexisting condition policy definition should retain the prudent layperson standard. Some interested parties expressed concern with removing the prudent layperson standard if the look-back period is shortened to six months and the potential for abuse because of such a revision. The Subgroup discussed the Missouri DOI’s suggested revision that would remove the prudent layperson standard. The Subgroup did not reach any decisions on the issue and agreed to continue the discussion during its next meeting in early 2022.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.
The ERISA (B) Working Group of the Regulatory Framework (B) Task Force met March 22, 2022. The following Working Group members participated: Robert Wake, Chair (ME); Yada Horace (AL); Jason Lapham (CO); Andria Seip (IA); Julie Holmes (MO); Paul Hanson (MN); Carrie Couch (MO); Laura Arp (NE); Jeremy Christensen (NV); Tracy Biehn (NC); David Barney (OH); Candy Holbrook (SD); Tanji J. Northrup (UT); Charles Malone (WA); and Richard Wicka (WI). Also participating were: Paige Duhamel (NM) and Jon Thayer (NY).

1. **Exposed a Revised Draft Case Summary of the Rutledge v. Pharmaceutical Care Management Association (PCMA) Decision for Inclusion in the ERISA Handbook**

Mr. Wake said the first item on the agenda is to discuss exposing for comment the revised case summary in the case of Rutledge v. Pharmaceutical Care Management Association (PCMA). He explained that this summary has been exposed in other contexts, but he said the Working Group needs a meaningful comment period to give the opportunity to suggest edits before it officially adopts it for inclusion in the Health and Welfare Plans Under the Employee Retirement Income Security Act: Guidelines for State and Federal Regulation (ERISA Handbook).

Ms. Arp said that, in her opinion, the case summary is ready for public comment. There were no objections made.

The Working Group agreed to expose the revised draft case summary (Attachment Five-A) for a 30-day public comment period ending April 21.

2. **Discussed Additional Updates to the ERISA Handbook**

Mr. Wake explained that the ERISA Handbook was revised to reflect the 2018 U.S. Department of Labor (DOL) association health plan rule. However, in March 2019, significant provisions of the rule were invalidated in federal court and remanded back to DOL. The current administration is not interested in revisiting the AHP rule, and it remains to be seen whether future administrations might seek to revisit it. The question is whether the Handbook should be revised to reflect this reversal and what it should say instead.

J.P. Wieske (Horizon Government Affairs) cautioned against complete removal of the revisions and suggested that some pieces of it should be archived. He said that although the rule is obsolete, it is still the subject of some public policy debate, and there is likely value to having some of the pieces in the ERISA Handbook available for reference.

Carl Schmid (HIV+Hepatitis Policy Institute) said he is looking forward to commenting on the Rutledge summary. He said that it is important to review the entire ERISA Handbook and not just insert this case summary. He said there may be other sections where clarifying changes are needed, and the NAIC funded consumer representatives may have some additional changes to propose in other sections.

Ms. Duhamel said she is interested in updates regarding ERISA preemption of state requests for information post-Gobeille v. Liberty Mutual Ins. Co. She said she is aware of at least one case that allowed for a state to obtain information from an ERISA plan that is de minimus. Mr. Wake said this was definitely a topic of interest for the Working Group, even if it is not quite ripe for inclusion in the Handbook.

Mr. Wake asked whether there was any interest in adding to the ERISA Handbook information about regulatory oversight of fully insured as well as self-funded multiple employer welfare arrangements (MEWAs). Ms. Seip said
that Iowa has a regulation on this topic that she is happy to share with the Working Group if they choose to look at adding something to the ERISA Handbook.

Mr. Thayer said New York is seeing a recent proliferation of professional employer organizations (PEOs) treated like large groups under state law but covering mostly small employers. Mr. Thayer said this is a significant issue in New York and that the number of people who have their health care through PEOs is almost as large as the small group market. He said his main concern is the applicability of the look-through rules of the federal Affordable Care Act (ACA) to PEO coverage.

Mr. Wake referenced the 2010 case of Payroll Solutions Group Ltd. v. Nevada, where a federal trial court held that a state law cannot decide what is an ERISA plan for purposes of federal law, but states can decide treatment under state law. Mr. Wake acknowledged that analysis is complicated when both what the state law permits and the ACA permits have to be considered, and sometimes states prohibit what the ACA permits, but they cannot permit what the ACA prohibits. Ms. Duhamel said that New Mexico is also seeing increased discussions about PEOs and asked whether other states are as well. Mr. Wake said he is not aware of discussions in Maine.

Having no further business, the ERISA (B) Working Group adjourned into regulator-to-regulator session, pursuant to paragraph 1 (potential or pending litigation or administrative proceedings), paragraph 2 (pending investigations), paragraph 3 (specific companies, entities or individuals), paragraph 8 (consideration of strategic planning issues), and paragraph 9 (any other subject required to be kept confidential) of the NAIC Policy Statement on Open Meetings.
In *Rutledge v. PCMA*, the Court upheld an Arkansas law, Act 900, which required pharmacy benefits managers ("PBMs")\(^1\) to reimburse pharmacies at a price equal to or higher than what the pharmacy paid to buy the drug. Act 900 required PBMs to provide administrative appeal procedures for pharmacies to challenge reimbursement prices that are below the pharmacies’ acquisition costs, and it also authorized pharmacies to decline to dispense drugs when a PBM would provide a below-cost reimbursement. Act 900 applied to all transactions between PBMs and pharmacies, including transactions where the PBM was acting on behalf of a self-insured ERISA plan. Thus, the saving clause was not at issue in this case.

In a suit brought by Pharmaceutical Care Management Association ("PCMA"), a national trade association representing 11 PBMs, the Eastern District of Arkansas had ruled that Act 900 was preempted by ERISA, and the Eighth Circuit affirmed.\(^2\) Both courts relied on a recent Eighth Circuit decision striking down a similar Iowa law because it “made ‘implicit reference’ to ERISA by regulating PBMs that administer benefits for ERISA plans”\(^3\) and “was impermissibly ‘connected with’ an ERISA plan because, by requiring an appeal process for pharmacies to challenge PBM reimbursement rates and restricting the sources from which PBMs could determine pricing, the law limited the plan administrator’s ability to control the calculation of drug benefits.”\(^4\)

The Supreme Court, however, held that because Act 900 “regulates PBMs whether or not the plans they service fall within ERISA’s coverage,” it is analogous to the law upheld by the Court in *Travelers*, “which did not refer to ERISA plans because it imposed surcharges ‘regardless of whether the commercial coverage [was] ultimately secured by an ERISA plan, private purchase, or otherwise.’”\(^5\) The Court held that under *Travelers*, “State rate regulations that merely increase costs or alter incentives for ERISA plans without forcing plans to adopt any particular scheme of substantive coverage are not preempted by ERISA.”\(^6\)

The Court rejected PCMA’s contention “that Act 900 has an impermissible connection with an ERISA plan because its enforcement mechanisms both directly affect central matters of plan administration and interfere with nationally uniform plan administration.”\(^7\) The Court acknowledged that Act 900 required ERISA plan administrators to “comply with a particular process” and standards,\(^8\) but explained that those enforcement mechanisms “do not require plan administrators to structure their benefit plans in any particular manner, nor do they lead to anything more than potential operational inefficiencies” for PBMs.\(^9\) The Court emphasized that State law

---

\(^1\) As the term is spelled in Act 900. Supreme Court style refers to “pharmacy benefit managers.”

\(^2\) *PCMA v. Rutledge*, 891 F.3d 1109 (8th Cir. 2018).

\(^3\) 141 S.Ct. at 479, quoting *PCMA v. Gerhart*, 852 F.3d 722, 729 (8th Cir. 2017).

\(^4\) Id. at 479, quoting *Gerhart*, 852 F.3d at 726, 731.

\(^5\) Id. at 481, quoting *Travelers*, 514 U.S. at 656.

\(^6\) Id. at 480, citing *Travelers*, 514 U.S. at 668.

\(^7\) Id. at 481–482.

\(^8\) Id. at 482, quoting PCMA brief at 24.

\(^9\) Id.
governs disputes between plans and providers. The Court held further that ERISA did not preempt Act 900’s decline-to-dispense provision, even though it “effectively denies plan beneficiaries their benefits” because any denial of benefits would be the consequence of the lawful state regulation of reimbursement rates and the PBM’s refusal to comply.

Finally, the Court rejected PCMA’s claim that the law had an impermissible “reference to” ERISA. As the Court explained, Act 900 “applies to PBMs whether or not they manage an ERISA plan,” and Act 900 did not treat ERISA plans differently than non-ERISA plans.

However, Rutledge does not represent an open-ended approval of state pharmacy benefit regulation in general. The Court only considered the provisions of the Arkansas PBM law as they stood at the time PCMA filed its preemption challenge. While Rutledge was making its way through the appellate courts, Arkansas amended its PBM law to add new requirements and prohibitions, so it is important that Rutledge not be read as a finding that the Court analyzed Arkansas’ PBM law as it existed in 2020. Additionally, the Court did not address issues that have been raised by other State PBM-pharmacy laws, including laws regulating networks, prohibitions and limitations on corporate practice of medicine, and laws regulating what pharmacies may discuss with their patients. The Rutledge decision has opened the door to additional ERISA challenges, which, at the time of this writing are making their way through the courts.

The Pharmacy Benefit Manager Regulatory Issues (B) Subgroup of the Regulatory Framework (B) Task Force met March 16, 2022. The following Subgroup members participated: TK Keen, Chair (OR); Laura Arp, Vice Chair, and Eric Dunning (NE); Sarah Bailey (AK); Anthony L. Williams (AL); Beth Barrington (AR); Jessica Ryan (CA); Paul Lombardo and Kathy Belfi (CT); Howard Liebers (DC); Andria Seip (IA); Vicki Schmidt (KS); Daniel McIlwain (KY); Jeff Zewe (LA); Chad Arnold and Joe Stoddard (MI); Cynthia Amann and Amy Hoyt (MO); Sherri Mortensen-Brown and Norman Barrett Wiik (MN); David Dachs (MT); Ted Hamby and Robert Croom (NC); Ralph Boeckman and Erin Porter (NJ); Paige Duhamel (NM); Ana Paulina Gomez (PA); Katrina Rodon (SC); Brian Hoffmeister and Scott McAnally (TN); Tanji J. Northrup (UT); Don Beatty and Stephen Hogge (VA); Jennifer Kreitler and Ned Gaines (WA); Nathan Houdek and Jennifer Stegall (WI); Michael Malone and Ellen Potter (WV); and Jeff Rude and Bryce Hamilton (WY). Also participating was: Robert Wake (ME).

1. Adopted its 2021 Fall National Meeting Minutes

Mr. Lombardo made a motion, seconded by Mr. Beatty, to adopt the Subgroup’s Dec. 11, 2021, minutes (Attachment Six-A). The motion passed unanimously.

2. Heard an Update from Montana on its PBM Law

Mr. Keen said the Subgroup’s next agenda item is to hear from Montana about its pharmacy benefit manager (PBM) law and other related activities. He explained that the agenda has Oklahoma also providing an update, but due to unforeseen circumstances, Oklahoma will provide that update during the Subgroup’s meeting at the Spring National Meeting.

Mr. Dachs discussed Montana’s PBM law and related activities over the past few years beginning with the U.S. Senate (Senate) Bill 71, which the Montana Legislature passed with bipartisan support in 2019, but it was vetoed by the governor. He explained that one central provision in Senate Bill 71 was to set up a mechanism to lower the cost of health insurance for consumers. The provision required that all compensation remitted by or on behalf of a manufacturer, labeler, repacker, or wholesale distributor that is directly or indirectly related to a health benefit plan be remitted to and retained by the health benefit plan and used to lower health benefit plan premiums for covered persons. Mr. Dachs explained that this provision was really aimed at spread pricing and trying to ensure consumers received a share of those remitted monies to lower their health insurance premiums. He said Senate Bill 71 reflected Montana’s approach to PBM regulation, which is different than what other states were doing at the time by focusing on the financial aspects of the prescription drug supply chain and looking at areas where it may be able to lower costs.

Mr. Dachs said after its experience with Senate Bill 71 and a change in leadership at the Montana Department of Insurance (DOI), it has taken a more measured approach. He said like many other states, Montana decided to clarify its regulatory authority over PBMs and require that PBMs be licensed in the state. He said Montana also decided to focus on price transparency. In 2021, the Montana Legislature passed the Montana Pharmacy Benefit Manager Oversight Act, which became effective Jan. 1. Mr. Dachs said the bill establishes a PBM licensing requirement and includes other provisions, including some reporting requirements and prohibited practices. He said Montana believes this legislation is something it can build on as it moves forward. He discussed developing
regulations related to the licensing requirements, including network adequacy requirements. He said he anticipates Montana will end up licensing about 20 PBMs.

Mr. Dachs said based on its work related to Senate Bill 71, Montana found that due to contractual requirements, it was difficult for pharmacists to share information with the Montana DOI on what was in their contracts to facilitate investigating complaints. To address this—i.e., the recently enacted statute—the prohibited practices provision includes language allowing pharmacists to share information with the Montana DOI when it is investigating issues related to PBM business practices. Mr. Dachs outlined the Montana DOI’s steps for moving forward with promulgating regulations to implement the recently enacted law.

Mr. Keen asked Mr. Dachs if the Montana law includes any exemptions from the PBM licensing requirements or the reporting of data. Mr. Dachs said he does not believe there are any specific exemptions. He explained how the law is structured and how terms are defined. He said given this structure, some types of entities are automatically carved out. Ms. Seip asked about Montana’s PBM network adequacy requirements and how the Montana DOI determines the accuracy of a PBM’s compliance. Mr. Dachs said the Montana DOI has a template of community pharmacies that it uses. He explained that in some areas in Montana, there may not be pharmacies. In those situations, the Montana DOI will use a health carrier’s GeoAccess plan in addition to looking at where the plan enrollees are located, and the community pharmacies are located to access network adequacy. Mr. Dachs explained that to not stifle innovation, particularly innovation that could lower costs for consumers, the Montana DOI regulations allow for flexibility if a health benefit plan wants to have a narrow network, but the hope is that health benefit plans include at least 80% of the community pharmacies.

3. Heard an Update from the ERISA (B) Working Group

Mr. Wake provided an update on the work of the Employee Retirement Income Security Act (ERISA) (B) Working Group related to its revisions to the Health and Welfare Plans Under the Employee Retirement Income Security Act: Guidelines for State and Federal Regulation (ERISA Handbook) to include a case summary on the U.S. Supreme Court’s decision in Rutledge vs. the Pharmaceutical Care Management Association (PCMA). He said the Working Group plans to meet March 22 to discuss an initial draft of the case summary. He anticipates that after that review and discussion, the Working Group will expose the draft for a public comment period.

Mr. Wake said as part of its work in 2022, the Working Group will provide its expertise to the Subgroup, as the Subgroup considers necessary, related to the Rutledge decision in relation to the Subgroup’s 2022 charge to develop a white paper discussing state laws regulating PBM business practices, including the implications of the Rutledge decision on such business practices and any challenges, if any, the states have encountered in implementing such laws and/or regulations.

Mr. Keen said the Subgroup welcomes the Working Group’s assistance and expertise as it moves forward with the white paper, including an analysis of the Rutledge decision, including its progeny and impact, if any, on the state regulation of PBM business practices. He said this collaboration is important to ensure consistency in any conclusions related to the Rutledge decision across NAIC groups.

4. Heard an Update on State PBM Law Compilation

Jolie H. Matthews (NAIC) said along with the Subgroup’s meeting agenda for today, she distributed two charts: 1) a compilation of state PBM licensing and registration laws; and 2) a compilation of state PBM business practice laws. She said these state PBM law compilations relate to and are meant to support the Subgroup’s efforts to complete its 2022 charge to develop a white paper on issues related to the state regulation of certain PBM business practices. She said she received corrections and updates to the charts for inclusion in the next versions
of each chart. She said she hopes to complete the updated versions sometime in late April or early May. She requested additional information from stakeholders on any missing state PBM laws to include in the updated versions.

Ms. Matthews said she has posted the compilation charges on the Subgroup’s web page under a new heading “State PBM Laws Charts.” She said she anticipates updating each chart moving forward on at least a quarterly basis, and the updated charts will be posted at this location on the Subgroup’s web page.

5. Discussed its Spring National Meeting Agenda and Future Meetings

Mr. Keen discussed the Subgroup’s agenda for its April 4 meeting during the Spring National Meeting and an outline for the Subgroup’s next few meetings. He said in addition to receiving an update from Oklahoma on its PBM law implementation, for the April 4 meeting, the Subgroup will hear a consumer perspective on the Subgroup’s white paper charge. The Subgroup will also hear from Oregon on some of its work related to prescription drug pricing transparency and prescription drug supply chain issues. Mr. Keen said the Subgroup will also hold level-setting and background meetings over the next few months to hear from speakers suggested by Subgroup members. He said the goal of these meetings is to ideally have the Subgroup begin its work drafting the white paper with a common level of understanding and knowledge about the issues to be discussed in the white paper.

6. Discussed State Pharmacy Complaint Processes

Mr. Hamilton said Wyoming has seen a recent rise in complaints from pharmacies alleging violations of certain provisions of its existing laws. He asked if any states set up a formal adjudication process to handle pharmacy complaints, including developing and using a specific template for such complaints. He explained that under Wyoming’s existing laws, it has a maximum allowable cost (MAC) appeals law and a law on pharmacy audit procedures.

Mr. Keen said Oregon has not received a high volume of such complaints. Mr. Beatty said for complaints from pharmacies, when Virginia first enacted its law, it did not receive a large volume of complaints because pharmacists found its website too complicated to file such complaints. He said to address this problem, Virginia developed a specific complaint form for pharmacists.

Mr. Hamilton asked that if anyone else has any information to assist Wyoming in developing a formal adjudication process to handle pharmacist complaints, he would appreciate it if they would reach out to him. Mr. Hogge said in addition to Virginia, Ohio and Oklahoma have developed specific pharmacist complaint forms. He suggested that as a starting point, Mr. Hamilton should look at what these states have done.

Having no further business, the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup adjourned.
The Pharmacy Benefit Manager Regulatory Issues (B) Subgroup met in San Diego, CA, Dec. 11, 2021. The following Subgroup members participated: TK Keen, Chair (OR); Laura Arp, Vice Chair, and Martin Swanson (NE); Lori K. Wing-Heier (AK); Yada Horace (AL); Alan McClain (AR); Bruce Hinze (CA); Paul Lombardo and Kathy Belfi (CT); Andria Seip (IA); Julie Holmes (KS); Shawn Boggs (KY); Jeffrey Zewe (LA); Kathleen A. Birrane and Mary Kwei (MD); Chad Arnold (MI); Chlora Lindley-Myers and Cynthia Amann (MO); Tracy Biehn (NC); Gale Simon (NJ); Paige Duhamel (NM); Shannen Logue (PA); Brian Hoffmeister (TN); Tanji J. Northrup (UT); Don Beatty (VA); Molly Nollette (WA); Nathan Houdek and Jennifer Stegall (WI); Joylynn Fix (WV); and Denise Burke (WY). Also participating were: David Altmaier (FL); Jon Godfread (ND); and Glen Mulready and Kelli Price (OK).

1. **Heard an Update on the Pharmaceutical Care Management Association v. Wehbi Ruling**

Commissioner Godfread updated the Subgroup on the recent decision by the Eighth Circuit of the U.S. Court of Appeals in *Pharmaceutical Care Management Association v. Wehbi*. He said the Eight Circuit’s decision upheld two laws enacted during North Dakota’s 2017 legislative session. These laws were enacted as an effort to prohibit pharmacy benefit managers (PBMs) from engaging in what have been considered deceptive and anti-competitive practices, which ultimately drive up prescription drug costs. The *Pharmaceutical Care Management Association v. Wehbi* case is the first to consider at the federal appellate level the scope of the U.S. Supreme Court’s unanimous decision last year in *Rutledge v. Pharmaceutical Care Management Association*, which upheld an Arkansas state law regulating the abusive practices of PBMs.

Commissioner Godfread said based on the North Dakota Department of Insurance’s (DOI’s) legal analysis of the *Pharmaceutical Care Management Association v. Wehbi* decision, the North Dakota DOI believes the *Pharmaceutical Care Management Association v. Wehbi* decision significantly expands upon the *Rutledge v. Pharmaceutical Care Management Association* decision, which provided a framework that places a broader category of laws presumptively beyond the Employee Retirement Income Security Act’s (ERISA’s) preemptive scope—i.e., health care cost regulation—including state legislation regulating PBMs in this area. He said *Pharmaceutical Care Management Association v. Wehbi* took that a step further to uphold laws regulating PBMs against ERISA preemption where the laws regulate matters of transparency; the imposition of fees, fines, and arbitrary performance metrics; and other requirements upon pharmacy providers, thereby preventing anti-competitive practices by PBMs. He said he believes the *Rutledge v. Pharmaceutical Care Management Association* and *Pharmaceutical Care Management Association v. Wehbi* decisions now open the door for states to pass more laws that regulate PBMs more comprehensively and have those laws upheld as applied to ERISA plans, as long as the laws pass the ERISA “tests” established in these cases.

Mr. Keen thanked Commissioner Godfread for bringing the *Pharmaceutical Care Management Association v. Wehbi* decision to the Subgroup’s attention. He said he believes the Subgroup will find the North Dakota DOI’s analysis of the case helpful as it moves forward with its work to develop a white paper on issues related to the state regulation of certain PBM business practices. He also said he assumes the ERISA (B) Working Group will be examining the *Pharmaceutical Care Management Association v. Wehbi* decision as well. As such, the Subgroup will coordinate it discussions on the case with the Working Group.
2. **Heard from the States on the Implementation of PBM Laws**

Mr. Keen said the Subgroup’s next agenda item is to hear from Connecticut, Oklahoma, Virginia, and Wisconsin on their PBM laws. He said this agenda item was added at the request of Subgroup members wanting to know what other states have done with respect to PBM regulation and oversight. He said he believes this information will be helpful to the Subgroup as it moves forward with the white paper and potentially for additional Subgroup discussions about developing another draft PBM model.

a. **Connecticut**

Mr. Lombardo discussed Connecticut’s PBM law. He said Connecticut requires PBMs to register with the state. He discussed Connecticut Gen Stat § 38a-479ppp (2019), which was enacted under Public Act 18-41. He said this statute requires PBMs for insured business in the state to file a report each year with the commissioner that includes information on the aggregate dollar amount of all rebates for outpatient prescription drugs the PBM collected from pharmaceutical manufacturers and the aggregate dollar amount of all rebates for outpatient prescription drugs, excluding any portion of the rebate received by health carriers, the PBM collected from the pharmaceutical manufacturers. He said Connecticut received the first of this data at the beginning of 2020 and will receive the second set of data at the beginning of 2022. He said this information will be made public sometime in the first quarter of 2022. He said although not strictly related to PBMs, Public Act 18-41 also requires health insurers to provide information on their rebate practices. He said based on this information, the commissioner prepares an annual report, which is posted on the DOI’s website, containing: 1) an explanation of the manner in which health carriers accounted for rebates in calculating premiums for health care plans delivered, issued for delivery, renewed, amended, or continued during such year; 2) a statement disclosing whether, and describing the manner in which, health carriers made rebates available to insureds at the point of purchase during such year; 3) any other manner in which health carriers applied rebates during such year; and 4) such other information as the commissioner, in the commissioner’s discretion, deems relevant. He also discussed a provision in Connecticut law modeled after a California law requiring health insurers as part of their rate filing to provide data on prescription drugs; i.e., the top 25 most costly drugs and the top 25 most utilized drugs.

Ms. Belfi discussed Connecticut’s review of affiliated agreements health insurers have with PBMs as part of the DOI’s financial analysis requirements of the companies.

Mr. Lombardo explained that as part of this financial analysis work, the Connecticut DOI realized it needs to learn more about every aspect of the prescription drug distribution system, which ultimately resulted in a draft, non-public white paper that Connecticut has shared with the Subgroup. He noted that as part of this process, the Connecticut DOI came to realize the possibility of unintended consequences of any PBM legislation meant to address one aspect of PBM business practices, such as rebating, on other aspects of the prescription drug distribution system.

b. **Oklahoma**

Ms. Price discussed Oklahoma’s Patient’s Right to Pharmacy Choice Act, which was effective Nov. 1, 2019. She explained that the Act establishes minimum and uniform access to a provider and standards and prohibitions on restrictions of a patient’s right to choose a pharmacy provider. These minimum standards include provisions: 1) barring PBMs from reimbursing independent pharmacies at a lesser amount than PBM-owned pharmacies; 2) outlining geographical requirements for urban, suburban, and rural pharmacy access; and 3) prohibiting incentives related to mail-order, cost-sharing, co-payments, or other discounts.
Ms. Price explained how the *Rutledge v. Pharmaceutical Care Management Association* case and, ultimately, the U.S. Supreme Court’s decision in that case affected the Oklahoma DOI’s implementation and enforcement of the Act.

Ms. Price also discussed the Oklahoma DOI’s initiatives related to ensuring PBM compliance and enforcement of the Act. She said the Oklahoma DOI created a division focused solely on PBM compliance and enforcement. It hired staff, including an industry expert/pharmacist consultant, with the applicable knowledge and expertise in these areas.

Ms. Price said the Oklahoma DOI created a process on its website for consumers to submit complaints about PBMs online. As part of this, and to make the process as smooth as possible, the division developed templates for typical correspondence sent to PBMs and consumer complainants, including a “blue sheet” specific to PBM alleged violations, which can be used for Oklahoma DOI investigators to succinctly summarize their investigations and more quickly refer cases to the legal division for enforcement actions. Based on the Oklahoma DOI’s experiences, Ms. Price also offered suggestions to states considering PBM legislation and currently implementing PBM laws.

Ms. Price said since Sept. 1, 2020, the Oklahoma DOI has received and reviewed over 135,000 alleged violations of the Act. She said approximately 27,000 have been resolved to date, and 32 alleged violations have been referred to the Oklahoma legal division for an enforcement action.

Mr. Houdek asked Ms. Price if staff hired for the new division were newly hired staff or repurposed staff. Ms. Price said it was a combination of new staff and repurposed staff. Mr. Houdek asked Ms. Price about the nature of complaints filed. Ms. Price said most of the complaints related to transaction fee issues and maximum allowable cost (MAC) pricing appeals and reimbursement amounts.

Ms. Arp asked about the fiscal note attached to the Act. Commissioner Mulready said such a fiscal note would have been approximately $500,000 from the Oklahoma DOI’s perspective. Ms. Duhamel asked about the MAC appeals. Ms. Price described how the Oklahoma DOI has uncovered such violations. She explained that the pharmacy services administrative organizations (PSAOs) have alerted the Oklahoma DOI about alleged MAC pricing appeal violations.

c. **Virginia**

Mr. Beatty discussed Virginia’s PBM law, which was effective Oct. 1, 2020. He explained that Virginia’s PBM law places the responsibility on the health insurer for compliance with the law. Under the law, PBMs must be licensed. Mr. Beatty explained that if the PBM fills out the application correctly, the PBM law requires the Virginia DOI to issue the license. He described the PBM law’s prohibitions on certain conduct by a health carrier or by a PBM under contract with a carrier. These prohibitions include: 1) reimbursing a pharmacy or pharmacist an amount less than the amount the PBM reimburses a PBM affiliate for providing the same pharmacist services; and 2) penalizing or retaliating against a pharmacist or pharmacy for exercising rights provided under the law.

Mr. Beatty said the Virginia law also prohibits a health carrier or a PBM under contract with a carrier from: 1) including any mail order pharmacy or PBM affiliate in calculating or determining network adequacy; and 2) conducting spread pricing.

Mr. Beatty said currently, Virginia has 39 licensed PBMs. He said the Virginia DOI has not received a lot of complaints related to its law. He explained that because of this seemingly lack of complaints, the Virginia DOI decided to create and post on its website a specific complaint form that can be used to file complaints related to
the PBM law. He said even with the specific complaint form, the Virginia DOI still has not received a lot of complaints specific to the PBM law.

Mr. Beatty also described Virginia’s quarterly reporting requirements related to rebates and its examination requirements. He said the Virginia DOI plans to submit legislation for consideration during the 2022 legislative session changing the quarterly rebate reporting requirements to an annual report since the Virginia DOI will not review the information until the end of each calendar year.

Ms. Arp asked Mr. Beatty about the confidentiality of the examination reports and the fee for such examinations. Mr. Beatty described the Virginia law’s confidentiality requirements, which is consistent with the NAIC’s model confidentiality language regarding examination reports and any working papers, documents, reports, and other information compiled during an examination. He explained that the Virginia DOI does not charge companies for financial or market conduct examinations. The money to pay for examinations comes from the Virginia DOI’s general assessment.

d. Wisconsin

Mr. Houdek discussed the work of the Governor’s Task Force on Reducing Prescription Drug Prices before Wisconsin’s proposed PBM law was introduced. He said the Task Force held eight public meetings from November 2019 to August 2020. The Task Force heard from 24 organizations representing a multitude of stakeholders. He said the Task Force issued a report in October 2020, which centered on the following key policy provisions: 1) lowering prices and controlling costs; 2) increasing transparency and consumer protections; and 3) access for vulnerable populations.

Mr. Houdek said with respect to increasing transparency and consumer protections, among its recommendations, the Task Force recommended the creation of the Office of Prescription Drug Affordability. He said similar to Oklahoma’s approach, the Task Force recognized that the Wisconsin DOI does not have the capacity and appropriate expertise to implement and enforce the requirements for a law regulating PBMs and the prescription drug market.

Mr. Houdek said 20 of the Task Force’s recommendations were included in the governor’s 2021–2023 biennial budget. He said during the budget process, the Task Force’s recommendations were removed and introduced as separate, stand-alone bills and packaged as “Less for Rx.” However, due to the COVID-19 public health emergency and other circumstances, the PBM legislation died during the 2020 legislative session.

Mr. Houdek said a slimmed down version of what was initially introduced was introduced in January 2021 and enacted in March 2021 (2021 Wisconsin Act 9). Key provisions in the law include: 1) a prohibition on gag clauses; 2) an annual PBM rebate reporting requirement; 3) a PBM licensure requirement; and 4) limitations on a PBM’s ability to retroactively deny or reduce a pharmacy’s claim after adjudication.

Mr. Houdek discussed the Wisconsin DOI’s next steps, which include: 1) tracking complaints and correspondence received; 2) learning from the efforts of other states as they implement their PBM oversight laws; and 3) continuing to work with stakeholders to build support to advance the other Task Force recommendations. He also said the fiscal note for the initial PBM bill included: 1) seven new staff; and 2) $500,000 in information technology (IT) upgrades. He said this fiscal note request was attached to the January 2021 legislation; but ultimately, the Wisconsin DOI received no new dollars to assist with implementation and enforcement. He said the Wisconsin DOI’s market regulation division has been tasked with implementing the new PBM law and has been working over the past few months to create a dedicated website and develop complaint templates, consumer-facing materials, and other information necessary for a smooth implementation process.
3. **Discussed its Next Steps**

Mr. Keen said the Subgroup will continue its discussions on its white paper charge during a meeting early next year.

Having no further business, the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup adjourned.
SENIOR ISSUES (B) TASK FORCE

Senior Issues (B) Task Force March 17, 2022, Minutes .......................................................... 6-125
Senior Issues (B) Task Force Feb. 25, 2022, Minutes (Attachment One) .................................. 6-128
  Comment Letter Regarding the Federal Centers for Medicare & Medicaid Services’ (CMS’s)
  Proposed Rule on Stricter Marketing Guidelines for Medicare Advantage and Medicare
  Part D Plans (Attachment One-A) .............................................................................................. 6-129
Senior Issues (B) Task Force Feb. 8, 2022, Minutes (Attachment Two) .................................... 6-131
  Comment Letter to the CMS Regarding the Treatment of Nonparticipating Durable Medical
  Equipment (DME) Suppliers Under Medicare’s “Limitation on Beneficiary Liability”
  (Attachment Three) ................................................................................................................. 6-134
The Senior Issues (B) Task Force met March 17, 2022. The following Task Force members participated: Marlene Caride, Chair (NJ); Jon Pike, Vice Chair (UT); Lori K. Wing-Heier represented by Sarah Bailey (AK); Jim L. Ridling represented by Yada Horace (AL); Ricardo Lara represented by Tyler McKinney (CA); Andrew N. Mais represented by Paul Lombardo (CT); Karima M. Woods represented by Brian Bressman (DC); Trinidad Navarro represented by Susan Jennette (DE); David Altmaier represented by Chris Struk (FL); John F. King represented by Matthew Padova (GA); Colin M. Hayashida represented by Kathleen Nakasone (HI); Doug Ommen represented by Andria Seip (IA); Dean L. Cameron represented by Shannon Hohl (ID); Vicki Schmidt represented by Julie Holmes (KS); Sharon P. Clark represented by Stephanie McGaughey-Bowker (KY); James J. Donelon represented by Ron Henderson (LA); Gary D. Anderson represented by Kevin Beagan (MA); Kathleen A. Birrane represented by Alexander Borkowski (MD); Eric A. Cioppa represented by Sherry Ingalls (ME); Anita G. Fox represented by Renee Campbell (MI); Grace Arnold represented by Cam Jenkins (MN); Chlora Lindley-Myers (MO); Troy Downing represented by Ashley Perez (MT); Mike Causey represented by Garlinda Taylor (NC); Jon Godfread represented by Chrystal Bartuska (ND); Eric Dunning (NE); Barbara D. Richardson (NV); Judith L. French represented by Tynesia Dorsey (OH); Glen Mulready represented by Mike Rhoads (OK); Andrew R. Stolfi represented by Ana K. Pace (OR); Michael Humphreys (PA); Larry D. Deiter represented by Jill Kruger (SD); Carter Lawrence represented by Brian Hoffmeister (TN); Cassie Brown represented by Chris Herrick (TX); Scott A. White represented by Bob Grissom (VA); Michael S. Pieciak represented by Mary Block (VT); Mike Kreidler represented by Molly Nollette (WA); Nathan Houdek (WI); and Allan L. McVey represented by Ellen Potter (WV). Also participating were: Kay Warrington (MS); Bogdanka Kurahovic (NM); Martin Wojcik (NY); Patrick Smock (RI); and Tana Howard (WY).

1. **Adopted its Feb. 25, 2022; Feb. 8, 2022; and 2021 Fall National Meeting Minutes**

The Task Force met Feb. 8 and agreed to submit comments in response to the federal Centers for Medicare & Medicaid Services’ (CMS’s) proposed rule on stricter marketing guidelines for Medicare Advantage (MA) plans.

The Task Force met Feb. 25 and adopted a letter in support of the CMS’s proposed rule on stricter marketing guidelines for MA plans.

Ms. Kruger made a motion, seconded by Director Lindley-Myers, to adopt the Task Force’s Feb. 25, 2022 (Attachment One); Feb. 8, 2022 (Attachment Two); and Nov. 30, 2021 (see NAIC Proceedings – Fall 2021, Senior Issues (B) Task Force) minutes. The motion passed unanimously.

2. **Adopted the Letter to CMS Regarding the Treatment of Nonparticipating DME Suppliers Under Medicare's "Limitation on Beneficiary Liability"**

Mr. Rhoads made a motion, seconded by Mr. Grissom, to adopt the Task Force’s letter to the CMS (Attachment Three). The motion passed unanimously.

3. **Heard a Presentation Regarding Medicare Part D and Auto-Enrollment**

Harry Ting (Health Consumer Advocate) presented an issue that poses difficulties for State Health Insurance Assistance Program (SHIP) counselors and the harm inflicted on Medicare Part D enrollees. He said he is asking the Task Force to endorse some actions and contact the CMS regarding this problem.
Dr. Ting said the situation arises when an insurer discontinues one of its Medicare Prescription Drug Plans (PDPs) for the next calendar year and the beneficiary is then crosswalked to another of the insurer’s PDPs. He said enrollees are notified via the Annual Notice of Change (ANOC) mailing in September, and in 2021, 3.2 million PDP enrollees were crosswalked into a different PDP for 2022.

Dr. Ting said many of these ANOCs are confused with junk mail and thrown out by the beneficiary. He said the same ANOC formats are sent out every year to all Medicare Part D enrollees, but the choice they are presented with is confusing, and the beneficiaries are not given proper guidance. He provided an example of a client being crosswalked from the Mutual of Omaha Rx Value Plan and thus being switched from one of the lowest cost plans in the beneficiary’s area to one of the highest. He said the change in premium for this client went from $22.20 a month to $77.90 a month. He said it is not really the fault of the insurance plan but rather the problem with the CMS’s rules and regulations.

Dr. Ting said the ANOC tells beneficiaries to check the changes to the benefits and costs to see if they affect the beneficiary. He said this is very difficult for many beneficiaries to do. For example, he said one client of his takes 43 different medications and drugs, and the ANOC tells the beneficiary to go to the online drug list if there are changes. He said the online drug list is a 45-page formulary for the seniors to go through. He said the ANOC asks whether one’s drugs are in a different tier with different cost sharing and points out that there are five tiers with 10 cost-sharing categories. He said the ANOC asks whether one’s drugs have new restrictions, and it instructs the senior to call their insurer; if the senior can use the same pharmacy, the senior is instructed to go to a website or call to obtain a directory. He said there is no mention of Medicare or SHIP resources, and the section entitled “additional resources” tells the senior to call their insurer, which is not helpful when seeking unbiased and objective answers.

Dr. Ting said there are three changes the CMS can do to address this issue, and he asks that the NAIC act in contacting the CMS to implement these changes. He said the first change is for the CMS to notify crosswalked Medicare Part D enrollees directly so the ANOC letters are not confused as junk mail and the beneficiary has notice from the CMS about upcoming changes. He suggested a sample letter that the CMS could implement. He said the second change is to modify the ANOC template currently being used. He said additional language should be made available beyond the current standard language that this document is available in (e.g., Spanish, braille, and large print). He suggested that the section start with advising the beneficiary to call their SHIP or the 800 Medicare number, as well as provide the Medicare.gov web page.

Dr. Ting said the first two suggestions can be done by the CMS through its current rules. He said the third suggestion is for the CMS to allow crosswalked Part D plan enrollees to switch Part D plans during the January through March period, the same as MA enrollees. He said he believes this can be implemented through the CMS’s regulations, but if not, he would propose it as an amendment. He said he would like the Task Force and the NAIC to support the three suggestions and ask the CMS to modify its Medicare Part D ANOC template to include objective resources and tell the CMS to give crosswalked Medicare Part D drug plan enrollees the same protections as those in MA plans.

Commissioner Caride asked if Task Force members have heard about these complaints. Mr. Henderson, Ms. McGaughey-Bowker, Ms. Seip, and Ms. Hohl said they have heard and are aware of these issues in their states. Ms. Hohl asked Dr. Ting if he has reached out to the CMS about whether the CMS has given any explanation as to why these suggestions are not already a requirement. Dr. Ting said he has reached out but has not received any response from the CMS. Commissioner Caride suggested that Task Force members take time to review the slides Dr. Ting presented, and the Task Force can discuss this matter in more detail at its next meeting.
4. **Heard a Discussion About Home Care Plans and Marketing Insurance**

Bonnie Burns (California Health Advocates—CHA) said the issue she wants to bring to the attention of the state insurance regulators is a matter she has not dealt with in almost 10 years, and it involves the sale of access to home care through what is essentially a service contract. She said in the past, it was masqueraded as insurance and sold by insurance agents.

Ms. Burns said it has arisen again in the form of a membership organization where one pays a membership fee plus an annual fee, and that entitles the person to a certain number of home care hours. She said in the past, these hours could have been discounted costs from participating home health agencies or other entities. She said the last time she was involved with one of these contracts was in 2013 when the San Diego district attorney prosecuted and charged a person with seven felonies regarding this scheme. She said the company in question had operated in many different states and under a variety of names, and people were paying for access to what was essentially a discounted home care membership organization.

Ms. Burns said she is raising this because there may be some organizations operating in this space currently (e.g., she became aware today of an insurance product that is being sold as a home care indemnity product), and she believes they are using the short-term insurance model to provide these benefits. She said she wanted to bring this to the attention of state insurance regulators in case complaints are being received about this or people have made inquiries about this matter. She said as she learns more about the current adaptation of these home care indemnity products, she will give a presentation to the Task Force.

Commissioner Caride said her department has not received any calls or complaints about this matter, but that is not to say it is not happening across the country, and she asked if anyone is hearing about this in their state. Ms. Burns said the way these organizations operate is that complaints are not heard until the claims are not paid or the organization pays the small claims but not the larger ones.

5. **Heard a Federal Legislative Update**

David Torian (NAIC) said the fiscal year (FY) 2022 Omnibus legislation, which funds the government through Sept. 30, was passed by the U.S. House of Representatives (House) and the U.S. Senate (Senate) and signed into law by the president, and SHIP funding is maintained at $57,115,000 for FY 2022.

Mr. Torian said the Omnibus includes two senior protection provisions. One is the creation of the Senior Scams Prevention Advisory Group, and the second is the Senior Fraud Advisory Office within the Federal Trade Commission (FTC). He said both provisions are aimed at improving interagency coordination on efforts to protect seniors from falling victim to fraud and scam attempts. He said the details about each provision is detailed in the printed version of the update, which is posted on the Task Force’s web page unless the chair would like the details read in full. Commissioner Caride said anyone interested in the details can go to the Task Force’s web page, and they can contact Mr. Torian if they have any questions.

Having no further business, the Senior Issues (B) Task Force adjourned.

*SITF 03-17-22 Minutes*
The Senior Issues (B) Task Force conducted an e-vote that concluded Feb. 25, 2022. The following Task Force members participated: Marlene Caride, Chair (NJ); Jon Pike, Vice Chair (UT); Lori K. Wing-Heier (AK); Jim L. Ridling (AL); Alan McClain (AR); Ricardo Lara (CA); Andrew N. Mais (CT); Trinidad Navarro (DE); John F. King (GA); Colin M. Hayashida (HI); Dean L. Cameron (ID); Amy L. Beard (IN); Vicki Schmidt (KS); Sharon P. Clark (KY); James L. Donelon (LA); Gary D. Anderson (MA); Kathleen A. Birrane (MD); Eric A. Cioppa (ME); Anita G. Fox (MI); Chlora Lindley-Myers (MO); Troy Downing (MT); Mike Causey (NC); Jon Godfread (ND); Eric Dunning (NE); Barbara D. Richardson (NV); Judith L. French (OH); Jessica K. Altman (PA); Larry D. Deiter (SD); Carter Lawrence (TN); Cassie Brown (TX); Michael S. Pieciak (VT); Mike Kreidler (WA); Nathan Houdek (WI); and Allan L. McVey (WV).

1. **Adopted a Letter in Support of the CMS’ Proposed Rule on Stricter Marketing Guidelines for Medicare Advantage and Medicare Part D Plans**

The Task Force conducted an e-vote to consider adoption of a comment letter in support of the Centers for Medicare & Medicaid Services’ (CMS’) proposed rule on stricter marketing guidelines for Medicare Advantage (MA) and Medicare Part D plans.

Without objection, the Task Force adopted the comment letter (Attachment One-A).

Having no further business, the Senior Issues (B) Task Force adjourned.

Baltimore, MD 21244-8013

Via Regulations.gov

To Whom It May Concern:

The following comments on CY 2023 Medicare Advantage and Part D Proposed Rule (CMS-4192-P), as published in the Federal Register on January 12, 2022, are submitted on behalf of the members of the National Association of Insurance Commissioners (NAIC), which represents the chief insurance regulators in the 50 states, the District of Columbia, and the United States territories. The comments specifically address the portion of the proposed rule focused on the practices of third-party marketing organizations (TPMO) of Medicare Advantage (MA) Plans.

CMS notes in its own explanation of its proposed rule that the Federal government is seeing an increase in beneficiary complaints associated with TPMO advertisements and has received feedback from beneficiary advocates and stakeholders concerned about marketing practices. State insurance regulators have also heard many complaints regarding these TPMOs and the advertisements of MA plans.

The NAIC’s Senior Issues (B) Task Force and the Improper Marketing of Health Insurance (D) Working Group have heard from many state regulators regarding consumers being switched from their original plans after either inquiring in response to ads or receiving cold calls from these marketers. One insurance commissioner described some of these ads as somewhat misleading at the very best and close to fraudulent at the very worst.

State insurance regulators and consumer advocates have noted an increase in the improper marketing of MA plans geared toward seniors that have included not only the running of television commercials that provided incorrect information, but a significant increase in social media ads, unsolicited phone calls to seniors and mass mailings from unidentified entities attempting to solicit business. During the past several years, advertising for these plans has increased and has emphasized extra or chronic care benefits often only available in particular sets of circumstances and not to the average MA plan enrollee.

The NAIC and state regulators have heard many stories in which beneficiaries have enrolled in or been enrolled in plans with narrow networks that didn’t include their current providers, had pharmacy benefits with higher costs, imposed higher copayments than expected, didn’t have the benefits they had seen advertised, or that were completely inappropriate for their particular needs and not what they thought they were buying. These sales often involve agents/brokerages or TPMOs that represent only some of the options available to Medicare beneficiaries.

Many of these TPMOs have names with “Medicare” or “Seniors” (i.e. American Medicare Advisors, Medicare Insurance Advisors, Medicare Plan Store, Senior Health Plans, etc.) and/or contain endorsements by known celebrities adding further confusion and misrepresentation. Many complaints involve agents or third-party marketers cold-calling or going door-to-door, often in senior-living housing/communities.

The NAIC notes there are gaps in MA regulation. The states are only allowed, by federal law, to initially license the plan, ensure the financial solvency of the carrier, and hold the license of both the carrier and insurance producer who
sells the plan. The federal government oversees the MA plans themselves and sets out rules for the marketing of them.

Many state insurance regulators work with State Health Insurance Assistance Programs (SHIP) coordinators and state Senior Medicare Patrol (SMP) coordinators on multiple complaints from beneficiaries but are confronted with limited or no positive results. State regulatory authority for these plans is limited to the agents and any misrepresentation; however, most complaints fall into an area that limits any actions states can take against these agents/brokers or TPMOs.

Some states, using state laws, have successfully prosecuted producers when they have violated CMS rules in the sale of the product. We ask CMS to provide the states all of the evidentiary information CMS collects for prosecution.

While the proposed rule may not go far enough for some, we feel this is a good start. We have received suggestions and recommendations that CMS should consider additional language; stronger marketing disclosure language; labeling the marketing disclosures in a separate color or in a text box with defined borders in at least a larger font that garner attention from the consumer; and requiring all producers to identify existing coverage and inquire about an applicant’s intent to replace existing coverage before taking an application from someone already covered.

Other suggestions and recommendations CMS should consider include requiring TPMOs to inform beneficiaries of the option to use 1-800-MEDICARE or www.medicare.gov to compare the total cost of drugs that the beneficiary will incur if they select any MA or Part D plan and requiring TPMOs to report the number of complaints they receive each month from consumers.

Finally, consumers must have a source of unbiased information in the very complex Medicare world. CMS should consider adding contact information for states’ SHIP programs, SMP programs, and other Medicare consumer advocate divisions and programs to marketing disclosure requirements and to written, oral and online information about Medicare enrollment.

The NAIC will continue to review proposed rules and provide comments on the potential impact on market competition and consumer protections. We are available to discuss these or other issues as this proposed rule is finalized.

Sincerely,
The Senior Issues (B) Task Force met Feb. 8, 2022. The following Task Force members participated: Marlene Caride, Chair (NJ); Jon Pike, Vice Chair (UT); Lori K. Wing-Heier represented by Sarah Bailey (AK); Jim L. Ridling represented by Willard Smith (AL); Alan McClain represented by Carroll Astin (AR); Evan G. Daniels represented by Erin Klug (AZ); Ricardo Lara represented by Tyler McKinney (CA); Michael Conway represented by Peg Brown (CO); Andrew N. Mais represented by Paul Lombardo (CT); Karima M. Woods represented by Howard Liebers (DC); Trinidad Navarro represented by Susan Jennette (DE); David Altmaier represented by Chris Struk (FL); John F. King represented by Matthew Padova (GA); Colin M. Hayashida represented by Kathleen Nakasone (HI); Doug Ommen (IA); Dean L. Cameron represented by Kathy McGill (ID); Amy L. Beard represented by Rebecca Vaughan (IN); Vicki Schmidt represented by Julie Holmes (KS); Sharon P. Clark represented by Stephanie McGaughy-Bowker (KY); James J. Doneelon represented by Ron Henderson (LA); Gary D. Anderson represented by Kevin Beagan (MA); Kathleen A. Birrane represented by Joy Hatchette (MD); Eric A. Cioppa represented by Sherry Ingalls (ME); Anita G. Fox represented by Renee Campbell (MI); Grace Arnold represented by Theodore Patton (MN); Chlora Lindley-Myers (MO); Mike Causey represented by Ted Hamby (NC); Jon Godfread represented by Yuri Venjohn (ND); Eric Dunning and Martin Swanson (NE); Barbara D. Richardson represented by Jack Childress (NV); Judith L. French represented by Tynesia Dorsey (OH); Jessica K. Altman represented by Michael Gurgiolo (PA); Elizabeth Kelleher Dwyer represented by Patrick Smock (RI); Larry D. Deiter represented by Jill Kruger (SD); Carter Lawrence represented by Brian Hoffmeister (TN); Cassie Brown represented by Dannette Smith (TX); Scott A. White represented by Bob Grissom (VA); Michael S. Pieciak represented by Mary Block (VT); Mike Kreidler represented by Molly Nollette (WA); Nathan Houdek represented by Jennifer Stegall (WI); and Allan L. McVey (WV). Also participating were: Eric Anderson (IL); Kay Warrington (MS); Ingrid Marsh (NH); Bogdanka Kurahovic (NM); Martin Wojcik (NY); Glen Mulready (OK); Andrew Dvorine (SC); and Mavis Earnshaw (WY).

1. **Discussed the CMS’s Proposed Rule on Stricter Marketing Guidelines for MA Plans**

Commissioner Caride said the purpose of this Task Force meeting is to examine the proposed rule promulgated by the Centers for Medicare & Medicaid Services (CMS) to impose stricter marketing guidelines for Medicare Advantage (MA) plans. She said this meeting is not to target MA plans but to focus on the deceptive marketing advertisements to sell MA plans. She said the Task Force has heard from state insurance regulators, most notably from Louisiana and Nebraska, regarding consumers being switched from their original plans after either inquiring in response to ads or receiving cold calls from these marketers.

Mr. Swanson gave some background on what he has heard from Nebraska and other states regarding these solicitations. He said Nebraska has a very good working relationship with its regional CMS representatives and shares information with other states. He said these issues have been raised and are being examined by the Improper Marketing of Health Insurance (D) Working Group; and because many of these Working Group calls are regulator-only, frank discussions are had with the CMS and the federal Center for Consumer Information and Insurance Oversight (CCIIO). He said some of these calls have died down after open enrollment closed, but MA plan open enrollment does not end for another month.

Commissioner McVey said he has seen these advertisements; they are somewhat misleading at the very best, and they are close to fraudulent at the very worst. He said he would like to address this situation; even though he has seen one of the ads revamped, it is still not a good situation, and more complaints will come.
Mr. Henderson said one of the biggest issues is that those third-party callers who are not necessarily agents can call seniors asking if they would like to change their plan, and the next thing the senior discovers is that they have been switched into another plan, and that new plan does not even take the senior’s doctor. He related a story he told before about being present when a call came in to a senior; when he took the phone to ask for the caller’s license, the caller hung up. He said Commissioner Schmidt, the Director of the Louisiana State Health Insurance Assistance Program (SHIP), is constantly making changes on behalf of seniors who have been moved out of their plans. He said many seniors are being incentivized to make changes because the marketing caller tells them they are not getting all they deserve when in fact they are getting what they need. He said it must be emphasized to the CMS that these third-party marketing callers are using unlicensed persons to make the calls and then hand the call over to a licensed person.

Commissioner Caride asked the Task Force if it would agree to comment on the CMS’s proposed rule and any objections to commenting. Mr. Swanson said the regional CMS personnel he has engaged with would appreciate input from the NAIC to get the attention of the officials in the District of Columbia. Commissioner Caride noted that both Idaho and Missouri concur with Mr. Swanson’s comments. She asked if there are any interested parties that wish to comment.

Bonnie Burns (California Health Advocates—CHA) said the CHA submitted a letter to the Task Force laying out its position and what it has commented to the CMS. She said there has been a massive increase in the number of people being switched to plans they either did not want or were not appropriate for them. She said she has seen those dually eligible being moved from their non-premium plans to plans with premiums and plans that have co-payments when they should not have any co-payments. She said the CMS’s own statistics show there has been a jump in complaints. She said in 2020, the CMS received a total of 15,497 complaints related to marketing; and in 2021, excluding December, the CMS received 39,617 complaints. She said this is an indication of companies fighting for market share and agents and brokers fighting for sale commissions.

Ms. Burns said one area of great concern is that there is no indication to how any enforcement is taking place. She said some states have memoranda of understanding (MoUs) with the CMS so there would be a transfer of information, but when an agent or a broker where these actions are taking place is identified, there does not appear to be any formal process in the CMS proposed rule for these agents and brokers who are licensed to be disciplined through the states’ licensing and enforcement system. She said the CMS is proposing a disclaimer to be added to websites and advertisements stating that the consumer is not being given all the information about plans available to them. She said such a disclaimer is ineffective, and she said she proposed in the letter to the Task Force what would be an adequate disclosure to consumers. She said SHIPs are not even referenced in the proposed rules, and she strongly believes SHIPs must be included. She also said the proposed rule should require agents and brokers to sign an attestation to show that what is being offered and sold is an improvement to the consumer from what they are already enrolled in. She said this already exists for Medicare Supplement plans, so it should apply to MA plans.

Mr. Henderson pointed out that most of the SHIPs are in states’ Aging and Elderly offices, so if there is no connection to the state insurance departments, many of these issues are going unheard and are not being reported to insurance departments.

Harry Ting (Health Consumer Advocate) said he is an NAIC consumer representative and SHIP counselor. He said he had a client who was cold called, told the caller she did not want to change but was changed to a new plan that did not fit her needs. He said when he asked the new plan who the producer was who called the client and switched her to the new plan, they said they did not know. He said these marketing organizations have very little incentive to discipline their people, and when he asked the client if she would like to file a complaint, she was reluctant to do so.
Dr. Ting said he agrees with Ms. Burns that the CMS proposed rule is not impactful enough. He proposed that the CMS use its complaint tracking module that counted over 39,000 complaints in 2021 to enter a star system calculation and assign a certain number of stars to those plans. He said it would make the marketing organization more sensitive and willing to take action to reduce complaints.

Commissioner Mulready said the Oklahoma Insurance Department has received dozens and dozens of calls and complaints, and it is supportive of letting the CMS know what states are experiencing. Ms. Burns said holding plans or marketing organizations accountable is laudable, but it does no good if the complaints and information are not getting to the states’ departments of insurance (DOI), and in turn, there is no action on a state level holding these actual sellers accountable.

Commissioner McVey made a motion, seconded by Commissioner Pike, that the Task Force submit comments in response to the CMS’s proposed rule on stricter marketing guidelines for MA plans. The motion passed unanimously.

Commissioner McVey asked about the process of submitting comments. Commissioner Caride asked David Torian (NAIC) to explain. Mr. Torian said he would like comments to be submitted by week’s end, or Monday, Feb. 14 at the latest. He said he would collate the comments into a single letter for the Task Force to adopt via an e-vote. He reminded the Task Force that time is of the essence, as the deadline for comments to the CMS is March 7, and any comments adopted by the Task Force will need approval from the Government Relations (EX) Leadership Council. Commissioner Caride asked if there are any issues or problems with that process, and none were heard.

Having no further business, the Senior Issues (B) Task Force adjourned.

SITF 02-08-22 Minutes
Hon. Chiquita Brooks-LaSure - Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
200 Independence Avenue, SW
Washington, D.C. 20201

Dear Administrator Brooks-LaSure:

We are writing on behalf of the National Association of Insurance Commissioners’ (NAIC) Senior Issues (B) Task Force to request guidance from CMS regarding the treatment of nonparticipating durable medical equipment (DME) suppliers under Medicare's "Limitation on Beneficiary Liability" (the so-called "balance billing limits").

The NAIC is the standard setting organization representing the chief insurance regulators in the 50 states, the District of Columbia, and the United States territories.

The NAIC’s Senior Issues (B) Task Force (SITF) is charged with considering policy issues; developing appropriate regulatory standards; and revising, as necessary, the NAIC models, consumer guides, and training materials on Medicare supplement (Medigap) insurance, long-term care insurance (LTCI), senior counseling programs, and other insurance issues that affect older Americans.

The SITF seeks critical guidance from CMS that a nonparticipating supplier of scooters or other DME items and services may only charge 15% more than the Medicare approved amount. The SITF has heard from many state regulators, consumer advocates and industry representatives about Medigap insurers being presented with "excess charges" claims for expensive motorized "scooters" that are submitted as Medicare covered DME. These claims are submitted by nonparticipating suppliers to Medicare for payment and beneficiaries are "balance billed" an enormous amount. The insurers have been paying these "excess charges" claims in full to satisfy policyholders and to avoid complaints.

These "excess charge" claims are becoming more frequent and more expensive. Insurers and state regulators are concerned about the appropriateness of these claims by nonparticipating DME suppliers and the resulting impact on Medigap premiums. The SITF has been presented with many examples of these excessive charges. One example illustrated billed charges from one scooter supplier ranging from $15,789, to $31,000, depending upon the model of the scooter. The Medicare approved amount is significantly lower than the actual billed amount. In one instance, Medicare was billed $43,485.10, for a power wheelchair and the Medicare approved amount was $4,702. The remaining "excess" balance of $38,783.10 was then presented to a Medigap insurer for payment in full as an "excess charge."

Medigap policies are required to pay benefits based upon "Medicare eligible expenses." This term is defined in the NAIC Model Regulation to Implement the NAIC Medicare Supplement Insurance Minimum Standards Model Act (Model #651) to mean "expenses of the kinds covered by Medicare Parts A and B, to the extent recognized as reasonable and medically necessary by Medicare." See Model #651 at Section 5.G ("Policy Definitions and Terms"). See also Model #651 at Sections 8, 8.1, 9. 9.1 ("Minimum Benefit Standards"). Accordingly, Medigap benefit payments require that Medicare must first determine that expenses are covered and must be recognized as reasonable and necessary.
Model #651 requires that certain standardized plans must include a benefit for payment of Medicare Part B "Excess Charges." This benefit is described in Model #651 as coverage for a percentage of the difference between the actual Medicare Part B charge as billed, not to exceed any charge limitation established by the Medicare program or state law, and the Medicare-approved Part B charge. See Model #651 at Sections 8.C; 8.1.C; 9.E; 9.1.E; and 10.M-N.

The benefit for "Medicare Part B Excess Charges" was adopted following the enactment of the 1990 federal Medigap standardization legislation. The NAIC debated how to properly characterize and phrase the requirement. There was agreement that these "excess charges" were billed by providers in amounts that were above the Medicare-approved amount, and so otherwise would not be paid for by the plans.

The NAIC considered changing the term "Medicare Part B Excess Charge" to "Part B Balance Billing" but concluded that the change would mean nothing to an average consumer. See Model #651, Proceedings Citation, Section 8C at page PC-651-8; and Section 17D at page PC-651-26. Separately, CMS defines "excess charge" as an amount that is "the difference between the Medicare-approved amount and the legally permitted higher charge." See CMS-NAIC, "Guide to Choosing a Medigap Policy-2021" at page 49 ("Definitions").

As described in the "Guide to Choosing a Medigap Policy" the phrase referring to "the legally permitted higher charge" is clearly a reference to the limits on "balance billing." Based on the timing of the NAIC's consideration of the "excess charges" benefit, and the NAIC debate about the phrase, it is clearly intended to address the so-called "balance billing" circumstances discussed below.

In 1993 the Congress amended the "balance billing" protection provision to clarify that the "extra-billing" limits also applied to non-participating "suppliers or other persons." See H.R. 2264, OBRA Act of 1993, Section 13517 (entitled "Extension of Physician Payment Provisions to Nonparticipating Suppliers and Other Persons"). The conference committee explanation simply states that the "nonparticipating suppliers would be prohibited from billing or collecting from any person an actual charge in excess of the Medicare limiting charge." See H.R. Rep. No. 213, 103d Cong. at 769-771 (August 4, 1993) (Conference Report to Accompany H.R. 2264)

Therefore, a nonparticipating supplier is legally only permitted to charge 115% of the Medicare-approved amount. The statutory text of the Social Security Act's "Limit on Beneficiary Liability" applies to a "nonparticipating physician or nonparticipating supplier (emphasis added) or other person who does not accept payment on an assignment-related basis for a physician's service" that is furnished to a Medicare beneficiary. See Social Security Act Section 1848(g)(1)(A).

Arguably the Social Security Act's "Limits on Beneficiary Liability" provisions apply to these "balance billing" claims for motorized scooters as well as other DME items submitted by nonparticipating DME suppliers.

In addition, CMS states that: "No longer are services of suppliers and other nonphysicians … excluded from the limiting charge." See Medicare Carriers Manual, Part 3 - Claims Process, Section 17002 ("Limiting Charge") at page 17-7 (July 11, 2003).

The term "nonparticipating supplier" in this section of the statute does not provide any exception for a DME supplier or any other type of supplier. It is broadly defined elsewhere as "a supplier or other person that is not a participating supplier." See Social Security Act Section 1842(i)(2). The statute further provides that no person may bill or collect an actual charge for the service in excess of the...
limiting charge. See Social Security Act Section 1848(g)(1)(A)(i). Furthermore, the statute provides that no person is liable for payment of any amounts billed for the service in excess of such limiting charge. See Social Security Act Section 1848(g)(1)(A)(ii).

CMS regulations provide that a "supplier" who is nonparticipating and does not accept assignment may charge a beneficiary an amount up to the limiting charge. The regulations establish specific limits on the actual charges of nonparticipating suppliers for both "items and services" at 115% of the Medicare approved charge. See 42 CFR 414.48 (a)-(b) ("Limits on actual charges of nonparticipating suppliers").

Medicare Part B pays for DME that is used in a patient's home. A DME supplier is defined as an entity with a valid Medicare supplier number (both participating and nonparticipating). A power mobility device (PMD) is a covered item along with power wheelchairs and motorized scooters. To be covered a PMD requires: (1) first, a written order or prescription from a physician; (2) a face-to-face encounter with a physician; and (3) supporting documentation for "medical necessity." See 42 CFR 410.38(a)-(d).

A "supplier" is defined broadly in the CMS regulation as "an entity other than a provider that furnishes health care services under Medicare. See 42 CFR 400.202. In the preamble to the 1993 final rule CMS explains changes to the regulations that "in addition, the limiting charge provision will apply to nonparticipating suppliers or other persons. Previously, it had applied to the services of nonparticipating physicians only." See 58 Fed. Reg. 230 at page 63646 (December 2, 1993).

Finally, the consumer reliance on the marketing of these DME items at no cost to Medicare beneficiaries, who are then more likely to agree to purchase those items, contributes to driving up the costs to Medicare. It isn't just the cost to insurers and the impact on Medigap premiums but the resulting cost to Medicare Part B.

The Social Security Act's "Limitation on Beneficiary Liability" clearly references a "nonparticipating supplier or other person" without qualification or exceptions. See Social Security Act Section 1848(g)(1)(A). The Act's DME payment provisions clearly refer to providers of DME as "suppliers." See Social Security Act Section 1834(a).

The SITF requests guidance from CMS regarding nonparticipating DME suppliers and looks forward to CMS’ response as it will help the State regulators, Medigap insurers and Medicare beneficiaries understand better how to address this matter.

Sincerely,

Marlene Caride

The Property and Casualty Insurance (C) Committee met in Kansas City, MO, April 7, 2022. The following Committee members participated: Mike Chaney, Chair (MS); Alan McClain, Co-Vice Chair (AR); Anita G. Fox, Co-Vice Chair (MI); Jim L. Ridling (AL); Ricardo Lara (CA); Andrew N. Mais, George Bradner, and Wanchin Chou (CT); Trinidad Navarro (DE); Colin M. Hayashida represented by Martha Im and Kathleen Nakasone (HI); Vicki Schmidt (KS); James J. Donelon (LA); Chris Nicolopoulos (NH); Glen Mulready (OK); Larry D. Deiter (SD); Tregenza A. Roach (VI); Allan L. McVey (WV). Also participating were: David Altmaier (FL); Eric Dunning (NE); Martha Lees (NY); Mike McKenney (PA); and Eric Slavich (WA).

1. **Adopted its 2021 Fall National Meeting Minutes**

Commissioner McVey made a motion, seconded by Director Fox, to adopt the Committee’s Dec. 15, 2021, minutes (see NAIC Proceedings – Fall 2021, Property and Casualty Insurance (C) Committee). The motion passed unanimously.

2. **Adopted the Reports of its Task Forces and Working Groups**

A. **Casualty Actuarial and Statistical (C) Task Force**

Mr. Slavich said the Casualty Actuarial and Statistical (C) Task Force March 8 in lieu of the Spring National Meeting. During that meeting, the Task Force adopted a document with guidance for the regulatory review of random forest rate models. This document is a follow-up to the Task Force’s white paper titled *Regulatory Review of Predictive Models*, which was adopted last spring. In writing the initial white paper, the Task Force focused on just one predominant type of multivariate analysis: generalized linear models (GLMs). The new guidance deals with random forest models, and the Task Force intends to continue working to create guidance for other types of models.

Mr. Slavich said the Task Force has been discussing an issue raised by the American Academy of Actuaries (Academy) related to accounting practices for portfolio retroactive reinsurance. In May 2019, the Academy wrote to the Task Force and the Statutory Accounting Principles (E) Working Group about this issue, and the Working Group asked the Task Force for input. After investigating the issue and after a long period of discussion, the Task Force decided to proceed with writing some suggested revisions to the instructions for Schedule P and perhaps also for paragraph 36 and paragraph 37 in the *Statement of Statutory Accounting Principles (SSAP) No. 62R—Property and Casualty Reinsurance*. The Task Force will provide these suggestions to the Statutory Accounting Principles (E) Working Group for its consideration.

Mr. Slavich also said the Statistical Data (C) Working Group has been working with statistical agents to implement accelerated publishing of average premium data. The Working Group decided to include accelerated average premiums every year for the *Dwelling, Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance Report* (Homeowners Report). This will result in the production of two reports in 2022: 1) the normal report with 2020 data; and 2) an accelerated report with 2021 data. Only one report will be needed in subsequent years. Discussions about expedited reporting for the *Auto Insurance Database Report* (Auto Report) are ongoing.
Mr. Slavich also reported the Task Force continues to meet regularly, including both a monthly Book Club meeting to educate on predictive modeling and a monthly regulator-to-regulator meeting to discuss rate filing issues. These discussions have proven to be a valuable resource for regulatory actuaries (and non-actuary regulators), and the Task Force intends to continue with these meetings.

B. Surplus Lines (C) Task Force

Commissioner Donelon said the Surplus Lines (C) Task Force has not met yet in 2022, but it plans to meet soon to hear from the drafting group looking at the Nonadmitted Insurance Model Act (#870). That drafting group is working to modernize this model to bring it in line with the federal Nonadmitted and Reinsurance Reform Act (NRRA).

C. Title Insurance (C) Task Force

Director Dunning said the Title Insurance (C) Task Force met April 5 to hear states report on how they deal with wire fraud issues referred by title agents, as well as how states handle closing protection letters (CPLs). The Task Force also heard a presentation from industry on CPL policy language, including exclusions, and discussed its work plan for the year.

Director Dunning said the work plan includes meeting in regulator-to-regulator session in June with the Consumer Financial Protection Bureau (CFPB) to discuss recent changes, Real Estate Practices Act (RESPA) activities, and how states should collaborate with the CFPB. Additionally, the work plan calls for hearing from industry on what the post-pandemic future of the title insurance industry will look like, particularly in regard to virtual closings. It also calls on industry to share how complications arise from the required use of plans by some states that include rules or forms tailored to other lines of insurance. Director Dunning said the Task Force will review the Title Insurance Model Act to determine if there is a need to make a recommendation to remove the requirement for on-site review of underwriting and claims practices.

Director Fox asked if there was a date scheduled for the next Title Insurance (C) Task Force meeting, to which Director Dunning replied that it had not been set yet.

D. Workers’ Compensation (C) Task Force

Commissioner McClain said the Workers’ Compensation (C) Task Force met March 21 in lieu of the Spring National Meeting. The Task Force heard updates on federal legislation, including original language included in the Build Back Better Act that provided funding to the U.S. Department of Labor (DOL) Office of Workers’ Compensation Programs (OWCP) for “monitoring of state workers’ compensation programs.” That language was ultimately removed. The Task Force heard updates on cannabis, independent contractor, and single-payer health care, and state and federal legislation as related to workers’ compensation.

E. Cannabis Insurance (C) Working Group

Commissioner Lara said the Cannabis Insurance (C) Working Group met March 24 in lieu of the Spring National Meeting. During its meeting, the Working Group heard from two presenters on the state of the cannabis insurance industry. It also heard an update on federal cannabis-related legislative activities and discussed its 2022 work plan. The work plan includes monitoring cannabis-related federal legislative activities and discussed its 2022 work plan. The work plan includes monitoring cannabis-related federal legislative activities and discussed its 2022 work plan. The work plan includes monitoring cannabis-related federal legislative activities and discussed its 2022 work plan. The work plan includes monitoring cannabis-related federal legislative activities and discussed its 2022 work plan. The work plan includes monitoring cannabis-related federal legislative activities and discussed its 2022 work plan. The work plan includes monitoring cannabis-related federal legislative activities and discussed its 2022 work plan. The work plan includes monitoring cannabis-related federal legislative activities and discussed its 2022 work plan. The work plan includes monitoring cannabis-related federal legislative activities and discussed its 2022 work plan. The work plan includes monitoring cannabis-related federal legislative activities and discussed its 2022 work plan. The work plan includes monitoring cannabis-related federal legislative activities and discussed its 2022 work plan. The work plan includes monitoring cannabis-related federal legislative activities and discussed its 2022 work plan. The work plan include...
Commissioner Lara said the work plan also calls for continued discussion with the Producer Licensing (D) Task Force on whether there is a need to collaborate to study social equity issues in states where cannabis is legalized for medical and/or recreational use.

Commissioner Lara said the work plan calls on the Working Group to explore emerging issues and market availability constraints through additional presentations. This includes exploring the risks of minor CBD-derived intoxicants and social consumption lounges and how a federal cannabis regulatory framework could help inform insurers’ coverage offerings.

F. Catastrophe Insurance (C) Working Group

Commissioner Altmaier said the Catastrophe Insurance (C) Working Group met March 4 and in joint session with the NAIC/Federal Emergency Management Agency (FEMA) (C) Advisory Group April 4. The Working Group is currently working on updates to the *Catastrophe Modeling Handbook*. NAIC staff sent a survey to states regarding the Handbook in order to collect information from the states to help guide the update of the Handbook. A drafting group has met once to begin the process of updating the Handbook.

Commissioner Altmaier said the Working Group stays informed about catastrophic events in other states and shares lessons learned and processes other states use in the aftermath of a storm or other catastrophic event. On April 4, the Working Group heard an update from Iowa and Tennessee state insurance regulators regarding recent catastrophic weather events. Commissioner Altmaier reported that the NAIC has been partnering with FEMA on regional events to help state departments of insurance (DOIs) form better relationships with their FEMA partners. During the April 4 meeting, Commissioner Mulready provided the Working Group with an overview of past FEMA regional meetings, as well as the upcoming FEMA Region 6 meeting that will be held in Oklahoma City, OK, May 3–4. Commissioner Altmaier also said NAIC staff continue to add information to the Catastrophe Resource Center and are looking for state insurance regulator input.

Commissioner Chaney reported the Missouri Department of Commerce and Insurance will be cohosting the Central U.S. Quake Insurance Summit May 23–24 in St. Louis, MO.

G. Pet Insurance (C) Working Group

Commissioner Chaney provided an update on the status of the Pet Insurance Model Act. The model was previously adopted by the Property and Casualty Insurance (C) Committee but was pulled off the Plenary agenda at the 2021 Fall National Meeting because a couple states brought forth concerns about the producer training section of the model.

Commissioner Chaney said the model will be exposed with small revisions, and comments will be discussed during an upcoming meeting of the Pet Insurance (C) Working Group. Commissioner Chaney said the Pet Insurance (C) Working Group was not reappointed in 2022 because it was thought its work was complete.

Commissioner Schmidt made a motion, seconded by Director Deiter, to adopt a charge for the Pet Insurance (C) Working Group to “complete the development of a model law to establish appropriate regulatory standards for the pet insurance industry.”

Director Fox made a motion, seconded by Commissioner McVey, to adopt an extension to the Summer National Meeting for revisions to the proposed Pet Insurance Model Act. The motion passed unanimously.
H. Terrorism Insurance Implementation (C) Working Group

Ms. Lees said the Terrorism Insurance Implementation (C) Working Group has not met yet this year, but it does plan to meet in the near future to receive an analysis of the recently received workers’ compensation data, as well as last year’s data received in the non-workers compensation portion of the state insurance regulator data call. Ms. Lees said the Federal Insurance Office (FIO) and the NAIC formally notified insurers of this year’s data call on April 1 by providing instructions to insurers for submitting the data to both locations. She said the due date will be May 16, and additional information can be found on the NAIC and the U.S. Department of the Treasury (Treasury Department) websites.

I. Transparency and Readability of Consumer Information (C) Working Group

Mr. Bradner said the Transparency and Readability of Consumer Information (C) Working Group has been working on a project over the past year to draft regulatory best practices that serve to inform consumers of the reasons for significant premium increases related to property/casualty (P/C) insurance products. The Working Group formed drafting groups in three areas: 1) disclosure language; 2) rate filing checklist; and 3) consumer education. He said the disclosure language and the rate filing checklist drafting groups have completed their work, and the consumer education drafting group has sent its final document to Brenda J. Cude (University of Georgia) to be reviewed for readability. These documents will be combined into a single “best practices” document. Mr. Bradner said the Working Group will meet in April to review the document and expose it for comment. The Working Group anticipates this project to be complete sometime in May and sent to the Property and Casualty Insurance (C) Committee for consideration of adoption during the Summer National Meeting.

Commissioner Mulready made a motion, seconded by Commissioner Ridling, to adopt the following task force and working group reports: Casualty Actuarial and Statistical (C) Task Force; Surplus Lines (C) Task Force; Title Insurance (C) Task Force; Workers’ Compensation (C) Task Force; Cannabis Insurance (C) Working Group (Attachment One); Catastrophe Insurance (C) Working Group (Attachment Two); Pet Insurance (C) Working Group; Terrorism Insurance Implementation (C) Working Group; and Transparency and Readability of Consumer Information (C) Working Group. The motion passed unanimously.

3. Heard a Presentation on PPA Insurance Results

Aaron Brandenburg (NAIC) said NAIC staff was asked by the Committee to analyze Annual Statement data to show trends in private passenger auto (PPA) premiums and losses through 2021 when possible. He noted most of the data comes from the Insurance Expense Exhibit in order to create combined ratios. This exhibit comes into the NAIC on April 1, so combined ratios for 2021 are not presented within the analysis.

For PPA liability, written premium fell in 2020 due to the COVID-19 pandemic. Premium rose every year over the past 10 years, typically in the 2%–7% range, except for in 2020, when it fell 2%. Premium rebounded in 2021 with about a 6% increase. Loss ratios for PPA liability typically ranged from 63%–71% over the last 10 years, with a 10-year average of 65.5%. The loss ratio for 2020 was 56%, and 2021 is at the 10-year average. The 10-year average for combined ratio is 103%, with 2020 as the only year below 100% at 94.8%. Mr. Brandenburg said it seems likely that 2021 will be close to average in the low 100 percentile.

Mr. Brandenburg said PPA physical damage premium rose every year over the past 10 years, but it fell in 2020. Physical damage usually rises between 2% and 9%, with 2020 the only decrease at about 1%. PPA physical damage premium rose 9% in 2021. The 10-year average loss ratio is 64.4%, with 2020 at 55% and 2021 at 71.5%. The combined ratio for PPA physical damage is 97.3%, with 2020 at 89.2%.
Mr. Brandenburg noted the PPA market of $250 billion or $260 billion is historically around 35% of the total P/C insurance industry. The total PPA market usually rises from 3% to 8% in premium, but premium fell nearly 2% in 2020, with a 7% increase in 2021. The 10-year average loss ratio for the PPA industry as a whole was 65%, with 2020 under 56%, and 2021 at 68%. The combined ratio was about 101%, with 2020 at a 92.5% combined ratio. Mr. Brandenburg said it is expected that 2021 will see a combined ratio above 100%.

Mr. Brandenburg said the NAIC’s annual Report on Profitability By Line By State (Profitability Report) is produced later in the year, so 2021 results are not available. However, he said the average return on net worth (RNW) for the PPA line as a whole is 4.86%. He said the years 2018–2020 were above average, with 2020 coming in at 10.2% RNW. It is expected 2021 RNW decrease, and that number will be shared with the Committee when available.

Mr. Brandenburg asked if the Committee would like additional quarterly data. He said the Annual Statement has quarterly data showing national loss ratios for PPA. In addition, the NAIC and states receive Fast Track data from statistical agents. The Fast Track data represents not all but a significant portion of the PPA industry and is received on a quarterly basis. Mr. Brandenburg said NAIC staff have created charts showing quarterly trending with frequency and severity figures. He noted the data is a snapshot in time and only a subset of larger writers within the market. He also said the Statistical Data (C) Working Group is reviewing the Statistical Handbook of Data Available to Insurance Regulators, which describes statistical data submitted to states.

Director Fox said state insurance regulators would find value in reviewing quarterly data especially related to reduced driving and whether there has been an increase in automobile part costs.

Mr. Chou asked if NAIC staff would be working with the Statistical Data (C) Working Group to update average premium figures. Mr. Brandenburg said the NAIC publishes the Auto Report annually, which includes average auto premiums by state, and the Statistical Data (C) Working Group is considering changes that would move the publication of those figures up.

Binny Birnbaum (Center for Economic Justice—CEJ) said the CEJ and the Consumer Federation of America (CFA) reported at the Property and Casualty Insurance (C) Committee meeting in December 2021 that the auto insurance industry had received windfall profits. He said industry results can be deceptive because they combine mutual insurer results with publicly traded insurers. He said the industry focuses on increasing claim costs when convenient, but it does not talk about a decrease in claims such as in 2020. He also said the industry receives additional premium as vehicle values increase. He said the windfall profits of 2020 were not offset by 2021 and 2022. He noted that insurers asked for rate increases in 2021 and that insurers did not lose money in 2021 or 2022. Mr. Birnbaum said state insurance regulators need improved data and authorities to prevent future windfall profits.

Director Fox asked about profitability results and the relationship between premium and claims and distinguishing between what came from premium compared to investment income. Mr. Birnbaum said combined ratios have other expenses included but not profits from investment income. He said investment income has been relatively stable and does not change dramatically.

4. Heard a Presentation Related to the Effects of Inflation on Auto and Homeowners Lines

Susanna Gotsch (CCC Intelligent Solutions) said CCC Intelligent Solutions is a software as a service (Saas) provider that handles repair costs in auto physical damage claims. She said the COVID-19 pandemic saw a significant drop-off in driving, with a greater than 13% decline in miles driven in 2020. She said miles driven recovered throughout 2021 and exceeded pre-pandemic levels. She said CCC processed about 12 million claims in 2021, where a normal year pre-pandemic would see about 16 million claims. She said claims continue to increase.
Ms. Gotsch said a claim often flags whether a vehicle is drivable or not because a non-drivable vehicle will typically see average repair costs of around $6,000 compared to around $3,000 for a drivable vehicle. During the pandemic, the industry started to see a steady uptick in the percent of claims that were non-drivable losses, with higher repair costs. She said vehicle repair costs climbed more than 9% in 2021. She noted a lot of these increases have to do with a changing vehicle fleet and the content of those vehicles with more expensive components within the vehicle. She said the average new vehicle contains more than 100 semiconductor chips. She noted that raw materials costs have been increasing, with average costs paid per auto part up more than 8%. She also explained that supply chain disruptions and the Russian invasion of Ukraine are adding significant cost pressures to the average replacement part.

Ms. Gotsch said the benefits of the advanced driver-assistance systems (ADAS) have become less beneficial because of congested roads and higher speeds. She said 96% of repair shops have a backlog for repairs. She said used vehicle values will remain elevated and that the cost of total loss claims showed a 25% increase in 2021. She noted that the auto insurance industry is seeing more distracted driving, higher speeds, and more severe injuries.

Robert Hartwig (University of South Carolina) said the year-over-year (YOY) inflation rate was 7.5% in January 2022, with February at 7.9%, the highest figure in 40 years. He said the personal auto claims severity is as high as it has been over the past several decades. He also noted people are driving more and involved in more accidents. He said police departments are showing an increase in excess speed and substance abuse.

Mr. Hartwig said PPA loss ratios have increased quickly throughout 2021 in each quarter. The physical damage loss ratio has increased quickly after falling in 2020. The homeowners loss ratio has increased by 15 points since 2019 and in 2021 was 12.8 points higher than the all-property and casualty lines average.

Mr. Hartwig said lumber and wood product prices have more than doubled from pre-COVID-19 and have come down about a third since then. He also explained investment yields in 2021 were depressed, down about 2.6% in the first three quarters of 2021, the lowest figures since 1960. Net investment income has dropped about 12% since 2018. He said P/C insurance profitability is significantly below that of the Fortune 500 companies. The ratio of premium to policyholder surplus is relatively stable over time. Inflation-adjusted insured catastrophe losses have increased over the past five years, which is driving up the cost of property insurance. The P/C insurance industry is experiencing a sharp increase in claim severities affecting property, liability, and auto coverages. Mr. Hartwig noted inflation, catastrophe losses, demand surge, and increased dangerous driving behaviors are all contributing to the increase in severities and loss ratios. Investment income has been falling in recent years. He said rate adequacy is a concern. He noted insurers use current trend data to develop rates prospectively, hence the pressure to adjust rates accordingly.

Commissioner Mulready asked what state insurance regulators could do help navigate these sharp increases in costs.

Mr. Hartwig said some of the things are beyond control, such as the decrease in seatbelt use and increase in excessive speeding. He said there is hope that new technologies will decrease accidents, but this also leads to more expensive repairs. Ms. Gotsch said though driver-assistance features improve safety, they also increase driver distraction generally.

Commissioner McVey said state insurance regulators can provide additional consumer education about how people can reduce their claims through human behavior. He asked whether there would be some stabilization in the inflation rate. Ms. Gotsch said the semiconductor shortage has caused a decline in new vehicle production, which has put more people into the used vehicle market and has driven up the cost of U.S. vehicle prices. Mr. Hartwig said eventually inflation will come down from current levels, but wages and prices will normalize at a new, higher level.
Mr. Chou asked about bodily injury severity increasing by 14%, while physical damage increased 6.7%. Mr. Hartwig said bodily injury is most heavily influenced by medical costs. He said more impaired driving and distracted driving will result in more severe accidents.

Mr. McKenney said the data he has seen shows an increase in severity but declines in accident frequency. He said a decrease in severity does not usually offset the decline in frequency on the liability side. He said liability also has limits, which means severity has a limited impact. He said he believes insurers should not just increase rates on everyone, particularly those with lower limits who are not contributing to the increased severity. He noted that loss ratios are the most misunderstood statistic in actuarial science as they represent so many different things.

5. Discussed its Charge Related to Parametric Insurance Products

Commissioner Chaney said the Committee has a charge related to parametric insurance products that asks the Committee to provide a forum for discussing issues related to parametric insurance and to consider the development of a white paper or regulatory guidance. He said the Committee will hear from parametric insurance providers in the future. In addition, the Climate and Resiliency (EX) Task Force has a workstream looking at innovation that has heard from numerous parametric insurance providers related to climate risks. Commissioner Chaney said NAIC staff will look at those presentations and begin to create a document that would summarize the various products being introduced in the market along with some potential regulatory issues. He said the Committee will begin to work on a white paper related to parametric insurance with a goal of drafting a paper in 2022.

6. Heard a Presentation on Gun Owners Liability

Peter Kochenburger (University of Connecticut School of Law) said San Jose, California, recently passed an ordinance requiring residents who possess guns to have liability insurance to cover accidental gun deaths. He said the number of firearm deaths and injuries have increased in the past few years. He noted the idea of the ordinance is that by requiring gun owners to have insurance, this will lead to insurers to study the risk and ask the questions necessary to evaluate whether a gun owner is storing and using the gun in the safest manner possible.

Mr. Kochenburger said the ordinance includes a $25 fee and requires the gun owner to maintain a liability policy that specifically covers losses resulting from the accidental use of the firearm. Mr. Kochenburger said the provision has been challenged in court. He noted that virtually all homeowners and renters policies currently cover the accidental usage of firearms. In 2020, 95% of gun deaths were suicides and homicides and accidental discharges account for only 1.2% of all deaths. He said using the traditional functions of insurance to address a social problem has been done before, but this particular ordinance is not likely to be very effective. He also noted that it injects insurers into a contentious public policy debate.

7. Heard a Federal Update

Brooke Stringer (NAIC) said the NAIC attended a virtual roundtable with Republican committee members, insurers, and policyholders to discuss pandemic risk insurance. The NAIC submitted a statement for the record supporting the development of a federal business interruption mechanism provided it does not undermine regulatory authorities, jeopardize insurer financial condition, and is otherwise affordable to policyholders. The NAIC has not taken a position on any specific proposal at this time. No Republicans support Rep. Carolyn B. Maloney’s (D-NY) Pandemic Risk Insurance Act (PRIA) (H.R. 5823), which would establish a federal Pandemic Risk Reinsurance Program to provide a system of shared public and private compensation for business interruption (BI) losses resulting from a pandemic, subject to certain conditions, deductibles, and caps. The NAIC will continue to monitor proposals, but given the insurance trades’ opposition to PRIA, Republican opposition to the bill, and significant
funding with the pandemic and infrastructure bills, there may not be much of an appetite for developing such a new federal program at this time.

Ms. Stringer said NAIC staff have met with the staff of Rep. Maxine Waters (D-CA), chair of the U.S. House Committee on Financial Services, to discuss the House Subcommittee on Diversity and Inclusion’s plans to study the insurance industry. They have previously produced reports on banks/investment firms. She noted that the insurance industry has begun to receive letters, and the Subcommittee hopes to have a report finalized before the elections.

Ms. Stringer reported that the FIO is preparing an auto insurance availability and affordability report for Congress focusing on underserved communities and the impact of non-driving factors. The FIO issued a request for information in 2021 soliciting input as follow up to its 2017 report.

Ms. Stringer said the staff of Sen. Sherrod Brown (D-OH), chair of the U.S. Senate Committee on Banking, Housing, and Urban Affairs, are drafting a bill to expand the federal Liability Risk Retention Act (LRRA) to allow risk retention groups (RRGs) to sell property insurance provided they serve nonprofits and meet certain other requirements. The NAIC continues to raise concerns and provided information on the regulatory authorities (particularly non-domiciliary state authorities) that would be preempted by such an expansion.

Ms. Stringer said that in February, the House passed the SAFE Banking Act as part of the America COMPETES Act to provide a safe harbor from violations of federal law for those engaged in the business of insurance participating in cannabis industry activity that is permissible under state law.

Having no further business, the Property and Casualty Insurance (C) Committee adjourned.
The Cannabis Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met March 24, 2022. The following Working Group members participated: Ricardo Lara, Chair, represented by Melerie Michael (CA); Michael Conway, Vice Chair, represented by Peg Brown (CO); Jennifer Bruce (AR); Angela King (DC); Christina Miller (DE); C.J. Metcalf (IL); Marlene Caride represented by Randall Currier (NJ); Gennady Stolyarov (NV); Raven Collins (OR); Sebastian Conforto (PA); Elizabeth Kelleher Dwyer represented by Beth Vollucci (RI); Isabelle Turpin Keiser (VT); and Michael Walker (WA).

1. Adopted its 2021 Fall National Meeting Minutes

The Working Group met Dec. 1, 2021, and took the following action: 1) adopted its Oct. 21, 2021, minutes; 2) received a status report on the drafting of the updated Understanding the Market for Cannabis Insurance white paper; 3) discussed the potential to collaborate with the Producer Licensing (D) Task Force; 4) heard a presentation from the University of Colorado on emerging scientific issues in the cannabis space; and 5) heard a presentation from the Cannabis Regulators Association (CANNRA) on cannabis policy and regulation trends.

Mr. Currier made a motion, seconded by Ms. Brown, to adopt the Working Group’s Dec. 1, 2021, minutes (see NAIC Proceedings – Fall 2021, Property and Casualty Insurance (C) Committee, Attachment Two). The motion passed unanimously.

2. Heard a Presentation on the State of the Union in the Cannabis Insurance Industry

Erich Schutz (Jencap Specialty Insurance Services) stated that the cannabis space is experiencing massive growth, with sales expected to exceed $30 billion in 2022. There is a wide breadth of cannabis insurance products, but depth is an issue. For instance, there are only a few carriers writing cyber coverage. Putting together a $75 million property tower for a single location is not uncommon, but it is very difficult to do. Some carriers do not offer high enough limits on equipment breakdown. Workers’ compensation and auto coverage vary by state. Michigan and Massachusetts are good examples of states that have very robust assigned risk pools for both coverages. Other states do not have as many options. For example, auto placement in California is difficult, expensive, and often has coverage gaps. The reinsurance marketplace is limited in the cannabis space. There are approximately eight A-rated package markets writing leaf touching cannabis coverage currently supported by only two to three reinsurers of that population. Several of the markets are very conservative with catastrophe wind and will put a named source storm exclusion on any property policy written anywhere on the eastern seaboard. It is a big issue because this exclusion will apply to properties that are 150 miles inland from the coast. Parametric insurance is the only coverage available for outdoor crop, which is not practical or cost prohibitive. Federal outdoor crop insurance will not include marijuana until it is federally legalized or decriminalized. The market has not responded yet to the need for multiple coverages to be written by one market. For delivery-only risk, different markets will write the liability and products coverages. Likewise, coverages for premises (social) consumption are usually broken up among more than one carrier. The market for directors and officers’ coverage has doubled in capacity over the last 18 months to approximately 12 players. However, this does not address the needs of the many small mom and pop growers who need more robust and affordable liability coverages. Additionally, many of the smaller operations do not take up coverages unless it is mandated. Michigan has a law that all cannabis license holders must have $100,000 of product liability coverage with no exclusions. If the licensee operates in both the recreation and medical cannabis space, then they must have $100,000 for each. A specific carrier began offering a policy that
specified $100,000 had no exclusions to meet this need. The dram shop law, passed in the last year, states that a person is financially responsible for any bodily injury or property damage they incur while consuming cannabis. The law stipulates the coverage must be on admitted paper, which is limited at best.

Jodi Green (Miller Nash LLP) stated that the 2018 Farm Bill removed hemp, defined as cannabis and derivatives of cannabis with extremely low concentrations of the psychoactive compound delta-9-tetrahydrocannabinol (THC) (no more than 0.3% THC), from the definition of marijuana in the Controlled Substances Act (CSA). This created nuances that led to the development of an additional gray market for minor cannabinoids such as delta-8 and delta-10. Cannabinoids are naturally occurring in very small quantities in the plant. They are created by converting cannabinoids (CBD) and distillate into delta-8 or delta-10. Companies are creating minor cannabinoids because they have psychoactive affects and present a way to bypass federal law. Some state jurisdictions have banned these compounds entirely, and others have not addressed it. This inconsistent legal standing has created confusion among companies as to how these products can or cannot be sold.

The industry is maturing, with medical cannabis legal in 39 states and adult-use cannabis legal in 19 states. There are several federal bills pending that are attempting to fully legalize marijuana. The Secure and Fair Enforcement (SAFE) Banking Act of 2021 is attempting to create insurance regulations that will insulate insurance providers from federal prosecution. These federal bills are unlikely to pass this year, but there will be new states passing medical or recreational-use marijuana legislation. Regulations vary by state and locality, which makes it difficult for operators to comply with regulations and ties into carriers’ reluctance to offer coverage in the cannabis space. As the cannabis industry has matured, companies have felt safer to enforce their right under state law. This has led to more litigation. There have been many corporate governance lawsuits. Product liability lawsuits may come to the forefront given the numerous state product recalls. The largest product liability claims have come from a handful of lawsuits against Pure Leaf for mixing up their CBD and THC products, which resulted in consumers unknowingly consuming psychoactive products. This highlights the importance of liability coverage and adequate risk management in the industry. There have also been several employment lawsuits related to employee pay for time spent dining, golfing, or changing clothing. This highlights the need for more education on compliance protocols within the industry. There has been an uptick in cyber claims over the past year related to the collection and storage of customer information in the cloud. Rising risks from wildfires in places such as California and Colorado highlight the need for coverage of water, fire, and smoke damage. There have been significant theft issues, especially in Washington and California with armed robberies. There have been intellectual property lawsuits involving copyright or trademark infringement of products that are being sold. For instance, there were edibles resembling Skittles or other candies around Halloween that created concern for children’s safety. Environmental claims arise from using different solvents, chemicals, and pesticides in crop production. There have also been lawsuits related to California Prop 65, which requires companies to disclose the levels of certain harmful chemicals inherent in the product on its label.

Carriers are now paying claims, unlike five years earlier when many denied coverages. For instance, Hannover paid a couple claims in excess of $1 million. The health hazard exclusion is highly problematic. Carriers have sought to deny coverage for bodily injury and other claims based on this exclusion. Carriers also deny based on cannabis exclusions. There should be a carve-out on policies with these exclusions for companies that are operating in compliance with state law. Claims are frequently denied based on protective safeguard requirements, such as a certain number of cameras. There is not an issue with the amount of coverage available in the market but with the quality of the coverage. Carriers need to be educated that the minimum limits available under state law are designated for licensing requirements and are not meant to be what companies should be getting. There have been several lawsuits involving manufacturers and malfunctioning vaping products where the battery exploded and caused injury. Yet, one of the biggest failures throughout the cannabis industry is the continued lack of products coverage. Broker education is needed on this.
Ms. Brown asked what Mr. Schutz has heard about the homeowners residual market, as Colorado has recently heard about issues with the homeowners Fair Access to Insurance Requirements (FAIR) plans excluding marijuana. Mr. Schutz said he has seen this occurring in the Massachusetts risk pools, as well as the residual markets. This is a large concern, as residual markets are the markets of last resort.

Ms. Michael asked Ms. Green to elaborate on why she is not optimistic about the passing of a federal bill this year. Ms. Green stated that her views reflect that most pending bills are just iterations of earlier bills. The cannabis industry itself has not fully supported any one bill, as it is fragmented in terms of supporting piecemeal or wholistic legislation. Mr. Schutz stated that the political climate is not conducive to a bill passing in part due to the focus on Ukraine.

Mr. Currier asked for more information on the named storm exclusions and what could be done to create a reinsurance market short of federal legalization. Mr. Schutz stated that there is a limited pool of reinsurers. Education and advocacy are the best path forward until federal legalization. Brokers and carriers need to understand how well built the risk profiles are of the insureds who are in compliance with the law but are rated as if they are a higher risk because of the negative perception of the cannabis industry.

Ms. Michael asked what led to the doubling of directors and officers (D&O) coverage over the last year. Mr. Schutz said it’s a social equity issue. Most cannabis companies are either of a size they don’t need this coverage or they are in greater need of other coverages. However, carriers only heard from the people with deep pockets sitting on corporate boards about needing this coverage. Ms. Green said she agreed that the large corporate companies were pushing for this and it’s not helpful to small operators lacking basic coverage because its too costly.

3. **Heard a Report on Federal Cannabis-Related Legislative Activities from NAIC Staff**

Brooke Stringer (NAIC) stated that the NAIC is on record supporting both the SAFE Banking Act and the Clarifying Law Around Insurance of Marijuana (CLAIM) Act. The U.S. House of Representatives (House) passed the SAFE Banking Act last month for the sixth time on a bipartisan basis. It was added as an amendment to the American Competitiveness Of a More Productive Emerging Tech Economy Act (COMPETE) Act. Congressman Ed Perlmutter (D-CO) has been a strong supporter and advocate on this legislation for the SAFE Banking Act and will soon be retiring. U.S. Speaker of the House Nancy Pelosi has promised to advocate for legislation when the House conferences with the U.S. Senate (Senate) because the Senate has passed the COMPETE Act without the SAFE Banking Act in it. However, both leaders of the Senate do not support the SAFE Banking Act for assorted reasons. The SAFE Banking Act is not likely to pass because there is concern that a piecemeal approach will not be sufficient to address the issues.

4. **Discussed its 2022 Work Plan**

Ms. Michael stated that there would not be time to discuss its 2022 work plan. She requested that feedback on the plan be sent to NAIC staff. The work plan includes monitoring cannabis-related federal legislation, finishing updates on and moving for adoption of the *Understanding the Market for Cannabis Insurance* white paper by the Fall National Meeting, and hearing presentations and panel discussions on emerging issues.

Having no further business, the Cannabis Insurance (C) Working Group adjourned.
Catastrophe Insurance (C) Working Group
and the NAIC/Federal Emergency Management Agency (FEMA) (C) Advisory Group
Kansas City, Missouri
April 4, 2022

The Catastrophe Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met in Kansas City, MO, April 4, 2022, in joint session with the NAIC/FEMA (C) Advisory Group of the Catastrophe Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee. The following Working Group members participated: David Altmaier, Chair, and Susanne Murphy (FL); Mike Causey, Vice Chair, represented by Tracy Biehn (NC); Mike Causey, Vice Chair, represented by Tracy Biehn (NC); Brian Powell, Alan McClain (AR); Lucy Jabourian (CA); George Bradner and Wanchin Chou (CT); Travis Grassel (IA); Shannon Whalen (IL); Julie Holmes (KS); Matthew Mancini (MA); Joy Hatchette (MD); Jo LeDuc (MO); Mike Chaney (MS); Tom Botsko (OH); Glen Mulready (OK); Brian Fordham and Trisha Goldsmith (OR); David Buono, Shannen Logue, and Katie Merritt (PA); Alexander S. Adams Vega (PR); Stephanie Cope (TN); Mark Worman (TX); Brian Welch (WA); and Allan L. McVey (WV). The following Advisory Group members participated: Glen Mulready, Chair (OK); Carter Lawrence, Vice Chair, represented by Stephanie Cope (TN); Brian Powell (AL); Lucy Jabourian (CA); George Bradner and Wanchin Chou (CT); Travis Grassel (IA); Amy L. Bearn (IN); Julie Holmes (KS); Joy Hatchette (MD); Jo LeDuc (MO); Brian Fordham and Trisha Goldsmith (OR); Marly Santoro (VA); Brian Welch (WA); and Allan L. McVey (WV).

1. **Adopted the Working Group’s and Advisory Group’s Minutes**

Mr. Botsko made a motion, seconded by Ms. Cope, to adopt the Working Group’s March 4 minutes (Attachment Two-A) and the Advisory Group’s March 25 minutes (Attachment Two-B). The motion passed unanimously.

2. **Heard an Update on Federal Legislation**

Patrick Celestine (NAIC) said the National Flood Insurance Program (NFIP) is operating under an extension through Sept. 30, and the NAIC continues to reiterate support for a long-term reauthorization.

While there has not been much progress on a long-term reauthorization, there have been some reauthorization bills introduced. The NFIP Reauthorization and Reform Act of 2021 has been introduced in both the U.S. House of Representatives (House) and the U.S. Senate (Senate). This bill would allow for a five-year reauthorization, cap annual rate increases at 9% (compared to the current 18%), cap the Write Your Own (WYO) compensation at 22.46% of written premiums (versus the current 30%), and require each agent that sells NFIP policies to complete a three-hour continuing education (CE) course every two years. The CE course would need to be approved by the insurance commissioner in the state where the agent is a legal resident.

Mr. Celestine said the Continuous Coverage for Flood Insurance Act has also been introduced in both the House and the Senate. This bill would clarify that a flood insurance policy purchased in the private market would count as “continuous coverage” under the terms of the NFIP. Therefore, policyholders could return to the NFIP without losing any previous subsidy.

Mr. Celestine said FEMA began phase two of its implementation of Risk Rating 2.0. Policies renewing on or after April 1 will be issued under Risk Rating 2.0. A bipartisan group of coastal senators unsuccessfully advocated postponing the implementation of Risk Rating 2.0, warning FEMA about the impact of premium increases. This will remain a key issue for the reauthorization of the NFIP.
Mr. Celestine said the Flood Insurance Pricing Transparency Act was introduced in the Senate. This bill would require FEMA to publish the formulas used to calculate mitigation credits for policyholders under Risk Rating 2.0. The bill would also require FEMA to release a toolkit that could be used to estimate the cost of insurance for new construction, without compromising proprietary information.

Lastly, Mr. Celestine said the Senate Committee on Homeland Security and Governmental Affairs approved the Community Disaster Resilience Zones Act of 2022, advancing it to the full Senate. Chairman Gary C. Peters (D-MI) and Ranking Member Rob Portman (R-OH) sponsored the bill. The Reinsurance Association of America (RAA) has also been a strong proponent of this bill. The bill would amend the Stafford Disaster Relief and Emergency Assistance Act to make permanent the National Risk Index, or a similar tool, and utilize its data to identify and designate community disaster resilience zone communities that are the most at risk to natural hazards. This would allow FEMA to identify what communities are most in need of assistance for mitigation projects.

Commissioner Mulready said a few weeks ago, Oklahoma had the privilege of hosting David Maurstad (FEMA) and the director of FEMA Region 6 in Tulsa, OK. He said Tulsa was one of only two communities in the country with the highest NFIP ratings based on a community rating system on a city’s stormwater management.

3. Discussed the *Catastrophe Computer Modeling Handbook* Updates

Commissioner Altmaier said the Working Group is charged with updating the *Catastrophe Computer Modeling Handbook* (Handbook). He said a drafting group consisting of several state insurance regulators has been formed, and the drafting group met last week to discuss a work plan for updating the Handbook. He said future drafting group calls will include interested parties that have expressed interest in attending these calls. He asked NAIC staff to provide and update of the drafting group’s meeting last week.

Sara Robben (NAIC) said the purpose of the Handbook is to serve as a guidebook for state insurance regulators to use. The drafting group discussed including sections in the Handbook that will encompass guidance for state insurance regulators in the areas of rates, forms, legal, etc. The intention of the Handbook is to steer away from theoretical information and provide guidelines for state insurance regulators. It is expected that the Handbook will cross-reference information with more technical information that can be found in the Society of Actuaries (SOA) documentation.

Ms. Robben said the drafting group also plans to send a survey to states, consisting of easy to answer questions regarding bulletins and regulations states have in place regarding catastrophe models. The drafting group hopes to put this information in the form of a chart with links to the actual document for easy reference.

Ms. Robben said anyone that has not yet joined the drafting group should reach out to her to be added to the list.

4. Heard an Update from the Iowa Insurance Division Regarding Recent Tornadoes

Mr. Grassel said Iowa has seen numerous catastrophic events in the last few years. He said these events included derechos, flooding, and severe convective storm activity most recently that caused some destructive tornadoes. He said these types of events appear to be happening with greater frequency.

Mr. Grassel said March was a turbulent month for many states. On March 5, there were at least 13 tornadoes reported, and one area of activity included an EF-4 strength tornado lasting approximately 90 minutes and stretching for approximately 70 miles. Mr. Grassel said the tornadoes resulted in at least seven fatalities and caused severe property damage. He said tornado wind speeds were reported to be as high as 170 miles per hour. Following the March 5 tornadoes, a snowstorm that produced three to five inches of snow occurred, which
hindered recovery efforts in the short-term. Mr. Grassel said Iowa’s Deputy Insurance Commissioner, Jared Kirby, experienced a direct hit to his home, causing extensive damage.

Mr. Grassel said hoping for the best, while preparing for the worst will ensure resiliency and safety when devastation strikes. He said building structurally strong homes and buildings or retrofitting homes and buildings make them more resistant to damage caused by severe convective storm activity. Wind resistant structures include a masonry home or reinforced building materials, including entrance doors, windows, roof, and garage doors. Stronger structures are more likely to be resilient during a severe wind event.

Mr. Grassel said the following items are important to do prior to a disaster: 1) know the safe space in your home; 2) make sure you have appropriate insurance from a reputable insurer; 3) periodically evaluate your insurance products and the coverage limits in your insurance policies; 4) read your insurance policy and speak with an insurance company representative or insurance agent with questions; and 5) annually record a home inventory to ensure proof of ownership for your belongings.

Amy Bach (United Policyholders) asked Mr. Grassel what type of deductibles they are seeing in Iowa regarding wind. Mr. Grassel said he does not have information on this specific event, but in the rate filings, they see higher deductibles and percentage deductibles for wind events. He said the deductibles have a range of $500 to $2,500.

5. Heard an Update from the TDCI Regarding Recent Catastrophic Events

Ms. Cope said flooding continues to be one of the largest issues for Tennessee consumers. She said the Tennessee Department of Commerce and Insurance (TDCI) has focused on education and outreach efforts regarding flooding in the past year.

Ms. Cope said the TDCI has an internal team that serves to process consumer complaints and educate communities. She said the team actively meets with local emergency planning committees in various counties throughout the state. Ms. Cope said the TDCI wants to ensure consumers understand the necessity of proper insurance coverage.

Ms. Cope said in the wake of the deadly Waverly floods, the TDCI set up disaster recovery centers in the affected areas. She said the TDCI wanted to be available for consumers on the spot, so they had what they needed when they needed it the most. She said due to the increased severity of natural catastrophes over the past few years, two counties became NFIP communities. She said the TDCI hopes this will encourage consumers to get the coverage they need.

Ms. Cope said after the tornadoes of 2020, the TDCI set up five claim centers across the state and requested that the top 10 insurance writers bring their catastrophe teams to handle claims on-site for their policyholders.

Ms. Cope said following the December 2021 tornadoes, the TDCI attended town hall meetings in Humphreys and Dresden counties. She said the TDCI consistently makes itself available to consumers, so consumers understand they have the support of the TDCI.

Ms. Cope said most recently, the TDCI responded to the wildfires near Gatlinburg, TN. She said over 100 structures were damaged, and more than 11,000 people were evacuated. As a result, the TDCI requested that insurers send representatives to the county fairgrounds to assist with on-site claims. Ms. Cope said Commissioner Lawrence and the Consumer Insurance Services team were at the site to help consumers with any claims and claims processing questions.
Ms. Cope said the TDCI believes in the power of educating consumers so they can make the best decisions for themselves and their families.

6. **Heard an Overview of FEMA Regional Meetings**

Commissioner Mulready said state insurance regulators have had several workshops with FEMA. The most recent workshop was held last year in a virtual format with FEMA Regions 8, 9, and 10. He said he has been told that state insurance regulators have enhanced their relationships with their FEMA colleagues as a result of these workshops.

Commissioner Mulready said FEMA Region 4 formed a working group following its FEMA workshop. This working group meets every other month with its FEMA colleagues to discuss issues related to disasters and make sure they are better prepared in advance of a disaster.

Commissioner Mulready said the Oklahoma Insurance Department will be hosting the FEMA Region 6 workshop on May 3 and May 4 in Oklahoma City, and invitations went out last week. He said attendees will be touring the National Weather Center in Norman, OK, on the evening of May 3.

Commissioner Mulready said any states wanting to conduct a workshop in their FEMA region could reach out to him or Aaron Brandenburg (NAIC).

7. **Received an Update on the NAIC Catastrophe Resource Center**

Ms. Robben said she would be reaching out to the departments of insurance (DOIs) to be sure the names on the catastrophe contact list are current. She asked states about what types of information are not on the web page that would be helpful to add. No one had any immediate comments. Commissioner Altmaier suggested that the NAIC send out a survey to Working Group and Advisory Group members to better meet the needs of the state insurance regulators.

Mr. Bradner said the Northeast Zone is reconvening a group of catastrophe contacts within each of the northeast state DOIs. He said they would be meeting sometime in April or May. He said in the past, some of the things they discussed included what is happening in each state regarding items such as hurricane deductibles, policy language changes, etc. He said if a catastrophic event approaches the Northeast, the group can hold a call to discuss what each state is doing to prepare for the event.

Having no further business, the Catastrophe Insurance (C) Working Group and the NAIC/FEMA (C) Advisory Group adjourned.
The Catastrophe Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met March 4, 2022. The following Working Group members participated: David Altmaier, Chair, Alexis Bakofsky and Susanne Murphy (FL); Timothy Johnson, Vice Chair (NC); Shauna Nickel and Katie Hegland (AK); Jimmy Gunn and Brian Powell (AL); Jimmy Harris (AR); Ken Allen, Lucy Labourian, Giovanni Muzzarelli, Lisbeth Landsman-Smith, and Lynne Wehmueller (CA); George Bradner and Wanchin Chou (CT); Colin M. Hayashida and Roland Teruya (HI); Travis Grassel (IA); Judy Mottar (IL); Tate Flott, Brenda Johnson, and Julie Holmes (KS); James J. Donelon and Warren Byrd (LA); Caleb Huntington and Matthew Mancini (MA); Robert Baron, Ronald Coleman, Walter Dabrowski, and (MD); Cynthia Amann and Jo LeDuc (MO); Cuc Nguyen and Andrew Schallhorn (OK); Ying Liu (OR); David Buono (PA); Elizabeth Kelleher Dwyer, Segun Daramola, and Beth Vollucci (RI); Stephanie Cope and Vickie Trice (TN); and Marianne Baker, J’ne Byckovski, and Mark Worman (TX). Also participating were: Linda Grant (IN); Sandra Anderson (MN); Chris Aufenthie (ND); Gennady Stolyarov (NV); and Mary Block and Isabelle Turpin Keiser (VT).

1. **Adopted its 2021 Fall National Meeting Minutes**

   Commissioner Hayashida made a motion, seconded by Mr. Grassel, to adopt the Working Group’s Dec. 12, 2021, minutes (*see NAIC Proceedings – Fall 2021, Property and Casualty Insurance (C) Committee, Attachment Three*). The motion passed unanimously.

2. **Heard a Presentation Regarding a Survey to States About the Catastrophe Modeling Handbook**

   Sara Robben (NAIC) said a survey regarding the NAIC *Catastrophe Modeling Handbook* (Handbook) was sent out to states late last year. The purpose of the questionnaire was to help aid the Working Group in determining what information to include in the Handbook to make it a useful tool for state insurance regulators. Ms. Robben said 22 states responded to the survey.

   The survey results indicated that 20 of the 22 states responding to the survey indicated that it would be helpful to add information on more perils. Currently, the Handbook includes the perils of earthquake and hurricane. The survey indicated that states would like to see the perils of flood; wildfire; convective storms; and other perils like cyber, terrorism, and winter storms in this order.

   The survey asked states if they had any state-specific filing requirements for catastrophe models. Seven of the 22 states responding indicated that they had specific requirements. This included some states having regulations and others issuing bulletins. Some states allow catastrophe models only for specific perils and have specific requirements.

   The survey asked each state if they coordinated with any other state regarding catastrophe models. Three of the states surveyed said they coordinate with other states regarding the use of catastrophe models, and 19 indicated that they do not coordinate with other states. Comments included:

   - If the state is aware of another state having the same or a similar model filed, it will contact that state.
   - A state used an actuarial firm for its 2020–2021 model review that subcontracted with experts who routinely work with the Florida Commission on Hurricane Loss Projection Methodology.
A state indicated that it works with other states in the Northeast Zone.

The survey asked each state the percentage of rate filings received that referenced a catastrophe model. Seventeen states indicated 0–25%, four states indicated 25–50%, and one state indicated 75–100%. Most of the states fall into the 0–25% category.

The survey also asked questions regarding the number of staff and amount of time staff spent on reviewing filings referencing a catastrophe model. These numbers correlated with the percentage of filings.

The survey asked if states used any tools in evaluating a catastrophe model. Three of the 22 states indicated that they used tools for evaluating a catastrophe model. These tools included the use of outside actuarial consulting firms, a standard support checklist, and the Florida Commission on Hurricane Loss Projection Methodology.

The survey indicated that three of the 22 states utilize the Handbook; however, several states indicated that they were not aware of the Handbook’s existence. The three states that utilize the Handbook indicated that they use it as a reference guide or to better understand how such modeling might be occurring and how it might be a part of a rate filing.

The survey asked if the following sections would be helpful to state insurance regulators:

- Section 3: General Overview of Catastrophe Models
- Section 4: Model Input Provided by Company
- Section 5: Model Output
- Section 6: Model Validation and Update

Twenty-one of the 22 states surveyed indicated that all these sections would be helpful.

The survey asked states if they used the questions in Section 7 of the Handbook when evaluating filings for catastrophe models. Eight states indicated that they use the questions, and five states indicated that they use some of the questions but not all of them.

The survey indicated that state insurance regulators would like to see the following tools:

- A set of questions for financial examiners.
- A set of questions for reviewers.
- A set of questions to understand the impact of climate risk on the insurer.
- A standard support checklist and to be able to send models to an NAIC review team, as needed.

Ms. Robben asked that any state that still wants to fill out the survey reach out to her for a link.

Mr. Chou asked which state answered 75–100% regarding rate filings referencing a catastrophe model. Ms. Robben said she would have to go back to the survey to see which state answered 75–100%. Since this meeting, the state that indicated the 75–100% reached out to the NAIC and said this was reported in error. Ms. Robben also said she would create a matrix of state answers for Working Group members.
3. **Discussed Next Steps Regarding the *Catastrophe Modeling Handbook***

Commissioner Altmaier said the survey responses indicated that the Handbook was not being used by many states. He said it was notable that not all state insurance regulators were aware of the existence of the Handbook. He said not only is this a timely opportunity to update the Handbook, but it is also an opportunity to raise awareness about the Handbook. Catastrophe events have grown in number and size, and there will likely be an increased use of catastrophe models, if not for ratemaking, in Own Risk and Solvency Assessments (ORSAs) and other tools.

Currently, the Handbook includes the following sections:

- Purpose and Background
- Selected Catastrophe Perils (Earthquake and Hurricane)
- A General Overview of Catastrophe Models
- Model Input Provided by Company
- Model Output
- Model Validation and Update
- Evaluating Models
- Regulatory Review and Acceptance
- Related Activities, Activities to Consider

Commissioner Altmaier said he believes everyone is aware of the establishment of a catastrophe model center of excellence (COE). He said while the COE has not yet been adopted, if adopted, its role would be to:

- Facilitate insurance department access to catastrophe modeling documentation and assistance distilling the information.
- Provide general technical education/training materials on the mechanics of commercial models and treatment of perils and risk exposures.
- Conducting applied research analysis utilizing various model platforms to proactively answer the regulatory “so what” questions that may need to be addressed for regulatory resilience priorities.

Commissioner Altmaier said it is important to note that the support services anticipated to be offered through the COE are not going to take the place of individual state department of insurance (DOI) activities involving catastrophe models. He said for example, the COE would not be approving vendor models and items of that nature, as the COE is intended to be a resource.

Commissioner Altmaier asked the Working Group what sections of the Handbook it feels should be retained in an updated Handbook and what kind of topics would best be covered in more detail through the COE if it is adopted.

Mr. Grassel said there is a broad evaluation in the catastrophe models being discussed. He said it makes sense that the COE would do more in-depth work, and there is some application in whether we are discussing market conduct reviews or rate review filings. He said catastrophe models affect several different areas for DOIs, so he believes this is something state insurance regulators should keep in mind going forward.

Commissioner Altmaier said the selected catastrophe perils currently included in the Handbook are earthquake and hurricane. He said flood is becoming the most prominent catastrophe across the country, and many states, including Florida, are in the process of reviewing new commercial models for flood insurance. He said the Working Group might want to consider whether to incorporate some information regarding flood models in the Handbook update.
Commissioner Altmaier said the Catastrophe Risk (E) Subgroup is working to develop catastrophe charges for the peril of wildfire. He said one of the challenges the Working Group has had is that wildfire models are not as robust as hurricane and earthquake models. He said it may be worthwhile to determine if wildfire models fit into the Handbook as well.

Mr. Chou said the Catastrophe Risk (E) Subgroup has adopted the wildfire peril as informational only. He said the Subgroup is still in discussion regarding the peril it will discuss next.

Commissioner Altmaier said he would also bring some focus to the sections of the Handbook regarding the input that goes into a catastrophe model. He said there is a commonly quoted phrase, “garbage in, garbage out.” He said he believes it is important for state insurance regulators to have a thorough understanding of what goes into a model, so it makes sense to spend some time evaluating this section of the Handbook. He said the Working Group should evaluate what information belongs in the Handbook and what information would be more suited to the COE.

Commissioner Altmaier said states have a variety of different processes regarding catastrophe modeling. He said some states have a formal process, while others do not. He said Florida uses the “Hurricane Loss Projection Methodology,” and Louisiana requires that insurers send in a narrative about the rationale behind the models they are using. He asked the Working Group if it would be helpful to consider compiling a list of bulletins or regulations around the country to help understand the similarities and differences between state approaches to the use of catastrophe models. This could be added as an appendix to the Handbook. Other states agreed.

Commissioner Altmaier said one of the things he found interesting is that many times, the way direct writers use catastrophe models is different from how reinsurers use catastrophe models. He said reinsurers will typically have more flexibility since they fall under regulatory jurisdictions outside of the U.S. He said reinsurance rates are oftentimes not subject to regulatory approval, so they have more flexibility regarding how they use catastrophe models. He suggested that the Working Group might consider hearing some presentations and feedback from reinsurers about how they use catastrophe models. This information could be incorporated into the Handbook if the Working Group deems it helpful. Mr. Grassel said he believes this would be helpful because reinsurers play a much bigger role.

Commissioner Altmaier said the Working Group will form a drafting group based on state insurance regulators that have previously volunteered and add any state insurance regulators that would like to volunteer to be a part of the drafting group. He asked state insurance regulators interested in participating to email NAIC staff.

NAIC staff asked states that have a set of questions regarding perils to please forward those to the NAIC.

Having no further business, the Catastrophe Insurance (C) Working Group adjourned.
The NAIC/FEMA (C) Advisory Group of the Catastrophe Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met March 25, 2022. The following Advisory Group members participated: Glen Mulready, Chair (OK); Carter Lawrence, Vice Chair (TN); Chad Bennett and Katie Hegland (AK); Dan Gates (AL); Ken Allen (CA); George Bradner (CT); Susanne Murphy (FL); Travis Grassel (IA); Kate Kixmiller (IN); Tate Flott, Brenda Johnson, and Craig VanAalst (KS); James J. Donelon and Warren Byrd (LA); Joy Hatchette (MD); Jo LeDuc (MO); David Dahl and James T. Thompson (OR); Beth Vollucci (RI); and Marc McLaughlin (VA).

1. **Heard a Presentation Regarding the NFIP’s Risk Rating 2.0**

Doug Iannarelli (FEMA) said the National Flood Insurance Program’s (NFIP’s) Risk Rating 2.0 was rolled out in a phased approach. New business policies began to be written with the Risk Rating 2.0 rating methodology on Oct. 1, 2021. Mr. Iannarelli said existing policyholders could move into Risk Rating 2.0 if they chose to. Beginning on April 1, existing policyholders will be transitioned into Risk Rating 2.0. Mr. Iannarelli said agents are saying Risk Rating 2.0 is a new quoting experience. In general, trends in premium changes are what FEMA had expected.

Mr. Iannarelli said consumers are inquiring about the new rating variables. FEMA has trained over 31,000 agents about Risk Rating 2.0. Agents and consumers asked about elevation certificates and whether flood zones still matter. Commissioner Mulready said he attended the FEMA training and encouraged other state insurance regulators to do so.

Mr. Iannarelli said state insurance regulators should visit the Risk Rating 2.0 website, which has information about changes in rates by county and ZIP code and how the rating structure is designed. He asked commissioners to encourage consumers to talk to their agent. He said Risk Rating 2.0 does not require an elevation certificate, as was required before, but policyholders can provide an elevation certificate, and it will be used if it reduces their premium. Mr. McLaughlin asked why an elevation certificate is not factored in unless a policyholder wants it to be if Risk Rating 2.0 accurately reflects risk. Mr. Iannarelli said the ground elevation is looked at, as well as the first-floor height of the building using different data sources, but if a surveyor determines the ground elevation and that provides better information, then that information will be used to rate the policy.

2. **Heard a Presentation Related to FEMA’s CRS**

Commissioner Mulready said the city of Tulsa, OK, recently achieved a “1” rating in FEMA’s Community Rating System (CRS), becoming only the second city to do so. Bill Lesser (FEMA) said the NFIP and the NAIC have shared ambitions in terms of serving consumers and ensuring that insurance is available. He said the CRS was created in 1990 as a way for communities to receive NFIP premium discounts if their community is implementing floodplain management practices that exceed the minimum requirements, like building code enforcement, regulatory provisions, and public information. He said the CRS was modeled after the fire rating system used by insurance companies.

Mr. Lesser said participation in the CRS is voluntary. There are about 22,500 communities in the NFIP nationwide, and about 1,500 communities are in the CRS. He said those 1,500 communities include the highest risk flood communities, leading to about 75% of all NFIP policies being in CRS communities. He said the CRS Coordinator’s Manual describes all aspects of the community’s participation, including how many points communities can
receive in the many different floodplain management activities. The goals of the program are to reduce and avoid flood damage to insurable property, strengthen and support certain insurance aspects of the NFIP, and foster comprehensive floodplain management.

Mr. Lesser said there are 10 classes within the CRS, with each class receiving a percentage discount on NFIP policies. He said Class “1” policyholders receive almost a 50% premium discount. He mentioned four broad categories of activities within the CRS: 1) public information; 2) mapping and regulations; 3) flood damage reduction; and 4) warning and response. Credits for flood insurance promotion can be achieved by working with agents or forming a committee to promote flood insurance, which supports the FEMA objective of closing the insurance gap. He noted that CRS communities are across the nation, and about 20 have achieved a 1–4 class rating.

Mr. Lesser said under Risk Rating 2.0, all policyholders will receive a premium discount if their community participates in the CRS, not just those in the Special Flood Hazard Area (SFHA). He said the growth of interest in the CRS is likely to lead to more affordable flood insurance.

Mr. Lesser said state insurance commissioners can become informed about CRS participation in their state, connect with the state office of the NFIP state coordinator, connect with the Association of State Floodplain Managers (ASFPM), and develop a CRS participation messaging platform within their state.

Mr. Grassel asked what Tulsa has done to help achieve CRS credits. Mr. Bradner said he hears from communities that there is a lot of work that goes into achieving a high score. Commissioner Mulready said Tulsa experienced devastating flooding decades ago, which motivated the community to act. He said it took many years to achieve the CRS Class “1” rating. He said Tulsa has made a lot of flood control and infrastructure improvements.

Mr. Lesser said most communities in the top four classes have experienced devastating flooding, sometimes more than once. He said Tulsa bought out at-risk communities, which earned them credits. He also said communities often have a learning curve in the first year of being in the CRS. He said many training webinars are available for communities. He said there are groups of community coordinators who come together in user groups to share best practices, and this is very helpful for communities. Mr. Bradner said using the agent community might help communities achieve CRS classes. Mr. Lesser said some of the user groups have agents involved.

Jeff Czajkowski (NAIC) asked if there would be overlap between the CRS and Verisk’s Building Code Effectiveness Grading Schedule (BCEGS), where communities could leverage resources by participating in both programs. Mr. Lesser said there are communities that participate in both, and the CRS requires a minimum BCEGS score. He said it is important for communities that are flood prone to have building codes and be able to enforce protective floodplain management practices as it relates to buildings and methods of construction. Dale Thomure (Verisk) said there is overlap between credits in the CRS and the BCEGS. He said Verisk works closely with the CRS in leveraging those programs. He said building code enforcement and building code regulations go hand in hand with flood plain management and are highly variable from jurisdiction to jurisdiction. Mr. Czajkowski said states might be able to leverage resources across the programs, and state insurance regulators should look at both programs.

Mr. Lesser said a state insurance commissioner could be a voice to advocate for better building codes. He said some states have building codes that are both a maximum and minimum, so communities cannot enact building codes of a higher standard. Some communities are not able to adopt a minimum elevation about base flood elevation.
3. **Heard an Update on the Spring National Meeting**

Commissioner Mulready said the Catastrophe Insurance (C) Working Group and the Advisory Group will meet jointly on April 4 at the Spring National Meeting. He said the Working Group will receive an update from the drafting group making edits to the *Catastrophe Computer Modeling Handbook*. The Advisory Group will: 1) hear reports about upcoming and recent FEMA regional meetings; and 2) receive an update on the status of the NAIC’s Catastrophe Resource Center. Commissioner Mulready said states may also report on their response to recent catastrophes during the meeting.

Having no further business, the NAIC/FEMA (C) Advisory Group adjourned.
CASUALTY ACTUARIAL AND STATISTICAL (C) TASK FORCE

Casualty Actuarial and Statistical (C) Task Force March 8, 2022, Minutes .......................................................... 7-25
Casualty Actuarial and Statistical (C) Task Force Feb. 18, 2022, Minutes (Attachment One) .............................. 7-29
Casualty Actuarial and Statistical (C) Task Force Feb. 8, 2022, Minutes (Attachment Two) .............................. 7-30

Statistical Data (C) Working Group Jan. 27, 2022, Minutes (Attachment Six) ................................................... 7-87
Random Forest Rate Models (Attachment Seven) .............................................................................................. 7-89
The Casualty Actuarial and Statistical (C) Task Force met March 8, 2022. The following Task Force members participated: Mike Kreidler, Chair, represented by Eric Slavich (WA); Grace Arnold, Vice Chair, represented by Phil Vigliaturo (MN); Jim L. Ridling represented by Daniel Davis (AL); Ricardo Lara represented by Lynne Wehmueller (CA); Michael Conway represented by Mitchell Bronson (CO); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by David Christhilf (DC); David Altmaier represented by Greg Jaynes (FL); Colin M. Hayashida represented by Randy Jacobson (HI); Doug Ommen represented by Travis Grassel (IA); Dana Popish Severinghaus represented by Anthony Bredel and Judy Mottar (IL); Amy L. Beard represented by Larry Steinert (IN); Vicki Schmidt represented by Nicole Boyd (KS); James J. Donelon represented by Nichole Torbla (LA); Kathleen A. Brrane represented by Walter Dabrowski (MD); Eric A. Cioppa represented by Sandra Darby (ME); Chlora Lindley-Myers represented by Julie Lederer (MO); Troy Downing represented by Mari Kindberg (MT); Mike Causey represented by Rick Cohen (NC); Chris Nicoloopulos represented by Christian Citarella (NH); Russell Toal and Anna Krylova (NM); Barbara D. Richardson represented by Gennady Stolyarov (NV); Judith L. French represented by Tom Botsko (OH); Glen Mulready represented by Kate Yang (OK); Andrew R. Stolfi represented by TK Keen (OR); Michael Humphreys represented by Kevin Clark and Michael McKenney (PA); Raymond G. Farmer represented by Will Davis (SC); Cassie Brown represented by J’ne Byckovski (TX); Michael S. Pieciak represented by Mary Richter (VT); and Allan L. McVey represented by Juanita Wimmer (WV). Also participating was: Gordon Hay (NE).

1. **Adopted its Feb. 18, 2022; Feb. 8, 2022; Jan. 24, 2022; Jan. 10, 2022; and 2021 Fall National Meeting Minutes**

Mr. Slavich said the Task Force met Feb. 18, 2022; Feb. 8, 2022; Jan. 24, 2022; Jan. 10, 2022; and Dec. 7, 2021. During these meetings, the Task Force took the following action: 1) adopted the 2018/2019 Auto Insurance Database Report (Auto Report); 2) adopted the Dwelling, Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance Report (Homeowners Report); 3) adopted the 2020 Competition Database Report (Competition Report); 4) discussed comments received on Project #2019 -49: Retroactive Reinsurance Exception; and 5) discussed comments received on the regulatory review of random forest models proposal.

The Task Force also met Feb. 15 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss rate filing issues.

The Task Force held a Predictive Analytics Book Club meeting on Feb. 22. Liam McGrath (Willis Towers Watson—WTW) presented on the evaluation of models built in Emblem.

Mr. Botsko made a motion, seconded by Ms. Darby, to adopt the Task Force’s Feb. 18, 2022 (Attachment One); Feb. 8, 2022 (Attachment Two); Jan. 24, 2022 (Attachment Three); Jan. 10, 2022 (Attachment Four); and Dec. 7, 2021 (see NAIC Proceedings – Fall 2021, Casualty Actuarial and Statistical (C) Task Force) minutes. The motion passed unanimously.

2. **Adopted the Report of the Actuarial Opinion (C) Working Group**

Ms. Krylova said the Actuarial Opinion (C) Working Group adopted proposed changes to the Property/Casualty (P/C) Statement of Actuarial Opinion (SAO) instructions on March 1 and sent the proposal to the Blanks (E) Working Group. The changes were described during the Task Force’s Feb. 8 meeting.
Ms. Krylova made a motion, seconded by Ms. Lederer, to adopt the report of the Actuarial Opinion (C) Working Group, including its March 1, Feb. 1, and Jan. 18 minutes (Attachment Five). The motion passed unanimously.

3. **Adopted the Report of the Statistical Data (C) Working Group**

Ms. Darby said the Statistical Data (C) Working Group met Jan. 27 to discuss proposed changes to the Competition Report, the Homeowners Report, and the Auto Report. While no structural changes to the reports were adopted at that time, the Working Group voted to collect data for the Homeowners Report on a faster timeline. NAIC staff sent requests to collect 2020 and 2021 data this year to produce two reports and speed up the timeline of the average premium data. The Working Group plans to meet March 10 to look at a similar approach for the Auto Report. The Working Group will focus on updates to the *Statistical Handbook of Data Available to Insurance Regulators* and plans to meet monthly to discuss and adopt any changes that would improve the collection and use of statistical data. As for the 2019 data year reports, the 2019 Homeowners Report is being released to the public on March 10, and the 2018/2019 Auto Report was released Jan. 31.

Ms. Darby made a motion, seconded by Mr. Chou, to adopt the report of the Statistical Data (C) Working Group, including its Jan. 27 minutes (Attachment Six). The motion passed unanimously.

4. **Discussed the Next Steps for Project #2019-49: Retroactive Reinsurance Exception**

Mr. Hay recapped Project #2019-49: Retroactive Reinsurance Exception. Having heard comments from interested parties on Feb. 8, the Task Force discussed three options for next steps: 1) forward the completed work and let the Statutory Accounting Principles (E) Working Group decide any further action. In this option, the Task Force would write a memo describing the issue and summarizing the PowerPoint presentation that was exposed and attach the two comment letters; 2) do option #1 and draft proposed edits to instructions for both Schedule P and paragraphs 36 and 37 in *Statement of Statutory Accounting Principles (SSAP) No. 62R—Property and Casualty Reinsurance*; and 3) do additional research to dig deeper into the issue and consult experts.

Mr. Bredel questioned whether an exception needs to be added to SSAP No. 62R for pooling. To qualify for the existing exception, they need to include equal assets to the reserves ceded for the retrospective portion of the pool. Mr. Hay said the *Interpretation (INT) 03-02: Modification to an Existing Intercompany Pooling Arrangement* conclusion is that for changes in pool shares, there is a presumption that when pool shares are retroactively moved around, there is an offsetting asset transfer. That then would loop intercompany pools into paragraph 36d of SSAP No. 62R, and no further changes need to be made. Mr. Bredel said with a prospective agreement, the reinsurance ceded premium is known. With a retrospective arrangement, there needs to be premium ceded to offset the nominal, and not discounted, value of the reserves.

Deciding actuarial knowledge is needed to draft Schedule P instructions, the Task Force agreed to move forward with option #2, with the recognition that the Statutory Accounting Principles (E) Working Group may make changes to what the Task Force drafts for SSAP No. 62R if any changes are proposed. A subgroup of volunteers, including Mr. Hay, Mr. Chou, and Robin Marcotte (NAIC), will draft proposed revisions for future Task Force consideration.

5. **Adopted the Regulatory Review of Random Forest Rate Models Document**

Mr. Slavich said during the Feb. 8 meeting, Risk & Regulatory Consulting LLC and Allstate presented their comments about the random forest proposal, and he asked NAIC staff to consider submitted comments and suggest changes to the proposed documents. Sam Kloese (NAIC) presented the proposed revisions.
Mr. Slavich said he would like to have the Task Force adopt the amended document but postpone any decision to officially attach the document to the white paper until the Task Force has created the package of similar documents for other models.

Mr. Stolyarov made a motion, seconded by Ms. Darby, to adopt the random forest models and associated terminology document with non-substantive editing (Attachment Seven). The motion passed unanimously.

6. Heard a Report About Coordination with the Innovation, Cybersecurity, and Technology (H) Committee and the Special (EX) Committee on Race and Insurance Workstream Three

Mr. Slavich said he and Mr. Vigliaturo met with commissioner leaders of the Innovation, Cybersecurity, and Technology (H) Committee and Workstream Three of the Special (EX) Committee on Race and Insurance to discuss coordination around potential bias issues in P/C rating. He said this issue may require more of the Task Force’s attention. Cathy O’Neil, who wrote “Weapons of Math Destruction” and has expertise in the societal impacts of big data and algorithms, participated in the discussion.

Mr. Slavich said the discussion focused on possible racial bias in insurance and what state insurance regulators should do when reviewing rates, marketing, claims processing, and risk selection. He said there were six key points he would address: 1) one should start with an idea of which outcomes should be considered. Areas that might be a concern include rating; eligibility, risk selection, and marketing; claims payments (e.g., amounts and promptness); payment plan options; coverage terms; and company assignment; 2) there are algorithms that can take a consumer’s first name, last name, and address and use that information to infer the consumer’s race. This, combined with other insurer information, is one way to evaluate disparate impact; 3) it is known that racial inference algorithms are not perfect; however, the imperfection is at least known directionally, and the degree of racial bias tends to be understated with the algorithms; 4) racial bias, correlation, or disparate impact should not be evaluated as a binary “yes” or “no,” but it should be thought of as a matter of degree. Every rating variable is going to have some amount of correlation with race. The issue is how to come up with a threshold for acceptability and consider insurers relative to other insurers, as well as rating plans relative to other rating plans; 5) a predetermined, tight list of characteristics that make a rating element legitimate should be used; and 6) a rating variable’s correlation with race can be obscured by analyzing it in combination with other rating variables. If one looks at a variable in isolation, it may have a high level of correlation with race. One might then argue that one needs to control for other factors, since these other factors may have distributional differences by race. If one analyzes multiple variables simultaneously, some of the correlation between the subject rating variable and race will appear to go away because more than one variable might be significantly correlated with race. So, it is important to have constraints on what control variables should be included in any analysis looking for racial bias and to not allow the list of control variables to keep growing. Mr. Slavich suggested that a consideration is whether allowing a control variable would tend to perpetuate existing bias.

7. Heard a Report from the Academy

The American Academy of Actuaries (Academy) presented a report on its current activities.

Lauren Cavanaugh (Academy) said the Academy’s Casualty Practice Council sent comment letters to the Federal Insurance Office (FIO) regarding the availability and affordability of auto insurance, climate-related insurance, and financial risk in the insurance sector. Other projects include updating the cyber risk toolkit and cyber papers on different issues, including silent cyber, the cyberthreat landscape, cyber risk, accumulation cyber risk, reinsurance ransomware war, and cyber terrorism. A cyber risk resource guide is being drafted.
Regarding diversity, equity, and inclusion (DE&I) efforts, Ms. Cavanaugh said the Academy established a Racial Equity Task Force and contributed to efforts with a letter provided to the Colorado Department of Insurance (DOI) on its law in place on unfair discrimination.

Ms. Cavanaugh reported that numerous papers are being drafted and published. Working with the Data Science and Analytics Committee, she said the plan is to publish a causation correlation issue brief this year and a data issue brief on the collection of protected class data. The Extreme Events Committee recently issued a wildfire risk issue paper that will be highlighted in a March 17 webinar. The Committee also plans to publish an Insurance-Linked Security Monograph in the next few months. The Property/Casualty Risk-Based Capital Committee is analyzing workspace capital. The Medical Professional Liability (MPL) Committee recently published an issue brief on the COVID-19 impacts related to MPL. The Workers’ Compensation Committee recently published on the opioid epidemic.

Derek Freihaut (Academy) said the Committee on Property and Liability Financial Reporting (COPLFR) submitted comments to the Blanks (E) Working Group on changes related to the disclosure agreements and losses. The P/C loss reserve opinions seminar was held; the 2021 practice note on opinions for P/C loss reserves and the P/C Loss Reserve Law Manual were both published in December 2021; and the risk transfer practice note is scheduled to be published in the second quarter of 2022 after a review by the certified public accountant (CPA).

8. Discussed Other Matters

Kris DeFrain (NAIC) said she was contacted by Mr. Steinert about the NAIC’s workers’ compensation loss cost multiplier (LCM) forms. The Task Force supported the idea of a drafting group proposing changes to the forms for future Task Force consideration.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.
The Casualty Actuarial and Statistical (C) Task Force conducted an e-vote that concluded Feb. 18, 2022. The following Task Force members participated: Mike Kreidler, Chair, represented by Eric Slavich (WA); Jim L. Ridling represented by Daniel Davis (AL); Ricardo Lara represented by Lynne Wehmueller (CA); Michael Conway represented by Mitchell Bronson (CO); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by David Christhilf (DC); David Altmaier represented by Christina Huff (FL); Colin M. Hayashida represented by Randy Jacobson (HI); Doug Ommen represented by Travis Grassel (IA); Amy L. Beard represented by Scott Shover (IN); Vicki Schmidt represented by Nicole Boyd (KS); Eric A. Cioppa represented by Sandra Darby (ME); Troy Downing (MT); Mike Causey represented by Kevin Conley (NC); Marlene Caride represented by Carl Sornson (NJ); Russell Toal represented by Anna Krylova (NM); Barbara D. Richardson represented by Gennady Stolyarov (NV); Judith L. French represented by Tom Botsko (OH); Glen Mulready represented by Andrew Schallhorn (OK); Andrew R. Stolfi represented by David Dahl (OR); Cassie Brown represented by J’ne Byckovski (TX); Michael S. Pieciak represented by Rosemary Raszka (VT); and Allan L. McVey and Juanita Wimmer (WV).

1. **Adopted the Homeowners Report**

The Task Force conducted an e-vote to consider adoption of the *Dwelling Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance Report* (Homeowners Report). The motion passed unanimously.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.

https://naiconline.sharepoint.com/sites/NAICSupportStaffHub/Member%20Meetings/2022%20NAIC%20Meetings/Spring%20National%20Meeting/Committee%20Meetings/PROPERTY%20and%20CASUALTY%20INS%20(C)%20COMMITTEE/Casualty%20Actuarial%20and%20Statistical%20TF/02-18%20CASTF%20Evote%20HO%20min.docx
The Casualty Actuarial and Statistical (C) Task Force met Feb. 8, 2022. The following Task Force members participated: Mike Kreidler, Chair, represented by Eric Slavich (WA); Grace Arnold, Vice Chair, represented by Connor Meyer (MN); Jim L. Ridling represented by Daniel Davis (AL); Ricardo Lara represented by Lynne Wehmueller (CA); Michael Conway represented by Mitchell Bronson (CO); Andrew N. Mais represented by Qing He and Wanchin Chou (CT); David Altmaier represented by Greg Jaynes (FL); Colin M. Hayashida represented by Randy Jacobson (HI); Doug Ommen represented by Travis Grassel (IA); Dana Popish Severinghaus represented by Judy Mottar (IL); Amy L. Beard represented by Scott Shover (IN); Vicki Schmidt represented by Nicole Boyd (KS); James J. Donelon represented by Nichole Torblaa (LA); Kathleen A. Birrane represented by Ronald Coleman and Walter Dabrowski (MD); Eric A. Cioppa represented by Sandra Darby (ME); Chlora Lindley-Myers represented by Cynthia Amann and Julie Lederer (MO); Troy Downing represented by David Dombrowski (MT); Mike Causey represented by Rick Cohen (NC); Chris Nicolopoulos represented by Christian Citarella (NH); Russell Toal and Anna Krylova (NM); Barbara D. Richardson represented by Gennady Stolyarov (NV); Judith L. French represented by Tom Botsko (OH); Glen Mulready represented by Andrew Schallhorn (OK); Jessica K. Altman represented by Kevin Clark, Michael McKenney, and Dennis Sloan (PA); Cassie Brown represented by Miriam Fisk (TX); and Michael S. Pieciak represented by Rosemary Raszka (VT).

1. **Received a Report on its 2022 Task Force Charges**

   Mr. Slavich described the Task Force’s 2022 charges. He said the Task Force will continue assisting other committee groups, as needed; monitor national casualty actuarial developments; hold regulator-only rate filing issues calls; and hold predictive analytic Book Club trainings. He said the two new charges proposed by the Task Force were adopted. Those charges are as follows: “D2. Review the completed work on artificial intelligence (AI) from other committee groups. Coordinate with the Innovation, Cybersecurity, and Technology (H) Committee on the tracking of new uses of AI, auditing algorithms, product development, and other emerging regulatory issues in as far as these issues contain a Task Force component” and “With NAIC staff assistance, discuss guidance for the regulatory review of tree-based models and generalized additive models (GAM) used in rate filings.” Mr. Slavich said the Property and Casualty Insurance (C) Committee adopted the following new charge for the Statistical Data (C) Working Group: “Implement the expedited reporting and publication of average auto and average homeowners premium portions of the annual Auto Insurance Database Report (Auto Report) and Dwelling, Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance Report (Homeowners Report).” Based on the Working Group’s 2021 research findings, the Committee decided to request that the Working Group move forward with implementation.

   Mr. Slavich said leadership of the Task Force’s working groups were reappointed. Ms. Krylova is the chair of the Actuarial Opinion (C) Working Group, and Ms. Fisk is the vice chair. Ms. Darby is the chair of the Statistical Data (C) Working Group, and Mr. Chou is the vice chair.

2. **Adopted the Report of the Actuarial Opinion (C) Working Group**

   Ms. Krylova said the Actuarial Opinion (C) Working Group is planning to submit a proposal to the Blanks (E) Working Group to change the Property/Casualty (P/C) Statement of Actuarial Opinion (SAO) instructions. She said the plan is to: 1) remove the paragraph about the continuing education (CE) logs, given the related project has concluded; 2) add guidance for situations where the parent board reviews the Appointed Actuary’s qualification
documentation for all the member companies; and 3) clarify the signature block requirements. The Working Group will meet March 1 to consider adoption of the proposal.

Ms. Krylova made a motion, seconded by Ms. Lederer, to adopt the report of the Actuarial Opinion (C) Working Group. The motion passed unanimously.

3. Adopted the Report of the Statistical Data (C) Working Group

Ms. Darby said the Statistical Data (C) Working Group released the Auto Report to the public, and the Homeowners Report is being considered for adoption by the Task Force.

Ms. Darby said the Working Group met to discuss its new charge. The Working Group decided to include the accelerated average premium every year for the Homeowners Report. Ms. Darby said this will result in the production of two reports in 2022 but only one report in subsequent years. Also, due to its data collection requirements, the Homeowners Report for California will include detailed premium and exposure data one year and then summary information the next year. The Working Group will continue to discuss expedited reporting for the Auto Report.

Ms. Darby made a motion, seconded by Mr. Chou, to adopt the report of the Statistical Data (C) Working Group. The motion passed unanimously.

4. Discussed Project #2019-29: Retroactive Reinsurance Exception

Two comment letters were received regarding Project #2019-29 (Attachment Two-A). Mr. Chou and Joseph Sieverling (Reinsurance Association of America—RAA) summarized their comments. The Task Force will continue discussing this issue on its March 8 call. Ralph Blanchard (Travelers) said his initial concerns on this issue are related to risk-based capital (RBC) implications. Derek Freihaut (American Academy of Actuaries—Academy) said the Committee on Property and Liability Financial Reporting (COPLFR) discussed the proposal and had no concerns.

5. Discussed the Regulatory Review of Random Forest Rate Models

Two comment letters were received regarding Sam Kloese’s (NAIC) proposed glossary entries and information items concerning the regulatory review of random forest models (Attachment Two-B). David Heppen (Risk & Regulatory Consulting LLC) highlighted his comments. Mike Woods (Allstate) said his comments are detailed in nature.

Mr. Slavich said the Task Force needs to decide how to use the documents. He said at a minimum, the documents can be used by the NAIC rate model review team as it reviews random forest models upon states’ requests. Regarding publication, he said the Task Force could post any final product on its website and/or attach the work to the Regulatory Review of Predictive Models white paper. He said there would be no plan to modify any already-adopted white paper components but only a plan to attach random forest information to the white paper. Some Task Force members supported the idea to attach the additional glossary words and random forest information items to the already-adopted white paper, so long as the existing white paper is not open for modification. No one expressed opposition.

Mr. Slavich asked NAIC staff to review the comment letters and propose changes for Task Force discussion for its March 8 call.
6. **Discussed Other Matters**

Kris DeFrain (NAIC) said Roberto Perez (NAIC) will be demonstrating the shared model database in early March. Any state insurance regulator can attend.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.

https://naiconline.sharepoint.com/sites/NAICSupportStaffHub/Member%20Meetings/2022%20NAIC%20Meetings/Spring%20National%20Meeting/Committee%20Meetings/PROPERTY%20and%20CASUALTY%20INS%20(C)%20COMMITTEE/Casualty%20Actuarial%20and%20Statistical%20(C)%20TF/02-08%20min.docx
To: Kris DeFrain
From: Wanchin Chou, Chief Actuary
Date: January 20, 2022
Subject: Comment on Schedule P Reporting for Retroactive Reinsurance Accounting Exceptions

Thank you for the opportunity to comment on the proposed solutions to the problem of the mismatch between SSAP 62R and the Schedule P instructions as they pertain to the treatment of intercompany reinsurance arrangements.

Slide 18 points out that the Schedule P Instructions for intercompany pooling direct the company to record premiums and losses according to the pooling percentage and to restate the history if a change is made retroactively. SSAP 62R allows recording premiums and losses in this manner only if there is no surplus gain. In general, such pooling agreements result in some change in surplus. We find the current Schedule P instructions allow for valuable information regarding loss development and premium volume changes, and so we support the proposal to add intercompany pooling to the exceptions listed in SSAP 62R, paragraph 36.

Slide 20 points out that Schedule P are silent regarding treatment for the exceptions listed in SSAP 62R, paragraphs 36c and 36d. We support adding Schedule P instructions for the exceptions listed in SSAP62R, paragraphs 36c and 3d, including specifying a method for allocating premium to prior years.

We do not support adding a Schedule P line of business (one of the “Other Possible Actions” listed on slide 22) since this would include a mixture of insurance lines of business and claim ages. Such a mixture would not be useful in monitoring underwriting results.

Resolving the differences between SSAP 62R and Schedule P will make our system of accounting more uniform and transparent and benefit the public as a whole.

RE: Comments on December 7, 2021 Draft Report on Retroactive Reinsurance Reporting

Dear Commissioner Arnold and Ms. DeFrain:

The Reinsurance Association of America (RAA), headquartered in Washington, D.C., is the leading trade association of property and casualty reinsurers doing business in the United States. The RAA is committed to promoting a regulatory environment that ensures the industry remains globally competitive and financially robust. RAA membership is diverse, including reinsurance underwriters and intermediaries licensed in the U.S. and those that conduct business on a cross border basis.

The RAA appreciates the opportunity to comment on the draft report, Schedule P Reporting for Retroactive Reinsurance Accounting Exceptions (the report), presented to the Casualty Actuarial and Statistical Task Force (CASTF) on December 7, 2021. First, we appreciate the comprehensiveness of the report and congratulate the members of the subgroup and NAIC staff for providing a thorough review of the current accounting and reporting implications of the paragraph 36 exceptions in SSAP No. 62R. Our brief comments have been informed by only one RAA member since the comment period encompassed both the annual reinsurance renewal season and year-end reporting. Nevertheless, we wished to provide these comments now, even though we may have more to add as this project develops.

**Retroactive Reinsurance Exception – Paragraph 36d**
This issue arose at the NAIC because of a diversity in practice that was noted by COPLFR in its May 2019, letter to the CASTF and Statutory Accounting Principles Working Group (SAPWG). In that letter, COPLFR describes two loss portfolio transfer (LPT) reinsurance transactions among affiliates that were reported differently in Schedule P. Company A reported the ceded LPT premium in the current calendar year of Schedule P, while Company G allocated the ceded LPT...
premium to prior years on Schedule P. These transactions were accounted for as prospective reinsurance under the Paragraph 36d. exception of SSAP No. 62R. In RAA’s view, there are two issues to note regarding this situation:

1. We agree with the report (page 20) that under current guidance there will be distortions in Schedule P when applying prospective accounting to retroactive reinsurance.
2. We also agree with the report (page 19) that the Schedule P instructions are clear that ceded premium in the above should be reported in the current calendar year on Schedule P.

Therefore, it appears that Company G simply did not follow the existing Schedule P instructions. Perhaps, this was a permitted practice or alternatively, the Company G concluded that this reporting was “better” because it distorted Schedule P to a lesser degree.

**Response to Subgroup Proposal**

Regarding the specific proposal in the report on page 20, the RAA does not believe that adding additional instructions to Schedule P for paragraphs 36c and 36d is strictly necessary. There is already specific guidance for the 36d exception, and in general, each of the exceptions listed in SSAP No. 62R already have clear guidance as to how the elements to the transaction should be treated in the financial statements; as premiums, losses, etc. Further, there already is clear guidance as to how to treat premiums or losses on Schedule P. For example – if consideration is treated as premium, one should follow the guidance on Sch P for Premiums, which currently does not provide for allocation of premium to related AY.

This does not solve the original and ongoing issue of distortions in the Schedule P data. These issues are not new and have existed for a very long time. It seems to us that in order to address that issue, a very comprehensive review of Schedule P reporting guidance may be necessary. For example, if allocating premium is viewed as preferable to the current guidance, then the current guidance on Schedule P should provide for the allocation of premium to AY for all items that can vary (other examples include reinstatement premium adjustments; audit premiums; retrospective rating provisions), and any such change should apply to direct, assumed and ceded premiums. This is a broader issue than retroactive reinsurance. The guidance, if provided, may list retroactive as one of the areas that might cause need for allocation of material amounts, but should not be the only type of transaction considered.

Thank you for the opportunity to provide these comments. We look forward to continued discussion of these issues at future meetings.

Sincerely,

Joseph B. Sieverling
Senior Vice President

Re: Best Practices for Regulatory Review of Random Forests

Dear Ms. DeFrain,

Thank you for the opportunity to comment on changes to the white paper “Regulatory Review of Predictive Models” that will address Random Forest models.

Below are suggested revisions to the white paper. Revisions are shown in blue font.

Section A.3.d

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>A.3.d</td>
<td>Determine how missing data was handled.</td>
<td>1</td>
<td>This is most relevant for variables that have been “scrubbed” or adjusted. The regulator should be aware of assumptions the modeler made in handling missing, null, or “not available” values in the data. For example, it would be helpful to the reviewer if the modeler were to provide a statement as to whether there is any systemic reason for missing data. If adjustments or recoding of values were made, they should be explained. It may also be useful to the regulator if the percentage of exposures and premium for missing information from the model data are provided. This data can be displayed in either graphical or tabular formats. The modeler should describe the way the tree fitting process handled missing values. The modeler should specify if missing values are treated before running the tree model or if they are allowed to be handled by the tree model. When creating predictions on new datasets (such as hold out datasets), tree-based models may have different approaches for handling missing data or categorical levels not encountered in the</td>
</tr>
</tbody>
</table>
training data for a predictor variable. The modeler should specify the process utilized when this occurs.

Comments: We suggest revising section A.3.d to expand the commentary on situations where the handling of missing value may be relevant.

Section B.1.h

<td>B.1.h</td>
<td>In conjunction with variable selection, obtain a narrative on how the company determined the granularity of the rating variables during model development.</td>
<td>3</td>
<td>The narrative should include discussion of how credibility was considered in the process of determining the level of granularity of the variables selected. Minimum data volume constraints can be applied to a tree-based model, such that the trees will not create a split that would result in terminal nodes with volume below a set amount. The modeler should comment on how the threshold was chosen.</td>
</tr>
<tr>
<td>B.1.j</td>
<td>If adjustments to the model were made based on credibility considerations, obtain an explanation of the credibility considerations and how the adjustments were applied.</td>
<td>2</td>
<td>If there was no minimum data volume threshold applied to the trees, or if the threshold was very small, obtain an explanation of any post modeling adjustments the modeler made to address the credibility considerations and how the adjustments were applied.</td>
</tr>
<tr>
<td>New B.3.4</td>
<td>Obtain parameters that determined the volume of data in each tree node and a narrative of how parameters were chosen.</td>
<td>1</td>
<td>Minimum data volume constraints can be applied to a tree-based model, such that the trees will not create a split that would result in terminal nodes with volume below a set amount. The modeler should comment on how the threshold was chosen. If there was no minimum data volume threshold applied to the trees, or if the threshold was exceedingly small, obtain an explanation of any post modeling adjustments the modeler made to address the credibility considerations and how the adjustments were applied.</td>
</tr>
</tbody>
</table>
C.4.a Determine what, if any, consideration was given to the credibility of the output data.

The regulator should determine at what level of granularity credibility is applied. If modeling was by coverage, by-form, or by-peril, the company should explain how these were handled when there was not enough credible data by coverage, form, or peril to model. The company should comment on the minimum data volume requirement at each node before splitting.

Comments:

We recommend that the comment on “minimum data volume” be removed from B.1.h and create a new section B.3.4 requesting that the minimum data volume in a leaf be provided as a level 1 request due to the basic nature of this information.

We also recommend removing section B.1.j and adding the commentary of B.1.j to the newly created B.3.4 section on the minimum data volume hyperparameter.

C.4.a contains discussion of data volume and we believe commentary on data volume can be removed from C.4.a since it is discussed in other sections.

Section B.3.a

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>B.3.a</td>
<td>Obtain a complete data dictionary, including the names, types, definitions, and rationales for each variable.</td>
<td>1</td>
<td>Types of variables might be continuous, discrete, Boolean, etc. Tree based models do not have offset or control variables, as all variables are treated the same way in the trees. Identify any variable used as an offset or control in the random forest model and the offset factor that was applied for each level of the offset variable. For any variable(s) intended to function as a control or offset, obtain an explanation of its purpose and impact. Also, for any use of interaction between variables, obtain an explanation of its rationale and impact.</td>
</tr>
</tbody>
</table>

Comments:

Offsets and control variables can apply to tree-based models. Offsets may be applied to the starting prediction for a given record before a tree-based model is built. With proper
treatment, control variables can also exist in tree-based models if there are variables used in the model building process that are not part of the final rating plan.

## Section B.3.d

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>B.3.d</td>
<td>Obtain plots describing the relationship between each predictor variable and the target variable. Obtain a rational explanation for why an increase in the observed relationship between each predictor variable should increase or decrease and the target variable (frequency, severity, loss costs, expenses, or any element or characteristic being predicted).</td>
<td>1</td>
<td>Partial dependence plots, accumulated local effects plots, or shapley plots will help improve model interpretability. The plots should be accompanied by commentary on why the visualized relationship is may be reasonable for variables of concern. Considering possible causation may be relevant, but proving causation is neither practical nor expected. If no rational explanation can be provided, greater scrutiny may be appropriate. For example, the regulator should look for unfamiliar predictor variables and, if found, the regulator should seek to understand the connection relationship that variable has to increasing or decreasing the target variable. The regulator should also consider that interpretability plots for tree-based models need to be reviewed with other considerations in mind. For example, partial dependence calculations assume independence with other variables in the model.</td>
</tr>
</tbody>
</table>

**Comments:**

We suggest removing the request that every plot be accompanied by commentary in the initial filing. Given that a loss model is built for each loss type and each model will contain tens of variables, this would require commentary on several hundred plots. We believe that asking for commentary on plots related to variables of concern would be more appropriate.

We also suggest adding some commentary to illustrate that each type of interpretability plot is imperfect and no plot should be completely relied upon.
### Section B.3.f

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>B.3.f</td>
<td>Obtain variable importance plots. Obtain a description of how variable importance was calculated.</td>
<td>1</td>
<td>Variable Importance Plots for tree-based methods highlight which variables contributed most to the model. There are multiple ways to calculate variable importance, and variable importance can be used to create an intuitive understanding of model operation. Variables with the lowest importance measures should be prioritized when reviewing predictor variables for significance. Credibility can be addressed through proper hyperparameter selection. Variables with highest importance should be prioritized when reviewing the model for appropriateness. Variables with lower importance may be evaluated objectively through their correlation with other variables in the model, and subjectively through how they may be interacting with other variables in the model to identify a subset of risks.</td>
</tr>
</tbody>
</table>

**Comments:**

We recommend changing the focus on low importance variables. In tree-based models, carefully selected hyperparameters should prevent the model from splitting erroneously on non-credible variables. For example, the minimum leaf count or minimum improvement threshold for a split should demonstrate sufficient credibility for the segment being identified. This commentary may erroneously guide a model reviewer to request the removal of a variable that demonstrates material signal through complex interactions with other variables.

### Section B.4.e

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>B.4.e</td>
<td>Obtain evidence that the model fits the training data well and for</td>
<td>2</td>
<td>The regulator should ask for the company to provide exhibits or plots that show the fitted average makes sense when compared to the observed average for variables of interest. Regulators would ideally review this comparison for every variable, but time constraints may</td>
</tr>
</tbody>
</table>

© 2022 National Association of Insurance Commissioners
Limit the focus to just variables of interest. Variables of interest should include those with a low importance measure according to diagnostic tests, variables without an intuitive relationship to loss, or variables that may be a proxy for a protected class attribute. Variables of interest should include those with a high or medium importance measure according to diagnostic tests. Variables with low importance or without an intuitive relationship to loss may be evaluated objectively through their correlation with other variables in the model, and subjectively through how they may be interacting with other variables in the model to identify a subset of risks.

**Comments:**

We recommend changing the focus from variables with low importance to variables of high and medium importance. Variables of low importance provide low predictive power to the model and are therefore only mildly affecting any segment. Variables with low importance may only be meaningful in the tails of their distribution, and goodness of fit for most of the variable's range may be immaterial. Variables with lower importance may be better evaluated objectively through their correlation with other variables in the model, and subjectively through how they may be interacting with other variables in the model to identify a subset of risks.

**Section B.4.h**

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>B.4.h</td>
<td>Obtain a narrative on how potential concerns with overfitting were addressed.</td>
<td>2</td>
<td>Tree based models such as Random Forest models are notorious for over-fitting. The company should provide a narrative on how overfitting was addressed. The company should provide lift charts on training data and testing data that is separate from the training data.</td>
</tr>
<tr>
<td>New B.3.5</td>
<td>Obtain a narrative of the process to select all hyperparameters for the Random Forest. Detail how this process addressed potential</td>
<td>2</td>
<td>Hyperparameter tuning can be done in a variety of ways. The rigor of the tuning process should reflect the risk of overfitting on the specific dataset.</td>
</tr>
</tbody>
</table>
Comments:

Overfitting in tree-based models should be addressed through the hyperparameter selection process. We recommend that B.4.h request only a one-way lift chart against holdout data to demonstrate that the model is not overfit, and that an additional section B.3.5 be added to request a narrative of the hyperparameter tuning process and how this has addressed overfitting.

Section B.4.j

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>B.4.j</td>
<td>Obtain 5-10 sample records with corresponding output from the model for those records.</td>
<td>2 4</td>
<td>The company should provide 5-10 sample records with corresponding input variable values, the prediction from each component tree in the model, and the final ensemble model prediction. The company should describe how the final model prediction aggregates the individual tree model predictions.</td>
</tr>
</tbody>
</table>

Comments:

We suggest changing the level of importance of this item to level 4. A narrative describing how the predictions of each tree are combined for a final model prediction is essential information and is already requested in section B.2.e. However, we do not feel the request for sample records and sample calculations is part of a normal model review unless there are concerns about the model.

Section C.10.d

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>C.10.d</td>
<td>Obtain complete documentation of all component trees and how the individual predictions are aggregated together into a final prediction.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>--------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------</td>
<td></td>
<td></td>
</tr>
<tr>
<td>1 4</td>
<td>The company should provide either tree diagrams for each component tree or comprehensive if-else statements that would replicate the logic of the trees. The company should state how the individual component tree predictions are combined into a final prediction.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Comments:**

We suggest changing the level of importance of this item to level 4. We do not feel the request for each tree is part of a regular model review unless there are concerns about the model. Tree diagrams are also of limited usefulness by a reviewer since there are generally hundreds of trees in one model and it is unlikely that a reviewer would have the time to review each tree.

**General Comments**

We recommend additional commentary to clarify that this guidance is for Random Forests and may not be appropriate for all other types of tree-based models. For example, while examining individual trees for a Random Forest may be enlightening, examining individual trees for a Gradient Boosting Machine (GBM) is much less intuitive as each tree’s interpretation depends on the results of the possibly substantial number of trees before it. Other such differences exist and are out of scope for this commentary. We also recommend that the committee provide additional guidance specific to other types of tree-based models such as GBMs to avoid potential misapplication of this guidance on other tree-based models.

Once again, thank you for the opportunity to comment.

To: "DeFrain, Kris"
Subject: RE: CASTF Exposure - Review of Random Forest Models

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Hi Kris,

We wanted to provide you with the following comments on this exposure:

1. We thought the additional guidance on Random Forests was very well done, and we particularly thought items B.3.1-B.3.3, B.3.f, B.4.h, and B.4.k were helpful.

2. Regarding item B.2.a, we suggest adding guidance along the lines below:

   The narrative should include a description of each hyperparameter, document the values of the hyper parameters, specify the implication of using a higher or lower value for each hyper parameter, and discuss any sensitivity testing completed on the hyper parameters and observations from the sensitivity analysis.

3. Regarding consistency between the Appendix and the glossary, “pruning” is defined in the glossary but does not appear to be covered in the Appendix. We believe this term would fit well with B.4.h on overfitting; this could be accomplished with language along the lines below:

   If pruning was utilized to address overfitting, the narrative should provide commentary on the pruning process.

Thank you for the opportunity to comment on this!

Thanks,
Dave

Casualty Actuarial and Statistical (C) Task Force
E-Vote
January 24, 2022

The Casualty Actuarial and Statistical (C) Task Force conducted an e-vote that concluded Jan. 24, 2022. The following Task Force members participated: Mike Kreidler, Chair, represented by Eric Slavich (WA); Grace Arnold, Vice Chair, represented by Phil Vigliaturo (MN); Michael Conway represented by Mitchell Bronson (CO); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by David Christhilf (DC); David Altmaier represented by Christina Huff (FL); Colin M. Hayashida represented by Randy Jacobson (HI); Dana Popish Severinghaus represented by Judy Mottar (IL); Vicki Schmidt represented by Nicole Boyd (KS); Eric A. Cioppa represented by Sandra Darby (ME); Chlora Lindley-Myers and Cynthia Amann (MO); Troy Downing represented by Mari Kindberg (MT); Marlene Caride represented by Carl Sornson (NJ); Russell Toal represented by Anna Krylova (NM); Judith L. French represented by Tom Botsko (OH); Andrew R. Stolfi represented by David Dahl (OR); Cassie Brown represented by J’ne Byckovski (TX); Michael S. Pieciak represented by Rosemary Raszka (VT); and Allan L. McVey and Juanita Wimmer (WV).

1. **Adopted the Competition Report**

The Task Force conducted an e-vote to consider adoption of the *2020 Competition Database Report* (Competition Report). The motion passed unanimously.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.

https://naiconline.sharepoint.com/sites/NAICSupportStaffHub/Member%20Meetings/2022%20NAIC%20Meetings/Spring%20National%20Meeting/Committee%20Meetings/PROPERTY%20and%20CASUALTY%20INS%20(C)%20COMMITTEE/Casualty%20Actuarial%20and%20Statistical%20(TF)/01-24%20CASTF%20Evote%20Comp%20min.docx
The Casualty Actuarial and Statistical (C) Task Force conducted an e-vote that concluded Jan. 10, 2022. The following Task Force members participated: Jim L. Ridling represented by Daniel Davis (AL); Ricardo Lara represented by Lynne Wehmueller (CA); Michael Conway represented by Mitchell Bronson (CO); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by David Christhilf (DC); David Altmaier represented by Christina Huff (FL); Colin M. Hayashida represented by Randy Jacobson (HI); Dana Popish Severinghaus represented by Judy Mottar (IL); Vicki Schmidt represented by Nicole Boyd (KS); Kathleen A. Birrane represented by Robert Baron (MD); Eric A. Cioppa represented by Sandra Darby (ME); Anita G. Fox represented by Kevin Dyke (MI); Troy Downing represented by Mari Kindberg (MT); Mike Causey represented by Kevin Conley (NC); Chris Nicolopoulos represented by Christian Citarella (NH); Marlene Caride represented by Carl Sornson (NJ); Russell Toal represented by Anna Krylova (NM); Judith L. French represented by Tom Botsko (OH); Glen Mulready represented by Andrew Schallhorn (OK); Andrew R. Stolfi represented by David Dahl (OR); Raymond G. Farmer represented by Will Davis (SC); Michael S. Pieciak represented by Rosemary Raszka (VT); Mike Kreidler represented by Eric Slavich (WA); and Allan L. McVey and Juanita Wimmer (WV).

1. **Adopted the Auto Report**

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.

https://naiconline.sharepoint.com/sites/NAICSupportStaffHub/Member%20Meetings/2022%20NAIC%20Meetings/Spring%20National%20Meeting/Committee%20Meetings/PROPERTY%20and%20CASUALTY%20INS%20(C)%20COMMITTEE/Casualty%20Actuarial%20and%20Statistical%20(C)%20TF/01-10%20CASTF%20Evote%20Auto%20min.docx
The Actuarial Opinion (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force met Jan. 18, Feb. 1, and March 1, 2022. The following Working Group members participated: Anna Krylova, Chair (NM); Miriam Fisk, Vice Chair, and Rebecca Armon (TX); Amy Waldhauer (CT); David Christhilf (DC); Chantel Long and Judy Mottar (IL); Sandra Darby (ME); Julie Lederer (MO); Gordon Hay (NE); Tom Botsko (OH); Kate Yang (OK); and Kevin Clark, James Di Santo, and Michael McKenney (PA).

1. **Adopted a Proposal for the P/C SAO Instructions**

Ms. Krylova proposed revised 2022 Property/Casualty (P/C) Statement of Actuarial Opinion (SAO), P/C Actuarial Opinion Summary, and Title Statement of Actuarial Opinion instructions as a starting point for discussion during the Jan. 18 meeting (Attachment Five-A). Mr. Hay submitted additional proposed changes for the discussion (Attachment Five-B).

During its Feb. 1 meeting, the Working Group agreed to four changes to the P/C SAO instructions and decided to postpone any additional changes because more discussion and consultation would be needed, and there was no more time for deliberation in order to have an exposure and meet the Blanks (E) Working Group’s March 4 deadline.

The first change in the P/C SAO instructions is in Section 1. Guidance on continuing education (CE) logs is no longer required because the Casualty Actuarial and Statistical (C) Task Force’s CE log project will not be reoccurring, so the paragraph on the topic was removed. Ms. Krylova noted that actuaries will refer to their respective societies for guidance on CE logs.

The second change is also in Section 1. The change is to provide additional guidance on documentation of the board review of qualification documentation (QD) for companies that are part of a group whose parent board reviews QD on behalf of all subsidiaries. Guidance on this question was requested by the industry, and the Working Group consulted the Financial Examiners Handbook (E) Technical Group on the appropriate response.

The third change is in Section 3. An additional requirement has been added in the IDENTIFICATION paragraph for Appointed Actuaries to confirm that QD has been provided to the Board of Directors. This statement in the IDENTIFICATION paragraph will assist state insurance regulators in determining whether this requirement has been met.

The fourth change is in Section 8 and provides clarification that the signature block requirements apply to the SAO only. The actuarial report should reproduce the same information, though not necessarily in the same format. It has been reported that Appointed Actuaries often provide the required information in a slightly different format within the actuarial report, necessitating financial examiners to create meaningless findings/objections just because the information does not follow the exact format. The Working Group members agree that the prescribed format is applicable to the actuarial opinion only and that the format in the actuarial report may vary.

With a Blanks (E) Working Group deadline of March 4 looming, the Actuarial Opinion (C) Working Group’s chair exposed the amended proposed instructions for the P/C Statement of Actuarial Opinion for a 25-day public
comment period ending Feb. 27. No comments were received, and no additional comments were made during the Working Group’s March 1 meeting.

Ms. Lederer made a motion, seconded by Mr. Christhilf, to adopt the 2022 P/C SAO instructions and refer them to the Blanks (E) Working Group for consideration (Attachment Five-C). The motion passed unanimously.

Having no further business, the Actuarial Opinion (C) Working Group adjourned.
1. There is to be included with or attached to Page 1 of the Annual Statement the statement of the Appointed Actuary, entitled “Statement of Actuarial Opinion” (Actuarial Opinion), setting forth his or her opinion relating to reserves specified in the SCOPE paragraph. The Actuarial Opinion, both the narrative and required Exhibits, shall be in the format of and contain the information required by this section of the Annual Statement Instructions – Property and Casualty.

Upon initial engagement, the Appointed Actuary must be appointed by the Board of Directors by Dec. 31 of the calendar year for which the opinion is rendered. The Company shall notify the domiciliary commissioner within five business days of the initial appointment with the following information:

a. Name and title (and, in the case of a consulting actuary, the name of the firm).
b. Manner of appointment of the Appointed Actuary (e.g., who made the appointment and when).
c. A statement that the person meets the requirements of a Qualified Actuary (or was approved by the domiciliary commissioner) and that documentation was provided to the Board of Directors.

Once this notification is furnished, no further notice is required with respect to this person unless the Board of Directors takes action to no longer appoint or retain the actuary or the actuary no longer meets the requirements of a Qualified Actuary.

If subject to the U.S. Qualification Standards, the Appointed Actuary shall annually attest to having met the continuing education requirements under Section 3 of the U.S. Qualification Standards for issuing Actuarial Opinions. As agreed with the actuarial organizations, the Casualty Actuarial Society (CAS) and Society of Actuaries (SOA) will determine the process for receiving the attestations for their respective members and make available the attestations to the public. An Appointed Actuary subject to the U.S. Qualification Standards and not a member of the CAS or SOA shall select one of the above organizations to submit their attestation.

In accordance with the CAS and SOA’s continuing education review procedures, an Appointed Actuary who is subject to the U.S. Qualification Standards and selected for review shall submit a log of their continuing education in a form determined by the CAS and SOA. The log shall include categorization of continuing education approved for use by the Casualty Actuarial and Statistical Task Force. As agreed with the actuarial organizations, the CAS and SOA will provide an annual consolidated report to the NAIC identifying the types and subject matter of continuing education being obtained by Appointed Actuaries. An Appointed Actuary subject to the U.S. Qualification Standards and not a member of the CAS or SOA shall follow the review procedures for the organization in which they submitted their attestation.

The Appointed Actuary shall provide to the Board of Directors qualification documentation on occasion of their appointment, and on an annual basis thereafter, directly or through company management. The documentation should include brief biographical information and a description of how the definition of “Qualified Actuary” is met or expected to be met (in the case of continuing education) for that year. The documentation should describe the Appointed Actuary’s responsible experience relevant to the subject of the Actuarial Opinion. The Board of Directors shall document the company’s review of those materials and any other information they may deem relevant, including information that may be requested directly from the Appointed Actuary. The qualification documentation shall be considered workpapers and be available for inspection upon regulator request or during a financial examination.
If an actuary who was the Appointed Actuary for the immediately preceding filed Actuarial Opinion is replaced by an action of the Board of Directors, the Insurer shall within five (5) business days notify the Insurance Department of the state of domicile of this event. The Insurer shall also furnish the domiciliary commissioner with a separate letter within ten (10) business days of the above notification stating whether in the twenty-four (24) months preceding such event there were any disagreements with the former Appointed Actuary regarding the content of the opinion on matters of the risk of material adverse deviation, required disclosures, scope, procedures, type of opinion issued, substantive wording of the opinion or data quality. The disagreements required to be reported in response to this paragraph include both those resolved to the former Appointed Actuary’s satisfaction and those not resolved to the former Appointed Actuary’s satisfaction. The letter should include a description of the disagreement and the nature of its resolution (or that it was not resolved). Within this same ten (10) business days, the Insurer shall in writing also request such former Appointed Actuary to furnish a letter addressed to the Insurer stating whether the Appointed Actuary agrees with the statements contained in the Insurer’s letter and, if not, stating the reasons for which he or she does not agree. The former Appointed Actuary shall provide a written response to the insurer within ten (10) business days of such request, and the Insurer shall furnish such responsive letter from the former Appointed Actuary to the domiciliary commissioner together with its own responses.

The Appointed Actuary must report to the Board of Directors each year on the items within the scope of the Actuarial Opinion. The Actuarial Opinion and the Actuarial Report must be made available to the Board of Directors. The minutes of the Board of Directors should indicate that the Appointed Actuary has presented such information to the Board of Directors and identify the manner of presentation (e.g., webinar, in-person presentation, written). A separate Actuarial Opinion is required for each company filing an Annual Statement. When there is an affiliated company pooling arrangement, one Actuarial Report for the aggregate pool is sufficient, but there must be addendums to the Actuarial Report to cover non-pooled reserves for individual companies.

The Actuarial Opinion and the supporting Actuarial Report and workpapers should be consistent with the appropriate Actuarial Standards of Practice (ASOPs), including, but not limited to, ASOP No. 23, ASOP No. 36, ASOP No. 41 and ASOP No. 43, as promulgated by the Actuarial Standards Board.

1A. Definitions

“Appointed Actuary” is a Qualified Actuary (or individual otherwise approved by the domiciliary commissioner) appointed by the Board of Directors in accordance with Section 1 of these instructions.

“Board of Directors” can include the designated Board of Directors, its equivalent or an appropriate committee directly reporting to the Board of Directors.

“Qualified Actuary” is a person who:

(i) Meets the basic education, experience and continuing education requirements of the Specific Qualification Standard for Statements of Actuarial Opinion, NAIC Property and Casualty Annual Statement, as set forth in the Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States (U.S. Qualifications Standards), promulgated by the American Academy of Actuaries (Academy):

(ii) Has obtained and maintains an Accepted Actuarial Designation; and

(iii) Is a member of a professional actuarial association that requires adherence to the same Code of Professional Conduct promulgated by the Academy, requires adherence to the U.S. Qualification Standards, and participates in the Actuarial Board for Counseling and Discipline when its members are practicing in the U.S.

An exception to parts (i) and (ii) of this definition would be an actuary evaluated by the Academy’s Casualty Practice Council and determined to be a Qualified Actuary for particular lines of business and business activities.
“Accepted Actuarial Designation” in item (ii) of the definition of a Qualified Actuary, is an actuarial designation accepted as meeting or exceeding the NAIC’s Minimum Property/Casualty (P/C) Actuarial Educational Standards for a P/C Appointed Actuary (published on the NAIC website). The following actuarial designations, with any noted conditions, are accepted as meeting or exceeding basic education minimum standards:

(i) Fellow of the CAS (FCAS) – Condition: basic education must include Exam 6 – Regulation and Financial Reporting (United States);

(ii) Associate of the CAS (ACAS) – Conditions: basic education must include Exam 6 – Regulation and Financial Reporting (United States) and Exam 7 – Estimation of Policy Liabilities, Insurance Company Valuation, and Enterprise Risk Management;

(iii) Fellow of the SOA (FSA) – Conditions: basic education must include completion of the general insurance track, including the following optional exams: the United States’ version of the Financial and Regulatory Environment Exam and the Advanced Topics in General Insurance Exam.

The table below provides some allowable exam substitutions for (i), (ii) and (iii) in the definition of “Accepted Actuarial Designation:” Noting that CAS exams have changed over time, exceptions for (i) and (ii) provide for FCAS/ACAS designations achieved before an exam was created (e.g. CAS Exam 6-US) or with an earlier version of an exam or exam topic (e.g., 2010 CAS Exam 6 instead of the current CAS Exam 7 Section A). FCAS/ACAS qualified under the 2018 and prior Statement of Actuarial Opinion instructions can use the noted substitution rules to achieve qualification under the new instructions by demonstrating basic and/or continuing education of the required topics including material in CAS Exam 6 (US) and section A of CAS Exam 7 (in the May 2019 CAS syllabus). Exceptions for (iii) for an FSA are also included in the table. The SOA exams completed in the general insurance track in 2019 and prior should be supplemented with continuing education and experience to meet basic education requirements in the U.S. Qualification Standards. For purpose of these instructions only, the table also includes specific exams from other organizations that are accepted as substitutes.

<table>
<thead>
<tr>
<th>Exception for (i), (ii), or (iii)</th>
<th>Exam: Exam Substitution Allowed*</th>
</tr>
</thead>
<tbody>
<tr>
<td>(i) and (ii) CAS Exam 6 (US)</td>
<td>1. Any CAS version of a U.S. P/C statutory accounting and regulation exam administered prior to creation of the CAS Exam 6 (US) in 2011.</td>
</tr>
<tr>
<td></td>
<td>2. An FCAS or ACAS earned prior to 2021 who did not pass CAS Exam 6 (US) or an allowable exam substitution, may substitute experience and/or continuing education for CAS Exam 6 (US) provided the Appointed Actuary explains in his/her qualification documentation how knowledge of U.S. financial reporting and regulation was obtained.</td>

</tbody>
</table>

*Note: These exam substitutions only apply to these instructions and are not applicable for CAS or SOA exam waivers.
“Insurer” or “Company” means an insurer or reinsurer authorized to write property and/or casualty insurance under the laws of any state and who files on the Property and Casualty Blank.

“Actuarial Report” means a document or other presentation prepared as a formal means of conveying to the state regulatory authority and the Board of Directors the Appointed Actuary’s professional conclusions and recommendations of recording and communicating the methods and procedures, of assuring that the parties addressed are aware of the significance of the Appointed Actuary’s opinion or findings, and of documenting the analysis underlying the opinion. The required content of the Actuarial Report is further described in paragraph 7. (Note that the inclusion of the Board of Directors as part of the intended audience for the Actuarial Report does not change the content of the Actuarial Report as described in paragraph 7. The Appointed Actuary should present findings to the Board of Directors in a manner deemed suitable for such audience.)

“Property and Casualty (P&C) Long Duration Contracts” refers to contracts (excluding financial guaranty contracts, mortgage guaranty contracts and surety contracts) that fulfill both of the following conditions: (1) the contract term is greater than or equal to 13 months; and (2) the insurer can neither cancel the contract nor increase the premium during the contract term. These contracts are subject to the three tests of SSAP No. 65—Property and Casualty Contracts of the NAIC Accounting Practices and Procedures Manual.

“Accident and Health (A&H) Long Duration Contracts” refers to A&H contracts in which the contract term is greater than or equal to 13 months and contract reserves are required. See Schedule H instructions for a description of categories of contract reserves, as well as policy features that give rise to contract reserves. Two specific examples of contracts that typically require contract reserves are long-term care and disability income insurance.

1B. Exemptions

An insurer who intends to file for one of the exemptions under this Section must submit a letter of intent to its domiciliary commissioner no later than December 1 of the calendar year for which the exemption is to be claimed. The commissioner may deny the exemption prior to December 31 of the same year if he or she deems the exemption inappropriate.

A copy of the approved exemption must be filed with the Annual Statement in all jurisdictions in which the company is authorized.

Exemption for Small Companies

An insurer that has less than $1,000,000 total direct plus assumed written premiums during a calendar year, and less than $1,000,000 total direct plus assumed loss and loss adjustment expense reserves at year-end, in lieu of the Actuarial Opinion required for the calendar year, may submit an affidavit under oath of an officer of the insurer that specifies the amounts of direct plus assumed written premiums and direct plus assumed loss and loss adjustment reserves.

Exemption for Insurers under Supervision or Conservatorship

Unless ordered by the domiciliary commissioner, an insurer that is under supervision or conservatorship pursuant to statutory provision is exempt from the filing requirements contained herein.

Exemption for Nature of Business

An insurer otherwise subject to the requirement and not eligible for an exemption as enumerated above may apply to its domiciliary commissioner for an exemption based on the nature of business written.
Financial Hardship Exemption

An insurer otherwise subject to this requirement and not eligible for an exemption as enumerated above may apply to the commissioner for a financial hardship exemption. Financial hardship is presumed to exist if the projected reasonable cost of the Actuarial Opinion would exceed the lesser of:

(i) One percent (1%) of the insurer’s capital and surplus reflected in the insurer’s latest quarterly statement for the calendar year for which the exemption is sought; or

(ii) Three percent (3%) of the insurer’s direct plus assumed premiums written during the calendar year for which the exemption is sought as projected from the insurer’s latest quarterly statements filed with its domiciliary commissioner.

1C. Reporting Requirements for Pooled Companies

For each company in the pool, the Appointed Actuary shall include a description of the pool, identification of the lead company and a listing of all companies in the pool, their state of domicile and their respective pooling percentages.

Exhibits A and B for each company in the pool should represent the company’s share of the pool and should reconcile to the financial statement for that company.

The following paragraph applies to companies that have a 0% share of the pool (no reported Schedule P data). The company shall submit an Actuarial Opinion that reads similar to that provided for the lead company. For example, the IRIS ratio and risk of material adverse deviation discussions, and other relevant comments shall relate to the risks of the lead company in the pool. The Exhibit B responses to question 5 should be $0 and to question 6 should be “not applicable.” Exhibits A and B of the lead company should be attached as an addendum to the PDF file and/or hard copy being filed (but would not be reported by the 0% companies in their data capture).

2. The Actuarial Opinion must consist of an IDENTIFICATION paragraph identifying the Appointed Actuary; a SCOPE paragraph identifying the subjects on which an opinion is to be expressed and describing the scope of the Appointed Actuary’s work; an OPINION paragraph expressing his or her opinion with respect to such subjects; and one or more additional RELEVANT COMMENTS paragraphs. These four sections must be clearly designated.

3. The IDENTIFICATION paragraph should indicate the Appointed Actuary’s relationship to the Company, qualifications for acting as Appointed Actuary and date of appointment and specify that the appointment was made by the Board of Directors.

If the Appointed Actuary was approved by the Academy to be a “Qualified Actuary,” with or without limitation, or if the Appointed Actuary is not a Qualified Actuary but was approved by the domiciliary commissioner, the company must attach, each year, the approval letter and reference such in the identification paragraph.

4. The SCOPE paragraph should contain a sentence such as the following:

“I have examined the actuarial assumptions and methods used in determining reserves listed in Exhibit A, as shown in the Annual Statement of the Company as prepared for filing with state regulatory officials, as of December 31, 20__, and reviewed information provided to me through XXX date.”

Exhibit A should list those items and amounts with respect to which the Appointed Actuary is expressing an opinion.

The Appointed Actuary should state that the items in the SCOPE, on which he or she is expressing an opinion, reflect Disclosure items 8 through 13.2 in Exhibit B.
The SCOPE paragraph should include a paragraph such as the following regarding the data used by the Appointed Actuary in forming the opinion:

“In forming my opinion on the loss and loss adjustment expense reserves, I relied upon data prepared by [officer name and title at the Company]. I evaluated that data for reasonableness and consistency. I also reconciled that data to Schedule P, Part 1 of the Company’s current Annual Statement. In other respects, my examination included such review of the actuarial assumptions and methods used and such tests of the calculations as I considered necessary.”

5. The OPINION paragraph should include a sentence that at least covers the points listed in the following illustration:

“In my opinion, the amounts carried in Exhibit A on account of the items identified:

A. Meet the requirements of the insurance laws of [state of domicile].
B. Are computed in accordance with accepted actuarial standards.
C. Make a reasonable provision for all unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements.”

If the Scope includes material Unearned Premium Reserves for P&C Long Duration Contracts or Other Loss Reserve items on which the Appointed Actuary is expressing an opinion, the Actuarial Opinion should contain language such as the following:

D. Make a reasonable provision for the unearned premium reserves for P&C Long Duration Contracts and/or [insert Other Loss Reserve item on which the Appointed Actuary is expressing an opinion] of the Company under the terms of its contracts and agreements.

If there is any aggregation or combination of items in Exhibit A, the opinion language should clearly identify the combined items.

Insurance laws and regulations shall at all times take precedence over the actuarial standards.

If the Appointed Actuary has made use of the analysis of another actuary not within the Appointed Actuary’s control (such as for pools and associations, for a subsidiary or for special lines of business) for a material portion of the reserves, the other actuary must be identified by name, credential and affiliation within the OPINION paragraph. If the Appointed Actuary has made use of the work of a non-actuary (such as for modeling) for a material portion of the reserves, that individual must be identified by name and affiliation and a description of the type of analysis performed must be provided.

A Statement of Actuarial Opinion should be made in accordance with one of the following sections (1 through 5). The Appointed Actuary must explicitly identify in Exhibit B which type applies.

1. Determination of Reasonable Provision. When the carried reserve amount is within the Appointed Actuary’s range of reasonable reserve estimates, the Appointed Actuary should issue a Statement of Actuarial Opinion that the carried reserve amount makes a reasonable provision for the liabilities associated with the specified reserves.

2. Determination of Deficient or Inadequate Provision. When the carried reserve amount is less than the minimum amount that the Appointed Actuary believes is reasonable, the Appointed Actuary should issue a Statement of Actuarial Opinion that the carried reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves. In addition, the Appointed Actuary should disclose the minimum amount that the Appointed Actuary believes is reasonable.

3. Determination of Redundant or Excessive Provision. When the carried reserve amount is greater than the maximum amount that the Appointed Actuary believes is reasonable, the Appointed Actuary should issue a Statement of Actuarial Opinion that the carried reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves. In addition, the Appointed Actuary should disclose the maximum amount that the Appointed Actuary believes is reasonable.
4. **Qualified Opinion.** When, in the Appointed Actuary’s opinion, the reserves for a certain item or items are in question because they cannot be reasonably estimated or the Appointed Actuary is unable to render an opinion on those items, the Appointed Actuary should issue a qualified Statement of Actuarial Opinion. The Appointed Actuary should disclose the item (or items) to which the qualification relates, the reason(s) for the qualification and the amounts for such item(s), if disclosed by the Company. Such a qualified opinion should state whether the carried reserve amount makes a reasonable provision for the liabilities associated with the specified reserves, except for the item (or items) to which the qualification relates. The Appointed Actuary is not required to issue a qualified opinion if the Appointed Actuary reasonably believes that the item (or items) in question are not likely to be material.

5. **No Opinion.** The Appointed Actuary’s ability to give an opinion is dependent upon data, analyses, assumptions, and related information that are sufficient to support a conclusion. If the Appointed Actuary cannot reach a conclusion due to deficiencies or limitations in the data, analyses, assumptions, or related information, then the Appointed Actuary may issue a statement of no opinion. A statement of no opinion should include a description of the reasons why no opinion could be given.

6. The Appointed Actuary must provide RELEVANT COMMENT paragraphs to address the following topics of regulatory importance.

   A. **Company-Specific Risk Factors**
   
   The Appointed Actuary should include an explanatory paragraph to describe the major factors, combination of factors or particular conditions underlying the risks and uncertainties the Appointed Actuary considers relevant. The explanatory paragraph should not include general, broad statements about risks and uncertainties due to economic changes, judicial decisions, regulatory actions, political or social forces, etc., nor is the Appointed Actuary required to include an exhaustive list of all potential sources of risks and uncertainties.

   B. **Risk of Material Adverse Deviation**
   
   The Appointed Actuary must provide specific RELEVANT COMMENT paragraphs to address the risk of material adverse deviation. The Appointed Actuary must identify the materiality standard and the basis for establishing this standard. The materiality standard must also be disclosed in U.S. dollars in Exhibit B: Disclosures. The Appointed Actuary should explicitly state whether or not he or she reasonably believes that there are significant risks and uncertainties that could result in material adverse deviation. This determination is also to be disclosed in Exhibit B.

   C. **Other Disclosures in Exhibit B**
   
   RELEVANT COMMENT paragraphs should describe the significance of each of the remaining Disclosure items (8 through 14) in Exhibit B. The Appointed Actuary should address the items individually and in combination when commenting on a material impact.

   D. **Reinsurance**
   
   RELEVANT COMMENT paragraphs should address reinsurance collectability, retroactive reinsurance and financial reinsurance.
   
   The Appointed Actuary’s comments on reinsurance collectability should address any uncertainty associated with including potentially uncollectable amounts in the estimate of ceded reserves. Before commenting on reinsurance collectability, the Appointed Actuary should solicit information from management on any actual collectability problems, review ratings given to reinsurers by a recognized rating service and examine Schedule F for the current year for indications of regulatory action or reinsurance recoverable on paid losses over ninety (90) days past due. The comment should also reflect any other information the Appointed Actuary has received from management or that is publicly available about the capability or willingness of reinsurers to pay claims. The Appointed Actuary’s comments do not imply an opinion on the financial condition of any reinsurer.

Financial reinsurance refers to contracts referenced in SSAP No. 62R in which credit is not allowed for the ceding insurer because the arrangements do not include a transfer of both timing and underwriting risk that the reinsurer undertakes in fact to indemnify the ceding insurer against loss or liability by reason of the original insurance.

E. IRIS Ratios

If the Company’s reserves will create exceptional values under the NAIC IRIS Tests for One-Year Reserve Development to Policyholders’ Surplus, Two-Year Reserve Development to Policyholders’ Surplus or Estimated Current Reserve Deficiency to Policyholders’ Surplus, the Appointed Actuary must include RELEVANT COMMENT on the factors that led to the unusual value(s).

F. Methods and Assumptions

If there has been any significant change in the actuarial assumptions and/or methods from those previously employed, that change should be described in a RELEVANT COMMENT paragraph. If the Appointed Actuary is newly appointed and does not review the work of the prior Appointed Actuary, then the Appointed Actuary should disclose this.

7. The Actuarial Opinion must include assurance that an Actuarial Report and underlying actuarial workpapers supporting the Actuarial Opinion will be maintained at the Company and available for regulatory examination for seven (7) years. The Actuarial Report contains significant proprietary information. It is expected that the Actuarial Report be held confidential and not be intended for public inspection. The Actuarial Report must be available by May 1 of the year following the year-end for which the Actuarial Opinion was rendered or within two (2) weeks after a request from an individual state commissioner.

The Actuarial Report should be consistent with the documentation and disclosure requirements of ASOP No. 41, Actuarial Communications. The Actuarial Report must contain both narrative and technical components. The narrative component should provide sufficient detail to clearly explain to Company management, the Board of Directors, the regulator or other authority the findings, recommendations and conclusions, as well as their significance. The technical component should provide sufficient documentation and disclosure for another actuary practicing in the same field to evaluate the work. This technical component must show the analysis from the basic data (e.g., loss triangles) to the conclusions.

Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves (AG 51) in the NAIC Accounting Practices and Procedures Manual requires a company with over 10,000 in force lives covered by long-term care (LTC) insurance contracts as of the valuation date to perform a stand-alone asset adequacy analysis for its in force long-term care (LTC) contracts. The Actuarial Report and workpapers summarizing the results, assumptions and testing procedures for the asset adequacy testing of LTC business must be in compliance with AG 51 requirements. When referring to AG 51, the term “Actuarial Memorandum” is synonymous with Actuarial Report and workpapers.

The Actuarial Report should contain disclosure of all reserve amounts associated with A&H Long Duration Contracts reported by the Company; the reserve amounts in the Actuarial Report should tie to the Annual Statement.
The Actuarial Report must also include:

A. A description of the Appointed Actuary’s relationship to the Company, with clear presentation of the Appointed Actuary’s role in advising the Board of Directors and/or management regarding the carried reserves. The Actuarial Report should identify how and when the Appointed Actuary presents the analysis to the Board of Directors and, where applicable, to the officer(s) of the Company responsible for determining the carried reserves.

B. An exhibit that ties to the Annual Statement and compares the Appointed Actuary’s conclusions to the carried amounts consistent with the segmentation of exposure or liability groupings used in the analysis. The Appointed Actuary’s conclusions include the Appointed Actuary’s point estimate(s), range(s) of reasonable estimates or both.

C. An exhibit that reconciles and maps the data used by the Appointed Actuary, consistent with the segmentation of exposure or liability groupings used in the Appointed Actuary’s analysis, to the Annual Statement Schedule P line of business reporting. An explanation should be provided for any material differences.

D. An exhibit or appendix showing the change in the Appointed Actuary’s estimates from the prior Actuarial Report, including extended discussion of factors underlying any material changes. The exhibit or appendix should illustrate the changes on a net basis but should also include the changes on a gross basis, if relevant. If the Appointed Actuary is newly appointed and does not review the work of the prior Appointed Actuary, then the Appointed Actuary should disclose this.

E. Extended comments on trends that indicate the presence or absence of risks and uncertainties that could result in material adverse deviation.

F. Extended comments on factors that led to unusual IRIS ratios for One-Year Reserve Development to Policyholders’ Surplus, Two-Year Reserve Development to Policyholders’ Surplus or Estimated Current Reserve Deficiency to Policyholders’ Surplus, and how these factors were addressed in prior and current analyses.

8. Both the Actuarial Opinion and the Actuarial Report should conclude with the signature of the Appointed Actuary responsible for providing the Actuarial Opinion and the respective dates when the Actuarial Opinion was rendered and the Actuarial Report finalized. The signature and date should appear in the following format:

________________________
Signature of Appointed Actuary

________________________
Printed name of Appointed Actuary

________________________
Employer’s name

________________________
Address of Appointed Actuary

________________________
Telephone number of Appointed Actuary

________________________
Email address of Appointed Actuary

________________________
Date opinion was rendered

9. The Insurer required to furnish an Actuarial Opinion shall require its Appointed Actuary to notify its Board of Directors or its audit committee in writing within five (5) business days after any determination by the Appointed Actuary that the Actuarial Opinion submitted to the domiciliary commissioner was in error as a result of reliance on data or other information (other than assumptions) that, as of the balance sheet date, was factually incorrect. The Actuarial Opinion shall be considered to be in error if the Actuarial Opinion would have not been issued or would have been materially altered had the correct data or other information been used. The Actuarial Opinion shall not be considered to be in error if it would have been materially altered or not issued solely because of data or information concerning events subsequent to the balance sheet date or because actual results differ from those projected. Notification is required when discovery is made between the issuance of the Actuarial Opinion and Dec. 31 of that year. Notification should include a summary of such findings.
If the Appointed Actuary learns that the data or other information relied upon was factually incorrect, but cannot immediately determine what, if any, changes are needed in the Actuarial Opinion, the Appointed Actuary and the Company should quickly undertake procedures necessary for the Appointed Actuary to make such determination. If the Insurer does not provide the necessary data corrections and other support (including financial support) within ten (10) business days, the Appointed Actuary should proceed with the notification to the Board of Directors and the domiciliary commissioner.

An Insurer who is notified pursuant to the preceding paragraphs shall forward a copy of the amended Actuarial Opinion to the domiciliary commissioner within five (5) business days of receipt of such and shall provide the Appointed Actuary making the notification with a copy of the letter and amended Actuarial Opinion submitted to the domiciliary commissioner. If the Appointed Actuary fails to receive such copy within the five (5) business day period referred to in the previous sentence, the Appointed Actuary shall notify the domiciliary commissioner within the next five (5) business days that an amended Actuarial Opinion has been finalized.

No Appointed Actuary shall be liable in any manner to any person for any statement made in connection with the above paragraphs if such statement is made in a good faith effort to comply with the above paragraphs.

10. Data in Exhibits A and B are to be filed in both print and data capture format.

Exhibit B: DISCLOSURES
DATA TO BE FILED IN BOTH PRINT AND DATA CAPTURE FORMATS

NOTE: Exhibit B should be completed for Net dollar amounts included in the SCOPE. If an answer would be different for Direct and Assumed amounts, identify and discuss the difference within RELEVANT COMMENTS.

1. Name of the Appointed Actuary
   Last _______ First _______ Mid _______

2. The Appointed Actuary’s relationship to the Company
   Enter E or C based upon the following:
   E if an Employee of the Company or Group
   C if a Consultant

3. The Appointed Actuary’s Accepted Actuarial Designation
   (indicated by the letter code):
   F if a Fellow of the Casualty Actuarial Society (FCAS)
   A if an Associate of the Casualty Actuarial Society (ACAS)
   S if a Fellow of the Society of Actuaries (FSA) through the General Insurance track
   M if the actuary does not have an Accepted Actuarial Designation but is approved by the Academy’s Casualty Practice Council.
   O for Other

4. Type of Opinion, as identified in the OPINION paragraph.
   Enter R, I, E, Q, or N based upon the following:
   R if Reasonable
   I if Inadequate or Deficient Provision
   E if Excessive or Redundant Provision
   Q if Qualified. Use Q when part of the OPINION is Qualified.
   N if No Opinion

5. Materiality Standard expressed in U.S. dollars (used to Answer Question #6) $ _______

6. Are there significant risks that could result in Material Adverse Deviation? Yes [ ] No [ ] Not Applicable [ ]

7. Statutory Surplus (Liabilities, Surplus and Other Funds page, Col 1, Line 37) $ _______

8. Anticipated net salvage and subrogation included as a reduction to loss reserves as reported in Schedule P (should equal Part 1 Summary, Col 23, Line 12 * 1000) $ _______

9. Discount included as a reduction to loss reserves and loss adjustment expense reserves as reported in Schedule P
   9.1 Nontabular Discount [Notes, Line 32B23, (Amounts 1, 2, 3 & 4)], Electronic Filing Cols 1, 2, 3, & 4 $ _______
   9.2 Tabular Discount [Notes, Line 32A23, (Amounts 1 & 2)], Electronic Filing Col 1 & 2 $ _______

10. The net reserves for losses and loss adjustment expenses for the Company’s share of voluntary and involuntary underwriting pools’ and associations’ unpaid losses and loss adjustment expenses that are included in reserves shown on the Liabilities, Surplus and Other Funds page, Losses and Loss Adjustment Expenses lines $ _______
11. The net reserves for losses and loss adjustment expenses that the Company carries for the following liabilities included on the Liabilities, Surplus and Other Funds page, Losses and Loss Adjustment Expenses lines *

11.1 Asbestos, as disclosed in the Notes to Financial Statements (Notes, Line 33A03D, ending net asbestos reserves for current year) Electronic Filing Col 5 $ _______

11.2 Environmental, as disclosed in the Notes to Financial Statements (Notes, Line 33D03D, ending net environmental reserves for current year), Electronic Filing Col 5 $ _______

12. The total claims made extended loss and loss adjustment expense, and unearned premium reserves (Greater than or equal to Schedule P Interrogatories)

12.1 Amount reported as loss and loss adjustment expense reserves $ _______

12.2 Amount reported as unearned premium reserves $ _______

13. The net reserves for the A&H Long Duration Contracts that the Company carries on the following lines on the Liabilities, Surplus and Other Funds page:

13.1 Losses $ _______

13.2 Loss Adjustment Expenses $ _______

13.3 Unearned Premium $ _______

13.4 Write-In (list separately, adding additional lines as needed, and identify (e.g., “Premium Deficiency Reserves”, “Contract Reserves other than Premium Deficiency Reserves” or “AG 51 Reserves”)) $ _______

14. Other items on which the Appointed Actuary is providing relevant comment (list separately, adding additional lines as needed) $ _______

* The reserves disclosed in item 11 above, should exclude amounts relating to contracts specifically written to cover asbestos and environmental exposures. Contracts specifically written to cover these exposures include Environmental Impairment Liability (post 1986), Asbestos Abatement, Pollution Legal Liability, Contractor’s Pollution Liability, Consultant’s Environmental Liability, and Pollution and Remediation Legal Liability.
ACTUARIAL OPINION SUMMARY SUPPLEMENT

1. For all Companies that are required by their domiciliary state to submit a confidential document entitled Actuarial Opinion Summary (AOS), such document shall be filed with the domiciliary state by March 15 (or by a later date otherwise specified by the domiciliary state). This AOS shall be submitted to a non-domiciliary state within 15 days of request, but no earlier than March 15, provided that the requesting state can demonstrate, through the existence of law or some similar means, that it is able to preserve the confidentiality of the document.

2. The AOS should be consistent with the appropriate Actuarial Standards of Practice (ASOPs), including but not limited to ASOP No. 23, ASOP No. 41 and ASOP No. 43, as promulgated by the Actuarial Standards Board.

3. Exemptions for filing the AOS are the same as those for filing the Statement of Actuarial Opinion.

4. The AOS contains significant proprietary information. It is expected that the AOS be held confidential; it is not intended for public inspection. The AOS should not be filed with the NAIC and should be kept separate from any copy of the Statement of Actuarial Opinion (Actuarial Opinion) in order to maintain confidentiality of the AOS. The AOS can contain a statement that refers to the Actuarial Opinion and the date of that opinion.

5. The AOS should be signed and dated by the Appointed Actuary who signed the Actuarial Opinion and shall include at least the following:

   A. The Appointed Actuary’s range of reasonable estimates for loss and loss adjustment expense reserves, net and gross of reinsurance, when calculated;

   B. The Appointed Actuary’s point estimates for loss and loss adjustment expense reserves, net and gross of reinsurance, when calculated;

   C. The Company’s carried loss and loss adjustment expense reserves, net and gross of reinsurance;

   D. The difference between the Company’s carried reserves and the Appointed Actuary’s estimates calculated in A and B, net and gross of reinsurance; and

   E. Where there has been one-year adverse development in excess of 5% of the prior year-end’s policyholders’ surplus as measured by Schedule P, Part 2 Summary in three (3) or more of the past five (5) calendar years, an explicit description of the reserve elements or management decisions that were the major contributors.

6. The AOS for a pooled Company (as referenced in paragraph 1C of the instructions for the Actuarial Opinion) shall include a statement that the Company is a xx% pool participant. For a non-0% Company, the information provided for paragraph 5 should be numbers after the Company’s share of the pool has been applied; specifically, the point or range comparison should be for each statutory Company and should not be for the pool in total. For any 0% pool participant, the information provided for paragraph 5 should be that of the lead company.

7. The net and gross reserve values reported by the Appointed Actuary in the AOS should reconcile to the corresponding values reported in the Insurer’s Annual Statement, the Appointed Actuary’s Actuarial Opinion and the Actuarial Report. If not, the Appointed Actuary shall provide an explanation of the difference.
8. The Insurer required to furnish an AOS shall require its Appointed Actuary to notify its Board of Directors in writing within five (5) business days after any determination by the Appointed Actuary that the AOS submitted to the domiciliary commissioner was in error as a result of reliance on data or other information (other than assumptions) that, as of the balance sheet date, was factually incorrect. The AOS shall be considered to be in error if the AOS would have not been issued or would have been materially altered had the correct data or other information been used. The AOS shall not be considered to be in error if it would have been materially altered or not issued solely because of data or information concerning events subsequent to the balance sheet date or because actual results differ from those projected. Notification shall be required when discovery is made between the issuance of the AOS and Dec. 31 of that year. Notification should include a summary of such findings.

If the Appointed Actuary learns that the data or other information relied upon was factually incorrect, but cannot immediately determine what, if any, changes are needed in the AOS, the Appointed Actuary and the Company should quickly undertake procedures necessary for the Appointed Actuary to make such determination. If the Insurer does not provide the necessary data corrections and other support (including financial support) within ten (10) business days, the Appointed Actuary should proceed with the notification to the Board of Directors and the domiciliary commissioner.

An Insurer who is notified pursuant to the preceding paragraphs shall forward a copy of the amended AOS to the domiciliary commissioner within five (5) business days of receipt of such and shall provide the Appointed Actuary making the notification with a copy of the letter and amended AOS submitted to the domiciliary commissioner. If the Appointed Actuary fails to receive such copy within the five (5) business day period referred to in the previous sentence, the Appointed Actuary shall notify the domiciliary commissioner within the next five (5) business days that an amended AOS has been finalized.

9. No Appointed Actuary shall be liable in any manner to any person for any statement made in connection with the above paragraphs if such statement is made in a good faith effort to comply with the above paragraphs.
ACTUARIAL OPINION

1. There is to be included with or attached to Page 1 of the Annual Statement, the statement of a Qualified Actuary, entitled “Statement of Actuarial Opinion” (Actuarial Opinion) setting forth his or her opinion relating to reserves specified in the SCOPE paragraph. The Actuarial Opinion, both the narrative and required exhibits, shall be in the format of and contain the information required by this section of the Annual Statement Instructions – Title.

The Qualified Actuary must be appointed by the Board of Directors or its equivalent, or by a committee of the Board, by December 31 of the calendar year for which the opinion is rendered. Upon initial appointment (or “retention”), the Company shall notify the domiciliary commissioner within five business days of the appointment with the following information:

a. Name and title (and, in the case of a consulting actuary, the name of the firm).

b. Manner of appointment of the Appointed Actuary (e.g., who made the appointment and when).

c. A statement that the person meets the requirements of a Qualified Actuary.

Once this notification is furnished, no further notice is required with respect to this person unless the actuary ceases to be appointed or retained or ceases to meet the requirements of a Qualified Actuary.

If an actuary who was the Appointed Actuary for the immediately preceding filed Actuarial Opinion is replaced by an action of the Board of Directors, the Insurer shall within five (5) business days notify the Insurance Department of the state of domicile of this event. The Insurer shall also furnish the domiciliary commissioner with a separate letter within ten (10) business days of the above notification stating whether in the twenty-four (24) months preceding such event there were any disagreements with the former Appointed Actuary regarding the content of the opinion on matters of the risk of material adverse deviation, required disclosures, scope, procedures, type of opinion issued, substantive wording of the opinion or data quality. The disagreements required to be reported in response to this paragraph include both those resolved to the former actuary’s satisfaction and those not resolved to the former actuary’s satisfaction. The letter should include a description of the disagreements and the nature of its resolution (or that it was not resolved). The Insurer shall also request in writing such former actuary to furnish a letter addressed to the Insurer stating whether the actuary agrees with the statements contained in Insurer’s letter and, if not, stating the reasons for which he or she does not agree; and the Insurer shall furnish such responsive letter from the former actuary to the domiciliary commissioner together with its own.

The Appointed Actuary must report to the Board of Directors or the Audit Committee each year on the items within the scope of the Actuarial Opinion. The Actuarial Opinion and the Actuarial Report must be made available to the Board of Directors. The minutes of the Board of Directors should indicate that the Appointed Actuary has presented such information to the Board of Directors or the Audit Committee and that the Actuarial Opinion and the Actuarial Report were made available. A separate Actuarial Opinion is required for each company filing an Annual Statement. When there is an affiliated company pooling arrangement, one Actuarial Report for the aggregate pool is sufficient, but there must be addendums to the Actuarial Report to cover non-pooled reserves for individual companies.

The Actuarial Opinion and the supporting Actuarial Report and workpapers, should be consistent with the appropriate Actuarial Standards of Practice (ASOPs), including but not limited to ASOP No. 23, ASOP No. 36, ASOP No. 41 and ASOP No. 43, as promulgated by the Actuarial Standards Board.
1A. Definitions

“Qualified Actuary” is a person who is either:

(i) A member in good standing of the Casualty Actuarial Society; or

(ii) A member in good standing of the American Academy of Actuaries who has been approved as qualified for signing casualty loss reserve opinions by the Casualty Practice Council of the American Academy of Actuaries.

“Insurer” or “Company” means a reporting entity authorized to write title insurance under the laws of any state and who files on the Title Blank.

“Actuarial Report” means a document or other presentation, prepared as a formal means of conveying to the state regulatory authority and the Board of Directors, or its equivalent, the actuary’s professional conclusions and recommendations, of recording and communicating the methods and procedures, of assuring that the parties addressed are aware of the significance of the actuary’s opinion or findings and of documenting the analysis underlying the opinion. The expected content of the Actuarial Report is further described in paragraph 7. (Note that the inclusion of the Board of Directors as part of the intended audience for the Actuarial Report does not change the content of the Actuarial Report as described in paragraph 7. The Appointed Actuary should present findings to the Board of Directors in a manner deemed suitable for such audience.)

1B. Exemptions

An insurer who intends to file for one of the exemptions under this section must submit a letter of intent to its domiciliary commissioner no later than December 1 of the calendar year for which the exemption is to be claimed. The commissioner may deny the exemption prior to December 31 of the same year if the exemption is deemed inappropriate.

A copy of the approved exemption must be filed with the Annual Statement in all jurisdictions in which the company is authorized.

Exemption for Small Companies

An insurer that has less than $1,000,000 total direct plus assumed written premiums during a calendar year, and less than $1,000,000 total direct plus assumed loss and loss adjustment expense reserves at year-end, in lieu of the Actuarial Opinion required for the calendar year, may submit an affidavit under oath of an officer of the insurer that specifies the amounts of direct plus assumed written premiums and direct plus assumed loss and loss adjustment reserves.

Exemption for Insurers under Supervision or Conservatorship

Unless ordered by the domiciliary commissioner, an insurer that is under supervision or conservatorship pursuant to statutory provision is exempt from the filing requirements contained herein.

Exemption for Nature of Business

An insurer otherwise subject to the requirement and not eligible for an exemption as enumerated above may apply to its domiciliary commissioner for an exemption based on the nature of business written.
Financial Hardship Exemption

An insurer otherwise subject to this requirement and not eligible for an exemption as enumerated above may apply to the commissioner for a financial hardship exemption.

Financial hardship is presumed to exist if the projected reasonable cost of the opinion would exceed the lesser of:

(i) One percent (1%) of the insurer’s capital and surplus reflected in the insurer’s latest quarterly statement for the calendar year for which the exemption is sought; or

(ii) Three percent (3%) of the insurer’s direct plus assumed premiums written during the calendar year for which the exemption is sought as projected from the insurer’s latest quarterly statements filed with its domiciliary commissioner.

2. The Statement of Actuarial Opinion must consist of an IDENTIFICATION paragraph identifying the Appointed Actuary; a SCOPE paragraph identifying the subjects on which an opinion is to be expressed and describing the scope of the actuary’s work; an OPINION paragraph expressing his or her opinion with respect to such subjects and one or more additional RELEVANT COMMENTS paragraphs. These four sections must be clearly designated.

3. The IDENTIFICATION paragraph should indicate the Appointed Actuary’s relationship to the Company, qualifications for acting as Appointed Actuary, and date of appointment, and specify that the appointment was made by the Board of Directors (or its equivalent) or by a committee of the Board. A member of the American Academy of Actuaries qualifying under paragraph 1A(ii) must attach, each year, a copy of the approval letter from the Academy.

These instructions require that a Qualified Actuary prepare the Actuarial Opinion. If a person who does not meet the definition of a Qualified Actuary has been approved by the insurance regulatory official of the domiciliary state, the Company must attach, each year, a letter from that official stating that the individual meets the state’s requirements for rendering the Actuarial Opinion.

4. The SCOPE paragraph should contain a sentence such as the following:

“I have examined the actuarial assumptions and methods used in determining reserves listed in Exhibit A, as shown in the Annual Statement of the Company as prepared for filing with state regulatory officials, as of December 31, 20__, and reviewed information provided to me through XXX date.”

Exhibit A should list those items and amounts with respect to which the Appointed Actuary is expressing an opinion.

The Appointed Actuary should state that the items in the SCOPE paragraph, on which he or she is expressing an opinion, reflect the Disclosure items (8 through 14) in Exhibit B.

The SCOPE paragraph should include a paragraph such as the following regarding the data used by the Appointed Actuary in forming the opinion:

“In forming my opinion on the loss and loss adjustment expense reserves, I relied upon data prepared by __________ (name, affiliation and relation to Company). I evaluated that data for reasonableness and consistency. I also reconciled that data to Schedule P, Parts 1 and 2 of the Company’s current Annual Statement. In other respects, my examination included such review of the actuarial assumptions and methods used and such tests of the calculations as I considered necessary.”
5. The OPINION paragraph should include a sentence that at least covers the points listed in the following illustration:

“In my opinion, the amounts carried in Exhibit A on account of the items identified:

A. Meet the requirements of the insurance laws of (state of domicile).
B. Are computed in accordance with accepted actuarial standards.
C. Make a reasonable provision for all unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements.”

If there is any aggregation or combination of items in Exhibit A, the opinion language should clearly identify the combined items.

Insurance laws and regulations shall at all times take precedence over the actuarial standards.

If the actuary has made use of the work of another actuary (such as for pools and associations, for a subsidiary or for special lines of business) for a material portion of the reserves, the other actuary must be identified by name and affiliation within the OPINION paragraph.

A Statement of Actuarial Opinion should be made in accordance with one of the following sections (a through e). The actuary must explicitly identify in Exhibit B which type applies.

a. Determination of Reasonable Provision. When the carried reserve amount is within the actuary’s range of reasonable reserve estimates, the actuary should issue a Statement of Actuarial Opinion that the carried reserve amount makes a reasonable provision for the liabilities associated with the specified reserves.

b. Determination of Deficient or Inadequate Provision. When the carried reserve amount is less than the minimum amount that the actuary believes is reasonable, the actuary should issue a statement of actuarial opinion that the carried reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves. In addition, the actuary should disclose the minimum amount that the actuary believes is reasonable.

c. Determination of Redundant or Excessive Provision. When the carried reserve amount is greater than the maximum amount that the actuary believes is reasonable, the actuary should issue a Statement of Actuarial Opinion that the carried reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves. In addition, the actuary should disclose the maximum amount that the actuary believes is reasonable.

d. Qualified Opinion. When, in the actuary’s opinion, the reserves for a certain item or items are in question because they cannot be reasonably estimated or the actuary is unable to render an opinion on those items, the actuary should issue a qualified Statement of Actuarial Opinion. The actuary should disclose the item (or items) to which the qualification relates, the reasons for the qualification, and the amounts for such item(s), if disclosed by the Company. Such a qualified opinion should state whether the stated reserve amount makes a reasonable provision for the liabilities associated with the specified reserves, except for the item (or items) to which the qualification relates. The actuary is not required to issue a qualified opinion if the actuary reasonably believes that the item (or items) in question are not likely to be material.

e. No Opinion. The actuary’s ability to give an opinion is dependent upon data, analyses, assumptions, and related information that are sufficient to support a conclusion. If the actuary cannot reach a conclusion due to deficiencies or limitations in the data, analyses, assumptions, or related information, then the actuary may issue a statement of no opinion. A statement of no opinion should include a description of the reasons why no opinion could be given.
6. The Appointed Actuary must provide RELEVANT COMMENT paragraphs to address the following topics of regulatory importance.

a. Risk of Material Adverse Deviation.

The Appointed Actuary must provide specific RELEVANT COMMENT paragraphs to address the risk of material adverse deviation. The Appointed Actuary must identify the materiality standard and the basis for establishing this standard with respect to the relevant characteristics of the Company. The materiality standard must also be disclosed in U.S. dollars in Exhibit B: Disclosures. The Appointed Actuary should include an explanatory paragraph to describe the major factors, combination of factors or particular conditions underlying the risks and uncertainties the actuary considers relevant. The explanatory paragraph should not include general, broad statements about risks and uncertainties due to economic changes, judicial decisions, regulatory actions, political or social forces, etc., nor is the Appointed Actuary required to include an exhaustive list of all potential sources of risks and uncertainties. The Appointed Actuary should explicitly state whether or not he or she reasonably believes that there are significant risks and uncertainties that could result in material adverse deviation. This determination is also to be disclosed in Exhibit B.

b. Other Disclosures in Exhibit B

RELEVANT COMMENT paragraphs should describe the significance of each of the remaining Disclosure items (8 through 14) in Exhibit B. The Appointed Actuary should address the items individually and in combination when commenting on a material impact.

If the Company’s reserves will cause the ratio of One-Year or Two-Year Known Claims Reserve Development (shown in Schedule P, Part 3) to the respective prior year’s Policyholders’ Surplus to be greater than 20%, the Appointed Actuary must include RELEVANT COMMENT on the factors that led to the exceptional reserve development.

c. Reinsurance

RELEVANT COMMENT paragraphs should address reinsurance collectability, retroactive reinsurance and financial reinsurance.

The Appointed Actuary’s comments on reinsurance collectability should address any uncertainty associated with including potentially-uncollectable amounts in the estimate of ceded reserves. Before commenting on reinsurance collectability, the Appointed Actuary should solicit information from management on any actual collectability problems, review ratings given to reinsurers by a recognized rating service, and examine Schedule F for the current year for indications of regulatory action or reinsurance recoverable on paid losses over ninety (90) days past due. The comment should also reflect any other information the actuary has received from management or that is publicly available about the capability or willingness of reinsurers to pay claims. The Appointed Actuary’s comments do not imply an opinion on the financial condition of any reinsurer.

Financial reinsurance refers to contracts referenced in SSAP No. 62R—Property and Casualty Reinsurance of the Accounting Practices and Procedures Manual in which credit is not allowed for the ceding insurer because the arrangements do not include a transfer of both timing and underwriting risk that the reinsurer undertakes in fact to indemnify the ceding insurer against loss or liability by reason of the original insurance.

d. Reserve Development

If the Company’s reserves will cause the ratio of One-Year or Two-Year Reserve Development (shown in Schedule P, Part 2) to the respective prior year’s Policyholders’ Surplus to be greater than 20%, the Appointed actuary must include RELEVANT COMMENT on the factors that led to the exceptional reserve development.
e. Methods and Assumptions

If there has been any significant change in the actuarial assumptions and/or methods from those previously employed, that change should be described in a RELEVANT COMMENT paragraph. If the Appointed Actuary is newly-appointed and does not review the work of the prior Appointed Actuary, then the Appointed Actuary should disclose this.

7. The Actuarial Opinion must include assurance that an Actuarial Report and underlying actuarial workpapers supporting the Actuarial Opinion will be maintained at the Company and available for examination for seven years. The Actuarial Report contains significant proprietary information. It is expected that the Actuarial Report be held confidential and not be intended for public inspection. The Actuarial Report must be available by May 1 of the year following the year-end for which the Opinion was rendered or within two (2) weeks after a request from an individual state commissioner.

The Actuarial Report should be consistent with the documentation and disclosure requirements of ASOP No. 41, Actuarial Communications. The Actuarial Report must contain both narrative and technical components. The narrative component should provide sufficient detail to clearly explain to company management, the Board of Directors, the regulator, or other authority the findings, recommendations and conclusions, as well as their significance. The technical component should provide sufficient documentation and disclosure for another actuary practicing in the same field to evaluate the work. This technical component must show the analysis from the basic data (e.g., loss triangles) to the conclusions.

The Actuarial Report must also include:

- A description of the Appointed Actuary’s relationship to the Company, with clear presentation of the Appointed Actuary’s role in advising the Board and/or management regarding the carried reserves. The Actuarial Report should identify how and when the Appointed Actuary presents the analysis to the Board and, where applicable, to the officer(s) of the Company responsible for determining the carried reserves.

- An exhibit that ties to the Annual Statement and compares the Appointed Actuary’s conclusions to the carried amounts consistent with the segmentation of exposure or liability groupings used in the analysis. The Appointed Actuary’s conclusions include the Appointed Actuary’s point estimate(s), range(s) of reasonable estimates or both.

- An exhibit that reconciles and maps the data used by the Appointed Actuary, consistent with the segmentation of exposure or liability groupings used in the Appointed Actuary’s analysis, to the Annual Statement Schedule P.

- An exhibit or appendix showing the change in the Appointed Actuary’s estimates from the prior Actuarial Report, including extended discussion of factors underlying any material changes. If the Appointed Actuary is newly-appointed and does not review the work of the prior Appointed Actuary, then the Appointed Actuary should disclose this.

- Extended comments on trends that indicate the presence or absence of risks and uncertainties that could result in material adverse deviation.

- Extended comments on factors that led to exceptional reserve development, as defined in 6C and 6D, and how these factors were addressed in prior and current analyses.
8. The statement should conclude with the signature of the Appointed Actuary responsible for providing the Actuarial Opinion and the date when the Opinion was rendered. The signature and date should appear in the following format:

___________________________________
Signature of Appointed Actuary
Printed name of Appointed actuary
Employer’s name
Address of Appointed Actuary
Telephone number of Appointed Actuary
Email address of Appointed Actuary
Date opinion was rendered

9. The Insurer required to furnish an Actuarial Opinion shall require its Appointed Actuary to notify its Board of Directors or its audit committee in writing within five (5) business days after any determination by the Appointed Actuary that the Opinion submitted to the domiciliary commissioner was in error as a result of reliance on data or other information (other than assumptions) that, as of the balance sheet date, was factually incorrect. The Opinion shall be considered to be in error if the Opinion would have not been issued or would have been materially altered had the correct data or other information been used. The Opinion shall not be considered to be in error if it would have been materially altered or not issued solely because of data or information concerning events subsequent to the balance sheet date or because actual results differ from those projected.

Notification shall be required for any such determination made between the issuance of the Actuarial Opinion and the balance sheet date for which the next Actuarial Opinion will be issued. The notification should include a summary of such findings and an amended Actuarial Opinion.

An Insurer who is notified pursuant to the preceding paragraphs shall forward a copy of the summary and the amended Actuarial Opinion to the domiciliary commissioner within five (5) business days of receipt of such and shall provide the Appointed Actuary making the notification a copy of the summary and amended Actuarial Opinion being furnished to the domiciliary commissioner. If the Appointed Actuary fails to receive such copy within the five (5) business day period referred to in the previous sentence, the Appointed Actuary shall notify the domiciliary commissioner within the next five (5) business days that the submitted Actuarial Opinion should no longer be relied upon or such other notification recommended by the actuary’s attorney.

If the Appointed Actuary learns that the data or other information relied upon was factually incorrect, but cannot immediately determine what, if any, changes are needed in the Actuarial Opinion, the actuary and the Company should undertake as quickly as is reasonably practical those procedures necessary for the Appointed Actuary to make the determination discussed above. If the Insurer does not provide the necessary data corrections and other support (including financial support) within ten (10) business days, the actuary should proceed with the notification discussed above.

No Appointed Actuary shall be liable in any manner to any person for any statement made in connection with the above paragraphs if such statement is made in a good faith effort to comply with the above paragraphs.

10. Data in Exhibit A and Exhibit B are to be filed in both print and data capture format.
## Exhibit A: SCOPE

### DATA TO BE FILED IN BOTH PRINT AND DATA CAPTURE FORMAT

1. Name of the Appointed Actuary
2. The Appointed Actuary’s relationship to the Company.
   Enter E or C based upon the following:
   - E - If an Employee of the Company or Group
   - C - If a Consultant
3. The Appointed Actuary has the following designation (indicated by the letter code):
   - F - If a Fellow of the Casualty Actuarial Society (FCAS)
   - A - If an Associate of the Casualty Actuarial Society (ACAS)
   - M - If not a member of the Casualty Actuarial Society, but a Member of the American Academy of Actuaries (MAAA) approved by the Casualty Practice Council, as documented with the attached approval letter.
   - O - For Other
4. Type of Opinion, as identified in the OPINION paragraph. Enter R, I, E, Q, or N based upon the following:
   R - If Reasonable
   I - If Inadequate or Deficient Provision
   E - If Excessive or Redundant Provision
   Q - If Qualified (use Q when part of the OPINION is Qualified)
   N - If No Opinion

5. Materiality Standard expressed in U.S. dollars (used to answer question #6) $ __________

6. Are there significant risks that could result in Material Adverse Deviation? __________

7. Statutory Surplus (Liabilities, Surplus, and Other Funds Page, Line 32) $ __________

8. Known claims reserve (Liabilities, Surplus, and Other Funds Page, Line 1) $ __________

9. Statutory premium reserve (Liabilities, Surplus, and Other Funds Page, Line 2) $ __________

10. Aggregate of other reserves required by law (Liabilities, Surplus, and Other Funds Page, Line 3) $ __________

11. Supplemental reserve (Liabilities, Surplus, and Other Funds Page, Line 4) $ __________

12. Anticipated net salvage and subrogation included as a reduction to loss reserves as reported in Schedule P $ __________

13. Discount included as a reduction to loss reserves and loss adjustment expense reserves as reported in Schedule P $ __________

14. Other items on which the Appointed Actuary is providing relevant comment (list separately, adding additional lines as needed) $ __________
Remove the two sentences starting with “The log shall include categorization of CE approved for use by CAST…” to eliminate the reference to the CE Log study.

Add deadline for submission of QD to the Board: “at least one month prior…”

Add language about documenting review of QD at the level of the holding company structure that is responsible for overseeing insurance operations. (language from FEHTG+CT/Michelle’s proposal)

Add reference to ASOP 56 (Modeling), 1 (Introductory ASOP), 20 (Discounting of PC Unpaid Claim Estimates) and 21 (Responding to or Assisting Auditors or Examiners in Connection with Financial Audits, Financial Reviews, and Financial Examinations)

Add assertion that the qualification documentation was provided to the BOD, “directly or through Company Management.”

Michelle made a point that hardly any actuarial reports follow this format exactly. Usually this information is provided in various spots throughout the report. Do we want to word this language just to ask that this information is included, but not mandate the format and location?

What exactly are the actuary’s “conclusions”? Are they each prescribed SAO assertion, esp. that the carried amounts on Exhibit A meet state legal requirements, are based on or consistent with reserves based on good actuarial work, and make a provision that’s reasonable for P0Y?

Do we all expect the appointed actuary to use basic data and reasonable methods/assumptions to arrive at his/her indicated amount and/or range of reasonable amounts? And then expect a “Reasonable” SAO if the carried amounts are materially consistent with those “actuary’s conclusions?”

Is this really about the signature block? I see infrequent deviations in signature blocks and discourage the deviation.

The Actuarial Report should be consistent with the documentation and disclosure requirements of ASOP No. 4, Actuarial communications. Okay.

The Actuarial Report must contain both narrative and technical components separate from each other.

The narrative component should provide sufficient detail to clearly explain the findings, recommendations and conclusions, as well as their significance.

The technical component should provide sufficient documentation and disclosure for another actuary practicing in the same field to evaluate the work.

The narrative component should include an analysis of the basic data (e.g., loss triangle) to the conclusions.

The technical component must show the analysis from the basic data (e.g., loss triangle) to the actuary’s conclusions.

The Actuarial Report must contain separate narrative and technical components.

Anticipated Effective Date: Annual 2022

IDENTIFICATION OF ITEM(S) TO CHANGE

Changes and clarifying guidance in Sections 1, 3, and 8 of the Actuarial Opinion Instructions. Please see the attached red-line document for identification of each change.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

Proposed changes include some clean-up and clarifications in the P/C Statement of Actuarial Opinion Instructions. Changes were adopted by Actuarial Opinion (C) Working Group on 3/1/2022.

Section 1:
- Guidance on continuing education (CE) logs is no longer required because the Casualty Actuarial and Statistical (C) Task Force’s CE Log project will not be reoccurring. Actuaries will refer to their respective societies for guidance on CE Logs.
- Additional guidance is provided on documentation of the board review of Qualification Documentation (QD) for companies that are part of a group whose parent board reviews QD on behalf of all subsidiaries. Guidance on this question has been requested by the industry and the Working Group has consulted the Financial Examination Handbook (E) Technical Group on the appropriate response.

Section 3: An additional requirement is added in the IDENTIFICATION paragraph for Appointed Actuaries to confirm that qualification documentation has been provided to the Board of Directors. This statement in the IDENTIFICATION paragraph will assist regulators in determining whether this requirement has been met.
Section 8: Clarification that the signature block requirements apply to the Statement of Actuarial Opinion only. The Actuarial Report should reproduce the same information, though not necessarily in the same format. It has been reported that Appointed Actuaries often provide the required information in a slightly different format within the Actuarial Report, necessitating Financial Examiners to create meaningless findings/objections just because the information doesn’t follow the exact format. The Working Group members agree that the prescribed format is applicable to the Actuarial Opinion only and the format in the Actuarial Report may vary.

** This section must be completed on all forms. Revised 7/18/2018
ACTUARIAL OPINION

1. There is to be included with or attached to Page 1 of the Annual Statement the statement of the Appointed Actuary, entitled “Statement of Actuarial Opinion” (Actuarial Opinion), setting forth his or her opinion relating to reserves specified in the SCOPE paragraph. The Actuarial Opinion, both the narrative and required Exhibits, shall be in the format of and contain the information required by this section of the Annual Statement Instructions – Property and Casualty.

Upon initial engagement, the Appointed Actuary must be appointed by the Board of Directors by Dec. 31 of the calendar year for which the opinion is rendered. The Company shall notify the domiciliary commissioner within five business days of the initial appointment with the following information:

a. Name and title (and, in the case of a consulting actuary, the name of the firm).

b. Manner of appointment of the Appointed Actuary (e.g., who made the appointment and when).

c. A statement that the person meets the requirements of a Qualified Actuary (or was approved by the domiciliary commissioner) and that documentation was provided to the Board of Directors.

Once this notification is furnished, no further notice is required with respect to this person unless the Board of Directors takes action to no longer appoint or retain the actuary or the actuary no longer meets the requirements of a Qualified Actuary.

If subject to the U.S. Qualification Standards, the Appointed Actuary shall annually attest to having met the continuing education requirements under Section 3 of the U.S. Qualification Standards for issuing Actuarial Opinions. As agreed with the actuarial organizations, the Casualty Actuarial Society (CAS) and Society of Actuaries (SOA) will determine the process for receiving the attestations for their respective members and make available the attestations to the public. An Appointed Actuary subject to the U.S. Qualification Standards and not a member of the CAS or SOA shall select one of the above organizations to submit their attestation.

In accordance with the CAS and SOA’s continuing education review procedures, an Appointed Actuary who is subject to the U.S. Qualification Standards and selected for review shall submit a log of their continuing education in a form determined by the CAS and SOA. The log shall include categorization of continuing education approved for use by the Casualty Actuarial and Statistical Task Force. As agreed with the actuarial organizations, the CAS and SOA will provide an annual consolidated report to the NAIC identifying the types and subject matter of continuing education being obtained by Appointed Actuaries. An Appointed Actuary subject to the U.S. Qualification Standards and not a member of the CAS or SOA shall follow the review procedures for the organization in which they submitted their attestation.

The Appointed Actuary shall provide to the Board of Directors qualification documentation on occasion of their appointment, and on an annual basis thereafter, directly or through company management. The documentation should include brief biographical information and a description of how the definition of “Qualified Actuary” is met or expected to be met (in the case of continuing education) for that year. The documentation should describe the Appointed Actuary’s responsible experience relevant to the subject of the Actuarial Opinion. The Board of Directors shall document the company’s review of those materials and any other information they may deem relevant, including information that may be requested directly from the Appointed Actuary. It is generally expected that the review of the Appointed Actuary’s qualification documentation should take place at the level within a holding company structure that is responsible for overseeing insurance operations. If a statutory entity is a subsidiary or a non-lead pool member with an Appointed Actuary whose qualifications were reviewed by the pool lead or principal’s Board, the statutory entity’s Board can satisfy the review requirement by acknowledging the parent Board’s review. This can be done by noting in the meeting minutes the name of the principal or lead entity and the date the parent Board reviewed the qualification documentation, or by attaching a copy of the parent Board’s meeting minutes reflecting their review of the qualification documentation. The qualification documentation shall be considered workpapers and be available for inspection upon regulator request or during a financial examination.
If an actuary who was the Appointed Actuary for the immediately preceding filed Actuarial Opinion is replaced by an action of the Board of Directors, the Insurer shall within five (5) business days notify the Insurance Department of the state of domicile of this event. The Insurer shall also furnish the domiciliary commissioner with a separate letter within ten (10) business days of the above notification stating whether in the twenty-four (24) months preceding such event there were any disagreements with the former Appointed Actuary regarding the content of the opinion on matters of the risk of material adverse deviation, required disclosures, scope, procedures, type of opinion issued, substantive wording of the opinion or data quality. The disagreements required to be reported in response to this paragraph include both those resolved to the former Appointed Actuary’s satisfaction and those not resolved to the former Appointed Actuary’s satisfaction. The letter should include a description of the disagreement and the nature of its resolution (or that it was not resolved). Within this same ten (10) business days, the Insurer shall in writing also request such former Appointed Actuary to furnish a letter addressed to the Insurer stating whether the Appointed Actuary agrees with the statements contained in the Insurer’s letter and, if not, stating the reasons for which he or she does not agree. The former Appointed Actuary shall provide a written response to the insurer within ten (10) business days of such request, and the Insurer shall furnish such responsive letter from the former Appointed Actuary to the domiciliary commissioner together with its own responses.

The Appointed Actuary must report to the Board of Directors each year on the items within the scope of the Actuarial Opinion. The Actuarial Opinion and the Actuarial Report must be made available to the Board of Directors. The minutes of the Board of Directors should indicate that the Appointed Actuary has presented such information to the Board of Directors and identify the manner of presentation (e.g., webinar, in-person presentation, written). A separate Actuarial Opinion is required for each company filing an Annual Statement. When there is an affiliated company pooling arrangement, one Actuarial Report for the aggregate pool is sufficient, but there must be addendums to the Actuarial Report to cover non-pooled reserves for individual companies.

The Actuarial Opinion and the supporting Actuarial Report and workpapers should be consistent with the appropriate Actuarial Standards of Practice (ASOPs), including, but not limited to, ASOP No. 23, ASOP No. 36, ASOP No. 41 and ASOP No. 43, as promulgated by the Actuarial Standards Board.

1A. Definitions

“Appointed Actuary” is a Qualified Actuary (or individual otherwise approved by the domiciliary commissioner) appointed by the Board of Directors in accordance with Section 1 of these instructions.

“Board of Directors” can include the designated Board of Directors, its equivalent or an appropriate committee directly reporting to the Board of Directors.

“Qualified Actuary” is a person who:

(i) Meets the basic education, experience and continuing education requirements of the Specific Qualification Standard for Statements of Actuarial Opinion, NAIC Property and Casualty Annual Statement, as set forth in the Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States (U.S. Qualifications Standards), promulgated by the American Academy of Actuaries (Academy):

(ii) Has obtained and maintains an Accepted Actuarial Designation; and

(iii) Is a member of a professional actuarial association that requires adherence to the same Code of Professional Conduct promulgated by the Academy, requires adherence to the U.S. Qualification Standards, and participates in the Actuarial Board for Counseling and Discipline when its members are practicing in the U.S.

An exception to parts (i) and (ii) of this definition would be an actuary evaluated by the Academy’s Casualty Practice Council and determined to be a Qualified Actuary for particular lines of business and business activities.
“Accepted Actuarial Designation” in item (ii) of the definition of a Qualified Actuary, is an actuarial designation accepted as meeting or exceeding the NAIC’s Minimum Property/Casualty (P/C) Actuarial Educational Standards for a P/C Appointed Actuary (published on the NAIC website). The following actuarial designations, with any noted conditions, are accepted as meeting or exceeding basic education minimum standards:

(i) Fellow of the CAS (FCAS) – Condition: basic education must include Exam 6 – Regulation and Financial Reporting (United States);

(ii) Associate of the CAS (ACAS) – Conditions: basic education must include Exam 6 – Regulation and Financial Reporting (United States) and Exam 7 – Estimation of Policy Liabilities, Insurance Company Valuation, and Enterprise Risk Management;

(iii) Fellow of the SOA (FSA) – Conditions: basic education must include completion of the general insurance track, including the following optional exams: the United States’ version of the Financial and Regulatory Environment Exam and the Advanced Topics in General Insurance Exam.

The table below provides some allowable exam substitutions for (i), (ii) and (iii) in the definition of “Accepted Actuarial Designation:” Noting that CAS exams have changed over time, exceptions for (i) and (ii) provide for FCAS/ACAS designations achieved before an exam was created (e.g. CAS Exam 6-US) or with an earlier version of an exam or exam topic (e.g., 2010 CAS Exam 6 instead of the current CAS Exam 7 Section A). FCAS/ACAS qualified under the 2018 and prior Statement of Actuarial Opinion instructions can use the noted substitution rules to achieve qualification under the new instructions by demonstrating basic and/or continuing education of the required topics including material in CAS Exam 6 (US) and section A of CAS Exam 7 (in the May 2019 CAS syllabus). Exceptions for (iii) for an FSA are also included in the table.

The SOA exams completed in the general insurance track in 2019 and prior should be supplemented with continuing education and experience to meet basic education requirements in the U.S. Qualification Standards. For purpose of these instructions only, the table also includes specific exams from other organizations that are accepted as substitutes.

</table>

*Note: These exam substitutions only apply to these instructions and are not applicable for CAS or SOA exam waivers.
“Insurer” or “Company” means an insurer or reinsurer authorized to write property and/or casualty insurance under the laws of any state and who files on the Property and Casualty Blank.

“Actuarial Report” means a document or other presentation prepared as a formal means of conveying to the state regulatory authority and the Board of Directors the Appointed Actuary’s professional conclusions and recommendations of recording and communicating the methods and procedures, of assuring that the parties addressed are aware of the significance of the Appointed Actuary’s opinion or findings, and of documenting the analysis underlying the opinion. The required content of the Actuarial Report is further described in paragraph 7. (Note that the inclusion of the Board of Directors as part of the intended audience for the Actuarial Report does not change the content of the Actuarial Report as described in paragraph 7. The Appointed Actuary should present findings to the Board of Directors in a manner deemed suitable for such audience.)

“Property and Casualty (P&C) Long Duration Contracts” refers to contracts (excluding financial guaranty contracts, mortgage guaranty contracts and surety contracts) that fulfill both of the following conditions: (1) the contract term is greater than or equal to 13 months; and (2) the insurer can neither cancel the contract nor increase the premium during the contract term. These contracts are subject to the three tests of SSAP No. 65—Property and Casualty Contracts of the NAIC Accounting Practices and Procedures Manual.

“Accident and Health (A&H) Long Duration Contracts” refers to A&H contracts in which the contract term is greater than or equal to 13 months and contract reserves are required. See Schedule H instructions for a description of categories of contract reserves, as well as policy features that give rise to contract reserves. Two specific examples of contracts that typically require contract reserves are long-term care and disability income insurance.

1B. Exemptions

An insurer who intends to file for one of the exemptions under this Section must submit a letter of intent to its domiciliary commissioner no later than December 1 of the calendar year for which the exemption is to be claimed. The commissioner may deny the exemption prior to December 31 of the same year if he or she deems the exemption inappropriate.

A copy of the approved exemption must be filed with the Annual Statement in all jurisdictions in which the company is authorized.

Exemption for Small Companies

An insurer that has less than $1,000,000 total direct plus assumed written premiums during a calendar year, and less than $1,000,000 total direct plus assumed loss and loss adjustment expense reserves at year-end, in lieu of the Actuarial Opinion required for the calendar year, may submit an affidavit under oath of an officer of the insurer that specifies the amounts of direct plus assumed written premiums and direct plus assumed loss and loss adjustment reserves.

Exemption for Insurers under Supervision or Conservatorship

Unless ordered by the domiciliary commissioner, an insurer that is under supervision or conservatorship pursuant to statutory provision is exempt from the filing requirements contained herein.

Exemption for Nature of Business

An insurer otherwise subject to the requirement and not eligible for an exemption as enumerated above may apply to its domiciliary commissioner for an exemption based on the nature of business written.
Financial Hardship Exemption

An insurer otherwise subject to this requirement and not eligible for an exemption as enumerated above may apply to the commissioner for a financial hardship exemption. Financial hardship is presumed to exist if the projected reasonable cost of the Actuarial Opinion would exceed the lesser of:

(i) One percent (1%) of the insurer’s capital and surplus reflected in the insurer’s latest quarterly statement for the calendar year for which the exemption is sought; or

(ii) Three percent (3%) of the insurer’s direct plus assumed premiums written during the calendar year for which the exemption is sought as projected from the insurer’s latest quarterly statements filed with its domiciliary commissioner.

1C. Reporting Requirements for Pooled Companies

For each company in the pool, the Appointed Actuary shall include a description of the pool, identification of the lead company and a listing of all companies in the pool, their state of domicile and their respective pooling percentages.

Exhibits A and B for each company in the pool should represent the company’s share of the pool and should reconcile to the financial statement for that company.

The following paragraph applies to companies that have a 0% share of the pool (no reported Schedule P data). The company shall submit an Actuarial Opinion that reads similar to that provided for the lead company. For example, the IRIS ratio and risk of material adverse deviation discussions, and other relevant comments shall relate to the risks of the lead company in the pool. The Exhibit B responses to question 5 should be $0 and to question 6 should be “not applicable.” Exhibits A and B of the lead company should be attached as an addendum to the PDF file and/or hard copy being filed (but would not be reported by the 0% companies in their data capture).

2. The Actuarial Opinion must consist of an IDENTIFICATION paragraph identifying the Appointed Actuary; a SCOPE paragraph identifying the subjects on which an opinion is to be expressed and describing the scope of the Appointed Actuary’s work; an OPINION paragraph expressing his or her opinion with respect to such subjects; and one or more additional RELEVANT COMMENTS paragraphs. These four sections must be clearly designated.

3. The IDENTIFICATION paragraph should indicate the Appointed Actuary’s relationship to the Company, qualifications for acting as Appointed Actuary and date of appointment and specify that the appointment was made by the Board of Directors. Additionally, the IDENTIFICATION paragraph should include a statement asserting that the Appointed Actuary has complied with the requirement to provide qualification documentation to the Board of Directors, either directly or through company management.

If the Appointed Actuary was approved by the Academy to be a “Qualified Actuary,” with or without limitation, or if the Appointed Actuary is not a Qualified Actuary but was approved by the domiciliary commissioner, the company must attach, each year, the approval letter and reference such in the identification paragraph.

4. The SCOPE paragraph should contain a sentence such as the following:

“I have examined the actuarial assumptions and methods used in determining reserves listed in Exhibit A, as shown in the Annual Statement of the Company as prepared for filing with state regulatory officials, as of December 31, 20__, and reviewed information provided to me through XXX date.”

Exhibit A should list those items and amounts with respect to which the Appointed Actuary is expressing an opinion.

The Appointed Actuary should state that the items in the SCOPE, on which he or she is expressing an opinion, reflect Disclosure items 8 through 13.2 in Exhibit B.
The SCOPE paragraph should include a paragraph such as the following regarding the data used by the Appointed Actuary in forming the opinion:

“In forming my opinion on the loss and loss adjustment expense reserves, I relied upon data prepared by __________ (officer name and title at the Company). I evaluated that data for reasonableness and consistency. I also reconciled that data to Schedule P, Part 1 of the Company’s current Annual Statement. In other respects, my examination included such review of the actuarial assumptions and methods used and such tests of the calculations as I considered necessary.”

5. The OPINION paragraph should include a sentence that at least covers the points listed in the following illustration:

“In my opinion, the amounts carried in Exhibit A on account of the items identified:

A. Meet the requirements of the insurance laws of (state of domicile).
B. Are computed in accordance with accepted actuarial standards.
C. Make a reasonable provision for all unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements.”

If the Scope includes material Unearned Premium Reserves for P&C Long Duration Contracts or Other Loss Reserve items on which the Appointed Actuary is expressing an opinion, the Actuarial Opinion should contain language such as the following:

D. Make a reasonable provision for the unearned premium reserves for P&C Long Duration Contracts and/or <insert Other Loss Reserve item on which the Appointed Actuary is expressing an Opinion> of the Company under the terms of its contracts and agreements.

If there is any aggregation or combination of items in Exhibit A, the opinion language should clearly identify the combined items.

Insurance laws and regulations shall at all times take precedence over the actuarial standards.

If the Appointed Actuary has made use of the analysis of another actuary not within the Appointed Actuary’s control (such as for pools and associations, for a subsidiary or for special lines of business) for a material portion of the reserves, the other actuary must be identified by name, credential and affiliation within the OPINION paragraph. If the Appointed Actuary has made use of the work of a non-actuary (such as for modeling) for a material portion of the reserves, that individual must be identified by name and affiliation and a description of the type of analysis performed must be provided.

A Statement of Actuarial Opinion should be made in accordance with one of the following sections (1 through 5). The Appointed Actuary must explicitly identify in Exhibit B which type applies.

1. Determination of Reasonable Provision. When the carried reserve amount is within the Appointed Actuary’s range of reasonable reserve estimates, the Appointed Actuary should issue a Statement of Actuarial Opinion that the carried reserve amount makes a reasonable provision for the liabilities associated with the specified reserves.

2. Determination of Deficient or Inadequate Provision. When the carried reserve amount is less than the minimum amount that the Appointed Actuary believes is reasonable, the Appointed Actuary should issue a Statement of Actuarial Opinion that the carried reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves. In addition, the Appointed Actuary should disclose the minimum amount that the Appointed Actuary believes is reasonable.

3. Determination of Redundant or Excessive Provision. When the carried reserve amount is greater than the maximum amount that the Appointed Actuary believes is reasonable, the Appointed Actuary should issue a Statement of Actuarial Opinion that the carried reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves. In addition, the Appointed Actuary should disclose the maximum amount that the Appointed Actuary believes is reasonable.
4. **Qualified Opinion.** When, in the Appointed Actuary’s opinion, the reserves for a certain item or items are in question because they cannot be reasonably estimated or the Appointed Actuary is unable to render an opinion on those items, the Appointed Actuary should issue a qualified Statement of Actuarial Opinion. The Appointed Actuary should disclose the item (or items) to which the qualification relates, the reason(s) for the qualification and the amounts for such item(s), if disclosed by the Company. Such a qualified opinion should state whether the carried reserve amount makes a reasonable provision for the liabilities associated with the specified reserves, **except for** the item (or items) to which the qualification relates. The Appointed Actuary is not required to issue a qualified opinion if the Appointed Actuary reasonably believes that the item (or items) in question are not likely to be material.

5. **No Opinion.** The Appointed Actuary’s ability to give an opinion is dependent upon data, analyses, assumptions, and related information that are sufficient to support a conclusion. If the Appointed Actuary cannot reach a conclusion due to deficiencies or limitations in the data, analyses, assumptions, or related information, then the Appointed Actuary may issue a statement of no opinion. A statement of no opinion should include a description of the reasons why no opinion could be given.

6. The Appointed Actuary must provide RELEVANT COMMENT paragraphs to address the following topics of regulatory importance.

   A. **Company-Specific Risk Factors**

      The Appointed Actuary should include an explanatory paragraph to describe the major factors, combination of factors or particular conditions underlying the risks and uncertainties the Appointed Actuary considers relevant. The explanatory paragraph should not include general, broad statements about risks and uncertainties due to economic changes, judicial decisions, regulatory actions, political or social forces, etc., nor is the Appointed Actuary required to include an exhaustive list of all potential sources of risks and uncertainties.

   B. **Risk of Material Adverse Deviation**

      The Appointed Actuary must provide specific RELEVANT COMMENT paragraphs to address the risk of material adverse deviation. The Appointed Actuary must identify the materiality standard and the basis for establishing this standard. The materiality standard must also be disclosed in U.S. dollars in Exhibit B: Disclosures. The Appointed Actuary should explicitly state whether or not he or she reasonably believes that there are significant risks and uncertainties that could result in material adverse deviation. This determination is also to be disclosed in Exhibit B.

   C. **Other Disclosures in Exhibit B**

      RELEVANT COMMENT paragraphs should describe the significance of each of the remaining Disclosure items (8 through 14) in Exhibit B. The Appointed Actuary should address the items individually and in combination when commenting on a material impact.

   D. **Reinsurance**

      RELEVANT COMMENT paragraphs should address reinsurance collectability, retroactive reinsurance and financial reinsurance.

      The Appointed Actuary’s comments on reinsurance collectability should address any uncertainty associated with including potentially uncollectable amounts in the estimate of ceded reserves. Before commenting on reinsurance collectability, the Appointed Actuary should solicit information from management on any actual collectability problems, review ratings given to reinsurers by a recognized rating service and examine Schedule F for the current year for indications of regulatory action or reinsurance recoverable on paid losses over ninety (90) days past due. The comment should also reflect any other information the Appointed Actuary has received from management or that is publicly available about the capability or willingness of reinsurers to pay claims. The Appointed Actuary’s comments do not imply an opinion on the financial condition of any reinsurer.

Financial reinsurance refers to contracts referenced in SSAP No. 62R in which credit is not allowed for the ceding insurer because the arrangements do not include a transfer of both timing and underwriting risk that the reinsurer undertakes in fact to indemnify the ceding insurer against loss or liability by reason of the original insurance.

E. IRIS Ratios

If the Company’s reserves will create exceptional values under the NAIC IRIS Tests for One-Year Reserve Development to Policyholders’ Surplus, Two-Year Reserve Development to Policyholders’ Surplus or Estimated Current Reserve Deficiency to Policyholders’ Surplus, the Appointed Actuary must include RELEVANT COMMENT on the factors that led to the unusual value(s).

F. Methods and Assumptions

If there has been any significant change in the actuarial assumptions and/or methods from those previously employed, that change should be described in a RELEVANT COMMENT paragraph. If the Appointed Actuary is newly appointed and does not review the work of the prior Appointed Actuary, then the Appointed Actuary should disclose this.

7. The Actuarial Opinion must include assurance that an Actuarial Report and underlying actuarial workpapers supporting the Actuarial Opinion will be maintained at the Company and available for regulatory examination for seven (7) years. The Actuarial Report contains significant proprietary information. It is expected that the Actuarial Report be held confidential and not be intended for public inspection. The Actuarial Report must be available by May 1 of the year following the year-end for which the Actuarial Opinion was rendered or within two (2) weeks after a request from an individual state commissioner.

The Actuarial Report should be consistent with the documentation and disclosure requirements of ASOP No. 41, Actuarial Communications. The Actuarial Report must contain both narrative and technical components. The narrative component should provide sufficient detail to clearly explain to Company management, the Board of Directors, the regulator or other authority the findings, recommendations and conclusions, as well as their significance. The technical component should provide sufficient documentation and disclosure for another actuary practicing in the same field to evaluate the work. This technical component must show the analysis from the basic data (e.g., loss triangles) to the conclusions.

Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves (AG 51) in the NAIC Accounting Practices and Procedures Manual requires a company with over 10,000 in force lives covered by long-term care (LTC) insurance contracts as of the valuation date to perform a stand-alone asset adequacy analysis for its in force long-term care (LTC) contracts. The Actuarial Report and workpapers summarizing the results, assumptions and testing procedures for the asset adequacy testing of LTC business must be in compliance with AG 51 requirements. When referring to AG 51, the term “Actuarial Memorandum” is synonymous with Actuarial Report and workpapers.

The Actuarial Report should contain disclosure of all reserve amounts associated with A&H Long Duration Contracts reported by the Company; the reserve amounts in the Actuarial Report should tie to the Annual Statement.
The Actuarial Report must also include:

A. A description of the Appointed Actuary’s relationship to the Company, with clear presentation of the Appointed Actuary’s role in advising the Board of Directors and/or management regarding the carried reserves. The Actuarial Report should identify how and when the Appointed Actuary presents the analysis to the Board of Directors and, where applicable, to the officer(s) of the Company responsible for determining the carried reserves.

B. An exhibit that ties to the Annual Statement and compares the Appointed Actuary’s conclusions to the carried amounts consistent with the segmentation of exposure or liability groupings used in the analysis. The Appointed Actuary’s conclusions include the Appointed Actuary’s point estimate(s), range(s) of reasonable estimates or both.

C. An exhibit that reconciles and maps the data used by the Appointed Actuary, consistent with the segmentation of exposure or liability groupings used in the Appointed Actuary’s analysis, to the Annual Statement Schedule P line of business reporting. An explanation should be provided for any material differences.

D. An exhibit or appendix showing the change in the Appointed Actuary’s estimates from the prior Actuarial Report, including extended discussion of factors underlying any material changes. The exhibit or appendix should illustrate the changes on a net basis but should also include the changes on a gross basis, if relevant. If the Appointed Actuary is newly appointed and does not review the work of the prior Appointed Actuary, then the Appointed Actuary should disclose this.

E. Extended comments on trends that indicate the presence or absence of risks and uncertainties that could result in material adverse deviation.

F. Extended comments on factors that led to unusual IRIS ratios for One-Year Reserve Development to Policyholders’ Surplus, Two-Year Reserve Development to Policyholders’ Surplus or Estimated Current Reserve Deficiency to Policyholders’ Surplus, and how these factors were addressed in prior and current analyses.

8. The Actuarial Opinion and the Actuarial Report should conclude with the signature of the Appointed Actuary responsible for providing the Actuarial Opinion and the respective dates when the Actuarial Opinion was rendered and the Actuarial Report finalized. The signature and date should appear in the following format:

__________________________
Signature of Appointed Actuary

__________________________
Printed name of Appointed Actuary

__________________________
Employer’s name

__________________________
Address of Appointed Actuary

__________________________
Telephone number of Appointed Actuary

__________________________
Email address of Appointed Actuary

__________________________
Date opinion was rendered

The same information should be reproduced within the Actuarial Report, along with the date the Actuarial Report was finalized.

9. The Insurer required to furnish an Actuarial Opinion shall require its Appointed Actuary to notify its Board of Directors or its audit committee in writing within five (5) business days after any determination by the Appointed Actuary that the Actuarial Opinion submitted to the domiciliary commissioner was in error as a result of reliance on data or other information (other than assumptions) that, as of the balance sheet date, was factually incorrect. The Actuarial Opinion shall be considered to be in error if the Actuarial Opinion would have not been issued or would have been materially altered had the correct data or other information been used. The Actuarial Opinion shall not be considered to be in error if it would have been materially altered or not issued solely because of data or information concerning events subsequent to the balance sheet date or because actual results differ from those projected. Notification is required when discovery is made between the issuance of the Actuarial Opinion and Dec. 31 of that year. Notification should include a summary of such findings.
If the Appointed Actuary learns that the data or other information relied upon was factually incorrect, but cannot immediately determine what, if any, changes are needed in the Actuarial Opinion, the Appointed Actuary and the Company should quickly undertake procedures necessary for the Appointed Actuary to make such determination. If the Insurer does not provide the necessary data corrections and other support (including financial support) within ten (10) business days, the Appointed Actuary should proceed with the notification to the Board of Directors and the domiciliary commissioner.

An Insurer who is notified pursuant to the preceding paragraphs shall forward a copy of the amended Actuarial Opinion to the domiciliary commissioner within five (5) business days of receipt of such and shall provide the Appointed Actuary making the notification with a copy of the letter and amended Actuarial Opinion submitted to the domiciliary commissioner. If the Appointed Actuary fails to receive such copy within the five (5) business day period referred to in the previous sentence, the Appointed Actuary shall notify the domiciliary commissioner within the next five (5) business days that an amended Actuarial Opinion has been finalized.

No Appointed Actuary shall be liable in any manner to any person for any statement made in connection with the above paragraphs if such statement is made in a good faith effort to comply with the above paragraphs.

10. Data in Exhibits A and B are to be filed in both print and data capture format.

Exhibit B: DISCLOSURES
DATA TO BE FILED IN BOTH PRINT AND DATA CAPTURE FORMATS

NOTE: Exhibit B should be completed for Net dollar amounts included in the SCOPE. If an answer would be different for Direct and Assumed amounts, identify and discuss the difference within RELEVANT COMMENTS.

1. Name of the Appointed Actuary
   Last _______ First _______ Mid _______

2. The Appointed Actuary’s relationship to the Company
   Enter E or C based upon the following:
   E if an Employee of the Company or Group
   C if a Consultant

3. The Appointed Actuary’s Accepted Actuarial Designation (indicated by the letter code):
   F if a Fellow of the Casualty Actuarial Society (FCAS)
   A if an Associate of the Casualty Actuarial Society (ACAS)
   S if a Fellow of the Society of Actuaries (FSA) through the General Insurance track
   M if the actuary does not have an Accepted Actuarial Designation but is approved by the Academy’s Casualty Practice Council.
   O for Other

4. Type of Opinion, as identified in the OPINION paragraph.
   Enter R, I, E, Q, or N based upon the following:
   R if Reasonable
   I if Inadequate or Deficient Provision
   E if Excessive or Redundant Provision
   Q if Qualified. Use Q when part of the OPINION is Qualified.
   N if No Opinion

5. Materiality Standard expressed in U.S. dollars (used to Answer Question #6) $ _______

6. Are there significant risks that could result in Material Adverse Deviation? Yes [ ] No [ ] Not Applicable [ ]

7. Statutory Surplus (Liabilities, Surplus and Other Funds page, Col 1, Line 37) $ _______

8. Anticipated net salvage and subrogation included as a reduction to loss reserves as reported in Schedule P (should equal Part 1 Summary, Col 23, Line 12 * 1000) $ _______

9. Discount included as a reduction to loss reserves and loss adjustment expense reserves as reported in Schedule P
   9.1 Nontabular Discount [Notes, Line 32B23, (Amounts 1, 2, 3 & 4)], Electronic Filing Cols 1, 2, 3, & 4 $ _______
   9.2 Tabular Discount [Notes, Line 32A23, (Amounts 1 & 2)], Electronic Filing Col 1 & 2 $ _______

10. The net reserves for losses and loss adjustment expenses for the Company’s share of voluntary and involuntary underwriting pools’ and associations’ unpaid losses and loss adjustment expenses that are included in reserves shown on the Liabilities, Surplus and Other Funds page, Losses and Loss Adjustment Expenses lines $ _______
11. The net reserves for losses and loss adjustment expenses that the Company carries for the following liabilities included on the Liabilities, Surplus and Other Funds page, Losses and Loss Adjustment Expenses lines *

11.1 Asbestos, as disclosed in the Notes to Financial Statements (Notes, Line 33A03D, ending net asbestos reserves for current year) Electronic Filing Col 5 $ ________

11.2 Environmental, as disclosed in the Notes to Financial Statements (Notes, Line 33D03D, ending net environmental reserves for current year), Electronic Filing Col 5 $ ________

12. The total claims made extended loss and loss adjustment expense, and unearned premium reserves (Greater than or equal to Schedule P Interrogatories)

12.1 Amount reported as loss and loss adjustment expense reserves $ ________

12.2 Amount reported as unearned premium reserves $ ________

13. The net reserves for the A&H Long Duration Contracts that the Company carries on the following lines on the Liabilities, Surplus and Other Funds page:

13.1 Losses $ ________

13.2 Loss Adjustment Expenses $ ________

13.3 Unearned Premium $ ________

13.4 Write-In (list separately, adding additional lines as needed, and identify (e.g., “Premium Deficiency Reserves”, “Contract Reserves other than Premium Deficiency Reserves” or “AG 51 Reserves”)) $ ________

14. Other items on which the Appointed Actuary is providing relevant comment (list separately, adding additional lines as needed) $ ________

* The reserves disclosed in item 11 above, should exclude amounts relating to contracts specifically written to cover asbestos and environmental exposures. Contracts specifically written to cover these exposures include Environmental Impairment Liability (post 1986), Asbestos Abatement, Pollution Legal Liability, Contractor’s Pollution Liability, Consultant’s Environmental Liability, and Pollution and Remediation Legal Liability.

The Statistical Data (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force met Jan. 27, 2022. The following Working Group members participated: Sandra Darby, Chair (ME); Wanchin Chou, Vice Chair, and Qing He (CT); Cynthia Amann (MO); Christian Citarella (NH); Alexander Vajda (NY); Tom Botsko (OH); Andrew Schallhorn (OK); David Dahl (OR); and Brian Ryder (TX). Also participating were: Luciano Gobbo (CA); Randy Jacobson (HI); Anthony Bredel (IL); Nichole Torblaa (LA); Regan Hess (MT); and Chris Aufenthie (ND).

1. **Discussed Suggested Changes to NAIC Statistical Reports**

Ms. Darby said Arthur Schwartz (NC) submitted potential changes to the *Competition Database Report* (Competition Report), the *Auto Database Report* (Auto Report), and the *Dwelling, Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance Report* (Homeowners Report).

Ms. Darby said for the Competition Report, there were questions about the market share data. She said it was unclear whether these suggestions were a replacement or a supplement for the current report. Mr. Botsko said he would like to know why certain columns were eliminated in this spreadsheet.

Ms. Darby said for the Auto Report, the submitting statistical agents would need to clarify if they can provide the data by metropolitan statistical area (MSA). She said it is unclear what the data source would be for elements like median car value and median per capita income.

Ms. Darby said for the Homeowners Report, it is unclear what the data source would be for median home value and what the difference is between new homes and all homes. She said mobile home coverage may not be able to be broken out and reported separately as requested.

Ms. Darby said she would compile a list of questions about these proposed changes to send to Mr. Schwartz. She said these suggestions would be discussed on a future call for Mr. Schwartz to address the questions.

2. **Discussed the Timeline of Data Collection for NAIC Statistical Reports**

Ms. Darby said the Working Group has a charge from the Casualty Actuarial and Statistical (C) Task Force to adopt a faster timeline for the publication of auto insurance and homeowners insurance average premiums. She said the Auto Report could not include loss and claims data on a sped-up timeline, and the Homeowners Report would not include California detailed data every year, as that data is collected by the California Department of Insurance (DOI) only every other year. Mr. Citarella said the Working Group should consider adopting a sped-up timeline for the Homeowners Report. He said if California data can only be collected every other year, then the report should still be published, and it can include California data in the years that it is available. Mr. Gobbo said California can provide high level information every year, but it can only provide the homeowners data by insurance range every other year.

Libby Crews (NAIC) said the Working Group would need to produce two reports in one year to catch up to the desired timeline.
Due to this change, Mr. Chou asked for a longer exposure period to review the reports when they are completed for the year.

Mr. Chou made a motion, seconded by Mr. Citarella, to speed up the timeline of the Homeowners Report by collecting data from the most recent data year and collect two years of data in 2022 to catch up to the new timeline. The motion passed unanimously.

Ms. Darby said a sped-up timeline for the Auto Report would not include loss and claims data, as that cannot be collected on a faster timeline.

Birny Birnbaum (Center for Economic Justice—CEJ) said more recent average premium data can be added to the report along with historical loss information. Ms. Darby asked if the more recent average premium data should be added to the report as an appendix. Mr. Birnbaum said the information should not be in an appendix. He said the report would just have one more recent year of average premium data than the loss data. Mr. Dahl said it would be better to have the more recent premium information in a separate table so that readers are not trying to compare premium and loss information for different years.

Mr. Citarella asked if NAIC staff could provide mock-ups of the more recent average premium data added into the current tables and added as a separate table.

3. Discussed Initiating a Review of the Statistical Handbook

Ms. Darby said the Working Group should begin a review of the Statistical Handbook (Handbook). She said the Handbook has not been updated since 2012. She asked any Working Group member that would like to lead the review of a section of the Handbook to reach out. She said the Working Group would work on updating the Handbook throughout the year.

Having no further business, the Statistical Data (C) Working Group adjourned.
APPENDIX B-RF – INFORMATION ELEMENTS AND GUIDANCE FOR A REGULATOR TO MEET BEST PRACTICES’ OBJECTIVES (WHEN REVIEWING RANDOM FORESTS)

This appendix identifies the information a state insurance regulator may need to review a Random Forest predictive model used by an insurer to support a personal automobile or home insurance rating plan. The list is lengthy but not exhaustive. It is not intended to limit the authority of a regulator to request additional information in support of the model or filed rating plan. Nor is every item on the list intended to be a requirement for every filing. However, the items listed should help guide a regulator to sufficient information that helps determine if the rating plan meets state-specific filing and legal requirements. Documentation of the design and operational details of the model will help ensure the business continuity and transparency of the models used. Documentation should be sufficiently detailed and complete to enable a qualified third party to form a sound judgment on the suitability of the model for the intended purpose. The theory, assumptions, methodologies, software, and empirical bases should be explained, as well as the data used in developing and implementing the model. Relevant testing and ongoing performance testing need to be documented. Key model limitations and overrides need to be pointed out so that stakeholders understand the circumstances under which the model does not work effectively. End-user documentation should be provided and key reports using the model results described. Major changes to the model need to be documented and shared with regulators in a timely and appropriate manner. Information technology (IT) controls should be in place, such as a record of versions, change control, and access to the model.

Many information elements listed below are probably confidential, proprietary, or trade secret and should be treated as such, in accordance with state laws and/or regulations. Regulators should be aware of their state laws and/or regulations on confidentiality when requesting data from insurers that may be proprietary or trade secret. For example, some proprietary models may have contractual terms (with the insurer) that prevent disclosure to the public. Without clear necessity, exposing this data to additional dissemination may compromise the model’s protection. Although the list of information is long, the insurer should already have internal documentation on the model for more than half of the information listed. The remaining items on the list require either minimal analysis (approximately 25%) or deeper analysis to generate for a regulator (approximately 25%).

The “Level of Importance to the Regulator’s Review” is a ranking of information a regulator may need to review which is based on the following level criteria:

Level 1 – This information is necessary to begin the review of a predictive model. These data elements pertain to basic information about the type and structure of the model, the data and variables used, the assumptions made, and the goodness of fit. Ideally, this information would be included in the filing documentation with the initial submission of a filing made based on a predictive model.

Level 2 – This information is necessary to continue the review of all but the most basic models, such as those based only on the filer’s internal data and only including variables that are in the filed rating plan. These data elements provide more detailed information about the model and address questions arising from review of the information in Level 1. Insurers concerned with speed to market may also want to include this information in the filing documentation.

Level 3 – This information is necessary to continue the review of a model where concerns have been raised and not resolved based on review of the information in Level 1 and Level 2. These data elements address even more detailed aspects of the model. This information does not necessarily need to be included with the initial submission, unless specifically requested by a particular state, as it is typically requested only if the reviewer has concerns that the model may not comply with state laws and/or regulations.

Level 4 – This information is necessary to continue the review of a model where concerns have been raised and not resolved based on the information in Level 1, Level 2, and Level 3. This most granular level of detail is addressing

---

2 There are some models that are made public by the vendor and would not result in a hindrance of the model’s protection.
the basic building blocks of the model and does not necessarily need to be included by the filer with the initial submission, unless specifically requested by a particular state. It is typically requested only if the reviewer has serious concerns that the model may produce rates or rating factors that are excessive, inadequate, and/or unfairly discriminatory.

Appendix B-RF is focused on Random Forest models and should not be referenced in the review of other model types. Random Forest models are a tree-based approach with many significant differences from GLMs. This Appendix B-RF is intended to provide state guidance for the review of rate filings based on Random Forest models.
## A. SELECTING MODEL INPUT

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance to the Regulator’s Review</th>
<th>Comments</th>
</tr>
</thead>
</table>
| 1. Available Data Sources | Review the details of sources for both insurance and non-insurance data used as input to the model (only need sources for filed input characteristics included in the filed model). | 1 | Request details of data sources, whether internal to the company or from external sources. For insurance experience (policy or claim), determine whether data are aggregated by calendar, accident, fiscal, or policy year and when it was last evaluated. For each data source, get a list of all data elements used as input to the model that came from that source. For insurance data, get a list all companies whose data is included in the datasets.

Request details of any non-insurance data used (customer-provided or other), whether the data was collected by use of a questionnaire/checklist, whether data was voluntarily reported by the applicant, and whether any of the data is subject to the federal Fair Credit Reporting Act (FCRA). If the data is from an outside source, find out what steps were taken to verify the data was accurate, complete, and unbiased in terms of relevant and representative time frame, representative of potential exposures, and lacking in obvious correlation to protected classes.

Note: Reviewing source details should not make a difference when the model is new or refreshed; refreshed models would report the prior version list with the incremental changes due to the refresh. |

<p>| | Reconcile aggregated insurance data underlying the model with available external insurance reports. | 4 | Accuracy of insurance data should be reviewed. It is assumed that the data in the insurer’s data banks is subject to routine internal company audits and reconciliation. “Aggregated data” is straight from the insurer’s data banks without further modification (i.e., not scrubbed or transformed for the purposes of modeling). In other words, the data would not have been specifically modified for the purpose of model building. The company should provide some form of reasonability check that the data makes sense when checked against other audited sources. |</p>
<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance to the Regulator’s Review</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>A.1.c</td>
<td>Review the geographic scope and geographic exposure distribution of the raw data for relevance to the state where the model is filed.</td>
<td>2</td>
<td>Many models are developed using a countrywide or a regional dataset. The company should explain how the data used to build the model makes sense for a specific state. The regulator should inquire which states were included in the data underlying the model build, testing, and validation. The company should explain why any states were excluded from the countrywide data. The company should provide an explanation where the data came from geographically and that it is a good representation for a state; i.e., the distribution by state should not introduce a geographic bias. However, there could be a bias by peril or wind-resistant building codes. Evaluate whether the data is relevant to the loss potential for which it is being used. For example, verify that hurricane data is only used where hurricanes can occur. The company should provide a demonstration that the model fits well on the specific state or surrounding region.</td>
</tr>
</tbody>
</table>

2. Sub-Models

<p>| A.2.a   | Consider the relevance of (i.e., whether there is bias) of overlapping data or variables used in the model and sub-models. | 3 | Check if the same variables/datasets were used in the model, a sub-model, or as stand-alone rating characteristics. Random Forest models handle redundant variables by splitting on only one of the variables within each component tree. By contrast, GLMs struggle with redundant variables as they try to include redundant variables simultaneously. However, best actuarial practice is to keep models as parsimonious as possible and only include additional variables that contribute significant additional predictive power. |
| A.2.b   | Determine if the sub-model was previously approved (or accepted) by the regulatory agency. | 1 | If the sub-model was previously approved/accepted, that may reduce the extent of the sub-model’s review. If approved, obtain the tracking number(s) (e.g., state, SERFF) and verify when and if it was the same model currently under review. Note: A previous approval does not necessarily confer a guarantee of ongoing approval; e.g., when statutes and/or regulations have changed or if a model’s indications have been undermined by subsequent empirical experience. However, knowing whether a model has been previously approved can help focus the regulator’s efforts and determine whether the prior decision needs to be revisited. In some circumstances, direct dialogue with the vendor could be quicker and more useful. |</p>
<table>

<th>Level of Importance to the Regulator’s Review</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>A.2.c</td>
<td>Determine if the sub-model output was used as input to the Random Forest; obtain the vendor name, as well as the name and version of the sub-model.</td>
<td>1</td>
<td>To accelerate the review of the filing, it may be desirable to request (from the company), the name and contact information for a vendor representative. The company should provide the name of the third-party vendor and a contact in the event the regulator has questions. The “contact” can be an intermediary at the insurer (e.g., a filing specialist), who can place the regulator in direct contact with a subject-matter expert (SME) at the vendor. Examples of such sub-models include credit/financial scoring algorithms and household composite score models. Sub-models can be evaluated separately and in the same manner as the primary model under evaluation. A sub-model contact for additional information should be provided. Sub-model SMEs may need to be brought into the conversation with regulators (whether in-house or third-party sub-models are used).</td>
</tr>
<tr>
<td>A.2.d</td>
<td>If using catastrophe model output, identify the vendor and the model settings/assumptions used when the model was run.</td>
<td>1</td>
<td>To accelerate the review of the filing, get contact information for the SME that ran the model and an SME from the vendor. The “SME” can be an intermediary at the insurer (e.g., a filing specialist), who can place the regulator in direct contact with the appropriate SMEs at the insurer or model vendor. For example, it is important to know hurricane model settings for storm surge, demand surge, and long-term/short-term views.</td>
</tr>
<tr>
<td>A.2.e</td>
<td>Obtain an explanation of how catastrophe models are integrated into the model to ensure no double-counting.</td>
<td>1</td>
<td>If a weather-based sub-model is input to the Random Forest under review, loss data used to develop the model should not include loss experience associated with the weather-based sub-model. Doing so could cause distortions in the modeled results by double-counting such losses when determining relativities or loss loads in the filed rating plan. For example, redundant losses in the data may occur when non-hurricane wind losses are included in the data while also using a severe convective storm model in the actuarial indication. Such redundancy may also occur with the inclusion of fluvial or pluvial flood losses when using a flood model or inclusion of freeze losses when using a winter storm model.</td>
</tr>

<td>Level of Importance to the Regulator’s Review</td>
<td>Comments</td>
</tr>
<tr>
<td>---------</td>
<td>-------------------------------------------------------------------------------------</td>
<td>---------------------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>A.2.f</td>
<td>If using output of any scoring algorithms, obtain a list of the variables used to determine the score and provide the source of the data used to calculate the score.</td>
<td>1</td>
<td>Any sub-model should be reviewed in the same manner as the primary model that uses the sub-model’s output as input. Depending on the result of item A.2.b, the importance of this item may be decreased.</td>
</tr>
<tr>
<td>3. Adjustments to Data</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>A.3.a</td>
<td>Determine if premium, exposure, loss, or expense data were adjusted (e.g., on-leveled, developed, trended, adjusted for catastrophe experience, or capped). If so, how? Do the adjustments vary for different segments of the data? If so, identify the segments and how the data was adjusted.</td>
<td>2</td>
<td>The rating plan or indications underlying the rating plan may provide special treatment of large losses and non-modeled large loss events. If such treatments exist, the company should provide an explanation how they were handled. These treatments need to be identified and the company/regulator needs to determine whether model data needs to be adjusted. For example, should large bodily injury (BI) liability losses in the case of personal automobile insurance be excluded, or should large non-catastrophe wind/hail claims in home insurance be excluded from the model’s training, test and validation data? Look for anomalies in the data that should be addressed. For example, is there an extreme loss event in the data? If other processes were used to load rates for specific loss events, how is the impact of those losses considered? Examples of losses that can contribute to anomalies in the data are large losses or flood, hurricane, or severe convective storm losses for personal automobile comprehensive or home insurance. Premium should be brought to current rate level if the target variable is calculated with a premium metric, such as loss ratio. Premium can be brought to current rate level with the extension of exposures method or the parallelogram method. Note that the premium must be on-leveled at a granular variable level for each variable included in the new model if the parallelogram method is used. Statewide on-level factors by coverage are typically sufficient for statewide rate indication development but not sufficient for models that determine rates by variable level.</td>
</tr>
<tr>
<td>A.3.b</td>
<td>Identify adjustments that were made to aggregated data (e.g., transformations, binning and/or categorizations). If any, identify the name of the characteristic/variable and obtain a description of the adjustment.</td>
<td>1</td>
<td>Pre-modeling binning may be unnecessary in a random forest model. The tree model will naturally segment numerical values in the splitting process of the trees. However, if the insurer does bin variables before modeling, the reason should be understood.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>---</td>
<td>---</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>A.3.c</strong></td>
<td>Ask for aggregated data (one dataset of pre-adjusted/scrubbed data and one dataset of post-adjusted/scrubbed data) that allows the regulator to focus on the univariate distributions and compare raw data to adjusted/binned/transformed/etc. data.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>4</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>This is most relevant for variables that have been “scrubbed” or adjusted. Though most regulators may never ask for aggregated data and do not plan to rebuild any models, a regulator may ask for this aggregated data or subsets of it. It would be useful to the regulator if the percentage of exposures and premium for missing information from the model data by category are provided. This data can be displayed in either graphical or tabular formats.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Section</td>

<td>Level of Importance to the Regulator’s Review</td>
<td>Comments</td>
</tr>
<tr>
<td>---------</td>
<td>---------------------</td>
<td>---------------------------------------------</td>
<td>----------</td>
</tr>
<tr>
<td>A.3.d</td>
<td>Determine how missing data was handled.</td>
<td>1</td>
<td>This is most relevant for variables that have been “scrubbed” or adjusted. The regulator should be aware of assumptions the modeler made in handling missing, null, or “not available” values in the data. For example, it would be helpful to the reviewer if the modeler were to provide a statement as to whether there is any systemic reason for missing data. If adjustments or recoding of values were made, they should be explained. It may also be useful to the regulator if the percentage of exposures and premium for missing information from the model data are provided. This data can be displayed in either graphical or tabular formats. The modeler should describe the way the tree fitting process handled missing values. The modeler should specify if missing values are treated before running the tree model or if they are allowed to be handled by the tree model. When creating predictions on new datasets (such as hold out datasets), tree-based models may have different approaches for handling missing data or categorical levels not encountered in the training data for a predictor variable. The modeler should specify the process utilized when this occurs.</td>
</tr>
<tr>
<td>A.3.e</td>
<td>If duplicate records exist, determine how they were handled.</td>
<td>1</td>
<td>Look for a discussion of how outliers were handled. If necessary, the regulator may want to investigate further by getting a list (with description) of the types of outliers and determine what adjustments were made to each type of outlier. To understand the filer’s response, the regulator should ask for the filer’s materiality standard.</td>
</tr>
<tr>
<td>A.3.f</td>
<td>Determine if there were any material outliers identified and subsequently adjusted during the scrubbing process.</td>
<td>3</td>
<td></td>
</tr>
<tr>
<td>4. Data Organization</td>
<td>Obtain documentation on the methods used to compile and organize data, including procedures to merge data from different sources or filter data based on particular characteristics and a description of any preliminary analyses, data checks, and logical tests performed on the data and the results of those tests.</td>
<td>2</td>
<td>This should explain how data from separate sources was merged and/or how subsets of policies, based on selected characteristics, are filtered to be included in the data underlying the model and the rationale for that filtering.</td>
</tr>
<tr>
<td>A.4.b</td>
<td>Obtain documentation on the insurer’s process for reviewing the appropriateness, reasonableness, consistency, and comprehensiveness of the data, including a discussion of the rational relationship the data has to the predicted variable.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>---</td>
<td>---</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2</td>
<td>An example is when by-peril or by-coverage modeling is performed; the documentation should be for each peril/coverage and make rational sense. For example, if “murder” or “theft” data are used to predict the wind peril, the company should provide support and a rational explanation for their use.</td>

### B. BUILDING THE MODEL

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance to Regulator's Review</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>1. High-Level Narrative for Building the Model</td>
<td></td>
<td></td>
</tr>
<tr>
<td>B.1.a</td>
<td>Identify the type of model underlying the rate filing (e.g., Random Forest, GLM, decision tree, Bayesian GLM, gradient-boosting machine, neural network, etc.). Understand the model’s role in the rating system and provide the reasons why that type of model is an appropriate choice for that role.</td>
<td>1</td>
<td>It is important to understand if the model in question is a Random Forest and, therefore, these information elements are applicable; or if it is some other model type, in which case other reasonable review approaches may be considered. There should be an explanation of why the model (using the variables included in it) is appropriate for the line of business. If by-peril or by-coverage modeling is used, the explanation should be by-peril/by-coverage. <strong>Note:</strong> If the model is not a Random Forest, the information elements in this white paper may not apply in their entirety.</td>
</tr>
<tr>
<td>B.1.b</td>
<td>Identify the software used for model development. Obtain the name of the software vendor/developer, software product, and a software version reference used in model development.</td>
<td>3</td>
<td>Changes in software from one model version to the next may explain if such changes, over time, contribute to changes in the modeled results. The company should provide the name of the third-party vendor and a “contact” in the event the regulator has questions. The “contact” can be an intermediary at the insurer (e.g., a filing specialist) who can place the regulator in direct contact with the appropriate SME at the vendor. Open-source software/programs used in model development should be identified by name and version the same as if from a vendor.</td>
</tr>
<tr>
<td>Section</td>
<td>Information Element</td>
<td>Level of Importance to Regulator’s Review</td>
<td>Comments</td>
</tr>
<tr>
<td>---------</td>
<td>---------------------</td>
<td>------------------------------------------</td>
<td>----------</td>
</tr>
<tr>
<td>B.1.c</td>
<td>Obtain a description how the available data was divided between model training, test, and/or validation datasets. The description should include an explanation why the selected approach was deemed most appropriate, whether the company made any further subdivisions of available data, and reasons for the subdivisions (e.g., a portion separated from training data to support testing of components during model building). Determine if the validation data was accessed before model training was completed and, if so, obtain an explanation of why that came to occur. Obtain a discussion of whether the model was rebuilt using all the data or if it was only based on the training data.</td>
<td>1</td>
<td>The reviewer should be aware that modelers may break their data into three or just two datasets. Although the term “training” is used with little ambiguity, “test” and “validation” are terms that are sometimes interchanged, or the word “validation” may not be used at all. The reviewer should note whether a company employed cross-validation techniques instead of a training/test/validation dataset approach. If cross-validation techniques were used, the reviewer should request a description of how cross-validation was done and confirm that the final model was not built on any particular subset of the data, but rather the full dataset. The discussion of training, test, and/or validation datasets is a separate discussion from the % of observations (rows of data) or % of features (columns of data) used within each tree. These splits are based on hyperparameters and are commented on in other sections.</td>
</tr>
<tr>
<td>B.1.d</td>
<td>Obtain a brief description of the development process, from initial concept to final model and filed rating plan.</td>
<td>1</td>
<td>The narrative should have the same scope as the filing.</td>
</tr>
<tr>
<td>B.1.e</td>
<td>Obtain a narrative on whether loss ratio, pure premium, or frequency/severity analyses were performed and, if separate frequency/severity modeling was performed, how pure premiums were determined.</td>
<td>1</td>
<td>A clear description of the target variable is key to understanding the purpose of the model. It may also prove useful to obtain a sample calculation of the target variable in Excel format, starting with the “raw” data for a policy, or a small sample of policies, depending on the complexity of the target variable calculation.</td>
</tr>
<tr>
<td>B.1.f</td>
<td>Identify the model’s target variable.</td>
<td>1</td>
<td>Candidate variables are the variables used as input to the modeling process. Certain variables may not end up used in the final model if none of the component trees of the model split on the variable. The narrative regarding the candidate variable selection process may address matters such as the criteria upon which variables were selected or omitted, identification of the number of preliminary variables considered in developing the model versus the number of variables that remained, and any statutory or regulatory limitations that were taken into account when making</td>
</tr>
</tbody>
</table>
the decisions regarding candidate variable selection. The modeler should comment on the use of automated feature selection algorithms to choose candidate predictor variables and explain how potential overfitting that can arise from these techniques was addressed.

<tr>
<td>B.1.h</td>
<td>In conjunction with variable selection, obtain a narrative on how the company determined the granularity of the rating variables during model development.</td>
<td>3</td>
<td>The narrative should include discussion of how credibility was considered in the process of determining the level of granularity of the variables selected.</td>
</tr>
<tr>
<td>B.1.i</td>
<td>Determine if model input data was segmented in any way (e.g., by-coverage, by-peril, or by-form basis). If so, obtain a description of data segmentation and the reasons for data segmentation.</td>
<td>1</td>
<td>The regulator would use this to follow the logic of the modeling process.</td>
</tr>
<tr>
<td>2. Medium-Level Narrative for Building the Model</td>
<td></td>
<td>2</td>
<td></td>
</tr>
<tr>
<td>B.2.a</td>
<td>At crucial points in model development, if selections were made among alternatives regarding model assumptions, techniques, or hyperparameters, obtain a narrative on the judgment used to make those selections.</td>
<td>2</td>
<td>Evaluate the addition or removal of variables and the model fitting. It is not necessary for the company to discuss each iteration of adding and subtracting variables, but the regulator should gain a general understanding of how these adjustments were done, including any statistical improvement measures relied upon.</td>
</tr>
<tr>
<td>B.2.b</td>
<td>If post-model adjustments were made to the data and the model was rerun, obtain an explanation on the details and the rationale for those adjustments.</td>
<td>2</td>
<td></td>
</tr>
<tr>
<td>Section</td>
<td>Information Element</td>
<td>Level of Importance to Regulator's Review</td>
<td>Comments</td>
</tr>
<tr>
<td>---------</td>
<td>---------------------</td>
<td>-----------------------------------------</td>
<td>----------</td>
</tr>
<tr>
<td>B.2.d</td>
<td>Identify which distribution was used for the model (e.g., Regression based on Poisson, Gamma, Logistic, or Tweedie are common choices). Obtain an explanation of why the distribution was chosen. Certain distribution assumptions will involve numerical parameters, for example regression with a Tweedie assumed distribution will have a p power value. Obtain the specific numerical parameters associated with the distribution.</td>
<td>1</td>
<td>Tree-based methods combine predictions from multiple component trees and aggregate them into a final prediction for each observation. Common methods for combining random forest model predictions include the arithmetic or geometric mean of all the component trees.</td>
</tr>
<tr>
<td>B.2.e</td>
<td>Obtain a narrative on how the predictions from the component trees are combined to arrive at a final model prediction.</td>
<td>2</td>
<td></td>
</tr>
<tr>
<td>B.2.f</td>
<td>If there were data situations in which weights were used, obtain an explanation of how and why they were used.</td>
<td>3</td>
<td>Investigate whether identical records were combined to build the model.</td>
</tr>
<tr>
<td>B.3.1</td>
<td>Obtain the number of component trees comprising the Random Forest model. Obtain a narrative on how this number was chosen.</td>
<td>1</td>
<td>Random Forest models should contain enough trees to reduce error to an acceptable level. Random forest models should balance this with the concept of parsimony. A model with fewer trees that achieves relatively similar reduction in error is preferable to a model with more trees. Checking the error on a test dataset or out of bag error for different numbers of trees can reveal at what value the error on test data starts to level off. Modelers might rely on early stopping rules within modeling software to arrive at the final number of trees. The narrative on the number of trees should discuss the stopping criterion, which defines what condition is met when the model stopped adding more trees.</td>
</tr>
<tr>
<td>B.3.2</td>
<td>Obtain the sampling parameters that apply to both the percent of observations used in each component tree and the number of features tested for each split within each tree. Obtain a narrative on how the sampling parameters were selected.</td>
<td>1</td>
<td>Random forest models often sample both the observations (typically rows of modeling data) with replacement and sample the features (typically columns of modeling data) This means that each tree has a bootstrapped dataset. The company should discuss the bagging fraction (a.k.a. sample size) applied to observations (typically rows of data). This is often expressed as a percent. For example: perhaps each tree is based on a bootstrapped sample which is 50% of the original dataset. The company should discuss the number of features</td>

<tr>
<td>B.4.g</td>
<td>Obtain a description how the model was tested for stability over time.</td>
<td>2</td>
<td>Evaluate the build/test/validation datasets for potential time-sensitive model distortions (e.g., a winter storm in year 3 of 5 can distort the model in both the testing and validation datasets). Obsolescence over time is a model risk (e.g., old data for a variable or a variable itself may no longer be relevant). If a model being introduced now is based on losses from years ago, the reviewer should be interested in knowing whether that model would be predictive in the proposed context. Validation using recent data from the proposed context might be requested. Obsolescence is a risk even for a new model based on recent and relevant loss data. The reviewer may want to inquire as to the following: What steps, if any, were taken during modeling to prevent or delay obsolescence? What controls exist to measure the rate of obsolescence? What is the plan and timeline for updating and ultimately replacing the model? The reviewer should also consider that as newer technologies enter the market (e.g., personal automobile) their impact may change claim activity over time (e.g., lower frequency of loss). So, it is not necessarily a bad thing that the results are not stable over time.</td>
</tr>
<tr>
<td>B.4.h</td>
<td>Obtain a narrative on how potential concerns with overfitting were addressed.</td>
<td>2</td>
<td>Tree-based models such as Random Forest models are notorious for overfitting. The company should provide a narrative on how overfitting was addressed. The company should provide a lift chart on training data used to fit the model and a lift chart on testing data which was not used to fit the model. If pruning was utilized to address overfitting, the narrative should provide commentary on the pruning process.</td>

</thead>
<tbody>
<tr>
<td>1. General Impact of Model on Rating Algorithm</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>C.1.a</td>
<td>In the actuarial memorandum or explanatory memorandum, for each model and sub-model (including external models), look for a narrative that explains each model and its role (i.e., how it was used) in the rating system.</td>
<td>1</td>
<td>The “role of the model” relates to how the model integrates into the rating plan as a whole and where the effects of the model are manifested within the various components of the rating plan. This is not intended as an overarching statement of the model’s goal, but rather a description of how specifically the model is used. This item is particularly important, if the role of the model cannot be immediately discerned by the reviewer from a quick review of the rate and/or rule pages. (Importance is dependent on state requirements and ease of identification by the first layer of review and escalation to the appropriate review staff.)</td>
</tr>
<tr>
<td>C.1.b</td>
<td>Obtain an explanation of how the model was used to adjust the filed rating algorithm.</td>
<td>1</td>
<td>The regulator should consider asking for an explanation of how the model was used to adjust the rating algorithm.</td>
</tr>
<tr>
<td>C.1.c</td>
<td>Obtain a complete list of characteristics/variables used in the proposed rating plan, including those used as input to the model (including sub-models and composite variables) and all other characteristics/variables (not input to the model) used to calculate a premium. For each characteristic/variable, determine if it is only input to the model, whether it is only a separate univariate rating characteristic, or whether it is both input to the model and a separate univariate rating characteristic. The list should include transparent descriptions (in plain language) of each listed characteristic/variable.</td>
<td>1</td>
<td>Examples of variables used as inputs to the model and used as separate univariate rating characteristics might be criteria used to determine a rating tier or household composite characteristic.</td>

<tr>
<td>---------</td>
<td>---------------------</td>
<td>-----------------------------------------</td>
<td>----------</td>
</tr>
</tbody>
</table>
| **2. Relevance of Variables and Relationship to Risk of Loss** | **C.2.a** Obtain a narrative regarding how the characteristics/rating variables included in the filed rating plan relate to the risk of insurance loss (or expense) for the type of insurance product being priced. | 2 | The narrative should include a discussion of the relevance each characteristic/rating variable has on consumer behavior that would lead to a difference in risk of loss (or expense). The narrative should include a rational relationship to cost, and model visualization plots (such as partial dependence plots, accumulated local effects plots, or Shapley plots) should be consistent with the expected direction of the relationship.  
**Note:** This explanation would not be needed if the connection between variables and risk of loss (or expense) has already been illustrated. |
| **3. Comparison of Model Outputs to Current and Selected Rating Factors** | **C.3.b** Obtain documentation and support for all calculations, judgments, or adjustments that connect the model’s indicated values to the selected rates filed in the rating plan. | 1 | The documentation should include explanations for the necessity of any such adjustments and each significant difference between the model’s indicated values and the selected values. This applies even to models that produce scores, tiers, or ranges of values for which indications can be derived.  
**Note:** This information is especially important if differences between model-indicated values and selected values are material and/or impact one consumer population more than another. |
<p>| | <strong>C.3.c</strong> For each characteristic/variable used as both input to the model (including sub-models and composite variables) and as a separate univariate rating characteristic, obtain a narrative regarding how each characteristic/variable was tempered or adjusted to account for possible overlap or redundancy in what the characteristic/variable measures. | 2 | The insurer should address this possibility or other considerations; e.g., tier placement models often use risk characteristics/variables that are also used elsewhere in the rating plan. One way to do this would be to model the loss ratios resulting from a process that already uses univariate rating variables. Then the model/composite variables would be attempting to explain the residuals. |</p>

<td>4.</td>
<td><strong>Responses to Data, Credibility, and Granularity Issues</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>C.4.a</td>
<td>Determine what, if any, consideration was given to the credibility of the output data.</td>
<td>2</td>
<td>The regulator should determine at what level of granularity credibility is applied. If modeling was by-coverage, by-form, or by-peril, the company should explain how these were handled when there was not enough credible data by coverage, form, or peril to model.</td>
</tr>
<tr>
<td>C.4.b</td>
<td>If the rating plan is less granular than the model, obtain an explanation of why.</td>
<td>2</td>
<td>This is applicable if the company had to combine modeled output in order to reduce the granularity of the rating plan.</td>
</tr>
<tr>
<td>C.4.c</td>
<td>If the rating plan is more granular than the model, obtain an explanation of why.</td>
<td>2</td>
<td>A more granular rating plan may imply that the company had to extrapolate certain rating treatments, especially at the tails of a distribution of attributes, in a manner not specified by the model indications. It may be necessary to extrapolate due to data availability or other considerations.</td>
</tr>
<tr>
<td>5.</td>
<td><strong>Definitions of Rating Variables</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>C.5.a</td>
<td>Obtain a narrative regarding adjustments made to model output (e.g., transformations, binning and/or categorizations). If adjustments were made, obtain the name of the characteristic/variable and a description of the adjustment.</td>
<td>2</td>
<td>If rating tiers or other intermediate rating categories are created from model output, the rate and/or rule pages should present these rating tiers or categories. The company should provide an explanation of how model output was translated into these rating tiers or intermediate rating categories.</td>
</tr>
<tr>
<td>6.</td>
<td><strong>Supporting Data</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>C.6.a</td>
<td>Obtain aggregated state-specific, book-of-business-specific univariate historical experience data, separately for each year included in the model, consisting of loss ratio or pure premium relativities and the data underlying those calculations for each category of model output(s) proposed to be used within the rating plan. For each data element, obtain an explanation of whether it is raw or adjusted and, if the latter, obtain a detailed explanation for the adjustments.</td>
<td>4</td>
<td>For example, were losses developed/undeveloped, trended/untrended, capped/uncapped, etc.? Univariate indications should not necessarily be used to override more sophisticated multivariate indications. However, they do provide additional context and may serve as a useful reference.</td>

<td>Obtain a rate disruption/dislocation analysis, demonstrating the distribution of percentage and/or dollar impacts on renewal business (created by rerating the current book of business) and sufficient information to explain the disruptions to individual consumers.</td>
<td>2</td>
<td>The analysis should include the largest dollar and percentage impacts arising from the filing, including the impacts arising specifically from the adoption of the model or changes to the model as they translate into the proposed rating plan. While the default request would typically be for the distribution/dislocation of impacts at the overall filing level, the regulator may need to delve into the more granular variable-specific effects of rate changes if there is concern about particular variables having extreme or disproportionate impacts, or significant impacts that have otherwise yet to be substantiated. See Appendix D for an example of a disruption analysis.</td>
</tr>
<tr>
<td>C.7.e</td>
<td>Obtain exposure distributions for the model’s output variables and show the effects of rate changes at granular and summary levels, including the overall impact on the book of business.</td>
<td>3</td>
<td>See Appendix D for an example of an exposure distribution.</td>
</tr>
<tr>
<td>C.7.f</td>
<td>Identify policy characteristics, used as input to a model or sub-model, that remain “static” over a policy’s lifetime versus those that will be updated periodically. Obtain a narrative on how the company handles policy characteristics that are listed as “static,” yet change over time.</td>
<td>3</td>
<td>Some examples of “static” policy characteristics are prior carrier tenure, prior carrier type, prior liability limits, claim history over past X years, or lapse of coverage. These are specific policy characteristics usually set at the time new business is written, used to create an insurance score or to place the business in a rating/underwriting tier, and often fixed for the life of the policy. The reviewer should be aware, and possibly concerned, how the company treats an insured over time when the insured’s risk profile based on “static” variables changes over time but the rate charged, based on a new business insurance score or tier assignment, no longer reflect the insured’s true and current risk profile. A few examples of “non-static” policy characteristics are age of driver, driving record, and credit information (FCRA-related). These are updated automatically by the company on a periodic basis, usually at renewal, with or without the policyholder explicitly informing the company.</td>

</thead>
<tbody>
<tr>
<td>C.9.a</td>
<td>Establish procedures to efficiently review rate filings and models contained therein.</td>
<td>1</td>
<td>“Speed to market” is an important competitive concept for insurers. Although the regulator needs to understand the rate filing before accepting the rate filing, the regulator should not request information that does not increase his/her understanding of the rate filing. The regulator should review the state’s rate filing review process and procedures to ensure that they are fair and efficient.</td>
</tr>
<tr>
<td>C.9.b</td>
<td>Be knowledgeable of state laws and regulations in order to determine if the proposed rating plan (and models) are compliant with state laws and/or regulations.</td>
<td>1</td>
<td>This is a primary duty of state insurance regulators. The regulator should be knowledgeable of state laws and regulations and apply them to a rate filing fairly and efficiently. The regulator should pay special attention to prohibitions of unfair discrimination.</td>
</tr>
<tr>
<td>C.9.c</td>
<td>Be knowledgeable of state laws and regulations in order to determine if any information contained in the rate filing (and models) should be treated as confidential.</td>
<td>1</td>
<td>The regulator should be knowledgeable of state laws and regulations regarding confidentiality of rate filing information and apply them to a rate filing fairly and efficiently. Confidentiality of proprietary information is key to innovation and competitive markets.</td>
</tr>
<tr>
<td>C.10.d</td>
<td>Obtain complete documentation that would allow future audits of model predictions.</td>
<td>1</td>
<td>The company should provide comprehensive documentation of the rating algorithm such that a rate can be reproduced for any theoretical risk. Comprehensive documentation could be provided as one of the following: a complete set of tree diagrams, a set of if-else logic statements that represents the trees, or a table showing every possible combination of risk characteristics and the final prediction.</td>
</tr>
</tbody>
</table>
RANDOM FOREST GLOSSARY OF TERMS

**Accumulated Local Effects Plots:** A type of interpretability plot. Accumulated Local Effects plots calculate smaller, incremental changes in the feature effects. ALE shows the expected and centered effects of a variable.

**Bagged Trees:** An ensemble of trees where each tree is based on a “bootstrap aggregated” sample.

**Branch:** A connection on a decision tree between a parent node and a child node. A relationship based on a predictor variable is checked at each node, determining which branch applies.

**Candidate Variables:** The variables specified by the modeler to be used within the full model. The random variable selection by a random forest means that component trees might only use a subset of these variables in each tree.

**Child Node:** The node below a parent node. The child node is the result of a split that occurs based on a predictor variable. The node above the child node, which is where the split occurred resulting in the creation of the child nodes, is called the parent note. There is 1 parent node for every child node. The root node is the only node which is not a child node.

**Component Tree:** An individual tree within an approach based on an ensemble of trees such as random forest or gradient boosting machine.

**Deviance:** A measure of model fit. Deviance is based on the difference between the log-likelihood of the saturated model and the log-likelihood of the proposed model being evaluated. Smaller values of deviance demonstrate that a model’s predictions fit closer to actual. Deviance on training data will always decrease as model complexity increases.

**Hyperparameter:** A model hyperparameter is a model setting specified by the modeler that is external to the model and whose value cannot be estimated from data.

**Node:** A point on a decision tree. Nodes are either root nodes (the top node), leaf nodes (a terminal node at which point no further splitting occurs), or an internal node which appears in the middle of the tree while splitting is still taking place.

**Out-of-Bag Error:** Error calculated for observations based on the trees that did not include them in the set of training observations. Out-of-Bag Error is calculable when bootstrapping is used to generate different datasets for each component tree in an ensemble tree method.

**Parent Node:** The node above a child node. The parent node is where a split occurs based on a predictor variable. The nodes below the parent node, which are a direct result of the parent node’s split, are called child nodes. There are typically 2 child nodes for every parent node. Terminal nodes cannot be parent nodes.

**Partial Dependence Plots:** A type of interpretability plot. The partial dependence plot computes the marginal effect of a given variable on the prediction.

**Pruning:** The process of scaling back a tree to reduce its complexity. This results in trees with fewer branches and terminal nodes appearing higher on the tree. Pruning is more common on models built on a single decision tree rather than on ensemble models such as random forests or Gradient Boosting Machines.

**Random Forest:** An ensemble of trees where each tree is based on a bootstrap aggregated sample and each split is based on a random sample of the candidate variables.

**Root node:** The first (top) node in a decision tree. This node contains the entire set of data used by the tree as no splits have occurred yet.
Shapley Additive Explanation Plots: A type of interpretability plot. Shapley plots investigate the effect of including a variable in the model by the order in which it is added. The Shapley value represents the amount the variable of interest contributes to the prediction.

Splitting: The process of dividing a node into two or more sub-nodes, starting from the root node. Splitting occurs at every node up until the terminal (leaf) nodes when the stopping criterion is met.

Stopping Criterion: A criterion applied to the splitting process that informs the node when it is ineligible to split any further. Volume of data is often used as a stopping criterion, such that each leaf node is based on at least a pre-determined amount of data.

Terminal Node: An end node containing no child nodes, because the node has met the stopping criterion. The terminal node is associated with a prediction for one of the component trees. The terminal node is also known as a “leaf” node, the resulting endpoint of a decision tree.

Tree-Based Model: A model that can be represented as a decision tree or a collection of decision trees.

Tree Depth: The maximum number of splits between the root node and a leaf node for a tree.

Variable Importance: A measure of how the variables (a.k.a. features) contribute to the overall model. There are multiple ways to measure variable importance.
SURPLUS LINES (C) TASK FORCE

The Surplus Lines (C) Task Force did not meet at the Spring National Meeting.
TITLE INSURANCE (C) TASK FORCE

Title Insurance (C) Task Force April 5, 2022, Minutes
Title Insurance (C) Task Force
Kansas City, Missouri
April 5, 2022

The Title Insurance (C) Task Force met in Kansas City, MO, April 5, 2022. The following Task Force members participated: Eric Dunning, Chair, and Connie Van Slyke (NE); Michael S. Pieciak, Vice Chair, represented by Kevin Gaffney (VT); Jim L. Ridling represented by Jimmy Gunn and Reyn Norman (AL); Michael Conway represented by Peg Brown (CO); David Altmaier represented by Anoush Brangaccio (FL); Vicki Schmidt represented by Craig VanAalst (KS); James J. Donelon represented by Warren Byrd (LA); Grace Arnold represented by Paul Hanson (MN); Chlora Lindley-Myers represented by Marjorie Thompson (MO); Troy Downing represented by Bob Biskupiak (MT); Mike Causey represented by Tracy Biehn (NC); Judith L. French represented by Michelle Brugh Rafeld (OH); Glen Mulready (OK); Michael Humphreys represented by Shannen Logue and Sebastian Conforto (PA); Elizabeth Kelleher Dwyer represented by Brian Werbeloff (RI); Larry D. Deiter represented by Frank Marnell (SD); and Scott A. White represented by Mike Beavers and Chuck Myers (VA). Also participating was: Mike Kreidler represented by Michael Walker (WA).

1. **Adopted its 2021 Fall National Meeting Minutes**

   Director Dunning said the Task Force met Nov. 16, 2021. During this meeting, the Task Force took the following action: 1) adopted its Oct. 19, 2021, minutes; 2) adopted its 2022 proposed charges; 3) heard a presentation from AM Best on how the robust housing market drove historic title industry performance; 4) heard a presentation from the American Land Title Association (ALTA) on changes to its homeowners policy and endorsements.

   Mr. Gaffney made a motion, seconded by Ms. Biehn, to adopt the Task Force’s Nov. 16, 2021, minutes (see NAIC Proceedings – Fall 2021, Title Insurance (C) Task Force). The motion passed unanimously.

2. **Received a Report on How Cyber Wire Fraud Cases Referred by Title Agents are Handled at the VBI**

   Mr. Myers stated that the Virginia Bureau of Insurance (VBI) is one of the regulatory authorities under the Virginia State Corporation Commission (SCC). Virginia has 356,000 active title agents, 1.6 appointments, and almost 9,000 title appointments. A settlement agent who wants to do real estate closings on property located in Virginia can be licensed as a title agent and registered with the VBI as a real estate settlement agent. According to the Federal Bureau of Investigation (FBI) internet crime report, internet crimes have risen considerably over each of the last five years. There has been an average of 552,000 complaints per year received by the FBI Internet Crime Complaint Center (IC3). The IC3’s primary functions are to provide a central hub to alert the public to threats; host a victim reporting portal; partner with private sector and local, state, federal, and international agencies; increase victim reporting via outreach; and host a remote access database for all law enforcement. In 2021 alone, there were 847,000 complaints with losses of $6.9 billion reported to the IC3.

   Virginia is the ninth top state by victim losses. The increase in settlement agent fraud is linked to the strong rise in real estate transactions in the state recently. In just four northern Virginia counties during 2021, 27,000 homes were sold for $19 billion in 19 days. Multiple parties are involved in a real estate transaction, including the buyer, seller, relator, mortgage lender, and mortgage broker. This provides many opportunities for fraudsters, especially considering that as many as four out of five people are still using unsecured emails. When a compromise occurs, the consumer should first contact their financial institution to attempt to get the stolen assets frozen or recalled. Complaints should then be filed by the financial institution and the consumer with the IC3. The IC3’s Recovery Asset Team (RAT) then assists FBI field offices with the possible freezing of funds for victims.
The VBI usually becomes involved after receiving a complaint from the consumer. In one specific case, the consumer felt the settlement agent should have responded to their confirmation of the email wire. After investigating, the VBI found that the reason for the lack of response was that the confirmation email also went to the fraudster’s email address. Business email fraudsters commonly make a slight, and therefore possibly unnoticeable, change to a valid email address. VA Code § 38.2-625 Notice to Commissioner requires an agent or agency to report if they have a cyber breach to the commissioner. In this case, the agency was out just over $1 million because the fraudster was about to gain access to their entire system and transfer funds out from not just the agency, but the lawyer that owned the agency. All the money was returned to the consumers through either errors and omissions coverage, loans or personal money tied to the agency. In a different case, $154,000 was wired to pay off a loan. The financial institution was valid, but the beneficiary was not. The account was traced to San Francisco, CA, where it had then been wired again to Indiana, and the agency was able to recover $82,000. The balance was submitted as an errors and omissions claim. Under VA Code § 55.1-1004 Duties of Settlement Agents, a settlement agent must have an errors and omissions or malpractice insurance policy providing a minimum of $250,000 in coverage, a blanket fidelity bond or employee dishonesty insurance policy covering persons employed by the settlement agent providing a minimum of $100,000 in coverage, and a surety bond of no less than $200,000.

3. **Heard a Presentation on CPL Language**

Paul Hammann (First American Title Insurance Company and ALTA) stated that the 2021 closing protection letter (CPL) was adopted by ALTA and became effective on April 2, 2021. It is a revision to the 2018 CPL, which was a revision to the 2015 CPL. The ALTA CPL sets standard and best practices and serves as a model. Most jurisdictions still use the 2015 CPL, which does not contain the new exclusions. The 2021 CPL expressly covers lenders, purchasers, or lessees. Elsewhere in the CPL, the borrower in any refinance transaction is covered under the definition of “you” and “your.” If there is only a loan closing, the borrowers are automatically afforded coverage under the definition of “you” and “your” in the letter. For residential deals, the borrower is automatically covered. The CPL covers losses that are solely caused by a failure of the issuing agent or approved attorney to comply with the insureds written closing instructions that relate to: 1) the disbursement of funds necessary to establish the status of the title to the land; 2) the validity, enforceability, or priority of the lien of the insured mortgage; or 3) obtaining any document, specifically required by the insured, but only to the extent that failure to obtain it adversely affects the status of the title or validity, enforceability, or priority of the lien of the insured mortgage. The CPL also covers losses from fraud, theft, dishonesty, or misappropriation by the issuing agent or approved attorney in handling your funds or documents in connection with the closing, but only to the extent that it affects the status of the title or validity, enforceability, or priority of the lien of the insured mortgage on the title. There are three types of authorizing laws. The CPL may be issued to the seller, buyer, and lender, as is done in Alabama, Arizona, Arkansas, Georgia, Louisiana, Nevada, and Utah. The CPL may be issued to the buyer and lender with the seller allowed but not mandatory. The CPL may be issued to the buyer and lender, where the seller is not included, as is done in the ALTA CPL and some states. Title underwriters are limited to the issuance of title insurance. CPLs are an exception to the monoline limitations.

State-specific requirements include: 1) Notice of Availability (Alabama, Arizona, Arkansas, Colorado, Missouri, and Ohio); 2) the CPL must be issued to the buyer, borrower, lender, and seller on residential transactions (Indiana); 3) the CPL must be issued to the buyer, lender, or seller on residential transactions and may be issued to the buyer, lender, or seller in other transactions (Missouri); 4) the CPL must be offered to any lender, borrower, or seller and any applicant for title insurance (Ohio); 5) the CPL must be issued to proposed insureds (Nebraska); 6) the CPL must be issued to the proposed insured residential lender and may be issued to other proposed insureds (Rhode Island); and 7) the CPL may be issued to the lender or purchaser/seller (Texas).
The 2021 ALTA CPL requirements are as follows:

1. The Company issues or is contractually obligated to issue a Policy for Your protection in connection with the Real Estate Transaction.

2. You are to be:
   A. A lender secured by the Insured Mortgage on the Title to the Land.
   B. A purchaser or lessee of the Title to the Land.

3. The aggregate of all Funds You transmit to the Issuing Agent or Approved Attorney for the Real Estate Transaction does not exceed $_____________.

4. Your loss is solely caused by:
   A. A failure of the Issuing Agent or Approved Attorney to comply with Your written closing instructions that relate to:
      i. The disbursement of Funds necessary to establish the status of the Title to the Land.
      ii. The validity, enforceability, or priority of the lien of the Insured Mortgage.
      iii. Obtaining any document, specifically required by You, but only to the extent that the failure to obtain the document adversely affects the status of the Title to the Land or the validity, enforceability, or priority of the lien of the Insured Mortgage on the Title to the Land.
   B. Fraud, theft, dishonesty, or misappropriation by the Issuing Agent or Approved Attorney in handling Your Funds or documents in connection with the closing, but only to the extent that the fraud, theft, dishonesty, or misappropriation adversely affects the status of the Title to the Land or the validity, enforceability, or priority of the lien of the Insured Mortgage on the Title to the Land.

For Requirements 1 and 2, the ALTA CPL specifies that the protection is extended to either a secured lender or purchaser/lessee of the Title. In contrast, the Ohio Closing Protection Coverage (CPC) Ohio Title Insurance Rating Bureau (OTIRB) specifies either a lender secured by a mortgage or a listed “Covered Party” with an interest in the land. Ohio allows the seller to be a “Covered Party.” The Missouri CPL also allows for sellers to be covered and a separate Seller’s CPL to be utilized. Texas ICS: T-51 covers purchasers and sellers, and T-50 covers lenders.

For Requirement 3, the ALTA CPL specifies the defined maximum amount of funds that are to be transmitted to the entity handling the real estate transaction as a requirement. In contrast, the Ohio CPC OTIRB has no such requirement but limits liability to the amount of funds due to or paid for the covered party. The Missouri CPL limits liability to $5 million for buyers, lessees, and lenders; the alternate version facilitates insertion by the underwriter of the higher or lower amount tailored to the actual transaction. The Texas ICS T-51 (for buyer/seller) only insures above the first $500,000 of the loss for sellers and buyers, and no maximum is specified (deductible concept). For Requirement 4, the ALTA CPL specifies that the indemnity for fraud, theft, dishonesty, or misappropriation must adversely affect the status of the title or lien of the insured mortgage on the title. In contrast, the Ohio CPC OTIRB specifies, “theft, misappropriation, fraud or any other failure,” without the requirement for an effect on the title or lender’s lien. The Missouri CPL specifically includes any “theft or fraud” in the purchaser’s deposited earnest money or settlement funds, and there is no reference to affect the Title or lender’s lien. Texas provides protection for “fraud or dishonesty” of the Issuing Agent in handling seller/purchaser funds and protection for “fraud or dishonesty” of the lender, as it affects the status of the title or validity, enforceability, and priority of the mortgage lien.

The ALTA CPL excludes: 1) certain closing instructions; 2) loss of funds due to bank issues; 3) mechanic’s and materialmen’s liens; 4) certain defects, liens, encumbrances, and adverse claims connected with the Real Estate Transaction; and 5) “fraud, theft, dishonesty, misappropriation, and negligence” by the CPL recipient, its employees, agent, attorney, or broker. In contrast, in Ohio, failure to comply with inconsistent closing instructions is not excluded. There is also no exclusion of “other matters in connection with the real estate transaction.” Although fraud, theft, dishonesty, misappropriation, and negligence are not directly addressed in the Ohio CPC, “matters” created, suffered, assumed, or agreed to by the CPC recipient and your agents/employees are excluded.
Missouri has no express exclusion for mechanics’ liens but does address fraud, dishonesty, or negligence by your employee, agent, attorney, or broker and “matters” created, suffered, assumed, or agreed to or known are excluded. The Texas T-51 for the Buyer or Seller excludes “fraud, dishonesty, or negligence” by the letter recipient; its employee; agent; or attorney; and like Ohio and Missouri, “any matters created, suffered, assumed, or agreed to by or known to you.” The Texas T-50 for the Lender excludes: 1) “fraud, dishonesty, or negligence” by the letter recipient, its employee, agent, attorney, or broker; 2) “any matters created, suffered, assumed, or agreed to by or known to you,” like Ohio and Missouri; and 3) no liability for loss from negligence, fraud, or bad faith of any party other than the issuing agent.

Additionally, ALTA provides exclusions not existing in the Ohio CPC, as Ohio does not state exclusion of loss resulting from: 1) failures of the issuing agent to determine the applicability of documents required by closing instructions; 2) laws regulating lending practices; 3) imposing credit risk retention and securitization standards; 4) construction disbursements; 5) an agent acting as a qualified intermediary for 1031 exchange; or 6) cyber or other fraud that is beyond the scope of the stated indemnification. The Missouri CPL is similar to the scope of the Ohio CPC exclusions. The scope of the Texas T-51 for consumer reimbursement is limited to settlement funds for fraud/dishonesty of the issuing agent, so many of ALTA’s CPL exclusions do not apply. There is greater reimbursement scope with the T-50 for lenders, so more exclusions apply.

Regarding liability exposure, liability for loss in Ohio is limited to the actual loss of funds and is no greater than the amount due to or paid on behalf of a covered party. There is no stated maximum amount and no expressly stated limit lender covered party to the owner of the secured indebtedness at the time of CPC payment. There is also no express cut off for payments under a title insurance policy. Missouri specifies that liability is the amount of settlement fund transmitted, but the default maximum is $5 million. It does not expressly limit the lender covered party to the owner of secured indebtedness at the time of the CPC payment, and there is no express cut off for payments under a title policy. In Texas, buyer/sellers effectively have a $500,000 deductible on a claim. For Lenders, there is no stated liability limit.

Regarding a limited agent, under the ALTA CPL, the issuing agent or approved attorney is not the insurer’s agent for closing/escrow, so closing/escrow is outside the scope of the agency. Agency is limited to policy issuance and there are exclusions for fraud, theft, dishonesty, misappropriation, or negligence of other parties to the transaction. There are also exclusions for creditworthiness claims and inadequate security. In contrast, the Ohio CPC does not include a statement as to the limitation of agency scope, but the loss events are narrowly expressed. Also, protection as to compliance with closing instructions is limited to the status of title or the validity, enforceability, or priority of the mortgage lien. Missouri is virtually the same. The Texas Lender T-50 has virtually the same language as the ALTA CPL. However, the Texas T-51 for Seller and Buyer have a very narrow scope protecting settlement/earnest money funds.

Regarding the jurisdiction and forum, the ALTA CPL provides protection when the real estate is in a specified state, the real estate has a choice of law and jurisdiction provision, and class action proceedings are not permitted. Additionally, demand for arbitration may be made by either party where the policy amount of insurance is up to $2 million and by mutual agreement for the policy amount of insurance over $2 million. There are not similar provisions stated in the Ohio CPC. The Missouri CPL provides protection only for real estate transactions in Missouri. The Texas T-50 (Lender) provides arbitration provisions that mirror those of the ALTA CPL. Unlike the T-50, the T-51 (Seller/Buyer) limits the corporate contact with the company to the principal place of business in Texas, thus leaving open the position that jurisdiction and choice of law are limited to Texas.

4. Received a Report on How CPLs are Used in Louisiana and Ohio from a Statutory and Regulatory Framework

Mr. Byrd stated that the CPL serves as a contract whereby a title insurer agrees to indemnify a lender or any other parties to a real estate transaction from any actual losses that arise due to any misconduct of the closing title
agent or the closing attorney. Some of the misconduct that is considered in the CPL includes, but is not limited to, fraud or dishonesty in the handling of funds or closing documents and the failure of the closing agent to follow written closing instructions. Written closing instructions could be as simple as the settlement agent being instructed to deposit certain funds in a specific account and then transfer those funds at a specific time to another account when the transaction is funded. If these instructions are not followed and there is a loss, the loss is covered under the CPL. In most instances, the title insurer that issues the closing protection is the same insurer that will issue either the owner’s policy or the lender’s policy in conjunction with the real estate transaction.

The relevant statute in Louisiana is R.S. 22:515 (C), which states that a title insurer may issue closing or settlement protection to a person who is a party to a transaction in which a title insurance policy is contemplated being issued. The closing or settlement protection shall conform to the terms of coverage and form of instrument as may be required by the department and may indemnify a person solely against loss of settlement funds because of the following acts of a settlement agent, title insurer’s named employee, or title insurance producer: a) theft or misappropriation of settlement funds; or b) failure to comply with instructions when agreed to by the settlement agent, employee, or title insurance producer. The premium charged by a title insurer for this coverage shall be submitted to and approved by the commissioner of insurance. Additionally, a title insurer shall not provide any other coverage, which purports to indemnify against improper acts or omissions of a person with regard to escrow or settlement service.

The written closing instructions should not be inconsistent with any instructions outlined in the title insurance policy’s commitment/binder documents. The fees (premium) assessed for the issuance of CPLs have been between $25 and $50. Courts have expressed varied opinions on whether the CPL is an insurance product. At the initial use of CPLs, title insurers did not charge a fee for the letter. Based upon La. R.S. 22:515 (C), the Louisiana legislature recognizes the CPL as providing some form of coverage, and the premium for the CPL must be approved by the commissioner of insurance. Louisiana is a prior approval state. Thus, the form, the letter itself, and the rate must be submitted to the insurance department for prior approval. The written notice of a claim must be received by the company within one year from the transmittal of the fund.

Ms. Rafeld stated that Ohio has had some issues with CPLs being offered. In 2007, at the height of title default locations in the marketplace, Ohio enacted closing protection legislation. The closing protection law requires title insurance companies or the agent to offer closing or settlement protection to all parties associated with the transaction. All CPLs issued are to indemnify the party who requested the protection against misappropriation, fraud, or any other failure to properly disperse settlement closing or escrow funds. Also included is any situation where the title agent fails to comply with written closing instructions. Ohio has found issues with the lack of coverage for injured parties from escrow agents mistakes or fraud. Additionally, past cases have found that some title agents do not always offer closing protection as they are required. In most of those cases, the issue became known through the investigation into an agent misappropriating settlement funds. The investigations revealed that the agents did not offer protection because they did not want the consumer to believe the theft of their money would even be a possibility during the real estate transaction. This raises the question of whether the offering of closing protection should be left to the individual in a position to steal the funds. Other concerns include the timing as to when closing protection coverage is offered in the way the coverage is described by title agents under the current process or methods. There is an extremely low acceptance rate by consumers.

Many within the agent community have expressed that they are not in favor of the mandate to offer closing protection coverage, as it makes them look bad in the eyes of the consumer. For this reason, the importance of closing protection is often downplayed by title agents. Another issue is some title underwriters doing business in the state have tried to exclude cyber theft events from CPL coverage. They have also been reluctant to reimburse consumers affected by business email compromise, believing it falls outside the CPL statute in Ohio. There needs to be education within the underwriter community when the CPL filings are being submitted to the OTIRB because of Ohio’s statute. The CPL is to indemnify a party from misappropriations, fraud, or any other failure to properly
disperse settlement funds. When an ALTA CPL is filed with the OTIRB, it has been necessary to tell the underwriter that Ohio’s interpretation of the law is that cyber theft events related to business email compromises are not to be excluded from CPL coverage.

5. **Held a Q&A Session on the Cyber Wire Fraud Report and Presentations**

Birny Birnbaum (Center for Economic Justice—CEJ) asked why CPLs are not covered by errors and omissions policies, thus alleviating the need for an additional fee for coverage under a CPL. Mr. Hammann stated that the fee associated with a CPL is to cover the costs of the CPL issuance, not a premium. The CPL fee is not charged in all jurisdictions.

Peter Kochenburger (University of Connecticut School of Law) urged state insurance regulators not to allow arbitration mandates. Class actions should be restricted to cases where evidence of their need is demonstrated.

6. **Discussed its 2022 Work Plan**

Director Dunning asked that in the interest of time, Task Force members, interested state insurance regulators, and interested parties review the work plan included as part of the materials and submit comments to Anne Obersteadt (NAIC) at aobersteadt@naic.org.

The work plan includes: 1) holding a regulator-only meeting with the Consumer Financial Protection Bureau (CFPB); 2) discussion on how the use and language of CPLs varies by state; 3) a presentation on the post-pandemic future of the title insurance industry; 4) a roundtable discussion on rate regulation; 5) a presentation from industry on complications that arise from the required use of plans by some states that include rules or forms tailored to other lines of insurance; and 6) a review of Section 15C of the *Title Insurers Model Act* (#628) to determine if there is a need to make a recommendation to remove the requirement for the on-site review of underwriting and claims practices.

Having no further business, the Title Insurance (C) Task Force adjourned.
WORKERS’ COMPENSATION (C) TASK FORCE

Workers’ Compensation (C) Task Force March 21, 2022, Minutes.................................................................................. 7-131
The Workers’ Compensation (C) Task Force met March 21, 2022. The following Task Force members participated: Alan McClain, Chair, and Jimmy Harris (AR); John F. King, Vice Chair (GA); Lori K. Wing-Heier represented by Anna Latham (AK); Jim L. Ridling represented by Jennifer Brown, Jimmy Gunn, Yada Horace, and Erick Wright (AL); Ricardo Lara represented by Yvonne Hauscarrriague, Giovanni Muzzarelli, and Sarah Ye (CA); Andrew N. Mais represented by George Bradner and Amy Waldhauer (CT); Trinidad Navarro represented by Lucretia Prince (DE); David Altmaier represented by Greg Jaynes (FL); Colin M. Hayashida represented by Kathleen Nakasone and Grant Shintaku (HI); Doug Ommen represented by Travis Grassel (IA); Dean L. Cameron represented by Katie Deaver, Michele MacKenzie, and Randy Pipal (ID); Vicki Schmidt represented by Julie Holmes and Craig VanAalst (KS); James J. Donelon represented by Warren Byrd and Tom Travis (LA); Gary D. Anderson represented by Caleb Huntington and Matthew Mancini (MA); Eric A. Cioppa represented by Brock Bubar, Sandra Darby, and Robert Wake (ME); Grace Arnold represented by Sandra Anderson, Tammy Lohmann, and Phil Vigliaturo (MN); Chlora Lindley-Myers represented by Jo LeDuc and Rebecca Shavers (MO); Mike Causey represented by Fred Fuller (NC); Marlene Caride represented by Mark McGill and Carl Sornson (NJ); Barbara D. Richardson represented by Erin Summers (NV); Michael Humphreys represented by Michael Mckenney and Eric Zhou (PA); Elizabeth Kelleher Dwyer represented by Beth Vollucci (RI); Raymond G. Farmer represented by Will Davis (SC); Larry D. Deiter (SD); Jon Pike represented by Tracy Klausmeier and Reed Stringham (UT); Michael S. Pieciak represented by Mary Block, Isabelle Turpin Keiser, Karla Nuissl, Pat Murray, and Marcia Violette (VT); and Allan L. McVey, Tonya Gillespie, Erin K. Hunter, and Juanita Wimmer (WV). Also participating were: Tom Zuppan (AZ); Kevin Dyke and Tina Nacy (MI); Mike Chaney (MS); Bob Biskupiak (MT); Connie Van Slyke (NE); Bogdanka Kurahovic and Jennifer Catechis (NM); Cuc Nguyen and Andrew Schallhorn (OK); Brian Hoffmeister (TN); Marianne Baker and Nicole Elliott (TX); Rebecca Nichols (VA); David Haushalter (WI); Danie Capps (WY).

1. Heard an Update on Federal Legislation

Brooke Stringer (NAIC) said the Democrats in the U.S. House of Representatives (House) are concerned by a decline in the adequacy of benefits provided to injured workers under the state-based workers’ compensation system. She said House Democrats believe the costs for disabling workplace injuries are being shifted to federal programs, such as Social Security disability insurance, due to reduced workers’ compensation coverage under state laws.

Ms. Stringer said that in an earlier version of the Build Back Better Act, the House Committee on Education and Labor included language and funding for the U.S. Department of Labor (DOL) Office of Workers’ Compensation Programs (OWCP) for “monitoring of state workers’ compensation programs.” The property/casualty (P/C) trade associations opposed this provision in the Build Back Better Act, and the specific reference was ultimately removed.

In November 2021, the House passed a $1.7 trillion Build Better Act. While the updated bill provides $121 million for the DOL’s OWCP activities, it did not include a specific reference to oversight of the state workers’ compensation programs, which was included in previous versions. The outcome of the bill in the U.S. Senate remains uncertain.

Ms. Stringer said last week during a markup at the House Committee on Education and Labor, ranking member Virginia Foxx (R-NC) offered an amendment to prohibit monitoring of the DOL on the adequacy of state workers’ compensation programs; this amendment was defeated along party lines.
Ms. Stringer said in December 2021, the Workforce Protections Subcommittee held a hearing on “Strengthening the Safety Net for Injured Workers,” which also touched on the DOL’s authority to reinstitute monitoring and reporting on state workers’ compensation programs. She said it is anticipated that there could be continued congressional oversight and that attention to this issue moving forward. Ms. Stringer said she will keep the Task Force informed of any updates.

Commissioner King asked Ms. Stringer to report back to the Task Force if she sees any movement in the Senate regarding the monitoring of workers’ compensation. He said state insurance regulators will want to talk to their congressional delegation in the event there is any movement toward the monitoring of workers’ compensation.

Commissioner McClain said the monitoring of workers’ compensation does go across all regulatory lines. He said adjudication and benefits are typically the responsibility of the workers’ compensation agencies in the various states and usually not within the departments of insurance (DOIs). Commissioner McClain said the impact of these items affects the rating and loss costs, and these are the items affecting the DOIs.

Commissioner McClain said there have been several reforms in the past 20 to 30 years, as well as mechanization and employers paying more attention to worker safety. The combination of these items has lowered the frequency and severity of accidents in the workplace, and has affected workers’ compensation rates in a positive way.

2. Heard an Update on Cannabis, Independent Contractor, and Single-Payer Health Insurance Legislation Regarding Workers’ Compensation

Susan Donegan (National Council on Compensation Insurance—NCCI) said there is huge crossover potential between state activities, especially in the legislatures, and what is going on in Congress. She said at the end of last year, the NCCI tracked more than 1,000 state and federal bills.

Ms. Donegan said there were approximately 164 of these bills enacted. She said another 182 bills enacted were COVID-19-related.

Ms. Donegan said approximately 350 workers’ compensation regulations were proposed throughout the states and of those, approximately 162 were adopted. Ms. Donegan said many of these regulations were COVID-19-related. She said legislatures were looking at extensions of presumptions or making permanent laws about infectious or contagious diseases that may happen in the future, whether they include a pandemic or not.

Ms. Donegan said there have been COVID-19 vaccination-related bills being introduced during the current legislative sessions. These bills are generally falling into two categories. The first category is a private right of action against employers regarding certain injuries or death occurring from receiving a mandated vaccination as a condition of employment. She said there were approximately 12 states that have been looking at this issue. To date, some of these bills have died, and some of these bills are still in committee.

Ms. Donegan said state and federal cannabis-related legislation has the potential to intersect. She said there have been inconsistencies between state and federal laws regarding cannabis, including items such as the criminal justice impact on current law, expungements, and criminal records related to cannabis.

Ms. Donegan said one bill that has seen a lot of activity federally is the SAFE Banking Act. This Act has passed in the House six times, but the Senate has remained opposed to passing a stand-alone measure for cannabis and the banking sector. Ms. Donegan said this bill will need to pass the Senate if it is going to help businesses unable to open a bank account or obtain loans at a reasonable rate. She said 23 state governors (19 Democrats and four Republicans) have sent a letter to Congress urging the passage of the SAFE Banking Act.
Ms. Donegan said a broader proposal, “The Cannabis Administration and Opportunity Act,” was not introduced, but it unveiled in July 2021. This Act would remove cannabis from the list of controlled substances, which would empower states to implement their own cannabis laws. This Act would also provide access for insurance services to cannabis-related businesses. Ms. Donegan said there is some interest in using a broader approach than to simply focus on the banking sector.

Ms. Donegan said there are two cases currently on petition for a Writ of Certiorari to the U.S. Supreme Court in Minnesota. She said the issue is whether the Controlled Substances Act (CSA) preempts any order under a state workers’ compensation law, requiring an employer to reimburse an injured employee for the cost of buying medical cannabis to treat a work-related injury. Ms. Donegan said there is a mature split in the states’ supreme courts regarding whether preemption is valid. She said 11 states have said a preemption is valid, while 16 states have said preemption is not valid.

Ms. Donegan said there is a conflict between federal and state jurisdictions regarding cannabis. She said cannabis has been a Schedule I substance since 1970. Ms. Donegan said this complication, as well as the differing opinions regarding preemption, is confusing. She said she hopes that one day soon, there will be more continuity regarding medical cannabis legislation and regulations to alleviate insurers concerns regarding the risk to insure cannabis businesses.

Ms. Donegan said the NCCI has been watching federal activities and state level activities regarding who is an employee versus who is an independent contractor. She said South Dakota just signed a bill establishing a test for determining whether a delivery facilitation contractor is an independent contractor or an employee. Ms. Donegan said that there are several types of contractors and that states have different ways of describing this particular focus.

Ms. Donegan said in March 2021, the U.S. House of Representatives passed the “Protecting the Right to Organize Act.” This act focuses on the right to form and join unions. However, there are a couple of provisions in the Act that affect worker classification. Ms. Donegan said an independent contractor could be deemed an employee for purposes of federal law, which would allow unions to organize and then protect people who might have earlier been classified as an independent contractor. She said this bill has gone to the Senate. However, there has been no action in the Senate to date.

Ms. Donegan said earlier this month, a U.S. district court judge in the district of Eastern Texas ruled that the DOL violated the Administrative Procedures Act (APA) by delaying and then withdrawing the Trump administration rule that made it easier for businesses to classify workers as independent contractors. This invalidated the DOL’s actions and reinstated the Trump administration rule siding with the coalition of workforce Innovation, which represents the gig economy businesses such as Uber and Lyft. Ms. Donegan said the Biden administration has not yet indicated how it is going to respond to this ruling.

Ms. Donegan said the NCCI is following legislation regarding single payer health insurance, as this could be a game changer for workers’ compensation. She said it is unknown as to whether workers’ compensation would be included in a single-payer system or whether workers’ compensation would have its own carve out.

Ms. Donegan said health care reform is still getting some attention in Congress. In February, the representatives of the House Committee on Education and Labor held a hearing on health care reform titled “Exploring Pathways to Affordable, Universal Health Coverage.” She said it examined mechanisms to transition private health coverage to a federal system. Those who gathered discussed the considerations of a Medicare for all approach. Ms. Donegan said the Committee did not have any questions regarding the potential impacts to injured workers, nor was anything discussed regarding workers’ compensation presented in the hearing.
Ms. Donegan said there are approximately nine bills at the state level addressing some type of single payer mechanism, ranging from creating a study group to study a single payer system to how to finance a single payer system. She said four of the nine bills did not include workers’ compensation. However the remainder did reference workers’ compensation. Ms. Donegan said one of the questions needing answered regarding single payer legislation that includes workers’ compensation is how this would affect workers’ compensation.

Having no further business, the Workers’ Compensation (C) Task Force adjourned.
MARKET REGULATION AND CONSUMER AFFAIRS (D) COMMITTEE

Market Regulation and Consumer Affairs (D) Committee April 7, 2022, Minutes .................................................. 8-2
2022 Proposed Revised Charges (Attachment One)................................................................. 8-8
Market Regulation Certification (D) Working Group March 22, 2022, Minutes (Attachment Two) .............. 8-13
Market Analysis Procedures (D) Working Group March 3, 2022, Minutes (Attachment Three) ............... 8-15
Market Conduct Annual Statement Blanks (D) Working Group March 17, 2022, Minutes
(Attachment Four)......................................................................................................................... 8-18
Digital Claims Interrogatory Reporting Subject Matter Expert (SME) Proposal (Attachment Four-A) ...... 8-22
Market Conduct Examination Guidelines (D) Working Group March 10, 2022, Minutes
(Attachment Five)......................................................................................................................... 8-23
Privacy Protections (D) Working Group April 6, 2022, Minutes (Attachment Six) ...................................... 8-29
Privacy Protections (D) Working Group 2022 Work Plan (Attachment Six-A) ........................................ 8-33
The Market Regulation and Consumer Affairs (D) Committee met in Kansas City, MO, April 7, 2022. The following Committee members participated: Jon Pike, Chair (UT); Trinidad Navarro, Vice Chair (DE); Karima M. Woods (DC); Sharon P. Clark (KY); Chlora Lindley-Myers (MO); Mike Causey represented by Tracy Biehn (NC); Jon Godfread represented by John Arnold (ND); Eric Dunning represented by Martin Swanson (NE); Russell Toal (NM); Barbara D. Richardson (NV); Michael Humphreys represented by David Buono (PA); Cassie Brown (TX); and Michael S. Pieciak represented by Karla Nuissl (VT). Also participating were: Michael Conway and Damion Hughes (CO); Doug Ommen (IA); Erica Weyhenmeyer (IL); Larry D. Deiter (SD); Katie Johnson and Rebecca Nichols (VA); and John Haworth (WA).

1. Adopted its 2021 Fall National Meeting Minutes

Superintendent Toal made a motion, seconded by Ms. Biehn, to adopt the Committee’s Dec. 15, 2021, minutes (see NAIC Proceedings – Fall 2021, Market Regulation and Consumer Affairs (D) Committee). The motion passed unanimously.

2. Adopted its 2022 Revised Charges

Commissioner Pike said when the Committee charges were adopted at the 2021 Fall National Meeting, it was noted that the Privacy Protections (D) Working Group might move under the Innovation, Cybersecurity, and Technology (H) Committee to better align the privacy protection discussions with the NAIC members’ discussions regarding the increased use of consumer data and innovations. He said the revised charges reflect this change in the reporting structure for the Working Group.

Commissioner Pike also said the Speed to Market (H) Working Group will move to the Market Regulation and Consumer Affairs (D) Committee because of the more technical efforts of the Working Group, which has been focusing on the updates to the product coding matrix (PCM) and Product Filing Review Handbook.

Commissioner Pike said the revised charges also include the Antifraud (D) Task Force’s revised charges that disbanded the Antifraud Education Enhancement (D) Working Group and moved the charge of the Working Group to the Task Force. He said the elimination of the Working Group should allow for the continuation of the education initiatives in a more streamlined manner.

Commissioner Ommen said he consulted with the vice chair of the Advisory Organization Examination Oversight (D) Working Group, and they agreed that the name of the Working Group should be shortened to the Advisory Organization (D) Working Group. He asked for a motion to shorten the name of the Working Group. Commissioner Richardson made a motion, seconded by Director Lindley-Myers, to rename the Advisory Organization Examination Oversight (D) Working Group to the Advisory Organization (D) Working Group. The motion passed unanimously.

Superintendent Toal made a motion, seconded by Commissioner Richardson, to adopt the Committee’s 2022 revised charges (Attachment One), including renaming the Advisory Organization Examination Oversight (D) Working Group. The motion passed unanimously.
3. **Adopted the Reports of its Task Forces and Working Groups**

   a. **Market Regulation Certification (D) Working Group**

   Superintendent Toal said the Market Regulation Certification (D) Working Group met March 22. He said since this was the first time the Working Group has met since late 2020, the Working Group reviewed the status of the Voluntary Market Regulation Certification Program.

   Superintendent Toal noted that the Working Group has three parts of the Voluntary Market Regulation Certification Program to complete this year. First, he said the certification requirements are finished, but the revisions suggested by the certification pilot states need to be adopted for inclusion in the Voluntary Market Regulation Certification Program. Second, the implementation plan for the Voluntary Market Regulation Certification Program needs to be brought up to date. Third, the Working Group needs to complete the scoring guidelines to enable jurisdictions to understand what is needed to be certified and uniformly self-evaluate themselves.

   Superintendent Toal said the Working Group heard a report from the small group of state insurance regulators working on the scoring matrix for the Voluntary Market Regulation Certification Program. He said they made progress in 2020 and will have a draft of the scoring matrix to the Working Group prior to the Summer National Meeting.

   b. **Antifraud (D) Task Force**

   Commissioner Navarro said the Antifraud (D) Task Force met March 28. He said the Task Force discussed a letter received concerning racial bias and discrimination potentially taking place. The Task Force heard comments from NAIC Consumer Representative Birny Birnbaum (Center for Economic Justice—CEJ) and will continue to monitor the topic and schedule additional discussions, if warranted.

   Commissioner Navarro said the Task Force adopted a recommendation to temporarily disband the Antifraud Education Enhancement (D) Working Group and move its current charge under the Task Force. As the Working Group’s last official action, the Task Force received an update from the Working Group. Commissioner Navarro said updated Investigator Safety Training Webinars for the state insurance regulators and private investigators will be held this year, and specific dates will be distributed once confirmed. He said Michelle Brugh Rafeld (OH) will continue her position as the Task Force’s education subject matter expert (SME) and work with the NAIC to develop additional advanced training throughout the year.

   Commissioner Navarro said the Task Force received an update from the Antifraud Technology (D) Working Group. He said the Working Group requested that state insurance regulator SMEs work with NAIC staff to create a template for industry to use when creating their Antifraud Plans. The Working Group will expose the final draft of the template for comment, and the Working Group will meet to discuss the comments and potentially adopt the template. Commissioner Navarro said once the template is adopted by the Working Group, it will be presented to the Task Force for consideration at the Summer National Meeting. He said the Working Group chair has continued to work with NAIC staff to redesign the Online Fraud Reporting System (OFRS). He said the OFRS industry section is currently in beta testing, and the NAIC is accepting suggestions to finalize the redesign.

   Commissioner Navarro said the Task Force received an update from the newly appointed Improper Marketing of Health Insurance (D) Working Group. He said the Working Group continues to meet monthly in regulator-to-regulator session, and it held its second open meeting April 4 at the Spring National Meeting. He said during the meeting, the Working Group discussed current issues being witnessed throughout the states, including enforcement actions taking place due to their continued efforts. He said the Working Group also heard from the
Coalition Against Insurance Fraud (CAIF) regarding the work it has completed specific to the improper marketing of insurance. He said the Working Group discussed the collaborative document on lead generators comprising potential fraudulent entities who are improperly marketing health insurance. The collaborative document was created to assist states and federal agencies to coordinate necessary actions to fight insurance fraud.

Lastly, Commissioner Navarro said the Task Force received a report on matters of national interest to the insurance fraud bureaus from the CAIF.

c. Market Information Systems (D) Task Force

Commissioner Conway said the Task Force also considered the report of the Market Information Systems Research and Development (D) Working Group regarding the incorporation of artificial intelligence (AI) in the NAIC market information systems (MIS). He said the report lays out five sequential steps needed to incorporate AI into the MIS, beginning with a full analysis of the current state of the data in the MIS and the data’s usefulness for AI analysis techniques. He said after hearing comments regarding the time and resources needed to implement all five of the report’s recommendations and a proposal to limit adoption to only the first two recommendations to assess the current quality of the market information data, the Task Force decided to continue its discussions and consideration of adoption at its next meeting.

Commissioner Conway said the Task Force also received reports from the Working Group on the status of current MIS projects and its analysis of the completeness, accuracy, and timeliness of the data in the MIS. He said the Task Force adopted both reports.

d. Producer Licensing (D) Task Force

Director Deiter said the Producer Licensing (D) Task Force has not met since the 2021 Fall National Meeting, but progress has been made on several important initiatives, and a call will be scheduled in late April or early May.

Director Deiter said the Task Force has continued its development of a uniform process for considering updates to the NAIC’s Uniform Applications. He said one of the main changes to the document is language that clarifies the coordination between the NAIC, the National Insurance Producer Registry (NIPR), and NAIC member jurisdictions, including any back-office system vendors, in assessing the cost and time needed to implement adopted changes to the Uniform Licensing Applications. He said the Task Force will accept a final round of comments and plans to consider the adoption of the Uniform Application Change Process during its next call. He said the Task Force will then begin the review of suggested changes to the Uniform Producer Licensing Application within the guidelines of the adopted process.

Director Deiter said there has been additional discussions regarding how states review 1033 waiver requests. He said the Federal Violent Crime Control and Law Enforcement Act of 1994 requires producer applicants who have been convicted of crimes involving dishonesty or breach of trust to obtain written consent or approval before engaging in the business of insurance. He noted that NAIC staff have been working with industry to clarify industry’s request to simplify the 1033 waiver process and bring a proposal to the Task Force.

Director Deiter said the Task Force has faced delays appointing working group chairs due to the resignation and lack of availability of producer licensing directors to chair the working groups. He said Richard Tozer (VA) has
agreed to chair the Uniform Education (D) Working Group, and he is working with Commissioner Clark, the vice chair of the Task Force, to identify a chair for the Producer Licensing Uniformity (D) Working Group.

Director Deiter said the Task Force will consider the formal appointment of a new Adjuster Licensing (D) Working Group during its next conference call. He said Rachel Chester (RI) agreed to move forward with leading initial discussions falling under the current Task Force charge to “monitor the state implementation of adjuster licensing reciprocity and uniformity and update, as necessary, NAIC adjuster licensing standards.”

e. Market Analysis Procedures (D) Working Group

Mr. Haworth said the Market Analysis Procedures (D) Working Group met March 23 and reviewed its charges for 2022. He said during 2022, the Working Group will focus on the MIS data to ensure it is effectively meeting the needs of market analysts and, if necessary, provide recommendations for enhancements and improvements. He also said in 2022, the Working Group will open discussions on the next line of business for the Market Conduct Annual Statement (MCAS). He encouraged all interested state insurance regulators, interested parties, and industry to provide suggestions for the Working Group to consider.

Mr. Haworth said the Working Group discussed the new standard MCAS ratios for the two newest lines of business in the MCAS; i.e., Short-Term Limited-Duration (STLD) Insurance and Travel Insurance. He said the ratios are exposed on the Working Group web page, and the Working Group will be voting on their adoption on its conference call.

Finally, Mr. Haworth said the Working Group adopted a motion to add the disability and lender-placed insurance MCAS data to the Market Analysis Review System (MARS). The Working Group forwarded the request to the Market Information Systems Research and Development (D) Working Group for its consideration. He said during the Market Information Systems Research and Development (D) Working Group’s discussion, it asked the Market Analysis Procedures (D) Working Group for additional details, and that will be on the agenda during its next meeting.

f. Market Conduct Annual Statement Blanks (D) Working Group

Ms. Weyhenmeyer said the Market Conduct Annual Statement Blanks (D) Working Group met March 17 and received an update regarding the Life MCAS draft edits for Accelerated Underwriting. She said the Accelerated Underwriting (A) Working Group adopted its draft paper. She said the MCAS Accelerated Underwriting SMEs has a meeting scheduled on April 13 to discuss a definition for the proposed Life MCAS Accelerated Underwriting proposal.

Ms. Weyhenmeyer said the Market Conduct Annual Statement Blanks (D) Working Group received an update regarding the Other Health MCAS draft. She said the SMEs working on the Other Health draft are finalizing the draft, and it is anticipated that the draft will be exposed in time for the Working Group to consider adoption prior to the June 1 deadline for edits to the 2023 MCAS reporting.

Ms. Weyhenmeyer said the Working Group discussed the proposed lawsuit definitions and placement of lawsuit data elements for the Homeowners MCAS and Private Passenger Auto (PPA) MCAS. The SMEs working on this issue have scheduled a call on April 12 to discuss outstanding questions and concerns prior to providing a draft proposal to the Working Group for public discussion.

Ms. Weyhenmeyer said the Working Group adopted the proposal for digital claims interrogatories for the Homeowners and PPA MCAS lines of business. She said the edits will be provided to the Committee, along with
any other MCAS edits that need to be considered prior to the Committee’s Aug.1 deadline for edits to the 2023 MCAS reporting.

Finally, Ms. Weyhenmeyer said the Working Group reviewed guidance regarding the new data element asking for the “Number of Lawsuits Closed with Consideration for the Consumer” on the Homeowners and PPA MCAS Lines of business.

g. Market Conduct Examination Guidelines (D) Working Group

Mr. Hughes said the Market Conduct Examination Guidelines (D) Working Group met March 10 and reviewed its 2022 charges and established priorities for 2022. First, the Working Group will develop a new, updated Chapter 24 of the Market Regulation Handbook on conducting the Mental Health Parity and Addiction Equity Act (MHPAEA) examination in the Market Regulation Handbook. Mr. Hughes said at the end of 2021, the Working Group was asked to coordinate with the MHPAEA (B) Working Group to develop updates to the mental health parity-related chapter of the Market Regulation Handbook to ensure it reflects current MHPAEA parity compliance analysis requirements for non-quantitative treatment limits (NQTLs) and better align the chapter with established federal guidance related to mental health parity. He said the Market Conduct Examination Guidelines (D) Working Group’s vice chair, Ms. Weyhenmeyer, is the chair of the MHPAEA (B) Working Group, and the two working groups are already collaborating to address this request. He said as a result of that coordination, an updated MHPAEA chapter is forthcoming and will be distributed after the Spring National Meeting as a new exposure draft for the Market Conduct Examination Guidelines (D) Working Group’s consideration. Second, the Working Group will update Chapter 23—Conducting the Life and Annuity Examination of the Market Regulation Handbook to include revised guidance pertaining to the revisions to the Suitability in Annuity Transactions Model Regulation that were adopted by the NAIC in February 2020. Third, the Working Group will develop new travel insurance-related Standardized Data Requests (SDRs) to address in-force policies and claims.

Mr. Hughes said the Working Group will also move forward in 2022 with its charges to develop uniform market conduct procedural guidance; coordinate with the Innovation, Cybersecurity, and Technology (H) Committee; discuss the effectiveness of group supervision of market conduct risks; and discuss the role of market conduct examiners in reviewing insurers’ corporate governance.

Mr. Hughes said the Working Group also discussed draft revisions to Chapter 21—Conducting the Property and Casualty Examination of the Market Regulation Handbook regarding provisions from the Real Property Lender-Placed Insurance Model Act (#631) and to Chapter 20—General Examination Standards of the Market Regulation Handbook regarding provisions in the Insurance Holding Company System Regulatory Act (#440).

h. Speed to Market (H) Working Group

Ms. Nichols said the Speed to Market (H) Working Group leadership and NAIC staff support met March 10 to discuss the Working Group’s goals and plans for 2022. She said a Working Group call is scheduled for April 20 to discuss its 2022 goals. Ms. Nichols said the Working Group will: 1) hear an update on the System for Electronic Rates & Forms Filing (SERFF) Modernization Project; 2) hear a status update on edits to the Product Filing Review Handbook; and 3) discuss the annual review of the PCM and Uniform Transmittal Document suggestions.

i. Advisory Organization (D) Working Group

Commissioner Ommen said the Advisory Organization (D) Working Group met March 22. He noted that because the Working Group’s charge is to oversee the regularly scheduled examinations of advisory organizations, the Working Group always meets in closed regulator-only session.
Commissioner Ommen said in addition to receiving updates on exams currently in progress and the most recent company responses to their annual self-evaluations, the Working Group began consideration of advisory organizations that primarily provide telematics and other services heavily reliant in the use of big data technology to insurers. He said this is beyond the standard loss cost and actuarial type services that most advisory organizations provide for their members. He said this year, the Working Group is considering the examination standards that should be in place to effectively regulate these entities. He noted that there are currently a couple states that participate in the Working Group who are conducting examinations of these organizations, and the Working Group will be reviewing and discussing the results of these examinations as it works on examination standards.

Mr. Birnbaum asked whether the development of the standards would be on open conference calls so interested parties could participate. Commissioner Ommen said the development would initially be closed, but once a framework of standards is developed, it would likely move to the Market Conduct Examination Guidelines (D) Working Group for completion. Mr. Birnbaum also asked whether the results of advisory organization examinations could be made public. Commissioner Ommen said the decision to make examination reports public belongs to the jurisdictions participating in the examination, not the Advisory Organization (D) Working Group.

j. Privacy Protections (D) Working Group

Ms. Johnson said the Privacy Protections (D) Working Group met March 23 and March 9 in regulator-only session. She said state insurance regulator SMEs conducted their initial drafting via email and then met March 29 and April 4 following the Working Group’s meeting.

Ms. Johnson said the Working Group adopted its 2021 Fall National Meeting minutes and heard updates by Jennifer McAdam (NAIC) on state privacy legislation and Brooke Stringer (NAIC) on federal privacy legislation.

Ms. Johnson said the Working Group also discussed comments received on the exposure draft of the Working Group’s work plan, which was exposed March 23 for a seven-day public comment period that ended on March 30. She said the Working Group adopted the 2022 work plan during its April 4 meeting.

Having no further business, the Market Regulation and Consumer Affairs (D) Committee adjourned.
MARKET REGULATION AND CONSUMER AFFAIRS (D) COMMITTEE

The mission of the Market Regulation and Consumer Affairs (D) Committee is to monitor all aspects of the market regulatory process for continuous improvement. This includes market analysis, regulatory interventions with companies, and multi-jurisdictional collaboration. The Committee will also review and make recommendations regarding the underwriting and market practices of insurers and producers, as those practices affect insurance consumers, including the availability and affordability of insurance.

Ongoing Support of NAIC Programs, Products or Services

1. The Market Regulation and Consumer Affairs (D) Committee will:
   A. Monitor the centralized collection and storage of market conduct data, national analysis, and reporting at the NAIC, including issues regarding the public availability of data.
   B. Monitor and assess the current process for multi-jurisdictional market conduct activities and provide appropriate recommendations for enhancement, as necessary.
   C. Evaluate all data currently collected in the NAIC Market Information Systems (MIS) and considered confidential to determine what, if any, can be made more widely available.
   D. Oversee the activities of the Antifraud (D) Task Force.
   E. Oversee the activities of the Market Information Systems (D) Task Force.
   F. Oversee the activities of the Producer Licensing (D) Task Force.
   G. Monitor the underwriting and market practices of insurers and producers, as well as the conditions of insurance marketplaces, including urban markets, to identify specific market conduct issues of importance and concern. Hold public hearings on these issues at the NAIC national meetings, as appropriate.
   H. In collaboration with other technical working groups, discuss and share best practices through public forums to address broad consumer concerns regarding personal insurance products.
   I. Coordinate with the International Insurance Relations (G) Committee to develop input and submit comments to the International Association of Insurance Supervisors (IAIS) and/or other related groups on issues regarding market regulation concepts.
   J. Coordinate with the Health Insurance and Managed Care (B) Committee to provide policy recommendations regarding uniform state enforcement of the federal Affordable Care Act (ACA).
   K. Review the “Best Practices and Guidelines for Consumer Information Disclosures” (adopted October 2012) and update, as needed.

2. The Advisory Organization Examination Oversight (D) Working Group will:
   A. Revise the protocols, as necessary, for the examination of national or multistate advisory organizations (including rating organizations and statistical agents) to be more comprehensive, efficient, and possibly less frequent than the current system of single-state exams. Solicit input and collaboration from other interested and affected committees and task forces.
   B. Monitor the data reporting and data collection processes of advisory organizations (including rating organizations and statistical agents) to determine if they are implementing appropriate measures to ensure data quality. Report the results of this ongoing charge, as needed.
   C. Actively assist with and coordinate multistate examinations of advisory organizations (including rating organizations and statistical agents).
3. The **Market Actions (D) Working Group** will:
   A. Facilitate interstate communication and coordinate collaborative state regulatory actions.

4. The **Market Analysis Procedures (D) Working Group** will:
   A. Recommend changes to the market analysis framework based on results over the past five years, including the current set of Level 1 and Level 2 questions.
   B. Discuss other market data collection issues and make recommendations, as necessary.
   C. Consider recommendations for new lines of business for the Market Conduct Annual Statement (MCAS).

5. The **Market Conduct Annual Statement Blanks (D) Working Group** will:
   A. Review the MCAS data elements and the “Data Call and Definitions” for those lines of business that have been in effect for longer than three years and update them, as necessary.
   B. Develop an MCAS blank to be used for the collection of data for additional lines of business, where appropriate.

6. The **Market Conduct Examination Guidelines (D) Working Group** will:
   A. Develop market conduct examination standards, as necessary, for inclusion in the *Market Regulation Handbook*.
   B. Monitor the adoption and revision of NAIC models and develop market conduct examination standards to correspond with adopted NAIC models.
   C. Develop updated standardized data requests, as necessary, for inclusion in the *Market Regulation Handbook*.
   D. Develop uniform market conduct procedural guidance (e.g., a library, depository, or warehouse with market conduct examination templates, such as an exam call letter, exam exit agenda, etc.) for inclusion in, or for use in conjunction with, the *Market Regulation Handbook*.
   E. Coordinate with the Innovation, Cybersecurity, and Technology (H) Committee to develop market conduct examiner guidance for the oversight of regulated entities’ use of insurance and non-insurance consumer data and models using algorithms and artificial intelligence (AI).
   F. Discuss the effectiveness of group supervision of market conduct risks and develop examination procedural guidance, as necessary.
   G. Discuss the role of market conduct examiners in reviewing insurers’ corporate governance as outlined in the NAIC’s *Corporate Governance Annual Disclosure Model Act (#305)* and *Corporate Governance Annual Disclosure Model Regulation (#306)*.

7. The **Market Regulation Certification (D) Working Group** will:
   A. Develop a formal market regulation certification proposal for consideration by the NAIC membership that provides recommendations for the following: 1) certification standards; 2) a process for the state implementation of the standards; 3) a process to measure the states’ compliance with the standards; 4) a process for future revisions to the standards; and 5) assistance for jurisdictions to achieve certification.

8. The **Privacy Protections (D) Working Group** will:
   A. Review state insurance privacy protections regarding the collection, use and disclosure of information gathered in connection with insurance transactions and make recommended changes, as needed, to certain NAIC models, such as the *NAIC Insurance Information and Privacy Protection Model Act (#670)* and the *Privacy of Consumer Financial and Health Information Regulation (#672)*.
8. The Speed to Market (D) Working Group will:
   A. Consider proposed System for Electronic Rates & Forms Filing (SERFF) features or functionality presented
to the Working Group by the SERFF Advisory Board (SAB), likely originating from the SERFF Product
Steering Committee (PSC). Upon approval and acquisition of any needed funding, direct the SAB to
implement the project. Receive periodic reports from the SAB, as needed.
   B. Provide feedback and recommendations concerning the SERFF modernization when requested by the
Executive (EX) Committee and any group assigned oversight of the SERFF modernization by the Executive
(EX) Committee.
   C. Discuss and oversee the implementation and ongoing maintenance/enhancement of speed to market
operational efficiencies related to product filing needs, efficiencies, and effective consumer protection.
   This includes the following activities:
   i. Provide a forum to gather information from the states and the industry regarding tools, policies, and
resolutions to assist with common filing issues. Provide oversight in evaluating product filing efficiency
issues for state insurance regulators and the industry, particularly regarding uniformity.
   ii. Use SERFF data to develop, refine, implement, collect, and distribute common filing metrics that
provide a tool to measure the success of the speed to market modernization efforts, as measured by
nationwide and individual state speed to market compliance, with an emphasis on monitoring state
regulatory and insurer responsibilities for speed to market for insurance products.
   iii. Facilitate proposed changes to the product coding matrices (PCMs) and the uniform transmittal
document (UTD) on an annual basis, including the review, approval, and notification of changes.
Monitor, assist with, and report on state implementation of any PCM changes.
   iv. Facilitate the review and revision of the Product Filing Review Handbook, which contains an overview
of all the operational efficiency tools and describes best practices for industry filers and state
reviewers regarding the rate and form filing and review process. Develop and implement a
communication plan to inform the states about the Product Filing Review Handbook.
   D. Provide direction to NAIC staff regarding SERFF functionality, implementation, development, and
enhancements. Direct NAIC staff to provide individual state speed to market reports to each commissioner
at each national meeting. Receive periodic reports from NAIC staff, as needed.
   E. Conduct the following activities, as desired, by the Interstate Insurance Product Regulation Commission
(Compact):
   i. Provide support to the Compact as the speed to market vehicle for asset-based insurance products,
encouraging the states’ participation in, and the industry’s usage of, the Compact.
   ii. Receive periodic reports from the Compact, as needed.

NAIC Support Staff: Tim Mullen/Randy Helder

D Cmte Rev Charges
2022 Proposed Revised Charges

ANTIFRAUD (D) TASK FORCE

The mission of the Antifraud (D) Task Force is to serve the public interest by assisting the state insurance supervisory officials, individually and collectively, through the detection, monitoring, and appropriate referral for the investigation of insurance crime, both by and against consumers. The Task Force will assist the insurance regulatory community by conducting the following activities: 1) maintaining and improving electronic databases regarding fraudulent insurance activities; 2) disseminating the results of research and analysis of insurance fraud trends, as well as case-specific analysis, to the insurance regulatory community; and 3) providing a liaison function between state insurance regulators, law enforcement (federal, state, local, and international), and other specific antifraud organizations. The Task Force will also serve as a liaison with the NAIC Information Technology Group (ITG) and other NAIC committees, task forces, and/or working groups to develop technological solutions for data collection and information sharing. The Task Force will monitor all aspects of antifraud activities by its working groups on the following charges.

Ongoing Support of NAIC Programs, Products or Services

1. The Antifraud (D) Task Force will:
   A. Work with NAIC committees, task forces, and working groups (e.g., Title Insurance (C) Task Force, etc.) to review issues and concerns related to fraud activities and schemes related to insurance fraud.
   B. Coordinate efforts to address national concerns related to agent fraud and activities of unauthorized agents related to insurance sales.
   C. Coordinate the enforcement and investigation efforts of state and federal securities regulators with state insurance fraud bureaus.
   D. Coordinate with state, federal, and international law enforcement agencies in addressing antifraud issues relating to the insurance industry.
   E. Review and provide comments to the International Association of Insurance Supervisors (IAIS) on its Insurance Core Principles (ICPs) related to insurance fraud.
   F. Coordinate activities and information from national antifraud organizations and provide information to state insurance fraud bureaus.
   G. Coordinate activities and information with state and federal fraud divisions to determine guidelines that will assist with reciprocal involvement concerning antifraud issues resulting from natural disasters and catastrophes.
   H. Coordinate efforts with the insurance industry to address antifraud issues and concerns.
   I. **Evaluate and recommend methods to track national fraud trends.**
   J. **Develop seminars, trainings, and webinars regarding insurance fraud. Provide three webinars by the 2022 Fall National Meeting.**

2. The Antifraud Education Enhancement (D) Working Group will:
   A. Develop seminars, trainings, and webinars regarding insurance fraud. Provide three webinars by the 2022...
3.2. The Antifraud Technology (D) Working Group will:
   A. Work with the NAIC to develop an Antifraud Plan Repository to be used by insurers to create and store an electronic fraud plan for distribution among the states/jurisdictions. Complete by 2022 Fall National Meeting.
   B. Evaluate sources of antifraud data and propose methods for enhancing the utilization and exchange of information among state insurance regulators, fraud investigative divisions, law enforcement officials, insurers, and antifraud organizations. Complete by the 2022 Fall National Meeting.

4.3. The Improper Marketing of Health Insurance (D) Working Group will:
   A. Coordinate with state insurance regulators, both on a state and federal level, to provide assistance and guidance monitoring the improper marketing of health plans, and coordinate appropriate enforcement actions, as needed, with other NAIC committees, task forces, and working groups.
   B. Review existing NAIC models and guidelines that address the use of lead generators for sales of health insurance products, and identify models and guidelines that need to be updated or developed to address current marketplace activities.

NAIC Support Staff: Greg Welker/Lois E. Alexander

Antifraud TF Charges
Market Regulation Certification (D) Working Group
Virtual Meeting
March 22, 2022

The Market Regulation Certification (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met March 22, 2022. The following Working Group members participated: John Haworth, Vice Chair (WA); Lori K. Wing-Heier (AK); Crystal Phelps (AR); Erica Weyhenmeyer (IL); Dawna Kokosinski (MD); Chlora Lindley-Myers (MO); Tracy Biehn (NC); Edwin Pugsley (NH); Ralph Boeckman and Erin Porter (NJ); Landon Hubbard (OK); Colette Hittner (OR); Michael Bailes (SC); Julie Fairbanks (VA); Karla Nuissl (VT); Theresa Miller (WV); and Bill Cole (WY).

1. **Reviewed its 2022 Charges and Current Status of the Voluntary Market Regulation Certification Program**

   Mr. Haworth said the Working Group did not meet in 2021 while the Market Regulation and Consumer Affairs (D) Committee considered next steps for the Voluntary Market Regulation Certification Program. He said the 2022 chair of the Committee, Commissioner Jon Pike (UT), asked Superintendent Russell Toal (NM) if he would serve as Working Group chair in 2022, and Superintendent Toal agreed to do so. Mr. Haworth said he agreed to serve as Working Group vice chair.

   Mr. Haworth said there is only one charge for the Working Group and that is to develop a formal market regulation certification proposal for consideration by the NAIC membership. He said the charge has five sections.

   First, Mr. Haworth said the Working Group is to develop the certification standards that it would expect a state’s insurance department should meet. He said this, for the most part, has been achieved. He said there are 12 requirements in the certification program covering staffing, use of the NAIC market information systems, participation in Market Regulation and Consumer Affairs (D) Committee working groups, participation in the Market Conduct Annual Statement (MCAS), collaboration with other departments, and the ability to enforce compliance of regulated entities to market conduct laws and regulations. Mr. Haworth noted that in 2017 and 2018, the Working Group oversaw a pilot program of 18 states that worked to apply the certification standards to the market regulation divisions of their insurance departments. He said the volunteers brought the assessments and recommendations to the Working Group. In 2019 and 2020, the Working Group met to consider the recommendations and incorporated many of them in the certification program. He said these revisions can be found on the Working Group’s web page.

   Second, Mr. Haworth said the Working Group was tasked with developing an implementation plan for the certification program. He said this has also been finished, but because a few years have passed since it was drafted, the implementation plan is now out of date and needs to be brought back up to date. He said the Working Group will be considering the implementation plan in a meeting later in 2022 and will have it completed before the Fall National Meeting.

   Third, Mr. Haworth said the Working Group will develop a process for measuring a jurisdiction’s compliance to the standards. He said the Working Group was actively working on the scoring matrix for measuring the compliance to the standards. He said a current version of the scoring matrix is on the Working Group’s web page.

   Fourth, Mr. Haworth said the Working Group needs to create a process for future revisions to the certification standards. He said this was completed with the implementation plan and consists of a single paragraph at the end.
of the implementation plan. He said when the Working Group reviews the implementation plan, it will take a look at the revision process to see if it needs improvement or if it is good as is.

Finally, Mr. Haworth said the Working Group is tasked with assisting jurisdictions in achieving certification once a certification program is approved and an implementation plan is in place.

2. **Heard an Update on the Certification Program Scoring Matrix**

Mr. Haworth said the Certification Program Scoring Matrix drafting group met March 9 to resume its work on a draft for a scoring matrix to enable jurisdictions to do self-assessments and provide a framework for scoring jurisdictions seeking certification under the Voluntary Market Regulation Certification Program.

Mr. Haworth said the scoring matrix classifies each part of each requirement as mandatory, primary, or secondary, and the drafting group is currently assigning point values to each part. He said a color-coded draft of the scoring matrix without the point values can be found in the exposure drafts on the Working Group’s web page. He said questions coded as red are mandatory; questions coded as yellow are primary; and questions coded as green are secondary. He said a jurisdiction scoring 70% of the maximum possible points would pass the certification assessment. He noted, however, that if one of the mandatory parts is missed, the jurisdiction would not pass the certification assessment even if it scored more than 70%. Mr. Haworth said the drafting group will have the draft ready for the Working Group’s consideration prior to the Summer National Meeting.

3. **Discussed Other Matters**

Mr. Haworth said the goal of the Working Group is to have the Voluntary Market Regulation Certification Program, the implementation plan, and the scoring matrix to the Market Regulation and Consumer Affairs (D) Committee by the Fall National Meeting. He asked that comments be sent to Randy Helder (NAIC) by April 15 on any portion of the certification program.

Having no further business, the Market Regulation Certification (D) Working Group adjourned.
The Market Analysis Procedures (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met March 3, 2022. The following Working Group members participated: John Haworth, Chair (WA); Rebecca Rebholz, Vice Chair (WI); Crystal Phelps (AR); Sarah Borunda (AZ); Don McKinley (CA); Damion Hughes (CO); Kurt Swan (CT); Frank Pyle (DE); Scott Woods (FL); Erica Weyhenmeyer (IL); Tate Flott (KS); Sandra Stumbo (KY); Dawn Kokosinski (MD); Timothy Schott (ME); Jill Huisken (MI); Cynthia Amann, Teresa Kroll, and Jo LeDuc (MO); Paul Hanson (MN); Martin Swanson and Reva Vandevoorde (NE); Edwin Pugsley (NH); Ralph Boeckman (NJ); Guy Self (OH); Landon Hubbart (OK); Jeffrey Arnold (PA); Brett Bache (RI); Glynda Daniels (SC); Tracy Klausmeier (UT); Will Felvey (VA); Isabelle Turpin Keiser (VT); and Theresa Miller (WV).

1. **Adopted its 2021 Fall National Meeting Minutes**

Mr. Haworth said the Working Group met Nov. 18, 2021, and took the following action: 1) adopted its 2021 Summer National Meeting minutes; 2) discussed market analysis training; 3) discussed the proposed standard ratios for the travel insurance and short-term, limited-duration (STLD) insurance Market Conduct Annual Statement (MCAS) blanks; and 3) discussed the market analysis tools in i-Site+ that will be replaced with enhanced tools and dashboards.

Ms. Weyhenmeyer made a motion, seconded by Ms. Rebholz, to adopt the Working Group’s Nov. 18, 2021, minutes (see NAIC Proceedings – Fall 2021, Market Regulation and Consumer Affairs (D) Committee, Attachment Seven). The motion passed unanimously.

2. **Reviewed its Charges for 2022**

Mr. Haworth said the Working Group’s charges for 2022 have not changed. He said the charges are deliberately broad and could encompass numerous activities. He encouraged everyone to consider what tasks may be important for the Working Group to consider and address in 2022.

Mr. Haworth said the first charge is “to recommend changes to the market analysis framework based over the last five years, including the current set of Level 1 and Level 2 questions.” He said the charge is the reason agenda item 4 was added to the agenda for this meeting. He said he had received a request for the Working Group to consider adding the MCAS data from lender-placed insurance and disability insurance into the Market Analysis Review System (MARS) Level 1 data set. He said he is recommending the Working Group submit a Uniform System Enhancement Request (USER) form to the Market Information Systems Research and Development (D) Working Group to prioritize the request.

Mr. Haworth said the Working Group’s second charge is “to discuss market data collection issues and make recommendations, as necessary.” He said the charge is the reason the Working Group schedules at least one or two discussions regarding the latest MCAS filings and any issues that analysts are encountering with them. He said the charge also covers the Complaints Database System (CDS), the Regulatory Information Retrieval System (RIRS), the Market Action Tracking System (MATS), the Market Analysis Prioritization Tool (MAPT), and other databases.

Mr. Haworth noted that the Market Information Systems Research and Development (D) Working Group annually reports on the completeness, accuracy, and timeliness of the data in the market information systems.
suggested that when the report is ready, the Market Analysis Procedures (D) Working Group should review and provide feedback, as the market analysis experts, to the Market Information Systems Research and Development (D) Working Group and the Market Information Systems (D) Task Force on ways to address the concerns arising from the metrics report.

Mr. Haworth said the third charge is to consider recommendations for new lines of business for the MCAS. He said the most recent recommendations were in November 2019 to add other health insurance to the MCAS and in March 2020 to add travel insurance to the MCAS. He said the Working Group did not make any recommendations in 2021, and he recommended that the Working Group consider which, if any, lines of business, need to be added to the MCAS.

Mr. Haworth said any requests for agenda items relating to the Working Group charges should be sent to Randy Helder (NAIC).

3. Discussed Standard Ratios for the Travel and STLD MCAS Blanks

Mr. Haworth said the proposed standard ratios for the travel and STLD MCAS blanks were originally exposed for the Working Group’s Nov. 18, 2021, meeting, and the Working Group asked for volunteers to review them, make edits and bring them back to the Working Group.

Mr. Haworth said there are five proposed ratios for travel insurance and 11 ratios for STLD. He said along with the proposed ratios, the drafting group made two suggestions for new data elements.

Mr. Haworth said the first suggestion is a new element for the travel MCAS blank of “policies in-force during the period” to assist in analyzing complaint trends from year to year and from company to company. He said the second new data element is for the STLD blank and is the “dollar amount of claims paid during the reporting period.”

Mr. Haworth said the Working Group will consider the new data elements separate from the ratios.

Lisa Brown (American Property Casualty Insurers Association—APCIA) said the APCIA supports the five new ratios for the travel insurance MCAS blank and the new data elements. She said the date element of “policies in-force during the period” is a better comparison to the number of complaints. She thanked state insurance regulators that participated in the drafting of the ratios and said industry appreciated the open dialogue.

Duke de Haas (Allianz) also thanked state insurance regulators for the work put into developing the ratios. He agreed that “policies in-force” is a better denominator for the complaints ratio and is more consistent with the other lines of business.

Mr. Haworth said the proposed ratios are posted on the Working Group web page and asked that comments on the ratios and data elements be sent to Mr. Helder by April 15. He said it is important to get these adopted in time for next year’s MCAS data collection.

4. Discussed Market Analysis Tools and Data Elements

Mr. Haworth said this agenda item addresses the Working Group’s first charge to “recommend changes to the market analysis framework based over the last five years, including the current set of Level 1 and Level 2 questions.” He said he plans to continue this agenda item throughout the year.
Mr. Haworth said he would like to make a recommendation that the Working Group submit a USER form to the Market Information Systems Research and Development (D) Working Group to incorporate the disability insurance and lender-place insurance MCAS data into the MARS Level 1 set of questions.

Ms. LeDuc made a motion, seconded by Mr. Pyle, to add the disability insurance and lender-place insurance MCAS data into the MARS. The motion passed unanimously.

5. Discussed Other Matters

Birny Birnbaum (Center for Economic Justice—CEJ) noted that the proposed standard ratios for travel insurance do not include a ratio to measure cancellations. He said this is inconsistent with the other MCAS lines of business. He said there is no purpose to have a data element capturing the number of cancellations if no ratio is developed regarding cancellations. He noted the travel insurance MCAS blank does not have the appropriate data elements to create a denominator for a good cancellation ratio. Ms. Brown noted that was why industry proposed the addition of the data element of “policies in-force during the period,” but she also noted that most cancellations are consumer initiated and that a ratio to measure cancellations would not be of much value since state insurance regulators would already know the number of cancellations. Mr. Birnbaum said a high cancellation ratio compared with other companies would tell state insurance regulators there may be marketing issues with the reporting company.

Having no further business, the Market Analysis Procedures (D) Working Group adjourned.
Market Conduct Annual Statement Blanks (D) Working Group
Virtual Meeting
March 17, 2022

The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met March 17, 2022. The following Working Group members participated: Erica Weyhenmeyer, Chair (IL); Rebecca Rebholz, Chair, Vice Chair (WI); Maria Ailor and Cheryl Hawley (AZ); Scott Woods (FL); Paula Shamburger (GA); Brenda Johnson (KS); Lori Cunningham (KY); Mary Lou Moran (MA); Dawna Kokosinski (MD); Jill Huiskens (MI); Teresa Kroll and Jo LeDuc (MO); Martin Swanson (NE); Guy Self (OH); Jeff Arnold (PA); Michael Bailes (SC); Tony Dorschner (SD); Shelli Isiminger (TN); Shelley Wiseman (UT); Melissa Gerachis (VA); and Jason Carr (WA).

1. **Adopted its Nov. 22, 2021, Minutes**

The Working Group met Nov. 22, 2021, and took the following action: 1) adopted its July 28, 2021, minutes; 2) received an update on the life Market Conduct Annual Statement (MCAS) draft edits for accelerated underwriting (AU); 3) received an update on the Other Health Drafting Group; 4) received a proposal from the subject matter expert (SME) group on lawsuit definitions and placement of the lawsuit data elements for the homeowners and private passenger auto (PPA) MCAS; and 5) received a proposal from the SME group on reporting of the digital claims interrogatory question.

Ms. Rebholz made a motion, seconded by Ms. Moran, to adopt the Working Group’s Nov. 22, 2021, minutes (*see NAIC Proceedings – Fall 2021, Market Regulation and Consumer Affairs (D) Committee, Attachment Eight*). The motion passed unanimously.

2. **Received an Update on the Life MCAS Draft Edits for AU**

Ms. Weyhenmeyer stated that the March 4 draft of AU in the life insurance educational paper, which was drafted by the Accelerated Underwriting (A) Working Group, was exposed for a two-week public comment period ending March 18. The draft can be found on the Accelerated Underwriting (A) Working Group’s web page for anyone who would like to review it.

Ms. Weyhenmeyer stated the Accelerated Underwriting (A) Working Group is meeting March 24 in lieu of the Spring National Meeting to: 1) discuss comments received; and 2) consider adoption of the educational paper. Upon adoption, the Working Group plans forward it to the Life Insurance and Annuities (A) Committee for consideration of adoption at the Spring National Meeting. She stated if the draft paper is adopted on March 24, the Market Conduct Annual Statement Blanks (D) Working Group will be reconvening the AU SME group that worked on the life MCAS updates related to AU. The SME group will be tasked with reviewing the definition of AU adopted by the Accelerated Underwriting (A) Working Group to determine if it is appropriate for use with MCAS reporting of AU. She stated if these things happen and are completed before the Market Conduct Annual Statement Blanks (D) Working Group’s meeting in April, then the AU edits will again be exposed to the Working Group along with an updated definition. Then the Working Group can consider the edits during its May meeting.

3. **Received an Update on the Other Health Draft Group**

Randy Helder (NAIC) stated the Other Health Drafting Group is being led by Mary Kay Rodriguez (WI) and that meetings have been taking place weekly for the last few months, with about 20 people in attendance, including...
state insurance regulators, consumer representatives, and industry members. He stated drafts are being posted regularly on the Market Conduct Annual Statement Blanks (D) Working Group web page for review and that any questions can be forwarded to him.

Mr. Helder stated that the Drafting Group began its work by identifying the other health lines to be included in the blank. The other health lines agreed upon are: 1) Health - Accident Only; 2) Health - Accidental Death and Dismemberment; 3) Health - Specified Disease - Limited Benefit; 4) Health – Hospital/Other Indemnity; and 5) Health – Hospital/Surgical/Medical Expense. He stated each of these are divided into individual policies that are sold through associations and policies that are sold through employer groups. The drafting group used the adopted short-term, limited-duration (STLD) MCAS blank as a starting point for developing the data elements and definitions. It eliminated the non-relevant data points and added some data elements that are more appropriate for the other health products. He stated the data elements are divided into five sections: 1) interrogatories; 2) policy/certificate administration; 3) claims administration; 4) consumer complaints and lawsuits; and 5) marketing and sales.

Mr. Helder stated the data elements are close to conclusion and that another meeting will take place for a review of some additional definitions. The goal is for this to be completed by the end of April for the Working Group’s review.

4. **Adopted the Proposal for Digital Claims Interrogatories for the Homeowner and PPA MCAS Lines of Business**

Ms. Weyhenmeyer stated the proposal for digital claims interrogatories for the homeowner and PPA MCAS lines of business is included in attachment two of the meeting materials. She stated this proposal was first presented to the Working Group last November, and that during last year’s June 30, 2021, Working Group meeting, the Working Group voted to include an interrogatory within the home and auto MCAS blanks to capture third-party vendors providing third-party data and algorithms used in the digital claims process. The wording approved during the June 30 meeting included “and for each vendor, identify the vendor’s specific role in the digital claim process.” The SME group was tasked with reviewing this interrogatory and to make recommendations of how third-party vendor data should be reported.

Ms. Weyhenmeyer stated the proposal shows the requirement to identify vendor roles is removed, allowing single-element capture of names of third-party vendors, similar to the capture of names of managing general agents (MGAs) and third-party administrators (TPAs). A public comment period was allowed for review of this proposal, and no comments were received.

Ms. Rebholz made a motion, seconded by Ms. Gerachis, to adopt the proposal for the auto and home digital claims Interrogatories that will be included in the 2023 MCAS reporting, to be collected in 2024 (Attachment Four-A). The motion passed unanimously.

5. **Discussed the Proposed Lawsuit Definitions and Placement of Lawsuit Data Elements for the Homeowners and Auto MCAS**

Ms. Weyhenmeyer stated the proposal for lawsuit definitions and placement of lawsuit data elements for the homeowners and auto MCAS is included in the meeting materials. She stated this was first presented to the Working Group in November 2021 and that the materials include a description and redline version, followed by a clean version of the proposal. Ms. Weyhenmeyer stated the proposal simplifies the lawsuit reporting and its definition as much as possible. The SME group proposes the following for the home and PPA MCAS lawsuit reporting: 1) removal of the lawsuit data elements from the claims reporting section; 2) creation of a new reporting section for the lawsuit data elements; 3) reporting the lawsuit data elements by claims coverage type.
as has been done in the past; 4) adding reporting for “non-claim related lawsuits”; and 5) updating the definition of lawsuits to accommodate the new reporting structure.

Ms. Weyhenmeyer stated the proposed definition is similar to the definition used for other MCAS lines of business, which was done for consistency. She stated a few of the simplifications to the definition could be made to the definition in other lines of business if the Working Group finds that it would be useful. In November, the SME group also proposed the addition of an interrogatory to capture comments for the newly added lawsuit section.

Lisa Brown (American Property Casualty Insurance Association—APCIA) submitted comments for review, which were also part of the meeting materials. Ms. Brown stated she participated in the SME group for this. She stated the proposed definition says: “include only lawsuits brought by an applicant for insurance, a policyholder or claimant as a plaintiff against the reporting insurer or its agent as a defendant.” She stated that “agent” should be defined if it is going to be used as a term in the definition because it was unclear to many of their members if that is referring to an agent as an insurance producer or a third-party that has an agency relationship based on the definition of agency. Ms. Brown stated the definition also states: “If one lawsuit seeks damages under two or more policies, count the number of policies involved as the number of lawsuits.” She stated there needs to be clarification on how these should be reported as there may be multiple policies issued by multiple insurers. Ms. Brown stated they support the language proposed for arbitration, mediation, and appraisal, but ask that it be amended to exclude appraisal matters filed in a court of law and interpleader actions filed by a company. She stated that in Michigan, there seems to be a lot of suits brought by a medical provider for payment under personal injury protection (PIP) and asked if those suits would be counted since medical provider may not fall into the category of policyholder, applicant, or claimant. She also asked if a Pennsylvania writ of summons would be considered a lawsuit under this definition.

Ms. Brown stated the APCIA recognizes the need to expand collection of lawsuit data for both claims-related and non-claims related lawsuits but asks that the coverage breakout for claims-related lawsuit data be deleted and the reasons for this request. Ms. Huiskens stated Michigan is not ready to decide on proposed language with the way it is written now. Ms. Brown stated their request would be that under what to exclude in the definition explanation, to exclude lawsuits brought directly by medical providers.

Mr. Arnold stated he did some research on the question raised regarding Pennsylvania and explained that a writ of summons allows someone to start a lawsuit without actually filing the complaint that would include the grounds on which the lawsuit is being filed, including specific allegations. He stated that the writ of summons just identifies the parties and that the details come later. He said he thinks waiting to include this as a lawsuit would be more appropriate when the actual complaint is filed and the details of the lawsuit are included.

Ms. LeDuc stated companies are already reporting lawsuits based on coverage type in the claims-related area and that there was a request to add all of the other types of non-claims related lawsuits. She stated companies would continue to report what they have been for lawsuits and then just add a single number for any non-claim related lawsuits, which would be the lawsuit total minus the claims related lawsuits. Ms. Brown stated companies would appreciate more time to get the programming in place to report this additional data element and that she will get more information from companies as to why more time is needed before this is collected. Ms. LeDuc and Ms. Huiskens stated they believe more time is needed before the proposal on lawsuit definitions and the placement of lawsuit data elements for the homeowners and PPA MCAS is considered. Ms. Weyhenmeyer agreed and stated the SME group will reconvene. Ms. Huiskens asked that information be shared regarding Michigan concerns, and Ms. Brown stated they would do that.
6. Received Guidance Regarding the New “Number of Lawsuits Closed with Consideration for the Consumer” Data Element for the Homeowner and PPA MCAS Lines of Business

Ms. Weyhenmeyer stated that the meeting materials include guidance for some of the questions that have been presented on the data element for “number of lawsuits closed with consideration for the consumer” data element for the homeowners and PPA MCAS lines of business. She stated this is being provided to let meeting attendees know that these will be added to the MCAS frequently asked questions (FAQ) document posted on the MCAS web page. No questions or concerns were presented.

7. Discussed Other Matters

Ms. Weyhenmeyer stated the next Working Group meeting is scheduled for April 21, 2022. She stated during that meeting, a draft for the AU proposal may be exposed, which would include a new definition and a draft for the other health MCAS reporting data call and definitions. She advised that if these items are exposed, the Working Group will consider them during its May meeting.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.

During the 6/30 WG meeting it was voted to include an interrogatory to capture third-party vendors. The SME group was tasked with review and determining the details of how it would be reported. Above is the wording proposed by the SME group. This proposal applies to both the Homeowner and Private Passenger Auto MCAS lines of business.

This proposal removes the requirement to identify vendor roles.
The Market Conduct Examination Guidelines (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met March 10, 2022. The following Working Group members participated: Damion Hughes, Chair (CO); Erica Weyhenmeyer, Vice Chair, Susan Berry, and Patrick Tallman (IL); Jeff Cordell, Teri Ann Mecca, and Crystal Phelps (AR); Sarah Borunda (AZ); Kurt Swan (CT); Patrice Garnette (DC); Susan Jennette and Frank Pyle (DE); Paula Shamburger (GA); Daniel Mathis (IA); Ron Kreiter (KY); Mary Lou Moran (MA); Airic Boyce and Jill Huiskens (MI); Teresa Fischer (MN); Cynthia Amann, Jennifer Hopper, Teresa Kroll, Jo LeDuc, and Win Nickens (MO); Tracy Biehn (NC); Edwin Pugsley (NH); Ralph Boeckman and Erin Porter (NJ); Leatrice Geckler (NM); Hermoliva Abejar and Barbara D. Richardson (NV); Sylvia Lawson (NY); Rodney Beetch (OH); Landon Hubbard and Shelly Scott (OK); Brian Fordham, Ana K. Pace, and Tasha Sizemore (OR); David Buono and Paul Towsen (PA); Brett Bache, Segun Daramola, Matt Gendron, and Brian Werbeloff (RI); Kelly Christensen and Shelley Wiseman (UT); Andrea Baytop, Julie Fairbanks, Joy Morton, and Bryan Wachter (VA); Mary Block, Isabelle Turpin Keiser, and Karla Nuissl (VT); Jeanette Plitt (WA); and Barbara Belling, Diane Dambach, Darcy Paskey, Rebecca Rebholz, Mary Kay Rodriguez, and Jody Ullman (WI).

1. **Heard Opening Remarks**

Mr. Hughes welcomed returning Working Group members and a new member state, Utah, to the Working Group, represented by Ms. Northrup and Ms. Wiseman. He also welcomed new member representatives Ms. Mecca, Ms. Shamburger, Ms. LeDuc, and Mr. Towsen.

2. **Discussed its Potential 2022 Tasks**

Mr. Hughes said the charges of the Working Group, as adopted by the Market Regulation and Consumer Affairs (D) Committee, are to:

- Develop market conduct examination standards, as necessary, for inclusion in the *Market Regulation Handbook*.
- Monitor the adoption and revision of NAIC models and develop market conduct examination standards to correspond with adopted NAIC models.
- Develop updated standardized data requests (SDRs), as necessary, for inclusion in the *Market Regulation Handbook*.
- Develop uniform market conduct procedural guidance (e.g., a library, depository or warehouse with market conduct examination templates, such as an exam call letter, exam exit agenda, etc.) for inclusion in, or for use in conjunction with, the *Market Regulation Handbook*.
- Coordinate with the Innovation, Cybersecurity, and Technology (H) Committee to develop market conduct examiner guidance for the oversight of regulated entities’ use of insurance and non-insurance consumer data and models using algorithms and artificial intelligence (AI).
- Discuss the effectiveness of group supervision of market conduct risks and develop examination procedural guidance, as necessary.
- Discuss the role of market conduct examiners in reviewing insurers’ corporate governance as outlined in the *Corporate Governance Annual Disclosure Model Act* (#305) and the *Corporate Governance Annual Disclosure Model Regulation* (#306).
The Working Group will not meet at NAIC national meetings; it will accomplish its assigned tasks via regularly scheduled conference calls, to occur approximately every four to six weeks.

Mr. Hughes said the Working Group began discussing the draft Chapter 21—Conducting the Property and Casualty Examination, initially circulated on Oct. 27, 2021, at its Nov. 4, 2021, meeting. He said Sharon Shipp (DC) reviewed the *Real Property Lender-Placed Insurance Model Act* (#631) and recommended revisions to various areas of the chapter for the Working Group’s consideration. Since the Nov. 4, 2021, meeting, which was the last meeting of the Working Group, comments were received on the draft from the industry trade associations (comments dated Nov. 11, 2021, sent to the NAIC on Nov. 23, 2021) and Examination Resources LLC (comments dated Dec. 17, 2021). These comments were circulated to the Working Group, interested state insurance regulators and interested parties on Dec. 2, 2021, and Dec. 20, 2021, respectively.

Chrys Lemon (McIntyre & Lemon PLLC) presented the trade associations’ comments, which he submitted on behalf of the Consumer Credit Industry Association (CCIA), the American Property Casualty Insurance Association (APCIA), the American Bankers Association (ABA), the National Association of Mutual Insurance Companies (NAMIC), and the Council of Insurance Agents & Brokers (CIAB). He proposed the following:

1) Marketing and Sales Standard 1 – Adding “such certificates will only be requested for lender-placed insurance policies” to the Documents to be Reviewed section to the item, “New business policy forms and certificate of insurance” so it would then read, “New business policy forms and certificate of insurance (such certificates will only be requested for lender-placed insurance policies).”

2) Underwriting and Rating Standard 4 – Adding “For lender placed insurance” before “Documentation showing regulated entity’s separate rates for mortgage servicer obtained lender-placed insurance versus voluntary insurance on real estate owned property” to the Documents to be Reviewed section so it would then read, “For lender placed insurance, documentation showing regulated entity’s separate rates for mortgage servicer obtained lender-placed insurance versus voluntary insurance on real estate owned property.”

3) Underwriting and Rating Standard 6:
   a) Adding “and lender placed insurance examinations, as applicable” to the Apply to section so the section would then read, “All workers’ compensation examinations and lender-placed insurance examinations, as applicable.”
   b) Adding “except with respect to lender-placed flood insurance” to the item in the Documents to be Reviewed section, “Applicable reports filed with the commissioner (e.g., required reporting for insurers with at least $100,000 in direct written premium for lender-placed insurance, required rate filing for insurers with an annual loss ratio of less than 35% in any lender-placed program for two consecutive years)” so it would then read, “Applicable reports filed with the commissioner (e.g., required reporting for insurers with at least $100,000 in direct written premium for lender-placed insurance, required rate filing for insurers with an annual loss ratio of less than 35% in any lender-placed program, except with respect to lender-placed flood insurance, for two consecutive years).”
   c) Adding “and, with respect to losses under lender-placed insurance policies” to the first paragraph of the Review Procedures and Criteria section so the paragraph would then read, “Losses under each policy should be clearly and accurately maintained at the regulated entity, so that paid amounts, reserves, deductibles, and, with respect to losses under lender-placed insurance policies, any excess amounts paid to the mortgagor can be easily reviewed. The sample data should be compared to the unit statistical reports to verify accuracy of reporting of the following items.”
4) Underwriting and Rating Standard 13 – Adding “For lender placed insurers” to two items in the Documents to be Reviewed section so the items would then read, “For lender-placed insurers, books and records containing compensation, contingent commissions, profit sharing, and other payments dependent on profitability or loss ratios” and “For lender-placed insurers, third-party agreements for outsourced services.”

Ms. Garnette indicated that the proposed language of the trade associations to Marketing and Sales Standard 1 and Underwriting and Rating Standards 4, 6, and 13 would be acceptable changes to the draft chapter.

Craig Leonard (Examination Resources LLC) presented his comments of Dec. 17, 2021, in which he said: 1) the language proposed by Ms. Shipp modifying Marketing and Sales Standard 8 in Chapter 21, “before the effective date of the insurance” would cause confusion among examiners/regulated entities; and 2) the meaning of the phrase, “near the expiration of a claim” is unclear.

Ms. Garnette indicated that Marketing and Sales Standard 8 of the chapter could be rewritten as follows to address Mr. Leonard’s comments, “Underwriting, rating and classification are based on adequate information developed at or near inception of the coverage rather than before the effective date of the insurance, near the expiration of coverage, or following a claim.” Mr. Leonard said the meaning of Ms. Garnette’s suggested change remains unclear, and he would still have some of the same concerns, specifically regarding what the difference is between “developed at or near inception of the coverage” rather than “before the effective date of insurance.” Mr. Gendron asked whether the proposed change would be made to the Conducting the Property Casualty Examination chapter or if the chapter is specific to lender-placed insurance. Mr. Hughes said the change is being made to the Conducting the Property Casualty Examination chapter. Ms. Abejar said the phrase, “near inception” is redundant with the phrase, “before effective date,” and she asked for additional time to review the revisions before consideration of adoption. Birny Birnbaum (Center for Economic Justice—CEJ) agreed and suggested that more time is needed to review the Chapter 21 exposure draft. Ms. Garnette said a better way to address the comments arising during the meeting might be to revise the Review Procedures and Criteria section of Marketing and Sales Standard 8, instead of revising the language of Standard 8 itself. Mr. Hughes said the comment due date will be extended on the exposure draft.

Mr. Hughes said the draft Chapter 20—General Examination Standards, which was circulated on Oct. 27, 2021, had been provided by Mr. Kreiter for the Working Group’s consideration. Mr. Hughes said Mr. Kreiter reviewed the Insurance Holding Company System Regulatory Act (#440) in 2021 and recommended corresponding revisions to the chapter. Since the Nov. 4, 2021, meeting, which was the last meeting of the Working Group, comments were received on the draft from State Farm on Nov. 24, 2021, and the American Council of Life Insurers (ACLI) on Dec. 17, 2021. These comments were circulated to the Working Group, interested state insurance regulators, and interested parties on Dec. 2, 2021, and Dec. 20, 2021, respectively.

Chuck Feinen (State Farm) presented his comments dated Nov. 24, 2021, on the Chapter 20 exposure draft. He said market conduct examinations involve surveillance of market practices (e.g., marketing and sales, underwriting and rating, claims practices); therefore, the addition of review procedures and criteria relating to solvency—i.e., liquidity stress testing (LST) and group capital calculation (GCC)—in Chapter 20 should not be included within the scope of market conduct examinations. He said such procedures/financial solvency filings are made by regulated entities with domestic or lead state financial regulators, so these areas should not be a focus of market conduct examinations. He said the revisions in Chapter 20 regarding LST and GCC should be removed from the exposure draft, as it is his opinion that these do not need to be addressed in a market conduct exam,
and a market conduct examiner should instead give deference to the lead state or the domestic financial regulator in these matters, especially since the GCC has an evaluation tool for solvency, and the lead state or domestic financial regulator has the ability to exempt various entities from making that type of solvency filing.

Gabrielle Griffith (ACLI) presented the ACLI Dec. 17, 2021, comments on the Chapter 20 exposure draft. She indicated that the issue of state insurance regulators’ review of LST and GCC is adequately addressed by state insurance department financial regulators, and market conduct examiners, therefore, need not review a regulated entity for compliance with the solvency provisions of Model #440. She expressed concern with the inclusion of LST and GCC guidance in the Chapter 20 draft since these are to be filed with a state insurance commissioner in the context of an acquisition or a merger, and the lead state or domestic regulator retains the authority and responsibility of the review of regulated entity compliance with these tools, not market conduct examiners.

Mr. Kreiter said market conduct examiners are not limited to reviewing only market conduct compliance issues; he quoted from Chapter 1—Introduction of the Market Regulation Handbook, “… market conduct compliance issues can have a significant effect on legal and compliance issues, which in turn can create material solvency issues. Coordination with the financial function is an important area for market conduct examiners ….” He recommended removing the text that was added within the Review Procedures and Criteria sections of both Operations/Management Standard 1 and Marketing and Sales Standard 1, while retaining the references to Model #440 within the NAIC model references of both of the examination standards, which will allow each jurisdiction to use the provisions of Model #440 as they deem appropriate.

Mr. Feinen said while market conduct examiners may discover during the course of an examination that underwriting practices might be creating a solvency issue for a regulated entity, market conduct examiners may not have the expertise needed for a review of the solvency tools mentioned in Chapter 20, and while the removal of the Model #440 guidance from the Review Procedures and Criteria sections would address his concerns to some extent, the main issue that remains is that the reference to Model #440 within the NAIC model references of the examination standards broadens a market conduct exam to areas that are generally handled by a lead state or domestic regulator, which would lead to the duplication of efforts.

Ms. Abejar said when there are issues found by market conduct examiners relating to marketing strategy, etc., her jurisdiction contacts the domestic (domiciliary) state’s financial analysis staff to ascertain if the regulated entity has any problem with any liquidity issues or if that state has performed a recent LST or Own Risk and Solvency Assessment (ORSA) report on the regulated entity. She said her jurisdiction would not perform that review themselves; her jurisdiction would instead rely on the lead state’s (domiciliary state) financial analysis staff for that information, as well as their opinions on the financial reports that have been submitted by the regulated entity. She said regarding newly hired examiners, it is beneficial to have guidance in the Market Regulation Handbook that indicates that there are other information/reference sources available that they can review; therefore, she suggested retaining Mr. Kreiter’s revisions to the Review Procedures and Criteria sections relating to Model #440 in the exposure draft.

Ms. Amann said the language in the Review Procedures and Criteria sections of the two revised examination standards could be changed from “Determine …” to “Discuss with the domestic …” or “In consultation with the domestic regulatory ….” Incorporating this language would provide guidance to a newly hired examiner that there is additional information they can review. Ms. Amann indicated that the remainder of the language Mr. Kreiter developed should remain in the chapter, as it would prompt an examiner to initiate some kind of consultation with the domestic state.
Ms. Plitt said market conduct examiners in Washington, upon opening a new examination, begin inquiries with its own financial division to ascertain if there are any current or pending issues Washington financial analysts have seen with a particular entity that market conduct examiners should be aware of. She said Washington market conduct examiners would not perform LST themselves; they are instead seeking information from the domestic state, or Washington’s own financial analysis division, to obtain support/confirmation that there is (or is not) a problem related to the solvency of a specific regulated entity.

Ms. Weyhenmeyer agreed, saying that qualifying language should be inserted within the Review Procedures and Criteria sections of both examination standards, prompting the examiner to inquire with the domiciliary state regarding solvency issues. Mr. Gendron said if the intent of ORSA is that of a regulated entity identifying its own risk, then a regulated entity should be aware that market conduct examiners would consider that an appropriate topic of consideration. He said Rhode Island’s market conduct examiners do not perform stress tests themselves; however, they want to be able to discuss the results of stress tests with domestic financial examiners.

Ms. Berry, who is a financial solvency regulator, said when a regulated entity identifies a risk in its ORSA report, it does not mean it is a risk; it means it has the potential to be a risk, and how that risk is mitigated, as well as what controls are in place, are what is important when analyzing the probability that an identified risk might occur. If a financial regulator feels that an identified risk is not adequately mitigated or inadequate controls are not in place, the financial regulator should then notify the market conduct area in his/her jurisdiction that there may be a potential issue with the regulated entity that could be addressed in a market conduct examination.

Ms. Abejar said the references inserted within the exposure draft to Model #440 should remain so examiners know that certain information is available to them, and direction should be provided in the exposure draft to prompt the examiner to reach out to the domiciliary state to ascertain if financial analysis is being conducted already on that regulated entity or if there are any issues of financial concern that the domiciliary state financial analysis staff has identified; that information is valuable to assist a market examiner in performing a more thorough market conduct examination. She said the word “coordination” could be used instead of “determination” in the exposure draft to direct the examiner to the domiciliary state for further information on solvency issues.

Mr. Feinen said his main concern remains, with the exposure draft as currently written, that market conduct examiners would make LST and GCC determinations; however, he does not have any concerns with examiners looking to a lead state or domestic regulator for further information on solvency topics.

Jeff Martin (UnitedHealthcare) said he would provide the Working Group with language from the Financial Analysis Handbook that might better address the coordination of market conduct examiners and financial solvency analysts in the Chapter 20 exposure draft.

Lisa Brown (APCIA) agreed with Mr. Feinen’s and Mr. Martin’s comments, and Mr. Martin added that this issue ties into the Working Group’s charge to “Discuss the role of market conduct examiners in reviewing insurers’ corporate governance ...”

Mr. Hughes said the comment due date on Chapter 20 will be extended to allow for further comments and revisions to the exposure draft.

5. Discussed Other Matters

Mr. Hughes said he and Ms. Weyhenmeyer have been collaborating with the Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group; there is a draft chapter that has been developed by the MHPAEA (B)
Working Group that will be distributed to the Market Conduct Examination Guidelines (D) Working Group after the Spring National Meeting. He said the draft, which is designed to replace the current Chapter 24B—Conducting the MHPAEA-Related Examination in the Market Regulation Handbook, has been updated to align with federal guidance more closely on the issue of compliance analysis requirements for non-quantitative treatment limitations (NQTLs).

Mr. Hughes said Mr. Werbeloff, Mr. Swan, Mr. Pyle, and other state insurance regulators on their respective teams collaborated to create a revised Chapter 23—Conducting the Life and Annuity Examination, which they updated to correspond with revisions to the Suitability in Annuity Transaction Model Regulation (#275), which was adopted by the NAIC in February 2020. Mr. Hughes said that draft would be distributed to the Working Group prior to the next meeting.

Mr. Hughes said a regulator-only subject matter expert (SME) group worked in 2021 on creating new travel-insurance related SDRs to address in-force policies and claims. He said those draft SDRs are now ready for the Working Group’s review and consideration, and they will be circulated to the Working Group soon.

Mr. Hughes asked the Working Group members to participate in as many Working Group meetings as possible this year so the Working Group can accomplish the tasks that are planned in 2022. He said NAIC staff will provide advance email notice of the next Working Group meeting, which is anticipated to occur in April.

Having no further business, the Market Conduct Examination Guidelines (D) Working Group adjourned.
The Privacy Protections (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met in Kansas City, MO, April 6, 2022. The following Working Group members participated: Katie Johnson, Chair (VA); Cynthia Amann, Co-Vice Chair (MO); Chris Aufenthie, Co-Vice Chair (ND); Sarah Bailey (AK); Damon Diederich (CA); George Bradner (CT); Erica Weyhenmeyer (IL); LeAnn Crow (KS); Ron Kreiter (KY); Robert Wake (ME); T.J. Patton (MN); Martin Swanson (NE); Teresa Green (OK); Raven Collins (OR); Gary Jones and David Buono (PA); Frank Marnell (SD); Carole Cearley (TX); Todd Dixon (WA); and Rachel Cissne Carabell (WI). Also participating were Trinidad Navarro and Frank Pyle (DE); Kathleen A. Birrane and Alexander Borkowski (MD); Chlora Lindley-Myers and Carrie Couch (MO); Tracy Biehn (NC); Eric Dunning (NE); and Don Beatty (VA).

1. **Heard Opening Comments**

Ms. Johnson said as this Working Group has an aggressive work plan, it is still accepting Working Group members who are committed to volunteering to work on specific sections as noted in the work plan. She asked those interested to contact Lois E. Alexander (NAIC) to become a Working Group member or to join one of the distribution lists for interested state insurance regulators and interested parties.

2. **Adopted its 2021 Fall National Meeting Minutes**

Ms. Johnson said the Working Group met Dec. 11, 2021. She also said the Working Group met March 23, 2022, and March 9, 2022, in regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to draft its work plan. Ms. Johnson said a group of subject matter experts (SMEs) also met to draft revisions to the Preamble and the first three sections of the *NAIC Insurance Information and Privacy Protection Model Act* (#670) for the Working Group’s consideration.

Ms. Amann made a motion, seconded by Mr. Patton, to adopt the Working Group’s Dec. 11, 2021, minutes (see *NAIC Proceedings – Fall 2021, Market Regulation and Consumer Affairs (D) Committee, Attachment Nine*). The motion passed unanimously.

3. **Heard Updates on State Privacy Legislation and on Federal Privacy**

Jennifer McAdam (NAIC) said the Working Group outlined in its report to the Market Regulation and Consumer Affairs (D) Committee at 2021 Fall National Meeting the state privacy legislation at that time, including the California Consumer Privacy Act (CCPA) and the California Data Privacy Act (CDPA), which amended the CCPA; the Colorado Privacy Act (CPA); and the Virginia Consumer Data Protection Act (VCDPA). Since that time, she said just one other state has adopted a similar data privacy law, and that is the Utah Consumer Privacy Act (UCPA). She said other states have proposed privacy legislation, but none of the bills have been signed into law yet. However, she said many of those state legislatures are still in session or will have carryovers until next year. She said there are currently more than 20 bills pending across the country and that she will continue to monitor those. Ms. McAdam said the NAIC Legal team tracks the legislation and has created two different charts listing the bills. She said the charts will be posted to the Working Group’s web page soon. She said the charts list the business obligations posed to the consumer rights provided by the manner of enforcement by the attorney generals or by private right of action and any federal Gramm-Leach-Bliley Act (GLBA) or federal Health Insurance Portability and
Accountability Act of 1996 (HIPAA) exemptions that might be found in those laws or bills. She said it is important for the Working Group to follow these laws because of the consumer rights and obligations that are being established, as well as to be aware of the carve-outs that are applicable to the insurance industry.

Ms. McAdam said California was the first U.S. state to adopt an omnibus privacy law that would impose its broad obligations on businesses that would provide consumers with transparency and control of their personal data. She said California’s law does not go as far as the General Data Privacy Regulation (GDPR), but it is certainly the most comprehensive of the other three existing state data privacy laws. As a refresher, she said many of the consumer rights that are found in the CCPA and GDPR can be traced back to the rights found in the federal Fair Credit Reporting Act (FCRA), which looks remarkably like Model #670. She said two updated charts on state privacy legislation will be posted to the Working Group’s web page soon. She said the charts include GLBA carve-outs and HIPAA exemptions. Ms. McAdam said California had adopted the first omnibus bill, and while it did not go as far as the GDPR, it went further than any other bill proposed by states and could be traced back to the FCRA. She said of the state privacy laws, California’s law could be categorized as being the most stringent and Utah’s as probably the most opposite of that continuum, with Colorado and Virginia in the middle. She said that Colorado may be closer to California and that Virginia may be slightly closer to Utah.

Ms. McAdam said for those tracking the GLBA and HIPAA preemptions found in these laws:

- California has a data level exemption for the GLBA and an entity level exemption for HIPAA.
- Virginia has an entity level exemption for the GLBA and HIPAA.
- Colorado has a data level exemption for the GLBA and HIPAA.
- Utah has a data level exemption for HIPAA and an entity level exemption for the GLBA, which is the opposite of California.

She said that current laws run the gamut and that the NAIC Legal team will continue to follow state privacy legislation for the states that remain in session this year.

Brooke Stringer (NAIC) said there have been reports in the media that U.S. Rep. Frank Pallone (D-WI), chair of the U.S. House Committee on Energy and Commerce, is going to be convening a meeting with staff for Sen. Maria Cantwell (D-WA), chair of the U.S. Senate Committee on Commerce, Science and Transportation; and Sen. Roger Wicker (R-MS), ranking member of the U.S. Senate Committee on Commerce, Science and Transportation. Ms. Stringer said their respective staff are going to be meeting to form a bipartisan agreement on comprehensive privacy legislation. She said these two committees have the primary jurisdiction over data privacy, as well as some of the financial services committees. She said it will be an elusive goal at the federal level, so what remains to be seen is what is going to come of this. She mentioned that over the past few years, there have been some key points of contention that can come up in these congressional discussions: 1) whether it attempts to preempt state laws; and 2) whether there is a private right of action at the state level. So, she said these negotiations will certainly evolve around certain trade-offs regarding the extent of the preemption, the private right of action, and the stringency of the privacy standards.

Ms. Stringer said bills that have been introduced or reintroduced by this Congress all recognize consumer rights to control their information; they all require companies to take steps to protect those rights; and they create enforcement procedures for those requirements. She said Sen. Wicker’s Safe Data Act (SDA) has been reintroduced with lofty standards for data privacy and security that would preempt all state data privacy and security laws. She said it has a GLBA carve-out, which may protect some state consumer data privacy laws, but it also has some instructions for the Federal Trade Commissioner (FTC) to develop privacy standards. Ms. Stringer said it is particularly important to watch due to Sen. Wicker’s position on that committee. She said that last year,
Sen. Cantwell had introduced legislation that had strict standards, but it would have established a preemptive privacy floor and it would have provided for a private right of action. However, it would not have prevented laws with much greater levels of protection. She said that in November 2021, the House Committee on Energy and Commerce Republicans released a draft bill of the Control Our Data Act (CODA), which would have created a national preemptive privacy standard. Ms. Stringer said Sen. Jerry Moran (R-KS) had reintroduced the Commerce Data Privacy and Security Act, which would preempt state data privacy and security authority with certain exceptions so it would not supersede laws that address financial institutions held by organizations held by Title V of the GLBA.

On the House of Representatives side, Ms. Stringer said Rep. Suzan DelBene (D-WA) reintroduced the Information Transparency and Personal Data Control Act, which is another bill that would create a national database of privacy standards and preempt state control if there are conflicting state laws. Ms. Stringer said it would allow users to opt out before companies can use their most sensitive personal information. She said all of this is to say that there are many flavors and approaches to federal data privacy bills, and Congress has struggled to reach any sort of compromise on the issue. However, she said that could change at any time. She said when momentum is growing at the state level to enact data privacy laws, the pressure ramps up at the federal level to act. In addition to Congress, it is also worth noting that the FTC is expected to provide data privacy regulations. Ms. Stringer said the NAIC continues to engage with Congress to oppose preemptive federal legislative proposals and to inform Congress of the Working Group’s efforts to update its models. She said the NAIC makes the point to Congress that states have proven the ability to act quickly to address technological changes that affect data privacy and data security. She also said that the NAIC underscores the importance of not undermining the existing state regulatory framework or inhibiting ongoing efforts in the states to develop data privacy laws and regulations so that state insurance regulators can continue working in the best interests of insurance consumers.

Mr. Patton asked about the difference between data versus entity-level exemptions. Ms. McAdam said the various laws treat the GLBA and HIPAA differently. She said that entity-level exemptions use the phrase “this law does not apply to entities covered by or controlled under GLBA or HIPAA covered entities” and that data-level exemptions use the phrase “data or information collected pursuant to GLBA or HIPAA.” Ms. McAdam said it would be up to the Working Group to determine whether only certain data is carved out or if any data collected by the entire entity is carved out. Mr. Wake said the Working Group should not even consider an entity-level exemption under the GLBA because it would mean excluding the financial sector, which would be fine if it could be said that the GLBA covers the financial sector, and the Working Group wants to cover the Facebooks of the world that are not financial institutions. However, he said since the Working Group consists of state insurance regulators drafting a state insurance privacy law, it is using its delegated functional regulatory authority under the GLBA to regulate. So, the Working Group cannot carve GLBA out because that would carve out everything that the Working Group wants to do. Mr. Wake said California’s data-level exemption for the GLBA means the data collected is not being regulated, but insurers might be regulated in other ways. It leaves everything up to state insurance regulators except the private right of action, which applies only to the attaching of the data to the regulation.

Chris Petersen (Arbor Strategies), speaking on behalf of the Coalition of Health Insurers, said there should be a HIPAA safe harbor like Model #670, under which there is no exemption from the law unless insurance companies comply with the Privacy of Consumer Financial and Health Information Regulation (#672). He said if insurance companies comply with HIPAA, they do not need to comply with any other lessor standard. Mr. Petersen said Model #672 is an insurance-only model, so he said the Working Group’s work plan should start with Model #672, not Model #670 as part of it is obsolete. Mr. Wake said the Working Group already had these discussions in regulator-to-regulator meetings prior to coming to the decision noted in the work plan. Ms. Johnson said the Working Group has determined that it would be looking at Model #670 and Model #672 and drafting a white paper on consumer data ownership.
4. **Adopted its Work Plan**

Ms. Johnson said the exposure draft of the Working Group’s work plan was drafted in two regulator-to-regulator meetings on March 23 and March 9, and that the draft was exposed for comment on March 23 for a seven-day public comment period ending March 30. She said written comments had been received from the American Council of Life Insurers (ACLI) and the Coalition of Healthcare Providers. Ms. Johnson asked if there were any comments from Working Group members, interested state insurance regulators, or interested parties. Birny Birnbaum (Center for Economic Justice—CEJ) said the work plan, while ambitious, showed a depth of understanding of the issue, so he agreed with it as a sound plan. However, he said the Working Group may need to revise or tweak it as it proceeds through it.

Robert Ridgeway (Coalition of Healthcare Providers) said he agrees with what Mr. Petersen had written in his comments on behalf of the Coalition of Healthcare Providers and that he also wanted to highlight two of the points made in that letter. One was that the Working Group should focus on Model #672 by starting its work with it, and the other was that a gap analysis should be done prior to any revisions being suggested. Mr. Ridgeway said the difficult timeline given would require all stakeholders to work together on drafting of any revisions, especially on wordsmithing.

Kristin Abbott (ACLI) said the comment period was too short and that future comment periods should be at least 30 days to give trade associations like hers enough time to distribute the drafts to their members and then compile all comments received prior to responding to the Working Group. She said the Working Group should be mindful to avoid holidays. Ms. Abbott also asked the Working Group for more detail about the white paper, particularly about its design and purpose.

Wes Bissett (Independent Insurance Agents and Brokers of America—IIABA) asked how the white paper would fit into the Working Group’s work plan. He asked what type of issues the white paper would address and if it would include any recommendations from the Working Group. Mr. Bissett also asked if the white paper would be looking into any private contracts. Ms. Johnson said the issues noted in the comments submitted would be considered by the Working Group as it moved through its work plan in 2022.

Ms. Amann made a motion, seconded by Mr. Aufenthie, to adopt the Working Group’s work plan for 2022 (Attachment Six-A). The motion passed unanimously.

5. **Discussed Other Matters**

Ms. Johnson said Mr. Aufenthie had volunteered to lead the workstream team on drafting the white paper on data ownership and use rights. Mr. Aufenthie said the team’s goal was to identify where the gaps are in Model #670 and Model #672 about who owns consumer data; where it comes from; who has control over it; for how long; and under what circumstances. He said the team would solicit questions from Working Group members, interested state insurance regulators, and interested parties (including NAIC consumer representatives) for a survey that would be exposed to seek other questions that could first be tied back to the six consumer data rights identified by NAIC Members over the last two years.

Ms. Johnson reminded the Working Group that the survey questions are scheduled to be exposed for a brief comment by May 11, with the final survey scheduled to be distributed in July.

Having no further business, the Privacy Protections (D) Working Group adjourned.

ANTIFRAUD (D) TASK FORCE

Antifraud (D) Task Force March 28, 2022, Minutes................................................................................................... 8-47
The Antifraud (D) Task Force met March 28, 2022. The following Task Force members participated: Trinidad Navarro, Chair, and Frank Pyle (DE); John F. King, Vice Chair, represented by Matthew Padova (GA); Lori K. Wing-Heier represented by Alex Romero and Jeanne Murray (AK); Alan McClain represented by Crystal Phelps, Pat O’Kelly, and Paul Keller (AR); Evan G. Daniels represented by Maria Ailor and Paul Hill (AZ); Ricardo Lara represented by Eric Charlick and George Mueller (CA); Andrew N. Mais represented by Amy Stegall and Kurt Swan (CT); Karima M. Woods represented by Brian Bressman (DC); Doug Ommen represented by Benjamin Olejnik, Cynthia Banks Radke, and Sonya Sellmeyer (IA); Dean L. Cameron represented by Eduardo Castaneda, Hermoliva Abejar, Kathy McFill, Kyle Cammack, and Kristen Finau (ID); Vicki Schmidt represented by Chris Hollenbeck and Tate Flott (KS); Sharon P. Clark represented by Juan Garrett (KY); Kathleen A. Birrane represented by Alexander Borkowski (MD); Anita G. Fox represented Chad Arnold, Jill Huisken, Michele Riddering, and Randall Gregg (MI); Grace Arnold represented by Chris Ness, Martin Fleischhacker, Matthew Vatter, Rick Cruz, and T.J. Patton (MN); Chlora Lindley-Myers represented by Carrie Couch, Jeana Thomas, Jo LeDuc, and Sheri Sloan (MO); Mike Chaney represented by John Hornback (MS); Troy Downing and Troy Smith (MT); Mike Causey represented by Angela Hatchell, Della Shepherd, Ted Hamby, and Tracy Biehn (NC); Jon Godfread represented by Dale Pittman and Helene Herauf (ND); Eric Dunning, Kimberly Church, and Martin Swanson (NE); Chris Nicolopoulos represented by Heather Silverstein (NH); Marlene Caride represented by Richard Besser (NJ); Judith L. French represented by Michelle Brugh Rafael (OH); Glen Mulready represented by Landon Hubbell, Shelly Scott, and Rick Wagnon (OK); Andrew R. Stolfi represented by Dorothy Bean and Stephanie Noren (OR); Michael Humphreys represented by David Buono (PA); Raymond G. Farmer represented by Juan Rodriguez and Melissa Manning (SC); Larry D. Deiter and Jill Kruger (SD); Cassie Brown represented by Chris Davis, Brad Carpenter, and Leah Gillum (TX); Jon Pike and Armand Glick (UT); Michael S. Pieciak represented by Kevin Gaffney (VT); Scott A. White represented by Mike Beavers (VA); and Allan L. McVey represented by Greg Elam (WV). Also participating were: Matthew Stewart (LA); and John Haworth (WA).

1. **Adopted its 2021 Fall National Meeting Minutes**

   Mr. Wagnon made a motion, seconded by Ms. Rafeld, to adopt the Task Force’s Nov. 12, 2021, minutes (see NAIC Proceedings – Fall 2021, Antifraud (D) Task Force). The motion passed unanimously.

2. **Discussed Racial Bias and Discrimination**

   Commissioner Navarro said the Task Force received a letter from the Consumer Federation of America (CFA) and the Center for Economic Justice (CEJ) addressing an article from The New York Times concerning allegations of potential racial bias and discrimination practices taking place.

   The Task Force discussed the article and received comments from Birny Baughman (CEJ). Commissioner Navarro said Delaware the Department of Insurance (DOI) will be investigating this issue and will present any findings to the Task Force.

3. **Adopted a Recommendation to Disband the Antifraud Education Enhancement (D) Working Group**

   Commissioner Navarro said that due to the continued creation of new committees, task forces, and working groups, NAIC leadership has asked all chairs to review their current working groups to determine if they should continue in their current capacity. Commissioner Navarro said after reviewing the Task Force’s current working
groups, the discussion with the working group chairs led to the decision that the Antifraud Education Enhancement (D) Working Group would be temporarily disbanded. The current charge under the Working Group would be moved directly under the Task Force, and Ms. Rafeld would remain as the designated subject matter expert (SME) for training and education.

Mr. Mueller made a motion, seconded by Mr. Beaver, to adopt the recommendation that the Antifraud Education Enhancement (D) Working Group would be disbanded, and the current charge would be moved under the Task Force’s (see NAIC Proceedings – Spring 2022, Market Regulation and Consumer Affairs (D) Committee, Attachment One). The motion passed unanimously.

4. Received an Update from the Antifraud Education Enhancement (D) Working Group

Ms. Rafeld said the Working Group is working to schedule the investigator safety webinar for state insurance regulators and the private sector. She said the webinar is consistently being updated, and she encouraged everyone to attend due to the new information being added. Ms. Rafeld said she is also working with NAIC staff to schedule a webinar concerning an open-source webinar series presented by Michele Stuart (JAG Investigations). She said that she will continue to work with NAIC staff for new training topics, and she encouraged state insurance regulators or industry representatives to send in topics to the NAIC.

5. Received and Update from the Antifraud Technology (D) Working Group

Mr. Glick said the Working Group has been finalizing the creation of an Antifraud Plan Repository. He said the Working Group created an SME group to develop an antifraud template and workflow. Mr. Glick said the SME group has completed its work on the template and is working to finalize the workflow document. He said the final draft will be presented to the Working Group for its consideration and then will refer it to the Task Force for review. He said the Working Group will continue to coordinate with NAIC staff as they finalize the redesign of the Online Fraud Reporting System (OFRS). Mr. Glick said the Working Group is currently going through beta testing on the industry side of the OFRS, and once the testing is completed, the updates will be applied to the consumer side as well. He said he will report to the Task Force as more develops.

6. Received an Update from the Improper Marketing of Health Insurance (D) Working Group

Mr. Swanson said the Working Group will be holding its second opening meeting during the Spring National Meeting on April 4. He said the Working Group has continued to meet monthly in regulator-to-regulator session, which has contributed to actions taking place against fraudulent entities across the nation. He said the Working Group has created a regulator-only collaboration document with a list of entities that are potentially committing improper marketing of health insurance. Mr. Swanson said the open and closed discussions, in addition to the collaboration document, will be an asset to the Working Group as it continues its fight against improper marketing of insurance.

7. Heard a Report from the Coalition

Matthew Smith (Coalition Against Insurance Fraud) said the Coalition currently has 47 of the 51 domestic insurance departments as members. He said that in addition to research studies, the Coalition has more than 50 videos and infographics about health care sharing ministries (HCSMs), as well as a fraud tracker to track arrests and convictions across the states. Mr. Smith said the Coalition encourages the use of its information available to assist with states fighting insurance fraud. He said the Coalition is looking to partner with fraud directors to bring back the Annual Fraud Directors Conference, which was paused due to the COVID-19 pandemic. He said there will be more details to follow.
Mr. Smith said the Coalition will be providing a presentation during the NAIC/American Indian and Alaskan Native Liaison Committee during the Spring National Meeting. He said the goal is to present how insurance fraud affects those communities and other communities and how the Coalition can assist with their fight against insurance fraud.

Mr. Smith said a new study was completed concerning the state of insurance technology, which is available on the Coalition website. He said in addition, there will be an upcoming study concerning insurance companies.

Mr. Smith said on the advocacy front, the Coalition’s “friend of the court” program has been successful assisting states with laws being introduced and encourages states to reach out to the Coalition for any assistance.

Mr. Smith said the Coalition’s mid-year meeting will take place June 6–7 in Orlando, FL, and he encouraged state insurance regulators to attend if possible.

8. **Heard an Update from the NHCAA**

Leia McKenna (National Health Care Anti-Fraud Association—NHCAA) said over the past two years, the NHCAA has held its annual conference virtually due to the COVID-19 pandemic. However, this year the NHCAA’s will be in person in November in Orlando, FL. Ms. Mckenna said she encourages state insurance regulators to reach out to the NHCAA if there is anything they can assist states within fighting insurance fraud.

9. **Discussed Other Matters**

Commissioner Navarro said there are a few dates that he would like the Task Force members, interested state insurance regulators, and interested parties to be aware of taking place in 2022.

Commissioner Navarro said that on April 4, the Task Force will meet in regulator-to-regulator session, and the Improper Marketing of Health Insurance (D) Working Group will hold its second open meeting. He said details can be found on the NAIC national meeting web page.

Commissioner Navarro said this will be the third year for the Antifraud (D) Task Force to fully participate in the NAIC Insurance Summit. The antifraud track has continued to grow, and this year is shaping up to have a full two days of sessions. He encouraged everyone to attend if possible.

Commissioner Navarro said the Task Force has committed to bringing more training and insurance fraud training awareness not only to the insurance departments, but also to industry and consumers. He said information will be distributed as this training develops.

Having no further business, the Antifraud (D) Task Force adjourned.
MARKET INFORMATION SYSTEMS (D) TASK FORCE

Market Information Systems (D) Task Force March 25, 2022, Minutes................................................................. 8-51
Market Information Systems (D) Task Force Dec. 3, 2021, Minutes (Attachment One) ........................................... 8-54
2022 Revised Charges (Attachment One-A) ..................................................................................................................... 8-55
Market Information Systems (MIS) Data Analysis Report (Attachment Two) .......................................................... 8-56
The Market Information Systems (D) Task Force met March 25, 2022. The following Task Force members participated: Dana Popish Severinghaus, Vice Chair (IL); Evan G. Daniels represented by Maria Ailor (AZ); Ricardo Lara represented by Pam O’Connell (CA); Andrew N. Mais represented by Kurt Swan (CT); Trinidad Navarro represented by Frank Pyle (DE); Vicki Schmidt represented by Tate Flott (KS); Sharon P. Clark represented by Ron Kreiter (KY); Chlora Lindley-Myers represented by Brent Kabler (MO); Marlene Caride represented by Ralph Boeckman (NJ); Barbara D. Richardson represented by Hermoliva Abejar (NV); Judith L. French represented by Rodney Beech (OH); Cassie Brown represented by Rachel Cloyd (TX); Nathan Houdek represented by Rebecca Rebholz (WI); and Allan L. McVey represented by Jeannie Tincher (WV). Also participating was: Erica Weyhenmeyer (IL).

1. **Adopted its Dec. 3, 2021, and 2021 Fall National Meeting Minutes**

Director Severinghaus said the Task Force adopted a revision to its 2022 charges on Dec. 3, 2021, via e-vote. She said the Task Force added back the charge to make recommendations regarding incorporating artificial intelligence (AI) abilities in the NAIC Market Information Systems (MIS), with a completion date of the 2022 Summer National Meeting.

Ms. Cloyd said the minutes did not reflect that Texas abstained from the vote. She requested that Texas’ abstention be noted in the minutes.

Mr. Flott made a motion, seconded by Mr. Swan, to adopt the Task Force’s Dec. 3, 2021, minutes with the addition that Texas abstained from the e-vote (Attachment One). The motion passed unanimously.

Mr. Kreiter made a motion, seconded by Ms. O’Connell, to adopt the Task Force’s Nov. 23, 2021, minutes (see NAIC Proceedings – Fall 2021, Market Information Systems (D) Task Force). The motion passed unanimously.

2. **Considered the AI Recommendations**

Director Severinghaus said the Task Force had a lengthy discussion during the 2021 Fall National Meeting and was not able to vote on the Market Information Systems Research and Development (D) Working Group’s report. She said she would give everyone as much time as needed to discuss the report and the feasibility of incorporating artificial intelligence (AI) analysis abilities in the MIS; whether the NAIC should proceed in that direction at this time; and, if so, what the first steps would be to put it in motion. She said the Task Force has until the Summer National Meeting to complete its charge, and it can meet again prior to the Summer National Meeting if necessary.

Director Severinghaus said that during the 2021 Fall National Meeting, Texas expressed concerns on whether the charge properly belongs with the Task Force rather than with the Big Data and Artificial Intelligence (H) Working Group. She said Texas also said they were concerned about the cost and availability of NAIC resources to implement the recommendations in the report. Director Severinghaus said industry representatives generally agreed with the idea of analyzing the quality of the current MIS data and the potential of applying AI analysis techniques to the data but expressed concerns regarding the collection of transactional level data. She said that consumer representatives supported the report’s recommendations of assessing the quality of the current MIS data and increasing the amount of data collected to make the use of AI on the market information systems as effective as possible.
Andrew Pauley (National Association of Mutual Insurance Companies—NAMIC) said the report was comprehensive and laudable. He said, however, that adopting it in full was premature due to other workstreams the NAIC is working on. He also said it was not clear that AI models are superior to the current analysis being done. He noted the paper said AI analysis methods could lead to many false positives. He said that would consume the time and resources of state insurance regulators and companies. He cautioned about confidentiality and cybersecurity if transactional data is collected.

Mr. Kabler said the paper outlined a process that begins with reviewing and correcting the current data in the MIS, and then refining analysis methods. After those steps, it could then be decided if incorporating AI is necessary. He said it is possible to minimize false positives as long as are aware of the potential.

Ms. Cloyd suggested that only the first two recommendations be adopted rather than all five and then ask the NAIC for feedback on whether AI methods could take the place of current methodologies. She noted that the third recommendation is to incorporate AI in the MIS after the first two recommendations are completed. She said more feedback is needed before taking that step. Mr. Kabler suggested revising the third recommendation to consider incorporating AI methods rather than incorporating various promising AI modes of analysis. Ms. Cloyd said it was better to just adopt the first two requirements because it is clear the data currently collected is insufficient for AI and there is no proof of concept. Mr. Kabler said that there are different levels of AI techniques and that it would not be too much to incorporate less sophisticated AI technologies that would do the same thing as traditional statistical and quantitative techniques. Ms. Cloyd said Texas is not opposed to improving analysis techniques but is concerned about the time and resources necessary to pursue all five requirements in the report.

Director Severinghaus said that the efficient use of time and resources is at the top of mind for everyone. She said unless we have hard data to show what the cost would be to pursue all five requirements, everyone is just guessing at the cost in time and resources. She asked if the NAIC has looked at AI before.

Randy Helder (NAIC) said the NAIC did investigate AI techniques for financial regulation, but this is the first time it has been considered for market regulation. He said the financial regulators involved did provide input to the Market Information Systems Research and Development (D) Working Group as it prepared this report.

Mr. Kabler said it was not clear whether the financial investigation of AI techniques showed any improvement over the traditional methods. He said he did not know the cost of the financial regulator investigation, but it did involve hiring a consultant.

Ms. Weyhenmeyer suggested referring the report back to the Working Group to consider the costs. She also noted that since the chair and vice chair are new to the Task Force this year, it may be helpful to allow Commissioner Michael Conway (CO) an opportunity to also provide some input.

Director Severinghaus agreed and said the Task Force would not take a vote on the report during this meeting.

Mr. Kabler said the Working Group met on March 16 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) and paragraph 6 (consultations with NAIC staff members) of the NAIC Policy Statement on Open Meetings, and took the following action: 1) reviewed the current NAIC projects and Uniform System Enhancement Request (USER) forms submitted to the Working Group; 2) adopted a USER request to create a personalized information capture system (PICS) event to notify subscribers on a recurring basis of outstanding waiver and extension requests; 3) adopted a request to add a new Complaints Database System (CDS) coverage type code for telehealth; and 4) considered a request from the Market Analysis Procedures (D) Working Group to add the lender-placed insurance and disability insurance Market Conduct Annual Statement (MCAS) data
into the Market Analysis Review System (MARS). Finally, Mr. Kabler noted the Working Group completed its work on the 2020 MIS data analysis and recommendations.

Mr. Kreiter made a motion, seconded by Ms. Ailor, to adopt the report of the Market Information Systems Research and Development (D) Working Group. The motion passed unanimously.

4. Received an Update on MIS Projects and USER Forms

Chris Witt (NAIC) said the NAIC Information Technology (IT) team has completed the migration to the cloud. He said that the MCAS system has now opened and is receiving filings and that all the MCAS i-Site+ reports used by state insurance regulators will be available by the filing deadline. Mr. Witt said the Market Actions Tracking System (MATS) web service should be completed by the end of the first quarter. Mr. Witt said the next major project to be started is the separation of the MCAS system from the Financial Data Repository (FDR) system.

5. Adopted the MIS Data Analysis Metrics and Recommendations

Director Severinghaus said that during the 2021 Fall National Meeting, the Task Force was not ready to adopt the analysis and recommendations for improving the data in the MIS databases and that the Working Group only provided a preliminary report. She said the MIS data analysis metrics results are now ready to be reviewed along with the Working Group’s recommendations. She said that while the meeting materials only provide an aggregated look at the MIS data, each of NAIC member jurisdictions’ market analysis chiefs (MACs) will be sent the specific results for their jurisdictions.

Mr. Kabler said the MIS data analysis report evaluates the quality of the data in the MIS databases to identify issues with the data and alert states of those issues and ways to improve the quality. He said there are no recommendations based on the 2020 analysis. He noted that the report evaluates the timeliness, accuracy and completeness of the MIS data submitted by each jurisdiction through tests that are summarized in the report. He noted as an example that the accuracy of complaint data can be measured by comparing the disposition code with whether the complaint was coded as confirmed or unconfirmed.

Mr. Kabler said the detailed reports were sent to each jurisdiction’s MAC.

Ms. Rebholz made a motion, seconded by Ms. Abejar, to adopt the MIS data analysis report (Attachment Two). The motion passed unanimously.

Having no further business, the Market Information Systems (D) Task Force adjourned.
The Market Information Systems (D) Task Force conducted an e-vote that concluded Dec. 3, 2021. The following Task Force members participated: Mike Kreidler, Chair (WA); Chlora Lindley-Myers, Vice-Chair (MO); Lori K. Wing-Heier (AK); Peni Itula Sapini Teo (AS); Evan G. Daniels (AZ); Ricardo Lara (CA); Michael Conway (CO); Andrew N. Mais (CT); Trinidad Navarro (DE); Doug Ommen (IA); Dana Popish-Severinghaus (IL); Vicki Schmidt (KS); James J. Donelon (LA); Grace Arnold (MN); Troy Downing (MT); Marlene Caride (NJ); Russell Toal (NM); Barbara D. Richardson (NV); Judith L. French (OH); Glen Mulready (OK); Andrew R. Stolfi (OR); Cassie Brown (TX); Michael S. Pieciak (VT); Mark Afable (WI); and Allan L. McVey (WV).

1. **Adopted a Revision to its 2022 Charges**

The Task Force considered adoption of a revision to its 2022 charges. The Task Force’s 2022 charges adopted on Oct. 29 removed the charge to make recommendations for the incorporation of artificial intelligence (AI) abilities in the NAIC market information systems. Because the charge was not completed during its Nov. 23 meeting, the Task Force considered adding the charge back to its 2022 charges with a completion date of the 2022 Summer National Meeting.

Twelve states voted to adopt the revised charges, three states voted against adopting the revised charges, and Texas abstained. A majority of the Task Force members voted in favor of adopting the revision to its 2022 charges.

Having no further business, the Market Information Systems (D) Task Force adjourned.
MARKET INFORMATION SYSTEMS (D) TASK FORCE

The mission of the Market Information Systems (D) Task Force is to provide business expertise regarding the desired functionality of the NAIC Market Information Systems (MIS) and the prioritization of regulatory requests for the development and enhancements of the MIS.

Ongoing Support of NAIC Programs, Products or Services

1. The Market Information Systems (D) Task Force will:
   A. Ensure that the MIS support the strategic direction set forth by the Market Regulation and Consumer Affairs (D) Committee.
   B. Develop recommendations for the incorporation of artificial intelligence (AI) abilities in NAIC Market Information Systems for use in market analysis. Complete by the 2022 Summer National Meeting.
   C. Analyze the data in the MIS. If needed, recommend methods to ensure better data quality. Complete by the 2022 Fall National Meeting.
   D. Provide guidance on the appropriate use of the MIS and the data entered in them.
      2. Electronic Forums.
      4. Market Analysis Profile.
      5. Market Analysis Prioritization Tool (MAPT).
      9. 1033 State Decision Repository (SDR1033) (in conjunction with the Antifraud (D) Task Force).

2. The Market Information Systems Research and Development (D) Working Group will:
   A. Serve as the business partner to review and prioritize submitted Uniform System Enhancement Request (USER) forms to ensure an efficient use of available NAIC staffing and resources.
   B. Assist the Task Force with tasks as assigned, such as:
      1. Analyze MIS data.
      2. Provide state users with query access to MIS data.
      3. Provide guidance on the appropriate use of the MIS.

NAIC Support Staff: Randy Helder
# Objective

It is essential that the systems on which insurance consumers and state insurance regulators depend use reliable data. These systems include, but are not limited to, the Consumer Insurance Search (CIS), Market Analysis Prioritization Tool (MAPT), Market Analysis Profile (MAP) and Market Analysis Review System (MARS). In addition to these National Association of Insurance Commissioners (NAIC) systems, many state systems and processes use NAIC Market Information System (MIS) data. Therefore, MIS data quality is critical.

The MIS data analysis metrics were developed at the direction of the Market Information Systems (D) Task Force to identify potential data quality issues in the NAIC MIS database. For each system, three aspects of data quality are considered: 1) completeness; 2) timeliness; and 3) accuracy.

# Results

Note: These symbols indicate the following changes between periods: (△) trending in positive direction; (–) no change or unable to determine trend; and () trending in negative direction.

## Complaint Database System (CDS)

### Completeness:

C1. Identify errors that prevented submitted complaints from successfully loading to the NAIC MIS database.

<table>
<thead>
<tr>
<th>Year</th>
<th>Total Complaints Submitted</th>
<th>Complaints Not Loaded First Time</th>
<th>Complaints Not Loaded</th>
<th>Complaints Loaded</th>
<th>Errors Created</th>
<th>% Errors to Total Complaints Submitted</th>
<th>% Complaints Not Loaded to Total Complaints Submitted</th>
<th>△</th>
</tr>
</thead>
<tbody>
<tr>
<td>2020*</td>
<td>339,137</td>
<td>129,851</td>

The Financial Condition (E) Committee met in Kansas City, MO, April 5, 2022. The following Committee members participated: Scott A. White, Chair (VA); Elizabeth Kelleher Dwyer, Vice Chair, represented by Jack Broccoli (RI); Michael Conway (CO); David Altmaier (FL); Doug Ommen represented by Carrie Mears (IA); Maine represented by Vanessa Sullivan and Robert Wake (ME); Grace Arnold represented by Kathleen Orth and Fred Andersen (MN); Chlora Lindley-Myers (MO); Mike Chaney represented by David Browning (MS); Marlene Caride (NJ); Adrienne A. Harris represented by My Chi To and Bob Kasinow (NY); Raymond G. Farmer (SC); Cassie Brown, Jamie Walker, and Mike Boerner (TX); Nathan Houdek and Amy Malm (WI); and Jeff Rude (WY). Also participating were: Phillip Barlow (DC); and Dale Bruggeman (OH).

1. **Adopted its Jan. 12, 2022, and 2021 Fall National Meeting Minutes**

The Committee met Jan. 12 to expose a request for comment suggesting a revised approach to risk-based capital (RBC) requirements for structured securities and other asset-backed securities (ABS) with comments due to the Risk-Based Capital Investment Risk and Evaluation (E) Working Group.

Commissioner Caride made a motion, seconded by Ms. Malm, to adopt the Committee’s Jan. 12, 2022 (Attachment One) and Dec. 13, 2021 (see NAIC Proceedings – Fall 2021, Financial Condition (E) Committee) minutes. The motion passed unanimously.

2. **Adopted the Reports of its Task Forces and Working Groups**

Commissioner White stated that the Committee usually takes one motion to adopt the Committee’s task force and working group reports that are considered technical, noncontroversial, and not significant by NAIC standards; i.e., they do not include model laws, model regulations, model guidelines, or items considered to be controversial. He reminded Committee members that subsequent to the Committee’s adoption of its votes, all the technical items included within the reports adopted will be sent to the NAIC members for review shortly after the conclusion of the Spring National Meeting as part of the Financial Condition (E) Committee Technical Changes report. Pursuant to the Technical Changes report process previously adopted by the NAIC Plenary, the members will have 10 days to comment. Otherwise, the technical changes will be considered adopted by the NAIC and effective immediately. With respect to the task force and working group reports, Commissioner White asked the Committee: 1) whether there were any items that should be discussed further before being considered for adoption and sent to the members for consideration as part of the Financial Condition (E) Committee Technical Changes report; and 2) whether there were other issues not up for adoption that are currently being considered by task forces or workings groups reporting to this Committee that require further discussion. The response to both questions was no.

In addition to presenting the reports for adoption, Commissioner White also noted that the Financial Analysis (E) Working Group met April 4, Feb. 23, and Jan. 26 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss letter responses and financial results. Additionally, the Valuation Analysis (E) Working Group met March 23, Feb. 8, and Jan. 25 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss valuation items related to specific companies.
Commissioner Caride made a motion, seconded by Director Lindley-Myers, to adopt the following task force and working group reports: Accounting Practices and Procedures (E) Task Force; Capital Adequacy (E) Task Force; Financial Stability (E) Task Force; Reinsurance (E) Task Force; Valuation of Securities (E) Task Force; Group Capital Calculation (E) Working Group (Attachment Two); Restructuring Mechanisms (E) Working Group (Attachment Three); and National Treatment and Coordination (E) Working Group (Attachment Four). The motion passed.

3. **Adopted a Model Law Extension Request from the Mortgage Guaranty Insurance (E) Working Group**

Commissioner White described how the Committee and the Executive (EX) Committee approved a project in years prior to update the *Mortgage Guaranty Insurance Model Act* (#630). He described how the Working Group still had develop a new capital model, as well as finalized the changes to #630. He noted the Working Group was requesting an extension on the development of changes to (#630) as outlined in the request, but that based upon where things stood today and things being in the home stretch, he was not sure why the Committee would not approve the request.

Director Farmer made a motion, seconded by Commissioner Conway, to adopt the extension request (Attachment Five). The motion passed.

4. **Received an Update on Committee-Supported Initiatives**

Commissioner White stated the next item was to receive an update on what is described as Committee-supported initiatives. He said what he means by that are updates from several chairs on work that he would describe as a priority. He stated the organizing principle underlying the priorities of the Committee this year is tied to the low interest rates and the impact that has had on asset risk in the industry. He noted that the industry has been in this low interest rate environment more or less since the Great Recession of 2007. That environment has put pressure on the life insurance industry in particular, given its dependence on long-term investments. That has led some insurers to adopt a riskier asset strategy. Commissioner White provided an example where state insurance regulators have seen a shift away from more conservative senior debt holdings towards higher yielding investments such as structured securities and other ABS. He noted state insurance regulators have also seen the growing trend of many insurers selling their annuity business to private equity investors. All of this has led to increased complexity and heightened scrutiny on the part of the Committee to determine whether additional safeguards to the solvency framework are needed. He said as state insurance regulators, it is important to make sure that this trend toward higher yields is balanced with the security necessary to ensure that companies can meet their obligations.

a. **Investment RBC**

Commissioner White noted that there are some concerns that the RBC framework may be contributing to this behavior of companies searching for higher yield. He noted that for those who were at the 2021 Fall National Meeting, at that time he led a discussion about the fact that structured credit is treated the same as corporate bonds for the purposes of RBC. That is true even though structured credit has a more extreme risk profile. He indicated that in order to address this, the Committee supported creating a new working group to examine whether increased RBC charges for these types of investments should be considered. He introduced Mr. Barlow to provide an update on the work.

Mr. Barlow discussed how the Risk-Based Capital Investment Risk and Evaluation (E) Working Group met March 22 to discuss four comment letters received from the Financial Condition (E) Committee exposure. He noted that during the meeting, the Working Group also adopted its working agenda. Finally, the Working Group discussed the path forward to address the charges and working agenda. He noted that among the conclusions from that meeting were: 1) a series of meetings following this meeting will provide an opportunity to address the charges
and working agenda; 2) assets will be addressed sequentially, starting with those having the biggest impact, which is likely the collateralized loan obligations (CLOs); 3) the Working Group is not ready to engage a consultant, but it may need consulting assistance as details emerge. Mr. Barlow noted that the Working Group also has a long list of investment-related issues that had been referred to Capital Adequacy (E) Task Force, but the goal is to address the priority items identified by the Committee first. As this is done, the Working Group will look at the process holistically from the financial statement reporting and assignment of designations through the RBC charges.

Mr. Barlow discussed his desire to have a process that relies on the annual statement reporting and rating designations to determine the RBC charge rather than “company records” or information in the notes, interrogatories, or otherwise determined by the filer. This should help with transparency and consistency. He stated he would also like a process that establishes a methodology for identifying and dealing with new assets or asset classes that can adjust in response to the volume in insurers portfolios. He noted that the Working Group has good representation from other impacted task forces and working groups, including the Health Risk-Based Capital (E) Working Group, Life Risk-Based Capital (E) Working Group, Property and Casualty Risk-Based Capital (E) Working Group, Capital Adequacy (E) Task Force, Valuation of Securities (E) Task Force, and Statutory Accounting Principles (E) Working Group. At this point, Mr. Barlow said there seems to be a general consensus on the path forward. Since all of the members bring different expertise to this, he said the Risk-Based Capital Investment Risk and Evaluation (E) Working Group is engaging in some educational sessions to increase its collective knowledge, gathering data to help prioritize projects, and making sure all information is equally shared so there is a collective understanding of the issues involved. Mr. Barlow closed by noting that while there are a lot of items on the Working Group’s agenda, it will address them as expeditiously as possible.

b. Statutory Accounting

Commissioner White discussed how the Statutory Accounting Principles (E) Working Group is currently focused on improving accounting for certain structured securities and cited an example where there has been an increase in debt instruments that have underlying collateral assets that are more equity-based. He said state insurance regulators want to make sure that equity risk is not masked and that the asset receives the proper RBC charge.

Mr. Bruggeman, Statutory Accounting Principles (E) Working Group chair, noted that the Working Group has been working on a long-term project to update the investment-related Statements of Statutory Accounting Principles (SSAPs), which are currently focused on the legal form or structure of investments rather than their substance. He noted how opportunity existed, and still exists, to report any item as a bond by acquiring it through a special purpose vehicle (SPV) in the form of a debt instrument, regardless of whether the insurer investor was in a different economic position; i.e., holding the underlying assets directly. For example, under the existing guidance, an SPV could hold equity items, the SPV could issue an instrument in the form of debt (various tranches, but not the residual tranche, which is now a Sch BA investment) with pass-through performance of the equity items, and the reporting entity would be permitted to report that debt issuance from the SPV as a bond, when in actuality they have equity risk. Mr. Bruggeman described that the Statutory Accounting Principles (E) Working Group knew it needed more principle-based bond accounting. Doing so would allow an increasingly innovative asset-backed bond market to be accounted for based upon its substance as opposed to its form.

Mr. Bruggeman said that in fall 2020, a small group of state insurance regulators and industry with detail investment knowledge produced principles and a flowchart of when an investment can be reported as a bond. The group also had initial discussion to increase transparency in reporting with improved classifications on the distinct types of bonds and ABS that qualify for reporting as a bond. In May 2021, the Statutory Accounting Principles (E) Working Group exposed and heard comments on the principles-based bond definition, which included many examples of what would meet the definition. It also expanded the small group of state insurance regulators with industry to get more perspectives for staff direction. After much discussion and clarifying examples, the Statutory Accounting Principles (E) Working Group exposed a revised principles-based bond
definition and an issue paper for a public comment period ending May 6, and it directed NAIC staff to begin amending language for state insurance regulators’ review. During the Spring National Meeting, the Statutory Accounting Principles (E) Working Group received comments and an update regarding potential reporting options to revise the bond schedule. After hearing comments, the state insurance regulators directed NAIC staff to develop a more robust illustration of the reporting proposal selected, with a choice for certain ABS bonds to be on a bond sub-schedule versus wedging in with sub-total lines, and with a goal to expose in May. The direction also noted that NAIC staff should continue to work with interested parties, especially category descriptions.

c. **Reliance on Rating Agencies**

Commissioner White noted that another area the Committee is looking at is the role of rating agencies. The key role that rating agencies play in the value of insurer investments again ties into this concern over how the industry is reacting to the low interest rate environment. He said the Committee has been asking if there is an overreliance on rating agencies, and if so, how can it address that.

Ms. Mears described how the Valuation of Securities (E) Task Force had initiated several steps to look at how the NAIC uses rating agency ratings in the assignment of NAIC designations. The first is a proposal from Securities Valuation Office (SVO) staff to add market-data analytical fields for bond investments to the annual statement instructions. She described how the proposed amendment, if adopted, would be a first step towards achieving a core recommendation from the former Rating Agency (E) Working Group to the Committee in 2010 to lessen the NAIC’s reliance on rating agency ratings by looking at other measures of risk. The proposed additional fields would include market yield, interest rate sensitivity measures like effective duration and convexity, and risk premium indications, among others. After this critical analytical information on bond risk is reported, the Task Force and the SVO will be able to review for inconsistencies that may appear between these risk measures and the reported rating and determine if additional changes are needed.

Ms. Mears noted that the Valuation of Securities (E) Task Force sent informational referrals on this proposal to the Life Actuarial (A) Task Force and the Capital Adequacy (E) Task Force as this information could be useful in the achievement of their objectives and charges. She said the Valuation of Securities (E) Task Force anticipates continued coordination with the Statutory Accounting Principles (E) Working Group and its updates to the bond reporting schedules.

Ms. Mears explained that another key effort is the establishment of an ad hoc discussion group that includes state insurance regulators, insurance company staff, and NAIC staff. The ad hoc group is talking through the issue of the NAIC’s reliance on rating agency ratings and the rating inconsistencies across rating organizations observed by the SVO and reported to the Task Force in their memorandum from November of 2021. Some key objectives of this ad hoc group include: 1) establishing a framework of qualitative and quantitative criteria for being a credit rating provider (CRP) to the NAIC; 2) eliminating or minimizing RBC arbitrage opportunities between CRP ratings and asset classes; 3) defining a repeatable quantitative process to evaluate rating performance for all rating agencies consistent with RBC factors; and 4) considering how the incorporation of market data noted earlier can be used to identify potential misalignments of risk. Finally, the SVO continues to make targeted recommendations to the Task Force to address specific issues with ratings. The most recent include proposed changes to the definition of principal protected securities to include synthetic variants of these securities not previously contemplated, and an updated definition of securities with non-payment risks other than traditional credit risk that will need to be reviewed by the SVO.

Ms. Mears explained that a key to many of these efforts is the SVO need for additional technology resources. This will become more of an issue as the group takes on some of these additional responsibilities that are more analytically intensive. Finally, the NAIC’s Structured Securities Group (SSG), which currently models residential mortgage-backed securities (RMBS) and commercial mortgage-backed securities (CMBS) for designation and
capital purposes, is looking at the possibility of modeling additional asset classes to lessen the NAIC’s reliance on rating agency ratings for these complex investment structures.

d. **Asset Adequacy Testing for Complex Assets**

Commissioner White said that not all of the work in this area is being done in the Committee. He noted several ongoing projects in the Life Actuarial (A) Task Force, adding that the Committee and in particular Director Judith L. French (OH) are engaged with those. He asked Mr. Anderson to provide an update on a proposed actuarial guideline to address certain high risk or “high yield” assets in an insurer’s asset adequacy testing.

Mr. Andersen discussed the development of a new actuarial guideline related to asset holdings and their related risks. He noted that the work was part of the coordinated efforts of the NAIC, overseen by the Macroprudential (E) Working Group, to ensure appropriate regulation of the developments seen regarding an increase in private equity and complex assets in the life insurance industry. He explained that the Life Actuarial (A) Task Force is focused on aspects related to reserve adequacy and, as a result, working to help ensure life insurers involved in complex assets will be able to pay claims even if those assets do not perform as expected. Mr. Andersen noted during its most recent meeting, the Life Actuarial (A) Task Force met to discuss comments on a first draft of an actuarial guideline that would provide documentation and sensitivity testing requirements on life insurers engaged in such activity. Mr. Anderson noted that the guideline was expected to be adopted by the NAIC at the Summer National meeting in early August. He said, however, that partly due to the aggressive time frame, some of the more controversial aspects that were in the first draft, including application of guardrails that could directly affect the financials of some insurers, will be deferred to later discussions that are not part of the aggressive 2022 time frame. He said that the resulting documentation and sensitivity tests that will likely be included in the 2022 guideline adoption will provide information to state insurance regulators, including: analysis of the risks of the complex assets, details underlying the assumptions on how those assets will perform, expectations on the sophistication of the company models matching the complexity of the assets, identification of practices in determining fair values for assets that do not have deep markets, information on privately-originated assets and fees, and assurance that any counterparty risk related to reinsurance deals are considered and documented. He concluded by noting that over the next several weeks, there will be movement to turn the first draft into a final draft that is ready for adoption.

e. **ESG**

Commissioner White introduced Mr. Boerner, Life Actuarial (A) Task Force chair, who updated the Committee on a new economic scenario generator (ESG) that is intended to better capture the potential for lower interest rates for extended periods, which is lacking in the current ESG.

Mr. Boerner provided background on the work, noting that in 2017, the American Academy of Actuaries (Academy) notified the Life Actuarial (A) Task Force that it did not have the resources to maintain the prescribed ESGs, except in their current form until a suitable replacement could be found. In June 2019, the Financial Stability (E) Task Force noted a potential deficiency in the prescribed ESGs related to a limited reflection of extended periods of low and even negative interest rates and requested the Valuation Analysis (E) Working Group assess the macro prudential risk to insurance organizations in the U.S. with a focus on variable annuity writers. He noted that in July 2019, the Life Actuarial (A) Task Force and Life Risk-Based Capital (E) Working Group requested that NAIC staff consider issuing a request for proposal (RFP) for a vendor to build and maintain a new ESG to be used in the determination of statutory reserves and capital. After extensive work with state insurance regulators and ESG subject matter experts (SMEs) from the life insurance industry, the NAIC issued the RFP for a new ESG in March 2020.
Mr. Boerner stated that upon reviewing proposals from six companies, Conning was selected as the ESG vendor and approved by the Executive (EX) Committee in September 2020. After the contract was in place with Conning, an ESG Drafting Group comprised of state insurance regulators, Conning staff, and NAIC staff was formed to develop ESG recommendations to the Life Actuarial (A) Task Force and the Life Risk-Based Capital (E) Working Group. To incorporate more industry feedback into the process, industry SMEs were added to the ESG Drafting Group in June 2021, which met weekly until recently to focus more attention on planning a June field test. He noted that any ESG for field testing or a final ESG is composed of three sets of scenarios: 1) those from a Treasury model; 2) those from an Equity model; and 3) those from a Corporate Bond model. With such models in mind, a few collaborative examples over the course of the ESG Drafting Group discussions, where state insurance regulators incorporated feedback from the industry SMEs, included 1) using statistics and input from the SMEs to develop the acceptance criteria for the Treasury model; 2) directing Conning to produce scenarios according to alternative calibration suggested by SMEs and including the alternative calibration as one of the proposed Treasury models to field test; and 3) directing Conning to alter the international equity indices to align the fund’s expected returns on a risk/reward basis relative to the U.S. large cap fund for the Equity model.

Mr. Boerner said that it was also planned for Conning to work on development of an SME-proposed “simplified corporate bond model” after the field test begins. Conning’s corporate bond model is able to reproduce the key dynamics of bond returns. However, some of the information in this model is proprietary. The SMEs’ simplified corporate bond model is intended to be fully transparent and nonproprietary. The development of such a simplified corporate bond model involves a significant effort, which would not make it in time for a June field test. However, such a simplified corporate bond model would focus on having similar scenarios as the Conning corporate bond model so that use of the Conning corporate bond model will be relevant for the June field test.

Mr. Boerner noted that achieving the June field test is especially important to help determine the ESG’s impact on industry reserves and capital and to help state insurance regulators understand the materiality of technical issues brought up by the industry SMEs. In place of the ESG Drafting Group meetings, the state insurance regulators have transitioned to conducting weekly meetings with state insurance regulators, industry SMEs, Conning staff, and NAIC staff to plan for the June field test. This is in addition to weekly planning meetings, which also include American Council of Life Insurers (ACLI) and Academy representation to plan for future efforts and meetings of the ESG initiative. Mr. Boerner noted next steps that would take place prior to the ESG June field test include: 1) refining the recommended ESG models for field testing; 2) building out field test specifications, instructions for participants, and a results template; 3) determining the final set of field test participants and field test product coverage; and 4) preparing the necessary scenario sets for delivery to field test participants.

Mr. Boerner said the steps that would occur after the June field test include: 1) analyzing results of the field test; 2) adjusting ESG models as appropriate where model office programs may help inform appropriate adjustments; 3) planning for a follow-up field test early next year to test adjusted models; and 4) discussing results of that field test. He also noted that if the ESG models were ready for implementation, then work on implementation for 2024 would begin if timing permits. He explained that the steps will involve: 1) joint open meetings of the Task Force and the Life Risk-Based Capital (E) Working Group; 2) continued planning meetings, including early next year field test planning calls; and 3) ESG Drafting Group meetings as needed.

Commissioner White stated his appreciation for all of the chairs who provided updates on these important initiatives, as well as all the state insurance regulators involved in developing the work. He stated it should be clear to the Committee that a lot of great work is occurring, with a great deal of coordination also occurring on these projects—all intended to address the low yield environment. He said that it is not the intent of the Committee to overrule the details of work of these groups and noted that each of these projects are important and are supported by the Committee given their objectives. Ms. To agreed with Commissioner White and noted her support for all of the projects given each is intended to address the asset and spread risk faced by the industry.
She stressed that they were also important to level the playing field and described how she expects the industry to fully participate and collaborate in helping to develop these solutions to these issues.

Having no further business, the Financial Condition (E) Committee adjourned.
The Financial Condition (E) Committee met Jan. 12, 2022, in joint session with the RBC Investment Risk and Evaluation (E) Working Group of the Capital Adequacy (E) Task Force. The following Committee members participated: Scott A. White, Chair, represented by Doug Stolte (VA); Michael Conway, Vice Chair, represented by Rolf Kaumann (CO); Dana Popish Severinghaus represented by Vincent Tsang (IL); Amy L. Beard represented by Roy Eft (IN); Eric A. Cioppa represented by Vanessa Sullivan (ME); Chlora Lindley-Myers represented by John Rehagen (MO); Mike Chaney represented by David Browning (MS); Marlene Caride (NJ); Russell Toal and Leatrice Geckler (NM); Adrienne A. Harris represented by Bob Kasinow (NY); Judith L. French represented by Tom Botsko and Dale Bruggeman (OH); Raymond G. Farmer (SC); Cassie Brown represented by Jamie Walker (TX); Nathan Houdek (WI); and Jeff Rude (WY). The following Working Group members participated: Philip Barlow, Chair (DC); Wanchin Chou (CT); Ray Spudeck (FL); Kevin Clark and Carrie Mears (IA); Vincent Tsang (IL); Fred Andersen (MN); William Leung and Debbie Doggett (MO); Lindsay Crawford (NE); Bob Kasinow and Bill Carmello (NY); Tom Botsko and Dale Bruggeman (OH); Mike Boerner and Rachel Hemphill (TX); Steve Drutz and Tim Hays (WA); and Amy Malm (WI).

1. Discussed Phase II of a Bond Factor Proposal for Structured and Asset-Backed Securities

Mr. Stolte discussed his objectives for the conference call: 1) officially handoff the two projects Commissioner White spoke about at the 2021 Fall National Meeting related to asset-backed securities RBC changes and residual interest securities to the new Working Group; and 2) give some direction to the Working Group on the first of those issues. He provided a recap of some of the items Commissioner White spoke about at the 2021 Fall National Meeting to address the first part of the first objective.

Mr. Stolte stated that in 2021, the Life Risk-Based Capital (E) Working Group received a proposal from Moody’s Investors Service (Moody’s) and the American Council of Life Insurers (ACLI) that ultimately included the new bond factors adopted for the life RBC formula for year-end 2021. Most importantly, within that proposal, it was suggested that in the future, the NAIC should consider a second phase to such work to look at other asset classes of fixed income securities. Mr. Stolte noted that the life insurance industry has been challenged with the continued low interest rate issues, but the Committee and its task forces and working groups have also spent a great deal of time talking about the industry’s search of yield and a shift away from corporate debt holdings towards structured securities and other asset-backed securities, particularly collateralized loan obligations (CLOs). He noted that these types of securities tend to carry more tail risk than a typical corporate debt offering, and state insurance regulators need to start thinking about that tail risk more explicitly in the RBC formula for such types of assets. He stated that there were basically two ways the NAIC could take on this work: 1) use the model used for variable annuities and mortgage guaranty insurance a few years ago where the NAIC issues a request for proposal (RFP) on a project and then hires a consultant that the NAIC controls, but it gets reimbursement commitments from members of the industry before doing so; and 2) use the approach the ACLI used during the bond factor proposal last year where the state insurance regulators control the scope of work before the ACLI puts out a bid, and the ACLI funds the project. He noted that either approach could work, but one of the reasons he wanted to have this call in early January was in case there was a strong sentiment to have the NAIC contract this work since that would require the commissioner to take such a proposal to the Executive (EX) Committee, perhaps during the Commissioners’ Conference in early February. He discussed how Mr. Barlow and Dan Daveline (NAIC) have experience with both and can help to facilitate either approach.
Mr. Stolte suggested that before moving into this idea of hiring a consultant, Commissioner White wanted to suggest the release of a 45-day public comment period after the call. The purpose of such a request would be to solicit if members of the industry, and perhaps consultants that follow the NAIC work, have views on possible methodologies that could achieve the objective of capturing the tail risk on CLOs and other structured securities and asset-backed securities. Mr. Stolte noted that Commissioner White’s suggestion was that ultimately, it will be up to the RBC Investment Risk and Evaluation (E) Working Group to determine which of the recommended methodologies are chosen, as well as various other details. He described how Commissioner White envisioned how the NAIC data on CLO stress tests could be used to back into a factor, or how other methods, such as that used for residential mortgage-backed securities (RMBS) and commercial mortgage-backed securities (CMBS), could be used. He added that for other asset classes, perhaps some form of ratings is used where the consultant can prove the effectiveness of some ratings, or perhaps some ratings with adjustments. He noted his hope that the Working Group and Securities Valuation Office (SVO) staff could possibly review the proposals in March and select a methodology(ies) before the Spring National Meeting to where a consultant could be hired after the Spring National Meeting and possibly come back to the Working Group with specific proposed factors by the Summer National Meeting; then, perhaps the Working Group could adopt something by the end of the year. He noted that Commissioner White knows that this is an aggressive timetable, but he believes an aggressive goal should be set.

Superintendent Toal stated that he believes Commissioner White’s proposal is logical, and he supports it and his proposed timeline. Mr. Barlow stated his appreciation for the background information and thinking, and he noted that he looks forward to chairing the Working Group. He stated his support for considering more granular investment factors on certain investments, at least for the life RBC formula, but there would need to be more discussion at the Working Group or the Capital Adequacy (E) Task Force on whether the same is needed for the property/casualty (P/C) formula and the health formula. He also stated that he strongly supports not having the NAIC contract a consultant but instead having the Working Group direct the engagement by the industry of such a consultant, noting that the latter worked well for the life RBC bond factors adopted in 2021. He stated that he has some concerns with the proposed timeline, and he stated that while a similar timeline worked for the 2021 bond factors, a lot of leg work was done by the American Academy of Actuaries (Academy) that does not exist for this proposal. He also discussed the need for the project to complete a proper risk analysis to determine the appropriate factors, noting the potential for a lack of data on newer types of securities. Mr. Stolte responded that he would be certain to communicate Mr. Barlow’s concerns to Commissioner White. Superintendent Toal indicated that he respectfully disagrees with Mr. Barlow’s comments about the reasonableness of the timeline, as well as how he believes it would be better if the NAIC controlled the consultant simply for objectivity. Mr. Stolte responded that he would be certain to communicate Superintendent’s Toal’s concerns to Commissioner White. Mr. Spudeck stated that he supports the comments made by Mr. Barlow related to the process to use, noting that under that process, the state insurance regulators would still be in control of the work. He also noted that he believes the proposed timeline is not just aggressive but aspirational. He noted that the work could begin, but depending upon the depth and granularity chosen, it could be very labor intensive. He also suggested avoiding applying it to health companies, at least initially. Mr. Botsko stated his support for Mr. Barlow’s comments, and he noted the importance of how this as well as future work is coordinated with the Task Force. Mr. Stolte responded that his comments would be noted.

2. Discussed SSAP No. 43 Residual Interests

Mr. Stolte noted that the next issues deal with residual interests where the underlying issue affects the Statutory Accounting Principles (E) Working Group, the Valuation of Securities (E) Task Force, and the various RBC formulas and RBC groups. He noted that Commissioner White was made aware that there had already been some informal coordination among the chairs of these groups. He asked if some of the key members of those groups—Mr. Barlow, Mr. Bruggeman, and Ms. Mears—could briefly discuss each of their views on plans to coordinate activities
Mr. Barlow noted his support for this work, bearing in mind the incentives for this type of change, and he noted his goal to make RBC not be the issue for investments in these types of structures. He looks forward to working with the other groups, but like the first issue, consideration will need to be given to whether such changes are needed for the health and P/C formulas. Mr. Bruggeman stated his agreement with Mr. Barlow from the sense that development of a factor will be a challenge. He discussed how these will be reported within Schedule BA, but currently, there is no detailed reporting to capture these. However, he hopes that with a new blanks proposal, the NAIC can at least capture the impact on the asset valuation reserve (AVR). He stated that he also agrees with Mr. Barlow with respect to whether this need for health and P/C remains to be seen. Ms. Mears stated her agreement with Mr. Barlow and Mr. Bruggeman, and she noted that materiality is something else she wants to look at. She also questions if there could be some overlap between this issue and the issue discussed within the first agenda item. She suggested that the request for comments be revised to solicit information on the availability of data on residual interests, and she wonders about how the availability of collateral may need to be considered as well.

Having no further business, the Financial Condition (E) Committee and RBC Investment Risk and Evaluation (E) Working Group adjourned.

[Attachment One-Joint Call January 12 E min.docx]
The Group Capital Calculation (E) Working Group of the Financial Condition (E) Committee met Feb. 9, 2022. The following Working Group members participated: John Rehagen, Chair (MO); Kathy Belfi, Vice Chair (CT); Susan Bernard (CA); Philip Barlow (DC); Ray Spudeck (FL); Carrie Mears (IA); Susan Berry (IL); Roy Eft (IN); John Turchi (MA); Judy Weaver (MI); Kathleen Orth (MN); Justin Schrader (NE); David Wolf (NJ); Bob Kasinow (NY); Dale Bruggeman and Tim Biler (OH); Melissa Greiner and Kimberly Rankin (PA); Trey Hancock (TN); Jamie Walker (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI).

1. **Adopted its 2021 Fall National Meeting Minutes**

The Working Group met Nov. 22 and took the following action: 1) adopted its Nov. 8, 2021; Sept. 8, 2021; and Summer National Meeting minutes, which included the following action: a) exposed a staff memorandum that includes possible group capital calculation (GCC) modifications for a public comment period ending Dec. 23, 2021; b) exposed clarifying changes to the GCC instructions that were previously provided to the Working Group and the public as part of the GCC Trial Implementation for a public comment period ending Dec. 8, 2021; c) discussed comments on maintenance documents and proposed revisions; d) discussed comments on a draft referral to the Capital Adequacy (E) Task Force; and e) adopted recommended changes to the Financial Analysis Handbook that incorporate guidance on utilizing the GCC and subsequently distributed these changes to the Financial Analysis Solvency Tools (E) Working Group; and 2) discussed the results of the GCC Trial Implementation.

Ms. Belfi made a motion, seconded by Mr. Spudeck, to adopt the Working Group’s Nov. 22, 2021, minutes (see NAIC Proceedings – Fall 2021, Financial Condition (E) Committee, Attachment Two). The motion passed unanimously.

2. **Discussed Comments Received on Possible Changes to the 2022 GCC**

Mr. Rehagen announced his objectives for the conference call: 1) discuss each of the issues (Attachment Two-A) and the related comments (Attachment Two-B) from America’s Health Insurance Plans (AHIP) and the American Council of Life Insurers (ACLI); and 2) ask the Working Group to make decisions on each of those issues. He noted that for those issues that the Working Group chooses to make a change to the GCC, he will ask NAIC staff to develop a revised template and instructions with such changes incorporated. The revised template and instructions will be exposed for a public comment period and be discussed on the Working Group’s next conference call. Mr. Rehagen stated that ultimately, he wants the Working Group to adopt a revised template and instructions that will be used for year-end 2022 so all parties can begin to prepare for the year-end filing. He stated that year-end 2022 will be the NAIC’s first year for the GCC filing with its published template and instructions, and it will be available for any state that is requiring it for their groups for year-end 2022. He also stated that NAIC staff expect to develop training for companies for the summer of 2022, while training for the state insurance regulators will be closer to the expected filing date. He emphasized that while the Working Group will be making some changes for 2022, that is not meant to suggest that changes will not occur in the future. In fact, he noted that once the GCC is adopted for year-end 2022, he wants the Working Group to adopt its form and procedures documents that will be used in the future for any party suggesting a change to the GCC.
a. **Eliminate Stress Scenario**

Mr. Rehagen reminded call participants of the fact that in 2021, the GCC Trial Implementation template and instructions included a stress scenario; but at that time, the Working Group concluded that it would not include a stress scenario in the GCC’s first implemented version. He noted, however, that the Working Group had already discussed that it may decide in future years to add different stresses to the GCC as a supplemental disclosure. He reiterated this point in response to a written comment from AHIP, but he noted that if the Working Group desires to include stresses in the future, just like any other proposal, the state insurance regulators will expose such a proposal, and the details of that proposal will be debated just like any other new proposal. He asked if any Working Group members are opposed to removing the GCC Trial Implementation stress scenario out of the 2022 GCC. No members objected to removing this item.

b. **Debt Allowance**

Mr. Rehagen discussed his belief that NAIC staff were under the impression from comments made by interested parties in 2021 that there was a desire to increase the debt allowance to account for procyclicality. NAIC staff had proposed a way to deal with that in the exposed memorandum, which he suggested was not well received from AHIP and the ACLI based upon their written comments. He provided his opinion that he believes the Working Group was already in favor of the levels of debt that were included in the GCC Trial Implementation, and he suggested moving forward without any change to the GCC Trial Implementation because he believes the Working Group has already recognized that most senior debt is already being recognized in the GCC. He noted that if members of the Working Group have strong feelings, they can consider the comments from AHIP and the ACLI, but he reiterated that he is inclined to keep the debt levels the same as they were during the GCC Trial Implementation. It was noted how the current debt allowance is at 75% in total, and the subcategory limits are 30% for senior debt and 15% for hybrid debt, but both subcategory limits are a percentage of available capital plus senior and hybrid debt. Mr. Rehagen stated that he believes the ACLI is proposing some changes to that construct that would likely just push up those limits a little.

Tom Finnell (AHIP) noted that AHIP does not have strong feelings on the NAIC staff proposal to increase the debt allowance, and it certainly would not stand in the way, but it would not carry the flag for it either. He noted that AHIP’s concerns regarding the NAIC staff proposal are more directed at including triggers based upon an external factor, which seems similar to relying on rating agency ratings, which showed triggers can have issues as witnessed during the financial crisis. Mr. Rehagen asked AHIP if that means it is supportive of leaving the current debt limits as is, as opposed to making the changes recommended by NAIC staff. Mr. Finnell responded affirmatively.

Kristin Abbott (ACLI) noted the ACLI comment it would consider a technical correction to the exposed NAIC staff proposal, and she asked Martin Mair (MetLife) to expand on the ACLI views on the issue. Mr. Mair stated that what the ACLI is proposing is that the subcategories be a percentage of the total category. He described that if one went back to the original debt framework and its cap of 50% and considers the total debt allowance has been increased to 75%, the senior debt limit and the hybrid debt limit should both be increased. With the ACLI proposal, if one takes those subcategories on a percentage basis, then the senior debt should now be 45% instead of 30%, and the hybrid would be 22.5% instead of 15%. Mr. Mair described how the NAIC staff memo suggests an adjustable debt limit, and the ACLI proposal is that as the total debt limit increases, the subcategories should automatically be increased, which the ACLI sees as a technical correction to the NAIC staff proposal.

Ned Tyrrell (NAIC) asked for clarification on the proposal, noting that it seems that the ACLI proposal is simpler but less nuanced. He noted that under the ACLI proposal, adjusting subcategories described by Mr. Mair would result in a higher amount of debt being added into the available capital. Mr. Mair responded that the ACLI proposal is intended to align the subcategory limits with the total limit. Mr. Tyrrell noted the importance of looking at the
fact that the current limits use a different denominator for the subcategories as the total limit. Specifically, he noted that the total limit of 75% is a percentage of available capital excluding debt, while the subcategories are a percentage of available capital plus total debt. He added that consequently, a group could have a situation where one limit is binding but the other is not. He stated that for most groups, in particular life groups, the debt is concentrated as senior debt, so the subcategory is the binding limit. Mr. Rehagen agreed with Mr. Tyrrell, and he noted that there is not really an existing issue with the current debt limits, and for most companies, all debt was allowed as in addition to available capital. He noted that in summary, he does not believe a change is necessary, but what Mr. Mair is describing is something that could be studied. He asked if any Working Group members believe this is something the Working Group should make a change to the debt limit today.

Mr. Bruggeman offered an example to demonstrate the impact of the proposed change from the ACLI. In his example, a group has available capital of $100 million, and in such a situation, 75% of the total capital would provide the group with an additional $75 million, for a total of $175 million used in the calculation. Then, applying the 30% and 15% to the $175 million, the total allowance is over $78 million from the two individual amounts. Changing the subcategory percentages as well as the rest of the proposal has the result of increasing the amount of debt that can be added into the available capital and count toward the GCC because of the different denominator, and Mr. Bruggeman believes that is the point Mr. Tyrrell was making. He added that they were not trying to match up the 30% and the 15% with the $75 million additional capitals allowed from debt; it is 30% of $175 million. Mr. Tyrrell confirmed that is what is currently embedded within the current GCC. Mr. Bruggeman confirmed that he does not believe a change needs to be made to the debt limit at this time for the proposal. Mr. Barlow asked whether a group would be more restricted if it has a lot of hybrid debt and not much senior debt. Mr. Bruggeman responded that this is correct, as the group would not be able to recognize all of that in the group capital numerator. Mr. Rehagen asked if any Working Group members are opposed to keeping the current debt limit template the same with no changes from this proposal or any suggested modifications from the ACLI. No members objected to keeping the GCC the same for the current debt limits.

Lou Felice (NAIC) suggested that the issue being discussed is one the NAIC may want to keep an eye on because not every group is going to get to 75% of the $175 million; some may only be at 60%, in which case the mathematics changes a bit. Consequently, there will likely be some cases where there is some haircut on the amount of debt that the group can carry simply because it does not have 75% of its otherwise available capital total. Mr. Rehagen agreed, noting that as state insurance regulators begin to receive their filings, to the extent that several such groups are being finalized, it is something the Working Group can look at again more closely. Mr. Bruggeman clarified that the current limit is not allowing groups to obtain debt; rather, it is simply limiting how much debt can be added into the existing available capital and counted within the GCC.

c. **Eliminate Sensitivity Test Related to “Other Debt”**

Mr. Rehagen noted that NAIC staff had proposed the elimination of the sensitivity test around the other debt; given that the industry was not opposed, the proposed change will be made unless Working Group members express disagreement. No members disagreed with the proposal elimination.

d. **Non-Risk Sensitive Foreign Jurisdiction**

Ms. Abbott stated that ACLI members have varying perspectives on this issue; some prefer 50% because 100% can be viewed as punitive, and it gives zero credit for all available capital that is above the required capital. Also, a 100% factor treats capital from those jurisdictions as not existing. Ms. Abbott noted that this is why the ACLI believes 50% seems like a reasonable middle ground for now, and perhaps the Working Group or others could undertake some study to determine if that is the appropriate level. Mr. Rehagen stated that he believes the ACLI proposal is reasonable, and while he does not know exactly what such a proposal that may come from the industry
may look like, he is supportive of reducing the factor to 50% for now, but a different approach could be considered in the future. He asked if any Working Group members are opposed to making the change proposed by NAIC staff. No members objected.

e. Schedule 1 Related Changes

Mr. Finnell described how AHIP’s comments are intended to be helpful. He noted that while AHIP is not too concerned where the information is captured, it has numbers who believe in constructing a template that has everything listed in one place. He noted that if it gets broken up in different spots, AHIP believes that would make the process a little more cumbersome. He stated that he also does not believe the state insurance regulators would want to take the items on the template. Ms. Abbott discussed how the ACLI supports efforts to streamline Schedule 1. She noted that the ACLI believes it is important for state insurance regulators to have the detail they need, and the ACLI supports the NAIC staff recommendation to include the information elsewhere in the template. Mr. Rehagen noted that it does not appear that there is agreement between the interested parties on the way to move forward. He stated that he does not have strong opinions, but the first time a company fills the GCC out, it is going to present them with some challenges and confusion. He noted, however, that he believes it will become easier after the first year; therefore, he stated that he is not inclined to make a change at this time. He noted that this is not to suggest that future changes cannot be considered, but he does not want to make a change at this time. Mr. Spudeck agreed stating that he prefers to make no changes at this time, and the GCC instructions is a living document that can always be changed in the future. Mr. Bruggeman noted that there are some oddities when going through the Schedule 1. He noted that if a group elects to exclude the state insurance regulators and then elects to include them, depending upon the situation, when the equity values are rolled up and then onto the schedules, it can create some confusion. He noted that if the group is going from statutory accounting to U.S. generally accepted accounting principles (GAAP) accounting, it gets a little odd if a company all of a sudden says exclude and the state insurance regulator says include. He stated that the dollars kind of flow funny, and he noted that he is testing a couple of groups to see what happens, including double counting, but those things can be part of the training or just need to be handled with care. Mr. Rehagen noted how Missouri would probably be a guinea pig this year because it will require several groups to complete it in 2022. Mr. Bruggeman confirmed that the template could be maintained as it is for now, and no changes are needed at this time. The Working Group did not disagree.

f. Asset Managers

Mr. Rehagen noted that the last item deals with asset managers, who are currently treated as financial entities. The question is whether the industry can bring back a proposal and basis for making a proposal that asset managers be considered financial entities subject to an existing capital requirement. Mr. Rehagen stated that the comments do not include such a proposal, so at this time, he is inclined to keep it as is, but he believes the Working Group would always be open to a proposal in the future. The Working Group did not disagree.

Mr. Rehagen asked the Working Group whether it agrees with asking NAIC staff to develop changes to the template and instructions for year-end 2022 based upon the decisions during the call by the Working Group. He indicated that he would review the template and instructions once the changes have been made, and he suggested that both could be exposed for 30 days once he completes his review. The Working Group did not disagree.

Having no further business, the Group Capital Calculation (E) Working Group adjourned.
MEMORANDUM

TO: Group Capital Calculation (E) Working Group

FROM: Dan Daveline, Ned Tyrrell, and Jane Ren

DATE: Nov. 8, 2021

RE: Staff Proposed Changes as a Result of Trial Implementation

While the 2019 GCC Field Test was invaluable in finalizing major changes to the GCC Template and Instructions before implementation, the 2021 Trial Implementation allowed preparers and reviewers of the GCC to focus more on the nuances of the GCC. As expected, a number of changes to the instructions were suggested during the completion of the template based upon comments and feedback from preparers, which the Working Group has been made aware of with each new release of the same during the trial period. Such changes are included in today’s materials, and we request the Working Group to expose these updated instructions with these modifications. The purpose of this memorandum however is to highlight more material changes, or potentially material changes to the extent the Working Group agrees with the staff recommendation. The following summarizes such changes.

Due to the fact that in accordance with draft procedures for the Working Group, template changes need to be adopted earlier in the year before instructional changes, we have listed those that require template changes first so they can be prioritized in discussions.

Template Changes

1. **Eliminate Stress Scenario**: While some Working Group members may want to consider adding informational stresses to the GCC in the future, the current sentiment among the Working Group seems to suggest that should only be considered after the GCC is fully implemented. Based upon that, it seems appropriate to remove the current stress from the template and the instructions.

2. **Debt Allowance**: One of the reasons the industry proposed the idea of including stress testing in the GCC for the Trial Implementation was to understand the sensitivity of the debt allowance after an economic downturn, therefore addressing its procyclicality. While it’s true that a 30% decline in the capital of a group can impact the debt allowance of the GCC in certain situations, thereby reducing the GCC ratio, NAIC staff does not believe this is a sufficient cause for increasing the debt allowance. As a reminder, the debt allowance is a proxy for the amount of subordinated capital embedded within the GCC and we believe the current allowance approximates this proxy well. A number of volunteers participating in the Trial Implementation suggested the 30% decline was generally not a very reasonable stress given past performance of the industry during previous financial crisis (e.g., 2008/2009 great
recession). However, some of those volunteers pointed to monetary policy during a financial crisis which actually encourages entities of all industries to increase debt as a means to push back against the negative impact. They pointed to the industry’s issuance of debt immediately after COVID and suggested the GCC should not go against these policies. NAIC staff does not disagree in principle, and would suggest a better way to address these points is through a simple annual 10% cap that enables the debt allowance to increase 10% from the prior year, but only during a period where the Federal Reserve has taken a public position of reducing the cost of borrowing through reducing interest rates either by lowering the Federal Funds rates or by purchasing debt instruments (additional if applicable). However, the 10% increase must be reversed once the Federal Reserve has taken action to reverse its trend (e.g., increase rates or reduce purchasing debt instruments). Perhaps this could be formally implemented only upon issuance of “guidance” by the Working Group that is posted to the Website. The details of whether this is appropriate and how it should be considered for adoption should first be determined by the Working Group. NAIC Staff would welcome proposed changes to the GCC instructions and template that could achieve this type of approach or any other similar approach that reduces the perceived procyclicality of the GCC limitation in this area.

3. **Eliminate Sensitivity Test Related to “Other Debt”** — We recognize that some members of the industry continue to believe that the debt allowance should include “other debt” beyond “senior debt” and “hybrid debt”. However, NAIC staff continues to believe that the approach already adopted by the Working Group to have an individual limit for each of those items (30% and 15% respectively) and the overall cap of those two is appropriate for the previous points made regarding how the debt allowance is a proxy for subordinated capital already within the insurance companies. With the previous consideration about adding an additional 10% annual change meeting the criteria, we further support no change to allow other debt. This should be further deliberated by the Working Group before taking action on this issue and input from interested parties may assist the Working Group in such a deliberation.

4. **Non-Risk Sensitive Foreign Jurisdictions**— One recommendation that has already been made by NAIC staff and regulators during the Trial Implementation is a different approach related to non-risk sensitive foreign jurisdictions. In summary, these are jurisdictions whose capital requirements are not responsive to the magnitude and/or nature of an insurer’s risk profile. During the Trial Implementation, a conservative approach was used on this matter, and the template included a capital charge equivalent to 100% of the carrying value of the non-U.S. insurer, which is similar in the life RBC formula today. However, to be clear, since 2010, the life formula has required companies to use a zero value for foreign affiliates statutory carry value is excluded from both total adjusted capital (the numerator) and RBC (the denominator) of the RBC ratio. This was done to level the playing field between stock and mutual insurers on the basis that most stock insurers where such entities are owned by a sister non-insurance holding company rather than the U.S. life insurance company.
NAIC staff suggestion during the Trial implementation was that groups with such entities consider using a lower factor, such as 50% of the carrying value, and be given the option to calculate the insurers capital requirement using RBC (with reasonable simplifications/estimates) if that is preferred to the 50% carrying value. At this point we have included this option in the revised instructions pending approval with exposure of such a substitute.

5. **Schedule 1 Related Questions/Considerations** The last item actually includes a number of separate questions or considerations, but they are all related to Schedule 1 and its purpose. More specifically, from the onset, the regulators have always stated they would like a way to make sure that the GCC includes all of the entities included in Schedule Y. Said differently, as drafted today, the Schedule 1 requires all entities to be listed in the Schedule Y, thereby providing that starting point the regulators requested. However, the instructions do provide one exception, and that is for Schedule A and BA entities, since those entities are already reflected in the RBC, and they don’t result in double counting of capital. Instead, these entities are listed in the Q&A tab, thereby having the effect of keeping the Schedule 1 cleaner, but still allowing a way for the regulator to reconcile back to the Schedule Y if they chose to do so. The question is whether similar exceptions in Schedule 1 should be provided for other entities. This would be for simplicity and to allow the regulator to focus on the entities more easily in the group on that matter. NAIC staff welcomes input on these considerations. The following presents such types of entities to the Working Group in a way to see if they would like a different approach:

a. **Other entities included in the RBC** The GCC does not require non-insurance/non-financial entities to be destacked, but they are required to be included in Schedule 1 and certain limited information included in the Inventory. The question is whether a listing of these entities could be included in the Q&A similar to the Schedule A and BA entities. The idea being that would keep the Schedule 1 cleaner, but for anyone wanting to reconcile back to the Schedule 1, they could do so with the listings in the Q&A. The NAIC raises this issue in case the current approach results in confusion by the preparer, or even for the reviewer since the inventory does not include any calculated capital amounts for these entities.

b. **Consideration of Entities “Not material” or “Excluded” from the GCC ratio** The GCC currently requires the group to list out its entities on Schedule 1, then mark each as either “Included” or “Excluded” for the purpose of calculating the GCC ratio. Specifically, for those that do not meet the GCC definition of material, the entity can “Exclude” them, however they have to be marked as such. The regulator then reviews the same listing and determines for themselves if each entity should be “Included” or “Excluded”. It’s likely that in the majority of situations, once a regulator
determines an entity may be “Excluded” from the ratio, that they will likely be excluded in the future. This is based upon the fact that the general reason for exclusion tends to be driven by the nature of the entity and its risks, and not its size. However, to clarify, not all entities that are once approved to be excluded always will be, and for that reason there will be a continued need for the GCC to provide information that allows the regulator to decide whether they can be excluded. The question is whether such information could be different than what is provided in Schedule 1, and, if so, whether perhaps such information could be reported elsewhere (e.g., Q&A tab). This would reduce the number of entities on Schedule 1 and perhaps help the regulator to focus on material entities in that schedule. The NAIC raises this issue for two reasons; 1) whether a different approach would allow for a more efficient review of the GCC by the regulator; 2) whether the current approach results in confusion by the preparer.

i. **Sensitivity Analysis** There is currently a sensitivity analysis related to “Excluded” entities to help the regulator understand the impact of the excluded entities on the GCC. The question is whether this should be removed. To the extent these excluded entities were no longer included in the Schedule 1 and Inventory, this sensitivity analysis could not be calculated, again, suggesting the need for some type of information to still be captured elsewhere in the GCC.

### Instruction Only Changes

6. **Asset Managers** The GCC currently considers asset managers as financial entities, and therefore subject to a factor of either 2.5%, 5.0%, or 10% of 3-year average revenue (same as other financial entities) based upon the material risk principles defined in Section II of the instructions. Some members of the industry have suggested that asset managers should instead utilize the regulatory capital standards imposed by the Financial Industry Regulatory Authority (FINRA). NAIC staff have always believed that while the base GCC requirements should generally remain the same as the principles under which they have been developed by the Working Group, it’s only natural that it evolves over time to carve out new factors for specific industry’s where a different factor can be supported. As it relates to the current GCC, this would include either specific financial entities having a different factor than those noted above, or potentially even for non-insurance/non-financial industries, a different factor than is used for all other non-insurance/non-financial entities. Additionally, perhaps more specific to the point, one of the GCC principles is that it defers to the specific capital requirements of the regulator of the entity, which in this case may include FINRA to the extent they have specific capital requirements. NAIC staff attempted to gather information on such requirements through the review of FINRA 15c3-1, but it was unclear how such capital requirements practically work as they seem to be more principle-based. NAIC Staff would
recommend the Working Group consider such a request, but only upon deliverance of documentation, including examples, that enable the regulators to understand. This does not need to be a full presentation to the Working Group unless the members indicate such is needed but could instead be full documentation and time for the Working Group to ask questions.
December 22, 2021

Mr. John Rehagen, Chair
Missouri Department of Insurance
Division Director – Financial Institutions & Professional Registration
NAIC Group Capital Calculation Working Group
Via e-mail: ddaveline@naic.org

Re: Comments on NAIC Group Capital Calculation (E) Working Group exposed proposed changes to the Group Capital Calculation (GCC) following the 2021 Trial Implementation

Dear Mr. Rehagen:

The American Council of Life Insurers appreciates the opportunity to comment on the Proposed changes to the Group Capital Calculation (“GCC”) following the 2021 Trial Implementation. We appreciate the significant and thoughtful work that has gone into the GCC framework and the NAIC’s ongoing commitment to developing a GCC that is fit-for-purpose.

ACLI is generally supportive of the proposed changes, however, we do have some comments to provide in relation to the Debt Allowance, Schedule 1 Considerations, and Non-Risk Sensitive Jurisdictions.

Debt Allowance

In 2020, the NAIC agreed to increase the overall debt cap from 50% to 75% but left the subcategory caps unchanged: (1) Senior debt cap remains at 30%; (2) Hybrid debt cap remains at 15%. ACLI suggests that the subcategory caps should instead be set at a percentage of the overall cap: (1) Senior debt cap should be 60% of the overall cap (i.e., the original 30%/50%); and (2) Hybrid debt cap should be at 30% of the overall cap (15%/50%). Having the subcategories as a percentage of the overall cap allows the subcategories to adjust automatically as the overall cap adjusts up and down.

Schedule 1 Considerations

ACLI supports the streamlining of Schedule 1, however, we want to ensure that regulators have the detail they need for entities that are not already included in the GCC via the parent insurer’s RBC. Our recommendation would be to treat immaterial non-insurance/non-financial entities on Schedule Y of an RBC-filing US insurer like non-financial BA and A entities and create a place for them to be included in the GCC.
identified on Input 6. That way, while they are not listed on Schedule 1, they would continue to receive the same treatment as under the parent insurer’s RBC.

**Non-Risk Sensitive Jurisdictions**

ACLI members have varying perspectives on this issue. Some are comfortable with lowering the risk-charge for non-risk sensitive jurisdictions from 100% to 50%. Others believe that to uphold credibility in the GCC, non-risk sensitive jurisdictions should apply an RBC-type charge in the GCC or default to a 100% factor absent any other information. To move materially away from a 100% factor should require analysis and an explanation for why a different factor, in this case 50%, is more appropriate. They do agree with the proposed alteration to allow groups to calculate the insurer’s capital requirement using RBC, with simplifications, if that is preferable to the 100% risk charge approach.

There is potentially room for a compromise on this issue, where the 50% factor is maintained in the GCC Trial Implementation Instructions, but it is clearly labeled as an interim factor until more thorough analysis can be done on the appropriate factor(s) for non-risk-based jurisdictions. Some key items of the GCC are yet to be finalized and/or may change over time, such as scalars and calibration levels. The non-risk-based jurisdiction factors could be added to that list.

**Conclusion**

Thank you for the opportunity to comment. We look forward to continuing to support the efforts of the Working Group and staff as work continues on other GCC elements, like scalar methodology. As always, we would be happy to discuss our comments, or any other issue, with you or your staff at your convenience.

Many thanks,

Kristin Abbott
Group Capital Calculation (E) Working Group – Staff Memo of Proposed Changes to the GCC as a Result of Trial Implementation

Dear Mr. Daveline:

On behalf of AHIP’s member plans, we welcome the opportunity to comment on the Staff Memo of Proposed Changes to the GCC as a Result of Trial Implementation (Staff Memo). Our comments follow and are arranged by the topics captioned in the Staff Memo:

Template Changes

1. Eliminate Stress Scenario – AHIP agrees with Staff Memo’s proposal to eliminate the stress scenarios in the template. Should the working group consider adding those scenarios back to the template later (which is stated as a possibility in the Staff Memo), we would expect that to be subject to another exposure process at that time and that we would again have an opportunity to comment.

2. Debt Allowance – The Staff Memo proposes that the debt allowance currently provided in the GCC Instructions be allowed to increase 10% from the prior year, but only during a period where the Federal Reserve has taken a public position of reducing the cost of borrowing through reducing interest rates either by lowering the Federal Funds rates or by purchasing debt instruments; the 10% increase would then be reversed once the Federal Reserve has taken action to reverse its trend. AHIP is concerned that the proposed 10% decrement in capital when the Federal Reserve reverses its action could have the same systemic impacts of triggers based on rating agency downgrades as was experienced during the financial crisis. The Financial Analysis Handbook guidance that was recently adopted on the use of the GCC suggests that regulatory analysts focus on year-over-year GCC consistency to identify red flags that would trigger a deeper level of regulatory review of the GCC, both of capital resources and of calculated capital. The subject proposal could trigger unintended "red flags" and a deeper regulator review based solely on the toggling of the debt allowance, rather than an underlying economic cause impacting the group. As new debt is issued or debt retired, the true capital picture may thus be clouded by change to the debt allowance. Therefore, AHIP does not support the proposed changes to the debt allowance presented in the Staff Memo.
Schedule 1 Related Questions/Considerations – Relating to "non-insurance/non-financial entities" and "not material/excluded entities," AHIP prefers the current template structure, which has all Schedule Y entities listed in Schedule 1. Including all entities in Schedule 1 provides better controls to ensure completeness and accuracy. Members report that the control process becomes more complicated if they have multiple lists of entities in different places, and especially if entities move from one list to another.

* * * * *

We thank you again for the opportunity to comment and for your patience and consideration of our views. We look forward to discussing them with you further.

Sincerely,

Bob Ridgeway  
Bridgeway@ahip.org

Restructuring Mechanisms (E) Working Group
Virtual Meeting
March 28, 2022

The Restructuring Mechanisms (E) Working Group of the Financial Condition (E) Committee met March 28, 2022. The following Working Group members participated: Elizabeth Kelleher Dwyer, Co-Chair, Matt Gendron, and Jack Broccoli (RI); Andrew Schallhorn, Co-Chair (OK); Mel Anderson (AR); Rolf Kaumann (CO); Kathy Belfi and Jared Kosky (CT); Judy Mottar and Vincent Tsang (IL); Judy Weaver (MI); Fred Andersen (MN); John Rehagen (MO); Lindsay Crawford (NE); Bob Kasinow (NY); Jeffrey Smith (PA); Amy Garcia (TX); Doug Stolte and David Smith (VA); Steve Drutz (WA); and Amy Malm (WI). Also participating was: Bob Wake (ME).

1. Heard Introductory Comments

Superintendent Dwyer stated that it had been some time since the Working Group last met, noting that in December, the Working Group met and discussed a significant number of comments; i.e., over 300 pages of materials. She noted that since that time, NAIC staff reviewed those comments, making changes where they deemed appropriate; then, both co-chairs and their staff began reviewing and developing further changes to address the comments. She stated that Mr. Gendron is on her staff and has done excellent work in wading through all those pages and making suggestions as to changes to the white paper as a result. Both co-chair commissioners then reviewed it, and now the co-chairs are ready for the Working Group to discuss.

2. Adopted a Referral to the Receivership and Insolvency (E) Task Force

Superintendent Dwyer noted that during the Working Group’s discussions, one area that has drawn a lot of strong opinions was in the area of guaranty fund coverage and the need for a policyholder to retain such coverage. She summarized a draft referral letter to the Receivership and Insolvency (E) Task Force that draws upon a recommendation from the National Conference of Insurance Guaranty Funds (NCIGF) made during its most recent comments to the Working Group. She described how the referral envisions that the Task Force would expose a Request for NAIC Model Law Development form taken from the recommendation from the NCIGF, discuss and debate the comments, and hopefully submit a response to the Working Group before the Summer National Meeting on the referral and related Request for NAIC Model Law Development form (Attachment Three-A). Barbara F. Cox (NCIGF) stated that the NCIGF supports the referral and is most eager for the work on the model law amendment to begin that would protect policyholders in this situation. Mr. Wake asked if the intent was to get a rubber stamp on the language included in the Request for NAIC Model Law Development form or whether editing could occur. Superintendent Dwyer responded that there could be some wordsmithing, some likely gaps, or improvements, but the intent is not to tie the hands of the Task Force in any way. Ms. Malm made a motion, seconded by Mr. Drutz, to adopt the referral letter (Attachment Three-B) and distribute it to the Task Force along with the Request for NAIC Model Law Development form. The motion passed unanimously.

3. Discussed Feedback from White Paper Comments

Superintendent Dwyer referred participants on the call to a listing of topics prepared by Mr. Gendron, which is broken up into two lists, one that requires further Working Group discussion and another where there is a desire for the industry and others to provide more suggestions in terms of language to address previous comments (Attachment Three-C). The first list—i.e., items labeled starting with the letter A—represent areas where further Working Group discussion is needed. The second list—i.e., items labeled starting with the letter B—represent
comments where it is not clear how the comment should be addressed in the white paper. In short, the Working Group needs some extra help and is open to anybody who wants to send in a comment letter.

a. **Comment A1**

Mr. Wake noted that he could develop potential language for the Working Group to consider that addresses the previous comment from him. However, he requested clarification on whether the intent was actual best practices that are being recommended to the states or places that are just being provided with an overview. Ms. Weaver asked if some of this guidance will go into the *Financial Analysis Handbook* or if it is just part of developing an overview with more specifics developed later. Mr. Gendron responded that to a certain extent, an overview is being developed; although, the Restructuring Mechanisms (E) Subgroup that is chaired by Virginia is coming up with specific financial best practices. He added that whether those standards developed later become accreditation standards is also part of the charges given to the Working Group, but it would be premature to consider those until after the best practices are developed and finalized. Mr. Rehagen noted that his preference would highlight that there are a lot of unanswered questions and concerns that still exist.

b. **Comment A2**

Mr. Wake noted that he seemed to recall that the white paper suggested that a state insurance regulator does not need as high of a standard of review on a corporate division (CD) as an insurance business transfer (IBT), and he questioned that premise. He said he could develop potential language for the Working Group to consider that addresses the previous comment from him.

c. **Comment A3**

Mr. Gendron stated that the next comment pertains to the principles developed by the American Council of Life Insurers (ACLI), which the white paper catalogues. He stated that he believes the ACLI suggested that its best practices be adopted as recommendations, which he believes is a decision to be made by the Working Group. Wayne Mehlham (ACLI) agreed that the ACLI would like its principles adopted as recommendations. Mr. Kosky stated that Connecticut is opposed to the ACLI principle that requires an independent expert. He suggested that such use should be at the discretion of the commissioner for several reasons. Mr. David Smith asked if any decision on making the independence a requirement could be held until the Subgroup discusses and decides on the matter. He noted that the Subgroup’s proposed best practices and foundational principles document will be coming out shortly and asked if that decision could be deferred for the Subgroup.

d. **Comment A4**

Superintendent Dwyer discussed how this issue is likely one that would require a referral to another NAIC group to develop changes to the *Protected Cell Company Model Act* (#290).

e. **Comment A5**

Mr. David Smith noted that he is not sure if this is something that the Subgroup is looking at. He noted that there may be some crossover with statutory accounting where all companies are required to follow. He said to that point, it does not distinguish between an IBT and a CD, and he believes Virginia tries to look for other issues. Mr. Gendron noted that he believes if the Subgroup is focused on the rules of the road for both types, regardless of type, this comment should be addressed, as that is the point of the comment.
f. **Comment A6**

Mr. Gendron noted that he believes the next comment is likely another one that is consistent with what Ms. Weaver noted earlier. To the extent that the Subgroup develops best practices, it will likely have addressed this comment; then, the suggested accreditation requirements can be developed as a recommendation after the procedures to be used by all states are developed.

g. **Comment A7**

Andy Vetter (Northwestern Mutual) stated that as one of the companies signing the comment letter, Northwestern Mutual is looking for a pathway to uniformity on what should be just baseline requirements for jurisdictions that permit these transactions, including not allowing for long-term care (LTC) insurers. Superintendent Dwyer asked if there is a desire to make a statement that would be a standard that long-term cannot be included. Mr. Andersen responded that he would prefer if such a statement is not made, noting that he does not want to completely shut the door, especially with something that might otherwise just slip through a single state. However, he noted that he wants to keep things open for something at the national level if developed. Superintendent Dwyer asked about adding language such as, “The Restructuring Mechanisms (E) Working Group strongly discourages states from entertaining the use of IBT or CD transactions involving long-term care insurance, but if a state does consider, they should bring to a particular NAIC group or a national group for their consideration of some type of national solution, before doing so.” Mr. Rehagen agreed with this language and noted at least taking such action with all the states in which the policyholders for the LTC carrier reside. Mr. Tsang noted that there are two ways of looking at such a transaction, one in which the long-term care insurance (LTCI) business is transferred and another where all the non-LTCI business is transferred. Superintendent Dwyer asked NAIC staff to develop language for possible inclusion in the white paper after review by Rhode Island and Oklahoma. Mr. Rehagen also asked that the domestic state of the insurer consider all the states having to receive notice and approve, as well as all the policyholders, which perhaps could become some type of accreditation standard.

h. **Comment A8**

Mr. David Smith stated that while there may be some of the issues identified in this comment that are not covered by the work of the Subgroup, he believes most of them are. He suggested that the Working Group see what the Subgroup develops, then revisit the matter after that.

i. **Comment A9**

Mr. Gendron suggested that the Working Group add language similar to what was suggested by the National Workers Compensation Reinsurance Association (NWCRA), which suggests that states coordinate with the NWCRA after transactions are paid by the resulting insurer.

j. **Comment B1**

Mr. Gendron requested input from other attorneys and interested parties that may have access to a fuller source of some of these decisions in the public sector and the public domain. Comments can come from any party.

k. **Comment B2**

Superintendent Dwyer recommended that this section be modified as recommended by Mr. Wake by starting with the conclusive action by the court. Mr. Gendron stated that he found a companion case to this case in one
of the Channel Islands, and it is going through a similar time period, but he requested assistance from someone more familiar with the non-U.S. laws and legal research.

i. Comment B3

Superintendent Dwyer stated that the comment from Mr. Wake suggested that the introduction of IBTs in the white paper be followed by a description of CDs that are at a similar level, and then a comparison between IBTs and CDs. She noted that it is natural that the co-chairs have more knowledge on IBTs and that someone with a similar knowledge of CDs offers suggestions to address this point. Mr. Kosky indicated that he could assist in drafting language for this section, but he suggested that since they Working Group had not yet approved of such a transaction, it might also be helpful to have another state add more color into what it develops that has reviewed a transaction. Superintendent Dwyer stated that she hopes Illinois can assist with that additional color added.

m. Comment B4

Mr. Gendron noted that this item is similar to comment B3, and he expects that the need for additional language from a CD is the same.

n. Comment B5

Mr. Gendron stated that he is open to adding language to address this point, and he asked that if Virginia wants to offer some language, he could take it from there. Mr. Stolte noted that he believes the redline version does a good job of addressing the Virginia issue, but the one thing that is not clear is that the anti-novation statute is not just applicable to assumption reinsurance, but all transactions. He added that the Virginia State Corporation Commission (SCC) would most likely never subject itself to another state jurisdiction since Virginia is a court of record. He added that with respect to the Yosemite transaction, Virginia would hold the insurer accountable for non-compliance with the Virginia Statute, and Virginia does not have a specific suggestion developed yet. He stated that what is needed is an accreditation mandate, with a model law or regulation that has uniformity. He noted that what was at issue is about transferring the fundamental insurance promise from one legal entity to another legal entity. He noted Virginia is not opposed to IBT or CD laws, but it believes a model law or regulation is needed. He summarized that he believes the issue calls for a model law and model regulation that becomes an accreditation standard. Superintendent Dwyer asked if there is a better title for incorporating the Virginia points through a new section label. Mr. Stolte responded that he simply referred to the law as anti-novation. Mr. Wake suggested that consent requirements might be the better terminology. Mr. Stolte responded that that is what the statute requires. Mr. Rehagen noted that a section is still needed for other states with assumption reinsurance statutes. Mr. Wake suggested that it could read, “assumption reinsurance model and other acts that limit notations without the affirmative consent of the policyholder”. Superintendent Dwyer indicated that the Working Group would reword it with a similar thought in mind.

o. Comment B6

Superintendent Dwyer noted that this was an issue raised by Mr. Wake. Mr. Gendron noted that Mr. Wake provided a lot of good comments, and only a small number of them were not incorporated. Mr. Gendron requested language to address this particular one of only a few where language had not been developed to address this.
p. **Comment B7**

Mr. Gendron noted that Mr. Wake raised a good question about whether recourse is possible under the United Kingdom (UK) law, and a bankruptcy citation was included. He noted that since he is not an expert, he requires assistance.

q. **Comment B8**

Mr. Gendron noted that he tried to address this issue but questioned if it could be better clarified by those with more expertise in this area, and he requested assistance.

r. **Comment B9**

Mr. Gendron stated that several comments were received about adverse consequences to policyholders of long duration products, and while he tried to address this comment, he noted that he was not sure he did the topic justice; therefore, he requested assistance.

Superintendent Dwyer asked if exposing the comments for a 30-day public comment period would be a sufficient time period for individuals to review and develop revised language for the list just reviewed. Ms. Weaver agreed with the 30-day comment period. Mr. Gendron said that would likely allow the Working Group to synthesize something in about a month and a half and then have a call in about two weeks. Superintendent Dwyer stated that comments would be due April 29. NAIC staff were asked to: 1) post the listing of topics discussed on the call as a means to solicit feedback and language; and 2) post the original December 2021 call materials for which the page numbers are used as a reference point in the listing of items that require additional feedback.

Having no further business, the Restructuring Mechanisms (E) Working Group adjourned.
REQUEST FOR NAIC MODEL LAW DEVELOPMENT

This form is intended to gather information to support the development of a new model law or amendment to an existing model law. Prior to development of a new or amended model law, approval of the respective Parent Committee and the NAIC’s Executive Committee is required. The NAIC’s Executive Committee will consider whether the request fits the criteria for model law development. Please complete all questions and provide as much detail as necessary to help in this determination.

Please check whether this is: ☐ New Model Law       or      ☑ Amendment to Existing Model

1. Name of group to be responsible for drafting the model:
   Restructuring Mechanisms (E) Working Group

2. NAIC staff support contact information:
   Dan Daveline
ddaveline@naic.org
   816-783-8134

3. Please provide a brief description of the proposed new model or the amendment(s) to the existing model. If you are proposing a new model, please also provide a proposed title. If an existing model law, please provide the title, attach a current version to this form and reference the section(s) proposed to be amended.
   • Property and Casualty Insurance Guaranty Association Model Act (#540)

   In 2019, the Financial Condition (E) Committee formed the Restructuring Mechanisms (E) Working Group who was charged with the following:

   1. Evaluate and prepare a white paper that:
      a. Addresses the perceived need for restructuring statutes and the issues those statutes are designed to remedy. Also, consider alternatives that insurers are currently employing to achieve similar results.
      b. Summarizes the existing state restructuring statutes.
      c. Addresses the legal issues posed by an order of a court (or approval by an insurance department) in one state affecting the policyholders of other states.
      d. Considers the impact that a restructuring might have on guaranty associations and policyholders that had guaranty fund protection prior to the restructuring.
      e. Identifies and addresses the legal issues associated with restructuring using a protected cell.

   Background for Proposed Change
   This proposed change is being precipitated by discussions within the NAICs Restructuring Mechanisms (E) Working Group initiative, which is focused on documenting in the form of a White Paper, the various issues related to insurance business transfers (IBT) and corporate division (CD) transactions. The number of states adopting laws that permit either of these transactions is still relatively low, however one of the most significant issues that has been discussed during the meetings of the Working Group is the need for policyholders of such transactions to retain guaranty fund coverage. Representatives of the National Conference of Insurance Guaranty Funds (NCIGF) have suggested that an amendment to a state’s guaranty fund act, or other related law is necessary to address this issue. They have specifically suggested that the NAIC update the Property and Casualty Insurance Guaranty Association Model Act to incorporate specific language they have developed to address this issue. This will better enable those states that have incorporated #540 into their laws to update their laws for this important issue. This change is needed to ensure policyholders in all states retain their coverage, which is necessary regardless of how few states adopt changes to their laws to allow IBT and CD transactions.

   Scope of the Proposed Revisions to Model 540

© 2022 National Association of Insurance Commissioners   1
The scope of the request is limited to addressing the issue of guaranty fund coverage and as a result would be limited to specific suggestion of additional language within the definition of “Covered Claim” within #540. The following is the additional language (underlined language) that is being proposed to be added to Section 5, Definitions, within #540.

H. “Covered claim” means the following:

   (a) The claimant or insured is a resident of this State at the time of the insured event, provided that for entities other than an individual, the residence of a claimant, insured or policyholder is the State in which its principal place of business is located at the time of the insured event; or

   (b) The claim is a first party claim for damage to property with a permanent location in this State.

   (c) Notwithstanding any other provision in this Act, an insurance policy issued by a member insurer and later allocated, transferred, assumed by or otherwise made the sole responsibility of another insurer, pursuant to a state statute providing for the division of an insurance company or the statutory assumption or transfer of designated policies and under which there is no remaining obligation to the transferring entity (commonly known as “Division” or “Insurance Business Transfer” statutes), shall be considered to have been issued by a member insurer which is an Insolvent Insurer for the purposes of this Act in the event that the insurer to which the policy has been allocated, transferred, assumed or otherwise made the sole responsibility of is placed in liquidation.

   (d) An insurance policy that was issued by a non-member insurer and later allocated, transferred, assumed by or otherwise made the sole responsibility of a member insurer under a state statute described in subsection (a) shall not be considered to have been issued by a member insurer for the purposes of this Act.

4. Does the model law meet the Model Law Criteria? ☑ Yes or ☐ No (Check one)

   (If answering no to any of these questions, please reevaluate charge and proceed accordingly to address issues).

   a. Does the subject of the model law necessitate a national standard and require uniformity amongst all states? ☑ Yes or ☐ No (Check one)

      If yes, please explain why:

      This proposed change is needed to ensure policyholders in all states retain their guaranty fund coverage, which is necessary regardless of how few states adopted changes to their laws to allow IBT and CD transactions.

      It should be noted that with respect to guaranty fund coverage for life and health insurance, the National Organization of Life and Health Insurance Guaranty Associations are suggesting a different approach in addressing the same issue which centers around the need for such transaction to require the assuming or resulting insurer to be licensed in all states where the issuing insurer was licensed or ever was licensed to retain the needed coverage for policyholders.

   b. Does Committee believe NAIC members should devote significant regulator and Association resources to educate, communicate and support this model law? ☑ Yes or ☐ No (Check one)

5. What is the likelihood that your Committee will be able to draft and adopt the model law within one year from the date of Executive Committee approval?

   ☑ 1   ☐ 2   ☐ 3   ☐ 4   ☐ 5 (Check one)

   High Likelihood          Low Likelihood
Explanation, if necessary:

6. What is the likelihood that a minimum two-thirds majority of NAIC members would ultimately vote to adopt the proposed model law?

☐ 1 ☐ 2 ☐ 3 ☐ 4 ☐ 5  

High Likelihood Low Likelihood

Explanation, if necessary: See previous discussion.

7. What is the likelihood that state legislatures will adopt the model law in a uniform manner within three years of adoption by the NAIC?

☐ 1 ☐ 2 ☐ 3 ☐ 4 ☐ 5  

High Likelihood Low Likelihood

Explanation, if necessary:
At this juncture, the changes in concepts being considered are simple and because they have the potential to reduce expenses incurred by receivership estates, we believe such changes will be widely supported by all parties.

8. Is this model law referenced in the NAIC Accreditation Standards? If so, does the standard require the model law to be adopted in a substantially similar manner?

Not referenced in Accreditation Standards.

9. Is this model law in response to or impacted by federal laws or regulations? If yes, please explain.

No.
MEMORANDUM

TO: Receivership and Insolvency (E) Task Force

FROM: Restructuring Mechanisms (E) Working Group

RE: Referral Regarding Potential Change to NAIC Model

The NAIC formed the Restructuring Mechanisms (E) Working Group because of recent changes to state laws in the areas of Insurance Business Transfer (IBT) and Corporate Divisions (CD). The Working Group is in the process of drafting a white paper that, among other things, documents the issues the statutes are designed to address and some of the legal issues. Specific to that point, during public discussions, the Working Group received input from both the National Conference of Insurance Guaranty Funds (NCIGF) and the National Organization of Life and Health Insurance Guaranty Associations (NOLHGA) on how policyholders can retain guaranty fund coverage after such a transaction. The following summarizes such input, which is further explained at the end of this memorandum.

NCIGF – The NCIGF’s position is that where there was guaranty fund coverage before the IBT or CD, state insurance regulators should ensure that there is coverage after the IBT or CD. An IBT or CD should not reduce, eliminate, or in any way affect guaranty fund coverage. A CD or IBT should not create, expand, or in any way affect coverage. The NCIGF suggested that possible technical gaps may exist in states that have adopted the Property and Casualty Insurance Guaranty Association Model Act (#540) and proposed specific changes to the model to address.

NOLHGA – Described the three conditions that are needed for guaranty fund coverage after an IBT or CD. In general, restructuring statutes (or state insurance regulators reviewing proposed restructuring transactions) should clearly provide that assuming or resulting insurers must be licensed so policyholders maintain eligibility for guaranty association coverage from the same guaranty association that would have provided coverage immediately prior to a restructuring transaction. This means the resulting insurer must be licensed in all states where the transferring insurer was licensed or had ever been licensed with respect to the policies being transferred.

To that end, attached is a Request for NAIC Model Law Development form, which sets forth proposed changes to Model #540, as suggested by the NCIGF. The Working Group is not the technical expert in this area, but it does support the intent of retaining guaranty fund coverage; therefore, the Working Group asks the Receivership and Insolvency (E) Task Force to review the attached and determine where
such changes could generally be supported. We are not trying to determine if this is the exact change to make to the model at this time, but rather whether the Task Force supports the project and would be willing to complete an update to the language if approved by the Financial Condition (E) Committee and the Executive (EX) Committee. To the extent possible, perhaps the Task Force could expose the attached Request for NAIC Model Law Development form, debate it, and return it to the Working Group prior to the Summer National Meeting, where the request could be made to the Financial Condition (E) Committee.

Please let the Working Group know if you have any questions.

The following is a more comprehensive summary of the positions of the NGIGF and the NOLHGA:

The Working Group received input from the NOLHGA about the concerns for insurance consumers of personal lines life and health insurance business. The NOLHGA indicated that for there to be guaranty association coverage in the event of a life or health insurer insolvency, there are three conditions that must be present. Those conditions are:

1. The consumer seeking protection must be an eligible person under the guaranty association statute; typically, this is achieved by being a resident of the guaranty association’s state at the time of the insurer’s liquidation.

2. The product must be a covered policy.

3. The failed insurer for which protection is being sought must be a member insurer of the guaranty association of the state where the policyholder resides. To be a member insurer, the insurer must be licensed in that state or have been licensed in the state to write the lines of business covered by the guaranty association.

In most states, coverage can also be provided for an “orphan” policyholder of the insurer by the guaranty association in the insolvent insurer’s domestic state. Orphan policyholders are policyholders who are residents of states where the guaranty association cannot provide coverage because the insolvent insurer is not a member insurer due to not being licensed at the time required by the Life and Health Insurance Guaranty Association Model Act (#520). The orphan policyholder situation can arise when a policyholder purchases a policy in a state where the issuing company is licensed—i.e., is a member of the guaranty association—but subsequently moves to a state where the issuing insurance company was never licensed; i.e., is not a member of the guaranty association. The provision in Model #520, and the laws of most states, that provides that orphan policies are covered by the guaranty association in the insolvent insurer’s domestic state is designed to plug the gap in these rare situations.

A key factor when considering a life or health IBT or CD transaction is whether the resulting insurer is or will be a member insurer in each state. If the resulting insurer is a member insurer of the same guaranty associations as the transferring insurer, guaranty association coverage will be preserved and not changed.
for all policyholders. Of course, specific guaranty association coverage will be determined if/when the resulting insurer is placed under an order of liquidation with a finding of insolvency. If the resulting insurer is not a member insurer of the same guaranty associations as the transferring insurer, policyholders may lose guaranty association coverage or be covered as orphans by the guaranty association in the insurer’s domestic state. Orphan coverage was not designed to plug the gap in this situation. Shifting the coverage obligation to the domestic state guaranty association could result in guaranty association coverage being concentrated in that state.

To address these concerns with respect to IBT and CD transactions involving life or health insurance, restructuring statutes (or state insurance regulators reviewing proposed restructuring transactions) should clearly provide that assuming or resulting insurers must be licensed so policyholders maintain eligibility for guaranty association coverage from the same guaranty association that would have provided coverage immediately prior to a restructuring transaction. This means the resulting insurer must be licensed in all states where the transferring insurer was licensed or had ever been licensed with respect to the policies being transferred.

One interpretation of Model #540 is that based on the definitions of “Covered Claim,” “Member Insurer,” “Insolvent Insurer,” and “Assumed Claim Transaction,” an orphan policyholder could not be covered by the state guarantee association. Consequently, there is a concern that no guaranty association coverage would be provided if policies are transferred to a nonmember insurer. Many property/casualty (P/C) guaranty fund statutes require that the policy be issued by the now-insolvent insurer, and it must have been licensed either at the time of issue or when the insured event occurred. However, these limitations are designed to avoid coverage being provided when the policy at issue did not “contribute” to the association, which would not exist in the case of an assessable policy later transferred to an insurer that was not a member at the time the policy was issued. Moreover, the restrictions exist to prevent claims resulting from a company regulated as surplus lines, or a similar structure, to benefit from the protections afforded licensed business when a licensed company is liquidated.

The NCIGF’s position is that where there was guaranty fund coverage before the IBT or CD, state insurance regulators should ensure there is coverage after the IBT or CD. An IBT or CD should not reduce, eliminate, or in any way affect guaranty fund coverage. A CD or IBT should not create, expand, or in any way affect coverage. The NCIGF suggested that possible technical gaps may exist in states that have adopted Model #540. These gaps could include the definitions of “Covered Claim,” “Member Insurer,” “Insolvent Insurer,” and “Assumed Claims Transaction” found in Section 5 of the model.

Fulfilling this intent will likely require that P/C guaranty fund statutes be amended in each of the states where the original insurer was a member of a guaranty association before the transaction becomes final. The NCIGF indicated that it created a subcommittee to address this issue and oversee a coordinated national effort to enact the necessary changes in each state. It should be noted that the same membership
and timing issues that are raised by IBTs could also be raised in the case of any other policy novation, including the assumption reinsurance transactions.
### Topics for WG to discuss:

</table>
The National Treatment and Coordination (E) Working Group of the Financial Condition (E) Committee met March 9, 2022. The following Working Group members participated: Jay Buschmann Co-Chair (MO); Cameron Piatt, Co-Chair (OH); Cindy Hathaway (CO); William Mitchell (CT); Alisa Pritchard (DE); Carolyn Morgan and Alison Sterett (FL); Stewart Guerin and Mike Boutwell (LA); Kari Leonard (MT); Karen Feather (PA); Amy Garcia (TX); Jay Sueoka (UT); Ron Pastuch (WA); Amy Malm (WI); and Linda Johnson (WY).

1. **Heard Opening Remarks**

Mr. Piatt provided a summary of his involvement with the Working group and announced his position as co-chair. He added that Debbie Doggett (MO) could not attend today’s meeting due to scheduling conflicts.

2. **Tabled Proposal 2021-07 (Instructions Regarding Company Responses)**

Mr. Piatt said the proposal for company response to state inquiries has been tabled. During discussions on a regulator-only call, it was determined that states have processes or procedures in place on the timing of company responses. Hearing no objections, the Working Group tabled further discussion of proposal 2021-07.

3. **Heard an Update on the Domestic Surplus Lines Insurers Drafting Group**

Crystal Brown (NAIC) said the Working Group established the Domestic Surplus Lines Insurers Drafting Group to address a memo from the Chief Financial Regulator Forum for domestic surplus lines insurers (DSLI). The Drafting Group reviewed and provided responses to each question from the original memo in the response memo of Attachment 4 in the materials. The Drafting Group addressed these questions through discussion, surveys, and a review of each DSLI state’s statute/regulation.

Through the Drafting Group’s work, it developed the DSLI chart that provides insurers with the information needed to become a DSLI. Only states that allow for DSLI carriers are included on the chart. Most states utilize the Uniform Certificate of Authority Application (UCAA) primary application for the authorization of a DSLI. The chart provides the following information: 1) statute/regulation reference; 2) additional requirements; 3) board of director requirements; 4) minimum capital and surplus requirements; 5) requirements for existing admitted business fees; and 6) state website and contact information.

Ms. Garcia made a motion, seconded by Mr. Sueoka, to approve the responses to the Chief Financial Regulator Forum’s referral (Attachment Four-A). The motion passed unanimously.

4. **Heard an Update on the Biographical Affidavit Database Project**

Jane Barr (NAIC) said the bio database project will move forward effective April 1. During the development phase, industry and state insurance regulator user input is imperative to the development of the electronic application functionality. Ms. Barr mentioned that volunteers are needed for development and testing. Any interested users should email Ms. Barr directly. Ms. Barr added that the ad hoc group will resume its semi-monthly calls to complete the domestic corporate amendment application and instructions. Once the domestic corporate amendment application is completed, the ad hoc group will move on to the Form A application and Form E
notifications for development in 2023 with an implementation date sometime at the beginning of 2024. Next, the current expansion and foreign corporate amendment applications will be enhanced with new technology and developed on the new format by year-end 2024. During 2024, the ad hoc group will begin discussions on the biographical affidavit database. Input from affiants, industry, third-party vendors, and state users will be imperative to the success of this database. Ms. Barr stressed that volunteers are needed during the information gathering process and development of the electronic tool, and all interested parties should contact Ms. Barr.

5. Discussed Other Matters

Ms. Brown explained that an issue was brought to the attention of NAIC staff regarding individual affiants that held multiple board positions within a group; i.e., 50+. Attached in the materials are several templates that NAIC staff created that could be used in lieu of the blank addendum pages currently provided on the website. Jeff Martin (UnitedHealth Group—UHG) said the UHG has multiple affiants that hold numerous positions in their holding group that the UHG has used when submitting bios that he believes would work for other companies in a similar structure. The attached proposal removes the addendum pages and creates a separate attachment with options that would fit the scenario of the affiant. Ms. Barr added that this is just a temporary work around until the bio database is developed. Ms. Brown said one example allows for multiple positions listed for one company so multiple entries did not need to be created on the blank addendum page.

Gina Hudson (Liberty Mutual) said Liberty Mutual lists an attachment along with the cover letter because she believes the cover letter would include this information. Ms. Brown said the cover letter does not request all the pertinent information currently listed on the bio. Mr. Martin asked if the Working Group will consider creating a template for licenses and memberships. Ms. Barr suggested that any other examples should be emailed to NAIC staff by March 18, and those templates will be included in the current exposure with comments due by April 20.

Ms. Barr explained that the biographical database project timeline will move forward in 2022 with the following:

- Roll out of the primary and redomestication applications.
- The development and testing phase will take most of the second and third quarter with an anticipated release date by October or November. The Working Group may decide to release the application on Jan. 1, 2023, instead of late 2022.
- Next will be the domestic corporate amendment application in 2023 followed by the Form A and Form E.
- The Form A application will tie into the existing regulatory only Form A database, so testing may take longer; the anticipated release date may be year-end 2023.
- Then, the conversion of the current expansion and foreign state corporate amendment applications will be enhanced and follow the new format with a release date in early to mid-2024.
- Last will be the development of the biographical affidavit database; testing and development will include industry, third-party vendors, and state users.

Ms. Barr said the ad hoc group will work continuously throughout the year, and volunteers should specify which project they want to participate in. She added that it is anticipated that all states will move forward with the electronic application. Any questions should be directed to Ms. Barr.

The next Working Group meeting is tentatively set for mid-May.

Having no further business, the National Treatment and Coordination (E) Working Group adjourned.
MEMORANDUM

TO: Judy Weaver (MI), facilitator of the Chief Financial Regulator Forum

FROM: National Treatment and Coordination (E) Working Group

DATE: March 21, 2022

RE: Authorization of Domestic Surplus Lines Insurers

On its August 26, 2020 call, the National Treatment and Coordination (E) Working Group received a referral from the Chief Financial Regulator Forum on how to best handle Domestic Surplus Lines Insurers (DSLIs). The Working Group established a drafting group made up of both National Treatment and Coordination (E) Working Group and Surplus Lines (C) Working Group members to address the referral through discussion and surveys to the DSLI states. The drafting group addressed the following questions and developed guidance as requested in the referral:

- How to handle active or runoff admitted market premium written within the state of domicile post-DSLI authorization;
  - Of the states that responded to the initial survey a majority indicated that active or runoff admitted market premium was not allowed after conversion to a DSLI. Companies must either:
    - allow for the admitted business to lapse or expire;
    - be removed from the company through novation, cancellation, non-renewal or some other mechanism approved by the Director or Commissioner;
    - be assumed by a direct writer; or
    - cease writing admitted business on a specific date and allow the admitted block to go into runoff.

- How to address a DSLI that requests authorization to write both admitted and nonadmitted premiums in the state of domicile (unless prohibited in the legislation);
  - Based on the drafting group’s review of each state’s statute and the survey, state’s do not allow a DSLI to carry admitted policies on their books.

- The best approach for an analyst or examiner to review and test a sample of admitted polices that were subsequently converted to the nonadmitted market for a newly authorized DSLI;
  - The drafting group did not find that any state’s allowed for admitted business to be converted to non-admitted business.

- An understanding as to whether a DSLI with admitted premiums would continue to be eligible for guaranty fund protection;
Based on the drafting group’s review of each state’s statute and the surveys, no states allow for DSLI carrier to carry admitted business on their books and non-admitted business is not eligible for guaranty fund coverage.

- The best way for the state department of insurance to disclose authorized DSLIs; and
  - Based on the survey results, many states report DSLI carriers on their state website. Carriers also report DSLI status on Schedule T.
- The best method to be assured that the insurer is accurately reporting DSLI status, on its Schedule T, for its state of domicile.
  - The Annual Statement Instructions provide a DSLI status for those entities that are a DSLI.

The drafting group utilized the information obtained through their review of the state statutes and survey responses to develop a chart regarding the requirements for becoming a new DSLI carrier or converting from an admitted carrier to a DSLI. The chart was referred to the Working Group for review and posting to the UCAA webpage.

If you have any questions regarding the information outlined or guidance proposed, please contact NAIC staff: Jane Barr or Crystal Brown.

Cc: Debbie Doggett, Cameron Piatt NTC(E)WG co-chairs; NAIC staff support: Jane Barr, Crystal Brown and Andy Daleo
To:        Commissioner Scott White (VA), Chair, Financial Condition (E) Committee

From:     Richard Kohan (NC), Chair, Mortgage Guaranty Insurance (E) Working Group

Date:     March 7, 2022

Re:       Updated Request for Extension

The Mortgage Guaranty Insurance (E) Working Group is in the process of fulfilling its charge to update the Mortgage Guaranty Insurance Model Act (Model #630). The Working Group anticipated completion of its Charge by the 2022 Spring National Meeting. As Chair, I would like to update that request to the Financial Condition (E) Committee in accordance with NAIC procedures.

As background, the NAIC engaged Milliman to assist the Working Group in developing a Mortgage Guaranty Insurance Capital Model that will become part of the new capital standard for mortgage insurers. Subsequent to discussion at the 2019 Fall National Meeting, the Working Group exposed the Draft Mortgage Guaranty Insurance Capital Model, Mortgage Guaranty Insurance Model Act (#630), Mortgage Guaranty Insurance Standards Manual, and a proposed Mortgage Guaranty Insurance Exhibit. In 2021, the Working Group finalized the Mortgage Guaranty Insurance Exhibit that was integrated into the 2021 financial statement. The data for year-end 2021 will be provided by April 1, 2022 and will require a thorough analysis. After the data is analyzed, I anticipate reconvening the Working Group to continue our work Model #630.

At this time, we believe we can complete this work by the 2023 Spring National Meeting. The request for additional time is to allow the necessary time to address comments regarding the above referenced documents and ensure that a comprehensive regulatory framework is in place to effectively regulate these complex insurance entities. We are aware that we have been unable to complete our work within the one-year time period expected under the NAIC model law process and request an extension until the 2023 Spring National Meeting in order to finalize a product that can be adopted by the domestic states of the mortgage insurers, as well as any other state also wishing to adopt the same.

The Accounting Practices and Procedures (E) Task Force met in Kansas City, MO, April 5, 2022. The following Task Force members participated: Cassie Brown, Chair, represented by Jamie Walker (TX); Mike Causey, Vice Chair, represented by Jackie Obusek (NC); Lori K. Wing-Heier represented by David Phifer (AK); Jim L. Ridling represented by Sheila Travis and Blasé Abreo (AL); Alan McClain represented by Leo Liu (AR); Ricardo Lara represented by Kim Hudson and Susan Bernard (CA); Andrew N. Mais represented by William Arfanis (CT); Karima M. Woods represented by N. Kevin Brown (DC); Trinidad Navarro, represented by Rylynn Brown (DE); David Altmaier represented by Carolyn Morgan (FL); Doug Ommen represented by Carrie Mears and Daniel Mathis (IA); Dean L. Cameron represented by Amber Re (ID); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Bill Clark (KY); James J. Donelon represented by Melissa Gibson (LA); Gary D. Anderson represented by John Turchi (MA); Pending represented by Vanessa Sullivan (ME); Anita G. Fox represented by Judy Weaver (MI); Grace Arnold represented by Kathleen Orth (MN); Chlora Lindley-Myers represented by John Rehagen (MO); Jon Godfread represented by Matt Fischer (ND); Eric Dunning represented by Lindsay Crawford (NE); Chris Nicoloopoulos represented by Pat Gosselin (NH); Marlene Caride represented by David Wolf (NJ); Russell Toal represented by Beatrice Geckler (NM); Adrienne A. Harris represented by Bob Kasinow (NY); Judith L. French represented by Dale Braggman (OH); Michael Humphreys represented by Melissa Greiner and Matt Milford (PA); Elizabeth Kelleher Dwyer represented by Jack Broccoli (RI); Carter Lawrence represented by Trey Hancock (TN); Jon Pike represented by Jake Garn (UT); Scott A. White represented by David Smith, Doug Stolte and Greg Chew (VA); Michael S. Pieciak represented by Dan Petterson and Karen Ducharme (VT); Mike Kreidler represented by Steve Drutz (WA); Nathan Houdek represented by Amy Malm (WI); Allan L. McVey represented by Jamie Taylor (WV); and Jeff Rude represented by Linda Johnson (WY).

1. **Adopted its 2021 Fall National Meeting Minutes**

Mr. Braggman provided the report of the Statutory Accounting Principles (E) Working Group, which met April 4 to adopt its March 2, 2022; Jan. 27, 2022; and 2021 Fall National Meeting minutes. During its March 2, 2022, meeting, the Working Group exposed agenda item 2019-21: Proposed Bond Definition, a revised principle-based bond definition, and a draft issue paper for a public comment period ending May 6. In addition, the motion directed NAIC staff to continue discussions with industry on the bond definition and develop proposed reporting changes and potential statutory accounting revisions for subsequent exposure. Mr. Braggman stated that during its Jan. 27, 2022, meeting, the Working Group adopted two clarifications to statutory accounting principles (SAP), which were effective for year-end 2021 reporting. Agenda item 2021-31 reflects clarifications to life and health reinsurance disclosures and placement in the auditor report. Agenda item 2021-18 revisions remove reference to the “standard scenario” in Statement of Statutory Accounting Principles (SSAP) No. 108—Derivatives Hedging Variable Annuity Guarantees to ensure consistency with VM-21, Requirements for Principle-Based Reserves for Variable Annuities.

Mr. Braggman stated that the Working Group adopted the following clarifications to statutory accounting guidance:
A. **SSAP No. 22R—Leases:** Revisions reject *Accounting Standards Update (ASU) 2021-05, Leases (Topic 842), Lessors—Certain Leases with Variable Lease Payments* for statutory accounting. (Ref #2021-29)

B. **SSAP No. 43R—Loan-Backed and Structured Securities:** Revisions reflect updated NAIC designation and designation category guidance adopted by the Valuation of Securities (E) Task Force to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) for residential mortgage-backed securities (RMBS) and commercial mortgage-backed securities (CMBS). (Ref #2021-23)

C. **SSAP No. 68—Business Combinations and Goodwill:** Revisions reject *ASU 2021-03, Intangibles – Goodwill and Other (Topic 350) – Accounting Alternative for Evaluating Triggering Events* for statutory accounting. (Ref #2021-28)

D. **SSAP No. 72—Surplus and Quasi-Reorganizations:** Revisions reject *ASU 2021-04, Earnings Per Share (Topic 260), Debt—Modifications and Extinguishments (Subtopic 470-50), Compensation—Stock Compensation (Topic 718), and Derivatives and Hedging—Contracts in Entity's Own Equity (Subtopic 815-40)—Issuer's Accounting for Certain Modifications or Exchanges of Freestanding Equity-Classified Written Call Options* for statutory accounting while incorporating guidance on how to account for changes in fair values for written call options. (Ref #2021-27)

E. Adopted editorial revisions to update various terminology references of “substantive” and “nonsubstantive” to reflect “new SAP concept” and “SAP clarification.” Mr. Bruggeman noted that this completes the referral from the Financial Condition (E) Committee. (Ref #2021-26EP)

F. **Appendix D—Nonapplicable GAAP Pronouncements:** Revisions reject *ASU 2021-06, Presentation of Financial Statements (Topic 205), Financial Services—Depository and Lending (Topic 942), and Financial Services—Investment Companies (Topic 946), Amendments to SEC Paragraphs Pursuant to SEC Final Rule Releases No. 33-10786, Amendments to Financial Disclosures about Acquired and Disposed Businesses, and No. 33-10835, Update of Statistical Disclosures for Bank and Savings and Loan Registrants* as not applicable for statutory accounting. (Ref #2021-30)

G. **Agenda items resulting in blanks proposals without statutory revisions:**

   i. **Adopted an agenda item supporting supplemental reporting of subsidiary, controlled, and affiliated (SCA) entities investments reported in Schedule D, Part 6, Section 1: Valuation of Shares of Subsidiary, Controlled or Affiliated Companies.** The supplemental data is consistent with *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities* disclosure requirements and did not result in statutory revisions. The adoption reflects support for blanks proposal 2022-02 BWG sponsored by the Working Group. (Ref #2021-22)

   ii. **Adopted an agenda item proposing to add a new general interrogatory to require disclosure pertaining to cryptocurrencies directly held or permitted for the remittance of premiums.** This agenda item did not result in statutory revisions. However, adoption reflects support for the blanks proposal 2022-01BWG sponsored by the Working Group. (Ref #2021-24)

Mr. Bruggeman stated that the Working Group exposed the following SAP clarifications to statutory accounting guidance:

Presentation, which identifies factors to consider when deciding how items should be displayed on the financial statements; and 2) Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements, which updates the definitions of an asset and a liability. The Working Group exposed two issue papers for historical documentation of these SAP clarifications. (Ref #2022-01)

B. SSAP No. 22R: Revisions reject ASU 2021-09, Leases (Topic 842), Discount Rate for Lessees That Are Not Public Business Entities for statutory accounting. (Ref #2022-05)

C. SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items: Revisions incorporate certain disclosures from ASU 2021-10, Government Assistance, Disclosures by Business Entities about Government Assistance of terms and provisions of assistance received. (Ref #2022-04)

D. SSAP No. 25—Affiliates and Other Related Parties and SSAP No. 43R: Revisions clarify the identification and reporting requirements for affiliated transactions and incorporate new reporting codes in the investment schedules to identify investments held that involve related parties. The new reporting requirements will identify investments acquired through, or in, related parties, regardless of if they meet the definition of an affiliate. (Ref #2021-21)

E. SSAP No. 47—Uninsured Plans and SSAP No. 68: Revisions reject ASU 2021-08, Business Combinations, Accounting for Contract Assets and Contract Liabilities from Contracts with Customers for statutory accounting. Revisions in SSAP No. 68 also note that the intent is not to modify any U.S. generally accepted accounting principles (GAAP) requirement for the determination of U.S. GAAP book value. (Ref #2022-07)

F. SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies: Revisions propose to either eliminate the audited U.S. tax basis equity valuation exception or clarify that the U.S. tax basis equity audit shall occur at the investee level. (Ref #2022-02)

G. SSAP No. 86—Derivatives: Revisions propose: 1) a new Exhibit A, which will replace both Exhibit A and Exhibit B of SSAP No. 86 that adopts with modification U.S. GAAP guidance in determining hedge effectiveness; and 2) revised measurement methods for excluded components in hedging instruments. The Working Group directed NAIC staff to continue to work with industry representatives on other elements within ASU 2017-12: Derivatives and Hedging: Targeted Improvements to Accounting for Hedging Activities. (Ref #2021-20)

H. SSAP No. 104R—Share-Based Payments: Revisions incorporate the practical expedient from ASU 2021-07, Compensation – Stock Compensation (Topic 718), Determining the Current Price of an Underlying Share for Equity-Classified Share-Based Awards for the current price input, a required component for option-pricing models used in determining fair value for share-based payments. (Ref #2022-06)

I. Interpretation (INT) 22-01: Freddie Mac When-Issued K-Deal (WI Trust) Certificates: A tentative interpretation to clarify that investments in the Freddie Mac “When Issued K-Deal” (WI) Program are in scope of SSAP No. 43R. (Ref #2022-08)

J. Blanks Proposal: Exposed an agenda item that expressed support for a blanks proposal with instructional changes to Schedule T, the State Page, and Accident and Health Policy Experience Exhibit (AHPEE) to clarify guidance for premium adjustments. The instructions clarify that all premium adjustments, including but not limited to federal Affordable Care Act (ACA) premium adjustments related to the risk adjustment program, shall be allocated as premium in the respective jurisdiction. This agenda item does not result in statutory revisions. (Ref #2022-03)
Mr. Bruggeman said the comment period for items exposed during the April 4 meeting—agenda items 2021-21, 2022-03, and 2022-08—is May 6 to allow for consideration of adoption during a meeting anticipated for May. He stated that the comment deadline for all other exposure items is June 3.

Mr. Bruggeman stated that the Working Group reviewed comments and directed NAIC staff on the Bond Proposal Project regarding potential reporting options to revise Schedule D, Part 1: Long-Term Bonds. The update included preliminary responses to certain aspects of those comments. He noted that the Working Group directed NAIC staff to proceed with developing a more robust illustration of proposed reporting revisions for subsequent exposure. (Ref #2019-21)

Mr. Bruggeman stated that the Working Group reviewed comments and directed NAIC staff on SSAP No. 22R on prior exposed revisions intending to clarify that in any scenario in which a lease terminates early, all remaining leasehold improvements shall be immediately expensed. He stated the Working Group directed NAIC staff to continue to work with interested parties to refine the guidance for subsequent consideration. (Ref #2021-25)

Mr. Bruggeman stated that the Working Group received updates on the following items:

A. Heard an update on U.S. GAAP exposures, noting that pending items will be addressed during the normal maintenance process.

B. Received an update on the Working Group referral of agenda item 2019-49: Retroactive Reinsurance Exception regarding diversity in companies applying the retroactive reinsurance exception, which allows certain contracts to be reported prospectively. The Casualty Actuarial and Statistical (C) Task Force discussed this item on March 8. The Task Force directed and formed a small group to further work on this, including drafting instructional revisions to Schedule P – Analysis of Losses and Loss Expenses.

C. Received an update that the Working Group and the Valuation of Securities (E) Task Force both received a comment letter from the American Council of Life Insurers (ACLI) regarding a proposed amendment to the P&P Manual to permit unguaranteed and unrated subsidiary obligors in working capital finance investment (WCFI) transactions. As the Working Group does not have an exposure on this topic, the Working Group noted receipt but does not plan to address comments at this time; the comment letter will be included in the Valuation of Securities (E) Task Force minutes.

Mr. Bruggeman made a motion, seconded by Ms. Weaver to adopt the report of the Statutory Accounting Principles (E) Working Group (Attachment One). The motion passed unanimously.

Ms. Gosselin provided the report of the Blanks (E) Working Group, which met March 29, 2022, and took the following action:

Ms. Gosselin stated that the Working Group adopted its Nov. 16, 2021, minutes, (see NAIC Proceedings – Fall 2021, Accounting Practices and Procedures (E) Task Force, Attachment Two) which included the following action:

A. Adopted proposal 2021-14BWG – Expand the number of lines of business reported on Schedule H to match the lines of business reported on the Health Statement. Modify the instructions so they will be uniform between life/fraternal and property.

B. Adopted its editorial listing.

C. Approved the State Filing Checklists content.
D. Rejected proposal 2021-11BWG requesting to add a new annual statement supplement to the Property/Casualty (P/C) statement to capture exposure data for Annual Statement Lines 4, 19.1, 19.2, and 21.2 of the Exhibit of Premiums and Losses.

E. Deferred proposal 2021-13BWG which adds a new supplement to capture premium and loss data for Annual Statement Lines 17.1, 17.2, and 17.3 of the Exhibit of Premiums and Losses (State Page) – Other Liability by more granular lines of business for a public comment period ending March 4.

F. Exposed seven new proposals for a public comment period ending March 4.

Ms. Gosselin stated that the Working Group adopted its editorial listing and the following proposals:

A. 2021-15BWG – Add a footnote to Exhibit 7 in the Life/Fraternal statement and the Health statement (Life Supplement) to capture the amount of Federal Home Loan Bank (FHLB) funding agreements reported in Columns 1 through 6 of the exhibit (2021-16 SAPWG).

B. 2021-16BWG Modified – For Note 9 – Income Taxes, remove the 9C illustration instructions for the deferred tax asset (DTA) and deferred tax liability (DTL) components, which state, “reporting entities should disclose those items included as ‘Other’ (Lines 2a13, 2e4, 3a5, and 3b3) as additional lines for those items greater than 5% in the printed/PDF filing document,” as the illustration is not set up to accommodate variable lines. Add formulas for calculation of total and subtotal on the illustration for 9C. For Note 15 – Leases, modify the illustrations to add a “Thereafter” line and add a formula for the “Total” line.

C. 2021-17BWG Modified – Modify the Analysis of Operations by Lines of Business in the Health Blank to include all of health lines of business included in the Life/Fraternal Analysis of Operations by Lines of Business – Accident and Health. Add instructions for the new columns and adjust the column references. Add the Health Blank Analysis of Operations by Lines of Business as a supplement to the Life/Fraternal blank with the appropriate instructions and crosschecks. Add crosscheck to the Health Blank Analysis of Operations by Lines of Business to the Life/Fraternal Analysis of Operations by Lines of Business – Accident and Health instructions.

D. 2021-19BWG Modified – Add columns and lines to U&I (Parts 1, 2, 2A, 2B, and 2D) and the Exhibit of Premiums, Enrollment and Utilization in the annual statement to bring the lines of business reporting in line with Life/Fraternal and Property. Add columns and lines to the Exhibit of Premiums, Enrollment and Utilization and U&I Analysis of Claims Unpaid quarterly pages. The appropriate adjustments to the instructions are also being made.

E. 2021-20BWG Modified – Starting at Line 72 of the Life/Fraternal Five-Year Historical, add or delete lines that do not capture the specific lines of business reported on the Life/Fraternal Analysis of Operations by Lines of Business detail pages for life (individual and group), annuities (individual and group), and accident and health (A&H) for Line 33 of those pages.

F. 2021-21BWG Modified – Add instruction to the Investment Schedules General Instructions to exclude non-rated residual tranches or interests from being reported as bonds on Schedule D, Part 1, and add lines to Schedule BA for the reporting of those investments (2021-15 SAPWG).

G. 2021-23BWG Modified – Add a line category for Residual Tranches or Interests in the Asset Valuation Reserve Equity and Other Invested Asset Component blank, and renumber lines below the addition. Modify instructions as appropriate for the added lines.
Ms. Gosselin stated that the Working Group re-exposed proposal 2021-22BWG Modified – Add a new reporting requirement in the investment schedules for investment transactions with related parties. In addition to capturing direct loans in related parties, it will also capture information involving securitizations (or other similar investments) where the related party is a sponsor/originator along with whether the underlying investment is in a related party.

Ms. Gosselin stated that the Working Group deferred proposal 2021-18BWG – Modify the Life Insurance (State Page) to include the line of business detail reported on the Analysis of Operations by Lines of Business pages. Two new Schedule T style pages (Exhibit of Claims Settled During the Current Year and Policy Exhibit) are created to include detail captured by state on the existing Life Insurance (State Page) that could not be included due to limited space. Add definitions for life and annuity products to the lines of business definitions in the health appendix.

Ms. Gosselin stated that the Working Group exposed 11 new proposals for a public comment period ending April 25.

Ms. Gosselin stated that the Working Group received the year-end disclosure memorandum from the Statutory Accounting Principles (E) Working Group.

Ms. Gosselin made a motion, seconded by Ms. Orth, to adopt the report of the Blanks (E) Working Group (Attachment Two). The motion passed unanimously.

Having no further business, the Accounting Practices and Procedures (E) Task Force adjourned.

https://naiconline.sharepoint.com/sites/NAICSupportStaffHub/Member Meetings/2022 NAIC Meetings/Spring National Meeting/Committee Meetings/Financial Condition (E) Committee/Accounting Practices and Procedures (E) TF/minutes/APPTF 4-5-22 minutes.docx
1. **Adopted its March 2, 2022; Jan. 27, 2022; and 2021 Fall National Meeting Minutes**

   The Working Group met March 2, 2022; Jan. 27, 2022; and Dec. 11, 2021. During these meetings, the Working Group took the following action: 1) exposed a revised principles-based bond definition and related issue paper; and 2) received comments on items previously exposed for a public comment period ending Jan. 14, 2022.

   The Working Group also met March 31, 2022, and Feb. 28, 2022, in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) and paragraph 6 (consultations with NAIC staff related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings, to: 1) discuss its Spring National Meeting agenda; and 2) receive information on the bond project development.

   Ms. Walker made a motion, seconded by Ms. Bernard, to adopt the Working Group’s March 2, 2022 (Attachment One-A), Jan. 27, 2022 (Attachment One-B), and Dec. 11, 2021 (see NAIC Proceedings – Fall 2021, Accounting Practices and Procedures (E) Task Force, Attachment One) minutes. The motion passed unanimously.

2. **Adopted Non-Contested Positions**

   The Working Group held a public hearing to review comments (Attachment One-C) on previously exposed items.

   Ms. Malm made a motion, seconded by Mr. Hudson, to adopt the statutory accounting principle (SAP) clarifications, detailed below as non-contested statutory accounting revisions. The motion passed unanimously.

   a. **Agenda Item 2021-24**

      Mr. Bruggeman directed the Working Group to agenda item 2021-24: Cryptocurrency General Interrogatory (Attachment One-D). Jake Stultz (NAIC) stated that this agenda item proposed a new general interrogatory within the annual reporting blanks specific to the use or acceptance of cryptocurrencies. The general interrogatory will capture whether cryptocurrencies are held, identification of which schedules cryptocurrencies held are reported, and whether cryptocurrencies are accepted for the payment of premiums. Mr. Stultz stated that while the agenda item did not propose statutory revisions, adoption will express support for the corresponding Blanks (E) Working Group’s proposal (2022-01BWG), which adds the new general interrogatory to the annual statement for year-end 2022 reporting.
b. **Agenda Item 2021-28**

Mr. Bruggeman directed the Working Group to agenda item 2021-28: ASU 2021-03, Intangibles – Goodwill and Other (Attachment One-E). Jim Pinegar (NAIC) stated that this agenda item reviews Accounting Standards Update (ASU) 2021-03, Intangibles – Goodwill and Other – Accounting Alternative for Evaluating Triggering Events. He stated that ASU 2021-03 provides private companies and not-for-profit entities with an optional accounting alternative for the performance of a goodwill impairment triggering evaluation. The amendments allow for the assessment of goodwill impairment at the end of a reporting period. Mr. Pinegar stated that the statutory accounting authoritative guidance regarding impairment is in Interpretation (INT) 06-07: Definition of Phrase “Other Than Temporary,” and this guidance does not permit the delay of an impairment assessment until a reporting period. He stated that since ASU 2021-03 provided guidance contrary to INT 06-07, this agenda item proposes SAP clarifications in Statement of Statutory Accounting Principles (SSAP) No. 68—Business Combinations and Goodwill to reject ASU 2021-03 for statutory accounting.

c. **Agenda Item 2021-29**

Mr. Bruggeman directed the Working Group to agenda item 2021-29: ASU 2021-05, Variable Lease Payments (Attachment One-F). Mr. Stultz stated that this agenda item reviews ASU 2021-05, Leases (Topic 842): Lessors—Certain Leases with Variable Lease Payments and applies to lessors with lease contracts that have variable lease payments that do not depend on a reference index or rate and/or would have resulted in the lessor being required to recognize a day one selling loss at lease commencement if those leases were classified as sales-type or direct financing lease. He stated that as SSAP No. 22R—Leases requires nearly all leases to be treated as operating leases, adoption of this guidance would be redundant and unnecessary. Accordingly, this agenda item proposes SAP clarifications in SSAP No. 22R to reject ASU 2021-05 for statutory accounting.

d. **Agenda Item 2021-30**

Mr. Bruggeman directed the Working Group to agenda item 2021-30: ASU 2021-06, Amendments to SEC Paragraphs (Attachment One-G). Mr. Stultz stated that this agenda item reviews ASU 2021-06, Presentation of Financial Statements (Topic 205), Financial Services—Depository and Lending (Topic 942), and Financial Services—Investment Companies (Topic 946), Amendments to SEC Paragraphs Pursuant to SEC Final Rule Releases No. 33-10786, Amendments to Financial Disclosures about Acquired and Disposed Businesses, and No. 33-10835, Update of Statistical Disclosures for Bank and Savings and Loan Registrants. He stated that ASU 2021-06 provides formatting and paragraph references applicable to U.S. Securities and Exchange Commission (SEC) registrants. This agenda item proposes SAP clarifications to Appendix D—Nonapplicable GAAP Pronouncements to reject ASU 2021-06 as not applicable to statutory accounting.

3. **Reviewed Comments on Exposed Items – Minimal Discussion**

a. **Agenda Item 2021-23**

Mr. Bruggeman directed the Working Group to agenda item 2021-23: SSAP No. 43R – Financial Modeling – Updated Guidance. Mr. Pinegar stated that this agenda item reflects SAP clarifications to be consistent with the revised NAIC designation financial modeling guidance adopted on Oct. 20, 2021, by the Valuation of Securities (E) Task Force to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) for residential mortgage-backed securities (RMBS) and commercial mortgage-backed securities (CMBS). He stated that while the P&P Manual provides the financial modeling process, when this guidance was first adopted, a summarized narrative was reflected in the Accounting Practices and Procedures Manual (AP&P Manual). With
revisions to the financial modeling guidance, and as designations are determined by the Valuation of Securities (E) Task Force, the Working Group exposed two alternatives for consideration, noting that both options refer to the P&P Manual for detailed financial modeling guidance. He stated that the first option retained summarized financial modeling guidance in SSAP No. 43R—Loan-Backed and Structured Securities, updated to reflect the revisions to the P&P Manual by the Task Force. The second option removed financial modeling guidance from SSAP No. 43R and referred users to the guidance in the P&P Manual. He stated that in response to feedback from interested parties, which recommended a minor edit and supported option one, NAIC staff recommended retaining the summarized financial modeling guidance in SSAP No. 43R updated for the recent Task Force revisions.

Mr. Bruggeman stated that this agenda item updates the summarized financial modeling guidance in SSAP No. 43R and that it is important to note that the P&P Manual provides the detailed financial modelling and the designation process, which is the responsibility of the Valuation of Securities (E) Task Force. He stated that the AP&P Manual takes precedence over the P&P Manual in the statutory hierarchy. However, he noted that the AP&P Manual defers to the detailed guidance in the P&P Manual for the financial modeling process and the resulting NAIC designation.

Ms. Weaver made a motion, seconded by Ms. Bernard, to adopt the exposed option one SAP clarification revisions, updating the financial modeling guidance summarized in SSAP No. 43R and incorporating a grammatical edit as proposed by interested parties. Along with the updated financial modeling summary, this guidance continues to refer users to the detailed financial modeling guidance in the P&P Manual (Attachment One-H). The motion passed unanimously.

b. Agenda Item 2021-26EP

Mr. Bruggeman directed the Working Group to agenda item 2021-26EP: Editorial Updates (Substantive vs. Nonsubstantive). Mr. Pinegar stated that this agenda item is in response to the Working Group’s adoption of agenda item 2021-14: Policy Statement Terminology Change – Substantive and Nonsubstantive, which modified the use of the terminology of “substantive” and “nonsubstantive” in the NAIC Policy Statement on Maintenance of Statutory Accounting Principles (Policy Statement). He stated that this agenda item proposed editorial revisions to the preamble, table of contents, summary of changes, and the NAIC Policy Statement on Statutory Accounting Principles Maintenance Agenda Process. He stated that interested parties’ comments requested further clarification during the development process, specifically requesting effective dates for every adopted revision, regardless of if the revision was deemed to be an SAP clarification or a new SAP concept. He stated that this comment, similar to what was expressed during the 2021 Fall National Meeting, goes beyond the Financial Condition (E) Committee request to simply change the terminology references. This current agenda item only enacts editorial updates to reflect the previously adopted terminology changes, and if the editorial revisions were not adopted, there would be a disconnect between the Policy Statement and the terminology reflected in other sections of the AP&P Manual.

Ms. Walker made a motion, seconded by Mr. Kasinow to adopt the exposed SAP clarification editorial revisions to the preamble, table of contents, summary of changes, and the NAIC Policy Statement on Statutory Accounting Principles Maintenance Agenda Process (Attachment One-I). The motion passed unanimously.

c. Agenda Item 2021-27

Mr. Bruggeman directed the Working Group to agenda item 2021-27: ASU 2021-04, Issuer’s Accounting for Certain Modifications. Mr. Stultz stated that this agenda item reviews ASU 2021-04, Earnings Per Share (Topic 260), Debt—Modifications and Extinguishments (Subtopic 470-50), Compensation—Stock Compensation (Topic 718), and
Derivatives and Hedging—Contracts in Entity’s Own Equity (Subtopic 815-40): Issuer’s Accounting for Certain Modifications or Exchanges of Freestanding Equity-Classified Written Call Options. He stated that ASU 2021-04 directs that when a freestanding equity-classified written call option is modified or exchanged and the instrument remains classified as equity after the modification/exchange, the differences in fair value before and after the modification are accounted for as an adjustment to equity. However, conversely, ASU 2021-04 directs that if the modification/exchange is related to a debt instrument or line-of-credit, the differences in fair value before and after the modification may be capitalized in accordance with U.S. generally accepted accounting principles (GAAP) debt issuance guidance, a concept disallowed under SSAP No. 15—Debt and Holding Company Obligations.

Mr. Stultz stated that while this agenda item proposes to reject ASU 2021-04 for statutory accounting, it also proposes SAP clarifications to SSAP No. 72—Surplus and Quasi-Reorganizations, incorporating minor updates related to the accounting for changes in fair value involving the exchange of free-standing equity-classified written call options. He stated that in response to interested parties’ comments, NAIC staff recommended additional clarifications in SSAP No. 72 to precisely identify what guidance from ASU 2021-04 was adopted or rejected.

Mr. Bruggeman stated that while the additional clarifications proposed by NAIC staff do reflect the request by interested parties, they do make the sentence regarding applicable rejections quite lengthy. However, the applicable guidance should be sufficiently clear. Rosemarie Albrizio (Equitable), representing interested parties, agreed with the additional clarifications as proposed by NAIC staff. She noted this is consistent with other such clarifications in the AP&P Manual.

Ms. Malm made a motion, seconded by Ms. Weaver, to adopt the exposed SAP clarifications to SSAP No. 72, while incorporating additional clarification edits to precisely identify what guidance from ASU 2021-04 was adopted or rejected. (Attachment One-J). The motion passed unanimously.

4. Reviewed Comments on Exposed Items
   a. Agenda Item 2019-21

Mr. Bruggeman directed the Working Group to agenda item 2019-21: SSAP No. 43R – Proposed Bond Definition (Reporting Options). Julie Gann (NAIC) stated that this agenda item is a continuation of the bond definition project. She stated that during the 2021 Fall National Meeting, the Working Group exposed two additional elements regarding the bond project for public comment. The first item was a revised draft bond definition with limited edits focusing on changing the terminology of a “sufficient credit enhancement” to a “substantive credit enhancement” and a discussion document on potential reporting changes for initial comment. She stated that the comments on the bond definition were previously considered, and an updated bond definition and issue paper were exposed March 2 for a public comment period ending May 6. She stated that the exposed reporting changes discussion document is the focus for this meeting, with the intent to consider industry comments and receive Working Group direction. She stated that it is anticipated that the bond project will result in significant reporting changes to improve transparency and granularity of investments and that all reporting entities should be aware that these reporting changes are being discussed.

Ms. Gann stated that while there is not an exposure planned for this meeting, it was requested that the Working Group direct NAIC staff to work with state insurance regulators and industry in developing proposed reporting changes and SSAP edits for subsequent exposure. She stated that after considering interested parties’ comment letters, NAIC staff are planning not to proceed with edits on the following industry requests. However, state insurance regulator feedback is requested if consideration of these changes should occur:

- Interested parties recommended moving items in scope of SSAP No. 41—Surplus Notes from Schedule BA: Other Long-Term Invested Assets to Schedule D-1: Long-Term Bonds. Ms. Gann stated that as these
instruments have special characteristics and are not required to be reported with an NAIC designation, she does not believe state insurance regulators will support moving these items to Schedule D-1 and does not anticipate the proposed revisions to Schedule D-1 will include proposed reporting of surplus notes.

- Interested parties requested clarification on the use of a sub-schedule for Schedule D-1. She stated that the intent for a sub-schedule was to identify asset-backed securities (ABS) that qualify for bond reporting, but are financial asset-backed, but not self-liquidating (e.g., equity backed items), or that are not financial-asset backed and that do not meet the practical expedient for determining meaningful generation of cash flows. State insurance regulators wish to have the ability to identify these investments quickly and stated that a sub-schedule may be the preferred method for clear identification. Ms. Gann stated that when proposed reporting changes are drafted, that will likely assist in the understanding and use of the proposed sub-schedule.

- Interested parties requested that affiliate reporting be accomplished using an electronic column, rather than the current process of using an affiliate reporting line. Ms. Gann stated that NAIC staff believe regulators wish to continue the current process of utilizing separate reporting lines.

Ms. Gann stated that depending on the feedback from the Working Group, it is anticipated that a discussion document for possible reporting changes will be exposed by the Summer National Meeting. Mr. Bruggeman stated that NAIC staff will also draft revisions for SSAP No. 26R—Bonds and SSAP No. 43R to incorporate the principle-based bond definition into authoritative statutory guidance.

Tip Tipton (Thrivent), representing interested parties, stated that they appreciate the Working Group’s ongoing collaboration as they deem this will likely be one of the most significant reporting changes in recent years. He stated that interested parties look forward to continuing discussions so that they can get clarity on what is a sub-schedule, and what reporting columns and lines are required to meet the needs of state insurance regulators. Mr. Bruggeman stated that he believes the sub-schedule is required as the additional reporting elements (columns) do not fit within the existing reporting framework. He stated that the sub-schedule’s totals will still be reported as bonds, and state insurance regulators will be cognizant of reporting limitations of insurers. However, the use of the sub-schedule will be beneficial to the Risk-Based Capital (RBC) Investment Risk and Evaluation (E) Working Group as its review these items for additional risk-based capital granularity.

Mr. Bruggeman, on behalf of the Working Group, directed NAIC staff to continue working with state insurance regulators and interested parties in developing potential reporting changes for bond investments. This discussion will include the development of illustrations and reporting instructions.

b. Agenda Item 2021-20

Mr. Bruggeman directed the Working Group to agenda item 2021-20: Effective Derivatives – ASU 2017-12. Ms. Gann stated that this agenda item was drafted to consider revising SSAP No. 86—Derivatives to mirror effective hedging determinations permitted in ASU 2017-12, Derivatives and Hedging (Topic 815): Targeted Improvements to Accounting for Hedging Activities. While ASU 2017-12 was previously reviewed, the review was limited in scope and only adopted updates for hedging documentation, noting that a broader review would occur at a later date. Ms. Gann stated that both state insurance regulators and industry representatives requested further consideration of ASU 2017-12, particularly with regards to derivative arrangements that U.S. GAAP allow to qualify as an effective hedge. She stated that in general, NAIC staff believe that if a hedging relationship is considered to be effective under U.S. GAAP, it should also be considered effective for statutory accounting. However, differences in the valuation between U.S. GAAP and statutory accounting need to be reviewed before
those new effective hedging relationships are permitted to ensure the financial statement reporting and derivative impact is defined and understood. Ms. Gann stated since this item’s original exposure, NAIC staff have continued discussion with industry representatives. She stated that although industry has proposed revisions to SSAP No. 86 as part of their comment letter, NAIC staff are recommending exposure of two documents, which are more detailed than the industry proposed edits. She summarized the proposed revisions as follows:

- A new SSAP No. 86, Exhibit A, which is proposed to replace both of the existing SSAP No. 86, Exhibits A and B. This updated exhibit proposes adoption with modification of the overall U.S. GAAP guidance for determining hedge effectiveness even though not all paragraphs are proposed to be captured within the exhibit. The proposed modification would exclude U.S. GAAP guidance for the measurement of the hedging instruments, including excluded components of those instruments. This exclusion is required as statutory accounting has specific accounting and reporting guidance that differs from U.S. GAAP.

- Proposed SSAP revisions to incorporate new measurement guidance for different types of excluded components. As identified by industry, there are current inconsistencies in SSAP No. 86 for excluded components. While the proposed measurement methods vary by excluded component, the proposed accounting and reporting is consistent with the overall recommendations from industry. The proposed edits are more robust than what industry proposed to ensure that the measurement methods are clearly defined and with more detailed disclosures to allow state insurance regulators the ability to identify and assess the impact of any excluded component in the financial statements.

Mr. Bruggeman stated that review of this ASU is welcome as insurers have historically had differences in the assessment of hedge effectiveness for U.S. GAAP versus statutory accounting. He stated he was aware of instances where insurers would purchase supplemental derivative instruments to eliminate statutory surplus volatility of their original hedging instruments. This practice causes an insurer to incur excess costs that is likely not necessary.

Ms. Albrizio, representing interested parties, stated that they appreciate the collaborative efforts on this topic and support exposure of the proposed documents.

Ms. Walker made a motion, seconded by Ms. Bernard, to expose revisions to SSAP No. 86, which include: 1) a revised Exhibit A, which will replace Exhibit A and Exhibit B; and 2) proposed measurement guidance for excluded components. The motion passed unanimously.

c. Agenda Item 2021-21

Mr. Bruggeman directed the Working Group to agenda item 2021-21: Related Party Reporting. Mr. Stultz stated that this agenda item was drafted in response to recent discussions on the reporting and disclosure requirements for investments that involve related parties. He stated that the agenda item revised SSAP No. 25—Affiliates and Other Related Parties and SSAP No. 43R to clarify related party and affiliate guidance, as well as to require new reporting information for investments that are acquired from a related party, regardless of whether the investment is captured on the affiliate reporting line. He stated that interested parties’ comments recommended additional clarifying language on the presumption of control, as well as modifications to the proposed annual statement instructions, and NAIC staff have incorporated limited changes in the proposal for exposure consideration.

Mr. Stultz stated that in response to interested parties’ comments, this agenda item does not intend to make any changes to items currently reported as affiliated transactions. He stated that the clarification is intended to be consistent with the definition of an affiliate pursuant to the Insurance Holding Company System Regulatory Act
(#440), SSAP No. 25, and SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities. He stated that although the definition is consistently referenced, there is inconsistency in practice regarding the interpretation of what is required to be reflected on the affiliate reporting line. Pursuant to comments from interested parties, actual credit exposure should be present to report an investment on the affiliate reporting line. However, this interpretation is contrary to the preferences of some state insurance regulators who are expecting investment transactions with affiliates to be reported as affiliated transactions. Although there are no revisions proposed to change existing guidance for how affiliated investments are reported, it was noted that the expansion of the use of affiliates in structuring and procuring investment products has resulted with an increase in affiliated investment transactions in which there is no credit exposure to the actual affiliated entity, and state insurance regulators want to ensure that affiliated transactions are properly being disclosed to the domiciliary state. Mr. Stultz stated that interested parties also requested an effective date for 2023 year-end reporting. However, NAIC staff recommend a 2022 year-end effective date, as the reporting changes are in line with other state insurance regulators’ initiatives, including the Macroprudential (E) Working Group. In response to other interested parties’ comments, NAIC staff are recommending to also include additional clarifications that investments in exchange traded funds (ETFs) or mutual funds (as defined by the SEC) do not reflect ownership in an underlying entity, regardless of the ownership percentage the reporting entity holds, unless the mutual fund or ETF has the power to direct or cause direction of management of the underlying company. This additional revision is consistent with existing guidance in SSAP No. 97.

Angelica Tamayo-Sanchez (New York Life), representing interested parties, stated that it is important for the investment schedules to differentiate between investments that have true affiliated credit risk exposure from those that are simply managed/serviced by affiliates where the underlying assets of the investment structure do not have any credit risk exposure to affiliates and related parties. She stated that the investment codes being proposed would be beneficial to state insurance regulators for this identification and are supported by interested parties. Citing investments on Schedule D as an example, she stated that interested parties determine affiliated reporting based on the cash flows to service the underlying debt. In the case of debt service cash flow from an affiliate, those items would be reported as an affiliated transaction as the reporting entity is exposed to affiliated credit risk. However, this circumstance is very different from cases where an investment is managed by an affiliate, regardless of if the investment was originated by the affiliate. In these cases, interested parties do not believe these would be reported on the affiliated line as the cash flows do not originate from an affiliate, nor do they represent credit risk to an affiliated entity. She stated concern remains regarding state insurance regulator comments that affiliated transactions are reported as affiliated, regardless of any underlying credit exposure to an affiliate. However, the additional clarifications regarding the look through of ETFs and mutual funds are supported by interested parties. In terms of the look-through requirements, she stated that the requirement should be limited to private equity funds reported on Schedule BA. Additionally, while interested parties understand that there is a presumption of indirect control if an affiliated fund owns more than 10% of the voting shares of a corporation, they believe it would be rare for an investor that owns less than 50% of the voting stock of a corporation to have the ability to exercise control over the management and operations of such investee. Ms. Tamayo-Sanchez stated that while they understand that there is no desire by state insurance regulators to defer this requirement into 2023, the operational burden to insurers for year-end 2022 reporting will be significant.

Ms. Mears noted that she agrees that it was important to continue the discussions with industry on this topic to ensure that the reporting requirements were clear. Ms. Mears stated that she wants more industry feedback regarding cases with highly structured assets held primarily within a holding company group, especially when the underlying investments are not publicly available and there is no market validation of investment quality. She requested more input on the industry position on why such investments should not qualify for affiliate reporting, especially when these transactions either have previously been reported or should be reported to the domiciliary state pursuant to Model #440. She stated there is a differentiation between an affiliated transaction versus an
affiliated investment and that continued conversation should occur. She stated support for the additional reporting codes in the proposal, which will help identify related party involvement. Mr. Bruggeman stated he believes state insurance regulators still desire a 2022 reporting date and support efforts to achieve this objective.

Mr. Kasinow made a motion, seconded by Ms. Mears, to expose agenda item 2021-21, incorporating edits as proposed by NAIC staff for a 32-day public comment period ending May 6. The motion passed unanimously.

d. Agenda Item 2021-22

Mr. Bruggeman directed the Working Group to agenda item 2021-22: Schedule D-6-1, Supplemental Reporting. Mr. Pinegar stated that this agenda item proposed four additional data capture elements for Schedule D-6-1: Valuation of Shares of Subsidiary, Controlled or Affiliated Entities. He stated that the additional electronic-only columns will assist state insurance regulators in their review of subsidiary, controlled, and affiliated (SCA) filings, with a primary goal of helping identify filers who have repeated, identical adjustments year-after-year. He stated that in response to interested parties’ comments, the agenda details the current valuation communication process with the states and the respective filers, which includes details on the standard reporting templates and ongoing communication with the states of domicile. He noted that while this agenda item did not result in statutory revisions, adoption would express support for the corresponding Blanks (E) Working Group exposure (2022-02BWG). Mr. Bruggeman stated he believes this agenda item will further increase the efficiency of the SCA review process.

Ms. Walker made a motion, seconded by Ms. Gosselin, to adopt agenda item 2021-22, noting the agenda item did not result in statutory revisions (Attachment One-K). The motion passed unanimously.

e. Agenda Item 2021-25

Mr. Bruggeman directed the Working Group to agenda item 2021-25: Leasehold Improvements After Lease Termination. Mr. Stultz stated that this agenda item clarifies that when a lease terminates early, all remaining leasehold improvements shall be expensed, even if the leased asset is purchased. He stated that in response to interested parties’ comments, NAIC staff believe that if leasehold improvements are not expensed, items currently nonadmitted under SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements or SSAP No. 73—Health Care Delivery Assets and Leasehold Improvements in Health Care Facilities could ultimately be admitted under SSAP No. 40R—Real Estate Investments. Additionally, not all lease agreements include provisions for a purchase option at the time that the lease is signed, and in these situations, leasehold improvement assets should be expensed at the time the leased asset is purchased as almost all professional real estate companies would factor those leasehold improvements into the purchase price of the building. However, for lease agreements that include purchase options that discuss leasehold improvements, NAIC staff agree that these must be considered as part of the purchase of an asset that was part of a prior lease. He stated that NAIC staff recommended that the Working Group direct NAIC staff to work further with the interested parties in refining guidance for consideration. Ms. Albrizio stated that interested parties stand ready to assist with revised guidance for future consideration. Mr. Bruggeman agreed with the staff recommendation and directed NAIC staff to proceed accordingly.

5. Considered Maintenance Agenda – Pending Listing – Exposures

Ms. Mears made a motion, seconded by Ms. Travis, to move agenda items 2022-01 through 2022-08 to the active listing and expose all items for a public comment period. The motion passed unanimously.

Mr. Bruggeman stated that the public comment period for agenda items 2021-21, 2022-03 and 2022-08, is May 6. The comment deadline for all other exposure items is June 3.
a. **Agenda Item 2022-01**

Mr. Bruggeman directed the Working Group to agenda item 2022-01: Conceptual Framework – Updates. Mr. Pinegar stated that this agenda item reviews Financial Accounting Standards Board (FASB) Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements* (Chapter 4) and Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 7, Presentation* (Chapter 7) for their impact on statutory accounting. He stated Chapter 4 introduce revised definitions for the terms “asset” and “liability,” simplifying their definitional descriptions and redefining their essential characteristics. He stated that the historical definitions no longer include the term “probable” or the phrase “as the result of past transactions or events” citing rationale for their removal. He stated that as statutory accounting references these definitions, this agenda item proposed SAP clarifications to SSAP No. 4—Assets and Nonadmitted Assets and SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets to reflect the FASB’s updated definitions. He stated that in addition, NAIC staff recommended exposing two issue papers, each articulating the changes for SSAP No. 4 and SSAP No. 5R, FASB’s rationale for the changes, and discussion as to why the updates are proposed to be SAP clarifications in nature.

Mr. Pinegar stated the final topic reviewed Chapter 7 and proposed a minor SAP clarification to the Preamble, updating a paragraph reference to *Statement of Financial Accounting Concept 5*, which was superseded by Chapter 7. He stated that Chapter 7 describes what information should be included in the financial statements and how appropriate presentation can contribute to the objective of financial reporting. However, Chapter 7 concepts were not expected to modify current guidance, other than to update references to superseded accounting concepts.

b. **Agenda Item 2022-02**

Mr. Bruggeman directed the Working Group to agenda item 2022-02: SSAP No. 48 – Alternative Valuation of Minority Ownership Interests. Mr. Pinegar stated this agenda item reviews the audited U.S. tax equity financial statements U.S. GAAP audit exception provided in SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies. He stated that this agenda item arose trying to address questions regarding at which level the audited U.S. tax basis should apply as there was ambiguity regarding if the insurer’s audit would suffice, or if the audit should reside at the investee level. He stated that informal comments from a member of the NAIC/American Institute of Certified Public Accountants’ (AICPA) (E) Working Group indicated they were not aware of anyone using the audited U.S. tax basis method, which is permitted as an exception if audited U.S. GAAP basis financial statements were not available. They further indicated that they were not aware of anyone issuing U.S. tax basis equity audits. This agenda item proposes two options for consideration. The first option seeks input as to whether the audited U.S. tax basis exception is being used and if not, whether it should be removed as a permissible exception to audited U.S. GAAP basis in SSAP No. 48. The second option proposes an SAP clarification that if the audited U.S. tax basis exception is retained, the audit is required at the investee (investment) level.

c. **Agenda Item 2022-03**

Mr. Bruggeman directed the Working Group to agenda item 2022-03: Premium Adjustment Allocated to Jurisdictions. Robin Marcotte (NAIC) stated that while this agenda item does not propose statutory revisions, it does propose blanks instructional changes to Schedule T, the State Page and Accident and Health Policy Experience Exhibit (AHPEE) to clarify guidance for premium adjustments. She stated that NAIC staff received inquiries regarding a minor number of entities that primarily wrote health business related to the federal Affordable Care Act (ACA), which are believed to have not properly allocated premium adjustments by jurisdiction on the statutory financial statement. The proposed instruction changes clarify that all premium adjustments (both increases and decreases), including but not limited to ACA premium adjustments related to the risk adjustment
program, shall be allocated as premium in the respective jurisdiction. This agenda item has a shortened comment period ending May 6.

d. Agenda Item 2022-04

Mr. Bruggeman directed the Working Group to agenda item 2022-04: ASU 2021-10, Government Assistance. Mr. Pinegar stated that this agenda item reviews ASU 2021-10, Government Assistance, Disclosures by Business Entities about Government Assistance, which increases transparency regarding certain types of government assistance by increasing the disclosure of such information in the financial statements. He stated that while ASU 2021-10 broadly defines government assistance, the disclosures are significantly reduced in scope as they would not apply to government transactions that are accounted for in accordance with other codification topics (e.g., accounted for as debt). He stated that due to the relative rarity of such disclosure, this agenda item proposed SAP clarifications to SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items, incorporating certain disclosures from ASU 2021-10. The proposed additions will supplement existing disclosures to require that if the unusual or infrequent item is as the result of government assistance, the transaction will require identification, as well as a description of the terms and provisions of the assistance received.

e. Agenda Item 2022-05

Mr. Bruggeman directed the Working Group to agenda item 2022-05: ASU 2021-09, Leases, Discount Rate for Lessees. Mr. Stultz stated that this agenda item reviews ASU 2021-09, Leases (Topic 842), Discount Rate for Lessees That Are Not Public Business Entities, which states that when the rate implicit in the lease is readily determinable for any individual lease, that the lessee should use that rate (rather than a risk-free rate or an incremental borrowing rate), regardless of whether it has made the risk-free rate election. However, as statutory accounting generally requires all leases be classified as operating leases, this agenda item proposes SAP clarifications to reject ASU 2021-05 in SSAP No. 22R for statutory accounting.

f. Agenda Item 2022-06

Mr. Bruggeman directed the Working Group to agenda item 2022-06: ASU 2021-07, Compensation – Stock Compensation. Mr. Pinegar stated that this agenda item reviews ASU 2021-07, Compensation – Stock Compensation (Topic 718), Determining the Current Price of an Underlying Share for Equity-Classified Share-Based Awards which offers nonpublic companies a practical expedient to one of the several inputs necessary for option-priced modeling. He stated that when equity share options or similar instruments are granted in a share-based payment transaction, the fair value (which is used to determine expense recognition at inception and during any subsequent award modification) is estimated using an option-pricing model valuation technique. ASU 2021-07 provides a third practical expedient for nonpublic companies and is the third such practical expedient permitted, of which the two other practical expedients have previously been adopted and are currently permissible for use in SSAP No. 104R—Share-Based Payments. He stated that this agenda item proposes SAP clarifications to SSAP No. 104R to incorporate the new practical expedient for the current price input.

g. Agenda Item 2022-07

Mr. Bruggeman directed the Working Group to agenda item 2022-07: ASU 2021-08, Business Combinations. Mr. Pinegar stated that this agenda item reviews ASU 2021-08, Business Combinations, Accounting for Contract Assets and Contract Liabilities from Contracts with Customers, which requires acquiring entities to apply the revenue from contracts with customer standard (Topic 606), when valuing and recognizing contract related assets and liabilities in a business combination. Prior to the issuance of ASU 2021-08, acquirers would generally only recognize such items based on their fair values on the date of acquisition. He stated that in keeping with historical
precedent, this agenda item proposes SAP clarifications to reject ASU 2021-08 in SSAP No. 47—Uninsured Plans. However, as ASU 2021-08 is related to business combinations, the agenda item also proposes SAP clarifications to SSAP No. 68 to reject ASU 2021-08 for statutory accounting, while noting that rejection does not impact the determination of U.S. GAAP book value in an acquired entity.

h. Agenda Item 2022-08

Mr. Bruggeman directed the Working Group to agenda item 2022-08: INT 22-01T: Freddie Mac When-Issued K-Deal (WI Trust) Certificates. Ms. Gann stated that State Farm Mutual Automobile Insurance Company has sponsored this agenda item in collaboration with Freddie Mac requesting accounting and reporting clarification for Freddie Mac “When-Issued K-Deal (WI Trust) Certificates.” She stated that these certificates are akin to to-be-accounted (TBA) investments, in which certificate holders ultimately receive Freddie Mac guaranteed mortgage-backed securities. She stated that this program, in essence, creates an additional trust where the investor buys certificates in the “WI” trust, where then the WI trust uses the cash to purchase the mortgage securities from the real-estate mortgage investment conduit trust, who in turn purchases the mortgage securities directly from Freddie Mac. Upon conversion, the investor can take possession of the underlying mortgage securities or hold the trust certificates and receive the underlying mortgage security cashflows in a pass-through manner. In either event, the performance of the investment is guaranteed by Freddie Mac. The tentative statutory accounting interpretation clarifies that investments in the Freddie Mac WI Program shall be captured in scope of SSAP No. 43R from initial acquisition. This agenda item has a shortened comment period ending May 6.

6. Discussed Other Matters

a. Review of U.S. GAAP Exposure

Jason Farr (NAIC) stated that although there was one FASB exposure at the time the materials were published, its comment deadline of March 31 has passed. The proposed ASU would increase the disclosure regarding supplier finance programs. These programs allow a third-party financer to enter into the traditional buyer/supplier relationship, which effectively creates a structured payable agreement. NAIC staff recommend reviewing the final ASU under the SAP Maintenance Process as detailed in Appendix F—Policy Statements.

b. Referral to the Casualty Actuarial and Statistical (C) Task Force – Update

Ms. Marcotte stated that the Casualty Actuarial and Statistical (C) Task Force met March 8 to discuss a recommendation regarding the Working Group referral on agenda item 2019-49: Retroactive Reinsurance Exception regarding diversity in reporting for retroactive intercompany reinsurance contracts that meet the exception and allow for prospective reporting. She stated that the primary issue to address is whether to allocate premium back to prior years on annual statement Schedule P when multiple years of premium are ceded to a reinsurer. She stated that the Task Force plans to continue to work on this topic using a small group to draft proposed revisions to Schedule P instructions and other related guidance in SSAP No. 62R—Property and Casualty Reinsurance, specifically guidance in paragraph 36 and paragraph 37. NAIC staff were directed to continue working with the small group.

c. Comment Letter Received from the ACLI

Ms. Marcotte stated that the Working Group and the Valuation of Securities (E) Task Force received a comment letter from the American Council of Life Insurers (ACLI) regarding a proposed Task Force amendment to the P&P Manual to permit unguaranteed and unrated subsidiary obligors in working capital finance investment (WCFI) transactions. As the Working Group does not have an exposure on this topic, it noted receipt of the comments,
including the mention of the FASB exposure of proposed disclosures regarding supply chain finance programs. The Working Group does not plan to address the ACLI comments at this time (see NAIC Proceedings – Spring 2022, Valuation of Securities (E) Task Force, Attachment One and Attachment Two).

d.  **ASU 2016-13**

Ms. Gann stated that NAIC staff have received an inquiry regarding anticipated work related to **ASU 2016-13, Financial Instruments – Credit Losses (CECL)**. She stated that since its private company implementation is scheduled for enactment on Jan. 1, 2023, NAIC staff request input from industry representative on how CECL has affected their U.S. GAAP financial statements. Information on the U.S. GAAP impact may provide insight on how to approach the CECL standard for statutory accounting.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

https://naiconline.sharepoint.com/sites/naicsupportstaffhub/member meetings/2022 naic meetings/spring national meeting/committee meetings/financial condition (e) committee/accounting practices and procedures (e) tf/sapwg/sapwg minutes 4.4.22.docx
1. **Considered Maintenance Agenda – Active Listing**

   a. **Agenda Item 2019-21**

   Mr. Bruggeman directed the Working Group to agenda item 2019-21: Proposed Bond Definition. Julie Gann (NAIC) provided an overview of the project, stating that in May 2021, the Working Group exposed an original principles-based bond definition and affirmed the direction of the bond proposal after considering the comments in August 2021. Since that time, a small study group, representing state insurance regulators and interested parties have continued discussion and refinement of the principles-based bond definition. Ms. Gann stated that the purpose of holding today’s meeting is to consider exposure of a revised principles-based bond definition and draft issue paper. She stated that although limited edits are proposed to the proposed definition, the issue paper is detailed and intends to document the discussions that have occurred within the study group and the rationale supporting the various components of the bond definition. She stated that neither the proposed bond definition nor the issue paper would be considered authoritative. She stated that statement of statutory accounting principles (SSAP) revisions is not currently proposed as part of this exposure. She stated that with the specific deliberative process for this project, it is anticipated that comments on the issue paper and the revised definition would be considered prior to exposing proposed SSAP revisions.

   Ms. Gann then identified the various revisions to the principles-based bond definition:

   - Proposed revisions include explicit reference to U.S. Treasury Inflation-Protected Securities (TIPS) as an issuer credit obligation, which is in line with current guidance in SSAP No. 26R—Bonds. Ms. Gann stated that the inclusion of these securities was in response to another proposed edit, which clarifies the limitation for investments that have equity-driven results through a derivative or have an equity-based performance reference. With that clarification, U.S. TIPS, which are adjusted for inflation, could inadvertently be precluded from bond treatment.

   - Proposed revisions broaden the approach to identify investments that are in scope when repayment is fully supported by an underlying contractual obligation of a single operating entity that meets the bond definition. Rather than identify specific investments, the concept is included with examples of known investments. Ms. Gann stated that the guidance for “fully supported” was defined to require cash flows for repayment to cover 100% of interest and at least 95% of the principal, which is in line with the NAIC Securities Valuation Office (SVO) guidance related to credit tenant loans (CTLs).
• Proposed revisions delete the hybrid security reference as an explicit issuer credit obligation. This deletion does not intend to indicate that hybrid securities are prohibited from reporting on Schedule D-1—Long-Term Bonds; it only intends to clarify that such items shall be reviewed in accordance with the bond definition and only reported on Schedule D-1 if they qualify. Historically, a hybrid security was defined as a security with both debt and equity components, and a broad exception for such securities under the principles-based bond definition is not viable.

• Proposed revision includes specific identification of exchange-traded funds (ETFs) as issuer credit obligations if they qualify for bond treatment as identified in the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Office). Ms. Gann stated that inclusion of these funds is not a change to the principle concepts, rather it has been added for clarification purposes.

• Proposed revision to clarify that an investment with the potential for “additional returns” must be assessed as if the “additional returns” are a component of the investment’s interest. This revision is to clarify that it is not permissible to have a “stated interest” and then the potential for “additional returns” and conclude that the investment does not have a variable interest based on underlying equity interests.

• Proposed revision to delete the stapling example from Appendix 1, which details situations where securities, despite their legal form, do not in substance represent a creditor relationship. This example originally precluded bond reporting for a qualifying debt tranche if the reporting entity was required to hold equity tranches from the securitization. However, after considering comments from the first exposure period, as well as discussions that occurred within the study group, this example has been eliminated. With this revision, tranches that separately qualify as bonds are permitted to be reported as bonds, and the other tranches would be reported as equity; however, holding both types of securities should not preclude bond reporting for any eligible components. Ms. Mears stated that the origination of this example was to recognize the fact that in some cases, if an insurance company owned both equity and debt components or were required to hold both components as “stapled investments,” they may not necessarily be in a different economic position than had they held the entire investment as an equity investment on Schedule BA—Other Long-Term Assets. However, she stated that the accounting for such an investment should entail the substance of the holding, not necessarily the underlying risk of an investment, which is captured within the purview of the Capital Adequacy (E) Task Force, not statutory accounting. In addition, if a company sold one of their investment components, with the current example, the remaining component could move investment schedules, which is also not a practical solution. Ms. Mears stated that this issue will be considered by the recently formed Risk-Based Capital (RBC) Investment Risk and Evaluation (E) Working Group, which will jointly review the substance and recommend RBC charges for these types of investments.

• Proposed revisions to the example for when a reporting entity invests in a debt instrument issued from a special purpose vehicle that owns underlying equity interests. Ms. Gann stated that the original example was designed to focus on characteristics of an investment that did not qualify as a bond; instead, the example has been revised to provide information to assist users in determining whether a structure could qualify for bond reporting. She stated that the example includes expanded factors to consider in determining whether the rebuttable presumption—i.e., the assumption that a debt instrument collateralized by equity interests does not qualify as a bond—has been overcome.

Ms. Gann stated that staff’s recommendation is to expose both the proposed revisions to the bond definition and the issue paper for public comment. After comments are received, the next steps would be to introduce possible statutory accounting revisions, likely using SSAP No. 26R as the standard for issuer credit obligations and SSAP No.
43R—**Loan-Backed and Structured Securities** as the standard for asset-backed securities (ABS). Ms. Gann stated that revisions are also anticipated for SSAP No. 2R—*Cash, Cash Equivalents, Drafts and Short-Term Investments* to clarify that ABS, due to their underlying nature of having a certain level of equity-backed cash flows, should not qualify for securities in the scope of SSAP No. 2R and SSAP No. 103R—*Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*, as that standard currently refers all beneficial interests to SSAP No. 43R.

Ms. Gann stated that comments received from industry on potential reporting options is expected for the Spring National Meeting. However, as part of this exposure, input is requested regarding the reporting of investments that will not qualify as bonds. In addition to the reporting schedule, consideration will need to occur regarding measurement methods (e.g., amortized cost versus lower of cost or fair value). Accordingly, input regarding which approach is supported and what characteristics can be used to identify and support any preferred measurement method is requested during the exposure period.

Ms. Mears made a motion, seconded by Ms. Weaver, to expose the revised principles-based bond definition and draft issue paper for a public comment period ending May 6. In addition, the motion included a recommendation for NAIC staff to continue discussions on the bond definition and develop proposed reporting changes and potential statutory accounting revisions for a subsequent exposure. The motion passed unanimously.

2. **Discussed Other Matters**

Ms. Gann stated that the agenda for the Spring National Meeting has been posted on the NAIC website. The Working Group’s in-person public meeting is scheduled for Monday, April 4 from 9:45 a.m. to 12:00 p.m. CT. Ms. Gann stated that the meeting will have an audio-only option for those registered and not attending in person. Mr. Bruggeman stated that with the current schedule, regulator-only sessions are planned for immediately before and after the Working Group’s meeting, so the agendas will need to be efficiently discussed to allow attendees to move between meetings.

Mr. Bruggeman stated that in terms of the March 1 statutory filing deadline, the NAIC systems have been a bit delayed, so initial data runs may indicate a company has not filed when they have. It is anticipated that filings will be caught up in the next day, and state insurance regulators should be aware if they are looking for their domestic company filing results.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.
The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force met Jan. 27, 2022. The following Working Group members participated: Dale Bruggeman, Chair (OH); Carrie Mears and Kevin Clark, Co-Vice Chairs (IA); Sheila Travis (AL); Kim Hudson (CA); William Arfanis (CT); Tom Hudson, Nicole Brittingham, and Rylynn Brown (DE); Cindy Andersen and Eric Moser (IL); Steward Guerin (LA); Judy Weaver (MI); Doug Bartlett (NH); Bob Kasinow (NY); Kimberly Rankin (PA); Jamie Walker (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI).

1. Reviewed Comments on Exposed Items

The Working Group held a public hearing to review comments (Attachment One-B1) on previously exposed items.

a. Agenda Item 2021-18

Mr. Bruggeman directed the Working Group to agenda item 2021-18: SSAP No. 108 – VM-21 Scenario Consistency Update. Robin Marcotte (NAIC) stated that the Working Group previously received comments on the prior exposure and exposed additional statutory accounting principle (SAP) clarifications to Statement of Statutory Accounting Principles (SSAP) No. 108—Derivatives Hedging Variable Annuity Guarantees. The revisions exposed in December 2021 incorporated edits proposed by Life Actuarial (A) Task Force representatives and interested parties. The intent is to ensure consistency with revisions to VM-21, Requirements for Principle-Based Reserves for Variable Annuities. Ms. Marcotte stated that interested parties do not object to the exposed revisions. The Working Group also received additional informal comments from the Task Force that reorganized text within the document. The informal revisions proposed by a member of the Task Force were shared with interested parties prior to them submitting their comment letter, and the interested parties informally indicated that they do not object to the proposed edits. Ms. Marcotte stated that NAIC staff recommend that the Working Group adopt the exposed revisions classified as an SAP clarification incorporating the edits proposed. These revisions will have a Dec. 31, 2021, effective date so the Valuation Manual and Accounting Practices and Procedures Manual (AP&P Manual) will be synchronized.

Mike Monahan (American Council of Life Insurers—ACLI), representing interested parties, stated that they appreciate NAIC staff working to include the edits; they do not object to the changes and support moving forward with this agenda item.

Kim Hudson made a motion, seconded by Ms. Weaver, to adopt the exposed revisions to SSAP No. 108 with the edits presented by NAIC staff (Attachment One-B2), with an effective date of Dec. 31, 2021. The motion passed unanimously.

b. Agenda Item 2021-31

Mr. Bruggeman directed the Working Group to agenda item 2021-31: Life Reinsurance Disclosure Clarifications. Ms. Marcotte stated that this agenda item was exposed in December 2021 to address questions received from members of the American Institute of Certified Public Accountants’ (AICPA) NAIC Task Force regarding the life reinsurance disclosures and the related audited notes that were first effective in December 2020. The disclosures were adopted in SSAP No. 61R—Life, Deposit-Type and Health Reinsurance in agenda item 2017-28: Reinsurance
Risk Transfer for Short Duration Contracts. Preparers and auditors highlighted unclear elements in the disclosures that could use additional clarification. Comments were received from both interested parties and members of the AICPA NAIC Task Force. NAIC staff recommend that the Working Group adopt the exposed SAP clarifications with additional revisions that reflect the following: 1) revisions from the interested parties and the members of the AICPA NAIC Task Force as detailed in the comment letters; and 2) additional NAIC staff proposed edits to paragraph 78 that were developed in discussions with representatives from the AICPA NAIC Task Force. The edits were recommended to be added with a Dec. 31, 2021, effective date to assist preparers and auditors.

Ms. Marcotte summarized the revisions by paragraph. The main revisions in paragraph 78 addressed two issues. The first was the audit report location of the disclosures. The exposed revisions clarified that the information could be in the audited notes or the supplementary schedules. After discussions with members of the AICPA NAIC Task Force, it requested edits to clarify that the information resides in the supplementary schedules to the audited report, unless there are no such contracts subject to the disclosures identified, in which case the information that no such contracts were identified could be located in either the audited note or the supplementary schedule. Ms. Marcotte stated that the reason for this requested clarification was that the notes to the financial statement are subject to more review than the supplemental schedules. Clarification was requested as to whether the audited note in the supplemental schedules was required to be comparative. Comments noted that most supplemental schedules, including the one for similar reinsurance disclosures required by SSAP No. 62R—Property and Casualty Reinsurance, are not comparative and are only for contracts in effect during the current period covered by the statement. NAIC staff verified that the related property and casualty disclosures in the general interrogatories are focused on contracts in effect for the period covered by the statement. Therefore, NAIC staff drafted proposed revisions to further clarify that the audited note did not have to be comparative, meaning the inclusion of contracts in the prior years; i.e., it only needs to address current period contracts covered by the statement. Ms. Marcotte also discussed grammatical edits proposed by interested parties and the removal of a reference to assumed reinsurance contracts from paragraph 81. NAIC staff noted that the revision to paragraph 81 will make the life and health disclosure similar in scope to the related property and casualty disclosure, which addresses ceded contracts.

Mr. Bruggeman noted agreement with the revision to paragraph 81, as it made the text in the beginning of the paragraph consistent with the text of sub paragraphs a. and b. He also stated support for the clarifications, noting that the supplemental schedule is not required to be comparative.

Jean Connolly (PricewaterhouseCoopers LLP), chair of the AICPA NAIC Task Force, stated appreciation for NAIC staff and the Working Group’s assistance in working through the clarifications. She stated that the revisions were what was requested.

Steven Clayburn (ACLI) stated that interested parties were very appreciative of narrowing the scope of the disclosures, and they support the revisions discussed.

Ms. Malm made a motion, seconded by Mr. Smith, to adopt the exposed revisions to SSAP No. 61R on life reinsurance disclosures (Attachment One-B3), with the effective date of Dec. 31, 2021. The motion passed unanimously.

Ms. Marcotte stated that since the agenda items were adopted after year-end, which is the normal cutoff for edits to the AP&P Manual, the adopted revisions will be included in the updates section at the back of the 2021 and 2022 publication. Additionally, a guidance memo will be sent to the Blanks (E) Working Group for posting regarding the disclosures. Given the timing, NAIC staff will post the two adoptions on the Statutory Accounting Principles (E) Working Group’s web page on the documents tab. NAIC staff will also update the SSAP to annual statement disclosure checklists.

© 2022 National Association of Insurance Commissioners  2
Mr. Bruggeman inquired, and Julie Gann (NAIC) confirmed that a printed hard cover copy of the AP&P Manual is not an option for interested parties now. The NAIC is still working on having a printed copy as a potential option for state insurance regulators through a local printing vendor. Ms. Gann stated that industry representatives would need to acquire an electronic version of the AP&P Manual, which is accessed through Bookshelf.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

RE: Comments on the Items Exposed for Comment during the Statutory Accounting Principles Working Group (the “Working Group”) Meeting on December 11, 2021 with Comments Due January 14, 2022

Dear Mr. Bruggeman:

Interested parties would like to thank the Statutory Accounting Principles Working Group (the “Working Group”) for the opportunity to comment on the items exposed for comment with comments due January 14th. We offer the following comments:

**Ref #2021-18: VM-21 Scenario Consistency Update**

The Working Group exposed revisions, to SSAP No. 108—Derivatives Hedging Variable Annuity Guarantees, as illustrated in the proposal. The revisions, which incorporate edits proposed from Life Actuarial (A) Task Force representatives, ensure consistency with revisions to VM-21 by removing reference to the standard scenario while adding reference to the conditional tail expectation 70 guidance. This agenda item has a shortened exposure period, ending Jan. 14, 2022, so that the Working Group may consider adoption for year-end 2021 reporting.

Interested parties do not object to these changes.

**Ref #2021-31: Life Reinsurance Disclosure Clarifications**

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 61R, as in the proposal. These revisions intend to clarify, and in some cases, narrow the scope of certain disclosures. This agenda item also has a shortened exposure period, ending Jan. 14, 2022, so that the Working Group may consider adoption for year-end 2021 reporting.
Interested parties appreciate the exposure to clarify and narrow the scope of information requested in the SSAP No. 61R disclosures, specifically to paragraphs 78-83. Our understanding is that the original intent of these additional disclosures was to obtain information on ceded reinsurance. We note that the reference to “ceding” in paragraphs 79 and 80 should be “ceded” as is written in paragraph 81. For paragraph 81, we would suggest deleting “assumed or” so that the scope of disclosure remains consistent from 2020 to 2021 (with the extraneous disclosures clarified).

* * * * *

If you have any questions or would like to discuss these comments, please do not hesitate to contact us

Sincerely,

D. Keith Bell          Rose Albrizio

cc: Interested parties

https://naiconline.sharepoint.com/sites/naicsupportstaffhub/member meetings/2022 naic meetings/spring national meeting/committee meetings/financial condition (e) committee/accounting practices and procedures (e) tf/sapwg/1b1_cmnt ltrs/dkb2344.docx
To: The Statutory Accounting Principles (E) Working Group

From: Selected members of the American Institute of Certified Public Accountants’ (AICPA) NAIC Task Force

Date: January 14, 2022

Thanks again for considering the comments we submitted in 2021 related to these new disclosures and in developing the Form A. The AICPA NAIC Task Force has two additional comments that we would also appreciate that you consider:

1. Several of our members pointed out it might be confusing and/or lead to inconsistent practice to allow the disclosures to be included in either the footnotes or a supplemental schedule, because footnotes and supplemental information provide different levels of auditor assurance. Therefore, it would be unusual to have the option to include the disclosures in either place. As a result, we are recommending the following revisions below as "friendly amendments" to maintain the disclosures in a supplemental schedule, consistent with 2020. (This is also consistent with the intent of our comments last year.)

   78. Disclosures for paragraphs 79-84 are required to be included with the annual audit report financial statements beginning with the period ended December 31, 2020, regarding reinsurance contracts. The disclosures required within paragraphs 79-84 shall be in accompanying supplemental schedules or the notes of the annual audit report beginning in year-end 2020. If the disclosures are not applicable, an affirmative statement that no such contracts were identified is acceptable in the notes to the financial statements. These disclosures shall be limited to reinsurance contracts entered into, renewed or amended on or after January 1, 1996. This limitation applies to the annual audit report only and does not apply to the statutory annual statement interrogatories and the property and casualty reinsurance summary supplemental filing.

2. On a related issue and assuming the Working Group agrees to the changes above in paragraph 78 of SSAP No. 61R, we would like to comment on SAPWG’s conclusion that the life reinsurance supplemental schedule should be comparative. The other required schedules to the financial statements do not require comparable information. (A list of the schedules is below.) For these schedules, the annual statement instructions set out the form and content of the schedules which reflects a one year presentation. It would be useful to understand why this schedule would be different and if that was the intent of SAPWG. Do you know whether the decision to make the disclosure comparable considered that the other required schedules are not required to be comparable? In either case, we would like to request that the guidance in SSAP 61R (or in the 2022 annual statement instructions) state whether the schedule should be comparative.

With regard to the conclusion in the minutes that indicates that the change would be done prospectively, this seems like an accommodation to prevent companies from having to fix prior years (which we don’t want to discourage), but there could be some complexity in reporting on a comparative schedule that is not comparable because the guidance changed (e.g., the basis for preparing the schedule is not comparative) and could lead to diversity in approach in how individual companies and auditors deal with reporting in the current year.
Below is a list of current supplemental schedules which are not comparative (i.e. only the current year is presented)

- Supplemental schedule of assets and liabilities
- Supplemental schedule of Investment Risk Interrogatories
- Summary Investment Schedule
- Supplemental P/C Reinsurance Contracts Disclosures

Thanks

Kim

Kim Kushmerick
Director, Accounting Standards — Public Accounting

https://naiconline.sharepoint.com/sites/naicsupportstaffhub/member meetings/2022 naic meetings/spring national meeting/committee meetings/financial condition (e) committee/accounting practices and procedures (e) tf/sapwg/1b1_cmt ltrs/aicpa tf members.docx
Issue: VM-21 Scenario Consistency Update

Check (applicable entity):

- Modification of Existing SSAP
- New Issue or SSAP
- Interpretation

Modify: P/C: ☒ Life: ☒ Health: ☒

Description of Issue:
This agenda item provides a revision to Statement of Statutory Accounting Principles (SSAP) No. 108—Derivatives Hedging Variable Annuity Guarantees (SSAP No. 108) to ensure consistency with the Valuation Manual. This agenda item was developed in response to comments from an actuarial firm identifying an existing reference in SSAP No. 108 to the standard scenario in VM-21: Requirements for Principle-Based Reserves for Variable Annuities (VM-21). The Life Actuarial (A) Task Force NAIC staff support confirmed that the reference to the standard scenario has been deleted from VM-21.

VM-21 previously applied the standard scenario to all contracts in scope to generate the standard scenario amount. Revisions to VM-21 following the adoption of the Variable Annuity Framework resulted in the elimination of the standard scenario amount. Instead, VM-21 uses the prescribed projections amount, based on either the Company Specific Market Path (CSMP) or Conditional Tail Expectations (CTE) with Prescribed Assumptions (CTEPA). The CSMP and the CTEPA use random sets of scenarios to generate a CTE70 (adjusted) amount. This agenda item proposes using the VM-21 permitted approach that produces the CSMP or CTEPA scenario reserve closest to the CTE70 (adjusted) as the replacement for the standard scenario when determining the Macaulay duration in paragraph 14 of SSAP No. 108.

Existing Authoritative Literature:

SSAP No. 108—Derivatives Hedging Variable Annuity Guarantees provides the following (bolding added for emphasis)

13. Fair value fluctuations in the measurement of outstanding (non-expired) derivatives within a highly effective hedging strategy shall be reflected as follows:
   a. Fair value fluctuations in the hedging instruments attributable to the hedged risk that offset the current period change in the designated portion of the VM-21 reserve liability7 shall be

---

7 Hedge effectiveness is determined by comparing fair value fluctuations between the hedging instruments and the hedged item. However, in determining recognition in the financial statements, the fair value fluctuation of the hedging instruments is compared to the change in the reported value of the designated portion of the VM-21 liability. The designated portion of the VM-21 liability is not reported at fair value in the statutory financial statements, as such, the offset reported as realized gains and losses is the portion of the fair value change in hedging instruments offset by the change in the reported value of the designated portion of the VM-21 reserve. In accordance with the documented hedging strategy, reporting entities shall compare the fair value fluctuations to the change in the designated portion of the reserve liability, after considering recognized derivative returns (including recognized derivative income), when determining the recognition of fair value fluctuations.
recognized as a realized gain or loss.

b. Fair value fluctuations in the hedging instruments attributable to the hedged risk that do not offset the current period change in the designated portion of the VM-21 reserve liability shall be recognized as deferred assets (admitted) and deferred liabilities. The ability to recognize a deferred asset and deferred liability is limited to only the portion of the fair value fluctuation in the hedging instruments that is attributed to the hedged risk and does not immediately offset changes in the designated portion of the VM-21 reserve liability.

(Drafting Note subparagraphs 13.c. through 13.e. omitted to conserve space.)

14. Deferred assets and deferred liabilities recognized under paragraph 13.b. shall be amortized using a straight-line method into realized gains or realized losses over a finite amortization period. The amortization timeframe shall equal the Macaulay duration of the guarantee benefit cash flows based on the VM-21 Standard Scenario, but shall not exceed a period of 10 years.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 108, paragraph 14 as illustrated below. The revision will ensure consistency with VM-21 as it no longer references the standard scenario. With exposure, it is recommended that the Life Actuarial (A) Task Force receive notice of the exposure as part of the coordination process.

14. Deferred assets and deferred liabilities recognized under paragraph 13.b. shall be amortized using a straight-line method into realized gains or realized losses over a finite amortization period. The amortization timeframe shall equal the Macaulay duration of the guarantee benefit cash flows based on the VM-21 Standard Scenario adjusted run scenario that produces the scenario reserve closest to conditional tail expectation (CTE) 70 (adjusted), but shall not exceed a period of 10 years. The CTE 70 (adjusted) and the scenario reserve closest to the CTE 70 (adjusted) are determined using the method (company specific market path (CSMP) or conditional tail expectations (CTE) with prescribed assumptions (CTEPA)) applied by the reporting entity to calculate the prescribed projections amount.

New Footnote:
VM-21 allows a reporting entity to choose whether to use the CSMP method or the CTEPA method. Once the choice is made the company cannot change the method without the approval of the commissioner. For

---

8 Recognizing the fair value change for open derivative positions that offset the VM-21 change as a realized gain/loss (instead of an unrealized gain or loss) directly offsets the VM-21 reserve change in the income statement.

9 The change in fair value of the hedging instruments and hedged item is limited to changes driven by market factors. For example, periodic recognition of a cost owed to acquire the derivative from a counterparty (financing cost) shall not be captured as a change in the derivative instrument’s fair value. The fair value of the instrument shall be determined based on the underlying derivative without inclusion of acquisition costs (or other such contractual elements that may exist with the counterparty) that do not change based on the underlying derivative interests or market factors.
the purpose of determining the SSAP No. 108 amortization timeframe, the company shall apply its current method to determine the adjusted run scenario.

Staff Review Completed by: Robin Marcotte, NAIC Staff - October 2021

Status:
On October 25, 2021, in response to an e-vote to expose, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 108—Derivatives Hedging Variable Annuity Guarantees to ensure consistency with revisions to VM-21, removing references to the standard scenario. The Working Group also provided notice of the exposure to the Life Actuarial (A) Task Force.

On December 11, 2021, Statutory Accounting Principles (E) Working Group exposed revisions, to SSAP No. 108—Derivatives Hedging Variable Annuity Guarantees, as illustrated below. The revisions, which incorporate edits proposed from Life Actuarial (A) Task Force representatives, ensure consistency with revisions to VM-21 by removing reference to the standard scenario while adding reference to the conditional tail expectation 70 guidance. This agenda item has a shortened exposure period, ending Jan. 14, 2022, so that the Working Group may consider adoption for year-end 2021 reporting.

Exposed Revisions to SSAP No. 108

14. Deferred assets and deferred liabilities recognized under paragraph 13.b. shall be amortized using a straight-line method into realized gains or realized losses over a finite amortization period. The amortization timeframe shall equal the Macaulay duration of the guarantee benefit cash flows based on the VM-21 Standard Scenario Projection (new FN), but shall not exceed a period of 10 years.

New Footnote:
The VM-21 Standard Projection calculation shall be the prescribed assumption run for the scenario that produces the scenario reserve closest to conditional tail expectation (CTE) 70 (adjusted) and a discount rate equal to the valuation interest rate specified by the Standard Valuation Law for annuities valued on an issue year basis, using Plan Type A and a Guarantee Duration greater than 10 years but not more than 20 years. The VM-21 Standard Projection with prescribed assumption run is determined using the method (company specific market path (CSMP) or conditional tail expectations (CTE) with prescribed assumptions (CTEPA)) applied by the reporting entity to calculate the prescribed projections amount. For the CSMP method, the economic scenario is Path A, with the guarantee benefit cash flows from the run to calculate Prescribed Amount A. For the CTEPA method, the economic scenario is the scenario that produces the scenario reserve closest to the CTE70 (Adjusted) from the stochastic reserve calculation, with the guarantee benefit cash flows from the VM-21 Standard Projection with prescribed assumption run for this economic scenario.

On January 27, 2022, the Statutory Accounting Principles (E) Working Group adopted SAP clarifications which update SSAP No. 108 references to be consistent with the Valuation Manual, Section 21 with a December 31, 2021, effective date, as detailed below. The adopted revisions included additional changes to the exposed language as recommended by a member of the Life Actuarial (A) Task Force.

Adopted SSAP No. 108 revisions effective December 31, 2021:

14. Deferred assets and deferred liabilities recognized under paragraph 13.b. shall be amortized using a straight-line method into realized gains or realized losses over a finite amortization period. The amortization timeframe shall equal the Macaulay duration of the guarantee benefit cash flows based on the VM-21 Standard Scenario Projection (new FN), but shall not exceed a period of 10 years.
New Footnote: The VM-21 Standard Projection benefit cash flows shall be based on the prescribed assumptions run for the scenario that produces the scenario reserve closest to conditional tail expectation (CTE) 70 (adjusted). The VM-21 Standard Projection with prescribed assumptions run is determined using the method (company specific market path (CSMP) or conditional tail expectations with prescribed assumptions (CTEPA)) applied by the reporting entity to calculate the prescribed projections amount. For the CSMP method, the economic scenario is Path A, with the guarantee benefit cash flows from the run to calculate Prescribed Amount A. For the CTEPA method, the economic scenario is the scenario that produces the scenario reserve closest to the CTE70 (adjusted) from the stochastic reserve calculation, with the guarantee benefit cash flows from the VM-21 Standard Projection with prescribed assumptions run for this economic scenario. The discount rate for the Macaulay duration calculation shall be equal to the valuation interest rate specified by the Standard Valuation Law for annuities valued on an issue year basis, using Plan Type A and a Guarantee Duration greater than 10 years but not more than 20 years.

Description of Issue:
This agenda item is to address questions received from members of the American Institute of Certified Public Accountants (AICPA) NAIC Task Force regarding the life reinsurance disclosures and the related audited notes that were first effective in December 2020. The disclosures were adopted in SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance in agenda item 2017-28: Reinsurance Risk Transfer for Short Duration Contracts. Preparers and auditors have highlighted unclear elements in the disclosures that could use additional clarification. Requested clarifications and responses are detailed in the recommendation section, but they include items regarding whether the disclosures apply to ceding and assuming contracts, the format expected for the audited notes and how broadly to interpret the scope of certain disclosures. In the statutory annual statement filing the disclosures are in Note 23H and are not data captured. The proposed revisions to SSAP No. 61R narrow the scope of the disclosures and clarify what is required in the disclosures.

Existing Authoritative Literature:

SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance includes the following disclosures:

78. Disclosures for paragraphs 79-84 are required to be included with the annual audit report financial statements beginning with the period ended December 31, 2020, regarding reinsurance contracts. The disclosures required within paragraphs 79-84 shall be included in accompanying supplemental schedules of the annual audit report beginning in year-end 2020. These disclosures shall be limited to reinsurance contracts entered into, renewed or amended on or after January 1, 1996. This limitation applies to the annual audit report only and does not apply to the statutory annual statement interrogatories and the property and casualty reinsurance summary supplemental filing.

79. Disclose any reinsurance contracts (or multiple contracts with the same reinsurer or its affiliates) subject to A-791 that includes a provision, which limits the reinsurer’s assumption of significant risks identified as in A-791. Examples of risk-limiting features include provisions such as a deductible, a loss ratio corridor, a loss cap, an aggregate limit or similar effect. If true, indicate the number of reinsurance contracts to which such provisions apply. For contracts subject to A-791, indicate if deposit accounting was applied for all contracts, which limit significant risks.

80. Disclose any reinsurance contracts (or multiple contracts with the same reinsurer or its affiliates) not subject to A-791, for which reinsurance accounting was applied and includes a provision that limits the reinsurer’s assumption of risk. Examples of risk-limiting features include provisions such as a deductible, a loss ratio corridor, a loss cap, an aggregate limit or similar effect. If true, indicate the number of reinsurance contracts to which such provisions apply. If affirmative, indicate if the reinsurance credit was reduced for the risk-limiting features.

81. Disclose if any reinsurance contracts contain features (except reinsurance contracts with a federal or state facility) described below which result in delays in payment in form or in fact:
Ref #2021-31

a. Provisions which permit the reporting of losses, or settlements are made, less frequently than quarterly or payments due from the reinsurer are not made in cash within ninety (90) days of the settlement date (unless there is no activity during the period).

b. Payment schedule, accumulating retentions from multiple years or any features inherently designed to delay timing of the reimbursement to the ceding entity.

82. Disclose if the reporting entity has reflected reinsurance accounting credit for any contracts not subject to Appendix A-791 and not yearly renewable term, which meet the risk-transfer requirements of SSAP No. 61R and identify the type of contracts and the reinsurance contracts.

   a. Assumption Reinsurance – new for the reporting period.

   b. Non-proportional reinsurance, which does not result in significant surplus relief. If yes, indicate if the insured events(s) triggering contract coverage has been recognized.

83. Disclose if the reporting entity ceded any risk which is not subject to A-791 and not yearly renewable term reinsurance, under any reinsurance contract (or multiple contracts with the same reinsurer or its affiliates) during the period covered by the financial statement, and either:

   a. Accounted for that contract as reinsurance under statutory accounting principles (SAP) and as a deposit under generally accepted accounting principles (GAAP); or

   b. Accounted for that contract as reinsurance under GAAP and as a deposit under SAP.

84. If affirmative disclosure is required for paragraph 83, explain why the contract(s) is treated differently for GAAP and SAP.

The SSAP No. 61R disclosures were developed based on existing SSAP No. 62R—Property and Casualty Reinsurance disclosures with modifications for life and health reinsurance guidance. SSAP No. 62R includes the following disclosures:

113. Disclosures for paragraphs 114-119 represent annual statement interrogatories, which are required to be included with the annual audit report beginning with audit reports on financial statements as of and for the period ended December 31, 2006. The disclosures required within paragraphs 114-119 shall be included in accompanying supplemental schedules of the annual audit report beginning in year-end 2006. These disclosures shall be limited to reinsurance contracts entered into, renewed or amended on or after January 1, 1994. This limitation applies to the annual audit report only and does not apply to the statutory annual statement interrogatories and the reinsurance summary supplemental filing.

114. Disclose if any risks are reinsured under a quota share reinsurance contract with any other entity that includes a provision that would limit the reinsurer’s losses below the stated quota share percentage (e.g. a deductible, a loss ratio corridor, a loss cap, an aggregate limit or any similar provisions)? If yes, indicate the number of reinsurance contracts containing such provisions and if the amount of reinsurance credit taken reflects the reduction in quota share coverage caused by any applicable limiting provision(s).

115. Disclose if the reporting entity ceded any risk under any reinsurance contract (or under multiple contracts with the same reinsurer or its affiliates) for which during the period covered by the statement: (i) it recorded a positive or negative underwriting result greater than 5% of prior year-end surplus as regards policyholders or it reported calendar year written premium ceded or year-end loss and loss expense reserves ceded greater than 5% of prior year-end surplus as regards policyholders; (ii) it accounted for that contract as reinsurance and not as a deposit; and (iii) the contract(s) contain one or more of the following features or other features that would have similar results:
a. A contract term longer than two years and the contract is noncancellable by the reporting entity during the contract term;

b. A limited or conditional cancellation provision under which cancellation triggers an obligation by the reporting entity, or an affiliate of the reporting entity, to enter into a new reinsurance contract with the reinsurer, or an affiliate of the reinsurer;

c. Aggregate stop loss reinsurance coverage;

d. A unilateral right by either party (or both parties) to commute the reinsurance contract, whether conditional or not, except for such provisions which are only triggered by a decline in the credit status of the other party;

e. A provision permitting reporting of losses, or payment of losses, less frequently than on a quarterly basis (unless there is no activity during the period); or

f. Payment schedule, accumulating retentions from multiple years or any features inherently designed to delay timing of the reimbursement to the ceding entity.

116. Disclose if the reporting entity during the period covered by the statement ceded any risk under any reinsurance contract (or under multiple contracts with the same reinsurer or its affiliates) for which it recorded a positive or negative underwriting result greater than 5% of prior year-end surplus as regards policyholders or it reported calendar year written premium ceded or year-end loss and loss expense reserves ceded greater than 5% of prior year-end surplus as regards policyholders. This disclosure is limited to reinsurance contracts with written premium cessions or loss and loss expense reserve cessions described in this paragraph that meet the criteria of paragraph 116.a. or paragraph 116.b. This disclosure excludes cessions to approved pooling arrangements or to captive insurance companies that are directly or indirectly controlling, controlled by, or under common control with (i) one or more unaffiliated policyholders of the reporting entity, or (ii) an association of which one or more unaffiliated policyholders of the reporting entity is a member.

a. The written premium ceded to the reinsurer by the reporting entity or its affiliates represents fifty percent (50%) or more of the entire direct and assumed premium written by the reinsurer based on its most recently available financial statement; or

b. Twenty-five percent (25%) or more of the written premium ceded to the reinsurer has been retroceded back to the reporting entity or its affiliates in separate reinsurance contract.

117. If affirmative disclosure is required for paragraph 115 or 116, provide the following information:

a. A summary of the reinsurance contract terms and indicate whether it applies to the contracts meeting paragraph 115 or 116;

b. A brief discussion of management's principal objectives in entering into the reinsurance contract including the economic purpose to be achieved; and

c. The aggregate financial statement impact gross of all such ceded reinsurance contracts on the balance sheet and statement of income.

118. Except for transactions meeting the requirements of paragraph 36, disclose if the reporting entity ceded any risk under any reinsurance contract (or multiple contracts with the same reinsurer or its affiliates) during the period covered by the financial statement, and either:
Ref #2021-31

a. Accounted for that contract as reinsurance (either prospective or retroactive) under statutory accounting principles (SAP) and as a deposit under generally accepted accounting principles (GAAP); or

b. Accounted for that contract as reinsurance under GAAP and as a deposit under SAP.

119. If affirmative disclosure is required for paragraph 118, explain in a supplemental filing why the contract(s) is treated differently for GAAP and SAP.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):
Agenda item 2017-28 adopted the SSAP No. 61R disclosures in paragraphs 78-84. The disclosures were developed at the request of the Financial Analysis (E) Working Group and were based on existing disclosures in SSAP No. 62R—Property and Casualty Reinsurance in paragraphs 114-119 that are designed to identify contracts with risk limiting features or other items that may need additional regulatory review. The disclosures had to be modified to meet the requirements of SSAP No. 61R and Appendix A-791- Life and Health Reinsurance Agreements

Information or issues (included in Description of Issue) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS): None

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose the revisions to SSAP No. 61R disclosures illustrated below. These items are recommended for a shortened comment period to allow for possible adoption in early 2022 with a year-end 2021 effective date. The proposed revisions provide clarifications and, in some cases, narrow the scope of disclosure. No additional disclosures are proposed. Having the disclosure revisions final for year-end 2021 will assist preparers and auditors.

1. Does the Statutory Accounting Principles (E) Working Group expect the disclosures to be filed as a supplemental schedule in the audited financial statements even when all answers are not applicable or none? (This is the most common question that the auditing firms received.)

Response: If there are no contracts with the applicable features, a narrative note would be sufficient. See suggested edit to paragraph 78 which provides that the information can be in a note or a supplemental schedule. NAIC staff notes that Note 23H is not data captured in the statutory annual statement filing.

2. Is the supplemental schedule specific to ceded reinsurance only?

Response: While some of the disclosures are primarily designed to identify ceding contracts which may require additional scrutiny to verify that too large of a reinsurance credit was taken by the ceding entity, the scope of the disclosures includes all reinsurance contracts unless specifically identified otherwise. See proposed clarifications to limit paragraphs 79 and 80 to ceding contracts. This clarification would be similar to corresponding paragraphs in SSAP No. 62. Also, a clarification also specifies that paragraph 81 is applicable to both assumed and ceding contracts.

3. With regard to paragraph 80, would a stop loss or excess of loss reinsurance agreement with a loss cap or with deductibles (which are common contractual provisions) be required to be disclosed?
Response: Paragraph 80 provides the following:

80. Disclose any reinsurance contracts (or multiple contracts with the same reinsurer or its affiliates) not subject to A-791, for which reinsurance accounting was applied and includes a provision that limits the reinsurer's assumption of risk. Examples of risk-limiting features include provisions such as a deductible, a loss ratio corridor, a loss cap, an aggregate limit or similar effect. If true, indicate the number of reinsurance contracts to which such provisions apply. If affirmative, indicate if the reinsurance credit was reduced for the risk-limiting features.

Paragraph 80 is a modification of the following SSAP No. 62R disclosure:

114. Disclose if any risks are reinsured under a quota share reinsurance contract with any other entity that includes a provision that would limit the reinsurer’s losses below the stated quota share percentage (e.g. a deductible, a loss ratio corridor, a loss cap, an aggregate limit or any similar provisions)? If yes, indicate the number of reinsurance contracts containing such provisions and if the amount of reinsurance credit taken reflects the reduction in quota share coverage caused by any applicable limiting provision(s).

Response: Paragraph 80 was modified to capture contracts not subject to A-791 and not quota share contracts as shown in SSAP No. 62R, paragraph 114 because the requirements of A-791 do not allow significant risks which are required to be ceded to be limited. As currently drafted, the disclosure is written too broadly in that it may be capturing more nonproportional contracts with “standard” features than what is useful. See proposed clarification to paragraph 80 in the illustration below to remove stop loss or excess of loss reinsurance agreements with deductibles or loss caps that apply to the entire contract and are not adjustable based on other features from the disclosure.

4. Please clarify the intent and what information should be disclosed in subparagraphs 82.a. and 82.b.

a. We thought that for paragraph 82.a., the intent related to ceding companies with assumption reinsurance agreements (paragraph 60 of SSAP 61R) entered into during the current year for which indemnity reinsurance is being applied for policyholders who have not yet agreed to the transfer to the new insurer or for which the regulator has not yet approved the novation to the new insurer.

Response: Paragraph 82.a. is intended to reference assumption reinsurance agreements referenced in paragraph 60 of SSAP No. 61R entered into during the current year for which reinsurance credit is reported. It does not make a distinction regarding those that have or have not been approved by the policyholder. A simple reading of the disclosure is intended - to identify new assumption reinsurance agreements. This paragraph does not have a similar paragraph in SSAP No. 62R. See edits to SSAP No. 61R illustrated below which add reference to the contracts in paragraph 60.

b. With regard to paragraph 82.b., what is the concern related to non-proportionate contracts that do not provide significant surplus relief?

Response: Paragraph 82. b is proposed for deletion, as it does not provide useful information. This is because it would require disclosure of contracts which do not provide significant surplus relief and it is unclear what types of assumption reinsurance would be captured. This paragraph does not have a similar paragraph in SSAP No. 62R. See edits to SSAP No. 61R illustrated below.

5. How should an entity answer paragraphs 83-84 if no GAAP financial statements are prepared?
Response: If the reporting entity and or its holding company group does not prepare GAAP financials this is not an analysis that would be required. See proposed clarification in paragraph 83 below. AICPA representatives noted, and NAIC staff agrees, that because of A-791 differences there may be more life and health contracts reported differently for GAAP.

**Recommended Revisions to SSAP No. 61R:**

78. Disclosures for paragraphs 79-84 are required to be included with the annual audit report financial statements beginning with the period ended December 31, 2020, regarding reinsurance contracts. The disclosures required within paragraphs 79-84 shall can be included in accompanying supplemental schedules or the notes of the annual audit report beginning in year-end 2020. If not applicable, an affirmative statement that no such contracts were identified is acceptable. These disclosures shall be limited to reinsurance contracts entered into, renewed or amended on or after January 1, 1996. This limitation applies to the annual audit report only and does not apply to the statutory annual statement interrogatories and the property and casualty reinsurance summary supplemental filing.

79. Disclose any ceding reinsurance contracts (or multiple contracts with the same reinsurer or its affiliates) subject to A-791 that includes a provision, which limits the reinsurer’s assumption of significant risks identified as in A-791. Examples of risk-limiting features include provisions such as a deductible, a loss ratio corridor, a loss cap, an aggregate limit or similar effect. If true, indicate the number of reinsurance contracts to which such provisions apply. For contracts subject to A-791, indicate if deposit accounting was applied for all contracts, which limit significant risks.

80. Disclose any ceding reinsurance contracts (or multiple contracts with the same reinsurer or its affiliates) not subject to A-791, for which reinsurance accounting was applied and includes a provision that limits the reinsurer’s assumption of risk. Examples of risk-limiting features include provisions such as a deductible, a loss ratio corridor, a loss cap, an aggregate limit or similar effect. Note that a stop loss or excess of loss reinsurance agreement with deductibles or loss caps which apply to the entire contract and are not adjustable based on other features, do not require disclosure under this paragraph. If true, indicate the number of reinsurance contracts to which such provisions apply. If affirmative, indicate if the reinsurance credit was reduced for the risk-limiting features.

81. Disclose if any assumed or ceded reinsurance contracts contain features (except reinsurance contracts with a federal or state facility) described below which result in delays in payment in form or in fact:

   a. Provisions which permit the reporting of losses, or settlements are made, less frequently than quarterly or payments due from the reinsurer are not made in cash within ninety (90) days of the settlement date (unless there is no activity during the period).

   b. Payment schedule, accumulating retentions from multiple years or any features inherently designed to delay timing of the reimbursement to the ceding entity.

82. Disclose if the reporting entity has reflected reinsurance accounting credit for any contracts not subject to Appendix A-791 and not yearly renewable term, which meet the risk-transfer requirements of SSAP No. 61R and identify the type of contracts and the reinsurance contracts.

   a. Assumption Reinsurance – as discussed in paragraph 60, which are new for the reporting period.

   b. Non-proportional reinsurance, which does not result in significant surplus relief. If yes, indicate if the insured events(s) triggering contract coverage has been recognized.
83. Disclose if the reporting entity ceded any risk which is not subject to A-791 and not yearly renewable term reinsurance, under any reinsurance contract (or multiple contracts with the same reinsurer or its affiliates) during the period covered by the financial statement, and either:

   a. Accounted for that contract as reinsurance under statutory accounting principles (SAP) and as a deposit under U.S. generally accepted accounting principles (GAAP); or

   b. Accounted for that contract as reinsurance under U.S. GAAP and as a deposit under SAP.

   If the reporting entity does not prepare U.S. GAAP financial statements or its financial statements are not part of upstream U.S. GAAP financial statements, this disclosure can be answered not applicable.

84. If affirmative disclosure is required for paragraph 83, explain why the contract(s) is treated differently for GAAP and SAP.

Staff Review Completed by: Robin Marcotte, NAIC Staff - November 2021

Status:
On December 11, 2021, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 61R, as illustrated above. These revisions intend to clarify, and in some cases, narrow the scope of certain disclosures. This agenda item has a shortened exposure period, ending Jan. 14, 2022, so that the Working Group may consider adoption for year-end 2021 reporting.

On January 27, 2022, the Statutory Accounting Principles (E) Working Group adopted SAP clarifications which update the SSAP No. 61R disclosures with a December 31, 2021, effective date, as detailed below. The adopted revisions included additional changes to the exposed language as recommended by members of the ACIPA’s NAIC Task Force and interested parties.

Adopted Revisions to SSAP No. 61R:

78. Disclosures for paragraphs 79-84 apply to reinsurance contracts in effect for the current period covered by the statement and are required to be included with the annual audit report financial statements beginning with the period ended December 31, 2020, regarding reinsurance contracts. The disclosures required within paragraphs 79-84 shall be included in accompanying supplemental schedules of the annual audit report beginning in year-end 2020. If the disclosures are not applicable, an affirmative statement that no such contracts were identified is acceptable in the notes to the financial statements or the supplemental schedules. These disclosures shall be limited to reinsurance contracts entered into, renewed or amended on or after January 1, 1996. This limitation applies to the annual audit report only and does not apply to the statutory annual statement interrogatories and the property and casualty reinsurance summary supplemental filing.

79. Disclose any ceded reinsurance contracts (or multiple contracts with the same reinsurer or its affiliates) subject to A-791 that includes a provision, which limits the reinsurer’s assumption of significant risks identified as in A-791. Examples of risk-limiting features include provisions such as a deductible, a loss ratio corridor, a loss cap, an aggregate limit or similar effect. If true, indicate the number of reinsurance contracts to which such provisions apply. For contracts subject to A-791, indicate if deposit accounting was applied for all contracts, which limit significant risks.

80. Disclose any ceded reinsurance contracts (or multiple contracts with the same reinsurer or its affiliates) not subject to A-791, for which reinsurance accounting was applied and includes a provision that limits the reinsurer’s assumption of risk. Examples of risk-limiting features include provisions such as a deductible, a loss ratio corridor, a loss cap, an aggregate limit or similar effect. Note that a stop loss or
excess of loss reinsurance agreement with deductibles or loss caps which apply to the entire contract and are not adjustable based on other features, do not require disclosure under this paragraph. If true, indicate the number of reinsurance contracts to which such provisions apply. If affirmative, indicate if the reinsurance credit was reduced for the risk-limiting features.

81. Disclose if any ceded reinsurance contracts contain features (except reinsurance contracts with a federal or state facility) described below which result in delays in payment in form or in fact:

   a. Provisions which permit the reporting of losses, or settlements are made, less frequently than quarterly or payments due from the reinsurer are not made in cash within ninety (90) days of the settlement date (unless there is no activity during the period).

   b. Payment schedule, accumulating retentions from multiple years or any features inherently designed to delay timing of the reimbursement to the ceding entity.

82. Disclose if the reporting entity has reflected reinsurance accounting credit for any contracts not subject to Appendix A-791 and not yearly renewable term, which meet the risk-transfer requirements of SSAP No. 61R and identify the type of contracts and the reinsurance contracts.

   a. Assumption Reinsurance – as discussed in paragraph 60, which are new for the reporting period.

   b. Non-proportional reinsurance, which does not result in significant surplus relief. If yes, indicate if the insured events(s) triggering contract coverage has been recognized.

83. Disclose if the reporting entity ceded any risk which is not subject to A-791 and not yearly renewable term reinsurance, under any reinsurance contract (or multiple contracts with the same reinsurer or its affiliates) during the period covered by the financial statement, and either:

   a. Accounted for that contract as reinsurance under statutory accounting principles (SAP) and as a deposit under U.S. generally accepted accounting principles (GAAP); or

   b. Accounted for that contract as reinsurance under U.S. GAAP and as a deposit under SAP.

If the reporting entity does not prepare U.S. GAAP financial statements or its financial statements are not part of upstream U.S. GAAP financial statements, this disclosure can be answered not applicable.

84. If affirmative disclosure is required for paragraph 83, explain why the contract(s) is treated differently for GAAP and SAP.

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

RE: Items Exposed for Comment by the Statutory Accounting Principles Working Group on December 11, 2021 with Comments due February 18

Dear Mr. Bruggeman:

Interested parties appreciate the opportunity to comment on the exposure drafts released for comment by the NAIC Statutory Accounting Principles (E) Working Group (the Working Group).

We offer the following comments:

Ref #2019-21: Proposed Bond Definition

Pursuant to the direction from the Working Group in October 2020, a small group of regulators and industry have been meeting regularly to draft a bond definition for consideration. The intent of this project is to clarify what should be considered a bond (whether captured in SSAP No. 26R—Bonds or SSAP No. 43R—Loan-Backed and Structured Securities) and reported on Schedule D-1: Long-Term Bonds. This exposure is specific to the proposed bond definition included in the exposed Form A, along with the glossary (page 5) and appendices (pages 6-12), but comments on future developments (such as reporting changes, accounting and reporting guidance for items that do not qualify as bonds, transition guidance, etc.) may also be submitted to assist in the development of these items.

Interested parties appreciate the collaborative effort, between NAIC staff, regulators and interested parties, on this significant and complex project. We note this exposure includes the following three separate and distinct components for which we will provide comments:

1) Sufficiency Discussion – Concept (Attachment N),
Interested parties are supportive of the proposed refinements to the sufficient credit enhancement concept. Interested parties believe the clear articulation of the intent of the required substantive credit enhancement provides for a more understandable and workable proposed bond definition. Likewise, interested parties are supportive of the revised examples, where the new substantive credit enhancement concept has been incorporated.

Interested parties also offer the following comments on the various possible reporting options for Schedule D-1.

1. Reporting Lines:

   With the principles-based bond definition, it is recommended that more granular reporting lines be established to capture investments in scope of SSAP No. 26R and SSAP No. 43R. From preliminary assessments, the current general categories are not used for analytical assessments / reports except for U.S. Govt – Full Faith and Credit. As such, this document proposes to replace the current general categories with the inclusion of more useful reporting lines based on the type of investment.

Exposure Request Detail provided on pages 2-5:

1. Information is requested on the potential removal of the general categories and whether the elimination would impact any tools or analyses currently performed.
   - Interested parties have no concerns currently with the proposed removal of the general categories.

2. Information is requested on the proposed reporting lines and whether additional categories would be beneficial. (Note – The proposal suggests dedicated reporting lines for certain securities that are now identified by codes. Comments on this approach are requested.)
   - Interested parties note that one of the challenges with the current Schedule D reporting categories and/or columns is ambiguity which leads to inconsistent reporting among companies. Interested parties recommends working together to ensure the instructions are clear and unambiguous to help prevent this problem with the new reporting schedules. This will benefit both companies and regulators.
   - Interested parties would like a better understanding of the unaffiliated/affiliated split of certain rows in the proposal; for example, are the rows not labelled with ‘Affiliated’ implied to be ‘Unaffiliated’? Or are the affiliated rows a subset of the former? Have you considered an alternative such as removing the lines identifying ‘Affiliated’ investments and utilizing a column to identify them instead? Blanks interested parties are suggesting that an Affiliated or Related Party indicator be utilized in a column for the investment schedules in the Blanks exposure 2021-22BWG (Related Party Reporting).
• Since investments in GNMA are RBC exempt, we recommend that additional lines be added to the ABS section to accommodate these for ease of identification (e.g., US Government Residential Mortgage-Backed Securities; US Government Commercial Mortgage-Backed Securities).
• Consider adding a new category in Issuer Credit Obligation for investments in Surplus Notes/Surplus Debentures which are currently reported on Schedule BA.

2. New Sub-Schedule D-1:

The bond project is currently proposing a new sub-schedule that details bond investments that have certain characteristics (e.g., ABS backed by financial assets that are not self-liquidating and ABS backed by cash-generating non-financial assets not captured within the practical expedient.)

Exposure Request:
1. Information is requested on how investments shall be categorized on this schedule.
   • Interested parties believe that the proposed ‘sub-schedule’ for Schedule D – Part I could be confusing, and the proposed data could be readily incorporated into electronic-only columns for the respective categories in the ‘Other Asset-Backed Securities’ section.
   • Clear instructions for each category under Other ABS will be extremely beneficial.
2. Information is requested on additional information / columns desired for these structures. Initial ideas that have been proposed include:
   a. Balloon payment as % of principal at acquisition
   b. Current loan-to-value
   c. PIK – Information on whether payment of interest is deferrable
   d. Amount of PIK interest to date
   e. Expected payoff date determined at acquisition
   f. Expected payoff date as of the financial statement date.

   • Currently, interested parties would support the proposed data elements for the ‘Other Asset-Backed Securities’ categories being reported in columns instead of in a ‘sub-schedule’. As changes to SSAP No. 26R and SSAP No. 43R are finalized for this project and further evaluation of these investments is done, modifications to the list may be warranted.
   • Interested Parties note that some of this data (e.g., Expected payoff date determined at acquisition) may not be readily available upon transition because it assumes a forward-looking analysis at a point in time that has already occurred (potentially decades in the past). Would a practical expedient be needed upon adoption to populate these types of fields?

3. Schedule D-1 Information:

As noted, with the change in reporting lines, it has been proposed a review of the columns and instructions also be considered. The following code columns have been potentially
identified.

- Column 3 – Code Column
- Column 5 – Bond Characteristics
- Column 26 – Collateral Type
- Column 34 – Capital Structure Code

Exposure Request– Detail provided on page 6:

1. Information is requested on whether other columns / reporting instructions should be clarified as part of the bond proposal project.
   - Interested parties are requesting additional time to address possible changes to the definitions of the columns indicated in the proposal. As rows are being changed, it could have a direct impact on what might be included in the columns as to minimize data redundancy.

2. Comments are welcome on the additional investment elements should be captured and/or whether certain elements are no longer beneficial to be captured. Potential elements related to asset‐backed securities include:
   a. Market Validation – This will be a code to identify situations where none of the issuance is owned by unrelated parties.
      - Currently, interested parties don’t have an issue with adding this field and we believe the answer could be either yes or no.
      - However, interested parties are not sure if the intent is to have the same meaning as the following – *This will be a code to identify situations where all of the issuance is owned by related parties.* If so, interested parties recommends removing the double negatives to be less confusing. If not, interested parties may not fully appreciate what is trying to be captured.

   b. Participation in residual tranche (Y/N)
      - Interested parties aren’t sure how to respond to this question. Should the insurer respond Yes if it currently owns a residual tranche of the same securitization (e.g., residual issued from the same vehicle that issued the bond it invested in) or if they have ever owned a participation in the residual tranche?

Ref #2021-20: Effective Derivatives – ASU 2017-12

The Working Group moved this agenda item to the active listing, categorized as substantive, and directed NAIC staff to work with regulators and industry in assessing and developing revisions to facilitate effective hedge assessments consistently between U.S. GAAP and statutory accounting.

ASU 2017-12 provided targeted improvements to the existing GAAP hedge accounting framework that helps reduce some of the cost and complexity of applying hedge accounting and allows for additional hedging strategies that better align with an entity's risk management practices. Substantive changes that weren’t initially adopted in SSAP No. 86 are addressing cross-currency basis spread as an excluded component, partial-term hedging for fair value.
hedges, ability to use the benchmark interest rate component of contractual cash flows to calculate the change in fair value of the hedged item in fair value hedges, last-of-layer/portfolio layer method for fair value hedges, and hedges of interest rate risk when the hedged item can be settled before scheduled maturity. Additionally, we are proposing clarifications to existing SSAP No. 86 for the accounting of forward points as an excluded component for currency forwards. Please refer to the attached appendix for proposed mark-ups to SSAP86 for these changes.

Summary of changes proposed to SSAP No. 86:

1. **Clarifications for the accounting of forward points as an excluded component for FX forwards** – Currently there is implicit inconsistency between paragraph 40 and Exhibit C for forward points as excluded components; this results in accounting that doesn’t align with companies’ risk management strategies. Application of the guidance in Paragraph 40 for a FX forward in an effective hedge relationship with an excluded component results in an impact to Surplus that is the same as if hedge accounting had not been applied. We propose resolving this matter by explicitly allowing the guidance in Exhibit C to be applied regardless of whether a component of the derivative is excluded from the assessment of effectiveness. When forward points are an excluded component from the assessment of hedge effectiveness, the forward points would be amortized into income. This would allow for the execution of FX forward effective hedge relationships, which interested parties would consider sound risk management strategies, to receive an accounting treatment that is more favorable relative to hedge accounting not being applied.

2. **Adding cross-currency basis spread as an excluded component** – We propose adding cross-currency basis spread as an excluded component. Doing so better aligns hedge accounting with companies’ risk management strategies, aligns the accounting for FX swaps where the cross-currency basis spread is an excluded component with the proposed accounting for FX forwards where forward points are an excluded component, and brings consistency between U.S. GAAP and Statutory accounting. Changes in the fair value of cross-currency basis spread have historically resulted in a less effective hedge or ineffective hedge because there is no corresponding offset in the hedged item. Excluding the cross-currency basis spread from the assessment of hedge effectiveness is beneficial for fair value hedges of foreign-denominated assets and liabilities. When the value of the cross-currency basis spread is excluded from the assessment of effectiveness, based on proposed changes to Paragraph 40 and Exhibit C, the excluded component would be held at amortized cost. With FX forwards, forward points as excluded components need to be amortized to be recognized in income. For FX swaps, the value of the cross-currency basis spread is embedded in the coupon payments of the swap, so the value is recorded in income each period through the typical swap accrual process.

3. **Adding ability to designate partial-term for fair value hedges** – We propose adding partial-term hedging for fair value hedges because it better aligns hedge accounting with companies’ risk management strategies for managing interest rate risk and brings consistency between U.S. GAAP and Statutory accounting. Currently SSAP No. 86 requires that the full contractual cash flows of the entire hedged item must be used to
calculate the change in the hedged item’s fair value attributed to the benchmark interest rate. With partial term an entity may designate only certain consecutive interest payments of a financial instrument as the hedged item and assume that the principal payment occurs at the end of the hedge term. Partial-term hedging allows entities to calculate the change in the fair value of the hedged item using an assumed term that begins when the first hedged cash flow begins to accrue and ends when the last hedged cash flow is due and payable. When using full contractual cash flows to calculate the change in the hedged item’s fair value attributed to changes in the benchmark rate, it can be difficult to achieve a highly effective hedge because the hedging instrument and the hedged item would react differently to changes in interest rates since the principal repayment occurs on different dates.

4. **Adding alternative to use the benchmark interest rate component of contractual cash flows to calculate the change in the fair value of the hedged item in fair value hedges** – We propose adding an alternative to use the benchmark interest rate component of contractual cash flows to calculate the change in the fair value of the hedged item in fair value hedges because it better aligns hedge accounting with companies’ risk management strategies for managing interest rate risk and brings consistency between U.S. GAAP and statutory accounting. Currently SSAP No. 86 requires that the full contractual cash flows of the entire hedged item be used to calculate the change in the hedged item’s fair value attributed to the benchmark interest rate. Calculating the change in fair value using only the benchmark rate component instead of the entire coupon may better reflect how an entity manages interest rate risk. In addition, it will provide a greater degree of offset between the changes in the fair values of the hedging instrument and the hedged item. Generally, the benchmark rate being hedged and the fixed rate on the hedging swap will match if the swap is “at-market” and executed at the inception of the hedging relationship.

5. **Adding last-of-layer/portfolio layer method for fair value hedges** – We propose adding last-of-layer/portfolio layer method for fair value hedges because it better aligns hedge accounting with companies’ risk management strategies for managing interest rate risk and brings consistency between U.S. GAAP and statutory accounting. Last-of-layer allows entities to designate as the hedged item the last dollar amount of a closed portfolio of prepayable financial assets, or one or more beneficial interests in a portfolio of prepayable financial instruments. When using this approach, it is assumed that as prepayments occur, they are first applied to the portion of the closed portfolio that are not part of the designated layer. At inception and on each assessment date, the entity would need to determine that the designated layer is expected to be outstanding until the end of the hedge. This approach simplifies the rigid nature of the similar asset test required for portfolio hedging for fair value hedges by allowing the ability to assess qualitatively instead of quantitatively by combining the partial-term fair value hedge election and the election to measure changes in the hedged item by using the benchmark rate component of the contractual coupon cash flows. This makes achieving hedge accounting for a portfolio of prepayable fixed rate assets easier. The similar asset test requirement for portfolio hedges often makes it difficult, if not impossible, for a group of disparate fixed-rate assets to qualify to be hedged on a portfolio basis. The FASB currently has tentative
conclusions for updates to last-of-layer method, so we will need a scope limitation to maintain consistency with GAAP. For example, last-of-layer would only be applicable to closed portfolios of assets, and companies would be prohibited from designating closed portfolios of liabilities.

6. **Adding hedges of interest rate risk when the hedged item can be settled before scheduled maturity** – We propose adding the ability to elect to only consider how changes in the benchmark rate affects the decision to prepay the instrument when it assesses hedge effectiveness and measures the change in the hedged item’s value attributable to the hedged risk because it better aligns hedge accounting with companies’ risk management strategies and brings consistency between U.S. GAAP and statutory accounting. If an entity makes this election, it does not consider how other factors (e.g. credit risk) might affect the decision to prepay the financial instrument.

**Ref #2021-21: Related Party Reporting**

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 25 and SSAP No. 43R, as illustrated in the proposal, to clarify application of the existing affiliate definition and incorporate disclosure requirements for all investments that involve related parties, regardless of whether or not they meet the affiliate definition (“the Related Party Exposure”). In addition, draft annual statement reporting revisions were also exposed, in anticipation of incorporating those revisions into a Blanks (E) Working Group proposal.

Interested parties appreciate NAIC staff meeting with industry to better understand the regulatory concerns and intent of this proposal.

The Related Party Exposure has the following two main goals:

1. Clarify the reporting of affiliate transactions within existing reporting lines in the investment schedules. This clarification intends to be consistent with the definition of an “affiliate” pursuant to the *Insurance Holding Company System Regulatory Act* (Model #440), SSAP No. 25—Affiliates and Other Related Parties and SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated (SCA) Entities.

2. Incorporate new reporting requirements for investment transactions with related parties. Pursuant to recent discussions, regulators desire additional information on investment transactions involving related parties, regardless of whether the related party is “affiliated” pursuant to Model #440. To preserve the affiliate definition and reporting categories, these additional proposed reporting elements will be captured outside of the current affiliate reporting requirements.

To accomplish these goals, the Related Party Exposure proposes to make changes to SSAP No 25 - Affiliates and Other Related Parties and SSAP No. 43R - Loan-backed and Structured Securities. We understand that one of the goals of the proposal is to identify investments that are originated, managed, sponsored or serviced (referred to as managed by affiliates for the
remainder of this letter) by an affiliate or related party of the insurer. Interested parties agree that this information can be useful for the regulators, but we believe that it is critical to differentiate investments where there is direct credit exposure to an affiliate from those investments that are only managed by affiliates with no underlying credit exposure to the affiliate or related parties of the insurer. The affiliate reporting distinction is very important for a number of reasons, including but not limited to the following:

a. **Rating Agencies** – Interested parties understand that the rating agencies may apply a higher risk factor to affiliated assets as there is a presumption that anything reported as affiliated has credit risk exposure to an SCA of the insurer.

b. **NAIC Designations** – Affiliated debt investments where there is credit exposure to an SCA of the insurer have to be filed with the SVO to obtain an NAIC designation. Affiliated equity investments in SCAs reported on Schedule D also require filing to confirm their reporting value on Schedule D. Debt investments in CLOs/CDOs that are managed by affiliates but that do not have any credit exposure to an affiliate are filing exempt because they are not deemed affiliated.

Our comments to the proposed changes to SSAP No. 25 and SSAP No. 43 are provided below:

1. **Removal of references to U.S. GAAP guidance from SSAP No. 25** - Interested parties agree with removing the U.S. GAAP reference to FASB Interpretation No. 35 as we agree that the statutory guidance uses a different threshold than US GAAP to determine if significant influence exists over an investee. In addition, the SSAP No. 25 guidance already includes a number of scenarios to rebut the presumption of control, which are similar to the examples provided in the GAAP guidance.

2. **The Working Group’s Proposed changes to SSAP No. 25 to add the following new paragraph:**

“For entities not controlled by voting interests, such as limited partnerships, trusts and other special purpose entities, control may be held by a general partner, servicer, or by other arrangements. The ability of the reporting entity or its affiliates to direct the management and policies of an entity through such arrangements shall constitute control as defined in paragraph 6. Additionally, a reporting entity or its affiliates may have indirect control of other entities through such arrangements. For example, if a limited partnership were to be controlled by an affiliated general partner, and that limited partnership held greater than 10% of the voting interests of another company, indirect control shall be presumed to exist. If direct or indirect control exists, whether through voting securities, contracts, common management or otherwise, the arrangement is considered affiliated under paragraph 5. Consistent with paragraph 8, a disclaimer of affiliation does not eliminate a “related party” distinction or disclosure requirements for material transactions pursuant to SSAP No. 25.”

We understand from conversations with staff that this paragraph is meant to clarify the guidance in paragraph 7 of SSAP No. 25 and paragraph 6 of SSAP No. 97- Investments
in Subsidiary, Controlled and Affiliated Entities. That guidance requires that investments in limited partnerships and other similar entities (i.e. investment funds) that are managed by a general partner that is affiliated to the insurer and where the insurer owns more than 10% of the investment fund’s equity be reported as affiliated investments.

Interested parties understand that the current SSAP No. 25 and SSAP No. 97 guidance already require equity investments in limited partnerships and similar entities to be reported as affiliated if the insurer owns more than 10% of the equity of the limited partnership and the insurer is affiliated to the general partner or managing member for limited liability company structures. One thing to note is that even if the insurer is affiliated to the general partner, the insurer would usually not have any credit exposure to its affiliates in these structures as the underlying assets of the investment fund are usually held with unrelated parties. For this reason, interested parties note that there is a diversity in practice in the reporting of these investment funds on Schedule BA, with some insurers reporting these investments in the affiliated section of Schedule BA and others reporting these investments as unaffiliated. If the intent is to report these types of equity investments as affiliated when the presumption of control cannot be overcome, this will require some reporting changes by some insurers.

In regard to debt investments in investment funds or securitization vehicles managed by the insurer affiliates or related parties as well as mortgage loans managed by affiliates, we note that most insurers currently report those investments as unaffiliated on Schedule D, Schedule BA and Schedule B if there is no underlying credit exposure to affiliates of the insurer. Interested parties would like to highlight again that just because the insurer is affiliated with the manager or servicer of an investment vehicle such as a securitization, if the underlying assets in the structure do not have affiliated credit exposure, the investment itself should not be reported as affiliated as that would not be accurate reporting. See further comments on the SSAP No. 43R proposed changes in item No. 4 below.

The new proposed paragraph also includes a look-through requirement of these investment funds to identify instances where the investment fund owns more than 10% of the common stock of its underlying investees. Interested parties have concerns with this look-through review. Doing a look-through of the underlying investments of investment funds managed by affiliates of the insurer could potentially create a very significant operational burden that may have little or no benefit. The reason why there is potentially little benefit to this is because if these investment funds have purchased an equity investment that represents more than 10% but less than 50% of the voting stock of one of their investees, this would almost never give control to the investment fund. For most entities capitalized with common stock (i.e. voting entities), the parties that control are the ones that own more than 50% of the voting shares. If the Working Group feels that this look-through is necessary, interested parties will need time to get this process implemented. Interested parties believe that the earliest this look-through requirement can be implemented is for year-end 2023 as time will be needed to set up a process with all affiliated funds so that the funds provide a listing of underlying equity investments in
other entities along with the percentage ownership. In addition, we suggest some wording changes, as shown below in the underlined text to the new paragraph, to link the new paragraph back to the examples in paragraph 7 to incorporate the examples of when the presumption of control can be overcome:

“For entities not controlled by voting interests, such as limited partnerships, trusts and other special purpose entities, control may be held by a general partner, servicer, or by other arrangements. The ability of the reporting entity or its affiliates to direct the management and policies of an entity through such arrangements shall constitute control as defined in paragraph 6. Additionally, a reporting entity or its affiliates may have indirect control of other entities through such arrangements. For example, if a limited partnership were to be controlled by an affiliated general partner, and that limited partnership held greater than 10% of the voting interests of another company, indirect control shall be presumed to exist unless the presumption of control can be overcome as detailed in paragraph 7. If direct or indirect control exists, whether through voting securities, contracts, common management or otherwise, the arrangement is considered affiliated under paragraph 5. Consistent with paragraph 8, a disclaimer of affiliation does not eliminate a “related party” distinction or disclosure requirements for material transactions pursuant to SSAP No. 25.”

Interested parties also ask for clarification regarding what the implications are of identifying an underlying investee of an investment fund as an affiliate. We believe that any other transactions carried out with the indirect affiliate need to be disclosed in the related party footnote, but we are unclear as to the impacts to Schedule Y and any other reporting schedules. The unit of account in this case would be the direct investment in the affiliated investment fund, not the underlying investments of the investment fund. It is not clear to us whether the indirect affiliates would also need to be reported on Schedule Y and/or any other reporting schedules.

3. **Proposed changes under paragraph 6 (a) of SSAP No. 43R regarding insurers’ investments in securitization vehicles where the underlying assets of the securitization predominantly relate to assets with credit exposure to affiliates/related parties of the insurer** – Interested parties agree that when the insurer has credit exposure to its SCAs, even if there are intermediaries as part of the transaction, such investment should be reported as affiliated in the investment schedules.

4. **Proposed changes to SSAP No. 43R to clarify that investments managed by affiliates are viewed as affiliated even if the underlying assets in the structure do not have any credit exposure to an affiliate** - Many insurers own asset management subsidiaries which manage securitization transactions. There is no question that the asset manager itself is an SCA of the insurer and such asset managers are reported on Schedule Y as affiliates of the insurer. However, when any debt tranches purchased from those securitization vehicles do not have any credit exposure to SCAs of the insurer, the debt tranches are not reported in the affiliated section of Schedule D even if the securitization vehicle is managed by an affiliate.
It is very important to interested parties that this distinction is understood for Schedule D bond investments. Schedule D bond investments should not be reported as affiliated if they do not have credit exposure to SCAs of the insurer.

We understand from conversations with NAIC staff that this clarification is not intended to change the reporting lines in which investments are currently reported. The expectation is that these investments will now have a new code that will identify these investments as being managed by a related party of the insurer but have no credit exposures to related parties.

Interested parties agree with adding new codes to differentiate investments that are simply managed by a related party (including SCAs) from those that in fact have credit exposure to a related party (including SCAs) of the insurer. See further comments to the proposed codes in item 5 below.

5. **Proposed annual statement changes to add a new electronic-only column to the investment schedules to identify investments involving related parties** – Interested Parties have no objection to the proposed new codes to specify the type of relationship with the manager/sponsor/servicer of an investment vehicle. However, we offer the following comments to provide better clarity as to the applicability of the codes:

   a. Most if not all of an insurer’s general account investments are managed by an affiliated asset manager. The affiliated asset manager makes decisions as to when to buy and sell a specific investment, including reviewing the investment for potential credit losses. We do not believe that it is the intent of the proposal to flag all investments as affiliated only because an affiliated asset manager makes investment decisions over the investment. Insurers already report their relationship with affiliated asset managers in the related party footnote. We believe that the intent of this proposal is to identify investment vehicles that are managed by related parties (including SCAs) as well as investments with direct exposure to related parties (including SCAs) of the insurer. To that end, we believe the codes would predominantly apply to the following types of investments:

      i. CLOs/CDOs or special purpose entities set up to create a securitization vehicle that are managed by related parties (including SCAs) of the insurer.

      ii. Mutual funds/ETFs and other similar funds where the asset manager is a related party of the insurers (including SCAs of the insurer).

      iii. Limited partnerships, limited liability companies or trusts set up as investment vehicles where the general partner or managing member is a related party of the insurer (including SCAs of the insurer).

      iv. Debt and equity investments in affiliates where there is direct credit risk exposure to a related party (including SCAs of the insurer).
b. Codes 2, 3 and 4 of the Related Party Exposure refer to “securitizations and other similar investments” which may imply to some that the codes only apply to Schedule D assets since Schedule D is where debt investments in securitizations are reported. If the codes are expected to apply to all investment vehicles, perhaps the wording can be made clearer by saying “securitizations and other investment vehicles such as mutual funds, limited partnerships and limited liability companies.”

Ref #2021-22: Schedule D-6-1, Supplemental Reporting

The Working Group moved this item to the active listing and exposed proposed revisions to be incorporated into a Blanks (E) Working Group proposal which would supplement the reporting of SCA investments reported in Schedule D-6-1, as illustrated in the proposal. The supplemental electronic data to be captured is consistent with current requirements in SSAP No. 97 and as a result, the agenda item did not propose statutory accounting revisions.

Interested parties have the following observations regarding this proposal:

• The nature of the NAIC valuation adjustments can be broad and include a range of possibilities. But in looking back to the reductions from the 2020 filings, there are notes for items such as: going concern, lack of audit, audit not provided in English, lack of a U.S. GAAP reconciliation, or other errors, etc. It appears that the most prevalent, by far, is a reduction to match the equity reflected in the audit.

• The adjustment is not intended to match the approved amount, but to adjust subsequent valuations to reflect the current equity that factors in the noted adjustment / issue by NAIC staff from the filing submission. For example, if an insurer didn’t adjust for a surplus note, and staff adjusted their approved year end value to remove the surplus note, the insurer should make sure that a similar adjustment is reflected going forward when reporting the current equity amount.

• In addition, since this is gathering prior year information, we note that regulators will be able to easily identify significant swings in equity values for any particular SCA.

In summary, interested parties recommend that there be a formal process for communicating the adjustment to the state of domicile and a clearly articulated instruction for how the adjustment is to be reported to ensure that the adjustments are communicated to insurers by the state of domicile and that insurers clearly understand how the adjustments are to be reflected.

Ref #2021-23: SSAP No. 43R – Financial Modeling – Updated Guidance

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed two options for possible revision, as illustrated in the proposal, to update the summarized financial modeling guidance in SSAP No. 43R. The first option will retain existing guidance, with updates to reflect Valuation of Securities (E) Task Force adopted edits. The
second option removes the summarized financial modeling guidance and refers users to the Purposes and Procedures Manual of the NAIC Investment Analysis Office, which is the source document for financial modeling guidance.

Interested parties support option one as presented in the exposure. While there are advantages and disadvantages to each option, option 1 provides meaningful holistic view of how these securities are treated in one spot, and without reference to the P&P manual, which we believe will be useful for financial and annual statement preparers. Interested parties note the following grammatical error in paragraph 27 a – third sentence (tracked changed suggestion):

“For a modeled non-legacy security, meaning one which closed after December 31, 2012, the NAIC designation and NAIC designation category assigned by the NAIC Securities Valuation Office must be used.”

**Ref #2021-24: General Interrogatory for Cryptocurrencies**

The Working Group moved this item to the active listing and exposed proposed revisions to be incorporated into a Blanks (E) Working Group proposal to add a new general interrogatory to the annual blanks, requiring disclosure of when cryptocurrencies are directly held or permitted for the remittance of premiums. This agenda item did not propose statutory revisions.

Interested parties have no comment on this item.

**Ref #2021-25: Leasehold Improvements After Lease Termination**

NAIC staff received a question about the treatment of leasehold improvements in situations where a leased property is purchased by the lessee during the lease term and noted that there is no explicit guidance for these situations in SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements nor SSAP No. 73—Health Care Delivery Assets and Leasehold Improvements in Health Care Facilities. In these scenarios, it was identified that the reporting entity had acquired the property that was initially subject to a lease; however regardless of the scenario, amortization of leasehold improvements is only permitted over the shorter of the estimated useful life of the improvement or the lease term (as defined in SSAP No. 22R). In a normal lease termination, one where the lessee does not acquire said property, any remaining leasehold improvements shall be immediately expensed. This agenda item has been drafted to clarify this guidance, to eliminate future questions and ensure consistent application.

Interested parties agree that, in most cases, unamortized lessee owned leasehold improvements should be immediately expensed if the lease is terminated. However, in the situation where the reporting entity purchases a property that it was previously leasing, the immediate expensing may not be appropriate in all circumstances.

SSAP No. 19, Furniture, Fixtures, Equipment and Leasehold Improvements, paragraph 4 defines leasehold improvements as (bolded for emphasis) “lessee expenditures that are permanently attached to an asset” that a reporting entity is leasing under an operating lease.”
In defining this issue, NAIC Staff referred to paragraphs 18 and 31 of SSAP No. 40R, Real Estate Investments, which relate to the sale of real estate. Within the guidance of these paragraphs, it is emphasized by Staff that the sale of real estate includes property improvements or integral equipment, which are defined as any physical structure or equipment attached to the real estate that cannot be removed and used separately without incurring significant costs, such as an office building. Interested parties agree if a reporting entity sells real estate, the asset, including property improvements and integral equipment, should be derecognized and a gain or loss on the sale be realized. However, as noted above, this issue relates to when a reporting entity acquires, not sells, a property that it was leasing.

SSAP No. 40R paragraph 8 states (bolded for emphasis), “The cost of real estate represents the fair value of the consideration exchanged plus any costs incurred to place the real estate asset in usable condition, including but not limited to, brokerage fees, legal fees, demolition, clearing and grading, fees of architects and engineers, any additional expenditures made for equipment and fixtures that are made a permanent part of the structure…” Therefore, under SSAP No. 40R, leasehold improvements are admitted assets.

The proposed revisions to SSAP No. 19 and SSAP No. 73 both state (bolded for emphasis; italics to denote reference to the appropriate party acquiring the leased real estate):

The amortization of leasehold improvements (including property improvements and integral equipment) shall cease, with any remaining amount immediately expensed, in any event in which the lease is terminated in advance of the lease term. This includes situations in which leased real estate is acquired by the reporting entity (lessee) lessor. If leased real estate is acquired, recognition of the real estate shall follow the provisions in SSAP No. 40R—Real Estate Investments.

It is noted in the Staff Recommendation that “[i]t is presumed that the purchase of a property from a third party would include the leasehold improvements as part of the full purchase price.” Under this presumption it is logical that the previously recognized leasehold improvements should be immediately expensed, otherwise, the reporting entity would be double counting the assets and related expense. In practice, however, interested parties generally believe this to be an unlikely scenario.

Lease agreements with purchase options can be complex and structured in a myriad of ways depending on how the reporting entity lessee negotiated with the lessor. There may be circumstances that the reporting entity negotiates a reduced price to acquire the real estate formerly leased to compensate for the permanent improvements it previously made. In other situations, the sales price is determined based on the then current fair or appraised value. In this situation, the lessee and lessor will engage a third-party appraiser to establish the sales price. Appraisers generally use the cost, sales comparison, or income approaches to establish the value. Generally, those approaches may not contemplate the specific lessee owned leasehold improvements unless those improvements generate material utility (e.g., expansion of the building itself, or in a ground lease, land improvements or a constructed building, etc.). Accordingly, the reporting entity would not be including in the cost of the acquired real estate.
any additional expenditures made for equipment and fixtures that are made a permanent part of the structure as required/allowed by SSAP No. 40R if the amendments to SSAP No. 19 and 73 require them to be written off at acquisition.

Additionally, interested parties believe it would generally be economically punitive to a reporting entity to provide consideration to purchase a leased asset to the landlord (seller) that includes significant costs that the reporting entity lessee already incurred for the leasehold improvements. Also, many States require material purchases of real estate (particularly for HMOs) to be approved by the Department of Insurance. Barring any unique circumstances, it is unlikely a regulator would approve a transaction that requires the reporting entity to pay additional amounts to a lessor for costs it already incurred.

Interested parties are also concerned with the additional complexity the exposure draft will add in applying SSAP No 22R versus ASC 842 for GAAP. As it stands today, there is already a cost basis difference between GAAP and SAP when purchasing the underlying leased asset. SSAP No 22R implies that any deferred rent liability upon termination of a lease would be adjusted off to the P&L (i.e., a gain). For GAAP under ASC 842, any remaining lease liability upon purchase of the leased asset is adjusted to the cost basis of the asset (i.e., effectively deferring the gain) along with the unamortized portion of the lessee owned leasehold improvements. Expensing unamortized leasehold improvements in all circumstances for terminated leases for SAP creates further cost basis differences that will artificially and significantly distort earnings and will be extremely difficult to operationalize.

It is also worth noting that for some interested parties, external auditors and regulators have audited these transactions and have been comfortable that duplication is not occurring.

Interested parties suggest that the following amendments be revised guidance of SSAP No. 19 and 73:

The amortization of leasehold improvements (including property improvements and integral equipment) shall cease, with any remaining amount immediately expensed, in any events in which the lease is terminated in advance of the lease term. **When leased real estate is purchased by the reporting entity lessee resulting in termination of the lease, any unamortized lessee owned leasehold improvements should be added to the cost basis of the acquired real estate and recognized in accordance with SSAP No. 40R – Real Estate Investments.** Any unamortized leasehold improvements owned by the reporting entity lessee that have no future economic benefit upon purchase of the leased real estate asset or those included in the purchase price of the acquired real estate should be immediately expensed. This includes situations in which leased real estate is acquired by the reporting entity lessor. If leased real estate is acquired, recognition of the real estate shall follow the provisions in SSAP No. 40R—Real Estate Investments.

**Ref #2021-26EP: Editorial and Maintenance Update**

The Working Group moved this item to the active listing, categorized as nonsubstantive, and
exposed revisions to certain, remaining terminology references of “substantive” and “nonsubstantive,”

In response to an Aug. 14 referral from the Financial Condition (E) Committee, the edits are proposed to update the terminology references of “substantive” and “nonsubstantive,” which have historically been used to describe statutory accounting revisions being considered by the Working Group to the NAIC Accounting Practices & Procedures Manual. The Committee recommended terminology updates to alleviate concerns that users who are not familiar with the historical definitions of these terms may incorrectly perceive that the terms reflect potential financial impact rather than their intended definitions.

Accordingly, where applicable, the current concept/term of:

1) a “substantive” revision is proposed to be replaced with the phraseology of a “New SAP or New SAP concept in an existing SSAP,” and,
2) a “nonsubstantive” revision is proposed to be replaced with the phraseology of a “SAP clarification.”

Interested parties agree that the distinction between substantive (proposed to change to “development of new SSAPs or New SAP Concepts in an Existing SSAPs”) and non-substantive (proposed to change to “Development of SAP Clarifications”) can be confusing and that there would be more clarity in the development process if the distinction were eliminated.

Instead, we recommend that all new standards be handled similarly but that the effective date for each new standard be determined by evaluating the complexity of implementation (e.g., the extent that systems or process changes are required) and the availability of data to insurers to implement the new standard. This determination would be made as guidance is completed and with feedback from industry as to the time needed to adopt proposed reporting and/or disclosure.

Ref #2021-27: ASU 2021-04 - Issuer's Accounting for Certain Modifications or Exchanges of Freestanding Equity-Classified Written Call Options

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions, as illustrated in the proposal, to incorporate guidance related to the accounting for the changes in fair value when exchanging equity-classified written call options, while rejecting the remainder of ASU 2021-04 in SSAP No. 72.

Interested parties have no comment on the approach taken in the exposed revisions but recommend that the revisions be expanded to provide more detail to clarify what guidance from GAAP is adopted and what is not (similar to the description generally provided in an SSAP).

Ref #2021-28: ASU 2021-03, Intangibles – Goodwill and Other (Topic 350) – Accounting Alternative for Evaluating Triggering Events

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 68—Business Combinations and Goodwill to reject ASU 2021-
Statutory Accounting Principles Working Group
February 18, 2022
Page 17

03, Intangibles – Goodwill and Other (Topic 350) – Accounting Alternative for Evaluating Triggering Events for statutory accounting.

Interested parties have no comment on this item.

Ref #2021-29: ASU 2021-05 - Leases (Topic 842), Lessors—Certain Leases with Variable Lease Payments

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to reject ASU 2021-05 in SSAP No. 22R.

Interested parties have no comment on this item.

Ref #2021-30: ASU 2021-06—Amendments to SEC Paragraphs in Topic 205, Topic 942 and Topic 946

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to Appendix D—Nonapplicable GAAP Pronouncements to reject ASU 2021-06 as not applicable to statutory accounting.

Interested parties have no comment on this item.

APPENDIX

Suggested Modification to SSAP 86 for Discussions Related to FX Hedging / Excluded Components

Proposed Modifications to the Main Body of SSAP No. 86

40. The gain or loss on a derivative designated as a hedge and assessed to be effective is reported consistently with the hedged item. If an entity’s defined risk management strategy for a particular hedging relationship excludes a specific component of the gain or loss, or related cash flows, on the hedged derivative from the assessment of hedged effectiveness (as discussed in Exhibit B), that excluded component of the gain or loss shall be recognized in accordance with Appendix C, as an unrealized gain or loss. For example, if the effectiveness of a hedge with an option contract is assessed based on changes in the option’s intrinsic value, the changes in the option’s time value would be recognized in unrealized gain or losses. Time value is equal to the fair value of the option less its intrinsic value.

Proposed Modifications to Exhibit B

2. In defining how hedge effectiveness will be assessed, an entity must specify whether it will include in that assessment all of the gain or loss on a hedging instrument. As discussed in paragraph 33, this statement permits (but does not require) an entity to exclude all or a part of the hedging instrument’s time value from the assessment of hedge effectiveness, as follows:

   a. If the effectiveness of a hedge with an option contract is assessed based on changes in the option’s intrinsic value, the change in the time value of the contract would be excluded from the assessment of hedge effectiveness.

   b. If the effectiveness of a hedge with an option contract is assessed based on changes in the option’s minimum value, that is, its intrinsic value plus the effect of discounting, the change in the volatility value of the contract would be excluded from the assessment of hedge effectiveness.

   c. If the effectiveness of a hedge with a forward or futures contract is assessed based on changes in fair value attributable to changes in spot prices, the change in the fair value of the contract related to the changes in the difference between the spot price and the forward or futures price would be excluded from the assessment of hedge effectiveness.

   d. If the effectiveness of a hedge with a foreign currency swap is assessed based on changes in fair value attributable to changes in spot rates, only the change in value of the foreign currency notional amount due to fluctuations in spot prices would be included in the assessment of effectiveness.

In each circumstance above, changes in the excluded component would be recognized in accordance with Appendix C, included in unrealized gains or losses. As noted in paragraph 1 of this Exhibit, the effectiveness of similar hedges generally should be assessed similarly; that includes whether a component of the gain or loss on a derivative is excluded in assessing effectiveness. No other components of a gain or loss on the designated hedging instrument may be excluded from the assessment of hedge effectiveness.

Proposed Modifications to Exhibit C

2. Swaps, Collars, and Forwards (see also discussion to Introduction above)

b. Statement Value

   iii. Open foreign currency swap and forward contracts hedging foreign currency exposure on items denominated in a foreign currency and translated into U.S. dollars where fair value accounting is not being used.
(a) **For forward contracts**, the foreign exchange premium (discount) on the currency contract shall be amortized into income over the life of the contract or hedge program. The foreign exchange premium (discount) is defined as the foreign currency (notional) amount to be received (paid) times the net of the forward rate minus the spot rate at the time the contract was opened.

Amortization is not required if the contract:

1) was entered into within a year of maturity; or
2) is a foreign currency swap. For foreign currency swaps, the equivalent of a forward contract’s premium (discount) is the cross-currency basis spread, which is amortized into income through the foreign currency swap’s periodic interest accruals.

(b) A foreign currency translation adjustment shall be reflected as an unrealized gain/loss (unassigned funds (surplus) adjustment) using the same procedures as done to translate the hedged item;

(c) The unrealized gain/loss for the period equals the foreign currency (notional) amount to be received (paid) times the net of the current spot rate minus the prior period end spot rate;

(d) The statement value of the derivative equals:

1) **For forward contracts**, the amortized (premium) discount plus the cumulative unrealized gains/(loss) on the contract.
2) **For foreign currency swaps**, the cumulative unrealized gains/(loss) on the contract. Amortization of the cross-currency basis spread is recorded on the balance sheet as Receivables (Payable) for Investment Income Due & Accrued or Other Liabilities, as a component of the foreign currency swap’s periodic interest accrual.

The cumulative unrealized gain/(loss) equals the foreign currency (notional) amount to be received (paid) times the net of the current spot rate minus the spot rate at the time the contract was opened.

(e) Recognition of unrealized gains/losses and amortization of foreign exchange premium/discount on derivatives hedging forecasted transactions or firm commitments shall be deferred until the hedged transaction occurs. These deferred gains/losses will adjust the basis or proceeds of the hedged transaction when it occurs;

(f) For hedges where the cost of the foreign currency contract is combined with the hedged item, the statement value on Schedule DB is zero. The fair value of the derivative and hedged item shall be determined and reported separately, either individually or in the aggregate;

(g) If during the life of the currency contract it or a designated portion of the currency contract is not effective as a hedge, the hedge relationship shall be discontinued and the derivative shall be recorded at fair value pursuant to paragraph 22—valuation at amortized cost shall cease. To the extent it ceased to be an effective hedge, a cumulative unrealized gain/loss (surplus adjustment) will be recognized equal to the difference between the carrying value of the derivative on the balance sheet (at the time of de-designation) and the fair value of the derivative (at the time of de-designation) notional amount or designated notional amount times the difference between the forward rate available for the remaining maturity of the contract (i.e., the forward rate as of the balance sheet date) and the forward rate at the time it ceased to be an effective hedge.
Proposed changes to Reporting

Updated to SSAP 86.62.vi:

86.62.vi net gain or loss recognized in unrealized gains or losses during the reporting period representing the component of the derivative instruments’ gain or loss, if any, excluded from the assessment of hedge effectiveness;

The change in fair value of derivative components excluded from the assessment of effectiveness (pursuant to paragraph 2 in Exhibit B). These changes in fair value that occurred during the period and cumulatively over the life to date of the hedge relationship shall be disclosed by derivative type.

Example disclosure

**Two examples to choose from - year to date or cumulative**

For the years ended December 31, 2021 and 2020 there were derivative fair value changes excluded from the assessment of hedge effectiveness of $3M and $5M, respectively, related to foreign exchange swaps and $6M and $13M, respectively, related to foreign currency forwards.

At December 31, 2021 and 2020 there were derivative fair value changes excluded from the assessment of hedge effectiveness of $8M and 10M, respectively, related to foreign exchange swaps and $4M and $10M, respectively, related to foreign currency forwards.

**Proposed Schedule DB changes for identifier:**

Add an “X” to the Code column 15 indicating the qualifying derivative has a difference between BACV and FV due to an excluded component.
Suggested Modification to SSAP 86 for Discussions Related to Alignment of Interest Rate Hedging with GAAP (Topic 815/ASU 2017-12)

Proposed Modifications to the Main Body of SSAP 86

26. Fair value hedges qualify for hedge accounting if all of the following criteria are met:

d. The hedged item is specifically identified as either all or a specific portion or partial term of a recognized asset or liability or of an unrecognized firm commitment. The hedged item is a single asset or liability (or a specific portion or partial term thereof) or is a portfolio of similar assets or a portfolio of similar liabilities (or a specific portion thereof) or closed portfolio of assets where assumed layer is anticipated to be outstanding (or a specific portion thereof). For partial term one or more consecutive selected contractual cash flows where the hedged item begins when the first hedge cash flow begins to accrue and ends when the last hedged cash flow is due and payable, the assumed maturity of the hedged item occurs on the date in which the last hedged cash flow is due and payable;

e. If similar assets or liabilities are aggregated and hedged as a portfolio, the individual assets or individual liabilities must share the risk exposure for which they are designated as being hedged. The change in fair value attributed to the hedged risk for each individual item in a hedged portfolio must be expected to respond in generally proportionate manner to the overall change in the fair value of the aggregate portfolio to the hedged risk;

f. For a closed portfolio of prepayable financial assets or one or more beneficial interests secured by a portfolio of prepayable financial instruments, an entity may designate as the hedged item a stated amount of the asset or assets that are not expected to be affected by prepayments, defaults, and other factors affecting the timing and amount of cash flows if the designation is made in conjunction with the partial-term hedging election in paragraph (this designation is referred to throughout as the “last-of-layer method” or “portfolio layer method”).

   a. For last-of-layer, an analysis shall be completed and documented to support the entity’s expectation that the hedged item (that is, the designated last of layer) is anticipated to be outstanding as of the hedged item’s assumed maturity date in accordance with the entity’s partial-term hedge election. That analysis shall incorporate the entity’s current expectations of prepayments, defaults, and other events affecting the timing and amount of cash flows associated with the closed portfolio of prepayable financial assets or beneficial interest(s) secured by a portfolio of prepayable financial instruments.

   b. For purposes of its analysis, the entity may assume that as prepayments, defaults, and other events affecting the timing and amount of cash flows occur, they first will be applied to the portion of the closed portfolio of prepayable financial assets or one or more beneficial interests that is not part of the hedged item (that is, the designated last of layer); and

g. If the hedged item is a financial asset or liability, a recognized loan servicing right, or a nonfinancial firm commitment with financial components, the designated risk being hedged is:

   i. The risk of changes in the overall fair value of the entire hedged item;

   ii. The risk of changes in its fair value attributed to changes in benchmark interest rate risk;

   iii. The risk of changes in its fair value attributed to change in the related foreign currency exchange rates; or

   iv. The risk of changes in its fair value attributable to both change in the obligor’s creditworthiness and changes in the spread over the benchmark interest rate with respect to the financial asset’s or liability’s credit sector at inception of the hedged (referred to as credit risk).
If the risk designated as being hedged is not the risk in paragraph 26.f.i, two or more of the other risks (benchmark interest rate risk, foreign currency exchange risk, and credit risk) may simultaneously be designated as being hedged.

The benchmark interest rate being hedged in a hedge of interest rate risk must be specifically identified as part of the designation and documentation at the inception of the hedge relationship. In calculating the change in the hedged item’s fair value attributable to changes in the benchmark interest rate, the estimated cash flows used in calculating fair value must be based on all of the contractual cash flows of the entire hedged item or the benchmark rate component of the contractual coupon cash flows of the hedged item determined at hedge inception. An entity may designate a fair value hedge of interest rate risk in which the hedged item is a prepayable instrument. The entity may consider only how changes in the benchmark interest rate affect the decision to settle the hedged item before its scheduled maturity (for example, an entity may consider only how changes in the benchmark interest rate affect an obligor’s decision to call a debt instrument when it has the right to do so). The entity need not consider other factors that would affect this decision (for example, credit risk) when assessing hedge effectiveness. Excluding some of the hedged item’s contractual cash flows (for example the portion of the interest rate coupon in excess of the benchmark interest rate) from the calculation is not permitted. An entity may not simply designate prepayment risk as the risk being hedged for a financial asset. However, it can designate the option component of a prepayable instrument as the hedged item in a fair value hedge of the entity’s exposure to changes in the fair value of that “prepayment” option, perhaps thereby achieving the objective of its desire to hedge prepayment risk. The effect of an embedded derivative of the same risk class must be considered in designating a hedge of an individual risk. For example, the effect of an embedded prepayment option must be considered in designating a hedge of benchmark interest rate risk.

**Proposed Modifications to Exhibit B**

8. Conditions applicable to fair value hedges only
   f. The expiration date of the swaps matches the maturity date or assumed maturity date of the interest-bearing asset or liability.
   g. There is no floor or cap on the variable interest rate of the swap
   h. The interval between repricing of the variable interest in the swap is frequent enough to justify an assumption that the variable payment or receipt is at a market rate (generally three to six months or less).
   i. For last-of-layer If both of the following conditions exist, the quantitative test described for similar asset test may be performed qualitatively and only at hedge inception:

   a. The hedged item is a closed portfolio of prepayable financial assets or one or more beneficial interests.
   b. An entity measures the change in fair value of the hedged item based on the benchmark rate component of the contractual coupon cash flows.

Using the benchmark rate component of the contractual coupon cash flows when all assets have the same assumed maturity date and prepayment risk does not affect the measurement of the hedged item results in all hedged items having the same benchmark rate component coupon cash flows.

Description of Issue: On May 20, 2021, the Statutory Accounting Principles (E) Working Group adopted INT 21-01: Accounting for Cryptocurrencies, which addressed the statutory accounting treatment for cryptocurrencies, and established that directly held cryptocurrencies do not meet the definition of an admitted asset for statutory accounting. While researching this topic, it was noted that some insurance companies held cryptocurrencies, but that these were not always easy to identify in the statutory financial statements. Additionally, as the use of cryptocurrencies by insurance companies evolves, regulators expressed a desire to better understand how companies are using cryptocurrencies. NAIC staff were directed by the Working Group to look at possible ways to get a better view of how cryptocurrencies are currently directly held and used by insurance companies.

NAIC staff have proposed a new general interrogatory within the annual reporting blanks with several questions specific to cryptocurrencies. This is proposed as a new general interrogatory as this is information that has not been previously disclosed and does not fit well with any existing disclosures.

There are no proposed changes to statutory accounting, however the agenda item does result in a sponsored blanks proposal to the Blanks (E) Working Group to incorporate the general interrogatory and related instructions. NAIC staff from the Statutory Accounting Principles (E) Working Group will work directly with the Blanks (E) Working Group staff support.

Existing Authoritative Literature: As articulated in the “description of issue” section, INT 21-01 established that directly held cryptocurrencies do not meet the definition of an admitted asset and are therefore nonadmitted for statutory accounting.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): INT 21-01, discussed in the prior section.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): The IFRS Interpretations Committee issued a statement in June 2019 concluding that cryptocurrencies are not financial assets, however that they do meet the definition of an intangible asset.

Staff Recommendation:
NAIC staff recommends that the Working Group forward a sponsored blanks proposal to the Blanks (E) Working Group to add a new general interrogatory to the annual statement blanks to capture information about cryptocurrencies directly held or permitted for the remittance of premiums. Note, this agenda item does
not propose statutory revisions. The proposed additions to the reporting blanks and the blanks instructions are shown below.

Annual Statement Instructions, General Interrogatories, Investment Section: (All Types):

38.1 Answer “YES” if the company directly owns cryptocurrencies. Answer “NO” if the company does not directly own cryptocurrencies or only holds cryptocurrencies indirectly through funds (ETFs, Mutual Funds, etc.) INT 21-01: Accounting for Cryptocurrencies established that directly held cryptocurrencies do not meet the definition of cash or an admitted asset and are therefore considered to be a nonadmitted asset for statutory accounting.

38.2 If the answer to 38.1 is “YES”, specify on which schedule they are reported. (e.g., Schedule BA, etc.)

39.2 If the answer to 39.1 is “YES”, indicate if it is the policy of the reporting entity to directly hold cryptocurrency accepted as payment for premiums or immediately convert to U.S. dollars. Select “YES” for both questions if some cryptocurrencies are held directly and others are immediately converted to U.S. dollars.

39.21 Answer “YES” if it is the policy of the reporting entity to directly hold cryptocurrency that was accepted as payment for premiums.

39.22 Answer “YES” if it is the policy of the reporting entity to immediately convert cryptocurrency accepted as payment for premiums to U.S. dollars.

39.3 If the answer to 38.1 or 39.1 is “YES”, complete Columns 1 through 3 for each cryptocurrency accepted for payments of premiums or held directly.

Name of Cryptocurrency:

Provide the name of each cryptocurrency accepted for payments of premiums or held directly.

Immediately Converted to USD, Directly Held, or Both:

For each cryptocurrency listed, provide one of the following responses:

• Immediately converted to USD
• Directly held,
• Both.

Accepted for Payment of Premiums:

If the cryptocurrencies are accepted for the payment of premiums provide the response of “YES” in the column otherwise the response in the column should be “NO”.
Annual Statement Blanks, General Interrogatories, Investment Section: (All Types):

38.1 Does the reporting entity directly hold cryptocurrencies?  
Yes [ ] No [ ]

38.2 If the response to 38.1 is yes, on what schedule are they reported?  

39.1 Does the reporting entity directly or indirectly accept cryptocurrencies as payment for premiums on policies?  
Yes [ ] No [ ]

39.2 If the response to 39.1 is yes, are the cryptocurrencies held directly or are they immediately converted to U.S. dollars?  
39.21 Held directly  
Yes [ ] No [ ]

39.22 Immediately converted to U.S. dollars  
Yes [ ] No [ ]

39.3 If the response to 38.1 or 39.1 is yes, list all cryptocurrencies accepted for payments of premiums or that are held directly.

Staff Review Completed by: Jake Stultz, NAIC Staff, November 2021

Status:
On December 11, 2021, the Statutory Accounting Principles (E) Working Group moved this item to the active listing and exposed proposed revisions to be incorporated into a Blanks (E) Working Group proposal to add a new general interrogatory to the annual blanks, requiring disclosure of when cryptocurrencies are directly held or permitted for the remittance of premiums. This agenda item did not propose statutory revisions.

On April 4, 2022, the Statutory Accounting Principles (E) Working Group adopted this agenda item, which did not result in statutory accounting revisions, however adoption expressed support of the corresponding Blanks (E) Working Group proposal (2022-01BWG), which incorporates a new general interrogatory to detail if cryptocurrencies are directly held or permitted for the remittance of premiums.

**Description of Issue:**

In March 2021, the Financial Accounting Standards Board (FASB) issued Accounting Standard Update (ASU) 2021-03, Intangibles – Goodwill and Other – Accounting Alternative for Evaluating Triggering Events to provide private companies and not-for-profit entities with an optional accounting alternative for the performance of a goodwill impairment triggering evaluation. Goodwill impairment guidance requires entities to evaluate if the fair value of a reporting entity (that possesses goodwill) is less than its carrying value. Under guidance prior to this ASU, if it were deemed that it was more likely than not that goodwill was impaired, goodwill was tested for impairment using the triggering event date as the measurement date.

Several concerns regarding triggering event evaluations were raised by certain entities, specifically that the cost and complexity to evaluate interim triggering events was burdensome and operationally many private entities likely only evaluate impairment at the end of a reporting period. With these circumstances, the ASU referenced that it may be unduly difficult for these entities to determine a specific triggering date or even identify that a triggering event had occurred. Additionally, the temporary variability in values as a result of the COVID-19 pandemic likely exacerbated this issue.

Accordingly, the amendments in this ASU allow an accounting alternative to perform a goodwill impairment triggering event evaluation only as of the end of a reporting period, regardless of if that is an interim or an annual period. If an entity elects this alternative, they will only evaluate goodwill for impairment as of each reporting date. As a key note, this election is permitted for private and not-for-profit entities regardless of which U.S. GAAP accounting treatment was elected for goodwill (i.e., impairment only or straight-line amortization).

**Existing Authoritative Literature:**

**Staff note** – while the calculation of goodwill differs between U.S. GAAP and Statutory Accounting, the foundation of goodwill is similar. For completeness of this document, applicable goodwill references, as well as impairment guidance, have been included herein. Certain relevant items have been bolded for emphasis.

**SSAP No. 68—Business Combinations and Goodwill**

**Statutory Purchases of SCA Investments**

3. The statutory purchase method of accounting is defined as accounting for a business combination as the acquisition of one entity by another. It shall be used for all purchases of SCA entities including partnerships, joint ventures, and limited liability companies. The acquiring reporting entity shall record its investment at cost. Cost is defined as the sum of: (a) any cash payment, (b) the fair value of other assets distributed, (c) the fair value of any liabilities assumed, and (d) any direct costs of the acquisition.\(^{[\text{INT 00-28}]}\) Contingent consideration issued in a purchase business combination that is embedded in a security or that
is in the form of a separate financial instrument shall be recorded by the issuer at fair value at the acquisition date.

4. For those acquired SCA entities accounted for in accordance with paragraphs 8.b.i., 8.b.ii., 8.b.iii. or 8.b.iv. of SSAP No. 97, and joint venture, partnership or limited liability company entities accounted for in accordance with paragraph 8 of SSAP No. 48, goodwill is defined as the difference between the cost of acquiring the entity and the reporting entity’s share of the book value of the acquired entity. When the cost of the acquired entity is greater than the reporting entity’s share of the book value, positive goodwill exists. When the cost of the acquired entity is less than the reporting entity’s share of the book value, negative goodwill exists. Goodwill resulting from assumption reinsurance shall be recorded as a separate write-in for other-than-invested assets. All other goodwill shall be reported in the carrying value of the investment.

5. A business combination accounted for under the statutory purchase method and in which the acquired entity is valued in accordance with paragraphs 8.b.ii., 8.b.iii. or, 8.b.iv. of SSAP No. 97 shall determine the amount of positive goodwill or negative goodwill created by the combination using the reporting entity’s share of the GAAP net book value of the acquired entity, adjusted to a statutory basis of accounting in accordance with paragraph 9 of SSAP No. 97 in the case of acquired entities valued in accordance paragraphs 8.b.ii. or 8.b.iv. of SSAP No. 97. Business combinations accounted for under the statutory purchase method and in which the acquired entity is valued in accordance with, paragraph 8.b.i. of SSAP No. 97 shall determine the amount of positive or negative goodwill created by the business combination using the insurer’s share of the statutory book value of the acquired entity.

6. For those acquired SCA entities accounted for in accordance with paragraph 8.b.i. of SSAP No. 97 under the statutory purchase method, the historical bases of the acquired entity shall continue to be used in preparing its statutory financial statements. Therefore, pushdown accounting is not permitted.

7. Positive goodwill recorded under the statutory purchase method of accounting shall be admitted subject to the following limitation: Positive goodwill from all sources, including life, accident and health, and deposit-type assumption reinsurance and goodwill resulting from the acquisition of an SCA by the insurance reporting entity that is reported on the SCA’s financial statements (resulting from the application of pushdown accounting), is limited in the aggregate to 10% of the acquiring entity’s capital and surplus as required to be shown on the statutory balance sheet of the reporting entity for its most recently filed statement with the domiciliary state commissioner adjusted to exclude any net positive goodwill, EDP equipment and operating system software, and net deferred tax assets. Additionally, all positive goodwill shall be nonadmitted when the underlying investment in the SCA or partnership, joint venture and limited liability company is nonadmitted. When negative goodwill exists, it shall be recorded as a contra-asset.

8. Positive or negative goodwill resulting from the purchase of an SCA, joint venture, partnership or limited liability company shall be amortized to unrealized capital gains and losses on investments over the period in which the acquiring entity benefits economically, not to exceed 10 years. Positive or negative goodwill resulting from life, accident and health, and deposit-type assumption reinsurance shall be amortized to operations as a component of general insurance expenses over the period in which the assuming entity benefits economically, not to exceed 10 years. Goodwill shall be evaluated separately for each transaction. (INT 01-18)

Impairment

9. For any decline in the fair value of an entity, acquired through a purchase, that is other than temporary, the investment shall be written down to fair value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. The write down shall first be considered as an adjustment to any portion of the investment that is nonadmitted (e.g., nonadmitted goodwill). The new cost basis shall not be changed for subsequent recoveries in fair value. Future declines in fair value, which are determined to be other than temporary, shall be recorded as realized losses. A long-
lived asset shall be tested for recoverability whenever events or changes in circumstances indicate that its carrying amount may not be recoverable. The following are examples of such triggering events or changes in circumstances:

a. A significant decrease in the fair value of a long-lived asset

b. A significant adverse change in the extent or manner in which a long-lived asset is being used or in its physical condition

c. A significant adverse change in legal factors or in the business climate that could affect the value of a long-lived asset, including an adverse action or assessment by a regulator

d. An accumulation of costs significantly in excess of the amount originally expected for the acquisition or construction of a long-lived asset

e. A current period operating or cash flow loss combined with a history of operating or cash flow losses or a projection or forecast that demonstrates continuing losses associated with the use of a long-lived asset

f. A current expectation that, more likely than not, a long-lived asset will be sold or otherwise disposed of significantly before the end of its previously estimated useful life

10. An impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to recover the carrying amount of the investment or there is evidence indicating inability of the investee to sustain earnings which would justify the carrying amount of the investment. A fair value of an investment that is below the carrying amount based on the statutory equity method or the existence of investee operating losses may indicate a loss in value; however, they are not necessarily indicative of a loss in value that is other than temporary.

Staff note: In addition to the guidance in SSAP No. 68, INT 06-07: Definition of Phrase “Other Than Temporary” also provides authoritative guidance for when an impairment has occurred. While INT 06-07 has been included below, with certain relevant items bolded for emphasis, the requirement for impairment is an assessment - if an impairment indicator is present. Thus, it does not permit the delaying of an impairment assessment until a reporting period, nor does it permit assessment differentiation based on entity type (public vs. private or a not-for-profit entity).

INT 06-07: Definition of Phrase “Other than Temporary”

1. The Accounting Practices and Procedures Manual contains guidance for determining when an investment is considered impaired within each of the above identified statements. Those statements should also be used to determine the measurement of an impairment loss. Each of the above statements also makes reference to an “other than temporary” decline in fair value. This interpretation is designed to address questions related to that phrase, as well as summarize the statutory accounting process for determining when an investment is considered impaired.

Step 1: Determine Whether an Investment Is Impaired

2. The decision for determining when an investment is considered impaired is dictated by the applicable SSAP and the respective impairment indicators included in each of the SSAPs. If an impairment indicator is present, the determination of an impairment shall be assessed at the individual security or investment level as reported in the annual statement and supporting schedules. For those SSAPs that require the reporting entity to use the fair value to determine if an impairment has occurred, the determination of that value shall be consistent with how the term fair value is defined within SSAP No. 100—Fair Value. Once a reporting entity has determined that an impairment indicator is present, the reporting entity shall continue to evaluate whether the investment is impaired each subsequent reporting
period until either (a) the investment experiences a recovery of the fair value up to (or beyond) its carrying value or (b) the investor recognizes an other-than-temporary impairment loss.

**Step 2: Evaluate Whether an Impairment Is Other Than Temporary**

3. There are numerous factors to be considered when determining whether an impairment is other than temporary and their relative significance will vary from case to case. The Emerging Accounting Issues (E) Working Group (Working Group) has been asked if the phrase “other than temporary” should be interpreted to mean “permanent.” The Working Group believes the Statutory Accounting Principles (E) Working Group consciously chose the phrase “other than temporary” as the analysis was not intended to determine whether an individual security or investment was “permanently impaired.” **The fair value of assets may decline for various reasons. The market price may be affected by general market conditions, which reflect prospects for the economy as a whole, or by specific information pertaining to an industry or an individual company. Such declines require further investigation by management. Acting upon the premise that a write-down may be required, management should consider all available evidence to evaluate the fair value of its investment.**

4. The Working Group believes that the following items are only a few examples of the factors, which, individually or in combination, indicate that a security’s decline in value is specific to an issuer’s fundamental credit difficulties, or that a non-interest related decline is other than temporary and that a write-down of the carrying value is required:

   a. The length of time and the extent to which the fair value has been less than cost;

   b. The financial condition and short-term prospects of the issuer, including any specific events that may influence the operations of the issuer, such as changes in technology, that may impair the earnings potential of the asset or the discontinuance of a segment of the business that may affect the future earnings potential; or

   c. The intent and ability of the holder to retain its investment in the issuer for a period of time sufficient to allow for any anticipated recovery in value.

5. **An interest related impairment should be deemed other-than-temporary when an investor has the intent to sell an investment, at the reporting date, before recovery of the cost of the investment.** The investor should consider whether its cash or working capital requirements and contractual or regulatory obligations indicate that the investment may need to be sold before the forecasted recovery occurs. The term “interest related” includes a declining value due to both increases in the risk free interest rate and general credit spread widening. Credit spreads can widen or contract for a variety of reasons, including supply/demand imbalances in the marketplace or perceived higher/lower risk of an entire sector. If the declining value is caused, in whole or in part, due to credit spreads widening, but not due to fundamental credit problems of the issuer, the change in credit spreads is deemed to be interest related. Fundamental credit problems exist with the issuer when there is evidence of financial difficulty that may result in the issuer being unable to pay principal or interest when due.

6. **Unless evidence exists to support the assertion that the decline in fair value below carrying value is temporary, a write-down, accounted for as a realized loss, should be recorded.** In accordance with the guidance of the SSAPs, such loss should be recognized in income for the period in which other than temporary impairment is determined to have occurred. The adjusted carrying value reflecting the impairment loss of the individual security or investment shall be the new cost basis of the individual security or investment.

7. The Working Group has also been asked if it is appropriate for reporting entities, independent auditors or state examiners to apply predefined thresholds to the phrase “other than temporary”? The Working Group is aware that certain insurers, independent auditors and state examiners, over time, have developed quantitative thresholds as “rules of thumb” to assist in the evaluation of asset impairment. One
rule of thumb in particular suggests that if the fair value is less than its carrying value by 20 percent or more, then it is considered to be other than temporarily impaired. Another suggests that an asset is other than temporarily impaired if the fair value has been less than cost for more than 6 months. The use of a numerical threshold may provide the basis for a preliminary assumption that – without considering all relevant circumstances – an impairment may have occurred. Identifying the impairment is only the beginning of the analysis; it cannot appropriately be used as a substitute for a full analysis of all relevant qualitative considerations. Exclusive reliance on such thresholds removes the ability of management to apply its judgment, a concept inherent to the impairment model.

**Step 3: If the Impairment is Other Than Temporary, the Cost Basis of the Individual Asset Shall Be Written Down to a New Cost Basis and the Amount of the Write-Down Is Accounted for as a Realized Loss**

8. If an impairment is considered other than temporary, the cost or carrying value of the asset should be written down to reflect its value in accordance with the relevant SSAP. A company’s management should follow the impairment guidance in the SSAP pertaining to that particular asset class while considering various factors on a case-by-case basis in determining the amount of the realized loss that should be recorded.

**Activity to Date** (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

**Information or issues (included in Description of Issue) not previously contemplated by the Working Group:** None

**Staff Recommendation:**

NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 68 —*Business Combinations and Goodwill* to reject ASU 2021-03, *Intangibles – Goodwill and Other (Topic 350) – Accounting Alternative for Evaluating Triggering Events for statutory accounting*. Rejecting this ASU will result with continuation of existing guidance from INT 06-07, which does not permit delays in impairment assessment or variations in assessment based on type of entity.

Proposed revisions to SSAP No. 68 (Relevant Literature section – paragraph 22):

**Staff Review Completed by:** Jim Pinegar, NAIC Staff – October 2021
Status:
On December 11, 2021, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 68—Business Combinations and Goodwill to reject ASU 2021-03, Intangibles – Goodwill and Other (Topic 350) – Accounting Alternative for Evaluating Triggering Events for statutory accounting.

On April 4, 2022, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as illustrated above, to SSAP No. 68—Business Combinations and Goodwill rejecting ASU 2021-03, Intangibles – Goodwill and Other (Topic 350) – Accounting Alternative for Evaluating Triggering Events for statutory accounting.

<td></td>
<td></td>
</tr>
</tbody>
</table>

Description of Issue: In July 2021, the Financial Accounting Standards Board (FASB) issued Accounting Standard Update (ASU) 2021-05, Leases (Topic 842), Lessors—Certain Leases with Variable Lease Payments. This ASU was issued as part of FASB's post-implementation review to address issues that have been found during the implementation of the new lease guidance from ASU 2016-02, Leases (Topic 842). The guidance in ASU 2021-05 applies to lessors with lease contracts that: 1) have variable lease payments that do not depend on a reference index or rate, and/or 2) would have resulted in the lessor being required to recognize a day one selling loss (at lease commencement) if those leases were classified as sales-type or direct financing. The changes to Topic 842 will require a lessor to classify a lease with variable lease payments that do not depend on an index or a rate as an operating lease at lease commencement if classifying the lease as a sales-type lease or a direct financing lease would result in the recognition of a selling loss. SSAP No. 22R—Leases requires nearly all leases to be treated as operating leases for statutory accounting, so adoption of this guidance would be redundant and unnecessary.

Existing Authoritative Literature:
The ASUs related to Topic 842 have previously been rejected in SSAP No. 22R—Leases.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): ASC Topic 842 was the result of a joint project between FASB and the International Accounting Standards Board.

Recommendation: Staff recommends the Working Group move this agenda item to the active listing, categorized as nonsubstantive and expose revisions to reject ASU 2021-05 in SSAP No. 22R—Leases. Under statutory accounting almost all leases are classified as operating leases, thus this U.S. GAAP guidance is not necessary.

Proposed Revision to SSAP No. 22R (Relevant Literature section – paragraph 52):

i. ASU 2020-02, Leases (Topic 842), Lessors—Certain Leases with Variable Lease Payments (Rejected in its entirety.)

Staff Review Completed by: Jake Stultz, NAIC Staff – August 2021
**Status:**
On December 11, 2021, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to reject ASU 2021-05 in SSAP No. 22R.

On April 4, 2022, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as illustrated above, to reject *ASU 2021-05, Leases (Topic 842), Lessors—Certain Leases with Variable Lease Payments* in *SSAP No. 22R—Leases.*

Description of Issue:
The Financial Accounting Standards Board issued Accounting Standard Update (ASU) 2021-06, Presentation of Financial Statements (Topic 205), Financial Services—Depository and Lending (Topic 942), and Financial Services—Investment Companies (Topic 946), Amendments to SEC Paragraphs Pursuant to SEC Final Rule Releases No. 33-10786, Amendments to Financial Disclosures about Acquired and Disposed Businesses, and No. 33-10835, Update of Statistical Disclosures for Bank and Savings and Loan Registrants, which effects only SEC paragraphs in Topic 205, Topic 942 and Topic 946. These edits are predominantly formatting and paragraph references, with new guidance duplicated from SEC requirements on the presentation of financial statements for funds acquired or to be acquired.

Existing Authoritative Literature:
Generally, all SEC guidance from ASUs is rejected as not applicable for statutory accounting in Appendix D—Nonapplicable GAAP Pronouncements.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): None

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive, and expose revisions to Appendix D—Nonapplicable GAAP Pronouncements to reject ASU 2021-06, Presentation of Financial Statements (Topic 205), Financial Services—Depository and Lending (Topic 942), and Financial Services—Investment Companies (Topic 946), Amendments to SEC Paragraphs Pursuant to SEC Final Rule Releases No. 33-10786, Amendments to Financial Disclosures about Acquired and Disposed Businesses, and No. 33-10835, Update of Statistical Disclosures for Bank and Savings and Loan Registrants as not applicable to statutory accounting.

This item is proposed to be rejected as not applicable as ASU 2021-06 is specific to deletion and modification of SEC paragraphs, which are not applicable for statutory accounting purposes.

Staff Review Completed by: Jake Stultz, November 2021

Issue: SSAP No. 43R – Financial Modeling – Updated Guidance

Check (applicable entity):

- Modification of Existing SSAP: ☒
- New Issue or SSAP: ☐
- Interpretation: ☐

P/C | Life | Health
--- | --- | ---
☒ | ☒ | ☒

Description of Issue: This agenda item reflects updated NAIC designation/NAIC designation category guidance recently adopted by the Valuation of Securities (E) Task Force (VOSTF) to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual), for residential mortgage-backed securities (RMBS) and commercial mortgage-backed securities (CMBS).

On October 20, 2021, the VOSTF adopted instructions to the P&P Manual to designate that 1) modeled RMBS/CMBS tranches that do not have expected losses will be assigned an NAIC 1 Designation and a NAIC 1.A. Designation Category, and 2) financial modeling for “legacy” RMBS/CMBS securities (those that closed prior to January 1, 2013), shall continue to utilize the insurer’s carrying value for said modeling.

This agenda item has been drafted to ensure the financial modeling guidance summarized in SSAP No. 43R—Loan-Backed and Structured Securities reflects the practices as directed by the P&P Manual. (Note, while the Accounting Practices and Procedures Manual is higher than the P&P manual in the statutory hierarchy, the primary source of authoritative guidance for financial modeling is the P&P manual as only a general description of the modeling process is included in SSAP No. 43R).

Existing Authoritative Literature:

SSAP No. 43R—Loan-Backed and Structured Securities

Designation Guidance

27. For RMBS/CMBS securities within the scope of this statement, the initial NAIC designation used to determine the carrying value method and the final NAIC designation for reporting purposes is determined using a multi-step process. The P&P Manual provides detailed guidance. A general description of the processes is as follows:

a. Financial Modeling: Pursuant to the P&P Manual, the NAIC identifies select securities where financial modeling must be used to determine the NAIC designation. NAIC designation based on financial modeling incorporates the insurers’ carrying value for the security. For those securities that are financially modeled, the insurer must use NAIC CUSIP specific modeled breakpoints provided by the modelers in determining initial and final designation for these identified securities. As specified in the P&P Manual, securities where modeling results in zero expected loss in all scenarios and that would be equivalent to an NAIC designation and NAIC designation category of NAIC 1 and NAIC 1.A, respectively, if the filing exemption process in the P&P Manual was applied, are automatically considered to have a final NAIC designation of NAIC 1 and NAIC designation category of NAIC 1.A., regardless of the carrying value. The three-step process for modeled securities is as follows:
i. Step 1: Determine Initial Designation – The current amortized cost (divided by remaining par amount) of a loan-backed or structured security is compared to the modeled breakpoint values assigned to the six (6) NAIC designations for each CUSIP to establish the initial NAIC designation.

ii. Step 2: Determine Carrying Value Method – The carrying value method, either the amortized cost method or the lower of amortized cost or fair value method, is then determined as described in paragraph 26 based upon the initial NAIC designation from Step 1.

iii. Step 3: Determine Final Designation – The final NAIC designation is determined by comparing the carrying value (divided by remaining par amount) of a security (based on paragraph 27.a.ii.) to the NAIC CUSIP specific modeled breakpoint values assigned to the six (6) NAIC designations for each CUSIP. The final designation is mapped to an NAIC designation category according to the instructions in the P&P Manual. This final NAIC designation shall be applicable for statutory accounting and reporting purposes and the NAIC designation category will be used for investment schedule reporting and establishing RBC and AVR charges. The final NAIC designation is not used for establishing the appropriate carrying value method in Step 2 (paragraph 27.a.ii.).

b. All Other Loan-Backed and Structured Securities: For securities not subject to paragraph 27.a. (financial modeling) follow the established designation procedures according to the appropriate section of the P&P Manual. The NAIC designation shall be applicable for statutory accounting and reporting purposes (including determining the carrying value method and establishing the AVR charges). The carrying value method is established as described in paragraph 26. Examples of these securities include, but are not limited to equipment trust certificates, credit tenant loans (CTL), 5*/6* securities, interest only (IO) securities, securities with CRP ratings (excluding RMBS/CMBS), loan-backed and structured securities, and mortgage-referenced securities with SVO assigned NAIC designations. [NAIC staff note, it is anticipated that the revisions shown above in this paragraph will be reflected when agenda item 2021-11: SSAP No. 43R – CTL is adopted. As these edits do not impact this agenda item, they are shown here for reference and accordingly, are not shown below in the options presented for possible exposure.]

Specific Interim Reporting Guidance Financially Modeled Securities

28. For securities that will be financially modeled under paragraph 27, the guidance in this paragraph shall be applied in determining the reporting method for such securities acquired in the current year for quarterly financial statements. Securities reported as of the prior-year end shall continue to be reported under the prior-year end methodology for the current-year quarterly financial statements. For year-end reporting, securities shall be reported in accordance with paragraph 27, regardless of the quarterly methodology used.

a. Reporting entities that acquired the entire financial modeling database for the prior-year end are required to follow the financial modeling methodology (paragraph 27.a.) for all securities acquired in the subsequent year that were included in the financial modeling data acquired for the prior year-end.

b. Reporting entities that acquired identical securities (identical CUSIP) to those held and financially modeled for the prior year-end are required to follow the prior year-end financial modeling methodology (paragraph 27.a.) for these securities acquired subsequent to year-end.
c. Reporting entities that do not acquire the prior-year financial modeling information for current-year acquired individual CUSIPS, and are not captured within paragraphs 28.a. or 28.b., are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate). Reporting entities that do acquire the individual CUSIP information from the prior-year financial modeling database shall use that information for interim reporting.

d. Reporting entities that acquire securities not previously modeled at the prior year-end are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate).

8. **Question** – Do LBSS purchased in different lots result in a different NAIC designation for the same CUSIP? Can reporting entities use a weighted average method determined on a legal entity basis?

8.1 Under the financial modeling process (applicable to qualifying RMBS/CMBS reviewed by the NAIC Structured Securities Group), the amortized cost of the security impacts the “final” NAIC designation used for reporting and RBC purposes. As such, securities subject to the financial modeling process acquired in different lots can result in a different NAIC designation for the same CUSIP. In accordance with the current instructions for calculating AVR and IMR, reporting entities are required to keep track of the different lots separately, which means reporting the different designations. For reporting purposes, if a SSAP No. 43R security (by CUSIP) has different NAIC designations by lot, the reporting entity shall either 1) report the aggregate investment with the lowest applicable NAIC designation or 2) report the investment separately by purchase lot on the investment schedule. If reporting separately, the investment may be aggregated by NAIC designation. (For example, all acquisitions of the identical CUSIP resulting with an NAIC 1 designation may be aggregated, and all acquisitions of the identical CUSIP resulting with an NAIC 3 designation may be aggregated.)

9. **Question** – The NAIC Designation process for LBSS subject to the financial modeling process may incorporate loss expectations that differ from the reporting entity’s expectations related to OTTI conclusions. Should the reporting entities be required to incorporate recovery values obtained from data provided by the service provider used for the NAIC Designation process for impairment analysis as required by SSAP No. 43R?
In accordance with INT 06-07: Definition of Phrase “Other Than Temporary,” reporting entities are expected to “consider all available evidence” at their disposal, including the information that can be derived from the NAIC designation.

**Question** - For companies that have separate accounts, can the NAIC designation be assigned based upon the total legal entity or whether it needs to be calculated separately for the general account and the total separate account?

10.1 The financial modeling process for qualifying RMBS/CMBS securities is required for applicable securities held in either the general or separate account.

**Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):**

- To be consistent with the P&P Manual revisions, agenda item 2018-19 eliminated the multi-step designation guidance for modified filing exempt (MFE) securities. The elimination of MFE was effective March 31, 2019, with early application permitted for year-end 2018. With the elimination of MFE, for securities that are filing exempt, the NAIC designation reported will correspond to the CRP rating without adjustment based on carrying value. Also, in agenda item 2018-03, the Working Group clarified that securities acquired in lots shall not be reported with weighted average designations. With the adopted guidance, if a SSAP No. 43R security (by CUSIP) has different NAIC designations by lot, the reporting entity shall either 1) report the aggregate investment with the lowest applicable NAIC designation or 2) report the investment separately by purchase lot on the investment schedule. If reporting separately, the investment may be aggregated by NAIC designation. With the elimination of MFE, the instances of different designations by lot is not expected to be prevalent, but could still occur with the financial modeling process for RMBS and CMBS.

- In November 2020, the Working Group adopted edits to SSAP No. 43R from agenda item 2020-21: SSAP No. 43R – Designation Categories for RMBS/CMBS investments, incorporating newly adopted VOSTF guidance to the P&P manual detailing the use and mapping of NAIC designations to NAIC designation categories. Reporting entities were to then utilize the new NAIC designation categories for accounting and reporting purposes.

**Information or issues (included in Description of Issue) not previously contemplated by the Working Group:**

None

**Convergence with International Financial Reporting Standards (IFRS):** Not Applicable

**Staff Recommendation:** NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 43R—Loan-backed and Structured Securities to reflect the updated financial modeling guidance for RMBS/CMBS securities. These revisions reflect the guidance recently adopted for the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual).

NAIC staff note - Two options for incorporating the newly revised P&P manual guidance are presented below. Option 1 retains the past approach to summarize the financial modeling approach. Option 2 removes the summary and instead refers to the P&P Manual. When the modeling guidance was first adopted, it was identified as necessary to summarize in the AP&P. However, as the concept is no longer new, NAIC staff requests feedback on the extent
the guidance needs to be retained. Since the P&P Manual governs this process, the AP&P guidance must currently be updated anytime they incorporate a change.

Proposed Revisions to SSAP No. 43R—Loan-Backed and Structured Securities

OPTION #1 – Retain existing guidance in SSAP No. 43R with updates to reflect recent actions of the VOSTF. (If this option is preferred, further updates are likely forthcoming as the VOSTF considers additional modifications to the financial modeling guidance.)

Designation Guidance

27. For RMBS/CMBS securities within the scope of this statement, the initial NAIC designation used to determine the carrying value method and the final NAIC designation for reporting purposes is determined using a multi-step process or the NAIC designation assigned by the NAIC Securities Valuation Office. The P&P Manual provides detailed guidance. A general description of the processes is as follows:

a. Financial Modeling: Pursuant to the P&P Manual, the NAIC identifies select securities where financial modeling must be used to determine the NAIC designation. For a modeled legacy security, meaning one which closed prior to January 1, 2013, the NAIC designation is based on financial modeling incorporating the insurers’ carrying value. For the security a modeled on-legacy security, meaning one which closed after December 31, 2012, the NAIC designation and NAIC designation category assigned by the NAIC Securities Valuation Office must be used. For those legacy securities that are financially modeled, the insurer must use NAIC CUSIP specific modeled breakpoints provided by the modelers in determining initial and final designation for these identified securities. As specified in the P&P Manual, a modeled legacy security RMBS or CMBS tranche that has no expected loss, as compiled and published by the NAIC Securities Valuation Office, under any of the selected modeling scenarios would be assigned an NAIC 1 designation and NAIC 1.A designation category regardless of the insurer’s book/adjusted carrying value. Securities where modeling results in zero expected loss in all scenarios and that would be equivalent to an NAIC designation and NAIC designation category of NAIC 1 and NAIC 1.A, respectively, if the filing exemption process in the P&P Manual was applied, are automatically considered to have a final NAIC designation of NAIC 1 and NAIC designation category of NAIC 1.A, regardless of the carrying value. The three-step process for modeled legacy securities is as follows:

i. Step 1: Determine Initial Designation – The current amortized cost (divided by remaining par amount) of a loan-backed or structured security is compared to the modeled breakpoint values assigned to each the six (6) NAIC designations and NAIC designation category for each CUSIP to establish the initial NAIC designation.

ii. Step 2: Determine Carrying Value Method – The carrying value method, either the amortized cost method or the lower of amortized cost or fair value method, is then determined, as described in paragraph 26 based upon the initial NAIC designation from Step 1.

iii. Step 3: Determine Final Designation – The final NAIC designation is determined by comparing the carrying value (divided by remaining par amount) of a security (based on paragraph 27.a.ii.) to the NAIC CUSIP specific modeled breakpoint values assigned to the six (6) NAIC designations and NAIC designation category for each CUSIP or. The final designation is mapped to an NAIC designation category, according to the instructions in the P&P Manual. This final NAIC designation shall be applicable for statutory accounting and reporting purposes.
Ref #2021-23

and the NAIC designation category will be used for investment schedule reporting and establishing RBC and AVR charges. The final NAIC designation is not used for establishing the appropriate carrying value method in Step 2 (paragraph 27.a.ii.).

b. All Other Loan-Backed and Structured Securities: For securities not subject to paragraph 27.a. (financial modeling) follow the established designation procedures according to the appropriate section of the P&P Manual. The NAIC designation shall be applicable for statutory accounting and reporting purposes (including determining the carrying value method and establishing the AVR charges). The carrying value method is established as described in paragraph 26.

Specific Interim Reporting Guidance Financially Modeled Securities

28. For securities that will be financially modeled under paragraph 27, the guidance in this paragraph shall be applied in determining the reporting method for such securities acquired in the current year for quarterly financial statements. Securities reported as of the prior-year end shall continue to be reported under the prior-year end methodology for the current-year quarterly financial statements. For year-end reporting, securities shall be reported in accordance with paragraph 27, regardless of the quarterly methodology used.

a. Reporting entities that acquired the entire financial modeling database for the prior-year end are required to follow the financial modeling methodology (paragraph 27.a.) for all securities acquired in the subsequent year that were included in the financial modeling data acquired for the prior year-end.

b. Reporting entities that acquired identical securities (identical CUSIP) to those held and financially modeled for the prior year-end are required to follow the prior year-end financial modeling methodology (paragraph 27.a.) for these securities acquired subsequent to year-end.

c. Reporting entities that do not acquire the prior-year financial modeling information for current-year acquired individual CUSIPS, and are not captured within paragraphs 28.a. or 28.b., are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate). Reporting entities that do acquire the individual CUSIP information from the prior-year financial modeling database shall use that information for interim reporting.

d. Reporting entities that acquire securities not previously modeled at the prior year-end are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate).

OPTION #2 – Remove summarized financial modeling guidance from SSAP No. 43R and refer to the guidance in the P&P Manual. (If this option is preferred, further updates to financial modeling guidance are expected to be isolated to the P&P Manual, which is the governs the designation process.)

Designation Guidance

27. NAIC designations are determined in accordance with the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual). The NAIC designations shall be applicable for statutory accounting and reporting purposes (including determining the carrying value and establishing the AVR charges). For RMBS/CMBS securities within the scope of this statement may be subject to the financial modeling process. The P&P Manual shall be consulted for the specific process for obtaining or determining the NAIC designation. The initial NAIC designation used to determine the carrying value method and the final NAIC designation for reporting purposes is
determined using a multi-step process. The P&P Manual provides detailed guidance. A general description of the processes is as follows:

a. **Financial Modeling:** Pursuant to the P&P Manual, the NAIC identifies select securities where financial modeling must be used to determine the NAIC designation. NAIC designation based on financial modeling incorporates the insurers’ carrying value for the security. For those securities that are financially modeled, the insurer must use NAIC CUSIP-specific modeled breakpoints provided by the modelers in determining initial and final designation for these identified securities. As specified in the P&P Manual, securities where modeling results in zero expected loss in all scenarios and that would be equivalent to an NAIC designation and NAIC designation category of NAIC 1 and NAIC 1.A., respectively, if the filing exemption process in the P&P Manual was applied, are automatically considered to have a final NAIC designation of NAIC 1 and NAIC designation category of NAIC 1.A., regardless of the carrying value. The three-step process for modeled securities is as follows:

i. **Step 1: Determine Initial Designation** – The current amortized cost (divided by remaining par amount) of a loan-backed or structured security is compared to the modeled breakpoint values assigned to the six (6) NAIC designations for each CUSIP to establish the initial NAIC designation.

ii. **Step 2: Determine Carrying Value Method** – The carrying value method, either the amortized cost method or the lower of amortized cost or fair value method, is then determined as described in paragraph 26 based upon the initial NAIC designation from Step 1.

iii. **Step 3: Determine Final Designation** – The final NAIC designation is determined by comparing the carrying value (divided by remaining par amount) of a security (based on paragraph 27.a.ii.) to the NAIC CUSIP-specific modeled breakpoint values assigned to the six (6) NAIC designations for each CUSIP. The final designation is mapped to an NAIC designation category according to the instructions in the P&P Manual. This final NAIC designation shall be applicable for statutory accounting and reporting purposes, and the NAIC designation category will be used for investment schedule reporting and establishing RBC and AVR charges. The final NAIC designation is not used for establishing the appropriate carrying value method in Step 2 (paragraph 27.a.ii.).

b. **All Other Loan-Backed and Structured Securities:** For securities not subject to paragraph 27.a. (financial modeling) follow the established designation procedures according to the appropriate section of the P&P Manual. The NAIC designation shall be applicable for statutory accounting and reporting purposes (including determining the carrying value method and establishing the AVR charges). The carrying value method is established as described in paragraph 26.

**Specific Interim Reporting Guidance Financially Modeled Securities**

27. For securities that will be financially modeled under paragraph 27, the guidance in this paragraph shall be applied in determining the reporting method for such securities acquired in the current year for quarterly financial statements. Securities reported as of the prior-year end shall continue to be reported under the prior-year end methodology for the current-year quarterly financial statements. For year-end reporting, securities shall be reported in accordance with paragraph 27, regardless of the quarterly methodology used.

a. Reporting entities that acquired the entire financial modeling database for the prior-year end are required to follow the financial modeling methodology (paragraph 27.a.) for all
Ref #2021-23

securities acquired in the subsequent year that were included in the financial modeling data acquired for the prior year end.

b. Reporting entities that acquired identical securities (identical CUSIP) to those held and financially modeled for the prior year-end are required to follow the prior year-end financial modeling methodology (paragraph 27.a.) for these securities acquired subsequent to year-end.

c. Reporting entities that do not acquire the prior-year financial modeling information for current-year acquired individual CUSIPs, and are not captured within paragraphs 28.a. or 28.b., are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate). Reporting entities that do acquire the individual CUSIP information from the prior-year financial modeling database shall use that information for interim reporting.

d. Reporting entities that acquire securities not previously modeled at the prior year-end are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate).

Staff Review Completed by: Jim Pinegar, NAIC Staff – October 2021

Status:
On December 11, 2021, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed two options for possible revision, as illustrated above, to update the summarized financial modeling guidance in SSAP No. 43R. The first option will retain existing guidance, with updates to reflect Valuation of Securities (E) Task Force adopted edits. The second option removes the summarized financial modeling guidance and refers users to the Purposes and Procedures Manual of the NAIC Investment Analysis Office, which is the source document for financial modeling guidance.

On April 4, 2022, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as illustrated below, retaining, but updating summarized financial modeling guidance for residential mortgage-backed securities and commercial mortgage-backed securities in SSAP No. 43R—Loan-Backed and Structured Securities. The revisions incorporate a minor grammatical edit as proposed by interested parties.

Designation Guidance

27. For RMBS/CMBS securities within the scope of this statement, the initial NAIC designation used to determine the carrying value method and the final NAIC designation for reporting purposes is determined using a multi-step process or the NAIC designation assigned by the NAIC Securities Valuation Office. The P&P Manual provides detailed guidance. A general description of the processes is as follows:

a. Financial Modeling: Pursuant to the P&P Manual, the NAIC identifies select securities where financial modeling must be used to determine the NAIC designation. For a modeled legacy security, meaning one which closed prior to January 1, 2013, the NAIC designation is based on financial modeling incorporating the insurers' carrying value. For the security a modeled non-legacy security, meaning one which closed after December 31, 2012, the NAIC designation and NAIC designation category assigned by the NAIC Securities Valuation Office must be used. For those legacy securities that are financially modeled, the insurer must use NAIC CUSIP specific modeled breakpoints provided by the modelers in determining initial and final designation for these identified securities. As specified in the P&P Manual, a modeled legacy security RMBS or CMBS tranche that has no expected loss, as compiled and published by the NAIC Securities Valuation Office, under any of the selected modeling scenarios would be assigned an NAIC 1 designation and NAIC 1.A designation category regardless of the insurer’s book/adjusted carrying value.
value, securities where modeling results in zero expected loss in all scenarios and that would be equivalent to an NAIC designation and NAIC designation category of NAIC 1 and NAIC 1.A., respectively, if the filing exemption process in the P&P Manual was applied, are automatically considered to have a final NAIC designation of NAIC 1 and NAIC designation category of NAIC 1.A., regardless of the carrying value. The three-step process for modeled legacy securities is as follows:

i. Step 1: Determine Initial Designation – The current amortized cost (divided by remaining par amount) of a loan-backed or structured security is compared to the modeled breakpoint values assigned to each the six (6) NAIC designations and NAIC designation category for each CUSIP to establish the initial NAIC designation.

ii. Step 2: Determine Carrying Value Method – The carrying value method, either the amortized cost method or the lower of amortized cost or fair value method, is then determined as described in paragraph 26 based upon the initial NAIC designation from Step 1.

iii. Step 3: Determine Final Designation – The final NAIC designation is determined by comparing the carrying value (divided by remaining par amount) of a security (based on paragraph 27.a.ii.) to the NAIC CUSIP specific modeled breakpoint values assigned to the six (6) NAIC designations and NAIC designation category for each CUSIP, or. The final designation is mapped to an NAIC designation category, according to the instructions in the P&P Manual. This final NAIC designation shall be applicable for statutory accounting and reporting purposes and the NAIC designation category will be used for investment schedule reporting and establishing RBC and AVR charges. The final NAIC designation is not used for establishing the appropriate carrying value method in Step 2 (paragraph 27.a.ii.).

b. All Other Loan-Backed and Structured Securities: For securities not subject to paragraph 27.a. (financial modeling) follow the established designation procedures according to the appropriate section of the P&P Manual. The NAIC designation shall be applicable for statutory accounting and reporting purposes (including determining the carrying value method and establishing the AVR charges). The carrying value method is established as described in paragraph 26.
Maintenance updates provide revisions to the *Accounting Practices and Procedures Manual* (AP&P Manual), such as editorial corrections, reference changes and formatting.

<table>
<thead>
<tr>
<th>SSAP/Appendix</th>
<th>Description/Revision</th>
</tr>
</thead>
</table>
| Various       | Pursuant to an Aug. 14 referral from the Financial Condition (E) Committee, the edits propose herein update the terminology references of “*substantive*” and “*nonsubstantive*,” which have historically been used to describe statutory accounting revisions being considered by the Statutory Accounting Principles (E) Working Group to the AP&P Manual. The Committee recommended terminology updates to alleviate concerns that users who are not familiar with the historical definitions of the aforementioned terms may incorrectly perceive that the terms reflect potential financial impact rather than their intended definitions. Accordingly, where applicable, the current concept/term of:

1) a “*substantive*” revision is proposed to be replaced with the phraseology of a “New SAP or New SAP concept in an existing SSAP,” and,

2) a “*nonsubstantive*” revision is proposed to be replaced with the phraseology of a “SAP clarification.”

Agenda item 2021-14: SAP Terminology, which was previously exposed by the Working Group on Aug. 26, addresses the proposed terminology/phraseology changes in the *NAIC Policy Statement on Maintenance of Statutory Accounting Principles* (Appendix F). This editorial agenda item identifies all remaining uses of the terms in the current AP&P manual for change consideration.

Please note, it is anticipated that terminology changes will generally only occur on a go-forward basis as amendments to previously adopted SSAPs, issue papers, agenda items or other historical documents will not occur. As such, the terms used in previously adopted guidance will remain, with the new terms being used prospectively when considering future revisions to statutory accounting.

**Recommendation:**
NAIC staff recommend that the Statutory Accounting Principles (E) Working Group move this agenda item to the active listing, categorize as nonsubstantive, and expose editorial revisions as illustrated below.

**Status:**
On December 11, 2021, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to certain, remaining terminology references of “*substantive*” and “*nonsubstantive*,” as illustrated below.

On April 4, 2022, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed editorial revisions as shown below.
Various SSAPs in response to terminology changes of “Substantive” and “Nonsubstantive”
(Note: for a review of every use “substantive and nonsubstantive,” as well documentation as to proposed modifications, if any, please see pages see attachment G.1.)

Edit 1: Table of Contents (How to use this Manual), Volume I, Page xvii

Summary of Changes:
The Summary of Changes outlines changes made to the prior edition of the Manual to create the current year’s version. It is divided into three sections: 1) the development of new SSAPs or new SAP concepts to existing SSAPs; substantive revisions to statutory accounting principles; 2) SAP clarifications; nonsubstantive revisions to statutory accounting principles; and 3) revisions to the appendices included in the Manual. The Summary of Changes is a key resource for readers who are looking to identify changes from the prior edition.

Edit 2: Table of Contents (How to use this Manual), Volume I, Page xviii

Statements of Statutory Accounting Principles:
As indicated by the Statutory Hierarchy, the Statements of Statutory Accounting Principles (SSAPs) are the primary authoritative statutory accounting practices and procedures promulgated by the NAIC. These statements are the result of issue papers that have been exposed for public comment and finalized. Finalized issue papers are found in Appendix E and ARE NOT authoritative. While it is not intended that there be any significant differences between an underlying issue paper and the resultant SSAP, if differences exist, the SSAP prevails and shall be considered definitive. Readers may use the NAIC website to keep abreast of adopted revisions; substantive and nonsubstantive changes to the SSAPs. Completely superseded SSAPs that are no longer authoritative are moved from the printed Manual into Appendix H – Superseded SSAPs and Nullified Interpretations, which is posted for public reference on the Statutory Accounting Principles (E) Working Group web page at https://content.naic.org/cmte_e_app_sapwg.htm.

Edit 3: Table of Contents (How to use this Manual), Volume I, Page xviii

New paragraph proposed (To be inserted between the paragraphs starting with "As indicated by the Statutory Hierarchy..." and "The cover page of each SSAP...")

Prior to (adoption date), the term used to describe a new SAP concept or a new SAP concept in an existing SSAP was “substantive” and the term used to describe a SAP clarification was “nonsubstantive.” The new terms will be reflected in materials to describe revisions to statutory accounting principles on a prospective basis and historical documents will not be updated to reflect the revised terms.

Edit 4: Table of Contents (How to use this Manual), Volume I, Page xviii

AFFECTS/AFFECTED BY – A useful tool for tracking relationships between statements and interpretations is contained within these sections. The “affects” section is used when a SSAP has previously been substantively amended to reflect new SAP concepts or superseded by other or superseded previously issued SSAPs. Nullified INTs are also noted in this section. Readers are referenced to another SSAP in the “affected by” section if the SSAP has been substantively amended or superseded or amended with a new SAP concept or with the issuance of a new SSAP. Text within paragraphs substantively amended with new SAP concepts or superseded may also be “shaded” to notify readers that revised guidance is available.

Edit 5: Table of Contents (How to use this Manual), Volume I, Page xviii

Refer to the Relevant Literature and Effective Date and Transition sections of each SSAP for details of the development of new SSAPs or new SAP concepts, as well as changes as the result of SAP clarifications; substantive and nonsubstantive changes.
**Edit 6: Summary of Changes, Volume I, Page xxiii**

Section 1 summarizes substantive revisions that result with a new SSAP or new SAP concept to statutory accounting principles. Substantive revisions that introduce original or modified accounting principles and can be reflected in an existing or new SSAP. When substantive revisions that result in a new SAP concept are made to an existing SSAP, the effective date is identified in the Status section, and the revised text within is depicted by underlines (new language) and strikethroughs (removed language). This tracking will not be shown in subsequent manuals. New SSAPs and new SAP concepts that revise existing substantively revised SSAPs are commonly accompanied by a corresponding issue paper that reflects the revisions for historical purposes. If language in an existing SSAP is superseded, that language is shaded and the new or substantively revised SSAP is referenced. Completely superseded SSAPs and nullified interpretations are included in Appendix H.

**Edit 7: Summary of Changes, Volume I, Page xxiii**

Section 2 summarizes the nonsubstantive revisions that clarify existing to statutory accounting principles. Nonsubstantive revisions are characterized as language clarifications which do not modify the original intent of a SSAP, or changes to reference material. Nonsubstantive revisions are depicted by underlines (new language) and strikethroughs (removed language) and will not be tracked in subsequent manuals. Nonsubstantive revisions that clarify existing statutory accounting principles are effective when adopted unless a specific effective date is noted.

**Edit 8: Summary of Changes (heading in table), Volume I, Page xxiii**

1. Substantive Revisions that resulted in a new SSAP or a new SAP concept – Statutory Accounting Principles

**Edit 9: Summary of Changes (heading in table), Volume I, Page xxiii**

2. Nonsubstantive Revisions that resulted in a SAP clarification – Statutory Accounting Principles

**Edit 10: Preamble, Volume I, Page P-5**

23. The Accounting Practices and Procedures (E) Task Force will accomplish its mission through charges assigned to the following working groups:

- Statutory Accounting Principles (E) Working Group: Responsible for developing and adopting substantive and nonsubstantive revisions to the Statements of Statutory Accounting Principles (SSAPs). Statutory accounting principles provide the basis for insurers to prepare financial statements for financial regulation purposes, and SSAPs are considered level 1 (highest authority) in the statutory accounting hierarchy. Refer to the Statutory Accounting Principles (E) Working Group Web page (http://www.naic.org/cmte_e_app_sapwg.htm) for specific information and charges.

- Blanks (E) Working Group: Considers improvements and revisions to various annual/quarterly statement blanks to conform to changes made in other areas of the NAIC to promote uniformity in reporting of financial information by insurers and develop reporting formats for other entities subject to the jurisdiction of state insurance departments. Refer to the Blanks (E) Working Group webpage (http://www.naic.org/cmte_e_app_blanks.htm) for specific information and charges.

**Edit 11: Preamble, Volume I, Page P-9**

47. Once promulgated, statements will only be amended or superseded through the issuance of new SSAP pronouncements. If it is necessary to introduce a new SAP concept that will substantially modify or augment the guidance in an existing SSAP, a new statement will be promulgated and/or the statement will be reissued with “revised” in the title. Nonsubstantial changes as a result of clarifying an existing SAP will be included in the existing statement with changes tracked (i.e., new text will be underlined and deleted text as strikethrough) in
the next printing of the Manual. Then no changes will be shown after the initial year. A useful tool for tracking of the relationships between statements is contained in the “Status” section of each statement which includes sections labeled “Affects” and “Affected By.” As SSAPs are issued in the future that modify or augment the guidance previously provided, these sections will identify the relationships between statements.

**Edit 12: Table of Contents (How to use this Manual), Volume II, Page xvii**

**Summary of Changes:**
The Summary of Changes outlines changes made to the prior edition of the Manual to create the current year’s version. It is divided into three sections: 1) the development of new SSAPs or new SAP concepts to existing SSAPs; substantive revisions to statutory accounting principles; 2) SAP clarifications; nonsubstantive revisions to statutory accounting principles; and 3) revisions to the appendices included in the Manual. The Summary of Changes is a key resource for readers who are looking to identify changes from the prior edition.

**Edit 13: Table of Contents (How to use this Manual), Volume II, Page xviii**

**Statements of Statutory Accounting Principles:**
As indicated by the Statutory Hierarchy, the Statements of Statutory Accounting Principles (SSAPs) are the primary authoritative statutory accounting practices and procedures promulgated by the NAIC. These statements are the result of issue papers that have been exposed for public comment and finalized. Finalized issue papers are found in Appendix E and ARE NOT authoritative. While it is not intended that there be any significant differences between an underlying issue paper and the resultant SSAP, if differences exist, the SSAP prevails and shall be considered definitive. Readers may use the NAIC website to keep abreast of adopted revisions to the SSAPs. Completely superseded SSAPs that are no longer authoritative are moved from the printed Manual into Appendix H – Superseded SSAPs and Nullified Interpretations, which is posted for public reference on the Statutory Accounting Principles (E) Working Group web page at https://content.naic.org/cmte_e_app_sapwg.htm.

**Edit 14: Table of Contents (How to use this Manual), Volume II, Page xviii**

New paragraph proposed (To be inserted between the paragraphs starting with "As indicated by the Statutory Hierarchy..." and "The cover page of each SSAP...")
Prior to (adoption date), the term used to describe a new SAP concept or a new SAP concept in an existing SSAP was “substantive” and the term used to describe a SAP clarification was “nonsubstantive.” The new terms will be reflected in materials to describe revisions to statutory accounting principles on a prospective basis and historical documents will not be updated to reflect the revised terms.

**Edit 17: Summary of Changes, Volume II, Page xxiii**

Section 1 summarizes substantive revisions that result with a new SSAP or new SAP concept to statutory accounting principles. Substantive Revisions that introduce original or modified accounting principles and can be reflected in an existing or new SSAP. When substantive revisions that result in a new SAP concept are made to an existing SSAP, the effective date is identified in the Status section, and the revised text within is depicted by underlines (new language) and strikethroughs (removed language). This tracking will not be shown in subsequent manuals. New SSAPs and new SAP concepts that revise existing substantively revised SSAPs are commonly accompanied by a corresponding issue paper that reflects the revisions for historical purposes. If language in an existing SSAP is superseded, that language is shaded and the new or substantively revised SSAP is referenced. Completely superseded SSAPs and nullified interpretations are included in Appendix H.

**Edit 18: Summary of Changes, Volume II, Page xxiii**

Section 2 summarizes the nonsubstantive revisions that clarify existing to statutory accounting principles. Nonsubstantive These revisions are characterized as language clarifications which do not modify the original
intent of a SSAP, or changes to reference material. Nonsubstantive revisions are depicted by underlines (new language) and strikethroughs (removed language) and will not be tracked in subsequent manuals. Nonsubstantive revisions that clarify existing statutory accounting principles are effective when adopted unless a specific effective date is noted.

**Edit 19: Summary of Changes (heading in table), Volume II, Page xxiii**

1. **Substantive** Revisions that resulted in a new SSAP or a new SAP concept – Statutory Accounting Principles

**Edit 20: Summary of Changes (heading in table), Volume II, Page xxiii**

2. **Nonsubstantive** Revisions that resulted in a SAP clarification – Statutory Accounting Principles

3. Information and issues can be presented to the Working Group in a variety of ways. Issues can be recommended or forwarded from 1) other NAIC committees, task forces or working groups; 2) interested parties; 3) interested regulators; and 4) NAIC staff. Also, if any guidance within the Generally Accepted Accounting Principles (GAAP) Hierarchy (see § V of the Preamble to the Accounting Practices and Procedures Manual (AP&P Manual)) is added or revised, those changes must be considered by the Working Group for potential revisions to SAP. In order for an issue to be placed on the Pending Listing, the recommending party must complete a Statutory Accounting Principles Maintenance Agenda Submission Form (Form A) and submit it to the Working Group support staff no later than 20 business days prior to the next scheduled Working Group meeting. NAIC staff will prepare a submission form for all GAAP pronouncements that have not been previously addressed by the Working Group. NAIC staff will update the Pending Listing before each national meeting and will notify the recommending party of such action. If the Working Group does not wish to address the issue (e.g., issue deemed not applicable to statutory accounting) or rejects the position presented, then the Working Group may move the item to the Rejected Listing. Should the Working Group choose to address an issue, it is moved to the Active Listing where it is prioritized and categorized as a new SSAP concept, clarification of an existing SSAP, Substantive, Nonsubstantive or an Interpretation agenda item.

4. The **Active Listing** identifies agenda items that are in the process of development and includes the following:

   a. **New SAP Concept Substantive:** These agenda items address the development of new SSAPs and/or the introduction of a new and substantially revised SSAP's concept as defined in the NAIC Policy Statement on Maintenance of Statutory Accounting Principles.

   b. **Clarification of an Existing SSAP Nonsubstantive:** These agenda items address the development of nonsubstantive revisions which clarify an existing SAP as defined in the NAIC Policy Statement on Maintenance of Statutory Accounting Principles.
c. **Interpretations**: These agenda items address the development of interpretations to SAP as defined in the NAIC Policy Statement on Maintenance of Statutory Accounting Principles. If SSAP revisions are subsequently deemed necessary, the Working Group shall re-categorize the agenda item as either a *new SAP concept*, or a *clarification of an existing SSAP substantive or nonsubstantive*, as applicable, and follow the appropriate process to consider and adopt revisions.

5. After review of the agenda item (including any interested party comments), at its discretion, the Working Group makes the ultimate determination of whether an agenda item is categorized (or re-categorized) as a *new SAP concept*, *clarification of an existing SSAP substantive* (either as a *new SSAP* or *substantively-revised SSAP*), *nonsubstantive* or an interpretation.

8. NAIC staff will maintain the following on the Working Group Web page (http://naic.org/cmte_e_app_sapwg.htm): 1) A blank Form A (Attachment A to this policy statement); 2) The current Maintenance Agenda, and 3) Current *statutory substantive, nonsubstantive* and/or interpretation revisions exposed for public comment. Attachment B to this policy statement will be attached to all exposures with proposed *substantive* revisions that *result in a new SAP concept* and serves as the request for written comment and notice of a public hearing.

**Description of Issue:** In May 2021, the Financial Accounting Standards Board (FASB) issued *Accounting Standard Update (ASU) 2021-04, Earnings Per Share (Topic 260), Debt—Modifications and Extinguishments (Subtopic 470-50), Compensation—Stock Compensation (Topic 718), and Derivatives and Hedging—Contracts in Entity’s Own Equity (Subtopic 815-40)—Issuer’s Accounting for Certain Modifications or Exchanges of Freestanding Equity-Classified Written Call Options*. The amendments in this ASU impact all entities that issue freestanding written call options, that are then modified in connection with either an equity issuance, debt origination or a debt modification.

The amendments affect those entities for when a freestanding equity-classified written call option is modified, or exchanged, and the instrument remains classified as equity after the modification or exchange. This topic is discussed in *SSAP No. 72—Surplus and Quasi-Reorganization*, paragraph 10. If the warrant is modified as part of a debt modification and the warrant is held by the creditor involved in the debt modification, the issuer would treat the warrant’s change in value as a fee to or from the creditor, based on if it is an increase or a decrease. If the modification of the warrant is connected to a debt modification where the debt is held by a third-party, the increase in fair-value of the warrant will be treated as third-party cost, and any decreases would be disregarded. Guidance for debt issuance costs is in *SSAP No. 15—Debt and Holding Company Obligations*.

The main provisions of this ASU are:

1. An entity should treat a modification of the terms or conditions or an exchange of a freestanding equity-classified written call option that remains equity classified after modification or exchange as an exchange of the original instrument for a new instrument.

2. An entity should measure the effect of a modification or an exchange of a freestanding equity-classified written call option that remains equity classified after modification or exchange as follows:

   a. For a modification or an exchange that is a part of or directly related to a modification or an exchange of an existing debt instrument or line-of-credit or revolving-debt arrangements (hereinafter, referred to as a “debt” or “debt instrument”), as the difference between the fair value of the modified or exchanged written call option and the fair value of that written call option immediately before it is modified or exchanged.

   b. For all other modifications or exchanges, as the excess, if any, of the fair value of the modified or exchanged written call option over the fair value of that written call option immediately before it is modified or exchanged.
3. An entity should recognize the effect of a modification or an exchange of a freestanding equity-classified written call option that remains equity classified after modification or exchange on the basis of the substance of the transaction.

An entity should recognize the effect of a modification or an exchange of a freestanding equity-classified written call option to compensate for goods or services in accordance with the guidance in Topic 718, Compensation—Stock Compensation. In a multiple-element transaction (for example, one that includes both debt financing and equity financing), the total effect of the modification should be allocated to the respective elements in the transaction.

**Existing Authoritative Literature:** The guidance for the issuance of stock purchase warrants is in **SSAP No. 72—Surplus and Quasi-Reorganization**, paragraph 10, and guidance for debt issuance costs is included in **SSAP No. 15—Debt and Holding Company Obligations**, paragraph 5.

**SSAP No. 72:**

10. Stock purchase warrants issued in return for cash shall be credited to gross paid-in and contributed surplus. When debt instruments are issued with conversion features, no value shall be assigned to the conversion features unless the conversion feature is clearly separable from the debt obligation in the form of a detachable stock purchase warrant. In such instances the relative fair value of the detachable stock purchase warrant at time of issue shall be credited to gross paid-in and contributed surplus. For instances in which a reporting entity has issued puttable warrants or mandatorily redeemable warrants, such items shall be reflected as liabilities as the warrants obligate the reporting entity to ultimately transfer cash or other assets to the holder in order to repurchase the shares.

**SSAP No. 15:**

5. Debt issuance costs (e.g., loan fees and legal fees) do not meet the definition of an asset as defined in **SSAP No. 4—Assets and Nonadmitted Assets**. Accordingly, these costs shall be charged to operations in the period incurred.

**Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):** None

**Information or issues (included in Description of Issue) not previously contemplated by the Working Group:** None

**Convergence with International Financial Reporting Standards (IFRS):** None.

**Staff Review Completed by:** Jake Stultz -NAIC staff, September 2021

**Staff Recommendation:**

NAIC staff recommends that the Working Group move this item to the active listing and expose revisions to **SSAP No. 72—Surplus and Quasi-Reorganization** to reject ASU 2021-04 for statutory accounting. However, NAIC staff recommends that the FASB guidance related to accounting for the changes in fair value regarding the exchange of a free-standing equity-classified written call option be incorporated into SSAP No. 72.

**Proposed revisions to SSAP No. 72:**

10. Stock purchase warrants issued in return for cash shall be credited to gross paid-in and contributed surplus. **An entity shall treat a modification of the terms or conditions or an exchange of a freestanding...**
equity-classified written call option as an exchange of the original instrument for a new instrument. In substance, the entity repurchases the original instrument by issuing a new instrument. The total effect of the modification or exchange shall be allocated to the respective elements in the transaction. When debt instruments are issued with conversion features, no value shall be assigned to the conversion features unless the conversion feature is clearly separable from the debt obligation in the form of a detachable stock purchase warrant. In such instances, the relative fair value of the detachable stock purchase warrant at time of issue shall be credited to gross paid-in and contributed surplus. For instances in which a reporting entity has issued puttable warrants or mandatorily redeemable warrants, such items shall be reflected as liabilities as the warrants obligate the reporting entity to ultimately transfer cash or other assets to the holder in order to repurchase the shares.

29. This statement also rejects Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins, “Chapter 1, Prior Opinions,” paragraph 12 of APB 10, and FASB Technical Bulletin No. 85-6, Accounting for a Purchase of Treasury Shares at a Price Significantly in Excess of the Current Market Price of the Shares and the Income Statement Classification of Costs Incurred in Defending against a Takeover Attempt, and Accounting Standard Update (ASU) 2021-04, Earnings Per Share (Topic 260), Debt—Modifications and Extinguishments (Subtopic 470-50), Compensation—Stock Compensation (Topic 718), and Derivatives and Hedging—Contracts in Entity’s Own Equity (Subtopic 815-40)—Issuer’s Accounting for Certain Modifications or Exchanges of Freestanding Equity-Classified Written Call Options.

Status:
On December 11, 2021, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions, as illustrated above, to incorporate guidance related to the accounting for the changes in fair value when exchanging equity-classified written call options, while rejecting the remainder of ASU 2021-04 in SSAP No. 72.

On April 4, 2022, the Statutory Accounting Principles (E) Working Group adopted SAP clarifications to SSAP No. 72—Surplus and Quasi-Reorganizations to reject ASU 2021-04 for statutory accounting while incorporating guidance that clarifies that an entity shall treat a modification of the terms or conditions or an exchange of a freestanding equity-classified written call options shall be treated as an exchange, as detailed below. The adopted revisions included additional changes to the exposed language as recommended interested parties.

29. This statement also rejects Accounting Research Bulletin No. 43, Restatement and Revision of Accounting Research Bulletins, “Chapter 1, Prior Opinions,” paragraph 12 of APB 10, and FASB Technical Bulletin No. 85-6, Accounting for a Purchase of Treasury Shares at a Price Significantly in Excess of the Current Market Price of the Shares and the Income Statement Classification of Costs Incurred in Defending against a Takeover Attempt, and Accounting Standard Update (ASU) 2021-04, Earnings Per Share (Topic 260), Debt—Modifications and Extinguishments (Subtopic 470-50), Compensation—Stock Compensation (Topic 718), and Derivatives and Hedging—Contracts in Entity’s Own Equity (Subtopic 815-40)—Issuer’s Accounting for Certain Modifications or Exchanges of Freestanding Equity-Classified Written Call Options, while incorporating guidance that clarifies that an entity shall treat a modification of the terms or conditions or an exchange of a freestanding equity-classified written call option as an exchange of the original instrument for a new instrument.

**Description of Issue:** SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities defines the specific criteria for when an investment is considered a subsidiary, controlled or affiliated entity (SCA) for statutory accounting purposes. Broadly defined, SCAs are entities that are 1) directly or indirectly owned or controlled by a reporting entity (i.e., a subsidiary), or 2) within a holding company system or a party that is directly or indirectly, through one or more intermediaries, in which controls, is controlled by, or is under common control with a reporting entity (i.e., an affiliate). While SSAP No. 97 offers varying classifications of SCAs with differing valuation methods, all SCAs are ultimately reported on Schedule D – Part 6 – Section 1: Valuation of Shares of Subsidiary, Controlled or Affiliated Entities.

The reporting requirements for SCAs is defined in SSAP No. 97, Exhibit A, however in general, the process is as follows: (note: the following comments are not applicable for domestic SCA insurance companies)

- All SCA entities, regardless of if they are nonadmitted, have a zero value, or are immaterial to the reporting entity, must file a “Sub-1” within 90 days of the acquisition or formation of the investment. The Sub-1 filing is to gather basic information about the SCA and is used to determine if the transaction meets certain specific criteria specified within SSAP No. 97.

- Annually, but no later than August 31 (or one month after the audit report is issued for an SCA – for entities who routinely received their audit reports after August 31), SCAs must file a “Sub-2” filing. This filing details the valuation method utilized; the value claimed in Schedule D-6-1 and includes all required supporting documentation. (Nonadmitted assets are not required to file a Sub-2 if they are nonadmitted, or had a zero value, for the full reporting period). The Sub-2 filing is then reviewed by the NAIC for verification of the claimed value. If required, valuation adjustments are made. As directed in SSAP No 97, if the insurance company has reported a value for a SCA investment on its financial statement blank that differs from the value approved by the NAIC, the insurer is required to adjust the reported value in its next quarterly financial statement blanks, unless otherwise directed by the insurer’s state of domicile. (Note, the SCA review process occurs in arrears. As such, when a value is adjusted, the concepts for the adjustment shall be applied to the next year-end. For example, if a company did not incorporate required SSAP No. 97 adjustments in determining the reported value as of Dec. 31, 2020, those adjustments should be considered when determining the value reported as of Dec. 31, 2021 (or earlier if known when the quarterly financials are completed). When the adjustment is material, then the guidance in SSAP No. 3—Accounting Changes and Corrections of Errors would be applicable.)

In 2019, the NAIC reviewed 824 SCA filings (which includes both Sub-1 and Sub-2 filings). Of the total, 720 were Sub-2 filings (the filing in which a value is approved). Of the 720 Sub-2 filings, 125 (approx. 17%) resulted in **valuation decreases.** Presumably, per SSAP No. 97, entities (unless directed by their state of domicile) adjusted the reported values in their next quarterly financial statements, however NAIC staff have found that it is not
uncommon for the same entities, year after year, to have approved values that vary significantly from their reported balances. It is also important to note that while the NAIC does send monthly reports on SCA activity to state regulators, the process of reviewing the activity reports and verifying compliance with SSAP No. 97, for state regulators (and NAIC staff) is operationally onerous. Accordingly, this agenda item has been drafted to propose new supplemental reporting (in electronic only columns) to assist state regulators to 1) ensure Sub-1 and Sub-2 filings are being submitted by reporting entities, and 2) identify situations where the NAIC approved value varies significantly from the value reported on Schedule D-6-1.

Existing Authoritative Literature:

**Staff note** – For completeness of the document, the authoritative guidance defining SCA’s in scope of SSAP No. 97 has been included herein. Certain relevant items have been bolded for emphasis.

**SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities**

**Definition [of a SCA]**

1. Parent and subsidiary are defined as follows:
   a. Parent—An entity that directly or indirectly owns and controls the reporting entity;
   b. Subsidiary—An entity that is, directly or indirectly, owned and controlled by the reporting entity.

2. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies as defined in SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies. Those entities are accounted for under the guidance provided in SSAP No. 48, which requires an equity method for all such investments.

3. Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of the investee, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by common management, or (d) otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity.

4. Control as defined in paragraph 5 shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in an entity and a second member of the group has an 8% interest in the same entity, the total interest is 13% and therefore each member of the affiliated group shall be presumed to have control. This presumption will stand until rebutted by an evaluation of all the facts and circumstances relating to the investment based on the criteria in FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18. The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting securities of an investee. The insurer shall maintain documents substantiating its determination for review by the domiciliary commissioner. An investment in an SCA entity may fall below the level of ownership described in paragraph 5, in which case, the reporting entity would discontinue the use of the equity method, as prescribed in paragraph 13.g. Additionally, through an increase in the level of ownership, a reporting entity may become qualified to use the equity method of accounting (paragraph 8.b.), in which case, the reporting entity shall add the cost of acquiring additional interest to the current basis of the previously held interest and shall apply the equity method prospectively, as of the date the
investment becomes qualified for equity method accounting. Examples of situations where the presumption of control may be in doubt include the following:

a. Any limited partner investment in a limited partnership, unless the limited partner is affiliated with the general partner.

b. An entity where the insurer owns less than 50% of an entity and there is an unaffiliated individual or group of investors who own a controlling interest.

c. An entity where the insurer has given up participating rights as a shareholder to the investee.

5. Investments in SCA entities meet the definition of assets as defined in SSAP No. 4—Assets and Nonadmitted Assets and are admitted assets to the extent they conform to the requirements of this statement.

EXHIBIT A – SCA REPORTING PROCESS

50. SCA entities, except for domestic SCA insurance company investments accounted for under paragraph 8.b.i of this statement, in which the reporting entity has an equity interest (common or preferred stock), are required to be filed with the NAIC. Nonadmitted assets are not required to be filed in a Sub-2 as long as they were nonadmitted, or had a zero value, for the full reporting period (all interim and annual reporting). Immaterial asset SCAs do not have an automatic exclusion from filing, as immateriality of an SCA will be ascertained by the state of domicile of the insurance reporting entity, but companies are allowed to request an exemption from the domiciliary state to not file an SCA on the basis that it is immaterial. The filing process does not include investments within the scope of SSAP No. 48.

51. Except for domestic SCA insurance company investments accounted for under paragraph 8.b.i., all SCA investments within the scope of this statement, purchased during any one calendar year, shall be reported to the NAIC on a Sub-1 form within 90 days of the acquisition or formation of the investment; this includes nonadmitted, zero-valued and immaterial SCAs. The NAIC will process that filing in the same year but will not at that time approve or disapprove a value for the SCA investment. By August 31 of each year, the insurance company shall submit a Sub-2 filing for the previously purchased SCA investment reported on a Sub-1 form and later that year, the NAIC will approve a value for the transaction. For SCAs that routinely receive their audit reports after the August 31 deadline, a filing deadline of one month after the audit report date shall be applied. Filers must provide previous years’ audit reports to verify an audit report dated after August 31 in order to not be charged a late fee for a Sub-2 filing that is filed after the August 31 deadline. The value approved by the NAIC at the conclusion of the Sub-2 form filing is reported by the insurance company on its financial statement blank. If the insurance company has reported a value for the SCA investment on its financial statement blank that differs from the value approved by the NAIC, the insurer is required to adjust the reported value in its next quarterly financial statement blank unless otherwise directed by the insurer’s state of domicile.

52. Insurance companies shall use one of the valuation methods described in paragraph 8 to calculate the value of their investments in insurance and non-insurance SCA companies. An insurance company shall calculate the value of its investments in foreign insurance and all non-insurance company SCA entities and report the value to the NAIC no later than August 31, or one month after the audit report date for SCAs that routinely receive their audits after August 31 for existing SCA investments, and within 90 days of the acquisition or formation of a new SCA investment.
Initial Reporting of SCA Investments

53. Reporting the acquisition or formation of a new investment is accomplished by submitting a completed Sub-1 form for each investment, disclosing (i) the valuation reported or to be reported by the insurance company on its latest or next quarterly financial statement blank, (ii) which method of those described in paragraph 8 was used to arrive at the valuation, (iii) the factual context of the transaction and (iv) economic and business motivations for the transaction. The submission will be processed by the NAIC only if the NAIC determines it has been provided with all material information with respect to all SCA companies of the reporting insurance company that require valuation.

54. The purpose of a Sub-1 filing is to gather basic information about the SCA. If the NAIC determines that the reported transaction meets the tests specified, it will complete the filing in the VISION database. If the NAIC determines that the transaction does not meet the tests specified, it will not complete the filing in the VISION database and instead shall notify the reporting insurance company and the state of domicile in writing of its determination.

Subsequent Reporting of SCA Investments

55. By August 31 or one month after the audit report date of each year and subsequent to the reporting of an SCA investment on the Sub-1 form, the insurance company shall submit a Sub-2 form filing, with all supporting documentation for foreign SCAs provided in English, for the same SCA investment. Additionally, by August 31 or one month after the audit report date of each year, any insurance company that has made a Sub-2 form filing in a previous year must update the information by filing an updated Sub-2 form filing.

56. Each year the NAIC shall compile a list of all SCA investments (excluding insurance company SCAs (paragraph 8.b.i.) nonadmitted and zero-value SCAs) reported as Sub-1 form filings for which a Sub-2 form filing has not yet been received. For these transactions, the NAIC will notify the responsible reporting insurance company and its state of domicile that it has not received a Sub-2 filing for the SCA investment.

57. The purpose of the Sub-2 filing is to determine whether the value calculated by the reporting insurance company for the SCA investment is appropriate and to approve that or some other value for reporting on the insurer's financial statement blank.

58. An insurance company that concludes an SCA transaction at year-end may be unable to file a Sub-1 form prior to the time it would be required to file a Sub-2 form. Where this is the case, the NAIC is authorized to accept and review a Sub-1 filing from such an insurance company and to accept and review the Sub-2 filing after the Sub-1 filing review has been completed.

59. No filing of an investment in a domestic SCA insurance company valued under paragraph 8.b.i. shall be required to be made with the NAIC.

Assessment and Review of Sub-2 Form

64. By August 31 or one month after the audit report date of each year, the NAIC shall initiate a review of all SCA investments for which new Sub-2 form filings have been received as well as an annual update review of Sub-2 SCA investments already logged in the VISION database. The NAIC review shall encompass a review of the most recent annual statutory reporting by the parent insurance company's Schedule Y (to ascertain the identity of the members of the holding company system and to ensure that information for all SCA companies has been submitted), a review of the parent's financial statement blank to review the last reported value for the SCA investments and a review of the VISION database to determine whether SCA debt and SCA preferred securities have been assigned NAIC designations. As part of its analysis, the NAIC shall review the portion of the bond...
investments carried by the parent or a subsidiary insurer with a Z notation. If the NAIC determines that the portion of the Z bonds shown on the documentation is significant, the NAIC shall not process the Sub-2 filing until the insurance company reports the bonds to permit removal of the Z notation. Beginning with year-end 2019, two new suffixes will apply: YE and IF. YE means that the security is a properly filed annual update that the SVO has determined will not be assigned an NAIC designation by the close of the year-end reporting cycle. The symbol YE is assigned by the SVO pursuant to the carryover administrative procedure described in Part One, Section 3 f) (iii) of the Purposes and Procedures Manual of the NAIC Investment Analysis Office. When the SVO assigns the symbol YE it also assigns the NAIC designation in effect for the previous reporting year. IF means that the security is an initial filing that has been properly filed with the SVO but which the SVO has determined will not be assigned an NAIC designation by the close of the year-end reporting cycle. The symbol IF is assigned by the SVO and communicates that the insurer should self-designate the security for year-end and identify it with the symbol IF. IF, therefore, also communicates to the regulator that the NAIC designation reported by the insurance company was not derived by or obtained from the SVO, but has been determined analytically by a reporting insurance company.

65. Upon completion of the procedures described above, the NAIC will determine whether the value reported by the insurance company on the current SCA filing was calculated in accordance with the instructions for the valuation method chosen and verify that the filed value reflects the adjustments required by paragraph 9.

66. Upon approval of a value (including making necessary adjustments), the NAIC will complete the Sub-2 filing with the approved value in the status field of the VISION database.

67. The NAIC shall report its determination to the insurance company. If a significant discrepancy exists between the value claimed by the reporting insurance company and the value approved by the NAIC, the NAIC shall communicate the discrepancy with the company. If the NAIC cannot come to a conclusion based on the support provided, the filing can be rejected in VISION, and written notification will be provided to the reporting insurance company and the company's state of domicile of this action. This correspondence will be sent to the domiciliary state. Filers are able to download their review information from the NAIC filing system.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation: NAIC staff recommends that the Working Group forward a proposal to the Blanks (E) Working Group to supplement the identification of SCA investments in Schedule D – Part 6 – Section 1: Valuation of Shares of Subsidiary, Controlled or Affiliated Entities. The supplemental data to be captured is consistent with current requirements in SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, however this improved reporting granularity will significantly assist regulators to 1) ensure Sub-1 and Sub-2 filings are being submitted by reporting entities, and 2) identify situations where the NAIC approved value varies significantly from the value reported on Schedule D-6-1.

The proposed (electronic column) additions to Schedule D – Part 6 – Section 1 are shown below. (Note: for brevity, the included blanks instructions, which do not have proposed edits, have been abbreviated and should not be used for blanks filing purposes.)
### SCHEDULE D – PART 6 – SECTION 1
Valuation of Shares of Subsidiary, Controlled or Affiliated Companies

### Reporting Instructions for Schedule D, Part 6, Section 1

- **Column 1** – CUSIP Identification
- **Column 2** – Description
- **Column 3** – Foreign
- **Column 4** – NAIC Company Code
- **Column 5** – ID Number
- **Column 6** – NAIC Valuation Method
- **Column 8** – Total Amount of Goodwill
- **Column 9** – Nonadmitted Amount
- **Column 10** – Stock of Such Company Owned by Insurer on Statement Date Number of Shares
- **Column 11** – Stock of Such Company Owned by Insurer on Statement Date % of Outstanding

**Column 12 through 159 will be electronic only.**

- **Column 12** – Legal Entity Identifier (LEI)
- **Column 13** – Issuer
- **Column 14** – Issue
- **Column 15** – ISIN Identification
- **Column 16** – Prior Year BACV
- **Column 17** – Prior Year Nonadmitted Amount

*Provide the amount nonadmitted, if any, included in Column 4 of the Asset page.*
Column 18 – Prior year Sub-2 Verified Value

If per SSAP No. 97 or by direction of the domiciliary regulator, the SCA is required to be filed with the NAIC, provide the prior year’s Sub-2 'Total Value Claimed.'

Column 18 – Prior year VISION Filing Number

If per SSAP No. 97 or by direction of the domiciliary regulator, the SCA is required to be filed with the NAIC, provide the prior year NAIC VISION filing number.

Staff Review Completed by: Jim Pinegar, NAIC Staff – November 2021

Status:
On December 11, 2021, the Statutory Accounting Principles (E) Working Group moved this item to the active listing and exposed proposed revisions to be incorporated into a Blanks (E) Working Group proposal which would supplement the reporting of SCA investments reported in Schedule D-6-1, as illustrated above. The supplemental data to be captured is consistent with current requirements in SSAP No. 97 and as a result, the agenda item did not propose statutory revisions.

On April 4, 2022, the Statutory Accounting Principles (E) Working Group adopted this agenda item, which did not result in statutory accounting revisions, however adoption expressed support of the corresponding Blanks (E) Working Group proposal (2022-02BWG), which incorporates new electronic only columns in Schedule D-6-1. The supplemental data to be captured is consistent with current requirements in SSAP No. 97.

https://naiconline.sharepoint.com/sites/NAICSupportStaffHub/Member Meetings/2022 NAIC Meetings/Spring National Meeting/Committee Meetings/FINANCIAL CONDITION (E) COMMITTEE/Accounting Practices and Procedures (E) TF/SAPWG/Att1K_21-22_SchD-6-1.docx
The Blanks (E) Working Group of the Accounting Practices and Procedures (E) Task Force met March 29, 2022. The following Working Group members participated: Pat Gosselin, Chair (NH); Kim Hudson, Vice Chair (CA); William Arfanis (CT); Philip Barlow and N. Kevin Brown (DC); Tom Hudson (DE); Carolyn Morgan (FL); Daniel Mathis (IA); Roy Eft (IN); Dan Schaefer (MI); Debbie Doggett (MO); Lindsay Crawford (NE); Nakia Reid (NJ); Dale Bruggeman and Tracy Snow (OH); Holly Mills (OK); Kimberly Rankin (PA); Shawn Frederick and Jamie Walker (TX); Jake Garn (UT); Steve Drutz (WA); Adrian Jaramillo (WI); and Michael Crum (WV). Also participating was: Anna Krylova (NM).

1. **Adopted its Nov. 16, 2021, Minutes**

Ms. Gosselin referenced the Blanks (E) Working Group’s Nov. 16 minutes, where the sponsor withdrew the previously exposed agenda item 2021-21BWG. During this meeting, the Working Group took the following action: 1) deferred proposal 2021-13BWG to allow for additional discussion; 2) adopted deferred proposal 2021-14BWG with editorial revisions; 3) rejected proposal 2021-11BWG, which was previously deferred; 4) exposed seven new proposals for a public comment period ending March 4; 5) adopted its editorial listing; and 6) approved the state filing checklists.

Mr. Hudson made a motion, seconded by Ms. Crawford, to adopt the Working Group’s Nov. 16, 2021, minutes (see NAIC Proceedings – Fall 2021, Accounting Practices and Procedures (E) Task Force, Attachment Two). The motion passed unanimously.

2. **Withdrew an Item Previously Deferred**

   a. **Agenda Item 2021-13BWG**

Ms. Gosselin stated that this proposal adds a new supplement, Exhibit of Premiums and Losses (State Page) – Other Liability, to the property/casualty (P/C) blank to capture premium and loss data for annual statement line 17.1, line 17.2 and line 17.3. There were numerous interested party comments received for this proposal. Taking those into consideration, Ms. Gosselin requested the withdrawal of this proposal, and a new proposal is being submitted for exposure incorporating interested parties’ suggested revisions. She said the new proposal is 2022-04BWG, and it is to be exposed during this meeting.

3. **Adopted Items Previously Exposed**

   a. **Agenda Item 2021-15BWG**

Mr. Bruggeman stated that this blanks agenda item results from the Statutory Accounting Principles (E) Working Group’s adoption of its related agenda item 2021-16, which is to increase the transparency of Federal Home Loan Bank (FHLB) borrowings classified as a funding agreement within the scope of *Statement of Statutory Accounting Principles (SSAP) No. 52—Deposit-Type Contracts* reported in Exhibit 7 – Deposit-Type Contracts. Exhibit 7 includes columnar reporting of various types of deposit-type contracts, including guaranteed interest contracts (GICs), annuities certain, supplemental contracts, etc. Due to the varied nature of reporting based on policy form, FHLB borrowings classified as a deposit-type contract and reported in Exhibit 7 are not readily identifiable to financial statement users. Mr. Bruggeman stated that the recommendation from the Statutory Accounting Principles (E)
Working Group was to include a new footnote detailing the FHLB borrowings associated with every column in Exhibit 7.

Mr. Bruggeman stated that the comments from interested parties suggested adding a new line in Exhibit 7, rather than a footnote, stating that the new line would be easier to align to the associated FHLB borrowings with the respective deposit type contract columns. When this agenda item was drafted by NAIC staff, interested parties indicated preference for the footnote. While the footnote proposed by the Statutory Accounting Principles (E) Working Group was envisioned to be below the table, it deferred to the Blanks (E) Working Group support staff on the format of the footnote.

Mr. Bruggeman made a motion, seconded by Mr. Garn, to adopt the proposal (Attachment Two-A). The motion passed unanimously.

b. Agenda Item 2021-16BWG

Mr. Bruggeman stated that this blanks agenda item proposes revisions to Note 9–Income Taxes and Note 15–Leases. For Note 9, specifically 9C, the agenda item addresses differences between the portable document format (PDF) reporting of Note 9C and the data capture element of the disclosure. The data capture element has a single “Other” line for deferred tax asset (DTA) and deferred tax liability (DTL) components, whereas the instructions for Note 9C ask that additional lines be added to the illustration for additional components over 5% in the PDF document. The additional lines in the PDF were intended to be temporary to identify if there were other specific lines that needed to be added based on what companies were reporting as additional lines in the PDF. With no additional items identified, the instruction for adding these lines is now being removed.

Mr. Bruggeman stated that for Note 15, the proposal adds minor modifications by including a “thereafter” row in the minimum aggregate rental commitment table and adjusts the total formula accordingly. The comments from interested parties recommended a couple of minor editorial revisions to the formulas to reflect the removal of the lines in the income tax PDF, which NAIC staff agree with and are reflected in the final proposal.

Mr. Bruggeman made a motion, seconded by Mr. Hudson, to adopt the proposal (Attachment Two-B). The motion passed unanimously.

c. Agenda Item 2021-17BWG

Mr. Drutz stated that this proposal modifies the Analysis of Operations by Lines of Business in the health blank to include all of health lines of business included in the life/fraternal blank Analysis of Operations by Lines of Business – Accident and Health. It adds instructions for the new columns and adjusts the column references. It adds the Health Blank Analysis of Operations by Lines of Business as a supplement to the life/fraternal blank with the appropriate instructions and crosschecks. It adds crosschecks to the Health Blank Analysis of Operations by Lines of Business to the life/fraternal Analysis of Operations by Lines of Business – Accident and Health instructions.

Mr. Drutz stated that there were interested party comments received. With regards to the request to change the effective date, this proposal was changed to a supplement to accommodate interested parties’ previous request and input. There does not appear to be a need to postpone this proposal to annual 2023. Regarding the identical descriptions comment, those will remain in the instructions for now as they appear in the proposal. Mr. Drutz stated that both the life/fraternal and health statement instructions have duplication of definitions of Lines of Business. NAIC staff will put together a proposal to concentrate the definitions in the Appendix of the instructions. The P/C instructions have the Lines of Business in the Appendix, and the instructions for the individual pages refer to the Appendix.
Mr. Drutz stated that the request to change the name of the supplement was included in the modifications highlighted in the proposal. Interested parties pointed out some issues with the crosschecks, which have been discussed with them and resolved. The crosscheck for the Analysis of Operations – Accident and Health, line 13, language will be added to include the change in the reserve that is reported in Exhibit 6, column 1. Language will be added to line 19 to clarify that the line should include the increase in policy reserves and the change in premium deficiency reserves. This language is consistent with the same line reported in the health blank. The crosschecks for line 19 and line 20 of the page will be deleted and replaced with one adding line 19 and line 20 to match up in total with the supplement lines 21 through 24, column 1. A crosscheck is being added from the Supplement, column 1 minus column 14, line 24 should equal the total in the Analysis of Operations Summary, column 6 (accident and health [A&H]), line 29. This is similar to the other crosschecks of the Analysis of Operations pages to the summary. Interested parties asked for an instruction added to the supplement to indicate that life companies that do not write any health business or hold any health reserves are not required to file the supplement.

Mr. Drutz made a motion, seconded by Mr. Hudson, to adopt the modifications to the proposal. Tip Tipton (Thrivent Financial) stated that interested parties would like the effective date to be an annual 2023. He stated that companies have indicated that they are adjusting to the previous changes to Schedule H and the changes to the Accident and Health Policy Experience Exhibit, which is also effective this year. He stated that those efforts, especially for smaller companies, will make it difficult to implement this change for annual 2022. He stated that this proposal, being effective for annual 2022, would require companies to retroactively report the data back to the first of the year.

Mr. Hudson made a subsequent motion, seconded by Mr. Drutz, to adopt the modifications, including the change in effective date to annual 2023 to accommodate interested parties’ request. The motion passed unanimously. Mr. Drutz made a motion, seconded by Mr. Hudson, to adopt the modified proposal (Attachment Two-C). The motion passed.

d. **Agenda Item 2021-18BWG**

Ms. Walker stated that this proposal modifies the Life Insurance exhibit (State Page) to include the line of business detail reported on the Analysis of Operations by Lines of Business pages. Two new Schedule T style pages, Exhibit of Claims Settled During the Current Year and Policy Exhibit, are created to include detail captured by state on the existing Life Insurance exhibit (State Page) that could not be included due to space restrictions. This proposal adds definitions for life and annuity products to the lines of business definitions in the health appendix. She stated that considering the interested party comments, she would like to defer this proposal to allow time for further discussion and review by other regulatory groups.

Ms. Walker made a motion, seconded by Ms. Doggett, to defer the proposal for a public comment period ending April 25. The motion passed unanimously.

e. **Agenda Item 2021-19BWG**

Mr. Drutz stated that this proposal adds columns and lines to Underwriting and Investment Exhibits, Parts 1, 2, 2A, 2B, and 2D and the Exhibit of Premiums, Enrollment and Utilization in the annual statement bringing the lines of business reporting in line with Life/Fraternal and Property. It adds columns and lines to the Exhibit of Premiums, Enrollment and Utilization and Underwriting and Investment analysis of Claims Unpaid quarterly pages. The appropriate adjustments to the instructions are also being made.
Mr. Drutz made a motion, seconded by Mr. Hudson to adopt the modifications to the proposal. The motion passed unanimously. Mr. Garn made a motion, seconded by Mr. Drutz to adopt the modified proposal (Attachment Two-D). The motion passed unanimously.

f. Agenda Item 2021-20BWG

Mr. Garn stated that this proposal, beginning at line 72 of the Life/Fraternal Five-Year Historical, adds or deletes lines to pull in the specific lines of business reported on the Life/Fraternal Analysis of Operations by Lines of Business detail pages for life (individual and group), annuities (individual and group), and Accident and Health (line 33 of those pages).

Mr. Garn stated that the changes to the life/fraternal Analysis of Operations by Lines of Business were made in the 2019 filing. The effective date of 2023 was recommended to accommodate the five years of data to coincide with this adoption. Companies have reported the five-year historical page for three years using the lines as they currently exist. As it should not be a hardship for companies to report in the current lines for one additional year and complete the full five years of data in 2023, it is recommended that the proposal remain with a 2023 effective date.

Mr. Garn said the A&H claim reserves adequacy lines are not part of the current proposal. They will remain and can be discussed further as to whether they should remain in the future. The crosscheck references will be adjusted in a future editorial listing as these may no longer work with the recent changes to Schedule H. The other editorial suggestions from the interested parties have been made and are highlighted in the proposal as modifications.

Mr. Garn made a motion, seconded by Mr. Eft to adopt the modifications to the proposal. The motion passed unanimously. Mr. Garn made a motion, seconded by Mr. Eft to adopt the modified proposal (Attachment Two-E). The motion passed unanimously.

g. Agenda Item 2021-21BWG

Mr. Bruggeman stated that this blanks agenda item results from the Statutory Accounting Principles (E) Working Group’s adoption of agenda item 2021-15, which specified that residual tranches shall be reported on Schedule BA - Other Long-Term Investments and valued at the lower of amortized cost or fair value. The effective date of this required reporting is year-end 2022. This blanks item added instructions to the Investment Schedules General Instructions to exclude residual tranches or interests from being reported as bonds on Schedule D, Part 1 and added lines to Schedule BA for the reporting of those investments. He stated that the comments from interested parties recommended adding a notation that the proposal should also apply to separate accounts, as these types of investments could exist in separate account investment holdings. This change was not deemed necessary as the general account instructions are relevant for this type of investment.

Mr. Bruggeman stated that interested parties recommended modifying the title of residual tranches or interests to include the phrase “with underlying assets having characteristics of.” This change has been made to the proposal. Interested parties also suggested splitting the Common Stock subcategory between Preferred Stock and Common Stock, which would require renumbering of the lines for the subsequent categories/subcategories. They state that this change would support the efforts of the newly formed Risk-Based Capital Investment Risk and Evaluation (E) Working Group as it evaluates possible changes to the RBC factors for these types of investments. While NAIC staff support this suggestion, this item has not yet been reflected in the proposal. However, it could be considered, as long as the revisions can be implemented for year-end 2022 reporting.
Finally, interested parties proposed adding instructions that the investment in Residual Tranches or Interests should be assigned to the subcategory with the highest underlying asset concentration as there should not be any bifurcation of the underlying assets among the subcategories. NAIC staff conferred with state insurance regulators, who indicated support for these revisions. Mr. Bruggeman recommended adoption of proposal 2021-21BWG, incorporating the suggestions of interested parties, which: 1) split the common stock subcategory between preferred and common stock; and 2) add instructions that residual tranches should be assigned to the subcategory with the highest underlying asset concentration.

Ms. Doggett and Mr. Hudson indicated that they agreed with the breakout of the preferred stock and common stock lines. Mr. Tipton stated that interested parties approved of the breakout of preferred stock and common stock as well.

Mr. Bruggeman made a motion, seconded by Mr. Eft to adopt the modifications to the proposal. The motion passed unanimously. Mr. Bruggeman made a motion, seconded by Mr. Eft, to adopt the modified proposal (Attachment Two-F). The motion passed unanimously.

h. **Agenda Item 2021-22BWG**

Mr. Bruggeman stated that this blanks agenda item is in response to the Statutory Accounting Principles (E) Working Group’s agenda item 2021-21 regarding related party reporting. The Working Group’s agenda item had two main goals: 1) to clarify reporting of affiliate transactions within existing reporting lines in the investment schedules; and 2) to incorporate new reporting requirements for investment transactions with related parties. Pursuant to recent discussions, state insurance regulators desire additional information on investment transactions involving related parties, regardless of whether the related party is “affiliated” pursuant to the *Insurance Holding Company System Regulatory Act* (#440).

Mr. Bruggeman stated that the identification of certain investments/transactions would be identified through the use of a reporting code in the 2022 year-end investment schedules: 1) direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure; 2) securitization or similar investment involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties; 3) securitization or similar investment involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties; 4) securitization or similar investment in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role; and 5) the investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1–4.

Mr. Bruggeman stated that during its April 4 meeting at the Spring National Meeting, the Statutory Accounting Principles (E) Working Group plans to expose its related agenda item with modifications to the reporting proposal that considers comments from interested parties. The exposure will include modifications to the original proposed SSAP No. 25—*Affiliates and Other Related Parties* clarifications and revisions to the proposed annual statement reporting instructions. Accordingly, it is recommended that the Blanks (E) Working Group expose this blanks item incorporating the new language that will be concurrently exposed by the Statutory Accounting Principles (E) Working Group.
Mr. Bruggeman made a motion, seconded by Mr. Hudson, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Bruggeman made a motion, seconded by Mr. Drutz to re-expose the modified proposal (Attachment Two-G) for a public comment period ending April 25. The motion passed unanimously.

i. Agenda Item 2021-23BWG

Mr. Bruggeman stated that this blanks agenda item assumes adoption of 2021-21BWG. With the new reporting lines proposed for residuals in Schedule BA, additional revisions are needed to map those reporting lines to the asset valuation reserve (AVR) schedule. The proposed revisions will separately capture these items in a new category within AVR as they are items that are not comparable to other investments.

The comments from interested parties, similar to 2021-21BWG, recommended adding a notation that the proposal should also apply to separate accounts, as these types of investments could exist in separate account investment holdings. This change was not deemed necessary as the general account instructions are relevant for this type of investment. However, interested parties also suggested other editorial updates, and those items have been corrected in the final proposal. Mr. Bruggeman recommend adoption of 2021-21BWG, incorporating the editorial suggestions of interested parties.

Mr. Bruggeman made a motion, seconded by Ms. Doggett, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Bruggeman made a motion, seconded by Ms. Doggett to adopt the modified proposal (Attachment Two-H). The motion passed unanimously.

John DuBois (MassMutual) stated that the Working Group may need to look at the risk-based capital (RBC) impact. Mr. Bruggeman stated that the factors will stay the same for this year. It will be broken out in the AVR categories. They may go in a different category of risk, so there may be a covariance difference, but the factors should not have an impact for 2022. There may need to be an editorial comment in the new RBC instructions to account for that.

4. Exposed New Items

   a. Agenda Item 2022-01BWG

Mr. Bruggeman stated that this blanks agenda item is in response to Statutory Accounting Principles (E) Working Group agenda item 2021-24, which the Working Group exposed in December 2021 and is up for consideration of adoption during the Spring National Meeting. The Blanks (E) Working Group’s agenda item proposes a new general interrogatory within the annual reporting blanks, specific to the use or acceptance of cryptocurrencies. Examples of inquiries within the interrogatory include the identification regarding: 1) if cryptocurrencies are held by an insurance reporting entity (and if so, which reporting schedules are the cryptocurrencies reported); and 2) if cryptocurrencies are accepted for the payment of premiums. This general interrogatory was requested by regulators after the Statutory Accounting Principles (E) Working Group’s May 2021 adoption of Interpretation (INT) 21-01: Accounting for Cryptocurrencies, which established that directly held cryptocurrencies do not meet the definition of an admitted asset for statutory accounting.

Hearing no objection, Ms. Gosselin stated that the proposal will be considered exposed.

   b. Agenda Item 2022-02BWG

Mr. Bruggeman stated that this blanks agenda item is in response to Statutory Accounting Principles (E) Working Group agenda item 2021-22, which the Working Group exposed in December 2021 and is up for consideration of
adoption during the Spring National Meeting. The agenda item is to expand, through electronic-only columns, the reporting on Schedule D – Part 6 – Section 1: Valuation of Shares of Subsidiary, Controlled or Affiliated Entities (Schedule D-6-1). Schedule D-6-1 captures investments that are defined in SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities. The proposed expansion in reporting would capture items consistent with current requirements in SSAP No. 97 and include items such as prior year’s book/adjusted carrying value (BACV), nonadmitted amount, sub-2 verified value, and VISION filing number. The addition of these items to the Schedule D, Part 6, Section 1 tables were proposed as they will assist state insurance regulators to: 1) ensure Sub 1 and Sub 2 filings are being submitted by reporting entities; and 2) identify situations where the NAIC approved value varies significantly from the value reported on Schedule D, Part 6, Section 1.

Hearing no objection, Ms. Gosselin stated that the proposal will be considered exposed.

c. Agenda Item 2022-03BWG

Mary Caswell (NAIC) stated that this affects only the P/C quarterly filing with effective date of first-quarter 2023. This proposal is to fix the reporting of line 5 to be reported as line 5.1 – Commercial multiple peril (non-liability portion) and line 5.2 – Commercial multiple peril (liability portion) on the Quarterly Part 1 and Part 2 pages to be consistent with the annual reporting. This change was missed on proposal 2020-33BWG. This is a big enough change to warrant a proposal rather than an editorial correction.

Hearing no objection, Ms. Gosselin stated that the proposal will be considered exposed.

d. Agenda Item 2022-04BWG

Ms. Gosselin stated that this proposal adds a new supplement to capture premium and loss data for the P/C blank for annual statement line 17.1, line 17.2 and line 17.3 of the Exhibit of Premiums and Losses (State Page) – Other Liability by more granular lines of business. She stated that after discussions with interested parties and state insurance regulators and reviewing their input, this proposal was drafted to replace 2021-13BWG.

Hearing no objection, Ms. Gosselin stated that the proposal will be considered exposed.

e. Agenda Item 2022-05BWG

Ms. Caswell stated that this proposal adds line numbers to the status data points of the life/fraternal, health. and P/C Schedule T footnote for ease in electronic data capture of the lines and clarification of reporting.

Hearing no objection, Ms. Gosselin stated that the proposal will be considered exposed.

f. Agenda Item 2022-06BWG

Mr. Drutz stated that this proposal is sponsored by the Health Risk-Based Capital (E) Working Group. After much discussion of the Health Test Ad Hoc Group members, and approval by the Health Risk-Based Capital (E) Working Group, the proposal was drafted to amend the health test language annual statement instructions in an effort to move those filers who write predominantly health business and file on the life blank to begin filing on the health blank.

Hearing no objection, Ms. Gosselin stated that the proposal will be considered exposed.
g. **Agenda Item 2022-07BWG**

Eric King (NAIC) stated that this proposal is sponsored by the Health Actuarial (B) Task Force. It modifies the Health Actuarial Opinion Instructions to add definitions of “actuarial asset” and “actuarial liability” and modifies Section 4 (Identification), Section 5 (Scope), and Section 7 (Opinion) to clarify that the actuary’s opinion covers actuarial assets, as well as actuarial liabilities. It modifies Section 9 to clarify that the guidance related to the type of opinion rendered by an appointed actuary covers both actuarial assets and actuarial liabilities.

Hearing no objection, Ms. Gosselin stated that the proposal will be considered exposed.

h. **Agenda Item 2022-08BWG**

Ms. Krylova stated that this proposal modifies the instructions in Section 1, Section 3, and Section 8 of the Property/Casualty Actuarial Opinion Instructions to reflect the changes adopted by the Actuarial Opinion (C) Working Group. She stated that the first change is deletion of the paragraph on continuing education log procedures because this is no longer needed as the Task Force has ended its project of studying the continuing education logs. The second change came about as a request for guidance from industry. In consultation with the financial examiner, the technical group developed guidance on documenting the review of the qualification documentation for companies that are part of a larger group. The third change regarding the directly appointed actuaries to include an additional requirement is added in the Identification paragraph for appointed actuaries to confirm that qualification documentation has been provided to the board of directors. This statement in the Identification paragraph will assist state insurance regulators in determining whether this requirement has been met. The fourth change clarifies that the signature block requirements apply to the Statement of Actuarial Opinion only.

Hearing no objection, Ms. Gosselin stated that the proposal will be considered exposed.

i. **Agenda Item 2022-09BWG**

Jennifer Frasier (NAIC) stated that this proposal is sponsored by the Life Actuarial (A) Task Force with an effective date of annual 2022. She stated that the *Valuation Manual* allows for an ongoing exemption, which means that a company can file once for a life principles-based reserve (PBR) exemption, and for subsequent years, the company could just attest to its ongoing qualification. The proposal changes are meant to sync up the blanks requirements with the new allowance for an ongoing exemption. It changes to the Life/Fraternal VM-20 Reserves Supplement blank part 2, adding a question 3, a disclosure of the year that the Life PBR Exemption was actively filed, and a confirmation of the eligibility criteria in the case of ongoing exemptions. It corrects references to a state “granting” an exemption, since this is often not the case (e.g., the exemption may be allowed). For the VM-20 Reserves Supplement Instructions, it adds instructions for the new disclosure item, question 3. It corrects the references to a state “granting” an exemption. For the Supplemental Exhibits and Schedules Interrogatories (Quarterly Statement), for question 8, it adds instructions for how to respond if the company is using the ongoing exemption. The same instructions can also be found in the *Valuation Manual*, Section II, Subsection 1.G.1.

Hearing no objection, Ms. Gosselin stated that the proposal will be considered exposed.

j. **Agenda Item 2022-10BWG**

Mr. Bruggeman stated that this blanks agenda item is in response to Statutory Accounting Principles (E) Working Group agenda item 2022-03, which the Working Group expects to consider for exposure during the Spring National Meeting. The Statutory Accounting Principles (E) Working Group’s agenda item was drafted to propose
blanks instructional changes primarily to Schedule T, which reflects premiums, allocated by states and territories. NAIC staff received inquiries from three states in the fourth quarter of 2021 regarding a minor number of entities that primarily wrote health business related to the federal Affordable Care Act (ACA), which are believed to have not properly allocated premium adjustments by jurisdiction on the statutory financial statement. In summary, the agenda item directs that all premium adjustments (both increases and decreases), including but not limited to ACA premium adjustments related to the risk adjustment program, shall be allocated as premium in the respective jurisdiction.

Hearing no objection, Ms. Gosselin stated that the proposal will be considered exposed.

k. Agenda Item 2022-11BWG

Mr. Barlow stated that this proposal updates the Life/Fraternal AVR factors to correspond with the adopted RBC factors for the expanded bond designation categories. This is strictly a mechanical update. The maximum reserve factor is set to the after-tax RBC factor, and the basic contribution and reserve objective factors are a percentage of those updated maximum reserve factors.

Hearing no objection, Ms. Gosselin stated that the proposal will be considered exposed.

5. Adopted the Editorial Listing

Mr. Hudson made a motion, seconded by Ms. Gosselin, to adopt the Blanks (E) Working Group editorial listing. The motion passed unanimously (Attachment Two-I).

6. Received the Statutory Accounting Principles (E) Working Group Memorandum

Mr. Bruggeman stated that this is a standardized year-end memorandum from the Statutory Accounting Principles (E) Working Group. It is intended to notify the Blanks (E) Working Group of revisions to the “Notes to the Financial Statements” that have been adopted for year-end 2021 reporting. It is recommended that this memorandum, detailing instructional revisions and changes to existing disclosure requirements, be posted to the NAIC website. If deemed necessary, specific proposals, if not yet submitted, will be submitted to the Blanks (E) Working Group to formalize the instruction revisions. It is requested that this information be included in the next update to the Annual Statement Instructions. A year-end review identified that the instructions in Schedule D, Part 2 on preferred stock need to be updated to be consistent with the SSAP No. 32R—Preferred Stock revision, because the valuation of perpetual preferred stock is no longer based on the NAIC designation.

Mr. Bruggeman made a motion, seconded by Mr. Hudson, to receive the Statutory Accounting Principles (E) Working Group memorandum (Attachment Two-J). The motion passed unanimously.

Having no further business, the Blanks (E) Working Group adjourned.

## IDENTIFICATION OF ITEM(S) TO CHANGE

Add a footnote to Exhibit 7 in the Life/Fraternal Statement and the Health Statement (Life Supplement) to capture amount of FHLB Funding Agreements reported in Columns 1 through 6 of the exhibit.

## REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to provide regulators the amount of FHLB Funding Agreements in the individual columns of Exhibit 7. (2021-16 SAPWG)

**IDENTIFICATION OF ITEM(S) TO CHANGE**

***See next page for details***

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

***See next page for details***

**NAIC STAFF COMMENTS**

Comment on Effective Reporting Date:__________________________

Other Comments:__________________________________________

** This section must be completed on all forms.  

Revised 7/18/2018
IDENTIFICATION OF ITEM(S) TO CHANGE

Note 9 – Income Taxes:

- Modify the instructions for 9C to eliminate the instruction for adding additional lines for DTA and DTL components to the PDF/printed version of the notes not specifically detailed in the illustration that are greater than 5% to bring in line with the data capture element of the note that can’t accommodate variable lines.

- Add formulas for calculation of total and subtotal on the illustration for 9C that are not already present.

Note 15 – Leases:

- Modify the illustrations to add a “Thereafter” line.

- Add formula for “Total” line.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

For Note 9 – Income Taxes, address differences between the PDF reporting of Note 9C and the data capture element of the disclosure. The data capture element has a single “Other” line for DTA and DTL components where the instructions for 9C asks that additional lines be added to the illustration for additional components over 5% in the PDF document. The additional lines on the PDF were intended to be temporary to identify if there were other specific lines needed to be added based on what companies were reporting as additional lines on the PDF. With no additional items identified to be added the instruction for adding these lines is being removed. The proposal also specifically clarifies calculation of total and subtotal lines where that calculation has not already been provided for clarification.

For Note 15 – Leases, there should have been a line for aggregating the amounts for the remaining years after the five years specifically shown in the illustration. This proposal adds those lines as Line 6 – Thereafter. In addition, formula for calculating the total line has been added to the illustration for clarification.
9. Income Taxes

Instruction:

C. Disclose the significant components of income taxes incurred (i.e., current income tax expenses) and the changes in DTAs and DTLs. These components would include, for example:

- Current tax expense or benefit;
- The change in DTAs and DTLs (exclusive of the effects of other components listed below);
- Investment tax credits;
- The benefits of operating loss carry forwards;
- Adjustments of a DTA or DTL for enacted changes in tax laws or rates or a change in the tax status of the reporting entity; and
- Adjustments to gross deferred tax assets because of a change in circumstances that causes a change in judgment about the realizability of the related deferred tax asset, and the reason for the adjustment and change in judgment.

NOTE: The illustration below for this disclosure reflects the setup for the data capture of the electronic notes. Reporting entities should disclose those items included as “Other” (Lines 2a13, 2e4, 3a5 and 3b3) as additional lines for those items greater than 5% in the printed/PDF filing document.
C. Current income taxes incurred consist of the following major components:

<table>
<thead>
<tr>
<th>Component</th>
<th>12/31/2021</th>
<th>12/31/2020</th>

15. Leases

Instruction:

A. Disclose the following items related to lessee leasing arrangements (refer to SSAP No. 22R—Leases):

(2) For leases having initial or remaining noncancelable lease terms in excess of one year:

a. Future minimum rental payments required as of the date of the latest balance sheet presented, in the aggregate and for each of the five succeeding years.

b. The total of minimum rentals to be received in the future under noncancelable subleases as of the date of the latest balance sheet presented.

B. When leasing is a significant part of the lessor’s business activities in terms of revenue, net income or assets, disclose the following information with respect to leases:

(1) For operating leases:

a. A general description of the lessor’s leasing arrangements;

b. The cost and carrying amount, if different, of property on lease or held for leasing by major classes of property according to nature or function, and the amount of accumulated depreciation in total as of the date of the latest balance sheet presented;

c. Minimum future rentals on noncancelable leases as of the date of the latest balance sheet presented, in the aggregate and for each of the five succeeding years; and

d. Total contingent rentals included in income for each period for which an income statement is presented.

(2) For leveraged leases:

a. A description of the terms including the pretax income from the leveraged leases. For purposes of presenting the investment in a leveraged lease in the lessor’s balance sheet, the amount of related deferred taxes shall be presented separately (from the remainder of the net investment);

b. Separate presentation (from each other) shall be made of pretax income from the leveraged lease, the tax effect of pretax income, and the amount of investment tax credit recognized as income during the period; and

c. When leveraged leasing is a significant part of the lessor’s business activities in terms of revenue, net income, or assets, the components of the net investment balance in leveraged leases shall be disclosed.

IDENTIFICATION OF ITEM(S) TO CHANGE

Modify the Analysis of Operations by Lines of Business in the Health Blank to include all of health lines of business included in the Life/Fraternal Analysis of Operations by Lines of Business – Accident and Health. Add instructions for the new columns and adjust the column references. Add the Health Blank Analysis of Operations by Lines of Business as a supplement to the Life/Fraternal Blank with the appropriate instructions and crosschecks. Add crosscheck to the Health Blank Analysis of Operations by Lines of Business to the Life/Fraternal Analysis of Operations by Lines of Business – Accident and Health instructions

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of the proposal is to add the Health Blank Analysis of Operations by Lines of Business as a supplement to the Life/Fraternal Statement to capture data points Health Blank Analysis of Operations by Lines of Business. This will allow regulators to look at revenue and expenses in the same detail as reported on the Heath Analysis of Operations by Lines of Business.

** This section must be completed on all forms.

Revised 7/18/2018
ANNUAL STATEMENT INSTRUCTIONS – HEALTH

ANALYSIS OF OPERATIONS BY LINES OF BUSINESS

Please refer to the instructions in Statement of Revenues and Expenses for instructions and line descriptions for this Exhibit.

Riders/Endorsements/Floaters:

If a rider, endorsement or floater acts like a separate policy with separate premium, deductible and limit, then it is to be recorded on the same line of business as if it were a stand-alone policy regardless of whether it is referred to as a rider, endorsement or floater. If there is no additional premium, separate deductible or limit, the rider, endorsement or floater should be reported on the same line of business as the base policy.

Column 1 – Total

The amounts in this column are to agree with the corresponding amounts reported on Page 4, Column 2.

Column 2 – Comprehensive (Hospital & Medical) – Individual
Column 3 – Comprehensive (Hospital & Medical) – Group

Include: Business that provides for medical coverages including hospital, surgical and major medical. Include State Children’s Health Insurance Program (SCHIP) Medicaid Program (Title XXI), risk contracts.

Exclude: Administrative services only (ASO), other non-underwritten business, administrative services contracts (ASC), federal employees health benefit plan (FEHBP) premiums, Medicare (Title XVIII) and Medicaid (Title XIX) risk contracts, Medicare Supplement, Vision only and Dental only business.

Column 4 – Medicare Supplement

Include: Business reported in the Medicare Supplement Insurance Experience Exhibit of the annual statement.

Exclude: Administrative services only (ASO), other non-underwritten business, administrative services contracts (ASC), federal employees health benefit plan (FEHBP) premiums, comprehensive hospital and medical policies, Medicare (Title XVIII) and Medicaid (Title XIX) risk contracts, Vision only and Dental only business.

Column 45 – Dental Only

Include: Policies providing for dental only coverage issued as stand alone dental or as a rider to a medical policy that is not related to the medical policy through premiums, deductibles or out-of-pocket limits.

Exclude: Administrative services only (ASO), other non-underwritten business, administrative services contracts (ASC), federal employees health benefit plan (FEHBP) premiums, comprehensive hospital and medical policies, Medicare (Title XVIII) and Medicaid (Title XIX) risk contracts, Medicare Supplement and Vision only business.

<td></td>
</tr>
</tbody>
</table>
Column 11 – Disability Income

Include: The term ‘disability income’ includes contracts providing disability income coverage, both short-term and long-term.

Column 12 – Long-Term Care

Include: Any insurance policy or rider that provides coverage for not less than twelve (12) consecutive months for each covered person on an expense incurred, indemnity, prepaid or other basis, for one or more necessary or medically necessary diagnostic, preventive, therapeutic, rehabilitative, maintenance or personal care services, provided in a setting other than an acute care unit of a hospital.

A policy or rider that provides for payment of benefits based upon cognitive impairment or the loss of functional capacity.

Column 13 – Other Health

Include: Other health coverages such as stop loss, disability income, long-term care and prescription drug plans and coverages not specifically addressed in any other columns. Policies providing stand alone Medicare Part D Prescription Drug Coverage.

On Line 20, expenses and reimbursements from administrative services only (ASO), other non-underwritten business and administrative services contracts (ASC).

Exclude: Policies providing Medicare Part D Prescription Drug Coverage through a Medicare Advantage product.

Column 14 – Other Non-health

Include: Life and property/casualty coverages.
ANNUAL STATEMENT INSTRUCTIONS – LIFE\FRATERNAL

HEALTH SUPPLEMENT

HEALTH ANALYSIS OF OPERATIONS BY LINES OF BUSINESS SUPPLEMENT

Please refer to the instructions in Statement of Revenues and Expenses for instructions and line descriptions for this Exhibit.

Complete the supplement if the reporting entity has health lines of business to be reported in Columns 2 through 13. Reporting entities that only have non-health lines of business should not complete the supplement.

Riders/Endorsements/Floaters:

If a rider, endorsement or floater acts like a separate policy with separate premium, deductible and limit, then it is to be recorded on the same line of business as if it were a stand-alone policy regardless of whether it is referred to as a rider, endorsement or floater. If there is no additional premium, separate deductible or limit, the rider, endorsement or floater should be reported on the same line of business as the base policy.

Column 1 – Total

Column 1 (Line 19 plus Line 20) minus Column 14 (Line 19 plus Line 20) should equal Analysis of Operations by Lines of Business – Accident and Health Column 1, sum of Lines 21 through 24.

Column 2 – Comprehensive (Hospital & Medical) – Individual

Column 3 – Comprehensive (Hospital & Medical) – Group

Include: Business that provides for medical coverages including hospital, surgical and major medical. Include State Children’s Health Insurance Program (SCHIP) Medicaid Program (Title XXI), risk contracts.

Exclude: Administrative services only (ASO), other non-underwritten business, administrative services contracts (ASC), federal employees health benefit plan (FEHBP) premiums, Medicare (Title XVIII) and Medicaid (Title XIX) risk contracts, Medicare Supplement, Vision only and Dental only business.

Column 4 – Medicare Supplement

Include: Business reported in the Medicare Supplement Insurance Experience Exhibit of the annual statement.

Exclude: Administrative services only (ASO), other non-underwritten business, administrative services contracts (ASC), federal employees health benefit plan (FEHBP) premiums, comprehensive hospital and medical policies, Medicare (Title XVIII) and Medicaid (Title XIX) risk contracts, Vision only and Dental only business.

Column 5 – Dental Only

Include: Policies providing for dental only coverage issued as stand alone dental or as a rider to a medical policy that is not related to the medical policy through premiums, deductibles or out-of-pocket limits.

Exclude: Administrative services only (ASO), other non-underwritten business, administrative services contracts (ASC), federal employees health benefit plan (FEHBP) premiums, comprehensive hospital and medical policies, Medicare (Title XVIII) and Medicaid (Title XIX) risk contracts, Medicare Supplement and Vision only business.
Column 6 – Vision Only

Include: Policies providing for vision only coverage issued as stand-alone vision or as a rider to a medical policy that is not related to the medical policy through premiums, deductibles or out-of-pocket limits.

Exclude: Administrative services only (ASO), other non-underwritten business, administrative services contracts (ASC), federal employees health benefit plan (FEHBP) premiums, comprehensive hospital and medical policies, Medicare (Title XVIII) and Medicaid (Title XIX) risk contract, Medicare Supplement, and Dental only business.

Column 7 – Federal Employees Health Benefits Plans (FEHBP)

Include: Business allocable to the Federal Employees Health Benefits Plan (FEHBP) premium that are exempted from state taxes or other fees by Section 8909(f)(1) of Title 5 of the United States Code.

Exclude: Administrative services only (ASO), other non-underwritten business, administrative services contracts (ASC), comprehensive hospital and medical policies, Medicare (Title XVIII) and Medicaid (Title XIX) risk contracts, Medicare Supplement, Vision only and Dental only business.

Column 8 – Title XVIII - Medicare

Include: Business where the reporting entity charges a premium and agrees to cover the full medical costs of Medicare subscribers. Policies providing Medicare Part D Prescription Drug Coverage through a Medicare Advantage product.

Exclude: Administrative services only (ASO), other non-underwritten business, administrative services contracts (ASC), federal employees health benefit plan (FEHBP) premiums, comprehensive hospital and medical policies, Medicare (Title XIX) risk contracts, Medicare Supplement, Vision only and Dental only business. Policies providing stand alone Medicare Part D Prescription Drug Coverage.

Column 9 – Title XIX - Medicaid

Include: Business where the reporting entity charges a premium and agrees to cover the full medical costs of Medicaid subscribers.

Exclude: Administrative services only (ASO), other non-underwritten business, administrative services contracts (ASC), federal employees health benefit plan (FEHBP) premiums, comprehensive hospital and medical policies, Medicare (Title XVIII) risk contracts, Medicare Supplement, Vision only and Dental only business.

Column 10 – Credit A&H

Include: Coverage provided to, or offered to, borrowers in connection with a consumer credit transaction where the proceeds are used to repay a debt or an installment loan in the event the consumer is disabled as the result of an accident, including business not exceeding 120 months duration (Group and Individual).

</tbody>
</table>
Line 2 – Change in Unearned Premium Reserves and Reserve for Rate Credits

Exclude: Reserves relating to uninsured plans and the uninsured portion of partially insured plans.

Line 3 – Fee-for-Service (Net of $____ Medical Expenses)

Include: Revenue recognized by the reporting entity for provision of health services to non-members by reporting entity providers and to members through provision of health services excluded from their prepaid benefit packages. Include in the inside amount, the medical expenses associated with fee-for-service business.

Line 4 – Risk Revenue

Include: Amounts charged by the reporting entity as a provider or intermediary for specified medical services (e.g., full professional, dental, radiology, etc.) provided to the policyholders or members of another insurer or reporting entity.

Unlike premiums that are collected from an employer group or individual member, risk revenue is the prepaid (usually on a capitated basis) payment, made by another insurer or reporting entity to the reporting entity in exchange for services to be provided or offered by such organization.

Line 5 – Aggregate Write-ins for Other Health Care Related Revenues

Enter the total of the write-ins listed in schedule Details of Write-ins Aggregated at Line 5 for Other Health Care Related Revenues.

Line 6 – Aggregate Write-ins for Other Non-health Revenues

Enter the total of the write-ins in schedule Details of Write-ins Aggregate at Line 6 for Other Non-health Revenues.

Line 8 – Hospital/Medical Benefits

Include: Expenses for physician services provided under contractual arrangement to the reporting entity.

Salaries, including fringe benefits, paid to physicians for delivery of medical services. Capitation payments by the reporting entity to physicians for delivery of medical services to reporting entity subscribers.

Fees paid by the reporting entity to physicians on a fee-for-service basis for delivery of medical services to reporting entity subscribers. This includes capitated referrals.

Inpatient hospital costs of routine and ancillary services for reporting entity members while confined to an acute care hospital.

Charges for non-reporting entity physician services provided in a hospital are included in this line item only if included as an undefined portion of charges by a hospital to the reporting entity. (If separately itemized or billed, physician charges should be included in outside referrals below.)

The cost of utilizing skilled nursing and intermediate care facilities.
Routine hospital service includes regular room and board (including intensive care units, coronary care units, and other special inpatient hospital units), dietary and nursing services, medical surgical supplies, medical social services, and the use of certain equipment and facilities for which the provider does not customarily make a separate charge.

Ancillary services may also include laboratory, radiology, drugs, delivery room, physical therapy services, other special items and services for which charges are customarily made in addition to a routine service charge.

Skilled nursing facilities are primarily engaged in providing skilled nursing care and related services for patients who require medical or nursing care or rehabilitation service.

Intermediate care facilities are for individuals who do not require the degree of care and treatment that a hospital or skilled nursing-care facility provides, but that do require care and services above the level of room and board.

Exclude: Expenses for medical personnel time devoted to administrative tasks.

Emergency room and out-of-area hospitalization.

All items meeting the definition of Cost Containment Expenses found in SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses.

Line 9 — Other Professional Services

Include: Expenses for other professional providers under contractual arrangement to the reporting entity.

Salaries, as well as fringe benefits, paid by the reporting entity to non-physician providers licensed, accredited or certified to perform specified health services, consistent with state law, engaged in the delivery of medical services.

Compensation to personnel engaged in activities in direct support of the provision of medical services. For example, include compensation to pharmacists, dentists, psychologists, optometrists, podiatrists, extenders, nurses, clinical personnel such as ambulance drivers and technicians.

Exclude: Professional services not meeting this definition. Report these services as administrative expenses. For example, exclude compensation to paraprofessionals, janitors, quality assurance analysts, administrative supervisors, secretaries to medical personnel, and medical record clerks.

Prescription drugs.

All items meeting the definition of Cost Containment Expenses found in SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses.
Line 10 — Outside Referrals

Include: Expenses for providers not under arrangement with the reporting entity to provide services, such as consultations, or out-of-network providers.

Line 11 — Emergency Room and Out-of-Area

Include: Expenses for other health delivery services including emergency room costs incurred by members for which the reporting entity is responsible and out-of-area service costs for emergency physician and hospital.

In the event a member is admitted to the health care facility immediately after seeking emergency room service, emergency service expenses are reported in this line, the expenses after admission are reported in the hospital/medical line, provided the member is seeking services in the service area. Out-of-area expenses incurred, whether emergency or hospital, are reported in this line.

Line 12 — Prescription Drugs

Include: Expenses for Prescription Drugs and other pharmacy benefits covered by the reporting entity.

Deduct: Pharmaceutical rebates relating to insured plans.

Exclude: Prescription drug charges that are included in a hospital billing which should be classified as Hospital/Medical Benefits on Line 8.

Line 13 — Aggregate Write-ins for Other Hospital and Medical

Include: Other hospital and medical expenses not covered in the other claims accounts.

Line 14 — Incentive Pool, Withhold Adjustments and Bonus Amounts

This category is for adjusting the full medical expenses reported by means of both debit and credit entries. For example, report physician withholds forfeited to the reporting entity as a credit entry. Report amounts incurred due to an arrangement whereby the reporting entity agrees to utilization savings with a provider as a debit entry.

Line 16 — Net Reinsurance Recoveries

Amounts recovered and recoverable from reinsurers on paid losses

Include: Amounts related to assumed and ceded business.

Line 18 — Non-Health Claims (net)

Include: Claims for life or property/casualty insurance, net of reinsurance.

Line 19 — Claims Adjustment Expenses, Including $ Cost Containment Expenses

All expenses incurred in connection with the recording, adjustment and settlement of claims. This includes the total of the expense classification “Other Claim Adjustment Expenses” and all “Cost Containment Expenses” in the Underwriting and Investment Exhibit, Part 3, Analysis of Expenses.

Cost Containment Expenses and Other Claim Adjustment Expenses have been defined in SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses. Refer to SSAP No. 55 for accounting guidance.
Line 20 — General Administrative Expenses

Refer to SSAP No. 70—Allocation of Expenses, for accounting guidance.

Exclude: All expenses related to cost containment activities in accordance with SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses.

Line 21 — Increase in Reserves for Accident and Health Contracts

Include: Increase in policy reserves.

Change in premium deficiency reserve.

Line 22 — Increase in Reserves for Life Contracts

Include: Increase in policy reserves.

Change in premium deficiency reserve.

Line 24 — Net Underwriting Gain or (Loss)

Column 1 minus Column 14 should equal Analysis of Operations by Lines of Business—Summary Column 6, Line 29

Detail of Write-ins Aggregated at Line 5 for Other Health Care Related Revenues

Include: Revenue from sources not covered in the other revenue accounts.

Detail of Write-ins at Line 6 for Other Non-Health Revenues

Include: Revenue from life and property/casualty business (non-premium amounts).

Gains losses on fixed assets.

Details of Write-ins Aggregated at Line 13 for Other Hospital and Medical

Include: Other hospital and medical expenses not covered in the other claims accounts.
### ANALYSIS OF OPERATIONS BY LINES OF BUSINESS – ACCIDENT AND HEALTH

**Column 1 — Total**

Sum of Lines 21 through 24 should equal Health Analysis of Operations by Lines of Business Supplement Line 19 plus 20 (Column 1 minus Column 14).

**Line 1 — Premiums for Accident and Health Contracts**

Should equal Health Analysis of Operations by Lines of Business Supplement, Line 7 minus Line 6 (Column 1 minus Column 14).

**Line 8.3 — Aggregate Write-Ins for Miscellaneous Income**

Enter the total of the write-ins listed in schedule Details of Write-ins Aggregated at Line 8.3 for Miscellaneous Income.

**Line 13 — Disability Benefits and Benefits Under Accident and Health Contracts**

Should equal

- Health Supplement — Analysis of Operations by Lines of Business Supplement, Line 17, Column 1 minus Column 14,
- Plus Exhibit 6, Line 16, Column 1 CY,
- Minus Exhibit 6, Line 16, Column 1 PY.

**Line 16 — Group Conversions**

Include: The customary charges, in the appropriate columns, to cover the excess cost arising from group conversions.

*This line is not applicable to Fraternal Benefit Societies.*

**Line 19 — Increase in Aggregate Reserves for Life and Accident and Health Contracts**

Should equal the Health Supplement – Analysis of Operations by Lines of Business Supplement, Column 1 minus Column 14, Line 21 plus Line 22

Include: Increase in policy reserves reported in Exhibit 6

Change in premium deficiency reserve reported in Exhibit 6.

The following supplemental reports are required to be filed as part of your annual statement filing if your company is engaged in the type of business covered by the supplement. However, in the event that your company does not transact the type of business for which the special report must be filed, your response of NO to the specific interrogatory will be accepted in lieu of filing a "NONE" report and a bar code will be printed below. If the supplement is required of your company but is not being filed for whatever reason enter SEE EXPLANATION and provide an explanation following the interrogatory questions.

[X] QUARTERLY STATEMENT
[X] INSTRUCTIONS
[X] CROSSCHECKS

[ ] Life, Accident & Health/Fraternal
[ ] Property/Casualty
[ ] Health

Anticipated Effective Date: Annual 2022

IDENTIFICATION OF ITEM(S) TO CHANGE

Add columns and lines to U&I (Parts 1, 2, 2A, 2B and 2D) and the Exhibit of Premiums, Enrollment and Utilization in the annual statement bring the lines of business reporting in line with Life/Fraternal and Property. Add columns and lines to the Exhibit of Premiums, Enrollment and Utilization and U&I Analysis of Claims Unpaid quarterly pages. The appropriate adjustments to the instructions are also being made.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to bring consistency in lines of business reporting across all statement types that report health business. This proposal brings the Health Statement in line with Life/Fraternal and Property Statements.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date:

Other Comments:

** This section must be completed on all forms.

Revised 7/18/2018
ANNUAL STATEMENT INSTRUCTIONS – HEALTH

UNDERWRITING AND INVESTMENT EXHIBIT

PART 1 – PREMIUMS

Written premium is defined as the contractually determined amount charged by the reporting entity to the policyholder for the effective period of the contract based on the expectation of risk, policy benefits, and expenses associated with the coverage provided by the terms of the insurance contract. For health contracts without fixed contract periods, premiums written will be equal to the amount collected during the reporting period plus uncollected premiums at the end of the period less uncollected premiums at the beginning of the period.

Column 1 – Direct Business

Include: Experience rating refunds and return retrospective premiums. Deduct any experience rating refunds and return retrospective premiums paid. Refer to SSAP No. 66—Retrospectively Rated Contracts for accounting guidance.

Accrued return premium adjustments for contracts subject to redetermination.

Column 4 – Net Premium Income

For companies that record premium on a cash basis, make adjustments for uncollected premiums at the beginning and end of the year to reflect premiums on a written basis.

Line 1 – Comprehensive (Hospital & Medical) – Individual

Include: Policies providing for medical coverages including hospital, surgical and major medical. Include State Children’s Health Insurance Program (SCHIP) Medicaid Program (Title XXI), risk contracts.

Exclude: Administrative services only (ASO), other non-underwritten business, administrative services contracts (ASC), federal employees health benefit plan (FEHBP) premiums, medical only policies, Medicare (Title XVIII) and Medicaid (Title XIX) risk contracts, Medicare Supplement, Vision only and Dental only business.

Line 23 – Medicare Supplement

Include: Business reported in the Medicare Supplement Insurance Experience Exhibit of the annual statement.

Exclude: Revenue as a result of an arrangement between the reporting entity and the Centers for Medicare & Medicaid Services (CMS), on a cost or risk basis, for services to a Medicare beneficiary.

Line 44 – Dental Only

Include: Premiums for policies providing for dental only coverage issued as stand alone dental or as a rider to a medical policy that is not related to the medical policy through deductibles or out-of-pocket limits.

Line 45 – Vision Only

Include: Premiums for policies providing for vision only coverage issued as stand alone vision or as a rider to a medical policy that is not related to the medical policy through deductibles or out-of-pocket limits.

Line 56 – Federal Employees Health Benefits Plan (FEHBP)
Include: Net premiums written attributable to the FEHBP.

Line 6
Title XVIII - Medicare

Include: Revenue as a result of a risk arrangement between the reporting entity and the Centers for Medicare & Medicaid Services (CMS), for services to a Medicare beneficiary. Policies providing Medicare Part D Prescription Drug Coverage through a Medicare Advantage product.

Line 7
Title XIX - Medicaid

Include: Revenue resulting from an arrangement between the reporting entity and a Medicaid state agency for services to a Medicaid beneficiary.

Line 8
Credit A&H

Include: Coverage provided to, or offered to, borrowers in connection with a consumer credit transaction where the proceeds are used to repay a debt or an installment loan in the event the consumer is disabled as the result of an accident, including business not exceeding 120 months duration (Group and Individual).

Line 9
Disability Income

Include: The term ‘disability income’ includes contracts providing disability income coverage, both short-term and long-term.

Line 10
Long-Term Care

Include: Any insurance policy or rider that provides coverage for not less than twelve (12) consecutive months for each covered person on an expense incurred, indemnity, prepaid or other basis, for one or more necessary or medically necessary diagnostic, preventive, therapeutic, rehabilitative, maintenance or personal care services, provided in a setting other than an acute care unit of a hospital.

A policy or rider that provides for payment of benefits based upon cognitive impairment or the loss of functional capacity.

Line 11
Other Health

Include: Other health revenues not included in any other column, including stop loss, disability income and long-term care. Policies providing stand alone Medicare Part D Prescription Drug Coverage.

Exclude: ASO (administrative services only) contracts and ASC (administrative service contracts). Refer to SSAP No. 47—Uninsured Plans for accounting guidance. Policies providing Medicare Part D Prescription Drug Coverage through a Medicare Advantage product.

Line 12
Health Subtotal

Column 1 should equal Schedule T, Line 61 sum of Columns 2, 3, 5 and 6.
Line 4014  —  Life

Include: Revenue for life insurance.

Column 1 should equal Schedule T, Line 61, Column 7.

Line 4015  —  Property/Casualty

Include: Revenue for property/casualty insurance.

Column 1 should equal Schedule T, Line 61, Column 8.
UNDERWRITING AND INVESTMENT EXHIBIT

PART 2 – CLAIMS INCURRED DURING THE YEAR

Column 913 – Other Health

Include: Claims incurred for other health lines of business not included in any other column, including stop loss, disability income and long-term care.

Column 1014 – Other Non-health

Include: Claims incurred for life and property/casualty lines of business.

Line 1 – Payments During the Year

Report payments net of pharmaceutical rebates collected and risk share amount collected. Refer to SSAP No. 84—Health Care and Government Insured Plan Receivables for accounting guidance.

Line 1.3 should include only those reinsurance recoveries received during the year.

Exclude: Medical incentive pools and bonuses.

Line 2 – Paid Medical Incentive Pools and Bonuses

Equals Underwriting and Investment, Part 2B, Columns 1 and 2, Line 1216.

Detail Eliminated to Conserve Space

Line 12 – Incurred Benefits

Line 12.1 = Line 1.1 + Line 3.1 + Line 4.1 – Line 6 – Line 8.1 – Line 9.1

Line 12.2 = Line 1.2 + Line 3.2 + Line 4.2 – Line 8.2 – Line 9.2

Line 12.3 = Line 1.3 + Line 3.3 + Line 4.3 + Line 7 – Line 8.3 – Line 9.3 – Line 11

Line 12.4 = Line 1.4 + Line 3.4 + Line 4.4 – Line 6 – Line 7 – Line 8.4 – Line 9.4 + Line 11

Line 12.1 – Incurred Benefits: Direct

Column 1 minus Column 1014, Line 12.1 should agree with the sum of Lines 9 through 14 on the Statement of Revenue and Expenses.

Line 13 – Incurred Medical Incentive Pools and Bonuses

This should agree with Line 2 + Line 5 – Line 10.
UNDERWRITING AND INVESTMENT EXHIBIT
PART 2A – CLAIMS LIABILITY END OF CURRENT YEAR

Refer to SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses for accounting guidance. Include recoverables for anticipated coordination of benefits and subrogation as a reduction to unpaid claims.

Column 913 – Other Health

Include: Claims liability for other health lines of business not included in any other column, including stop loss, disability income and long-term care.

Column 1014 – Other Non-health

Include: Claims liability for life and property/casualty lines of business.

Line 1 – Reported in Process of Adjustment

Include: Liability for all claims that have been reported to the company on or before December 31 of the current year. Provision for claims of the current year or prior years, if any, reported after that date would be made in Line 2 as Incurred but Unreported. Portions of reported claims for which payments are due after December 31 of the current year are reported in Underwriting and Investment Exhibit, Part 2D, Line 9.

Line 2 – Incurred but Unreported

Except where inapplicable, the reserve included in these lines should be based on past experience, modified to reflect current conditions, such as changes in exposure, claim frequency or severity.

Line 3 – Amounts Withheld from Paid Claims and Capitations

Report the amounts withheld from paid claims and capitations that have not been distributed and the anticipated withholds from estimated incurred but not reported losses.

Line 4.4 – Net Total Claim Liability

This amount should agree to Page 3, Line 1, Column 3.
UNDERWRITING AND INVESTMENT EXHIBIT

PART 2B – ANALYSIS OF CLAIMS UNPAID – PRIOR YEAR – NET OF REINSURANCE

Claims are to include amounts paid or accrued for capitation, and any other means of payment, for medical or other health care services including, under other medical costs, amounts for occupancy, depreciation and amortization as it relates to medical and hospital expenses.

Incentive pool, withhold, and bonus amounts are defined as: amounts to be paid to providers by the Health entity as an incentive to achieve goals such as effective management of care. Some arrangements involve paying an agreed-on amount for each claim, and then paying a bonus at the end of the contract period. Other arrangements involve a set amount to be withheld from each claim, and then paying a portion (which could be none or all) of the withheld amount at the end of the contract period.

For arrangements involving amounts withheld, the claim payments should be recorded net of the withhold, and the unpaid withholds should be held as an additional liability until paid or formally retained. The amount due should be supported by signed agreements and the basis for establishing the liability should be documented when determining the amount of this liability.

Columns 1 and 2

Enter in Columns 1 and 2, Lines 1 through 8, all payments made during the year. Record actual payments only, net of applicable Coordination of Benefits, deductibles, copayments, pharmaceutical rebates collected, risk share amounts collected, reinsuranc, subrogation, and provider discounts. Refer to SSAP No. 84—Health Care and Government Insured Plan Receivables for accounting guidance.

Include in Columns 1 and 2, Line 10, the portion of current health care receivables balance relating to claims paid in the current year on insured plans. This would not include those health care receivables, such as loans or advances to non-related party hospitals, established as prepaid assets that are not expensed until the related claims have been received from the provider as the claims have not been paid as of the statement date. Refer to SSAP No. 84—Health Care and Government Insured Plan Receivables for accounting guidance.

Include on Line 12 actual payments from provider incentive pools and bonus arrangements or supplemental facility settlements (distributions of utilization savings).

All claim payments made relating to service dates prior to the current reporting year should be reported in Column 1. Report in Column 2 all claim payments for service dates in the current reporting year.

Columns 3 and 4

Enter in Columns 3 and 4 all claims related liabilities and reserves held at the end of the current year. This includes liability for both reported and unreported claims and should be net of anticipated reductions for coordination of benefits, deductibles, copayments, provider discounts or reinsurance recoveries on unpaid claims.

Include in Columns 3 and 4, Line 10, the portion of current health care receivables of insured plans relating to claims in the process of adjustment, excluding those health care receivables, such as loans or advances to non-related party hospitals, established as prepaid assets that are not expensed until the related claims have been received from the provider. Refer to SSAP No. 84—Health Care and Government Insured Plan Receivables for accounting guidance.

Report on Lines 1 through 8 the claims unpaid gross of the actual withholds on paid claims and net of settlement adjustments to prior withholds. Estimated incurred but unreported losses reported on Lines 1 through 8 should be calculated in accordance with SSAP No. 54R—Individual and Group Accident and Health Contracts and may include estimations as to return of withhold on claims incurred, but not yet paid. Liability for provider incentive pools and supplemental facility settlements should also be included on Line 12.

Line 13-17, Columns 1 through 4, less Column 6 should agree to Page 4, Line 18 plus Line 19, Column 2.

The sum of Columns 3 and 4, Line 13-17 plus 10-14 should agree to the sum of Lines 1, 2 and 7, Page 3, Column 3.

Line 8-12 – Other Health

Report the unpaid claims for other health business not included in any other line. This category includes all unspecified business written under the Company’s health line of business authority including stop loss as well as business that does not qualify for the Health Statement Test (e.g., disability income and long-term care).

Line 10-14 – Health Care Receivables

This line is based on the gross health care receivable, not just the admitted portion.

Columns 1 and 2 report the amounts of health care receivables associated with claims paid during the year, excluding those health care receivables, such as loans or advances to non-related party hospitals, established as prepaid assets that are not expensed until the related claims have been received from the provider.

Columns 3 and 4 report the health care receivable amount attributable to those claims remaining unpaid as of the reporting date. This will include those amounts of pharmaceutical rebates that are estimated in accordance with SSAP No. 84—Health Care and Government Insured Plan Receivables guidelines.

The sum of Columns 1 through 4 on the Underwriting and Investment Exhibit, Part 2B, Line 10-14 should equal the health care receivables on Exhibit 3, Column 6 plus Column 7, excluding those health care receivables, such as loans or advances to non-related party hospitals, established as prepaid assets that are not expensed until the related claims have been received from the provider. If health care receivables reported on Underwriting and Investment Exhibit, Part 2B are affected by reinsurance, then the sum of Column 1 through Column 4 may be different from the amounts of health care receivables reported on Exhibit 3, which are gross of reinsurance.

If health care receivables are not affected by reinsurance, then Line 10-14, Column 1 through Column 4 should be no more than Exhibit 3, Line 0799999, Column 6 plus Column 7 and be no less than to Exhibit 3, Line 0799999, Column 6 plus Column 7 minus Exhibit 3, Line 0399999, Column 6 plus Column 7. If health care receivables are affected by reinsurance, then Line 10-14, Column 1 through Column 4 should be more/less than Exhibit 3, Line 0799999, Columns 6 plus 7 minus Exhibit 3, Line 0399999, Column 6 and Column 7.

Column 6 reports the amounts of prior year health care receivables, excluding those health care receivables, such as loans or advances to non-related party hospitals, established as prepaid assets that are not expensed until the related claims have been received from the provider.

Footnote (a) Line 10-14 reports those health care receivables, such as loans or advances to non-related party hospitals, established as prepaid assets that are not expensed until the related claims have been received from the provider.

Line 14-15 – Other Non-health

Report the unpaid claims for life and property/casualty business.

Line 14-16 – Medical Incentive Pools and Bonus Amounts

Include disbursements for incentive pool and bonus amounts in Column 1 and 2. Include liability for incentive pool and bonus amounts in Column 3 and 4.
UNDERWRITING AND INVESTMENT EXHIBIT

PART 2D – AGGREGATE RESERVE FOR ACCIDENT AND HEALTH CONTRACTS ONLY

Exclude reserves or other amounts relating to uninsured accident and health plans and the uninsured portion of partially insured accident and health plans from this exhibit.

Column 913 – Other

Include: Stop loss, disability income and long-term care.

Line 1 – Unearned Premium Reserves

Refer to SSAP No. 54R—Individual and Group Accident and Health Contracts for accounting guidance.

Detail Eliminated to Conserve Space

Details of Write-ins Aggregated on Line 5 for Other Policy Reserves

List separately all policy reserves for which there is no pre-printed line.

Include: Accrued return premium adjustments for contracts subject to redetermination.

Details of Write-ins Aggregated on Line 11 for Other Claim Reserves

List separately all claim reserves for which there is no pre-printed line.
### EXHIBIT OF PREMIUMS, ENROLLMENT AND UTILIZATION

A schedule must be prepared and submitted to the state of domicile for each jurisdiction in which the company has written direct business, or has direct amounts paid, incurred or unpaid for provisions of health care services. In addition, a schedule must be prepared and submitted that contains the grand total (GT) for the company. To other states in which the company is licensed it should submit a schedule for that state.

Written premium is defined as the contractually determined amount charged by the reporting entity to the policyholder for the effective period of the contract based on the expectation of risk, policy benefits, and expenses associated with the coverage provided by the terms of the insurance contract. For health contracts without fixed contract periods, premiums written will be equal to the amount collected during the reporting period plus uncollected premiums at the end of the period less uncollected premiums at the beginning of the period.

© 2022 National Association of Insurance Commissioners
Line 12 – Health Premiums Written
Include: Direct premiums written.
Column 1 should equal Underwriting and Investment Exhibit, Part 1, Column 1, Line 413.

Line 13 – Life Premiums Direct
Include: Direct premiums and annuity considerations for life contracts excluding reinsurance assumed and without deduction of reinsurance ceded.
Column 1 should equal Underwriting and Investment Exhibit, Part 1, Column 1, Line 4014.

Line 14 – Property/Casualty Premiums Written
Include: Direct premiums for property and casualty lines of business excluding reinsurance assumed and without deduction of reinsurance ceded.
Column 1 should equal Underwriting and Investment Exhibit, Part 1, Column 1, Line 4415.

Line 15 – Health Premiums Earned
Include: Direct written premium plus the change in unearned premium reserves and reserve for rate credits.
Sum of General Interrogatories Part 2, Lines 1.61, 1.64, 1.71 and 1.74 should equal Column 4, Grand Total Exhibit of Premiums, Enrollment and Utilization page.

Footnote (a) – Complete the information regarding number of persons covered under PPO managed care products and number of persons covered under indemnity only products. Include in PPO business health insurance products that provide access to higher level of benefits whenever participating provider networks are used. This will include all blended products whereby an indemnity product is sold and issued in conjunction with an HMO product. Health business includes all business equivalent to that included in the health blank.

Footnote (b) – Report Medicare Title XVIII premiums that are exempted from state taxes or other fees by Section 1854(g) of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003. This includes but is not limited to premiums written under a Medicare Advantage product, a Medicare PPO product, or a stand-alone Medicare part D product.
QUARTERLY STATEMENT INSTRUCTIONS – HEALTH

EXHIBIT OF PREMIUMS, ENROLLMENT AND UTILIZATION

Column 1 – Total
Include: All members.

Columns 2 through 1013 – Lines of Business
See Annual Statement Appendix – Definitions of Lines of Business and Product Lines in determining with which source information is associated. Stop loss, disability income and long-term care are to be included in the Other column.

Column 4 – Medicare Supplement
Include: Medicare Supplement contracts as defined by the NAIC Medicare Supplement Insurance Minimum Standards Model Act (#650) and Model Regulation to Implement the NAIC Medicare Supplement Insurance Minimum Standards Model Act (#651).

Column 8 – Title XVIII Medicare
Include only amounts collected from the Federal Government for Medicare benefits and the amounts collected from enrollees over and above that collected from the Federal Government as authorized under Title XVIII. Policies providing Medicare Part D Prescription Drug Coverage through a Medicare Advantage product.

Column 14 – Other Non-health
Include: Claims incurred for life and property/casualty lines of business.

Line 1 – Total Members at End of Prior Year
A member is a person who has been enrolled as a subscriber, or an eligible dependent of a subscriber, and for whom the reporting entity has accepted the responsibility for the provision of basic health services as provided by contract.

Line 2 – Total Members at End of First Quarter
Show total members (cumulative) at the end of the quarter.
UNDERWRITING AND INVESTMENT EXHIBIT

ANALYSIS OF CLAIMS UNPAID – PRIOR YEAR NET OF REINSURANCE

Information should be reported for current year-to-date.

Refer to SSAP No. 54R—Individual and Group Accident and Health Contracts, and SSAP No. 66—Retrospectively Rated Contracts, for accounting guidance.

Exclude: From the appropriate lines and columns, those amounts attributable to the Federal Employees Health Benefit Plan (FEHBP) that are exempted from state taxes or other fees by Section 8909(f)(1) of Title 5 of the United States Code.

Amounts attributable to uninsured plans and the uninsured portion of partially insured plans.

Claims are to include amounts paid or accrued for capitation, and any other means of payment, for medical or other health care services including, under other medical costs, amounts for occupancy, depreciation and amortization as it relates to medical and hospital expenses.

Incentive pool, withhold and bonus amounts are defined as amounts to be paid to providers by the Health entity as an incentive to achieve goals such as effective management of care. Some arrangements involve paying an agreed-on amount for each claim and then paying a bonus at the end of the contract period. Other arrangements involve a set amount to be withheld from each claim and then paying a portion (which could be none or all) of the withheld amount at the end of the contract period.

For arrangements involving amounts withheld, the claim payments should be recorded net of the withhold, and the unpaid withhold should be held as an additional liability until paid or formally retained. The amount due should be supported by signed agreements and the basis for establishing the liability should be documented when determining the amount of this liability.

Columns 1 and 2:

Enter in Columns 1 and 2, Lines 1 through 8, 12 and 115, all payments made year-to-date. Record actual payments only, net of applicable Coordination of Benefits, deductibles, copayments, pharmaceutical rebates collected, risk share amounts collected, reinsurance, subrogation and provider discounts. Refer to SSAP No. 84—Health Care and Government Insured Plans Receivables, for accounting guidance.

Include in Columns 1 and 2, Line 1014, the current health care receivables balance relating to claims paid year-to-date on insured plans. Refer to SSAP No. 84—Health Care and Government Insured Plans Receivables, for accounting guidance.

Include on Line 12 16 actual payments from provider incentive pools and bonus arrangements or supplemental facility settlements (distributions of utilization savings).

All claim payments made relating to service dates prior to the current reporting year should be reported in Column 1. Report in Column 2 all claim payments for service dates in the current reporting year.

Columns 3 and 4:

Enter in Columns 3 and 4 all claims related liabilities and reserves held at the end of the current quarter. This includes liability for both reported and unreported claims and should be net of anticipated reductions for coordination of benefits, deductibles, copayments, provider discounts or reinsurance recoveries.

Included in Columns 3 and 4, Line 10 14 current health care receivables of insured plans relating to claims in the process of adjustment. Refer to SSAP No. 84—Health Care and Government Insured Plans Receivables, for accounting guidance.
Report on Line 1 through 8-12 and 14-15, the claims unpaid gross of the actual withholds on paid claims and net of settlement adjustments to prior withholds. Estimated incurred but unreported losses reported on Lines 1 through 8-12 should be calculated in accordance with SSAP No. 54R—Individual and Group Accident and Health Contracts and may include estimations as to return of withhold on claims incurred, but not yet paid. Liability for provider incentive pools and supplemental facility settlements should also be included on Line 14-16.

Line 13-17, Columns 1 through 4, less Column 6 should agree to Page 4, Line 18 plus Line 19, Column 2.

The sum of Columns 3 and 4, Line 13-17 plus 10-14 should agree to the sum of Lines 1, 2 and 7, Page 3, Column 3.

Line 8-12 – Other Health

Report the unpaid claims for other health business not included in any other line. This category includes all unspecified business written under the Company’s health line of business authority, including stop loss as well as business that does not qualify for the Health Statement Test (e.g., disability income and long-term care).

Line 10-14 – Health Care Receivables

This line is based on the gross health care receivable, not just the admitted portion.

Columns 1 and 2 report the amounts of health care receivables associated with claims paid year-to-date.

Columns 3 and 4 report the health care receivable amount attributable to those claims remaining unpaid as of the end of the current quarter. This will include those amounts of pharmaceutical rebates that are estimated in accordance with SSAP No. 84—Health Care and Government Insured Plans Receivables, guidelines.

Line 11-14 – Other Non-health

Report the unpaid claims for life and property/casualty business.

Line 12-16 – Medical Incentive Pools and Bonus Amounts

Include disbursements for incentive pool and bonus amounts in Column 1 and 2. Include liability for incentive pool and bonus amounts in Column 3 and 4.

- Property/Casualty: [ ]
- Health: [ ]
- Separate Accounts: [ ]
- Protected Cell: [ ]
- Health (Life Supplement): [ ]

Anticipated Effective Date: Annual 2023

### IDENTIFICATION OF ITEM(S) TO CHANGE

Starting at Line 72 of the Life/Fraternity Five-Year Historical add or delete lines that don’t pull in the specific lines of business reported on the Life/Fraternity Analysis of Operations by Lines of Business detail pages for life (individual and group), annuities (individual and group), and A&H for Line 33 of those pages.

### REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to bring back the line of business detail reporting of Net Gains from Operations After Dividends to Policyholders/Refunds to Members and Federal Income Taxes by Lines of Business as was done before the Life/Fraternity Analysis of Operations by Lines of Business page was expanded for the new lines of business categories.

### NAIC STAFF COMMENTS

Comment on Effective Reporting Date:

**IDENTIFICATION OF ITEM(S) TO CHANGE**

Add instruction to the Investment Schedules General Instructions to exclude residual tranches or interests from being reported as bonds on Schedule D, Part 1 and add lines to Schedule BA for the reporting of those investments.

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to reflect changes being adopted by the Statutory Accounting Principles (E) Working Group SSAP No. 43R – Loan-Backed and Structured Securities (Ref #2021-15). The proposal excludes residual tranches or interests from being reported as bonds on Schedule D, Part 1 and requires them to be reported on Schedule BA.

The following listing is intended to give examples of investments to be included in each category; however, the list should not be considered all inclusive, and it should not be implied that any invested asset currently being reported in Schedules A, B or D is to be reclassified to Schedule BA:
Oil and Gas Production

Include: Offshore oil and gas leases.

**Residual Tranches or Interests with Underlying Assets Having Characteristics of:**

Investment in Residual Tranches or Interests should be assigned to the subcategory with the highest underlying asset concentration. There shouldn’t be any bifurcation of the underlying assets among the subcategories.

Include: Residual tranches or interests captures securitization tranches and beneficial interests as well as other structures captured in scope of SSAP No. 43R – Loan-Backed and Structured Securities, that reflect loss layers without any contractual payments, whether interest or principal, or both. Payments to holders of these investments occur after contractual interest and principal payments have been made to other tranches or interests and are based on the remaining available funds. See SSAP No. 43R for accounting guidance.

**Fixed Income Instruments**

Include: Investments with underlying collateral which, if held individually, would be reported on Schedule D – Part 1 – Long-Term Bonds

**Common Stocks**

Include: Investments with underlying collateral which, if held individually, would be reported on Schedule D – Part 2 – Section 2 – Common Stocks

**Preferred Stocks**

Include: Investments with underlying collateral which, if held individually, would be reported on Schedule D – Part 2 – Section 1 – Preferred Stocks

**Real Estate**

Include: Investments with underlying collateral which, if held individually, would be reported on Schedule A – Real Estate Owned

**Mortgage Loans**

Include: Investments with underlying collateral which, if held individually, would be reported on Schedule B – Mortgage Loans

**Other**

Include: Items that do not qualify for inclusion in the above subcategories.

**Any Other Class of Assets**

Include: Investments that do not fit into one of the other categories. An example of items that may be included are reverse mortgages.

All structured settlement income streams acquired as investments where the reporting entity acquires the legal right to receive payments. (Valuation and admittance provisions are detailed in SSAP No. 21R — Other Admitted Assets.)

INVESTMENT SCHEDULES GENERAL INSTRUCTIONS
(Applies to all investment schedules)

Detail Eliminated to Conserve Space

The following is the description of the General and Specific Classifications used for reporting the detail lines for bonds and stocks.

**General Classifications Bonds Only:**

Exclude residual tranches or interests captured in scope of SSAP No. 43R – Loan-Backed and Structured Securities. See SSAP No. 43R for accounting guidance. These securities should be reported on Schedule BA.

Refer to SSAP No. 26R—Bonds, SSAP No. 43R—Loan-Backed and Structured Securities and SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities for additional guidance.

**U.S. Government:**

U.S. Government shall be defined as U.S. Government Obligations as defined per the Purposes and Procedures Manual of the NAIC Investment Analysis Office.

#### IDENTIFICATION OF ITEM(S) TO CHANGE

This item proposes new reporting requirements for investment transactions with related parties. In addition to capturing direct loans in related parties, it will also capture information involving securitizations (or other similar investments) where the related party is a sponsor / originator along with whether the underlying investment is in a related party.

#### REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

Pursuant to recent discussions, regulators desire additional information on investment transactions involving related parties, regardless of whether the related party is “affiliated” pursuant to Model #440. To preserve the affiliate definition and reporting categories for affiliated investments, these additional proposed reporting elements will be captured outside of the current affiliate reporting requirements. The new electronic columns will capture investments issued by a related party or acquired through a related party transaction or arrangement, regardless if the specific affiliate definition has been met or if there has been a disclaimer of affiliation / control.

 Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. **Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.**

2. **Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.**

3. **Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.**

4. **Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.**

5. **The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.**

6. **The investment does not involve a related party.**

**NAIC Designation Category Footnote:**

Provide the total book/adjusted carrying value amount by NAIC Designation Category that represents the amount in reported in Column 12.

Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.

4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but that does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.

5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.

6. The investment does not involve a related party.

** NAIC Designation Category Footnote: **

Provide the total book/adjusted carrying value amount by NAIC Designation Category that represents the amount reported in Column 8.

The sum of the amounts reported for each NAIC Designation Category in the footnote should equal the sum of Lines 4019999999 and 4029999999.

**NAIC Designation Category Footnote:**

Provide the total book/adjusted carrying value amount by NAIC Designation Category that represents the amount reported in Column 6.
SCHEDULE D – PART 3
LONG-TERM BONDS AND STOCKS ACQUIRED DURING CURRENT YEAR

** Columns 10 through 14 will be electronic only. **

Column 14 – ISIN Identification

The International Securities Identification Numbering (ISIN) system is an international standard set up by the International Organization for Standardization (ISO). It is used for numbering specific securities, such as stocks, bonds, options and futures. ISIN numbers are administered by a National Numbering Agency (NNA) in each of their respective countries, and they work just like serial numbers for those securities. Record the ISIN number only if no valid CUSIP, CINS or PPN exists to report in Column 1.

Column 15 – Investments Involving Related Parties

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.

2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.

3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.

4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.

5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.

6. The investment does not involve a related party.

Column 12 – Investments Involving Related Parties

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.

2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.

3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.

4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.

5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.

6. The investment does not involve a related party.
The code reported for this column should be determined in a manner consistent with the instructions of other schedules for the lines shown below:

- Lines 0019999999 through 2509999999 ........................................... Schedule D, Part 1, Column 35
- Lines 4019999999 through 4509999999 ........................................... Schedule D, Part 2, Section 1, Column 28
- Lines 5019999999 through 5989999999 ........................................... Schedule D, Part 2, Section 2, Column 25
- Line 9309999999 ........................................................................... Schedule B, Part 1, Column 20
- Line 9409999999 ........................................................................... Schedule BA, Part 1, Column 27
- Line 9509999999 ........................................................................... Schedule DA, Part 1, Column 23
- Line 9709999999 ........................................................................... Schedule E, Part 2, Column 12

The column should be left blank for the following lines:

- Real Estate (Schedule A type) ............................................................. 9209999999
- Cash (Schedule E, Part 1 type) ............................................................ 9609999999
- Other Assets ..................................................................................... 9809999999

**General Interrogatories:**

1. The total activity for the year represents the net increase (decrease) from the prior year-end to the current year-end.

2. The average balance for the year is the average daily balance.

   **Average daily balance:** Total of daily balances divided by the number of days. Always calculate based on a 365/366 day year. If data is missing for a given date (e.g., weekend, holiday), count the previous day’s value multiple times. The actual day count for the year (365/366) would serve as the denominator in the average calculation.

3. NAIC Designation Category:

   Provide the total book/adjusted carrying value amount by NAIC Designation Category that represents the amount reported in Column 6.
SCHEDULE DL – PART 2

SECURITIES LENDING COLLATERAL ASSETS
Reinvested Collateral Assets Owned December 31 Current Year
(Securities lending collateral assets included on Schedules A, B, BA, D, DB and E
and not reported in aggregate on Line 10 of the asset page.)

** Columns 8 through 11 will be electronic only. **

Column 12 – Investments Involving Related Parties

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.

2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.

3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.

4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.

5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.

6. The investment does not involve a related party.
The code reported for this column should be same for the security as reported in other schedules for the lines shown below:

- Lines 0019999999 through 2509999999 ................................................. Schedule D, Part 1, Column 35
- Lines 4019999999 through 4509999999 ................................................. Schedule D, Part 2, Section 1, Column 28
- Lines 5019999999 through 5989999999 ................................................. Schedule D, Part 2, Section 2, Column 25
- Line 9309999999 .................................................................................. Schedule B, Part 1, Column 20
- Line 9409999999 .................................................................................. Schedule BA, Part 1, Column 27
- Line 9509999999 .................................................................................. Schedule DA, Part 1, Column 23
- Line 9709999999 .................................................................................. Schedule E, Part 2, Column 12

The column should be left blank for the following lines:

- Real Estate (Schedule A) ........................................................................... 9209999999
- Cash (Schedule E, Part 1) ....................................................................... 9609999999
- Other Assets ............................................................................................ 9809999999

General Interrogatories:

1. The total activity for the year represents the net increase (decrease) from the prior year-end to the current year-end.

2. The average balance for the year is the average daily balance.

   **Average daily balance:** Total of daily balances divided by the number of days. Always calculate based on a 365/366 day year. If data is missing for a given date (e.g., weekend, holiday), count the previous day’s value multiple times. The actual day count for the year (365/366) would serve as the denominator in the average calculation.

**Columns 10 and through 11-12 will be electronic only.**

**Detail Eliminated to Conserve Space**

**Detail Eliminated to Conserve Space**

**Column 12** — Investments Involving Related Parties

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.

2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.

3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.

4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.

5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.

6. The investment does not involve a related party.

**NAIC Designation Category Equivalent Footnote:**

Provide the total book/adjusted carrying value amount by NAIC Designation Category Equivalent that represents the amount reported in Column 7.

The sum of the amounts reported for each NAIC Designation Category Equivalent in the footnote should equal Line 2509999999.
SCHEDULE B – PART 1

MORTGAGE LOANS OWNED DECEMBER 31 OF CURRENT YEAR

Column 5 – Loan Type

If the loan was made to an officer or director of the reporting entity/subsidiary/affiliate, enter “E”. If the loan was made directly to a subsidiary or affiliate enter “S.” If the loan was made directly to a related party that doesn't meet the affiliate definition or the reporting entity has received domiciliary state approval to disclaim control/affiliation, enter “R.” Otherwise, leave the column blank.

** Columns 16 through 20 will be electronic only. **

Column 19 – Maturity Date

State the date the mortgage loan matures.

Column 20 – Investments Involving Related Parties

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.

2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.

3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.

4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.

5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.

6. The investment does not involve a related party.

**Detail Eliminated to Conserve Space**

**Columns 24 through 32 will be electronic only.**

**Detail Eliminated to Conserve Space**

### Column 32 – CDHS Identifier

Provide a unique identifier for each Clearly Defined Hedging Strategy (CDHS) applying the provisions of SSAP No. 108 reported on this schedule (e.g., 001, 002, etc.). This identifier will also be used for reporting of the CDHS in Column 1 of Schedule DB, Part E.

This column should only be used for the following line numbers:

- **Purchased Options** Lines 0089999999 through 0139999999
- **Written Options** Lines 0579999999 through 0629999999
- **Swaps** Lines 1059999999 through 1099999999
- **Forwards** Line 1429999999

### Column 33 – Investments Involving Related Parties

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment:

1. **Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.**

2. **Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.**

3. **Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.**

4. **Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.**

5. **The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.**

6. **The investment does not involve a related party.**
SCHEDULE DB – PART A – SECTION 2
OPTIONS, CAPS, FLOORS, COLLARS, SWAPS AND FORWARDS TERMINATED
DURING CURRENT YEAR

** Column 26 through 31 will be electronic only. **

Column 31 – CDHS Identifier

Provide a unique identifier for each Clearly Defined Hedging Strategy (CDHS) applying the provisions of SSAP No. 108 reported on this schedule (e.g., 001, 002, etc.). This identifier will also be used for reporting of the CDHS in Column 1 of Schedule DB, Part E.

This column should only be used for the following line numbers:

- Purchased Options Lines 0089999999 through 0139999999
- Written Options Lines 0579999999 through 0629999999
- Swaps Lines 1059999999 through 1099999999
- Forwards Line 1429999999

Column 32 – Investments Involving Related Parties

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.
2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.
3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.
4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.
5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.
6. The investment does not involve a related party.
**SCHEDULE DB – PART B – SECTION 1**

**FUTURES CONTRACTS OPEN**
**DECEMBER 31 OF CURRENT YEAR**

**Detail Eliminated to Conserve Space**

**Columns 23 through 30-31 will be electronic only. **

**Detail Eliminated to Conserve Space**

Column 30 – **CDHS Identifier**

Provide a unique identifier for each Clearly Defined Hedging Strategy (CDHS) applying the provisions of SSAP No. 108 reported on this schedule (e.g., 001, 002, etc.). This identifier will also be used for reporting of the CDHS in Column 1 of Schedule DB, Part E.

This column should only be used for the following line numbers:

- Long Futures Line 1529999999
- Short Futures Line 1599999999

Column 31 – **Investments Involving Related Parties**

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment:

1. **Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.**

2. **Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.**

3. **Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.**

4. **Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.**

5. **The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.**

6. **The investment does not involve a related party.**

** Column 27 **

** Investments Involving Related Parties **

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.

2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.

3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.

4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.

5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.

6. The investment does not involve a related party.
SCHEDULE DB – PART D – SECTION 1

COUNTERPARTY EXPOSURE FOR DERIVATIVE INSTRUMENTS OPEN
DECEMBER 31 OF CURRENT YEAR

** Columns 14 and 15 will be electronic only. **

Column 14 – Legal Entity Identifier (LEI)

Provide the 20-character Legal Entity Identifier (LEI) for any counterparty as assigned by a designated Local Operating Unit. If no LEI number has been assigned, leave blank.

Column 15 – Investments Involving Related Parties

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.

2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.

3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.

4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.

5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.

6. The investment does not involve a related party.
** SCHEDULE DB – PART D – SECTION 2 **

COLLATERAL FOR DERIVATIVE INSTRUMENTS OPEN DECEMBER 31 OF CURRENT YEAR

** Columns 10 and 11 will be electronic only. **

Column 10 – Legal Entity Identifier (LEI)

Provide the 20-character Legal Entity Identifier (LEI) for counterparty as assigned by a designated Local Operating Unit. If no LEI number has been assigned, leave blank.

Column 11 – Investments Involving Related Parties

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.

2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.

3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.

4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.

5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.

6. The investment does not involve a related party.
SCHEDULE DB – PART E

DERIVATIVES HEDGING VARIABLE ANNUITY GUARANTEES AS OF DECEMBER 31 OF CURRENT YEAR

(This schedule is specific for the derivatives and the hedging programs captured in SSAP No. 108.)

---

Column 19 – Ending Deferred Balance

Specific CDHS Deferred Liability (Asset) balance at end of current reporting period.

** Column 20 will be electronic only. **

Column 20 – Investments Involving Related Parties

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.

2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.

3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.

4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.

5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.

6. The investment does not involve a related party.
SCHEDULE DB – PART C – SECTION 1

REPLICATION (SYNTHETIC ASSET) TRANSACTIONS (RSATs) OPEN ON DECEMBER 31 OF CURRENT YEAR

Detail Eliminated to Conserve Space

Column 16 – Fair Value of Cash Instrument(s) Held

Enter the fair value of cash instrument(s) used in the RSAT.

** Column 17 will be electronic only. **

Column 17 – Investments Involving Related Parties

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.

2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.

3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.

4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.

5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.

6. The investment does not involve a related party.
QUARTERLY STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY AND TITLE

SCHEDULE BA – PART 2

OTHER LONG-TERM INVESTED ASSETS ACQUIRED
AND ADDITIONS MADE DURING THE CURRENT QUARTER

** Columns 14 through 17-18 will be electronic only. **

Column 17 – Maturity Date

Use only for securities included in the following subtotal lines.

Non-Registered Private Funds with Underlying Assets Having Characteristics of:

Mortgage Loans

</tbody>
</table>
SCHEDULE D – PART 3

LONG-TERM BONDS AND STOCKS ACQUIRED DURING THE CURRENT QUARTER

** Columns 11 through 16 will be electronic only. **

Column 15 – ISIN Identification

The International Securities Identification Numbering (ISIN) system is an international standard set up by the International Organization for Standardization (ISO). It is used for numbering specific securities, such as stocks, bonds, options and futures. ISIN numbers are administered by a National Numbering Agency (NNA) in each of their respective countries, and they work just like serial numbers for those securities. Record the ISIN number only if no valid CUSIP, CINS or PPN exists to report in Column 1.

Column 16 – Investments Involving Related Parties

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.

2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.

3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.

4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.

5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.

6. The investment does not involve a related party.
SCHEDULE D – PART 4

LONG-TERM BONDS AND STOCKS SOLD, REDEEMED OR OTHERWISE DISPOSED OF DURING THE CURRENT QUARTER

**  Columns 23 through 27 28 will be electronic only.  **

Column 27 – ISIN Identification

The International Securities Identification Numbering (ISIN) system is an international standard set up by the International Organization for Standardization (ISO). It is used for numbering specific securities, such as stocks, bonds, options and futures. ISIN numbers are administered by a National Numbering Agency (NNA) in each of their respective countries, and they work just like serial numbers for those securities. Record the ISIN number only if no valid CUSIP, CINS or PPN exists to report in Column 1.

Column 28 – Investments Involving Related Parties

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.

2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.

3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.

4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.

5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.

6. The investment does not involve a related party.
SCHEDULE DL – PART 1

SECURITIES LENDING COLLATERAL ASSETS

Reinvested Collateral Assets Owned Current Statement Date

</tbody>
</table>
The code reported for this column should be determined in a manner consistent with the instructions of other schedules for the lines shown below:

Lines 0019999999 through 2509999999 ......................... Schedule D, Part 1, Column 35  
Lines 4019999999 through 4509999999 ......................... Schedule D, Part 2, Section 1, Column 28  
Lines 5019999999 through 5989999999 ......................... Schedule D, Part 2, Section 2, Column 25  
Line 9309999999 .................................................. Schedule B, Part 1, Column 20  
Line 9409999999 .................................................. Schedule BA, Part 1, Column 27  
Line 9509999999 .................................................. Schedule DA, Part 1, Column 23  
Line 9709999999 .................................................. Schedule E, Part 2, Column 12

The column should be left blank for the following lines:

Real Estate (Schedule A type) .......................................................... 9209999999  
Cash (Schedule E, Part 1 type) .......................................................... 9609999999  
Other Assets .................................................................................. 9809999999

General Interrogatories:

1. The total activity for the year to date represents the net increase (decrease) from the prior year-end to the current statement date.

2. The average balance for the year to date is the average daily balance.

Average daily balance: Total of daily balances divided by the number of days that have passed in the year as of the reporting date. If data is missing for a given date (e.g., weekend, holiday), count the previous day’s value multiple times. The actual day count for the year to date would serve as the denominator in the average calculation.
**SCHEDULE DL – PART 2**

**SECURITIES LENDING COLLATERAL ASSETS**

Reinvested Collateral Assets Owned Current Statement Date

(Securities lending collateral assets included on Schedules A, B, BA, D, DB and E
and not reported in aggregate on Line 10 of the asset page.)

---

**Detail Eliminated to Conserve Space**

---

**Column 10 – Investments Involving Related Parties**

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.

2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.

3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.

4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.

5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.

6. The investment does not involve a related party.
The code reported for this column should be same for the security as reported in other schedules for the lines shown below:

- Lines 0019999999 through 2509999999 ................. Schedule D, Part 1, Column 35
- Lines 4019999999 through 4509999999 .................. Schedule D, Part 2, Section 1, Column 28
- Lines 5019999999 through 5989999999 ................. Schedule D, Part 2, Section 2, Column 25
- Line 9309999999 .................................................. Schedule B, Part 1, Column 20
- Line 9409999999 .................................................. Schedule BA, Part 1, Column 27
- Line 9509999999 .................................................. Schedule DA, Part 1, Column 23
- Line 9709999999 .................................................. Schedule E, Part 2, Column 12

The column should be left blank for the following lines:

- Real Estate (Schedule A) ............................................................ 9209999999
- Cash (Schedule E, Part 1) .......................................................... 9609999999
- Other Assets ................................................................................... 9809999999

General Interrogatories:

1. The total activity for the year to date represents the net increase (decrease) from the prior year-end to the current statement date.

2. The average balance for the year to date is the average daily balance.

   Average daily balance: Total of daily balances divided by the number of days that have passed in the year as of the reporting date. If data is missing for a given date (e.g., weekend, holiday), count the previous day’s value multiple times. The actual day count for the year to date would serve as the denominator in the average calculation.

</thead>
<tbody>
<tr>
<td>With the new reporting lines proposed for residuals in Schedule BA, additional revisions are needed to map those reporting lines to the AVR schedule. The proposed revisions will separately capture these items in a new category within AVR as they are items that are not comparable to other investments. As defined in the AP&amp;P Manual, residuals reflect loss layers without contractual interest or principal payments. Payments to holders of these investments occur after contractual interest and principal payments have been made to other tranches or interests and are based on the remaining available funds. Although payments to holders can occur throughout an investment’s duration (and not just at maturity), such instances still reflect the residual amount permitted to be distributed after other holders have received contractual interest and principal payments.</td>

Other Comments: This proposal assumes adoption of 2021-21BWG

** This section must be completed on all forms. Revised 7/18/2018
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL

EQUITY AND OTHER INVESTED ASSET COMPONENT – BASIC CONTRIBUTION, RESERVE OBJECTIVE AND MAXIMUM RESERVE CALCULATIONS

Detail Eliminated to Conserve Space

Lines 75 through 80 – Low-Income Housing Tax Credit Investments

Report Column 1 in accordance with SSAP No. 93—Low-Income Housing Tax Credit Property Investments.

For Line 75, report guaranteed low-income housing tax credit (LIHTC) investments. There must be an all-inclusive guarantee from a CRP-rated entity that guarantees the yield on the investment. Line 75 should equal Schedule BA, Part 1, Column 12, Line 3599999 + Line 3699999.

For Line 76, report non-guaranteed LIHTC investments with the following risk mitigation factors:

I. A level of leverage below 50%. For LIHTC Fund, the level of leverage is measured at the fund level.

II. There is a Tax Credit Guarantee Agreement from General Partner or managing member. This agreement requires the General Partner or managing member to reimburse investors for any shortfalls in tax credits due to errors of compliance, for the life of the partnership. For an LIHTC Fund, a Tax Credit Guarantee is required from the developers of the lower tier LIHTC properties to the upper tier partnership.

III. There are sufficient operating reserves, capital replacement reserves and/or operating deficit guarantees present to mitigate foreseeable foreclosure risk at the time of the investment.

Line 76 should equal Schedule BA, Part 1, Column 12, Line 3799999 + Line 3899999.

Only federal low-income housing tax credit investments can be reported on Lines 75 and 76. State low-income housing tax credit investments that meet the requirements of SSAP No. 93 and that, at a minimum, meet the requirements for federal guaranteed programs should be reported on Line 77. Line 77 should equal Schedule BA, Part 1, Column 12, Line 3999999 + Line 4099999.

State low-income housing tax credit investments that do not meet the requirements of SSAP No. 93 and that do not, at a minimum, meet the requirements for federal non-guaranteed programs should be reported on Line 78. Line 78 should equal Schedule BA, Part 1, Column 12, Line 4199999 + Line 4299999.

Any other low-income housing tax credit investments that meet the requirements of SSAP No. 93 and cannot be reported on Lines 75 through 78 should be reported on Line 79. Line 79 should equal Schedule BA, Part 1, Column 12, Line 4399999 + Line 4499999.

Multiply the amount in Column 4 for each category by the reserve factors for Page 34, Columns 5, 7 and 9, Lines 75 through 79. Report the products by category in Columns 6, 8 and 10, respectively.

Lines 81 through 91 – Residual Tranches or Interests

Line 81 – Fixed Income Instruments – Unaffiliated

Report the book/adjusted carrying value of all Schedule BA assets in Line 4699999 in Columns 1 and 4. Multiply the amount in Column 4 by the calculated reserve factors in Columns 5, 7 and 9 and report
the products in Columns 6, 8 and 10, respectively. For Lines 66 through 69, multiply the amounts in Column 4 by the reserve factors provided in Columns 5, 7 and 9 and report the products in Columns 6, 8 and 10, respectively.

Line 82 – Fixed Income Instruments – Affiliated

Report the book/adjusted carrying value of all Schedule BA assets in Line 4799999 in Columns 1 and 4. Multiply the amount in Column 4 by the calculated reserve factors in Columns 5, 7 and 9 and report the products in Columns 6, 8 and 10, respectively. For Lines 66 through 69, multiply the amounts in Column 4 by the reserve factors provided in Columns 5, 7 and 9 and report the products in Columns 6, 8 and 10, respectively.

Line 83 – Common Stock – Unaffiliated

Report the book/adjusted carrying value of all Schedule BA assets in Line 4899999 in Columns 1 and 4. Multiply the amount in Column 4 by the calculated reserve factors in Columns 5, 7 and 9 and report the products in Columns 6, 8 and 10, respectively. For Lines 66 through 69, multiply the amounts in Column 4 by the reserve factors provided in Columns 5, 7 and 9 and report the products in Columns 6, 8 and 10, respectively.

Line 84 – Common Stock – Affiliated

Report the book/adjusted carrying value of all Schedule BA assets in Line 4999999 in Columns 1 and 4. Multiply the amount in Column 4 by the calculated reserve factors in Columns 5, 7 and 9 and report the products in Columns 6, 8 and 10, respectively. For Lines 66 through 69, multiply the amounts in Column 4 by the reserve factors provided in Columns 5, 7 and 9 and report the products in Columns 6, 8 and 10, respectively.

Line 85 – Preferred Stock – Unaffiliated

Report the book/adjusted carrying value of all Schedule BA assets in Line 5099999 in Columns 1 and 4. Multiply the amount in Column 4 by the calculated reserve factors in Columns 5, 7 and 9 and report the products in Columns 6, 8 and 10, respectively.

Line 86 – Preferred Stock – Affiliated

Report the book/adjusted carrying value of all Schedule BA assets in Line 5199999 in Columns 1 and 4. Multiply the amount in Column 4 by the calculated reserve factors in Columns 5, 7 and 9 and report the products in Columns 6, 8 and 10, respectively.

Line 8587 – Real Estate – Unaffiliated

Report the book/adjusted carrying value of all Schedule BA assets in Line 505299999 in Column 1, any related encumbrances on these assets in Column 2, and any third-party encumbrances on these assets in Column 3. Report the sum of Columns 1, 2, and 3 in Column 4. Column 4 may not be less than zero. Multiply the amount in Column 4 by the reserve factors provided in Columns 5, 7 and 9 and report the products in Columns 6, 8 and 10, respectively.

Line 8688 – Real Estate – Affiliated

Report the book/adjusted carrying value of all Schedule BA assets in Line 515399999 in Column 1, any related encumbrances on these assets in Column 2, and any third-party encumbrances on these assets in Column 3. Report the sum of Columns 1, 2, and 3 in Column 4. Column 4 may not be less than zero. Multiply the amount in Column 4 by the reserve factors provided in Columns 5, 7 and 9 and report the products in Columns 6, 8 and 10, respectively.
Line 8789  –  Mortgage Loans – Unaffiliated

Report the book/adjusted carrying value of all Schedule BA assets in Line 525999999 in Columns 1 and 4. Multiply the amount in Column 4 by the reserve factors in Columns 5, 7 and 9. Report the products in Columns 6, 8 and 10, respectively.

Line 8890  –  Mortgage Loans – Affiliated

Report the book/adjusted carrying value of all Schedule BA assets in Line 535999999 in Columns 1 and 4. Multiply the amount in Column 4 by the reserve factors in Columns 5, 7 and 9. Report the products in Columns 6, 8 and 10, respectively.

Line 8991  –  Other – Unaffiliated

Report the book/adjusted carrying value of all Schedule BA assets in Line 545999999 in Columns 1 and 4. Multiply the amount in Column 4 by the reserve factors in Columns 5, 7 and 9. Report the products in Columns 6, 8 and 10, respectively.

Line 9092  –  Other – Affiliated

Report the book/adjusted carrying value of all Schedule BA assets in Line 555999999 in Columns 1 and 4. Multiply the amount in Column 4 by the reserve factors in Columns 5, 7 and 9. Report the products in Columns 6, 8 and 10, respectively.

Line 819294 & 829395  –  Working Capital Finance Investments

Report the book/adjusted carrying value of all working capital finance investments owned (Schedule BA, Part 1, Line 4599999) in Columns 1 and 4. Categorize the working capital finance investments into NAIC designations 1 or 2 as directed by the Purposes and Procedures Manual of the NAIC Investment Analysis Office. Multiply the amount in Column 4 for each designation by the reserve factors provided in Columns 5, 7 and 9, and report the products by designation in Columns 6, 8 and 10, respectively.

Line 839496  –  Other Invested Assets – Schedule BA

Report the book/adjusted carrying value of all other Schedule BA investments owned that cannot be classified into one of the above categories (Lines 0199999, 0299999, 0399999, 0499999, 0599999, 0699999, 0999999, 1099999, 1799999, 1899999, 2599999, 2699999, 2799999, 2899999, 3399999, 3499999, 4699999, 5599999, and 4799999) in Column 1 and any encumbrances on these assets in Column 3. Schedule DL, Part 1 investments reported on Line 940999999 would be included in this total if not classified in one of the above categories. Collateral loans (Lines 2999999 and 3099999) have been intentionally excluded from this total. For surplus debentures and capital notes, the amount to report in Column 1 is to be calculated based upon the accounting prescribed in SSAP No. 41—Surplus Notes. Report the sum of Columns 1 and 3 in Column 4. Column 4 may not be less than zero. Note that ALL surplus debentures and capital notes should be included here in Line 839496, EXCEPT those with a CRP rating equivalent to an NAIC 1 or NAIC 2 designation (which are reported in Lines 30 and 31 of this schedule). Multiply the amount in Column 4 by the reserve factors provided in Columns 5, 7 and 9, and report the products in Columns 6, 8 and 10, respectively.

Exclude: All surplus debentures and capital notes that possess a CRP rating equivalent to an NAIC 1 or NAIC 2 designation. These surplus debentures are to be reported in Line 30 and 31 (Other Invested Assets with Underlying Characteristics of Preferred Stocks) of this schedule.
Line 849597 – Other Short-Term Invested Assets – Schedule DA

Report the book/adjusted carrying value of all other Schedule DA (Lines 7029999999 and 7509999999) and Schedule DL, Part 1 (Line 9509999999) assets owned that cannot be classified into one of the above categories in Column 1 and any encumbrances on these assets in Column 3. Report the sum of Columns 1 and 3 in Column 4. Multiply the amount on Column 4 by the reserve factors provided in Columns 5, 7 and 9 and report the products in Columns 6, 8 and 10, respectively.

Line 869708 – Total Other Invested Assets – Schedules BA & DA

The Columns 6, 8 and 10 amounts must be combined with Columns 6, 8 and 10, Line 21 amounts and reported on the Asset Valuation Reserve Page, Column 5, Lines 7, 10 and 9, respectively.

NOTE: Other invested asset reserves will be calculated based on the nature of the underlying investments related to the Schedule BA and Schedule DA assets. Assets should be categorized as if the company owned the underlying investment. For example:

- Mortgage participation certificates and similar holdings should be classified as fixed income assets.
- Gas and oil production and mineral rights have potential variability of return and should be categorized as equity investments.
- Partnership investments should be classified as fixed or equity investments or as equity real estate, depending on the purpose of the partnership. The maximum AVR factor would be that appropriate for the asset classification.
- A “look through” approach should be taken for any Schedule BA and Schedule DA assets not specifically listed, so as to reflect in the AVR calculation the essential nature of the investments.

To: Pat Gosselin, Chair of the Blanks (E) Working Group
From: Dale Bruggeman, Chair of the Statutory Accounting Principles (E) Working Group
Re: Year-End 2021 Disclosures / Instructional Revisions
Date: February 2, 2022

The purpose of this memo is for the Statutory Accounting Principles (E) Working Group to notify the Blanks (E) Working Group of revisions to the “Notes to the Financial Statements” that have been adopted for year-end 2021 reporting. As these agenda items have already been adopted within the Statements of Statutory Accounting Principles (SSAPs), which represents the highest level of authoritative guidance as promulgated by the Preamble, these additions to the financial statement notes do not require approval from the Blanks (E) Working Group.

It is recommended that this memo, detailing instructional revisions and changes to existing disclosure requirements, be posted to the NAIC website. If deemed necessary, specific proposals, if not yet submitted, will be submitted to the Blanks (E) Working Group to formalize the instruction revisions. This is consistent with the NAIC Policy Statement on Coordination of the Accounting Practices and Procedures Manual and the Annual Statement Blank located within the Accounting Practices & Procedures Manual. It is requested that this information be included in the next update to the Annual Statement Instructions.

- **Agenda Item 2019-04: Investment Classification Project** – Revisions update the definitions, measurement, and impairment guidance for investments in preferred stock. The agenda item, substantively revised SSAP No. 32—Preferred Stock effective Jan. 1, 2021. One of the changes included revisions to the valuation method of perpetual preferred stock. Perpetual preferred stock is required to be reported at fair value, not to exceed any currently effective call price. (The Working Group defined “currently effective call price” in agenda item 2021-10: Clarification of Effective Call Price and clarified that the valuation ceiling of an effective call price, for all instruments within scope of SSAP No. 32R, shall only apply if the call is currently exercisable by the issuer, or if the issuer has announced that the instrument will be redeemed/called.) Accordingly, a year-end review identified that the instructions in Schedule D, Part 2 on preferred stock need to be updated to be consistent with the SSAP No. 32R revision, because the valuation of perpetual preferred stock is no longer based on the NAIC designation. Below are proposed revisions to the applicable blank’s instructions:

For reporting entities maintaining an AVR:

**Redeemable Preferred**

- NAIC Designation 1 – 3  Enter book value.
- NAIC Designation 4 – 6  Enter the lower of book value or fair value.

**Perpetual Preferred**

- NAIC Designation 1 – 26  Enter book fair value not to exceed any currently effective call price.
- NAIC Designation 4 – 6  Enter the lower of book value or fair value.

For reporting entities not maintaining an AVR:

**Redeemable Preferred**

- NAIC Designation 1 – 2  Enter book value.
- NAIC Designation 3 – 6  Enter the lower of book value or fair value.
Perpetual Preferred

NAIC Designations 1 – 26 Enter fair value not to exceed any currently effective call price.
NAIC Designations 3 – 6 Enter the lower of book value or fair value.

- **Agenda Item 2021-31: Life Reinsurance Disclosure Clarifications** – Revisions clarify disclosure requirements in SSAP No. 61R—Life and Health Reinsurance which were initially effective in 2020. Among various other minor edits, the primary revisions clarify 1) that the disclosures required in paragraphs 79-84 may be included in the notes to the financial statements or in supplemental reporting schedules, 2) that the disclosures will reside in the supplementary schedules unless no such contracts subject to the disclosures were identified, in which case, the information that no such contracts were identified can be in either the audited note or the supplementary schedules, and 3) that if the reporting entity does not prepare U.S. GAAP financial statements or its financial statements are not part of upstream U.S. GAAP financial statements, that the disclosure can be answered “not applicable.” The revisions make clearer where to place the audited information and what is included in the disclosures. No new disclosure elements were added. The revisions are effective December 31, 2021, and are shown below. It is recommended that the revisions be reflected in the reinsurance note as applicable.

78. Disclosures for paragraphs 79-84 **apply to reinsurance contracts in effect for the current period covered by the statement and** are required to be included with the annual audit report financial statements beginning with the period ended December 31, 2020, regarding reinsurance contracts. The disclosures required within paragraphs 79-84 shall be included in accompanying supplemental schedules of the annual audit report beginning in year-end 2020. If the disclosures are not applicable, an affirmative statement that no such contracts were identified is acceptable in the notes to the financial statements or the supplemental schedules. These disclosures shall be limited to reinsurance contracts entered into, renewed or amended on or after January 1, 1996. This limitation applies to the annual audit report only and does not apply to the statutory annual statement interrogatories and the property and casualty reinsurance summary supplemental filing.

79. Disclose any ceded reinsurance contracts (or multiple contracts with the same reinsurer or its affiliates) subject to A-791 that includes a provision, which limits the reinsurer’s assumption of significant risks identified as in A-791. Examples of risk-limiting features include provisions such as a deductible, a loss ratio corridor, a loss cap, an aggregate limit or similar effect. If true, indicate the number of reinsurance contracts to which such provisions apply. For contracts subject to A-791, indicate if deposit accounting was applied for all contracts, which limit significant risks.

80. Disclose any ceded reinsurance contracts (or multiple contracts with the same reinsurer or its affiliates) not subject to A-791, for which reinsurance accounting was applied and includes a provision that limits the reinsurer’s assumption of risk. Examples of risk-limiting features include provisions such as a deductible, a loss ratio corridor, a loss cap, an aggregate limit or similar effect. **Note that a stop loss or excess of loss reinsurance agreement with deductibles or loss caps which apply to the entire contract and are not adjustable based on other features, do not require disclosure under this paragraph.** If true, indicate the number of reinsurance contracts to which such provisions apply. If affirmative, indicate if the reinsurance credit was reduced for the risk-limiting features.

81. Disclose if any ceded reinsurance contracts contain features (except reinsurance contracts with a federal or state facility) described below which result in delays in payment in form or in fact:

a. Provisions which permit the reporting of losses, or settlements are made, less frequently than quarterly or payments due from the reinsurer are not made in cash within ninety (90) days of the settlement date (unless there is no activity during the period).

b. Payment schedule, accumulating retentions from multiple years or any features inherently designed to delay timing of the reimbursement to the ceding entity.
82. Disclose if the reporting entity has reflected reinsurance accounting credit for any contracts not subject to Appendix A-791 and not yearly renewable term, which meet the risk-transfer requirements of SSAP No. 61R and identify the type of contracts and the reinsurance contracts.

   a. Assumption Reinsurance – as discussed in paragraph 60, which are new for the reporting period.

   b. Non-proportional reinsurance, which does not result in significant surplus relief. If yes, indicate if the insured events(s) triggering contract coverage has been recognized.

83. Disclose if the reporting entity ceded any risk which is not subject to A-791 and not yearly renewable term reinsurance, under any reinsurance contract (or multiple contracts with the same reinsurer or its affiliates) during the period covered by the financial statement, and either:

   a. Accounted for that contract as reinsurance under statutory accounting principles (SAP) and as a deposit under U.S. generally accepted accounting principles (GAAP); or

   b. Accounted for that contract as reinsurance under U.S. GAAP and as a deposit under SAP.

If the reporting entity does not prepare U.S. GAAP financial statements or its financial statements are not part of upstream U.S. GAAP financial statements, this disclosure can be answered not applicable.

84. If affirmative disclosure is required for paragraph 83, explain why the contract(s) is treated differently for GAAP and SAP.

Please contact NAIC staff Julie Gann (jgann@naic.org), Robin Marcotte (rmarcotte@naic.org), Jim Pinegar (jpinegar@naic.org), Jake Stultz (jstultz@naic.org) or Jason Farr (jfarr@naic.org) if you have any questions.

The Capital Adequacy (E) Task Force met March 28, 2022. The following Task Force members participated: Judith L. French represented by Tom Botsko, Chair (OH); Doug Ommen represented by Mike Yanacheak, Vice Chair (IA); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Thomas Reedy (CA); Andrew N. Mais represented by Wanchin Chou (CT); Trinidad Navarro represented by Adrienne Lupo and Steve Kinion (DE); Karima M. Woods represented by Philip Barlow (DC); David Altmaier represented by Virginia Christy (FL); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Russell Coy (KY); Eric Dunning represented by Lindsay Crawford (NE); Marlene Caride represented by Diana Sherman (NJ); Elizabeth Kelleher Dwyer represented by Jack Brocoli (RI); Raymond G. Framer represented by Michael Shull (SC); Cassie Brown represented by Jamie Walker (TX); Mike Kreidler represented by Steve Drutz (WA); and Nathan Houdek represented by Amy Malm (WI).

1. **Adopted its Jan. 27, 2022; Dec. 20, 2021; and 2021 Fall National Meeting Minutes**

   Mr. Botsko said the Task Force met Jan. 27, 2022; Dec. 20, 2021; and Nov. 17, 2021. During these meetings, the Task Force took the following action: 1) adopted its Sept. 30, 2021, minutes; 2) discussed the formation of a new risk-based capital (RBC) working group and solicited membership for the RBC Investment Risk and Evaluation (E) Working Group; 3) adopted the 2021 Catastrophe Event List; and 4) adopted its working group reports. Ms. Malm asked that the commissioner representative be updated to reflect her name on the Jan. 27, 2022, minutes.

   Mr. Yanacheak made a motion, seconded by Mr. Chou, to adopt the Task Force’s Jan. 27, 2022, with the editorial change for Wisconsin (Attachment One); Dec. 20, 2021 (Attachment Two); and Nov. 17, 2021 (see NAIC Proceedings – Fall 2021, Capital Adequacy (E) Task Force) minutes. The motion passed unanimously.

2. **Adopted the Reports of its Working Groups**

   a. **Health Risk-Based Capital (E) Working Group**

   Mr. Drutz said that the Health Risk-Based Capital (E) Working Group met March 18 and took the following action: 1) adopted its Feb. 25, 2022; Jan. 28, 2022; and Dec. 16, 2021, minutes; 2) discussed the American Academy of Actuaries’ (Academy’s) report on the H2 – Underwriting Risk Review; and 3) adopted its working agenda.

   b. **Life Risk-Based Capital (E) Working Group**

   The Life-Risk-Based Capital (E) Working Group met March 23 and took the following action: 1) Adopted its March 10, 2022; Jan. 20, 2022; Dec. 16, 2021; and 2021 Fall National Meeting minutes, which included the following action: 2) Discussed the Academy’s)C2 Work Group recommendation on mortality; 3) Discussed the asset valuation reserve (AVR) and bond factor changes; 4) Adopted guidance on bond factor changes; 5) Adopted its working agenda; 6) Discussed reinsurance and comfort trusts; and 7) Discussed bond funds.

   c. **Catastrophe Risk (E) Subgroup**

   The Catastrophe Risk (E) Subgroup met March 22 and took the following action: 1) adopted its Feb. 22, 2022; Jan. 25, 2022; and Dec. 16, 2021, minutes; 2) discussed its working agenda; and 3) discussed the insured loss threshold
for wildfire peril; 4) expose proposal 2021-17-CR-MOD (Wildfire Information-Only Reporting Exemption); 5) discussed the independent model review instruction in the Rcat component; and 6) discussed the issue of double counting in the R5 component.

d. Property and Casualty Risk-Based Capital (E) Working Group

Mr. Botsko said that the Property and Casualty Risk-Based Capital (E) Working Group met March 23 and took the following action: 1) adopted the Catastrophe Risk (E) Subgroup’s Feb. 22, 2022; Jan. 25, 2022; and Dec. 16, 2021, minutes; 2) adopted the report of its subgroup; 3) adopted the following proposals: a) 2021-15-CR (Adding KCC Model); b) 2021-17-CR (Adding Wildfire Peril for Informational Purposes Only); and c) 2021-14-P (R3 factor Adjustment); 4) exposed proposal 2022-01-P (Removing Trend Test Footnote); 5) discussed its working agenda; and 6) heard updates on current property/casualty (P/C) RBC projects from the Academy.

e. RBC Investment Risk and Evaluation (E) Working Group

Mr. Barlow said that the RBC Investment Risk and Evaluation (E) Working Group met March 22 to consider comments received in response to a Jan. 12 exposure on the RBC treatment of asset-backed securities (ABS), including collateralized loan obligations (CLOs), collateralized fund obligations (CFOs), or other similar securities with similar types of tail risk.

Mr. Leung made a motion, seconded by Mr. Yanacheak, to adopt the reports of the Health Risk-Based Capital (E) Working Group (Attachment Three), the Life Risk-Based Capital (E) Working Group (Attachment Four), the Property and Casualty Risk-Based Capital (E) Working Group (Attachment Five), the Catastrophe Risk (E) Subgroup (Attachment Five-A), and the RBC Investment Risk and Evaluation (E) Working Group (Attachment Six). The motion passed.

Mr. Drutz said that the Health Risk-Based Capital (E) Working Group adopted proposal 2021-18-H-MOD on Feb. 25, using alternative language that provides guidance for evaluating the investment income adjustment within the underwriting risk factors. Additional clarity was incorporated into the guidance for the time period in which the Working Group will evaluate the investment yield prior to considering an adjustment.

Mr. Drutz made a motion, seconded by Mr. Chou, to adopt proposal 2021-18-H-MOD (Investment Income Guidance) (Attachment Seven). The motion passed.

Mr. Chou said the purpose of this proposal is to include the Karen Clark & Company (KCC) model as one of the approved third-party commercial vendor catastrophe models. The Subgroup received one supporting letter, which stated appreciation for the Subgroup keeping the approval list current with market usage.

Mr. Chou made a motion, seconded by Mr. Reedy, to adopt proposal 2021-15-CR (Approve Third-Party Vendor) (Attachment Eight). The motion passed unanimously.

5. Adopted Proposal 2021-17-CR (Information Only Wildfire Peril)

Mr. Chou said the purpose of this proposal is to include wildfire peril in the Rcat component for informational purposes filing until all the concerns are addressed before incorporated into the RBC calculation. He stated that the Subgroup received three comment letters during the exposure period. However, Mr. Chou indicated that the
Subgroup agreed to take time to evaluate the impact and allow more time for the modelers to enhance their modeling approach with this new peril.

Mr. Chou made a motion, seconded by Mr. Yanacheak, to adopt proposal 2021-17-CR (Information Only Wildfire Peril) (Attachment Nine). The motion passed unanimously.

6. **Adopted Proposal 2021-14-P (R3 Factor Adjustment)**

Mr. Botsko said this proposal intends to eliminate the double-counting effect of the operational risk charge on the component. He said NAIC staff performed an analysis to determine the impact on the RBC action levels by reducing the 2% reinsurance recoverable RBC charge for all reinsurance designation equivalents. The result indicated that the impact is insignificant, as there are only three companies with total adjusted capital (TAC) between zero to 75 million that will change the RBC results from action level to no action. He also stated that the Working Group received no comments during the exposure period.

Mr. Drutz made a motion, seconded by Mr. Chou, to adopt proposal 2021-14P (R3 Factor Adjustment) (Attachment Ten). The motion passed.

7. **Adopted its Working Agenda**

Mr. Botsko summarized the changes of the Task Force’s 2022 working agenda, which included the following substantial changes: 1) adding the exposure and/or adoption dates to the items of “evaluate other catastrophe risks for possible inclusion in the charge” and “evaluate the possibility of allowing additional third-party models or adjustments to the vendor models to calculate the cat model losses”; 2) changing the expected completion dates for “evaluate the proposed changes from the Affiliated Investment Ad Hoc Group related to P/C RBC Affiliated Investments,” “continue working with the Academy to review the methodology and revise the underwriting (Investment Income Adjustment, Loss Concentration, LOB UW risk) charges in the PRBC formula as appropriate,” “evaluate if changes should be made to the P/C formula to better assess companies in runoff,” and “evaluate the Underwriting Risk Line 1 Factors in the P/C formula” items; 3) removing the “modify instruction to PR027 Interrogatories that clarify how insurers with no gross exposure to earthquake or hurricane should complete the interrogatories” and “evaluate R3 Adjustment for Operational Risk Charge items; 4) adding the adoption date to the “implement wildfire peril in the Rcat component (for informational purposes only) item; and 5) adding “evaluate the possibility of modifying exemption criteria for different cat perils in the PR027 interrogatories,” “evaluate the possibility of enhancing the independent model instructions,” and “remove the trend test footnote in PR033” items under the new items section.

Mr. Drutz said the Health Risk-Based Capital (E) Working Group made the following updates to its working agenda for 2022: 1) combined item 27 and item 28 into one item and changed the expected completion date to “ongoing”; 2) updated the priority status and expected completion for item 28; 3) updated the expected completion and working agenda description for item 30; 4) combined item 31, 34, and 35 into one item and updated the expected completion date; 5) updated the expected completion dates for item 32 and item 33; and 6) updated the working item description for item 34.

Mr. Barlow mentioned that C2 mortality work was added because it was inadvertently left off the working agenda and that no other notable items changed from the current Life Risk-Based Capital (E) Working Group’s agenda items. He mentioned that the RBC Investment Risk and Evaluation (E) Working Group contains many referrals from this Task Force and that he may add one more referral from the Life Risk-Based Capital (E) Working Group.

Mr. Chou made a motion, seconded by Mr. Yanacheak, to adopt the working agenda (Attachment Eleven). The motion passed.
8. **Discussed Other Matters**

Mr. Botsko said that the results of the Affiliated Investment Ad Hoc Group will be shared in the coming weeks with the Life Risk-Based Capital (E) Working Group, the Health Risk-Based Capital (E) Working Group, and the Property and Casualty Risk-Based Capital (E) Working Group for continued discussion on the proposed adjustments to the affiliated investment instructions. Comments and suggestions will be reviewed and discussed at the Task Force level. Mr. Barlow stressed that the Ad Hoc Group did strive for consistency across the three formulas and that any suggested changes should be considered for consistency.

Mr. Botsko added that the Property and Casualty Risk-Based Capital (E) Working Group will be discussing a referral letter regarding run-off companies. Once direction is provided, the Working Group will share their findings with the Life Risk-Based Capital (E) Working Group and Health Risk-Based Capital (E) Working Group. Mr. Botsko also welcomed Mr. Yanacheak as the new vice chair commissioner representative for Iowa.

Having no further business, the Capital Adequacy (E) Task Force adjourned.
The Capital Adequacy (E) Task Force conducted an e-vote that concluded Jan. 27, 2022. The following Task Force members participated: Judith L. French, Chair, represented by Tom Botsko (OH); Doug Ommen, Vice Chair, represented by Mike Yanacheak (IA); Lori K. Wing-Heier represented by Wally Thomas (AK); Ricardo Lara represented by Thomas Reedy (CA); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by Philip Barlow (DC); David Altmaier (FL); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Russell Coy and Bill Clark (KY); Chlora Lindley-Myers represented by John Rehagen (MO); Elizabeth Kelleher Dwyer represented by Jack Broccoli (RI); Cassie Brown represented by Mike Boerner and Rachel Hemphill (TX); Mike Kreidler represented by Steve Drutz (WA), and Nathan Houdek represented by Amy Malm (WI).

1. **Adopted the Updated 2021 U.S. and Non-U.S. Catastrophe Risk Event Lists**

The Task Force conducted an e-vote to consider adoption of proposal 2021-16-CR (2021 U.S. and Non-U.S. Catastrophe Risk Event Lists).

Mr. Barlow made a motion, seconded by Mr. Chou, to adopt the 2021 U.S. and Non-U.S. Catastrophe Risk Event Lists (Attachment One-A). The motion passed unanimously.

Having no further business, the Capital Adequacy (E) Task Force adjourned.

The Capital Adequacy (E) Task Force met Dec. 20, 2021. The following Task Force members participated: Judith L. French, Chair, represented by Tom Botsko (OH); Cassie Brown, Vice Chair, represented by Mike Boerner and Rachel Hemphill (TX); Lori K. Wing-Heier represented by Wally Thomas (AK); Jim L. Ridling represented by Charles Hale (AL); Ricardo Lara represented by Thomas Reedy (CA); Andrew N. Mais represented by Kathy Belfi (CT); David Altmaier represented by Virginia Christy and Ray Spudeck (FL); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Russell Coy (KY); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by William Leung (MO); Mike Causey represented by Jackie Obusek (NC); Eric Dunning represented Michael Muldoon (NE); Mike Kreidler represented by Steve Drutz (WA); and Nathan Houdek represented by Amy Malm (WI). Also participating were: Philip Barlow (DC); Kevin Clark (IA); Lindsay Crawford and Justin Schrader (NE); and Bill Carmello (NY).

1. Discussed the RBC Investment Risk and Evaluation (E) Working Group

Mr. Botsko said the Financial Condition (E) Committee recently adopted the formation of the Risk-Based Capital (RBC) Investment Risk and Evaluation (E) Working Group. He asked if there are any questions on the charges of the Working Group. He also mentioned that two tasks were sent down from the Committee for the Working Group: 1) follow-up on Phase II of the Moody’s bond study, which is a modernization of the analysis; and 2) review Statement of Statutory Accounting Principles (SSAP) No. 43—Loan-Backed and Structured Securities in regard to residual tranches and the potential for an extremely high-risk default and that impact on RBC. The Statutory Accounting Principles (E) Working Group recently adopted changes to have this investment move from Schedule D reporting to Schedule BA.

Mr. Barlow added that it would be important to have members of the RBC Investment Risk and Evaluation (E) Working Group include members from the Health Risk-Based Capital (E) Working Group, the Life Risk-Based Capital (E) Working Group, the Property and Casualty Risk-Based Capital (E) Working Group, the Valuation of Securities (E) Task Force, and the Statutory Accounting Principles (E) Working Group to further promote coordination between the working groups under the Financial Condition (E) Committee.

Mr. Botsko said past referrals that were tabled by the Capital Adequacy (E) Task Force will be prioritized by the RBC Investment Risk and Evaluation (E) Working Group, and a long-term goal of the Working Group will be to conduct a holistic review of the investment schedules in the RBC formulas and coordinate consistency where it is warranted or categorize the investments in a consistent manner.

Mr. Carmello asked if the RBC Investment Risk and Evaluation (E) Working Group would be defining what a bond is and whether other assets would be considered if they were not considered a bond. Mr. Botsko said the Working Group should be looking at the investments as a whole (e.g., the residual tranches are currently treated as a bond, but that does not mean it will be treated that way in the future; it may be treated as an equity investment). Mr. Clark said he has joined the Working Group, been heavily involved as vice chair of the Statutory Accounting Principles (E) Working Group and the Valuation of Securities (E) Task Force, and can help with the coordination of the groups. Mr. Spudeck confirmed Florida’s involvement with the RBC Investment Risk and Evaluation (E) Working Group, as well as Mr. Boerner and other members with investment expertise for Texas. Mr. Leung said Missouri will be participating, as well as Mr. Andersen from Minnesota who has been following on the reserve side. Mr. Tsang confirmed his membership to the Working Group. Ms. Crawford confirmed her and Mr. Schrader’s participation, as well as others on her staff that have experience with macroprudential efforts that will be useful to the Working Group. Mr. Botsko said any interested parties should reach out to Jane Barr (NAIC) to be included on the list for meeting notifications. Edward L. Toy (Risk & Regulatory Consulting LLC) said he would be happy to assist with historical RBC investment schedules, and he suggested that the Working Group look at the inconsistencies regarding granularity between the life formula and the property/casualty (P/C) and health formulas. Mr. Botsko concurred that this is an important issue, and the Affiliate Investment Ad Hoc Group will be referring its proposals to the Health Risk-Based Capital (E) Working Group, the Life Risk-Based Capital (E) Working Group, the Property and Casualty Risk-Based Capital (E) Working Group, and the Capital Adequacy (E) Task Force for further discussion on when inconsistencies are warranted. Mr. Barlow said that specific topic should occur at the task force level.
Ms. Barr said a call is tentatively set for Jan. 12, 2022, and will be a joint call with the Financial Condition (E) Committee. The Committee web page has been set up for the RBC Investment Risk and Evaluation (E) Working Group, and the call information will be posted.

Having no further business, the Capital Adequacy (E) Task Force adjourned.

12_CapitalAdequacyTFmin.docx
The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met March 18, 2022. The following Working Group members participated: Steve Drutz, Chair (WA); Matthew Richard, Vice Chair, and Sean Fulton (TX) Wanchin Chou and Stephen Flick (CT); Kyle Collins (FL); Tish Becker (KS); Danielle Smith (MO); Michael Muldoon and Lindsay Crawford (NE); Ergys Shanaj (NY); and Jeffery Smith (PA). Also participating was: Tom Botsko (OH).

1. **Adopted is Feb. 25, 2022; Jan. 28, 2022; and Dec. 16, 2021, Minutes**

The Working Group met Feb. 25, 2022; Jan. 28, 2022; and Dec. 16, 2021. During these meetings, the Working Group took the following action: 1) exposed and referred the Health Test Language Proposal to the Blanks (E) Working Group; 2) exposed and referred a memo to the Health Actuarial (B) Task Force regarding asset adequacy testing; 3) adopted proposal 2021-18-H as modified for instructions in evaluating the investment yield adjustment in the underwriting risk factors; 4) received and exposed the American Academy of Actuaries (Academy) report on the H2 – Underwriting Risk component; and 5) reviewed the investment yields of the six-month U.S. Treasury bonds for the investment income adjustment.

Mr. Chou made a motion, seconded by Mr. Muldoon, to adopt the Working Group’s Feb. 25, 2022 (Attachment Three-A); Jan. 28, 2022 (Attachment Three-B); and Dec. 16, 2021 (Attachment Three-C) minutes. The motion passed unanimously.

2. **Discussed the Academy’s H2 – Underwriting Risk Component Report**

Mr. Drutz said the Academy’s H2 – Underwriting Risk report was exposed for a 45-day comment period, and no comments were received. The Academy outlined six options for better aligning the H2 risk factors to economic risk: 1) refresh factors based on updated insurer data; 2) develop factors at a more granular product level; 3) develop factors specific to more relevant block sizes and consider indexing factors for cut points to change over time; 4) model risk factors over an NAIC-defined prospective time horizon with a defined safety level that can be refreshed regularly; 5) refresh the managed care credit formula and factors to be more relevant and reflective of common contracting approached and other risk factors associated with these contracting approaches; and 6) analyze long-term care insurance (LTCI) underwriting performance to create a more nuanced set of risk factors that considers pricing changes over time.

Mr. Muldoon said the Academy laid out several other methodologies in their report, such as Best’s Capital Adequacy Relativity (BCAR), the property/casualty (P/C) risk-based capital (RBC) formula, etc. He asked if there would be any follow-up or educational sessions on the varying methodologies evaluated by the Academy to gain a better understanding that could be done simultaneously with moving forward to evaluate what data would be needed. Derek Skoog (Academy) said the Academy could provide a presentation on the BCAR and the P/C RBC formula approach, as well as more detailed suggestions for how the factors could be updated considering these alternative approaches. He said the Academy worked with AM Best to gain an understanding of how those factors were developed, and he suggested that the Academy may also be willing to present to the Working Group also. Mr. Chou suggested that the Working Group had an educational session before moving forward with the next steps. Mr. Muldoon asked if there is a way to compare what a company might look like under the BCAR versus the
current health RBC formula. Mr. Botsko said it is a great idea to have the discussion; however, RBC is about minimum solvency standards, and the BCAR is based on more of a going concern perspective, which is a little bit different than RBC. Mr. Drutz said it is his hope that as these conversations move forward, it will help the Working Group understand the purposes and the differences for those purposes.

The Working Group agreed to schedule a call for an educational session on the various methodologies prior to requesting that the Academy move forward.

3. **Adopted its 2022 Working Agenda**

Mr. Drutz said each year, the Working Group reviews the working agenda for the upcoming year based on its priorities and needs. He provided a summary of the changes: 1) combined items 26 and 27 into one item and changed the expected completion date to “Ongoing”; 2) updated the priority status and expected completion for item 28; 3) updated the expected completion and working agenda description for item 30; 4) combined items 31, 34, and 36 into one item and updated the expected completion date; 5) updated the expected completion dates for items 32 and 33; and 6) updated the working item description for item 35.

Mr. Chou made a motion, seconded by Mr. Muldoon, to adopt its 2022 working agenda (*see NAIC Proceedings – Spring 2022, Capital Adequacy (E) Task Force, Attachment Eleven*). The motion passed unanimously.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.
The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met Feb. 25, 2022. The following Working Group members participated: Steve Drutz, Chair (WA); Wanchin Chou and Stephen Flick (CT); Kyle Collins (FL); Tish Becker (KS); Debbie Doggett and Danielle Smith (MO); Tom Dudek (NY); and Aaron Hodges and Matthew Richard (TX).

1. **Referred the Health Test Language Proposal to the Blanks (E) Working Group**

Mr. Drutz said the Working Group re-exposed the Health Test Language Proposal for 15 days, which included minor modifications to add further clarity to the language, and no comments were received.

Mr. Dudek made a motion, seconded by Mr. Chou, to refer the Health Test Language Proposal (Attachment Three-A1) to the Blanks (E) Working Group. The motion passed unanimously.

2. **Referred a Memo to the Health Actuarial (B) Task Force**

Mr. Drutz said the referral letter to the Health Actuarial (B) Task Force was exposed for 15 days, and no comments were received. He said the referral asks the Task Force to consider adding a sentence to *Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves* (AG 51) for long-term care (LTC) business that would state that regardless of the blank an entity files, asset adequacy testing is required if the criteria are met.

Ms. Doggett made a motion, seconded by Ms. Becker, to refer the memo (Attachment Three-A2) to the Health Actuarial (B) Task Force. The motion passed unanimously.

3. **Adopted Proposal 2021-18-H-Modified**

Mr. Drutz said proposal 2021-18-H was re-exposed with alternative language for a 15-day public comment period, and no comments were received. The alternative language provides additional clarity for the time in which the Working Group will evaluate the investment yield prior to considering an adjustment.

Mr. Chou made a motion, seconded by Mr. Dudek, to re-adopt proposal 2021-18-H-MOD (see *NAIC Proceedings – Spring 2022, Capital Adequacy (E) Task Force, Attachment Seven*) with the alternative language. The motion passed unanimously.

4. **Discussed Other Matters**

Mr. Drutz asked for a volunteer to hold the vice chair position. He said if more than one person volunteers, a vote would be held.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.

ANTICIPATED EFFECTIVE DATE: __________________

IDENTIFICATION OF ITEM(S) TO CHANGE

Revise the Health Annual Statement Test language

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of the change is to move those filers who write predominantly health business and file on the life blank to begin filing on the health blank.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: __________________

Other Comments:
The Health Test Ad Hoc Group of the Health Risk-Based Capital (E) Working Group continues to discuss and review any potential modifications to premium and reserve ratios. The group will continue to evaluate if there should be changes and if so, will propose this to the Blanks (E) Working Group in a separate proposal for consideration in future years.

The references to the Life & Property & Casualty General Interrogatories were changed from pulling from RBC to instead pull from the Analysis of Operations By Lines of Business – Accident and Health and Underwriting & Investment Exhibit, Part 1B, respectively. The life General Interrogatory references will be further updated if proposal 2021-17BWG is adopted.

12-16-21 – Exposed to the Health and Life Risk-Based Capital (E) Working Groups for 40 days.
1-5-22 – Revised Health Annual Statement Instructions – General Interrogatories – Line 2.1 – Premium Numerator for additional clarity.
1-28-22 – Two comment letters received. Re-exposed to the Health and Life Risk-Based Capital (E) Working Groups for changes to the Reserve Numerator for 15 days. Comments due 2-14-22.
2-14-22 – No comments were received.
2-25-22 – Health Risk-Based Capital Working Group agreed to refer the proposal to the Blanks (E) Working Group for exposure and consideration.

** This section must be completed on all forms. Revised 7/18/2018
Health

The annual statement is to be completed in accordance with the Annual Statement Instructions and Accounting Practices and Procedures Manual except to the extent that state law, rules or regulations are in conflict with these publications. In cases of conflict, the health annual statement will be filed pursuant to such state’s filing requirements. The domiciliary state’s insurance regulatory authority shall maintain full discretion in determining which NAIC annual statement blank must be filed. The annual statement blank filed with the domiciliary state shall be the blank submitted to, and maintained by, the NAIC, and barring conflict as described above, should be filed with all jurisdictions in which the reporting entity is licensed.

1. **Health Statement Test:**
   
   If a reporting entity completes the health annual statement for the reporting year, the reporting entity must complete the Health Statement Test.
   
   The Health Statement Test is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers’ compensation, accidental death and dismemberment policies and long-term care policies.

   **Passing the Test:**
   
   A reporting entity is deemed to have passed the Health Statement Test if the values for the premium and reserve ratios in the Health Statement Test equal or exceed 95% for both the reporting and prior year.

   **Failing the Test:**
   
   If a reporting entity, licensed as a life, accident and health or property and casualty insurer in its domiciliary state, is required to file the health annual statement for the reporting year and does not pass the Health Statement Test in the reporting year, it will revert to the annual statement form and risk-based capital report associated with the type of license held in its domestic state in the first quarter of the second year following the reporting year. If a reporting entity, licensed as a health insurer in its domiciliary state, is required to file the health annual statement for the reporting year and does not pass the Health Statement Test in the reporting year, it should continue to file the health annual statement.

   **Variances from following these instructions:**
   
   If a reporting entity’s domestic regulator requires the reporting entity to complete an annual statement form and risk-based capital report that differs from these instructions, the domestic regulator shall notify the reporting entity in writing by June 1 of the year following the reporting year in which a Health Statement Test is submitted.

General Interrogatories

2. This General Interrogatory is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers’ compensation, accidental death and dismemberment policies and long-term care policies.

   All reporting entities should file the test.

   Premium and reserve information is obtained from the annual statement sources referenced on the form or from the related risk-based capital report for the corresponding premium descriptions relating to the current and prior reporting periods.
### Life, Accident and Health /Fraternal

#### Health Test

**GENERAL**

The annual statement is to be completed in accordance with the *Annual Statement Instructions and Accounting Practices and Procedures Manual* except to the extent that state law, rules or regulations are in conflict with these publications. In cases of conflict, the life, accident and health annual statement will be filed pursuant to such state’s filing requirements. The domiciliary state’s insurance regulatory authority shall maintain full discretion in determining which NAIC annual statement blank must be filed. The annual statement blank filed with the domiciliary state shall be the blank submitted to, and maintained by, the NAIC, and barring conflict as described above, should be filed with all jurisdictions in which the reporting entity is licensed.

1. **Health Statement Test:**

   If a reporting entity is licensed as a life and health insurer and completes the life, accident and health annual statement for the reporting year, the reporting entity must complete the Health Statement Test. However, a reporting entity that is required to also file the Separate Accounts Statement is not subject to the results of the Health Statement Test, and should continue to complete the life, accident and health/fraternal blank.

   The Health Statement Test is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers’ compensation, accidental death and dismemberment policies and long-term care policies.

   **Passing the Test:**
A reporting entity is deemed to have passed the Health Statement Test if:

The values for the **premium and reserve ratios in the Health Statement Test equal or exceed 95% for both the reporting and prior year**.

**AND**

The entity passing Health Statement Test is licensed and actively issuing and/or renewing business in five states or less.

**AND**

At least seventy-five percent (75%) of the entity’s current year premiums are written in its domiciliary state.

**OR**

The values for the premium and reserve ratios in the Health Statement Test equal 100% for both the reporting and prior year, regardless of the number of states in which the entity is licensed.

If a reporting entity is a) licensed as a life and health insurer; b) completes the Life, Accident and Health annual statement for the reporting year; and c) passes the Health Statement Test (as described above), the reporting entity must complete the health statement beginning with the first quarter’s statement for the second year following the reporting year in which the reporting entity passes the Health Statement Test and must also file the corresponding risk-based capital report and the life supplements for that year-end.

**Variances from following these instructions:**

If a reporting entity’s domestic regulator requires the reporting entity to complete an annual statement form and risk-based capital report that differs from these instructions, the domestic regulator shall notify the reporting entity in writing by June 1 of the year following the reporting year in which a Health Statement Test is submitted.

### General Interrogatories

2. This General Interrogatory is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers compensation, accidental death and dismemberment policies and long-term care policies.

All reporting entities should file the test.

Premium and reserve information is obtained from the annual statement sources referenced on the form or from the related risk-based capital report for the corresponding premium descriptions relating to the current and prior reporting periods.

Property/Casualty

Health Test

GENERAL

The annual statement is to be completed in accordance with the Annual Statement Instructions and Accounting Practices and Procedures Manual except to the extent that state law, rules or regulations are in conflict with these publications. In cases of conflict, the property and casualty annual statement will be filed pursuant to such state’s filing requirements. The domiciliary state’s insurance regulatory authority shall maintain full discretion in determining which NAIC annual statement blank must be filed. The annual statement blank filed with the domiciliary state shall be the blank submitted to, and maintained by, the NAIC, and barring conflict as described above, should be filed with all jurisdictions in which the reporting entity is licensed.

1. Health Statement Test:

If a reporting entity is licensed as a property and casualty insurer and completes the property and casualty annual statement for the reporting year, the reporting entity must complete the Health Statement Test.

The Health Statement Test is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers’ compensation, accidental death and dismemberment policies and long-term care policies.

Passing the Test:

A reporting entity is deemed to have passed the Health Statement Test if:

The values for the premium and reserve ratios in the Health Statement Test equal or exceed 95% for both the reporting and prior year.

AND

The entity passing Health Statement Test is licensed and actively issuing and/or renewing business in five states or less.

AND

At least seventy-five percent (75%) of the entity’s current year premiums are written in its domiciliary state.

OR

The values for the premium and reserve ratios in the Health Statement Test equal 100% for both the reporting and prior year, regardless of the number of states in which the entity is licensed.

If a reporting entity is a) licensed as a property and casualty insurer; b) completes the property and casualty annual statement for the reporting year; and c) passes the Health Statement Test (as described above), the reporting entity must complete the health statement beginning with the first quarter’s statement for the second year following the reporting year.
in which the reporting entity passes the Health Statement Test and must also file the corresponding risk-based capital report and the property/casualty supplements for that year-end.

**Variances from following these instructions:**

If a reporting entity’s domestic regulator requires the reporting entity to complete an annual statement form and risk-based capital report that differs from these instructions, the domestic regulator shall notify the reporting entity in writing by June 1 of the year following the reporting year in which a Health Statement Test is submitted.

**General Interrogatories**

2. This General Interrogatory is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers compensation, accidental death and dismemberment policies and long-term care policies.

All reporting entities should file the test.

Premium and reserve information is obtained from the annual statement sources referenced on the form or from the related risk-based capital report for the corresponding premium descriptions relating to the current and prior reporting periods.

MEMORANDUM

TO: Commissioner Andrew N. Mais (CT), Chair of the Health Actuarial (B) Task Force and
Fred Andersen (MN), Chair of the Long-Term Care Valuation (B) Subgroup

FROM: Steve Drutz (WA), Chair of the Health Risk-Based Capital (E) Working Group

DATE: Feb. 25, 2022

RE: AG 51 – Asset Adequacy Testing

The Health Risk-Based Capital (E) Working Group established the Health Test Ad Hoc Group in 2018 to review the health test language within the Annual Statement Instructions due to inconsistencies in reporting of health business across the different blanks, as well as a significant amount of health business reported on the life and fraternal blank. Currently, a company passes the health test if the following requirements are met:

- The values for the premium and reserve ratios in the Health Statement Test equal or exceed 95% for both the reporting and prior year.

AND

- The entity passing the Health Statement Test is licensed and actively issuing and/or renewing business in five states or less.

AND

- At least 75% of the entity’s current year premiums are written in its domiciliary state.

OR

- The values for the premium and reserve ratios in the Health Statement Test equal 100% for both the reporting and prior year, regardless of the number of states in which the entity is licensed.

The intent of the Ad Hoc Group was to evaluate if changes were warranted to the health test because of industry changes since its original development. The Ad Hoc Group has drafted a phase 1 proposal that will delete the requirements for an entity being licensed and actively issuing and/or renewing business in five states or less and at least 75% of the entity’s current year premiums being written in their domicile state. The Ad Hoc Group is continuing to evaluate the current 95% premium and reserve ratios.

Through the evaluation and discussion of the 95% reserve ratio, there was a question brought up as to whether an entity would still be required to perform asset adequacy testing of long-term care (LTC)
business if the entity moved from the life blank to the health blank. It is the Ad Hoc Group’s understanding that asset adequacy testing is required, regardless of the blank if the criteria for asset adequacy testing are met. The Working Group is asking the Health Actuarial (B) Task Force to consider adding a sentence to *Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves* (AG 51) that would indicate that regardless of the blank the entity files, asset adequacy testing is required by the entity if the criteria are met.

This clarification would help to make it abundantly clear that all companies with LTC exposure that are subject to asset adequacy testing would still be required to meet these requirements, regardless of the blank they are filing on.

If you have any questions regarding the suggested clarification, please contact Crystal Brown (cbrown@naic.org).

cc: Eric King, Crystal Brown
Health Risk-Based Capital (E) Working Group
Virtual Meeting
January 28, 2022

The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met Jan. 28, 2022. The following Working Group members participated: Steve Drutz, Chair (WA); Wanchin Chou and Stephen Flick (CT); Kyle Collins (FL); Tish Becker (KS); Michael Muldoon (NE); Tom Dudek (NY); Kimberly Rankin (PA); and Aaron Hodges, Matthew Richard, and Sean Fulton (TX).

1. **Discuss Comments Received on the Health Test Language Proposal**

Mr. Drutz said the Health Test Language Proposal was exposed for 40 days on Dec. 16, 2021, and two comment letters (Attachment Three-B1) were received. He said the Health Test Ad Hoc Group met Jan. 5 and Jan. 25 to: 1) discuss the language in the premium numerator section of the Health General Interrogatories; and 2) review the comment letters. The Ad Hoc Group suggested a friendly amendment to the language that included removing “in part,” replacing it with “excluding,” deleting the sentence “Column 10 of the reporting year’s annual statement,” and adding “of the reporting year’s annual statement.” Mr. Drutz said the Ad Hoc Group believed these changes were not material but clarifying. He said additional questions were brought forward regarding the exclusion of disability income, long-term care (LTC), credit accident and health (A&H), and dread disease in the reserve numerator for the life and property/casualty (P/C) General Interrogatory instructions, and clarifying language was added to show that these items should be excluded from the numerator portion of the reserve ratio.

Mr. Richard said his comments were in relation to the presentation of the reserve ratio. He said the amounts in the numerator and denominator are pulled from different schedules, and it would be clearer if they could be pulled from the same schedules, where possible, to be more consistent. He said it would also help to understand what drives the results of the calculation. Mr. Drutz said the Ad Hoc Group found that Texas’ comments were very well founded; however, the Ad Hoc Group wanted to further review the premium and reserve ratio over the course of this year and utilize these suggestions in that review.

Ray Nelson (America’s Health Insurance Plans—AHIP) said AHIP is supportive of the language included in the exposure and the friendly amendment.

Hearing no objections, the Working Group agreed to re-expose the Health Test Language Proposal with the friendly amendment changes for a 15-day public comment period ending Feb. 14. The exposure will be distributed to both the Health Risk-Based Capital (E) Working Group and the Life Risk-Based Capital (E) Working Group.

2. **Exposed a Referral Letter to the Health Actuarial (B) Task Force**

Mr. Drutz said through the Health Test Ad Hoc Group’s evaluation and discussion of the 95% reserve ratio, a question was brought up as to whether an entity would still be required to perform asset adequacy testing of LTC business if the entity moved from the life blank to the health blank. He said the referral letter asks the Health Actuarial (B) Task Force to consider adding a sentence to Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves (AG 51) that would indicate, regardless of the annual statement blank that the entity files, that asset adequacy testing is required by the entity if the criteria are met. He said this clarification would help to make it abundantly clear that all companies with LTC exposure that are subject to asset adequacy testing would still be required to meet these requirements, regardless of the blank they are filing on.
Hearing no objections, the Working Group agreed to expose the referral letter for a 15-day public comment period ending Feb. 14.

3. Received an Academy H2 – Underwriting Risk Report

Derek Skoog (American Academy of Actuaries—Academy) summarized the Academy’s report “Request for Comprehensive Review of the H2 – Underwriting Risk Component and Managed Care Credit Calculation in the Health Risk-Based Capital Formula.” He said that the Academy spent a fair bit of time discussing the factors themselves and the degree to which they have been updated since their inception, and it has investigated some of the significant changes that have taken place in the health insurance industry since the factors were originally contemplated. He said there have been changes in the claims distributions in the last 20 years; the high cost of beneficiaries and patients because of advances in medical care; asymmetric claims risk, as there may be limits on the level of profitability on health plans due to regulations; provider contracting; and the product basis and reform of the market for individual, small, and large group, as well as Medicare Advantage. He said there has been a lot that has changed in the industry, and the Academy wants to understand how others have evolved their views on underwriting risk in the health sector. He said to do this, the Academy spent quite a bit of time studying Best’s Capital Adequacy Relativity (BCAR), the NAIC P/C Risk-Based Capital (RBC) formula, Solvency II, and the Department of Managed Health Care Tangible Net Equity (TNE) requirements. He said the Academy saw some consistent themes, particularly that most of those approaches take a more granular view of products and a few split-out pricing versus reserving risk. He said the BCAR, P/C RBC formula, and Solvency II tend to take a more contemporaneous view of underwriting risk; they evolve over time; and the factors tend not to be static for a long stretch of time.

Mr. Skoog said with that background, in terms of understanding how the industry has evolved and what other approaches have been, the Academy has produced six potential recommendations or changes for the Working Group’s consideration: 1) refresh factors based on updated insurer data; 2) develop factors at a more granular product level; 3) develop factors specific to more relevant block sizes and consider any indexing factors for cut points to change over time; 4) model risk factors over an NAIC-defined prospective time horizon with a defined safety level that can be refreshed regularly; 5) refresh the managed care credit formula and factors to be more relevant and reflective of common contracting approaches and other risk factors associated with these contracting approaches; and 6) analyze long-term care insurance (LTCI) underwriting performance to create a more nuanced set of risk factors that considers pricing changes over time. He said the current theme is to bring the factors to reflect the current risk profile of underwriting strategies and approaches those insurers face today.

Mr. Muldoon said the six recommendations proposed by the Academy are a good set of recommendations, the points made regarding a more granular product level are well taken, and there is a lot of room to look at it in more granularity. Mr. Chou asked the Academy to provide a timeline and a path forward. Mr. Skoog said the path forward for items 1–5 is clear in that some of the approaches taken by the P/C RBC formula and a similar approach taken by the BCAR provide clarity for the underwriting approach of net written premium and a standard process for updating those factors based on safety levels observed in the industry. He said what will require more consideration is the data sources to be used. He said page 7 of the Annual Statement would be a good place to start because it already has many data fields that feed into the RBC formula. He said a longer-term goal would be to move towards the Accident and Health Policy Experience Exhibit level of detail. In the nearer term, a goal would be to mirror many of the approaches taken in the P/C RBC formula around thinking about underwriting risks and matching page 7 to that approach. He said the Academy could provide the Working Group with a work plan if requested. He said item 6 for LTC would require some additional study as to what that would look like because it is a challenging issue. Mr. Chou asked if there had been coordination between the various Academy groups to look at LTC. Mr. Skoog said the Academy connected internally, and there will need to be collaboration to make sure the right considerations are folded into any new risk factors.
Hearing no objections, the Working Group agreed to expose the report (Attachment Three-B2) for a 45-day public comment period ending March 16.

4. **Reviewed the Investment Yields of Six-Month Treasury Bonds for Investment Income Adjustment in Underwriting Risk**

Mr. Drutz said the Working Group adopted changes to the underwriting factors for year-end 2021 to incorporate an investment yield adjustment and adopted guidance into the instructions for the investment yield. The investment yield for the six-month treasury bond through the first four weeks of the month of January (Mondays were utilized as the basis day except for the week of Jan. 16 due to the holiday) remained below 0.5%, and as a result, there would be no changes to the factors for year-end 2022.

Mr. Drutz recommended that the Working Group consider modifying proposal 2021-18-H that was previously adopted on Dec. 16, 2021, to clarify the time period for which the investment yield is evaluated based on the previous analysis. He said alternative language was included in the proposal. He suggested that the proposal be re-exposed for a brief time period with the alternative language.

Hearing no objections, the Working Group agreed to re-expose proposal 2021-18-H (Attachment Three-B3) for a 15-day public comment period ending Feb. 14.

5. **Discussed Other Matters**

Mr. Drutz asked that any states interested in joining the Working Group please contact Crystal Brown (NAIC).

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.

Re:  Health Test Language Proposal Exposed on 12.16.21

Dear Mr. Drutz:

On behalf of the members of America’s Health Insurance Plans (AHIP), we appreciate the opportunity to provide comments on the Health Test Language Proposal discussed (and exposed) during the Working Group’s meeting on December 16, 2021.

AHIP is generally supportive of the language included in this December 16, 2021 exposure. Furthermore, we would like to express our appreciation to the Chair for including interested parties (including AHIP) and regulators during the discussion and evaluation process that has taken place on this topic at the ad hoc group level.

Thank you for the opportunity to provide these comments, and we look forward to continuing to work with the Health Risk-Based Capital (E) Working Group in the future.

Sincerely,

Bob Ridgeway
Bridgeway@ahip.org

Good morning Crystal & Amy,

Regarding the Health Test Language Proposal, my comments are as follows:

In the current presentation of the Reserve Ratio, the calculation is very straightforward:

<table>
<thead>
<tr>
<th>2.4(a)</th>
<th>Reserve Numerator</th>
<th>Net A&amp;H Policy and Contract Claims without Credit Health (Exhibit 8, Part 1, Line 4.4, Columns 9 and 11) plus Aggregate Reserves for A&amp;H Policies without Credit Health (Exhibit 6, Column 1 less Column 10) for Unearned Premiums (Line 1) and Future Contingent Benefits (Line 4)</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.5</td>
<td>Reserve Denominator</td>
<td>Aggregate Reserve (Page 3, Column 1, Lines 1+2+4.1+4.2) minus additional actuarial reserves (Exhibit 6, Column 1, Lines 3+11 plus Exhibit 5, Misc. Reserves Section, Line 0799999)</td>
</tr>
<tr>
<td>2.6</td>
<td>Reserve Ratio</td>
<td>$2.4/2.5$</td>
</tr>
</tbody>
</table>

However, it’s less straightforward to explain what drives the results, or to explain the changes from year to year.

A general issue is that when amounts are duplicated in the Annual Statement, we select the amount that appears earliest. So then the denominators are often calculated from the first few pages, and the numerators are calculated from later exhibits, and it becomes a little opaque.

In this case, the denominator references Page 3, but the numerator references Exhibits 6 and 8.

This obscures that we are effectively performing this calculation:

$$\text{Reserves for A&H (Non - Credit Products)} - \text{Reserves for Life and Other Products}$$

It would be more clear if the references were consistent between the numerator and the denominator, where practical.
For example, the references in the Denominator to Page 3 could be replaced with references to Exhibits 5 & 6.

Once these are harmonized, the calculation of the Reserve Ratio could be presented as follows:

<table>
<thead>
<tr>
<th></th>
<th>Health</th>
<th>Non-Health</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.4(a) Reserve Numerator</td>
<td>A</td>
<td>N/A</td>
<td>A</td>
</tr>
<tr>
<td>2.5 Reserve Denominator</td>
<td>A</td>
<td>B</td>
<td>A + B</td>
</tr>
<tr>
<td>2.6 Reserve Ratio</td>
<td></td>
<td></td>
<td>2.4/2.5</td>
</tr>
</tbody>
</table>

With both the health and the non-health reserves clearly identified, it would be straightforward to determine which items were driving the results of the Health Test.

All the best,

Re: Request for Comprehensive Review of the H2—Underwriting Risk Component and Managed Care Credit Calculation in the Health Risk-Based Capital Formula

Dear Mr. Drutz:

On behalf of the American Academy of Actuaries (Academy) Health Solvency Subcommittee, I am pleased to provide this report to the National Association of Insurance Commissioners (NAIC) Health Risk-Based Capital (HRBC) (E) Working Group. This report is in response to the request from the working group to analyze and comprehensively review the H2—Underwriting Risk component and the managed care credit calculation in the health risk-based capital (RBC) formula.

1. Introduction

In this report, the subcommittee presents a discussion of the current H2 — Underwriting Risk factors, key changes affecting health insurers that have impacted underwriting risk since the factors were originally developed, alternative views of underwriting risk from other regulating entities, and a set of targeted recommendations for improving the H2 — Underwriting Risk factors.

Our approach surveyed other methods of evaluating risk, and in particular underwriting risk taken by other risk quantification formulas (e.g., health, life, property and casualty (P&C) RBC formulas; credit rating agencies) and summarized their respective merit for health underwriting risk. The subcommittee recommends a constructive dialogue with the NAIC’s HRBC Working Group to determine the best approach before beginning detailed analysis and factor development.

2. Review of the H2 Risk Factor in Current HRBC Formula

History of H2 in Health Organizations’ Risk-Based Capital Formula

In the early 1990s, the Academy fulfilled a request from the NAIC to assist in the development of a risk-based capital formula - similar to those in place for life Insurers and P&C Insurers - that could be applied to a variety of traditional and nontraditional risk-assuming enterprises in the health insurance space. The objective in developing an RBC formula was to calculate the minimum amount of capital that the reporting entity should hold to support the risk associated with the business venture. In doing so, monitoring and regulatory agencies would be able to identify entities that were exhibiting signals of financial weakness and could take steps to promote their solvency. The RBC formula was also to be constructed in such a way that results would be the same for companies engaged in the same health insurance business activity, regardless of organizational structure.

Over time, refinements have been made leading to today’s health risk-based capital (HRBC) model. Like the life and P&C risk-based capital formulas, multiple risk categories are included in the calculation of the minimum capital amount for an entity. In the case of HRBC, five categories are employed (emphasis added to H2 - Underwriting Risk):

<table>
<thead>
<tr>
<th>Category Title</th>
<th>Abbreviation</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Insurance Affiliates and Misc. Other</td>
<td>H0</td>
<td>This is the risk from the declining value of insurance subsidiaries as well as risk from off-balance sheet and other miscellaneous accounts (e.g., deferred tax assets (DTAs)).</td>
</tr>
<tr>
<td>Asset Risk - Other</td>
<td>H1</td>
<td>This is the risk of asset losses due to default of principal and interest or fluctuation in market value.</td>
</tr>
<tr>
<td>Underwriting Risk</td>
<td>H2</td>
<td>This is the risk of underestimating liabilities from business already written or inadequately pricing business to be written in the coming year.</td>
</tr>
<tr>
<td>Credit Risk</td>
<td>H3</td>
<td>Creditor risk of not recovering receivable amounts owed</td>
</tr>
<tr>
<td>Business Risk</td>
<td>H4</td>
<td>This category includes several miscellaneous risks not captured elsewhere, such as those associated with administrative expenses, administrative services contracts/administrative services only (ASC/ASO) business, guaranty fund assessment, and excessive growth.</td>
</tr>
</tbody>
</table>
To develop the original H2 (underwriting risk) component of the HRBC formula, the Academy employed statistical modeling based on health insurance and provider data available at that time. Stochastic modeling was performed using a five-year modeling time horizon, and formulas and factors were developed to calculate capital levels that allowed each product to remain solvent in 95% of the modeled scenarios. Ultimately, the original modeling was used to develop relative risk values (RVs) for most lines of business which would be referenced by the NAIC to establish risk factors, based on the NAIC’s risk tolerance.

**Calculation of H2 in HRBC Formula**

The total H2 risk charge is calculated through several sub-formulas within the HRBC calculation, denoted as XR013 through XR019. The following is a summary of each sub-formula that contributes to the overall calculation of H2 for a reporting entity:

**XR013 — Underwriting Risk**

For most health reporting entities, underwriting risk constitutes the largest share of the overall risk-based capital charge, representing the general risk of fluctuations in underwriting experience — i.e., the risk that premiums (which are an expected value of future costs and considerations) are insufficient to cover actual plan costs. In such a scenario, the next dollar of cost is funded by the reporting entity’s capital and surplus. Depending on the policy type and the level of provider contracting, the reporting entity may not be fully exposed to this potential fluctuation in claims experience, as the risk may be transferred to another entity (e.g., a provider group or a reinsurer). However, this could introduce a separate and material credit risk that the assuming entity may default on its obligation(s).

To calculate the charge for this risk, six general lines of business are utilized:

1. Comprehensive Medical & Hospital
2. Medicare Supplement
3. Dental and Vision
4. Stand-alone Medicare Part D Coverage
5. Other Health Coverages
6. Other Non-Health Coverages

For each line of business, risk factors are applied to the reported incurred claims for the reporting entity, sourced from the Annual Statement. The risk factors are the same for all reporting entities, but generally decrease as the premiums for a particular line of business increases. Applying the risk factors to the estimated incurred claims generates Base Underwriting Risk RBC. See an illustration in Table 1 of the Underwriting Risk Factors by premium tier:
To the subcommittee’s collective knowledge, aside from the adoption of investment income adjustments into the Comprehensive Medical & Hospital, Medicare Supplement, and Dental and Vision factors in 2021, the premium tiers have not been adjusted over time to capture market dynamics that influence risk, such as medical cost growth.

A Managed Care Credit (sourced from XR018) is then applied to the Base Underwriting Risk RBC, which can reduce the risk charge for certain lines of business if the managed care contracts in place limit the financial risk of adverse claims fluctuations on the reporting entity.

The ultimate calculation of Net Underwriting Risk RBC compares the calculated Underwriting Risk (including the Managed Care Credit) to an Alternate Risk Charge that is dependent on the amount of risk borne by the reporting entity, after adjusting for any reinsurance arrangements.

**XR014 — Annual Statement Source**

This page contains no RBC calculations; however, it does illustrate to the user where information can be retrieved to perform RBC calculations on XR013. Some pieces of information are obtained from the reporting entity’s annual statement, while others must be sourced from internal company records (e.g., all premium and claims data for stand-alone Medicare Part D coverage).
**XR015 — Other Underwriting Risk**

This page contains the risk charge calculation for the following, where the risk charge, unless otherwise specified, is a risk factor applied to earned premium:

1. Business with rate guarantees split by a rate guarantee period of 15 to 36 months and a rate guarantee period of over 36 months
2. Federal Employees Health Benefits Program (FEHBP) and TRICARE, where the risk factors are applied to incurred claims
3. Stop Loss and Minimum Premium
4. Supplemental Benefits within Stand-Alone Medicare Part D Coverage, where the risk factors are applied to incurred claims
5. Medicaid pass-thru payments reported as premium
6. Disability income split by the first $50 million in earned premium and earned premium over $50 million for the following with the risk factor varying by premium tier:
   a. Noncancellable morbidity risk
   b. Other than non-cancellable morbidity risk
   c. Credit monthly balance plans
   d. Group long-term
   e. Credit single premium with additional reserves
   f. Credit single premium without additional reserves
   g. Group short-term

For single premium credit insurance with additional reserves, the premium is reduced for the change in additional reserves held.

The premium and additional reserves used in the risk charge calculation are based on company records.

**XR016 — Long-Term Care (LTC) Insurance Premium/Loss Ratio Experience**

The majority of the risk charge is for morbidity risk plus an additional risk charge for rate risk on noncancellable LTC insurance. The rate risk factor is 0.100 for all noncancellable premium and the morbidity charge is 0.100 and 0.030 for all LTC insurance premiums up to $50 million and over $50 million, respectively.

Then, additional charges for morbidity risk are based on experience. The average loss ratio is calculated for the current and prior year. Actual claims are adjusted to the average loss ratio and this adjusted claim amount is used to calculate the risk charge. The risk charge is calculated as follows:
1. For the first $35 million, the risk factor is 0.250 if current year premium is positive; otherwise, the factor is 0.370.
2. For adjusted claims in excess of $35 million, the risk factor is 0.080 if current year premium is positive; otherwise, the factor is 0.120.
3. A risk factor of 0.050 is applied to LTC Insurance claim reserves.

The premium and claim information used in the risk charge calculation are based on company records.

**XR017 — Limited Benefit Plan**

This page contains the risk charge calculation for the following limited benefit plans:

1. Hospital Indemnity and Specified Disease
2. Accidental Death and Dismemberment
3. Other Accident
4. Premium Stabilization Reserves—this is a credit to RBC and it is limited to the total Underwriting RBC for all lines, excluding stand-alone Part D.

The premium and reserve information used in the risk charge calculation are based on company records.

**XR018 — Underwriting Risk — Managed Care Credit**

The managed care credit seeks to account for volatility in claims costs relative to the coverage period. For instance, if an actuary was aware of capitation rates during the rating cycle, that would improve the likelihood of rate adequacy.

The managed care credit calculation utilizes five factors that reflect the impact of different types of provider contracts on medical claim predictability and volatility. The factor associated with each contract category is applied to the level of incurred claims in that category and an overall discount or credit is calculated based on the relative claims weights. The discount factors have remained unchanged since they were first adopted.

For example, fully capitated provider contracts (i.e., when providers are accepting 100% of the underwriting risk) are generally assumed to provide a health insurer with substantial financial protection and, accordingly, the substantial credit noted in the below table. Other provider contracts may also provide the health insurer with a range of financial protection less than full capitation (e.g., from discounted fee-for-service contracts to partial capitation and/or withholding funds from the provider that may only be paid after financial results have been evaluated against the provider contract agreement). The factors in Table 2 that vary by type of provider contract reflect this range of financial protection for the health insurer.
Table 2.

<table>
<thead>

<td>15%</td>
</tr>
<tr>
<td>Category 2—Bonus / Withhold Arrangements</td>
<td>0-25%</td>
</tr>
<tr>
<td>Category 3—Capitation</td>
<td>60%</td>
</tr>
<tr>
<td>Category 4—Non-Contingent Expenses and Aggregate Cost Arrangements and</td>
<td>75%</td>
</tr>
<tr>
<td>Certain PSO Capitated Arrangements</td>
<td></td>
</tr>
</tbody>
</table>

As Medicare Part D was implemented in 2006, the managed care credit was adapted to include a credit for stand-alone Part D plans in 2009 to reflect the reduction in risk to health plans attributable to the various risk adjustment programs implemented in accordance with the Affordable Care Act (ACA).

**XR019 — Calculation of Category 2 Managed Care Factor**

Category 2 in the managed care credit has a scaling factor determined by how significant the bonus / withhold payments are relative to the total claims subject to these programs. For example, if providers have been paid a 20% bonus on contracts subject to bonus, the managed care credit applicable is 20%.

3. **Evolution in Underwriting Risk Since Original Development of the H2 Risk Factor**

**Changes in Health Care Economics and Provider Systems**

There has been considerable evolution in health economics since HRBC was first developed in the 1990s. The most obvious is the significant rise in the size of the health care sector, which has grown by 6.8% annually over the last 25 years\(^2\), amounting to nearly a fourfold increase over that period. As part of that growth, there have been major regulatory and industry changes as well.

**Changes in Claims Distributions**

Among the many changes brought about by the ACA, is the distribution of claim cost risk. For instance, the elimination of annual and lifetime coverage limits, the elimination of medical underwriting, and the establishment of essential health benefits, while addressing issues from a public policy standpoint, have contributed to higher frequencies of high-cost individual claimants (often referred to as catastrophic claims).

Additionally, there has been significant progress made in modern medicine, both from a medical/surgical and prescription drug standpoint. These advanced procedures and drugs often serve a niche market and can command very high prices. For example, gene therapies driving $1

\(^2\) Center for Medicare and Medicaid Services (CMS) National Health Expenditure Data.
million or higher price tags have become more common, and that trend is likely to continue moving forward.

**Asymmetric Claims Risks**

The profitability distribution for insurance carriers is often asymmetrical due to the introduction of minimum loss ratios and other risk sharing arrangements across many lines of business. In favorable years, carriers are required to rebate premiums to policy holders or government entities, while in unfavorable years they might have to absorb losses.

**Provider Contracting Developments**

The nature of insurer / provider relationships has also evolved significantly over the past 25 years. While fee-for-service payments are still common, there has been a significant increase in risk arrangements, particularly for government lines of business.

Insurance carriers have continued to move providers toward risk-based contracts as providers’ risk tolerances have grown; frequently, this has led to improvement in member medical management and increasing insurer predictability of claims costs. Illustration 1 shows several new ways of contracting that are not currently contemplated in the formula.

**Illustration 1.**
Specific H2 Risk Considerations by Health Insurance Line of Business

Since the HRBC formula was developed, there have been significant changes in the lines of business that make up the health insurance industry. In addition to the introduction of the exchanges through the ACA, Medicare Advantage was implemented, and Medicaid Managed Care has become common for state Medicaid programs. Additionally, the LTC insurance market has changed materially as well.

Commercial Insured—Individual Market

The most significant event contributing to changes in underwriting risk in the individual market was the passage of the ACA in 2010 with the implementation largely phased in through calendar year 2014. Several changes affecting the individual health insurance underwriting risks include (not exhaustive):

- Elimination of annual and lifetime coverage limits
- Minimum medical loss ratio (MLR) requirement of 80%
- Pricing cycle requiring development and approval of rates well in advance of their implementation
- Increasingly robust rate review processes and provisions that influence the risk of adverse rate determinations and administrative actions (e.g., exchange exclusion)
- Elimination of pre-existing condition exclusions
- Revised and limited rating practices
- Risk mitigation programs (e.g., reinsurance, risk corridor, and risk adjustment mechanisms)

Commercial Insured—Small Group Market

Like the individual market, the commercial small group market was drastically altered by the ACA. Though similar changes were put in place (including the same minimum MLR requirement of 80%), it should be noted that usually the small group market is a separate risk pool from the individual market exhibiting its own risk characteristics.

Commercial Insured—Large Group Market and Self-Insured/Administrative Services

The ACA also affected commercial large group products, but to a lesser extent due to ERISA preemption of self-insured benefit programs. The minimum MLR requirement of 85% for large group insured coverage is somewhat more restrictive than the 80% minimums for individual and small group, reflective of the typically higher MLRs for large groups. Notably, there has been advancement in the type of medical insurance plans offered in the marketplace. At the time of original HRBC development, indemnity products were prevalent in the marketplace, with Health Maintenance Organization (HMO) plans offered by managed care organizations (MCOs). However, in the last 25 years, growth in preferred provider organizations (PPOs) and high-deductible health plans (HDHPs) have grown significantly. These products have different benefit
administration and provider payment characteristics than the indemnity products, which are far less prevalent today. For instance, per the Kaiser Family Foundation’s 2021 Employer Health Benefits Survey,³ the proportion of covered workers enrolled in conventional (e.g., indemnity) health plans decreased from 26% in 1996 to ~1% in 2021. During that same period, enrollment in HDHPs, which were not tracked until 2006, has grown to 28%.

In addition, due to potential administrative cost savings of self-insured services and increases in employer risk appetite, there has been a shift from large group fully insured policies (loosely defined as groups with >100 employees) to self-insurance and analogs (e.g., minimum premium arrangements). From a payer underwriting risk perspective, this has reduced the proportion of claims expense and associated risk attributed to large employer groups. However, a corollary to this secular trend has been the growth in employer stop-loss products that hedge the claims risk to these clients.

*Medicare*

Since the creation of the original HRBC formula, four of the largest drivers of change impacting Medicare health insurer underwriting risk have been (1) the growth of the Medicare Population, (2) the creation of Medicare Part C with the Balanced Budget Act of 1997, (3) the creation of Part D prescription drug benefits and the modification of the Medicare Advantage managed care program with the Medicare Prescription Drug, Improvement, and Modernization Act of 2003, and (4) Medicare provisions included in the ACA.

Under the Medicare Part C and Part D programs, beneficiaries can enroll for medical and/or prescription drug coverage under a private-sector payer. In return, the payer receives prospective, risk-adjusted capitation payments and member premiums. Under the ACA, payer capitation payments are tied to operational and clinical quality through the Star quality rating system, and a minimum medical loss ratio requirement of 85% was instituted, capping favorable payer surplus gains.

The net effect of these drivers has been an increase in Medicare spending, growth in the amount of Medicare underwriting risk borne by health payers, and increased complexity in the underwriting risk, due to the nature of risk adjustment, and quality and minimum loss ratio requirements. As a point of comparison, in 1998 under the prior Medicare HMO program, Medicare enrollment through private-sector plans was approximately 6 million.⁴ In 2020, approximately 24 million beneficiaries were served by Medicare Advantage. Medicare Advantage-share of enrollment had grown from 24% in 2010 to approximately 42% in 2021.⁵

⁴ Squire, Daniel et al. *Group Insurance*, 7th Ed. Pg. 139.
⁵ Medicare Advantage in 2021: Enrollment Update and Key Trends | KFF
**Medicaid and CHIP**

Since the inception of the HRBC formula, there has been an overall expansion of the Medicaid program. In addition, there has been a shift to Medicaid Managed Care programs managed by private health payers, as opposed to state-based fee-for-service programs. Two drivers of change impacting health insurer underwriting risk have been (1) the enactment of Title XXI of the Social Security Act, which created the State Children’s Health Insurance Program (CHIP), and (2) Medicaid enrollment expansions provided for in the ACA. As of 2019, 54.2% of all Medicaid expenditures were managed care and provider capitation payments.

Each state is unique in their requirements for Medicaid Managed Care products (i.e., risk adjustment protocols, minimum medical loss ratios, risk corridors, etc.). While a state is not required to establish a minimum medical loss ratio minimum medical loss ratio for Medicaid MCOs, CMS requires that (i) each contract calculate and report its medical loss ratio and (ii) for any state that does establish a minimum medical loss ratio, that the minimum may not be less than 85%.

**Long-Term Care (LTC) Insurance**

There are several characteristics of the LTC insurance market that have evolved since the product’s inception that affect its underwriting risk profile.

When LTC insurance was initially developed, there was little to no applicable experience to use to price the product. As experience developed, the accuracy of the pricing has improved. This has led to three market segments: original (oldest generation) products that are the most underpriced, a middle generation with improved pricing, and a newer generation based on more credible experience leading to more appropriate pricing. The accuracy of the pricing, or lack thereof, impacts the level of rate increases being requested by the insurers, with the older blocks of business typically needing higher rate increases than the newer blocks.

With some exceptions, most insurers are managing closed blocks of business. There are challenges to managing the rates on closed blocks, particularly on the older and smaller blocks. On blocks that are smaller and older, even very large rate increases will generally have little to no impact to the financials of the insurer.

Large, actuarily justified rate increases are typically not being approved by the regulators, and in some cases, not being requested by insurers, due to concern for the impact on the consumer. This is a key difference between LTC insurance repricing and other health blocks. With other health blocks, there typically is not a large discrepancy between actuarially justified, requested, and approved rate increases, as is seen with LTC insurance. Also, because rate increases have been consistently occurring, there may be “rate-increase fatigue” on the part of regulators – leading to potentially fewer or less approvals of rate increases.

Other characteristics and developments in the LTC insurance market that affect the risk profile are the following:
More credible data now exists for mortality and morbidity assumptions, used in rate increase and cash flow testing projections.

The persistent low interest rate environment suppresses investment income.

Possible increased litigation against insurers and reputational risk due to rate actions.

Existence of LTC insurance hybrid products that have a different risk profile than stand-alone LTC insurance products.

Actuarial Guideline (AG)-51—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves.

These developments in the market affect the amount of risk that an insurer bears and may impact the fit-for-purpose of the current RBC H2 framework. Insurers will have different risk profiles that are dependent on the age of the business, the adequacy of rates, and the ability to receive future rate increases, none of which are fully addressed in the current framework.

4. Alternative Views of Underwriting Risk

There are a number of other capital evaluation/requirement frameworks that consider underwriting risk. Based on the subcommittee’s review, several of these frameworks utilize risk quantification measures that would be valuable to consider as part of the health underwriting risk formula. The frameworks we found most instructive were Best’s Capital Adequacy Relativity (BCAR), P&C RBC, Solvency II, and DMHC Tangible Net Equity (TNE) requirements.

BCAR

There are two main components of risk charges for underwriting risk within BCAR—net earned premium risk and reserve risk. The following summaries are based largely on descriptions of the BCAR methodology provided by AM Best.

Net Earned Premium Risk

The net premiums risk is related to risk of underwriting losses on a book of business written in the next year. AM Best created an industry database of profit and losses for each line of business, using each insurer’s historical underwriting profit or loss based on the actual reported results. The industry database was then split based on the size of the net premiums written for that line of business, and statistical methods were applied to create distributions of profit and loss ratios.

The following blocks of business are evaluated separately:

---

6 California Department of Managed Health Care
When calculating company-specific capital requirements, the industry factors can be adjusted based on the rating unit’s own historical profitability. Implicitly, this assumes that historical underwriting performance is correlated with future underwriting performance. The company-specific factors are based on the most recent three years of profitability and can adjust the base factors by as much as 20% (positively or negatively). Like the H2 component of the health RBC formula, the rating unit’s current year written premium is used in the model as a proxy for the premium to be written next year. Using this assumption, the company-specific factors are applied to current year premium to calculate the capital requirement.

Reserving Risk

Unlike health RBC, BCAR includes a reserving risk component as part of underwriting risk. The applied risk charges are intended to cover the possibility of negative reserve development due to adverse claims experience. Like premium risk, AM Best’s reserve risk factors are based on an industry database of each company’s reserve adequacy generated from the annual statements by line of business and a company’s specific experience can adjust the base factor by as much as 20%. The BCAR formula utilizes the following reporting segments to develop reserving risk factors.
Diversification Credit

AM Best calculates diversification factors using correlation matrices based on industry-aggregated data across lines of business—for both premium risk and reserving risk. This intent behind the calculation is that often underwriting profits and losses in one line of business might offset underwriting profits and losses in another line of business. Similar to written premium, because reserves are largely set based on line of business, adverse or favorable reserve development for one line of business might offset development for another line of business.

Managed Care Credit

The managed care credit within the BCAR formula reflects the reduction in the overall premium risk charge for companies with managed care arrangements that reduce uncertainty regarding future claim payments.

This credit is reduced for the risk that the MCO will pay the capitation to a provider but not receive the agreed-upon services and will encounter unexpected expenses in arranging for alternative coverage, essentially introducing a credit risk that a provider might default on its obligations. This credit risk charge is based on the contractual relationship between the MCO and a provider. Higher credit risk charges apply to capitation payments made to unaffiliated or third-party care providers than to capitation payments made to affiliated care providers.

P&C RBC

Similar to BCAR, P&C underwriting risk is broken into two components in the P&C RBC formula: reserves and net written premiums.

Reserve Risk

The reserve risk RBC is developed by multiplying a set of RBC factors, which are discounted for investment income and adjusted for each individual company’s own relative experience of its net reserves for each line of business. The reserve risk is also adjusted downward with a credit for diversification among the lines of business.

The major lines of business largely correspond to the breakdowns in the annual statement (e.g., the Underwriting and Investment Exhibit). Calculations for some, generally smaller, lines are combined.

Net Written Premium

The net written premium component is developed by multiplying a risk factor (based on an analysis historical industry-wide underwriting performance at the 87.5th percentile) by the current year’s net written premiums, by line of business. The actual risk charge is based on the excess of a discounted combined ratio adjusted for investment income over 100%. As with the reserve risk factors, individual company experience is also considered in computing the RBC factor.
Solvency II

Solvency II divides health insurance into Similar to Life Techniques (SLT) and Non-Similar to Life Techniques (Non-SLT)—the distinction based on how products are priced. Products like long-term care insurance and individual disability income insurance would likely be examples of SLT Health, while typical medical products would be examples of Non-SLT Health.

The nature of how the Solvency II capital requirement is constructed is very different between SLT Health and Non-SLT Health. Solvency II discusses three main risks for Non-SLT Health:

1. Premium Risk
2. Reserve Risk
3. Catastrophe (CAT) risk

The time horizon for Solvency II is one year. In keeping with that, the definition of premium risk relates to both unexpired risks on existing contracts and policies to be written/renewed during the coming year. As a result, the inputs into the Solvency II calculation are prospective in nature, rather than retrospective in nature like current HRBC. The issuer is expected to estimate not just its expected premiums for the coming year from the unexpired term on existing contracts, but also its expected premiums for the coming year on both new and renewal business. Keeping with the one-year time horizon, the focus is on the risk of loss within the coming year and not on the risk of cumulative losses over a longer time frame.

DMHC Tangible Net Equity (TNE)

The DMHC\textsuperscript{7} maintains a simple capital requirement driven by underwriting risk. Full-service health plans must maintain a TNE of at least:

1. $1 million; or
2. the sum of two percent (2%) of the first $150 million of annualized premium revenues plus one percent (1%) of annualized premium revenues in excess of $150 million; or
3. an amount equal to the sum of:
   (A) eight percent (8%) of the first $150 million of annualized health care expenditures except those paid on a capitated basis or managed hospital payment basis; plus
   (B) four percent (4%) of the annualized health care expenditures, except those paid on a capitated basis or managed hospital payment basis, which are in excess of $150 million; plus
   (C) four percent (4%) of annualized hospital expenditures paid on a managed hospital payment basis.

This approach of excluding capitated payments demonstrates one potential approach for the managed care credit. It is worth noting that risk-bearing organizations (i.e., those that accept capitation) are regulated by the DMHC and themselves must meet minimum capital requirements, and requirements for risk-bearing organizations vary considerably from state-to-state.

\textsuperscript{7} Cal. Code Regs. Title 28, §1300.76 - Plan Tangible Net Equity Requirement.
5. Options for Better Aligning H2 Risk Factors to Economic Risk

Based on the subcommittee’s review of the current H2 risk factors, the evolution of health insurance underwriting risk since those risk factors were originally contemplated, and the alternative approaches utilized by other regulating entities, we recommend further study and potential implementation of, the following changes to the H2 underwriting risk factors.

1. Refresh factors based on updated insurer data
2. Develop factors at a more granular product level
3. Develop factors specific to more relevant block sizes and consider an indexing factor for cut points to change over time
4. Model risk factors over an NAIC-defined prospective time horizon with a defined safety level that can be refreshed regularly
5. Refresh of managed care credit formula and factors to be more relevant and reflective of common contracting approaches and other risk factors associated with these contracting approaches
6. Analyze long-term care insurance underwriting performance to create a more nuanced set of risk factors that considers pricing changes over time

Refresh factors based on updated insurer data

Because the underwriting risks taken by health insurers has changed significantly since many of the H2 underwriting risk factors were adopted, we recommend utilizing updated data to understand the current risk profile of health insurers. This could be achieved utilizing underwriting performance and volatility over the past 10 years—between 2011 and 2020—to consider pre-ACA, post-ACA and pandemic years to create new risk factors.

Develop factors at a more granular product level

Because many health products carry a range of underwriting risk—even within comprehensive medical coverage—a more detailed product view can be utilized to create new risk factors. For example, Commercial Group and Individual products are currently both included within the Comprehensive Medical column but have significantly different levels of volatility and associated financial risk.

This recommendation could be accomplished in the immediate term by utilizing reporting data from Page 7—Analysis of Operations by Line of Business. Over time, factors should be developed even more granularly. This can be accomplished by utilizing the Accident and Health Policy Experience Exhibit but would either require a change to when that filing would be submitted or via company records within the RBC filing.

Develop factors specific to more relevant block sizes and consider an indexing factor for cut points to change over time

As blocks grow, underlying volatility declines given the law of large numbers, but the relevant cut points to reflect that decline in volatility are likely well above what is currently utilized within the Underwriting Risk formula (e.g., $3M, $25M). Given the high prevalence of claimants
reaching costs well in excess of anything contemplated 20 years ago, these cut points should be revised to reflect more relevant block sizes and shifts in volatility.

Model risk factors over an NAIC-defined prospective time horizon with a defined safety level that can be refreshed regularly

Because risk factors are applied to historical claims to calculate capital buffers for losses against future premiums, the updated risk factor analysis should analyze prospective future losses over a defined time horizon. There are a range of defensible time horizons and safety levels that could be utilized within the risk factor modeling. While a one-year time horizon is most common, multiyear horizons could arguably better reflect the underwriting cycle. A range of safety levels could also be reasonably justified. Ultimately, these two modeling elements require regulatory discretion but should be well-defined and generally consistent over time to enable business management.

Refresh of managed care credit formula and factors to be more relevant and reflective of common contracting approaches and other risk factors associated with these contracting approaches

Because many of the common provider contracting mechanisms that existed when the factors were originally created are no longer widely used, an update to the managed care credit would better account for approaches like gain sharing and bundled payments. Additionally, the subcommittee encourage revisiting the bonus calculation for Category 2 claims in light of typical bonus levels available to providers and whether those bonuses have reduced underwriting volatility for health plans.

Analyze long-term care insurance underwriting performance to create a more nuanced set of risk factors that considers pricing changes over time

Because the underwriting environment for LTC insurance policies has undergone multiple somewhat discrete phases, it would likely be appropriate to evaluate LTC insurance underwriting risk charges according to the groups of policy issue years (e.g., before 2000, between 2000 and 2010, after 2010).

6. Potential Next Steps for Working Group Consideration

As a next step, the Subcommittee recommends first focusing on developing new factors on XR013 and XR018/XR019 consistent with recommendations 1 - 6 above. This would involve collecting historical statutory financial data from the analysis of operations by lines of business as well as Exhibit 7 Part 1—Summary of Transactions with Providers. Then, a data analysis exercise would be required to develop risk factors at a range of safety levels for the working group’s consideration.

Following that analysis, other underwriting risk factors (e.g., those on XR015 and XR016) could be evaluated utilizing the working group-approved approach—likely with special consideration for LTC insurance.
Thank you for the opportunity to provide this report in response to the request of the working group to provide analysis to perform a comprehensive review of the H2—Underwriting Risk component and the managed care credit calculation within the health RBC formula. We welcome the opportunity to speak with you in more detail and answer any questions you might have regarding this report. If you would like to discuss anything pertaining to this report and its recommendations, please contact Matthew Williams, the Academy’s senior health policy analyst, at williams@actuary.org to make arrangements.

Sincerely,
Derek Skoog, MAAA, FSA

DESCRIPTION OF CHANGE(S)
Incorporate benchmarking guidelines for the Working Group to follow in updating the investment income adjustment in the underwriting risk factors for Comprehensive Medical, Medicare Supplement and Dental & Vision.

REASON OR JUSTIFICATION FOR CHANGE **
The reason for the change is to clearly identify the frequency and parameters to use in adjusting the underwriting risk factors for investment income in the Comprehensive Medical, Medicare Supplement and Dental & Vision lines.

Additional Staff Comments:
11-4-21 cgb The WG exposed for 30-day public comment period ending on Dec. 3, 2021.
12-16-21 cgb One comment letter received.
12-16-21 cgb The Working Group adopted the proposal.

The investment income yield was incorporated into the Comprehensive Medical & Hospital, Medicare Supplement and Dental & Vision lines of business. The purpose was to incorporate an offset to reduce the underwriting risk factor for investment income earned by the insurer. The Working Group incorporated a 0.5% income yield that was based on the yield of a 6-month US Treasury Bond. Each year, the Working Group will evaluate the yield of the 6-month Treasury Bond as of January 1st and determine if further modifications to the 0.5% adjustment are needed. Any adjustments will be rounded up to the nearest 0.5%.

Alternative Language:

The investment income yield was incorporated into the Comprehensive Medical & Hospital, Medicare Supplement and Dental & Vision lines of business. The purpose was to incorporate an offset to reduce the underwriting risk factor for investment income earned by the insurer. The Working Group incorporated a 0.5% income yield that was based on the yield of a 6-month US Treasury Bond. Each year, the Working Group will evaluate the yield of the 6-month Treasury Bond (U.S. Department of the Treasury) on each Monday through the month of January and determine if further modifications to the 0.5% adjustment are needed. Any adjustments will be rounded up to the nearest 0.5%.
Health Risk-Based Capital (E) Working Group
Virtual Meeting
December 16, 2021

The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met Dec. 16, 2021. The following Working Group members participated: Steve Drutz, Chair (WA); Wanchin Chou (CT); Tish Becker (KS); Tom Dudek (NY); Kimberly Rankin (PA); and Aaron Hodges and Matthew Richard (TX).

Mr. Drutz said the Working Group adopted a previous proposal to incorporate a 0.5% investment income adjustment in the underwriting risk factors and agreed to draft guidance and benchmarks for updating the adjustment on an annual basis. These benchmarking guidelines were exposed under proposal 2021-18-H for a 30-day public comment period. The Working Group received one comment letter from UnitedHealth Group (UHG).

Jim Braue (UHG) summarized the comment letter (Attachment Three-C1). He said the letter addressed two key points: the maturity assumption and the reference period. He said UHG believes the assumption period of six months is still very conservative because even fairly conservative assumptions of business runoff would produce a rate of somewhere in the one- to two-year range. He said UHG understands the concern about consistency with rate filings; however, this is a company-specific issue that would have to be addressed through the filings process, and risk-based capital (RBC) must be based on broad assumptions. He said the proposed rounding adjustment could alleviate some of the difference; however, depending on the slope of the yield curve, using a six-month rate with that rounding adjustment could still produce something that is either too low or too high.

Mr. Braue said the second key point of the UHG letter relates to the reference period and the proposed wording that the Working Group will evaluate the yield as of Jan. 1 each year. He said taken literally, that would mean using the rate as of Jan. 1, and fixed income markets will typically be closed and a rate will normally not be published. He also noted that using a single day is probably not optimal because there could be some anomalous results due to a news report that came out the day before that could result in a dramatic change to the rate one day and recover the next. He suggested using a short period, such as the first 10 business days of the year.

Mr. Drutz said the current language states that the Working Group will evaluate the yield as of Jan. 1 each year. He said taken literally, that would mean using the rate as of Jan. 1, and fixed income markets will typically be closed and a rate will normally not be published. He also noted that using a single day is probably not optimal because there could be some anomalous results due to a news report that came out the day before that could result in a dramatic change to the rate one day and recover the next. He suggested using a short period, such as the first 10 business days of the year.

Mr. Chou made a motion, seconded by Ms. Rankin, to adopt proposal 2021-18-H (see NAIC Proceedings – Spring 2022, Capital Adequacy (E) Task Force, Attachment Three-B3). The motion passed unanimously.

2. Exposed Health Test Language Proposal

Mr. Drutz said the Health Test Ad Hoc Group draft recommended changes to the health test language (Attachment Three-C2) within the Annual Statement Instructions. Revisions included: 1) references in the health General Interrogatories; 2) a sentence regarding separate accounts in the life health test language; 3) deleted the requirements for licensed and actively writing in five states or less, 75% of the current premiums are written in the domiciliary state, and the “or” statement for the premium and reserve ratio equal to 100% in both the life and property/casualty (P/C) health test language; 4) updates to the reference pulls in the life General Interrogatories from the Life RBC to the Analysis of Operations by Lines of Business – Accident and Health; and 5) updates to the reference pulls in the P/C General Interrogatories from the P/C RBC to the Underwriting and Investment Exhibit,
Part 1B in the current year column. Mr. Drutz noted that the references in the life General Interrogatories could be further refined if the health test language is adopted by the Blanks (E) Working Group. He also noted that the prior year column in the P/C General Interrogatories will be updated in subsequent years, as the changes for the Underwriting and Investment Exhibit, Part 1B are only effective beginning in 2022.

Mr. Drutz said the Health Test Ad Hoc Group will continue to discuss and evaluate if there will be further recommendations to the premium and reserve ratios; however, these recommendations will be considered on a separate proposal for 2023 or later.

Hearing no objections, the Working Group agreed to expose the health test language proposal for a 40-day public comment period ending Jan. 24. The exposure will be distributed to both the Health Risk-Based Capital (E) Working Group and the Life Risk-Based Capital (E) Working Group.

3. **Discussed Other Matters**

Mr. Drutz said the Financial Condition (E) Committee approved the formation of the Risk-Based Capital (RBC) Investment Risk and Evaluation (E) Working Group at its Dec. 13 meeting. Philip Barlow (DC) will chair the Working Group. The Capital Adequacy (E) Task Force will meet Dec. 20 to review the charges and responsibilities of the Working Group. Interested members should contact Jane Barr (NAIC) for either membership or interested regulator participation.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.
November 30, 2021

Mr. Steven Drutz, Chair
Health Risk-Based Capital (E) Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO  64106-2197

Via electronic mail to Crystal Brown.

Re:  Proposal 2021-18-H.

Dear Mr. Drutz:

I am writing on behalf of UnitedHealth Group in regard to Proposal 2021-18-H, as exposed for comment on 11/4/21.  As we have stated in previous comment letters, we are supportive of investment income being reflected in the Health Risk-Based Capital formula, and we appreciate the work that your Working Group has done to implement that concept.

Proposal 2021-18-H bases the investment income adjustment on “the yield of the 6-month Treasury bond as of January 1st each year.”  We will comment on two aspects of this proposal: the 6-month maturity assumption and the January 1 reference period.

Six-month maturity assumption.

As explained in our comment letters of 1/6/21 and 4/16/21, we believe that a longer maturity assumption than 6 months is warranted.  In particular, we have suggested that a 5-year maturity assumption would be reasonable, given that the bond risk factors were based on an assumed 5-year maturity.  The same portfolio that generates the bond risk is also generating the investment income that is being reflected in the underwriting risk factors.

Two objections have been raised to using a 5-year maturity: a concern about asset/liability mismatch; and a concern about consistency with premium rate filings.  We will address both concerns below.

1. Asset/liability mismatch.

Considerable emphasis has been placed on the fact that most claims are paid within a few months of when they were incurred.  The analysis that the American Academy of Actuaries
performed to determine the investment income adjustment indicated that the average lag until payment for a comprehensive medical claim is less than two months. However, as we noted in our 1/6/21 letter, the run-out period of a single incurral date’s claims is not really relevant from an investment standpoint. As a going concern, a health entity does not repeatedly run its assets down to zero as claims are paid; there is a continual inflow of cash from premiums and other revenues, and investments are held for a longer term. Generally speaking, investment maturities would not be needed for as long as the entity’s business is stable or growing, except in cases where cash outflows exceeded cash inflows because of abnormally high levels of claims or other expenses.

Over what period might we assume that an entity’s volume of business will remain stable? For purposes related to the underwriting risk charges, we can look at what the Academy assumed in developing those charges. In the December 1994 report (as revised) of the Academy’s Health Organizations Risk Based Capital Task Force to the NAIC’s Health Organizations Risk-Based Capital Working Group, the Academy explained the following about the model used in determining the underwriting risk charges:

The purpose of this model is to simulate the financial results of a block of business over a five year period. … The block of business that is simulated is assumed to represent a stationary population. This means that as old business lapses, new business is written, and the characteristics of the inforce remains steady over time.

This, by itself, would suggest that a five-year investment maturity is indeed consistent with the assumptions underlying the development of the underwriting risk factors. It might be legitimately objected that, while the Academy may have evaluated risk assuming five years of steady volume, the modeled entity would not necessarily have made that same assumption in its investment strategy. That is true, but likewise the entity would not necessarily assume the imminent termination of all of its business. The use of a six-month maturity assumption could mean, as an example, that the entity expected more than 50% of its business to be terminated immediately, and the remainder to be terminated in one year. (The percentage is “more than” 50% because the run-off of the claims would add, as noted above, something more than a month to the average maturity.) While some entities, with concerns about the stability of their business, might make such an assumption, it does not seem like a reasonable assumption for the broad majority of entities covered by the Health RBC formula.

During a previous discussion, one regulator pointed out that, while immediate termination of most or all of an entity’s business might not be a reasonable assumption, in some markets a 30% termination rate would be quite reasonable. Consider that, if 30% of an entity’s business terminated immediately (net to any new business added), and another 30% of the remaining business terminated at the beginning of each subsequent year, on average the business would be on the books for about 2.3 years. If we wanted to be more conservative than to assume that the 30% annual termination continued indefinitely, and instead assumed that all remaining business would terminate at the end of the third year, the average life of the business would still be more than 1.5 years. Because that number represents an average, and because the yield curve is currently convex upwards, the resulting interest rate might
correspond to a maturity somewhat less than 1.5 years, but still more than one year. To reduce that rate further, to represent a six-month maturity, seems overly conservative.

Another potential objection is that the RBC formula does in fact assume that there will be losses, and that therefore cash outflows might indeed be assumed to exceed cash inflows, resulting in a need for shorter maturities. However, two things should be considered: first, that the underwriting risk charges (approximating the excess outflows) will in most cases be less than the claim reserves; and second, that the underwriting risk charges represent a cumulative loss over five years, which would not necessarily all need to be funded in the first year or two. Therefore, the capital that covers the excess outflows would not necessarily be invested to a shorter horizon than the claim reserves themselves, and accordingly would not significantly impact the average maturity of the investment portfolio.

In summary, even rather conservative assumptions about business volume would lead to an assumed maturity in the range of one to two years. Less conservative assumptions could easily justify a maturity above two years, since, for example, an entity experiencing a 30% loss of business might adjust its pricing and/or marketing to reduce further losses, rather than allow the 30% to continue or worsen.

2. Consistency with premium rate filings.

Regulators have raised the concern that the assumption of any non-trivial amount of investment income would be inconsistent with the assumptions that they have seen in premium rate filings, where, they state, investment income is typically dismissed as being immaterial. First, we must note that there may legitimately be differences between what is assumed for RBC purposes and what is assumed for rate filings, because of, for instance, differing standards of materiality.

However, even if we suppose that the same assumption should be used for both purposes, it does not follow that the rate filings should be driving the RBC outcome. RBC should be based on the best available data and reasoning. If those data and rationales seem at odds with what is being assumed elsewhere, it is those other assumptions that should be considered suspect.

Further, we point out that the RBC formula is applied to a broad population of health entities, whereas rate filings are entity-specific. If a regulator is concerned about whether an entity has appropriately reflected investment income in its rate filing, that entity can be required to provide further justification for its assumptions. RBC, on the other hand, must be appropriate for a wide variety of circumstances, and there is a practical limitation on how much it can be tailored to individual entities.

In summary, it does not seem appropriate to base RBC assumptions on what is depicted in premium rate filings.

We recognize that the proposal to round the investment income rate up to the next higher multiple of 0.5% was intended, at least in part, to effectively lengthen the maturity assumption.
However, while a fix of that sort might produce a reasonable result at a given point in time, it is unlikely to work properly in the long term. When the yield curve has a steep positive slope, the adjustment will be inadequate. When the yield curve is flat or, especially, inverted, the adjustment will be excessive. To avoid such outcomes, the maturity assumption should be set appropriately, and a lesser degree of rounding should be used.

In regard to that rounding convention, we will also note that the proposal states, “Any adjustments will be rounded up to the nearest 0.5%.” We suggest that, to avoid confusion, the sentence should begin, “The investment income yield will be rounded …” The word “adjustment” might be construed to mean the change in the underwriting risk factor, rather than the yield assumption underlying that change.

January 1 reference period.

Proposal 2021-18-H provides, “The Working Group will evaluate the yield of the 6-month Treasury bond as of January 1st each year …” We have some concerns regarding the phrase “as of January 1st.” To begin with, the fixed income markets typically will not be open on January 1, and many rate sources (e.g., the U.S Treasury department’s Daily Treasury Yield Curve Rates) will not supply a value for that date, leaving open to question what value should be used. More importantly, it may be inadvisable to use any single date as the basis for the yield determination, because the rate on a single date may be anomalous, e.g., because of overreactions to certain news items. It would be better to use the average yield over a somewhat longer period, such as the first ten business days of the year, or even the first month of the year. This would tend to minimize the impact of any one anomalous rate, while still allowing the determination to be made early in the calendar year.

Anticipated Effective Date:

**IDENTIFICATION OF ITEM(S) TO CHANGE**

Revise the Health Annual Statement Test language

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of the change is to move those filers who write predominantly health business and file on the life blank to begin filing on the health blank.

**NAIC STAFF COMMENTS**

Comment on Effective Reporting Date:

Other Comments:
The Health Test Ad Hoc Group of the Health Risk-Based Capital (E) Working Group continues to discuss and review any potential modifications to premium and reserve ratios. The group will continue to evaluate if there should be changes and if so, will propose this to the Blanks (E) Working Group in a separate proposal for consideration in future years.

The references to the Life & Property & Casualty General Interrogatories were changed from pulling from RBC to instead pull from the Analysis of Operations By Lines of Business – Accident and Health and Underwriting & Investment Exhibit, Part 1B, respectively. The life General Interrogatory references will be further updated if proposal 2021-17BWG is adopted.

**This section must be completed on all forms.**

Revised 7/18/2018
Health

GENERAL

The annual statement is to be completed in accordance with the Annual Statement Instructions and Accounting Practices and Procedures Manual except to the extent that state law, rules or regulations are in conflict with these publications. In cases of conflict, the health annual statement will be filed pursuant to such state’s filing requirements. The domiciliary state’s insurance regulatory authority shall maintain full discretion in determining which NAIC annual statement blank must be filed. The annual statement blank filed with the domiciliary state shall be the blank submitted to, and maintained by, the NAIC, and barring conflict as described above, should be filed with all jurisdictions in which the reporting entity is licensed.

1. Health Statement Test:

If a reporting entity completes the health annual statement for the reporting year, the reporting entity must complete the Health Statement Test.

The Health Statement Test is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers’ compensation, accidental death and dismemberment policies and long-term care policies.

Passing the Test:

A reporting entity is deemed to have passed the Health Statement Test if the values for the premium and reserve ratios in the Health Statement Test equal or exceed 95% for both the reporting and prior year.

Failing the Test:

If a reporting entity, licensed as a life, accident and health or property and casualty insurer in its domiciliary state, is required to file the health annual statement for the reporting year and does not pass the Health Statement Test in the reporting year, it will revert to the annual statement form and risk-based capital report associated with the type of license held in its domestic state in the first quarter of the second year following the reporting year. If a reporting entity, licensed as a health insurer in its domiciliary state, is required to file the health annual statement for the reporting year and does not pass the Health Statement Test in the reporting year, it should continue to file the health annual statement.

Variance from following these instructions:

If a reporting entity’s domestic regulator requires the reporting entity to complete an annual statement form and risk-based capital report that differs from these instructions, the domestic regulator shall notify the reporting entity in writing by June 1 of the year following the reporting year in which a Health Statement Test is submitted.

General Interrogatories

2. This General Interrogatory is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers’ compensation, accidental death and dismemberment policies and long-term care policies.

All reporting entities should file the test.

Premium and reserve information is obtained from the annual statement sources referenced on the form or from the related risk-based capital report for the corresponding premium descriptions relating to the current and prior reporting periods.

**Life, Accident and Health /Fraternal**

**Health Test**

**GENERAL**

The annual statement is to be completed in accordance with the *Annual Statement Instructions* and *Accounting Practices and Procedures Manual* except to the extent that state law, rules or regulations are in conflict with these publications. In cases of conflict, the life, accident and health annual statement will be filed pursuant to such state’s filing requirements. The domiciliary state’s insurance regulatory authority shall maintain full discretion in determining which NAIC annual statement blank must be filed. The annual statement blank filed with the domiciliary state shall be the blank submitted to, and maintained by, the NAIC, and barring conflict as described above, should be filed with all jurisdictions in which the reporting entity is licensed.

1. **Health Statement Test:**

   If a reporting entity is licensed as a life and health insurer and completes the life, accident and health annual statement for the reporting year, the reporting entity must complete the Health Statement Test. However, a reporting entity that is required to also file the Separate Accounts Statement is not subject to the results of the Health Statement Test, and should continue to complete the life, accident and health/fraternal blank.

   The Health Statement Test is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers’ compensation, accidental death and dismemberment policies and long-term care policies.

   **Passing the Test:**

   A reporting entity is deemed to have passed the Health Statement Test if:
The values for the **premium and reserve ratios in the Health Statement Test equal or exceed 95% for both the reporting and prior year.**

**AND**

The entity passing Health Statement Test is licensed and actively issuing and/or renewing business in five states or less.

**AND**

At least seventy-five percent (75%) of the entity’s current year premiums are written in its domiciliary state.

**OR**

The values for the premium and reserve ratios in the Health Statement Test equal 100% for both the reporting and prior year, regardless of the number of states in which the entity is licensed.

If a reporting entity is a) licensed as a life and health insurer; b) completes the Life, Accident and Health annual statement for the reporting year; and c) passes the Health Statement Test (as described above), the reporting entity must complete the health statement beginning with the first quarter’s statement for the second year following the reporting year in which the reporting entity passes the Health Statement Test and must also file the corresponding risk-based capital report and the life supplements for that year-end.

**Variances from following these instructions:**

If a reporting entity’s domestic regulator requires the reporting entity to complete an annual statement form and risk-based capital report that differs from these instructions, the domestic regulator shall notify the reporting entity in writing by June 1 of the year following the reporting year in which a Health Statement Test is submitted.

**General Interrogatories**

2. This General Interrogatory is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers compensation, accidental death and dismemberment policies and long-term care policies.

All reporting entities should file the test.

Premium and reserve information is obtained from the annual statement sources referenced on the form or from the related risk-based capital report for the corresponding premium descriptions relating to the current and prior reporting periods.

Property/Casualty

Health Test

GENERAL

The annual statement is to be completed in accordance with the Annual Statement Instructions and Accounting Practices and Procedures Manual except to the extent that state law, rules or regulations are in conflict with these publications. In cases of conflict, the property and casualty annual statement will be filed pursuant to such state’s filing requirements. The domiciliary state’s insurance regulatory authority shall maintain full discretion in determining which NAIC annual statement blank must be filed. The annual statement blank filed with the domiciliary state shall be the blank submitted to, and maintained by, the NAIC, and barring conflict as described above, should be filed with all jurisdictions in which the reporting entity is licensed.

1. Health Statement Test:

If a reporting entity is licensed as a property and casualty insurer and completes the property and casualty annual statement for the reporting year, the reporting entity must complete the Health Statement Test.

The Health Statement Test is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers’ compensation, accidental death and dismemberment policies and long-term care policies.

Passing the Test:

A reporting entity is deemed to have passed the Health Statement Test if:

The values for the premium and reserve ratios in the Health Statement Test equal or exceed 95% for both the reporting and prior year.

AND

The entity passing Health Statement Test is licensed and actively issuing and/or renewing business in five states or less.

AND

At least seventy-five percent (75%) of the entity’s current year premiums are written in its domiciliary state.

OR

The values for the premium and reserve ratios in the Health Statement Test equal 100% for both the reporting and prior year, regardless of the number of states in which the entity is licensed.

If a reporting entity is a) licensed as a property and casualty insurer; b) completes the property and casualty annual statement for the reporting year; and c) passes the Health Statement Test (as described above), the reporting entity must complete the health statement beginning with the first quarter’s statement for the second year following the reporting year in which the reporting entity passes the Health Statement Test and must also file the corresponding risk-based capital report and the property/casualty supplements for that year-end.

Variances from following these instructions:
If a reporting entity’s domestic regulator requires the reporting entity to complete an annual statement form and risk-based capital report that differs from these instructions, the domestic regulator shall notify the reporting entity in writing by June 1 of the year following the reporting year in which a Health Statement Test is submitted.

**General Interrogatories**

2. This General Interrogatory is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers compensation, accidental death and dismemberment policies and long-term care policies.

All reporting entities should file the test.

Premium and reserve information is obtained from the annual statement sources referenced on the form or from the related risk-based capital report for the corresponding premium descriptions relating to the current and prior reporting periods.

(a) Alternative Reserve Numerator – Company records may be used to adjust the reserve numerator to provide consistency between the values reported in the reserve numerator (2.4) and the premium numerator (2.1).
The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met March 23, 2022. The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Thomas Reedy (CA); Wanchin Chou (CT); Sean Collins (FL); Mike Yanacheak and Carrie Mears (IA); Vincent Tsang (IL); Fred Andersen (MN); William Leung (MO); Derek Wallman (NE); Kevin Clarkson (NJ); Bill Carmello and Amanda Fenwick (NY); Andrew Schallhorn (OK); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. Adopted its March 10, 2022; Jan. 10, 2022; Dec. 16, 2021; and 2021 Fall National Meeting Minutes

The Working Group met March 10, 2022; Jan. 20, 2022; and Dec. 16, 2021. During these meetings, the Working Group took the following action: 1) discussed the American Academy of Actuaries’ (Academy’s) recommendation on mortality; 2) exposed the changes to the asset valuation reserve (AVR) for a public comment period ending March 25; 3) discussed the Academy’s comment letter on longevity reinsurance; and 4) adopted the guidance document on bond factor changes.

Mr. Yanacheak made a motion, seconded by Mr. Reedy, to adopt the Working Group’s March 10, 2022 (Attachment Four-A); Jan. 20, 2022 (Attachment Four-B); Dec. 16, 2021 (Attachment Four-C); and Nov. 9, 2021 (see NAIC Proceedings – Fall 2021, Capital Adequacy (E) Task Force, Attachment Three) minutes. The motion passed unanimously.

2. Adopted its Working Agenda

Mr. Barlow said a request to add two items to the working agenda was received. Dave Fleming (NAIC) said one was to add the C-2 mortality work being done and another was to add an item for securities lending as it relates to the C-0 charge. Mr. Barlow suggested adding the C-2 item but not the C-0 item as it has yet to be discussed by the Working Group and could affect the other risk-based capital (RBC) formulas.

Mr. Yanacheak made a motion, seconded by Mr. Leung, to adopt the Working Group’s working agenda (see NAIC Proceedings – Spring 2022, Capital Adequacy (E) Task Force, Attachment Eleven) with the modification to add the C-2 item. The motion passed unanimously.

3. Discussed Reinsurance and Comfort Trusts

Andrew Holland (Sidley Austin LLP) said he is presenting on behalf of J.P. Morgan and thanked the Working Group for the opportunity to introduce this topic (Attachments Four-D and Four-E). He said life reinsurance transactions with licensed or accredited reinsurers would not require collateral in order to receive credit for that reinsurance. He said the life RBC instructions provide for an adjustment when there is a reinsurer that is licensed or accredited, but collateral is nonetheless provided, whether it is funds withheld or trusteed collateral, to prevent an overstatement of RBC. He said there are many life reinsurance transactions done where, notwithstanding a licensed or accredited status, the parties agree to the provision of collateral and when that collateral is provided, it is often something that is not a pure statutory credit for reinsurance trusts, but something referred to as a comfort trust. For a ceding company to avail itself of the RBC credit with the current instructions, he said the collateral needs to be in the form of a trust. He said what is being introduced to the Working Group is another collateral mechanism, which is the functional equivalent with a request to amend the instructions to provide for...
a similar credit. Mr. Holland stated that the comfort trust is a custodial account that is established by the reinsurer that is coupled with an account control agreement in favor of the ceding company and provides the same benefits that a trust agreement does. He said the collateral is provided by the reinsurer and acts as security to the ceding company, where the ceding company has the ability to draw down on that collateral. He said this is an interesting time to discuss this topic given the implementation of the reciprocal jurisdiction reinsurer provisions, which stand to loosen the requirement for statutory collateral going forward.

Phil Prince (J.P. Morgan) made the point that custody control accounts are widely used in the finance industry already. He said it is the way in which collateral is held for pledges to the Federal Home Loan Banks (FHLBs), as well as being used in the derivatives area. He said J.P. Morgan has thousands of these custodial control accounts already in place and has a much smaller number of insurance trusts, as those are a much more narrowly used mechanism, and they are asking that custody control accounts be treated in the same manner for purposes of the RBC calculation. Brian Eckert (J.P. Morgan) described how custody control accounts offer the same operational control as a trust arrangement but at a reduced cost due to a larger number of providers and automation. Brad Drake (J.P. Morgan) described the specific instructional changes requested, which he said provides a specific definition of custodied collateral.

Mr. Andersen asked about liquidation of the reinsurer and how the ceding company would be taken care of. Similar to a trust arrangement where the mechanism for segregating assets is through the transfer to a trustee, Mr. Drake said it is the control agreement, paired with the custody account, which creates the security interest and makes the ceding company a secured creditor and provides the same functionality as a trust. Mr. Tsang said it would be beneficial to the Working Group to have a sample transaction to review to see that the cash flows, and the end result, work as they are being described and that there are no risks unaccounted for between the different structures. Mr. Holland said they would be happy to provide sample documentation. Mr. Barlow said the Working Group will continue discussion on this topic as that additional information is provided.

4. Discussed Bond Funds

Michael Ceccarelli (Vanguard) presented the proposal (Attachment Four-F). He said clients have long asked why most bond mutual funds are not afforded RBC treatment aligned with their underlying bond holdings. Instead, the current standard is that most bond mutual funds receive an equity charge of 30%, despite owning the same bonds that are directly owned by insurers and receive C-1 bond factors. Mr. Ceccarelli said this unaligned RBC treatment is deterring insurers from selecting the mutual fund structure as a means to access a diversified portfolio of bonds. For decades, under limited circumstances, he said the mutual fund structure has received more favorable RBC treatment, in the form of money markets and pure-government bond mutual funds. He said the long-standing RBC exempt treatment for these mutual funds indicates a general comfort with the fixed income mutual fund structure, a structure that has been around for nearly a century and proven itself during varying market conditions. However, appropriately aligned RBC has always been limited to these two types of fixed income mutual funds, excluding all other mutual funds from receiving capital charges based on their bond holdings.

Mr. Ceccarelli said in the past few years, the Statutory Accounting Principles (E) Working Group and the Valuation of Securities (E) Task Force have made regulatory strides to create a more inclusive standard for fixed income mutual funds by permitting NAIC designation reporting outside of the bond schedule and opening the Securities Valuation Office (SVO) review to all U.S. Securities and Exchange Commission (SEC)-registered fixed income funds. He said this could allow for RBC factors to more adequately reflect the underlying risk of a fund that owns bonds, based on a thorough, established look-through risk evaluation conducted by the SVO.

Mr. Ceccarelli said Vanguard is asking that bond mutual funds be given the opportunity to receive RBC charges that reflect the risks of the bond securities held in the fund. He said Vanguard is not asking for unmitigated
application of more favorable charges, but that a non-equity factor is applied only after the bond mutual fund has submitted for approval through the SVO and the fund has undergone a risk review and assignment of an NAIC designation. Given the bond securities that make up these funds, he said it would be an appropriate proxy to use the highly scrutinized C-1 bond factors that have already been established. Importantly, these 20 factors provide a granular range, and a factor can be dictated and applied to a fund based on the aggregate risk of the bonds held within each uniquely composed fund. Because of the unique composition of each mutual fund, exactness of new, pre-established factors would seem an impossibility but also far less important than having an incrementally increasing range that can be applied to each fund based on the quantitative evaluation of credit quality, and qualitative discretion.

Mr. Ceccarelli said investment RBC charges should ensure adequate, appropriate capitalization based on risk but should not be a leading and determining factor in investment vehicle decisions for insurers. He said this is especially important for small and mid-size insurers that may be at a disadvantage when accessing the bonds they need for their portfolio but are being deterred from accessing those bonds through a mutual fund structure due to the currently associated equity charge. He said Vanguard believes this will provide clear guidance for insurers, align capital charges with the underlying risk of these investments, and give insurers another proven investment vehicle to access additional diversification to complement, not replace, their existing bond portfolios

Mr. Barlow asked if this proposal could also be applicable to the other RBC formulas. Mr. Ceccarelli said that it could. Mr. Barlow suggested the appropriate place for consideration of this proposal might be the RBC Investment Risk and Evaluation (E) Working Group. Mr. Fleming agreed since it could impact the other formulas and suggested a formal referral. Mr. Leung made a motion, seconded by Mr. Boerner, to refer this proposal to the RBC Investment Risk and Evaluation (E) Working Group. The motion passed unanimously.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
Life Risk-Based Capital (E) Working Group
Virtual Meeting
March 10, 2022

The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met March 10, 2022. The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Thomas Reedy (CA); Wanchin Chou (CT); Mike Yanacheak and Carrie Mears (IA); Ben Slutsker (MN); William Leung (MO); Derek Wallman (NE); Seong-min Eom (NJ); Bill Carmello (NY); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. **Discussed the Academy C2 Mortality Work Group Recommendation**

Mr. Barlow said there was one comment letter received. Brian Bayerle (American Council of Life Insurers—ACLI) presented the ACLI’s comment letter (Attachment Four-A1). He said the ACLI has one main recommendation with respect to the tiered charges and is suggesting treatment similar to what is currently done for disability income, where the product category with the highest risk charges is considered first, followed by the product category with the next highest risk charges but with recognition of the amount of net amount at risk (NAR) in the first category before determining which tiered charge to use. The third product category would then consider the NAR in the first two categories. He also noted the ACLI’s request for greater clarification of the definitions and improved tie-outs. He said the ACLI prefers option one in the American Academy of Actuaries’ (Academy’s) recommendation because of greater transparency. Mr. Barlow asked if the ACLI would be supportive if the suggested alternative tiering resulted in higher factors. He said it appears the ACLI is supportive of having amounts objectively pulled from the annual statement, but he asked for clarification if the ACLI is suggesting changes to the way certain items are reported. Mr. Bayerle said the ACLI would need to review any change in the proposed factors because of a change in the proposed tiering, but consistency with the analysis would be preferable. With respect to reporting changes, he said changes might be straightforward, and if state insurance regulators think this is a good idea, it might make sense as an area to explore to get direct tie-outs, but it appears that something to be considered for 2023. Mr. Slutsker expressed appreciation for the ACLI’s suggestion on tiering, as he believes it addresses the risk on a more objective measure, rather than reliance on the name of a product group. Chris Trost (Academy), chair of the Academy C2 Mortality Work Group, said the Work Group has already done some preliminary work on this suggestion, but he said the proposed tiering was just to recognize that the volatility risk declines the bigger the block size is, so it makes sense to look at the aggregate mortality exposure as opposed to the break points for each of the categories. He said the Work Group plans to formally respond to this suggestion, along with other comments made previously, so it can be considered by the Working Group on a future call. Mr. Slutsker said he appreciates the desire to be able to tie out to amounts from the annual statement, but he also appreciates the appeal of option two and asked if something similar to option two was done with the adoption of the longevity risk charges. Paul Navratil (Academy), chair of the Academy C2 Longevity Risk Work Group, said longevity risk-based capital (RBC) treatment referred to reserves in the annual statement but on an in-part basis because not all products aggregated in a single line were in scope, and company records were needed. Mr. Barlow asked if there is a desire to go with option two and adjust the reporting in the annual statement. Mr. Bayerle asked which option the factors were based on. Mr. Trost said option two is offered because it is more of a principle-based approach, but it will require companies to populate the exposure for the different categories. He said the key aspect is the adjustment capacity, and option two involves more intensive categorization, which would require underlying calculations by companies. While option one is also based on company records, he said it is more explicit, as there is already a basis in the annual statement for the different categories.
With both options using company records, possible adjustments to the annual statement reporting, and option two perhaps being more involved, Mr. Barlow said it appears that there is a desire to move forward with one of the two options for 2022 RBC with reporting changes in 2023 to reduce the reliance on company records. He suggested considering longevity when thinking about the reporting changes to possibly lessen the reliance on company records for that RBC item as well. With a requirement to adopt the structural changes by the end of April for year-end 2022 RBC, he asked if both options offer the same ability to address issues. Mr. Trost said he believes the Working Group could adopt either option for the structure, and it will be a matter of modifying the definition of categories in the instructions. He said the Academy would like to address that, along with previous questions, and present it to the Working Group, but this could be done on a call prior to the end of April. Mr. Barlow asked if another exposure of the structural changes would be needed before the end of April. Dave Fleming (NAIC) said while there are some differences between the structural presentation of the two options, they are line-item descriptions, so he does not believe an additional exposure of the structure would be needed. He said there is time for the Working Group to have one call in April to hear additional input from the Academy and then another call to adopt the structural changes if two calls are needed. Mr. Barlow said the Working Group will schedule a call when the Academy has its updated information. Mr. Leung asked if the Academy will be able to provide the annual statement changes contemplated for both options. Mr. Trost said he believes the Academy could include that in its update, but he said he will discuss it with the Academy C2 Mortality Work Group.

2. Exposed the AVR Changes for Comment

Mr. Fleming reminded the Working Group that the changes being proposed to the asset valuation reserve (AVR) are a result of the changes to the RBC bond factors adopted for year-end 2021, and as was done with RBC changes done for tax reform, these changes are mechanical and retain the existing relationships. He said it starts with the AVR maximum reserve factor, which is to equal the after-tax RBC factor, and the AVR basic contribution and reserve objective factors are then percentages of the maximum reserve. He said these changes will be exposed for comment by the Blanks (E) Working Group at the Spring National Meeting and considered for year-end 2022 implementation. He said the Working Group does not need to adopt this proposal, but he suggested a short exposure by the Working Group to address any technical comments, and while none are expected, any comments received can be addressed as a modification to the Blanks (E) Working Group exposure. The Working Group agreed to expose the changes to the AVR (Attachment Four-A2) for a public comment period ending March 25.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
Brian Bayerle  
Senior Actuary  

March 7, 2022  

Mr. Philip Barlow  
Chair, NAIC Life Risk-Based Capital (E) Working Group (Life RBC)  

Re: C-2 Mortality Structure Proposal

Dear Mr. Barlow:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit the following comments on the American Academy of Actuaries (the Academy) C-2 mortality structure proposal.

ACLI is supportive of the efforts to get updated C-2 mortality factors in place for yearend 2022 based on the best available information we currently possess. We have the following comments:

• Tiered Charges: Under the current structure, only one grouping of tiered charges exist so companies receive the benefit of aggregation in the factor as they move up to the lower charges associated with the 3 tiers of charges. Under the proposed framework, companies would not see such benefit as there are three grouping of tiered charges. Today a company begins to receive the full benefit of tiering above $25B NAR; under the proposed structure a company may need to have $75B NAR before receiving the full benefit of the lower charges.

We suggest a structure similar to what is done for disability income factors whereby the product category with the highest risk charges is considered first, followed by the product category with the next highest risk charges but recognize the amount of NAR in the first category before determining which tiered charge to use for the second product category. Subsequently the third product category considers the amount of NAR in the first two categories. For ULSG, there will be no change of their values for the tiers; “First 500 Million; Next 24,500 Million; Over 25,000 Million”. For Term, there would be recognition of the amount of ULSG NAR before determining the first charge to use for Term NAR. Similarly, All Other Life would recognize the amounts for both ULSG and Term before determining its first charge. For example, a company with $20B in ULSG, and $10B in Term: ULSG would use the factors as proposed, Term would apply $5B NAR using the Next 24,500 Million Term risk charge and $5B NAR at the Over 25,000 Million Term risk charge. Other approaches, such as pro-rata allocation by NAAR, could be developed as well.
• Clarification of definitions: We would appreciate greater clarification of relevant category definitions, particularly as it relates to pre-PBR business. We would like to understand if the definitions being proposed in the RBC instructions are consistent with definitions underlying the Academy’s analysis. We would suggest explicitly defining the terms (particularly UL with secondary guarantees) in the instructions, rather than referencing another source.

• Improved tie-out: We believe that for greater consistency, it would be beneficial to develop tie-outs to the Annual Statement. Given our assumption in the prior comment, we believe it would be beneficial to update another Annual Statement component so the reported net amount of risk values can tie to something explicitly (perhaps on the Analysis of Increase or Exhibit of Life). We suggest that given the timing this change be contemplated for 2023 Annual Statement reporting, with appropriate changes made to the C-2 mortality instructions for the 2023 RBC reporting.

• Support Option 1: ACLI supports the Academy recommendation of “Option 1”. We believe this approach fosters greater transparency and avoids confusion of business shifting between categories.

We appreciate the consideration of our comments and look forward to discussing on a future call. Thank you.

Sincerely,

[Signature]

Anticipated Effective Date: Annual 2022

IDENTIFICATION OF ITEM(S) TO CHANGE
Update the AVR factors to correspond with the adopted RBC factors for the expanded bond designation categories.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**
The AVR factors are linked to the after-tax RBC factors. The Life Risk-Based Capital (E) Working Group adopted changes to the life and fraternal RBC factors for the expanded NAIC Designation Categories for bonds for 2021 yearend reporting. The AVR factors will need to be adjusted where the RBC factors have been changed.

NAIC STAFF COMMENTS
Comment on Effective Reporting Date:

Other Comments:
A worksheet showing comparison of AVR and after-tax RBC factors for 2017, the changes made for the 2018 tax changes and the AVR factors being proposed for 2022 is posted at the Life Risk-Based Capital (E) Working Group website.
The AVR maximum reserve factors were updated to reflect the existing relationship to the RBC after-tax factors. The AVR basic contribution and reserve object factors were updated to reflect the existing relationships to the maximum reserve factors.

Draft: 3/22/22

Life Risk-Based Capital (E) Working Group
Virtual Meeting
January 20, 2022

The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met Jan. 20, 2022. The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Thomas Reedy (CA); Wanchin Chou (CT); Sean Collins (FL); Mike Yanacheak and Carrie Mears (IA); Vincent Tsang (IL); Ben Slutsker (MN); William Leung (MO); Derek Wallman (NE); Seong-min Eom (NJ); Bill Carmello (NY); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. Discussed Comments Received on the Academy C2 Mortality Work Group Recommendation

Brian Bayerle (American Council of Life Insurers—ACLI) presented the ACLI’s comment letter (Attachment Four-B1) and said the ACLI is generally supportive of an update to the mortality factors. He highlighted the ACLI’s desire for more analysis on the risk exposure periods and the ability for companies to adjust the mortality rate for emerging experience, along with greater analysis on the margins. Mr. Slutsker presented Minnesota’s comments (Attachment Four-B2) highlighting a request to the American Academy of Actuaries (Academy) to reflect additional uncertainty on future mortality in light of the COVID-19 pandemic. He also noted the Academy’s current proposed category breakdown and Minnesota’s recommendation to have the categorization done based on guarantee duration similar to how valuation rates are assigned in the Standard Valuation Law (#820). Additionally, he noted Minnesota’s suggestion to determine the C-2 mortality component based on the underlying guarantee duration in the policy with appropriate adjustments for certain types of policies. Mr. Barlow said he believes the categorization is a topic that will require more discussion, but his hope is that it can align with how information is presented in the annual statement to make it as objective as possible. Chris Trost (Academy) said there is always the challenge of relying on what is available in the annual statement versus more of a principle-based approach and having companies put products into specific categories based on their analysis. He said the reason the Academy chose the categories in the recommendation is they most closely follow the information in the annual statement and for principle-based reserves as well. While acknowledging that there will always be some imperfections, he said the Academy believes the higher level of differentiation is appropriate. He also commented that with respect to questions about pandemics, and specifically COVID-19, the Work Group added a component for an unknown sustained type of risk establishing a 2.5% annual probability that such an event can occur with a 5% severity so mortality rates would be 5% higher, and that would last for either the exposure period or for 10 years. He said the Academy could provide additional sensitivities around those assumptions to show the impact on factors. Mr. Carmello spoke to New York’s comments (Attachment Four-B3) and highlighted New York’s focus on the current pandemic and its concern that it may not be reflected sufficiently in the development of the proposed factors. He said he supports having more sensitivity tests included for the Working Group’s consideration. To New York’s comment on mortality improvement, Mr. Trost said the Academy could also provide sensitivities on that as well.

Mr. Barlow said it appears the two primary issues are the factors and categorization, and he asked if changes to the categorization would be structural. Dave Fleming (NAIC) said the categorization could change the structural presentation, but that presentation can be modified as a result of comments received from the exposure. He noted that the instructions, which include the factors, are included for information only, are not final, and are subject to a later exposure deadline. The Working Group agreed to expose the Academy’s proposed structural changes (Attachment Four-B4) for a 45-day public comment period.
2. **Discussed the Academy’s Comment Letter on Longevity Reinsurance**

Mr. Barlow thanked Ms. Eom for volunteering to chair the Longevity Risk (E/A) Subgroup and reminded Working Group members that the Subgroup’s work is pending some of the work on the reserve side. Paul Navratil (Academy), chair of the Academy C2 Longevity Risk Work Group, said the purpose of the Academy’s comment letter (Attachment Four-B5) is to continue the conversation, knowing that longevity reinsurance remains an item to be addressed by the Working Group, and to make the connection with VM-22, Statutory Maximum Valuation Interest Rates for Income Annuities, and consistency between the reserve work and what is ultimately done for capital.

3. **Discussed the AVR and Bond Factor Changes**

Mr. Barlow reminded the Working Group that changes to the asset valuation reserve (AVR) need to be made to correspond to the bond factor changes. Mr. Fleming said, as was done with the changes to AVR related to the risk-based capital (RBC) changes for tax reform, these changes are largely mechanical and retain the existing relationships. He said these are changes that will need to be adopted by the Blanks (E) Working Group, and he has been working with the ACLI to draft these to meet the needed timeline for year-end 2022 implementation.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
Brian Bayerle  
Senior Actuary  

January 11, 2022  

Mr. Philip Barlow  
Chair, NAIC Life Risk-Based Capital (E) Working Group (Life RBC)  

Re: C-2 Mortality Factor Proposal  

Dear Mr. Barlow:  

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit the following comments on the American Academy of Actuaries (the Academy) C-2 mortality factor proposal.  

ACLI appreciates the diligent efforts of the Academy in the development of these factors, and the thoughtful questioning and efforts from Life RBC working group members. ACLI is generally supportive of the initiative to update the C-2 mortality factors. We believe the structural changes to the methodology to determine the factors makes sense, and particularly updating the mortality assumptions underlying the factors is appropriate. However, ACLI would like more analysis and justification for the assumptions regarding the risk exposure periods and the ability of companies to adjust mortality rates for emerging experience because we are unsure as to the consistency of these assumptions across product types. In addition, ACLI would support greater analysis of the margins. We note that both the proposed factors include a 5% margin, while both pre-PBR and post-PBR reserves likely include margins that significantly exceed this level.  

Additionally, ACLI is supportive of Life RBC’s goal of more frequent updates to the mortality factors. ACLI believes the frequency of updates should reflect the greater percentage of in-force on a PBR-basis over time, greater availability of relevant data, and evolving reserves and practices.  

We appreciate the consideration of our comments and look forward to discussing on a future call. Thank you.  

Sincerely,  

[Signature]  

cc: Dave Fleming, NAIC
Date: 01/07/2022
To: Phillip Barlow, Chair of the Life Risk-Based Capital (E) Working Group
Subject: Life C-2 Mortality Factor Update

Thank you for the opportunity to provide comments on the Life C-2 Mortality Factor proposal. We applaud the Academy C-2 Mortality Work Group’s efforts, and think this is a great analysis. There are a few comments we would like to make to consider as potential refinements to the proposed factor updates, which are discussed below.

Catastrophe Risk Component

The impact of updating the catastrophic component of the C-2 risk in the proposal, inclusive of removing the HIV scenarios, is a large decrease to the C-2 factors (-35% for large inforce size and -20% for small inforce size). However, the Academy C-2 Mortality Work Group mentioned on a prior NAIC Life RBC Working Group call that, due to timing, the analysis does not include impacts due to the emergence of COVID-19. Given that we are in the midst of a two-year pandemic and that C-2 factors are not frequently revised, we believe it would be prudent to reflect the current environment in the update.

Therefore, we would like to ask whether the Academy C-2 Mortality Working Group would be open considering an adjustment to reflect additional uncertainty of future mortality in light of COVID-19. Such uncertainty may reflect the impact of “long COVID”, additional variants, or an increased likelihood of future pandemics. Given the status of the proposal, we acknowledge it may be challenging to come up with a sophisticated approach at this point, so we would be open to exploring any higher-level adjustments, such as employing sensitivity tests to pandemic shock probabilities and distribution of severities to determine a COVID-19 adjustment. In addition, one of the sensitivity tests in the report shows a small impact from increasing the probability of an unknown sustained catastrophe from 2.5% probability to 5.0% probability, but it may be worth considering higher probabilities or severities for this component in coming up for an adjustment to COVID-19 (to reflect the risk of future respiratory issues or long COVID), in addition to sensitivity testing pandemic risk.

Product Categories

The Academy’s proposal to differentiate risks based on product duration is a welcome development, which permits companies to more accurately reflect C-2 mortality risk for their mix of inforce business. The current proposal breakdown categories into “ULSG”, “Term”, and “Other” with exposure periods of 20 years, 10 years, and 5 years respectively. Although the simplicity of this approach for differentiating product groups is consistent with the overall RBC framework, it also creates some unintuitive results:

- **ULSG Categorization** – The proposal contains separate charges for “ULSG” vs. “other”, where “other” is about half the ULSG charge. However, “ULSG” is defined at issue as a secondary guarantee less than or equal to 5 years. This results in a universal life policy with a 5-year secondary guarantee having half the
charge of a universal life with a 6-year secondary guarantee. In contrast, a 40-year secondary guarantee will have the same mortality risk charge as a 6-year secondary guarantee.

- **Whole Life Categorization** – Similar to the ULSG observation described above, a non-participating whole life with low funding values would also get half the charge of universal life with a 6-year secondary guarantee. This is due to the underlying assumption that the non-participating whole life mortality risk is based on a 5-year exposure period, which is shorter than the average contract life of a whole life policy.

- **Term Categorization** – The term category is based on a 10-year liability exposure period. Therefore, the C-2 term charge (less than ULSG) might work for 10-year level term to 20-year level term, but the ULSG charge may be more appropriate for reflecting the associated risk for a 30-year level term.

As an alternative, we recommend differentiating the assignment to the 5, 10, and 20-year exposure period factors based on the guarantee duration, similar to how valuation rates are assigned in the Standard Valuation Law:

<table>
<thead>
<tr>
<th>Guarantee Duration (Years)</th>
<th>Exposure Period</th>
</tr>
</thead>
<tbody>
<tr>
<td>10 or less</td>
<td>5 Years</td>
</tr>
<tr>
<td>More than 10, but not more than 20</td>
<td>10 Years</td>
</tr>
<tr>
<td>More than 20</td>
<td>20 Years</td>
</tr>
</tbody>
</table>

We believe this modification would maintain simplicity (as this split is already required for valuation purposes), while also avoiding some of the unintuitive impacts in the original proposal described above.

In addition, we would recommend the NAIC Life RBC Working Group’s consideration of using an exposure period of 30 years for even longer guarantees, as the Academy C-2 Mortality Working Group has already calculated the factors associated with 30 years, which is disclosed in the exposed report.

**Experience Pass-Through**

One challenge with proposing factor differentiation, whether by other product line (as initially proposed) or guarantee duration (as described in this letter), is how to reflect the reduction in mortality risk for policies that are able to pass mortality experience to the policyholder through a non-guaranteed element. Examples include dividends on a participating whole life policies and cost of insurance charges on universal life policies without a secondary guarantee, where unfavorable company mortality experience could be offset by modifying these features on inforce policies. The Academy C-2 Morality Working Group attempts to address this issue by assigning policies with these non-guaranteed elements to proposed factors based on a 5-year exposure period (i.e., “other” category).

We would be interested in analysis to support why participating whole life or universal life without secondary guarantees should be assigned to a 5-year exposure period. If this was only intended to be a simplistic
conceptual adjustment to reflect less mortality risk in light of non-guarantee elements, then we would be interested if the Academy C-2 Mortality Working Group has any additional thoughts on how to more accurately quantify the decrease in mortality risk due to the presence of such features. For example, running a participating vs. non-participating whole life policy, or universal life with a secondary guarantee vs. without a secondary guarantee.

In the absence of this type of analysis, we think that assigning factors associated with a 5-year exposure may be too low (as this is about half of a 20-year exposure period). Instead, we would suggest determining the C-2 mortality component based on the underlying guarantee duration in the policy, and then subsequently adjusting the C-2 component downward for certain types of policies. For example, allow participating whole life policies and universal life policies with no or short secondary guarantees (e.g., 10 years or less) to receive a reduction factor that is closer to -20% (rather than -50%). Although non-guaranteed elements can offset some of the company mortality experience volatility, permanent policies still contain long-term death benefit guarantees that may have material mortality risk (even if lower than policyholder behavior risk on a relative basis).

**Conclusion**

We believe the Academy C-2 Mortality Work Group has a great proposal, and that the adjustments described in this letter for catastrophe risk and guarantee duration will only make it stronger. Regardless, we are pleased to see the proposed updates to C-2, which would serve as a significant and more update-to-date improvement over the current factors. As always, we appreciate the Academy’s hard work and intellectual rigor on this project, as well as the NAIC Life RBC Working Group providing us with the opportunity to comment.
Submitted via email:

We have the following comments regarding the C-2 mortality factor proposal:

1. The proposal replaces the 1% mortality improvement factor in the current model with the 2017 improvement scale from VM-20. We do not support the inclusion of any mortality improvement in the C-2 mortality factors.
2. The proposal for pandemic risk seems rather low given that we are currently in a pandemic with much higher mortality.

William B. Carmello, Jr., FSA, MAAA

Chief Life Actuary

New York State Department of Financial Services

Re: Structural Updates to Life RBC C-2 Mortality

Dear Philip,

On behalf of the C-2 Mortality Work Group of the American Academy of Actuaries, we are providing two options for structural updates to the Life RBC C-2 Mortality factors for consideration to be exposed by 1/31/2022. Also included are draft instructions for informational purposes which are subject to a different exposure deadline of 4/30/2022.

Sincerely,

Chris Trost, MAAA, FSA
Chairperson, C-2 Mortality Work Group
Ryan Fleming, MAAA, FSA
Vice Chairperson, C-2 Mortality Work Group
American Academy of Actuaries

1 The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

Basis of Factors

The factors developed represent surplus needed to provide for excess claims over life insurance mortality risk, which is defined as adverse variance in life insurance deaths (i.e., murders, diving accidents) expected both from random fluctuations and from inaccurate pricing for future levels of claim. For a large number of trials, each insured either lives or dies based on a "roll of the dice" business while appropriately reflecting the probability of death from both normal and excess claims, offering flexibility to adjust current mortality rates for emerging experience. The present value of mortality risks included in the claims generated by this process, less expected claims, will be the amount of surplus needed under that trial. Development of the factors were volatility, level, trend, and catastrophe. The factors were developed by stochastically simulating the formula produce a level of surplus at least as much run-off of in force life insurance blocks typical of U.S. life insurers.

The capital need, expressed as needed in 95 percent of a dollar amount, is determined as the trials' greatest present value of accumulated deficiencies at the 95th percentile of the stochastic distribution of experience over the remaining lifetime of a block of business while appropriately reflecting the pricing flexibility to adjust current mortality rates. Statutory losses are defined as the after-tax quantification of gross death benefits minus reserves released minus mortality margin present in reserves. The after-tax statutory losses are discounted to the present by using 20-year averages for U.S. swap rates. By selecting the largest present value accumulated loss across all protection years, the solved for capital ensures non-negative capital at all projection periods. Earlier period losses are not allowed to be offset by later period gains to reduce capital. The 95th percentile is the commonly accepted statistical safety level used for Life RBC C-2 mortality risk to identify weakly capitalized companies. The after-tax capital needs are translated to a factor expressed as a percentage of the net amount at risk (NAR). The pre-tax factor is determined by taking the after-tax factor divided by (1 minus the tax rate).

The model was developed for portfolios of 10,000, 100,000 and one million lives, and it was found that the surplus needs decreased with larger portfolios, consistent with the law of large numbers.

Specific Instructions for Application of the Formula

Lines 3, 4, 5 and 9-21 are not applicable to Fraternal Benefit Societies.

Annual statement reference is for the total net amount at risk for the category (e.g., Individual & Industrial is one category). The net amount at risk is then further broken down by size as in a tax table to reflect the decrease in risk. In larger blocks of life insurance, the breakdown will not appear on the RBC filing software or on the printed copy, as the application of factors to amounts in force is completed automatically. The calculation is as follows:

The NAR is derived for each of the factor categories using annual statement sources and company records. In force and Reserve amounts are net of reinsurance throughout.

LIFE INSURANCE - OPTION 2 - DRAFT

Basis of Factors

The factors chosen develop surplus needed to provide for excess claims over life insurance mortality risk, which is defined as adverse variance in life insurance deaths (i.e., insureds die sooner than expected) both from random fluctuations and from inaccurate pricing for future levels of mortality. The remaining lifetime of claims for a large number of lives is modeled in a block of business, while appropriately reflecting the variability of claims from both normal and excess claims. Pricing flexibility is used to adjust current mortality rates for emerging experience. The present values of mortality risks associated with the claims generated by this process, less expected claims, will be the amount of surplus needed under that trial. Development of the factors were volatility, level, trend, and catastrophe. The factors were developed by stochastically simulating the formula produce a level of surplus at least as high as the amount of in force life insurance blocks typical of U.S. life insurers.

The capital need, expressed as a percent of a dollar amount, is determined as discussed greatest present value of accumulated deficiencies at the 95th percentile of the stochastic distribution of scenarios over the remaining lifetime of a block of business while appropriately reflecting the pricing flexibility to adjust current mortality rates. Mortality losses are defined as the after-tax quantification of gross death benefits minus reserves released minus mortality margin present in reserves. The after-tax-statutory losses are discounted to the present by using 20-year averages for U.S. swap rates. By selecting the largest present value accumulated loss across all projection years, the solved for capital ensures non-negative capital at all projection periods. Earlier period losses are not allowed to be offset by later period gains to reduce capital. The 95th percentile is the commonly accepted statistical safety level used for Life RBC C-2 mortality risk to identify weakly capitalized companies. The after-tax capital need is translated to a factor expressed as a percentage of the net amount at risk (NAR). The pre-tax factor is determined by taking the after-tax factor divided by (1 minus the tax rate).

The model was developed for portfolios of 10,000, 100,000 and one million lives, and it was found that the surplus needs decreased with larger portfolios, consistent with the law of large numbers.

Net amount at risk was chosen as a benchmark because losses are difficult to calculate on a consistent basis from company to company.

The factors are differentiated between individual & industrial life and group & credit life, and by in force block size. Within individual & industrial life, the factors are differentiated into categories by contract type depending on the degree of pricing flexibility. Within group & credit life, the factors are differentiated into categories by the remaining length of the premium rate term by group contract. There are distinct factors for contracts that have remaining premium rate terms 36 months and under and for contracts that have remaining premium rate terms over 36 months. The Federal Employees’ Group Life Insurance (FEGLI) and Servicemembers’ Group Life Insurance (SGLI) receive a separate factor applied to the amounts in force.

Specific Instructions for Application of the Formula

Lines 4xx, 42, 5 and 9-21-41 are not applicable to Fraternal Benefit Societies.

Annual statement reference is for the total net amount at risk for the factor (e.g., Individual & Industrial (one category)). The net amount at risk is then further broken down by line 21 as a base to reflect the decrease in risk, E in a block of life insurance. This breakdown will not appear on the RBC filing software or on the printed copy, as the application of factors to amounts in force is completed automatically. The calculation is as follows:

The NAR is derived for each of the factor categories using annual statement sources and company records. In Force and Reserves amounts are net of reinsurance throughout. The In Force amounts throughout derived from company records need to be consistent with the Exhibit of Life Insurance. The Reserves amounts throughout derived from company records need to be consistent with Exhibit 5, Separate Accounts Exhibit, and Schedule S.

Pricing Flexibility for Individual Life Insurance is defined as the ability to materially adjust rates on in force contracts through changing premiums and/or non-guaranteed elements as of the valuation date and within the next 5 policy years. A material rate adjustment is defined as the ability to recover, on a present value basis, the difference in mortality provided for in the factor below for contracts with and without pricing flexibility.
Lines (11) and (12) Life Policies with Pricing Flexibility In Force and Reserves are derived from company records. Examples of products intended for this category include, but aren’t limited to, participating whole life insurance, universal life insurance without secondary guarantees, and yearly renewable term insurance where scheduled premiums may be changed. The table below illustrates the RBC requirement calculation embedded in Line (13) for Life Policies with Pricing Flexibility:

All amounts should be entered as required. The risk-based capital software will calculate the RBC requirement for individual and industrial and for group and credit.
December 21, 2021

Ms. Seong-Min Eom,
Chair, Longevity Risk (A/E) Subgroup
National Association of Insurance Commissioners

Via email: Dave Fleming (dfleming@naic.org)
Re: Longevity Risk Subgroup working agenda item on Longevity Reinsurance

Dear Seong-Min,

The American Academy of Actuaries1 (Academy) Annuity Reserves and Capital Work Group (ARCWG) recently shared with the Valuation Manual (VM)-22 (A) Subgroup an initial draft of NAIC Valuation Manual Section II and recommended VM-22 requirements associated with the ARCWG proposal on a principle-based reserving (PBR) framework for fixed annuities.2 The Academy’s C-2 Longevity Risk Work Group is providing its observations on implications this reserve proposal may have on the expansion of the scope for C-2 Longevity capital to include longevity reinsurance contracts. To summarize:

1. Longevity reinsurance is explicitly included in the scope of the ARCWG VM-22 draft;
2. Reserve aggregation, as included in the VM-22 draft, could facilitate a simple approach to including longevity reinsurance in C-2 using the same factors that currently apply to other fixed annuities; and
3. The C-2 capital approach for longevity reinsurance business written prior to the VM-22 effective date will require further study and recommendation by the Longevity Risk (E/A) Subgroup.

As you may recall, longevity reinsurance contracts were excluded from the scope of the year-end 2021 implementation of C-2 Longevity within Life Risk-Based Capital (LRBC) given the need for further discussion on appropriate capital methodology given product differences compared to payout annuities. Longevity reinsurance is explicitly included in the scope of ARCWG’s VM-22 draft. Progress on these reserve requirements may provide an opportunity to concurrently advance the discussion on C-2 capital.

---

1 The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
As described in the VM-22 product definition, the reinsurer assumes the longevity risk associated with the periodic payments of the reinsured annuity contract(s). In general, the reinsurer is responsible for paying the periodic annuity payments based on actual longevity experience of the underlying population in exchange for a fixed schedule of periodic payments over the expected lifetime of the underlying annuitants. Such contracts may include net settlement provisions such that only one party makes a payment in any particular period.

The field study, which was conducted in 2018 and used to calibrate the current C-2 Longevity factors, did not include results for longevity reinsurance since there were not enough responses for companies reporting results for the product to allow for aggregated data. As a result, the Academy’s C-2 Longevity Risk Work Group is not currently able to calibrate a capital factor based on results specific to the reinsurance product. Because this reinsurance transfers the longevity risk associated with immediate and/or deferred payout annuity products that are already in scope for C-2 Longevity, it seems reasonable to postulate that the longevity risk of a longevity reinsurance contract would be consistent with the longevity risk of the underlying annuity contract prior to reinsurance.

The periodic premium payments drive important differences in reserves compared to single premium payout annuity products. On a stand-alone product basis, the VM-22 stochastic reserve for longevity reinsurance could be quite low because the present value of annuity payments under prudent estimate mortality may not materially exceed the present value of premiums. If longevity reinsurance is aggregated with other products in calculating the stochastic reserve as permitted under the VM-22 draft, the inclusion of longevity reinsurance in the aggregation could in some cases act to reduce the aggregate reserve if the longevity reinsurance premiums exceed the annuity benefits under the prudent estimate reserve assumptions. The Academy’s C-2 Longevity Risk Work Group believes this is an appropriate though potentially surprising result that should be clearly understood. Listed below is a hypothetical illustration of reserve results under aggregation.

<table>
<thead>
<tr>
<th></th>
<th>Present Value of Future Premium</th>
<th>Present Value of Future Benefits</th>
<th>Reserve</th>
</tr>
</thead>
<tbody>
<tr>
<td>Immediate Annuities</td>
<td>N/A</td>
<td>1,500</td>
<td></td>
</tr>
<tr>
<td>Longevity Reinsurance Assumed</td>
<td>1,010</td>
<td>1,000</td>
<td></td>
</tr>
<tr>
<td></td>
<td>1,010</td>
<td>2,500</td>
<td>1,490</td>
</tr>
</tbody>
</table>

In this hypothetical illustration, the future longevity reinsurance premiums exceed future benefit payments, so the aggregate reserve—1,490—is less than the reserve that would have been calculated for the immediate annuities on a stand-alone basis—1,500. (The subsequent allocation of the 1,490 aggregate reserve to the contract level is not shown in this illustration.)

A simple approach to including longevity reinsurance within the scope of C-2 Longevity capital is to apply the existing capital factors to the present value of benefits for longevity reinsurance in addition to the existing reserve basis for products in scope. The ARCWG VM-22 draft as written would reflect the entire longevity reinsurance gross premium in the aggregated reserve calculation so no adjustment for premiums would be required in capital. Continuing the hypothetical illustration above, this would result in a total company basis for C-2 Longevity of 2,490:
The ARCWG VM-22 draft is written to apply prospectively to contracts issued after Jan. 1, 2024, so it does not address reserving for longevity reinsurance contracts issued before this date. The capital approach above may need to be reconsidered depending on the reserving method for these existing contracts. This retrospective issue may only apply to a small number of companies based on the low response rate for the product in the 2018 field study but will also need to be considered by the Longevity Risk Subgroup as part of the expansion of scope for C-2 Longevity.

The Academy’s C-2 Longevity Risk Work Group supports the proposal of the ARCWG, which includes an aggregate calculation of reserves. However, if aggregation of longevity reinsurance with other jointly managed annuity business is ultimately not included in the final VM-22 language (or when considering the retrospective application to contracts issued prior to Jan. 1, 2024, which may use different reserve methods), then it seems likely that a portion of the gross premium under the longevity reinsurance contracts could be excluded from the reserve calculation in order to ensure a reserve greater than zero. In that situation there would be two broad paths forward for C-2 capital:

A) **Continue to use present value of benefits as the basis for longevity reinsurance along with the same C-2 capital factor.** This approach could result in a portion of the gross reinsurance premium being excluded from both the reserve and capital calculations. This could be deemed acceptable within the context of RBC as a simple factor-based calculation for regulatory capital carried out independent of reserves. However, it would be inconsistent with a Total Asset Requirement (TAR) view of reserves and capital together achieving a consistent outcome (such as 95th percentile) across products and could result in the TAR for longevity reinsurance being overstated by the amount of any gross premium that is excluded.

B) **Consider an adjusted capital factor specific to longevity reinsurance that takes into account premium amounts not included in reserves.** It might not be possible to calibrate a single factor that would be appropriate to apply to all longevity reinsurance contracts written at different times with different premium levels and with different emerging experience. It could be possible to include a calculation of a more appropriate adjusted factor within the C-2 Longevity calculation at a company level; however, this would be more complicated than the factor times reserve approach currently used for C-2 Longevity.

Life insurance is an example of a product that also includes recurring premium payments. Under a net premium reserving methodology, a portion of the gross premium is excluded from reserves, yet no adjustment for this is required in capital. There are several key differences for longevity reinsurance that could merit consideration of the gross premium in reserves and/or capital:

- Future premium payments for longevity reinsurance are a contractual obligation that in some cases may be supported by collateral posted as security against default. Future life
insurance premiums by contrast are voluntary with a contract holder right to lapse at any
time.
• In a mortality risk event for life insurance (premature death), premium payments for a
contract cease and are not received by the insurer. By contrast, under a longevity
reinsurance risk event (extended longevity), premium payments for a contract continue in
their entirety and are netted in full against future benefit obligations.

The impact on C-2 Longevity for companies ceding risk through longevity reinsurance should
also be addressed. This could be achieved by clarifying the existing adjustment for modified
coinsurance (Modco) reserves ceded to also include reserves for which longevity risk is ceded
via longevity reinsurance contracts.

It may not be appropriate to exclude longevity risk transferred by reinsurance from scope of C-2
Longevity while including in scope payout annuity products having the same longevity risk. The
Academy’s C-2 Longevity Risk Work Group looks forward to supporting the Longevity Risk
Subgroup in completing the implementation of C-2 Longevity to include longevity reinsurance.

*****

Should you have any questions or comments regarding this letter, please contact Khloe
Greenwood, life policy analyst at the Academy (greenwood@actuary.org).

Sincerely,

Paul Navratil, MAAA, FSA
Chairperson, C-2 Longevity Risk Work Group
American Academy of Actuaries
The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met Dec. 16, 2021. The following Working Group members participated: Philip Barlow, Chair (DC); Chuck Hale (AL); Thomas Reedy (CA); Wanchin Chou (CT); Sean Collins (FL); Mike Yanacheak (IA); Vincent Tsang (IL); Fred Andersen (MN); William Leung (MO); Derek Wallman (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. Adopted the Guidance Document on Bond Factor Changes

Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI believes the document will be helpful to regulators and supports its adoption with the inclusion of the reference to other changes made for yearend 2021. Mr. Yanacheak made a motion, seconded by Mr. Leung, to adopt the Working Group’s guidance document on bond factor changes (Attachment Four-C1). The motion passed unanimously.

Chris Trost (American Academy of Actuaries—Academy), chair of the Academy’s C2 Mortality Work Group, highlighted the main changes that the Academy is recommending is to expand the number of categories in the current structure which applies a factor to the net amount at risk (NAR) which decreases as the NAR increases. The Academy believes a critical element in capturing the risk is the length of the exposure period where there is not the capacity to adjust the mortality charges and because of that, he said the Academy created three categories using VM-20 as a guide with term, universal life with secondary guarantees (ULSG) and all other. The all-other category maintains the same period that the original RBC work used which is looking at the mortality risk over a five-year period because beyond that time the risk could be covered through adjustments and mortality rates. Mr. Trost said the exposure period lasts much longer for term and ULSG and the Academy used averages of 10 years for term and 20 years for ULSG. He said the Academy also added a catastrophe terrorism component and a catastrophe unknown sustained risk component. He discussed other aspects that were changed and those that were not changed as shown on page six of the recommendation (Attachment Four-C2). Ryan Fleming (Academy) presented the updated C-2 factors, other aspects of the categorization and a comparison of the recommended factors versus the current factors along with the percentage change in those factors. He discussed the C-2 factors as an overall mortality increase along with the Academy’s comparison against other capital regimes. He highlighted the Academy’s sensitivity testing which helped in identifying that the length of the mortality rate exposure period is one of the most critical variables in determining capital factors. He summarized the Academy’s recommendation and noted that the Academy does not believe that additional review of the adopted correlation factor with longevity is needed as the work on mortality was done consistently with the longevity work.

With respect to the Academy’s pandemic modeling, Ms. Hemphill noted what appeared to be one-year events and asked whether having another component to account for multi-year events was considered. Mr. Trost said the Academy was capturing a multi-year event but modeling it occurring in one year. He also noted that the Academy looked at the actual impacts of unknown sustained risks, specifically with the opioid epidemic and AIDS, and those impacts were significantly less in the insured population than the general population, but the Academy did not reflect this in its recommendation. For those sustained type risks, he said the Academy also included the assumption that the worst experience was the same at all ages which adds another level of conservatism. Ms. Hemphill expressed concern with the factor decrease for the all-other category given how non-homogenous the products are in the ability to adjust and suggested the possibility of addressing this either through revising the factors presented or adding some regulatory review process. Mr. Carmello suggested having products without the ability to adjust default the categories with higher factors and not the all-other category. Mr. Barlow said another approach could be to set the factors for the all-other category to whatever is appropriate for the product involving the most risk.

Mr. Barlow said the Academy will be working with NAIC staff on the needed structural changes so they can be exposed for comment before the end of January.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
MEMORANDUM

TO: Financial Examiners and Other State Insurance Regulators

FROM: Philip Barlow, Chair of the Life Risk-Based Capital (E) Working Group

DATE: Dec. 16, 2021

RE: Interpretation of the 2021 Life Risk-Based Capital (RBC) Results in Light of the 2021 Bond Factor Changes

Purpose and Intended Audience for this Document
This document is intended to assist financial examiners and other state insurance regulators as they review the results of 2021 RBC calculations for life insurers in light of the 2021 bond factor changes. There were also changes related to longevity risk, real estate and reinsurance that state insurance regulators may want to consider but this document is specifically addressing the bond factor changes as they have the most potential to impact the action level, including through the trend test.

More detailed information about this topic is contained in the minutes of the Life Risk-Based Capital (E) Working Group, and related documents are included on the websites for both the Working Group and the Capital Adequacy (E) Task Force. The changes to the Life RBC formula factors for bonds were adopted by the Working Group on June 11 and by the Task Force on June 30.

Executive Summary
The work to update the RBC charges applied to bonds has been ongoing for several years and reflects the efforts of many participants. The Working Group appreciates the considerable work of the American Academy of Actuaries (Academy) on this project, as well as the work done by Moody’s Analytics on behalf of the American Council of Life Insurers (ACLI). The Working Group discussed the proposals presented during numerous conference calls over the past year. The Working Group also reviewed estimates of the impact the proposals would have had on the RBC results for life insurers’ year-end 2020 filings. The Working Group concluded that both proposals presented a sound and appropriate update to the factors applied to bonds, and it ultimately adopted the proposal presented by Moody’s.
How should the effects of the change in bond factors be factored into the interpretation of RBC results?

The estimated impact of the change in bond factors the Working Group reviewed on individual companies and the life insurance industry in aggregate indicated less than a 2% increase in the authorized control level (ACL) RBC on an aggregate basis. However, a small number of companies experienced a much larger impact when the 2019 results were recalculated with the new factors. The Life RBC Trend Test (LR035) will be affected by the change in bond factors and may be an area where this change is most evident. The Trend Test calculates a margin, which is the excess of total adjusted capital (TAC) over ACL RBC, for each of the current year, prior year, and third prior year. To the extent that the current year margin is lower than the prior year or third prior year margin, regulatory action may be indicated.

For the 2021 Trend Test, the margin for 2021 is compared to the margins for 2020 and 2018. As noted, a company’s ACL RBC is expected to be increased for 2021 compared to prior years. The changes to ACL RBC due to the change in bond factors may cause some companies to trigger the Trend Test for 2021, solely because of the change in bond factors.

If state insurance regulators find that a life insurer has triggered the Trend Test, triggers an Action Level for 2021, or has a significant decline in its RBC ratio from 2020 to 2021, they could have additional discussions with the company and request additional calculations. It is likely that companies would have done some analysis of significant changes in ACL RBC, and that analysis could be shared with state insurance regulators.
Academy C-2 Mortality Work Group Recommendation

Chris Trost, MAAA, FSA
Chairperson C-2 Mortality Work Group

Ryan Fleming, MAAA, FSA
Vice Chair C-2 Mortality Work Group
American Academy of Actuaries

National Association of Insurance Commissioners (NAIC) Life Risk-Based Capital (E) Working Group (LRBCWG)—November 9, 2021

Agenda

- Review Life RBC C-2 mortality overall approach and current risk-based capital (RBC) factors
- Present recommendation on updated C-2 factors
  - Structural changes to factor categories
  - Updated factors under the recommended structure
- Appendix:
  - Methodology, assumption, and risk distribution comparisons
  - Validation, peer review, limitations
Life RBC C-2 Mortality Overall Approach (1 of 2)

- Mortality risk is defined as adverse variance in life insurance deaths (i.e., insureds dying sooner than expected) over the remaining lifetime of a block of business while appropriately reflecting the pricing flexibility to adjust current mortality rates for emerging experience.
- C-2 requirement covers mortality risk up to the 95th percentile covering adverse experience in excess of the amount covered in statutory reserves.
- C-2 requirement includes mortality risks related to:
  - Volatility Risk—natural statistical deviations in experienced mortality
  - Level Risk—error in experience mortality assumption
  - Trend Risk—adverse mortality trend
  - Catastrophe Risks
    - Large temporary mortality increase from a severe event such as a pandemic or terrorism
    - Sustained mortality increase from an unknown risk

Life RBC C-2 Mortality Overall Approach (2 of 2)

- Evaluate mortality risks using stochastic simulation of projected statutory losses.
- Discount after-tax cash flows (at 2.765% after-tax discount rate [3.5% pre-tax]).
- Express capital requirement using a factor-based approach applied to Net Amount at Risk (NAR) and convert to pre-tax.
C-2 Life Mortality Risk-Based Capital

- The C-2 component of RBC represents **17-18%** of total life industry risk-based capital

What Changed and Didn’t Change from the Original Work*

**What Changed**
- Expanded categories to three product categories for individual life and two categories for remaining rate terms for group life
- Addition of a catastrophe terrorism component
- Addition of a catastrophe unknown sustained risk component, replaces severe adverse HIV scenarios in original work
- Lower experience mortality rates
- Lower discount rates (2.765% after-tax versus 6% in original work)
- Inforce assumptions reflecting current U.S. life insurers (demographic, product, lapses, etc.) and group specific assumptions
- Mortality risk assumptions calibrated to latest research and studies
- New model developed in Excel VBA; stochastic capabilities are much greater today than the early 1990’s

**What Didn’t Change**
- Statistical safety level – 95th percentile over 5 years for individual life products with inforce pricing flexibility
- Capital is determined for losses in excess of reserve mortality – 5% margin in statutory reserve mortality is consistent with one standard deviation

* See the Appendix for a detailed comparison of the current and original work
Pre-Tax C-2 Factor Recommendation versus Current RBC

Lower Experience Mortality Rates

- The new model uses a distribution of rating classes using 2017 CSO tables
- 2017 Commissioners Standard Ordinary (CSO) mortality rates are significantly lower (50%-90%) than “88% of the 1975-80 Basic Table” used previously due to decades of mortality improvement in the U.S.
- An example at a typical age highlights the significant decrease

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

- Similar % decreases also occur at different gender, ages and underwriting classes
- Experience mortality manifests through the level risk component
C-2 Factor Attribution by Mortality Risk
Individual Life - 5-Year Projection Period Example

- Risks for large inforce blocks are spread proportionately between volatility/level, trend, and catastrophe
- Smaller inforce blocks are subject to higher volatility and level risks, which results in higher factors versus larger blocks

C-2 Factor Attribution by Mortality Risk
Group Life - 5-Year Projection Period Example

- Risks for large inforce blocks are spread proportionately between volatility/level, trend, and catastrophe
- Smaller inforce blocks are subject to higher volatility and level risks, which results in higher factors versus larger blocks
Expanded Categories to Three Products for Individual Life and Two Categories for Remaining Rate Terms for Group Life

**Original 1990s Work**
- 1993 factors used a 5-year risk exposure period for all individual life business and a 3-year risk exposure period for group life because it assumed that management actions would occur to reset current mortality rates to reflect emerging experience.

**Current Work**
- For individual life, management action to reset current mortality rates may be limited or non-existent for products that offer longer term mortality rate guarantees (e.g., Universal Life with Secondary Guarantees (ULSG), Level Term).
- For group life, there are varying lengths of premium rate terms in the marketplace.
- Factors aligned with the remaining risk exposure period of current mortality rates on an inforce block is appropriate. This risk differentiation can be accomplished by varying factors by product for individual life and by remaining premium term for group life.
- The recommendation is to expand factors into additional categories to reflect the current mortality rate risk exposure period over the remaining lifetime of an inforce block of business.
  - For individual life insurance, the recommendation is to differentiate into three product categories with definitions consistent with the annual statement – analysis of operations by line of business – individual life insurance and VM-20.
  - For group life insurance, the recommendation is to differentiate into two categories by remaining length of the rate term based on company records by group contract.
Two New Catastrophe Components

- A terrorism component was developed based on industry experience from the September 11, 2001 terrorist attacks.
  - Component assumes a 5% annual probability of an extra 0.05 deaths per 1,000.
- As shared at the September 11, 2020 LRBCWG meeting, a new catastrophe component was developed for a sustained mortality increase from an unknown risk, which serves as a replacement for the adverse HIV scenarios in the original work.
  - Component is intended to cover unknown risks that could materialize in the insured population.
  - The component assumes a 2.5% annual probability of a 5% sustained severe mortality increase.
  - If the event occurs, it is sustained for the remainder of the projection period up to a maximum period of 10 years.
  - Without this component the recommended factors would be about 0.1 lower.
- The recommendation is to include these two new catastrophe components.

Recommended Updated C-2 Factors

<table>
<thead>
<tr>
<th>Per $1000 of NAR</th>

<td>3.90</td>
<td>2.70</td>
</tr>
<tr>
<td>Next $24.5B (Medium)</td>
<td>1.65</td>
<td>1.10</td>
</tr>
<tr>
<td>&gt;$25B (Large)</td>
<td>1.10</td>
<td>0.75</td>
</tr>
</tbody>
</table>

Individual Life: New categorization would be determined based on the categories specified in the annual statement analysis of operations by line of business and consistent with VM-20.
- ULSG: factors are the highest due to the longest current mortality rate guarantees and are based on a 20-year risk exposure period for a mature inforce block.
- Term Life: factors are based on a typical 10-year risk exposure period for a mature inforce block. The industry is concentrated in 10, 20 and 30-year level term.
- All Other Life: factors are based on a 5-year risk exposure period and assume inforce pricing may be adjusted following adverse mortality experience due to the presence of non-guaranteed elements. Examples are universal life products without secondary guarantees and participating whole life products.

Group Life: New categorization would be determined based on company records for the remaining premium rate terms by group contract.
- One category is for remaining premium rate terms greater than 3 years and is represented by a 5-year exposure period.
- The other category is remaining premium rate terms 3 years and under and is represented by a 3-year exposure period.
Recommendation on Updated C-2 Factors

- Size bands were reviewed, and the recommendation is to combine the current middle two categories ($500M-$5B and $5B-$25B) into one category ($500M-$25B).
- The recommendation is to continue categorizing industrial life with individual life and credit life with group life.
- The recommendation is to continue with the 50% credit given for group premium stabilization reserves.

* As of 2019 annual statement reporting.

Recommendation vs Current RBC
Individual & Industrial Life Impacts

- Overall individual life industry impact would be a modest decrease with industry exposure by NAR concentrated in Term business amongst large insurers.
- Factors increase for ULSG.
- Factors decrease for products with inforce pricing flexibility (i.e., All Other category).
- Small ULSG and Term carriers would experience an increase on retained business; however, reinsurance is typically used to transfer/mitigate the mortality risk.
## Recommendation vs Current RBC

### Group & Credit Life Impacts

- **C-2 is reduced by up to 50% of premium stabilization reserves**

Overall group industry impact would be a significant decrease in C-2 capital.

Factors decrease for all but one category: small size for longer rate terms which stays about the same.

Group life factors decreased due to the decades-long decline in experience mortality rates, and the exposure periods remain shorter term as compared to individual life.

C-2 is reduced by up to 50% of premium stabilization reserves.

</tr>
<tr>
<td>Medium</td>
<td>+10%</td>
<td>+14%</td>
</tr>
<tr>
<td>Large</td>
<td>+8%</td>
<td>+10%</td>
</tr>
</tbody>
</table>

- Table translates factors to an overall mortality percentage increase for a 5-year risk exposure period.
- Percentage increases are similar for other risk exposure periods with cumulative magnitudes being greater for longer periods.
  - For example, a 10% increase for 10 years is more severe than a 10% increase for 5 years.
- Factors were reviewed against other capital regimes, including Canada, International Capital Standards (ICS), Solvency II and rating agency.
  - Mortality risk drivers are consistent.
  - Confirmed magnitudes are reasonable for the 95th percentile.
Sensitivity Testing:
Other Attributes that Increase Mortality Risk

- The model was extensively sensitivity tested, and the following attributes increase mortality risk for companies concentrated in these areas.
- The C-2 Mortality Work Group doesn’t recommend differentiating RBC factors by these attributes; however, they may be useful to regulators when reviewing potentially weakly capitalized companies.
- **Older Attained Ages**: capital needs per unit of net amount at risk increase for attained ages 65 and older due to increasing mortality rates.
- **Substandard/Classified Underwriting Classes**: capital needs are higher due to higher mortality rates on unhealthier/riskier lives.

Summary of Recommendations

- The Academy C-2 Life Mortality Work Group recommends the factors shown on Slide 14 which reflect:
  1. Expanding factors into additional categories to reflect the current mortality rate risk exposure period over the remaining lifetime of an inforce block of business
     - For individual life insurance, the recommendation is to differentiate into three product categories with definitions consistent with the annual statement – analysis of operations by line of business – individual life insurance and VM-20
     - For group life insurance, the recommendation is to differentiate into two categories by the remaining length of the premium term based on company records by group contract
  2. Including the two new catastrophe components for 1) terrorism (expressed as a 5% annual probability of an extra 0.05 deaths per 1,000) and 2) the risk of a sustained mortality increase from an unknown event (expressed as a 2.5% annual probability of a 5% sustained mortality increase)
  3. Combining the current middle two size categories into one category
  4. Continue categorizing industrial life with individual life and credit life with group life
  5. Continue with the 50% credit given for group life premium stabilization reserves
- The work group opines that additional review of the adopted correlation factor with longevity C-2 is not necessary as the Life C-2 modeling was completed consistently with longevity.
Proposed Timeline

- A proposed timeline for a year-end 2022 implementation
  - By end of Q4 2021: expose recommended final factors
  - By end of Q1 2022: structural changes are adopted
  - By end of Q2 2022: updated factors are adopted
  - Year-end 2022: factors are implemented for year-end 2022 annual statements

Appendix: Model Validation, Peer Review, Limitations

- **Validation:** Model assumptions were developed by the work group through reviewing current mortality research and studies applicable to the U.S. life insurance industry. The assumptions were discussed, reviewed and agreed upon through the work group’s bi-weekly calls. Model results and sensitivities were also reviewed extensively by the work group. The work group also provided several updates to the NAIC Life Risk-Based Capital Working Group throughout the project and feedback was obtained from regulators.

- **Peer Review:** The model was independently peer reviewed by a member of the work group. The peer review confirmed that the calculations performed by the model were reasonable for the intended purpose and were being applied as intended.

- **Limitations:** The model is intended to stochastically project through Monte Carlo simulation the run-off of inforce life insurance blocks typical of U.S. life insurers in order to develop capital factors for use in the NAIC RBC formula for C-2 life insurance mortality risk. Other uses outside of this intended purpose may not be appropriate. Product features in the model were developed at a very basic level and consider differences in base statutory reserves, lapses, post level term mortality experience, face amounts and attained ages. The model is not designed to replicate detailed product and inforce block characteristics unique to individual companies. In particular, ULSG products were not directly modeled. The work group concluded based on the modeling that the capital factors are insensitive to product differences for a given risk exposure period. The recommendation to differentiate based on product is an indirect way to get at the length of mortality rate guarantee, utilizes the current reporting structure of the annual statements, and is aligned with principles based reserving differentiation.

Appendix:
Prior Work Group Presentations to Life RBC

- **September 2020**

- **April 2019**
- **August 2018**
- **August 2017**
Credit mitigation vs. capital relief

- Life reinsurance transactions with licensed or accredited reinsurers generally do not require a collateral mechanism to provide credit for reinsurance (CFR).

- Separate and distinct from CFR, the Life RBC Manual instructions reference certain collateral mechanisms (e.g., funds withheld or trusteeed collateral), which, if present, allow the Cedant to avoid an overstatement of RBC charges that would otherwise be applied for credit exposure to reinsurance counterparties. The Life RBC formula addresses uncollateralized credit exposure to reinsurers, whether admitted/accredited or unauthorized, and offers RBC credit only for certain listed collateral mechanisms.

- While the subject provision of the Life RBC Manual allows an RBC credit for certain non-CFR collateral mechanisms, certain other credit risk mitigation (comfort) arrangements developed by large custodial institutions are not similarly treated, resulting in significant inefficiencies in certain life reinsurance transactions.
Growing demand for ‘comfort trusts’

- In many life reinsurance transactions, where the parties negotiate and agree to collateral arrangements for commercial reasons, they are forced to use trusteed assets in order to achieve the desired RBC credit, even where a trust is not needed to satisfy CFR requirements; such “comfort trusts” are common in a variety of life reinsurance transactions, including block acquisitions, embedded value and reserve financings and pension risk transfers.
  - J.P. Morgan is aware of numerous transactions that involve over $50 billion of assets held in Comfort Trusts.

- Other collateral mechanisms can provide the same level of security to Cedants with lower costs and greater flexibility.
Custody Control Accounts

- The Finance industry widely supports and leverages custodial control accounts ("Custody Control Accounts") where segregated collateralization under third-party control is required (e.g. pledges to FHLBs, Segregated Initial Margin, variation margin for 40 Act clients, etc.).
  - In the same way, a Custodian can hold assets pledged by the Reinsurer for the benefit of the Cedant in connection with a reinsurance transaction.

- The intent of the Custody Control Account is to provide the same protections to the Cedant as would be provided by a trust arrangement. Both Comfort Trusts and Custody Control Accounts can be structured to:
  - Segregate assets to cover claims and other amounts payable under the subject reinsurance agreement
  - Establish a senior claim of the Cedant over the account assets in the event of a Reinsurer insolvency or receivership
  - Permit the Cedant to take control of the assets in the event of specified breaches of the reinsurance agreement
  - Allow the Cedant to monitor the composition of assets in the account
  - Restrict Reinsurer withdrawal and replacement of assets from the account based on agreed conditions

- However, a Custody Control Account offers the same operational control as a trust arrangement, at a reduced cost due to increased scale and automation:
  - Custodial arrangements represent the majority of collateralized assets held by Custodian banks.
  - Custody Control Accounts provide a greater level of automation and straight-through-processing, resulting in lower costs (up to $100K per annum, per account) for all parties (insurers and Custodians).
  - Custody Control Accounts and Comfort Trusts both offer the following services:
    - Priced Position Reporting
    - Monitoring of specific withdrawal and replacement conditions based on objective criteria
    - Detailed transaction reporting
    - Administration and servicing of assets
  - Today, Clients have a limited number of banks that are able to provide Comfort Trusts with the same capabilities and at the same price as a custody arrangement. By allowing Custody Control Accounts to receive the same RBC treatment as Comfort Trusts, insurers would be able to select among a larger group of providers.

J.P.Morgan
Proposed changes to RBC instruction

From Risk-Based Capital Forecasting & Instructions – Life and Fraternal, 2019

REINSURANCE
LR016 (p. 53 of the 2019 Edition)

There is a risk associated with recoverability of amounts from reinsurers. The risk is deemed comparable to that represented by bonds between risk classes 1 and 2 and is assigned a pre-tax factor of 0.78 percent. To avoid an overstatement of risk-based capital, the formula gives a 0.78 percent pre-tax credit for reinsurance with non-authorized and certified companies, for reinsurance among affiliated companies, for reinsurance with funds withheld or reinsurance with authorized reinsurers that is supported by equivalent trusteed or custodied collateral that meets the requirements of the types stipulated in paragraph 18 of Appendix A-785 (Credit for Reinsurance), where there have been regular bona fide withdrawals from such trusteed or custodied collateral to pay claims or recover payments of claims during the calendar year covered by the RBC report, and for reinsurance involving policy loans. Withdrawals from trusteed or custodied collateral that are less than the amounts due the ceding company shall be deemed to not be bona fide withdrawals. For purposes of these instructions, “custodied collateral” shall mean assets held pursuant to a custodial arrangement with a qualified U.S. financial institution (as defined in Appendix A-785 (Credit for Reinsurance)) pursuant to which the underlying assets are segregated from other assets of the reinsurer and are subject to the exclusive control of, and available to, the ceding company in the event of the reinsurer’s failure to pay under, and otherwise pursuant to the terms of, the subject reinsurance agreement.
Custody Control Account

Key Features

Custody
- Pledgor instructs assets to be placed into custody account free of payment
- Asset servicing on securities that are registered in J.P. Morgan’s nominee name
- Automated income transfer capability, back to main custody account in respect of any income earned on depository eligible assets can be provided

Control
- SWIFT message release automation for collateral release AND substitutions. Support for different arrangements (e.g., Single/Joint Authentication)
- Secured Party can assume control of account upon Notice of Exclusive Control instruction to the Custodian (NOEC)

Reporting
- Consolidated custody reporting available to both client and secured party
- View and schedule customized or pre-defined reports
- Intra-day and end-of-day reporting via SWIFT

Legal & Operational Highlights

Legal Documents Required
- Global Custody Agreement: Bilateral agreement for custodial services between Pledgor and Custodian
- Account Control Agreement: Tri-party agreement between Pledgor, Secured Party and Custodian

Legal & Operational Framework
- Custody Bank acts as Custodian (not as Trustee)
- Custodian has subordinated lien over assets in the control account (though may retain a first priority lien for fees and expenses)
- Assets are segregated in a control account in the Pledgor’s name FBO the Secured Party
- The Secured Party can assume control of the account at any time upon the satisfaction of conditions as stipulated in the underlying bilateral agreement w/ the Pledgor (e.g. an event of default as notified and exclusively determined by the Secured Party) and following Custodian’s receipt of a Notice of Exclusive Control (NOEC). Custodian has a reasonable time to act on the instruction and does not validate the event of default.
- Custodian is indemnified for following instructions
- Custodian acts upon instructions by Pledgor to deliver assets into the control account
- Parties have flexibility to decide on the control model – i.e., whether release and/or substitution of assets requires single party or dual (Pledgor and Secured Party) instructions
- The Account Control Agreement supplements a Global Custody Agreement and is not a standalone agreement.
The chart below summarizes key comparisons between: (1) a trust account established by a reinsurer to provide an asset or reduction from liability to a ceding company for reinsurance ceded (a “Credit for Reinsurance Trust”); (2) a trust account established by a reinsurer in connection with a reinsurance agreement that is not necessary to provide an asset or reduction from liability for reinsurance but rather provides credit protections to the ceding company (a “Comfort Trust”); and (3) a custodial account established by a reinsurer to provide credit protections to a ceding company in connection with a reinsurance agreement (a “Comfort Custodial Account”). With respect to a Comfort Custodial Account, the chart contemplates the structure proposed by JPMorgan in connection with its proposed changes to the RBC Manual.

DESCRIPTION OF CHANGE(S)

In reference to SAPWG referral 2020-#36 (8/13/2018) and VOSTF referral 2020-#38 (9/21/2018); Attribute bond risk-based capital (RBC) factors to bond mutual funds that have applied for Regulatory Treatment Analysis Service (RTAS) and have received a National Association of Insurance Commissioners (NAIC) designation from the Securities Valuation Office (SVO), based on a look-through calculation of the credit risk for the fund’s underlying bonds, using a weighted average rating factor methodology (WARF) in conjunction with a qualitative review of the fund’s pertinent U.S. Securities and Exchange Commission (SEC) registered investment documents. Proposed factor changes:

Background

Until recently, all mutual funds, bond or equity-oriented, were classified as “common stock,” unless they met specific eligibility criteria for inclusion on the now-discontinued Money Market Mutual Fund List or Bond Mutual Fund List. The Bond Mutual Fund List eligibility criteria were narrow in scope, only permitting bond-like treatment of a mutual fund if it invested solely in U.S. Government securities with the fund maintaining the highest credit quality rating given by an NAIC Credit Rating Provider (CRP). Since the discontinuation of these lists, the SVO has positioned a new list known as the NAIC Fixed Income-Like SEC Registered Funds List to allow for the evaluation and inclusion of mutual funds that predominantly invest in individual bond securities.

NAIC staff previously questioned the equity-like treatment for bond mutual funds as part of the Statutory Accounting Principles (E) Working Group’s (SAPWG) investment classification project. As a part of this project, NAIC staff determined that the inclusion of “mutual funds” within the “common stock” definition was overly broad. Consequently, the SAPWG adopted a proposal to add a column on Schedule D, Part 2, Section 2 (subsequently implemented by Blanks (E) Working Group) that would permit funds designated by the SVO (and only funds designated by the SVO) to be reported on that schedule. Eligibility for such reporting would require an NAIC designation that could, in turn, align with an RBC factor to be determined by the Capital Adequacy (E) Task Force. This action effectively recognized that with appropriate review of underlying holdings, more appropriate risk-based capital treatment can be achieved through the designation process, without changing the reporting schedule or accounting for such investments. This adoption led to a referral from SAPWG (2020–#36) for RBC consideration.

Concurrently, the Valuation of Securities (E) Task Force (VOSTF) directed NAIC staff to develop a comprehensive proposal to ensure consistent treatment for investments in funds that predominantly hold bond portfolios, across all schedules. Significant efforts were made to align fund guidance and evaluation treatment in the P&P Manual. The adopted language created the new, aforementioned NAIC Fixed Income-Like SEC Registered Funds List of the P&P Manual, which expanded the existing evaluation framework to permit review and designation for all funds issued by an investment company whose offering is registered with and regulated by the SEC and whose published investment objective is to invest almost exclusively in bonds. The VOSTF’s procedure permits the sponsor of a fund or an insurer to request an SVO assessment of a fund to determine if it meets requirements imposed by the Task Force for more appropriate treatment. If the fund is eligible, the SVO adds the name of the fund to the relevant list with a preliminary NAIC designation. This adoption led to a referral from VOSTF (2020–#38) that the Capital Adequacy (E) Task Force (CAPAD) consider formally integrating the comprehensive instructions for mutual funds adopted for the P&P Manual into the NAIC RBC framework, by attributing bond RBC factors to any bond fund meeting the P&P Manual criteria, and achieving an NAIC designation through the SVO’s evaluation process.

Both of these preceding events and changes have effectively positioned bond mutual funds to be accurately evaluated, designated, and reported with RBC charges that are reflective of the bond securities within the fund.

Regulation

Bond mutual funds (investment companies) are registered with and regulated by the SEC and have published investment objectives to invest in bonds. Strict regulation has enabled bond mutual funds to reliably deliver bond exposure to investors for over 85 years, through unprecedented market events, such as the interest rate shock in the 1970s that saw the U.S. Federal Funds’ rate go above 14%, and also, when interest rates were cut to near 0%, during the global financial crisis and the years that followed. As of year-end 2020, there is over $5.2 trillion in total net assets entrusted to the bond mutual fund investment structure (ICI Investment Company Fact Book 2021).

1 Purposes and Procedures Manual of the NAIC Investment Analysis Office: Part Three – SVO Procedures and Methodology for Production of NAIC Designation (2019); “A bond mutual fund is eligible for inclusion on the Bond List if the fund meets the following conditions: The fund shall invest 100% of its total assets in the U.S. Government securities listed in the section below, class 1 bonds that are issued or guaranteed as to payment of principal and interest by agencies and instrumentalities of the U.S. Government, including loan-backed bonds and collateralized mortgage obligations, and collateralized repurchase agreements comprised of those obligations at all times.”

2 SAPWG – Ref #2013-36 – SSAP No. 30 – Common Stock – Key Elements: The inclusion of “mutual funds” within the “common stock” definition is overly broad and allows inclusion of all “investment company” investments, and the characteristics of some of these investments may warrant separate accounting and reporting consideration (e.g., look-through). Per the SEC, an “investment company” is a company (corporation, business trust, partnership, or limited liability company) that issues securities and is primarily engaged in the business of investing in securities.
Mutual funds are stringently regulated under the Investment Company Act of 1940 (the “1940 Act”) and the Securities Act of 1933. These laws impose extensive obligations on the mutual fund and its investment adviser. As an SEC-regulated investment company, a mutual fund must invest its portfolio assets in accordance with the investment strategies outlined in its prospectus and other governing fund documents. The fund prospectus is an SEC-regulated legal document, updated annually, to inform current and prospective investors of the risks, fees, and investment strategy of the fund. It is not permissible for a bond mutual fund to change its investment strategy in any fundamental way that does not require the fund to at least notify its shareholders of the change, and in most cases, a mutual fund’s fundamental investment strategies cannot be altered without shareholder approval.

Additionally, Section 17(f) of the ‘40 Act imposes strict regulations that require the portfolio securities (purchased on behalf of the investors) to be held by an independent custodian, segregated from the fund sponsor’s own assets. Section 17(f) also requires the net assets of the fund to be physically segregated from assets of other funds, and from the assets of the investment adviser (or any other person/entity), and provides for, among other things, periodic examinations of the assets by an independent public accountant. Finally, the SEC requires mutual fund custodians to protect a fund’s assets by segregating them from their own assets. Fund custodians must have authorized instructions from the fund’s authorized representative, designated by an officer of the fund, to deliver securities or cash from the fund.

Structure

Mutual funds should be treated (for RBC purposes) in accordance with their underlying portfolio holdings because those portfolio securities drive the value and risks of the mutual fund. A shareholder in a mutual fund has a proportionate interest in, and exposure to, the underlying portfolio of securities held by the mutual fund. Bond mutual funds exist to pool the interests of many shareholders for the purpose of investing in fixed-income securities and pass through the cash flows and investment returns generated by its bond portfolio. Because the mutual fund must honor investor redemption requests at the Net Asset Value (NAV) per share, that is, at the actual value of the investor’s proportionate interest in the mutual fund’s underlying bond portfolio, the NAV is a highly accurate reflection of the fund’s underlying portfolio. The fund is simply a conduit for the performance of the underlying portfolio securities, as the federal securities laws make clear – under Rule 22c-1 of the ‘40 Act, shares of an open-end mutual fund generally may only be bought or sold at the fund’s net asset value, which is the value of its underlying portfolio securities less fund liabilities and expenses as determined under Rule 2a-4 of the ‘40 Act. Consequently, the risks of investing in a mutual fund are a reflection of the securities constituting its portfolio. In the case of a bond mutual fund, the risks and interests represented are that of the individual bonds held.

An examination of what this structure means for insurers

A bond mutual fund is not an operating company engaged in a trade or business that issues common stock and does not share inherent characteristics of common stock. The securities that the bond mutual fund holds represent the economic value of the fund. In other words, a bond fund investor has no rights in the underlying securities owned, with respect to: 1) ownership of the companies; 2) voting rights in those companies, and; 3) sharing in the company profits or losses. Any contention that a bond mutual fund should be treated as an equity from a RBC standpoint is inconsistent with these rights and the debt exposures conveyed through the ‘40 Act structure.

As previously stated, a bond mutual fund shareholder has a proportionate interest in the underlying securities (bonds), as reflected in the current NAV per share for the fund, but only directly owns shares of the mutual fund. The shareholder does not directly own the bonds, and therefore, does not have a direct creditor relationship with the issuer. Instead, the bond mutual fund, as a registered investment company, is the direct owner of the individual bonds, and carries the creditor relationship with the issuers. Within this legal structure, the fund itself (as creditor) does not default, in the traditional sense, with respect to its relationship with the shareholder. Rather, each individually owned bond within the portfolio carries risk of default to its creditor (i.e., the bond mutual fund). For this structural reason, default risks occur “within the fund” at the same statistical occurrence rate as in any other debtor/creditor ownership structure for the bond securities (e.g., an insurer owning the bond directly). Any default occurrence is immediately recognized in the fund’s NAV, just as any other institutional investor would recognize the same default on their balance sheet. Therefore, credit risk of a bond mutual fund can be represented as a product of the weighted average credit risk of the individual bonds owned by the fund, and probabilities of default hold true for each underlying security. As with direct bond ownership, bond funds have interest rate, inflation, and credit risk associated with the underlying bonds owned by the fund, reflected in the daily NAV.

---

1Section 3(a)(1)(C) of the Investment Company Act defines an investment company as an issuer that is engaged or proposes to engage in the business of investing, reinvesting, owning, holding or trading in securities, and owns or proposes to acquire “investment securities”

2Management companies usually are structured as corporations or trusts. A management company’s board of directors (or trustees) oversees the management of the company. See Section 2(a)(12) of the Investment Company Act. A management company’s investment adviser (which is typically a separate entity, registered with the Commission) manages the company’s portfolio securities for a fee. See Section 2(a)(20) of the Investment Company Act.
We can further examine this structure by defining the prospective constituents. Within the bond mutual fund legal structure, the fund is the investment “company”, and the registered investment adviser of the fund serves as the portfolio manager, investing for economic benefit for the “company”. This economic benefit is then proportionally passed-through the registered investment company (i.e., mutual fund) to the shareholder (e.g., insurer), in exchange for a fee, in the form of an expense ratio. Similarly, an insurance “company” may directly own a portfolio of hundreds or thousands of bonds that are managed by an internal team of investment management professionals that it compensates for these services, for the economic benefit of their general account and policy holders. Finally, an insurance “company” may access these bonds through a separately managed account (SMA) of individual bonds, managed on behalf of the “company” by a professional asset management firm. Once again, the investment adviser is acting in a fiduciary capacity for the insurer for the economic benefit of the “company” and its owners, in exchange for a management fee.

In all three arrangements, regardless of structure, there is a portfolio of bonds, a company that owns those bonds, portfolio adviser, and economic benefit passed on to the general account. Bonds held directly, or through other types of investment vehicles, hold the same types of securities. Therefore, portfolios of securities held in registered open-end management investment companies under the ‘40 Act should receive similar RBC treatment, in order to promote consistent, accurate application of capital treatment for structural ownership arrangements that produce the same economic value and risks.

An examination of credit rating downgrades

Based on structure, it should also be noted that there are no significant differences with respect to individual bond downgrades and the options available to manage such downgrades. This includes passively managed mutual funds that track a fixed income benchmark. When an issuer downgrade occurs, the downgrade is uniformly occurring within the bond market for any creditor, whereby a negative change in the rating of the bond security has occurred. A downgrade happens when a credit rating agency analyst feels that the future prospect for the security has weakened from the original recommendation, usually due to a material and fundamental change in the company's operations, future outlook, or industry, but does not indicate a guarantee of default. In each structure described, the owner has similar options.

While a passively managed mutual fund’s objective is to track and deliver indexed returns, it is not legally obligated to sell a bond that has been downgraded out of scope of the index, at the time of the announced downgrade event, or even at the time in which the tracked benchmark provider removes the bond from the index, on the last day of the month of occurrence. Instead, the mutual fund, just like the individual institutional owner or SMA, has options to mitigate its risk and manage its portfolio for the benefit of the shareholder. In all ownership structures, the owner may: 1) sell the bond; or 2) hold the bond despite the implied increase of risk.

Also, a downgrade does not necessarily equate to illiquidity and can result in either a discounted sale price option for the owner (immediately recognized in the NAV of a mutual fund), or in some instances, an increased value and sale price (recognized increase to mutual fund NAV) in the bond market, due to the market’s perception of a higher yield from the issuer that may not necessarily represent increased default risks to the prospective buyer. A mutual fund provider may leverage its scale and strong broker/dealer relationships to trade this security at a specific time (or over time) that will give the fund best execution and economic value.

Additionally, downgrades occur annually for a relatively small portion of the total U.S. bond market, and have represented less than 1% of issuance, on average, from 2007 to 2020. Of these downgrades, the majority remained within investment grade quality, with only 0.1% falling below investment grade. At the same time, a bond mutual fund only holds a fraction of bond market issues, and therefore may only own a fraction of a fraction of downgraded bonds that could in any manner impact a decision to sell the bond from the portfolio. As was previously discussed, these decisions to potentially mitigate portfolio risk are no different across ownership structures and immaterial in the decision to apply a certain set of risk-based capital factors.

*Calculated based on, Bloomberg Finance L.P., Moody’s, S&P, Fitch, and SIFMA market data.
Validity of evaluation methodology

The recommendation to apply bond factors to bond mutual funds, based on an SVO quantitative and qualitative review, is based on a NAIC approach successfully conducted for almost 30 years (see previous citation of eligible bond mutual funds that invest 100% of their total assets in the U.S. Government securities). The approach is consistent with past NAIC practice, easy to implement, and considers the role of the VOSTF in identifying investment risks and the practical approach expressed in the administration of the RBC framework, which is based on default characteristics of corporate bonds, but applied to many other instruments, with risk and default characteristics unlike those of corporate bonds. This method for evaluating risk, and application of bond factors as a proxy to achieve appropriate levels of risk-based capital for these investments, has proven over decades that it is built on sound policy and should also be readily be applied to bond mutual funds.

Current SVO procedures permit the sponsor of a fund, or an insurer, to request a SVO assessment of a fund to determine if the fund is within scope of the comprehensive instructions for mutual funds, adopted in the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual). If, and only if, the fund is eligible, the SVO conducts an analysis, and adds the name of the fund to the relevant list, with a preliminary NAIC designation. Therefore, any bond mutual funds not submitted through the established SVO framework would continue to be covered by SSAP No. 30 and remain ineligible for NAIC designation and/or corresponding bond RBC factors. This rigorous process includes evaluation upon initial submission to the SVO and an ongoing process that has the ability to adapt ratings if a fund’s composition or investment approach changes. For any rated fund the analysis would be conducted by the SVO twice each year; once during the fund provider’s mandatory annual review and again when an insurer files notice of its ownership of the fund.

The SVO’s well-developed analysis framework (successfully implemented for bond ETFs since 2004) includes a comprehensive look-through to all securities held in the investment in order to assess the inherent risks borne by the fund. This calculation of the credit risk for the fund’s underlying investment portfolio uses a weighted average rating factor methodology (WARF). The WARF factor for each portfolio security (issue/security specific) is determined by first translating its NAIC CRP changes. For any rated fund the analysis would be conducted by the SVO twice each year; once during the fund provider’s mandatory annual review and again when an insurer files notice of its ownership of the fund.

The SVO’s well-developed analysis framework (successfully implemented for bond ETFs since 2004) includes a comprehensive look-through to all securities held in the investment in order to assess the inherent risks borne by the fund. This calculation of the credit risk for the fund’s underlying investment portfolio uses a weighted average rating factor methodology (WARF). The WARF factor for each portfolio security (issue/security specific) is determined by first translating its NAIC CRP rating into an NAIC Designation. For bond securities that are unrated but have an NAIC Designation, the Designation is used. The WARF factor for that NAIC Designation is then market value-weighted. The weighted factor for each investment is summed to determine the fund’s credit rating, which is then translated into the equivalent NAIC Designation.

The analysis is detailed in nature and accurately identifies similar risks of credit quality and interest rate sensitivity, associated with the underlying bonds, but also scrutinizes the rare instances where funds have more of a heterogeneous investment profile or dispersion of risk. The analysis is built on three key pillars:

- An extensive quantitative look-through analysis that is built on sound mathematical principles, in which a fund cannot “hide” lower-quality bonds behind those with stronger credit quality. Instead, the risks of any lower-quality bonds result in a higher NAIC designation and corresponding RBC charge. This total charge for a given dollar of investment is often higher than if the same dollar was invested with proportionate weighting in each individual bond within the portfolio. As an example, Vanguard’s designated bond ETFs consistently give insurers diversified exposure to “higher” credit quality, relative to the applied NAIC designation, corresponding RBC factor, and total capital charge. (Data can be provided upon request. The same principle will hold true for similarly structured ‘40 Act mutual funds.).

- A qualitative review of the fund, considering the fund’s objectives and investment constraints, as outlined in the SEC-regulated prospectus; thus, the SVO review considers the full range of the fund’s possible future bond investments, not just the present.

- Ongoing regulatory oversight of the mutual funds used in insurers’ portfolios, which remains a critical safeguard. If an insurance company buys a preliminarily designated listed fund, it must file that fund with the SVO for an additional analysis and official validation of the previously analyzed credit risks in order to receive an official NAIC designation. This new analysis takes into account any credit quality changes in a fund, including previously discussed downgrades, which may or may not have been sold from the fund. Only after this additional analysis does the SVO assign an official NAIC designation and enter the security into the NAIC systems for fixed-income like treatment.

Validity and summary of bond factor application

A mutual fund is a reflection of the composition of individual bonds within the fund’s portfolio. Every bond mutual fund will have its own unique number and variety of holdings, credit quality exposure, and therefore risk associated with the fund. Due to the endless variety of holdings and credit exposure that a fund can contain, a single, one-time analysis cannot be conducted at a mutual fund industry level to standardize new RBC factors to be applied across various “buckets” of bond mutual funds. Therefore, the approach to look-through each submitted bond mutual fund, using the WARF methodology, and apply as a proxy a bond designation, is the only appropriate analysis that can be conducted to accurately apply an RBC factor aligned with the risk of each unique portfolio.
As previously described, mutual funds are pass-through entities that pass through the cash flows and investment experience generated by the portfolio. If the fund only holds debt, the investor will only experience debt-like cash flows through the fund, generated by the principal and interest of the individual bonds held by the fund. Additionally, the risks of the bond fund are a reflection of the aggregate risks of each underlying bond component of the portfolio. As an investor in those bonds, a mutual fund bears those risks proportionate to its exposure in the security in the same manner that an insurer would bear the risk proportionate to their investment exposure in a specific individual bond held.

Within the context of RBC and how bond factors are attributed on a basis of a debtor’s ability to meet obligations to a creditor, the mutual fund “company” itself does not default in its relationship with the shareholder, because there is no creditor/debtor relationship with the shareholder. Therefore, standardized default rates of funds cannot be analyzed. Similarly, an insurer who owns a portfolio of bonds does not default, but rather, individual bonds within the insurer’s portfolio have default probabilities based on the credit quality of the issuer and the risk to not meet obligations. The same economic experience exists for both investing entities, and each creditor has the same legal protections and opportunity for economic recovery. However, in the event a decision is made to trade the bond in default, a bond mutual fund provides a structural advantage to most other institutions, due to scale and broker/dealer relationships that include dedicated coverage. Because of these advantages, bond mutual funds can more effectively trade these bonds at an opportune time, thus creating efficiencies of value in comparison to other owners of the issuance in default.

As the owner of the individual bonds, the mutual fund has a direct creditor relationship with the bond issuer and is subject to default at a statistical rate inherent in the creditworthiness of the issuer. In this case, the mutual fund directly bears the risk of issuer default and the financial impact in a manner proportionate to each bond. This is the same creditor relationship and risk that an individual insurer experiences when it directly owns individual bonds with varying credit qualities, at varying amounts, within their individually managed portfolio or SMA. Therefore, RBC for the individual insurance company is an aggregate of the weighting the insurer has to each individual bond and its credit quality. Similarly, when the SVO analyzes a mutual fund they look at the individual weighting to each bond and its credit quality to produce a weighted average, just as you mathematically can with an individual insurer’s portfolio. (Data can be provided upon request.)

**Impact**

Impact should be considered secondary to applying charges that are appropriate to the risk of the investment and the validity of such factors, as previously described. Utilization of bond RBC factors will be aligned with the CAPAD policy that insurers are capitalized at a minimally acceptable level and aligned and implemented through an SVO methodology that accurately assesses the underlying credit risk. With accurate application of valid RBC factors, impact will be appropriate.

Bond mutual funds offer a number of benefits to insurers, including the ability to redeem shares with the fund, daily valuation of the portfolio at NAV, immediate low-cost diversification, and professional investment management. By pooling together the assets of thousands or millions of investors, mutual funds achieve greater scale and efficiency than virtually any investor, including many insurers, could hope to obtain individually. Importantly, the biggest beneficiaries of a broader inclusion of bond mutual funds for bond RBC application would be small and mid-size insurers. In our experience, these companies often have challenges constructing diversified bond portfolios without incurring high costs because of the comparatively limited scale of their portfolios. Allowing for expansion of bond factor application to SVO evaluated bond mutual funds would accurately reflect the inherent risk in the portfolio and remove an inconsistent barrier to these low-cost options provided by top institutional money managers. These managers can help insurers increase the probability of meeting their portfolio goals while simultaneously reducing risk through greater diversification.

For those insurers that currently invest in bond mutual funds, but receive an equity-like factor, future impact to RBC cannot be accurately measured, because there is an unknown variable in the number of bond mutual fund asset managers that will apply for RTAS in order to receive an NAIC designation with a corresponding bond factor. However, given the knowledge and resources required to submit a mutual fund for such treatment, it can reasonably be hypothesized that a limited number of mutual funds will apply for the SVO review process and receive bond factors, leading to a minimal effect across these held bond mutual funds and on insurer RBC. Below, is a historical three-year summary of the small amount invested in bond mutual funds that would have asset manager “eligibility” to apply for review and bond factor treatment.

<table>
<thead>
<tr>
<th>Approximate bond mutual fund admitted assets (SMM)</th>
<th>2017</th>
<th>2018</th>
<th>2019</th>
<th>2020</th>
</tr>

</tbody>
</table>
These invested funds would be eligible for bond factor RBC only if they submit for, and undergo, the SVO evaluation process, leading to an official NAIC designation listing. The above figures equate to less than 1/10 of 1% of insurers’ net admitted assets, according to statutory filings. Given the incredibly small allocation to bond funds within insurer portfolios, even in the most extreme assumed instance, where RBC would reduce from a 30% common stock charge to the lowest NAIC designation and charge (0.39% or 0.30%) for all current holdings, there would be very little impact to investment RBC, which is only one contributing factor to a company’s overall RBC.

 Revised 2-2019
Property and Casualty Risk-Based Capital (E) Working Group  
Virtual Meeting (in lieu of meeting at the 2022 Spring National Meeting)  
March 23, 2022

The Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met March 23, 2022. The following Working Group members participated: Tom Botsko, Chair, and Dale Bruggeman (OH); Charles Hale (AL); Wanchin Chou, Qing He, Amy Waldhauser, and George Bradner (CT); Robert Ridenour and Virginia Christy (FL); Judy Mottar (IL); Leatrice Geckler (NM); Halina Smosna and HauMichael Ying (NY); Will Davis (SC); Miriam Fisk and Monica Avila (TX); and Adrian Jaramillo and Michael Erdman (WI). Also participating were: Chris Erwin and Leo Liu (AR); Rolf Kaumann (CO); Adrienne Lupo (DE); Patrick P. Lo (HI); Tish Becker (KS); Vanessa Sullivan (ME); Julie Lederer (MO); Justin Schrader and Gordon Hay (NE); Trey Hancock (TN); and Steve Drutz (WA).

1. **Adopted Catastrophe Risk (E) Subgroup Feb. 22, 2022; Jan. 25, 2022; and Dec. 16, 2021, Minutes**

   Mr. Chou said the Catastrophe Risk (E) Subgroup met Feb. 22, 2022; Jan. 25, 2022; and Dec. 16, 2021. During these meetings, the Subgroup took the following action: 1) adopted proposal 2021-15-CR (Adding KCC Models), which the Subgroup exposed for a 30-day public comment period ending Nov. 26, 2021; 2) adopted proposal 2021-17-CR (Adding Wildfire Peril for Informational Purposes Only), which the Subgroup exposed for a 60-day public comment period ending Feb. 13; 3) heard an update from the Catastrophe Model Technical Review Ad Hoc Group. The update included the discussion of the survey questions created by the members within the group, which were based on *Actuarial Standard of Practice (ASOP) No. 38—Catastrophe Modeling (for All Practice Areas)*; 4) discussed three different kinds of catastrophe models that deviate from the vendor models. The Subgroup will focus on discussing the vendor catastrophe models with adjustments or different weight first; 5) discussed the issue of double counting in the R5 component. The Subgroup asked the interested parties to review the current methodology and provide comments in the upcoming meetings; 6) discussed the possibility of adding flood peril in the Rcat component. Industry asked the Subgroup to consider the materiality issue with respect to whether the flood peril is warranted, given the exposure of the industry; and 7) heard a presentation from Milliman on the private flood market.

   Mr. Chou made a motion, seconded by Mr. Davis, to adopt the Subgroup’s Feb. 22, 2022 (Attachment Five-A1); Jan. 25, 2022 (Attachment Five-A2); and Dec. 16, 2021 (Attachment Five-A3) minutes. The motion passed unanimously.

2. **Adopted the Report of the Catastrophe Risk (E) Subgroup**

   Ms. Smosna said the Subgroup met March 22, 2022, and took the following action: 1) adopted its Feb. 22, 2022; Jan. 25, 2022; and Dec. 16, 2021, minutes; 2) discussed its 2022 working agenda items; 3) discussed the insured loss threshold for wildfire peril; 4) exposed proposal MOD 2021-17-CR (Wildfire Information-Only Reporting Exemption) for a 14-day public comment period ending April 5; 6) discussed the independent model review instruction in the Rcat component; and 7) discussed the issue of double counting in the R5 component.

   Mr. Chou made a motion, seconded by Mr. Hale, to adopt the report (Attachment Five-A) of the Catastrophe Risk (E) Subgroup. The motion passed unanimously.

Mr. Chou said the purpose of this proposal is to include the Karen Clark & Company (KCC) model as one of the approved third-party commercial vendor catastrophe models. The Subgroup received one supporting letter, which encouraged the Subgroup to keep the approval list current with market usage.

Mr. Chou made a motion, seconded by Mr. Ridenour, to adopt proposal 2021-15-CR (see NAIC Proceedings – Spring 2022, Capital Adequacy (E) Task Force, Attachment Eight). The motion passed unanimously.

4. **Adopted Proposal 2021-17-CR (Adding Wildfire Peril for Informational Purposes Only)**

Mr. Chou said the purpose of this proposal is to include wildfire peril in the Rcat component for informational purposes filing until all the concerns are addressed before incorporated into the risk-based capital (RBC) calculation. He stated that the Subgroup received three comment letters during the exposure period. However, Mr. Chou indicated that the Subgroup agreed to take time to evaluate the impact and allow more time for the modelers to enhance their modeling approach with this new peril.

Mr. Chou made a motion, seconded by Mr. Ridenour, to adopt proposal 2021-17-CR (see NAIC Proceedings – Spring 2022, Capital Adequacy (E) Task Force, Attachment Nine). The motion passed unanimously.

5. **Adopted Proposal 2021-14-P (R3 Factor Adjustment)**

Mr. Botsko said this proposal intends to eliminate the double-counting effect of the operational risk charge on the component. He said NAIC staff performed an analysis to determine the impact on the RBC action levels by reducing the 2% reinsurance recoverable RBC charge for all reinsurance designation equivalents. The result indicated that the impact is insignificant, as there are only three companies with total adjusted capital (TAC) between zero to 75 million that will change the RBC results from action level to no action. He also stated that the Working Group received no comments during the exposure period.

Mr. Chou made a motion, seconded by Mr. Davis, to adopt proposal 2021-14-P (see NAIC Proceedings – Spring 2022, Capital Adequacy (E) Task Force, Attachment Ten). The motion passed unanimously.

6. **Exposed Proposal 2022-01-P (Removing Trend Test for Informational Purposes Only Footnote)**

Mr. Botsko said since the trend test has been adopted by every state, the purpose of this proposal is to remove the trend test for information-only wordings in the PR033 footnote.

The Subgroup agreed to expose proposal 2022-01-P for a 30-day public comment period ending April 22.

7. **Discussed its Working Agenda**

Mr. Botsko summarized the changes of Working Group’s 2022 working agenda, which included the following substantial changes: 1) adding the exposure and/or adoption dates to the items of “evaluate other catastrophe risks for possible inclusion in the charge” and “evaluate the possibility of allowing additional third-party models or adjustments to the vendor models to calculate the cat model losses”; 2) changing the expected completion dates for “evaluate the proposed changes from the Affiliated Investment Ad Hoc Group related to P/C RBC Affiliated Investments,” “continue working with the Academy to review the methodology and revise the underwriting (Investment Income Adjustment, Loss Concentration, LOB UW risk) charges in the PRBC formula as
appropriate,” “evaluate if changes should be made to the P/C formula to better assess companies in runoff,” and “evaluate the Underwriting Risk Line 1 Factors in the P/C formula” items; 3) removing the “modify instruction to PR027 Interrogatories that clarify how insurers with no gross exposure to earthquake or hurricane should complete the interrogatories” and “evaluate R3 Adjustment for Operational Risk Charge” items; 4) adding the adoption date to the “implement wildfire peril in the Rcat component (for informational purposes only)” item; and 5) adding “evaluate the possibility of modifying exemption criteria for different cat perils in the PR027 interrogatories,” “evaluate the possibility of enhancing the independent model instructions,” and “remove the trend test footnote in PR033” items under the new items section.

Without hearing any comments from state insurance regulators and industry, Mr. Botsko said the working agenda will be forwarded to the Capital Adequacy (E) Task Force for consideration.

8. **Heard Updates on Current P/C RBC Projects from the Academy**

Allan Kaufman (American Academy of Actuaries—Academy) said the Academy’s Property/Casualty (P/C) Risk-Based Capital Committee provided a report describing the calibration of indicated Line 4 premium and reserve risk factors, which was one of the three reports that the Academy described to the Working Group in 2019. He stated that currently, the Academy has four ongoing projects. First is the second of the three reports, which is the line 7 and line 8 of premium and reserve risk, respectively. Mr. Kaufman said he anticipates that this report would be shared with the Working Group for discussion during the next quarter. Second is the third of the three reports, which is the line 14 (loss and premium concentration factors) of premium and reserve risks. He said he anticipates that this report will be provided to the Working Group by end of 2022. He also stated that the last two projects, which are an update to the factors used to avoid overlap between the line 4 premium risk factor and the separate hurricane and earthquake charges in Rcat and the development of a revised approach of line 1 factor, will be presented to the Working Group by the end of the next quarter and by the end of 2022 or early 2023, respectively.

9. **Discussed Other Matters**

Mr. Botsko said a response letter to request for input regarding the definition of run-off companies was forwarded to the Restructuring Mechanisms (E) Subgroup in April 2021. The Subgroup planned to schedule a meeting in April to discuss this issue. Mr. Botsko encouraged all the interested parties to participate at the meeting and provide thoughts to the Working Group during the upcoming meeting.

Lastly, Mr. Botsko was pleased to announce that Mr. Chou will be serving as Working Group vice chair.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group adjourned.
The Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met March 22, 2022. The following Subgroup members participated: Wanchin Chou, Chair, George Bradner, and Qing He (CT); Halina Smosna, Chair, Gloria Huberman, HauMichael Ying (NY); Laura Clements and Giovanna Muzzarelli (CA); Jane Nelson (FL); Judy Mottar (IL); Gordon Hay (NE); Anna Krylova (NM); Tom Botsko (OH); Andrew Schallhorn (OK); and Miriam Fisk, Monica Avila, and Rebecca Armon (TX). Also participating were: Adrienne Lupo (DE); Brock Bubar (ME); and Julie Lederer (MO).

1. **Adopted its Feb. 22, 2022; Jan. 25, 2022; and Dec. 16, 2021, Minutes**

Mr. Chou said the Subgroup met Feb. 22, 2022; Jan. 25, 2022, and Dec. 16, 2021. During these meetings, the Subgroup took the following action: 1) adopted proposal 2021-15-CR (Adding KCC Models), which the Subgroup exposed for a 30-day public comment period ending Nov. 26, 2021; 2) adopted proposal 2021-17-CR (Adding Wildfire Peril for Informational Purposes Only), which the Subgroup exposed for a 60-day public comment period ending Feb. 13, 2022; 3) received an update from the Catastrophe Model Technical Review Ad Hoc Group. The update included the discussion of the survey questions created by the members within the group, which were based on **Actuarial Standard of Practice (ASOP) No. 38—Catastrophe Modeling (for All Practice Areas)**; 4) discussed three different kinds of catastrophe models that deviate from the vendor models. The Subgroup will focus on discussing the vendor catastrophe models with adjustments or different weight first; 5) discussed the issue of double counting in the R5 component. The Subgroup asked the interested parties to review the current methodology and provide comments in the upcoming meetings; 6) discussed the possibility of adding flood peril in the Rcat component. Industry asked the Subgroup to consider the materiality issue with respect to whether the flood peril is warranted, given the exposure of the industry; and 7) heard a presentation from Milliman on the private flood market.

Mr. Botsko made a motion, seconded by Ms. Clements, to adopt the Subgroup’s Feb. 22, 2022 (Attachment Five-A1); Jan. 25, 2022 (Attachment Five-A2); and Dec. 16, 2021 (Attachment Five-A3) minutes. The motion passed unanimously.

2. **Discussed its Working Agenda**

Ms. Smosna summarized the changes of the 2022 working agenda, which included the following substantial changes: 1) adding the exposure and adoption dates to the “evaluate the possibility of allowing additional third-party models or adjustments to the vendor models to calculate the cat model losses” item; 2) removing the “modify instruction to PR027 Interrogatories that clarify how insurers with no gross exposure to earthquake or hurricane should complete the interrogatories” item; 3) adding the adoption date to the “implement wildfire peril in the Rcat component (for informational purposes only)” item; and 4) adding “evaluate the possibility of modifying exemption criteria for different cat perils in the PR027 interrogatories” and “evaluate the possibility of enhancing the independent model instructions” items under the new items section. Without hearing any comments from state insurance regulators and industry, Ms. Smosna said the working agenda will be forwarded to the Property and Casualty Risk-Based Capital (E) Working Group for consideration.
3. **Discussed the Insured Loss Threshold for Wildfire Peril**

Ms. Smosna asked the Subgroup to consider using the same threshold of 25 million or greater estimated insurer losses for wildfire peril as the earthquake and hurricane perils. She said any received comments regarding this item will be discussed during the Subgroup’s next meeting on April 19.

4. **Exposed Proposal MOD 2021-17-CR (Wildfire Information-Only Reporting Exemption)**

Scott Williamson (Reinsurance Association of America—RAA) said this modification applies only to those smaller companies, where the modeling requirements would impose a cost and compliance burden that represent an outsized cost relative to the incremental benefit of providing the modeled data for information-only purposes. He stated that this exemption option is intended only to apply to the information-only reporting for wildfire, while the Subgroup continues to evaluate materiality and model maturity. It would no longer be available when the wildfire peril is added to the Rcat component unless the companies qualify under the exemptions listed in PR027 Interrogatory items C(7), C(8), or C(9).

The Subgroup agreed to expose proposal MOD 2021-17-CR for a 14-day public comment period ending April 5.

5. **Discussed the Independent Model Review Instruction in the Rcat Component**

Mr. Chou said some written comments related the instructions to review an internal model were received from the Missouri Department of Commerce and Insurance (DCI) earlier (Attachment Five-A4). Ms. Lederer said the DCI asked the Subgroup to look into the following items in the internal model review instructions: 1) consider rewording item 3 to make the Subgroup’s intention clear; 2) consider reviewing the comparison of internal model estimates to actual results for historical events; and 3) experiencing difficulty in receiving written documentation from the group-wide supervisor. She also stated that the DCI did not engage an outside consultant to review the model as this model is highly confidential. It was quite a heavy lift for reviewing based on the Rcat instructions. Ms. Lederer also said the DCI is not aware of any other companies that applied for permission to use their internal models in other states.

Mr. Chou urged the interested parties to review the current PR027 internal model instructions and provide comments or wordings to the NAIC staff in next three weeks. He said any received information will be discussed during the Subgroup’s next meeting on April 19.

6. **Discussed the Issue of Double Counting in the R5 Component**

Ms. Smosna said the NAIC did not receive any comments on this item since the Subgroup’s last meeting on Feb. 22. She said the wildfire peril will follow the same process as the other perils to adjust the R5 component based on the PR100’s data collection. The Subgroup agreed unanimously.

7. **Discussed Other Matters**

Mr. Chou said that the AIR Worldwide, Risk Management Solutions (RMS), and Karen Clark & Company (KCC) are the only third-party commercial vendor wildfire models agreed to be used by the Subgroup. He stated that the Subgroup only agreed on using the CoreLogic model for earthquake and hurricane peril and ARA HurLoss and Florida Public Model (FPHLM) for hurricane peril only. These clarifications will be reflected in the 2022 Risk-Based Capital (RBC) PR027 instructions.

Having no further business, the Catastrophe Risk (E) Subgroup adjourned.
The Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met Feb. 22, 2022. The following Subgroup members participated: Wanchin Chou, Co-Chair, and Qing He (CT); Halina Smosna, Co-Chair, Gloria Huberman, and HauMichael Ying (NY); Robert Ridenour, Vice Chair, and Jane Nelson (FL); Laura Clements, Lynne Wehmueller, and Giovanni Muzzarelli (CA); Judy Mottar (IL); Anna Krylova (NM); Tom Botsko (OH); Andrew Schallhorn (OK); and Miriam Fisk and Rebecca Armon (TX). Also participating was: Julie Lederer (MO).

1. Consider Adoption of Proposal 2021-17-CR (Adding Wildfire Peril for Informational Purposes Only)

Mr. Chou said the Subgroup identified wildfire as one of the major drivers of U.S. insured losses during the previous meeting. He also stated that a referral letter from the Climate and Resiliency (EX) Task Force was received on March 15, 2021, to recommend that the Subgroup consider: 1) expanding the current catastrophe framework to include other perils such as wildfire, flood, and/or convective storms that may experience a greater tail risk under projected climate-related trends; and 2) implementing two perils in the risk-based capital (RBC) framework by year-end 2022 if possible. He said a response was sent by the Subgroup on April 26, 2021, indicating that the catastrophe models are complicated; the Subgroup will need time to review and gain a better understanding so the costs and benefits for using the models are justified. He also said a proposal to include wildfire peril in the Rcat component for informational purposes only was developed and exposed for a 60-day public comment period ending Feb. 13. He stated that the Subgroup received three comment letters during the exposure period; some minor editorial changes in the proposal were made based on the received comment letters to clarify that this proposal is for informational purposes only and no timeline has been set for the RBC implementation until the needed enhancements and statistical impacts are implemented. In addition, the exemption interrogatory clearly indicated that the exemption rules to address the minimal wildfire exposure are consistent with the earthquake and hurricane perils.

Matthew Wulf (Swiss Re) recommended that the Subgroup consider extending the informational purposes only period to allow companies the time to responsibly incorporate either a vendor or internal model fully into pricing, risk selection, and capital management processes. Matthew Vece (American Property Casualty Insurance Association—APCIA) also supported an extended, multi-year period for informational-only filings until all the concerns are addressed before incorporated into RBC for solvency purposes, as wildfire models are still in the new stage of development, and the models are more prone to yielding inconsistent results, especially in the tail of the distribution. Jonathan Rodgers (National Association of Mutual Insurance Companies—NAMIC) and Scott Williamson (Reinsurance Association of America—RAA) said they submitted a comment letter on Feb. 13. Mr. Rodgers suggested that the filing only be required for companies that currently employ the approved models. He also stated that the comment letter clearly indicates that both NAMIC and the RAA do not think wildfire models are ready to be relied upon for solvency purposes; exploring other opportunities to address this peril during the for informational purposes only period is worth consideration. Mr. Botsko recommended that the Subgroup move the proposal forward, as the Subgroup agreed to take time to evaluate the impact and allow more time for the modelers to enhance their modeling approach with this new peril. Mr. Williamson asked the Subgroup to consider adopting the proposal with a carve out for companies that do not currently employ the model. Ms. Smosna asked for clarity around the term “employ” and whether Mr. Williamson means “license” models or “use” models, because many companies use models through their broker relationships and do not actually license the models. Mr. Williamson stated that he intended the term “employ” to refer to companies that license the models. Ms.
Smosna expressed concern that that might leave out too large a universe of companies from the informational-only process. Mr. Chou said the Subgroup will continue working with the RAA to resolve the exemption issues in the near future. He also encouraged all the interested parties to keep reviewing the comments and continue discussing the outstanding issues in the upcoming meetings.

Having no further comments, Mr. Botsko made a motion, seconded by Mr. Ridenour, to adopt proposal 2021-17-CR (see NAIC Proceedings – Spring 2022, Capital Adequacy (E) Task Force, Attachment Nine). The motion passed unanimously.

2. **Discussed the Independent Model Review Instructions in Rcat**

   Mr. Chou said during the previous discussion, the Subgroup identified three different kinds of catastrophe models that deviate from the vendor models: 1) internal catastrophe models; 2) vendor catastrophe models with adjustments or different weight; and 3) derivative models based on the vendor models. He stated that the Subgroup will focus on discussing the vendor catastrophe models with adjustments or different weight first. He said he believes the PR002 Attestation and PR027 Catastrophe Risk pages will require further modification to better accommodate this type of model. Ms. Lederer said the Missouri Department of Commerce and Insurance (DCI) has used the RBC instructions to review an internal catastrophe model. She said she would like to offer some comments to the Rcat instructions in the upcoming meeting. Mr. Chou also asked the industry to review the instructions and provide comments at the Spring National Meeting.

3. **Discussed the Issue of Double Counting in the R5 Component**

   Ms. Smosna said the wildfire peril will follow the same process as the other perils to adjust the R5 component based on the PR100s data collection. She said any received comments regarding this item will be discussed in the upcoming meeting.

4. **Heard a Presentation Regarding the Private Flood Market**

   Nancy Watkins (Milliman) provided a presentation on: 1) flood market background; 2) the need for flood catastrophe models; 3) flood and catastrophe model regulation; and 4) flood model evaluation (Attachment Five-A1a). Mr. Chou said currently, the Subgroup just started the discussion on: 1) the materiality of the flood peril; and 2) the RBC financial solvency regulations. He stated that Ms. Watkins will be invited back for another presentation if the Subgroup decides to further study this peril.

   Lastly, Mr. Chou said the Subgroup will continue discussing all the outstanding issues at the Spring National Meeting.

Having no further business, the Catastrophe Risk (E) Subgroup adjourned.
U.S. Private Flood Market

NAIC Catastrophe Risk (E) Subgroup

February 22, 2022

Nancy Watkins, FCAS, MAAA
Principal & Consulting Actuary, Milliman

Agenda

- Flood market background
- The need for flood catastrophe models
- Flood and catastrophe model regulation
- Flood model evaluation
Flood market background

Flood risk is increasing...

“The rain broke records set just 11 days before by Tropical Storm Henri, underscoring warnings from climate scientists of a new normal on a warmed planet. Hotter air holds more water and allows storms to gather strength more quickly and grow ever larger.”

New York Times, September 7, 2021

“The United States is expected to experience as much sea level rise by the year 2050 as it witnessed in the previous hundred years... sea levels along the coastline will rise an additional 10-12 inches by 2050 with specific amounts varying regionally, mainly due to land height changes.”

National Oceanic and Administration Association, February 15, 2022
...but the U.S. flood insurance market is underserved

- Current U.S. residential flood insurance market
  - Estimated 4% of SFHs have flood insurance (2021)
  - NFIP: $3.6B total premium on 4.8M policies (2019)
  - Private insurers reported $735M in Private Flood DWP (2020) vs. $577M in DWP (2019)
  - About one-third of Private Flood DWP is estimated to be residential
  - 175 private carriers writing flood insurance (2020) vs. 152 in 2019
  - Potential U.S. residential flood insurance market is between $37B and $47B of DWP
- For comparison purposes, 2020 HO DWP was $110B

What makes an insurance market sustainable?

- **Availability**
  - Insurer can manage and measure the risk
  - Insurer can charge premiums that represent the cost of risk transfer

- **Affordability**
  - Policyholders are able to pay the premium

- **Reliability**
  - Insurer will be able to pay claims
  - System will be stable over the long term

© 2022 National Association of Insurance Commissioners
Flood risk is local
Varies greatly over short distances and requires granular rating
Flood risk is catastrophic
Requires advanced catastrophe models for risk measurement and management

Milliman

National Flood Insurance Program
Supplementing historical experience with advanced catastrophe models

FEMA is updating the NFIP risk rating methodology through the implementation of a new pricing methodology called Risk Rating 2.0. The methodology leverages industry best practices and cutting-edge technology to enable FEMA to deliver rates that are actuarily sound, equitable, easier to understand and better reflect a property's flood risk.

Risk Rating 2.0 was implemented for new policies in October 2021 and will apply to renewal policies in April 2022. As part of the rate development process, FEMA supplemented NFIP's historical loss experience with commercial catastrophe models for inland flood and storm surge.

Description of RR 2.0 methodology and data sources: https://www.fema.gov/flood-insurance/risk-rating
Flood models are necessary for climate-readiness

Under a high climate scenario, an estimated 750k single-family properties in the US will face major repricing by 2050
Catastrophe model treatment varies widely among states

- Prohibition of the use of catastrophe models for some or all purposes in establishing rates
- Silent on the use of catastrophe models
- Questionnaires and case-by-case model validation
- Regulations piggybacking on other state reviews
- Statewide body for scientific and technical review of catastrophe models
How different states treat catastrophe models

- **Florida**: Models used in rate filings must be accepted by the Florida Commission on Loss Projection Methodology, which conducts extensive reviews of hurricane and flood models.

- **South Carolina**: Models must be approved by South Carolina, historically have followed Florida’s lead.

- **Hawaii**: Models must be accepted but historically have not been reviewed frequently, resulting in the requirement to use old models.

- **California**: Not allowed for setting overall rate levels (except for Earthquake and Fire Following Earthquake). Allowed for setting rate relativities, granular territory definitions, underwriting/firing.

- **New York**: Does not allow catastrophe models.

---

**Flood model evaluation**
Evaluation of emerging models
Specific actuarial techniques

- Calibration versus out-of-sample validation
- Reasonability checking
  - Is the aggregate AAL believable?
  - How often does it produce unreasonable location level AALs?
  - Does it produce logical relationships with risk?
  - Does it produce discontinuities?
- Does it reflect important variables that alter vulnerability?
- Does it include all important sub-perils?
- How does it compare to other models (if available)?
- Give special consideration to outliers

Example: Annual Average Loss (AAL) by model
Average AAL impacts the rate level

Wide disparities exist across different models for inland flood

Storm surge also shows sizeable variation of AALs across models
Example: Inspection of individual risks
Which modeled AALs are most reasonable?

<table>
<thead>
<tr>
<th>Model</th>
<th>Beach house</th>
<th>Inland property</th>
</tr>
</thead>
<tbody>
<tr>
<td>Model A</td>
<td>$1,000</td>
<td>$1,500</td>
</tr>
<tr>
<td>Model B</td>
<td>$30</td>
<td>$3</td>
</tr>
<tr>
<td>Model C</td>
<td>$20,000</td>
<td>$30</td>
</tr>
</tbody>
</table>

Example: Correlation among models
Higher agreement in relative risk for storm surge than inland flood

<table>
<thead>
<tr>
<th>Inland flood (4 counties)</th>
<th>Storm surge (2 counties)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Model A</td>
<td>Model B</td>
</tr>
<tr>
<td>1.00</td>
<td>0.26</td>
</tr>
<tr>
<td>1.00</td>
<td>0.30</td>
</tr>
<tr>
<td>1.00</td>
<td>0.34</td>
</tr>
<tr>
<td>1.00</td>
<td></td>
</tr>
</tbody>
</table>

None of the models are highly correlated for inland flood
Significantly higher correlation among storm surge AALs
Example: Spatial analysis of inland flood

- Model A shows limited high AALs
- Model B shows high AALs farther away from rivers
- Model C shows more high-AAL locations, generally very close to rivers
- Model D shows high AALs the farthest away from rivers

Proposal for catastrophe model clearinghouse

- Multi-disciplinary panel to develop standards, select expert reviewers, and manage model review process
- Third-party experts chosen by panel to perform confidential reviews
  - Consistent professional review team for all models for a given peril
  - Expert team would depend on nature of model but could include engineers, scientists, technologists, actuaries, claims experts, other professionals
- Voluntary participation by states who wish to rely on expert model review
  - Retention of state-level control of ultimate determination of acceptability
  - States may add filing-specific questions regarding model usage
- Potential clearinghouse deliverables
  - Standardized modeler disclosures
  - Market basket output for state level regulatory analysis, comparison
  - Third-party expert reports reviewing model compliance with standards, suitability for specific purposes
Vision for sustainable private flood insurance market

Available, affordable, reliable insurance

Agents and insurers actively competing to provide variety of options for consumers

Higher participation / take-up rates across all flood zones

Affordable risk-based premiums for the greatest number of households

Continuous improvements in data, modeling and risk communication

Ability to anticipate, measure and plan for future climate scenarios

Reduced reliance on disaster assistance + faster rebound post-event

Thank you

Nancy Watkins
nancy.watkins@milliman.com
The Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met Jan. 25, 2022. The following Subgroup members participated: Wanchin Chou, Chair, and Qing He (CT); Robert Ridenour, Vice Chair, and Jane Nelson (FL); Laura Clements and Giovanni Muzzarelli (CA); Judy Mottar (IL); Gordon Hay (NE); Anna Krylova and Leatrice Geckler (NM); Halina Smosna and Gloria Huberman (NY); Tom Botsko and Dale Bruggeman (OH); Andrew Schallhorn (OK); Will Davis (SC); and Miriam Fisk, Rebecca Armon, and Monica Avila (TX).

1. **Discussed the Possibility of Adding Flood Peril in the Rcat Component**

Mr. Chou said the Subgroup received a referral letter from the Climate and Resiliency (EX) Task Force in March 2022, which recommended that the Subgroup consider expanding the current catastrophe framework to include other perils such as wildfire, flood, and/or convection storms that may experience a greater risk under projected climate-related trends. He also said a response from the Subgroup stated that it was focusing on developing the risk charge for the wildfire perils at that time due to limited resources. He said last year, the Subgroup completed: 1) reviewing three different wildfire vendor models; and 2) adopting the Karen Clark & Company (KCC) earthquake and hurricane models. As the wildfire instructions and risk-based capital (RBC) structure is currently exposed for comments, he believes now is a good time to start reviewing the next peril; i.e., flood. He stated that the flood model review ad hoc group will be established next month to start the review process. He said he anticipates that the process will be similar to the wildfire model review process, which will include six different phases: 1) introduction to flood models; 2) in-depth technical reviews; 3) impact studies (model comparison); 4) developing RBC risk charge; 5) exposing the flood peril RBC structure and instructions for information purposes only; and 6) modifying the structure and instructions based on the comments and feedback. He urged all the interested parties to contact NAIC staff if they are interested in joining the ad hoc group. Scott Williamson (Reinsurance Association of America—RAA) encouraged the Subgroup to consider the materiality issue with respect to whether the flood peril is warranted, given the exposure of the industry. He also asked NAIC staff to perform a materiality analysis to determine if it makes sense to proceed further. Mr. Botsko recommended that the Subgroup consider conducting a company survey to determine if the exposure of not only the flood but also the convective storms are significant enough to study further. Ralph Blanchard (Travelers) said he is concerned that adding flood peril may have issues on removing the double counting in the R5 component, as flood can be caused by multiple perils. Nancy Watkins (Milliman) recommended that the Subgroup consider reviewing the Alabama Department of Insurance (DOI) Private Flood Insurance Survey as a good starting point.

2. **Discussed the Independent Model Review Instructions in Rcat**

Mr. Chou said last year, the Subgroup discussed three different kinds of catastrophe models that deviate from the vendor models: 1) internal catastrophe models; 2) vendor catastrophe models with adjustments or different weight; and 3) derivative models based on the vendor models. He stated that the industry provided some valuable information during the discussion, such as recommending that Subgroup: 1) consider developing a basic approval process if the Subgroup decides to rely on models in order to ensure the use of models are consistent and comparable across companies; and 2) review the RBC instructions, as it clearly indicated that a company should use the same data, modeling, and assumptions that the insurer uses in its own internal catastrophe risk management process. He said he believes adding this charge of reviewing the PR002 and PR027 instructions and blanks to the ad hoc group is worth considering, as both items are related to the model review process. He also
stated that this is just a continued improvement of the RBC instructions and blanks; this is a high priority for the Subgroup, and it will be reflected in the Subgroup’s working agenda soon. Matthew T. Wulf (Swiss Re) said Swiss Re and its domiciliary state will continue working with the Subgroup on this item in the future. Mr. Blanchard said Travelers will continue supporting the idea of treating adjustments to the vendor models differently from the totally separate models.

3. Discussed the Issue of Double Counting in the R5 Component

Mr. Chou said the current RBC formula PR100 through PR122 require insurers to provide actual catastrophe losses incurred separately by Annual Statement Line of Business for each of the last 10 accident years. The purpose of requiring the reporting of actual catastrophe losses is to avoid double counting catastrophe losses in the formula. Mr. Chou stated that the catastrophe risk element of the RBC formula is based on the results of catastrophe models run by the insurer. The existing R5 industry factors are derived from industry total loss data, which includes actual catastrophe losses, so it is necessary to study these actual catastrophe losses to avoid the double counting that would otherwise take place. Mr. Chou asked the industry to review the current methodology and provide comments in the next meeting.

4. Discussed Other Matters

Mr. Chou said proposal 2021-17-CR (Adding Wildfire Peril for Informational Purposes Only) was exposed for a 60-day public comment period ending Feb. 13. He encouraged all the interested parties to review the materials and submit comments for discussion in the upcoming meeting.

Lastly, Mr. Chou said he is pleased to announce the appointment of Ms. Smosna as co-chair of the Subgroup. He said he will work closely with Ms. Smosna to ensure the Subgroup completes all its charges successfully in the future.

Mr. Chou said the Subgroup will continue discussing all the outstanding issues in the meeting next month.

Having no further business, the Catastrophe Risk (E) Subgroup adjourned.

W:\National Meetings\2022\Spring\TF\CapAdequacy\PCRBC\Att01_12-16propertycatsg.doc
The Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met Dec. 16, 2021. The following Subgroup members participated: Wanchin Chou, Chair, and Amy Waldhauer (CT); Laura Clements and Giovanni Muzzarelli (CA); Judy Mottar (IL); Gordon Hay (NE); Halina Smosna (NY); Tom Botsko and Dale Bruggeman (OH); Andrew Schallhorn (OK); Will Davis (SC); and Miriam Fisk and Monica Avila (TX).

Mr. Chou said the Florida Commission on Hurricane Loss Projection Methodology (FCHLPM) reviewed and verified the Karen Clark & Company (KCC) hurricane model on June 19, 2019, and June 4, 2021. The Subgroup believed the KCC models seem to qualify under the same standards as the other modeling firms have for earthquakes and hurricanes. Mr. Chou said a proposal was created to include the KCC earthquake and hurricane models as one of the NAIC approved third-party commercial vendor models to calculate the catastrophe risk charge, which was exposed for a 30-day public comment period. He also stated that the Subgroup received one comment letter during the exposure period. Glen Daraskevich (KCC) said the KCC supports the proposed update to the list of NAIC-approved catastrophe models and appreciates the Subgroup’s goal of keeping the list current with market usage.

2. **Heard an Update from its Catastrophe Model Technical Review Ad Hoc Group**

Mr. Chou said the ad hoc group met Dec. 6 to discuss the survey questions created by the members within the group, which was based on Actuarial Standard of Practice (ASOP) No. 38—Catastrophe Modeling (for All Practice Areas). He said the survey results indicated that the ad hoc group gained a better understanding on different aspects of different models during a series of question and answer sections.

Ms. Smosna stated that the ad hoc group reviewed the technical documentation provided by three vendors: Risk Management Solutions (RMS), AIR, and KCC. Also, the ad hoc group posed questions to each noted vendor and had several follow up discussions with them separately. Ms. Smosna said the ad hoc group also acknowledged that although these are the best tools available to assess wildfire risk, limitations exist. A notable limitation across all three vendors includes the data vintage. In addition, Ms. Smosna indicated that the ad hoc group noted that although the key vendors are subject matter experts (SMEs), this does not negate the fact that wildfire models are in their infancy. Moreover, she said the ad hoc group comfortably stated that the vendors are experts and have dedicated huge resources to wildfire modeling; but going further and being able to state that the level of capital required for wildfire exposure is adequate based upon the modeling is a conclusion that cannot be validated by the ad hoc group. She concluded that at this point, the ad hoc group members only have a basic understanding of each vendor model and are reasonably familiar with the major model components and how those components interrelate.

Mr. Chou said the issue of the wildfire-prone areas was also discussed during the meeting. He stated that identifying the potential wildfire-prone areas will provide better determination of exemption from the wildfire charge. In addition, he provided a brief overview on the wildfire structure to the ad hoc group. He said the
structure will be included in the 2022 risk-based capital (RBC) formula just for informational purposes only. He also stated that the structure will not go live until all the outstanding issues are resolved. Lastly, he said the ad hoc group will not meet until the Subgroup starts reviewing the next peril.

3. **Exposed Proposal 2021-17-CR (Adding Wildfire Peril for Informational Purposes Only)**

Mr. Chou said while the Subgroup reviewed the possibility of expanding the current catastrophe framework to include other perils that may experience a greater tail risk under projected climate-related trends, the wildfire has been identified as one of the major drivers of the U.S. insured losses. He suggested that setting up a proposal to include wildfire peril in the Rcat component for informational purposes only to address this risk is necessary. He also indicated that the wildfire peril will not be included in the RBC calculation until all the outstanding issues are resolved. Lastly, he urged all the interested parties to review the proposal and provide comments during the exposure period.

Mr. Botsko expressed the Subgroup’s appreciation to the ad hoc group for its efforts in reviewing the wildfire models. Ralph Blanchard (Travelers) proposed to include Florida in the wildfire-prone areas. Steve Broadie (American Property Casualty Insurance Association—APCIA), Scott Williamson (Reinsurance Association of America—RAA), and Matthew Wulf (Swiss Re) requested to extend the 30-day exposure to 60 days due to the holiday season and the need for more time to review.

The Subgroup agreed to expose proposal 2021-17-CR for a 60-day public comment period ending Feb. 13.

Mr. Chou said the Subgroup will continue discussing all the outstanding issues in the meeting next month.

Having no further business, the Catastrophe Risk (E) Subgroup adjourned.
Hi Wanchin and Eva,

We note that agenda item 2 of Tuesday’s call is on the RCAT independent model review instructions. Since the Missouri Department of Commerce and Insurance (DCI) has used these instructions to review an internal catastrophe model, we would like to offer the subgroup our comments.

**Background on the DCI’s review**

On April 7, 2017, the Catastrophe Risk Subgroup granted permission for Swiss Re to use its internal model for year-end 2017 RCAT reporting. For subsequent year-ends, this permission came from the Missouri DCI.

In order to grant Swiss Re initial permission for year-end 2018 reporting, the DCI performed an in-depth review of the company’s model, centered around the seven requirements in the RCAT instructions. We relied on written information from the company, phone calls with the company, and in-person meetings with the company and the group-wide supervisor. Our review was informative and valuable. It was also extremely time-consuming for the DCI (and, I assume, for the company as well). Performing a thorough review based on the requirements in the RCAT instructions could be difficult for small insurance departments with limited technical staff.

As mentioned above, the DCI performed an in-depth review in 2018. For subsequent year-ends, our review has been much more high-level and has focused on any follow-up items from the previous year. While the RCAT instructions indicate that ongoing review should happen through the exam process, this may be too infrequent in some cases, especially since the company could be asked to re-file prior RBC reports if the regulator identifies a concern. Companies large enough to use their own model are probably only examined every five years. The DCI would prefer to perform an annual review and remain updated on any changes to the model. This seems particularly important as more perils are added to the RCAT charge.

**Our comments on the seven items in the RCAT instructions**

Taken as a whole, the seven requested items in the RCAT instructions seem reasonable. Gathering information on these items allowed for a thorough review and made the DCI comfortable granting permission for Swiss Re to use its model.

We offer the following comments on several of the items:

1. **Regarding item 3:**
   a. We do not know what it means to validate a peril or for perils to include both U.S. and global exposures. We raised these concerns in 2017 before the instructions were finalized. In order to attempt to comply with this item, we interpreted it as we saw reasonable. Namely, we checked that:
      i. If the insurer has exposure to the perils covered by the RBC catastrophe risk charge (earthquake and hurricane), those perils are contemplated in the RBC charge, and
      ii. The insurer is including both U.S. and non-U.S. exposures in the RBC charge.
   b. Whether or not our interpretation is correct, we recommend rewording this item to make the subgroup’s intention clear.

2. **Regarding item 6:**
   a. It appears that complying with this item is challenging for several reasons:
i. If an insurer has been relying on its internal model for many years, it may not maintain a license for a vendor model.

ii. If an insurer aggregates losses, instead of exposures, across accounts, it may not be able to produce a portfolio of exposures for input into a vendor model.

iii. It can be difficult, if not impossible, to identify drivers of differences between an internal model and a vendor model. First, the models are extremely complex, relying on numerous modules and impacted by various assumptions within those modules. Second, vendor model licenses often prohibit “back engineering” of the model’s parameterizations, so the company may not have full insight into the model’s assumptions.

b. Given these difficulties, would it be possible to add alternative methods of comparison to the RCAT instructions? We have found it helpful to review a comparison of internal model estimates to actual results for historical events.

3. Regarding item 7: We experienced difficulty in receiving written documentation from the group-wide supervisor.

Thank you for allowing us to share our experiences with the RCAT instructions.

Sincerely,

Julie

Julie Lederer, FCAS, MAAA

Sign up for DCI news
The RBC Investment Risk and Evaluation (E) Working Group of the Capital Adequacy (E) Task Force met March 22, 2022. The following Working Group members participated: Philip Barlow, Chair (DC); Thomas Reedy (CA); Wanchin Chou (CT); Ray Spudeck (FL); Carrie Mears (IA); Vincent Tsang (IL); Fred Andersen (MN); William Leung and Debbie Doggett (MO); Lindsay Crawford (NE); Bill Carmello and Bob Kasinow (NY); Dale Bruggeman and Tom Botsko (OH); Mike Boerner (TX); Steve Drutz and Tim Hays (WA); and Amy Malm (WI).

1. Adopted its Feb. 28 Minutes

The Working Group met Feb. 28. During this meeting, the Working Group took the following action: 1) discussed overall charges and the Financial Condition (E) Committee’s direction; 2) heard a preliminary investment overview and member perspectives; and 3) received comments from an initial request related to RBC treatment for asset-backed securities (ABS).

Mr. Spudeck made a motion, seconded by Mr. Chou, to adopt the Working Group’s Feb. 28 minutes (Attachment Six-A). The motion passed unanimously.

2. Discussed Comments Received

   a. American Council of Life Insurers

Paul Graham (American Council of Life Insurers—ACLI) presented the ACLI’s comment letter (Attachment Six-B). He noted the significant complexity involved in developing RBC for ABS. He noted the determination of associated risks (i.e., loss given default, timing, and others) will be different from commercial bonds. He said collateralized loan obligations (CLOs) might be able to be mapped to current bond factors using what has been learned from commercial mortgage-backed securities (CMBS) and residential mortgage-backed securities (RMBS) modeling. He suggested addressing CLOs first with other ABS to follow. He noted that RBC has historically followed the rule of rough justice and underscored the fact that the purpose of RBC is to identify weakly capitalized companies. He noted the ACLI’s suggestion that a technical resource group could be formed to help get the project started, defining scope, risks to study, and how this work fits within the RBC framework.

   b. Bridgeway Analytics

Amnon Levy (Bridgeway Analytics) presented Bridgeway Analytics’ comments (Attachment Six-C). He indicated support for the comments by Mr. Graham and the ACLI on a phased approach, allowing for coordination with the related review of nationally recognized statistical rating organizations (NRSROs) use in Securities Valuation Office (SVO) designations and acknowledging the complexity of the issues involved. He highlighted the need for the framework to be consistent with its use and measurement of differentiated risk measures, including that of a single credit investment (e.g., a rating and thus designation), and a portfolio loss concept that considers diversification and concentration (e.g., c1 factors). With respect to the RBC framework and providing state insurance regulators better tools to identify weakly capitalized companies and align investment incentives, he highlighted the need for ongoing monitoring of tail risks that can change materially from year to year with varying risk factors and to a varying degree across RMBS, CMBS, CLOs, and other structured assets. He also noted risks that are not captured by ratings, and thus NAIC designations. He said the approach should be sensitive to volatility.
and cyclical fluctuations. He stated that the data on ratings, and thus NAIC designations, that are fundamental to C-1 RBC are particularly sparse for structured assets. By and large, NRSRO methodologies were modified substantially after the financial crisis, with few credit events since. With data on collateral experience generally more robust than tranche experience, Mr. Levy said Bridgeway Analytics believes reliance on model-based approaches can better capture nuanced and varying characteristics across structured asset segments.

c. Risk & Regulatory Consulting

Ed Toy (Risk & Regulatory Consulting—RRC) presented RRC's comments (Attachment Six-D). He said the RBC framework was originally intended as a regulatory tool to be able to see weakly capitalized companies, and the framework was not intended to be granular or very detailed. However, he stated that investment vehicles owned by insurers have grown more varied and investment practices more complex. With this consideration, he said some degree of increased detail may be warranted to avoid regulatory arbitrage. He said a big step was already completed with the increased granularity of NAIC bond designations, as that eliminated the inappropriate incentive to race to the bottom with investments with BBB-minus designations and the disincentive to lean towards BBB-plus bonds.

Mr. Toy stated support for the review of the RBC framework to ensure that complex assets have RBC charges that are commensurate with the risk. He said structured securities are one of the investments where additional attention may be appropriate, but he encouraged the Working Group to think holistically and consider the broader themes mentioned by Mr. Graham. Mr. Toy stated that there are different kinds of risk and that tail risk is potentially different for different assets. While tail risk includes differences in volatility for default risk, he said the major issue is differences in loss severity. He stated that higher-level classes of structured securities are not perceived to be a material area of concern, and the primary issue is with subordinate classes. As such, understanding the industry exposure to subordinate classes of structured securities and how the characteristics of these investments compare with other asset classes that are also potentially concerning may be beneficial. Mr. Toy provided examples of collateral loans, which have a flat RBC factor for life entities and construction mortgage loans as two asset classes that have also had significant growth. Looking at asset classes with high tail risk, he also inquired about the assessment of asset classes that have materially less tail risk, such as government bonds. He said focusing on particular asset classes with specific risks without having a holistic discussion may create imbalances in the formula.

Mr. Toy stated that understanding the focus of tail risk is also a key element. If the focus is loss severity, then the question that should be addressed is how loss severity translates into a risk of loss to surplus, which is the main issue for RBC. He stated that if an insurer owns an investment at significant discount to par, then the risk of loss to surplus may be different from another insurer that owns the same investment at par.

Mr. Toy said the overall discussion should begin with representatives of the American Academy of Actuaries (Academy), and if there is a need to focus on specific areas, then engaging a consulting actuary may make sense.

Mr. Toy also addressed the specific question of residuals, which is a subcategory of structured securities. He stated that as classes are the bottom supporting tranche in a capital structure, then treatment as equity makes sense. With regard to Mr. Toy's question regarding the reporting of residuals, Mr. Bruggeman said there are two proposals being considered for adoption at the Blanks (E) Working Group. These proposals will require classification of residuals on Schedule BA and asset valuation reserve (AVR) based on underlying characteristics. The proposals mirror existing underlying classifications as fixed income, common stock, real estate, mortgage loans, and other. Mr. Toy commented that more granular classifications, particularly for the common stock category, may be warranted, providing an example of differences between publicly traded and private common...
stock investments. He stated having the same factor for the various stock or equity backed assets highlights the point of focusing on underlying risks.

d. **FLOIR**

Mr. Spudeck presented comments (Attachment Six-E) from the Florida Office of Insurance Regulation (FLOIR). He said with the progression and innovation towards more complicated investments, this is an opportunity to dig into the use of NAIC designations, as well as the classification of assets. He stated that the focus should be on the risk to surplus and ultimately the risk to policyholders or the insurer’s capital position. He stated that this project is likely going to be a long process but one that is overdue. Mr. Spudeck stated that it may appropriate to start with current asset exposures, but he said current exposures should not drive the work as that prevents considering issues or exposures that are currently being designed or developed until they have permeated the industry. He said waiting for items to be widespread makes it more difficult for the regulatory community to craft a nimble, agile, and efficient response to get the asset class reflected to where it should have been in the first place.

3. **Adopted its Working Agenda**

Mr. Barlow presented the Working Group’s working agenda and said it includes items referred from the Financial Condition (E) Committee and prior referrals to the Capital Adequacy (E) Task Force that focused on investments. He said the referrals from the Committee, as they include timelines, are recommended to be addressed first. However, to be consistent with many of the comments made, he said he recommends a holistic review as an overall approach.

Mr. Drutz made a motion, seconded by Mr. Botsko, to adopt the Working Group’s working agenda (Attachment Six-F).

4. **Discussed its Next Steps**

Mr. Barlow said the Working Group will begin with a review of the projects requested from the Committee. He stated support for a holistic review and supported Mr. Spudeck’s comment to review the role of NAIC designations and how assets are classified as part of this process. He said it would be key to identify the risks of asset classes and the impact on the solvency of insurance companies. He stated support for a process that allows consideration of new assets as they come into insurance company portfolios. He said it would be ideal if the revised process would prevent application of RBC factors based on an NAIC designation or asset classification that is ultimately not appropriate for the asset’s risk. He echoed the comments from Mr. Graham that it will not be possible to be perfect, but the goal is to have reasonable charges that are not too high or too low based on the risk of the asset. He stated that the process will be complicated, and that the assessment needs to consider the overall impact to the financial statements, reserves, and overall capital and surplus of insurance companies to be in line with the goal of RBC to identify weakly capitalized companies, or to identify actions that move companies towards being weakly capitalized.

Mr. Tsang asked about the percentage of these complex assets currently owned by insurance companies. Mr. Barlow stated that the Working Group does not have an exact number, but he will further inquire with the Capital Markets Bureau. He stated that reporting consistency is one of the challenges, as reporting is inconsistent, and it is not always clear that the reported asset is a structured or complex security. He stated that these investments are often mixed in with other corporate bonds in the reporting structure.
Mr. Tsang asked whether it was feasible to apply a factor to these securities and whether some form of simulation analysis to evaluate the risk of these assets would be more appropriate. He said a structured security is not like a corporate bond, and it will be difficult to determine an appropriate factor when there are many variants among the different types of structures. Mr. Barlow stated that this is a good point, but his preference would be to try to determine a methodology to apply a factor. He said this process could result with use of current factors or could result with the creation of a whole new set of factors, but he would like to see if that is possible before moving to something more complicated, particularly as the magnitude of these investments is still uncertain. He said developing a complicated methodology for a limited number of assets would not be relevant in identifying weakly capitalized companies. Mr. Therriault said they will work to develop an assessment of exposure. He said the structured security group would also be well positioned to model these types of transactions and assess risks.

Mr. Tsang stated that another working group is also monitoring these structured securities for cash-flow testing. He asked whether the actions of that group, particularly if it puts a cap on structured assets for cash-flow testing, would affect the consideration of this Working Group. He stated that he would not want a revised factor from this Working Group and an updated actuarial guideline from another group to impede each other. Mr. Barlow stated that it is important to coordinate with the Statutory Accounting Principles (E) Working Group, the Valuation of Securities (E) Task Force, and the work that is being done to the reserves and how it might ultimately affect the solvency of an insurance company. He said this Working Group has representatives from a variety of groups to make sure that the right people are involved and that the discussions include all relevant information.

Mr. Barlow said the next steps would be the development of recommendations with suggestions on moving forward. As to whether it would be beneficial to have small subgroups focusing on specific areas, he said he would like to begin working at the full Working Group level, and if projects became too cumbersome, then perhaps small groups could be considered. Mr. Carmello, Ms. Mears, and Mr. Boerner all stated agreement with keeping the discussion initially within the full Working Group in developing recommendations. Mr. Barlow said specific agendas for key topics will be developed to allow progress through a project plan. He said he does not think the Working Group is at the point where a consultant would be beneficial, so he recommends putting that consideration aside for the time being. He said as the Working Group moves forward, there may be a better understanding of the services and assistance a consultant could provide. Mr. Wanchin agreed with future consideration of a consultant after the Working Group can define the scope of the project and determine the experts who can help achieve specific goals. Mr. Spudeck agreed, noting that it would be more efficient to first determine the information needed prior to engaging a consultant. John DuBois (MassMutual) suggested that framing the project by determining the size of the different asset classes may assist the next discussion. Mr. Barlow said the Working Group should expect meetings to be scheduled after the Spring National Meeting with specific agendas and goals noted for each meeting.

5. Discussed Other Matters

James Braue (United Health Group) asked whether this Working Group would also be considering parallel treatment to the AVR for the asset classes that are being considered for revised RBC. Mr. Barlow stated that this would occur on the life side.

Julie Gann (NAIC) said the Blanks Working Group (E) is scheduled to meet March 29, and two proposals up for adoption related to residual reporting on Schedule BA and AVR are available on the Working Group’s website.

Having no further business, the RBC Investment Risk and Evaluation (E) Working Group adjourned.
The RBC Investment Risk and Evaluation (E) Working Group of the Capital Adequacy (E) Task Force met Feb. 28, 2022. The following Working Group members participated: Philip Barlow, Chair (DC); Thomas Reedy (CA); Wanchin Chou (CT); Ray Spudeck (FL); Carrie Mears (IA); Vincent Tsang (IL); Fred Andersen (MN); William Leung and Debbie Doggett (MO); Lindsay Crawford (NE); Bill Carmello (NY); Tom Botsko (OH); Mike Boerner and Rachel Hemphill (TX); Steve Drutz and Tim Hays (WA); and Amy Malm (WI).

1. Discussed its Formation, its Charges, and Financial Condition (E) Committee Direction

Mr. Barlow introduced the call and referred to a memorandum from Mr. Botsko, chair of the Capital Adequacy (E) Task Force, to the Financial Condition (E) Committee requesting the formation of the Working Group. Mr. Botsko stated that the formation of the Working Group was primarily for the evaluation of investments and risk from an RBC perspective, and the Committee was supportive of the formation. Mr. Barlow summarized the Working Group’s initial charges: 1) identifying and acknowledging uses of RBC beyond the purpose of the Risk-Based Capital (RBC) for Insurers Model Act (§312); 2) assessing the impact of potential changes in contributing to the identification of weakly capitalized companies; and 3) documenting the modifications made over time to the formulas. He stated that during an initial Jan. 12 joint call of the Working Group with the Committee, the Committee provided direction on two projects: 1) consider a second phase of the bond factors; and 2) review residual tranches for RBC. He stated that the requested work of the Committee could be completed with the scope of the Working Group charges, and he identified that the Working Group will likely have extensive coordination with the Statutory Accounting Principles (E) Working Group, the Valuation of Securities (E) Task Force, as well as other groups, while completing a comprehensive review of the investment component of the RBC calculation.

2. Discussed Desired Outcomes

Ms. Mears, chair of the Valuation of Securities (E) Task Force and vice chair of the Statutory Accounting Principles (E) Working Group, provided viewpoints on behalf of both groups, as Dale Bruggeman (OH), chair of the Statutory Accounting Principles (E) Working Group, was unable to attend. She stated that the bond project of the Statutory Accounting Principles (E) Working Group came about as state insurance regulators identified a shift in insurer portfolios from traditional bond holdings to more structured products. She identified that the accounting framework did not contemplate the type of collateral that could be held under these innovative products. She stated that the bond project initially began with a focus on equity investments that could be securitized, resulting in movement from Schedule BA: Other Invested Assets to Schedule D-1: Long-Term Bonds, but the project ultimately became a holistic review of Schedule D-1 and the principal concepts in classifying investments as bonds. She stated that the desire to have similar focuses on these types of investments at the Task Force and the RBC Investment Risk and Evaluation (E) Working Group to ensure that the ratings and capital framework continues to be appropriate for these types of investments.

Ms. Mears noted that a specific concern from a Statutory Accounting Principles (E) Working Group perspective occurs when an insurer holds an “entire stack” from a securitization, which is basically akin to continued holdings of the entire pool or portfolio of underlying collateral, and this concern is more prevalent when the collateral is equity-based. She provided an example of a collateralized fund obligation (CFO) where equity funds were held on Schedule BA with a 30% RBC charge but then went through a securitization process in which higher-level tranches were moved to Schedule D-1, resulting in much less RBC charges, and the remaining residual tranches were...
retained on Schedule BA. In this scenario, the economics and overall risk are not different from the insurer holding the entire investment on Schedule BA, but with the securitization and the ability to divide the holdings between Schedule D-1 and BA, the insurer RBC position is significantly different. Ms. Mears noted that an original proposal as part of the bond project tried to address this issue; however, it was quickly identified that this dynamic is not an accounting issue but pertains to risk assessment and ultimately RBC concepts. As such, there is a desire for the Working Group to address this as part of the residual tranche review. Ms. Mears stated that this residual review would be applicable to all securitizations but would be most impactful to CFO investments. She stated that the risk assessment may also be easier for residuals of a collateralized loan obligation (CLO), which have underlying collateral that is rated and may be more difficult for other structures that have underlying collateral that is not rated or does not fit within the existing RBC framework. She proposed moving forward with structural changes in the calculation, with subsequent edits to reflect the determined factors.

Ms. Mears then presented comments from the Valuation of Securities (E) Task Force, noting that there is a clear connection for some investments between the reported designations and resulting RBC factors. She stated that the Task Force has a project this year to undertake a review on how it uses credit rating providers (CRPs) and assess the types of risks that are encompassed within ratings from the various CRPs to ensure an understanding of the differences between CRPs. She stated that understanding the risks that are reflected in the CRP ratings, which translate to NAIC designations, will correspond to the Working Group in understanding the factors that should be considered in response to those designations. She stated that extensive collaboration of the impacted groups is paramount in ensuring that an appropriate overall statutory framework encompassing accounting, designations, and RBC is in place for all investments, but particularly for securitizations.

Mr. Barlow stated that the comments of Ms. Mears align with his perceptions for the Working Group. He stated that the Working Group should first focus on setting RBC charges that correlate with the risk insurers are undertaking and ensure that the risk the RBC is addressing is commonly understood. He said he believes this is in line with the Ms. Mears’ comments on understanding what is represented with CRP ratings and NAIC designations. He stated that he has been adherent to the concept that RBC is intended to identify weakly capitalized companies, and that has driven historical work of the Life Risk-Based Capital (E) Working Group; however, the work of the RBC Investment Risk and Evaluation (E) Working Group will not necessarily be focused on the work to identify weakly capitalized companies. Instead, the Working Group is likely going to be focusing on a more granular breakdown of investment risk. Although not focusing on weakly capitalized companies, this approach will add clarity and guidance for the other purposes in which RBC is used by insurance companies in making investment decisions. Mr. Barlow stated that the intent is to make RBC a non-factor in determining insurer investment decisions, as each investment will have a charge aligned with the investment risk. He stated that there are differences in the life, property/casualty (P/C), and health formulas, and the Working Group should assess whether the work being completed should be identical in all three formulas or if circumstances exist that support different formulas. He noted that representatives from the various RBC groups are participating in the Working Group, so this assessment will be completed as part of the process.

Mr. Barlow stated that he would like the Working Group to work holistically with its projects and ultimately have a broad methodology that will also address new assets and can be regularly updated with asset factors. He stated that the historical use of the RBC formula attempted to pull information from the financial statements; therefore, two identical companies would have similar RBC. This approach did not allow subjectivity into the RBC formula. Mr. Barlow stated that with changes in investments, two companies could seemingly look the same, but the underlying components of the investments could be different, and the RBC formula may have not been adjusted to reflect this dynamic. He stated that it would be ideal to be as objective as possible with the identification of investment risk, so that with sufficient information in the financial statement, investments can be categorized to ensure appropriate treatment for RBC formula purposes. He also stated that having a clear understanding of the designations, as well as the risk they represent, will also assist in calculating RBC factors that recognize the way
the assets are rated. Although this may not be a short-term result, it would be a goal for the Working Group, particularly with the path of developing a framework that will be appropriate in categorizing new assets and investment structures. Mr. Barlow stated that the RBC groups have historically been reactive to the decisions from other groups in the reporting of investments, and he would suggest developing a framework that can address current and future investments.

Mr. Botsko, representing the chair of the Capital Adequacy (E) Task Force and the Property and Casualty Risk-Based Capital (E) Working Group, affirmed the comments of Mr. Barlow, noting that the groups need to work together in determining an appropriate framework that allows for correct RBC charges. He stated that working together will allow a more efficient outcome for industry. Mr. Drutz, representing the chair of the Health Risk-Based Capital (E) Working Group, confirmed the comments of both Mr. Barlow and Mr. Botsko. Ms. Mears also agreed and encouraged participation of industry and state insurance regulators across the different groups. Mr. Barlow agreed and stated that the RBC Investment Risk and Evaluation (E) Working Group should assist with the coordination effort between the different groups.

Mr. Barlow stated that an exposure on Jan. 12 by the Financial Condition (E) Committee directed comments to the Working Group. The deadline for those comments is Feb. 28, and a specific call will occur to consider the comments from that exposure.

3. Received a Presentation on the High-Level Overview of Investment Development

Charles Therriault (NAIC) presented a summary of structured finance securities on behalf of NAIC Investment Analysis Office (IAO) staff. In principle, securitization is a simple concept involving the legal isolations of assets in a bankruptcy remote entity for the purpose of either collateralizing or generating cash flows sufficient to issue a debt security from the bankruptcy remote entity. However, since its inception in the late 1960s, securitization has evolved to become a tool to finance or monetize just about any asset imaginable.

Mr. Therriault stated that there is a very broad range of structured finance securities that may or may not be divided into different classes called tranches. The only real common theme is the legal isolation of assets in a bankruptcy remote entity. Beyond that, structured finance securities have no uniformity as to the nature of the assets, cash flow generation, classes or tranches, payments to the investor, or method of repaying the principal at maturity. The structures include asset backed securities (ABS), mortgage-backed securities, residential mortgage-backed securities (RMBS), commercial mortgage-backed securities (CMBS), collateralized debt obligations (CDOs), collateralized loan obligations (CLOs), insurance-linked risk transfer securities, future flow securitizations, credit tenant lease financing, ground lease financing, military housing administration fee securitization, and whole business securitization, along with many other names. Mr. Therriault stated that the underlying assets can be any asset such as mortgages, credit card receivables, commercial loans, home equity loans, student loans, equipment and property leases, movie revenues, royalty payments, aircraft landing slots, toll roads, or oil reserves, as just about any cash-producing vehicle or situation can be securitized.

Mr. Therriault stated that ratings play an important role in structured finance, as most of these securities are filing exempt (FE), meaning ratings are used to assign an NAIC designation. There is no universal standard for assessing their risk or any consistency in the methodologies across credit rating agencies to provide a uniform credit rating or risk assessment. The performance of structured finance has also varied across the asset class and types. The IAO raised the issue regarding the reliance upon CRP ratings and the lack of oversight as to the analytical basis for those ratings to the Valuation of Securities (E) Task Force in its Nov. 29, 2021, memo. The greater risk assessment variation rewards risk-taking without the commensurate RBC. Mr. Therriault stated that there can be potentially significant distortions of an insurer’s RBC ratio if the underlying rating used to set an NAIC designation is not derived in a manner that is comparable to or consistent with the risk assessment used in determining those RBC
factors. Ratings are not interchangeable, and IAO staff believe the NAIC’s use of them in its regulatory processes needs to reflect those differences efficiently and effectively.

4. Discussed Investment Reporting Perspectives

Ms. Mears stated that the Statutory Accounting Principles (E) Working Group and the Valuation of Securities (E) Task Force, as part of the bond project and investment analysis, will be making reporting changes. As such, if there are data points or analysis requests from the RBC Investment Risk and Evaluation (E) Working Group, those can be considered as part of the reporting changes being considered under the bond project. Ms. Mears inquired about the RBC structural change deadlines, stating a preference to have the structural changes in place as soon as possible for residual tranches so the framework is in place for potential factor changes. Mr. Barlow stated that structural changes need to be exposed by the end of January and adopted by the end of April. For instructional changes, which includes changing factors in the existing structure, those changes need to be exposed by April 30 and adopted by June 30. Mr. Barlow stated that in the past, the Life Risk-Based Capital (E) Working Group has incorporated structural changes in advance of factor changes to allow the deadlines to be met. He stated a presumption that such an approach has also been followed by the other RBC working groups. He stated that the intent for a more objective approach may consider differences in the schedule—i.e., grouping items together—or capture more identifiers for assets, allowing RBC to use the identifiers to better apply factors. He stated that this may be more feasible than increasing the schedules in the annual statement. Ms. Mears noted that these comments are helpful and beneficial, as the reporting changes are considered as part of the bond project. She stated that significant reporting revisions are anticipated, particularly to Schedule D-1 as part of the bond project.

Ralph Blanchard (Travelers) stated that he has historically looked to determine bond default rates by classification, and it was difficult to do so, as the reporting schedules have changed frequently over the years. He requested that the new structure be designed so it can be retained over time so that future analysis on bond classifications would be easier to complete. He stated that this detail was not in the investment schedule but supplemental data, but the format has changed over the years, so it was difficult to track. Julie Gann (NAIC) stated that she is not familiar with the location in the financial statements that captured bond defaults, but she said she would research this information and see what has changed from a historical perspective.

5. Discussed Other Matters

Mr. Barlow identified that Ms. Gann developed a chart of the pending investment-related referrals previously provided to the Capital Adequacy (E) Task Force or RBC working groups. He stated that some of the referrals were deferred for the bond factor proposal. Included within the chart are the two projects directed by the Financial Condition (E) Committee, which includes Phase II of the bond factors and residual interests. Mr. Barlow stated that these two projects will be addressed first, noting that they can be worked on concurrently. Next, the other projects on the chart would be prioritized by the Working Group, and additional investment-related referrals may be added to this list of projects. Mr. Barlow stated that the work on Phase II of the bond factors will begin first with a consideration of the comments received. He stated the intent to work holistically, so all projects should be reviewed with consideration of how assets are reported and how RBC factors are applied under the financial statement framework.

Having no further business, the RBC Investment Risk and Evaluation (E) Working Group adjourned.

Re: Phase II Bond RBC Initiative for Structured Securities

Dear Philip:

ACLI appreciates the opportunity to provide comments on the NAIC’s project to review the Risk-based Capital (RBC) treatment of Asset-backed Securities (ABS), including collateralized loan obligations (CLOs), collateralized fund obligations (CFOs), or other similar securities carrying similar types of tail risk. We note that these are preliminary comments on the project, rather than specific comments on any of the technical aspects of the RBC treatment of Asset-backed Securities.

Overview

ACLI agrees with the NAIC that review of the RBC treatment of structured securities is an important follow-up to the work done to develop new RBC factors for bonds. The Phase 1 bond factors were based on the review of default and loss experience of corporate bonds based on their rating, which might not be appropriate for structured securities.

We suggest that, due to the complexity of this project, it would be helpful once an initial path forward (e.g., defining project plan, scope, and writing RFP, if necessary) is decided, or also as part of those discussions, to assemble a representative working group of regulators, NAIC staff, and industry subject matter experts to help address technical elements, with full transparency for all interested parties. It also seems to reason that a significant amount of this technical work would need vetting more broadly at certain stages of development.

Our comments start with a possible outline of a project plan and then we provide our initial responses to the RFC questions.
Suggested Outline of Project Plan

From a timing perspective, ACLI envisions that the project can be covered in two phases. Work on the two phases can be accomplished either sequentially or in parallel, with longer implementation for the second phase as it’s more involved with more steps.

Phase 1

- Develop a modeling approach or other approach for CLOs and map to current C1 bond factors, potentially leveraging the existing NAIC modeling infrastructure for RMBS and CMBS; review rating agency methodologies.
- Apply a “no arbitrage” principle and evaluate equalization of RBC on the underlying (if available) and the securitization tranches through calibration and by allowing residual tranches to have a variable RBC based on measurable investment risk.
- The implementation plan for Phase 1 could be developed by year-end 2022 and may be less likely to need the assistance of a consultant.

Phase 2

- Assess mapping adequacy and consistency across modeled categories (RMBS, CMBS and CLOs).
- Implement refinements to modeling approaches to ensure appropriate assessment of tail risk.
- Develop a practical approach to map other ABS to current bond factors following the established principles from Phase 1 where the collateral has an assigned RBC. Define alternative approaches, e.g., bottoms-up underwriting, where collateral does not have a well-established RBC.
- Phase 2 is more complex – will likely take 2-3 years. Phase 2 likely requires hiring a consultant that could be engaged from time to time but is not a condition to implement partial solutions.

Project Timeframe

ACLI agrees that this project is a high priority. As noted above, the RBC charges for certain ABS structures, such as CLOs, may be completed relatively expediently, while other structures may take multiple years to complete. While we would expect that the RBC charges would be implemented as they are completed, care should be taken to determine the impact to industry before setting a specific implementation date.

Responses to Specific RFC Questions

Methodologies for capturing the risk (including tail risk) that exists with such assets (e.g., ratings-determined bond factors, a modeling process akin to the current CMBS/RMBS approach, or other proposals).

It is too early to suggest an exact methodology and this needs to be studied further. Structured securities do require a methodology that models collateral outcomes against the capital structure and cashflow waterfall of the security to derive loss projections for each tranche that are representative of the underlying collateral.

Risk modeling approaches for structured securities (beyond RMBS/CMBS) should be evaluated on the basis that they capture the tail risk of a skewed or heavy-tailed loss distribution (e.g., statistical approaches such as Conditional Tail Expectation (“CTE”) / TVaR / Expected Shortfall, scenario/stress testing, etc.).
How a consultant or consulting actuary could be used by the NAIC to determine the appropriate charge based upon certain data.

As exemplified during the Phase 1 RBC discussions, a consultant with capital markets expertise can add considerable value. Structured securities are significantly more complex than corporate bonds, reinforcing the need for this expertise. Once the scope of the project has been determined, the consultant could:

- Survey existing regulatory frameworks
- Provide initial modeling and calibration
- If needed, provide ongoing modeling and calibration

Given the technical complexity of structured securities, the ACLI recommends that the consultant coordinate closely with NAIC Structured Securities and Capital Markets Bureau to ensure a robust implementation of the developed recommendations.

The need for review outside of Life RBC (Health, P&C).

Since most insurance investments in structured securities reside in life insurance portfolios, the ACLI supports the initial focus being limited to Life RBC; however, it would be wise for the other two Working Groups to be kept apprised of the work done.

Whether residual tranches in ABS structures can be evaluated in conjunction with and under similar methodologies as the debt tranches.

The full structure, inclusive of all tranches, should be evaluated on a consistent methodological basis. For example, if the NAIC modeled all of the debt tranches of a particular CLO, the cashflow accruing to the residual is simply the difference between the cashflow accruing to the underlying collateral and the cashflow accruing to the sum of the debt tranches.

Specific proposals for addressing RBC treatment of residual tranches to reduce arbitrage incentives.

As a general principle, the level of capital held for all securitized tranches including the residual should generally be consistent with the capital held for the underlying collateral (where specific NAIC capital methodologies are available for such underlying collateral), recognizing retained exposures, diversification within the collateral pool and other relevant attributes, inclusive of any structural enhancements that improve economic outcomes for investors. Modeling of the full waterfall structure would permit the NAIC to perform ongoing checks to ensure that capital arbitrage incentives are minimized.

The ACLI looks forward to working with the NAIC on this project.

Sincerely,

Paul S. Graham, III, FSA, MAAA

RE: RBC treatment of asset backed securities

Dear Philip:

Bridgeway Analytics appreciates the opportunity to provide comments on RBC treatment of asset backed securities. Bridgeway Analytics encourages the NAIC and regulators to explore potential differentiated capital charges across credit segments, and in particular the treatment of structured assets, particularly for Life RBC. When redesigning the 2021 c1 factors, the reports I provided to the NAIC Life Risk-Based Capital Working Group on behalf of the ACLI highlighted the material differentiated risks, including tail risks, across asset classes that are not differentiated by NRSRO ratings alone and thus NAIC designations.1,2

With the 2021 reports providing details regarding our views on data and methodologies, our comments in this letter are more general. There are a wide range of approaches that can revise the RBC framework to provide regulators with tools to better identify weakly capitalized companies, and better align investment incentives. With that context, we feel it is critical for the RBC framework to have the following characteristics:

- Parsimony, scalability, and consistency, allowing for a holistic articulation of portfolio tail risk that aspires to be level-set across asset classes and over time. To the extent practical, the framework should be consistent with its use and measurement of differentiated risk measures, including that of a single credit investment (e.g., a rating and thus designation), tail loss of a single credit investment (which impacts loss given default), and a portfolio loss concept that considers diversification and concentration (e.g., c1 factors).
- Ongoing governance and monitoring of tail risks, that can change materially from year to year with varying risk factors and to a varying degree across RMBS, CMBS, CLO and other structured assets. Risks, that are not captured by ratings, and thus NAIC designations, alone.
- Data on ratings and thus NAIC designations, that are fundamental to c1 RBC, are particularly sparse for structured assets. By and large, NRSRO methodologies were modified substantially after the financial crisis, with few credit events since. With data on collateral experience generally more robust than tranche experience, we feel reliance on model-based approaches can better capture nuanced and varying characteristics across structured asset segments; characteristics that can have material implications for portfolio tail risks.

We raise these points to hopefully provide a level of transparency for the complexity and efforts that will be needed to address these important issues, as compared to, say, revising the c1 factors in 2021.

We appreciate the opportunity to comment on this exposure.

Sincerely,
Amnon Levy

Subject: RRC comments for the exposure related to certain Complex Assets before the Investment Risk and Evaluation Working Group

Background

The Financial Condition (E) Committee (E Committee) exposed for comment a set of questions regarding the appropriate Risk-Based Capital (RBC) treatment of Asset-Backed Securities (ABS), including Collateralized Loan Obligations (CLO), collateralized fund obligations (CFOs), or other similar securities carrying similar types of tail risk (Complex Assets). RRC appreciates the opportunity to offer our comments. Should you have any questions, we would be glad to discuss our comments with you and the E Committee members.

RRC Comments

- We have the following general comments:
  - We applaud these efforts. We agree that the RBC framework should be reviewed to ensure that Complex Assets have RBC charges that are commensurate with the risk, in particular highly structured assets that may not have significant risk at moderately adverse levels but have a very significant potential for loss in tail scenarios.
  - We believe that it is important for the RBC recognize that different asset classes have different characteristics, in particular in terms of loss severity after a default occurs, but also in the pattern of defaults. For example, the loss severity and pattern of default loss can vary significantly among corporate bonds versus government bonds versus structured securities (RMBS, CMBS and ABS), as well as investments not on Schedule D such as mortgage loans. We believe that the regulators should carefully consider the issue of tail risk and how that should be treated across all asset classes.

- We have the following specific comments on individual items exposed:
  - Regarding methodologies for capturing the risk (including tail risk): Different measures of tail risk could be appropriately reflected in different RBC factors while continuing the current process for assigning NAIC Designations. However, given that the exposure is focused on loss severity, this should recognize that bonds that are held at a discount to par also have a different profile from the perspective of risk of loss to surplus. There is also a question of timing of that loss after a default event occurs, which may require a methodology that projects losses over a relatively long time horizon after the occurrence of the event. Use of a conditional tail expectation (which takes an average over the full tail events) rather than Value

© 2022 National Association of Insurance Commissioners 1
at Risk (which looks at a specific point in the tail) may be more appropriate for Complex Assets since, for example, some may not have significant risk charges at a 95th percentile, but would have significant risk charges if the average of the highest 10% of risks were evaluated since it would capture deeper tail risk.

- Regarding use of a consultant: Since capturing tail risk may require more robust modeling approaches such as CTE, it could be helpful to the NAIC to engage a consulting actuary.

- Regarding the need for review outside of Life RBC (Health, P&C): If the E Committee decides that Risk-Based Capital factors should be adjusted to reflect different kinds of tail risk, we believe this should be applicable to the relevant assets and there should not be differences based on insurer type. Asset risk is specific to the asset. That is not to say that investment practices are not different across insurer types, but that is more appropriately adjusted for in the way that the overall RBC formulae work.

- Whether residual tranches in ABS structures can be evaluated in conjunction with and under similar methodologies as the debt tranches: Guidance for residual tranches of all Structured Securities was recently clarified to have those reported on Schedule BA, and not on Schedule D. This reflects appropriately on the fact that these are in a first loss position, much the same as an equity holding, in the capital structure, and are generally not considered securities that can be rated by the Nationally Recognized Statistical Rating Organizations (NRSROs). While they may have some characteristics akin to a debt security, they are more appropriately treated as equity-like and we believe they should take the RBC factor of similar assets that are reported on Schedule BA.

- Specific proposals for addressing RBC treatment of residual tranches to reduce arbitrage incentives: A substantive question is what the actual exposure is across the insurance industry. There are a number of factors that may be worth considering, not just for residual tranches of structured securities (assuming they will be treated as equity) but also other investments that receive equity treatment. Before considering a specific proposal, we recommend addressing a key principle, namely what are the actual exposures and what are the different characteristics of those exposures. The profile of residual tranches differs from publicly traded common stock, which differs from investments in private funds.

Thank you for the opportunity to provide comments on this important initiative. We can be reached at tricia.matson@riskreg.com/(860) 305-0701 and edward.toy@riskreg.com/(917)561-5605 if you or other E Committee members have any questions.

Re: Response to Request for Comments on RBC project for Certain Asset Back Securities

The Office has been closely following this issue and has been actively involved in the discussion. In response to your request, we would like to reiterate and reinforce some of the thinking we have already expressed.

We continue to believe that the risk, especially tail risk, of this growing class of asset structures cannot be realistically captured in traditional ratings and have been in support of a modeling-based approach as has been adopted for CMBS. These securities share many of the same features that led the NAIC to move to modeling for CMBS, but in many cases are more complex and intricate.

Clearly, outside expertise will be needed to guide the regulatory community toward the “best” answers. Whether it is an actuarial expertise, investment expertise or some combination of the two is an open question. As to whether to publish an NAIC RFP for an outside vendor, or accept the offer of the ACLI to pay for the consultants, using the previous approach, we feel the important concern is to ensure that we are getting the right expertise in a group who is responsive to regulator concerns and issues.

We do believe that while, in the current market, this issue is likely to be more critical in the Life sector, as we are building this structure with a forward looking lens, the other groups (P&C, and Health) should be involved as they may well have to address these as the market evolves and grows.

Lastly, with regard to the residual tranches, we continue to be of the opinion that the ability of the methodologies used for debt tranches to fully capture the unique risks that can be associated with the residual tranches is an open question that will require more detailed research and analysis.
Further, as to specific proposals for addressing these residual tranches, while getting the “right” RBC charge for them is of course essential, we also think that the ability to provide transparency to the regulator as to who is holding these and in what amounts is equally important. And this transparency should be easily identifiable.

DESCRIPTION OF CHANGE(S)

Incorporate benchmarking guidelines for the Working Group to follow in updating the investment income adjustment in the underwriting risk factors for Comprehensive Medical, Medicare Supplement, and Dental & Vision lines.

REASON OR JUSTIFICATION FOR CHANGE **

The reason for the change is to clearly identify the frequency and parameters to use in adjusting the underwriting risk factors for investment income in the Comprehensive Medical, Medicare Supplement, and Dental & Vision lines.

Additional Staff Comments:

11-4-21 cgb The WG exposed for 30-day public comment period ending on Dec. 3, 2021.
12-16-21 cgb One comment letter received.
12-16-21 cgb The Working Group adopted the proposal.
01-28-22 cgb The Working Group re-exposed with alternative language for 15 days. Comments due back on 02-14-22. The purpose of the alternative language is to add further clarity.
02-14-22 cgb No comments received.
02-25-22 cgb The WG re-adopted the proposal as modified with the alternative language to be used in place of the originally proposed language.

The investment income yield was incorporated into the Comprehensive Medical & Hospital, Medicare Supplement and Dental & Vision lines of business. The purpose was to incorporate an offset to reduce the underwriting risk factor for investment income earned by the insurer. The Working Group incorporated a 0.5% income yield that was based on the yield of a 6-month US Treasury Bond. Each year, the Working Group will identify the yield of the 6-month Treasury bond (U.S. Department of the Treasury) on each Monday through the month of January and determine if further modifications to the 0.5% adjustment are needed. Any adjustments will be rounded up to the nearest 0.5%.

Line (14) Base Underwriting Risk RBC. Line (6) x Line (12) x Line (13).
The proposed change would add the KCC as one of the approved third party commercial vendor catastrophe models.

**REASON OR JUSTIFICATION FOR CHANGE**

To keep the consistency with other third party commercial vendors for earthquake and hurricane catastrophe models. KCC has got the approval from the Florida Commission on hurricane loss projection methodology on 6/19/2019 and 6/4/2021.

**Additional Staff Comments:**

10/27/21 – The Subgroup agreed to expose this proposal for a 30-day public comment period ending Nov. 26.
12/16/21 – The Subgroup adopted this proposal during the Dec. 16, 2021, virtual meeting.
CALCULATION OF CATASTROPHE RISK CHARGE RCAT
PR027

The projected losses can be modeled using the following NAIC approved third party commercial vendor catastrophe models: AIR, EQECAT-CoreLogic, RMS, KCC, the ARA HurLoss Model, or the Florida Public Model for hurricane, as well as catastrophe models that are internally developed by the insurer or that are the result of adjustments made by the insurer to vendor models to represent the own view of catastrophe risk (hereinafter “own models”).

However, an insurer seeking to use an own model must first obtain written permission to do so by the domestic or lead state insurance regulator. In the situation where the model output is used to determine the catastrophe risk capital requirement for a single entity, the regulator granting permission to use the own model is the domestic state. In the situation where the model output is used to determine the catastrophe risk capital requirement for a group, the grantor is the lead state regulator. In the situation where the insurer seeking permission is a non-U.S. insurer, the grantor shall be the lead state regulator. Under all scenarios, the regulator that is granting permission should inform other domestic states that have a catastrophe risk exposure and share the results of the review.

To obtain permission to use the own model, the insurer must provide the domestic or lead state insurance regulator with written evidence of each of the following:

1. The use of the own model is reasonable considering the nature, scale, and complexity of the insurer’s catastrophe risk;
2. The own model is used for catastrophe risk management, capital assessment, and the capital allocation process and the model has been used for at least the last 3 years;
3. The perils included in the RBC Catastrophe Risk Charge have been validated by the insurer and that these perils include both US and global exposures, where applicable;
4. The own model has been developed using reasonable data and assumptions and that model results used in determining the RBC Catastrophe Risk Charge reflect exposure data that is no older than six months;
5. The insurer has individuals with experience in developing, testing and validating internal models or engages third parties with such experience. The insurer must provide supporting model documentation and a copy of the latest validation report and the insurer is solely responsible for the relevant cost. For each peril included in the RBC Catastrophe Risk Charge, the validation report should attest that the projected losses are a reasonable quantification of the exposure of the reporting entity. The validation report must provide a description of the scope, content, results and limitations of the validation, the individual qualifications of validation team and the date of the validation. Both the model documentation and the model validation report must be provided at a minimum once every five years, or whenever the lead or domestic state calls an examination; whenever there is a material change in the model; or whenever there is a material change in the insurer’s exposure to catastrophe exposure.
6. The results of the own model should be compared with the results produced by at least one of the following models: AIR, EQECAT-CoreLogic, RMS, KCC, ARA HurLoss, or the Florida Public Model. The insurer must provide the comparison and an explanation of the drivers of differences between the results produced by the internal model vs. results produced by the selected prescribed model.
7. If the own model has been approved or accepted by the non-U.S. group-wide supervisor for use in the determination of regulatory capital, the insurer must submit evidence, if available, from the non-US group-wide supervisor of the most recent approval/acceptance including the description of scope, content, results and limitations of the approval/acceptance process and dates of any planned future approval/acceptance, if known. The name and the contact information of a contact person at the non-US group-wide supervisor should also be provided for questions on the approval/acceptance process.

If the lead or domestic state determines that permission to use the own model cannot be granted, the insurer shall be required to determine the RBC Catastrophe Risk Charge through the use of one of the third party commercial vendor models (AIR, EQECAT-CoreLogic, RMS, KCC, ARA HurLoss (hurricane only)), or the Florida Public Model for hurricane, as advised by the lead state or domestic state.
If the lead or domestic state determines that permission to use the own model can be granted to determine the RBC Catastrophe Risk Charge, the model will be subject to additional review through the ongoing examination process. If, as a result of the examination, the lead or domestic state determines that permission to use the own model should be revoked, the insurer may be required to resubmit the risk-based capital filing and any past filings so impacted where own model was used, as directed by the lead state or domestic state.

If the insurer obtains permission to use the own model, it cannot revert back to using third party commercial vendor models to determine the RBC Catastrophe Risk Charge in subsequent reporting periods, unless this is agreed with the lead or domestic state that granted permission.

The contingent credit risk charge should be calculated in a manner consistent with the way the company internally evaluates and manages its modeled net catastrophe risk.

Note that no tax effect offsets or reinstatement premiums should be included in the modeled losses. Further note that the catastrophe risk charge is for earthquake and hurricane risks only.

As per the footnote on this page, modeled losses to be entered PR027A and PR027B in Lines (1) through (4) are to be calculated using one of the third party commercial vendor models – AIR, Equecat, CoreLogic, RMS, KCC, ARA HurLoss (hurricane only); or the Florida Public Model (hurricane only) or the insurer’s own catastrophe model; and using the insurance company’s own insured property exposure information as inputs to the model. The insurance company may elect to use the modeled results from any one of the models, or any combination of results of two or more of the models. Each insurer will not be required to utilize any prescribed set of modeling assumptions but will be expected to use the same exposure data, modeling, and assumptions that the insurer uses in its own internal catastrophe risk management process. Any exceptions must be explained in the required Attestation Re: Catastrophe Modeling Used in RBC Catastrophe Risk Charges within this RBC Report.

The Grand Total (PR027) page includes an interrogatory to support an exemption from filing the catastrophe risk charge. Any company qualifying for exemption from the earthquake risk charge must identify the particular criteria from among (1a), (1b), (2) and (3) that provides its qualification for exemption, and may leave the other three items from this group of four possible qualifications for exemption blank; except identification of criteria (3) as the basis for the exemption requires a further answer to (3a) and (3b). If an insurer does not write or assume earthquake risks leaving no gross exposure, enter an “X” in interrogatory 3, with no need to fill in (3a) and (3b). Any company qualifying for exemption from the hurricane risk charge must identify the particular criteria from among (4a), (4b), (5) and (6) that provides its qualification for exemption, and may leave the other three items from this second group of four possible qualifications for exemption blank. If the company qualifies for exemption from the earthquake risk charge, page PR027A and line (1) on this page may be left blank. If the company qualifies for exemption from the hurricane risk charge, page PR027B and line (2) on this page may be left blank. If an insurer does not write or assume hurricane risks leaving no gross exposure, enter an “X” in interrogatory 6.

In general, the following conditions will qualify a company for exemption: if it uses an intercompany pooling arrangement or quota share arrangement with U.S. affiliates covering 100% of its earthquake and hurricane risks such that there is no exposure for these risks; if it has a ratio of Insured Value – Property to surplus as regards policyholders of less than 50%; or if it writes Insured Value – Property that includes hurricane and/or earthquake coverage in catastrophe-prone areas representing less than 10% of its surplus as regards policyholders.

“Insured Value – Property” includes aggregate policy limits for structures and contents for policies written and assumed in the following annual statement lines – Fire, Allied Lines, Earthquake, Farmowners, Homeowners, and Commercial Multi-Peril.

“Catastrophe-Prone Areas in the U.S.” include:

i. For hurricane risks, Hawaii, District of Columbia and states and commonwealths bordering on the Atlantic Ocean and/or the Gulf of Mexico including Puerto Rico.

ii. For earthquake risk or for fire following earthquake, any of the following commonwealth or states: Alaska, Hawaii, Washington, Oregon, California, Idaho, Nevada, Utah, Arizona, Montana, Wyoming, Colorado, New Mexico, Puerto Rico, and geographic areas in the following states that are in the New Madrid Seismic Zone - Missouri, Arkansas, Mississippi, Tennessee, Illinois and Kentucky.

DESCRIPTION OF CHANGE(S)

The proposed change may add wildfire as one of the catastrophe risk perils for informational purposes only in the Rcat component.

REASON OR JUSTIFICATION FOR CHANGE **

While the Catastrophe Risk (E) Subgroup reviewed the possibility of expanding the current catastrophe framework to include other perils that may experience a greater tail risk under projected climate-related trends, the wildfire has been identified as one of the major drivers of the U.S. insured losses. The Subgroup decided to consider adding wildfire as one of the catastrophe perils in the Rcat component.

Additional Staff Comments:
12/16/21 – The Catastrophe Risk (E) Subgroup exposed the proposal for a 60-day comment period ending by 02-13-22.
2/22/22 – The Catastrophe Risk (E) Subgroup adopted this proposal during the Feb. 22, 2022, virtual meeting.
3/22/22 - Modification of this proposal can be found in 2022-01-CR

** This section must be completed on all forms.

© 2022 National Association of Insurance Commissioners
CALCULATION OF CATASTROPHE RISK CHARGE \( \text{RCAT} \)
\( \text{PR027A, PR027B, PR027C, PR027, AND PR027INT} \)

The catastrophe risk charge for earthquake (PR027A), and hurricane (PR027B), and wildfire for Informational purposes only (PR027C) risks is calculated by multiplying the RBC factors by the corresponding modeled losses and reinsurance recoverables. The risk applies on a net basis with a corresponding contingent credit risk charge for certain categories of reinsurers. Data must be provided for the worst year in 50, 100, 250, and 500; however, only the worst year in 100 will be used in the calculation of the catastrophe risk charge. While projected losses modeled on an Aggregate Exceedance Probability basis is preferred, companies are permitted to report on an Occurrence Exceedance Probability basis if that is consistent with the company’s internal risk management process.

The projected losses can be modeled using the following NAIC approved third party commercial vendor catastrophe models: AIR, Corelogic, RMS, KCC, the ARA HurLoss Model, or the Florida Public Model for hurricane, as well as catastrophe models that are internally developed by the insurer or that are the result of adjustments made by the insurer to vendor models to represent the own view of catastrophe risk (hereinafter “own models”).

However, an insurer seeking to use an own model must first obtain written permission to do so by the domestic or lead state insurance regulator. In the situation where the model output is used to determine the catastrophe risk capital requirement for a single entity, the regulator granting permission to use the own model is the domestic state. In the situation where the model output is used to determine the catastrophe risk capital requirement for a group, the grantor is the lead state regulator. In the situation where the insurer seeking permission is a non-U.S. insurer, the grantor shall be the lead state regulator. Under all scenarios, the regulator that is granting permission should inform other domestic states that have a catastrophe risk exposure and share the results of the review.

To obtain permission to use the own model, the insurer must provide the domestic or lead state insurance regulator with written evidence of each of the following:

1. The use of the own model is reasonable considering the nature, scale, and complexity of the insurer’s catastrophe risk;
2. The own model is used for catastrophe risk management, capital assessment, and the capital allocation process and the model has been used for at least the last 3 years;
3. The perils included in the RBC Catastrophe Risk Charge have been validated by the insurer and that these perils include both US and global exposures, where applicable;
4. The own model has been developed using reasonable data and assumptions and that model results used in determining the RBC Catastrophe Risk Charge reflect exposure data that is no older than six months;
5. The insurer has individuals with experience in developing, testing and validating internal models or engages third parties with such experience. The insurer must provide supporting model documentation and a copy of the latest validation report and the insurer is solely responsible for the relevant cost. For each peril included in the RBC Catastrophe Risk Charge, the validation report should attest that the projected losses are a reasonable quantification of the exposure of the reporting entity. The validation report must provide a description of the scope, content, results and limitations of the validation, the individual qualifications of validation team and the date of the validation. Both the model documentation and the model validation report must be provided at a minimum once every five years, or whenever the lead or domestic state calls an examination; whenever there is a material change in the model; or whenever there is a material change in the insurer’s exposure to catastrophe exposure.
6. The results of the own model should be compared with the results produced by at least one of the following models: AIR, Corelogic, RMS, KCC, ARA HurLoss, or the Florida Public Model. The insurer must provide the comparison and an explanation of the drivers of differences between the results produced by the internal model vs. results produced by the selected prescribed model.
7. If the own model has been approved or accepted by the non-U.S. group-wide supervisor for use in the determination of regulatory capital, the insurer must submit evidence, if available, from the non-US group-wide supervisor of the most recent approval/acceptance including the description of scope, content, results and limitations of the approval/acceptance process and dates of any planned future approval/acceptance, if known. The name and the contact information of a contact person at the non-US group-wide supervisor should also be provided for questions on the approval/acceptance process.

If the lead or domestic state determines that permission to use the own model cannot be granted, the insurer shall be required to determine the RBC Catastrophe Risk Charge through the use of one of the third-party commercial vendor models (AIR, Corelogic, RMS, KCC, ARA HurLoss (hurricane only)), or the Florida Public Model for hurricane, as advised by the lead state or domestic state.
If the lead or domestic state determines that permission to use the own model can be granted to determine the RBC Catastrophe Risk Charge, the model will be subject to additional review through the ongoing examination process. If, as a result of the examination, the lead or domestic state determines that permission to use the own model should be revoked, the insurer may be required to resubmit the risk-based capital filing and any past filings so impacted where own model was used, as directed by the lead state or domestic state. If the insurer obtains permission to use the own model, it cannot revert back to using third party commercial vendor models to determine the RBC Catastrophe Risk Charge in subsequent reporting periods, unless this is agreed with the lead or domestic state that granted permission.

The contingent credit risk charge should be calculated in a manner consistent with the way the company internally evaluates and manages its modeled net catastrophe risk.

Note that no tax effect offsets or reinstatement premiums should be included in the modeled losses. Further note that the catastrophe risk charge is for earthquake and hurricane risks only.

As per the footnote on this page, modeled losses to be entered PR027A, PR027B, and PR027C in Lines (1) through (4) are to be calculated using one of the third party commercial vendor models – AIR, Corelogic, RMS, KCC, ARA HurLoss (hurricane only); or the Florida Public Model (hurricane only) or the insurer’s own catastrophe model; and using the insurance company’s own insured property exposure information as inputs to the model. The insurance company may elect to use the modeled results from any one of the models, or any combination of results of two or more of the models. Each insurer will not be required to utilize any prescribed set of modeling assumptions but will be expected to use the same exposure data, modeling, and assumptions that the insurer uses in its own internal catastrophe risk management process. Any exceptions must be explained in the required Attestation Re: Catastrophe Modeling Used in RBC Catastrophe Risk Charges within this RBC Report.

The Grand Total (PR027) page includes an Interrogatory on page (PR027INT) to supports an exemption from filing the catastrophe risk charge.

Any company qualifying for exemption from the earthquake risk charge must identify the particular criteria from among (1a), (1b), (2) and (3) that provides its qualification for exemption and may leave the other three items from this first group of four possible qualifications for exemption blank except identification of criteria (3) as the basis for the exemption requires a further answer to (3a) and (3b). If an insurer does not write or assume earthquake risks leaving no gross exposure, enter an “X” in PR027INT interrogatory 3, with no need to fill in (3a) and (3b). If the company qualifies for exemption from the earthquake risk charge, page PR027A and line (1) on this page PR027 may be left blank.

Any company qualifying for exemption from the hurricane risk charge must identify the particular criteria from among (4a), (4b), (5) and (6) that provides its qualification for exemption and may leave the other three items from this second group of four possible qualifications for exemption blank. If an insurer does not write or assume hurricane risks leaving no gross exposure, enter an “X” in PR027INT interrogatory 6. If the company qualifies for exemption from the hurricane risk charge, page PR027B and line (2) on this page PR027 may be left blank.

Any company qualifying for exemption from the wildfire risk charge must identify the particular criteria from among (7a), (7b), (8) and (9) that provides its qualification for exemption and may leave the other three items from this third group of four possible qualifications for exemption blank. If an insurer does not write or assume hurricane risks leaving no gross exposure, enter an “X” in PR027INT interrogatory 9. If the company qualifies for exemption from the wildfire risk charge, page PR027C and line (3) on PR027 may be left blank.

In general, the following conditions will qualify a company for exemption: if it uses an intercompany pooling arrangement or quota share arrangement with U.S. affiliates covering 100% of its earthquake, and hurricane and wildfire risks such that there is no exposure for these risks; if it has a ratio of Insured Value – Property to surplus as regards policyholders of less than 50%; or if it writes Insured Value – Property that includes hurricane and/or earthquake and/or wildfire coverage in catastrophe-prone areas representing less than 10% of its surplus as regards policyholders.

“Insured Value – Property” includes aggregate policy limits for structures and contents for policies written and assumed in the following annual statement lines – Fire, Allied Lines, Earthquake, Farmowners, Homeowners, and Commercial Multi-Peril.
“Catastrophe-Prone Areas in the U.S.” include:

i. For hurricane risks, Hawaii, District of Columbia and states and commonwealths bordering on the Atlantic Ocean and/or the Gulf of Mexico including Puerto Rico.

ii. For earthquake risk or for fire following earthquake, any of the following commonwealth or states: Alaska, Hawaii, Washington, Oregon, California, Idaho, Nevada, Utah, Arizona, Montana, Wyoming, Colorado, New Mexico, Puerto Rico, and geographic areas in the following states that are in the New Madrid Seismic Zone - Missouri, Arkansas, Mississippi, Tennessee, Illinois and Kentucky.

Specific Instructions for Application of the Formula

| Column (1) – Direct and Assumed Modeled Losses | These are the direct and assumed modeled losses per the first footnote. Include losses only; no loss adjustment expenses. For companies that are part of an inter-company pooling arrangement, the losses in this column should be consistent with those reported in Schedule P, i.e. losses reported in this column should be the gross losses for the pool multiplied by the company’s share of the pool. |
| Column (2) – Net Modeled Losses | These are the net modeled losses per the footnote. Include losses only; no loss adjustment expenses. |
| Column (3) - Ceded Amounts Recoverable | These are the modeled losses ceded under any reinsurance contract. Include losses only, no loss adjustment expenses, and should be associated with the Net Modeled Losses. |
| Column (4) - Ceded Amounts with Zero Credit Risk Charge | Per the footnote, modeled catastrophe losses that would be ceded to the categories of reinsurers that are not subject to the RBC credit risk charge (i.e., U.S. affiliates and mandatory pools, whether authorized, unauthorized, or certified). |
| Column (5) – Amount | These are automatically calculated based on the previous columns. |
| Column (6) – RBC Requirement | A factor of 1.000 is applied to the reported modeled catastrophe losses calculated on both AEP and OEP basis, and a factor of 0.018 is applied to the reinsurance recoverables. The RBC Requirement is based on either AEP reported results or OEP reported results (not both), consistent with the way the company internally evaluates and manages its modeled net catastrophe risk. |
| Column (7) – Y/N | Please indicate “Y” for OEP basis and “N” for AEP basis. This column should not be blank. |
ATTESTATION RE: CATASTROPHE MODELING USED IN RBC CATASTROPHE RISK CHARGES

(1) Company Name: 

hereby certifies that the modeled catastrophe losses for earthquake risk, hurricane risk, and wildfire risk entered on lines 1 through 4 of Schedule PR027 of this Risk-Based Capital Report were applying the same catastrophe models or combination of models to the same underlying exposure data, and using the same modeling assumptions, as the company uses in its own internal risk management process, with the following exceptions:

(1a) 

These exceptions, if any, are made for the following reasons:

(1b) 

The following describes the company's application of catastrophe modeling to the determination of the Rcat risk charges: (Include which models are used in what combinations for each of the Rcat charges; what key modeling assumptions are used, including but not limited to time dependency, secondary uncertainty, storm surge, demand surge, and fire following earthquake; and the rationale for treatment of each issue or item): (provide attachments if necessary):

(1c) 

The company further certifies that the underlying exposure data used in the catastrophe modeling process is accurate and complete to the best of our knowledge and ability, with the following limitations:

(1d) 

The following describes the extent to which the exposure location data is accurate to GPS coordinates; to zip code; and to a level less accurate than zip code: (provide attachments if necessary):

(1e) 

The following describes the steps taken to validate, to the best of the Company's knowledge and belief, the accuracy and completeness of the exposure data used in the modeling process to determine the Rcat catastrophe risk charges (provide attachments if necessary):

(1f) 

Provide an explanation of the methodology used to derive the amounts in columns 3 and 4 of page PR027A, PR027B and PR027C:

## INTERROGATORY TO SUPPORT EXEMPTION FROM COMPLETING PR027 (To be completed by companies reporting no RBC charge in either Lines 1 through 3)

### A. Earthquake Exemption (To be completed by companies reporting no RBC charge in PR027 Line 1)
1. The company has not entered into a reinsurance agreement covering earthquake exposure with a non-affiliate or a non-US affiliate and, either
   - (a) the company participates in an inter-company pooling arrangement with 0% participation, leaving no net exposure for earthquake risks; or
   - (b) the company cedes 100% of its earthquake exposures to its US affiliate(s), leaving no net exposure for earthquake risks.
2. The Company’s Ratio of Insured Value - Property to surplus as regards policyholders is less than 50%.
3. The company has written Insured Value - Property that includes earthquake coverage in the Earthquake-Prone areas representing less than 10% of its surplus as regards policyholders.

For any company qualifying for the exemption under 3, provide details about how the “geographic areas in the New Madrid Seismic Zone” were determined.

- (a) What resource was used to define the New Madrid Seismic Zone?
- (b) Was exposure determined based on zip codes or counties in the zone, was it based on all of the earthquake exposure in the identified states or was another methodology used? Describe any other methodology used.

### B. Hurricane Exemption (To be completed by companies reporting no RBC charge in PR027 Line 2)
4. The company has not entered into a reinsurance agreement covering hurricane exposure with a non-affiliate or a non-US affiliate and, either
   - (a) the company participates in an inter-company pooling arrangement with 0% participation, leaving no net exposure for hurricane risks; or
   - (b) the company cedes 100% of its hurricane exposures to its US affiliate(s), leaving no net exposure for hurricane risks.
5. The Company’s Ratio of Insured Value - Property to surplus as regards policyholders is less than 50%.
6. The company has written Insured Value - Property that includes hurricane coverage in the Hurricane-Prone areas representing less than 10% of its surplus as regards policyholders.

Note: “Hurricane-Prone areas” include Hawaii, District of Columbia and states and commonwealths bordering on the Atlantic Ocean, and/or Gulf of Mexico including Puerto Rico.

### C. Wildfire Exemption (To be completed by companies reporting no RBC charge in PR027 Line 3)
7. The company has not entered into a reinsurance agreement covering wildfire exposure with a non-affiliate or a non-US affiliate and, either
   - (a) the company participates in an inter-company pooling arrangement with 0% participation, leaving no net exposure for wildfire risks; or
   - (b) the company cedes 100% of its wildfire exposures to its US affiliate(s), leaving no net exposure for wildfire risks.
8. The Company’s Ratio of Insured Value - Property to surplus as regards policyholders is less than 50%.
9. The company has written Insured Value - Property that includes wildfire coverage in the wildfire-Prone areas representing less than 10% of its surplus as regards policyholders.

Note: “Wildfire-Prone areas” include any of the following states: California, Idaho, Montana, Oregon, Nevada, Wyoming, Colorado, New Mexico, Washington, Arizona, and Utah.

| [ ] Health RBC Instructions | [x] Property/Casualty RBC Instructions | [ ] Life and Fraternal RBC Blanks |
| [ ] OTHER ____________________________ | [ ] | [ ] |

**DESCRIPTION OF CHANGE(S)**

The proposed change would remove the embedded 2% operational risk contained in the R3 credit risk component.

**REASON OR JUSTIFICATION FOR CHANGE **

When the reinsurance recoverable credit risk charge was implemented in 2018, a load of operational risk was embedded in the charge. Now, the operational risk is separately addressed in RBC as a standard-alone capital add-on, it results with duplication of the operational risk charge on the reinsurance recoverable component. This proposal intends to eliminate the double-counting effect of the operational risk charge on the component.

**Additional Staff Comments:**

10/25/21 – The PCRBC WG exposed it for a 30-day public comment period ending Nov. 24.

The Financial Stability (E) Task Force met in Kansas City, MO, April 5, 2022, in joint session with the Macroprudential (E) Working Group. The following Task Force members participated: Marlene Caride, Chair (NJ); Elizabeth Kelleher Dwyer, Vice Chair (RI); Ricardo Lara represented by Susan Bernard (CA); Andrew N. Mais represented by Kathy Belfi (CT); Karima M. Woods represented by Philip Barlow (DC); Trinidad Navarro represented by Tom Hudson (DE); David Altmaier represented by Carolyn Morgan (FL); Doug Ommen (IA); Amy L. Beard represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Gary D. Anderson represented by John Turchi (MA); Timothy N. Schott represented by Vanessa Sullivan (ME); Chlora Lindley-Myers represented by John Rehagen (MO); Mike Causey represented by Jackie Obusek (NC); Eric Dunning represented by Justin Schrader (NE); Adrienne A. Harris represented by Bob Kasinow (NY); Judith L. French represented by Dale Bruggeman (OH); Andrew R. Stolfi represented by Doug Hartz (OR); Michael Humphreys represented by Matt Milford (PA); Raymond G. Farmer represented by Daniel Morris (SC); Carter Lawrence represented by Trey Hancock (TN); Cassie Brown represented by Jamie Walker (TX); Scott A. White and Greg Chew (VA); and Nathan Houdek and Amy Malm (WI). The following Working Group members participated: Justin Schrader, Chair (NE); Carrie Mears, Vice Chair (IA); Susan Bernard (CA); Kathy Belfi (CT); Philip Barlow (DC); Carolyn Morgan (FL); Susan Berry (IL); Vanessa Sullivan (ME); Steve Mayhew (MI); Fred Andersen (MN); John Rehagen (MO); Bob Kasinow (NY); Matt Milford (PA); Jamie Walker (TX); and Greg Chew (VA).

1. **Heard Opening Remarks**

Commissioner Caride said materials for consideration and discussion for this meeting are available on the NAIC website in the Committees section under the Financial Condition (E) Committee.

2. **Adopted the Task Force’s Feb. 22 Minutes and the Working Group’s March 2 Minutes**

Commissioner Caride said to simplify the process, the Task Force will consider adoption of its Feb. 22 minutes and the Working Group’s March 2 minutes together.

Mr. Schrader made a motion, seconded by Mr. Eft, to adopt the Task Force’s Feb. 22 minutes (Attachment One) and the Working Group’s March 2 minutes (Attachment Two). The motion passed unanimously.

3. **Received a Working Group Update**

Mr. Schrader said since the Task Force adopted the “List of Regulatory Considerations Applicable (But Not Exclusive) to Private Equity (PE) Owned Insurers,” the Working Group met with the Statutory Accounting Principles (E) Working Group, the Valuation of Securities (E) Task Force, several risk-based capital (RBC) groups, and the Life Actuarial (A) Task Force to establish a baseline of their activities that relate to the considerations included on the list. The Macroprudential (E) Working Group met March 25 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) and paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings, to reach an initial conclusion on how to move forward for the first six considerations. Mr. Schrader added that another regulator-only meeting will be held after the national meeting to address the remaining considerations, with the expectation to release the full list of 13 considerations for a brief comment period. He stressed that if state insurance regulators or interested parties have comments or suggestions on the first six considerations, they should direct those to NAIC staff. He
concluded that after considering any comments received on the 13 considerations, the Working Group will finalize the document to consider for adoption by the Financial Stability (E) Task Force with status updates as work progresses.

Mr. Schrader summarized the changes made to the list of considerations so far:

- Added an introductory paragraph that gives a high-level explanation of solvency monitoring.
- Added specific examples from the NAIC *Financial Analysis Handbook* of stipulations state insurance regulators may require addressing outstanding concerns with entities acquiring insurers.
- Added the full list of considerations, updated with a summary of the existing work occurring at other NAIC groups and results of regulator-only discussions.

Mr. Schrader summarized each regulatory response to the list of regulatory considerations:

- For the first consideration, which involves state insurance regulators’ ability to gain a full understanding of the risks to their regulated insurers affected by holding company structures and affiliated/related-party agreements that avoid required disclosures, the Working Group believes it should be referred to the Group Solvency Issues (E) Working Group. He added that state insurance regulators discussed creating an optional set of disclosures for their use when approving a Form A applicant when unresolved regulatory concerns still exist. He also noted that the Macroprudential (E) Working Group recognized the benefit of additional training for states with less experience reviewing Form A applications involving complex holding company structures and agreements.

- For the second consideration, which deals with the potential existence of control and conflicts of interest where ownership is less than or equal to 10%, the Working Group believes it should also be referred to the Group Solvency Issues (E) Working Group. He also noted that the Macroprudential (E) Working Group recognized the benefit of additional training. He added that the Working Group suggested developing ways to better target affiliated agreements to collect, and he questioned if the Form B Insurance Holding Company System Annual Registration Statement needs to be modified.

- For the third consideration, which addresses control and conflict of interest, but specifically within the investment management agreement (IMA), the Working Group believes it should be referred to the Risk-Focused Surveillance (E) Working Group, which is already focused on a project involving other affiliated agreements and Form D filings. He also noted that the Macroprudential (E) Working Group recognized the benefit of additional training, and he questioned if the Valuation of Securities (E) Task Force should have a role in IMA review work due to the increase in bespoke agreements.

- For the fourth consideration, which involves the potential conflict of owners wanting short-term gains compared to the needs of life insurance products’ long-term liabilities and specifically includes fees charged to insurers in service agreements with other holding company entities; The Working Group noted the Life Actuarial (A) Task Force is performing work to address some of this consideration, but suggested the consideration should be referred to the Risk-Focused Surveillance (E) Working Group as well, because it is already addressing issues with affiliated agreements and fees. He added that the Macroprudential (E) Working Group believes increased guidance for capital maintenance agreements should be considered.

- For the fifth consideration, which covers the broader areas of operational, governance, and market conduct practices, and how those areas would be affected by new owners of insurers with a lack of insurance expertise, the Working Group noted the existence of good guidance in the *NAIC Financial Analysis Handbook*. Despite this existing guidance, the Working Group considered a referral to the Risk-Focused Surveillance (E) Working Group, but for now the members opted to keep developing suggestions at the Working Group. Some of the specific suggestions already discussed include optional Form A disclosures and guidance for less experienced states, considering more detailed guidance for financial examinations, and a recognition that this consideration must also address intentional actions.
• For the sixth consideration, which notes the impact of the lack of a widely accepted definition of PE, the Working Group consensus is that a definition of PE is not needed, as the considerations in this list are activity-based, and the activities, along with any remedies developed, apply to any type of owner.

Mr. Schrader reported that the Working Group updated the 2021 Liquidity Stress Testing Framework (LST Framework) document with Lead State Guidance, providing the outstanding economic variables for the adverse liquidity stress test, as well as the templates to use for the 2021 liquidity stress test (LST). He added that those documents are located on the Financial Stability (E) Task Force’s website. He clarified that insurers should use the Lead State Guidance version of the 2021 LST Framework and the updated templates for submitting the 2021 LST filings with a due date of June 30. He added that the Working Group will address questions and issues related to separate accounts with respect to future LST frameworks before discussing the results of those June 30 filings.

4. ** Adopted the Macroprudential Risk Assessment Process**

Mr. Schrader said the Macroprudential Risk Assessment Process (Attachment Three) was updated with:

• Minor amendments based on industry feedback (Attachment Four).
• An NAIC staff summary of industry feedback paired with NAIC staff’s responses followed by each of the industry comment letters (Attachment Four).
• An illustrative version of the Macroprudential Risk Assessment Process to show what a final document could look like (Attachment Five).

Mr. Schrader noted a recurring theme of industry asking for more details, but apart from some minor revisions to enhance understanding, the Working Group opted for more discussion on the matters to address industry concern by asking for feedback on the proposed actions based on the assessment performed rather than on revisions of the Macroprudential Risk Assessment Process document that could result in constant updates with every new metric or risk under consideration.

Miguel Romero (NAIC) summarized four changes to the Macroprudential Risk Assessment Process document based on industry comments:

• The Overview paragraph was updated to better clarify the intent of the risk assessment process.
• The Quantitative Review section changed to clarify that metrics will be presented in a manner that fits the measured risk with historical data also presented to provide the context needed to assess the risk.
• A reference to macro risk assessment was changed to macroprudential risk assessment to be consistent and not to be confused with macroeconomic risk analysis.
• The Conclusion and Presentation of Results paragraph was changed to add a reference to the three transmission channels identified by the Financial Stability Oversight Council (FSOC) as most likely to facilitate the transmission of risk across firms or markets, which are interconnectedness, asset liquidation, and critical function.

Mr. Schrader said a redlined version of the document was not included in the materials because of an administrative oversight in the preparation of the materials but due to the minor nature of the changes, he had still hoped to adopt the updated document as described by Mr. Romero.

For the Working Group, Ms. Bernard made a motion, seconded by Ms. Mears, to adopt the Macroprudential Risk Assessment Process. The motion passed unanimously.

For the Task Force, Mr. Schrader made a motion, seconded by Mr. Rehagen, to adopt the Macroprudential Risk Assessment Process. The motion passed unanimously.
5. **Heard an International Update**

Tim Nauheimer (NAIC) said the International Association of Insurance Supervisors (IAIS) launched the Global Monitoring Exercise (GME) on March 10, which includes the individual insurer monitoring (IIM) and sector-wide monitoring (SWM). He added that the deadline to submit IIM data is May 10 and the SWM data is June 30. He noted that as part of the SWM exercise, additional climate data and new data on cyber are being collected. He said cyber data will be aggregated anonymously and will be published as the IAIS’s special topic for the Global Insurance Market Report (GIMAR) this year. The IAIS is also collecting data on reinsurers as part of the SWM. Mr. Nauheimer emphasized the importance of striking a balance with respect to the burden for insurers and supervisors by limiting the data requested by the IAIS and ensuring that the objective for collecting such data is clear. He added that the work on potential revisions of the IIM systemic risk assessment methodology will be completed this year as part of a three-year cycle review, which is similar to the global systemically important insurer (G-SII) identification process that was replaced with the IAIS holistic framework for systemic risk. He said the implementation of the holistic framework is currently being assessed by the IAIS, and the Financial Stability Board (FSB) will decide towards the end of this year whether to eliminate the G-SII identification process for good or revive the process.

Mr. Nauheimer reported that the IAIS is reviewing comments received on the second public consultation on the development of liquidity metrics, which focuses on developing the Phase II cash flow projection approach and aligns more with the NAIC’s approach to assess liquidity risk. He added that the IAIS intends to issue a publication titled, “Liquidity Metrics as an Ancillary Indicator” this year after analysis of liquidity data received as part of the GME. He said the IAIS formed a climate risk steering group (CRSG) with three workstreams:

- GAP Analysis charged with reviewing the Insurance Core Principles (ICPs) and Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) standards.
- Scenario Analysis charged with best practices and education around scenario analysis.
- Climate Data charged with respect to data collection and analysis.

6. **Discussed Other Matters**

Commissioner Caride congratulated Superintendent Dwyer for being appointed the NAIC’s representative on the FSOC and the new vice chair of the Task Force. Superintendent Dwyer congratulated Commissioner Caride for being appointed the new chair of the Task Force.

Having no further business, the Financial Stability (E) Task Force and the Macroprudential (E) Working Group adjourned.
The Financial Stability (E) Task Force met Feb. 22, 2022, in joint session with the Macroprudential (E) Working Group. The following Task Force members participated: Eric A. Cioppa, Chair (ME); Marlene Caride, Vice Chair (NJ); Ricardo Lara represented by Susan Bernard (CA); Andrew N. Mais represented by Kathy Belfi (CT); Karima M. Woods represented by Philip Barlow (DC); Trinidad Navarro represented by Tom Hudson (DE); Amy L. Beard represented by Roy Eft (IN); Doug Ommen (IA); Vicki Schmidt represented by Tish Becker (KS); Gary D. Anderson represented by John Turchi (MA); Chlora Lindley-Myers represented by John Rehagen (MO); Eric Dunning represented by Justin Schrader (NE); Mike Causey and Jackie Obusek (NC); Adrienne A. Harris represented by Bob Kasinow (NY); Judith L. French represented by Tracy Snow (OH); Michael Humphreys represented by Kimberly Rankin and Melissa Greiner (PA); Elizabeth Kelleher Dwyer (RI); Raymond G. Farmer represented by Geoffrey Bonhom (SC); Carter Lawrence and Trey Hancock (TN); Cassie Brown represented by Jamie Walker (TX); Scott A. White represented by David Smith (VA); and Nathan Houdek and Amy Malm (WI). The following Working Group members participated: Justin Schrader, Chair (NE); Carrie Mears, Vice Chair (IA); Susan Bernard (CA); Steve Mayhew (MI); Fred Andersen (MN); John Rehagen (MO); Bob Kasinow (NY); Melissa Greiner (PA); Mike Boerner (TX); and Greg Chew (VA).

1. **Heard Opening Remarks**

Commissioner Caride said materials for consideration and discussion for this meeting are available on the NAIC website in the Committees section under the Financial Condition (E) Committee.

2. **Received a Working Group Update**

Mr. Schrader said that the Working Group adopted the document titled “List of Regulatory Considerations Applicable (But not Exclusive) to Private Equity (PE) Owned Insurers” during its meeting on Feb. 1. He stressed that some of the work on the considerations will occur, or is already underway, at other NAIC committee groups, and the Working Group’s role is to monitor those activities and developments. He said that the Working Group has organized a meeting with the various groups’ chairs, vice chairs, and NAIC support staff to establish a baseline of their activities underway that relate to the considerations included on the list of regulatory considerations. He added that after the baseline meeting, the list of regulatory considerations will be updated to reflect changes, and the tracking document will be posted on the Working Group’s web page in the documents section. Mr. Schrader said that after establishing the baseline in early March, the Working Group will hold periodic meetings with the chairs, vice chairs, and NAIC support staff of the various groups to ensure proper coordination occurs. He also promised verbal status updates in open meetings of the Working Group, which will be reflected in the Working Group’s tracking document. Mr. Schrader concluded that the Working Group will consider the risks, existing measures to address the risks, if they are sufficient for now or if further measures should be considered, and if the latter, which group is appropriate to perform the work. He added that the Working Group may need to meet in regulator-to-regulator session when deliberating answers to those questions—for example, to speak about specific companies—but that the answers to these questions will be considered in open meetings with an opportunity for interested parties to comment.

Mr. Schrader said that the Working Group continues to use the unofficial Liquidity Stress Test (LST) Study Group to address the details for the LST project. He added that the LST Study Group has concluded its work on the 2021
LST Framework, which the Working Group will consider for adoption along with the Task Force. He said that the 2021 LST Framework calls for LST filings to be submitted to the lead state regulator by June 30, and once comfortable, the lead state will provide results to NAIC staff to aggregate results. He noted that the LST Study Group will use those results as part of the deliberations for whether and how to modify the 2022 LST Framework. Mr. Schrader added that the LST Study Group will consider issues related to separate accounts, because other than general account guarantees for separate accounts, separate accounts were excluded from the scope. He explained that further considerations to perform some sort of data call and study, as well as whether to modify a future LST Framework to include some aspects of separate accounts, will be considered in the second quarter with any recommendations brought to open meetings of the Working Group.

3. **Adopted the “List of Regulatory Considerations – PE Related and Other”**

Commissioner Caride said that the initial “List of Regulatory Considerations – PE Related and Other” was exposed for a 30-day public comment period, which was extended by two weeks to meet an interested party’s request regarding the year-end holiday season. She added that the Working Group provided its recommended responses in detail to comments received during the Working Group’s meeting on Feb. 1. Commissioner Caride concluded that since no controversial items were raised during the Working Group process, the Task Force is considering adoption without any comment period.

Mr. Schrader made a motion, seconded by Superintendent Cioppa, to adopt the “List of Regulatory Considerations – PE Related and Other” (Attachment One-A). The motion passed unanimously.

4. **Adopted the 2021 LST Framework**

Mr. Schrader said that the 2021 LST Framework drafting began by incorporating the Lead State Guidance items issued last year after the Task Force adopted the 2020 LST Framework document. He added that there were only minor editorial items, such as updating the year and indicating differences of the 2021 LST processes compared to the 2020 LST. He stressed that there is a known set of metrics for the appendices that will need to be updated after the 2021 LST Framework document is adopted. Mr. Schrader said this change and any unexpected changes will be addressed using Lead State Guidance. He said that the 2021 LST Framework document is not being exposed for a public comment period because of this lack of substantive edits from the 2020 LST Framework adopted last year after multiple exposure periods both at the Working Group and the Task Force. Mr. Schrader clarified that all Lead State Guidance elements for the 2020 LST Framework were posted on the Task Force’s web page as they were made in 2021. He concluded that those items being incorporated into the 2021 LST Framework are not new guidance. He added that the insurers in scope that are affected by the minor edits to the 2021 LST Framework document have already signed off during the LST Study Group meetings this year.

For the Macroprudential Working Group’s consideration, Ms. Belfi made a motion, seconded by Ms. Mears, to adopt the 2021 LST Framework (Attachment One-B). The motion passed unanimously.

For the Financial Stability Task Force’s consideration, Commissioner Ommen made a motion, seconded by Ms. Belfi, to adopt the 2021 LST Framework (Attachment One-B). The motion passed unanimously by the Task Force.

5. **Adopted the Working Group’s Feb. 1 Minutes**

The Working Group met Feb. 1 and took the following action: 1) adopted the List of Regulatory Considerations – PE Related and Other; 2) received an update on the 2021 LST Framework, Including Scope Criteria; and 3) heard a macroprudential risk assessment update.
Mr. Schrader made a motion, seconded by Mr. Rehagen, to adopt the Working Group’s Feb. 1 minutes (Attachment One-C). The motion passed unanimously.

6. **Discussed Other Matters**

Commissioner Caride recognized Superintendent Cioppa for his many years of excellent service to the NAIC and wished him the best in his retirement.

Having no further business, the Financial Stability (E) Task Force and Macroprudential (E) Working Group adjourned.
A summary of currently identified regulatory considerations follows with no consideration of priority or importance (green underlined font indicates current or completed work by another NAIC committee group). Most of these considerations are not limited to PE owned insurers and are applicable to any insurers demonstrating the respective activities.

1. Regulators may not be obtaining clear pictures of risk due to holding companies structuring contractual agreements in a manner to avoid regulatory disclosures and requirements. Additionally, affiliated/related party agreements impacting the insurer’s risks may be structured to avoid disclosure (for example, by not including the insurer as a party to the agreement).

2. Control is presumed to exist where ownership is >=10%, but control and conflict of interest considerations may exist with less than 10% ownership. For example, a party may exercise a controlling influence over an insurer through Board and management representation or contractual arrangements, including non-customary minority shareholder rights or covenants, investment management agreement (IMA) provisions such as onerous or costly IMA termination provisions, or excessive control or discretion given over the investment strategy and its implementation. Asset-management services may need to be distinguished from ownership when assessing and considering controls and conflicts.

3. The material terms of the IMA and whether they are arm’s length or include conflicts of interest — including the amount and types of investment management fees paid by the insurer, the termination provisions (how difficult or costly it would be for the insurer to terminate the IMA) and the degree of discretion or control of the investment manager over investment guidelines, allocation, and decisions.

4. Owners of insurers, regardless of type and structure, may be focused on short-term results which may not be in alignment with the long-term nature of liabilities in life products. For example, investment management fees, when not fair and reasonable, paid to an affiliate of the owner of an insurer may effectively act as a form of unauthorized dividend in addition to reducing the insurer’s overall investment returns. Similarly, owners of insurers may not be willing to transfer capital to a troubled insurer.

5. Operational, governance and market conduct practices being impacted by the different priorities and level of insurance experience possessed by entrants into the insurance market without prior insurance experience, including, but not limited to, PE owners. For example, a reliance on TPAs due to the acquiring firm’s lack of expertise may not be sufficient to administer the business. Such practices could lead to lapse, early surrender, and/or exchanges of contracts with in-the-money guarantees and other important policyholder coverage and benefits.

6. No uniform or widely accepted definition of PE and challenges in maintaining a complete list of insurers’ material relationships with PE firms. (UCAA (National Treatment WG) dealt with some items related to PE.) This definition may not be required as the considerations included in this document are applicable across insurance ownership types.

7. The lack of identification of related party-originated investments (including structured securities). This may create potential conflicts of interests and excessive and/or hidden fees in the portfolio structure, as assets created and managed by affiliates may include fees at different levels of the value chain. For example, a CLO which is managed or structured by a related party. (An agenda item and blanks proposal are being developed by SAPWG.)

8. Though the blanks include affiliated investment disclosures, it is not easy to identify underlying affiliated investments and/or collateral within structured security investments. Additionally,
transactions may be excluded from affiliated reporting due to nuanced technicalities. Regulatory disclosures may be required to identify underlying related party investments and/or collateral within structured security investments. This would include, for example, loans in a CLO issued by a corporation owned by a related party. (An agenda item and blanks proposal are being developed by SAPWG.)

9. Broader considerations exist around asset manager affiliates (not just PE owners) and disclaimers of affiliation avoiding current affiliate investment disclosures. (A new Sc Y, Pt 3, has been adopted and will be in effect for year-end 2021. This schedule will identify all entities with greater than 10% ownership — regardless of any disclaimer of affiliation — and whether there is a disclaimer of control/disclaimer of affiliation. It will also identify the ultimate controlling party. Additionally, SAPWG is developing a proposal to revamp Schedule D reporting, with primary concepts to determine what reflects a qualifying bond and to identify different types of investments more clearly, including asset-backed securities.)

10. The material increases in privately structured securities (both by affiliated and non-affiliated asset managers), which introduce other sources of risk or increase traditional credit risk, such as complexity risk and illiquidity risk, and involve a lack of transparency. (The NAIC Capital Markets Bureau continues to monitor this and issue regular reports, but much of the work is complex and time-intensive with a lot of manual research required. The NAIC Securities Valuation Office will begin receiving private rating rationale reports in 2022; these will offer some transparency into these private securities.)

11. The level of reliance on rating agency ratings and their appropriateness for regulatory purposes (e.g., accuracy, consistency, comparability, applicability, interchangeability, and transparency). (VOSTF has previously addressed and will continue to address this issue.)

12. The trend of life insurers in pension risk transfer (PRT) business and supporting such business with the more complex investments outlined above (LATF has exposed questions aimed at determining if an Actuarial Guideline is needed to achieve a primary goal of ensuring claims-paying ability even if the complex assets (often private equity-related) did not perform as the company expects, and a secondary goal to require stress testing and best practices related to valuation of non-publicly traded assets (note — LATF’s considerations are not limited to PRT). Additionally, enhanced reporting in 2021 Separate Accounts blank will specifically identify assets backing PRT liabilities.)

Considerations have also been raised regarding the RBC treatment of PRT business.
   a. Review applicability of Department of Labor protections resulting for pension beneficiaries in a PRT transaction.
   b. Review state guaranty associations’ coverage for group annuity certificate holders (pension beneficiaries) in receivership compared to Pension Benefit Guaranty Corporation (PBGC) protection.

13. Insurers’ use of offshore reinsurers (including captives) and complex affiliated sidecar vehicles to maximize capital efficiency, reduce reserves, increase investment risk, and introduce complexities into the group structure.

INTRODUCTION

Macroprudential Implications of a Liquidity Stress

Beginning mid-year 2017, the NAIC embarked on a project to develop a liquidity stress testing framework. While the NAIC has existing tools and processes for assessing liquidity risk at a legal entity level (i.e., ‘inward’ impacts to the insurer), there was recognition that the NAIC toolbox could be further enhanced with the addition of more granular data in the annual statement and a tool that would enable an assessment of macroprudential impacts on the broader financial markets (i.e., ‘outward’ impacts) of a liquidity stress impacting a large number of insurers simultaneously.

Post-financial crisis, there were several attempts to assess potential market impacts emanating from a liquidity stress in the insurance sector. Many of these analyses relied heavily on anecdotal assumptions and observations from behaviors of other financial sectors. To provide more evidence-based analyses, the NAIC decided to develop a Liquidity Stress Test (LST) Framework for large life insurers that would aim to capture the outward impacts on the broader financial markets of aggregate asset sales under a liquidity stress.

The stress test will be run annually and the findings, on an aggregate basis, reported annually as part of the NAIC’s continuous macroprudential monitoring efforts. The NAIC’s pursuit of the liquidity stress test should not suggest any pre-judgement of the outcomes. The NAIC believes there is value to the exercise whether it points to vulnerabilities of certain asset classes or markets or, alternatively, suggests that even a severe liquidity stress impacting the insurance sector is unlikely to have material impacts on financial markets. The NAIC liquidity stress testing framework is intended to supplement, not replace, a firm-specific liquidity risk management framework. The NAIC has not yet discussed steps that might be taken to address any identified
vulnerabilities but acknowledges that any recommendations may require collaboration with other financial regulators.

The NAIC’s revised proposed liquidity stress testing framework is contained in the pages that follow. The NAIC recognizes that, at least in the early years, the stress testing process and analyses will be iterative. We expect refinements as the framework is developed, especially after the first year’s implementation.

BACKGROUND

NAIC Macroprudential Initiative

The NAIC’s Macroprudential Initiative (MPI) commenced in 2017. It recognized the post-financial crisis reforms that became part of our Solvency Modernization Initiative (SMI) that continue to serve us well today. However, in the ensuing years since those reforms, insurers have had to contend with sustained low interest rates, changing demographics and rapid advancements in communication and technology. They have responded by offering new products, adjusting investment strategies, making structural changes, and expanding into new global markets. There are new market players, new distribution channels, and a complex web of interconnections between financial market players.

What has not changed since the financial crisis is the scrutiny on the insurance sector in terms of understanding how insurers react to financial stress, and how that reaction can impact, via various transmission channels, policyholders, other insurers, financial market participants, and the broader public.

The proposed work on macroprudential measures is reflective of the state insurance regulators’ commitment to ensure that the companies they regulate remain financially strong for the protection of policyholders, while serving as a stabilizing force to contribute to financial stability, including in stressed financial markets. To that end, the NAIC’s three-year strategic plan (2018-2020), “State Ahead”, reflects the objective of “Evaluating Gaps and regulatory opportunities arising from macroprudential surveillance, and develop appropriate regulatory responses.”
The NAIC’s work on macroprudential surveillance is overseen by the Financial Stability Task Force of the NAIC Executive Committee. In April 2017, the Task Force was asked to consider new and improved tools to better monitor and respond to both the impact of external financial and economic risks on supervised firms, as well as the risks emanating from or amplified by these firms that might be transmitted externally. The Task Force, in turn, focused its efforts on potential enhancements to identify and monitor liquidity risk, among other areas. More specifically, the Task Force was requested to further develop the U.S. regulatory framework on liquidity risk with a focus on life insurers due to the long-term cash-buildup involved in many life insurance contracts and the potential for large scale liquidation of assets.

**Liquidity Assessment Subgroup**

To carry out its work on assessing liquidity considerations, the Task Force established the Liquidity Assessment Subgroup (“Subgroup”) mid-year 2017.

**Mandate**

The charges and workplan of the Subgroup reflect the following assignments:

- Review existing public and regulator-only data related to liquidity risk, identify any gaps based on regulatory needs and determine the scope of application, and propose recommendations to enhance disclosures.
- Develop a liquidity stress testing framework proposal for consideration by the Financial Condition (E) Committee, including the proposed universe of companies to which the framework will apply (e.g., large life insurers).
- Once the stress testing framework is completed, consider potential further enhancements or additional disclosures.

In addition, a small informal study group comprised of regulators, industry participants and NAIC staff was formed to consider the specific data needs and technical aspects of the project. The study group is NOT an official NAIC working group. All recommendations from the study group must be vetted and considered by the Liquidity Assessment Subgroup and/or the Financial Stability (EX) Task Force according to NAIC procedures.
Data Gaps
Prior to undertaking work on the Liquidity Stress Test, the Subgroup constructed an inventory list of existing life insurer disclosures as of 2018 that contribute to an understanding of liquidity risk. When assessing the current state, the Subgroup recognized the availability of significant detailed investment-related disclosures but contrasted it to the relatively sparse liability-related disclosures. To remedy this imbalance, a blanks proposal was constructed to significantly increase the disclosures for life insurance products.

Specifically, the Analysis of Operations by Line of Business schedule was expanded from a single exhibit to five exhibits, one each for Individual Life, Group Life, Individual Annuity, Group Annuity, and Accident and Health. The Analysis of Increase in Reserves schedule was similarly expanded. Within each of the five new exhibits, columns were added for more detailed product reporting. For example, columns were added to the Individual and Group Life exhibits to capture universal life insurance and universal life insurance with secondary guarantees, and columns were added to the Individual and Group Annuity exhibits to capture variable annuities and variable annuities with guaranteed benefits. In addition, two new lines were added to the now five exhibits of the Analysis of Increase in Reserves schedule: one capturing the cash surrender value of the products outstanding and another capturing the amount of policy loans available (less amounts already loaned). A new addition was also proposed to the Life Notes to Financial Statement. The new Note 33 considered the type of liquidity concerns disclosed in Note 32 for annuities and deposit-type contracts and added disclosures for life insurance products not covered in Note 32.

These proposals were exposed and commented upon several times at the Liquidity Assessment Subgroup, the Financial Stability (EX) Task Force, and at the Blanks (E) Working Group. Ultimately, they were adopted by NAIC Plenary for inclusion in the 2019 Life Annual Statement Blank. As an interim step, The Financial Stability Task Force performed a data call requesting a few key lines of information from the newly adopted 2019 format of the Analysis of Operations by Line of Business schedule and the Analysis of Increase in Reserves schedule, as well as the new Note 33, but populated with 2018 year-end data. This data call was completed in July 2019.
Discussions with Insurers
During the latter part of 2017 and first quarter of 2018, the Subgroup conducted calls with several large life insurers who agreed to share their internal liquidity risk assessment processes. The dialogue provided extremely helpful input and informed the establishment of the initial direction of the Liquidity Stress Testing Framework. Feedback from these discussions include:

- Scope criteria should be risk-focused, not solely based on size.
- Stress test framework should align with internal management reporting and leverage the ORSA.
- Stress test should be principle-based and complement a company’s internal stress testing methodology.
- Regulatory guidance should be provided to help define liquidity sources and uses, products/activities with liquidity risk, time horizons, level of aggregation, reporting frequency, and establishing stress scenarios.
- Public disclosure of results should be carefully considered to avoid exacerbating a liquidity crisis.

Regarding the specifics of liquidity assessments/stress test approaches, significant diversity in practices exist. Key observations in this regard included:

- Liquidity tests are performed at the material entity level and at the holding company level. Definitions of material entities differ.
- Most firms determine some sort of coverage ratio (Liquidity Sources) / (Liquidity Uses), for Base and Stress scenarios and monitor results to ensure they align with the firm’s (internal) risk appetite. Categories of liquidity sources and uses differ across firms and assumptions vary depending on time horizon. Some insurers determine coverage ratios utilizing balance sheet values, applying different haircuts by asset class, time horizon and type of stress. Other insurers determine liquidity coverage gaps (Liquidity Inflows – Liquidity Outflows) utilizing a cash flow approach.
- Stress scenarios vary by company, reflecting a combination of market-driven, as well as idiosyncratic and insurer-specific scenarios.
• Time horizons tested also vary, typically ranging from 7 days to 1 year.

**Regulatory Goals of the Liquidity Stress Test**

• The primary goal of this liquidity stress testing, and the specific stress scenarios utilized, is for macroprudential uses – to allow the FSTF regulators to identify amounts of asset sales by insurers that could impact the markets under stressed environments. Thus, the selected stress scenarios are consciously focused on industry-wide stresses – those that can impact many insurers within a similar timeframe. These may not be the most stressful scenarios for specific legal entity insurers, or even their groups. Regulators have indicated the liquidity stress testing is also meant to assist regulators in their micro prudential supervision, in the context of being helpful for domiciliary and lead state regulators to better understand liquidity stress testing programs at those legal entities and groups. There is no intent to require these stress scenarios to be used by individual insurers for some sort of assessment or regulatory intervention mechanism. Similarly, there has not been any consideration given to requiring them in the management of any entities in receivership.

• Regulatory concerns regarding liquidity risk for legal entity insurers and/or groups is more about the stress scenarios of most concern to those entities (not those identified for macro prudential purposes). Similarly, when considering liquidity risk at a legal entity and/or group, regulators need to understand the insurer’s entire risk management framework. Much of this understanding may come from the ORSA filings. Thus, the LST is not meant to be a legal entity insurer requirement, or used as a ranking tool, etc. However, it is recognized that simply reviewing these LST results may help regulators better understand the role of liquidity stress testing within the entities – which may result in more questions and information requests regarding the entities’ own liquidity risk management framework and dynamics of their internal liquidity stress tests.

Section 1. Scope Criteria for Determining Groups Subject to 2021 LST

HISTORY – Scope Criteria for the Initial 2020 LST:

In determining the companies subject to the liquidity stress test (LST), consideration was given to activities assumed to be correlated with liquidity risk. Another consideration was the desirability of tying data used in the criteria back to the statutory financial statements. Ultimately six activities were identified. Those activities are Fixed and Indexed Annuities, Funding Agreements, Derivatives, Securities Lending, Repurchase Agreements and Borrowed Money. Minimum thresholds were established for each of these six activities. A life insurance legal entity or life insurance group exceeding the threshold for any of the six activities is subject to the stress test (see Annex 1 for more details).

While the scope criteria only utilize statutory annual statement data, the stress test is not similarly limited. Thus, the stress test will consider many more liquidity risk elements than the scope criteria, and internal company data will be the source for many of those elements.

Just as the liquidity stress test structure and methodology may change over time, the scope criteria may also be modified, for example, in response to new data points in the NAIC Annual Statement Blank. The scope criteria will be reviewed annually.

Using the agreed criteria, NAIC staff obtained the amounts for all life insurance legal entities from the 2018 annual statutory financial statements (filed by March 1, 2019). If two or more life insurers were part of an insurance group with an NAIC group code, then the numbers for each of those legal entity life insurers was summed together to represent an insurance group result. Thus, a legal entity life insurer not in an insurance group can meet the threshold on its own, or the sum of legal entity life insurers in a group could meet the threshold. Twenty-three insurance groups met the initial scope criteria.
In establishing whether an insurer or group met or exceeded the threshold criteria, the Subgroup members supported using the most current single year activity rather than a multi-year average. This resulted in coverage amounts ranging from 60% to 80% of the industry total for each activity based on 2018 data. It was recognized that using single year activity could result in more instances of an insurance group being in scope one year and out of scope the next, but regulators viewed it more important to have the most recent financial data utilized for determining scope.

To address concerns about insurers moving in and out of scope, regulatory judgment will be used to address an insurer’s exit from or entry to the scope of insurers subject to the liquidity stress test. The lead state regulator will consult with the Task Force in determining when it is appropriate to remove an insurer from the LST requirement if it no longer meets the scope criteria. Similarly, lead state regulators should have the ability to consult with the Task Force and require the LST from an insurer not meeting the scope criteria (e.g., an insurer close to triggering the scope criteria for more than one year).

**CURRENT – Scope Criteria for the 2021 LST:**

Regulators agreed to retain the same 6 criteria and thresholds from the 2020 LST Scope Criteria for use as the 2021 LST Scope Criteria. The 2021 LST Scope Criteria have been applied to the 2020 annual statement data (data as of Dec. 31, 2020, filed by March 1, 2021).

**Section 2. Liquidity Stress Test**

**2.1 Summary**

The stress testing framework employs a company cash flow projection approach incorporating liquidity sources and uses over various time horizons under a baseline assumption and some number of stress scenarios (for 2021 there are 2 stress scenarios and also an insurer-specific request for information). The available assets are then recorded by asset category. The framework then calls for identification of expected asset sales by category, or other funding as allowed in the stress test, to cure any cash flow deficits (liquidity uses exceed liquidity sources) under the stress scenarios. The stress tests are to be performed at the legal entity level; the aggregated group does not perform the LST.
2.2 Time Horizons

The time horizons chosen by regulators are 30 days, 90 days, and 1 year, because, overall, insurance products are designed to be for the benefit of customers as risk protection over the long term and not designed to provide short term liquidity like other financial products. Historical experience in times of stress demonstrate slow policyholder reaction in short periods of time, as opposed to an event that occurs over months or years. Features designed to protect the long-term nature of the product for the policyholders ultimately reduce the likelihood of policyholder reaction to short-term volatility in markets. Therefore, evaluating shorter than 30-day time horizons has been deemed not warranted for the overarching macroprudential purpose of gauging liquidity risk in the Life insurance industry.

Policyholders do not “run” from an insurer in times of economic stress to the extent depositors do from a bank, because insurance is purchased to obtain the protection insurance provides, not as a source of liquidity or discretionary funds. In the United States, life insurance and annuities are purchased primarily for long-term financial protections upon death or retirement. Surrendering a life insurance contract to harvest its cash surrender value would leave the policyholder without death benefit protection that would be expensive or impossible to replace at a future date. Surrendering a variable annuity contract would lock in potentially temporary decreases in account value and could result in the loss of living benefit protection that becomes more valuable when market conditions depress account values below trigger points. Further, mitigating contract features such as surrender charges and the insurer’s right to delay the processing of withdrawals and surrenders for up to 30 days are common.

There are also non-contractual mitigating factors at play, such as potential negative tax consequences, that further reduce the short-term nature of liquidity risk for life insurers.

Simply put, policyholders are highly disincentivized to give up the likely irreplaceable protection for which they have already paid. The run-like mass surrender of insurance policies would require large numbers of policyholders to act against their self-interest.
From a holistic risk perspective, liquidity stress is traditionally experienced on the asset side. One short-term consequence of market turmoil could be a requirement to post collateral in connection with existing derivative contracts. However, even in this scenario, collateral is typically posted in the form of securities, so a demand for cash is not generated.

We do acknowledge liquidity risk does exist with respect to shorter time horizons and that many insurers do consider shorter time horizons (7-days for example) as part of their internal liquidity stress testing framework. This is viewed as a cash management/Treasury function impacting the daily operations of individual insurers, however, that would not affect the industry as a whole. Hence, these considerations are typically reviewed as part of individual/microprudential surveillance efforts in the U.S.

2.3 Insurer’s Internal Liquidity Stress Testing System

Insurers are to use their own internal liquidity stress testing system to perform the regulatory LST, adjusting for regulatory assumptions, metrics, etc., as specified in this document. For example, assessing materiality of stressed cash flows for inclusion in the liquidity uses and sources templates is per the insurer’s own internal methodology, but determining which legal entities are to perform the LST and report on those templates is specified in this document. Insurers should provide a narrative description of their internal liquidity stress testing system and processes, including for example their materiality thresholds for stressed cash flows and methodology for converting foreign currencies to US dollars (see Section 7. Reporting). The stress scenarios may vary from year-to-year and contain variations referred to as “What-if” scenarios. The following sections provide a further description of each of the key components of the framework.

Section 3. Legal Entities Required to Perform the LST for Insurers Meeting the Scope Criteria

The scope of entities included within an insurance group for the purposes of liquidity stress testing to assess the potential for large scale liquidation of assets (i.e., the legal entities within the group which should perform the LST), should include:
U.S. Life insurance legal entities, including reinsurers, regardless of corporate structure, so including captive (regulators specifically want all U.S. life insurance/reinsurance legal entities to perform the 2021 LST for informational purposes – future LST iterations may see a materiality consideration added);

- Non-guaranteed/market value separate accounts are not included in the 2021 LST. However, regulators may want to perform a separate account study in the future. The current thinking is that even though non-guaranteed/market value separate accounts may experience asset sales during stressed environments, those sales are at the policyholder’s discretion and do not generate liquidity stress for the insurer/group. As such they are deemed other market activity rather than insurance entity activity. Thus, for annuities that provide both non-guaranteed and guaranteed benefits, insurers should only include the cash flow impact of the guaranteed benefits.

- Non-U.S. life insurance/reinsurance legal entities should perform the 2021 LST if they pose material liquidity risks to the U.S. group (see below on non-U.S. legal entities).

- Where applicable, holding companies that could be a source or draw of liquidity to the life insurance legal entities; and

- Non-life insurance entities and non-insurance entities with material sources of liquidity, or that carry out material liquidity risk-bearing activities and could, directly or indirectly, pose material liquidity risk to the U.S. group. This materiality consideration should occur within the context of the specific stress scenario (and “what if” modification if applicable). The materiality criteria and initial list of legal entities in scope should be reviewed by the lead state regulator and modified by the insurer as needed based on regulator direction.

- Non-U.S. legal entities (including non-U.S. holding companies) are subject to this materiality consideration and should be subject to performing the LST if they pose material liquidity risk to the U.S. group.
• U.S. non-life insurers and reinsurers are not automatically exempted. If the U.S. non-life insurer poses material liquidity risk, per the stress scenario, to the U.S. group, then that legal entity insurer should perform the LST.

• Legal entity asset managers and mutual funds (both U.S. and non-U.S.) are excluded from performing the 2021 LST.

• However, those legal entities performing the LST (e.g., holding companies that could be a source or use of liquidity for the life insurers) must reflect any material stressed cash flows from/to the legal entity asset manager/mutual fund in their 2021 LST results (e.g., the liquidity sources and liquidity uses templates, as they do with any other type of legal entity that has material stressed cash flows from/to the legal entities performing the LST).

• If such material stressed cash flows from/to the legal entity asset manager/mutual fund exist, the regulators want specific disclosures on those in the results (either by adjusting the templates to include a line for these and/or in the narrative/explanatory disclosures submitted along with the templates).

• Examples of when such legal entity asset manager/mutual fund considerations and disclosures would need to be made for a specific stress scenario include:
  
  o If the holding company or another legal entity(ies) in the group is expected to fund a material liquidity shortfall of a mutual fund/asset manager (i.e., redemptions exceed the ability to sell assets), then the expected cash flows must be reflected (especially where there are established inter-affiliate support agreements);
  
  o If the holding company or another legal entity(ies) in the group is expected to provide capital to the mutual fund/asset manager or is expecting dividends from them, the material expected cash flows must be reflected; and
  
  o If the asset manager manages financial instruments under which it retains some risk, such as new European CLOs, or has contractual risk retention agreements for US CLOs, the required risk retention limit (5% for Europe)
must be reflected if sourced from the holding company or another legal entity(ies) in the group and considered material.

- Legal entity banks (both U.S. and non-U.S.) are excluded from performing the 2021 LST.
  - However, those legal entities performing the LST (e.g., holding companies that could be a source or use of liquidity for the life insurers) must reflect any material stressed cash flows from/to the legal entity bank in their 2021 LST results (e.g., the liquidity sources and liquidity uses templates, as they do with any other type of legal entity that has material stressed cash flows from/to the legal entities performing the LST).
  - If such material stressed cash flows from/to the legal entity bank exist, the regulators want specific disclosures on those in the results (either by adjusting the templates to include a line for these and/or in the explanatory disclosures submitted along with the templates).
  - Examples of when such legal entity bank considerations and disclosures would need to be made for a specific stress scenario include:
    - If the holding company or another legal entity(ies) in the group is expected to fund a material liquidity shortfall of a bank, then the expected cash flows must be reflected (especially where there are established inter-affiliate support agreements); and
    - If the holding company or another legal entity(ies) in the group is expected to provide capital to the bank or is expecting dividends from them, the material expected cash flows must be reflected.

For 2021, the legal entities identified in the bullets above, per a Company’s ORSA and/or other materiality criteria applied to the specific stress scenario, must be considered as material or identified as carrying out material liquidity risk bearing activities and hence subject to internal liquidity stress testing requirements. Although a legal entity in the group may not be required to perform the stress test due to materiality considerations or exemptions, those entities' material cash impacts on entities performing the stress test must be captured in the sources and uses
templates of the entities performing the LST. The insurer will need to disclose the materiality
criteria (agreed upon by the Lead State regulator) used in determining the legal entities subject
to the 2021 LST in the submission of its results. Based on the results of the 2020 initial LST exercise
and those of the 2021 LST, the Subgroup will determine if additional materiality criteria should
be developed to ensure better comparability amongst insurers.

Section 4. Cash Flow Approach – Liquidity Sources and Uses

The Liquidity Stress Testing Framework is anchored by a cash flow approach, utilizing companies’
actual cash flow projections of sources and uses of liquidity over various time horizons based
upon experience and expectations. This contrasts with a Balance Sheet Approach, which employs
static balance sheet amounts and generic assumptions about asset liquidity. While a Balance
Sheet Approach is easier to apply and provides calculation consistency (and thus the perception
of increased comparability), its ‘one-size fits all’ approach could result in a misleading assessment
of liquidity risk and fail to capture certain asset activities or product features under different
stress scenarios and time horizons. The cash flow approach is deemed more dynamic and hence
to capture liquidity risk impacts more precisely.

The insurer should produce cash flow projections for sources of liquidity and uses of liquidity that
cover: operating items, investments and derivatives, capital items, and funding arrangements.
(See Liquidity Sources and Uses templates in Section 7). To clarify an issue regarding funding
arrangements, the projected cash flows for liquidity sources and uses should include already
existing funding arrangements such as FHLB draws outstanding in the current time period. Also,
specific to the holding company, these projected cash flows for liquidity sources and uses should
include material non-U.S. impacts as well.

The insurer will produce these liquidity sources and uses cash flow projections in a baseline,
normal course of business scenario, for each time horizon. The insurer will also produce these
cash flows for each time horizon for a specific number of required stress scenarios (for 2021 there
are 2 stress scenarios and also an insurer-specific worst-case scenario).
4.1 Baseline Assumptions for Cash Flows

Baseline (pre-stress) cash flows are the insurer-specific cash flows from normal expected operations. Insurers should prepare cash flow projections under normal operating conditions and report the net cash flows (projected liquidity sources less uses) for each time horizon. These cash flow projections should be consistent with those used for internal baseline liquidity forecasts, such as those used for financial planning and analysis (FP&A), risk management, etc. A positive net cash flow is presumed in the baseline cash flows since companies are usually not expected to be operating in a net cash flow deficiency state.

Section 5. Stress Scenarios and their Assumptions

For year-end 2021 there are two regulatory liquidity stress scenarios: an adverse liquidity stress scenario for insurers, and an interest rate spike scenario. There is also an insurer-specific information request for each group’s own most adverse liquidity stress scenario(s). The adverse liquidity stress scenario contains a regulator provided narrative, regulator-prescribed assumptions, and company-specific assumptions. The interest rate spike scenario allows all other narrative description components and key metrics (including how much interest rates spike) to be provided by each company. The insurer-specific information request contains a company provided narrative and a description of key company metrics. The regulator provided narrative will be a qualitative description of the specified stress scenario to highlight the particular risks and sensitivities associated with that stress scenario. The regulator prescribed assumptions are specific parameters insurers should incorporate into their process for a particular stress scenario. Company-specific assumptions should be consistent with the information provided in the regulator provided narrative and regulator prescribed assumptions, and represent the detailed assumptions needed for a specific company’s liquidity stress testing process. Examples of where companies should provide their assumptions include: debt issuance, lapse sensitivity, new business sensitivity and mortality sensitivity. Regulators expect insurers to utilize policyholder behavior assumptions (e.g., surrenders and policy loan withdrawals, existence of new sales activity) as well as the insurer’s response (e.g., assuming delays in payment of policyholder...
benefits), consistent with the severity of the stress, and to provide very thorough explanatory information. All key business activities and product-type impacts to liquidity should be considered by the companies.

If the insurer’s internal model does not utilize a specific economic and/or company-specific assumption included in this document, the internal model does not need to be modified to incorporate it. However, if the insurer’s internal model does utilize a specific economic and/or company-specific assumption included in this document, the insurer should use the approach outlined below to calculate the value for that assumption. (This emphasizes the macro surveillance benefit of the 2021 LST, allowing for a level of consistency of assumptions across the industry. As discussed previously, this is not meant to specify assumptions used by the insurers in their own internal liquidity stress testing work.) If there is no specific value included in the 2021 LST Framework and instead there is an illustrative value or suggested guidance, the company should use a value consistent with the illustrative value or suggested guidance. For example, guidance is given below on using Moody’s values for migration, default, and recoveries. However, insurers may use S&P data or other appropriate data sources.

5.1 Adverse Liquidity Stress Scenario for Insurers

5.1.1 Narrative

Insurers are required to apply an adverse liquidity stress scenario as one of the two stress scenarios. The following is a summary of market conditions in the adverse scenario extracted from the Federal Reserve Board’s 2017 Supervisory Scenarios for Annual Stress Tests Required under the Dodd-Frank Act Stress Testing Rules and the Capital Plan Rule.

The adverse scenario is characterized by weakening economic activity across all economies included in the scenario. This economic downturn is accompanied by a global aversion to long-term fixed-income assets that, despite lower short-term rates, brings about a near-term rise in long-term rates and steepening yield curves in the United States and the four countries/country blocks in the scenario.
The economic indicator levels described below provide the backdrop for the economic climate insurers should assume in the adverse scenario. The actual levels insurers should use in the adverse scenario are provided in Annex 2.

- **Macroeconomic**
  - Real GDP falls slightly more than 2 percent from the pre-recession peak in the fourth quarter of 2016 to the recession trough in the first quarter of 2018
  - *Unemployment rate increases.*
  - *Headline CPI falls and then rises over the scenario period.*

- **Interest Rates and Credit Spreads**
  - *Short-term Treasury rates fall and remain near zero throughout the stress.*
  - *10-year Treasury yields rise.*
  - *Investment Grade (IG) corporate credit spreads widen.*

- **Asset Valuations**
  - *Equity prices decline by roughly 40%.*
  - *The Volatility Index (VIX) peaks at approximately 35.*
  - *Housing prices and commercial real estate prices decline through 8 quarters.*

- **Description of International Market Conditions**
  - *Recessions and slowdowns in growth are experienced in the Euro area, United Kingdom, Japan, and developing Asia economies.*
  - *All foreign economies experience a decline in consumer prices.*
  - *U.S. Dollar appreciates against the Euro, British Pound, and developing Asia currencies.*
  - *U.S. Dollar depreciates modestly against the Japanese Yen, driven by flight-to-safety capital flow.*

**5.1.2 Regulator-Prescribed Assumptions**

Insurers should utilize the values for the economic indicators from the Federal Reserve Board’s annual Supervisory Scenarios for Annual Stress Tests Required under the Dodd-Frank Act Stress
Testing Rules and the Capital Plan Rule as the basis for scenario assumptions, Table A.1 Historical data and Table A.5 (Annex 2i, A) Supervisory adverse scenario. Insurers should use the version published in February 2017 (refer to the tables in Annex 2i). Specifically, insurers should run the adverse liquidity stress scenario using the deltas for the Treasury curve, Corporate spreads, GDP, Unemployment, U.S. Inflation (CPI), Housing Price Index (HPI), S&P 500 index (SPX SPOT), Commercial Real Estate Index (CREI) and VIX index. Theses economic variables should be used to the extent these variables are included in an insurer’s internal liquidity stress test process or models.

Insurers should apply the same change in economic variables experienced between Q4 2016 Table A.1 and the stress scenarios in Table A.5 to current economic variable levels (Annex 2i, D). Insurers should use the tables in Annex 2i for an illustrative example of how the deltas from the 2017 Fed’s CCAR are applied to the current reference quarter (Q4 2020) for the 2020 LST (Annex 2i, B). For example, insurers should use 2021 (or most recent year-end) 10 Yr. Treasury rates and apply the same percentage or absolute b.p. change shown from Q4 2016 to the 2017 Table A.5 amounts in their 2021 LST stress scenarios. Table C (Annex 2i, C) shows the 2017 deltas applied to 2021 year-end levels on an absolute and percentage basis for 3 month and 1-year horizons for ease of use. The deltas to apply are provided for the 30-day, 90-day and 1-year horizons. Note, the tables also include structured spread assumptions described below in section 5.1.4. The tables are included in Annex 2i of this document.

In addition, other market indicators are necessary for insurers to apply to stressed cash flows and to assess the impact on expected asset sales. These are as follows (with details to be found in Annex 2):

- Market Capacity Assumption
- Structured Spreads over Treasuries
- SWAP Spreads
- Swaption Volatility
- Credit Assumptions: Moody’s Transition Matrix/Migration Rates
Credit Assumptions: Moody’s Default Table
Credit Assumptions: Moody’s Recovery Rate Table

5.1.3 Market Capacity Assumption

The following is suggested guidance to determine market constraints on asset categories to be sold in times of stress. It represents standards followed by many insurers to estimate assets sales by stress scenario, asset category and time horizon that can be sold without meaningfully impacting the entire market by widening bid-offer spreads. We recognize each company has its own individual methodology for determining potential asset sales under stress, and we request a written narrative be provided as to how they make their determination.

Once an asset class has been identified as available to be sold to satisfy a cash deficiency from cash flow stress testing, the insurer should calculate its percentage of the total amount issued and outstanding. Next the insurer should obtain average daily trading volumes (ADTV) and make an assumption for the haircut amount to apply to that volume to reflect stressed conditions (the “haircut ADTV”). Next, the insurer would apply its calculated percentage of total outstanding owned to the haircut ADTV, and the result would be divided by the number of days in the stress testing time horizon to arrive at a daily amount that can be sold. This daily amount able to be sold would be multiplied by the number of days in the prescribed time horizon: 30 days for the 30-day horizon, 60 days for the 90-day horizon (31-90 days) and 274 days for the 1-year horizon (91-365 days). An illustrative example best explains the above-described process.

Illustrative example (also included in Appendix 2ii):

Step 1: Estimate Unconstrained Sales Per Day

Insurer A has a $100 billion portfolio of investment-grade corporate bonds, priced at par. Insurer A estimates that it holds approximately 5% of outstanding corporate bonds. In the adverse liquidity stress scenario, Insurer A’s unconstrained liquidity stress testing model assumes that it can sell:
<table>
<thead>
<tr>
<th>Time Horizon</th>
<th>% Able to Be Sold</th>
<th>Sale Price</th>
<th>Total Sale</th>
<th>Sales / Day</th>
</tr>
</thead>
<tbody>
<tr>
<td>First 30 Days</td>
<td>10%</td>
<td>97</td>
<td>$9.7 B</td>
<td>$440 M</td>
</tr>
<tr>
<td>31-90 Days</td>
<td>20%</td>
<td>94</td>
<td>$18.8 B</td>
<td>$430 M</td>
</tr>
<tr>
<td>91-365 Days</td>
<td>50%</td>
<td>90</td>
<td>$45.0 B</td>
<td>$230 M</td>
</tr>
</tbody>
</table>

**Step 2: Add Market Capacity Constraint**

Assume the average daily trading volume in the secondary market for investment grade corporate bonds has been $13.0 Billion over the past year. Insurer A estimates that trading volumes would decline by 40% in the adverse liquidity stress scenario to $8.0 B per day. Since Insurer A is 5% of the market, Insurer A can only trade $400 M per day ($8B x 5%) without paying a significant illiquidity premium and impacting the overall market.

Insurer A then repeats this process for every asset class in its investment portfolio.

<table>
<thead>
<tr>
<th>Time Horizon</th>
<th>Unconstrained Sales / Day</th>
<th>Market Capacity Assumption</th>
<th>Impact</th>
</tr>
</thead>
<tbody>
<tr>
<td>First 30 Days</td>
<td>$440 M</td>
<td>$400 M</td>
<td>($40 M)</td>
</tr>
<tr>
<td>31-90 Days</td>
<td>$430 M</td>
<td>$400 M</td>
<td>($30 M)</td>
</tr>
<tr>
<td>91-365 Days</td>
<td>$230 M</td>
<td>$400 M</td>
<td>$0</td>
</tr>
</tbody>
</table>

### 5.1.4 Structured Spreads Over Treasuries

Insurers should use Annex 2i and 2iii to assist in determining cash flows, asset values and the quantity of assets to be sold in stressed markets. For baseline values, the industry shall submit year-end spreads to the regulators shortly after year-end. The regulators will review and approve the values for use in the table for liquidity stress testing purposes. Structured spread data was derived from the JPMorgan ABS Weekly Asset Spread Datasheet. The spreads were scaled to a stressed economic environment consistent with an adverse scenario as described by the Fed, described above and adopted for this stress testing. For the 2020 LST, economic conditions experienced in March of 2020 were deemed consistent with an adverse scenario. Therefore, structured spreads from March 2020 were used as the basis for the stressed spreads assumptions for insurers to use in their stress testing scenario for the 30-day, 90-day and 1-year horizons.
Note, to calculate structured spreads for CLO/CDO 5.5-7 year and ABS Auto3 year, it was necessary to construct a Treasury yield curve with 3-year and 7-year points. These points were calculated using a straight-line linear interpolation method. For the 2021 LST, the same March 2020 structured spreads were deemed appropriate for use.

Regulators ask industry members to agree on one set of structured spread values amongst themselves to submit for approval, not each insurer submitting values that each need to be approved. Regulators and/or the NAIC need to do a reasonableness check of current baseline/market levels of spreads insurers use before applying the stressed amounts in the JPMorgan spreadsheet. For example, if current spreads are already greater than the JPMorgan stressed spread amounts, regulators may have to consider alternatives or additional stressed levels. One agreed upon set of values will help provide uniformity, consistency, and comparability of stress testing results across insurers.

When utilizing these spreads, insurers should assume the percentage increase in spreads experienced in March 2020 from the JPMorgan ABS Weekly Asset Spread Datasheet; and apply the absolute increase to the agreed upon December 31 baseline spreads. These tables are provided in Annex 2iii, A & B.

Since the reasonableness check is merely a check of current market rates, it is not anticipated that it will be burdensome for insurers to provide an agreed upon set of December 31 baseline values to regulators by January 31 of each year or for the regulators to be able to respond by February 28 of every year to allow insurers sufficient time to incorporate into their stress testing framework. Baseline amounts are included in Annex 2iii, B.

For the 2021 LST – Industry agreed upon values are to be established as Lead State guidance after the 2021 LST Framework has been adopted. Industry plans to develop an alternative process for future LST iterations which will allow NAIC staff to establish the values to include in these appendices.
5.1.5 SWAP Spreads

Stressed spread levels may impact assets prices for expected sales calculations necessary for the stress scenarios. Insurers should complete the SWAP Spread table in Annex 2iv to document assumptions used in determining asset values and the quantity of assets to be sold in stressed markets. SWAP spread source data is no longer provided in the Federal Reserve’s H.15 FRED data. Use of Bloomberg Swap Spreads is preferred – if options exist within Bloomberg, identify which option was used. If a different source from Bloomberg is used, then identify the source and option.

5.1.6 Swaption Volatility

Insurers should use the table in Annex 2v to assist in determining asset values and the quantity of assets to be sold in stressed markets. Insurers should obtain the information to populate the table using Bloomberg’s Swaption Volatility for various time horizons and expiry. For consistency, insurers should use the table found on Bloomberg at NSV [Go].

5.1.7 Moody’s Transition Matrix/Migration Rates

Insurers should use the table in Annex 2vi to assist in determining corporate credit migrations, asset values and the quantity of assets to be sold in stressed markets. The table is imported from Moody’s Corporate-Global: Annual default study, Exhibit 39 - Average one-year alphanumeric rating migration rates, 1983-2019. If available, insurers should use the equivalent Moody’s tables for U.S. Public Finance for municipal bonds and the appropriate Moody’s tables for structured /asset-backed securities. Alternative sources may be used but should be disclosed as well as the rationale for their use.

5.1.8 Moody’s Default Table

Insurers should use the table in Annex 2vii to assist in determining asset values and the quantity of assets to be sold in stressed markets. The table is imported from Moody’s Corporate-Global: Annual default study, Exhibit 45 - Average cumulative issuer-weighted global default rates by letter rating, 1983-2019. Insurers should use the equivalent Moody’s tables for U.S. Public...
Finance for municipal bonds and the appropriate Moody’s tables for structured /asset-backed securities. Alternative sources may be used but should be disclosed as well as the rationale for their use.

5.1.9 Moody’s Recovery Rate Table

Insurers should use the table in Annex 2viii to assist in determining asset values and the quantity of assets to be sold in stressed markets. The table is imported from Moody’s Corporate-Global: Annual default study, Exhibit 8 - Average corporate debt recovery rates measured by ultimate recoveries, 1987-2019. Insurers should use the equivalent Moody’s tables for U.S. Public Finance for municipal bonds and the appropriate Moody’s tables for structured /asset-backed securities. Alternative sources may be used but should be disclosed as well as the rationale for their use.

If relevant for a given insurer, the adverse liquidity stress scenario for insurers can be run considering sources other than expected asset sales (e.g., FHLB credit line draws, bank lines of credit and holding company contributions). Should that be the case, the insurer must clearly identify the sources other than asset sales utilized to meet expected liquidity deficiencies.

5.1.10 “What If” Modification

The “What if” modification to the adverse liquidity stress scenario removes the ability for insurers to use extraordinary internal and external funding sources to satisfy any liquidity deficiency under stress, i.e., no actions taken in response to the stress (as opposed to ongoing operational funding agreements included in the insurer’s baseline templates) or in response to a liquidity deficiency. Intragroup “keep well” agreements would be considered extraordinary transactions. Thus, expected asset sales will be the primary source of meeting any liquidity deficiency for the “What if” scenario. Any existing funding such as commercial paper will not be assumed to roll, nor will FHLB facilities ability to roll upon maturity.

5.1.11 Company-Specific Assumptions

Insurers must construct the assumptions needed for their internal models to run the above adverse liquidity stress scenario for insurers. Company specific assumptions should be consistent with the above scenario as narrative and regulator prescribed assumptions. Examples include the
inability to roll or issue new debt, potential increases in lapse rates, new business sensitivity, mortality experience and policyholder behavior (e.g., surrenders and policy loans).

5.2 Interest Rate Spike Scenario

5.2.1 Narrative

Insurers should run an interest rate spike stress test that resembles the late 70’s/early 80’s inflationary period as it most closely mirrors the regulatory desired interest rate spike scenario. Historical data from the late 70’s/early 80’s show the following economic conditions:

- Inflationary forces caused interest rates to rise quickly.
- Investors rotated out of fixed income and into equities, real estate, and commodities.
- Central bank responded by tightening monetary policy in tandem, eventually causing the yield curve to invert.

Insurers should provide a detailed narrative outlining their scenario and assumptions around general economic conditions bulleted above and specific assumptions for economic variables for each time horizon. The economic variables in the table below and the amount of expected movement in each variable should be fully described in the narrative to the extent are used in a company’s internal model. The table outlines the directional movement of the relevant economic indicators. Insurers should specify the amount of movement for each variable they consider to be part of the scenario for a severe interest rate spike. For example, insurers may indicate a parallel shift in Treasury rates up 100bps in the first 30 days, up 200bps in 90 days and 300bps over 12 months. The table is a guide and not to be interpreted as a strict template and may be supplemented or customized by the insurer. Narrative/Explanatory disclosures should explain these assumptions.

5.2.2 Regulator-Prescribed Assumptions

Regulators did not adopt any regulator-prescribed assumption values for this stress scenario. Instead, they provided the below regulator guidance for insurers to use when establishing their own company specific assumptions for this stress scenario.
<table>

5.2.3 Company-Specific Assumptions

Insurers must construct the assumptions needed for their internal models to run the above stress scenario. Companies are encouraged to provide more information beyond these guidelines as they feel is appropriate to help regulators understand their assumptions for the scenario. Company specific assumptions should be consistent with the stress scenario’s narrative and regulator prescribed assumptions.

5.3 Insurer Specific Information Request - Worst-Case Scenario

5.3.1 Narrative

This information request requires insurers to provide a detailed narrative of their most severe liquidity stress scenario(s) to obtain greater insight to the drivers of liquidity risk for specific insurers. The most severe scenario should be one that results in the largest liquidity deficiency (liquidity sources less uses) from their existing internal liquidity stress testing process. The
scenario should be focused on the insurer's internal model scenario with the worst-case outcome for the group. Regulators may use this information to inform future prescribed stress scenarios.

Insurers should provide a comprehensive narrative describing the stress scenario(s) and the economic environment(s). This stress scenario(s) could be a combination of multiple stressors.

Section 6. Available and Expected Asset Sales

Once the stressed sources and uses of liquidity have been established, and the net cash flows calculated, insurers then project the assets available at the end of the time horizon by asset category (please refer to the asset categories in the Assets Template in Section 7). The valuation of available assets for the baseline scenario utilizes current and projected asset values for a normal operating environment. The valuation of available assets for a stress scenario will be based upon fair value haircuts per the specific stress scenario narrative, its regulatory prescribed assumptions, and/or the company assumptions based on the narrative and regulatory prescribed assumptions (e.g., fair market value haircuts and capacity indicators). Note: Any securities pledged as part of institutional funding agreements (e.g., FHLB) should be excluded and considered encumbered. However, any pre-pledged assets that are not securing credit that has been extended and remains outstanding (i.e., excess) should be considered unencumbered.

To the extent that stressed cash inflows are insufficient to meet the anticipated cash outflows, the insurer must provide for cash flows to meet the deficiency. Unless a stress scenario (or "What-if" modification of a stress scenario) indicates otherwise, the insurer can utilize internal and external funding sources (e.g., FHLB new draws) as well as asset sales to satisfy a liquidity deficiency. Any expected asset sales must be reported in the appropriate column(s) of the template. Insurers decide which categories of available assets to sell, as well as the quantity to sell. (Please refer to the Assets Template in Section 7.)

Asset sales will appear in two different places - 1) within the liquidity sources template for expected/planned activity during the time horizon (pre-liquidity deficiency calculation), and 2) in the assets template for any amount of asset sales used to meet a liquidity deficiency (Liquidity Sources less Liquidity Uses). If an insurer has no liquidity deficiency, then there are no asset sales.
needed in the Assets Template (though available assets still apply). Similarly, if cash on hand was sufficient to meet the liquidity deficiency and the insurer chose to utilize that cash, then no asset sales would be reported in the Assets template.

The expected asset sales amounts calculated based on the insurer’s own models should also be subjected to portfolio manager and/or Chief Investment Officer (CIO) feedback. This feedback may take the form of “topside” adjustments to the expected asset sales. Regulators expect robust disclosures around the chief investment officer’s (or equivalent title or designee) assumptions and decisions on expected asset sales. The intent is for these asset sales to most accurately represent what actions the insurer could reasonably take in the given scenario, market conditions, and the company’s anticipated investment policy and/or strategy.

Section 7. Reporting

Insurers should submit data in the reporting template for liquidity sources, liquidity uses, and assets (available assets and expected asset sales) in US dollars. These templates utilize categories for 30-day, 90-day and 1-year time horizons. The assets template further illustrates available assets and final expected asset sales by asset sub-category to cover any liquidity deficiency (negative amounts of net liquidity sources less liquidity uses over the prescribed time horizons). Use of these consistent sub-categories of assets is critical for allowing the Task Force to aggregate the asset sales results.
Liquidity Sources and Liquidity Uses Templates:
A liquidity sources report and a liquidity uses report should be generated for each legal entity within the group that was subjected to liquidity stress testing, using the NAIC templates. These legal entity amounts should also be aggregated into a group liquidity sources report and a group liquidity uses report for submission (the LST is not performed at the group level; rather it is performed at the legal entity level and those results are aggregated to present a group level report).

- For the Baseline, the Adverse Liquidity stress scenario, and the Interest Rate Spike stress scenario, Liquidity Sources and Liquidity Uses templates at both the individual entity level and the aggregated group level are to be submitted.
- For the insurer’s own “Worst Case” scenario, only the group level Liquidity Sources and Liquidity Uses templates are required to be submitted, not the legal entity templates.
- For the “What If” Variation of the Adverse Liquidity stress scenario, a group level Liquidity Sources template and/or a group level Liquidity Uses template is only required if there is a material difference from the Adverse Liquidity stress scenario’s group level Liquidity Sources and Liquidity Uses templates.

Assets Template:
As with the Liquidity Uses and Liquidity Sources templates, the Assets template is to be generated for each legal entity performing the LST. For the 2021 LST, the insurer may submit the assets template at the group level only, without submission of the legal entity asset sales templates.

- A group level assets template is required for the Baseline and all stress scenarios, including the insurer’s own “Worst Case” scenario and the “What If” variation of the Adverse Liquidity stress scenario.

Modification of Templates:
Insurers are allowed to add lines to the templates to provide more detailed breakdown of existing categories (e.g., for cash flows to/from legal entity asset manager/mutual funds as well as banks), but deletions of existing lines/categories are highly discouraged.
Submission Deadline:

The reporting templates and many other narrative disclosures referenced in this document are to be submitted to the Lead State by June 30, 2022.

Section 8. Templates

8.1 Liquidity Sources Template

Note 1: Certain flows could be settled in securities (e.g., margins on derivatives, capital contributions/dividends, etc.). See the more specific Security Collateral guidance within the Excel templates.

Note 2: Asset Sales (pending settlement) should include trades executed prior to the reporting date with a known settlement date after the reporting date (for example 12/30 trade date and 01/03 settle date).

Note 3: Asset Commitments should include anticipated cash flows related to settlement of a future obligation to a counterparty to the extent, and in the amount, appropriate for the specific stress scenario and economic assumptions. Examples could include capital calls for alternative investments, mortgage loanings, etc., and should include each company’s best estimate as to what they would expect to fund under each scenario. If these commitments have been explicitly prefunded/collateralized by highly liquid assets, asset commitments should be reported on a net basis, including proceeds from the sale of the highly liquid assets in an amount consistent with the specific stress scenario and economic assumptions. This line item may include some percentage amount of commitments to fund private placement revolvers consistent with the specific stress scenario and economic assumptions, but revolvers and lines of credit themselves should be captured in the credit facilities line in the Sources Funding section.

© 2022 National Association of Insurance Commissioners
Note 1: Insurers will enter “Illiquid” in a data field for any asset category deemed such within a specific time horizon. (Regulators can then follow up with questions later if there are concerns, etc.)

Note 2: Any securities pledged as part of institutional funding agreements (e.g., FHLB) should be excluded and considered encumbered. However, any pre-pledged assets that are not securing credit that has been extended and remains outstanding (i.e., excess) should be considered unencumbered.

Note 3: Reminder that regulators want robust disclosures regarding the chief investment officer’s (or equivalent title or designee) assumptions and decisions on expected asset sales. Might need to supplement the template comments with additional narrative disclosures.

Note 4: Excluding the “What If” variation, insurers are to provide disclosures indicating when affiliated amounts are provided to assist a legal entity in addressing a liquidity deficiency.
Narrative/Explanatory Disclosures noted in the 2021 LST

Narrative/explanatory disclosures are expected to be in English.

- Insurers should provide a narrative description of their internal liquidity stress testing system and processes, including for example their materiality thresholds for stressed cash flows and methodology for converting foreign currencies to US dollars.
- Specific disclosures on material stressed cash flows to/from legal entity banks/asset managers/mutual funds if needed.
- Company-specific narrative on assumptions and metrics used for the adverse liquidity stress scenario for insurers, for example the inability to roll or issue new debt, potential increases in lapse rates, new business sensitivity, mortality experience and policyholder behavior (e.g., surrenders and policy loans).
- Company-specific narrative on the interest rate shock scenario, assumptions around general economic conditions bulleted in 5.2.1 Narrative, and specific metrics for economic variables for each time horizon. The economic variables in the table in 5.2.2 Regulator-Prescribed Assumptions should be fully described in the narrative, to the extent they are use in the company’s internal model.
- Insurers should provide a comprehensive narrative describing their worst-case liquidity stress scenario(s) and the economic environment(s), including assumptions, key metrics and results.
- Written narrative on the insurer’s own individual methodology for determining asset sales under stress.
- Robust disclosures regarding the chief investment officer’s (or equivalent title or designee) assumptions and decisions on expected asset sales, if needed.
- Excluding the “What If” variation, disclosures to identify when affiliated amounts are contributed to assist a legal entity in addressing a liquidity deficiency.
- Disclose when a regulatory prescribed variable is not used for the LST because it is not used in the internal liquidity stress testing process or models.
[End of 2021 Liquidity Stress Testing Framework – to be included as an appendix in the NAIC Financial Analysis Handbook]

**Data Aggregation**

Given the NAIC’s primary focus is on macroprudential impacts of a liquidity stress impacting the life insurance sector, the NAIC will aggregate final expected asset sales data across the insurance groups subject to the liquidity stress test. The aggregation will be done by asset category. The NAIC aims to compare the aggregated results against various benchmarks, potentially including normal and/or stressed trading volumes and asset values for various asset classes, to determine the impact such sales may have on the capital markets in times of stress. Findings from this analysis may also inform expected asset sale assumptions utilized in future runs of the liquidity stress test.

As part of its macroprudential surveillance, the insurance regulators and/or NAIC may reach out to other regulatory agencies to discuss aggregate results that may impact other regulated industries such as banks, securities brokers, and asset managers. Insurance regulators may also coordinate with other agencies to identify appropriate and perhaps coordinated action they may take to prevent or minimize the effect large asset sales may have on the financial markets and overall economy.

**Regulatory Authority**

For the 2020 liquidity stress test, lead state regulators utilized their examination authority to collect the reporting results from insurers and to keep the data confidential. A long-term solution was developed at the Financial Stability (EX) Task Force in coordination with addressing similar issues related to the Group Capital Calculation project, resulting in revisions to Model #440. However, it will take several years for states to adopt these revisions. As a result, regulators will utilize their examination authority for the 2021 LST as well.
Confidentiality

For the 2020 liquidity stress test, lead state regulators utilized their examination authority to collect the reporting results from insurers identified by the scope criteria. Existing protocols for collecting confidential/sensitive data for each state and insurer were utilized. A long-term solution was developed at the Financial Stability (EX) Task Force in coordination with addressing similar issues related to the Group Capital Calculation project, resulting in revisions to Model #440. However, it will take several years for states to adopt these revisions. As a result, regulators will utilize their examination authority for the 2021 LST as well.

Timeline

- January 2022 – Incorporate all appropriate Lead State Guidance into the 2020 LST Framework document as the starting place for the 2021 LST Framework and begin work on changes specific to the 2021 LST.
- Regulators agreed to make no substantive changes for the 2021 LST Framework, including the Scope Criteria. Minor template revisions and clarity improvements to the 2021 LST Framework document need to be finalized early in 2022 to allow insurers adequate time to generate the 2021 LST filings in time for the June 30, 2022, filing deadline; ideally by the end of January 2022.
- Any additional revisions necessary after adoption by the Financial Stability (E) Task Force, such as updates to Annex 2 for 2021 values, will be implemented as Lead State Guidance.
**Annex 1: Original Scope Criteria with Annual Statement References**

The Subgroup proposes to include in the scope of the Liquidity Stress Testing Framework any insurer/group that exceeds the following thresholds for any of the noted activities (or account balance as a proxy for that activity). The thresholds have been established taking into consideration both the account balance of the insurer/group to the total balance for the life insurance sector, as well as the aggregate account balance of insurers/groups within scope to the aggregate account balance for the life insurance sector.

  Page: Notes to Financial Statement Investments Restricted Assets  
  Line: Sum of 05L1C, 05L1D, 05L1E, 05L1F  
  Column: Total (General Account Plus Separate Account) |
In performing the addition of the FHLB funding agreement amount to the GICs amount, NAIC staff discovered that the reporting of FHLB funding agreements is not consistent in Exhibit 7, Deposit-Type Contracts. The source of the FHLB amount is Note 11.B(4)(b):

Line: Funding agreements, current year, amount as of the reporting date, borrowing from FHLB, collateral pledged to FHLB
Column: Funding Agreement Reserves Established

For some insurers, we were able to match amounts from the FHLB funding agreement footnote to the exact same amount in Exhibit 7, either Column 2 (GICs) or Column 6 (Premiums and Other Deposit Funds). For those insurers where the FHLB amount matched Exhibit 7, Column 2, we did not add the FHLB funding agreement amount to the GICs amount, because that would be double-counting the FHLB funding agreements. For other insurers, even though the amounts did not match exactly, we were able to assume the FHLB funding agreements were reported in either Column 2 or Column 6 (e.g., the amount in Exhibit 7, Column 2 was zero or much smaller than the FHLB note, while the Column 6 amount was larger). However, for several insurers, we were not able to make an informed assumption (e.g., both Column 2 and Column 6 amounts were larger than the FHLB funding agreement amount). To be conservative in these instances, we added the FHLB funding agreement amount to the GICs amount. Overall, for the $10 billion threshold, adding FHLB funding agreements to GICs does not result in a different list of insurance groups from the list with GICs of more than $10 billion.

---

1 In performing the addition of the FHLB funding agreement amount to the GICs amount, NAIC staff discovered that the reporting of FHLB funding agreements is not consistent in Exhibit 7, Deposit-Type Contracts. The source of the FHLB amount is Note 11.B(4)(b):

Line: Funding agreements, current year, amount as of the reporting date, borrowing from FHLB, collateral pledged to FHLB
Column: Funding Agreement Reserves Established

For some insurers, we were able to match amounts from the FHLB funding agreement footnote to the exact same amount in Exhibit 7, either Column 2 (GICs) or Column 6 (Premiums and Other Deposit Funds). For those insurers where the FHLB amount matched Exhibit 7, Column 2, we did not add the FHLB funding agreement amount to the GICs amount, because that would be double-counting the FHLB funding agreements. For other insurers, even though the amounts did not match exactly, we were able to assume the FHLB funding agreements were reported in either Column 2 or Column 6 (e.g., the amount in Exhibit 7, Column 2 was zero or much smaller than the FHLB note, while the Column 6 amount was larger). However, for several insurers, we were not able to make an informed assumption (e.g., both Column 2 and Column 6 amounts were larger than the FHLB funding agreement amount). To be conservative in these instances, we added the FHLB funding agreement amount to the GICs amount. Overall, for the $10 billion threshold, adding FHLB funding agreements to GICs does not result in a different list of insurance groups from the list with GICs of more than $10 billion.

Notes: The U.S. economy experiences a moderate recession. Real GDP falls slightly more than 2 percent from the pre-recession peak, while the unemployment rate rises steadily, peaking at about 7% percent in the third quarter of 2019. The U.S. recession is accompanied by an initial fall in inflation through the third quarter of 2017, with the rate of increase in consumer prices then rising steadily and reaching 2 percent by the middle of 2018. Reflecting weak economic conditions, short-term interest rates in the United States fall and remain near zero for the rest of the scenario period. With the increase in term premiums, 5-year Treasury yields gradually rise to a little less than 2% by the second half of 2018. Financial conditions tighten for corporations and households during the recession. Spreads between investment grade corporate bond yields and 10-year Treasury yields widen to about 3% percentage points by the end of 2017, while spreads between mortgage rates and 10-year Treasury yields widen to about 2% percentage points over the same period. Asset prices decline in the adverse scenario accompanied by a rise in equity market volatility. Aggregate house prices and commercial real estate prices experience less sizable but more sustained declines compared to equity prices; house prices fall 12 percent through the first quarter of 2019 and commercial real estate prices fall 15 percent through the fourth quarter of 2018. Following the recession in the United States, output activity picks up slowly at first and then gains momentum, growth is real 2% GDP per annum from an increase of 0 percent at an annual rate in the second quarter of 2018 to an increase of 3 percent at an annual rate by the middle of 2019. The unemployment rate declines modestly.

Annex 2ii. Market Capacity Assumption

Illustrative Example only

Step 1: Estimate Unconstrained Sales Per Day

Insurer A has a $100 billion portfolio of investment-grade corporate bonds, priced at par. Insurer A estimates that it holds approximately 5% of outstanding corporate bonds. In the adverse liquidity stress scenario, Insurer A’s unconstrained liquidity stress testing model assumes that it can sell:

<table>
<thead>
<tr>
<th>Time Horizon</th>
<th>% Able to Be Sold</th>
<th>Sale Price</th>
<th>Total Sale</th>
<th>Sales / Day</th>
</tr>
</thead>
<tbody>
<tr>
<td>First 30 Days</td>
<td>10%</td>
<td>97</td>
<td>$9.7 B</td>
<td>$440 M</td>
</tr>
<tr>
<td>31-90 Days</td>
<td>20%</td>
<td>94</td>
<td>$18.8 B</td>
<td>$430 M</td>
</tr>
<tr>
<td>91-365 Days</td>
<td>50%</td>
<td>90</td>
<td>$45.0 B</td>
<td>$230 M</td>
</tr>
</tbody>
</table>

Step 2: Add Market Capacity Constraint

Assume the average daily trading volume in the secondary market for investment grade corporate bonds has been $13.0 Billion over the past year. Insurer A estimates that trading volumes would decline by 40% in the adverse liquidity stress scenario to $8.0 B per day.

Since Insurer A is 5% of the market, Insurer A can only trade $400 M per day ($8B x 5%) without paying a significant illiquidity premium and impacting the overall market.

Insurer A then repeats this process for every asset class in its investment portfolio.

<table>
<thead>
<tr>
<th>Time Horizon</th>
<th>Unconstrained Sales / Day</th>

<td>$430 M</td>
<td>$400 M</td>
<td>($30 M)</td>
</tr>
<tr>
<td>91-365 Days</td>
<td>$230 M</td>
<td>$400 M</td>
<td>$0</td>
</tr>
</tbody>
</table>
Annex 2iii, A. Structured Spreads over Treasuries

Proposed Structured Credit Spreads

<table>
<thead>
<tr>
<th>Structured Spreads Over U.S. Treasuries</th>
<th>December 31, 2020</th>
</tr>
</thead>
<tbody>
<tr>
<td>Asset Type</td>
<td>Baseline</td>
</tr>
<tr>
<td>Agency MBS</td>
<td>45 bps</td>
</tr>
<tr>
<td>Non-Agency MBS</td>
<td>100 bps</td>
</tr>
<tr>

<td>167 bps</td>
</tr>
<tr>
<td>ABS-Cards</td>
<td>45 bps</td>
</tr>
<tr>
<td>ABS-Auto</td>
<td>16 bps</td>
</tr>
</tbody>
</table>

*Aligned with CCAR 2017 “Adverse Scenario” process (see page 3 and path B of capital credit spreads over time: difference between BBB Corporate yields and 10-Year Treasury yields). ABS-Cards/Auto are spreads to bor/swap for baseline.

Note 1: Non-Agency MBS baseline is based on expert judgment.
Note 2: Stress Scenario is calibrated to the Federal Reserve 2017 CCAR “Adverse Scenario.”
Note 3: Assumes deteriorating financial conditions peaking in 12 month consistent with the path of 2017 CCAR “adverse scenario” and March 2020 spread levels; credit spreads peak at March 2020 levels.

Note 4: Y/NB interbank rates and credit spreads are quarterly averages. All structured spread instructions are point-in-time and end-of-period - i.e., year end, December 31.

Sources: JPMorgan ABS Weekly Spreads Datasheet, Deutsche Bank Securitized Product Market Databank and internal calculations.

Mr. Schrader said that during its Dec. 7, 2021, meeting, the Financial Stability (E) Task Force exposed the list of “Regulatory Considerations Applicable (But Not Exclusive) to Private Equity (PE) Owned Insurers” for a 30-day public comment period, which was subsequently extended to Jan. 18, 2022. He thanked the following groups for their comments: the American Council of Life Insurers (ACLI); the American Investment Council (AIC); the National Alliance of Life Companies (NALC); the National Organization of Life and Health Insurance Guaranty Associations (NOLHGA); and Risk & Regulatory Consulting (RRC). Mr. Schrader reported that the Task Force met Jan. 24 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) and paragraph 4 (internal or administrative matters of the NAIC and any NAIC staff), to discuss the comments received. He added that the finalized edits to the proposed list of PE-related and other regulatory considerations was distributed via email and posted on the Working Group’s web page on Jan. 27.

Mr. Schrader requested that Todd Sells (NAIC) walk through the proposed edits to receive any final comments before considering the list for adoption, which would then be submitted to the Financial Stability (E) Task Force and the Financial Condition (E) Committee for consideration.

Mr. Sells stressed that the Working Group is only finalizing a list of considerations, which has no bearing if any item on the list will be acted upon in the future. Mr. Sells asked the ACLI if adding “Asset management services may need to be distinguished from ownership, when assessing, and considering controls and conflicts” reflected their comments (regulatory consideration #2). David Leiffer (ACLI) said that an asset management agreement would not typically raise issues of control, so he agreed with adding that sentence. Ed Toy (RRC) said that with respect to risks that are part of the Financial Condition Examiners Handbook, a private asset adds to more market volatility, liquidity, and potentially more credit risks due to being potentially opaque, but those assets are not riskier by simply being private (regulatory consideration #10). Mr. Sells indicated those comments will be sent for consideration to staff supporting the Financial Condition Examiners Handbook. Mr. Sells thanked NOLHGA for sending a 2016 report that compared pensions under the Pension Benefit Guaranty Corporation (PBGC) versus state guarantee coverage for those group annuity certificate holders (regulatory consideration #12B). Mr. Sells noted that for regulatory consideration 13, the ACLI asked for more specifics, so the Working Group added “reduce reserves” and “increase investment risk” as examples to the list of regulatory considerations regarding insurers’ use of offshore reinsurers (including captives) and complex affiliated sidecar vehicles. He emphasized that the list of regulatory considerations has no bearing if any item on the list will be acted upon. David Leiffer (ACLI) agreed that those examples were sufficient.
Michael Hachey (UNITE HERE) said that he is a researcher for a labor organization that represents workers in the U.S. and Canada and that supports the work of the Working Group, especially regulatory consideration #12 and #13. He added that for #12, the Working Group should examine U.S. Department of Labor (DOL) protections for pension beneficiaries that have seen their pensions transferred from an insurer to PE. He added that for #13, the Working Group should examine how there is risk transfer from the U.S. to Bermuda through offshore captives, reinsurance, or side car vehicles and work cooperatively with federal agencies to avoid groups operating outside the reach of prudential regulation. Mr. Schrader thanked Mr. Hachey for his comments and said that the Working Group welcomes future comments through the NAIC’s open and transparent process.

Ms. Belfi made a motion, seconded by Mr. Wolf, to adopt the amended “Regulatory Considerations Applicable (But Not Exclusive) to Private Equity (PE) Owned Insurers” (see NAIC Proceedings – Spring 2022, Financial Stability (E) Task Force, Attachment One-A). The motion passed unanimously.

2. Received an Update on the 2021 LST Framework, Including Scope Criteria

Mr. Schrader said that the liquidity stress test (LST) study group, an unofficial NAIC group composed of interested state insurance regulators, lead states, representatives of in scope insurers, and NAIC staff constructed the 2020 LST framework, which included a Sept. 30, 2021, filing deadline because the framework requirements were not finalized until April 2020. He added that LST results need to be provided by June 30 to allow time to review the results and use them in considering any framework and/or scope criteria changes by Dec. 31 of the data year as required once the revisions of the Insurance Holding Company System Regulatory Act (#440) are in force. He concluded that to accomplish the June 30 deadline, LST study group regulators have agreed not to make any substantive changes to the 2021 LST, including the scope criteria. He added that for consistency in the process, the original 22 groups, which is down from 23 due to merger/acquisition activity, are still participating to avoid groups frequently falling in and out of scope. He stressed that new life insurance groups scoped in by their 2020 data are invited to participate this year in the LST study group discussions as well, in anticipation of their filing the 2022 LST. He added that the LST study group intends to finalize the proposed 2021 LST framework document soon, but the lead state adjustments for some market metrics will be finalized for lead state guidance in February or March. Mr. Schrader said that the proposed 2021 LST framework will be considered for adoption possibly jointly by the Working Group and the Financial Stability (E) Task Force, but there will be no exposure period since there are no substantive changes from the 2020 LST framework, which was exposed many times and only the scoped-in life insurance groups are affected.

3. Heard a Macroprudential Risk Assessment

Tim Nauheimer (NAIC) said that NAIC staff and state insurance regulators are designing a process that:

- Allows state insurance regulators to assess risks at an industry-wide level (mainly inward, but may also consider outward).
- Allows industry input to be sought at appropriate junctures.
- Incorporates the branded risk categories albeit tailored to a macro perspective.
- Leverages existing NAIC data and publicly available quantitative and qualitative inputs.
- Allows the risk assessment to culminate in the issuance of a public risk dashboard supported by detailed analysis that may be regulator-only.

Mr. Nauheimer added that an overview of documentation for the risk dashboard will be exposed in February and said he anticipates biweekly Working Group meetings by state insurance regulators to work on the risk dashboard. Mr. Nauheimer said that the risk dashboard currently under development has a goal of publishing a first edition in late 2022, ideally in junction with the Fall Risk Alert.
Mr. Schrader said that state insurance regulators will try to avoid duplicating any information that is already in the Fall Risk Alert and seek industry input. He emphasized that the goal is to provide as much useful regulatory-only information as possible that can be shared with both state and federal regulators.

Having no further business, the Macroprudential (E) Working Group adjourned.
The Macroprudential (E) Working Group of the Financial Stability (E) Task Force met March 2, 2022. The following Working Group members participated: Justin Schrader, Chair (NE); Carrie Mears, Vice Chair (IA); Susan Bernard (CA); Kathy Belfi (CT); Ray Spudeck (FL); Lynn Beckner (MD); Vanessa Sullivan (ME); Steve Mayhew (MI); Fred Andersen (MN); John Rehagen (MO); David Wolf (NJ); Bob Kasinow and Bill Carmello (NY); Kimberly Rankin (PA); Jamie Walker and Mike Boerner (TX); and Stephen Thomas (VA).

1. **Heard Opening Remarks and Updates**

Mr. Schrader said for several years, the NAIC has been supporting state insurance regulators in the development of macroprudential tools. He added that the NAIC started with the Macroprudential Initiative (MPI), which led to the development of the Liquidity Stress Testing Framework (LST Framework) and continues with the introduction of a Macroprudential Risk Assessment process that, although not listed in the MPI, is a logical extension of an activities-based approach to supervision. Mr. Schrader asked Miguel Romero (NAIC) to present on the Macroprudential Risk Assessment process.

2. **Received an Update on the Macroprudential Risk Assessment Process**

Mr. Romero explained that he would spend most of his time on the PowerPoint presentation summarizing what Macroprudential Risk Assessment process could look like (Attachment Two-A), which does not go into enough detail but may generate questions. He added that the details are provided in a Word document (Attachment Two-B), which includes an overview, quantitative review, qualitative review, and overall conclusions of the Macroprudential Risk Assessment process.

Mr. Romero summarized the goals of the Macroprudential Risk Assessment process:

- Process Document: Explains the Macroprudential Risk Assessment process in terms of what goes into it and how it is used.
- Risk Dashboards: Supports the risk and trend assessments contained in the report by providing a mix of data and analysis for state insurance regulators only.
- Risk Report: Documents a summary of state insurance regulators’ views on industry developments by providing information on the activities-based supervisory approach for the public.

Mr. Romero added that the Macroprudential Risk Assessment process is designed to support the activities-based supervisory approach to macroprudential supervision by relying extensively on existing data sources:

- Results of microeconomic surveillance.
- Aggregated industry data.
- Publicly available data, where necessary.

Mr. Romero concluded that the analysis includes both a quantitative and qualitative review, which may be useful for both micro and macroprudential supervision, while trying to avoid duplication. He added that the results of the assessment may lead to requests for further study by the NAIC and policy discussions at the Financial Stability...
(E) Task Force. He noted that the work is structured around risk categories, but it is still under active development. He added that a public report will hopefully be ready later this year.

Lauren Sarper (Prudential) asked if Mr. Romero could share a list of existing resources and documentation publicly. Mr. Romero responded that:

- Qualitative Sources are listed on page 2 of the Macroprudential Risk Assessment process document.
- Quantitative Sources are sector wide data found on the NAIC website, but the analysis may go deeper.

Mr. Schrader said he intends to release the NAIC Macroprudential Risk Assessment process document with an exposure period that allows enough time for the NAIC to incorporate comments before the Working Group meets jointly with the Financial Stability (E) Task Force on April 5 at the Spring National Meeting. After hearing no objection from interested parties or state insurance regulators and support from Mr. Rehagen, Mr. Schrader exposed the NAIC Macroprudential Risk Assessment process for a public comment period ending March 21.

Having no further business, the Macroprudential (E) Working Group adjourned.
Macro Risk Assessment

March 2, 2022

© 2022 National Association of Insurance Commissioners
Macroprudential Risk Assessment - Overview

- Process Document
  - Goal - Explains the Macro Risk Assessment process
    - What goes into it
    - How it’s used
- Risk Dashboards
  - Goal - Support the risk and trend assessments contained in report
    - Provide mix of data and analysis (text)
    - Regulator only
- Risk Report
  - Goal - Demonstrate/document a summary of regulator views on industry developments
    - Important piece of activities based supervisory approach
    - Public document
Macropudential Risk Assessment - Summary

- Key Details of Macropudential Risk Assessment:
  - Designed to support activities based supervisory approach to macropudential supervision
  - Relies extensively on existing data sources
    - Results of microeconomic surveillance
    - Aggregated industry data
    - Publicly available data, where necessary
  - Includes both a Quantitative and Qualitative review
  - Results of the assessment may lead to:
    - Requests for further study and analysis (regulators/NAIC staff)
    - Policy discussions at Financial Stability (E) Task Force
NAIC Macroprudential Risk Assessment

Overview
As a logical extension of the NAIC’s Macroprudential Initiative, the Macroprudential Working Group was charged with developing, implementing, and maintaining a macroprudential risk assessment system. The macroprudential risk assessment is a key component of the NAIC’s overall Macroprudential Supervision that enhances regulators’ ability to monitor industry trends from a macroprudential perspective. This document summarizes the process to conduct the macroprudential risk assessment.

A key objective of the NAIC’s macroprudential risk assessment is to identify and assess industry-wide insurance risks. The proactive identification of risks allows insurance regulators to consider and incorporate, as needed, various macroprudential surveillance measures across the insurance sector. The risk dashboard tools developed in this process may provide valuable insight to insurance regulators, the industry, and the public about activities that may pose systemic risk or threaten U.S. financial stability. The NAIC’s membership on FSOC provides a forum to communicate and monitor such systemic risks or activities.

The NAIC uses the definition of systemic risk used by the International Monetary Fund, Bank for International Settlements and Financial Stability Board for the macroprudential risk assessment process. That definition is “a risk of disruption to financial services that is caused by an impairment of all or parts of the financial system and has the potential to have serious negative consequences for the real economy.”

The NAIC’s macroprudential risk assessment is designed to incorporate both quantitative and qualitative assessment factors to facilitate the identification of key risk exposures. Quantitative factors can be used to track and measure risk exposures by establishing key risk indicators for ongoing monitoring and objective assessment. In addition, qualitative factors may be used to supplement the risk indicators by incorporating information from a broader range of sources into the risk assessment process to identify emerging issues and industry trends for consideration. The risk dashboard primarily considers inward risks but may also consider outward risks. This document describes the steps to review and consider both quantitative and qualitative factors.

Quantitative Review
In conducting a quantitative assessment, NAIC staff and state insurance regulators will identify, aggregate, and track the performance of targeted insurance industry and macroeconomic risk indicators on a biannual basis. Targeted indicators are classified within established risk assessment categories to facilitate both the assessment process and presentation of results. Risk indicators are sourced from aggregated NAIC Annual Statement data as well as public data sources and are reviewed and updated as needed to quantify emerging material risk exposures. Industry exposures and indicators are aggregated across statement types/lines of business as appropriate and compared against historical results and averages for purposes of review and assessment.

Assessment Categories (subject to ongoing review and adjustment):
1. Macroeconomic – This category assesses the potential impact of macroeconomic factors affecting the broader economy, with a focus on those most likely to impact the insurance industry.
2. Interconnectedness – This category assesses the impact of interconnectedness with other financial sectors on the overall financial stability of the insurance industry.
3. Capitalization & Reputation – This category assesses the overall capitalization of the insurance industry, as well as how perceptions of financial strength (including ratings and outlooks) could affect industry performance.
4. Underwriting & Profitability – This category assesses the exposure of the insurance industry to risks associated with insurance underwriting performance, reserve development, and overall profitability.
5. Credit – This category assesses the exposure of the insurance industry to the risk that amounts collected or collectible by insurers are less than those contractually due (i.e., debt securities, reinsurance recoverable, and other counterparties).

6. Market – This category assesses the exposure of the insurance industry to the risk that changes in interest rates and/or prices adversely affect the value of investments and liabilities.

7. Liquidity – This category assesses the exposure of the insurance industry to the risk that insurers are unable to meet financial obligations (i.e., cash demands) as they become due without incurring unacceptable losses.

8. Other – This category assesses the exposure of the insurance industry to other key risks that do not fit into the above categories, which could include operational and strategic risk exposures.

Qualitative Review and Research
In addition to quantitative analysis, the process of macro risk assessment utilizes various qualitative tools and resources to identify emerging risk exposures, market conditions and industry activities that have the potential to impact the macroprudential risk assessment. These tools and resources may include results of company surveillance efforts, industry news, internal/external research, as well as insights from federal and international resources. By conducting ongoing study and research in these areas, topics for consideration in the overall macroeconomic risk assessment may be identified, as well as additional indicators for incorporation into the quantitative assessment. The qualitative assessment and research may also result in the identification of factors that could potentially influence the quantitative assessment of exposures discussed above.

Qualitative Review Sources (subject to ongoing review and adjustment):

   a. Results of Microeconomic Surveillance – Incorporation of findings and takeaways from the NAIC FAWG process, ORSA reviews, input from chief regulators, etc.
   b. Industry News – Ongoing review and tracking of issues identified through a review of news feeds including Rating Agency reports & outlooks, industry periodicals, etc.
   c. Internal/External Research & Studies – Ongoing review and consideration of research performed by the NAIC’s CMB, the NAIC’s CIPR, rating agencies and various external research agencies and sources (i.e., academics, JIR, III), etc.
   d. Federal Resources – Review of information highlighted in FSOC Reports and inquiries, Federal Reserve/FIO/OFR reports, etc.
   e. International Resources – Review of information highlighted in IAIS’s Global Monitoring Exercise reports and other reports (i.e., GIMAR), FSB data and reports, IMF data and reports, etc.

Overall Conclusions and Presentation of Results
Insights from both the quantitative and qualitative reviews are aggregated to reach a baseline assessment of industry exposure to various macroprudential risks. The baseline assessment will then be evaluated, adjusted as needed, and approved by the Macroprudential (E) Working Group. The final assessment will consist of an overall level and trend for each risk category.

Assessment Levels – Assessment levels are documented on a four-tier scale consisting of High, Moderate-High, Moderate-Low or Low. Assessments are based on current and historical risk indicators and expert judgment.

Trend Levels – Trend levels are documented on a five-tier scale to consist of Rapidly Increasing, Increasing, Static, Decreasing or Rapidly Decreasing. Trends are based on the changes in risk indicators and expert judgment.
The macroprudential risk assessment are compiled and presented in a public report describing regulator views on risk exposures (i.e., risk dashboards), ongoing supervisory efforts to address exposures, and additional policy considerations in response to higher risk assessments, if warranted. The public report will also highlight specific quantitative and qualitative elements that support the overall assessments.

**Use in Ongoing Macroprudential and Microprudential Surveillance**

The results of the macroprudential risk assessment process can be used by state insurance regulators for various purposes, including the identification of sector-wide risks and potential systemic risks within the financial system related to insurance sector activities. The risk dashboard may be used to identify interplays between industry-wide risks identified in the dashboard and individual insurer risk analysis.

Insurance regulators may also consider using the risk dashboard in a top-down, risk-focused, supervisory approach. Starting at the top with a sector-wide risk dashboard, insurance regulators may wish to channel their supervisory resources towards identifying individual insurers who contribute to higher assessed sector-wide risks and potential systemic risk or activities. Further analysis may warrant additional supervision and oversight of select insurers. When monitoring an individual insurer, the insurance regulator should be aware of the broader market in which the insurer operates to be able to better understand the context of certain risk factors. To assist state insurance regulators in this regard, the results may be used to complement the NAIC’s Solvency Monitoring Risk Alert and act as a regulator-only supplement to NAIC Handbooks for use in addressing risk exposures and industry trends in conducting financial analysis and examinations.

Macroprudential risks can also be presented to the Financial Stability (E) Task Force for general policy consideration, which could include the development of additional tasks, policies, practices, or disclosures to address sector-wide risk exposures. In addition, assessments could be shared with federal and international regulators for broader financial sector and macroprudential surveillance purposes.
NAIC Macroprudential Risk Assessment

Overview
The Macroprudential Working Group was charged with development, implementation, and maintenance of a macroprudential risk assessment system. This project is a logical extension of the NAIC’s Macroprudential Initiative. The macroprudential risk assessment is also a key component of the NAIC’s overall Macroprudential Supervision that enhances regulators’ ability to monitor industry trends from a macroprudential perspective. This document summarizes the process to conduct the macroprudential risk assessment.

A key objective of the NAIC’s macroprudential risk assessment is to identify and assess industry-wide insurance risks. The proactive identification of risks allows insurance regulators to consider and incorporate, as needed, various macroprudential surveillance measures across the insurance sector. The risk dashboard tools developed in this process may provide valuable insight to insurance regulators, the industry, and the public about activities that may pose systemic risk or threaten U.S. financial stability. The NAIC’s membership on FSOC provides a forum to communicate and monitor such systemic risks or activities.

The NAIC uses the definition of systemic risk used by the International Monetary Fund, Bank for International Settlements and Financial Stability Board for the macroprudential risk assessment process. That definition is “a risk of disruption to financial services that is caused by an impairment of all or parts of the financial system and has the potential to have serious negative consequences for the real economy.”

The NAIC’s macroprudential risk assessment is designed to incorporate both quantitative and qualitative assessment factors to facilitate the identification of key risk exposures. Quantitative factors can be used to track and measure risk exposures by establishing key risk indicators for ongoing monitoring and objective assessment. In addition, qualitative factors may be used to supplement the risk indicators by incorporating information from a broader range of sources into the risk assessment process to identify emerging issues and industry trends for consideration. The risk dashboard primarily considers inward risks but may also consider outward risks. This document describes the steps to review and consider both quantitative and qualitative factors.

Quantitative Review
In conducting a quantitative assessment, NAIC staff and state insurance regulators will identify, aggregate, and track the performance of targeted insurance industry and macroeconomic risk indicators on a biannual basis. Targeted indicators are classified within established risk assessment categories to facilitate both the assessment process and presentation of results. Risk indicators are sourced from aggregated NAIC Annual Statement data as well as public data sources and are reviewed and updated as needed to quantify emerging material risk exposures. Industry exposures and indicators are aggregated/presented in a manner that logically fits the measured risk exposure under evaluation (i.e., by line of business, product type, legal structure, etc.). Careful consideration will also be given to the historical data that best provides context necessary to evaluate the exposure.

Assessment Categories (subject to ongoing review and adjustment):
1. **Macroeconomic** – This category assesses the potential impact of macroeconomic factors affecting the broader economy, with a focus on those most likely to impact the insurance industry.
2. **Interconnectedness** – This category assesses the impact of interconnectedness with other financial sectors on the overall financial stability of the insurance industry.
3. **Capitalization & Reputation** – This category assesses the overall capitalization of the insurance industry, as well as how perceptions of financial strength (including ratings and outlooks) could affect industry performance.
4. **Underwriting & Profitability** – This category assesses the exposure of the insurance industry to risks associated with insurance underwriting performance, reserve development, and overall profitability.

5. **Credit** – This category assesses the exposure of the insurance industry to the risk that amounts collected or collectible by insurers are less than those contractually due (i.e., debt securities, reinsurance recoverable, and other counterparties).

6. **Market** – This category assesses the exposure of the insurance industry to the risk that changes in interest rates and/or prices adversely affect the value of investments and liabilities.

7. **Liquidity** – This category assesses the exposure of the insurance industry to the risk that insurers are unable to meet financial obligations (i.e., cash demands) as they become due without incurring unacceptable losses.

8. **Other** – This category assesses the exposure of the insurance industry to other key risks that do not fit into the above categories, which could include operational and strategic risk exposures.

**Qualitative Review and Research**

In addition to quantitative analysis, the process of macroprudential risk assessment utilizes various qualitative tools and resources to identify emerging risk exposures, market conditions and industry activities that have the potential to impact the macroprudential risk assessment. These tools and resources may include results of company surveillance efforts, industry news, internal/external research, as well as insights from federal and international resources. By conducting ongoing study and research in these areas, topics for consideration in the overall macroeconomic risk assessment may be identified, as well as additional indicators for incorporation into the quantitative assessment. The qualitative assessment and research may also result in the identification of factors that could potentially influence the quantitative assessment of exposures discussed above.

**Qualitative Review Sources** (subject to ongoing review and adjustment):

a. **Results of Microeconomic Surveillance** – Incorporation of findings and takeaways from the NAIC FAWG process, ORSA reviews, input from chief regulators, etc.

b. **Industry News** – Ongoing review and tracking of issues identified through a review of news feeds including Rating Agency reports & outlooks, industry periodicals, etc.

c. **Internal/External Research & Studies** – Ongoing review and consideration of research performed by the NAIC’s CMB, the NAIC’s CIPR, rating agencies and various external research agencies and sources (i.e., academics, JIR, III), etc.

d. **Federal Resources** – Review of information highlighted in FSOC Reports and inquiries, Federal Reserve/FIO/OFR reports, etc.

e. **International Resources** – Review of information highlighted in IAIS’s Global Monitoring Exercise reports and other reports (i.e., GIMAR), FSB data and reports, IMF data and reports, etc.

**Overall Conclusions and Presentation of Results**

Insights from both the quantitative and qualitative reviews are aggregated to reach a baseline assessment of industry exposure to various macroprudential risks. The baseline assessment will then be evaluated, adjusted as needed, and approved by the Macroprudential (E) Working Group. The assessment considers how each risk aligns with the three transmission channels, identified by FSOC as most likely to facilitate the transmission of risk across firms or markets. Those transmission channels are interconnectedness, asset liquidation, and critical function. The final assessment will consist of an overall level and trend for each risk category.

**Assessment Levels** – Assessment levels are documented on a four-tier scale consisting of High, Moderate-High, Moderate-Low or Low. Assessments are based on current and historical risk indicators and expert judgment.
Trend Levels – Trend levels are documented on a five-tier scale to consist of Rapidly Increasing, Increasing, Static, Decreasing or Rapidly Decreasing. Trends are based on the changes in risk indicators and expert judgment.

The macroprudential risk assessment are compiled and presented in a public report describing regulator views on risk exposures (i.e., risk dashboards), ongoing supervisory efforts to address exposures, and additional policy considerations in response to higher risk assessments, if warranted. The public report will also highlight specific quantitative and qualitative elements that support the overall assessments.

Use in Ongoing Macroprudential and Microprudential Surveillance
The results of the macroprudential risk assessment process can be used by state insurance regulators for various purposes, including the identification of sector-wide risks and potential systemic risks within the financial system related to insurance sector activities. The risk dashboard may be used to identify interplays between industry-wide risks identified in the dashboard and individual insurer risk analysis.

Insurance regulators may also consider using the risk dashboard in a top-down, risk-focused, supervisory approach. Starting at the top with a sector-wide risk dashboard, insurance regulators may wish to channel their supervisory resources towards identifying individual insurers who contribute to higher assessed sector-wide risks and potential systemic risk or activities. Further analysis may warrant additional supervision and oversight of select insurers. When monitoring an individual insurer, the insurance regulator should be aware of the broader market in which the insurer operates to be able to better understand the context of certain risk factors. To assist state insurance regulators in this regard, the results may be used to complement the NAIC’s Solvency Monitoring Risk Alert and act as a regulator-only supplement to NAIC Handbooks for use in addressing risk exposures and industry trends in conducting financial analysis and examinations.

Macroprudential risks can also be presented to the Financial Stability (E) Task Force for general policy consideration, which could include the development of additional tasks, policies, practices, or disclosures to address sector-wide risk exposures. In addition, assessments could be shared with federal and international regulators for broader financial sector and macroprudential surveillance purposes.
**Summary of Industry Input**

In general, industry appears supportive of the NAIC’s efforts on macroprudential risk assessment.

NAIC staff believes the majority of industry’s input can be addressed as our process is executed without a need to change the process document.

The following tables are NAIC’s attempt to summarize industry’s input with responses by NAIC staff for regulators and industry to consider.

<table>
<thead>
<tr>

<td>1</td>
<td>Industry suggests that we focus the assessment to outward risks and that we align the assessment with the three, distinct “transmission channels” of interconnectedness, asset liquidation, and critical function.</td>
<td>ACLI, APCIA, NA CRO Council</td>
</tr>
</tbody>
</table>

NAIC staff appreciates industry’s input and agrees that it is helpful to align our process with the concept of FSOC’s transmission channels. Although our current process does not separately categorize the three transmission channels it does incorporate the underlying concepts within the eight categories we have identified. Therefore, NAIC staff have proposed a change to the “Overall Conclusions and Presentation of Results” section of the process memo to more clearly express the inclusion of the concepts as a part of the risk assessment process.

However, the change does not alter the focus of the risk assessment process to preserve the regulator freedom to freely identify risks both inward and outward. While FSOC’s role is generally macroprudential in nature, state regulators have both a macroprudential and microprudential perspective and, therefore, this tool is designed to be useful towards both lenses of regulator discussions.

<td>Industry suggests that we “Avoid building overly complicated risk dashboards comprised of disparate metrics- and instead focus on prioritizing a manageable set of the indicators that are most relevant to assessing vulnerabilities.”</td>
<td>NA CRO Council</td>
</tr>
</tbody>
</table>

NAIC staff’s early experience in constructing the macroprudential risk assessment process aligns with industry’s input. While our discussions on specific risks often start with several data points, many of our discussions have resulted in a final analysis that is simpler and therefore easier to discuss.

However, given that no two risks are the same, NAIC staff suggests we avoid any prescriptions on number of the number of metrics per risk as each risk may require differing levels of information.

NAIC staff also believes that industry’s input can be applied without needing a change to the process document.

--- | --- | ---
3 | Industry suggests that we “Identify and contextualize metrics that will underly each assessment category.” | NA CRO Council

NAIC staff’s early experience in constructing the macroprudential risk assessment process aligns with industry’s input. Our discussions and the data/metrics we present on each risk allow for context as industry suggests. Context can be quantitative or qualitative with NAIC staff working to make sure all relevant context is available for any risk under discussion.

However, given that no two risks are the same, NAIC staff suggests we avoid any prescriptions on the exact information that is required to be presented per risk as each risk may require differing levels of information.

NAIC staff have suggested a change to the “Quantitative Review” section to attempt to address this feedback.

4 | Industry suggests that we “Avoid unnecessary duplication for supervisors and the industry.” | ACLI
AFCIA
NA CRO Council

Industry’s input is consistent with regulator input provided in other settings and therefore NAIC staff have been mindful to not create a process that is burdensome to anyone involved.

The intent is that this process be run twice a year, based on data that is available. In other words, where data is unavailable, that will likely mean the risks for which that data is relevant, may not be re-assessed until the annual analysis. Moreover, each risk will be presented at the level which makes the most sense for the risk (generally by line of business).

As with any new process, flexibility is key. Therefore, while the intention is to perform the risk assessment semi-annually, that is a design choice that can be revisited as experience dictates.

NAIC staff also believes that industry’s input can be applied without needing a change to the process document.

<td>Industry suggests that we “include an assessment on risk management.”</td>
<td>NA CRO Council</td>
</tr>
</tbody>
</table>

In past settings, other industry groups and regulators have expressed concern with such a practice. Therefore, the process was designed to allow regulators to consider such insights in so far as industry wide observations can be drawn (see Qualitative Review Sources) without needing to make public assessments of industry wide risk management practices. Moreover, NAIC staff believe that it would be difficult to meaningful describe industry wide risk management practices at the level at which the report is anticipated to be written.

NAIC staff also believes that industry’s input can be applied (in a limited capacity) without needing a change to the process document.
Industry suggests that we “provide further insight on how the Assessment is envisioned to fit into the existing regulatory risk and solvency reporting scheme.”

The section of the process document entitled “Use in Ongoing Macroprudential and Microprudential Surveillance” attempts to provide this insight. In short, the new macroprudential risk assessment process is intended to be a complimentary tool to the suite of existing microprudential surveillance tools, policies, and procedures.

To the extent further insights are needed, it’s likely that meetings at the Working Group level would be a better venue for the requested information to be provided.

Industry suggests no edits are necessary to the process document to reflect industry comments

We have in fact separated property, life and health data for certain risk categories where it makes sense and is feasible to do so. For example, the dashboard for underwriting risk, is separated by industry sector.

The change made related to feedback item # 2, discussed above, was also made with the intent of addressing this piece of feedback.

Miguel Romero, Financial Regulatory Services Manager  
MARomero@naic.org

Re: NAIC Macroprudential (E) Working Group exposure of the Macroprudential Risk Assessment Tool

Dear Mr. Romero:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit comments in response to the NAIC Macroprudential (E) Working Groups exposure of its Macroprudential Risk Assessment Tool (“risk assessment tool”). At a high level, we are supportive of the NAIC’s development of the macroprudential risk assessment tool as part of the Macroprudential Initiative and agree that, if designed appropriately, could provide valuable insight to regulators, the industry, and the public. To that end, we would like to offer the following feedback to help improve its design and achieve the tool’s intended goals.

General

We believe the risk dashboard, while being mindful of inward risks, should primarily be directed to surveillance for outward risks to the financial system (i.e., an activities based approach) as state regulators have access to other tools that are better positioned to help them determine if an individual insurer warrants additional monitoring (e.g., LST).

We believe NAIC should develop guiding principles for how it will use existing data and assess each risk category and seek stakeholder collaboration as it builds out and evolves these assessments overtime.

Further, we recommend that the NAIC conduct the monitoring process and dashboard update on an annual basis rather than biannual. Most of the key information used for the exercise is only updated once a year (annual statements, blue book, LST, GCC, ORSA, etc.). Biannual may require additional data that is not available in quarterly filings and we want to avoid unnecessary and burdensome data calls since this exercise is supposed to be leveraging existing data sources.
We also agree with the NAIC relying on the established definition of systemic risk used by various international organizations.

Quantitative Review

We agree with the 8 risk assessment categories, and note that they are broadly aligned with those identified in the EIOPA risk dashboard that was included in the IAIS Application Paper on Macroprudential Supervision published last year. However, it is hard to comment on the categories without additional information or something tangible to review. We understand there needs to be a balance between regulator discretion and prescriptive metrics when assessing risk. The process needs to be data informed, but not data driven. We believe NAIC should develop guiding principles for how it will use existing data and assess each risk category and seek stakeholder collaboration as it builds out and evolves these assessments overtime.

Additionally, the risk categories should be mapped back to the transmission channels identified by the FSOC 2019 guidance and IAIS’s holistic framework. As noted above, we are concerned that these assessment categories are primarily focused on inward risks and could limit or downplay valuable insight about activities that may pose systemic risk or threaten US financial stability. We request the NAIC provide more detail on the metrics/risk indicators for each category, including how they will map to existing data collections and provide ample time for industry comments to ensure the metrics are appropriate for the dashboard’s stated use.

It would also be helpful to understand how the working group envisions the macroprudential risk assessment tool will influence existing risk assessment and mitigation work at the Macroprudential Working Group and more broadly the NAIC (i.e., RBC, actuarial modeling, accounting, etc.).

Qualitative Review and Research

We agree that a qualitative component of the tool is an important complement to the quantitative component, particularly to the extent that the qualitative tool may be more responsive to emerging risks.

Overall Conclusions and Presentation of Results

We agree on the use of assessment levels and trend levels in the presentation of results.

Thank you in advance for the consideration of our comments. ACLI and its members look forward to continuing our work with you on the important matter of improving macroprudential surveillance tools.

Sincerely,

Gabrielle Griffith

Justin Schrader, Chair
Macroprudential (E) Working Group
National Association of Insurance Commissioners

Re: Proposed Macroprudential Risk Assessment

Dear Chairman Schrader:

The American Property Casualty Insurance Association (APCIA) welcomes the opportunity to comment on the NAIC Macroprudential (E) Working Group’s proposed Macroprudential Risk Assessment. APCIA is the primary national trade association for home, auto, and business insurers. APCIA promotes and protects the viability of private competition for the benefit of consumers and insurers, with a legacy dating back 150 years. APCIA members represent all sizes, structures, and regions—protecting families, communities, and businesses in the U.S. and across the globe.

The NAIC, through the collective participation of state regulators, has made significant progress in developing an effective framework for monitoring and addressing insurers’ risks, and the development of a macroprudential risk assessment to monitor systemic vulnerabilities is a natural complement to that framework. The proposed assessment is essential to support the priorities laid out in the December 2019 interpretative guidance from the Financial Stability Oversight Council (FSOC) regarding nonbank financial company designations, which utilizes an activities-based approach (ABA) for identifying and addressing potential risks to financial stability. Consistent with the FSOC’s interpretative guidance, the NAIC is appropriately developing an ABA that is designed to address the risk profile of the insurance sector.

In general, APCIA believes the proposed Macroprudential Risk Assessment sets forth a reasonable process for monitoring industry-wide risk within an activities-based approach for monitoring systemic risk.

As this process moves forward, we believe the proposed assessment should identify and focus on metrics that are relevant with and responsive to the risks associated with an ABA, including a focus on the Interconnectedness, Asset Liquidation, and Critical Function transmission channels. Further, the focus of the assessment should be on potential financial vulnerabilities that can occur on a macroprudential level from these transmission mechanisms over identified time periods rather than assessment of a particular insurer’s overall risk profile. As an example, if a transmission occurs over the course of a year or longer, the potential impact would be very different from that if the transmission occurs within one week. For this reason, we would also caution against aggregating life and property & casualty insurer data together, as the transmission time horizons are very different for these two business models, even though both types of insurance are collectively part of the insurance sector.
In addition, it is critical that any conclusions about macroprudential risks be drawn within the context of the broader economy. Exposures that may seem large within the insurance industry may be significantly smaller when compared with other financial service providers. If the Macroprudential Risk Assessment too narrowly focuses on the collective risk exposures of insurers, without considering the broader economy, this could result in supervisory measures that are not cost-beneficial and that do not focus, as intended, on true sector-wide or systemic risks. Likewise, we agree the Macroprudential Risk Assessment should leverage federal and international resources, such as broad macro-level and cross-sectoral data, because this will ensure the assessment properly looks at the impact of risks on insurers in the context of the broader economy.

Furthermore, we agree with the proposal’s approach to identifying, collecting, and aggregating data, including data collected from U.S.-based insurers through the Individual Insurer Monitoring data collection exercise conducted by the Bank of International Settlements, because the Macroprudential Risk Assessment should not require any additional reporting from or analysis of individual insurers. As discussed above, we would also caution against aggregating life and property & casualty insurer data together. Similarly, individual company data should remain confidential and aggregated reporting should be done separately for the life and property & casualty segments of the insurance sector.

Thank you for considering the points addressed in this letter, and please do not hesitate to contact us if you have any questions.

Sincerely,

Justin Schrader
Chair, Macroprudential (E) Working Group
National Association of Insurance Commissioners

Re: CRO Council Feedback on NAIC Macroprudential Risk Assessment

Dear Justin,

The North American CRO Council (CRO Council) is a professional association of Chief Risk Officers (CROs) of leading insurers based in the United States, Bermuda, and Canada. Member CROs currently represent 35 of the largest Life and Property and Casualty insurers in North America. The CRO Council seeks to develop and promote leading practices in risk management throughout the insurance industry and provide thought leadership and direction on the advancement of sensible risk-based assessments.

General Comments

The CRO Council supports the initiative to collect quantitative and qualitative information that informs the identification of risk exposures, emerging issues, and industry trends that may warrant further oversight and/or consideration by state regulators. The NAIC, through the state regulators, has made demonstrable progress in developing a credible and effective construct for monitoring and addressing risks – including potential systemic vulnerabilities. Such a construct is essential to supporting the priorities laid out in the Financial Stability Oversight Council’s (FSOC) December 2019 interpretative guidance regarding nonbank financial company designations, which implements an activities-based approach (ABA) for identifying and addressing potential risks to financial stability. Consistent with the FSOC’s guidance, the NAIC, through the state regulators, are appropriately assuming primary responsibility for crafting and implementing an ABA that is tailored to the risk profile of the insurance sector.

Our mandate as CROs very much aligns with those of our supervisors in seeking to protect policyholders and promote financial stability. In this spirit, we are pleased to offer the following feedback on the NAIC’s proposal.

Thematic Feedback

• **Anchor the Assessment – and the specific metrics chosen to help implement it – with the three distinct “transmission channels” for how risks might propagate across the financial system.**

While the assessment categories the NAIC has identified are pertinent to the assessment of insurance-related risk factors, they appear to be overly inward-focused. We believe that the Assessment – while being mindful of inward risks – should primarily be directed to surveillance for outward risks to the financial system. To this end, we believe that the assessment should filter and focus on metrics that align with, and are directly instrumental to, implementation of an ABA including focus on the Interconnectedness, Asset Liquidation, and Critical Function transmission channels. Further, the focus of the assessment should be on potential macroprudential vulnerabilities resulting from these transmission mechanisms rather than assessment of a particular insurer’s overall risk profile.
Avoid building overly complicated risk dashboards comprised of disparate metrics - and instead focus on prioritizing a manageable set of the indicators that are most relevant to assessing vulnerabilities. As CROs, one of our primary responsibilities is to discern “signal” from “noise” among the plethora of financial indicators at our disposal. Making risk-informed decisions depends on identifying – and then contextualizing – a tractable subset within a vast array of metrics. Given the macroprudential nature of the NAIC’s initiative, we encourage careful selection of distinct metrics that address potential drivers of risk – including emerging risks and potential systemic vulnerabilities – such as those that address leverage, liquidity, and risk concentrations. An overly broad dashboard of indicators could introduce potential statistical error (e.g., multicollinearity problems) as well as cognitive biases and limitations. With respect to drawing conclusions from the assessment, greater insight on how the information will be compiled/aggregated across the various indicators/metrics will inform the lens through which the results should be interpreted – especially when housed next to data points that may be based on different approaches (e.g., assumptions, models, etc.) or where results will only be applicable for a subset of the industry.

Identify and contextualize metrics that will underly each assessment category relative to the NAIC’s objectives, historical trends, and broader market developments. It would be helpful to get a better sense of the specific metrics the NAIC’s will monitor for each respective category, the intended rationale, and the mode of analysis. Context is critical. For example, credit spreads are potentially useful indicators. However, as a measure of fundamental credit risk (e.g., CDS-implied default probabilities), spreads are prone to volatility and “false positives” in which the implied default likelihood of individual obligors is vastly overstated. Moreover, for insurers that apply disciplined asset and liability management (ALM), an increase in spreads during an illiquidity-related stress period might create opportunities to reinvest at higher yields, which ultimately creates more income to defease policyholder liabilities. A period of sustained low spreads, on the other hand, might create complacency or a generalized underpricing of risk and, in this scenario, could be a better leading indicator of stress than elevated spreads. This nuance underscores that regulators should avoid a hardwired, data-mining reliance on risk dashboards and automatic triggers for action and instead consider the broader situational context surrounding a given metric. More broadly, it is critical that any conclusions about macroprudential risks be drawn within the context of the broader economy. Insufficient consideration of the broader economy when assessing metrics could result in supervisory measures that are not cost-beneficial and that do not focus, as intended, on true sector-wide or systemic risks.

Avoid unnecessary duplication for supervisors and the industry. We appreciate and support the NAIC stating it will rely extensively on existing data sources and encourage it to fit its data gathering and assessment into the existing regulatory risk assessment and solvency reporting scheme (e.g., Liquidity Stress Testing, RBC, Form F, the Group Capital Calculation, ORSA, etc.). Additionally, we note that any new data gathering and/or assessment should be given appropriate confidentiality protections. Further, it would be helpful to understand whether the NAIC intends to conduct the same assessment on a semi-annual basis as the varying scope of information insurers file on an annual versus quarterly basis is likely to necessitate different content for a year-end versus mid-year assessment. It would also be helpful to understand if the NAIC intends to present results in aggregate for the industry or separate by line of business,
life versus P&C, mutual versus stock companies, etc.

- **Engage in ongoing and iterative dialogue with stakeholders.** We recognize the important role regulatory practices can play in promoting sound behavior across the industry and would welcome the opportunity to assist the NAIC with the development of the risk assessment tool, the review and interpretation of the biannual results, and efforts to identify and understand emerging risks.

**Structural Feedback**

As noted above, the nuances of the assessment criteria – including how they are interpreted – will be critically important to making the assessment beneficial to state regulators. To this end, the CRO Council recommends the NAIC consider incorporating the following structural elements into the assessment:

1. Use the prevailing “transmission channel” framework to enable a stronger linkage of each assessment category/criteria to a specific macroprudential concern. Numerous regulator and industry groups, both within and outside the US, have coalesced on a “transmission channel” approach to the assessment of macroprudential risk and how such risk could potentially impact financial stability. As noted above, the three transmission channels previously identified are: Interconnectedness, Asset Liquidation, and Critical Function. Regulators should map the existing “Assessment Categories” to a transmission channel to ensure the ultimate assessment criteria metrics align with the pathway for macroprudential risk transmission. The table below reflects a potential mapping of the existing assessment categories to the transmission channels.

<table>
<thead>
<tr>
<th>Transmission channel</th>
<th>Existing assessment categories</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interconnectedness</td>
<td>2. Interconnectedness</td>
</tr>
<tr>
<td></td>
<td>3. Capitalization and reputation</td>
</tr>
<tr>
<td></td>
<td>5. Credit</td>
</tr>
<tr>
<td></td>
<td>6. Market (non-derivative)</td>
</tr>
<tr>
<td>Asset liquidation</td>
<td>6. Market (derivative)</td>
</tr>
<tr>
<td></td>
<td>7. Liquidity</td>
</tr>
<tr>
<td>Critical function</td>
<td>4. Underwriting and profitability</td>
</tr>
<tr>
<td>Other</td>
<td>1. Macroeconomic</td>
</tr>
<tr>
<td></td>
<td>8. Other</td>
</tr>
</tbody>
</table>

2. Identify explicit elements of the financial sector that may be influenced by industry contributions to the transmission channels. The Council recommends further identifying the areas of the financial sector that may be affected by the insurance industry through the identified transmission channels. We think this will be necessary to establish thresholds outlined in the “Assessment Levels” that align with a macroprudential risk.

3. Include an assessment on risk management. The proposed Assessment focuses almost solely on risk exposure. We suggest also expressly incorporating an assessment of industry risk management as managed risks are not likely to turn into significant vulnerabilities or transmission of systemic risk.

4. Provide further insight on how the Assessment is envisioned to fit into the existing regulatory
risk and solvency reporting scheme. For example, it would be helpful to have a deeper understanding of what new information the NAIC expects the Assessment to deliver relative to the existing financial solvency regulatory tools. Further, it also would be helpful to obtain additional information regarding how state regulators may be expected to incorporate information from the Assessment into their supervision of insurers.

In Closing

The nuances of the Assessment will be critically important to success of the tool. The Council would welcome the opportunity to further engage with the NAIC on this project, both as development of the assessment framework progresses and post implementation to help ensure it evolves as may be necessary over time.

Sincerely,

Geoffrey Craddock
Chair of the North American CRO Council
NAIC Macroprudential Risk Assessment

Overview

As a logical extension of the NAIC’s Macroprudential Initiative, the Macroprudential Working Group was charged with developing, implementing, and maintaining a macroprudential risk assessment system. The macroprudential risk assessment is a key component of the NAIC’s overall Macroprudential Supervision that enhances regulators’ ability to monitor industry trends from a macroprudential perspective. This document summarizes the process to conduct the macroprudential risk assessment.

A key objective of the NAIC’s macroprudential risk assessment is to identify and assess industry-wide insurance risks. The proactive identification of risks allows insurance regulators to consider and incorporate, as needed, various macroprudential surveillance measures across the insurance sector. The risk dashboard tools developed in this process may provide valuable insight to insurance regulators, the industry, and the public about activities that may pose systemic risk or threaten U.S. financial stability. The NAIC’s membership on FSOC provides a forum to communicate and monitor such systemic risks or activities.

The NAIC uses the definition of systemic risk used by the International Monetary Fund, Bank for International Settlements and Financial Stability Board for the macroprudential risk assessment process. That definition is “a risk of disruption to financial services that is caused by an impairment of all or parts of the financial system and has the potential to have serious negative consequences for the real economy.”

The NAIC’s macroprudential risk assessment is designed to incorporate both quantitative and qualitative assessment factors to facilitate the identification of key risk exposures. Quantitative factors can be used to track and measure risk exposures by establishing key risk indicators for ongoing monitoring and objective assessment. In addition, qualitative factors may be used to supplement the risk indicators by incorporating information from a broader range of sources into the risk assessment process to identify emerging issues and industry trends for consideration. The risk dashboard primarily considers inward risks but may also consider outward risks. This document describes the steps to review and consider both quantitative and qualitative factors.
Quantitative Review

In conducting a quantitative assessment, NAIC staff and state insurance regulators will identify, aggregate, and track the performance of targeted insurance industry and macroeconomic risk indicators on a biannual basis. Targeted indicators are classified within established risk assessment categories to facilitate both the assessment process and presentation of results. Risk indicators are sourced from aggregated NAIC Annual Statement data as well as public data sources and are reviewed and updated as needed to quantify emerging material risk exposures. Industry exposures and indicators are aggregated across statement types/lines of business as appropriate and compared against historical results and averages for purposes of review and assessment.

Assessment Categories (subject to ongoing review and adjustment):

1. Macroeconomic  This category assesses the potential impact of macroeconomic factors affecting the broader economy, with a focus on those most likely to impact the insurance industry.

2. Interconnectedness  This category assesses the impact of interconnectedness with other financial sectors on the overall financial stability of the insurance industry.

3. Capitalization & Reputation  This category assesses the overall capitalization of the insurance industry, as well as how perceptions of financial strength (including ratings and outlooks) could affect industry performance.

4. Underwriting & Profitability  This category assesses the exposure of the insurance industry to risks associated with insurance underwriting performance, reserve development, and overall profitability.

5. Credit  This category assesses the exposure of the insurance industry to the risk that amounts collected or collectible by insurers are less than those contractually due (i.e., debt securities, reinsurance recoverable, and other counterparties).

6. Market  This category assesses the exposure of the insurance industry to the risk that changes in interest rates and/or prices adversely affect the value of investments and liabilities.

7. Liquidity  This category assesses the exposure of the insurance industry to the risk that insurers are unable to meet financial obligations (i.e., cash demands) as they become due without incurring unacceptable losses.

8. Other  This category assesses the exposure of the insurance industry to other key risks that do not fit into the above categories, which could include operational and strategic risk exposures.
Qualitative Review and Research

In addition to quantitative analysis, the process of macro risk assessment utilizes various qualitative tools and resources to identify emerging risk exposures, market conditions and industry activities that have the potential to impact the macroprudential risk assessment. These tools and resources may include results of company surveillance efforts, industry news, internal/external research, as well as insights from federal and international resources. By conducting ongoing study and research in these areas, topics for consideration in the overall macroeconomic risk assessment may be identified, as well as additional indicators for incorporation into the quantitative assessment. The qualitative assessment and research may also result in the identification of factors that could potentially influence the quantitative assessment of exposures discussed above.

Qualitative Review Sources (subject to ongoing review and adjustment):

a. Results of Microeconomic Surveillance – Incorporation of findings and takeaways from the NAIC FAWG process, ORSA reviews, input from chief regulators, etc.

b. Industry News – Ongoing review and tracking of issues identified through a review of news feeds including Rating Agency reports & outlooks, industry periodicals, etc.

c. Internal/External Research & Studies – Ongoing review and consideration of research performed by the NAIC’s CMB, the NAIC’s CIPR, rating agencies and various external research agencies and sources (i.e., academics, JIR, III), etc.

d. Federal Resources – Review of information highlighted in FSOC Reports and inquiries, Federal Reserve/FIO/OFR reports, etc.

e. International Resources – Review of information highlighted in IAIS’s Global Monitoring Exercise reports and other reports (i.e., GIMAR), FSB data and reports, IMF data and reports, etc.

Overall Conclusions and Presentation of Results

Insights from both the quantitative and qualitative reviews are aggregated to reach a baseline assessment of industry exposure to various macroprudential risks. The baseline assessment will then be evaluated, adjusted as needed, and approved by the Macroprudential (E) Working Group. The final assessment will consist of an overall level and trend for each risk category.

1. Assessment Levels – Assessment levels are documented on a four-tier scale consisting of High, Moderate-High, Moderate-Low or Low. Assessments are based on current and historical risk indicators and expert judgment.

2. Trend Levels – Trend levels are documented on a five-tier scale to consist of Rapidly Increasing, Increasing, Static, Decreasing or Rapidly Decreasing. Trends are based on the changes in risk indicators and expert judgment.
The macroprudential risk assessment are compiled and presented in a public report describing regulator views on risk exposures (i.e., risk dashboards), ongoing supervisory efforts to address exposures, and additional policy considerations in response to higher risk assessments, if warranted. The public report will also highlight specific quantitative and qualitative elements that support the overall assessments.

**Use in Ongoing Macroprudential and Microprudential Surveillance**

The results of the macroprudential risk assessment process can be used by state insurance regulators for various purposes, including the identification of sector-wide risks and potential systemic risks within the financial system related to insurance sector activities. The risk dashboard may be used to identify interplays between industry-wide risks identified in the dashboard and individual insurer risk analysis.

Insurance regulators may also consider using the risk dashboard in a top-down, risk-focused, supervisory approach. Starting at the top with a sector-wide risk dashboard, insurance regulators may wish to channel their supervisory resources towards identifying individual insurers who contribute to higher assessed sector-wide risks and potential systemic risk or activities. Further analysis may warrant additional supervision and oversight of select insurers. When monitoring an individual insurer, the insurance regulator should be aware of the broader market in which the insurer operates to be able to better understand the context of certain risk factors. To assist state insurance regulators in this regard, the results may be used to complement the NAIC’s Solvency Monitoring Risk Alert and act as a regulator-only supplement to NAIC Handbooks for use in addressing risk exposures and industry trends in conducting financial analysis and examinations.

Macroprudential risks can also be presented to the Financial Stability (E) Task Force for general policy consideration, which could include the development of additional tasks, policies, practices, or disclosures to address sector-wide risk exposures. In addition, assessments could be shared with federal and international regulators for broader financial sector and macroprudential surveillance purposes.
RECEIVERSHIP AND INSOLVENCY (E) TASK FORCE

Receivership and Insolvency (E) Task Force April 6, 2022, Minutes ................................................................. 9-586
Restructuring Mechanisms (E) Working Group Referral (Attachment One) ............................................................ 9-589
National Conference of insurance Guaranty Funds (NCIGF) Presentation (Attachment Two) .......................... 9-595
The Receivership and Insolvency (E) Task Force met in Kansas City, MO, April 6, 2022. The following Task Force members participated: Cassie Brown, Vice Chair, represented by Brian Riewe (TX); Lori K. Wing-Heier represented by David Phifer (AK); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by Jared Kosky (CT); David Altmaier represented by Anoush Brangaccio (FL); Colin M. Hayashida represented by Patrick P. Lo (HI); Doug Ommen represented by Kim Cross (IA); Dana Popish Severinghaus represented by Kevin Baldwin (IL); Vicki Schmidt represented by Justin McFarland (KS); Gary D. Anderson represented by Christopher Joyce (MA); Timothy N. Schott represented by Robert Wake (ME); Chlora Lindley-Myers represented by Shelley Forrest (MO); Mike Causey represented by Jackie Obusek (NC); Eric Dunning represented by Lindsay Crawford (NE); Michael Humphreys represented by Laura Lyon Slaymaker and Crystal McDonald (PA); Elizabeth Kelleher Dwyer represented by Matt Gendron and Patrick Smock (RI); Carter Lawrence represented by Trey Hancock (TN); Jon Pike represented by Reed Stringham (UT); and Mike Kreidler represented by Charles Malone (WA).

1. **Adopted its 2021 Fall National Meeting Minutes**

Ms. Cross made a motion, seconded by Mr. Stringham, to adopt the Task Force’s Nov. 30, 2021, minutes (see NAIC Proceedings – Fall 2021, Receivership and Insolvency (E) Task Force). The motion passed unanimously.

2. **Received the Report of the Receiver’s Handbook (E) Subgroup**

Mr. Baldwin said the Receiver’s Handbook (E) Subgroup has not met in 2022. However, it has established drafting groups that have met in 2022 to draft revisions to Chapter 3, Chapter 4, and Chapter 5 of the Receiver’s Handbook for Insurance Company Insolvencies (Receiver’s Handbook). The Subgroup plans to schedule a meeting to expose those revisions for public comment.

3. **Received a Referral from the Restructuring Mechanisms (E) Working Group and Exposed a Request for NAIC Model Law Development**

Mr. Riewe said the Restructuring Mechanisms (E) Working Group sent a referral to the Task Force (Attachment One). The Working Group was charged to look at state laws regarding insurance business transfers (IBTs) and corporate divisions (CDs). The Working Group is in the process of developing a white paper on the topics. One area it identified where model laws may need to be amended was regarding how policyholders retain guaranty fund coverage after such transactions. The referral outlines the positions of both the National Organization of Life and Health Insurance Guaranty Associations (NOLHGA) and the National Conference of Insurance Guaranty Funds (NCIGF). Mr. Riewe said for property/casualty (P/C), the referral states that needed revisions have been identified for the Property and Casualty Insurance Guaranty Association Model Act (#540). The NCIGF suggested that possible technical gaps may exist in states that have adopted Model #540 within the definitions of “covered claim,” “member insurer,” “insolvent insurer,” and “assumed claims transaction.” The referral includes a draft Request for NAIC Model Law Development to amend Model #540. The Working Group has not received any opposition to addressing the coverage gap in Model #540.

Mr. Riewe said the Task Force will consider advancing the Request for NAIC Model Law Development to the Financial Condition (E) Committee. While there are suggested model law edits within the request, the language is not final. There will be opportunity to draft the language after the request has been approved by Executive (EX) Committee.
Mr. Riewe said that upon the Executive (EX) Committee’s approval, he recommends delegating the Receivership Law (E) Working Group to finalize the edits to Model #540.

Barbara Cox (Barbara Cox LLC, representing NCIGF) said NCIGF supports the Request for NAIC Model Law Development to amend Model #540.

Mr. Gendron, Mr. Baldwin, and Mr. Wake stated they support the Task Force’s consideration of this Request for NAIC Model Law Development. Mr. Wake said the Task Force should also consider a review of the Life and Health Insurance Guaranty Association Model Act (#520) to determine if any amendments are necessary to preserve guaranty association coverage in assumption novation. Mr. Riewe said he agrees with Mr. Wake’s comments.

Hearing no objection, Mr. Riewe said the Request for NAIC Model Law Development will be exposed for 30-day public comment period ending May 6.

4. Heard a Presentation from the NCIGF

Roger Schmelzer (NCIGF) delivered a presentation of the NCIGF on the topic of pre-receivership coordination and information sharing (Attachment Two). He said the number of insolvencies has declined over the past 20 years. He said the NCIGF is not bringing complaints. The short runway is an outdated business model for the protection of insurers. Companies that fail are more complex, including multi-state, multi-line carriers; a high volume of electronic claims files; claims operations that are delegated to third-party administrators (TPAs)/multiple information technology (IT) systems; and today there are fewer people with specialized insolvency data management expertise due to fewer insolvencies. He said the NCIGF’s need is consistent and timely transfer of usable claims data to guaranty funds and receivers at the time of insolvency. This is only going to happen if there is enhanced pre-liquidation coordination between receivers, state insurance regulators, and guaranty funds. Mr. Schmelzer said the NCIGF has invested in IT solutions and that currently guaranty funds handle roughly 90% of claims data extraction activities in insolvencies.

Mr. Schmelzer said the public policy solution is the confidential exchange of fundamental information between state insurance regulators, receivers, and guaranty funds well before the liquidation order is signed. There are four advantages. First, there may be insights gained from the data exchange that might affect the regulatory decision on timing as ideally the liquidation order would not be signed until all parties agreed the data is ready to be transferred. Second, guaranty fund operations may need time to scale operations to handle the scope of the liquidation. Third, the receivers will have usable data sooner. Fourth, it would reduce the cost of insolvency management.

Mr. Schmelzer said the confidential information that would be shared is triggered when state insurance regulators see an insurer is headed to insolvency. The type of information would be policy information, claims records, and information about TPA relationships. This information is important as it relates to cyber liability coverage and services that need to be offered.

Mr. Schmelzer said there has been progress made with the recent amendments to model laws and revisions to the Financial Condition Examiners Handbook. There is also ongoing work on the Receiver’s Handbook and the recent discussion on the Restructuring Mechanisms (E) Working Group referral.

Ms. Cox said to share information at an earlier time may require states implement statutory changes. She said a proposal in Illinois calls for changes to Model #540, the Insurance Holding Company System Regulatory Act (#440), and the Model Law on Examinations (#390). She said another approach is a memorandum of understanding (MoU). She said California is exploring this option with its guaranty fund and has put the MoU on hold pending the Task Force’s consideration of this proposal. Both drafts are included in Attachment Two. She said everyone is
concerned by confidentiality. She said the guaranty fund system is populated by industry personnel. They serve on the NCIGF board of directors, state guaranty association board members, and committees. She said to protect confidentiality, the information would not be shared with the NCIGF or state board members. She said the NCIGF has a plan to work through that.

Patrick Hughes (Faegre Drinker Biddle & Reath) said that is one idea to face these challenges. He said updates to NAIC handbooks is another way to document and potentially join various legal authorities and the coordination with receivers, state insurance regulators, and guaranty funds. Updating various handbooks may be able to be advanced more easily. He said NCIGF is trying to reach practical solutions and have sought feedback from state insurance regulators to develop this proposal. He said every state may not be the same and may have different legal structures and preferences as to which options works.

Mr. Schmelzer said he recognizes that other foreign jurisdictions may not believe the U.S. resolution system is as coordinated as it should be. Guaranty funds and state insurance regulators have worked to disprove that belief, and this is another important step. He said under the federal Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act), the federal government has an opportunity if state insurance departments do not respond quickly enough. The guaranty funds need to be as robust as possible.

Hearing no objection, Mr. Riewe said the Receivership Law (E) Working Group will be referred to consider options to address the issues raised by the NCIGF, including review of the MoU and draft statutory language. Mr. Baldwin and Ms. Slaymaker, Receivership Law (E) Working Group co-chairs, agreed.

5. **Heard an Update on Federal Activities**

Patrick Celestine (NAIC) said the NAIC’s proposed State Insurance Receivership Priority (SIRP) Act establishes a clear claim filing deadline in the Federal Priority Act (FPA) for the U.S. Department of Justice (DOJ) to file claims of the U.S. to insolvent insurance company estates and to ensure state insurance regulators are not held personally liable if claims of the government are not paid first. Several members of the Task Force and NAIC staff are working with U.S. Rep. Madeleine Dean’s (D-PA) office and the DOJ to finalize edits to the SIRP Act. It is expected to be introduced to the U.S. House of Representatives this year.

6. **Heard an Update on International Activities**

Mr. Wake said he worked with NAIC staff, the NOLHGA, and the NCIGF to complete a survey of the International Association of Insurance Supervisors (IAIS) to gather information to inform the development of an application paper on policyholder protection schemes. Mr. Wake said the U.S. recently completed its in-person meetings for the IAIS-targeted jurisdictional assessment regarding the holistic framework, which included an assessment of insurance receivership, and recovery and resolution planning.

Having no further business, the Receivership and Insolvency (E) Task Force adjourned.
MEMORANDUM

TO: Receivership and Insolvency (E) Task Force

FROM: Restructuring Mechanisms (E) Working Group

DATE: March 28, 2022

RE: Referral Regarding Potential Change to NAIC Model

The NAIC formed the Restructuring Mechanisms (E) Working Group because of recent changes to state laws in the areas of Insurance Business Transfer (IBT) and Corporate Divisions (CD). The Working Group is in the process of drafting a white paper that, among other things, documents the issues the statutes are designed to address and some of the legal issues. Specific to that point, during public discussions, the Working Group received input from both the National Conference of Insurance Guaranty Funds (NCIGF) and the National Organization of Life and Health Insurance Guaranty Associations (NOLHGA) on how policyholders can retain guaranty fund coverage after such a transaction. The following summarizes such input, which is further explained at the end of this memorandum.

NCIGF – The NCIGF’s position is that where there was guaranty fund coverage before the IBT or CD, state insurance regulators should ensure that there is coverage after the IBT or CD. An IBT or CD should not reduce, eliminate, or in any way affect guaranty fund coverage. A CD or IBT should not create, expand, or in any way affect coverage. The NCIGF suggested that possible technical gaps may exist in states that have adopted the Property and Casualty Insurance Guaranty Association Model Act (#540) and proposed specific changes to the model to address.

NOLHGA – Described the three conditions that are needed for guaranty fund coverage after an IBT or CD. In general, restructuring statutes (or state insurance regulators reviewing proposed restructuring transactions) should clearly provide that assuming or resulting insurers must be licensed so policyholders maintain eligibility for guaranty association coverage from the same guaranty association that would have provided coverage immediately prior to a restructuring transaction. This means the resulting insurer must be licensed in all states where the transferring insurer was licensed or had ever been licensed with respect to the policies being transferred.

To that end, attached is a Request for NAIC Model Law Development form, which sets forth proposed changes to Model #540, as suggested by the NCIGF. The Working Group is not the technical expert in this area, but it does support the intent of retaining guaranty fund coverage; therefore, the Working Group asks the Receivership and Insolvency (E) Task Force to review the attached and determine where such changes could generally be supported. We are not trying to determine if this is the exact change to make to the model at this time, but rather whether the Task Force supports the project and would
be willing to complete an update to the language if approved by the Financial Condition (E) Committee and the Executive (EX) Committee. To the extent possible, perhaps the Task Force could expose the attached Request for NAIC Model Law Development form, debate it, and return it to the Working Group prior to the Summer National Meeting, where the request could be made to the Financial Condition (E) Committee.

Please let the Working Group know if you have any questions.

The following is a more comprehensive summary of the positions of the NGIGF and the NOLHGA:

The Working Group received input from the NOLHGA about the concerns for insurance consumers of personal lines life and health insurance business. The NOLHGA indicated that for there to be guaranty association coverage in the event of a life or health insurer insolvency, there are three conditions that must be present. Those conditions are:

1. The consumer seeking protection must be an eligible person under the guaranty association statute; typically, this is achieved by being a resident of the guaranty association’s state at the time of the insurer’s liquidation.

2. The product must be a covered policy.

3. The failed insurer for which protection is being sought must be a member insurer of the guaranty association of the state where the policyholder resides. To be a member insurer, the insurer must be licensed in that state or have been licensed in the state to write the lines of business covered by the guaranty association.

In most states, coverage can also be provided for an “orphan” policyholder of the insurer by the guaranty association in the insolvent insurer’s domestic state. Orphan policyholders are policyholders who are residents of states where the guaranty association cannot provide coverage because the insolvent insurer is not a member insurer due to not being licensed at the time required by the Life and Health Insurance Guaranty Association Model Act (#520). The orphan policyholder situation can arise when a policyholder purchases a policy in a state where the issuing company is licensed—i.e., is a member of the guaranty association—but subsequently moves to a state where the issuing insurance company was never licensed; i.e., is not a member of the guaranty association. The provision in Model #520, and the laws of most states, that provides that orphan policies are covered by the guaranty association in the insolvent insurer’s domestic state is designed to plug the gap in these rare situations.

A key factor when considering a life or health IBT or CD transaction is whether the resulting insurer is or will be a member insurer in each state. If the resulting insurer is a member insurer of the same guaranty associations as the transferring insurer, guaranty association coverage will be preserved and not changed for all policyholders. Of course, specific guaranty association coverage will be determined if/when the resulting insurer is placed under an order of liquidation with a finding of insolvency. If the resulting insurer is not a member insurer of the same guaranty associations as the transferring insurer, policyholders may lose guaranty association coverage or be covered as orphans by the guaranty association in the insurer’s
domestic state. Orphan coverage was not designed to plug the gap in this situation. Shifting the coverage obligation to the domestic state guaranty association could result in guaranty association coverage being concentrated in that state.

To address these concerns with respect to IBT and CD transactions involving life or health insurance, restructuring statutes (or state insurance regulators reviewing proposed restructuring transactions) should clearly provide that assuming or resulting insurers must be licensed so policyholders maintain eligibility for guaranty association coverage from the same guaranty association that would have provided coverage immediately prior to a restructuring transaction. This means the resulting insurer must be licensed in all states where the transferring insurer was licensed or had ever been licensed with respect to the policies being transferred.

One interpretation of Model #540 is that based on the definitions of “Covered Claim,” “Member Insurer,” “Insolvent Insurer,” and “Assumed Claim Transaction,” an orphan policyholder could not be covered by the state guarantee association. Consequently, there is a concern that no guaranty association coverage would be provided if policies are transferred to a nonmember insurer. Many property/casualty (P/C) guaranty fund statutes require that the policy be issued by the now-insolvent insurer, and it must have been licensed either at the time of issue or when the insured event occurred. However, these limitations are designed to avoid coverage being provided when the policy at issue did not “contribute” to the association, which would not exist in the case of an assessable policy later transferred to an insurer that was not a member at the time the policy was issued. Moreover, the restrictions exist to prevent claims resulting from a company regulated as surplus lines, or a similar structure, to benefit from the protections afforded licensed business when a licensed company is liquidated.

The NCIGF’s position is that where there was guaranty fund coverage before the IBT or CD, state insurance regulators should ensure there is coverage after the IBT or CD. An IBT or CD should not reduce, eliminate, or in any way affect guaranty fund coverage. A CD or IBT should not create, expand, or in any way affect coverage. The NCIGF suggested that possible technical gaps may exist in states that have adopted Model #540. These gaps could include the definitions of “Covered Claim,” “Member Insurer,” “Insolvent Insurer,” and “Assumed Claims Transaction” found in Section 5 of the model.

Fulfilling this intent will likely require that P/C guaranty fund statutes be amended in each of the states where the original insurer was a member of a guaranty association before the transaction becomes final. The NCIGF indicated that it created a subcommittee to address this issue and oversee a coordinated national effort to enact the necessary changes in each state. It should be noted that the same membership and timing issues that are raised by IBTs could also be raised in the case of any other policy novation, including the assumption reinsurance transactions.
REQUEST FOR NAIC MODEL LAW DEVELOPMENT

This form is intended to gather information to support the development of a new model law or amendment to an existing model law. Prior to development of a new or amended model law, approval of the respective Parent Committee and the NAIC’s Executive Committee is required. The NAIC’s Executive Committee will consider whether the request fits the criteria for model law development. Please complete all questions and provide as much detail as necessary to help in this determination.

Please check whether this is: □ New Model Law or ☑ Amendment to Existing Model

1. Name of group to be responsible for drafting the model:

Restructuring Mechanisms (E) Working Group

2. NAIC staff support contact information:

Dan Daveline
ddaveline@naic.org
816-783-8134

3. Please provide a brief description of the proposed new model or the amendment(s) to the existing model. If you are proposing a new model, please also provide a proposed title. If an existing model law, please provide the title, attach a current version to this form and reference the section(s) proposed to be amended.

• Property and Casualty Insurance Guaranty Association Model Act (#540)

In 2019, the Financial Condition (E) Committee formed the Restructuring Mechanisms (E) Working Group who was charged with the following:

1. Evaluate and prepare a white paper that:
   a. Addresses the perceived need for restructuring statutes and the issues those statutes are designed to remedy. Also, consider alternatives that insurers are currently employing to achieve similar results.
   b. Summarizes the existing state restructuring statutes.
   c. Addresses the legal issues posed by an order of a court (or approval by an insurance department) in one state affecting the policyholders of other states.
   d. Considers the impact that a restructuring might have on guaranty associations and policyholders that had guaranty fund protection prior to the restructuring.
   e. Identifies and addresses the legal issues associated with restructuring using a protected cell.

Background for Proposed Change

This proposed change is being precipitated by discussions within the NAICs Restructuring Mechanisms (E) Working Group initiative, which is focused on documenting in the form of a White Paper, the various issues related to insurance business transfers (IBT) and corporate division (CD) transactions. The number of states adopting laws that permit either of these transactions is still relatively low, however one of the most significant issues that has been discussed during the meetings of the Working Group is the need for policyholders of such transactions to retain guaranty fund coverage. Representatives of the National Conference of Insurance Guaranty Funds (NCIGF) have suggested that an amendment to a state’s guaranty fund act, or other related law is necessary to address this issue. They have specifically suggested that the NAIC update the Property and Casualty Insurance Guaranty Association Model Act to incorporate specific language they have developed to address this issue. This will better enable those states that have incorporated #540 into their laws to update their laws for this important issue. This change is needed to ensure policyholders in all states retain their coverage, which is necessary regardless of how few states adopt changes to their laws to allow IBT and CD transactions.

Scope of the Proposed Revisions to Model 540
The scope of the request is limited to addressing the issue of guaranty fund coverage and as a result would be limited to specific suggestion of additional language within the definition of “Covered Claim” within #540. The following is the additional language (underlined language) that is being proposed to be added to Section 5, Definitions, within #540.

H. “Covered claim” means the following:

(a) The claimant or insured is a resident of this State at the time of the insured event, provided that for entities other than an individual, the residence of a claimant, insured or policyholder is the State in which its principal place of business is located at the time of the insured event; or

(b) The claim is a first party claim for damage to property with a permanent location in this State.

(c) Notwithstanding any other provision in this Act, an insurance policy issued by a member insurer and later allocated, transferred, assumed by or otherwise made the sole responsibility of another insurer, pursuant to a state statute providing for the division of an insurance company or the statutory assumption or transfer of designated policies and under which there is no remaining obligation to the transferring entity (commonly known as “Division” or “Insurance Business Transfer” statutes), shall be considered to have been issued by a member insurer which is an Insolvent Insurer for the purposes of this Act in the event that the insurer to which the policy has been allocated, transferred, assumed or otherwise made the sole responsibility of is placed in liquidation.

(d) An insurance policy that was issued by a non-member insurer and later allocated, transferred, assumed by or otherwise made the sole responsibility of a member insurer under a state statute described in subsection (a) shall not be considered to have been issued by a member insurer for the purposes of this Act.

4. Does the model law meet the Model Law Criteria? ☒ Yes or ☐ No (Check one)

(If answering no to any of these questions, please reevaluate charge and proceed accordingly to address issues).

a. Does the subject of the model law necessitate a national standard and require uniformity amongst all states? ☒ Yes or ☐ No (Check one)

If yes, please explain why:

This proposed change is needed to ensure policyholders in all states retain their guaranty fund coverage, which is necessary regardless of how few states adopted changes to their laws to allow IBT and CD transactions.

It should be noted that with respect to guaranty fund coverage for life and health insurance, the National Organization of Life and Health Insurance Guaranty Associations are suggesting a different approach in addressing the same issue which centers around the need for such transaction to require the assuming or resulting insurer to be licensed in all states where the issuing insurer was licensed or ever was licensed to retain the needed coverage for policyholders.

b. Does Committee believe NAIC members should devote significant regulator and Association resources to educate, communicate and support this model law? ☒ Yes or ☐ No (Check one)

5. What is the likelihood that your Committee will be able to draft and adopt the model law within one year from the date of Executive Committee approval?

☒ 1 ☐ 2 ☐ 3 ☐ 4 ☐ 5 (Check one)

High Likelihood Low Likelihood

Explanation, if necessary:
6. What is the likelihood that a minimum two-thirds majority of NAIC members would ultimately vote to adopt the proposed model law?

☐ 1 ☐ 2 ☐ 3 ☐ 4 ☐ 5 (Check one)

High Likelihood Low Likelihood

Explanation, if necessary: See previous discussion.

7. What is the likelihood that state legislatures will adopt the model law in a uniform manner within three years of adoption by the NAIC?

☐ 1 ☐ 2 ☐ 3 ☐ 4 ☐ 5 (Check one)

High Likelihood Low Likelihood

Explanation, if necessary:

At this juncture, the changes in concepts being considered are simple and because they have the potential to reduce expenses incurred by receivership estates, we believe such changes will be widely supported by all parties.

8. Is this model law referenced in the NAIC Accreditation Standards? If so, does the standard require the model law to be adopted in a substantially similar manner?

Not referenced in Accreditation Standards.

9. Is this model law in response to or impacted by federal laws or regulations? If yes, please explain.

No.
Protecting Consumers:
New Opportunities for Cooperation

Roger H. Schmelzer, President & CEO
National Conference of Insurance Guaranty Funds

Barbara Cox
Public Policy Counsel to NCIGF

Patrick Hughes, Partner
Faegre Drinker Biddle & Reath LLP

NAIC Receivership and Insolvency Task Force
April 6, 2022

Regulators are Doing a Good Job:
P&C Insolvencies 2000-2021
The Short Runway Insolvency is an Outdated Biz Model for the Protection of Insurance Consumers

The few companies that fall are more complex than ever:
- Multi-state, multi-line carriers
- High volume of electronic claims files
- Claims operations delegated to TPAs/Multiple IT systems
- Limited specialized insolvency data management expertise due to fewer insolvencies

The Need
Consistent and timely transfer of usable claims data via UDS to guaranty funds and receivers at the time of insolvency

Achieved through enhanced PRE-LIQUIDATION coordination (Regulators/Receivers/Guaranty Funds)

- Smooth, seamless (as possible), transitions are important for the reputation of the U.S. state regulatory system
- Delay and appearance of chaos undermines stakeholder confidence

Public Policy & Technology Solutions Exist
Level Setting: UDS

✓ Specialized NAIC Communications Protocol developed for GFs and Receivers to read and process claims.

✓ Not an industry standard, but regulator approved; data must be converted for receivers and guaranty funds to meet their statutory obligations to consumers—this can be tricky.

✓ NCIGF has developed and maintains Data Mapper and SUDS, the support software for UDS

UDS Back to the Receiver: Monthly, Quarterly and Annual Reporting from GFs

Urgency

✓ Ongoing periodic benefits for workers compensation claimants

✓ In auto claims, essential transportation for work or medical needs

✓ Smooth, seamless as possible, transitions are important for the reputation of the US state regulatory system

✓ Delay and appearance of chaos is never good

Impediments

✓ Files controlled by third parties using various data systems

✓ Third parties may not treat transition with the same urgency as receivers and gas

✓ As liquidation is imminent, TPA may be laying off people due to loss of business

✓ High volume of data – imaged files – takes time to transition

✓ Antiquated Data systems
The Technology Solution

NCIGF Members have invested heavily in these competencies and established a subsidiary (GSI) to assist receivers with the extraction and conversion of claims data to UDS.

NCIGF and GSI can step in at the early, chaotic, but crucially important parts of an insolvency. We make sure data gets where it needs to go, then step away once the transition becomes more orderly.

Essential to making this work for all parties is delivery of these services through a legally separate subsidiary to mitigate claims-paying responsibilities to NCIGF and its member guaranty funds.

The Public Policy Solution

A Confidential Exchange of Fundamental Information

- Regulators, Receivers & GFs
- Well Before the Liquidation Order is Signed

Advantages

- Regulators can gain valuable insight into data transition readiness and complex product lines
- GFs involved can more fully prepare to pay claimants
- Receivers will have usable data sooner in order to track reinsurance recoveries and process POCs.
Confidential Information to Be Shared

- Triggered when regulators see an insurer headed toward insolvency
- Access to the troubled insurer policy information and claims records in advance of a liquidation.
- Advance information about troubled insurer TPA relationships. (large quantities of data in unknown formats and questionable condition/on unknown computer systems/security controls) Ownership of and gaining access to this data is crucial.

This information is typically deemed confidential and protected from disclosure under the state Holding Company and Examination Acts.

- In some states regulators may have the authority to disclose to GFs under current law

Data Elements of a Pre-Liquidiation Readiness Strategy

1. Demonstration and documentation that a troubled carrier’s data is segregated from third party data and can be extracted completely and quickly (within 24 hours)
2. Understanding all troubled carrier’s systems (including legacy) and the UDS framework
3. Skill and resources to extract large data sets of sensitive information and transmit them securely

GFs and Receivers need enough data, quickly enough to make “UDS”:
Claim files, file notes, payments/transactions, and images

With meaningful preplanning, we can help make the export even easier
On the Horizon: Cyber Liability Coverage

✔ Policies providing CL coverage use broad and non-standard language requiring the insurer to cover certain losses and provide ancillary services in case of a cyber incident.

✔ GFs & Receivers will need additional time to coordinate with regulators to review and analyze the CL policies of a member insurer heading toward imminent insolvency to determine and fulfill statutory obligations.

This is one example of a complex product line that needs attention BEFORE insolvency!

Developments Moving the Needle

2021 Holding Company Act Changes Already Adopted by the NAIC As a Result of a Referral from RITF!

✔ More controls on affiliated companies holding claims data and other essential information.

✔ IT Examination Working Group has adopted additional steps for the examination structure to address new holding company law requirements.

Combined with new requirements for TPA UDS competency @ appropriate RBC level, these are critical readiness tactics already in place.
We Have Proposed A Next Step

NAIC model law amendments or guidance to facilitate pre-receivership cooperation and coordination

- Further revisions to state holding company laws and regulations, exam laws and guaranty fund acts in some states. Others could do this with a memorandum of understanding (MOU) providing for and preserving confidentiality.
- Information sharing would improve cooperation and coordination.
- Addresses our mutual interest of protecting insurance consumers.
- NCIGF has amendments and a draft MOU ready for consideration.

Traction: 2022 Proposals in IL & CA based on the NCIGF amendments

How it Would Work

Once a Regulator makes a finding of insolvency and subsequent liquidation in the next 3-12 months, we recommend the following:

Step 1: Regulator schedules initial meeting with GF manager (no documents necessary)
Step 2: First meeting covered by statute being proposed or an MOU if delinquency proceeding is highly likely then detailed confidentiality agreement is required to move forward.
Step 3: GFs begin review of claim data, policy information and other documents to prepare for an orderly transfer.
Step 4: Regulator and GF manager develops plan for transition to liquidation (other GFs may be involved)
Step 5: GFs can advise Regulator on condition and location of data which may be useful to Regulator in deciding when to sign liquidation order.

Much of this could be done during a rehabilitation period if there is sufficient time and access.
Protecting Communications, Part I

- Guaranty Funds have a huge incentive to maintain confidentiality.
- Guaranty Funds understand the sensitivity of this information and the need to keep it confidential.
- Guaranty Funds have a proven track record with confidential agreements with Receivers that are standard for every rehabilitation/liquidation.
- NOLHGA and the life funds have been collaborating closely at the troubled company level for several years.
- The role of the property casualty funds (and NCIGF) may differ, but this precedent matters and demonstrates feasibility.

Protecting Communications, Part II

- MOU extends the confidentiality required by the statute to any guaranty fund receiving the information.
- MOU could be an alternative approach where states have this authority under current law.
- Our model MOU can be tailored to address any specific confidentiality concerns.
- Confidential information will NOT be shared with state Board members until such time there is a public court proceeding.
Our Proposal is Consistent With the Public Policy Evolution of P&C Guaranty Funds and NCIGF

2008 Financial Crisis: DFA Title II is still in effect and requires state readiness for companies of any size (not only SIFIs)

Regulators Depend Upon NCIGF’s Coordination of the State Guaranty Fund Response to Multi-State Insolvencies

- Title II Receivership coordination plans adopted by state regulators stress coordination with NCIGF both before and in response to a crisis (Receivers Handbook pp. 629-630).
- NCIGF and coordination between NAIC and NCIGF is cited 44 times in Receiver’s Handbook with numerous references to NCIGF website.
- NCIGF and NOLHGA are invited to participate in the confidential Receivership Financial Analysis Working Group (RFAWG) at the NAIC.

Thank You For Your Time!
This Conversation is Underway

✓ Constructive & collaborative.
✓ Readiness in general, data transfer specifically.
✓ Goal: A near seamless safety net for consumers.
✓ Strengthen state insurance regulation.

We Are on the Same Team!

rschmelzer@ncigf.org
Guideline for Troubled Company Information Sharing and Coordination with Guaranty Associations

Drafting Note: Pre-liquidation information sharing and coordination with guaranty associations has become even more critical in the modern insurance environment. Ideally such sharing and coordination should take place early on when a company becomes a “troubled company.” Regulators should consider involving guaranty funds even before the company is put in a receivership status.¹ It is essential that guaranty funds have usable claims data in order to service claims once a company is found insolvent and ordered into liquidation. (This is when most property casualty funds are “triggered.”) Moreover, complex new products such as cyber security are being written by insurance companies. Older products such as large deductible workers compensation often use complex collateral arrangements and collection protocols. Advance study and information sharing in such cases is essential for a smooth transition into liquidation if a liquidation does occur.

Regulators may have concerns regarding whether there is adequate statutory authority to share information before a receivership. The guideline below offers statutory language that could be used to amend state law to clearly permit sharing and coordination in cases where regulators feel it is appropriate. Confidentiality concerns are paramount and are addressed in the text provided below. Note that amendments to the property casualty guaranty fund model act, the Model Holding Company Act and the Examinations Act may be necessary. Amendments to all of these Models is offered.

In some states, a regulator may determine that current state law and regulatory practice already permits pre-receivership coordination. If this is the case a regulator may want to consider memorializing the terms of information sharing and coordination with a Memorandum of Understanding (MOU). A template for such an MOU is also provided as a separate document.

PROPERTY AND CASUALTY INSURANCE GUARANTY ASSOCIATION MODEL ACT
NCIGF Suggested Revisions to Section 10

Section 10. Duties and Powers of the Commissioner

A. The commissioner shall:

(1) Notify the association of the existence of an insolvent insurer not later than three (3) days after the commissioner receives notice of the

¹ The NAIC Troubled Company Handbook suggests that such coordination begin when a company’s RBC levels are --- or below. (Cite)
determination of the insolvency. The association shall be entitled to a copy of a complaint seeking an order of liquidation with a finding of insolvency against a member company at the same time that the complaint is filed with a court of competent jurisdiction;

(2) Provide the association with a statement of the net direct written premiums of each member insurer upon request of the board of directors.

B. The commissioner may:

(1) Suspend or revoke, after notice and hearing, the certificate of authority to transact insurance in this State of a member insurer that fails to pay an assessment when due or fails to comply with the plan of operation. As an alternative, the commissioner may levy a fine on a member insurer that fails to pay an assessment when due. The fine shall not exceed five percent (5%) of the unpaid assessment per month, except that a fine shall not be less than $100 per month;

(2) Revoke the designation of a servicing facility if the commissioner finds claims are being handled unsatisfactorily.

(3) Examine, audit, or otherwise regulate the association.

(4) If the Commissioner determines that any member insurer as defined in Section 5K above may be subject to a future delinquency proceeding under Article XIII of this Code (insert citation to the liquidation section of the Code), then in order to assist in the performance of the Commissioner’s duties, the Commissioner may:

(i) share confidential and privileged documents, material, or information reported pursuant to an enterprise risk filing with the Association regarding that member insurer; and

(ii) share confidential and privileged documents, material, the contents of an examination report, a preliminary examination report or its results, or any matter relating there to, including working papers, recorded information, documents, and copies thereof produced by, obtained by, or disclosed to the Commissioner or to any other person in the course of any examination with the Association regarding that member insurer.
(iii) The Commissioner may disclose the information described in this subsection to the Association so long as the Association agrees in writing to hold that information confidential, in a manner consistent with this Code, and uses that information to prepare for the possible liquidation of the member insurer. Access to the information disclosed by the Commissioner to the Association under this subsection shall be limited to the Association’s staff and its counsel. The Board of Directors of the Association may have access to the information disclosed by the Commissioner to the Association once the member insurer is subject to a delinquency proceeding under this Code (insert citation to the liquidation section) subject to any terms and conditions established by the Commissioner.

(iv) The Commissioner may disclose the information described in this subsection with Associations in other states, and with any organization of one or more state Associations of similar purposes, so long as the recipient of such information agrees in writing to hold that information confidential, in a manner consistent with this Code, and uses that information to prepare for the possible liquidation of the member insurer. Access to the information disclosed by the Commissioner under this subsection shall be limited to the Association’s staff and its counsel. The Board of Directors of the Association may have access to the information disclosed by the Commissioner to the Association once the member insurer is subject to a delinquency proceeding under this Code (insert citation to the liquidation section) subject to any terms and conditions established by the Commissioner.

(v) Should the Commissioner determine a liquidation is likely, he or she may cooperate with the Association and with any organization of one or more state Associations of similar purposes to provide for an orderly transition to liquidation in order to minimize any delay in the handling and payment of claims.
Drafting Note: This section does not require periodic examinations of the guaranty associations but allows the commissioner to conduct examinations as the commissioner deems necessary.

C. A final action or order of the commissioner under this Act shall be subject to judicial review in a court of competent jurisdiction.

NCIGF Recommended Changes to the NAIC Model Holding Company Act

Section 8. Confidential Treatment

A. Documents, materials or other information in the possession or control of the Department of Insurance that are obtained by or disclosed to the commissioner or any other person in the course of an examination or investigation made pursuant to Section 6 and all information reported or provided to the Department of Insurance pursuant to Section 3B(12) and (13), Section 4, Section 5 and Section 7.1 are recognized by this state as being proprietary and to contain trade secrets, and shall be confidential by law and privileged, shall not be subject to [insert open records, freedom of information, sunshine or other appropriate phrase], shall not be subject to subpoena, and shall not be subject to discovery or admissible in evidence in any private civil action. However, the commissioner is authorized to use the documents, materials or other information in the furtherance of any regulatory or legal action brought as a part of the commissioner’s official duties. The commissioner shall not otherwise make the documents, materials or other information public without the prior written consent of the insurer to which it pertains unless the commissioner, after giving the insurer and its affiliates who would be affected thereby notice and opportunity to be heard, determines that the interest of policyholders, shareholders or the public will be served by the publication thereof, in which event the commissioner may publish all or any part in such manner as may be deemed appropriate.

(1) For purposes of the information reported and provided to the Department of Insurance pursuant to Section 4L(2), the commissioner shall maintain the confidentiality of the group capital calculation and group capital ratio produced within the calculation and any NCIGF Recommended Changes to NAIC Model Holding Company Act group capital information received.
from an insurance holding company supervised by the Federal Reserve Board or any U.S. group wide supervisor.

(2) For purposes of the information reported and provided to the [Department of Insurance] pursuant to Section 4L(3), the commissioner shall maintain the confidentiality of the liquidity stress test results and supporting disclosures and any liquidity stress test information received from an insurance holding company supervised by the Federal Reserve Board and non-U.S. group wide supervisors.

Drafting Note: This group capital calculation and group capital ratio includes confidential information and filings received from insurance holding companies supervised by the Federal Reserve Board. Similarly, the liquidity stress test may include confidential information and filings received from insurance holding companies supervised by the Federal Reserve Board. The confidential treatment afforded to group capital calculation filings includes any Federal Reserve Board group capital filings and information.

B. Neither the commissioner nor any person who received documents, materials or other information while acting under the authority of the commissioner or with whom such documents, materials or other information are shared pursuant to this Act shall be permitted or required to testify in any private civil action concerning any confidential documents, materials, or information subject to Subsection A.

C. In order to assist in the performance of the commissioner’s duties, the commissioner:

(1) May share documents, materials or other information, including the confidential and privileged documents, materials or information subject to Subsection A, including proprietary and trade secret documents and materials with other state, federal and international regulatory agencies, with the NAIC, and with any third-party consultants designated by the commissioner, with state, federal, and international law enforcement authorities, including members of any supervisory college described in Section 7, provided that the recipient agrees in writing to maintain the confidentiality and privileged status of the document, material or other information, and has verified in writing the legal authority to maintain confidentiality.

(2) Notwithstanding paragraph (1) above, the commissioner may only share confidential and privileged documents, material, or information reported pursuant to Section 4L(1) with commissioners of states having statutes or regulations substantially similar to Subsection A and who have agreed in writing not to disclose such information.
Notwithstanding paragraphs (1) and (2) above, the Commissioner may share confidential and privileged documents, material, or information reported pursuant to Section 4L(1) or otherwise described in paragraph A of this section with the [name of state property casualty insurance guaranty association] by any member insurer defined in [section in guaranty association act defining member insurer] if the Commissioner determines that the member insurer may be subject to a future delinquency proceeding under [provisions related to delinquency proceeding] of this Code. The Commissioner may disclose the information described in this subsection so long as the parties agree in writing to hold that information confidential, in a manner consistent with this Code, and use that information to prepare for a possible delinquency proceeding of the member insurer. Access to the information disclosed by the Commissioner to the [state guaranty fund] shall be limited to the [state guaranty fund’s] staff and its counsel. The Board of Directors of the [state guaranty fund] may have access to the information disclosed by the Commissioner to the [state guaranty fund] once the member insurer is subject to a delinquency proceeding under [provisions relating to delinquency proceeding] of this Code subject to any terms and conditions established by the Commissioner.

The Commissioner may also, pursuant to this subsection, disclose the information described in this subsection with Associations in other states, and with any organization of one or more state Associations of similar purposes, so long as the recipient of such information agrees in writing to hold that information confidential, in a manner consistent with this Code, and uses that information to prepare for a possible delinquency proceeding of the member insurer. Access to the information disclosed by the Commissioner under this subsection shall be limited to the Association’s staff and its counsel. The Board of Directors of the Association may have access to the information disclosed by the Commissioner to the Association once the member insurer is subject to a delinquency proceeding under this Code (insert citation to the liquidation section) subject to any terms and conditions established by the Commissioner.

Should the Commissioner determine that a delinquency proceeding is likely, he or she may cooperate with the Association and with any organization of one or more state Associations of similar purposes to provide for an orderly transition to liquidation in order to minimize any delay in the handling and payment of claims.
MODEL LAW ON EXAMINATIONS

NCIGF Recommended Changes to Section in 5F

Section 5. Examination Reports

F. Privilege for, and Confidentiality of Ancillary Information

(1) (a) Except as provided in Subsection E above and in this subsection, documents, materials or other information, including, but not limited to, all working papers, and copies thereof, created, produced or obtained by or disclosed to the commissioner or any other person in the course of an examination made under this Act, or in the course of analysis by the commissioner of the financial condition or market conduct of a company shall be confidential by law and privileged, shall not be subject to [insert open records, freedom of information, sunshine or other appropriate phrase], shall not be subject to subpoena, and shall not be subject to discovery or admissible in evidence in any private civil action. The commissioner is authorized to use the documents, materials or other information in the furtherance of any regulatory or legal action brought as part of the commissioner’s official duties.

(b) Documents, materials or other information, including, but not limited to, all working papers, and copies thereof, in the possession or control of the National Association of Insurance Commissioners and its affiliates and subsidiaries shall be confidential by law and privileged, shall not be subject to subpoena, and shall not be subject to discovery or admissible in evidence in any private civil action if they are:
(i) Created, produced or obtained by or disclosed to the National Association of Insurance Commissioners and its affiliates and subsidiaries in the course of the National Association of Insurance Commissioners and its affiliates and subsidiaries assisting an examination made under this Act, or assisting a commissioner in the analysis of the financial condition or market conduct of a company; or

(ii) Disclosed to the National Association of Insurance Commissioners and its affiliates and subsidiaries under Paragraph (3) of this subsection by a commissioner.

(c) For the purposes of Paragraph (1)(b), “Act” includes the law of another state or jurisdiction that is substantially similar to this Act.

(2) Neither the commissioner nor any person who received the documents, material or other information while acting under the authority of the commissioner, including the National Association of Insurance Commissioners and its affiliates and subsidiaries, shall be permitted to testify in any private civil action concerning any confidential documents, materials or information subject to Paragraph (1).

(3) In order to assist in the performance of the commissioner’s duties, the commissioner:

(a) May share documents, materials or other information, including the confidential and privileged documents, materials or information subject to Paragraph (1), with other state, federal and international regulatory agencies, with the National Association of Insurance Commissioners and its affiliates and subsidiaries, and with state, federal and international law enforcement authorities, provided that the recipient agrees to maintain the confidentiality and privileged status of the document, material, communication or other information;

(b) May receive documents, materials, communications or information, including otherwise confidential and privileged documents, materials or information, from the National Association of Insurance Commissioners and its affiliates and subsidiaries, and from regulatory and law enforcement officials of other foreign or domestic jurisdictions, and shall maintain as
confidential or privileged any document, material or information received with notice or the understanding that it is confidential or privileged under the laws of the jurisdiction that is the source of the document, material or information; and

(c) May share documents, materials or other information, including the confidential and privileged documents, materials or information subject to Paragraph (1), with the [name of state property casualty guaranty association] regarding any member insurer defined in [section in guaranty association act defining member insurer] if the commissioner determines that the member insurer may be subject to a future delinquency proceeding under [provisions related to delinquency proceeding] of this Code. The commissioner may disclose the information described in this subsection so long as the parties agree in writing to hold that information confidential, in a manner consistent with this Code, and use that information to prepare for a future delinquency proceeding of a member insurer. Access to the information disclosed by the commissioner to the [state guaranty fund] shall be limited to the [state guaranty fund’s] staff and its counsel. The Board of Directors of the [state guaranty fund] may have access to the information disclosed by the Commissioner to the [state guaranty fund] once the member insurer is subject to a delinquency proceeding under [provisions relating to delinquency proceeding] of this Code subject to any terms and conditions established by the commissioner.

The commissioner may also, pursuant to this subsection (3)(c), disclose the information described in this subsection with Associations in other states, and with any organization of one or more state Associations of similar purposes, so long as the recipient of such information agrees in writing to hold that information confidential, in a manner consistent with this Code, and uses that information to prepare for a possible delinquency proceeding of the member insurer. Access to the information disclosed by the commissioner under this subsection shall be limited to the Association’s staff and its counsel. The Board of Directors of the Association may have access to the information disclosed by the commissioner to the Association once the member insurer is subject to a delinquency proceeding under this Code (insert citation to the liquidation section) subject to any terms and conditions established by the commissioner.
Should the commissioner determine that a delinquency proceeding is likely, he or she may cooperate with the Association and with any organization of one or more state Associations of similar purposes to provide for an orderly transition to liquidation in order to minimize any delay in the handling and payment of claims.

(d) [Optional provision] May enter into agreements governing sharing and use of information consistent with this subsection.

PC-390-5
MEMORANDUM OF UNDERSTANDING

This Memorandum of Understanding (“MOU”) is among the [state] Department of Insurance (“DOI”), the [Receiver of the insolvent company – if appointed] and the [guaranty fund in the state of domicile of the troubled company, the other insurance guaranty funds which have executed this agreement (collectively “Guaranty Funds”) and the National Conference of Insurance Guaranty Funds (NCIGF).

Definitions:

1.1 “Agreement” or “MOU” refers to this Memorandum of Understanding;

1.2 “Confidential Information” refers to any:
   a) documents, data or other information relating to any domestic insurance company in the State of [state] where the Commissioner has determined that the financial condition of such company creates a material risk of Receivership that are not publicly available or public records, whether written or not, including but not limited to claims files and data; financial analyses, modeling and projections; trade secrets, technical processes and know-how; agency agreements, arrangements, accounts, proposals, lists, and other information; policyholder lists and information; costs and pricing information; internal procedures, strategies and plans; and computer programs;
   b) work product or other information regarding any such Company that is confidential and/or privileged; and
   c) communications between the Parties regarding any potential or pending legal actions involving any such company that is a threat to such companies’ solvency.

1.3 “Evaluation Material” refers to all information, oral or written, including but not limited to Confidential Information as defined herein, that is furnished to Guaranty Funds or NCIGF under the terms of this Agreement, and all analyses, compilations, studies, or other materials prepared by Guaranty Funds or NCIGF containing or based in whole or in part upon such information.

1.4 “Company or Companies” refers to any domestic property and casualty insurance company in the State of [state] where the Commissioner has determined the financial condition of such company creates a material risk of receivership.

1.5 “Commissioner” refers to the Commissioner of Insurance of the State of [state].

1.6 “Party” and “Parties” refer to the Commissioner, the Receiver, if appointed, the signatory Guaranty Funds and the NCIGF.

1.7 “Receivership Court” refers to the [court with jurisdiction over the receivership]

1.8 “Receivership” refers to the rehabilitation or liquidation of any domestic insurance
company in the State of [state].

1.9 “Receiver” refers to [name of deputy receiver if appointed] or any of his or her successors.

1.10 “Covered Claim” shall have the same meaning as contained in the applicable statutes of the Guaranty Funds.

II. Recitals

2.1 The Commissioner is responsible for the financial regulation of Companies. From time-to-time the financial condition of one or more of such Companies creates a material risk of Receivership.

2.2 Should a Receivership occur of a Company, the Commissioner will appoint a special deputy receiver who will be responsible for the handling of such Receivership.

2.3 If the Receivership of a Company includes an order of liquidation with a finding of insolvency, the Guaranty Funds will have the responsibility for the payment of “Covered Claims” arising from such Receivership.

2.4 The Parties agree that in order to properly prepare for any Receivership, to provide for a smooth transition to liquidation should it become required, and in order to avoid delay in the payment of “Covered Claims,” it is essential to share Confidential Information among them with respect to any Company the Commissioner determines is at material risk of Receivership.

2.5 It is agreed by the Parties that, subject to the Commissioner’s discretion, the Commissioner can freely consult with the Receiver (if appointed), the Guaranty Funds, and NCIGF, with respect to any Company, including but not limited to, the dissemination of Confidential Information and Evaluation Material as defined herein. It is understood that such consultations are to be held in strictest confidence and the Commissioner may, in his or her discretion, withhold the name of the Company being discussed from the Guaranty Funds and the NCIGF.

2.6 The Guaranty Funds have determined that in order to protect consumers and to better fulfill their mission (see cite to applicable Guaranty Funds’ statutes) it is necessary and proper for them to enter into this Agreement and likewise it is necessary and proper for the NCIGF, as a membership organization that supports the Guaranty Funds in their mission, to enter into this Agreement. The DOI and Receiver have determined that this Agreement enables them to better serve the insurance consumers in [involved states] and to better protect them from the adverse consequences of a Company liquidation.

III. Use and Treatment of Evaluation Material

3.1 Subject to the terms of this Agreement, the Commissioner and Receiver will grant the Guaranty Funds and NCIGF Evaluation Material as they determine is appropriate. The
Evaluation Material shall be used by the Guaranty Funds and NCIGF to determine potential obligations of the Guaranty Funds, prepare for the possible assumption of such obligations, and to perform such statutory obligations in the event they become obligated to pay “Covered Claims” under policies of insurance issued by a Company. The Guaranty Funds and NCIGF shall be allowed to copy such Evaluation Material for their own use consistent with the terms of this Agreement.

3.2 The Guaranty Funds and the NCIGF agree to maintain the confidentiality of all Evaluation Material provided to them, and of any privileges with respect to such information. The Guaranty Funds and the NCIGF agree not to disclose any Evaluation Material to any person or entity, except as expressly provided herein.

3.3 The Guaranty Funds and the NCIGF may share Evaluation Material with their respective counsel, consultants or agents as it deems necessary, provided that such persons agree to comply with terms of this Agreement, including but not limited to the remedies provided under Part IV. In the event of a breach of this Agreement by any person to whom Evaluation Material has been provided, the Party or Parties providing such information shall also remain liable for the breach.

3.4 The Guaranty Funds and the NCIGF agree that no Evaluation Material shall be provided to any insurance companies or the owners, directors, officers, employees, agents, representatives, or affiliates of any insurance companies, except as necessary to discharge statutory duties, for official action or consideration by the Board of Directors.

3.5 In the event that the Guaranty Funds or the NCIGF are served with process seeking the production of Evaluation Material, including but not limited to a subpoena or order of a court of competent jurisdiction, an investigation by a government entity, or discovery demand issued in connection with any action, the Guaranty Funds and NCIGF, as appropriate, shall notify the Commissioner and Receiver in writing as promptly as practicable. The Guaranty Funds and NCIGF, as appropriate, shall take reasonable actions to protect the confidentiality and, if applicable, the privileged status of such information, unless otherwise requested by the Commissioner or the Receiver. If a protective order or other remedy is not obtained prior to the date that compliance with the request is legally required, the Guaranty Funds and the NCIGF, as appropriate, will furnish only that portion of the Evaluation Material or take only such action as is legally required.

IV. Remedies

4.1 The Guaranty Funds and the NCIGF agree that money damages would not be a sufficient remedy for a breach of this Agreement, and that the Commissioner or Receiver shall be entitled to equitable relief, including injunctive relief, as a remedy for such breach. Such remedy shall be in addition to all other remedies available at law or in equity, and shall not be deemed the exclusive remedy for a breach of this Agreement. Any action to enforce this Agreement shall be brought in the [appropriate court for the proceeding].

4.2 In the event of an action alleging a breach of this Agreement, the prevailing party shall be
entitled to reimbursement for its reasonable attorney’s fees. Any attorney’s fees awarded
to the Guaranty Funds or the NCIGF shall be handled as an administrative expense in the
proceeding, subject to [cite to applicable law]. Any attorney’s fees awarded to the
Commissioner or Receiver shall be paid from the Guaranty funds and NCIGF’s funds, and
shall not be submitted as a claim in the proceeding.

4.3 No failure or delay by any Party in exercising any right, power or privilege shall operate
as a waiver thereof. Any exercise of a right, power or privilege shall not be considered to
preclude any other or further exercise thereof.

4.4 There shall be no liability on the part of the Commissioner or Receiver or the Company(ies)
to the Guaranty Funds or NCIGF relating to or arising from the Evaluation Material or any
other documents, material, information or communications provided under this Agreement.

V. Warranties and Representations

5.1 The Commissioner, the Guaranty Funds, and the NCIGF to the extent consistent with their
statutory and other obligations, shall in good faith cooperate and communicate promptly
with each other with respect to the performance of their duties under this Agreement.

5.2 The Guaranty Funds and the NCIGF represent that they have the authority to enter into this
Agreement and fulfill their obligations under this Agreement.

5.3 Each undersigned person represents that he or she is authorized to sign this Agreement on
behalf of the Party he or she represents.

5.4 The Guaranty Funds and the NCIGF understand and acknowledge that the Commissioner
or Receiver makes no representations or warranties as to the accuracy or completeness of
any Evaluation Material provided under this Agreement.

VI. Termination

6.1 This Agreement may be terminated at any time by agreement among the Parties or by any
single Party in writing with 30 days’ notice, provided that all Evaluation Material obtained
prior to such termination shall remain confidential, unless otherwise agreed by the Parties,
and except as otherwise provided by law. Further, this Agreement shall be terminated upon
a determination in writing by the Commissioner or the Receiver that the Company no
longer presents a material risk of Receivership.

6.2 The Guaranty Funds and the NCIGF are permitted to use Evaluation Material in the manner
and for purposes described herein until delivery by the Receiver or Commissioner of a
written notice specifying the date of termination of this Agreement. Upon a receivership
order wherein one or more Guaranty Funds are triggered this Agreement shall terminate in
all respects without the obligation to destroy Evaluation material or maintain it as
confidential.
DRAFT 3-18-22

6.3 Except as provided in Paragraph 6.2, in the event of a termination of this Agreement, the Guaranty Funds and NCIGF shall immediately undertake to destroy all Evaluation Materials, and all copies, summaries, analyses and notes of the contents or parts thereof, and shall provide an affidavit attesting to the destruction of all such Evaluation Materials being provided to the Receiver, if appointed, and the Commissioner within 30 days after termination, and no part thereof shall be retained by the Guaranty Funds or NCIGF in any form without the prior written consent of the Commissioner or Receiver.

VII. Miscellaneous Provisions

7.1 Nothing in this Agreement shall be deemed to create an attorney-client relationship between any Party’s counsel and any other Party.

7.2 This Agreement shall be governed by and construed in accordance with the laws of the State of [state of domicile of the insolvency].

7.3 This Agreement may be executed in multiple counterparts, each of which shall be deemed an original for all purposes, and all of which together shall constitute one and the same instrument.

7.4 This Agreement shall be effective upon the date signed by each party and shall also apply to any and all Evaluation Material that has previously been shared between the Parties.

7.5 All communications under this Agreement shall be in writing and shall be sent by email to the addresses specified below. A copy of any such notice shall also be personally delivered or sent by either first class registered or certified U.S. Mail, return receipt requested, postage prepaid, or by a bonded mail delivery service, to the address set out below:

The Commissioner:  The Receiver:
[name, address, phone, email address]  [name, address, phone, email address]

Guaranty Funds:
[list of contact information for signatory funds]

7.6 The Parties agree to meet periodically, at least annually, to discuss issues arising under this Agreement and its implementation with respect to any specific Company.

REINSURANCE (E) TASK FORCE

Reinsurance (E) Task Force March 22, 2022, Minutes ........................................................................................................ 9-621
March 14, 2022, Draft Uniform Checklist for Reciprocal Jurisdiction Reinsurers (Attachment One) ........ 9-624
Implementation of the 2019 Revisions to the Credit for Reinsurance Model Law (#785) and the
Credit for Reinsurance Model Regulation (#786); Status as of March 11, 2022 (Attachment Two) ..... 9-630
Implementation of the Term and Universal Life Insurance Reserve Financing Model Regulation (#787);
Status as of March 11, 2022 (Attachment Three) ........................................................................................................ 9-632
Reinsurance (E) Task Force
Virtual Meeting (in lieu of meeting at the 2022 Spring National Meeting)
March 22, 2022

The Reinsurance (E) Task Force met March 22, 2022. The following Task Force members participated: Chlora Lindley-Myers, Chair, and John Rehagen (MO); Chris Niccolopoulos, Vice Chair, represented by Doug Bartlett and Pat Gosselin (NH); Lori K. Wing-Heier represented by David Phifer (AK); Alan McClain, represented by Mel Anderson (AR); Ricardo Lara represented by Monica Macaluso (CA); Andrew N. Mais represented by Joel Henry (CT); Trinidad Navarro represented by Ryllyn Brown (DE); David Altmaier represented by Carolyn Morgan (FL); Doug Ommen represented by Kim Cross (IA); Amy L. Beard represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Stewart Guerin (LA); Gary D. Anderson represented by Christopher Joyce (MA); Eric A. Cioppa represented by Robert Wake (ME); Mike Causey represented by Jackie Obusek (NC); Jon Godfread represented by Matt Fischer (ND); Eric Dunning represented by Lindsay Crawford (NE); Marlene Caride represented by Diana Sherman (NJ); Russell Toal (NM); Adrienne A. Harris represented by Roberto Paradis (NY); Judith L. French represented by Dale Bruggeman (OH); Elizabeth Kelleher Dwyer represented by Jack Broccoli (RI); Cassie Brown represented by Jamie Walker (TX); Jon Pike represented by Jake Garn (UT); Scott A. White represented by David Smith and Doug Stolte (VA); and Nathan Houdek represented by Mark McNabb (WI).

1. **Adopted its 2021 Fall National Meeting Minutes**

Ms. Obusek made a motion, seconded by Mr. Eft, to adopt the Task Force’s Dec. 13, 2021, minutes (see NAIC Proceedings – Fall 2021, Reinsurance (E) Task Force). The motion passed unanimously.

Jake Stultz (NAIC) provided the report of the Reinsurance Financial Analysis (E) Working Group. He stated that the Working Group meets in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings. He stated that the Working Group met Dec. 20, 2021, to approve one certified reinsurer and three reciprocal jurisdiction reinsurers for passporting. He stated that the Working Group also met March 3, 2022, and took the following action: 1) approved seven reciprocal jurisdiction reinsurers and one certified reinsurer for passporting; 2) discussed revising the regulator-only Reinsurance Financial Analysis (E) Working Group Procedures Manual; and 3) discussed the revisions to the Uniform Checklist for Reciprocal Jurisdiction Reinsurers (Uniform Checklist). He stated that after its March 3 meeting, the Working Group conducted an e-vote to approve the revisions to the Uniform Checklist.

Mr. Stultz stated that the Working Group has now approved 14 reciprocal jurisdiction reinsurers for passporting and plans to meet several more times in 2022 as more applications are received. He noted that the list of passported reinsurers can be found on the Certified and Reciprocal Jurisdiction Reinsurer web page. He stated that NAIC staff have revised the web page to better meet the needs of state insurance regulators, industry, and other interested parties. He stated that NAIC staff are creating a point-of-contact list to be included on that web page and will include a single best contact for each state for any issues regarding reciprocal jurisdiction reinsurers and certified reinsurers. He requested that each state provide their point of contact person, which will be published publicly on the certified and reciprocal jurisdiction reinsurer webpage.

Ms. Macaluso made a motion, seconded by Mr. Bartlett, to adopt the Working Group’s report. The motion passed unanimously.
3. **Exposed Revisions to the Uniform Checklist**

Dan Schelp (NAIC) stated that the Reinsurance Financial Analysis (E) Working Group met March 3 to discuss revisions to the Uniform Checklist. After that meeting, the Working Group conducted an e-vote and approved sending the revisions to the Task Force for further consideration. Mr. Schelp stated that the Task Force approved the current version of the Uniform Checklist on June 9, 2020, but since that time, the NAIC has adopted the ReFAWG Review Process, which provides updated guidance on the passporting process.

Mr. Schelp stated that the NAIC originally adopted the *Uniform Application Checklist for Certified Reinsurers* in 2014, and it was designed to place uniformity around the state approval process and to assist the Working Group in the review of certified reinsurers for passporting purposes. He stated that it has been amended several times and was the basis for the Uniform Checklist. Mr. Schelp provided a summary of the revisions to the Uniform Checklist and recommended that the document be exposed for a 30-day public comment period.

Mr. Bruggeman suggested a clarification to the Uniform Checklist to provide additional guidance for lead states regarding the ReFAWG Review Process. Mr. Rehagen stated that this clarification may be helpful for the final adopted version of the document and will be considered before the document is adopted.

Mr. Bartlett made a motion, seconded by Mr. Bruggeman, to expose the *Uniform Checklist for Reciprocal Jurisdiction Reinsurers* (Attachment One) for a 30-day public comment period. The motion passed unanimously.

4. **Received a Status Report on the Reinsurance Activities of the Mutual Recognition of Jurisdictions (E) Working Group**

Mr. Wake stated that the Working Group has not met since the 2021 Fall National Meeting but plans to meet later this year to complete its duties related to the group capital calculation (GCC) process and to reapprove the status of the seven existing qualified jurisdictions and the three reciprocal jurisdictions that are not subject to an in-force covered agreement. He stated that NAIC staff established a due diligence review process in 2021 and provided a recommendation to the Working Group that the existing qualified jurisdictions and reciprocal jurisdictions not subject to a Covered Agreement should retain their status, and this recommendation was then adopted by the Working Group. He stated that the Working Group will perform this same review toward the end of 2022 and will report this to the Task Force at the Fall National Meeting. Mr. Wake stated that the Working Group would meet if there were any updates with the qualified jurisdiction review of the Republic of Korea.

5. **Received a Status Report on the States’ Implementation of the 2019 Revisions to Model #785 and Model #786**

Mr. Stultz stated that as of March 11, 48 U.S. jurisdictions have adopted the 2019 revisions to the *Credit for Reinsurance Model Law* (#785), while five jurisdictions have action under consideration. He noted that 34 states have adopted the revisions to the *Credit for Reinsurance Model Regulation* (#786), and seven jurisdictions currently have action under consideration. The maps showing the adoption of the 2019 revisions to Model #785 and Model #786 were included in the meeting materials (Attachment Two).

Mr. Stultz stated that the 2019 revisions to the models must be adopted by the states prior to Sept. 1, 2022, which is the date when the Federal Insurance Office (FIO) must complete its federal preemption reviews under the Covered Agreements. He stated that the Task Force will provide support to the states to meet this deadline. Mr. Stultz recommended that all states and jurisdictions adopt the 2019 revisions to Model #785 and Model #786 as soon as possible and no later than July 1 in order to give the FIO sufficient time for its federal preemption analysis.
Mr. Stultz stated that the current adoption maps can be found on the Task Force’s web page. He noted that he and Mr. Schelp can answer any technical questions during the legislative process, and Holly Weatherford (NAIC) is working directly with the states on the adoption of the 2019 revisions to Model #785 and Model #786.

Mr. Schelp stated that the NAIC has been in contact with all states that have not yet adopted Model #786 and that all are in the process of completing the adoption of the model.

Karalee Morrell (Reinsurance Association of America—RAA) complimented the Task Force and NAIC staff for the work that has been completed at this point and added that the point of contact list will be valuable for the RAA.

6. Received a Status Report on the States’ Implementation of Model #787

Mr. Stultz stated that the *Term and Universal Life Insurance Reserve Financing Model Regulation* (#787) becomes an accreditation standard on Sept. 1, with enforcement beginning on Jan. 1, 2023. He noted that as of March 11, 10 jurisdictions have adopted Model #787, with another eight jurisdictions with action under consideration. He stated that the map showing the current adoption status for Model #787 was included in the meeting materials (Attachment Three) and added that the adoption of Model #787 is unrelated to the Covered Agreements and is not potentially subject to federal preemption. Mr. Stultz noted that Model #787 mirrors *Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation* (AG 48), and that under the accreditation standards, a state may meet the requirements through an administrative practice, such as an actuarial guideline. He and added that if a state adopts Model #787, it also will need to adopt Section 5B(4) of Model #785.

Having no further business, the Reinsurance (E) Task Force adjourned.

II. Filing Requirements for “Passporting State” of Reciprocal Jurisdiction Reinsurer

In order to facilitate multi-state recognition of assuming insurers and to encourage uniformity among the states, the NAIC has initiated a process called “passporting” under which the commissioner has the discretion to defer to another state’s determination with respect to compliance with this section. Passporting is based upon individual state regulatory authority, and states are encouraged to act in a uniform manner in order to facilitate the passporting process. States are also encouraged to utilize the passporting process to reduce the amount of documentation filed with the states and reduce duplicate filings.

If an NAIC accredited jurisdiction has determined that the conditions set forth under the Filing Requirements for Lead States have been met, the commissioner has the discretion to defer to that jurisdiction’s determination, and add such assuming insurer to the list of assuming insurers to which cessions shall be granted credit. The commissioner may accept financial documentation filed with the Lead State or with the NAIC. The following documentation must be filed with the Passporting State:

<table>
<thead>
<tr>
<th>Citation to State Law / Regulation</th>

III. Interaction Between Certified Reinsurers and Reciprocal Jurisdiction Reinsurers

Under Section 8A(5) of the Credit for Reinsurance Model Regulation (#786), credit for reinsurance shall apply only to reinsurance contracts entered into or renewed on or after the effective date of the certification of the assuming insurer with respect to Certified Reinsurers. Under Section 2F(7) of the Credit for Reinsurance Model Law (#785), credit shall be taken with respect to Reciprocal Jurisdiction Reinsurers only for reinsurance agreements entered
Uniform Checklist for Reciprocal Jurisdiction Reinsurers

Approved by the Reinsurance (E) Task Force on June 9, 2020

into, amended, or renewed on or after the effective date of the statute adding this subsection, and only with respect to losses incurred and reserves reported on or after the later of (i) the date on which the assuming insurer has met all eligibility requirements to be designated a Reciprocal Jurisdiction Reinsurer, and (ii) the effective date of the new reinsurance agreement, amendment, or renewal.

It is expected that certain assuming insurers may be considered to be Certified Reinsurers for purposes of in-force business and Reciprocal Jurisdiction Reinsurers with respect to reinsurance agreements entered into, amended, or renewed on or after the effective date. In addition, these same reinsurers may also have certain blocks of business that are fully collateralized under the prior provisions of Model #785 and Model #786. The NAIC blanks will be amended to reflect the status of these reinsurers with respect to each type of insurance assumed.

RISK RETENTION GROUP (E) TASK FORCE

The Risk Retention Group (E) Task Force did not meet at the Spring National Meeting.
VALUATION OF SECURITIES (E) TASK FORCE

Valuation of Securities (E) Task Force April 5, 2022, Minutes ........................................................................................................ 9-635

American Council of Life Insurers (ACLI) Comment Letter Regarding the Proposed P&P Manual Amendment to Permit Un-Guaranteed and Unrated Subsidiary Obligors in WCFI Transactions, with SVO Discretion (Attachment Two) ........................................................................................................ 9-647

P&P Manual Amendment to Permit Un-Guaranteed and Unrated Subsidiary Obligors in WCFI Transactions, with SVO Discretion (Attachment Three) ........................................................................................................ 9-650
The Valuation of Securities (E) Task Force met in Kansas City, MO, April 5, 2022. The following Task Force members participated: Doug Ommen, Chair, represented by Carrie Mears (IA); Scott A. White, Vice Chair, represented by Greg Chew and Doug Stolte (VA); Lori K. Wing-Heier represented by David Phifer (AK); Ricardo Lara represented by Laura Clements (CA); Andrew N. Mais represented by Kathy Belfi and Kenneth Cotrone (CT); Trinidad Navarro represented by Rylynn Brown (DE); David Altmaier represented by Carolyn Morgan (FL); Dean L. Cameron represented by Eric Fletcher and Amber Re (ID); Dana Popish Severyinghaus represented by Bruce Sartain (IL); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Melissa Gibson (LA); Gary D. Anderson represented by John Turchi (MA); Kathleen A. Brrane represented by Matt Kozak (MD); Chlora Lindley-Myers represented by Debbie Doggett (MO); Eric Dunning represented by Lindsay Crawford and Justin Schrader (NE); Marlene Caride represented by Nakia Reid (NJ); Adrienne A. Harris represented by Bob Kasinow and Jim Everett (NY); Cassie Brown represented by Jamie Walker (TX); Jon Pike represented by Jake Garn (UT); Mike Kreidler represented by Steve Drutz (WA).

1. Adopted its 2021 Fall National Meeting Minutes

Mr. Chew made a motion, seconded by Ms. Doggett, to adopt the Task Force’s Dec. 12, 2021, minutes (see NAIC Proceedings – Fall 2021, Valuation of Securities (E) Task Force). The motion passed unanimously.

2. Received and Discussed Comments on a Proposed Amendment to the P&P Manual to Update the Definition of PPS

Marc Perlman (NAIC) said that as explained at the 2021 Fall National Meeting, an amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) is being proposed to update the definition of “principal protected securities” (PPS) because the Securities Valuation Office (SVO) is seeing transactions that pose similar risks to PPS transactions, as currently defined, but they are structured in a way that do not cleanly fit that definition. Currently, the PPS definition covers securities with underlying assets. This includes a traditional bond or bonds and other “performance” assets, such as derivatives, common stock, commodities, equity indices, and even undisclosed assets, which are intended to generate excess return which are typically not securities that would otherwise be permitted on the bond schedule. In each case, the external credit rating provider (CRP) rating is based solely on the component dedicated to the repayment of principal and ignores the risks and statutory prohibitions of reporting the performance asset on Schedule D, Part 1.

The SVO has received proposals for securities that possess many of the same risks as PPS but are structured in a way that they do not cleanly fit the definition in the P&P Manual. They could be described as “synthetic PPS” in that the security is not issued by an special purpose vehicle (SPV), which holds an “underlying” principal protection bond and the performance asset. Instead, the security is the direct obligation of a large financial institution, which is obligated to pay principal at maturity and a premium based on the performance of referenced assets, such as equity, fixed income or futures indices (or a combination thereof), and other financial assets. Though the obligation is solely that of the issuing financial institution, meaning there are no underlying bonds or performance assets (as currently specified in the PPS definition), the structure poses the same risk of exposure to a performance asset because the amount of the issuer’s payment obligation is directly dependent on the performance of the referenced indices or assets. Additionally, unlike a PPS transaction with an underlying bond and performance asset, the likelihood of payment of the performance asset premium, whatever the amount might be, is linked directly to the creditworthiness of the issuer.
Comments have been received from interested parties stating that they agree with the substance behind the proposed amendment but requested that the wording be thoroughly discussed, as was the case with the original PPS definition, to make certain that the amendment does what is intended and does not result in unintended consequences. The SVO requests from the Task Force permission to work with industry for purposes of modifying the language of the current proposal and then re-exposing this amendment for an abbreviated comment period. As deals of this type are currently coming to market, the SVO would like to expedite these discussions and the eventual adoption of this amendment.

Mike Reis (Northwestern Mutual on behalf of the American Council of Life Insurers [ACLI], Private Placement Investors Association [PPiA], and the North American Securities Valuation Association [NASVA]), said they understand the concern and support the change, but they would like to work with the SVO to avoid any unintended consequences.

Ms. Mears directed SVO staff to work with industry on technical modifications to the current proposed language and expose the revised amendment for a 30-day comment period.

3. Exposed a Proposed Amendment to the P&P Manual to Update the Definition of Other Non-Payment Risks Assigned a Subscript “S”

Charles Therriault (NAIC) said this agenda item is closely related to the last one in that PPS are a type of subscript “S” security. Securities that possess “Other Non-Payment Risks” are intended to be reviewed by the SVO, but these investments have not been explicitly included on the list of Specific Populations of Securities Not Eligible For Filing Exemption in Part Three of the P&P Manual. Securities with other non-payment risks are identified through assignment of the Administrative Symbol “S” as a subscript to the NAIC designation. This amendment would add “Securities with Other Non-Payment Risks” to the list of securities that are ineligible for filing exemption.

As noted in Part One, paragraph 90, of the P&P Manual, “An objective of the VOS/TF is to assess the financial ability of an insurer to pay claims. For example, the regulatory assumption is that a fixed income instrument called debt by its originator or issuer requires that the issuer make scheduled payments of interest and fully repay the principal amount to the insurer on a date certain. A contractual modification that is inconsistent with this assumption creates a rebuttable inference that the security or instrument contains an additional or other non-payment risk created by the contract that may result in the insurer not being paid in accordance with the underlying regulatory assumption. The SVO is required to identify securities that contain such contractual modifications and quantify the possibility that such contracts will result in a diminution in payment to the insurer, so this can be reflected in the NAIC Designation assigned to the security through the application of the notching process.”

The proposed amendment clarified through additional illustrations securities that would also be considered as having “Other Non-Payment Risks.” Based on comments received, The SVO requests the Task Force’s approval to work with industry on modifying the language and fine-tuning the amendment to avoid any unintended consequences.

Mr. Reis said this is related to the previous item on PPS. There are more concerns with this amendment as to possible unintended consequences in the additional illustrations, and they appreciate working with the SVO to update the amendment and include a principle-based feature to avoid financial engineering.

Ms. Mears directed SVO staff to work with industry on technical modifications to the current proposed language and expose the revised amendment for a 45-day public comment.
4. **Received and Discussed a Proposed Referral to the Blanks (E) Working Group to Add Fixed Income Analytical Risk Measures to Investments Reported on Schedule D, Part One**

Mr. Therriault said the SVO proposes adding market-data analytical fields for bond investments to the annual statement instructions. This amendment is a first step towards what the former Rating Agency (E) Working Group recommended, and the Financial Condition (E) Committee approved, in 2010 to address lessening the NAIC’s reliance on rating agency ratings by looking at other measures of risk. It also reflects the Investment Analysis Office (IAO) staff’s recent findings regarding the discrepancies between ratings, presented in its Nov. 29, 2021, memo, and recommendation to identify securities with risks that may not be reflected by a rating.

The Rating Agency (E) Working Group made these summary recommendations in its April 28, 2010, report that was adopted by the Financial Condition (E) Committee:

1. Regulators [should] explore how reliance on Approved Ratings Organization (ARO) ratings can be reduced when evaluating new, structured, or alternative asset classes, particularly by introducing additional or alternative ways to measure risk.
2. Consider alternatives for regulators’ assessment of insurers’ investment risk, including expanding the role of the NAIC SVO.
3. When considering continuing the use of ratings in insurance regulation, the steps taken by the nationally recognized statistical rating organizations (NRSROs) in correcting the causes that led to recent rating shortfalls, including the NRSROs’ efforts in implementing the recommended structural reforms, should be taken into account.

As the IAO staff demonstrated with the analysis in its Nov. 29, 2021, memo regarding rating discrepancies, not all CRP ratings reflect a reasonable or consistent assessment of a security’s risk, indicating that rating shortfalls persist today. One step towards introducing alternative ways to measure a bond security’s risk would be to require insurers to report various common analytical measures about each security, including metrics such as its current market yield, interest rate sensitivity, spread relative to risk-free securities such as U.S. Treasuries, duration, convexity, and average remaining life. The more a security’s market yield and spread differ from similarly rated securities, the more likely it is that the implied market-perceived risk of that security differs from the risk indicated by the credit rating assigned to it. The yield difference or spread in basis points can potentially help identify securities whose CRP risk assessment warrants further review by the SVO, examiners, or other regulatory groups. For example, a AAA-rated 10-year security with a market yield of 6.00% appears anomalous when compared to data published by the St. Louis Fed (FRED) indicating a AAA U.S. corporate yield should be 3.00% (as of March 21). Significant differences would highlight a potential risk assessment mismatch. Other fields that measure a security’s price sensitivity to interest rate movements may also help to identify market-perceived risk inconsistent with the assigned credit rating.

The Rating Agency (E) Working Group made similar recommendations to consider market data in its referral to this Task Force and the former SVO Initiatives (EX) Working Group. Their detailed recommendations were as follows:

1. **Referral to the Valuation of Securities (E) Task Force: The Task Force should continue to develop independent analytical processes to assess investment risks. These mechanisms can be tailored to address unique regulatory concerns and should be developed for use either as supplements or alternatives to ratings, depending on the specific regulatory process under consideration.**
2. **Referral to the Valuation of Securities (E) Task Force: ARO ratings have a role in regulation. However, since ratings cannot be used to measure all the risks that a single investment or a mix of investments may represent in an insurer’s portfolio, NAIC policy on the use of ARO ratings should be highly selective and incorporate both supplemental and alternative risk assessment benchmarks.**
3. Referral to the former SVO Initiatives (EX) Working Group: The NAIC should evaluate whether to expand the use of SVO and increase regulator reliance on the SVO for evaluating credit and other risks of securities.

The SVO is recommending the addition of these common bond market data fields to the annual statement instructions, through a referral to the Blanks (E) Working Group, for all bonds reported on Schedule D, Part 1 (those within scope of Statement of Statutory Principles (SSAP) No. 26R—Bonds and SSAP No. 43R—Loan-Backed and Structured Securities) with the objective of developing analytical processes to assess investment risk as either a supplement or alternative to ratings. To allow sufficient time for insurers to update their systems, the SVO recommends that the changes be implemented as electronic-only fields effective beginning with the reporting year ending Dec. 31, 2023. The SVO recommends informational referrals to the Capital Adequacy (E) Task Force and the Life Actuarial (A) Task Force to give them the opportunity to include any other market data fields that would assist them in their analysis work.

Ms. Mears said while the Task Force is proposing these new fields for the benefit of analytical procedures by the SVO, they really do align with other initiatives in place and with other groups, including the Capital Adequacy (E) Task Force and the Life Actuarial (A) Task Force. It is anticipated that will be a collaborative effort with those groups to ensure that the new fields are ones that can be used across those various work streams. She said this is a large change and that she agrees that insurers should be given sufficient time to prepare their systems. There are also changes coming from the bond project at the Statutory Accounting Principles (E) Working Group and will be working to align all those efforts across the various groups that are interested in this topic. These are all typical bond analytical fields commonly used to assess a bond risk, and they would be valuable information to be provided to state insurance regulators and the Task Force.

Chris Anderson (Anderson Insights) said what is being discussed is building a model and before a model is built, the purpose of the model needs to be understood. Is the model to get a general idea of insurers assets or is it to identify outliers or anomalies? Once that is addressed, the next question is what data elements are needed to populate the model? He said the suggestions seem reasonable. The question that needs to be addressed is: Are those the right variables? Are there too many, or are there not enough? If the purpose of the model is to identify outliers, then the right variables are needed. He said as another word of caution, if a simple web search is done, it will show how many people try to build models to identify what the proper rating agency rating should be. He said the world is littered with those Ph.D., artificial intelligence (AI), machine learning (ML) people. He said there are 5,000 analysts and supervisors at the nine rating agencies, and they would all love to have a model that would tell what the right rating should be for a bond. Mr. Anderson this is complicated and difficult, and perhaps the NAIC can find resources to build such a model. Before that is attempted, he said the model should be seen and tested. Then decide whether thousands of companies should be required to provide additional data, especially because the model itself that the NAIC develops may not be work properly without additional data.

Mr. Anderson said that last year, 43 anomalies were identified. The tough part, then, is doing attribution. Why do those anomalies exist? He said it is unknown why the 43 anomalies identified last year exist. He said it is hard and difficult. Mr. Anderson said it could be that the NAIC would need to replicate the process of the rating agency. He said a medium size rating agency might have 70–75 methodologies. To replicate the rating, the methodologies need to be understood. For corporate, for example, the NAIC would need to come up with its economic scenario, rely on economists, and then get an industry assessment. If it is autos, if it is aviation, for example, it is important to know how the individual company fits into that structure, both the economic structure and the industry outlook. This is interactive, but the analysts, of course, are looking at history. They are looking at audited financial statements and other things, but they are also actively participating with the company. Rating agency analysts of a corporate issuer has inside information. They meet with the company. They follow the company. They perform their due diligence, and then they go to their committee, which is represented by specialists that are drawn from that industry and who can contribute to the conversation. The analysts’ views are accepted or they are not, and
the analysts just sent back for more work. Mr. Anderson that is the process the rating agencies go through. If there is an anomaly, it needs to be understood now what that anomaly is attributed to.

Mr. Anderson said the SVO has a different process. The SVO looks at history. It looks at three years of audited financials. It looks at secondary information. It looks at the report of the analyst at the insurance company to their investment committee. The SVO may look at other things, but it does not take advantage of the many things that the 5,000 analysts and supervisors at the nine rating agencies do. It is a different process. Even if the SVO had a model and it worked well, there would still be anomalies must be explained. He said that is going to be a challenge.

Mr. Anderson commented on the objective that that the NAIC should reduce reliance on rating agencies for the 315,000 securities that insurers own. He said the idea that the NAIC is trying to reduce reliance is probably not the appropriate objective for this group. That is a blueprint from a dozen years ago. Some of the working groups in that blueprint do not exist anymore. This is not excusing the rating agencies. He said the rating agencies historically did a terrible job a dozen years ago. The U.S. Securities and Exchange Commission (SEC) requires that methodologies and performance be published. The SEC is doing what the SEC does, shining a light on a problem. He said if look at Form NRSRO, you can see the nine exhibits for all the rating agencies in a form that is standardized. It is not only standardized, but the SEC investigates, and it makes sure that a rating agency says what it is doing and does what it says and then those are reported on annually.

Mr. Anderson said that what needs to be done with the R-1 and C-1 bond factors is to come up with reliable factors that can be used to drive the risk-based capital (RBC) model. The RBC model is complicated. He said there are probably not a lot of people who understand the intricacies of that model, but what the model requires is accurate default statistics. That should be the objective of this Task Force in coming up with accurate representations of credit worthiness for R-1 and C-1 that will allow the RBC model to achieve its objective, which is to identify potentially troubled companies. It may be that reducing reliance on rating agencies is something the NAIC winds up doing. In summary, there is the difficulty of developing a model and doing attribution when there are exceptions. The fundamental question of why it is not appropriate to be thinking about the benefit of having accurate C-1 and R-1 factors that drive the RBC model.

Stephen Broadie (American Property Casualty Insurance Association—APCIA) requested a 45-day exposure period for the proposal.

Ms. Mears directed SVO staff to expose this request for a 45-day comment period May 20 and to prepare a referral to the Blanks Working Group with copies to Capital Adequacy (E) Task Force and Life Actuarial (A) Task Force.

5. Received and Discussed Comments on a Proposed Amendment to the P&P Manual to Add Guidance on the Designation of Schedule BA Assets with Fixed Income Characteristics

Mr. Perlman said the SVO recommends updating the instructions in Part Three of the P&P Manual to include guidance related to the assignment of NAIC designations to Schedule BA assets with underlying characteristics of bonds or fixed income instruments. Part One of the P&P Manual currently permits the SVO to assign NAIC designations to Schedule BA assets with underlying characteristics of bonds or fixed income instruments, but there is currently no specific guidance for the SVO in Part Three of the P&P Manual. Including the proposed provisions would enable the SVO to assign NAIC designations to Schedule BA assets that are not expressly covered by other sections of the P&P Manual (such as Schedule BA Funds). Schedule BA assets for life and fraternal insurers would benefit from NAIC designations because they would be eligible for more favorable RBC treatment. The SVO’s authority to assign NAIC designations to certain Schedule BA assets already exists. Part One of P&P Manual states: “The SVO is assigned to assess investment securities reported to state regulators on Schedule D and Schedule BA.”
Additionally, the P&P Manual also explains in Part One that to be eligible for the assignment of an NAIC designation, a Schedule BA asset must have underlying characteristics of a bond or fixed income instrument.

This proposed amendment would potentially make various types of assets eligible for an NAIC designation that currently are not. Each asset would need to be individually assessed by the SVO for bond or fixed income characteristics. At this time, the SVO recommends that SVO staff continue working with industry on this topic.

Mr. Reis said the ACLI, PPIA, and NASVA have had a longstanding shared goal with the SVO to work in getting NAIC designations on fixed income like instruments to right size the RBC charge. That will probably not happen without a referral to Capital Adequacy (E) Task Force. It also ties in with what is happening in the 43-R bond project with the Statutory Accounting Principles (E) Working Group, where certain investments may be moving to Schedule BA. Mr. Reis said this is a supported effort, and they will continue working with the SVO on it.

Ms. Mears directed SVO staff to continue to work with industry on the topic, which will eventually result in a referral to the Capital Adequacy (E) Working Group. She said it will be helpful, for their purposes, if there is a good framework that the Valuation of Securities (E) Task Force can provide to the Capital Adequacy (E) Task Force.

6. **Adopted an Amendment to the P&P Manual to Permit Un-Guaranteed and Unrated Subsidiary Obligors in WCFI Transactions, with SVO Discretion**

Ms. Mears said the Task Force has gone through several iterations of this amendment over the past year. With the current version, exposed at the 2021 Fall National Meeting, the SVO reintroduced a proposal under which the Task Force would give the SVO discretion to notch down from the parent’s rating in certain circumstances. It adheres very closely to an earlier version of the proposal.

Mr. Perlman said as the Task Force is probably aware of by now, the SVO received comments from certain insurers and other interested parties that it should assign NAIC designations to working capital finance investments (WCFI) with unguaranteed and unrated obligors, based on the implied support from an obligor’s NAIC CRP-rated parent even though the SVO found no generally accepted analytical technique or methodology to support the assumption that a parent entity will necessarily support its subsidiary in times of financial distress.

The current draft of the amendment, exposed at the 2021 Fall National Meeting, is substantially like the original amendment and reflects the comments from some Task Force and Statutory Accounting Principles (E) Working Group members that they would like the SVO to retain discretion to notch down, as it deems appropriate (Attachment One). Like the November 2020 amendment, the Task Force would direct the SVO to imply the parent’s support of its subsidiary and would give the SVO discretion to assign an NAIC designation to the subsidiary that is lower than that of the parent based on its assessment of the parent/subsidiary relationship. However, this current proposal clarifies that if the SVO notches the NAIC designation of a subsidiary obligor down from that of its parent, resulting in a credit assessment below an NAIC 2, the WCFI program would not be eligible for an NAIC designation because it would no longer meet the definition of an eligible “obligor” in SSAP No. 105R—Working Capital Finance Investments.

During the exposure period, a comment letter (Attachment Two) was sent to both this Task Force and the Statutory Accounting Principles (E) Working Group with comments related to working capital finance that go beyond the scope of the question of unrated subsidiaries and that affect SSAP No. 105R. It came to this Task Force’s attention that the Financial Accounting Standards Board (FASB) exposure draft regarding disclosure of WCFI or supplier finance programs, as the FASB calls them, which was sent as an attachment to the letter, was not posted in the meeting materials, but it can now be found in the documents tab of the Task Force web page. The Statutory Accounting Principles (E) Working Group has indicated that it does not plan to address these comments at this time, and as such, the SVO proposes adopting this amendment in its current form and revisiting
the other topics in question, depending on Working Group’s position on them, should it revisit them in the future. If this amendment is adopted, SVO staff will monitor WCFI transactions and keep the Task Force informed if the SVO encounters any issues or has any problems with WCFI programs because of these new instructions.

Ms. Mears said this is a narrow application of this direction from the Task Force solely to these WCFIs. And as Mr. Perlman noted, the Task Force would anticipate, in a regulator-to-regulator session, a continued dialog with the SVO on what it is seeing and what types of investments are coming through in case the Task Force would like to alter this in the future.

Mike Monahan (ACLI) said that all the work on WCFI transactions is appreciated and that he agrees with the recommendation to adopt this amendment.

Mr. Kozak made a motion, second by Ms. Doggett, to adopt this P&P amendment by which the Task Force would direct the SVO to assign NAIC designations to WCFIs with unrated subsidiary obligors (Attachment Three). The motion passed unanimously.

7. Heard a Report on the Use of NAIC Designations by Other Jurisdictions in the Regulation of Insurers

Mr. Therriault said the SVO was made aware of regulators or insurers in non-U.S. jurisdictions, such as the Bermuda Monetary Authority (BMA) and Japan’s Financial Services Agency (FSA), either referencing NAIC designations in their regulatory processes or wanting to reference them. The P&P Manual is specific in that NAIC designations are only intended for NAIC members consisting of the chief insurance regulators of the 50 states, the District of Columbia, and five U.S. territories. For example, the P&P Manual says of the intended, proper, and authorized use of NAIC designations, the following:

1. An NAIC designation for quality (NAIC designation) of a security is produced solely for NAIC members who should interpret the designation for quality, in the context of the NAIC Financial Regulation Standards and Accreditation Program, a member’s state insurance laws and regulations, and the regulatory or financial solvency profile of a specific insurance company.
2. Because an NAIC designation is not produced to aid the investment decision-making process, NAIC designations are not deemed to be suitable for use by anyone but NAIC members.
3. NAIC designations are not intended to be and should not be used as if they were the functional equivalent of the credit ratings of NRSROs or other rating organizations whose ratings are intended to be used by investors as predictive opinions of default risk.
4. The use or adoption of NAIC designations by anyone other than NAIC members is improper and is not authorized by the NAIC.
5. NAIC designations and other analytical products of the SVO and Structured Securities Group (SSG) are produced solely for the benefit of NAIC members in their capacity as state insurance department officials for use in the NAIC Financial Regulation Standards and Accreditation Program.

The SVO received this request and support for this change from interested parties who have identified that some U.S. dollar private placement securities could be classified as “unrated” and receive unfavorable treatment if overseas regulators cannot rely on NAIC designations and different legal entities of a single parent could be subject to different capital charges.

Given this would directly affect an NAIC-owned work product and NAIC designations, and it will require the NAIC as an organization to enter into agreements with non-U.S. regulatory groups, the SVO believes the NAIC’s Executive (EX) Committee will need to be involved and approve taking any further steps. The SVO recommends a referral to the Executive (EX) Committee for direction on how it would like to proceed with this matter.
Ms. Belfi said she has concerns about unintended consequences and the SVO being viewed as a rating agency. She asked if the ACLI could discuss what kinds of transactions are involved to require this support, then explain why it is important? She asked if it was maybe a U.S.-based group with a transaction with another jurisdiction, but there is concern with this blossoming into someone just wanting a rating from the SVO, and it has nothing to do with the U.S. group.

Mr. Monahan said to address two jurisdictions, Japan FSA and the BMA, U.S. dollar private placements are currently a core asset class for many U.S. companies operating in Japan, including MetLife, Prudential Financial, Aflac, Protective, and some other large companies. If these assets are considered undesignated after Japan adopts the International Associations of Insurance Supervisors’ (IAIS’) Insurance Capital Standard (ICS), there would be a huge selling pressure for an illiquid asset class, potentially causing market disruption on these U.S. assets. There would be no economic justification for this market’s disruptive, just the inability of global regulators to reach agreement. This is a great opportunity for international regulatory cooperation that is primarily under any NAIC’s control. Bermuda and Japan are extremely willing to use NAIC designations. Those jurisdictions just need to understand exactly what they need to do in a memorandum of understanding (MoU) to qualify for access. The NAIC can help by being very explicit about what Bermuda and Japan are going to use these designations for. They are U.S.-based groups.

Mr. Anderson said this undoubtedly has great merit. He said it is unfortunate when something is rated to not take that into consideration. But on the basic premise, just one observation, one will see in the last agenda item that the SVO designates, either on a first-time basis or on a repeat basis, about a little more than 12,000 securities a year. The notion that there is something special about any designation when the vast majority come from rating agencies is something that that need to be considered. He said he is not saying that this does not have tremendous merit; he said he was questioning the premise that there is a great difference between NAIC designations and rating agency ratings.

Ms. Mears directed SVO staff to forward this proposal to the Executive (EX) Committee requesting direction from it as to whether it supports the NAIC permitting non-U.S. jurisdictions access to and use of NAIC designations for their regulatory purposes if there is an MoU between the NAIC’s governing that use and with an acknowledgement from the requesting regulator that its use of designations may deviate from the NAIC’s intended purposes. She said the Executive (EX) Committee should also consider if guardrails are needed to ensure that usage aligns with the NAIC’s expectations.

8. Heard a Report from the SVO on Carryover Filings

Mr. Therriault said as required in Part Two, Operational and Administrative Instructions Applicable to the SVO, of the P&P Manual, the SVO director must prepare a report for the Spring National Meeting identifying an acceptable annual rate of carryover filings for the year-end reporting period. These carryover filings can be identified with the administrative symbols “IF,” which are initial filings with a self-assigned NAIC designation, and “YE,” which are annual update filings the SVO has not yet reviewed, and the NAIC designation from the prior review was carried forward until the review is complete. There were 828 carryovers filing for 2021 versus 795 in 2020; 310 were “IF,” and 518 were “YE.” This represented a carryover rate of 6.7% for 2021 versus a carryover rate of 6.3% for 2020. Overall, the SVO reviewed 12,258 security filings for 2021. A carryover rate below 10% is manageable for the office given its current staffing. As of March 31, there were only 37 remaining carryover filings to review.

Mr. Therriault said the SVO continues to experience significant resource limitations regarding its technology support that is negatively affecting its ability to make significant or timely improvements to its core systems, VISION, Automated Valuation Service Plus (AVS+), and the Structured Security System (STS). There will be limited ability to intake the private letter (PL) rating rationale reports this year, and the full implementation of the policy in VISION will need to be deferred until 2023 or possibly longer. It has also prevented the SVO for several years
now from being able to use the investment data it licenses, such as the business entity cross reference service and
global instruments cross reference service. Both are necessary to implement investment organizational
relationships and additional security identifiers like ISIN in these applications. He said any help that Task Force
members can provide to increase the SVO’s technology support is greatly appreciated.

Ms. Mears said the technology issues come up again and again and is something to be discussed at the Task Force
in terms of what support it can provide moving forward with the SVO so that it can get the technology and other
resources that they need.

9. Received a Report on Projects of the Statutory Accounting Principles (E) Working Group

Julie Gann (NAIC) said the Working Group met April 4. It addressed several issues during that meeting, but only
five will be included in this update—two adoptions and three exposures. The meeting summary, items that were
adopted, and those that were exposed are on the Working Group’s web page. The Working Group adopted a
proposal to support new reporting related to cryptocurrency. Although it did not result in any actual statutory
revisions, it did support a new general interrogatory, which is up for adoption at Blanks (E) Working Group in May
and will be in effect for a year in 2022. The disclosure will capture information from reporting entities on their use
of cryptocurrency, if they hold it, what reporting schedule it is on, and if they are receiving cryptocurrency as
payment of premium.

The second adoption relates to SSAP No. 43R; the Working Group adopted revisions that were referred from this
Task Force related to financial modeling. The Working Group considered whether to remove the financial
modeling guidance from the SSAP fully or just point to the P&P Manual. After considering comments from
industry, the Working Group decided to retain the guidance in SSAP No. 43R. However, it was identified that it
was easier for preparers to refer to the summary there, but the Working Group did make a point to comment
during the meeting that it is only a summary, and the detailed guidance is in the P&P Manual, if there is a need to
got to the actual detailed level guidance.

For exposures and discussion items, Ms. Gann said there three things to note. First, for the principles-based bond
project, the Working Group exposed a revised bond definition, as well as a draft issue paper in March. The Working
Group noted that comments are due May 6. The Working Group received information through comments received
from industry on the proposed reporting changes. As Ms. Mears mentioned earlier, the Working Group expects
significant reporting changes to Schedule D-1, as well as other satellite schedules, as a result of this project. The
Working Group wants to make sure it communicates that loud and clear so that no one is unaware when those
changes are in effect. NAIC staff were directed at the Spring National Meeting to continue working with industry
on those reporting changes, as well as to draft SSAP revisions so the bond definition gets reflected in SSAP No.
26R and SSAP No. 43R, and then those would be subsequently exposed for comment. The goal is to have more
granularity and transparency on the investments that are held on Schedule D-1. She said it is a big project and if
anyone wants to talk with NAIC staff to get more information, they can reach out and talk to her.

With regards to another item that was up for exposure, the Working Group discussed reporting changes to identify
whether an investment is with a related party, regardless of whether that investment is identified as an affiliated
investment in the reporting schedule. This is a second exposure related to this item, where the Working Group
reflected some interested party comments and re-exposed it for a shortened comment period that ends on May
6. The goal is to have it in effect for year-end 2022. There is a concurrent Blanks (E) Working Group proposal that
was also exposed. There will be new electronic reporting columns for reporting entities that would identify a code
on whether the investment came through a related party. There are five different codes there. One is for direct
credit underlying credit exposure and if there was a related party otherwise involved as a service or manager
again.
Lastly, Ms. Gann said the Working Group exposed a draft interpretation (INT) related to new securities that are referred to as When Issued Freddie Mac Securities. For that investment on day one, the reporting entity acquires a certificate that is backed by cash flows held in a trust. There is a subsequent trust that acquires the mortgage-backed securities within 90 days; it is like a double pass-through. The exposed INT identifies that these securities would be within scope of SSAP No. 43R at the date of acquisition. There would not be any moving between schedules. The securities are guaranteed by Freddie Mac. This was exposed for comment with a shortened comment period deadline of May 6, to get the INT in place.

10. **Heard an Update on New RMBS/CMBS Thresholds and Price Breakpoints**

Ms. Mears said the next item is to hear an update on new residential mortgage-backed securities (RMBS) and commercial mortgage-backed securities (CMBS) thresholds and price breakpoints.

Eric Kolchinsky (NAIC) said the SSG’s plan for the price break-point is to apply the current methodology using the new RBC factor targets for the thresholds and designations. SSG staff will follow the same approach that it currently uses for credit risk transfer (CRT) securities, and those are based on the breakpoint approach. This will be released through the Task Force for comment. SSG staff are closely working with the vendor, BlackRock Solutions, on the scenarios as well and hope to release those scenarios shortly, but it does require a lot more work. The release will include the scenarios and the associated probability. He said SSG staff look forward to getting feedback on them and having a robust discussion with both regulators and industry on these scenarios.

11. **Received an Update on the Ad Hoc Study Group**

Mr. Therriault said the ad hoc group—consisting of regulators, insurers, and NAIC staff—met for the first time on March 11 to discuss objectives for the group:

- Establish a framework of qualitative and quantitative criteria for being a CRP to the NAIC.
- Eliminate/minimize RBC arbitrage opportunities between CRP ratings and asset classes.
- Define a repeatable quantitative process to evaluate rating performance for all rating agencies consistent with NAIC RBC factors.
- Incorporate market data to help identify potential misalignments of risk, as recommended by the former Rating Agency (E) Working Group in 2010.

The ad hoc group also discussed the mapping analysis framework that one rating agency uses to map other rating agency ratings to their rating scale. The ad hoc group plans to meet again after the Spring National Meeting and is currently scheduled to meet monthly thereafter.

Ms. Mears said she anticipates the ad hoc group will have more robust updates once it has more than one meeting under its belt.

12. **Discussed Other Matters**

Mr. Kolchinsky said that there will be a joint NAIC and industry discussion on infrastructure that will be held immediately following Task Force meeting. It covers a report on infrastructure that was jointly written by the Capital Markets Bureau (CMB) and Center for Insurance Policy and Research (CIPR).

Having no further business, the Valuation of Securities (E) Task Force adjourned.
Date: August 26, 2021

To: Kevin Fry, Chair, Valuation of Securities (E) Task Force

From: Dale Bruggeman, Chair, Statutory Accounting Principles (E) Working Group

RE: Referral Response: Unrated Subsidiary Obligors in WCFI transactions

Summary – Pursuant to the referral received July 28, 2021, the Valuation of Securities (E) Task Force exposed a policy change that would direct the SVO to rely upon the NAIC designation of an unrated subsidiary obligor’s parent entity for Working Capital Finance Investments (WCFI), without notching for the subsidiary. A referral was provided to the Statutory Accounting Principles (E) Working Group, as a qualifying NAIC designation of the obligor is a required element for admittance of WCFI receivables under SSAP No. 105R—Working Capital Financial Investments.

The Working Group has considered this exposure and acknowledges that establishment of NAIC designations is within the purview of the Task Force. However, the provisions within SSAP No. 105R were established in accordance with the historical approaches utilized in determining NAIC designations which allowed the SVO to apply its credit substitution methodology as it does for other asset classes. The proposed policy would require the SVO to imply an NAIC designation to an unrated entity based on the parent entity’s credit quality without guarantees or other legally-binding provisions that provide assurance that the parent will be legally or contractually obligated to financially cover the obligations of the unrated entity. Although, for a given program, and not related to the parent/sub relationship, the SVO may notch or otherwise not give a rating to that program.

If the Task Force chooses to move away from the historical application of financial analysis and use of the credit substitution methodology in determining NAIC designations for WCFI programs, the Working Group may deem it necessary to incorporate additional guardrail provisions to SSAP No. 105R as the NAIC designation of the obligor may no longer provide the intended safeguard for WCFI programs. As WCFI are complex arrangements, the credit quality of the obligor – who is ultimately responsible for satisfying the debt owed to the insurance reporting entity – is of paramount importance. Furthermore, the referral and exposure documentation memo seem to understand this dilemma, as it specifically identifies that “no generally accepted analytical technique or methodology supports the assumption that a parent entity will necessarily support its subsidiary in times of financial distress.” Consideration of changes that the Working Group would deem necessary, if any, would be expected to occur after any such edits to the P&P manual are adopted.
If the Task Force chooses to move forward with the issuance of “implied” NAIC designations to unrated entities for WCRI programs, the Working Group offers the following two components for additional consideration:

1. The exposed P&P Manual language seems to contradict with SSAP No. 105R, paragraph 7. Specifically, the Task Force language identifies that the implied approach is an alternative method to obtaining an NAIC designation. If the Task Force is going to permit an implied approach to an unrated sub, then to avoid conflicts with SSAP No. 105R, this implied designation would need to be considered an “NAIC Designation.” If the guidance is adopted with the inconsistency, the guidance in SSAP No. 105R requiring an NAIC designation would be the authoritative guidance. Therefore, the Working Group would recommend coordination to address any inconsistencies.

2. Although the implied designation would need to be considered an “NAIC Designation” to satisfy the requirements of SSAP No. 105R, the Working Group recommends that NAIC designations determined under the implied methodology have a specific identifier so that WCRI programs with rated obligors and unrated obligors can be separately identifiable by state insurance regulators. This is considered necessary as without this identification, regulators could erroneously conclude that an unrated obligor has been individually determined to be of high-credit quality, or that the parent entity has guaranteed or is otherwise legally obligated to pay the obligations of the unrated entity.

The Working Group appreciates the referral from the Task Force and opportunity to provide comments. Please direct any questions or responses to the Chair of the Working Group, or NAIC SAPWG Staff.

RE: Supply Chain Finance also known as Working Capital Finance Investments

Dear Ms. Mears and Mr. Bruggeman:

ACLI appreciates the opportunity to comment on the Task Force’s Amendment to Permit Un-Guaranteed and Unrated Subsidiary Obligors in WCFI Transactions, with SVO Discretion. We also want to thank the NAIC and staff for engagement and continuing efforts to address various investment and statutory accounting issues and we appreciate the opportunity to call your attention to pending changes to both FASB\(^1\) and IFRS\(^2\) accounting standards. Both bodies have recently issued exposure drafts for comment that cover required disclosures of balance sheet accounts regarding use of what has been termed supply chain finance that in the context of the NAIC are known as Working Capital Finance Investments (SSAP 105).

Attached to this letter is a copy of FASB’s exposure draft which was placed on its agenda from a joint request from the Big 4 accounting firms. All companies preparing financial statements need comply and all disclosures are subject to audit by the filing entity auditor with the FASB exposure draft disclosure requirements summarized below:

405-50-50-3 An entity shall disclose all the following information about its supplier finance programs:
   a. The key terms of the program.

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 95 percent of industry assets in the United States.

acli.com
b. The following information about the amount of obligations outstanding at the end of the reporting period that the entity has confirmed as valid to the finance provider or intermediary under the program (that is, the amount of obligations confirmed under the program that remains unpaid by the entity):

1. Where those obligations are presented in the balance sheet. If those obligations are presented in more than one balance sheet line item, then the entity shall disclose the amount outstanding at the end of the reporting period in each line item.
2. A rollforward of those obligations showing, at a minimum, all the following:
   i. The amount of those obligations outstanding at the beginning of the reporting period
   ii. The amount of those obligations added to the program during the reporting period
   iii. The amount of those obligations settled during the reporting period
   iv. The amount of those obligations outstanding at the end of the reporting period.

We want to share several observations about the proposed disclosures and its potential impact on insurance filers as well as on the current SSAP and the remaining open issues and to make several recommendations.

In brief, SSAP 105 was approved in late 2013 with industry as the catalyst for its development. Adoption was low with industry again serving as catalyst for review beginning in 2016 with request for 10 critical revisions in 2017 of which 7 were adopted in 2020. Subsequent adoption of the 2020 revisions also remains low.

The three remaining items not adopted by the NAIC include Schedule BA reporting, restrictions to NAIC 1 and 2 equivalent ratings and limitations of issuers' unrated subsidiaries which is currently the subject of evaluation by both the VOS. Importantly, each of these items are directly addressed through the pending FASB rules:

1. In the case of insurance reporting, FASB requires the corporate entity to disclose specifically where those liabilities are reported in the financial statements likely classified either as either accounts payable or debt. Schedule D is the appropriate insurance reporting schedule for such liabilities and not Schedule BA. The continuing reporting on Schedule BA is inappropriate and is a significant obstacle to adoption by insurers as, and we cannot stress this enough, the extra scrutiny of BA assets is something that many insurance filers avoid.

2. In the case of corporate entities, all companies that utilize supply chain finance will be required to disclose the arrangements, regardless of their NRSRO credit rating. In the case of the SSAP, the restriction to NAIC 2 and higher investments, which is the only investment asset class to have such a restriction, creates a considerable challenge for investment. This restriction is inappropriate as well. As the SVO has discretion to notch a potential filing, in the case of a downward notching below NAIC 2 of a filing, the investment under the existing rules would become non-admitted. There is considerable expense and risk associated with RTAS approval and ratings equivalent assignment. Uncertainty concerning filing creates limitations on the willingness of insurance filers to invest given the increased risk associated with possible downward notching.

3. In the case of subsidiaries and affiliates as part of an organization that is utilizing supply chain finance, its obligations are subject to reporting and audit as consolidated in the accounts under the FASB rules. While this is currently being addressed by the VOS it is also worth noting that there has been significant resistance among staff and some regulators regarding
the perceived risks about unrated subsidiary obligations and suitability for investment. The SSAP restriction offers no meaningful purpose.

ACLI recommends that the remaining restrictions for Schedule BA reporting and for limitations to NAIC 2 or higher obligors be removed from the SSAP. Apt in the context of the pending disclosures is Supreme Court Justice Louis Brandeis statement that “sunlight is said to be the best of disinfectants” from his 1913 Harper’s Weekly article entitled “What Publicity Can Do”, the pending changes will lead to a significant expansion of awareness of the asset class and will also lead to broader opportunities for investment. While the insurance industry has had a head start, given the restrictiveness of the SSAP it has not benefited. Time is of the essence to complete the work and amend the SSAP to resolve the remaining investment issues and request your consideration of resolving these open matters promptly.

If you have any questions in the interim, please do not hesitate to contact me.

RE: Purposes and Procedures Manual amendment to permit un-guaranteed and unrated subsidiary obligors in WCFI transaction, with SVO discretion

DATE: November 24, 2021

Summary – The SVO has received comments from certain insurers and other interested parties that it should assign NAIC Designations to Working Capital Finance Investments (WCFI) with unguaranteed and unrated obligors, based on the implied support from an obligor’s NAIC Credit Rating Provider (CRP) rated parent.

In November 2020, the Task Force exposed a proposed amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (the “P&P Manual”) to direct the SVO to rely upon the NAIC Designation or NAIC CRP Rating equivalent of the subsidiary obligor’s parent entity, with allowance for the SVO to notch down from the parent’s rating or NAIC Designation due to its assessment of certain factors regarding the parent/subsidiary relationship. In response to feedback from some Task Force members and interested parties, the SVO subsequently presented a revised proposal to the Task Force at the Summer 2021 National Meeting to remove its discretion to notch because, as demonstrated in its memorandum to the Task Force of October 16, 2020, the SVO found no generally accepted analytical technique or methodology to support the assumption that a parent entity will necessarily support its subsidiary in times of financial distress. This revised amendment was also not adopted by the Task Force.

The SVO is now proposing a new clean amendment which is substantially similar to the original and reflects the comments from some Task Force and Statutory Accounting Principles (E) Working Group members that they would like the SVO to retain discretion to notch down, as they deem appropriate. Like the November 2020 amendment, the Task Force would direct the SVO to imply the parent’s support of its subsidiary and would give the SVO discretion to assign an NAIC Designation to the subsidiary which is lower than that of the parent based on its assessment of the parent/subsidiary relationship. However, this new proposal clarifies that if the SVO notches the NAIC Designation of a subsidiary obligor down from that of its parent resulting in a credit assessment below an NAIC 2, the WCFI program would not be eligible for an NAIC Designation because it would no longer meet the definition of an eligible “Obligor” in Statements of Statutory Accounting Principles 105R – Working Capital Finance Investments.
Proposed Amendment – The proposed text changes directing the SVO to assign NAIC Designations to WCFL programs with unguaranteed and unrated subsidiary obligors are shown below with additions in red underline and deletions in red strikethrough, as it would appear in the 2021 P&P Manual format.
PART ONE

POLICIES OF THE NAIC VALUATION OF SECURITIES (E) TASK FORCE
POLICIES APPLICABLE TO SPECIFIC ASSET CLASSES

WORKING CAPITAL FINANCE INVESTMENTS (WCFI)

Description

118. As described in SSAP No. 105R - Working Capital Finance Investments, WCFI represents a confirmed short-term obligation to pay a specified amount owed by one party (the obligor) to another (typically a supplier of goods), generated as a part of a working capital finance investment program for which an NAIC Designation is assigned by the SVO. Pursuant to the working capital finance investment program, this short-term obligation has been transferred by the entity entitled to payment (typically a supplier of goods) to a third-party investor.

Obligor

119. The Obligor for WCFI transactions is the party that purchases the goods or services that generates the original supplier receivable (which is the payable for that Obligor). The obligor must have an NAIC Designation of “1” or “2” or an NAIC Credit Rating Provider (CRP) Rating equivalent.

Unrated Subsidiaries

120. Many WCFI programs are structured in a way whereby unrated subsidiaries of a rated parent entity are involved as transaction participants, including as the Obligor. Such programs may have strong operational and strategic linkages between the rated parent entity and its unrated subsidiaries.

121. Given (i) the short-term (less than one year) payment terms of each of the underlying receivables arising from the sale of goods or services, (ii) WCFI investors’ option to stop funding a working capital finance program, and (iii) the necessity of working capital finance programs to obligors due to obligors’ reliance on their suppliers, the Task Force has concluded there is a low probability of default of WCFI investments. Accordingly, the Task Force deems it reasonable to establish a principle to direct the SVO, in its assessment of WCFI programs, to rely upon a parent entity’s rating for purposes of determining the NAIC Designation of the overall WCFI program.
122. Solely for purposes of WCFI transactions, the Task Force directs the SVO to rely upon the NAIC Designation or NAIC CRP Rating equivalent of the obligor, subsidiary or affiliate’s parent entity if the obligor, subsidiary or affiliate does not have an NAIC CRP Rating and the SVO cannot assign an NAIC Designation to it.

123. The Task Force authorizes the SVO, based on its analytical judgement and in its sole discretion, to notch such NAIC Designation down or decline to assign an NAIC Designation, based on factors including, but not limited to, whether:
   a) the unrated subsidiaries or affiliates that serve as key transaction participants cannot reasonably perform the functions expected of them; and/or
   b) the rated entity does not have significant documented operational control over the performance of the unrated subsidiaries or affiliates that also serve as obligors in the program; and/or
   c) documentary evidence in the program documents or appended thereto does not sufficiently demonstrate the importance of the inter-relationship between the rated entity and the unrated subsidiaries or affiliates; and/or
   d) the resulting NAIC Designation would, upon application of notching, be lower than an NAIC 2 Designation.

124. For the avoidance of doubt, though the Task Force directs the SVO to use the NAIC Designation or NAIC CRP rating equivalent of the obligor’s parent entity, due to the SVO’s authority to notch such NAIC Designation or rating, the SVO, based on its analytical judgement and in its sole discretion, may assign an NAIC Designation to the obligor which differs from the correlated NAIC CRP rating equivalent of the obligor’s parent entity or choose not to assign any NAIC Designation to the working capital finance program, based on aspects of the working capital finance program which are unrelated to the relationship between the obligor, subsidiary or affiliate and its parent entity.

125. The Task Force acknowledges that reliance upon the NAIC Designation or NAIC CRP rating equivalent of the obligor’s parent entity in the absence of a binding legal obligation for the parent to assume the financial obligations of the obligor, such as a guarantee, is not a generally accepted technique or methodology (as explained in “Use of Generally Accepted Techniques or Methodologies” in Part One of this Manual) and is inconsistent with the credit substitution guidelines detailed in “Credit Substitution” in Part Three of this manual, but it is directing the SVO to so rely.

PART THREE

SVO PROCEDURES AND METHODOLOGY FOR PRODUCTION OF NAIC DESIGNATIONS
WORKING CAPITAL FINANCE INVESTMENTS

122. **Obligor** – An entity that purchases the goods or services from the Supplier and thereby generates the original supplier receivable—and which Obligor has, or can be designated, **NAIC 1 or NAIC 2** by the SVO or has been assigned an equivalent credit rating by a NAIC CRP or, if not so designated, the SVO can assign such NAIC Designation, as directed by the VOS/TF pursuant to the “Working Capital Finance Investments (WCFI)” section in Part One of this Manual.

Financial Regulation Standards and Accreditation (F) Committee  
Kansas City, Missouri  
April 5, 2022

The Financial Regulation Standards and Accreditation (F) Committee met April 5, 2022. The following Committee members participated: Lori K. Wing-Heier, Chair (AK); Vicki Schmidt, Co-Vice Chair (KS); Sharon P. Clark, Co-Vice Chair (KY); Alan McClain (AR); Andrew N. Mais (CT); Gary D. Anderson (MA); Timothy N. Schott (ME); Mike Causey represented by Jackie Obusek (NC); Eric Dunning (NE); Andrew R. Stolfi (OR); Elizabeth Kelleher Dwyer (RI); Raymond G. Farmer (SC); Larry D. Deiter (SD); Scott A. White (VA); and Jeff Rude (WY). Also participating was: James J. Donelon (LA).

1. **Adopted its 2021 Summer National Meeting Minutes**

Commissioner McClain made a motion, seconded by Director Farmer, to adopt the Committee’s Aug. 14, 2021, minutes (see NAIC Proceedings – Summer 2021, Financial Regulation Standards and Accreditation (F) Committee). The motion passed unanimously.

Director Wing-Heier said the Committee met April 4 in regulator-to-regulator session, pursuant to paragraph 7 (consideration of individual state insurance department’s compliance with NAIC financial regulation standards) of the NAIC Policy Statement on Open Meetings. During this meeting, the Committee voted to award continued accreditation to Alabama, Mississippi, and North Carolina.

2. **Adopted Revisions to the 2021 NAIC Publications Referenced in the Accreditation Standards**

   a. **Adopted Revisions Deemed Insignificant**

Director Wing-Heier said there are several NAIC publications currently included in the accreditation standards by reference. At each Spring National Meeting, the Committee is to review revisions made to these publications in the prior year. Each of the applicable groups that developed revisions to the publications in 2021 have provided the Committee with a memorandum discussing the revisions, and they indicated whether the revisions should be considered significant or insignificant for accreditation purposes. This included the following publications: the Accounting Practices and Procedures Manual (AP&P Manual) (Attachment One); the Annual and Quarterly Statement Blanks and Instructions (Attachment Two); Risk-Based Capital (RBC) Formulas and Instructions for Life and Property/Casualty (P/C) Insurers (Attachment Three); the Financial Condition Examiners Handbook (Handbook) (Attachment Four); the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) (Attachment Five); and the Valuation Manual (Attachment Six). The working group or task force responsible for each of these publications has deemed their 2021 changes as insignificant to the accreditation process, except for the item specifically identified as “significant” by the Financial Examiners Handbook (E) Technical Group.

Director Farmer made a motion, seconded by Commissioner Stolfi, to adopt the revisions deemed insignificant to each of the publications immediately by reference to the accreditation standards. The motion passed unanimously.

   b. **Exposed Revisions Deemed Significant**

Director Wing-Heier summarized the Financial Examiners Handbook (E) Technical Group’s memorandum and discussed the items deemed significant for accreditation purposes. The Technical Group identified an
inconsistency between guidance in the Handbook and the accreditation guideline regarding exam coordination. Specifically, the Handbook guidance requires coordination efforts for examinations of holding company groups with insurers domiciled in multiple states; whereas, the accreditation guidance requires the same documentation for holding company groups with multiple insurers. Since the coordination guidance is intended to facilitate work between states, the recommendation is to align the accreditation guideline with the Handbook guidance as outlined in the memorandum.

Director Farmer made a motion, seconded by Commissioner McClain, to expose the Financial Examiners Handbook (E) Technical Group’s memorandum for a 30-day public comment period. The motion passed unanimously.

3. Exposed Receivership Updates to Model #440 and Model #450

Director Wing-Heier stated that at the 2021 Summer National Meeting, the Receivership and Insolvency (E) Task Force adopted revisions to the *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450). Because both models are part of the accreditation standards, the Committee needs to consider the impact of any changes. The Task Force has provided its recommendation (Attachment Seven).

Commissioner Donelon, chair of the Task Force, stated that the Executive (EX) Committee and Plenary adopted revisions to Model #440 and Model #450 at the 2021 Summer National Meeting. The revisions help ensure efficient coordination with affiliates and enforce the continuation of essential services by an affiliate to an insurer in the event of insolvency. The Task Force adopted the referral at its Nov. 30, 2021, meeting, which recommends that the receivership revision be considered “acceptable but not required” rather than identifying “substantially similar” provisions that would be required. Commissioner Donelon pointed out that this recommendation is limited to the receivership revisions to these models. It does not include revisions that were adopted by the NAIC in 2020 for group capital or stress testing. While the Task Force does not recommend an accreditation requirement to adopt these revisions, it strongly encourages states to consider them as they are amending their holding company statutes based on the benefits these revisions add to state regulation; the goal is to improve efficiencies in receivership and reduce costs to a receivership estate.

Director Farmer made a motion, seconded by Commissioner Clark, to expose the recommendation from the Receivership and Insolvency (E) Task Force that the 2021 revisions to Model #440 and Model #450 be acceptable for accreditation, but not required, for a 30-day public comment period. The motion passed unanimously.

4. Exposed a Preamble Update for Variable Annuity Captives

Director Wing-Heier stated that captives are generally excluded from the accreditation standards, except for the following: 1) captive risk retention groups (RRGs); 2) captives that reinsure term and universal life with secondary guarantees (ULSGs); 3) captives that reinsure variable annuity business; or 4) captives that reinsure long-term care (LTC) business. Currently, variable annuities and LTC captives have “to be determined” effective dates, as work was ongoing in these areas. Last spring, the Financial Regulation Standards and Accreditation (F) Committee sent a request to the Financial Condition (E) Committee for more information on the extent that variable annuities and LTC captives are used, any relevant trends, and updates on related work. The second paragraph of the Financial Condition (E) Committee response (Attachment Eight) discusses updates to the *Valuation Manual* to alleviate concerns regarding captives that reinsure variable annuity business. The memorandum recommends replacing the “to be determined” effective date with a reference to VM-21: Requirements for Principle-Based Reserves for Variable Annuities. The recommended change to the Accreditation Preamble is on the second page of the recommendation. Since the *Valuation Manual* is already required for accreditation, the proposed revision does not represent a new requirement. Rather, it serves as a reference for how this item is addressed in the

© 2022 National Association of Insurance Commissioners
accreditation standards. This means there is no proposed requirement that would apply directly to captives. Rather, the issue is being addressed through the standards for traditional insurers. If future trends indicate a concern, the Financial Regulation Standards and Accreditation (F) Committee may reconsider this at that time.

Director Farmer made a motion, seconded by Commissioner White, to expose the proposed updates to the Preamble to reference VM-21 regarding variable annuity business for a 30-day public comment period. The motion passed unanimously.

Having no further business, the Financial Regulation Standards and Accreditation (F) Committee adjourned.

MEMORANDUM

TO:    Director Lori K. Wing-Heier, (AK), Chair, Financial Regulations Standards and Accreditation (F) Committee
         Commissioner Vicki Schmidt, (KS), Co-Vice Chair, Financial Regulations Standards and Accreditation (F) Committee
         Commissioner Sharon P. Clark, (KY), Co-Vice Chair, Financial Regulations Standards and Accreditation (F) Committee

FROM:  Dale Bruggeman (OH), Chair, Statutory Accounting Principles (E) Working Group
         Carrie Mears (IA), Vice Chair, Statutory Accounting Principles (E) Working Group

DATE:  February 28, 2022

In 2001, the Financial Regulation Standards and Accreditation (F) Committee approved a motion to adopt the Accounting Practices and Procedures Manual – Effective January 1, 2001, Version 1999 (AP&P Manual) as an accreditation standard. The intention of this memorandum is to update the Committee on changes the Statutory Accounting Principles (E) Working Group has made to the AP&P Manual in 2021 up to the 2022 date of submission for publication. This memo is to provide the customary annual update regarding changes to the AP&P Manual.

Attachment A to this memo includes a detailed listing of the changes made to the AP&P Manual in 2021. On behalf of the Working Group, it is our opinion that none of these items, either individually or collectively, should be considered “significant” as defined by the financial solvency accreditation standards.

As outlined in the NAIC Policy Statement on Maintenance of Statutory Accounting Principles (SAP Policy Statement), modifications will be made to the AP&P Manual each year. As such, it will be reprinted with an “as of” date associated with it. For example, the next printing of the AP&P Manual, which encompasses the attached modifications, will be titled Accounting Practices and Procedures Manual – as of March 2022. This process allows for an efficient way to update the AP&P Manual and virtually guarantees that users have the latest version. Reprints and updates are necessary because of the evolutionary nature of accounting—in both the statutory accounting principles and the generally accepted accounting principles arenas—and are positive for users of the AP&P Manual.

The Working Group sincerely requests that the Committee consider the items listed in Attachment A as “insignificant” changes to the AP&P Manual. We will continue to notify the Committee of any changes to the AP&P Manual and to advise if, in our opinion, those changes are “significant” by financial solvency accreditation standards.

Summary of Changes to the  
As of March 2021 Accounting Practices and Procedures Manual  
included in the As of March 2022 Manual

The following summarizes changes made to the As of March 2021 Accounting Practices and Procedures Manual (Manual) and tracked in the As of March 2022 version.

Section 1 summarizes substantive\(^1\) revisions to statutory accounting principles. Substantive revisions introduce original or modified accounting principles and can be reflected in an existing or new SSAP. When substantive revisions are made to an existing SSAP, the effective date is identified in the Status section, and the revised text within is depicted by underlines (new language) and strikethroughs (removed language). This tracking will not be shown in subsequent manuals. New and substantively revised SSAPs are commonly accompanied by a corresponding issue paper that reflects the revisions for historical purposes. If language in an existing SSAP is superseded, that language is shaded and the new or substantively revised SSAP is referenced. Completely superseded SSAPs and nullified interpretations are included in Appendix H.

Section 2 summarizes the nonsubstantive\(^1\) revisions to statutory accounting principles. Nonsubstantive revisions are characterized as language clarifications which do not modify the original intent of a SSAP, or changes to reference material. Nonsubstantive revisions are depicted by underlines (new language) and strikethroughs (removed language) and will not be tracked in subsequent manuals. Nonsubstantive revisions are effective when adopted unless a specific effective date is noted.

Section 3 summarizes revisions to the Manual appendices.

\(^1\) Pending Content Alert – Effective January 1, 2022, references to “substantive” and “nonsubstantive,” which have historically been used to describe statutory accounting revisions, have been updated in the NAIC Policy Statement on Maintenance of Statutory Accounting Principles in Appendix F. Accordingly, where applicable, the concept/term, 1) “substantive” revision is being replaced with the phraseology “new SAP concept” and, 2) “nonsubstantive” revision is being replaced with the phraseology “SAP clarification” on a prospective basis. At the time of publication of the As of March 2022 Accounting Practices and Procedures Manual, conforming editorial revisions which impact the Preamble, Summary of Changes, How to Use this Manual, and NAIC Policy Statement on Statutory Accounting Principles Maintenance Agenda Process were exposed for public comment. When the exposed revisions are adopted, they will be made available as updates to the 2022 AP&P Manual.

Blanks (E) Working Group

DATE: February 2, 2022

RE: Items Impacting Current Accreditation Standard

Please find attached a list of items adopted by the Blanks (E) Working Group during 2021. The Blanks Working Group adopts numerous changes to the Annual Statement Blanks and Instructions each year. Most of the changes are made to clarify current requirements or are considered enhancements to existing reporting. The changes adopted in 2021 do not represent a substantive change to any reporting requirements.

I am planning to be present when the Financial Regulation Standards & Accreditation (F) Committee meets in the event any member of the committee wishes to discuss these issues.
Changes to blanks and instructions adopted during 2021

1. Add a new Health Care Receivables Supplement to the Life/Fraternal Annual Statement that adds Exhibits 3 and 3A from the Health Annual Statement to the to the Life/Fraternal annual filings. Add a guidance document reference to Exhibit 3A of the Health Annual Statement (2020-32BWG) Effective Dec. 31, 2021.

2. Modify Annual Statement Lines (ASLs) used on Underwriting and Investment (U&I) Exhibits, State Page and Insurance Expense Exhibit (IEE). Change Health ASL categories used in Property to be consistent with other statement types. Update ASL references used in crosschecks. Update definitions used in the appendix for the Health ASLs. See next page for details (2020-33BWG) Effective Jan. 1, 2022.

4. Expand the number of characters used from seven to 10 in the investment line categories for Schedules D, DA, DL and E excluding Schedule D, Part 6 (Sections 1 and 2) and Schedule E (Part 1 and 3). Add line categories for Unaffiliated Certificates of Deposit and Exchange Traded Funds. Split the line categories for Mutual Funds, Investment Unit Trusts and Closed-End Funds into lines indicating if the fund has been assigned a designation by the Securities Valuation Office (SVO). Make changes to Summary Investment Schedule, Summary by Country and Schedule D, Part 1A (Sections 1 and 2) to reflect the additional line categories (2020-35BWG) Effective Jan. 1, 2022.

6. Add a new Schedule Y, Part 3 to capture all entities with ownership greater than 10%, the ultimate controlling parties of those owners and other entities that the ultimate controlling party controls (SAPWG 2020-34) (2020-37BWG) Effective Dec. 31, 2021.

7. Make changes to the Accident and Health Policy Experience Exhibit by adding new columns, removing lines distinguishing with and without contract reserves, adding some new product lines, eliminating summary tables, changing the date that the exhibit is due and having it reported by state (2020-38BWG) Effective Dec. 31, 2021.

9. Add questions to the General Interrogatories, Part 1 regarding depository institution holding companies as it pertains to the group capital calculation (GCC). Additionally, modify the terminology in the first two questions for consistency with the new questions, which has been modified to consider that many insurers that are part of a depository institution holding company are savings and loan holding companies, which is picked up with the broader terminology compared to the more specific term of bank holding company (2021-02BWG) Effective Dec. 31, 2021.

10. Modify the tables for Interrogatory Questions 1.01, 1.01A, 2.5 and 4.2 in the Separate Accounts General Interrogatories by adding category lines to reflect additional granularity in the reporting on those tables (SAPWG 2020-37 and 2020-38) (2021-03BWG) Effective Dec. 31, 2021.

11. Add interrogatory questions 24.1 and 24.2 to the General Interrogatories, Part 1 “Financial” section asking if the insurer utilizes third parties to pay agent commissions in which the amounts advanced by the third parties are not settled in full within 90 days. Renumber the remaining questions (SAPWG 2019-24) (2021-04BWG) Effective Dec. 31, 2021.

12. Modify the instructions for Note 17B(4)b1(a) – Sale, Transfer and Servicing of Financial Assets and Extinguishments of Liabilities and add a table to the illustrations to data capture some aspects of the disclosure (SAPWG 2021-03) (2021-05BWG) Effective Dec. 31, 2021.

13. Add crosschecks between Long-term Care (LTC) Form 5 and Form 1 for Columns 2, 3, 4, 6 and 7 of Form 5 (2021-06BWG) Effective Dec. 31, 2021.
14. Add additional line categories to the instruction for Column 26 – Collateral Type to capture collateral type data for all residential mortgage-backed securities (RMBS), commercial mortgage-backed securities (CMBS) and loan-backed and structured securities (LBSS) securities regardless of reporting category (2021-07BWG) Effective Dec. 31, 2021.

17. Expand the number of lines of business reported on Schedule H to match the lines of business reported on the Health Statement. Modify the instructions so they will be uniform between life/fraternal and property (2021-14BWG) Effective Dec. 31, 2022.
MEMORANDUM

Financial Regulation Standards and Accreditation (F) Committee

FROM: Tom Botsko, Chair
Capital Adequacy (E) Task Force

DATE: February 1, 2022

RE: Accreditation Standards – Changes to the RBC Formulas and Instructions for Health, Life and P/C

Attached please find a brief description of changes to the 2021 Risk-Based Capital Report Including Overview and Instructions for health, life and property/casualty (P/C). These changes were adopted by the Capital Adequacy (E) Task Force and Executive (EX) Committee and Plenary in 2021. Significance of these changes was viewed as it relates to the overall risk-based capital (RBC) standard.

No changes to the RBC formulas or instructions were deemed to be significant for health, life or P/C.

Any questions can be directed to NAIC staff:
P/C – Eva Yeung
Life – Dave Fleming
Health — Crystal Brown

**Health RBC Formula**

Not Significant  Deleted the ACA Fee Sensitivity Test from the XR026.

Not Significant  Added the MAX function to Line 17 – RBC Growth Safe Harbor on page XR022.

Not Significant  Split bonds and miscellaneous assets into separate pages, XR007 and XR008, respectively.

Not Significant  Bond Modification in XR006, XR007 and XR012 included:
1) modified the structure and instructions;
2) revised the factors for 20 bond designations; and
3) reclassified hybrid securities.

Not Significant  Incorporated the term “incentives” into the managed care instructions and blanks as “Bonuses/Incentives.”

Not Significant  Updated the Line 38 receivable for securities factors on page XR008.

Not Significant  Incorporated a 0.5% investment income adjustment into XR013 Underwriting Risk factors for comprehensive medical, Medicare supplement, and dental and vision.

**Life RBC Formula**

Not Significant  Bond factor changes for the expanded NAIC designation categories which also included a bond size adjustment and tax factor changes.

Not Significant  Update the RBC calculation for real estate to reflect the updated experience.

Not Significant  Include factors for a longevity risk charge.
Not Significant  Updated the reinsurance calculation to allow for the inclusion of amounts held for reciprocal jurisdiction reinsurance.

Not Significant  Incorporated the term “incentives” into the managed care instructions and blanks as “Bonuses/Incentives.”

Not Significant  Updated the receivable for securities factors to 0.015.

Not Significant  Incorporated a 0.5% investment income adjustment into the factors on the Underwriting Risk – Experience Fluctuation Risk pages for comprehensive medical, Medicare supplement, and dental and vision.

Not Significant  Deleted the ACA Fee Sensitivity Test from the LR033.

**P/C RBC Formula**

Not Significant  Modified PR027 interrogatories instructions to clarify how insurers with no gross exposure to earthquake or hurricane should complete the interrogatories.

Not Significant  Removed the embedded 3% operational risk component contained in the reinsurance contingent credit risk of Rcat component in PR027A and PR027B.

Not Significant  Deleted the ACA Fee Sensitivity Test from the PR029.

Not Significant  Incorporated the term “incentives” into the PR021 managed care instructions and blanks as “Bonuses/Incentives.”

Not Significant  Incorporated a 0.5% investment income adjustment into PR029 Underwriting Risk factors for comprehensive medical, Medicare supplement, and dental and vision.

Not Significant  Incorporated examples to clarify how the reporting companies should select the designation in the Annual Statement Part 3, Reinsurer Designation Equivalent Rating column if the reporting entities subscribe to one or multiple rating agencies.

Not Significant  Bond Modification in PR006, PR011 and PR015 included:

4) modified the structure;
5) revised the factors for 20 bond designations;
6) modified the bond size factor;
7) reclassified hybrid securities and eliminated the hybrid securities section in PR007.

Not Significant  Updated the Line 1 industry average development factors in PR017 and PR018.

Not Significant  Updated the Line 1 receivable for securities factors in PR009 and PR011.
MEMORANDUM

TO: Financial Regulation Standards and Accreditation (F) Committee

FROM: Susan Bernard (CA), Chair, Financial Examiners Handbook (E) Technical Group
       John Litweiler (WI), Vice-Chair, Financial Examiners Handbook (E) Technical Group

DATE: Feb. 9, 2022

RE: Consideration for Financial Accreditation Standards
    2022 Financial Condition Examiners Handbook

The Accreditation Program Manual (Manual) includes Review Team Guidelines to be used for financial examinations performed using the risk-focused surveillance approach that is found in the NAIC Financial Condition Examiners Handbook (Handbook). This memorandum is to update the Financial Regulation Standards and Accreditation (F) Committee on changes the Financial Examiners Handbook (E) Technical Group has made to the Handbook in 2021.

Modifications are made to the Handbook each year, and a new edition is printed annually. This process allows for an efficient way to update the Handbook and ensures that users have the latest version. The Technical Group made several changes to the Handbook in 2021, the majority of which it considers non-significant; i.e., having no impact on accreditation guidance.

The Technical Group noted an opportunity to better align the guidance in the Handbook and the Manual as it relates to exam coordination. This change should be considered “significant” for accreditation purposes, which the Technical Group defines as a change that may immediately warrant a change to at least one accreditation standard or the Review Team Guideline(s) for said standard. Although this change is categorized as “significant” by the Technical Group, this is not meant to suggest the modifications are synonymous with the term “significant” within the accreditation context.

During 2021, the Technical Group made the following changes:

**Significant Changes to the Handbook Affecting Accreditation Standards and/or Review Team Guidelines:**

- Revisions to the Coordination Framework to clarify the roles and responsibilities of each state that has a company in a holding company group.

When reviewing the guidance contained in the Coordination Framework, the Technical Group noted that Handbook guidance requires the use of Exhibit Z – Exam Coordination when documenting coordination efforts for examinations of holding company groups with insurers domiciled in multiple states. This is
inconsistent with the guidance in the Manual, which requires the use of Exhibit Z for examinations of holding company groups with multiple insurers.

To ensure a consistent approach to documenting coordination efforts, the Technical Group advises the Committee to consider revising the guidance pertaining to Accreditation Standard B2(e): General Examination Procedures and Accreditation Standard B2(g): Scheduling of Examinations, as well as the related questions on the Accreditation SEG/IAR Form regarding the use of Exhibit Z. The Technical Group suggests incorporating the tracked revisions below to reflect this change in the Manual:

**Accreditation Standard B2(e): Use of Appropriate Guidelines and Procedures, Results-Oriented Guideline 1:**

The examiner should utilize a risk-focused approach and prepare examination documentation in sufficient detail to provide a clear understanding of the work performed. The content and organization of the documentation should support conclusions reached and effective execution of the risk-focused approach. When assessing compliance with this guideline, consideration should be given to the following:

- Utilization of a risk-focused approach in establishing priority of accounts or operational areas.
- The clarity and accuracy of the documentation used to support examination conclusions.
- Extent of involvement with contract examiners if utilized.
- Utilization of audit work when relied upon to support an identified risk.
- Fulfillment of coordination efforts as determined by the state in Exhibit Z – Examination Coordination, and consistent with their role as described in the Examiners Handbook, for companies that are part of a holding company group with insurers domiciled in multiple states that includes more than one insurer.

**Accreditation Standard B2(e): Use of Appropriate Guidelines and Procedures, Process-Oriented Guideline 3:**

If the company being examined is part of a holding company group with multiple insurers domiciled in multiple states, the state should complete the appropriate section of Exhibit Z, Part Two (or similar document) as follows:

- If the state is the exam facilitator conducting a fully coordinated group examination, Exhibit Z, Part Two, Section B (or similar document) should be completed.
- If the state is a participating state in a fully coordinated group examination, the state should complete Exhibit Z, Part Two, Section C (or similar document).
- If the state did not participate in a coordinated group examination or utilized existing work outside of a fully coordinated group examination, the state should complete Exhibit Z, Part Two, Section D (or similar document).

**Accreditation Standard B2(g): Use of Appropriate Guidelines and Procedures, Process-Oriented Guideline 3:**

The department should document the attempt to coordinate examination efforts with departments of other states consistent with the coordinated exam approach prescribed in the Examiners Handbook. Each company that is part of a holding company group that includes more than one insurer with insurers
domiciled in multiple states should include a copy of the coordination plan, documented in Section A of Exhibit Z, Part Two (or similar document), in its examination file.

Accreditation SEG/IAR Form, Standard B2(e), Question 5:

For examinations of companies that are part of a holding company group with insurers domiciled in multiple states that includes more than one insurer, does the department complete the applicable section of Exhibit Z – Examination Coordination based on its role in the examination?

Non-Significant Changes to the Handbook:

- Revisions to the Reserves Repositories (Life, Health and Property/Casualty [P/C]), as well as the Underwriting Repository, to provide additional possible completeness and accuracy procedures for examination teams to consider that align with the testing approach used by external auditors. Additionally, procedures were added to enhance collaboration with the actuary to determine significant lines of business/data elements to focus on for testing purposes.
- Revised guidance related to information technology (IT) in the following areas:
  - Additional guidance for evaluating the accessibility and transferability of policyholder data was incorporated into the following sections of the Handbook: 1) Section 1-3 narrative guidance; 2) Exhibit C, Part Two – IT Planning Questionnaire (ITPQ); and 3) Exhibit C, Part Two – IT Work Program and Instructional Notes.
  - Ransomware guidance was incorporated into the following sections of the Handbook: 1) Section 1-3 narrative guidance; and 2) Exhibit C, Part Two – IT Work Program.

If there are any questions regarding the proposed recommendations, please contact either me or NAIC staff (Bailey Henning at bhenning@naic.org) for clarification. Thank you for your consideration.
MEMORANDUM

TO: Financial Regulation Standards and Accreditation (F) Committee

FROM: Carrie Mears (IA), Chair Valuation of Securities (E) Task Force
Charles Therriault, Director, NAIC Securities Valuation Office

CC: Dan Daveline, Director, NAIC Financial Regulatory Services
Mark Perlman, Managing Investment Counsel, NAIC Securities Valuation Office

DATE: February 28, 2022

RE: Report of the Valuation of Securities (E) Task Force

A. Purpose – This report is presented to assist the Financial Regulation Standards and Accreditation (F) Committee to determine if amendments to the Purposes and Procedures Manual of the NAIC Investment Analysis Office adopted by the Valuation of Securities (E) Task Force in 2021 require corresponding changes in either the Financial Regulation Standards (defined below) or state laws or regulations adopted in conformity with Part A: Laws and Regulations of the Financial Regulation Standards.

B. Financial Regulation Standards – The NAIC Policy Statement on Financial Regulation Standards (SFRS) in the 2022 Accreditation Program Manual consists of four parts: Part A identifies laws and regulations deemed necessary to financial solvency regulation; Part B identifies regulatory practices and procedures that supplement and support enforcement of the financial solvency laws and regulations discussed in Part A; Part C contains three standards related to an insurance department’s organizational and personnel policies; and Part D focuses on Organization, licensing and change of control of domestic insurers. This report is concerned with the financial solvency standards in Part A. Those standards relevant to this report are shown immediately below and can be characterized as NAIC model legislation, codified NAIC guidance (i.e., the Accounting Practices and Procedures Manual): analytical work product of the NAIC staff (including the NAIC Investment Analysis Office) and state laws and regulations that contain substantially the same standards as NAIC model legislation or guidance. A review indicates that the work product of the NAIC Investment Analysis Office is directly or indirectly incorporated into the following Part A standards. For example:

- **Standard 5** requires that insurer owned securities be valued in accordance with the standards promulgated by the NAIC Investment Analysis Office;

- **Standard 2**, the Risk-Based Capital (RBC) for Insurers Model Act (#312) assigns RBC factors for securities based on their credit risk as measured by NAIC Designations;
Standard 3, the Accounting Practices and Procedures Manual uses NAIC Designations produced by the SVO or SSG, or by insurers through the filing exempt process and or Price Grids produced by the SSG to identify valuation rules applicable to an investment and the reserved capital amount the insurer must report;

Standard 8, pertaining to state investment regulations often incorporate NAIC mechanisms that relate asset allocations to credit risk expressed in the form of NAIC Designations; and

Standard 10, the Credit for Reinsurance Model Act identifies insurer owned securities compiled by the SVO into a List of Investment Securities published quarterly in the NAIC AVS + Plus product, and letters of credits issued by the institutions on the NAIC Qualified U.S. Financial Institutions List administered by the SVO, as eligible for use as collateral in reinsurance transactions.

C. Investment Analysis Office Standards Identified in the Purposes and Procedures Manual – All SVO and SSG standards related to the assessment of credit risk in insurer owned securities, identification of additional non-payment risk in securities, classification of certain assets as bonds or as bond-like for reporting purposes, the valuation of insurer owned securities, and other activities conducted by the SVO or the SSG in support of state insurance regulatory objectives, are determined and promulgated by the Valuation of Securities (E) Task Force and published in the Purposes and Procedures Manual. In 2021, the Purposes and Procedures Manual was revised once, in December, with all policies, analytical procedures and instructions adopted during 2021 effective for year-end financial reporting. Amendments to the Purposes and Procedures Manual would automatically be reflected in the SFRS if any or all of the SFRS Standards identified in paragraph A of this memorandum have been adopted by an accredited state or incorporated by reference into the laws or regulations of an accredited state. For example, amendments to the Purposes and Procedures Manual would be directly incorporated by reference if the laws or regulations of an accredited state refer to or incorporate Standard 5 on valuation. Amendments to the Purposes and Procedures Manual would be indirectly incorporated by reference if the law or regulations of a state refers to or incorporates any other Standard that itself uses NAIC Designations or other analytical products of the Investment Analysis Office as a component; for example, Standard 2 in the case of RBC and/or Standard 3 in the case of statutory accounting.

D. Conclusion – In our opinion, reasoning as discussed above, amendments to the Purposes and Procedures Manual adopted by the Valuation of Securities (E) Task Force in 2021 can be characterized as maintenance items consistent with the existing regulatory framework and automatically incorporated into the Part A Standards identified above. The amendments identified in Attachments One did not create processes or practices external to the Purposes and Procedures Manual or other NAIC model legislation, guidance or analysis of NAIC staff that would suggest the need to consider an amendment to NAIC model legislation or guidance or legislative action on the part of an accredited state.

We hope this is responsive to the issues and concerns before the Committee.
Attachment One

RECENT CHANGES TO THE PURPOSES AND PROCEDURES MANUAL
Published in the December 31, 2021 Publication

- Adopted updates to the financial modeling instructions for RMBS/CMBS for non-legacy securities – the changes move away from financial modeling price breakpoints to a single NAIC Designation and NAIC Designation Category for all non-Legacy Securities (those financially modelled RMBS/CMBS securities that closed on or after Jan. 1, 2013). Making this change only effects non-Legacy Securities and preserves the historical treatment for Legacy Securities.

*The Valuation of Securities (E) Task Force adopted this amendment on Mar. 22, 2021*

- Adopted updates to the list of NAIC CRPs to reflect NRSRO changes – these changes reflect the Jul. 2, 2019, Morningstar, Inc. acquisition of DBRS with the new entity being DBRS, Inc., doing business as “DBRS Morningstar Credit Ratings” or “DBRS Morningstar” along with other updates to the rating agency names on the List of NAIC Credit Rating Providers and the CRP Credit Rating Equivalents to NAIC Designations and NAIC Designation Categories tables to match those on the U.S. Securities and Exchange Commission’s Office of Credit Ratings list of Current NRSROs.

*The Valuation of Securities (E) Task Force adopted this amendment on Mar. 22, 2021*

- Adopted additional instructions for the review of funds to clarify guidance for fund leverage and the use of derivatives - a fund’s exposure to: (i) derivatives under which a fund is or may be required to make any payment or delivery of cash or other assets during the life of the instrument or at maturity or early termination, whether as margin or settlement payments or otherwise, (ii) short sale borrowings and (iii) reverse repurchase agreements or similar financing, would be limited to 10% of the fund’s net assets in normal market conditions. Exposure would be calculated based on the gross notional amounts of derivatives, the value of assets sold short for short sale borrowings, and the proceeds received by the fund but not repaid for reverse repurchase agreements. Certain currency and interest rate derivatives that hedge currency or interest rate risk associated with one or more specific equity or fixed-income investments of the fund would be exempt from the 10% exposure calculation. For derivatives under which a fund shall not be required to make any payment or delivery of cash or other assets during the life of the instrument or at maturity or early termination, whether as margin or settlement payments or otherwise, exposure would be calculated based on the derivative’s market value. As defined in the P&P Manual, “Predominantly Hold” means, in part, “The fund will hold at least 80% of its assets in bonds if the fund is a bond fund or at least 80% of its assets in preferred stock if the fund is a preferred stock fund, in normal market conditions.” This existing requirement, therefore, limits total derivatives, short sale borrowing and reverse repurchase agreement exposure in any fund to 20%, exclusive of the currency and interest rate derivatives mentioned above.

*The Valuation of Securities (E) Task Force adopted this amendment on Jul. 15, 2021*

- Adopted changes to permit securities that are Credit Tenant Loan-like (CTL-like) and Ground Lease Financing-like (GLF-like) transactions to use NAIC credit rating provider (CRP) ratings through the Filing Exempt (FE) process if they are structured as securities – the amendment clarifies the difference between Credit Tenant Loans and Ground Lease Financings, and real estate lease-backed securities for purposes of amending the Filing Exemption eligibility for each. The amendment modifies the P&P definition of CTL and GLF by clarifying that CTLs and GLFs only refer to “mortgage loans in scope of SSAP No. 37,” and, by default, not “securities,” which would be in scope of SSAP Nos. 26R or 43R. Real estate lease-backed securities would include CTL-like and GLF-like transactions which meet all the CTL or GLF guidelines in the P&P Manual but for a feature making it a security, such as a trust issued certificate. Only CTLs or GLFs with mortgage loans in scope of SSAP No. 37 need to be filed with the SVO for review and potential assignment of an NAIC Designation. All other real estate lease-backed transactions which meet the definition of a “security”, including those with balloon payments in excess of 5%, would be eligible for Filing Exemption, and have the option to file with the SVO.

*The Valuation of Securities (E) Task Force adopted this amendment on Jul. 15, 2021*
• Adopted guidance to conform to the Statutory Accounting Principles (E) Working Group’s adopted change to Statement of Statutory Accounting Principles (SSAP) No. 105R—Working Capital Finance Investments - The Statutory Accounting Principles (E) Working Group adopted updates to SSAP No. 105R Working Capital Finance Investments on May 20, 2020. Key revisions are summarized as follows: Functionally Equivalent Foreign Regulators - Removed the requirement that the Securities Valuation Office (SVO) determine if the International Finance Agent is the functional equivalent of the U.S. regulator; Commingling Prohibitions - Removed the finance agent prohibitions on commingling; Investor Rights Edit - Removed duplicative text regarding exercising of investor rights; Requirements for filer to Certify Perfected Interest – Removed requirements, with revisions allowing the SVO to determine if a first priority perfected interest has been obtained; Finance Agent Validation Requirements – Broadened the independent review requirements to allow independent review of the finance agent by either audit or through an internal control report; Default Date - Changed the default provisions from 15 to 30 days so the default date and the cure period are consistent; Possible Domestic Regulator Approval – Removed the statement that the reporting entity may need to seek approval from the domestic regulator. This amendment removes inconsistencies between the P&P Manual and SSAP No. 105R Working Capital Finance Investments.

The Valuation of Securities (E) Task Force adopted this amendment on Jul. 15, 2021

• Adopted instructions to add back Zero Loss Criteria for Legacy Modeled RMBS and CMBS - modeled Legacy Security RMBS or CMBS tranches that have no expected loss under any of the selected modeling scenarios would be assigned an NAIC 1 Designation and NAIC 1.A Designation Category regardless of the insurer’s book/adjusted carrying value.

The Valuation of Securities (E) Task Force adopted this amendment on Sep. 30, 2021

• Adopted the addition of Spanish GAAP to the list of Countries and Associated National Financial Presentation Standards - financial statements submitted to the Security Valuations Office (SVO) for analysis must be audited and prepared in accordance with either a Global Financial Presentation Standard (U.S. Generally Accepted Accounting Principles (U.S. GAAP) or International Financial Reporting Standards (IFRS) or a Reconciled Financial Presentation Standard (local GAAP reconciled to U.S. GAAP or IFRS) unless the SVO has been specifically authorized to use a National Financial Presentation Standard. The amendment permits filings presented on the basis of Spanish GAAP, subject to the presentation of additional documentation as specified and annually thereafter.

The Valuation of Securities (E) Task Force adopted this amendment on Sep. 30, 2021

• Adopted the addition of Bank Loans - Since 2018 the Accounting Practices and Procedures Manual (AP&P Manual) has included bank loans issued directly by a reporting entity or acquired through a participation, syndication or assignment in SSAP No. 26R – Bonds. Pursuant to SSAP No. 26R, bank loans means fixed-income instruments, representing indebtedness of a borrower, made by a financial institution. In order to maintain consistency with the bond definition in SSAP No. 26R - Bonds, this amendment clarifies that the SVO can assess and assign NAIC Designations to bank loans. The filing instructions and methodology would follow that of other corporate obligations.

The Valuation of Securities (E) Task Force adopted this amendment on Nov. 17, 2021
• Adopted the addition of the United States International Development Finance Corporation to the U.S. Government Full Faith and Credit – Filing Exempt List - In October 2018 the Better Utilization of Investments Leading to Development (“BUILD”) Act was signed into law. The BUILD Act reorganized and merged existing United State government development finance and aid programs, the U.S. Overseas Private Investment Corporation (“OPIC”) and the Development Credit Authority of the United Stated Agency for International Development (“USAID”), into a new agency called the U.S. International Development Finance Corporation (“DFC”). Pursuant to the BUILD Act, the support provided by the DFC shall, and existing support provided by OPIC and USAID shall continue, to constitute obligations of the United States, and the full faith and credit of the United States is thereby pledged for the full payment and performance of such obligations. The DFC is authorized to borrow from the U.S. Treasury to fulfill such obligations of the United States. Based on this express full faith and credit, the DFC was added to the “U.S. Government Full Faith and Credit – Filing Exempt” list in Part One. However, for the avoidance of doubt, as noted in this Manual, any security issued by an entity on the “U.S. Government Full Faith and Credit – Filing Exempt” list shall be filed with the SVO if the security is not fully guaranteed by the U.S. government. For certain entities on the list, statute may require parties other than the U.S. government full faith and credit guarantor to bear a risk of loss equal to a specified percentage of the guaranteed support. For example, the BUILD Act requires parties to a project to bear the risk of loss in an amount of at least 20 percent of the guaranteed support of the DFC. If an insurance company, as investor, is the party bearing that risk of loss, meaning the securities it purchased are not fully guaranteed by the DFC or another entity on the list, it would need to file those securities with the SVO.

The Valuation of Securities (E) Task Force adopted this amendment on Nov. 17, 2021

• Adopted technical corrections for Private Letter Rating Securities and the corresponding NAIC Designation Category for NAIC 5GI - At the May 24, 2021 Task Force meeting, an amendment was adopted to the P&P Manual requiring the submission of Private Rating Letter Rationale Reports with certain Private Rating Letters filed with the SVO. In the May amendment certain language, currently in the printed December 2020 version of the P&P Manual, which clarifies that an NAIC 5GI Designation is the equivalent of an NAIC 5.B Designation Category, was erroneously omitted. This non-substantive technical amendment re-inserts the omitted language.

The Valuation of Securities (E) Task Force adopted this amendment on Dec. 12, 2021

• Adopted clarify instructions to exclude Residual Tranches and Interests from Schedule D-1 reporting and to provide temporary NAIC Designation instructions - The Statutory Accounting Principles (E) Working Group (the “Working Group”) identified inconsistencies in how residual tranches and interests were being reported with some entities reporting them on Schedule BA – Other Long Term Invested Assets and others reporting them on Schedule D-1: Long-Term Bonds with either self-assigned NAIC 5GI or NAIC 6 Designations. To prevent further inconsistency and direct appropriate reporting, at its Nov. 10, 2021 meeting, the Working Group adopted an amendment to SSAP No.43R – Loan Backed and Structured Securities to clarify that residual tranches and interests shall be report on Schedule BA and made a referral to the Valuation of Securities (E) Task Force requesting a similar change to the P&P Manual. The amendment creates a December 31, 2022 effective date for all residual tranches and interests to be reported on Schedule BA without an NAIC Designation with a provision which permits residual tranches and interests currently reported on Schedule D-1 to continue to be reported on Schedule D-1 for reporting year 2021 but only with an NAIC 6* Designation.

The Valuation of Securities (E) Task Force adopted this amendment on Dec. 12, 2021
• Adopted instructions to require the filing of private rating letter rationale reports with the Securities Valuation Office (SVO) beginning Jan. 1, 2022 - for a private letter rated (PLR) security to receive an NAIC Designation the SVO must receive, along with the private rating letter, a related private rating letter rationale report providing a more in-depth analysis of the transaction, the methodology used to arrive at the private rating, and, as appropriate, discussion of the transaction’s credit, legal and operational risks and mitigants. With both the private rating letter and the private rating letter rationale report the SVO would be able to determine whether the privately rated security is eligible to receive an NAIC Designation with an NAIC CRP Credit Rating. A private rating letter rationale report should mirror the work product that a CRP would produce for a similarly rated security. The amendment has provisions for delayed submission and waived submission PLR securities, depending upon their issuance date.

The Valuation of Securities (E) Task Force adopted this amendment on May 24, 2021

END NOTES

1 “...The purpose of the Part A: Laws and Regulations standards are to assure that an accredited state has sufficient authority to regulate the solvency of its multi-state domestic insurance industry in an effective manner. ... A state may demonstrate compliance with a Part A standard through a law, a regulation, an established practice, which implements the general authority granted to the state or any combination of laws, regulations or practices, which achieves the objective of the standard ...” 2014 Accreditation Program Manual. “...For those standards included in the Part A ... where the term “substantially similar” is included, a state must have a law, regulation, administrative practice or a combination of the above that addresses the significant elements included in the NAIC model laws or regulations. ... Accreditation Interlineations (Substantially Similar)

2 “...Part B sets out standards required to ensure adequate solvency regulation of multi-state insurers ... In addition to a domestic state’s examination and analysis activities, other checks and balances exist in the regulatory environment. These include ... analyses by NAIC’s staff, ... and to some extent the evaluation by private rating agencies ...” 2014 Accreditation Program Manual

3 The SFRS requires that securities owned by insurance companies be valued in accordance with standards promulgated by the NAIC’s Capital Markets and Investment Analysis Office approved by VOS TF while other invested assets should be valued in accordance with procedures promulgated by the Financial Condition (E) Committee. The Investment Analysis Office refers to two independent staff functions: i.e., that of the SVO and that of the NAIC Structured Securities Group (SSG). The SSG was formally established as an NAIC staff function in 2013 and assumes responsibility for the conduct of the year-end financial surveillance of insurer owned residential mortgage backed securities (RMBS) and commercial mortgage backed securities (CMBS), conducted by the SVO since 2009. The SSG is also presumptively the segment of NAIC professional staff that would lead assessment of structured finance products generally.

The financial modeling process administered by the SSG generates intrinsic price values (referred to as Price Grids) for RMBS and CMBS instead of an NAIC Designation. These standards are contained in Part Four of the Purposes and Procedures Manual. Price Grids are used by insurers to generate NAIC Designations in accordance with procedures specified in Statement of Statutory Accounting Principles (SSAP) No. 43R Loan Backed and Structured Securities of the NAIC Accounting Practices and Procedures Manual. Accordingly, to the extent that the NAIC Accounting Practices and Procedures Manual is incorporated by reference in any standard, Price Grids and NAIC Designations derived by reference to them would also be incorporated.

4 The SFRS requires the adoption of the Risk Based Capital (RBC) for Insurers Model Act (#312) or a substantially similar law or regulation. RBC factors are tied to NAIC designations assigned by the SVO or in certain cases, for example in the case of Mortgage Referenced Securities, by the SSG; NAIC Designations assigned by insurance companies pursuant to the filing exempt rule contained in the Purposes and Procedures Manual or NAIC Designations derived by insurance companies for RMBS and CMBS from Price Grids produced by the SSG pursuant to SSAP No. 43R. “…This standard does not articulate a threshold level for minimum capital and surplus required for insurers to transact business ... Risk-based capital will, however, effectively require minimums when adopted by states.” Accreditation Interlineations - Financial Regulation Standards

5 The SFRS requires the use of the codified version of the Accounting Practices and Procedures Manual. Valuation procedures applicable to long-term invested assets are determined by the nature of the insurer (life or property/casualty) and the NAIC designation assigned to the security by the SVO or SSG; NAIC Designations assigned by insurance companies pursuant to the filing exempt rule contained in the Purposes and Procedures Manual or NAIC Designations derived by insurance companies for RMBS and CMBS from Price Grids produced by the SSG pursuant to SSAP No. 43R. “…To satisfy this standard, ... specific adoption of the NAIC Annual Statement Blank, NAIC Annual Statement Instructions, and the NAIC Accounting Practices and Procedures Manual [is required]. … Accreditation Interlineations - Financial Regulation Standards

6 The SFRS requires a diversified investment portfolio. Although the Investment of Insurers Model Act (Defined Limits or Defined Standards) is not specifically identified, portions of one or the other model acts have been adopted by many of the states and these relate specific asset allocations to NAIC designations provided by the SVO or in some cases by the SSG; NAIC Designations assigned by insurance companies pursuant to the filing exempt rule contained in the Purposes and Procedures Manual or NAIC Designations derived by insurance companies for RMBS and CMBS from Price Grids produced by the SSG pursuant to SSAP No. 43R. “…This standard ... [will require] that statutes, together with related regulations and administrative practices, provide adequate basis ... to prevent, or correct, undue concentration of investment by type and issue and unreasonable mismatching of maturities of assets and liabilities. The standard is not interpreted to require an investment statute that automatically leads to a fully diversified portfolio of investments. Accreditation Interlineations - Financial Regulation Standards

© 2022 National Association of Insurance Commissioners
The NAIC Investment of Insurers Model Act (Defined Limits Version) (# 280) imposes a 3% limit on the amount an insurer can invest in a single person (the threshold diversification limit) and also imposes a percentage limit on total investments of a defined credit quality, expressed by reference to NAIC Designation categories (the threshold credit quality limit). An additional percentage limit is then assigned to specific asset categories, which may or may not be subject to adjustment with the two threshold requirements. The limits identified in the Model Act are what would guide portfolio allocation decisions. Once made the insurer would shift to monitoring changes in the portfolio and rebalancing the allocations accordingly. Assuming a process for the identification of concentrations caused by indirect exposures, the insurer would aggregate such exposures with similar risks across all activities.

The SFRS requires the adoption of the Credit for Reinsurance Model Act (#785), Credit for Reinsurance Model Regulation (#786) and Life and Health Reinsurance Agreement Model Regulation (#791) or substantially similar laws. The SVO maintains a list of banks that meet defined eligibility criteria to issue letters of credit in support of reinsurance obligations or that are eligible to serve as trustees under various arrangements required by state insurance law.
MEMORANDUM

TO: Director Lori K. Wing-Heier (AK), Chair, Financial Regulations Standards and Accreditation (F) Committee, Commissioner Vicki Schmidt, (KS), Co-Vice Chair, Financial Regulations Standards and Accreditation (F) Committee and Commissioner Sharon P. Clark, (KY), Co-Vice Chair, Financial Regulations Standards and Accreditation (F) Committee

FROM: Mike Boerner (TX), Chair, Life Actuarial (A) Task Force, Craig Chupp (VA), Vice Chair, Life Actuarial (A) Task Force

DATE: March 8, 2022

In 2017, the Financial Regulation Standards and Accreditation (F) Committee approved a motion to adopt the Valuation Manual – Effective January 1, 2020 as an accreditation standard. The intention of this memorandum is to update the Committee on changes the Life Actuarial (A) Task Force made to the Valuation Manual in 2021. The changes were adopted by the Executive (EX) Committee and Plenary at the 2021 Summer Meeting.

Attachment A to this memo includes a detailed listing of the changes made to the Valuation Manual in 2021. On behalf of the Task Force, it is our opinion that none of these items, either individually or collectively, should be considered “significant” as defined by the financial solvency accreditation standards.

As outlined in the Valuation Manual, amendments will be adopted annually by the Executive (EX) Committee and Plenary at each NAIC Summer Meeting. As such, the Valuation Manual will be reposted with an effective date of January 1 of the year following Executive Committee and Plenary adoption. For example, the current Valuation Manual, which encompasses the attached modifications, is titled the 2022 Edition - Valuation Manual. This process allows for an efficient way to update the Valuation Manual and ensures that users have the latest version.

The Task Force sincerely requests that the Committee consider the items listed in Attachment A as “insignificant” changes to the Valuation Manual. We will continue to notify the Committee of any changes to the Valuation Manual and to advise if, in our opinion, those changes are “significant” by financial solvency accreditation standards.

It should be noted that revisions have been made to the Life PBR Exemption through adoption of amendment proposal 2019-33, which provides for the inclusion of individually underwritten group life business in the calculation of premium volume to become effective in 2024. The accreditation standard provides as follows: “Although not required for accreditation, a state’s laws and regulations may allow an exemption from the reserving requirements of the Valuation Manual similar to that provided in the Valuation Manual. For such cases, do the laws and regulations contain provisions that are similar to those provided in the Valuation Manual?” [Emphasis added]. We are aware of several states that have adopted the Life PBR Exemption directly into their statutes, and that it may be necessary for those states to amend their statutes by 2024 in order to make them consistent with the updated Life PBR Exemption.
The individual amendment proposals reside on the Industry tab on the NAIC website and are accessible by following the link below:

[LATF Adopted Amendments for the 2022 VM](#)
Date: November 30, 2021

To: Superintendent Elizabeth Kelleher Dwyer (RI), Chair of Financial Regulation Standards and Accreditation (F) Committee

From: Commissioner Cassie Brown (TX), Chair of Receivership and Insolvency (E) Task Force

Re: 2021 Amendments to the Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450)

On August 17, 2021, the NAIC Executive (EX) Committee and Plenary unanimously adopted revisions to the NAIC Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). The revisions help ensure efficient coordination with affiliates and to enforce the continuation of essential services by an affiliate to an insurer in the event of insolvency.

These revisions were drafted by the Receivership Law (E) Working Group under charges assigned by the Receivership and Insolvency (E) Task Force. These revisions, referred to as the “receivership revisions” do not include recent revisions to Models #440 and #450 for group capital calculation or liquidity stress test. The receivership revisions address the continuation of essential services through affiliated intercompany agreements with an insurer that is placed into receivership by: 1) bringing affiliate service providers deemed “integral” or “essential” to an insurer’s operations under the jurisdiction of a rehabilitator, conservator, or liquidator for purposes of interpreting, enforcing, and overseeing the affiliate’s obligations under the service agreement and give the commissioner authority to require that “integral” or “essential” affiliate service providers consent to such jurisdiction; 2) further clarifying the ownership of data and records of the insurer that are held by the affiliate; and 3) clarifying that premiums of the insurer held by the affiliate are the property of the insurer and rights of offset are determined by receivership law. See attachment A for a copy of the amendments.

The recommendation for Part A Accreditation Standards is that these receivership revisions be considered acceptable, but not required to be adopted by states. However, the revisions are considered important and all states are encouraged to adopt them. States may consider adoption of the changes in conjunction with opening their holding company laws to consider adoption of the Group Capital Calculation and Liquidity Stress Test revisions.

The Task Force will continue to encourage states to adopt these revisions based on the benefits these revisions add to state regulation, and to the goal of improving efficiencies in receivership and reducing costs to a receivership estate.
MEMORANDUM

TO: Superintendent Elizabeth Kelleher Dwyer, Chair of the Financial Regulation Standards and Accreditation (F) Committee

FROM: Commissioner Scott A. White, Chair of the Financial Condition (E) Committee

DATE: Nov. 19, 2021

RE: Use of Captives to Reinsure Variable Annuity and Long-Term Care Business

I received your April 14 memo requesting information on the extent the referenced captives are used, any trends on the use of the captives, reasons for such trends, and any relevant updates on work done in the areas of variable annuities and long-term care insurance (LTCI). Upon receiving your memo, I referred the information to the Financial Analysis (E) Working Group. Since the Working Group ultimately collected the information on the use of captives by surveying domestic states using the states’ confidentiality standards, the Working Group’s response memo will be submitted to the Financial Regulation Standards and Accreditation (F) Committee as a separate regulator-only document. However, for the purposes of this memo, I would note that one of the key takeaways from the Working Group is that the current impact to the risk-based capital (RBC) of the domestic insurers utilizing these captives is minimal.

I would also like to provide you with updates on work done on variable annuities and LTCI. In 2018, the Financial Condition (E) Committee adopted a revised framework for variable annuities, which became effective Jan. 1, 2020. The changes were specifically designed to remove the non-economic volatility within the previous framework, therefore removing the major reason for the use of captives for variable annuities. The Committee believes it is an appropriate time to remove the to be determined (TBD) effective date in the Accreditation Preamble and replace it with a reference to VM-21, Requirements for Principle-Based Reserves for Variable Annuities.

For LTCI, the Financial Condition (E) Committee has not developed any new standards that could be used to justify the removal of the TBD status. Although the impact of the use of captives for LTCI still appears to be minimal, the Committee recommends that this aspect of the Accreditation Preamble be retained and that the Financial Regulation Standards and Accreditation (F) Committee continue to monitor the use of captives for LTCI.

In summary, the Financial Condition (E) Committee recommends a replacement of the TBD in the Accreditation Preamble for variable annuities with VM-21 and retaining the TBD for LTCI.
Captive Reinsurers

The following Part A standards apply to the regulation of a state’s domestic insurers licensed and/or organized under its captive or special purpose vehicle statutes or any other similar statutory construct (captive insurer) that reinsure business covering risks residing in at least two states, but only with respect to the following lines of business:

1) Term and universal life with secondary guarantee policies that are applicable under Section 3 of the *Term and Universal Life Insurance Reserve Financing Model Regulation (#787)* (commonly referred to as XXX/AXXX policies). The application of this provision is intended to have a prospective-only effect, so that regulation of captive insurers, special purpose vehicles and any other entities that reinsure these types of policies will not be subject to the Part A standards if the policies assumed were both (1) issued prior to Jan. 1, 2015, and (2) ceded so that they were part of a reinsurance arrangement as of Dec. 31, 2014. [Drafting Note: This paragraph of the Preamble became effective Jan. 1, 2016]

2) Variable annuities valued under Actuarial Guideline XLIII—CARVM for Variable Annuities (AG 43) or VM-21: *Requirements for Principle-Based Reserves for Variable Annuities*. [Drafting Note: This paragraph of the Preamble is not yet effective. Effective date for compliance to be determined.] This paragraph of the Preamble was addressed through revisions to VM-21 of the *Valuation Manual.*

3) Long term care insurance valued under the *Health Insurance Reserves Model Regulation* (Model #10). [Drafting Note: This paragraph of the Preamble is not yet effective. Effective date for compliance to be determined.]

With regard to a captive insurer, special purpose vehicle, or any other entity assuming XXX/AXXX business, regulation of the entity is deemed to satisfy the Part A accreditation requirements if the applicable reinsurance transaction complies with Model #787.

[Drafting Note: The Part A standards with respect to entities assuming variable annuities and long term care reinsurance business are intended to be effective with respect to both currently in-force and future business. However, the effective dates for variable annuities and long term care insurance are is not yet determined, and their its application to in-force business need further discussion].
The International Insurance Relations (G) Committee met in Kansas City, MO, April 7, 2022. The following Committee members participated: Gary D. Anderson, Chair (MA); Eric Dunning, Vice Chair (NE); Andrew N. Mais (CT); David Altmaier (FL); Colin M. Hayashida (HI); Doug Ommen (IA); Dana Popish Severinghaus (IL); James J. Donelon (LA); Kathleen A. Birrane (MD); Anita G. Fox (MI); Troy Downing (MT); Marlene Caride (NJ); Alexander S. Adams Vega (PR); and Raymond G. Farmer (SC).

1. **Adopted its Jan. 18, 2022, and 2021 Fall National Meeting Minutes**

Commissioner Caride made a motion, seconded by Director Dunning, to adopt the Committee’s Jan. 18, 2022 (Attachment One) and Dec. 15, 2021 (see NAIC Proceedings – Fall 2021, International Insurance Relations (G) Committee) minutes. The motion passed unanimously.

2. **Discussed International Efforts on Sustainability and Climate**

Commissioner Anderson explained that the purpose of this agenda item was to highlight the topic of sustainability and climate and hear about international efforts to bring insurance supervisors together to strengthen their understanding of and responses to sustainability issues facing the insurance sector. He noted that the Committee would first hear more about the work of the Sustainable Insurance Forum (SIF), as several individual states and the NAIC are members. He noted that after hearing about the SIF, the Committee would hear from an insurer on how it is addressing sustainability and climate issues.

William Harding (SIF) gave an overview of the composition and creation of the SIF and its intended near-future and long-term goals. He addressed work being done or planning to be done as it relates to sustainability and climate. He reviewed the highlights of the SIF’s work over its first five years, including several key projects done in partnership with the International Association of Insurance Supervisors (IAIS). He noted that though the SIF has not met in person recently, there is strong engagement with its membership, and the SIF is looking forward to new members joining soon. Lastly, he said the SIF continues to dialogue with experts, both external and internal in relation to the membership, to share insights during active participation workshops.

Commissioner Anderson invited Committee members whose states are part of the SIF to offer their thoughts on how the SIF helps inform domestic efforts and activities related to sustainability and climate. Commissioner Birrane commented that the Solvency Workstream of the Climate and Resiliency (EX) Task Force is researching how to enhance tools to address climate-related financial risk more directly. The Task Force has reviewed international supervisory frameworks as part of this research and released a survey on where U.S. surveillance tools should be enhanced. That analysis led to requests for revisions to the Financial Condition Examinations Handbook (Handbook) and the NAIC Own Risk and Solvency Assessment (ORSA) Guidance Manual (ORSA Guidance Manual). Commissioner Birrane noted that the Task Force is waiting for comments and plans to hold a public session before deciding to adopt any changes to the Handbook or the ORSA Guidance Manual. She then noted that public panel discussions, a deeper dive into scenario analysis, and stress testing are all part of this discussion. She commended the SIF for its generous assistance to state department staff in providing resources, and she foresees utilizing the SIF’s expertise again to help in future deeper scenario analysis and stress testing work. Lastly, she said being an SIF member provides an incredible opportunity for Maryland’s insurance department staff to have sophisticated, global training on these issues.
Commissioner Mais highlighted the findings of the United Nations (UN) Intergovernmental Panel on Climate Change’s (IPCC’s) recent report on climate and its importance to the discussion of the Committee. He noted that Connecticut has the second highest number of uninsured coastal properties, and that was an agenda topic at Connecticut’s inaugural conference on climate, which included participants from the Committee, the Federal Insurance Office (FIO), and the SIF. He said the Connecticut Insurance Department will be issuing a bulletin to insurers on managing climate risk that considers current and future risk, with a draft for comment to be released in a few days. He also highlighted an upcoming release of Connecticut’s first legislative report that addresses climate risks. He noted that more innovative insurance products are needed, raising awareness for mitigation dollars and maintaining open dialogues with industry. He concluded his comments by noting that Connecticut’s application to join the SIF has been approved.

Rakhi Kumar (Liberty Mutual) presented on sustainability and climate from Liberty Mutual’s perspective. She highlighted how Liberty Mutual approaches sustainability and its importance to the company’s business, and she shared insights around climate scenario work. She outlined the way sustainability and climate are embedded in the workings of Liberty Mutual, explaining its environmental, social, and governance criteria. She provided detailed insights on scenario analysis, including how it provides a better understanding of transition risks affecting companies, coordination—not just commonality in the way forward—and how energy dependency influences policy design.

3. **Heard an Update on 2022 Activities of the IAIS**

Commissioner Anderson reported that due to time constraints, the update on recent IAIS activities would be circulated via email to the Committee. This update covered the following:

- IAIS committee meetings were held virtually in the latter part of February, as well as in person at the beginning of March in Basel, Switzerland.
- Work continues on developing criteria to assess whether the aggregation method (AM) provides comparable outcomes to the insurance capital standard (ICS). The ICS and AM data collections templates for this year of the monitoring period are expected to be released later this spring.
- On the holistic framework, the on-site portion of the targeted jurisdictional assessments is wrapping up, and work will next move to writing the reports. The U.S. on-site assessment took place in mid-January, which included Connecticut, New Jersey, and New York as state volunteers.
- This year’s global monitoring exercise (GME) kicked off earlier this month.
- The Climate Risk Steering Group delivered its recommendations on how the IAIS should: 1) address any gaps in its supervisory material; 2) support members on sharing best practices on climate scenario analysis; and 3) integrate climate-related data elements into the GME.
- On diversity, equity, and inclusion (DE&I), IAIS members are being surveyed as a stock-take on DE&I initiatives currently underway that will eventually lead to a public report expected in the fourth quarter of this year. The survey also intends to help identify possible areas for future work by the IAIS in this area.
- The IAIS has launched a new logo and website as part of its brand modernization process.

4. **Heard an Update on International Activities**

   a. **Regional Supervisory Cooperation**

Director Dunning reviewed the three topics of focus in 2022 for the European Union (EU)-U.S. Insurance Dialogue Project: 1) climate risk financial oversight, including climate risk disclosures, supervisory reporting, and other financial surveillance; 2) climate risk and resilience, including innovative technology, pre-disaster mitigation, and adaptation efforts, and modelling; and 3) innovation and technology, which will include topics such as big data, artificial intelligence (AI), and supervisory technology (SupTech) as a regulatory tool. He noted that the project’s
working groups have met several times and will be producing a summary report of the discussions by the end of this year.

Director Dunning reported that upcoming bilateral discussions are planned with Bermuda, Japan, and Taiwan, among others, and the NAIC will utilize the in-person IAIS June committee meetings and Global Seminar as an opportunity to connect with several colleagues from around the globe. Next, he noted upcoming virtual speaking engagements: 1) Director Cameron will be speaking on supervision in the new normal at a high-level event hosted jointly by the Latin American Association of Insurance Supervisors (ASSAL), the Financial Stability Institute (FSI), and the IAIS; and 2) Commissioner Birrane will be presenting at the Taiwan Insurance Institute’s (TII’s) East Asia Pacific Insurance Forum in May on regulation and practices of insurtech and consumer protection in the U.S.

Director Dunning reported that the 2022 NAIC Spring International Fellows Virtual Program will take place May 16–20. He said to plan for the in-person Fall 2022 Fellows Program scheduled to begin Oct. 10, any state interested in hosting a Fellow should contact NAIC staff.

b. OECD

Director Dunning reported that since the last meeting of the Organisation for Economic Co-operation and Development’s (OECD’s) Insurance and Private Pensions Committee (IPPC) in early December, work continues on a variety of projects. He said the NAIC recently contributed on three of the IPPC’s initiatives in particular: 1) the Global Insurance Statistics framework; 2) a survey on improving health, wellbeing, and care through digital tools in insurance; and 3) a state insurance regulator survey on leveraging emerging technologies for risk management.

5. Discussed Other Matters

Commissioner Anderson reminded attendees about the NAIC’s 2022 International Insurance Forum to be held in Washington, DC, May 12–13.

Commissioner Ommen commented on the importance of state insurance department staff involvement in international discussions and activities, as it helps ensure informed NAIC decision making on and influence over IAIS and other international work. Commissioner Anderson followed up on this by noting that building up a “U.S. bench” is consistent with that approach, and NAIC staff will further explore how to get state department staff more involved.

Commissioner Anderson ended the meeting by congratulating Director Farmer on his retirement and thanking him for his dedicated service to the NAIC and its international work.

Having no further business, the International Insurance Relations (G) Committee adjourned.
The International Insurance Relations (G) Committee met Jan. 18, 2022. The following Committee members participated: Gary D. Anderson, Chair (MA); Raymond G. Farmer, Vice Chair (SC); Evan G. Daniels represented by Scott Persten (AZ); Andrew N. Mais (CT); Karima M. Woods (DC); David Altmaier (FL); Doug Ommen (IA); James J. Donelon (LA); Kathleen A. Birrane (MD); Anita G. Fox represented by Steve Mayhew (MI); Chlora Lindley-Myers (MO); Eric Dunning represented by Jill Gleason (NE); Marlene Caride (NJ); Andrew R. Stolfi represented by TK Keen (OR); and Jessica K. Altman (PA).

1. **Discussed NAIC Comments on the IAIS Public Consultation on the Development of Liquidity Metrics: Phase 2**

   Commissioner Anderson explained that the International Association of Insurance Supervisors (IAIS) Public Consultation on the Development of Liquidity Metrics: Phase 2 will serve as a tool to facilitate the IAIS’s monitoring of the global insurance industry’s liquidity risk. He noted that it will allow the IAIS to assess insurers’ liquidity exposure, which may be critical, as insurers have been exposed to liquidity shortfalls in previous crises.

   Tim Nauheimer (NAIC) gave an overview of the NAIC’s comments on the public consultation, noting that since the NAIC was part of the initial drafting group within the IAIS, the comments address a few questions rather than respond to the full list. He explained that the NAIC’s comments serve as a general statement of support for this phase of the work. On the topic of additional metrics to be considered, he said while exploring the option of additional liquidity metrics is important for the IAIS to consider, a separate publication on this is too premature at this stage. In terms of a preference for a single or a set of metrics for liquidity risk monitoring purposes, he noted that the NAIC prefers the company projection approach (CPA), but it is not opposed to other types of metrics that fit with other jurisdictions’ systems.

   Steve Broadie (American Property Casualty Insurance Association—APCIA) spoke about the APCIA’s general comments on the consultation document, and he said the comments are still being finalized. He highlighted that property/casualty (P/C) insurers generally pose limited, if any, liquidity risk, and to the extent that there is some risk, it is not of systemic importance. Thus, the APCIA’s comments will urge the IAIS to use this for the purposes of macroprudential surveillance only, and jurisdictions should not use these metrics for the supervision of groups or companies at this point. Mr. Broadie noted that an aggregate basis of results released on an anonymized basis should be the approach taken by the IAIS. Mr. Nauheimer said the NAIC generally agrees with these points and that any data published by the IAIS would be anonymized.

   Robert Neill (American Council of Life Insurers—ACLI) said the ACLI is also finalizing its comments on the public consultation for submission to the IAIS. He noted that the ACLI will encourage the IAIS to establish an approach that leverages the results of jurisdictional level analysis, such as the NAIC’s liquidity stress test (LST) framework, rather than make additional data requests on the industry. He requested insight into further field-testing expectations, and he asked: 1) whether it would require additional information from U.S. firms beyond what is being provided for the NAIC’s LST work; and 2) whether it would be driven by the IAIS or jurisdictional supervisors. Mr. Nauheimer noted that the IAIS would conduct the field testing, but the NAIC would leverage the data for domestic purposes for LST purposes to limit the burden on domestic reporting companies. In terms of timing, he said the calendar is not set but would most likely begin in mid-2022 after the IAIS global monitoring exercise data collection.
Director Farmer made a motion, seconded by Commissioner Caride, to approve submission of the NAIC comments on the Liquidity Metrics: Phase 2 consultation document (Attachment One-A).

Having no further business, the International Insurance Relations (G) Committee adjourned.
### Question

<table>
<thead>
<tr>
<th>Question</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Do you agree with the IAIS’ general objective and contemplated usage for the liquidity metrics? If not, please explain your rationale.</td>
<td>A liquidity risk indicator should be considered along with other risk indicators to develop an overall risk profile of individual insurers and the sector. We support development of the CPA approach as a better risk indicator to assess liquidity risk. With respect to contemplated usage, we would prefer to see how the development of the CPA approach progresses prior to deciding on any publication of results as an ancillary indicator. A separate publication may not be necessary as it may be prudent to keep the results within the IIM and SWM exercises.</td>
</tr>
<tr>
<td>4 Is there a need to develop supplementary liquidity metrics solely for separate accounts for both EA and CPA? If not, provide suggestions how the IAIS should monitor liquidity related to separate accounts (united-linked products) for both EA and CPA?</td>
<td>Whether this is needed should be explored in the future; the NAIC plans to research this domestically in the future as well.</td>
</tr>
<tr>
<td>65 Do you prefer a set of liquidity metrics for liquidity risk monitoring purposes? If not, provide clarification.</td>
<td>While we feel the CPA is the best indicator of liquidity risk, we would not be opposed to having a set of liquidity metrics from which jurisdictions could choose to use based on which metric(s) works best for their system.</td>
</tr>
<tr>
<td>66 Do you prefer a single liquidity metric (eg. ILR or CPA metrics) for liquidity risk monitoring purposes? If not, provide clarification.</td>
<td>The NAIC prefers the CPA because we feel it is a better indicator of liquidity risk. The CPA is more dynamic capturing the cash flow generated by insurance premiums versus the static point in time balance sheet metrics historically used as liquidity risk indicators. The NAIC supports field testing both ILR and CPA to provide insights and comparison that may allow for some improvements.</td>

Big Data and Artificial Intelligence (H) Working Group April 5, 2022, Minutes (Attachment Two) .......... 12-12
Cybersecurity (H) Working Group March 23, 2022, Minutes (Attachment Three) ................................. 12-16
Innovation, Cybersecurity, and Technology (H) Committee
Kansas City, Missouri
April 5, 2022

The Innovation, Cybersecurity, and Technology (H) Committee met in Kansas City, MO, April 5, 2022. The following Committee members participated: Kathleen Birrane, Chair (MD); Evan G. Daniels, Co-Vice Chair (AZ); Dana Popish Severinghaus, Co-Vice Chair (IL); Karima M. Woods (DC); John F. King (GA); Amy L. Beard (IN); Chlora Lindley-Myers represented by Cynthia Amann (MO); Troy Downing (MT); Adrienne A. Harris represented by My Chi To (NY); Jon Godfread (ND); Judith L. French (OH); Elizabeth Kelleher Dwyer (RI); Carter Lawrence (TN); Michael S. Pieciak represented by Kevin Gaffney (VT); and Mike Kreidler represented by Michael Walker and Molly Nollette (WA). Also participating were: George Bradner (CT); and Eric Slavich (WA).

1. ** Adopted Proposed Revisions to the Innovation, Cybersecurity, and Technology (H) Committee Structure and its Working Group Charges

Commissioner Birrane said with the retirement of former Superintendent Eric A. Cioppa (ME), there have been some changes to the leadership and membership of the Innovation, Cybersecurity, and Technology (H) Committee (Committee). She said Director Popish-Severinghaus will replace Superintendent Cioppa as the co-vice chair, and Director Lindley-Myers will replace Maine as a member of the Committee.

Commissioner Birrane reviewed the proposed changes to the structure and the charges and proposed a new Committee working group, the Innovation in Technology and Regulation (H) Working Group. She said the structure changes propose moving the Speed to Market (H) Working Group to the Market Regulation and Consumer Affairs (D) Committee and moving the Privacy Protections (D) Working Group to this Committee. She said the proposal also includes a clarifying amendment to the Privacy Protections (D) Working Group charge.

Commissioner Birrane said the new Working Group will be the platform through which the Committee will evaluate and provide educational opportunities for state insurance regulators and others to investigate evolving and new developments on the innovation and technology front. She said this Director Daniels will serve as Working Group chair, and Director Popish Severinghaus and Director French will serve as co-vice chairs. Director Daniels said this Working Group will signal some new ways to educate and facilitate learning amongst state insurance regulators and presents an opportunity for many stakeholders to be part of that. He said he would summarize the charges in two ways. He said first, the objective is to facilitate discussion between all stakeholders—not just technology stakeholders, but also with state insurance regulators who are facilitating innovation in their states. He said many states have produced ways to talk about this area openly and that this Working Group can serve to identify issues affecting the insurance marketplace in the near future.

Mr. Bradner asked about the reasoning behind moving the Speed to Market (H) Working Group to the Market Regulation and Consumer Affairs (D) Committee. He said the charges to the Working Group appeared to include the System for Electronic Rates & Forms Filing (SERFF) Modernization Project, which might be considered something under the purview of the Committee. Commissioner Birrane acknowledged the charges speak to the SERFF Modernization Project, but she said the Working Group has been more focused on edits to the Product Filing Review Handbook, and the scope of that work is more granular and specific to rates and forms and not the broader NAIC. Director Daniels said the proposed move should not be considered any signal that the Committee is not interested in following this work, but that it is a touchpoint similar to others identified with other NAIC committees that the Committee will continue to coordinate with like the Health Innovations (B) Working Group. Commissioner Birrane said how state insurance regulators use technology will be a focus of the Committee, but
that does not mean specific and more granular work will be done outside of the Committee where the subject
matter expertise (SME) exists.

Commissioner Downing made a motion, seconded by Director Daniels, to adopt the proposed revisions to the
Innovation, Cybersecurity, and Technology (H) Committee’s structure and charges (Attachment One). The motion
passed unanimously.

2. **Adopted the Reports of its Working Groups**

   a. **Big Data and Artificial Intelligence (H) Working Group**

      Superintendent Dwyer said the Big Data and Artificial Intelligence (H) Working Group met April 5 and focused on
      four workstreams. She said the first workstream, led by Mr. Gaffney, is to continue the survey work begun in 2021.
      She said the workstream will continue to look at the private passenger auto (PPA) artificial intelligence
      (AI)/machine learning (ML) survey results and use that experience to inform the development of a homeowners
      and a life insurance survey scheduled to be issued in June and August, respectively. She said the work will
      culminate in a white paper to be published by the Fall National Meeting. She said the second workstream, led by
      Commissioner Ommen, will focus on review of third parties providing data and models to determine the
      appropriate regulatory format for monitoring and overseeing this use. She said this work should be completed by
      the Fall National Meeting as well. She said the third workstream, led by Superintendent Harris, will gather and
      evaluate information on governance models and frameworks, software tools and resources from various sources
      that could assist state insurance regulators in overseeing and monitoring use of data, and AI/ML to eliminate
      unintended bias. She said the final workstream, led by Commissioner Beard, is focused on how to implement the
      expectations outlined in the NAIC AI Principles and provide suggestions on next steps, which could include
      regulatory guidance, such as model governance. She said the Working Group will be holding an open meeting in
      45 to 60 days to receive a public update on these workstreams. Lastly, she said the Working Group received an
      update on the review of the PPA AI/ML survey results.

   b. **Cybersecurity (H) Working Group**

      Ms. Amann said the Cybersecurity (H) Working Group met March 23 to kick off its work for the year. She said that
during this meeting, the Working Group reviewed its charges and discussed projects that may be taken on based
on its charges and the needs of state insurance regulators. She said the discussion covered the following five
items:

      1. Consider the development of a cybersecurity response plan to assist state insurance regulators with
         situations where cybersecurity events take place within the insurance industry intended to leverage the
         strength of the U.S. system of regulation and allow state insurance regulators to share expertise and to
         develop a valuable resource to aid states managing complicated responses to cybersecurity events.
      2. Consider the development of a cybersecurity survey to better understand cybersecurity practices by
         insurers and look at controls, working closely with the Center for Insurance Policy and Research (CIPR)
         and learn from the NAIC’s experience with surveys.
      3. Develop advice and guidance related to training that would be beneficial to state insurance regulators,
         and put together training to be offered at the NAIC Insurance Summit.
      4. Review and refine the Working Group charges and related topics.
      5. Monitor state, federal, and international cybersecurity efforts.
c. **E-Commerce (H) Working Group**

Commissioner Downing said the E-Commerce (H) Working Group met March 30. He said the Working Group heard a presentation and summary from NAIC staff on the recent surveys sent to the states regarding their adoption and various exceptions to the federal Uniform Electronic Transactions Act (UETA), as well as the various steps and other actions taken by the states regarding e-commerce both during and because of the COVID-19 pandemic. He said 20 states responded to the survey, and their results gave the Working Group a good sense of what kinds of orders and bulletins have now either expired or been rescinded, as well as what other actions taken by the states have now become permanent either through legislation or regulation.

The NAIC also presented and summarized the various industry concerns that were received in response to the survey as well. Four industry trade associations provided responses to the survey in which they discussed various concerns and what they consider to be impediments to e-commerce. He said the trades also provided recommendations on how they would like to see state insurance regulators and legislators proceed with respect to e-commerce.

He said going into the meeting, the original intent was to assign issues to buckets and set discreet delivery dates and prioritization based on the survey results and the Working Group analysis. He said that sparked a conversation on whether that would be premature prior to spending time thoughtfully identifying themes and problem statements for each theme. He said at a high level, the industry surveys identified issues related to identifying consumer protection concerns such as opt-in/opt-out for electronic delivery of notices and other overarching themes. He said a small group of state insurance regulators volunteered to further analyze the states’ survey results to identify the various overarching themes and issues contained in the survey results and to further clarify the Working Group’s work plan. He said the Working Group plans to meet again in May to further discuss its work plan, as well as timelines for any deliverables that may be developed as a result of this work.

d. **Speed to Market (H) Working Group**

Commissioner Birrane said the Speed to Market (H) Working Group did not meet prior to the Spring National Meeting but is currently chaired by Rebecca Nichols (VA). She said the Working Group leadership and NAIC staff plan to review and discuss edits to the *Product Filing Review Handbook* and present any proposed changes to the Working Group, as needed. She said the Working Group plans to meet April 20 to continue work on its goals.

Commissioner Godfread made a motion, seconded by Director French, to adopt the reports of the Big Data and Artificial Intelligence (H) Working Group (Attachment Two), the Cybersecurity (H) Working Group (Attachment Three), the E-Commerce (H) Working Group, and the Speed to Market (H) Working Group. The motion passed unanimously.

3. **Received an Update on the Casualty Actuarial and Statistical (C) Task Force Predictive Model Review Process**

Commissioner Birrane said that consistent with the Committee’s efforts to coordinate and ensure collaboration with other related NAIC workstreams, Mr. Slavich, the current the chair of the Casualty Actuarial Statistical (C) Task Force, would provide an update on its Predictive Model Review Process.

Mr. Slavich said the Task Force has been concentrating on predictive modeling activities for the past few years. He provided a description of those activities and charges. Mr. Slavich then provided an update about the NAIC rate model review team’s activities. He said first, states are approving rates filed and the rate models are used in support of those rates; therefore, this group is not actually approving the models themselves, as the states are approving the rates. He said second, the rate models evaluated today are for risk classification and not the overall rate levels, so the company determines its overall rate needs, determines changes to rating variables not included...
in the modeling process, and then uses the model as the main support of allocation of the remaining overall rate needed for individual classes.

Mr. Slavich said the Task Force completed its first predictive modeling product in 2020 with its adoption of the NAIC white paper titled *Regulatory Review of Predictive Models*; meets in regulator-to-regulator session to discuss rate filing issues; and facilitates training and the sharing of expertise through predictive analytics webinars, which is referred to as the Book Club. He said the Task Force received a new charge this year to: “Review the completed work on artificial intelligence (AI) from other Committee groups and to coordinate with the Innovation, Cybersecurity, and Technology (H) Committee on the tracking of new uses of AI, auditing algorithms, product development, and other emerging regulatory issues, in as far as these issues contain a Task Force component.”

Mr. Slavich said Task Force members have also been working closely with the NAIC staff hired to form the NAIC rate model review team, including Dorothy L. Andrews (NAIC), a senior behavioral data scientist and actuary, and Sam Kloese (NAIC) and Roberto Perez (NAIC), who are property/casualty (P/C) rate model actuaries. He said this team of experts is led by Kris DeFrain (NAIC), Director of Research and Actuarial Services, and has made considerable progress over the last few years. He said the team has reviewed 54 rate models and produced 127 reports to assist state insurance regulators with their reviews of these models. Mr. Slavich said these reports are stored in a P/C rate model database designed by Task Force regulators and NAIC staff and accessible by the 31 states that have signed the Rate Review Support Services Agreement with the NAIC.

4. Received an Update on the Privacy Protections (D) Working Group 2022 Work Plan

Ms. Johnson provided the report of the Privacy Protections (D) Working Group. She said the Working Group met April 4 and adopted its minutes from previous meetings. She said the Working Group adopted the final exposure draft of the report on consumer data privacy protections and detailed the changes. She said during its meeting, the Working Group heard updates from Jennifer McAdam (NAIC) and Brooke Stringer (NAIC) on federal privacy legislation and received comments from the American Council of Life Insurers (ACLI) and the Health Coalition on the exposure draft of the Working Group’s work plan, which was adopted by the Working Group.

5. Discussed the Coordination of Related Workstream Activity in Other NAIC Committees

Commissioner Birrane said one of the highest priority charges to the Committee is to facilitate appropriate levels of coordination and collaboration among NAIC working groups with respect to topics that relate to innovation, technology, cybersecurity, and privacy in the insurance sector. She said the charge was a foundational element in the decision to form the Committee—the goal being to assure, to the extent appropriate, that the NAIC’s activities in these areas are identified, coordinated, and transparent. She said the first task was to operationalize that charge and determine what coordination and collaboration means along a continuum that ranges from awareness and monitoring the activities of a particular working group, to the absorption of that working group under the Committee and determine what the appropriate level of interface is between that NAIC working group and the Committee. She said the first step was to identify the working groups within the NAIC that include within their current charges or work focus topics that overlap with the work of the Committee referred to as “related groups.” She said that effort was undertaken by NAIC Committee staff, working across all the NAIC committees, and then the leadership of the Committee met with the leadership of each of the other committees to discuss coordination and collaboration in general and with respect to specific related groups. She said this led to an operational approach and framework that depends on the related group and the ongoing and iterative discussions. She said at a high level the categories are:

- Awareness and monitoring of work focus – This approach applies to groups whose work has no obvious overlap with the Committee but whose work can inform the Committee.
• Overlapping representation – This approach applies to groups whose work is more directly related and where each should be aware of the work of the other.
• Joint products/projects – This approach applies to circumstances in which the related group is working on a project that very clearly overlaps with the Committee, and it makes sense for the groups to share the work product.
• Absorption into the Committee – The only example of this currently is the Privacy Protections (D) Working Group.

Commissioner Birrane said that is the outline of how the Committee intends to interface with related groups. In addition, however, there are topics that cut across many related groups and that are of broad significance, such as the detection of unfair bias in AI/ML decisional systems or complex predictive models. She said that is an example of something that many working groups are addressing and for topics such as these, the Committee is establishing a Collaboration Forum that will serve as the platform for multiple NAIC working groups to come together to identify and address foundational issues and develop a common framework that, when adopted, can inform the area specific work of those groups.

Commissioner Birrane said that when such a topic is identified, there will be a meeting of the working groups involved and, if consensus exists, a project within the Collaboration Forum will be created. She said that project will be undertaken by a group consisting of each of the related working groups and any other state that wishes to participate, and each will have its own chair and vice chairs, determine the common issues to be addressed, and establish a work plan, deliverables, and time frames. She said the objective of each project within the Collaboration Forum will be to create the common framework and foundational elements of important regulatory issues that are of broad concern and impact to assure that those issues are fully discussed and vetted with the involvement of many disciplines and areas of expertise and focus, moving forward from a firm foundation built on consensus. She said the first project of the Collaboration Forum will be the algorithmic bias project.

Commissioner Birrane said one additional way in which the Committee will facilitate coordination and collaboration is to facilitate awareness and communication around what related groups are working on supported by the launch of the Innovations, Cybersecurity and Technology (ICT) Hub, which will:

• Provide a “portal” or library of resources related to innovation, cybersecurity, data privacy and consumer privacy, and technology, where the user can easily identify various workstreams and work products developed or being developed by different committees and groups at the NAIC.
• Primarily be led by NAIC staff but with significant input from committee members around the look and feel and the practicality of it.
• List related groups with links to their work and allow users to query and identify working groups and work product from a topic driven perspective.

Commissioner Birrane asked if any Committee members, interested state insurance regulators or interested parties wanted to comment. David Snyder (American Property and Casualty Insurance Association—APCIA) asked what the opportunities would be for stakeholder input on these large-scale projects like algorithmic bias. Commissioner Birrane said the group may meet in regulator-to-regulator session for organizational purposes but would then have public meetings to develop a common understanding and to identify appropriate tools for identifying algorithmic bias within certain AI/ML models. She said the objective would be to listen to SMEs and that the work product of the Collaboration Forum would be open for comment. Scott Harris (American InsurTech Council—AITC) said he applauds the efforts being made. He said finding the right balance between appropriate oversight and encouraging innovation, while keeping up with the pace of innovation, is challenging and that the AITC welcomes the opportunity to comment.
6. **Discussed Other Committee-Level Projects**

Director Daniels said that while the new Innovation in Technology and Regulation (H) Working Group is more outward-focused on what is happening in the marketplace, the Committee will also take on an inward focus as well to look at how state insurance regulators are using innovation and technology to do their jobs. He said there will be a forum for state insurance regulators to discuss concerns or share information about specific technologies or use cases, as well as what might be available in the future, or what SupTech and state insurance regulators will leverage or are leveraging to do their jobs better and more efficiently. Commissioner Birrane said this may have a similar look to what the Casualty Actuarial and Statistical (C) Task Force group is currently doing with its Book Club.

7. **Discussed Other Matters**

Commissioner Birrane asked Denise Matthews (NAIC) to provide an update on innovation, cybersecurity, and technology-related model law implementation. Ms. Matthews said 19 jurisdictions have passed the *Insurance Data Security Model Law* (#668), and it is pending in six jurisdictions with one state, New York, having passed related legislation. Commissioner Birrane noted that this legislation is close to being passed in Maryland, which will bring the number to 20. Ms. Matthews also said that two states have passed legislation related to the rebating revisions in the *Unfair Trade Practices Act* (#880), and legislation is pending in seven.

Birny Birnbaum (Center for Economic Justice—CEJ) asked if it would be possible for states to report the types of rebates they are finding companies are using and whether they are finding any issues with those rebates. He also said that while states are considering Model #880, some states took action by bulletin such as Maine, and he asked if the NAIC could track those.

Having no further business, the Innovation, Cybersecurity, and Technology (H) Committee adjourned.
Draft: 2/28/22

Adopted by the Executive (EX) Committee and Plenary, xx/xx/22

Adopted by the Innovation, Cybersecurity, and Technology (H) Committee, xx/xx/22

Draft 2022 Revised Proposed Structure and Charges

INNOVATION, CYBERSECURITY, AND TECHNOLOGY (H) COMMITTEE

The mission of the Innovation, Cybersecurity, and Technology (H) Committee is to: 1) provide a forum for state insurance regulators to learn and have discussions regarding: cybersecurity, innovation, data security and privacy protections, and emerging technology issues; 2) monitor developments in these areas that affect the state insurance regulatory framework; 3) maintain an understanding of evolving practices and use of innovation technologies by insurers and producers in respective lines of business; 4) coordinate NAIC efforts regarding innovation, cybersecurity and privacy, and technology across other committees; and 5) make recommendations and develop regulatory, statutory or guidance updates, as appropriate.

Ongoing Support of NAIC Programs, Products or Services

1. The Innovation, Cybersecurity, and Technology (H) Committee will:

   A. Provide forums, resources, and materials for the discussion of insurance sector developments in cybersecurity and data privacy to educate state insurance regulators on how these developments affect consumer protection, insurer and producer oversight, marketplace dynamics, and the state-based insurance regulatory framework.

   B. Discuss emerging issues related to cybersecurity, including cybersecurity event reporting, and consumer data privacy protections. Monitor and advise on the cybersecurity insurance market, including rating, underwriting, claims, product development, and loss control. Report on the cyber insurance market, including data reported within the Cybersecurity Insurance and Identity Theft Coverage Supplement.

   C. Coordinate with various subject matter expert (SME) groups on insurer and producer internal cybersecurity. Discuss emerging developments; best practices for risk management, internal control, and governance; and how state insurance regulators can best address industry cyber risks and challenges. Work with the Center for Insurance Policy and Research (CIPR) to analyze cybersecurity related information from various data sources.

   D. Provide forums, resources, and materials for the discussion of innovation and technology developments in the insurance sector, including the collection and use of data by insurers, producers, and state insurance regulators; as well as new products, services, and distribution platforms. Educate state insurance regulators on how these developments affect consumer protection, data privacy, insurer and producer oversight, marketplace dynamics, and the state-based insurance regulatory framework.

   E. Discuss emerging technologies and innovations related to insurance; and insurers, producers, state insurance regulators, licensees, or vendors; and the potential implications of these technologies for the state-based insurance regulatory structure—including reviewing new products and technologies affecting the insurance sector, and associated regulatory implications.
F. Consider and coordinate the development of regulatory guidance and examination standards related to innovation, cybersecurity, data privacy, the use of big data and artificial intelligence (AI) including machine learning (ML) in the business of insurance, and technology, including drafting and revising model laws, white papers, and other recommendations as appropriate. Consider best practices related to cybersecurity event tracking and coordination among state insurance regulators, and produce guidance related to regulatory response to cybersecurity events to promote consistent response efforts across state insurance departments.

G. Track the implementation of and issues related to all model laws pertaining to innovation, technology, data privacy, and cybersecurity including the Insurance Data Security Model Law (#668), the NAIC Insurance Information and Privacy and Privacy Protection Model Act (#670), the Privacy of Consumer Financial and Health Information Regulation (#672), and the Unfair Trade Practices Act (#880) rebating language and providing assistance to state insurance regulators as needed.

H. Coordinate with other NAIC committees and task forces, as appropriate, and evaluate and recommend certifications, continuing education, and training for regulatory staff related to technology, innovation, cybersecurity, and data privacy.

I. Follow the work of federal, state, and international governmental bodies to avoid conflicting standards and practices.

2. The Big Data and Artificial Intelligence (H) Working Group will:

A. Research the use of big data and artificial intelligence (AI) including machine learning (ML) in the business of insurance and evaluate existing regulatory frameworks for overseeing and monitoring their use. Present findings and recommendations to the Innovation, Cybersecurity, and Technology (H) Committee including potential recommendations for development of model governance for the use of big data and AI including ML for the insurance industry.

B. Review current audit and certification programs and/or frameworks that could be used to oversee insurers’ use of consumer and non-insurance data, and models using intelligent algorithms, including AI and in alignment with the NAIC AI Principles. If appropriate, issue recommendations and coordinate with the appropriate subject matter expert (SME) committees on the development of or modifications to model laws, regulations, handbooks, and regulatory guidance, regarding data analysis, marketing, rating, underwriting and claims, regulation of data vendors and brokers, regulatory reporting requirements, and consumer disclosure requirements.

C. Assess data and regulatory tools needed for state insurance regulators to appropriately monitor the marketplace, and evaluate the use of big data, algorithms, and machine learning, including AI/ML in underwriting, rating, claims and marketing practices. This assessment shall include a review of currently available data and tools, as well as recommendations for development of additional data and tools, as appropriate. Based on this assessment, propose a means to include these tools in existing and/or new regulatory oversight and monitoring processes to promote consistent oversight and monitoring efforts across state insurance departments.
3. The **Speed to Market (H)** Working Group (**move to D Committee**) will:

   A. Consider proposed System for Electronic Rates and Forms Filing (SERFF) features or functionality presented to the Working Group by the SERFF Advisory Board (SAB), likely originating from the SERFF Product Steering Committee (PSC). Upon approval and acquisition of any needed funding, direct the SAB to implement the project. Receive periodic reports from the SAB, as needed.

   B. Provide feedback and recommendations concerning the SERFF modernization when requested by the Executive (EX) Committee and any group assigned oversight of the SERFF modernization by the Executive (EX) Committee.

   C. Discuss and oversee the implementation and ongoing maintenance/enhancement of speed to market operational efficiencies related to product filing needs, efficiencies, and effective consumer protection. This includes the following activities:
      1. Provide a forum to gather information from the states and the industry regarding tools, policies, and resolutions to assist with common filing issues. Provide oversight in evaluating product filing efficiency issues for state insurance regulators and the industry, particularly regarding uniformity.
      2. Use SERFF data to develop, refine, implement, collect, and distribute common filing metrics that provide a tool to measure the success of the speed to market modernization efforts, as measured by nationwide and individual state speed to market compliance, with an emphasis on monitoring state regulatory and insurer responsibilities for speed to market for insurance products.
      3. Facilitate proposed changes to the product coding matrices (PCMs) and the uniform transmittal document (UTD) on an annual basis, including the review, approval, and notification of changes. Monitor, assist with and report on state implementation of any PCM changes.
      4. Facilitate the review and revision of the **Product Filing Review Handbook**, which contains an overview of all the operational efficiency tools and describes best practices for industry filers and state reviewers regarding the rate and form filing and review process. Develop and implement a communication plan to inform the states about the **Product Filing Review Handbook**.

   D. Provide direction to NAIC staff regarding SERFF functionality, implementation, development, and enhancements. Direct NAIC staff to provide individual state speed to market reports to each commissioner at each national meeting. Receive periodic reports from NAIC staff, as needed.

   E. Conduct the following activities, as desired, by the Interstate Insurance Product Regulation Commission (Compact):
      1. Provide support to the Compact as the speed to market vehicle for asset-based insurance products, encouraging the states’ participation in, and the industry’s usage of, the Compact.
      2. Receive periodic reports from the Compact, as needed.

4. The **E-Commerce (H)** Working Group will:

   A. Examine e-commerce laws and regulations; survey states regarding federal Uniform Electronic Transactions Act (UETA) exceptions; and work toward meaningful, unified recommendations. The Working Group will also examine whether a model bulletin would be appropriate for addressing some of the identified issues and draft a proposed bulletin if determined appropriate.
5. **The Cybersecurity (H) Working Group** will:

   A. Monitor cybersecurity trends such as vulnerabilities, risk management, governance practices and breaches with the potential to affect the insurance industry.
   B. Interact with and support state insurance departments responding to insurance industry cybersecurity events.
   C. Promote communication across state insurance departments regarding cybersecurity risks and events.
   D. Oversee the development of a regulatory cybersecurity response guidance document to assist state insurance regulators in the investigation of insurance cyber events.
   E. Coordinate NAIC committee cybersecurity work including cybersecurity guidance developed by the Market Conduct Examination Guidelines (D) Working Group and the Information Technology Examination (E) Working Group.
   F. Advise on the development of cybersecurity training for state insurance regulators.
   G. Work with the Center for Insurance Policy and Research (CIPR) to analyze publicly available cybersecurity related information.
   H. Support the states with implementation efforts related to the adoption of *Insurance Data Security Model Law* (#668).
   I. Engage with federal and international supervisors and agencies on efforts to manage and evaluate cybersecurity risk.

6. **The Privacy Protections (HD) Working Group** (*move to H Committee from D Committee*) will:

   A. Review state insurance privacy protections regarding the collection, data ownership and use rights, and disclosure of information gathered in connection with insurance transactions and make recommended changes, as needed, to certain NAIC models, such as Model #670 and Model #672.

7. **NEW: The Innovation in Technology and Regulation (H) Working Group** will:

   A. Develop forums, resources, and materials for discussing innovation and technology regarding companies, producers, state insurance regulators, and licensees relevant to the state-based insurance regulatory structure, including new products, services, business models, and distribution mechanisms.
   B. In conjunction with NAIC staff, explore developing a forum that provides insurers or third parties working with insurers the opportunity to confidentially brief state insurance regulators regarding innovation and technology applications, tests, use cases, and results.
   C. Identify and discuss regulatory models or programs that may assist state insurance regulators identify and better understand innovation taking place within the insurance industry.
   D. Monitor innovation work occurring in other NAIC letter committees, task forces, and working groups, and identify areas of possible coordination for the Innovation, Cybersecurity, and Technology (H) Committee.

NAIC Support Staff: Denise Matthews/Scott Morris

SharePoint/NAIC Support Staff Hub/Member Meetings/Spring 2022 National Meeting/Committee Meetings/INNOVATION CYBERSECURITY and TECHNOLOGY (H) COMMITTEE\2022 Charges\H Cmte Charges Revised040522.docx
The Big Data and Artificial Intelligence (H) Working Group of the Innovation, Cybersecurity, and Technology (H) Committee met in Kansas City, MO, April 5, 2022. The following Working Group members participated: Elizabeth Keller Dwyer, Chair (RI); Amy L. Beard, Co-Vice Chair (IN); Doug Ommen, Co-Vice Chair (IA); Adrienne A. Harris, Co-Vice Chair, represented by My Chi To and Kaitlin Asrow (NY); Kevin Gaffney, Co-Vice Chair (VT); Lori K. Wing-Heier (AK); Ken Allen (CA); Peg Brown (CO); Andrew N. Mais (CT); Frank Pyle (DE); Nicole Altieri Crockett (FL); Erica Weyhenmeyer (IL); Kathleen A. Birrane (MD); Timothy N. Schott and Benjamin Yardley (ME); Karen Dennis (MI); Cynthia Amann (MO); Kathy Shortt (NC); Chris Aufenthie (ND); Christian Citarella (NH); Barbara D. Richardson (NV); Judith L. French (OH); Glen Mulready and Teresa Green (OK); Doug Hartz (OR); Michael Humphreys (PA); Raymond G. Farmer and Michael Wise (SC); Frank Marnell (SD); Bill Huddleston (TN); Mark Worman (TX); Eric Lowe (VA); Molly Nollette and John Haworth (WA); Nathan Houdek and Jennifer Stegall (WI); and Juanita Wimmer (WV).

1. Discussed its Work Plan

Superintendent Dwyer said the 2022 work plan builds on the Working Group’s discussions last year and the three themes of: 1) artificial intelligence (AI)/machine learning (ML) surveys; 2) tools for monitoring AI/ML; and 3) AI/ML regulatory frameworks and governance. She said third-party data and model vendors, while included in the survey work last year, will be a new workstream in 2022. Superintendent Dwyer said the workstreams tie back to the Working Group’s charges. The first charge is to research the use of big data and AI/ML in the business of insurance, and evaluate existing regulatory frameworks for overseeing and monitoring their use. This charge includes the potential recommendation for the development of model governance for the use of big data and AI/ML. Superintendent Dwyer said the second charge is to review current audit and certification programs and/or frameworks, and assess data and regulatory tools needed for state insurance regulators to appropriately monitor the marketplace that could be used to oversee insurers’ use of consumer and non-insurance data and models using intelligent algorithms. She said the third charge focuses on the assessment of data and regulatory tools needed, which will include, as appropriate, recommendations for the collection of additional data and the development of additional tools.

Superintendent Dwyer said the work plan provides a summary of these charges and the following four workstreams: 1) survey work; 2) third-party data and model vendors; 3) evaluation of tools and resources for monitoring industry’s use of data; and 4) regulatory framework and governance. She said the first workstream will continue the analysis of the AI/ML private personal auto (PPA) survey data, use the PPA survey data and experience to inform the development of an AI/ML homeowners (HO) survey, and develop an AI/ML life insurance survey. The second workstream will determine the appropriate regulatory evaluation of third-party data and model vendors and produce a recommended regulatory framework for monitoring and overseeing industry’s use of third-party data and model vendors. The third workstream will gather data and evaluate information on governance models and software tools, which could assist state insurance regulators in overseeing and monitoring industry’s use of data and AI/ML and eliminate any bias in such use. The fourth workstream will evaluate how best to implement the expectations outlined in the NAIC AI Principles and provide suggestions on next steps, which could include regulatory guidance such as model governance.
2. **Discussed 2022 Workstreams**

Mr. Gaffney said Workstream One will build on the survey work completed in 2021 and will continue the analysis of the PPA survey data. As noted by Superintendent Dwyer, Mr. Gaffney said the subject matter experts (SMEs) will use the lessons learned from the PPA survey to develop the HO survey and life insurance survey. Mr. Gaffney said he anticipates the HO survey will be issued in June, and the life insurance survey will be issued in August, with company responses being collected on a confidential basis. Finally, Mr. Gaffney said the HO survey will be similar to the PPA survey, but the life insurance survey will be developed by a different group of regulatory SME. Mr. Gaffney said the survey results and white paper to completed by the Fall National Meeting will support the other workstreams, especially Workstream Two and Workstream Four.

Commissioner Ommen said Workstream Two is focusing on third-party data and model vendors. As noted in the work plan, a group of state insurance regulator SMEs will evaluate the activities of third-party data and model vendors and produce a recommended regulatory framework for monitoring and overseeing industry’s use of these vendors. Commissioner Ommen said the findings and insights will be reported to the Working Group for public discussion and recommendation to the Innovation, Cybersecurity, and Technology (H) Committee. As these efforts proceed, future work will likely be referred to other NAIC committees, task forces, and working groups. To provide a little more context to these efforts, Commissioner Ommen said the first area of focus is to identify new entities operating in the marketplace, better understand their operating practices, and identify whether and how states are currently licensing these entities. While this work will be broader than rating, he said the Casualty Actuarial and Statistical (C) Task Force’s recent survey identifying the types of licenses states issue may help inform these initial discussions. These licenses include Advisory Organizations, Rating Organizations, Rate Service Organizations, Statistical Agent, Statistical Organizations, and Insurance Service Organizations. He said Workstream Two will address all vendors that provide nontraditional data and models to insurers, such as vendors providing data for marketing, fraud detection, and claims settlement. Commissioner Ommen said this is one of the reasons why future work will likely be referred to other NAIC committees, task forces, and working groups. He said the second area of focus is to develop examination standards or questions that states can use for engaging with third-party data vendors and insurers regarding their use of third-party data vendors. Because this work is broader than advisory organizations and rating issues, Commissioner Ommen said the current examination standards for advisory organizations do not provide the right focus but that these standards will be kept in mind as examination standards are developed for third-party data and model vendors.

Superintendent Dwyer said Superintendent Harris is leading Workstream Three with Ms. To and Ms. Asrow. Ms. Asrow said this Workstream will review existing trends, tools, and approaches that can be deployed, or are being deployed, by supervisors to monitor the use of AI/ML by insurance companies. Ms. Asrow said these tools are referenced as SupTech and will include discussion of statistical methods that allow state insurance regulators to better identify disparate impact or unfair discrimination. This Workstream will also discuss tools and vendors the insurance industry is using directly to detect discrimination or bias that might result from the use of data or new processes. Ms. Asrow said the goal is to produce a summary of the supervisory approaches and processes that state insurance regulators can use. This summary will also identify best practices in the regulation of AI/ML, such as relevant model governance frameworks that have been used by state insurance regulators for insurance, banking, or other financial services. Ms. Asrow said one potential option is focus on the mitigation practices of insurance companies rather than directly reviewing for bias using technical tools. Ms. Asrow said this Workstream will primarily coordinate with Workstreams Two and Workstream Four.

Commissioner Beard said Workstream Four will focus on how to implement the expectations outlined in the NAIC’s AI Principles and provide suggestions on the appropriate regulatory framework for monitoring AI/ML, which could include model governance. She said this Workstream will be dependent upon the efforts of the other three workstreams.
Birny Birnbaum (Center for Economic Justice—CEJ) said the work plan is comprehensive and requested the Working Group review potential antitrust issues arising from insurers’ use of third-party data and model vendors. Mr. Birnbaum recommended the Working Group confirm insurers have responsibility for the outcomes that arise from their use of third-party data and model vendors. He also recommended the issues of consumer transparency and avoidance of unfair discrimination and racial bias be addressed. Regarding Workstream Four addressing the regulatory framework/governance, Mr. Birnbaum stressed the need for modernized data collection and market regulation. In addition, he said this Workstream should examine the actual consumer impacts because there are limitations to front-end reviews and model governance procedures. Mr. Birnbaum said these types of regulatory reviews do not guarantee positive consumer outcomes.

Scott Harrison (American InsurTech Council—AITC) said he thinks the work plan is well thought out and appropriately recognizes the impact this work will have on every line of insurance and committee across the NAIC. Matthew Smith (Coalition Against Insurance Fraud) said the Coalition will issue a study in September addressing the use of data and AI/ML to identify insurance fraud. Mr. Smith said the Coalition is beginning this work through a survey and encouraged the Working Group members to contact him if there are questions that they would like to be considered for the survey. David Snyder (American Property Casualty Insurance Association—APCIA) said the work plan looks logical and encouraged the Working Group not to lose sight of how AI/ML has extreme value for consumers, in terms of delivering the kind of products consumers expect and promoting market competition. Regarding Workstream Three, Mr. Snyder said he hopes this Workstream will be completed within the context existing state laws on unfair discrimination.

Superintendent Dwyer said she would review the comments made today and work with the SME lead for each Workstream to make any necessary changes to the work plan. She then requested each Workstream to provide an update on their work in 45 to 60 days during an open Working Group meeting.

3. Received a Presentation on AI/ML Survey Work

Mr. Gaffney said Workstream Three has five key objectives: 1) learn directly from the industry about what is happening in this space; 2) get a sense of the current level of risk and exposure and how the industry is managing or mitigating that risk; 3) develop information for trending, such as how the risk is evolving over time, and the industry’s responsive actions; 4) become more informed to develop a meaningful and useful regulatory approach for overseeing and monitoring AI/ML in the insurance market; and 5) learn from prior surveys to inform and improve future surveys. He said the initial surveys will allow state insurance regulators to document what the industry reports is happening in the PPA, HO, and life insurance markets regarding use of data and AI/ML and get a good sense of the current level of risk and exposure, as well as explore what companies might be doing to mitigate and/or manage its risk and exposure. Mr. Gaffney then reviewed in detail the additional, preliminary results of the PPA.

Mr. Gaffney said the PPA survey was conducted under the market conduct examination authority of nine states—Connecticut, Illinois, Iowa, Louisiana, Nevada, North Dakota, Pennsylvania, Rhode Island, and Wisconsin—and was sent to only larger companies, defined as those PPA writers with more than $75 million in direct premium written. The nine states received 193 responses, and almost 90% of the companies responding indicated they are using AI/ML in some manner. He said the largest use of AI/ML models is in claims, then fraud detection, marketing, rating, underwriting, and loss prevention. Mr. Gaffney said state insurance regulators are surprised by the results for the rating and underwriting categories as some of the companies that reported no use of AI/ML in these areas have filed rate models in support of their rates. Because of this, the analysis includes an evaluation of the accuracy of reporting.
Mr. Gaffney said 155 of the 193 respondents are using AI/ML in their claims processes, with 113 companies using AI/ML to evaluate images for the claim. He said no companies reported using AI/ML to automatically deny a claim.

Mr. Gaffney said 111 companies indicated they are or will be using AI/ML for fraud detection, and almost all these companies are using AI/ML to refer claims for fraud review. He said only 29 companies use AI/ML to fast-track claims in a determined non-fraud situation. Mr. Gaffney said companies reported using fraud detection models for claims triage, medical provider fraud detection, fraudulent quote detection, organized crime ring identification, and social network analysis.

Mr. Gaffney said about half the companies are using AI/ML models for marketing, with 75% of the companies using their own models and 25% of the companies using third-party vendors. Marketing models are most often used for targeted online advertising. Mr. Gaffney said other marketing models are used to identify potential customers, decide what advertising to do via mail or in print ads, and implement natural language processing for customer interactions.

Mr. Gaffney said 77 companies reported using AI/ML for rating, with 52 companies implementing rating models in production. He said the survey results also reflect that the use of telematics data was prevalent among companies with rating models in production. Mr. Gaffney said around 80% of models being used are developed internally by the companies, which highlights a regulatory need for continued preparation in the states to review independently developed rate models.

Mr. Gaffney said the use of AI/ML in underwriting is similar to its use in rating, with 59 companies indicating they are using or plan to implement AI/ML models for underwriting purposes, with 34 of the 59 companies indicating they are implementing underwriting models in production. He said an important aspect regarding the use of AI/ML in underwriting is the prevalence of externally sourced data elements, with more than 60% sourced from third-party providers. Mr. Gaffney said underwriting models are used for tiering and company placement, input into denials and approvals, renewals and reinstatements, and policy anomaly detection. He said only three companies are currently using AI/ML to identify high-risk customers for loss prevention.

Mr. Gaffney said the goal is to finalize the PPA survey analysis this summer and to present a report to Big Data and Artificial Intelligence (H) Working Group by the Fall National Meeting. He said the report is expected to include recommendations for regulatory guidance to better monitor the use of AI/ML. One idea is to potentially outline some type of risk hierarchy and describe company governance of risks and best practices that support the NAIC’s AI Principles.

Having no further business, the Big Data and Artificial Intelligence (H) Working Group adjourned.
The Cybersecurity (H) Working Group of the Innovation, Cybersecurity, and Technology (H) Committee met March 23, 2022. The following Working Group members participated: Cynthia Amann, Co-Chair (MO); Wendy Erdly, Co-Chair (NY); C.J. Metcalf, Co-Vice Chair (IL); Michael Peterson, Co-Vice Chair (VI); Sian Ng-Ashcraft (AK); Evan G. Daniels (AZ), Mel Anderson (AR); Damon Diedrich (CA); Wanchin Chou (CT); Matt Kilgallen (GA); Lance Hirano (HI); Shane Mead (KS); Troy Smith (MT); Martin Swanson (NE); Keith Briggs (NC); Colton Schulz and Chris Aufenthie (ND); Don Layson and Todd Oberholtzer (OH); Dan Petterson (VT); John Haworth (WA); and Nathan Houdek (WI).

1. **Heard Opening Remarks and Updates**

Ms. Amann welcomed the state insurance regulators to the Working Group’s first meeting. She said that the goal of the meeting is to discuss the group’s charges and, in the process, lay out a plan for the group’s work for the year. Although the hope was to cover all the charges, she said the focus of the discussion is going to be on the projects associated with two of the Working Group’s charges: 1) to interact with and support state insurance departments responding to insurance industry cybersecurity events; and 2) work with the Center for Insurance Policy and Research (CIPR) to analyze publicly available cybersecurity-related information.

In addition, the new Working Group will work to compliment the work of others with an increased focus on cybersecurity.

2. **Received an Update on the Macroprudential Risk Assessment Process**

Ms. Amann then led a discussion of the Working Group’s charges starting with the charge to interact with and support state insurance departments responding to insurance industry cybersecurity events. She noted that the Working Group could support state insurance regulators with the development of a repository of procedures/controls to assist them in responding to cyber security events. Mr. Peterson noted that he looks forward to working on this project given the complexity of cybersecurity discussions. There are many stakeholders that get involved in cybersecurity events, including law enforcement officials, so he said a response plan resource could help states understand their communication expectations.

Miguel Romero (NAIC) noted that although the financial exam and market conduct exam processes have been updated to better incorporate cybersecurity concepts, there remains a need for a response plan type of document to assist state insurance regulators responding to cybersecurity events. Over the years, state insurance regulators have asked for assistance responding to security events, and a cybersecurity response plan focused on the regulator’s role could be beneficial in meeting that need. The response plan could help states take a lead role in responding to security events. Such a response plan could be viewed as an optional practice aid that states use only as needed.

Mr. Peterson noted that he looks forward to working on this project given the complexity of cybersecurity discussions. There are many stakeholders that get involved in cybersecurity events, including law enforcement officials, so he said a response plan resource could help states understand their communication expectations.

Mr. Haworth asked if there would be a training component for insurance companies as part of this project. Ms. Amann indicated openness to the idea. Mr. Romero noted that state insurance regulators could continue the discussion on training insurers. He said the Working Group does have a charge to train state insurance regulators, but the regulators would have to evaluate if they would be the best body to train insurance companies specifically.
Ms. Amann, Mr. Peterson, and Mr. Romero next talked about the possibility of partnering with the CIPR to collaborate on a survey of insurance company cybersecurity practices. This work would be the practical implementation of the Working Group’s charge to work with the CIPR to analyze publicly available cybersecurity-related information. Mr. Romero noted that a good survey could give state insurance regulators meaningful information that would then help them prioritize future projects. Ms. Erdly also talked about the role that data could play in helping to identify control best practices.

Beyond these two charges, Ms. Amann talked about the importance of working with Market Regulation and Consumer Affairs (D) Committee and Financial Condition (E) Committee subject matter experts (SMEs) to avoid duplication and leverage expertise. Ms. Amann also expressed a desire to see more in the way of cybersecurity-related training. Ms. Amann and Mr. Romero further talked about the need to have a group that monitors international and federal work and also considers whether corresponding efforts are relevant and/or necessary domestically.

Mr. Chou requested that because of the wide-ranging topics the Working Group will cover, it should take steps to make sure the agenda provides enough detail to allow state insurance regulators to understand the expertise that should participate in the Working Group’s meetings. Mr. Chou also referred to the American Academy of Actuaries (Academy), which recently published insights on cybersecurity via its Cyber Risk Task Force. He said that might be beneficial to state insurance regulators on the Working Group’s projects. Richard Gibson (Academy) noted that the Cyber Risk Task Force also prepared a Cyber Risk Toolkit that could be useful to state insurance regulators. Additionally, Mr. Hirano commented on the importance of controls and reviewing third-party work in any cybersecurity risk discussion. Mr. Romero said that there may be training on reviewing third-party work at the NAIC’s Insurance Summit.

Having no further business, the Cybersecurity (H) Working Group adjourned.
NAIC/CONSUMER LIAISON COMMITTEE

NAIC/Consumer Liaison Committee April 8, 2022, Minutes................................................................. 13-2
NAIC/American Indian and Alaska Native Liaison Committee April 6, 2022, Minutes (Attachment One)...... 13-7
The NAIC/Consumer Liaison Committee met in Kansas City, MO, April 8, 2022. The following Liaison Committee members participated: Andrew R. Stolfi, Chair (OR); Grace Arnold, Vice Chair (MN); by Lori K. Wing-Heier (AK); Jim L. Ridling represented by Mark Fowler and Reyn Norman (AL); Alan McClain represented by Jennifer Bruce (AR); Peni Itula Sapini Teo (AS); Ricardo Lara (CA); Andrew N. Mais represented by Kurt Swan (CT); Karima M. Woods (DC); Trinidad Navarro represented by Frank Pyle (DE); David Altmaier represented by John Reilly (FL); Colin M. Hayashida represented by Melissa Hamada (HI); Dean L. Cameron represented by Randy Pipal (ID); Vicki Schmidt (KS); James J. Donelon (LA); Kathleen A. Birrane represented by Alexander Borkowski (MD); Anita G. Fox and Karin Gyger (MI); Chlora Lindley-Myers (MO); Mike Causey represented by Kathy Shortt (NC); Jon Godfread represented by John Arnold (ND); Eric Dunning (NE); Chris Nicolopoulos represented by David Bettencourt (NH); Barbara D. Richardson represented by David Cassetty (NV); Adrienne A. Harris represented by My Chi To (NY); Judith L. French and Jana Jarrett (OH); Michael Humphreys represented by Katie Merritt (PA); Cassie Brown (TX); Jon Pike (UT); Scott A. White represented by Don Beatty (VA); Mike Kreidler (WA); and Allan L. McCey (WV). Also participating were Michael Conway (CO); John F. King (GA); Michelle B. Santos (GU); Doug Ommen (IA); Dana Popish Severinghaus (IL); Doug Hartz (OR); and Tregenza A. Roach (VI).

1. **Heard Opening Remarks**

Commissioner Stolfi welcomed the 40 NAIC consumer representatives selected for 2022, indicating that their names and the organizations represented were included on the agenda following the names of the Liaison Committee members. He said as the vice chair of the NAIC Consumer Board of Trustees, he wants to report that the Board: 1) works in conjunction with the Liaison Committee; 2) comprises six state insurance regulator members and six consumer representative members; and 3) meets in closed, confidential sessions because it administers the NAIC Consumer Participation Program, which may require discussions of a confidential nature concerning personal information. He said the Board met April 7 to discuss suggested revisions to the Plan of Operation for the NAIC Consumer Participation Program and the surveys of Liaison Committee members and consumer representatives on how to enhance the level of participation during future Liaison Committee meetings.

2. **Adopted its 2021 Fall National Meeting Minutes**

Commissioner Stolfi said the Liaison Committee met Dec. 13, 2021.

Commissioner Arnold made a motion, seconded by Commissioner Lara, to adopt the Liaison Committee’s Dec. 13, 2021, minutes (see NAIC Proceedings – Fall 2021, NAIC/Consumer Liaison Committee). The motion passed unanimously.

3. **Heard a Presentation from the AEPI on the Demise of the Auto Insurance Appraisal Clause**

Erica Eversman (Automotive Education & Policy Institute—AEPI) said the appraisal clause is vanishing from private passenger automobile (PPA) insurance policies, and this is important because it is used to determine property loss claims values that are non-binding. She said the Road Traffic Act 1988 (RTA) requires insurers to provide umpire awards exclusively for personal injury but not for property loss resolutions. She said it also allows insurers to avoid using the Inter-American Commercial Arbitration Commission (IACAC), including no penalty for bad actors; however, she said it is not in all PPA policies. She said the appraisal is $5,500 and $96 for an arbitration for a policy that has an appraisal clause for a claim settlement projected to be under $10,000. She said the consumer success
rate is extremely high at 98% when arbitration is utilized. She said recent insurer changes include insurers: 1) using their own employees or claims adjustors to serve as arbitrators; 2) rejecting most umpires suggested by consumers; and 3) refusing to pay the umpire’s award. She said consumers are then forced to sue insurers to force them to pay contracts as written and approved by state insurance departments, which is contrary to standard insurance regulation. She said other changes insurers are making to appraisal clauses include removing them entirely or covering partial losses only where the clause used to cover a full or partial loss. She said many consumers have called her looking for an attorney to use but cannot find any, so insurers can pay less because small claim limits are much lower and can be moved to lower general court.

Ms. Eversman said her recommendations for state insurance regulators are to: 1) mandate full and partial evaluation of automobile property loss; 2) alert insurers to notify consumers that the RTA exists if they disagree with their claim offer; 3) require the use of independent evaluators and umpires; 4) establish a time frame for RTA completion and the maximum amount the consumer expects to be permitted; and 5) include the use of RTA use, results, and dollar value; and 6) change data elements for market conduct analysis to reflect it. She said a company told her she did not follow insurance regulations so she could not collect on her claim.

Commissioner Stolfi said Oregon implemented a consumer education process and hoped that when consumers came to it, they would understand that if the cost after the final decision is higher, the state requires companies to pay the difference. Amy Bach (United Policyholders—UP) said the UP is seeing insurers using fewer appraisals. Ms. Eversman asked companies why these changes are being made and whether companies have a good reason to do it. Commissioner Stolfi said Ms. Eversman could submit a request for NAIC action following the meeting.

4. Heard a Presentation from the CEJ on Modernizing Market Regulation Data Collection

Birny Birnbaum (Center for Economic Justice—CEJ) said there is little to no public market regulation data available for consumers or states to use, and the type of data the NAIC has today is on workers’ compensation so state insurance regulators can track COVID-19-related data by state and severity. He said mortgage lending is available on a monthly and annual basis by race and geography. He said on March 10, the NAIC announced a 2.2% increase from 2018 to 2019; an anachronism in property/casualty (P/C) data collection (not workers’ compensation) through the Market Conduct Annual Statement (MCAS) is highly flawed and untimely. He said most of the reporting comes from a statistical data agency system that has not been updated in 40 years. He said for workers’ compensation, the National Council on Compensation Insurance (NCCI) is only one of many statistical organizations that base analysis on transactional data reported monthly. He said for personal lines, the data is outdated and used to produce industry aggregate statistics, which results in reporting that is of no use to state insurance regulators for market regulation, except for that which is COVID-19-related or racially biased.

Mr. Birnbaum said statistical agents appointed by states refuse to provide data. He said one straightforward solution would be to use their existing authority to designate one singular statistical company through a bid process for all states to use like the NAIC did for statutory reporting, and it should include individual company data. He said there was historic precedence by the Texas Department of Insurance (TDI) when it implemented Request for Information and Qualifications (RFIQ) in 1995. He said its first expectation was that the designated statutory agent is to report to the TDI as the state’s agent. He said a second solution would be to use an Open Interactive Data Language (IDL) Blockchain Network for the insurance industry. He recommended that state insurance regulators move to a more timely, granular, uniform, and responsive market regulation data collection through a modernized statutory agent framework.

Commissioner Arnold asked Mr. Birnbaum if he has any concerns because workers’ compensation insurance has more structure than other P/C insurance. Mr. Birnbaum said he does not have any concerns because the historical evidence was tied to rating, which is not needed today, but the underwriting and pricing attributes are needed. Mr. Cassetty asked if the bid process was used by the TDI in 1995. Mr. Birnbaum said the bid process was done
from outside the TDI with one statutory agent designated for each major line. He said when the agent did credit scoring, data they already had was used because it had continually been collected, so there was no need for specific data calls. Commissioner Stolfi said this is intriguing to him, and he asked if anyone knows of other states that may have done this that could be contacted. Mr. Birnbaum said California, Illinois, and Pennsylvania have looked at this with special data calls from time to time because this would eliminate the need for special data calls. He suggested that the NAIC compare workers’ compensation to other lines’ data calls and ask statutory companies, such as the Insurance Services Office (ISO) and the American Association of Insurance Services (AAIS), what they can provide. Mr. Chou asked if, given the proactive and reactive resource constraints for most state insurance departments, the NAIC could encourage workers’ compensation to get more meat in their data reporting. Mr. Birnbaum said some resources are needed up front, and less being needed later. Executive Deputy Superintendent To said the Innovation, Cybersecurity, and Technology (H) Committee would provide supervisory or regulatory technology being considered.

5. Heard a Presentation by the NCTE, the DREDF, and the HIV + Hepatitis Policy Institute on the Role of State Insurance Regulators in Addressing Discriminatory Benefit Design

Carl Schmid (HIV + Hepatitis Policy Institute) said the proposed 2023 Notice of Benefit Payment Parameters (NBPP) Rule on Benefit Design, Section 156.125 Prohibition on discrimination would “… explicitly prohibit discrimination on the basis of sexual orientation and gender identity, as had been the case prior to 2020.” He said the Center for Consumer Information and Insurance Oversight (CCIIO) recently proposed adding clinically based, relevant, peer reviewed medical journal guidelines in six areas where presumptive discrimination exists: 1) the limitation on hearing aid coverage based on age; 2) Autism spectrum disorder (ASD) coverage limits based on age; 3) age limits for infertility treatment coverage when treatment is clinically effective for the age group; 4) limitation on foot care coverage based on diagnosis, whether diabetes or another underlying medical condition; 5) coverage of Essential Health Benefits (EHB) for gender-affirming care; and 6) access to prescription drugs for chronic health conditions through adverse tiering. He said there should be no adverse tiering, and tiering should not rely on cost alone. He said it must be clinically based and balanced, as well as allow reasonable medical management. He said there are other practices that also constitute discrimination, so attention to enforcement is needed in accordance with Qualified Health Plan (QHP) certification for prescriptions that is available online now with additional tools coming soon, many of which have zero cost sharing.

D. Ojeda (National Center for Transgender Equality—NCTE), who uses the pronoun they, said there are high levels of unmet health care needs among the transgender community. They said providers and plans need to mitigate harmful health care encounters and damaged trust. They said gender-affirming care is medically necessary and saves lives by improving mental health and quality of life overall. They said providers and plans found that in 2015, one in four experience a problem with being denied health care insurance coverage. They said there is a need to mitigate harmful health care encounters, such as the fear of being mistreated and that they could not afford the care needed, especially those that are higher within the ranks of people of color. They said state insurance regulators could provide clear guidance on nondiscriminatory coverage and outreach. They said states that have already provided explicit guidance include Colorado, Montana, Nevada, and Virginia. They encouraged all state insurance regulators to take the lead in this area of need.

Silvia Yee (Disability Rights Education and Defense Fund—DREDF) said discriminatory benefit design also exists within the proposed 2023 rule regarding rehabilitation and habilitation services and devices. She said there are critical medical needs for people with chronic conditions, such as medically needed therapies for pain management that are not fixes or cures, but rather slow progressive symptoms and restore functional capacity (e.g., long COVID); therapies needed for children and adults to achieve functions for the first time; mental health services and therapy that include in-patient and out-patient care; and durable medical equipment. She said some people need a wheelchair elevator, which for them is not a luxury item due to their debilitating condition, but rather, it is a medical necessity. However, she said insurers would not be covering it or certain contraception
services due to benefit design discrimination. She said they need help from state insurance regulators and recommended that they issue clear examples of discriminatory benefit design, explain what this type of discrimination means, and rotate a deep dive review of key benefit categories.

Commissioner Arnold said Workstream Five under the Special (EX) Committee on Race and Insurance would be a good place to give this presentation as well, and it might include how policies are affected. Ms. Merritt asked if the draft QHP template would have any federal definition of gender-affirming care. D. Ojeda said the template had a definition as well as standards.

6. Heard a Presentation from the NWLC and Georgetown University CHIR on the Urgency of Now: Mental Health Parity and an Ongoing Pandemic

Dorianne Mason (National Women’s Law Center—NWLC) said the federal Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008 (MHPAEA) referred to a covered condition, not a mandate. She said forty-three state parity laws were in effect in 2008, and the MHPAEA contains no state preemption. She said the MHPAEA did not affect existing state mandates to offer or cover behavioral health benefits, and legislative activity at the state level continues to focus on compliance and enforcement. Since the pandemic began, she said 106,000 Americans have died of overdoses, with 36.8% per 100,000 of those reporting as black and 41.4% reporting as Indian. She said every two years, the Employee Benefits Security Administration (EBSA) and the federal Centers for Medicare & Medicaid Services (CMS) issue an MHPAEA Report to the U.S. Congress (Congress). She said the 2022 report indicated that none of the plans were found to be sufficient, and compliance assistance was not enough, but what was needed was more active enforcement by states using their full authority. She said the report also indicated that the pandemic had a negative impact and increased mental health needs, especially in women due to the lack of childcare, the isolation of remote work, and required home schooling. She said one in seven women and 12.3% of men reported feeling overwhelmed.

Maanasa Kona (Georgetown University Center on Health Insurance Reforms—CHIR) said questions state insurance regulators could ask as they move forward with plans to improve MHPAEA compliance by insurers are: 1) what type of information the state needs to collect; 2) whether the state has the authority to collect this information; and 3) what format the state should use in requesting and collecting this information. She said the MHPAEA requires plans to document and report internal as well as external practices. She said under the Consolidated Appropriations Act enacted on Feb. 10, 2021, plans must make comparative analyses of design and application of non-quantitative treatment limitations (NQTLs) available to state departments of insurance (DOIs) upon request. She said state legislation as of the Legal Action Center (LAC) Report of July 2020 included: 1) 15 states and Washington, DC required plans to submit compliance reports and/or quantitative data to DOIs; 2) nine states and Washington, DC required plans to conduct parity compliance analysis modeled after the Kennedy Forum’s six-step analysis and report findings to DOIs; and 3) Washington, DC required health plans to report on quantitative data needed for an “in operation” analysis of parity compliance.

Ms. Kona said Pennsylvania developed its own quantitative treatment limitations (QTLs) compliance tool for assessing QTLs that included time limits, the need for granularity, and use of the tool by insurers during future product development. She said assessing NQTLs included finding the right tool; issues with NQTL compliance due to the large amount of data and consistency across carriers; recommendations that included reaching out to providers, which New Mexico did via provider survey and Nebraska did via presentations for providers; and using claims review. She said looking forward, state insurance regulators could: 1) require submission of compliance reports and quantitative data to monitor MHPAEA compliance by leveraging federal law; 2) adopt or develop the right tool for QTL and NQTL compliance data submission; 3) ensure high quality submissions by carriers; and 4) identify issues in submitted information. She concluded by saying that Georgetown University will be doing its own MHPAEA survey and report.
Commissioner Stolfi said Oregon passed some of these laws recently and acknowledged that putting such legislation together takes a lot of work by a state insurance department.

7. Heard a Presentation from the LLS and the Colorado Children’s Campaign on Standard Plan Design: Federal Developments and Lessons Learned in States

Erin Miller (Colorado Children’s Campaign) said there has been a lot of interest in being able to compare health care plans to help consumers choose the right plan for their personal needs. One way to improve a consumer’s ability to select would be to clarify the choices so the plans could be compared on an “apples to apples” basis. She said standardized plans would meet this challenge while improving health equity and providing other health coverage improvements. She said it would also provide the potential for cost-reduction strategies by targeting rate setting. She said states that already require standardized individual market health plans are on both coasts and in Colorado. She said Colorado required extensive stakeholder involvement in the process, including those from the health care industry and communities that are diverse regarding race, ethnicity, immigration status, age, ability, sexual orientation, gender identity, or geographic regions of the state and are affected by higher rates of health disparities and inequities. She said the standardized plans are designed to improve racial health equity and decrease racial health disparities through a variety of means, which are identified collaboratively with consumer stakeholders, such as improving prenatal health care, and through a culturally responsive network.

Lucy Culp (The Leukemia & Lymphoma Society—LLS) said recommendations for state insurance regulators include: 1) improving regulatory tools that would improve health equity through plan design, limit the number of plans offered, provide meaningful difference standards, and improve naming display; 2) additional consumer education with an emphasis on the benefits of standard plans, explanations of how to compare standard and non-standard plans, and education about new plans at re-enrollment; and 3) monitoring the marketplace as to the trends in consumer choices and consumer satisfaction.

Commissioner Arnold asked how requiring standardized plans affected the value of health care plans. Ms. Culp said most states see standard plans affected mostly in the way plans are named and referred to. She said this is where consumer education is needed the most. Ms. Miller said plan display comes in handy, especially in the early years.

Commissioner Stolfi said Oregon has had standard plans since the federal Affordable Care Act (ACA) was enacted.

8. Discussed Other Matters

Commissioner Stolfi said these presentations are very valuable, and the discussions following each were even more so. He said it is possible that changes may be determined for future meetings based on the results of the state insurance regulator and consumer surveys completed just prior to this meeting. He said a full discussion of all will follow to find good solutions for enhancing presentations and discussions going forward.

Michael DeLong (Consumer Federation of America—CFA) asked that consumer representatives be encouraged to help at the state level, and he asked what the NAIC is doing to ensure that the letter from the CFA on antifraud is being addressed. Commissioner Stolfi said he believes this issue is being addressed by another committee.

Having no further business, the NAIC/Consumer Liaison Committee adjourned.
Draft: 4/26/22

NAIC/American Indian and Alaska Native Liaison Committee
Kansas City, Missouri
April 6, 2022

The NAIC/American Indian and Alaska Native Liaison Committee met in Kansas City, MO, April 6, 2022. The following Liaison Committee members participated: Troy Downing, Chair (MT); Russell Toal, Vice Chair (NM); Lori K. Wing-Heier (AK); Trinidad Navarro (DE); Dean L. Cameron represented by Randy Pipal (ID); Grace Arnold (MN); Edward M. Deleon Guerrero (MP); Mike Causey represented by Kathy Shortt (NC); Jon Godfread represented by Colton Schulz (ND); Glen Mulready (OK); Andrew R. Stolfi (OR); Larry D. Deiter represented by Frank Marnell (SD); Mike Kreidler represented by Todd Dixon (WA); and Jeff Rude (WY). Also participating were Frank Pyle (DE); and Bob Biskupiak (MT).

1. Adopted its 2021 Fall National Meeting Minutes

Commissioner Downing said the Liaison Committee met Dec. 11, 2021.

Director Wing-Heier made a motion, seconded by Superintendent Toal, to adopt the Liaison Committee’s Dec. 11, 2021, minutes (see NAIC Proceedings – Fall 2021, NAIC/American Indian and Alaska Native Liaison Committee, Attachment Two). The motion passed unanimously.

2. Heard a Presentation on Communication and Outreach Within the American Indian Culture

Commissioner Downing said he met Pastor Bruce Plummer (Montana Indian Ministries) during an outreach meeting in Helena, MT, and he had a good conversation with Pastor Plummer regarding issues of cultural awareness that may facilitate or hinder communications with members of native populations. Although there is not one sweeping statement than can be made for every unique community, he said he found this experience valuable, and he asked Pastor Plummer to speak to the Liaison Committee about his insights into communications and awareness in Indian Country.

Pastor Plummer began his presentation with a prayer over the Liaison Committee. He said the focus of his presentation is on “Being an Indian,” and he said he lives on the Fort Belknap Indian Reservation in Montana, which is a closed, domestic, protected reservation that is a federally recognized tribe. He said the Fort Belknap Indian Reservation is located 40 miles south of the Canadian border and 20 miles north of the Missouri River. He said it is home to two tribes, i.e., the Assiniboine, or Nakoda, and the Gros Ventre. He said the reservation is not subject to Montana, which is a good thing and a bad thing. He said there is a desperate need to make communication work with Montana, as the American Indian tribes are dying. When asked who they are, he said they are a tribal nation that emphasizes “we,” not “I.” However, he said there is a lot of water under the bridge to quote an old proverb between states and Native Americans, so there are more than 500 years of roadblocks to overcome. He said to start with, he is a spiritual chief who was made by his tribe, rather than an ancestry chief. He said in 2022, Native Americans are American citizens; however, this was not always the case. He said there are less than five million Native Americans left, and they consider themselves caretakers of the land. While he said there are no do-overs in history because the past exists always and Native Americans have an excellent memory, now it is time for everyone to move on. He said when he is asked about what can be done to help preserve his people and his culture, he says education is an issue, as his parents only had a sixth-grade education. He said it is important to remember that there are many differences between American Indians and Alaska Natives, so outreach and communication efforts need to be customized according to tribe and area. To assist with this, he referred to the handout posted on the Event App that shows the strengths and differences between Native
American and white American cultures. He said in collaborating with the best leaders, they need a hand up, not a handout, and they need education. Then, he said they need more education.

Commissioner Downing said he understands that Pastor Plummer’s daughter is trying to solve housing problems in tribal communities. When asked about programs promoting “saving for your future”, Pastor Plummer rhetorically asked “why would those with resources not share? Because tribal members share rather than save.” Superintendent Toal asked what type of health services are available in Montana. Pastor Plummer said Montana did a survey that emphasizes the differences between federal Affordable Care Act (ACA) health care and Indian Health Service (IHS) health care. It found that the average age at death for a male in the U.S. is 75, but the average age at death for a Native American male is 55. He said that is because illness and chronic health conditions are ranked one to five; however, the amount budgeted for this care in the federal budget is enough to cover those ranked one only.

3. Heard a Presentation on Montana’s Experience with the ACA and its COVID-19/Pandemic Response

Commissioner Downing said Lesa Evers (Montana Department of Public Health and Human Services—DPHHS) would discuss responses to the COVID-19 pandemic in tribal communities. He said she would discuss successes, hurdles, and lessons learned in vaccinating tribal members.

Ms. Evers said she is proud to say that the flags of all the tribal nations are flown at the entrance to the building she works in, and the state cares for the flags and protects them. She said she was born on a reservation but now lives outside of the reservation. She said there are seven reservations in Montana that cover 1,500 miles and eight jurisdictions, all of which are federally recognized. She said the Little Shell Tribe is trying to become the 754th tribe recognized by the federal government. She said in the governor’s state of the state report said cardiovascular disease was the top reason for Native American deaths in Montana. She said Native Americans die at age 56 for men and 62 for women, while throughout the U.S., men die at age 75 and women at age 82. She said during a tour a few years ago, former Montana Insurance Commissioner Monica Lindeen traveled to all the tribes to educate them about the ACA. She said outreach was done via flyers, which were placed on bulletin boards at the grocery stores and clinics, as well as public service ads through tribal radio stations and via Facebook and other social media. She said they feed people and always bring food even if only one person shows up; it was worth it because that one person represented a whole group of people or a whole tribe, and that one person took the food as well as the message about the ACA back to that whole group of people or the whole tribe. She said one must build relationships to do this.

Ms. Evers said most Native Americans believe the IHS is a health insurance plan, but it is not; it is an extremely complicated health care system. She said it might cover the costs of health care provided, and it might not. She said Montana expanded Medicaid, which helped, but access to health care for the most critical is the number one issue. She said the IHS has five priority categories, but it only has funding for one—i.e., the very top level—so there is no preventative care, only care for the most critical cases, which is a problem. She said COVID-19 accelerated this problem due to the required isolation with some communities having checkpoints to control those who were able to enter reservations. She said it was difficult to track the spread because the state collects information by county, and there are 56; however, Native Americans want to hear about it by tribe. She said within six weeks, all tribes had been tested, with three of the tribes deciding to go through the state and the other three going elsewhere or providing their own. She said a total of 12,000 vaccinations were given, and the state did 8,000 of those. She said the Montana DPHHS has created good partnerships with the tribes by taking actions and providing home kits; however, COVID-19 has been devastating, with tribes having 19% of the cases and 32% of the deaths in Montana. She said lessons learned include: 1) commit to action; 2) remember that you are a guest on reservations; 3) do not expect large crowds; 4) bring food that you paid for and bring to-go boxes; and 5) do not overpromise.
Superintendent Toal gave a shout out to New Mexico tribes and pueblos who did so well in getting vaccines delivered, and he said he really appreciates their efforts. Commissioner Rude asked if any ongoing partnerships had been formed through their efforts in Montana. Ms. Evers said some tribes did, and others did not.

4. **Heard a Presentation on Consumer Outreach and Education About Fraud Within the American Indian Culture**

Matthew Smith (Coalition Against Insurance Fraud—CAIF) said he has been working with Alaska as they take steps to include fraud in their mission statement. He said fraud always targets the most vulnerable parts of consumers. He said American Indians and Alaska Natives are very trusting people, which is why fraudsters prey on them. He asked the Liaison Committee members to check out the graph in his slides for more information about how to protect tribes from fraudsters and educate tribal members on what is good insurance so they can recognize bad insurance when fraudsters try to thrust it upon them. He said 78% of tribes are not hearing from their state insurance department. He referred state insurance regulators to the public information and outreach templates on the CAIF’s website. He said customized videos and advertising are also available for any insurance department to use. He said the CAIF will train antifraud staff and teams on how to report and be protected from fraud. Director Wing-Heier said elders with cell phones are the most vulnerable sector of the country.

5. **Discussed Other Matters**

Commissioner Downing said he would like to address a few deliverables and time frames for the Liaison Committee. He said the first deliverable for consideration would be to produce a document on communication and cultural awareness with American Indian and Alaska Native communities. To gauge interest in an ad hoc group to define this tool to help bridge communications gaps between members of native communities and non-native industry and regulatory representatives, he asked members of the Liaison Committee to volunteer to be on the first ad hoc group.

Commissioner Downing said the second deliverable he would like to suggest is an ad hoc group to explore access to non-IHS health plans. He said this second ad hoc group would investigate issues with access and navigation of ACA Exchange Programs for American Indians and Alaska Natives.

Finally, Commissioner Downing said he would like to suggest an ad hoc group to explore deficits in access to coverage and put together suggestions for closing any market gaps. He said he would like any member of the Liaison Committee who is interested in being on one of the three ad hoc groups just noted to contact Lois E. Alexander (NAIC) and him so ad hoc group meetings can be scheduled. He said each group will have two to three members and will meet for a limited time to produce a specific product or deliverable.

Commissioner Downing said he would like to note that the Liaison Committee has two presenters from the Blue Cross Blue Shield of New Mexico lined up for an interim meeting that will be scheduled sometime before the Summer National Meeting at a date and time yet to be determined.

Commissioner Downing said he would like to use the rest of the meeting time to recommend that Liaison Committee members review the results of the two surveys—i.e., one for state insurance regulators and one for NAIC consumer representatives—about the goals of the Liaison Committee for 2022 in their head table member packets.

Having no further business, the NAIC/American Indian and Alaska Native Liaison Committee adjourned.
