PROVIDE A CONCISE STATEMENT OF THE PROPOSED CHANGE:
Definition: Accelerated underwriting means underwriting or pricing or life insurance in whole or in part on non-medical data obtained from other than the applicant or policyholder and includes, among other things, facial analytics, social media and consumer credit information.

Interrogatories:
• Does the company use accelerated underwriting for life insurance? Y/N
• If the company uses accelerated underwriting for life insurance, for what product categories is it used?
• If the company uses accelerated underwriting for life insurance, list the data sources used
and vendors supplying data or algorithms.

Data Elements:
- For data elements 1B-19 through 1B-27, replicate each data element for accelerated underwriting experience. For example, in addition to current 1B-20:
  - 1B-20A: Total Number of New Policies Issued By the Company during the Period Utilizing Accelerated Underwriting.

PROVIDE THE REASON FOR THE CHANGE:
Life insurers started utilizing accelerated underwriting a few years ago – the use of nonmedical data sources to create algorithms for underwriting and pricing. These data sources have included consumer credit data, social media, facial analytics and more. Some of the data sources used by insurers are not subject to the disclosure and consumer protection provisions of the Fair Credit Reporting Act. While accelerated underwriting holds the promise of faster decisionmaking and broader access, the use of black-box algorithms with little or no regulatory oversight also raises the potential for unfair and unfairly discriminatory treatment of applicants and policyholders. To enable regulators to monitor the effects of accelerated underwriting, we the proposed definition and data elements for MCAS life insurance.
