## American Academy of Actuaries P\&C Risk-Based Capital Committee Current and Future Research Topics, June 2024

- (Current) Diversification by line of business.
- (Current) Considering inclusion of the wildfire peril in Rcat, and corresponding adjustments to R5 to avoid double counting that peril. Similarly considering other perils for Rcat, e.g., severe convective storm and flood.
- (Current) Updating the calibration of premium and reserve risk charges to reflect more recent experience (The committee's 2023 Report used insurance industry experience through the 2017 Annual Statement). Considering ways to improve the efficiency of the risk charge calibration computations and the industry average computations (also known as Line 1 factors in the RBC formula).
- (Future) Monitor the extent to which the relationship between risk factors and interest rates continues, i.e., the validity of the PV Method described in the 2023 Report.
- (Future) Assess the growth charge. The current growth risk charge was calibrated in the 1990s, and the calibration has not been reviewed.
