# MCAS Data File Instruction Guide

## **Summary of Changes for 2017:**

- Health
  - Health is new to MCAS as required reporting.
- Thresholds
  - All lines of business now require a \$50,000 threshold for reporting, with the exception of LTC which requires any premiums. (The one exception of this is Arkansas which also requires \$50,000 for LTC premiums).

As the NAIC Market Regulation and Consumer Affairs (D) Committee approves 2017 data changes they will be available on the MCAS website. ([www.naic.org/industry\\_market\\_conduct\\_statement](http://www.naic.org/industry_market_conduct_statement))

## **Overview**

This manual is a supplement to the MCAS Industry User Guide that provides all the details for working with the MCAS on-line system. This Data File Instruction Guide is limited to information about the creation and upload of an MCAS .csv data (upload) file. Use of an upload file is an option for those companies not wanting to utilize the data entry screens as the primary vehicle for entering line of business data elements. All other data (i.e., attestation information, company-wide comments, waiver and extension requests) are accepted through the online application exclusively. For specific information about what data to submit, please refer to the appropriate line of business Data Call and Definitions document available on the MCAS website ([http://www.naic.org/mcas\\_2017.htm](http://www.naic.org/mcas_2017.htm).)

## **Data File Specifications**

The record layout for any given line of business follows the format of the corresponding data entry screen. Each line on the data entry screen translates into a separate record in the data file. Because each record in the file has a unique identifier, it is acceptable to include records for multiple states and lines of business in a single data file. However, each upload file is limited to data for a single company code. Furthermore, it is acceptable, but not necessary, to exclude records for which there is no data to report.

## **How a Data File is Processed**

Every uploaded file immediately undergoes a comprehensive virus scan which might take a minute or two to complete. If any problems are encountered the file is rejected without further processing and an error message is displayed. If no virus is detected, then basic validations are performed on the data. These validations include a check that all records contain the same NAIC company code and data year, the form designation is spelled and formatted correctly, and there are no duplicate records. Uploaded files are either accepted or rejected in their entirety. In other words, a single record in error will cause the entire file to be rejected by the system without processing. The company must correct or remove the unacceptable record(s) before resubmitting the file. Once the file is accepted the line of business screens are populated with the data based on the State, Form and Line Number fields in each record. From this point, the submission process is the same as if the data had been entered into the screens manually. The

# MCAS Data File Instruction Guide

Filing Matrix status shows the In Progress icon for all state/line of business combinations affected by the uploaded data. Detailed instructions regarding validating and submitting a filing are contained in the MCAS Industry User Guide which is available through the Help option on the MCAS data entry screens.

## CSV Basics

Data for upload must be in a .csv file format. This type of format uses commas to separate the fields from one another within each record. The easiest way to create a .csv file is through a spreadsheet application such as Microsoft Excel<sup>®</sup>. Once the data is entered with a field in each column and a row for each record, the file may be saved in the .csv file format which inserts a comma between each field automatically. It is advisable to examine the resulting .csv file in a text format by opening it using Wordpad or Notepad to verify the records look like the Sample records provided at the end of this manual.

When creating a .csv file from scratch there are formatting rules that must be followed. Below are formatting rules with examples to illustrate.

Rule 1 Each field is delimited with a comma except the last field in a row.

Ex: Field1,Field2,Field3,Field4,Field5 ← no comma at end

Rule 2 Fields within a record are positional which means they are expected in a given order. Consequently, if one of the fields contains no data (null), it must be noted as empty in its correct position within the record. This is done by ending the field with a comma, as usual, but with no data between the previous field's comma and the ending comma for the no-data field. In the following example, note that Field 4 and Field 6 contain no data.

Ex: Field1,Field2,Field3,,Field5, ← ending comma = Field6

Rule 3 Any data that is between two commas is considered a field even if it contains spaces (with the exception of commas that are found between a matching beginning double-quote and ending double-quote – see Rule 4).

Ex: Field1,Field2,This is a comment,0,YES

Rule 4 A field with embedded commas must start and end with double-quote characters in order to keep the field together.

Ex: Ginger,"We have a happy, healthy dog",tan,female,8

## MCAS Data File Instruction Guide

- Rule 5 A record must not contain an <Enter> key character anywhere within it, even within a long text field surrounded by double-quote characters.
- Rule 6 It is acceptable to enclose fields within double-quote characters even when not necessary otherwise.

Ex: Field1,Field2,"Field3",Field4,Field5,"Field6"

**Sample records are included at the end of this manual.**

### **CSV Assistant**

In 2016, the NAIC started offering the optional CSV Assistant tool. This tool provides users with the option to enter their MCAS data in a Microsoft Excel file, which is then converted to a correctly formatted CSV file for uploading to the MCAS site. Each line of business collected will have an accompanying Excel file. Any updates/changes to the tool will be posted on the NAIC [MCAS Homepage](#) under "Resources".

## Sample CSV Records

**Note:** As mentioned in the Data File Specifications section at the beginning of this manual, it is acceptable to exclude individual records from a record type group when the individual record contains no data. (**CAUTION** – a zero or a space is considered data but a null is not.) A common instance of this is found among the Interrogatory records where one record requires a Y or N answer and the following record instructs, “If Yes, explain.” When the first record is answered N there is nothing to explain in the second record. In this case the second record may be submitted with all the data fields in column F and beyond as null (blank) or the record may be omitted entirely.

In the sample records displayed below, all records in every record type group are included. However, those records eligible for omission, as described above, are highlighted *for display purposes only*. If a company chooses to include null records it is NOT necessary to highlight those records in the upload file.

**Disclaimer:** All data used in the sample records is fictitious. The appearance of text wrapping in any of these records is a result of sizing the data to fit on the pages of this manual. Each record type group contains two states in order to provide more examples.

The following sample records were created using Microsoft Excel® 2010 and saved using the .csv file format option. When the different record types have different numbers of columns within a single line of business, it is necessary to create a separate spreadsheet for each record type (i.e., one for Interrogatory, another for Claims, etc.) Once created, upload records may be submitted as separate files or concatenated into a single file for upload all at one time.

### **Life**

In this Life sample there is data provided for 2 states: GA and IA. GA has Individual Life Cash and Individual Life Non-Cash Value data to report while IA has Individual Life Non-Cash Value data only.
