   b. Expense costs that are capitalized in accordance with GAAP but are expensed pursuant to statutory accounting as promulgated by the NAIC in the Accounting Practices and Procedures Manual (e.g., deferred policy acquisition costs, preoperating, development and research costs, etc.);

   c. Adjust depreciation for certain assets in accordance with the following statutory accounting principles:

      i. SSAP No. 16R—Electronic Data Processing Equipment and Software

      ii. SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements

      iii. SSAP No. 68—Business Combinations and Goodwill

   d. Nonadmit the amount of goodwill of the SCA in excess of 10% of the audited U.S. GAAP equity of the SCA’s last audited financial statements.

   e. Nonadmit amount of the net deferred tax assets (DTAs) of the SCA in excess of 10% of the audited U.S. GAAP equity of the SCA’s last audited financial statements.

   f. Nonadmit any surplus notes held by the SCA issued by the reporting entity.
Adjust the U.S. GAAP annuity account value reserves of a foreign insurance SCA, with respect to the business it wrote directly, using the commissioners’ annuity reserve valuation method (CARVM) as defined in paragraphs 14 and 15 of Appendix A-820 (including the reserving provisions in the various Actuarial Guidelines which support CARVM). The valuation interest rate and mortality tables to be used in applying CARVM should be that prescribed by the foreign insurance SCA's country of domicile. If the Foreign SCA’s country of domicile does not prescribe the necessary tables and/or rates, no reserve adjustment shall be made.

**Note that the outcome of these adjustments, can result in a negative equity valuation of the investment.**

**SSAP No. 97, Exhibit C:**

7. **Q – Is it possible for an SCA investment valued using an equity method to be reported as a negative value?**

7.1 **A – Yes, the equity method noninsurance SCA could have a negative equity.** For example, SSAP No. 97, paragraph 8.b.ii., relating to noninsurance SCA entities, may require some assets to be reported as a negative value (nonadmitted) in paragraph 9. In this example, a paragraph 8.b.ii. SCA subsidiary that is only holding furniture, which is nonadmitted, would be reflected with negative equity to the extent the value of the nonadmitted asset(s) exceed(s) reported equity. It should be noted that although SSAP No. 97, paragraph 13.e., discusses some situations in which the equity method should be discontinued, this does not apply to SCA entities, which meet the requirements of paragraph 8.b.ii. In addition, SSAP No. 97, paragraph 13.e., lists some situations where the equity method for 8.b.ii and 8.b.iv entities would result in a valuation that is less than zero.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): Agenda items 2018-26 – SCA Loss Tracking – Accounting Guidance and 2020-18 – SSAP No. 97 Update were previously adopted. Agenda item 2018-26 resulted in revisions to **SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets** and **SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities** stating that equity losses of an SCA would not go negative (thus stopping at zero), however the guaranteed liabilities would be reported to the extent there is a financial guarantee or commitment. Agenda item 2020-18 resulted in revisions with clarifying edits to Exhibit C, question 7, in SSAP No. 97, as well as removed a superseded statement that guarantees or commitments from the insurance reporting entity to the SCA could result in a negative equity valuation of the SCA.

**Information or issues (included in Description of Issue) not previously contemplated by the Working Group:**

None

**Convergence with International Financial Reporting Standards (IFRS): N/A**

**Staff Recommendation:**

Staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose the intent to move this item to the disposal listing without statutory edits. Per staff's review of SCA Sub 2 filings filed with an 8b(iv) valuation method, there were no noted instances of negative value SCAs, therefore we do not recommend revisions to the existing guidance. This exposure will allow industry to determine if they are aware of any prevalent examples of a negative equity valuation in a foreign insurance SCA (8.b.iv) and provide detailed information to NAIC staff for assessment.
NAIC staff highlights that if such an event (negative equity due to nonadmitted assets) was to actually occur at some point, and the company was to question whether the negative equity in the SCA should be reported, that this should be addressed directly with the state of domicile. With this approach, the domiciliary state would be able to assess the limited statutory edits that were performed, the extent to which assets are held in the SCA that would be nonadmitted if held directly by the insurer, and how the SCA obtained those assets.

Staff Review Completed by: Fatima Sediqzad - NAIC Staff  
February 2021

Status:
On March 15, 2021, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed the intent to move this agenda item to the disposal listing without statutory edits. Industry is requested submit comments on any prevalent examples of a negative equity valuation in a foreign insurance subsidiary, controlled or affiliated (SCA) investment with detailed information for assessment.

On May 20, 2021, the Statutory Accounting Principles (E) Working Group exposed revisions to SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies and SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, as shown below, to indicate that the equity method valuation referenced in SSAP No. 97 can result in a negative equity valuation and to limit the statutory adjustments in SSAP No. 97, paragraph 9. The exposure includes proposed guidance based on comments received, which propose that foreign insurance SCAs shall stop at zero (and thus not be subject to negative equity valuations) when applying paragraph 9 adjustments in cases where the foreign insurance subsidiary is not engaged in providing services to, or holdings assets on behalf of, U.S. insurers.

Exposed Revisions:

SSAP No. 97, paragraph 9

9. The limited statutory basis of accounting for investments in noninsurance SCA entities, subject to paragraph 8.b.ii. and foreign insurance SCA entities, subject to paragraph 8.b.iv., shall be adjusted for the following:

   a. Nonadmit assets pursuant to the following statutory accounting principles as promulgated by the NAIC in the Accounting Practices and Procedures Manual;

   i. SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers

   ii. SSAP No. 16R—Electronic Data Processing Equipment and Software

   iii. SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements

   iv. SSAP No. 20—Nonadmitted Assets

   v. SSAP No. 21R—Other Admitted Assets (e.g., collateral loans secured by assets that do not qualify as investments are nonadmitted under SAP)

   vi. SSAP No. 29—Prepaid Expenses
vii. **SSAP No. 105R—Working Capital Finance Investments**

b. Expense costs that are capitalized in accordance with GAAP but are expensed pursuant to statutory accounting as promulgated by the NAIC in the *Accounting Practices and Procedures Manual* (e.g., deferred policy acquisition costs, preoperating, development and research costs, etc.);

c. Adjust depreciation for certain assets in accordance with the following statutory accounting principles:

i. **SSAP No. 16R—Electronic Data Processing Equipment and Software**

ii. **SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements**

iii. **SSAP No. 68—Business Combinations and Goodwill**

d. Nonadmit the amount of goodwill of the SCA in excess of 10% of the audited U.S. GAAP equity of the SCA’s last audited financial statements.

e. Nonadmit amount of the net deferred tax assets (DTAs) of the SCA in excess of 10% of the audited U.S. GAAP equity of the SCA’s last audited financial statements.

f. Nonadmit any surplus notes held by the SCA issued by the reporting entity.

g. Adjust the U.S. GAAP annuity account value reserves of a foreign insurance SCA, with respect to the business it wrote directly, using the commissioners’ annuity reserve valuation method (CARVM) as defined in paragraphs 14 and 15 of Appendix A-820 (including the reserving provisions in the various Actuarial Guidelines which support CARVM). The valuation interest rate and mortality tables to be used in applying CARVM should be that prescribed by the foreign insurance SCA’s country of domicile. If the Foreign SCA’s country of domicile does not prescribe the necessary tables and/or rates, no reserve adjustment shall be made.

Note that the outcome of these adjustments can result in a negative equity valuation of the investment for all paragraph 8.b.ii. entities. For a paragraph 8.b.iv. entity, the application of these adjustments will stop at zero, and will not result in negative equity valuation unless the 8.b.iv entity provides services to the reporting entity or its affiliates or holds assets on behalf of the reporting entity. If such services, including reinsurance transactions, are occurring, the adjustments required in this paragraph can result in a negative equity valuation. (See additional equity method application guidance in paragraph 13.e. regarding guarantees and financial support.)

**SSAP No. 48, paragraph 6**

6. Investments in these ventures, except for joint ventures, partnerships and limited liability companies with a minor ownership interest, shall be reported using an equity method as defined in **SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities**, paragraphs 8.b.i. through 8.b.iv. *(The equity method calculation may result with a negative valuation of the investment, therefore the SSAP No. 97 equity method calculation shall occur regardless of whether the investment is supported by an audit and the reporting entity will nonadmit the investment.)* A reporting entity whose shares of losses in a SSAP No. 48 entity exceeds its investment in the SSAP No. 48 entity shall disclose the information required by SSAP No. 97, paragraph 35.a.
On August 26, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, exposed revisions to SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies and SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entites, as illustrated above. The revisions in SSAP No. 48 direct that the equity method valuation referenced in SSAP No. 97 can result in a negative equity valuation regardless of if the investment is supported by an audit. The revisions in SSAP No. 97 direct that when applying the “limited statutory accounting adjustments” (SSAP No. 97, paragraph 9) to foreign insurance SCAs (SSAP No. 97, paragraph 8.b.iv. entities), the resultant equity value shall stop at zero (and thus not be subject to negative equity valuations) in cases where the foreign insurance subsidiary is not providing services to, or holding assets on behalf of, U.S. insurers.

**Issue:** SSAP No. 32R – Clarification of ‘Effective Call Price’

**Check (applicable entity):**

- Modification of Existing SSAP: X
- New Issue or SSAP: 
- Interpretation: 

**Description of Issue:** For a brief historical context, in July 2020, the Working Group adopted *Issue Paper No. 164—Preferred Stock* and substantively revised SSAP No. 32R—Preferred Stock. The substantively revised SSAP No. 32R was effective January 1, 2021, however in October 2020, agenda item 2020-31, permitted early application of the newly revised standard.

NAIC staff have received implementation questions regarding the application of a valuation ceiling for certain callable instruments in scope of SSAP No. 32R. The valuation ceiling requires that perpetual preferred, mandatory convertible preferred stock as well as publicly traded preferred stock warrants be reported at fair value, with a valuation ceiling that is **not to exceed any currently effective call price**. Questions on both the application and interpretation of this limitation have been brought to NAIC staff, accordingly this agenda item has been drafted to propose a clarification of this valuation ceiling.

Callable preferred stock is a type of preferred stock in which the issuer has the right to call or redeem at a pre-set price on or after a pre-defined calendar date. The call redemption terms such as price, premium and other applicable characteristics are specified in the instrument’s prospectus. It is important to note that callable preferred stock generally have a five-year lock out period in which the issuer cannot call the preferred stock. Additionally, prior to redemption (call), the issuer must send notice to the shareholders, detailing the date and conditions of the redemption.

NAIC staff recommend that an appropriate interpretation for the application of the valuation ceiling is that the limitation should only apply in situations where the call is **currently exercisable** by the issuer, or the issuer has provided notice of its intent to call the preferred stock. If the valuation ceiling were to apply earlier (in advance of the call date), in situations where preferred stock is purchased in advance of its available call date, a reporting entity would be required to artificially limit the preferred stock’s value, despite being able to liquidate it on the open market for fair value. This limitation could apply for years as calls are typically not available to the issuer for a period of at least 5 years post issuance.

For example, if perpetual preferred stock were purchased at $140 (its current fair value), but the preferred stock had a call available to the issuer at $120 in 5 years, a reporting entity would be required to report a day 1 unrealized loss for $20. To require the recognition of an unrealized loss in these situations does not appear to appropriately reflect the economics of the equity investment, especially when the instrument can be sold at its current fair value without incurring a loss. It is important to note that market conditions will likely influence the market value of the preferred stock as a call date nears – gradually decreasing any excess of fair value over the call price by the time the security is callable by the issuer. NAIC staff support maintaining a (clarified) valuation limitation to protect against unlikely scenarios where a callable security’s fair value increases but will be called at a lower price.
Existing Authoritative Literature: The ‘currently effective call price’ valuation ceiling is referenced in numerous sections within SSAP No. 32R—Preferred Stock and is applicable to both perpetual and mandatory convertible preferred stock as well as publicly traded preferred stock warrants. For emphasis, relevant guidance has been bolded below.

Balance Sheet Amount

11. Preferred stock shall be valued based on (a) the underlying characteristics (redeemable, perpetual or mandatory convertible), (b) the quality rating expressed as an NAIC designation, and (c) whether an asset valuation reserve (AVR) is maintained by the reporting entity:

a. For reporting entities that do not maintain an AVR:
   i. Highest-quality or high-quality redeemable preferred stocks (NAIC designations 1 and 2), which have characteristics of debt securities, shall be valued at cost or amortized cost. All other redeemable preferred stocks (NAIC designations 3 to 6) shall be reported at the lower of cost, amortized cost, or fair value.
   ii. Perpetual preferred stock and publicly traded preferred stock warrants shall be reported at fair value, not to exceed any currently effective call price.
   iii. Mandatory convertible preferred stocks (regardless if the preferred stock is redeemable or perpetual) shall be reported at fair value, not to exceed any currently effective call price, in the periods prior to conversion. Upon conversion to common stock, these securities shall be in scope of SSAP No. 30R.
   iv. For preferred stocks reported at fair value, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus)

b. For reporting entities that maintain an AVR:
   i. Highest-quality, high-quality or medium quality redeemable preferred stocks (NAIC designations 1 to 3) shall be valued at amortized cost. All other redeemable preferred stocks (NAIC designations 4 to 6) shall be reported at the lower of amortized cost or fair value.
   ii. Perpetual preferred stock and publicly preferred stock warrants shall be valued at fair value, not to exceed any currently effective call price.
   iii. Mandatory convertible preferred stocks (regardless if the preferred stock is redeemable or perpetual) shall be reported at fair value, not to exceed any currently effective call price, in the periods prior to conversion. Upon conversion to common stock, these securities shall be in scope of SSAP No. 30R.
   iv. For preferred stocks reported at fair value, the accounting for unrealized gains and losses shall be in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve.

Impairment of Redeemable Preferred Stock

12. An other-than-temporary impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of the preferred stock in effect at the date of acquisition. An assessment of other-than-temporary impairment shall occur whenever mandatory redemption rights or sinking fund requirements do not occur. A decline in fair value which is other-than-temporary includes situations where the reporting entity has made a decision to sell the preferred stock prior to its maturity at an amount below its carrying value (i.e., amortized cost). If it is
determined that a decline in the fair value of a redeemable preferred stock is other-than-temporary, an impairment loss shall be recognized as a realized loss equal to the entire difference between the redeemable preferred stock’s carrying value and its fair value, not to exceed any currently effective call price, at the balance sheet date of the reporting period for which the assessment is made. The measurement of the impairment loss shall not include partial recoveries of fair value subsequent to the balance sheet date. For reporting entities required to maintain an AVR, realized losses shall be accounted for in accordance with SSAP No. 7.

13. In periods subsequent to the recognition of other-than-temporary impairment loss for a redeemable preferred stock, the reporting entity shall account for the other-than-temporarily impaired preferred stock as if the preferred stock had been purchased on the measurement date of the other-than-temporary impairment. The fair value of the redeemable preferred stock on the other-than-temporary impairment measurement date shall become the new cost basis of the redeemable preferred stock and the new cost basis shall not be adjusted for subsequent recoveries in fair value. The discount or reduced premium recorded for the preferred stock, based on the new cost basis, shall be amortized over the remaining life of the preferred stock in the prospective manner based on the amount and timing of future estimated cash flows. The preferred stock shall continue to be subject to impairment analysis for each subsequent reporting period. Future declines in fair value which are determined to be other-than-temporary shall be recorded as realized losses.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): Previous activity was summarized above, in the ‘Description of Issue’ section.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 32R—Preferred Stock clarifying that for the ‘effective call price’ valuation ceiling to occur that 1) the call be currently exercisable by the issuer, or 2) the issuer of the security has announced that the instruments will be redeemed/called.

Proposed edits to SSAP No. 32R:

Balance Sheet Amount

11. Preferred stock shall be valued based on (a) the underlying characteristics (redeemable, perpetual or mandatory convertible), (b) the quality rating expressed as an NAIC designation, and (c) whether an asset valuation reserve (AVR) is maintained by the reporting entity New Footnote (FN):

a. For reporting entities that do not maintain an AVR:

i. Highest-quality or high-quality redeemable preferred stocks (NAIC designations 1 and 2), which have characteristics of debt securities, shall be valued at cost or amortized cost. All other redeemable preferred stocks (NAIC designations 3 to 6) shall be reported at the lower of cost, amortized cost, or fair value.

ii. Perpetual preferred stock and publicly traded preferred stock warrants shall be reported at fair value, not to exceed any currently effective call price.
Mandatory convertible preferred stocks (regardless if the preferred stock is redeemable or perpetual) shall be reported at fair value, not to exceed any currently effective call price, in the periods prior to conversion. Upon conversion to common stock, these securities shall be in scope of SSAP No. 30R.

For preferred stocks reported at fair value, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus).

b. For reporting entities that maintain an AVR:

i. Highest-quality, high-quality or medium quality redeemable preferred stocks (NAIC designations 1 to 3) shall be valued at amortized cost. All other redeemable preferred stocks (NAIC designations 4 to 6) shall be reported at the lower of amortized cost or fair value.

ii. Perpetual preferred stock and publicly preferred stock warrants shall be valued at fair value, not to exceed any currently effective call price.

iii. Mandatory convertible preferred stocks (regardless if the preferred stock is redeemable or perpetual) shall be reported at fair value, not to exceed any currently effective call price, in the periods prior to conversion. Upon conversion to common stock, these securities shall be in scope of SSAP No. 30R.

iv. For preferred stocks reported at fair value, the accounting for unrealized gains and losses shall be in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve.

Impairment of Redeemable Preferred Stock

12. An other-than-temporary impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of the preferred stock in effect at the date of acquisition. An assessment of other-than-temporary impairment shall occur whenever mandatory redemption rights or sinking fund requirements do not occur. A decline in fair value which is other-than-temporary includes situations where the reporting entity has made a decision to sell the preferred stock prior to its maturity at an amount below its carrying value (i.e., amortized cost). If it is determined that a decline in the fair value of a redeemable preferred stock is other-than-temporary, an impairment loss shall be recognized as a realized loss equal to the entire difference between the redeemable preferred stock’s carrying value and its fair value, not to exceed any currently effective call price, at the balance sheet date of the reporting period for which the assessment is made. The measurement of the impairment loss shall not include partial recoveries of fair value subsequent to the balance sheet date. For reporting entities required to maintain an AVR, realized losses shall be accounted for in accordance with SSAP No. 7.

New Footnote (FN) – In all situations noted in this statement in which the fair value is limited to the currently effective call price, this limitation only applies when the call is 1) currently exercisable by the issuer, or 2) the issuer has announced that the instruments will be redeemed/called.

Staff Review Completed by: Jim Pinegar, NAIC Staff – June 2021

Status:
On July 20, 2021, in response to an e-vote to expose, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 32R—Preferred Stock to clarify that the “effective call price” valuation limitation, for all instruments within scope
of the standard, shall only apply if the call is currently exercisable by the issuer or if the issuer has announced that the instrument will be redeemed/called.

On August 26, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to *SSAP No. 32R—Preferred Stock*, as illustrated above, to clarify that the “effective call price” valuation limitation, for all instruments within scope of the standard, shall only apply if the call is currently exercisable by the issuer or if the issuer has announced that the instrument will be redeemed/called.

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

RE: Ref #2019-21 – SSAP No. 43R, Proposed Bond Definition

Dear Mr. Bruggeman:

Interested parties would like to thank the Statutory Accounting Principles Working Group (SAPWG) for the opportunity to comment on the proposed bond definition in Reference #2019-21 – SSAP No. 43R, Proposed Bond Definition (the “Proposed Bond Definition” or “Exposure”). Interested parties would also like to thank SAPWG for the opportunity to regularly provide input to regulators and NAIC staff as the Proposed Bond Definition was being more fully developed; especially the collaborative environment where open and honest dialogue was encouraged so that the nuances of a very complicated project could be properly addressed.

Overall, interested parties are supportive of the proposed principles-based Proposed Bond Definition. We believe it is flexible enough to accommodate the continued evolution of the bond market, while having safeguards that help prevent potential regulatory abuses. The Proposed Bond Definition does come with a cost to industry though, which is primarily driven by the requirement to analyze and document that certain bonds meet specific thresholds (“meaningful” and “sufficient”). It may be necessary to have practical accommodations upon adoption (i.e., transition requirements for existing investments in an insurer’s investment portfolio) as it is our understanding the Proposed Bond Definition will require such analysis and documentation “as if” it was done when the bonds were issued. It may be difficult to do this “as if” analysis and documentation with bonds that were issued many years previously and/or where documentation is not available to perform such an analysis.

Interested parties would also like to address several areas of the Proposed Bond Definition where greater clarity may be needed and/or where we believe the requirements are too stringent. Interested parties will limit our comments to those we believe are substantive and will address several editorial comments directly with the SAPWG Working Group.

One item that may have escaped our full attention during the development of the Proposed Bond Definition relates to interest only and principal only strips. While we believe such investments generally qualify under the Proposed Bond Definition, it is unclear if such investments are an Issuer Credit Obligation (US Treasury Strips?) or Asset Backed Security (Mortgage Backed Security Strips?) as well as how the sufficiency criteria would apply to the latter when there are, or are not, agency guarantees. We intend to work with the SAPWG Working Group to get proper clarity on such investments.
The interested parties believe the examples in the Proposed Bond Definition are integral to applying it as well as providing a principles-based way of preventing perceived regulatory abuses such as ensuring legal form bonds, with in-substance equity-like characteristics, are not reported as bonds. Interested parties would like to provide three comments on these examples.

1) Example 1 of Appendix I prevents a legal form debt investment, that is required to be purchased with a pro rata share of an equity interest, from being a bond where there is a restriction on selling, assigning or transferring the debt investment without also selling, assigning, or transferring the pro rata equity interest to the same party. While the debt investment would have legal priority of payment over the equity interest, both interests are contractually required to be held in the same proportion by the reporting entity and cannot be independently sold, assigned or transferred, which only gives the reporting entity priority of payment over itself. The structure does not alter the risk profile in a way that results in different performance relative to if an investor were to just directly invest in the underlying assets. Therefore, the debt investment does not represent a creditor relationship in substance. Interested parties agree with this assessment but would like to emphasize that such investments will need to find a reporting home, other than Schedule D, Bonds, where the proper accounting of both the debt and equity interest is addressed. For such a situation where the underlying fund predominantly holds debt securities, it may also be appropriate that such investment, in total, be applied a bond-like risk-based capital charge.

Similarly, accounting and reporting will need to be addressed for any and all debt investments that do not meet the Proposed Bond Definition, but that are recognized as bonds in the financial markets. For example, 1) debt instruments issued by funds, that are treated as bonds in the capital markets, but would be excluded from the Proposed Bond Definition under Example III of Appendix I or 2) non-agency mortgage-backed securities that are treated as bonds in the capital markets but would be excluded from the Proposed Bond Definition under Example I of Appendix II, and therefore would not be reported as bonds on Schedule D. We understand the SAPWG Working Group intends to address the accounting and reporting, and potentially an appropriate risk-based capital charge for these investments, and any other bonds that do not meet the Proposed Bond Definition. Interested parties would like to emphasize the importance of addressing them appropriately and reaffirm that we stand ready to offer our assistance.

2) As mentioned previously, interested parties believe the examples in the Proposed Bond Definition are integral to applying the new proposed definition and generally find them helpful. However, the sufficiency examples in Appendix II do not include an example for a more traditional ABS, such as a collateralized loan obligation (CLO). Interested parties believe such an example would be beneficial to the Proposed Bond Definition and are currently working on developing one. We plan to share this with the SAPWG Working Group and are hopeful it can be added to the Proposed Bond Definition.

3) Interested parties believe Examples I and II of Appendix I do a good job of delineating a principle-based solution for preventing in-substance equity-like investments from being reported as bonds on Schedule D. Example III, however, we believe needs to be amended to ensure that it does not affect well-structured debt investments from being reported on Schedule D as bonds.

First, real world collateralized fund obligation debt instruments (CFO Debt Instruments), that are treated as bonds in the marketplace, are much more complicated and nuanced than the simplified example and interested parties have been challenged in applying the example to investments they own. For example, many CFO Debt Instruments are self-amortizing (in full or in part) and it is unclear if the following provision applies to the anticipated bullet maturity or total principal balance.
“Additionally, a debt instrument for which repayment relies significantly upon the ability to refinance or sell the underlying equity interests at maturity subjects to a point-in-time equity valuation risk that is characteristic of the substance of the equity holder relationship rather than a creditor relationship. Therefore, such reliance would preclude the rebuttable presumption from being overcome.”

Notwithstanding this lack of perceived clarity, many may interpret the phrase “relies significantly” that limits refinancing or underlying assets sales for repayment, to mean only approximately 10 – 20% of such repayment is allowed from these sources. We do not believe this is appropriate nor that it makes the CFO Debt Instruments equity-like. We note that this is apparently independent of overcollateralization and would treat CFO Debt Instruments the same whether they are 10x overcollateralized or 1x overcollateralized. It also seems to contradict the factors on the previous page where it says a reporting entity should consider the overcollateralization. We believe overcollateralization (and the other factors listed) should be evaluated collectively when making an equity-like determination rather than the seemingly hard and fast rule noted above.

This hard and fast rule also makes it equity-like if repayment substantially relies on refinancing. Interested parties agree that refinancing risk is an important consideration, but it typically is a determining factor in assessing credit quality as opposed to a factor in determining whether it is a debt security or an equity-like one. Interested parties believe that the credit quality of an investment will decline as the refinancing risk increases, but also believe that it should be eligible for Schedule D treatment, assuming the refinancing risk is commensurate with that of other debt securities.

The vast majority of debt in the private and public capital markets is structured as bullet maturities and it is universally accepted that the source of repayment typically is going to be from a refinancing event occurring at or near the time of the debt maturity. For CFO Debt Instruments, interested parties believe that it can also be acceptable to expect to be refinanced at maturity, but only if the expectation that the level of overcollateralization will remain at prudent levels such that a reasonable investor would be willing to refinance the maturity with replacement debt. The assessment of the debt’s ability to be refinanced needs to take into account the expectation for the initial, ongoing and “at maturity” overcollateralization, as well as the other structural enhancements that are likely to benefit the investor refinancing the debt. There is further little substantive difference between refinancing risk for debt issued by a CFO when compared to debt issued by an SEC ‘40 Act Fund.

Lastly, interested parties have also noted investments where the debt is issued from a feeder fund, which in turn invests in another fund, that invests directly in debt securities. While we do not believe Example III is intended to prohibit such investments, interested parties believe further clarity on these arrangements is warranted as they could be construed to be debt backed by equity interests.

Interested parties are hopeful we can re-assess Example III of Appendix I with the SAPWG working group to provide both greater clarity as well as additional flexibility on whether debt backed by equity should be eligible for reporting on Schedule D as bonds.

*****
Thank you for considering interested parties’ comments. Interested parties are committed to working with NAIC staff and SAPWG on this very complicated and important topic. If you have any questions in the interim, please do not hesitate to contact us or Mike Reis at michaelreis@northwesternmutual.com or 414-241-8293.

Sincerely,

D. Keith Bell           Rose Albrizio

The Lease-Backed Securities Working Group

July 15, 2021

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

RE: Ref #2019-21 – SSAP No. 43R, Proposed Bond Definition

Dear Mr. Bruggeman:

Our group, the Lease-Backed Securities Working Group, would like to thank the Statutory Accounting Principles Working Group (SAPWG) for the opportunity to comment on the proposed bond definition in Reference #2019-21 – SSAP No. 43R, Proposed Bond Definition (the “Proposed Bond Definition” or “Exposure”).

As you know, our group has been working closely for over a year now with members of SAPWG as well as the Valuation of Securities Task Force (VOSTF) and the Securities Valuation Office (SVO) to clarify the appropriate accounting and reporting treatment for the class of investments we are most concerned with: Lease-Backed Securities, Credit-Tenant Loans and Ground Lease Financings. We believe that together we have arrived at the correct outcome for these securities, and we are deeply appreciative of the consideration we received from all the regulators, as well as the time and effort that was put in by all parties to achieve that goal.

With regard to the broader effort to update the definition and classification of bonds and asset-backed securities which is the subject of the current exposure, we agree with many of the comments which have been submitted by other interested parties. However, we would like to offer the following additional comments:

1.) As a specific matter, paragraph 2 of the exposure lists various securities which would fall into the category of “issuer credit obligations”. Among others, these include:

   g. ETCs, EETCs, and CTLs for which repayment is fully supported by a lease to an operating entity (emphasis added).

   With regard to CTLs, although it is not explicitly stated here, we assume that the phrase “fully-supported” would extend to CTLs which meet the newly-revised definition in the P&P Manual: that is “Credit Tenant Loans” with a residual balance no greater than 5%.

2.) From a broader perspective, the current language in SSAP 43R, “Loan-Backed and Structured Securities”, draws a clear distinction between “structured securities” and “loan-backed securities” -- which are “not included in structured securities” -- and “for which the payment of interest and/or principal is directly proportional to the payments received by the issuer from the underlying assets”.

   These loan-and-lease-backed “pass-through securities” have long been accepted insurance company investments, as codified in SSAP 43R for many years. We believe that it is important not to lose this distinction between “pass-through” and “structured” securities, and we worry that the division of the
The Lease-Backed Securities Working Group

universe of bonds neatly into “issuer credit obligations” and “asset-backed securities” (a phrase which does not seem to appear at all in the current version of 43R) may be confusing to the market.

This is especially true, as the phrase “Asset-Backed Security” is commonly used to refer to pools of assets which have been carved-up, or “tranch ed” into multiple securities, and for which the cash flows received by investors are not “directly proportional” to the payments flowing from the underlying assets.

This confusion is made worse by the requirement in Paragraph 3.b of the Exposure that in order to qualify as an “asset-backed security” an investment must include “sufficient credit enhancement through guarantees (or other similar forms of recourse) subordination and/or overcollateralization” [Paragraph 3.b].

The examples in Appendix II of the exposure seek to clarify the “sufficiency criteria” for credit enhancement for various types of bonds. The principal used is that credit enhancement needs to be “sufficient to absorb losses similar to other debt instruments of similar quality”.

We believe that when this language is exposed, it will be both very confusing to market participants and difficult to implement in practice. This is because it conflates two concepts: credit quality and accounting classification. Who would bear the responsibility for determining: a) which debt instruments were of “similar quality”, and b) the amount of credit enhancement “sufficient” to achieve a certain credit quality? These are highly subjective judgments for which the answers could vary from deal to deal based on the specific characteristics of each individual transaction. How would disagreements be resolved?

This language also runs the risk of making it appear that all “asset-backed securities” must be “structured securities” with an equity tranche, or “first-loss” piece – or otherwise, they would not qualify as “bonds”.

While this may not have been the intent of the regulators, the current language seems to point in that direction. We would hope that as the process moves forward these important issues could be further clarified. In order for markets to function in an orderly manner, there need to be clear “guardrails” for both regulators and investors, and a clear distinction between accounting rules and standards, and credit quality.

We look forward to continuing the dialog we have established over the past year with the regulator community in clarifying the treatment of “CTLs”, Lease-backed Securities, and Ground-Lease Securities, and we are grateful for the opportunity to comment on the current exposure.

Thank you for considering our comments,

JMGarrison

Re: Proposed Definition of “Bond,” issued May 20, 2021 (last updated May 26, 2021)

Ladies and Gentlemen:

I serve as Vice President and Chief Investment Officer of Pinnacol Assurance (“Pinnacol”), Colorado’s state workers’ compensation insurance fund. This advice represents Pinnacol’s Comment to the Proposed Bond Definition (the “Definition”) issued by the Statutory Accounting Principles (E) Working Group on May 20, 2021.

As you know, many insurers have statutory limits on the amount of “other invested assets” they can own—Colorado limits an insurer’s “other invested assets” to 5% of the portfolio. Any “other invested assets” in excess of the 5% limitation cannot be considered “admitted assets” comprising part of the insurer’s surplus but instead, will reduce that surplus dollar for dollar.

The reason all this is important is that Pinnacol has invested around $85 million in five separate rated note structures which are comprised of two parts. The first part represents loans made by the manager of the investment to various borrowers (which would seem to be characterizable as a Bond and not an equity interest). The second part represents an equity interest in the vehicle issuing the notes. The ultimate underlying investments in these strategies are comprised of private debt, which generates the cash flows to pay Pinnacol’s returns on both the notes and the equity components.

According to the examples set forth in the proposed definition of “Bond,” it appears that the existence of the equity interest (which cannot be traded separately from the notes) in the rated notes programs in which Pinnacol has invested would disqualify these investments as “Bonds.” This would mean that Pinnacol would suffer a reduction in its surplus by at least $85 million.
The proposed definition of “Bond” suggests that whether an investment qualifies as a “Bond” is an all or nothing proposition— if a structured rated note investment contains certain equity like characteristics, it will not be characterizable as a Bond, even though a significant portion of the investment represents a creditor relationship which otherwise would qualify as a Bond. Pinnacol believes a more reasonable approach (and one which better reflects economic reality) would be to allow insurers to characterize that portion of their investment which represents a creditor relationship as a Bond (and therefore, categorizable as an admitted asset constituting part of the insurer’s surplus) with only the equity portion of the investment not being characterized as a Bond (and if in excess of 5% of the portfolio, not qualifying as an admitted asset). In other words, we suggest that the definition of a Bond recognize that portions of an investment may be characterized as a Bond while other portions may not. This bifurcation will better reflect the economic reality of each investment and protect insurer surplus from the dramatic dilution that otherwise will be experienced by adopting an “all or nothing” definition of Bond.

In conclusion, we contend that the Working Group’s “all or nothing” approach to characterization of an investment as a “Bond” poses great harm to the industry and is not reflective of the fact that a significant portion of rated note structured investments are creditor relationships properly characterized as Bonds. Instead, we urge the Working Group to adopt a definition of Bond which at the very least, permits those portions of an investment which truly reflect a creditor relationship to be treated as a Bond.

Sincerely,

PINNACOL ASSURANCE

David L. Bomberger
Vice President, Chief Investment Officer

RE: Items Exposed for Comment by the Statutory Accounting Principles Working Group on August 26, 2021 with Comments due October 1, 2021

Dear Mr. Bruggeman:

Interested parties appreciate the opportunity to comment on the exposure drafts released for comment by the NAIC Statutory Accounting Principles (E) Working Group (the Working Group). We offer the following comments:

Ref #2021-11 SSAP No. 43R

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed the following:

1. Revisions to SSAP No. 43R—Loan-Backed and Structured Securities, as illustrated in the proposal, to explicitly identify the SVO-Identified CTLs that are in scope of SSAP No. 43R. These revisions also propose to delete the examples of “other loan-backed and structured securities” in paragraph 27.b. Comments are requested if this deletion is perceived to remove investments from the scope of SSAP No. 43R.

2. Request for comment on the Working Group’s intent to nullify INT 20-10. (This INT nullifies automatically on Oct. 1, 2021, but it is anticipated that the explicit nullification will identify the revisions adopted by the VOSTF for historical reference.)

3. Disposal of agenda item 2020-24: Accounting and Reporting of Credit Tenant Loans without statutory revisions. This was the agenda item in response to the initial VOSTF referral and is no longer applicable with the adopted Task Force edits to clarify that CTLs are mortgage loans in scope of SSAP No. 37.
Interested parties have no comment on this item.

**Ref #2021-12 NAIC Accounting Practices and Procedures Manual Editorial and Maintenance Update**

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed editorial revisions to the Preamble, *Appendix A-001: Investments of Reporting Entities, Appendix C Actuarial Guidelines – Appendices, Appendix C-2 Interpretations of the Emerging Actuarial Issues (E) Working Group*, and *SSAP No. 21R — Other Admitted Assets*, as illustrated in the proposal.

Interested parties have no comment on this item.

**Ref #2021-13 SSAP No. 55: Salvage - Legal Recoveries**

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and took the following actions:

1. Exposed revisions to *SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses*, as illustrated in the proposal, to clarify that salvage and subrogation recoveries should be reported as a reduction of losses and/or loss adjusting expense (LAE reserves), depending on the nature of the costs being recovered. In addition, updates to the disclosure in paragraph 17.h. were exposed.

2. Directed NAIC staff to coordinate develop conforming revisions to the Annual Statement instructions.

3. Directed notification of the exposure to the following actuarial Task Forces:
   a. Casualty Actuarial and Statistical (C) Task Force,
   b. Life Actuarial (A) Task Force, and
   c. Health Actuarial (B) Task Force

Interested parties support this proposal.

**Ref #2021-14 Policy Statement Terminology Change – Substantive & Nonsubstantive**

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to the *NAIC Policy Statement on Maintenance of Statutory Accounting Principles*, as illustrated in the proposal and suggested by the Financial Condition (E) Committee in their Aug. 14, 2021, referral, to alter the terminology used when discussing types of statutory accounting revisions.

After some discussion and consideration of the proposal and its impact on the implementation of new statutory accounting standards, interested parties concluded that the distinction between substantive (proposed to change to “development of new SSAPs or New SAP Concepts in an
Existing SSAPs”) and non-substantive (proposed to change to “Development of SAP Clarifications”) is at times confusing and that there would be more transparency in the development process if the distinction were eliminated. Instead, we recommend that all new standards be handled similarly but that the effective date for each new standard be determined by evaluating the complexity of implementation (e.g., the extent that systems changes are required) and the availability of data to insurers to implement the new standard. This determination would be made as the new standard is being completed and with feedback from industry as to the time needed to adopt the new requirements.

INT 21-02T: Extension of Ninety-Day Rule for the Impact of Hurricane Ida

The Working Group reached a tentative consensus for a one-time optional extension of the ninety-day rule for uncollected premium balances, bills receivable for premiums and amounts due from agents and policyholders required per SSAP No. 6, paragraph 9. For policies in effect as of the declaration of a state of emergency by either the states, U.S. territories or federal government, as described in paragraph 1, insurers with policyholders in areas impacted by Hurricane Ida, its aftermath and the related flooding may wait 150 days (90 days per existing guidance, plus a 60-day extension), not to extend beyond Jan. 23, 2022, before nonadmitting premiums receivable from those directly impacted policyholders as required per SSAP No. 6, paragraph 9. b. Existing impairment analysis remains in effect for these affected policies.

The Working Group noted that a temporary sixty day (60) extension had previously been provided for other nationally significant disasters including INT 20-11: Extension of Ninety-Day Rule for the Impact of 2020 Hurricanes, California Wildfires and Iowa Windstorms, INT 18-04: Extension of Ninety-Day Rule for the Impact of Hurricane Florence and Hurricane Michael; INT 17-01: Extension of Ninety-Day Rule for the Impact of Hurricane Harvey, Hurricane Irma and Hurricane Maria; INT 13-01: Extension of Ninety-Day Rule for the Impact of Hurricane/Superstorm Sandy; and INT 05-04: Extension of Ninety-day Rule for the Impact of Hurricane Katrina, Hurricane Rita and Hurricane Wilma.

This interpretation will be automatically nullified on Jan. 24, 2022 and will be included as a nullified INT in Appendix H – Superseded SSAPs and Nullified Interpretations in the “As of March 2022” NAIC Accounting Practices and Procedures Manual.

Interested parties support this proposal.

Ref #2019-24 SSAP No. 71: Levelized Commissions

The Working Group exposed Issue Paper No. 16x: Levelized Commissions to document the historical discussion and final action adopted through the Executive Committee/Plenary.

Interested parties have no further comment on this item.
Thank you for considering interested parties’ comments. If you have any questions in the interim, please do not hesitate to contact us.

Sincerely,

D. Keith Bell

Rose Albrizio

RE: Items Exposed for Comment by the Statutory Accounting Principles Working Group by eVote on October 25, 2021 with Comments due November 12

Dear Mr. Bruggeman:

Interested parties appreciate the opportunity to comment on the exposure drafts released for comment by the NAIC Statutory Accounting Principles (E) Working Group (the Working Group). We offer the following comments:

**Ref #2021-16: SSAP No. 30R – FHLB Disclosure – Blanks Referral**

On October 25, 2021, in response to an e-vote to expose, the Working Group exposed this agenda item for public comment. While this agenda item does not propose statutory accounting revisions, it resulted in a referral to the Blanks (E) Working Group to include a supplemental data capture footnote for FHLB borrowings that are classified as a deposit-type contract and reported on *Exhibit 7 – Deposit-Type Contracts*.

Interested parties support the proposed change in this item.

**Ref #2021-17: SSAP No. 32R – Permitted Valuation Methods**

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to *SSAP No. 32R—Preferred Stock* to remove lingering references which indicate that cost is an allowable valuation method for redeemable preferred stock.

Interested parties have no comment on this item.
Ref #2021-18: VM-21 Scenario Consistency Update

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 108R—Derivatives Hedging Variable Annuity Guarantees to ensure consistency with revisions to VM-21, removing references to the standard scenario. The Working Group also provided notice of the exposure to the Life Actuarial (A) Task Force. Interested parties support this proposal.

Interested parties agree with this proposal but recommend the following edits for the Working Group’s consideration:

14. Deferred assets and deferred liabilities recognized under paragraph 13.b. shall be amortized using a straight-line method into realized gains or realized losses over a finite amortization period. The amortization timeframe shall equal the Macaulay duration of the guarantee benefit cash flows based on the VM-21 Standard Projection with prescribed assumption run scenario that produces the VM-21 adjusted run scenario that produces the scenario reserve closest to conditional tail expectation (CTE) 70 (adjusted), but shall not exceed a period of 10 years. The CTE 70 (adjusted) VM-21 Standard Projection with prescribed assumption run and the scenario reserve closest to the CTE 70 (adjusted) are determined using the method (company specific market path (CSMP) or conditional tail expectations (CTE) with prescribed assumptions (CTEPA)) applied by the reporting entityFN to calculate the prescribed projections amount.

Ref #2021-19: Editorial and Maintenance Update

The Working Group exposed the editorial revisions, as shown in the proposal, for public comment.

Interested parties have no comment on this item.

* * *

Thank you for considering interested parties’ comments. If you have any questions in the interim, please do not hesitate to contact us.

Sincerely,

D. Keith Bell

© 2021 National Association of Insurance Commissioners
Statutory Issue Paper No. 165

Levelized Commission

STATUS
Finalized December 11, 2021

Original SSAP: SSAP No. 71; Current Authoritative Guidance: SSAP No. 71

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. This issue paper documents for historical purposes the discussion of nonsubstantive revisions to SSAP No. 71—Policy Acquisition Costs and Commissions. The intent of these nonsubstantive revisions is to provide clarifying guidance to existing accounting requirements regarding levelized commission arrangements. The statutory accounting guidance in SSAP No. 71 has been in place since 1998 and is based on pre-codification guidance.

SUMMARY CONCLUSION

2. The nonsubstantive revisions to SSAP No. 71 adopted by the Statutory Accounting Principles (E) Working Group on March 15, 2021, the Accounting Practices and Procedures (E) Task Force on March 23, 2021, and the Financial Condition (E) Committee on April 13, 2021 (illustrated in Exhibit A), reflect the following:

   a. Provides additional descriptive guidance to assist with identifying levelized commission arrangements.

   b. Emphasizes the requirements noted in the original SSAP No. 71 guidance that levelized commission arrangements require full recognition of the liability amount. In addition, interest and or fees incurred to date are accrued.

   c. Specifies an effective December 31, 2021, for contracts in effect as of that date.

Policy Acquisition Costs Overview

3. Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). Pursuant to SSAP No. 71, as originally effective January 1, 2001, for the initial SAP Codification, specifically states that acquisition costs and commissions are expensed as incurred. This provision is a fundamental difference from U.S. generally accepted accounting principles (U.S. GAAP) and reflects a statutory concept that was employed prior to codification, as detailed in Issue Paper No. 71—Policy Acquisition Costs and Commissions.

   a. Under U.S. GAAP, paid or accrued acquisition costs, which include commission costs, are capitalized and reported as a deferred asset and expensed over time to match the recognition of revenue. Note that under U.S. GAAP and SAP, the liabilities associated with acquisition costs are the same. However, U.S. GAAP allows capitalization of certain acquisition costs where SAP requires immediate expense recognition. From information received on the
basis of U.S. GAAP, commission obligations from the writing of an insurance policy would be recognized as a deferred acquisition cost regardless of a third-party arrangement.

b. The departure from U.S. GAAP is consistent with original and ongoing SAP concepts that focus on the solvency of reporting entities for the protection of policyholders and not the matching of revenue to expenses. As detailed in the Preamble, the ultimate objective of solvency regulation is to ensure that policyholder, contract holder and other legal obligations are met when they come due and that companies maintain capital and surplus at all times and in such forms as required by statute to provide a margin of safety.

c. As detailed in the Statutory Accounting Recognition Concept, accounting treatments that defer expense recognition do not generally represent acceptable SAP treatment. Even if consideration had occurred to mirror U.S. GAAP and allow the capitalization of expenses as “deferred assets,” such assets would not be considered admitted assets for statutory accounting. This is because such items do not reflect assets with economic value available for policyholder claims. Nonadmitted assets are required to be charged to surplus in the period in which they arise. As such, in either scenario under SAP, the financial statements of the reporting entity would reflect a reduction of available surplus (either through the recognition of expense or through a direct surplus charge for nonadmitted assets) for acquisition costs and commissions.

Levelized Commission - Background

4. Agenda item 2019-24 on levelized and persistency commission was drafted and presented to the Statutory Accounting Principles (E) Working Group at the request of a state department of insurance after the practice was identified on a financial examination. The issues received by the Working Group related to the use of levelized commission arrangements and the amount to be recorded as a liability in accordance with SSAP No. 71 and SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.

5. Both SSAP No. 71 and SSAP No. 5R have relevant guidance on this topic:

   a. SSAP No. 71 describes levelized commission arrangements as follows:

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. These transactions are, in fact, funding agreements between a reporting entity and a third party. The continuance of the stream of payments specified in the levelized commission contract is a mechanism to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.
b. SSAP No. 5R defines liabilities as follows:

**Liabilities**

2. A liability is defined as certain or probable\(^1\) future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of a past transaction(s) or event(s).

3. A liability has three essential characteristics: (a) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable\(^1\) future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, (b) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened. This includes, but is not limited to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a reporting entity's financial statements when incurred.

4. Estimates (e.g., loss reserves) are required in financial statements for many ongoing and recurring activities of a reporting entity. The mere fact that an estimate is involved does not of itself constitute a loss contingency. For example, estimates of losses utilizing appropriate actuarial methodologies meet the definition of liabilities as outlined above and are not loss contingencies.

**Levelized Commission Funding Agreement**

6. The levelized commission arrangements identified for agenda item 2019-24 had the following key elements:

   a. A third party (referred to as a “funding-agent”) paid selling agents commission amounts for business directly written on behalf of the reporting entity. These payments typically occurred in the first year of policy issuance and were consistent with normal initial sales commissions considered policy acquisition costs.

   b. The reporting entity repaid the funding-agent through a levelized commission arrangement that spread out the commission repayment over multiple years (e.g., 3-6 years). The yearly commission repayments to the funding agent also included additional fees and explicit or implicit interest charged to the reporting entity. Consistent with the guidance in SSAP No. 71, paragraph 4, this levelized commission arrangement is repaying the funding-agent amounts “which are less than the normal first year commissions but exceed the normal renewal commissions.” As noted, SSAP No. 71 characterizes such agreements as in substance, a funding agreement (i.e. loan).

   c. The example agreement between the reporting entity and the funding agent specified that the funding agent will not be reimbursed by the reporting entity if the policies that generate the commission are cancelled prior to the policy anniversary date. This reduction in commission payment for policy cancellation is not materially different than direct agreements with agents that have commission “claw back” features. However, regardless of claw back features, commission is fully accrued and expenses upfront. In the event there

\(^1\) FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements, states: Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in FASB Statement 5, Accounting for Contingencies, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.
is a policy cancellation / lapse, then the liability accrued and recognized expense is adjusted for the amount of the commission that will not be paid.

7. The regulator noted that the reporting entity was not accruing all of the commission liability to the third-party funding agent. The insurance reporting entity employing the disputed practice asserted that the payments to the funding agent were theoretically avoidable until the policy had passed the anniversary date. The reporting entity did not accrue the full amount of initial sales commission that had already been paid on its behalf by the funding agent, which should have been recognized at the time the policy was sold. Although the entity should have recognized the full initial sales commission per SSAP No. 71, the reporting entity also did not accrue the next total expected payment to the third-party. The reporting entity only accrued the next payment when they viewed it as “earned” by the third-party agent. This “earned” date was typically the next policy anniversary when the payment to the funding agent became unavoidable. With this approach, the reporting entity was essentially incorporating a 100% lapse assumption in their process to recognize commission expense, as they would only recognize the commission expense when the policy continued passed a specific lapse date. This assumption is not permitted in statutory accounting, and therefore not reflected in other aspects of their financial statements such as policy reserves.

8. The reporting entities employing the disputed practice asserted that even though commission has been paid by the funding-agent to the sub agent, that no commission should be accrued by the reporting entity until after the end of each policy year when the policy has persisted past its anniversary. The reporting entity was asserting that inserting a persistency clause into a funding agreement allowed them to avoid the liability accrual and expense recognition for the initial acquisition costs for the issued policy at the time the policy was issued.

9. The assertion from the reporting entity is not consistent with SSAP No. 71, paragraph 5:

5. The use of an arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount requires the establishment of a liability for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions.

10. The regulator viewed the disputed practice as a misapplication of the levelized commission guidance in SSAP No. 71 and that the reporting entity was underreporting its sales commission expense incurred and the related commission expense liability.

**DISCUSSION**

11. The accounting issue is whether levelized commission funding arrangements require the establishment of a liability for the full amount of the unpaid principal and accrued interest which is payable to a third party. The agenda item and the proposed revisions assert that guidance in SSAP No. 71, which has existed since prior to codification, requires accrual of the full amount that is repayable to the funding agent under the levelized commission agreement. It is important to highlight that the guidance in SSAP No. 71, nor the proposed clarifying edits, do not seek to prohibit funding agreements. The long-standing guidance simply requires full liability recognition to ensure continued consistent reporting across reporting entities of commission obligations.

12. During the discussion of the agenda item, it was identified that this disputed practice of not accruing the full liability for the commission expense was only employed by a small number of reporting entities that employ similar operational practices. It was identified that these limited number of insurers entered into third-party arrangements with the intent to defer the recognition of commission costs for surplus relief. This goes against long-standing statutory accounting guidance and results in those insurers presenting a better financial position than other reporting entities that applied the guidance in SSAP No. 71 when using third-parties to pay commission as well as reporting entities that pay commission directly to agents. The
application of this approach by the small number of reporting entities employing the practice resulted in significant differences impacting consistency and comparability in statutory financial statements. From information obtained, it is believed that a vast majority of companies are following the guidance in SSAP No. 71 as originally intended.

13. Research identified that some capital-funding companies were facilitating the practice, with marketing efforts to promote the surplus relief provided by using their structure as a third-party payer. These capital-funding companies were also active commenters in response to the proposed edits to clarify the guidance in SSAP No. 71. Throughout the Working Group discussion, it was identified that if the guidance is not clarified, then all reporting entities would need to contract with third-party agents to pay commissions to prevent competitive disadvantages in reporting financial results in the statutory financial statements. For the small number of companies that have engaged in this practice, these entities have benefited from lower expense recognition. It also results with a decrease in liabilities, resulting with a calculation that fewer assets are needed to meet obligations and improving overall RBC calculations. These results were identified as concerning as the financial statements do not accurately represent the obligations of the reporting entity from issued in-force policies and could hinder the proper assessment of whether there are appropriate assets available to satisfy policyholder claims and other contractual requirements of the reporting entity.

Development of Statutory Accounting Guidance

14. SSAP No. 71 was adopted in 1998 as part of base codification, which went into effect in 2001.

15. Issue Paper No. 71—Policy Acquisition Costs and Commissions, paragraph 10 identifies the pre-codification statutory accounting guidance that is the basis for the existing SSAP No. 71 guidance. The precodification guidance also notes the same concerns (reiterated in the agenda item 2019-24) if reporting entities use levelized commission arrangements which operate as funding agreements to inappropriately enhance surplus. Issue Paper No. 71—Policy Acquisition Costs and Commissions:

10. Chapter 17, Other Liabilities, of the Accounting Practices and Procedures Manual for Life and Accident and Health Insurance Companies contains the following guidance on levelized commissions:

Levelized Commission

The accounting treatment for certain transactions, characterized as levelized commissions, which results in enhancement of surplus, has been determined to be inappropriate for statutory reporting.

These transactions are, in fact, funding agreements between an insurer and a third party. Agents receive normal (non-level) commissions with payments made by the third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents would ultimately be repaid (with interest explicit or implied) to the third party by "levelized" payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the insurer. The continuance of the stream of payments specified in the levelized commission contract is a mechanism to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of premium payment or the maintenance of the agents license with the insurer is not maintained with respect to the payment stream.

The use of an arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency but rather are linked to the repayment of an advanced amount requires the establishment of a liability in the full amount of the unpaid principal and accrued interest.
16. The intent of SSAP No. 71 for levelized commissions is that repayment of an advance (by having a third party pay on the insurer’s behalf), requires the establishment of a liability for the full amount of unpaid principal and accrued interest.

**Contingent Commission versus Funding Agreement**

17. SSAP No. 71, paragraphs 3-5, which are excerpted in the relevant statutory accounting section of this issue paper, describes both contingent commission and levelized commission agreements.

18. Contingent commission: SSAP No. 71, paragraph 3 provides the following key points:
   a. Contingent Commission liabilities are to be determined in accordance with the terms of each individual commission agreement.
   b. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion.
   c. Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity, such as retrospective premium adjustments and loss reserves, including incurred but not reported.

19. Levelized commission: SSAP No. 71, paragraphs 4 and 5 discuss levelized commission with the following key points:
   a. Such transactions are noted as in substance to be a funding agreement or a loan between a reporting entity and a third party.
   b. Selling agents receive their normal commission from a third party and repayment of the commission amounts to the third party by the reporting entity are intended, but repayment (with interest explicit or implied) to the third party is not necessarily guaranteed.
   c. Commission repayment to the third party by the reporting entity is over time. The levelized commission payments are lower than normal first year (sales) commission, but higher than normal renewal commission.
   d. The levelized commission arrangements are described as an attempt to bypass the recognition of expenses, which are normally charged to expense in the first year of the insurance contract.
   e. This guidance also notes that the use of a levelized commission arrangement is an attempt to break the normal link between underlying policies and the expense recognition, by changing the timing of the payment stream.
   f. SSAP No. 71, paragraph 5 provides:

5. The use of an arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount requires the establishment of a liability for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions.

20. The key differences between traditional contingent commission paid directly to the selling agent and a levelized commission funding agreement that uses a third-party funding agent were a major
component of the discussion prior to adopting the clarifying edits. The example brought to the Working Group was identified, by the regulator as a levelized commission funding agreement. Key levelized commission features of this example were: 1) the direct selling agents were paid their sales commission for policies written on behalf of the insurance reporting entity for year one commission by the third party; 2) the third-party funding agent was being repaid over time with some contingency elements in the third party levelized commission contract; and 3) the third party had typically advanced the funds to the selling agents in the same year that the policies were written (however some direct selling agents could choose different payment patterns).

21. Rather than accruing the total expected payments to the third party who had made commission payments to the direct selling agents, the reporting entity was only accruing commission expense based on when the next annual payment was due to the third-party. This levelized commission arrangement attempts to de-link the timing of recognition for the initial sales commission by inserting a third party.

22. As recognition of commission expenses is driven by policy events (such as the issuing or renewing of an insurance policy), the commission expenses had already been incurred, therefore, the reporting entities employing the disputed practice were viewed as underreporting their incurred commission expense and commission liabilities. This was not viewed as consistent with the principle of expensing acquisition costs when incurred or with the treatment of levelized commission funding agreements in SSAP No. 71.

23. In addition, it was identified that waiting to accrue the subsequent expected payments because the underlying polices might lapse in the future reflects a 100% lapse assumption. Using a 100% lapse assumption was noted as being inconsistent with the other financial statement assumptions regarding the underlying policies used for reserving, incurred but not reported claims, etc.

**Contingent Commission versus Loan with Contingency Element**

24. Comments received often characterized the third-party funding agreements as a persistency commission as support for why the full commission expense should not be required. The use of the term “persistency” in these instances is not in line with the traditional use of this term as it pertains to insurance contracts. Fundamentally, a persistency commission is commission that is earned over time as a policy is renewed or remains in force. A persistency commission occurs subsequent to an initial sales commission, where the triggering event is either the continuation or renewal of a policy. With these terms, an additional commission (beyond what was earned from the initial sales commission) is owed once the policy ‘persists’ overtime. Persistency commissions are generally much smaller payments than initial sales commission.

25. The third-party funding agreements reference to persistency commission in their contracts is not referring to additional commission owed with the continuation or renewal of a policy. Rather, they have taken the position that deferring the initial sales commission overtime and requiring portions of that initial sales commission to be paid to the third-party as the contract remains in force is akin to a persistency commission. This is not an appropriate comparison. As detailed, commission liabilities and the recognition of commission expenses shall occur in accordance with policy events. As such, with the issuance of an initial policy, the initial sales commission shall be recognized, with a liability accrual until paid, and with the recognition of the commission expense. If a policy remains in force over time, the terms of the contract may require additional commission to be paid to the selling agent. These additional commission amounts are considered “persistency” commissions and are only recognized when the policy event occurs that triggers the commission to be owed.

26. The following examples are included to assist with illustrating these concepts:

   a. Single Premium Immediate Annuity (SPIA): On January 1, 2020, agent sells a SPIA insurance policy and is owed $1,000 in initial sales commission. Over the next 10 years, if the policy continues to be in force, on January 1, the selling agent is awarded a persistency commission.
commission of $10, per year. This is a reward to the agent for the policy not being churned/terminated.

b. Direct Agent Arrangement: On January 1, 2020, the reporting entity recognizes the $1,000 as commission expense. On January 1, 2021 (and subsequent years) as the policy continues in force, reporting entity recognizes the $10 persistency commission as incurred.

c. Funding Agreement Arrangement: Rather than the reporting entity paying the $1,000 initial sales commission directly to the agent upfront, the funding agent pays the initial $1,000 commission to the selling agent. The insurer and the funding agent have an expectation that the reporting entity will repay the funding agent this amount over time. Under SSAP No. 71, an insurer is not permitted to insert a third-party to delay commission expense recognition. As such, under this arrangement the reporting entity insurer shall also recognize the full $1,000 as commission expense on January 1, 2020. Additionally, the insurer should recognize the $10 persistency commission on January 1, 2021 (and each year subsequent) if the policy continues to be in force. (This example does not reflect the recognition of the fees / interest of the funding agreement arrangement, which would also be required to be recognized.)

27. To be overly clear, the key concepts within these illustrations are as follows:

a. The initial obligating event is the selling of the insurance contract. Commission expense for initial sales commission shall be recognized consistently by each insurer, regardless of third-party arrangements where a funding agent pays this on behalf of the insurer.

b. The second obligation event is the persistency threshold in which additional commission is owed to the selling agent (policy did not lapse). This is also required to be recognized consistently by insurer regardless of any third-party arrangement.

c. The small number of companies that have delayed recognition of initial commission expense due to the insertion of a funding agent have noted that their agreement allows them to avoid payment in the future even of policy cancellation (lapse). The proper accounting for commission in the event of policy lapse is to decrease the payable to the funding agent when the lapse occurs, not prior to the lapse.

d. In addition to not altering the triggering event (initial issuance of policy), this dynamic does not reflect a traditional “persistency” commission. This funding agreement and use of a finance agent is simply a financing mechanism that the insurer has paid additional fees and interest to obtain. The proper accounting is to recognize the obligation for the full commission expense at the time of policy issuance, and then derecognize the obligation if, and only if, the insurer is no longer obligated to the funding agent. It is also noted that a third party would not pay large sums of money on an insurer’s behalf in an arm’s length transaction without an expectation of repayment.

Actions of the Statutory Accounting Principles (E) Working Group

28. On August 3, 2019, the Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 71—Policy Acquisition Costs and Commissions to clarify levelized commissions guidance and provide additional direction regarding commissions that are based on policy persistency. The Working Group exposed initial revisions to paragraphs 2, 3, 4 and 5 which were intended to clarify both levelized and persistency commission because it was identified that some
entities were trying to characterize their funding agreements as persistency commission. Key points in the exposed guidance were that:

a. A levelized commission arrangement (whether linked to traditional or nontraditional elements) require the establishment of a liability for the full amount of the unpaid principal and accrued interest payable to a third party at the time the policy is issued.

b. The persistency commission is accrued proportionately over the policy period in which the commission relates to and is not deferred until fully earned.

29. The exposed revisions were consistent with the original intent of SSAP No. 71 as well as the Statutory Statement of Concepts focusing on Recognition (excerpts from Preamble, paragraphs 37 and 38).

a. Liabilities require recognition as they are incurred.

b. Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment.

30. On December 7, 2019, the Working Group exposed nonsubstantive revisions to SSAP No. 71 to provide clarifications to the long-standing levelized commissions guidance and provide additional guidance regarding commission that is based on policy persistency. The revisions proposed to clarify that a levelized commission arrangement (whether linked to traditional or nontraditional elements) requires the establishment of a liability for unpaid principal and accrued interest payable, regardless of the timing of payments made to a third party. Additionally, the exposed guidance required accrual of persistency commission over the associated policy period.

31. The December 7, 2019, revisions were to address some of the comments received from interested parties and two capital funding companies. It was affirmed that the levelized commission repayment amount is owed to the funding agent who made the advance on the insurer’s behalf unless the policy has lapsed. It was noted that delaying payment to a third-party does not delay expense recognition. After this discussion, the guidance was exposed with the following revisions from the prior exposure:

a. Paragraph 2 - Removed previously exposed revisions regarding persistency commission. These provisions were initially included because the levelized commission example included contingency features regarding repayment. Commenters expressed concern that the exposed revisions could have an inadvertent impact on traditional renewal commissions, which was unrelated to a levelized commission arrangement.

b. Paragraph 3 - Added clarifying phrases regarding persistency commission accrual. The concept is that normal persistency commission is accrued for the period it relates to unless the policy is cancelled. This language was also added to address the industry comments regarding inadvertent impacts to traditional renewal commission.

c. Paragraph 4 - Added two clarifying phrases to assist with identifying levelized commission funding agreements.

d. Paragraph 5 - Added clarifying phrases to assist with identifying levelized commission funding agreements.

e. Footnote 1 - Redrafted to remove double negative wording.

32. The December 7, 2019, exposed nonsubstantive revisions were again intended to be consistent with the original intent of SSAP No. 71 as well as the Statutory Statement of Concepts focusing on Recognition (noted in the Preamble, paragraphs 37 and 38) stating that liabilities require recognition as they are incurred and accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment.

33. Notice of the December 7, 2019, exposure was also sent to the Life Actuarial (A) Task Force. The Working Group forwarded comments received at the 2019 Fall National Meeting inquiring whether there
is specific Valuation Manual language in VM-20, Requirements for Principle-Based Reserves for Life Products, and VM 21, Requirements for Principle-Based Reserves for Variable Annuities, that needs to be addressed in the coordination process as part of this agenda item. It was noted that the Principles-Based Reserving (PBR) methodology takes commission into account when projecting the present value of future cash flows. However, the projected future cash flows would not be accrued in duplicative if there is an existing liability.

34. On March 18, 2020, the Working Group, deferred discussion of this item for a subsequent call or meeting. This deferral occurred as the 2020 Spring National Meeting was cancelled for COVID-19, and the interim call held by the Working Group was limited in the topics to address.

35. During the July 30, 2020, meeting, the Working Group reviewed comments from interested parties and on behalf of two capital funding companies.

a. The proposed language from interested parties and one of the capital funding entities, as detailed in the following subparagraphs, was rejected by the Working Group as not viable and inconsistent with existing principles.

i. Interested parties’ proposed language recommended deleting most of the exposed revisions and adding guidance that would redefine a funding arrangement to only include those items where repayment is guaranteed. This proposal was noted as being in conflict with the long-standing guidance in SSAP No. 71, paragraph 4 which notes that “It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid…” It was also noted that the existing language in SSAP No. 71 seeks to look at the substance of the levelized commission arrangement noting that a third party would not prepay an entity’s commission expenses without an expectation of repayment.

ii. One of the capital funding companies sent comments through a legal firm. Their comments proposed only requiring levelized commission liability recognition if the third party, which prepays the commission, is under the control or has common control with the insurance reporting entity. The perception of that comment was that if an unrelated party were the third-party funding agent that paid the upfront sales commission expense, no liability recognition would be required by the insurance reporting entity. This recommendation was also rejected as the substance of the transaction is a loan and the accrual of a liability for a loan is the same under SSAP No. 5R for related and unrelated parties.

b. The Working Group also noted a concern with the capital funding company’s comments regarding assumption of lapse risk by noninsurance entities such as brokers and other third parties. The capital funding company’s comment letter (via the legal firm) asserted that the third-party broker, by virtue of their agreement, has assumed “lapse risk, mortality risk and the commission expense obligation.” The Working Group noted that some of the identified items which were noted as being transferred to the broker are insurance risks that can only be transferable to an insurance entity through a reinsurance agreement.

c. The comments from the other capital funding company focused on unintended consequences and potential impacts to various entities. It asserted that the clarifying edits to the existing language are a substantive change. The Working Group noted that the proposed revisions are trying to emphasize existing language that has been in effect prior to codification that is being ignored by some reporting entities in an attempt to defer
expense recognition. The Working Group affirmed that expensing acquisition costs when incurred is a long-standing principle in statutory accounting.

d. While commenters agreed that the commission obligations are ultimately liabilities/expenses, they noted that the issue is when to record the liability/expense. The discussion noted that the accrual of sales commission liabilities and the corresponding recognition of expenses are incurred when the insurance contract is written, not when the payment is due. It also noted that an insurer is responsible for the policy acquisition costs of its directly written policies.

36. After the discussion on July 30, 2020, the Working Group exposed additional nonsubstantive revisions to SSAP No. 71 to clarify the original levelized commission guidance and provide additional direction regarding commissions that are based on policy persistency. The exposed edits would require reporting entities that have not complied with the original intent of SSAP No. 71 to reflect the change as a correction of an error (as a mistake in the application of an accounting principle) pursuant to SSAP No. 3—Accounting Changes and Corrections of Errors in the December 31, 2020, financial statements. In accordance with SSAP No. 3, correction of accounting errors in previously issued financial statements, for which an amended financial statement was not filed, are to be reported as an adjustment to unassigned funds (surplus) in the period in which the error was detected. This guidance also requires disclosure in accordance with SSAP No 3. Part of the reason the exposure included correction of error guidance, as opposed to change in accounting principle, is that the Working Group identified that the practice was employed by a small number of reporting entities purposely for surplus relief and it was viewed as inconsistent with the long-standing guidance in SSAP No. 71. Further, it was identified that some funding companies were actively promoting the use of these third-party arrangements as a way to increase surplus by avoiding the recognition of commission expense when incurred.

37. On October 15, 2020, the Working Group held a hearing to receive comments from interested parties and from the American Institute of Certified Public Accountants’ NAIC Task Force (AICPA Task Force).

38. Both interested parties and the AICPA disagreed with the correction of an error treatment and stated a preference to have the classification as a change in accounting principle. It was noted that referring as a correction in error could result with issues in previously filed financial statements, prior exams, and previously issued audit opinions. The Working Group agreed to remove the previously exposed correction of error guidance in paragraph 7 and to revert to the change in accounting principle guidance. When making this decision, it was noted that the resulting financial statements would ultimately have a similar result. Under the change in accounting principle guidance, a reporting entity reflects the cumulative effect of the change as an adjustment to unassigned funds (surplus) in the period of change of the accounting principle. This guidance provides that the cumulative effect is the difference between the amount of capital and surplus at the beginning of the year and the amount of capital and surplus that would have been reported at that date as if the accounting principle had been applied retroactively to all prior periods. For a correction of error, domiciliary states may require entities to file corrected financial statements for all prior periods that reflected the error. If this direction does not occur, the change is required as an adjustment to unassigned funds in the period the error is detected. As such, by permitting this correction to be reported as a change in accounting principle, the impacted reported entities will not be subject to different treatment by domiciliary states with the resubmission of previously filed financial statements to correct the error. Rather, all impacted entities will have a consistent approach to update their financial statements accordingly.

39. The Working Group discussed the other comments and proposed revisions from interested parties regarding contingency commission. The Working Group did remove more of the contingent commission guidance that was previously exposed in paragraph 3 to address concerns regarding potential impacts on
traditional commission and renewals. This was viewed as addressing the remaining concerns about unintended impacts from the majority of industry that is not using funding agreements.

40. The Working Group also agreed to move the proposed effective date to January 1, 2021, to allow the small number of entities that are employing the practice the opportunity to consult with their domiciliary regulators.

41. With this discussion the Working Group again highlighted that the revisions are a nonsubstantive clarification of existing longstanding provisions of SSAP No. 71 which have been in place before 1998 and are only not being applied by a small number of reporting entities. As some commenters noted the materiality impact to the small number of entities that engaged in this practice, it was noted that under the *NAIC Policy Statement on Maintenance of Statutory Accounting Principles*, it is not the impact of a change on an individual entity that determines whether a change is substantive or nonsubstantive, but rather if the change alters original intent.

Excerpt from Policy Statement on Maintenance of Statutory Accounting Principles:

Nonsubstantive revisions to SAP will be developed to address, but will not be limited to: 1) clarification of the intent or application of existing SSAPs; 2) new disclosures and modification of existing disclosures; 3) revisions that do not change the intent of existing guidance; and 4) revisions to Appendix A—Excerpts of NAIC Model Laws to reflect amendments to NAIC adopted model laws and regulations.

42. After the discussion on October 15, 2020, the Working Group exposed updated revisions to SSAP No. 71 to clarify existing levelized commissions guidance, which requires full recognition of funding agreement liabilities incurred for commission expenses obligated when an insurance policy is written. (This guidance clarifies that writing the insurance policy is the obligating event for initial sales commission.) The exposed revisions have the following key changes from the prior exposure:

   a. Improved description of the funding agreements in paragraphs 4 and 5.

   b. Deletes the previously proposed revisions in paragraph 3 regarding other types of commission to address the comments received regarding unintended impacts on traditional renewal commission.

   c. Modifies the revisions in paragraph 7 to remove the language on correction of an error.

   d. Proposes the nonsubstantive revisions apply to contracts in effect on January 1, 2021.

43. On November 12, 2020, the Working Group held a hearing to receive comments on the October exposure. Comments were received from interested parties, the Mississippi Department of Insurance and a former New York state regulator. Key points from the review of comments were as follows:

   a. Given the year-end timing and the material impact to what is believed to be a very limited number of companies, the Working Group discussed having another exposure, with minor edits, to clarify that the revisions would apply to contracts in effect as of the effective date to later be specified by the Working Group. While the Working Group did not want to have the guidance in effect on January 1, 2021, a few members stated a preference to having the guidance effective upon adoption sometime in 2021.
b. The Working Group discussed the comments from the Mississippi Department of Insurance, interested parties and a former New York regulator that the changes appear to be substantive.

i. It was identified that the revisions have already had the due process required for either a substantive or a nonsubstantive change since it has had multiple exposures and public discussions.

ii. The Working Group affirmed that the proposed revisions are a nonsubstantive clarification of existing longstanding provisions of SSAP No. 71 which have been in place since prior to 1998. It was noted that under the *NAIC Policy Statement on Maintenance of Statutory Accounting Principles*, it is not the impact of a change on an individual entity that determines whether a change is substantive or nonsubstantive, but rather if the change alters original intent.

iii. It was also noted that the *NAIC Policy Statement on Maintenance of Statutory Accounting Principles* allows for drafting of an issue paper subsequent to the adoption of revisions. An issue paper can be drafted for either substantive or nonsubstantive revisions.

c. The former New York regulator generally opposed all of the revisions. He noted that the total commission paid will not change under this guidance, but rather only the timing of commission expense recognition will change. In response to these comments, Working Group members noted that the total commission expense is actually higher using these third-party arrangements because the funding agents charge interest and/or fees.

44. The Working Group also discussed and rejected the following revisions proposed by interested parties:

a. The proposed interested parties’ revisions would have allowed both a reduction in commission expense recognition and the delay in commission expense timing. The parties employing the disputed practice are trying to use persistency features in a funding agreement to defer and decrease the funding agreement liability. Interested parties’ comments advocated that the funding-agent fronting commission does not require recognition because of the insertion of a persistency contingency provision into the funding agreement. They noted that this persistency contingency provision might allow the reporting entity to avoid repayment of the past advance if the policy is subsequently cancelled. These proposed revisions were not incorporated as they are not in line with the original intent of the guidance and because it is not permissible to assume 100% lapse risk in recognition commission expense. It is only if a policy has been cancelled can a reporting entity derecognize the accrued liability/commission expenses.

b. Interested parties’ proposed revisions that commission funding agreements should only be accrued when repayment is guaranteed. This position has been previously rejected by the Working Group as it is in direct conflict with the existing guidance in SSAP No. 71, paragraph 4 which requires accrual of the full amount of a levelized commission agreement even when repayment is not guaranteed. It was noted that the purpose of the levelized commission guidance is to identify that the substance of the levelized commission is a funding arrangement. It identifies that a third party in an arm’s length transaction would not pay acquisition costs on behalf of an insurer without expectation of repayment and expectation of profit. The guidance requires recognition of the full amount of the funding agreement liability even if repayment is not guaranteed. The funding agreement is an...
attempt to de-link the relationship to the underlying policy from the normal day one accrual of sales commission. The funding agreement advance made by the third party is made with an expectation of repayment. Thus, the liability for amounts already advanced by the funding agent is not extinguished as a liability (under SSAP No. 5R or SSAP No. 103—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities) until it has either been repaid or the policy is cancelled.

c. The interested parties recommended revisions to recognize a reduced and delayed liability for the funding amount. They recommended ignoring the funding agreement nature of the advances and only recognizing the next payment because the policy might be cancelled in the future. It was again noted that this is the equivalent of assuming a 100% lapse rate on the policies. This position is similar to setting up the liability for a single payment on a loan instead of the entire principal balance. This proposed revision was rejected as inconsistent with the existing guidance in SSAP No. 71 which requires full accrual of the funding agreement liability.

d. Interested parties’ recommended revisions to add a new reference to SSAP No. 52—Deposit Type Contracts for the recognition of funding agreement liabilities. This was possibly an attempt to allow the funding agreement liability to be calculated using actuarial assumptions in the calculation of the liability. This would be inconsistent with SSAP No. 71 which does not allow discounting of such a liability.

e. Interested parties commented that “SSAP No. 71 is consistent in the application of persistency being part of the transfer of the risk (liability) to another party. If the lapse risk (persistency) is transferred to another party, the liability that the insurance company may have, is also transferred to that party and the insurance company has no liability.” However, it was noted that guidance in Appendix A-791 on Life and Health Reinsurance identifies that lapse risk, which is an insurance risk, can only be transferred via reinsurance. The Working Group disagreed that insurance risk liabilities can be extinguished with a commission agreement with a non-insurance entity, which seems to be the position of interested parties.

f. It was also noted that because of the persistency feature in the funding agreement, interested parties’ commenters were advocating to not recognize any commission expense in these arrangements until it is due to the third-party agent. Similar to other positions, this is the equivalent of a 100% lapse assumption. This assertion is not consistent with any other assertions reflected in the recognition of these insurance policies in their financial statements.

g. The Working Group did not support the comment by interested parties that under a levelized commission agreement another party is responsible for an insurer’s acquisition costs. It was noted that statutory accounting requires acquisition costs to be expensed as incurred, not shifted to a non-insurance entity. Interested parties were asserting that even though a third party prepaid their acquisition costs that they do not have to recognize an accrual for the levelized commission funding agreement. This position was rejected by the Working Group. The Working Group affirmed that a funding agreement is not the same as traditional persistency commission. The Working Group affirmed the original SSAP No. 71 guidance that the substance of a levelized commission agreement is a loan.

45. The Working Group discussed the overall statutory accounting concepts of conservatism and consistency which require that statutory financial statements reflect assets available for policyholder claims with comparable financial information. It was noted that allowing delayed expense recognition of initial policy commission expenses will contradict both statutory accounting concepts, as assets will be included that are not available for policyholder claims (as they are needed for non-recognized commission expenses).
and will result with financial statements that are not comparable to other insurance entities. Working Group members also expressed concerns with the competitive advantages that were occurring with companies that were employing these practices and stated a preference to have the guidance in effect in 2021.

46. After the discussion on November 12, 2020, the Working Group took the following actions:

   a. The proposed effective date of January 1, 2021 was changed to be effective upon adoption, and revised text was added to explicitly state that the proposed revisions will apply to contracts in effect as of the date of adoption.

   b. Determined that the revisions to SSAP No. 71 had met the due process for either a substantive or a nonsubstantive revision but concluded to keep the revision classified as nonsubstantive as the edits are in line with the original intent of SSAP No. 71. The Working Group reiterated that it is not the impact of a change on an individual entity that determines whether a change is substantive or nonsubstantive, but whether the revision is in line with the original intent of the SSAP. The Working Group noted that the proposed revisions to SSAP No. 71 are clarifications to the existing guidance consistent with original intent. Commissioner Donelon (LA) noted an objection to the classification as nonsubstantive.

   c. Directed NAIC Staff to draft an Issue Paper to document the discussion on this topic for historical purposes.

47. On March 15, 2021, the Working Group discussed written comments received from six parties including the 1) Montana Commissioner (now U.S. Representative) Matthew M. Rosendale, Sr., 2) a former North Carolina Commissioner 3) National Council of Insurance Legislators (NCOIL), 4) Interested parties, 5) one capital management company, and 6) a national conglomerate insurer. The key points from comments were summarized and draft responses were provided in the hearing materials for the meeting.

   a. Comments that there is no reason to change as current programs have been around for decades, been subject to external audits and insurance examinations and have not previously been noted of concern. (Montana commissioner, former North Carolina commissioner, capital company and the national conglomerate insurer).

      i. Materials response - It was noted that identifying levelized commission transactions is difficult, without an in-depth review. When this was identified on a 2017 state examination, the reporting entity refused to recognize the full liability, which is why this issue was brought to the Working Group. The guidance to recognize the full liability amount for a levelized commission transaction has been a statutory accounting requirement since before 1998. This guidance is in place to recognize that the substance of an arrangement that has a third party pay an insurer’s sales commission costs, is a loan. This is because a third party would not pay out large amounts of costs on another’s behalf without an expectation of repayment.

   b. Comments that the change is substantive based on impact and needs more study and review for unintended consequences. (Montana, former North Carolina commissioner, NCOIL, interested parties, the capital company and the national conglomerate insurer).

      i. Materials response - As noted in earlier meetings, under the NAIC Policy Statement on Maintenance of Statutory Accounting Principles, it is not the impact of a change on an individual entity that determines whether a change is substantive or nonsubstantive. To the extent this is a clarification of existing guidance, the revisions are consistent with the nonsubstantive classification.
ii. Materials response - Agenda item 2019-24 has been under discussion since August 2019, and the March 2021 meeting will be the sixth public discussion of this item. This item has been discussed: 1) August 2019; 2) December 2019; 3) July 2020; 4) October 2020; 5) November 2020 and 6) March 2021. It was noted that the underreporting of commission liabilities appears to be a practice employed by only a very small number of reporting entities.

c. Comments that there can be a negative RBC impact. The former North Carolina Commissioner, NCOIL, and the capital company all noted concern with the potential negative impact to risk-based capital which will result with the revisions requiring companies employing the disputed practice to recognize the full funding agreement.

i. Materials response - Reporting previously unrecognized liabilities can have negative RBC impacts; this is why the adoption of the agenda item was delayed from year-end 2020. The delay was to allow the small number of reporting entities which are employing the disputed practice to have an opportunity to have discussions with their regulators. However, it is highlighted that the unrecognized liability also resulted with improved financial statements (and better RBC) than what should have been recognized based on actual operations.

d. Possible consumer rate increases on guaranteed renewable long-term care were noted by the former NC commissioner and the capital company.

i. Materials response - The disputed practice is underreporting incurred commission expense and the obligation to repay it to a funding agent. This financing activity is being used to delay / under report incurred commissions. However, the total commission cost is typically slightly higher as the funding agents charge a fee and or interest (implicit or explicit ) for their services. As such, the full financial statement impact is not as clear cut as implied in this comment.

e. Effective date comments were varied. NCOIL was against a 2020 effective date, however that comment appeared to be related to the prior October exposure. NCOIL also requested a delay for the issue paper and recommended a five-year phase-in. The interested parties and the national insurance conglomerate advocated for an effective date no sooner than December 31, 2021, to allow time to work with regulators, auditors etc.

i. Materials response - Effective Date - The Working Group discussed proposed language which allows a December 31, 2021, effective date.

ii. Materials response - Phase-in - This is viewed as a practice employed by a small minority of reporting entities, but the potential impact is material. Some Working Group members and some members of industry have noted the unfair competitive advantage that entities which employ this practice are receiving, because it underrepresents the incurred liabilities. Prior Working Group discussions have indicated that a phase-in would need to be a permitted practice granted by the domiciliary regulator.

f. Interested parties’ comments asserted that lapse risk under the contracts had been transferred to a noninsurance entity, with the following comments “The existing SSAP No. 71 guidance is consistent in the application of persistency being part of the transfer of the risk (liability) to another party. If the lapse risk (persistency) is transferred to another party, the liability that the insurance company may have, is also transferred to that party and the insurance company has no liability. Removing persistency as a factor in the accrual of
commissions is a dangerous precedent. The differentiation between commissions based on real insurance risks versus payments based solely upon the passage of time in SSAP No. 71 goes directly to the risk transfer issue of one type of level commissions versus another. The proposed additional language eliminates this differentiation.”

i. Materials response - Statutory accounting guidance in Appendix A-791 on Life and Health Reinsurance identifies that lapse risk can be transferred via reinsurance. Transferring lapse related liabilities with a commission agreement with a noninsurance entity, was not viewed as a viable option under statutory accounting. The long-standing guidance in SSAP No. 71 requires full accrual of the funding agreement liability even if repayment is not guaranteed.

ii. Materials response - Because of the persistency feature in the funding agreement, interested parties’ commenters are advocating to not recognize any commission expense in these arrangements until it is due to the third-party agent. This is the equivalent of a 100% lapse assumption. This assumption would be inconsistent with any other assertions reflected in the recognition of these insurance policies in their financial statements. The overall statutory accounting concepts of conservatism and consistency require that financial statements reflect assets available for policyholder claims with comparable financial information. Allowing delayed expense recognition of initial policy commission expenses will contradict both statutory accounting concepts, as assets will be included that are not actually available for policyholder claims (as they are needed for non-recognized commission expenses) and will result with financial statements that are not comparable to other insurance entities.

g. Interested parties resubmitted some of the previously rejected proposed paragraph 4 revisions which seek to codify the industry position that funding agreements, which incorporate contingencies linked to traditional elements, should not be treated as a funding agreement (i.e. excluded from liability recognition).

i. Materials response - The proposed revisions were not incorporated as proposed language seeks to codify the treatment which has previously been rejected as inconsistent with the guidance in SSAP No. 71.

h. Interested parties resubmitted some of the previously rejected proposed paragraph 5 revisions to replace most of the exposed paragraph with language that is less detailed and which seeks to codify the industry position that funding agreements which incorporate contingencies linked to traditional elements should not be treated as a funding agreement (i.e. excluded from liability recognition).

i. Materials response - The proposed revisions were not incorporated as proposed language seeks to codify the treatment which has previously been rejected as inconsistent with the guidance in SSAP No. 71.

i. Interested parties commented that the exposed language which describes funding agreements, is too broad. Notes a concern that interim pay downs are not mentioned.

i. Materials response - Additional guidance regarding interim payments to paragraph 5, were not added because liabilities are always reduced when paid. This is detailed in SSAP No. 5R and SSAP No. 103R.
48. Interested parties commented that, “The current revisions require the accrual of a liability in situations that are inconsistent with the guidance SSAP No. 5R. Under a levelized commission program a third party has the obligation for the full initial sales commission. The insurer’s obligation under a levelized commission program that incorporates persistency should be accrued to the extent of legally contracted amounts owed. We do not believe the original intent of the SSAP required accruing for amounts that are not yet due and that may never be due. We strongly feel that the recognition of an obligation based on persistency is in accordance with the principles of SSAP 5R.”

a. Materials response - The comment by interested parties indicates that under a levelized commission agreement another party is responsible for an insurer’s acquisition costs. This is not appropriate as statutory accounting requires acquisition costs are expensed as incurred, not shifted to a non-insurance entity. The position of interested parties is that even though a third party prepaid an insurer’s acquisition costs that the insurer does not have to recognize an accrual for the levelized commission funding agreement because in some situations such as future policy cancellation, the insurer might not have to pay. This is rejected as inconsistent with SSAP No. 71 guidance and inconsistent with SSAP No. 5R.

b. Materials response - SSAP No. 5R incorporates an obligation to recognize contingent amounts that are probable and can be reasonably estimated. The difference is that a levelized commission arrangement is repaying a loan where in most cases the advance of the loan amount has already been made. The loan has contingency elements that may allow the loan repayment to be reduced in the future. Until the policy is cancelled there is a presumption that the amounts will be repaid. This is different from making a future commission payment on commission that has not yet been earned which occurs under traditional persistency commission. The elements of a liability under SSAP No. 5R:

i. Current obligation to pay for a past transaction - the insurer has a contract to repay the funding agent (current obligation). The service that is being paid for is the selling agent's sale of the insurance contract (past transaction). The guidance in SSAP No. 71 provides that related interest payments for the financing charges do not meet the definition of a liability until the passage of time for the interest has occurred. The insertion of a persistency element to the funding-agent funding agreement does not extinguish the entire pending liability. Such a liability would only be extinguished by payment or other legal release such as policy cancellation. The advance liability to the third party is for a past transaction- that is, the funding agent has paid commission to the direct agents for the sale of the policy.

ii. Payment probable of occurring - Payment of the obligation has to be probable of occurring. The only difference between the "persistency linked" funding arrangement and one where payment is guaranteed, is obviously the potential that principal will not be repaid due to lapse. However, the funding agents are not taking this risk without being compensated. The funding agreements are using a conservative estimate of expected lapses and factoring in a profit for the funding agent, hence the existing wording in SSAP No. 71 regarding interest explicit or implied. Therefore, a third-party funding agent would not be willing to provide financing if they did not think it was probable that they would have their full investment, plus a return on investment repaid. As such, the probable element of SSAP No. 5R is also met. The payment is probable and can be estimated and therefore meets the accrual requirements of SSAP No. 5R.
On March 15, 2021, the Working Group discussion included the following key points:

a. Mr. Bruggeman (OH) and Ms. Marcotte (NAIC) introduced agenda item 2019-24: Levelized and Persistency Commissions. The Working Group has been discussing this topic since August 2019 with this being the sixth public discussion. This agenda item was drafted in response to a specific state insurance regulator request to address an accounting practice identified during a financial examination. It was noted that a few insurers are utilizing a disputed practice by using third parties to pay policy acquisition costs, and they are not recognizing the full liability to repay those third parties. Not recognizing the full liability to repay the parties who are paying acquisition costs on an insurer’s behalf is inconsistent with the guidance in SSAP No. 71—Policy Acquisition Costs and Commissions. SSAP No. 71, which has been in place prior to 1998, provides statutory accounting guidance and identifies such agreements as funding agreements, which require full liability recognition. Mr. Bruggeman stated that NAIC staff have provided a summary of comments received, which includes a response to each position. Accordingly, NAIC staff are not recommending additional modifications.

b. Commissioner Mulready (OK) inquired as to whether actions taken by the Working Group regarding this project would go through the complete NAIC committee process, including reporting to the Accounting Practices and Procedures (E) Task Force and the Financial Condition (E) Committee and review by the Executive (EX) Committee and Plenary. Mr. Bruggeman stated that due to the controversial nature of this topic, this agenda item will be specifically considered through all levels of the committee process.

c. Commissioner Mulready further inquired regarding the expense recognition and payment of cashflows for using a third party to pay policy acquisition costs compared to insurers who directly pay commission expense. Mr. Bruggeman stated that traditional life insurance policies typically have a larger commission in the first year the policy is written. Through the use of a third party, some insurers have used a levelized repayment plan, so the first-year commission is repaid over several years. Additionally, the immediate expense recognition for this first-year commission, as required under SSAP No. 71, is not being properly recognized by some insurers in the year of acquisition. As a third party has remitted funds on behalf of an insurer, the insurer needs to properly recognize the loan as a liability.

d. Commissioner Mulready inquired about lapse risk, which is a common element built into these financing agreements. Mr. Bruggeman commented that lapse risk cannot be transferred to a noninsurance entity; and SSAP No. 71 still requires the liability to be recognized, even if repayment to the third party is not guaranteed. Mr. Bruggeman further stated that by not recognizing the full commission financing liability, an insurance company is asserting a 100% lapse rate, which is not an appropriate assumption and not consistent with the reserving methodology used for these products.

e. Ms. Nettleton (Guggenheim) stated that levelized commissions are not a new concept. She noted that a 2010 U.S. Securities and Exchange Commission (SEC) complaint against another carrier notes that levelized commissions were common practice. She stated that the concept of persistency remains a concern, as Guggenheim believes expense recognition will occur earlier than has traditionally been required. She stated that Guggenheim feels it is a dangerous practice to remove persistency in the treatment of levelized commission. Mr. Bruggeman stated that the concepts regarding traditional persistency commission are not a part of the proposed edits, as this agenda item is to clarify that initial acquisition costs should not be deferred through the use of a funding agreement.
Mr. Stolte (VA) stated that in 1991, Virginia had an insolvency in which the company participated in a structure where it utilized a levelized commission financing arrangement and did not properly recognize a liability for the amounts paid by the third party. However, as the insurer was liquidated, the third-party financier sought reimbursement for commission amounts previously forwarded on behalf of the insurer. Mr. Stolte stated that the insurer had not recorded the full amount of the liability, and this overstated surplus. He stated that if these amounts due are not recorded, they are in essence off-book, unrecorded liabilities. He stated that the concept of recognizing commission expenses when incurred has been a long-standing concept of statutory accounting, which was noted even prior to codification. He noted that acquisition costs are expensed as incurred upfront.

Commissioner Donelon responded that the insurer referenced by Mr. Stolte did a levelized commission practice; however, he perceived the accounting practice was fully transparent, and the $16 million amount of the off-balance sheet liability only represented a fraction of the $120 million insolvency. He stated that earlier exposures of this item, involved other large life insurers; however their earlier concerns appear to have been accommodated. He inquired regarding the nature of this accommodation. Mr. Bruggeman stated that this comment pertains to clarification involving true persistency commissions—i.e., subsequent year commissions—were not intended to be captured in the scope of levelized commissions revisions in SSAP No. 71. He said the initial revisions were perceived by the broader insurance industry as affecting traditional persistency commission and the Working Group subsequently clarified that that was not the intent of the revisions. Ms. Gann (NAIC) stated that SSAP No. 71 is a common area SSAP, so it is applicable to all insurer and product types. She stated that the intent of the SSAP No. 71 revisions is to capture initial acquisition costs and commissions from the issuance of a policy, not traditional persistency commissions that arise subsequent to initial commissions which are common in many insurance products.

Thomas B. Considine (National Council of Insurance Legislators—NCOIL) stated that NCOIL believes that the changes proposed are substantive in nature and the timing of an adoption is less than prudent, especially in light of the current economic environment. He noted that the revisions will have adverse capital consequences on some companies. Companies utilizing levelized commission structures have done so for decades, and in conjunction with this requiring a significant financial impact, NCOIL would recommend a four or five-year phase-in of expense recognition. Mr. Stolte stated that in response to a multi-year phase-in request, insurers affected could request a permitted practice from their state of domicile. In doing so, a multi-year phase-in could be granted; however, the financial and capital impact could be appropriately disclosed. Mr. Considine stated that permitted practices are not viewed as favorably as uniform treatment, and this would not be a preferred solution.

Lynn Kelley (Delaware Life), on behalf of interested parties, stated that they do not agree with the proposed edits, and they believe the edits are substantive in nature. She stated that interested parties believe that their accounting practices have been in compliance with SSAP No. 71 and have been subject to numerous insurance exams and independent financial audits. If adopted by the Working Group, an effective date no earlier than December 31, 2021, is requested. She stated her support also for a multi-year phase-in.

Mr. Bridgeland (Center for Insurance Research—CIR), NAIC consumer representative, stated that the most important function of statutory accounting is to ensure solvency and a level playing field among similar insurers. He stated that an insurer’s financial statements
should reflect capital available to pay policyholder claims and not permit off-balance sheet liabilities. Despite this requiring material adjustments to a few insurers, he stated that adoption was recommended to ensure that financial statements appropriately reflect an insurer’s financial position. He stated that if deferring the recognition of commissions is what is maintaining a company in the appropriate risk-based capital (RBC) range, then the company may warrant additional scrutiny for other areas as well.

k. Mr. Bruggeman stated that as the edits proposed do not change the original intent of SSAP No. 71, he views the edits as nonsubstantive in nature. He stated that the concept of requiring immediate expense recognition of initial acquisition costs meets the spirit of statutory accounting concepts, as well as the concept of conservatism as referenced in the preamble. Commissioner Donelon stated that he believes this issue to be substantive in nature, even if it is not in the technical accounting sense. He indicated that the reporting entity that contacted him indicated that it will not have a materially adverse impact on them. However, he has been told that there are reporting entities that will have a significant financial impact on some small companies, and it will jeopardize members of the ACLI and the National Alliance of Life Companies (NALC). He stated recommendation for grandfathering of existing practices or a multi-year phase-in of any recognition requirements. He stated his agreement with Mr. Considine that a permitted practice is not preferred. Mr. Smith stated that when referencing the definitions of substantive versus nonsubstantive in the Accounting Practices and Procedures Manual (AP&P Manual), the exposed edits are nonsubstantive in nature.

l. Commissioner Mulready stated that this practice has been in place for decades, and to classify this as nonsubstantive signifies to him that all prior insurance exams and independent audits are incorrect. Ms. Andersen (IL) stated that the proposed edits are only clarifying in nature, as they do not change the intent of SSAP No. 71. She stated that this practice has only been employed by a small number of insurance entities, and it results in liabilities that are not recorded in the financial statements. Mr. Stolte stated that commission financial arrangements are difficult to discover; in the prior insolvency example referenced, it was not until the company was in receivership that the issue was discovered. He noted that such arrangements create illusory surplus and violate the concepts of statutory accounting and audits do not review every single contract.

m. Mr. Bruggeman stated that nonsubstantive agenda items are generally effective immediately; however, due to the nature of this topic, it will need to be approved by the Accounting Practices and Procedures (E) Task Force, the Financial Condition (E) Committee, and the Executive (EX) Committee and Plenary. With the Executive (EX) Committee and Plenary not meeting until the Summer National Meeting, the earliest this adoption could take effect is likely the third quarter of 2021. Mr. Smith (VA) stated that due to the length that this agenda item has been discussed, they would support an immediate effective date. Ms. Belfi (CT), Mr. Fry (IL), Mr. Clark (IA) and Mr. Kim Hudson (CA) recommended a December 31, 2021, effective date, due to the likelihood of a significant financial impact combined with the requirement for adoption by the Executive (EX) Committee and Plenary. In an inquiry from Mr. Bruggeman, no Working Group member was opposed to a December 31, 2021, effective date, which is the effective date suggested by Delaware Life per the comments from Ms. Kelley.

n. As this agenda item directs that any adjustments be accounted for as a change in accounting principle under SSAP No. 3—Accounting Changes and Corrections of Errors, the effective date will not have a material impact, as any required cumulative adjustments calculated as of January 1, 2021, will impact unassigned funds (surplus). Mr. Bruggeman stated that
 upon adoption, insurers will be required to record a liability for outstanding amounts due to a third-party funding agent as a cumulative effect adjustment to surplus as of January 1. He noted that activities throughout the year after January 1 are recorded through income.

50. On March 15, 2021, the Working Group took the following actions with Louisiana voting in opposition.

   a. Directed NAIC staff to update this Issue paper for March 2021 and subsequent actions to allow for future exposure. It was noted that the non-authoritative issue paper does not need to be adopted prior to implementation of the SSAP No. 71 revisions.

   b. Supported an annual statement blanks proposal to provide a new general interrogatory to identify the use of a third party for the payment of commission expenses, which will be concurrently exposed with the Blanks (E) Working Group.

   c. Adopted the exposed revisions to SSAP No. 71 with a December 31, 2021, effective date. The Working Group affirmed the nonsubstantive classification of these revisions as consistent with the original intent of SSAP No. 71.

51. On March 23, 2021, the Accounting Practice and Procedures (E) Task Force adopted the report of the Working Group. The Task Force conducted a separate vote on the SSAP No. 71 revisions. The motion passed with 41 in favor and the states of Louisiana and Oklahoma opposed.

52. Key aspects of the March 23, 2021, Task Force discussion are provided below.

   a. Mr. Bruggeman provided an overview of agenda item 2019-24 regarding levelized commission, which affects SSAP No. 71—Policy Acquisition Costs and Commissions. He stated that the Working Group has been discussing this item since August 2019, when it was brought to the Working Group by a domiciliary state. Mr. Bruggeman stated that after six public discussions, the nonsubstantive revisions that clarify the guidance in SSAP No. 71 regarding levelized commissions were adopted on March 15, 2021, with a December 31, 2021, effective date. Thirteen Working Group members voted in favor of adoption, and one member was opposed.

   b. Mr. Bruggeman stated that both U.S. GAAP and SAP would calculate acquisition costs in a similar manner. However, one of the major financial reporting differences between SAP and GAAP is that GAAP capitalizes acquisition costs and expenses them over time to match revenue and expenses while SAP expenses policy acquisitions costs as incurred. Mr. Bruggeman stated that at the heart of this issue is that a small number of reporting entities are using third parties to pay their sales commission costs and not recognizing the full liability of what is in essence a loan to repay the third parties as required under SSAP No. 71. He said that the Working Group has had extensive discussion on this topic and has noted that the revisions clarify the long-standing principles in SSAP No. 71, which have existed since even prior to codification. He stated that the revisions were classified as nonsubstantive because the revisions emphasize the original principles regarding funding agreements and the impact to a minor number of companies do not determine the classification of the revisions.

   c. Mr. Bruggeman noted that state insurance regulators and consumer representatives also voiced concerns about the illusory surplus and unlevel playing field such arrangements create. He stated that because of the unfair competitive advantages that are perceived, the Working Group was not in favor of grandfathering the practices. He noted that the Working Group did discuss that companies could have discussions with their domiciliary states
regarding obtaining a permitted practice for phasing in the financial impact. Because the impact to the affected companies may vary.

d. Louisiana staff stated that Commissioner James J. Donelon could not attend the meeting, but he wanted his comments that this is a substantive change noted and also that he is in favor of a phase-in period. Oklahoma staff also noted that Oklahoma also supports the comments from Louisiana.

e. Ms. Kelley (Delaware Life) stated that their position is also that the revisions are substantive and that they appreciate the time that the Working Group has spent discussing this issue even if not all of the edits they submitted were incorporated. She also stated support for an effective date at least as late as December 31, 2021.

f. Elly Nettleton (Guggenheim Life and Annuity) highlighted two points from their prior comment letters: 1) levelized commissions are not a new concept and date back several decades. She noted that a 2010 U.S. Securities and Exchange Commission (SEC) complaint against another carrier identified levelized commissions as a common practice in the industry. She said Guggenheim is not aware that the accounting treatment was determined not to be in accordance with statutory accounting principles; and 2) traditional commissions such as those tied to policy persistency are carved out of the proposals. Ms. Nettleton said Guggenheim believes it is a dangerous precedent to remove persistency as a factor in the accrual of commissions as it is a key insurance element. Mr. Bruggeman noted that similar comments as Ms. Nettleton’s were made at the Working Group. He stated that the Working Group did hear the comments but did not agree with them.

g. Thomas Considine (National Council of Insurance Legislators—NCOIL) stated that NCOIL members feel strongly that the revisions are substantive but are willing to put that aside and do not feel the need to debate that classification again at this time. He stated that this is a practice that has been going on for decades. He stated that to implement this change during a period of great economic turmoil seems not only short-sighted, but also it is dangerous to require entities to make such a change in a period of a year. He stated that NCOIL recommends a significant phase-in period with a proposed effective date of December 31, 2025. He stated that a permitted practice does not reflect positively on the state granting the practice or the reporting entity receiving the practice. He stated that accreditation reviews note the permitted practices granted by a jurisdiction. He stated that the most fair and equitable solution and a way to avoid the debate of change classification is to add a four- or five-year phase-in.

h. Mr. Bruggeman stated that funding agreements to levelized commission costs are not prohibited. He said the issue is that the full liability for the funding agreement must be recognized for the inherent loan. In other words, it is a financing arrangement; it does not delay the timing of recognition of the acquisition costs. He stated that a permitted practice may not have a positive perception. However, permitted practice disclosure requirements allow state insurance regulators to understand the surplus impact of the arrangement. He stated that a permitted practice provides transparency and noted that if there were any decisions to extend the effective date beyond December 31, 2021, there would need to be a disclosure of the impact. Ms. Walker (TX) agreed, noting that consistency, meaning the ability to compare reporting entities’ financial positions, is a fundamental concept that statutory accounting is based on. She noted its importance for solvency regulation.

i. Mr. Considine noted that to address Mr. Bruggeman’s point about state insurance regulators’ information needs, he is confident that if there were a four- or five-year phase-
in, legislators would be supportive of a reasonably tailored data call. Mr. Rehagen (MO) asked if Mr. Considine envisioned a confidential data call or one that would be publicly produced. Mr. Considine indicated he assumed if it were for the state insurance regulators, then such a data call would be confidential. However, he said NCOIL would be open to discussion. Mr. Bruggeman stated his intent was for a disclosure to be part of the public statutory accounting filing.

j. Mr. Stolte stated that the Task Force is discussing noncompliant statutory accounting by a handful of companies. He stated that in 1991, Virginia had an insurance receivership of a large life insurance company that had a deferred commission funding arrangement. He said that the insurer had not booked the liability, but when the company was put into receivership, the funding entity/financier filed with the receivership a request for payment of $16 million. He said that the reporting entity prior to the receivership was reporting $120 million in surplus, but true surplus ended up being approximately $4 million. He said he disagreed with the statement that what the handful of companies are doing is an acceptable SAP practice. He said it is noncompliance with statutory accounting in SSAP No. 71, and also with the statutory accounting guidance that existed even prior to codification. He said from a level playing field perspective, he does not want to be forced to approve such agreements for his companies to be able to compete with reporting entities employing this practice. He stated that not recording the full liability for the funding agreements creates illusory surplus. He stated that if a reporting entity needs more time to implement the revisions, a permitted practice is what should be employed. He noted that he received notification of more than 100 permitted practices in an average year. He stated that the permitted practices are designed to provide transparent disclosure for all state insurance regulators.

k. Mr. Considine stated that what Mr. Stolte is terming “noncompliance” has been accepted in the regulatory community for 20 years. He said if reporting entities have been doing so for 20 years, it seems unreasonable to require a change in one year. Mr. Stole said that in Virginia, they have not accepted such practices. He noted that there may be some that they were unaware of, but they do not view it as an acceptable practice. He stated that this has been noted as problematic in a formal examination report, and he respectfully disagrees with Mr. Considine’s statement that it was an acceptable practice. Ms. Walker also noted that she has been a Texas state insurance regulator for 20 years and is not aware of any entities that are using funding agreements to defer the recognition of acquisition costs. She noted that she would also take exception to doing so if it were identified in an examination or other regulatory review.

l. Mr. Bridgeland (Center for Insurance Research—CIR) stated support for the proposal as adopted by the Working Group. He stated that one of the top priorities for state insurance regulators was ensuring that the insurers are solvent. He stated that part of that is also ensuring that there is a level playing field. He stated that in this case, there are a handful of companies using a technique that, by their own admission, is enhancing surplus. He noted that as a consumer advocate, he does not want to see insurers have illusory surplus.

53. On April 13, 2021, the Financial Condition (E) Committee, adopted the revisions with 11 in favor and the three states of Mississippi, New Mexico, and South Carolina dissenting. The following key comments were part of the discussion:

a. Commissioner White stated that the last item on the agenda is an issue that has received a considerable amount of discussion within the Statutory Accounting Principles (E) Working Group over the last couple years. He stated that unlike the premium refund issue from 2020,
where the Committee overturned the adoption of a position and suggested that the issue be redrafted, he does not believe that should occur for this particular issue. He stated that the reason for this was that it was his understanding that the vast majority of the life insurance industry is very much opposed to the practice that has apparently been used by what we think is a handful of companies. The reason being is they believe it gives those handful of companies an unfair competitive advantage over the rest of the industry that has been abiding by Statement of Statutory Accounting Principles (SSAP) No. 71—Policy Acquisition Costs and Commissions ever since its inception, as well as even dating back before at least the 1990s. He suggested that if the Committee does not adopt this item, his understanding is that it would force the Working Group to change the entire SSAP No. 71 to allow all commissions and related acquisition costs to be deferred and amortized over time. The reason this would be required is that is essentially what the handful of companies are doing today, while the rest of the industry expenses these costs at the inception of the contract in accordance with statutory accounting principles (SAP). Commissioner White summarized that this would require the Working Group to go back and basically adopt U.S. Generally Accepted Accounting Principles (GAAP) for this particular issue, even though this is one of the biggest differences between SAP and U.S. GAAP. He noted that even if the Committee adopts the issue, it still needs to be adopted by the Executive (EX) Committee and Plenary. He also noted that he already recommended that the Executive (EX) Committee and Plenary consider taking it up either at the Summer National Meeting or during an interim call of the Executive (EX) Committee and Plenary.

b. Ms. Walker noted that included in the materials is a document that provides an overview of the levelized commission agenda item 2019-24 from the Working Group, which modifies SSAP No. 71 through a clarification. She discussed how the Working Group began discussion on the issue in August 2019, and on March 15, 2021, the Working Group adopted nonsubstantive revisions illustrated at the end of the attachment, with an effective date of December 31, 2021. The Working Group vote was 13 states in favor and one state opposed. On March 23, 2021, the Accounting Practices and Procedures (E) Task Force adopted the Working Group’s revisions without modification. The vote was 41 members in favor and two opposed (Louisiana and Oklahoma).

c. Ms. Walker discussed that although U.S. GAAP and SAP calculate acquisition costs in a similar manner, one major financial reporting difference between the two is that U.S. GAAP capitalizes acquisition costs and expenses them over time to match revenues and expenses while SAP expenses policy acquisitions costs as incurred. This accounting treatment is in line with the SAP Statement of Concepts, particularly the recognition concept. This concept specifically identifies that accounting treatments that defer expense recognition are not generally acceptable under SAP.

d. Ms. Walker noted that this agenda item was initiated because some reporting entities are using third parties to pay their sales commission costs without recognizing the full liability to repay the third parties, as required under SSAP No. 71. These entities have taken the position that their agreements are not funding agreements, as they pass on lapse risk to the third party. Ms. Walker discussed how the Working Group has noted that the revisions clarify the long-standing principles in SSAP No. 71, which have existed since even prior to codification. The nonsubstantive revisions emphasize the original principles that require full liability recognition for the commission paid on an insurer’s behalf and any interest and fees incurred to date. Ms. Walker described how the Working Group noted that it is not permissible to pass insurance lapse risk to a non-insurance entity. Furthermore, as the commission is owed with the issuance of an insurance contract, the proper recognition shall continue to require recognition at the time the insurance contract is issued. Ms. Walker
indicated that the Working Group confirmed that it is not permissible to utilize a third-party payer of sales commission as a means to defer recognition of commission expenses.

e. Ms. Walker described how if the agenda item is adopted, a small number of companies will have a material financial impact. She emphasized that because of the unfair competitive advantages that are perceived, and as the guidance is in line with the original intent of SSAP No. 71, the Working Group did not adopt grandfathering or transition provisions. She discussed how the Working Group has recommended that affected companies speak to their domiciliary states regarding potential permitted practices, as needed, for phasing in the financial impact. This approach was favored because the impact to the affected companies may vary, and it provides disclosure in Note 1 to ensure the comparability of all insurers with SAP. Ms. Walker noted that it is her understanding that most companies are not employing this practice and will not be affected by the agenda item’s adoption.

f. Superintendent Toal (NM) suggested that the Committee should consider modifying the effective date from the current proposed year-end 2021 to year-end 2022. Ms. Walker stated that the Working Group had already delayed the effective date from its usual practice of effective upon adoption for nonsubstantive items such as this, but the Working Group wanted to allow time for domestic states to work with any of their companies affected. She also described how a further delay was considered, but since the vast majority of the industry is complying, such a suggestion was rejected by the Working Group. Superintendent Toal questioned whether having less than six months allows enough time for companies to make the changes necessary. Commissioner Donelon repeated a comment that he indicated he has made in the past, which was that even though this was not a substantive change, the real-world impact to some companies was to the tune of hundreds of millions of dollars; therefore, grandfathering of the old contracts, perhaps on a phased-in approach, should be allowed. He described that he had been directed to some communication from the U.S. Securities and Exchange Commission (SEC) where this practice was identified as far back as 30 years ago. He described how such companies therefore may have been using this practice in good faith, or at least one they believed was appropriate, and they are being asked to record hundreds of millions of changes in surplus from this practice. He stated that for this reason, he and other commissioners have interceded in this process. Mr. Slape (TX) stated that the reference to SEC action may not be accurate, as he believes the facts indicate that the company was in worse financial condition after entering into these transactions. In essence, these companies are borrowing money, paying interest on that borrowed money, then competing against other companies that are following the current accounting requirements. Mr. Slape noted that this is not a new issue; this is the first thing that a state insurance regulator learns about regarding the differences between SAP and U.S. GAAP.

g. Commissioner White indicated that everything he has been told is that this may have been taking place within a handful of companies, but that does not mean the state insurance regulators of those companies were aware of its existence in those companies. He described how this is not readable or identified in the financial statements since it is an unrecorded liability. He described how expensing these costs as incurred has been a bedrock principle within statutory accounting for years, even before SSAP No. 71 was adopted in 2001. He noted that he understands the argument for phasing in the impact, given that it could be material for some companies; however, the other side of that is the argument about the level playing field. He emphasized what Ms. Walker said earlier about affected companies working with their domestic regulator about a permitted practice, which is disclosed in Note 1 of the financial statements. Commissioner Donelon stated that he believes from his experience as a commissioner for so many years that the term “permitted practice” certainly
comes with a negative connotation. He stated that for the companies he has heard from, the affected companies are unwilling to pursue a permitted practice. However, he stated his appreciation for the time that the Committee and its subsidiary task forces and working groups have given to this issue.

h. Mr. Galbraith (AR) asked if it is possible to determine definitively if there were just a handful of companies and also whether the practice will definitively cease with all companies going forward on the same level playing field if the proposed changes are adopted. Commissioner White stated that he has heard no evidence to the contrary that it was anything more than a handful of companies since he believes state insurance regulators would have heard from those companies that are affected, and he noted that he is aware of companies in only three states where this is an issue. He described how this is a difficult practice to identify since it is not recorded in the financial statements. He also stated that with the significant discussion, the industry appears to be very aware of the issue, and the vast majority of the industry is supportive of the clarification to have a level playing field.

i. Commissioner Mulready stated his support for the comments made by Commissioner Donelon, noting that his concerns have never been about the issue but rather the implementation. He stated his understanding that grandfathering may be difficult, but a delayed effective date, as suggested by Superintendent Toal, should be considered. Commissioner White responded that he believes that point was debated at the Working Group and the Accounting Practices and Procedures (E) Task Force. Commissioner Mulready noted that as a result of these discussions, Oklahoma had sent communication to all of its domestices to determine if other insurers are affected, and he suggested that he is sure other states are likely doing the same thing. Commissioner White stated his support for that practice, noting that it allows the domestic regulator to determine what is best for any affected companies. Wayne Goodwin, former North Carolina Insurance Commissioner, stated that he had previously submitted comments on this issue, noting slippery slope concerns with what could happen if it is implemented as quickly as is suggested since those concerns affect consumers. He stated his support for comments from Commissioner Donelon, Commissioner Mulready and Mr. Galbraith, and he noted concern about the potential impact on smaller carriers.

j. Superintendent Toal stated that he wants to be clear in the idea of moving to a level playing field, and he is not objecting to the policy, rather his objection was with the limited time to implement, particularly given that state insurance regulators do not know the number of companies affected. Commissioner White responded that his deputy refers to the issue that arises from this practice as illusory surplus, and if in fact there are millions in unrecorded liabilities, that indicates information should be available to solvency regulators and indicates a level of concern. Ms. Walker stated that she believes this is a consumer protection issue, and her highest responsibility is ensuring that carriers can pay policyholder claims as they come due. She stated that when she hears some of the concerns that are being stated, as the domiciliary regulator, she needs the companies to come speak to her so that the two can work out a practice that takes care of consumers while considering the concerns of the company. She stated that the Accounting Practices and Procedures Task Force is trying to adopt some disclosures to gather information on companies, but that depends upon accurate completion by the company, something that may not occur given this particular accounting practice of expensing commissions as they are incurred, which is a fundamental bedrock of statutory accounting that differs from other standards. She noted that there was discussion of trying to obtain more data on the companies using this practice, but the companies did not come forward to their state insurance regulator even though that was requested. So, while a complete scope is not known, the Working Group
and the Task Force did not receive information from state insurance regulators that are on the Task Force or follow it. Ms. Walker also noted that the current proposed effective date of year-end 2021 is already a delay. Mr. Slape suggested that if this is going to have hundreds of millions of impacts on a handful of companies, that is illusory surplus, and that raises questions about the solvency of such insurers using this practice. Therefore, it could have an impact on this small number of companies.

k. Ms. Kelley (Delaware Life Insurance Company), on behalf of interested parties, stated that this is an issue that has been discussed for some time, and she appreciates the ongoing discussions of the Committee and NAIC staff that have worked with Delaware Life. She strongly advocated for additional time to work through this implementation because Delaware Life still believes there are unanswered questions with regard to the calculations. She stated that Delaware Life has advocated all along for an extended effective date. She stated that Delaware Life maintains that this is a substantive change and believes that it has applied SSAP No. 71 in good faith, with all prior financial statements subject to examination and audit. Mr. Corbett (Guggenheim Life and Annuity Company) stated that the accounting for levelized commissions has been presented as a solvency issue, whereby companies have unrecorded liabilities for future commission payments. If this is the case, the liability is deemed necessary for policyholder protection, so how would the Committee be comfortable with any persistency commissions being recorded over time when all insurers have policy experience to be used as a basis for estimating the liability for these future expected commission payments. Therefore, the obligating event, which is defined by one of three essential characteristics in SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets, has not occurred until the policy anniversary date. Mr. Corbett noted that paragraph 2 of SSAP No. 71, which contains no proposed modifications to the definition of a liability, determine when that liability has been incurred. The proposed changes to levelized commissions with a link to persistency are contradictory to paragraph 2. Commissions that are paid and earned according to persistency, which is a long-standing insurance element, should be treated in a consistent manner to ensure comparability among reporting entities. Guggenheim believes the proposed changes to SSAP No. 71 sets a dangerous precedence for the need to accrue for other liabilities for other predictable future expenses. Ms. Walker noted that the expense is incurred for the first year when the policy is written. So, even if the funding agreement allows the company to pay the sales agent in the future, that does not allow the company to defer expenses the first year of the policy. She stated that by deferring, and not recording the liability, and making the statement that it is not due until after the period is contrary and has a different assumption. The assumption that one does not have to book the liability until the policy is still in effect ignores the fact that the policy is currently in effect. As long as the policy is in effect, that amount will be owed. Therefore, you are not to adjust the liability down until the policy lapses or is cancelled. Using a funding agreement simply changes the timing of when the payment is due and does not affect if there should be an expense. Mr. Slape stated these are not persistency commissions because in those situations the agent is paid a commission in future years for when that policy stays in force. These are referred to as renewal commissions, and they are reported on the future anniversary date, but the first-year commission must be expensed immediately up front regardless of the existence of a funding agreement since that is a loan. Mr. Slape stated that he takes issue with the statement that these funding agreements provide for a persistency commission.

l. Roger Sevigny (Sevigny Consulting), as a former state insurance regulator, stated that what he keeps hearing is a lack of information, and he asked that the work be slowed down. Commissioner Donelon stated that with respect to the companies referred to, they are owned by wealthy owners and some of the largest insurers in the world.
White stated that the debate has been vigorous, and he reminded everyone that even if the Committee votes to adopt the proposal, it will still need to be considered by the Executive (EX) Committee and Plenary. at the Summer National Meeting or during an interim meeting before that date.

54. The revisions were adopted by the Executive (EX) Committee and Plenary on August 17, 2021, with 10 jurisdictions voting as opposed. The discussion primarily centered around whether to allow a one-year deferral of the effective date to December 31, 2022. The December 31, 2021, effective date was maintained.

RELEVANT STATUTORY ACCOUNTING

55. Existing guidance in SSAP No. 71—Policy Acquisition Costs and Commissions.

3. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported.

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. These transactions are, in fact, funding agreements between a reporting entity and a third party. The continuance of the stream of payments specified in the levelized commission contract is a mechanism to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount requires the establishment of a liability for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions.

Effective Date

56. As issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble), the subsequent consideration and adoption of this issue paper will not have any impact of the December 31, 2021, effective date of the nonsubstantive revisions adopted to SSAP No. 71 by the Working Group on March 15, 2021.
EXHIBIT A – NONSUBSTANTIVE REVISIONS TO SSAP NO. 71—POLICY ACQUISITION COSTS AND COMMISSIONS

Statement of Statutory Accounting Principles No. 71

Policy Acquisition Costs and Commissions

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for policy acquisition costs and commissions.

SUMMARY CONCLUSION

2. Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). Acquisition costs and commissions shall be expensed as incurred. Determination of when acquisition costs and commissions have been incurred shall be made in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.

3. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported.

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. These transactions are, in fact, funding agreements between a reporting entity and a third party regardless of how the payment to the third party is characterized. The continuance of the stream of payments specified in the levelized commission contract is a mechanism which attempts to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement such as a levelized commission arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount paid by a third party to the direct selling agents requires the establishment of a liability by the reporting entity for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions. Arrangements that use a third party to pay agents who write policies for the reporting entity and the insured can be an attempt to de-link the relationship between the insurer and those agents and defer or levelize the acquisition commissions. The insurance reporting entity is required to recognize the full amount of earned commission costs to the direct policy writing agents even if those costs are paid indirectly to the agents by a third party through the use of levelized commission, or similar arrangement, which is in substance a funding arrangement. Having a third party pay commission costs to the selling agent is strong evidence of a potential funding arrangement.
which shall be recognized as a liability because the substance of the arrangement indicates that repayment is reasonable and probable, even if a contingency has been incorporated into the funding arrangement, until the underlying policy has been cancelled. A third-party structure cannot recharacterize (e.g., by referencing policy persistency) and delay recognition of liabilities for initial sales commission owed from the writing of policies regardless of how a third-party arrangement is structured with regards to the timing of payment from the insurer. The amount owed for full initial sales commission shall be recognized immediately as the writing of an insurance contract is the event that obligates the insurer, and such action shall occur consistently among insurers. As such, this recognition is required regardless of if the insurer owes a selling agent directly or if a third-party has been contracted to provide payment to the selling agent.

Interpretation of the Statutory Accounting Principles (E) Working Group

INT 20-10: Reporting Nonconforming Credit Tenant Loans

GUIDANCE DETERMINED TO BE NO LONGER RELEVANT

INT 20-10 Dates Discussed

November 18, 2020; December 18, 2020; December 28, 2020; December 11, 2021

INT 20-04 References

SSAP No. 43R—Loan-Backed and Structured Securities

INT 20-10 Issue

1. During the Statutory Accounting Principles (E) Working Group meeting on November 12, 2020, the Working Group discussed and deferred final decision on inconsistencies in the reporting of “nonconforming” credit tenant loans (CTLs) currently reported on Schedule D-1 and directed reporting exceptions for year-end 2020. Due to subsequent questions, this interpretation has been issued to detail the provisions provided and clarify the reporting of CTLs in the year-end 2020 statutory financial statements.

INT 20-10 Discussion

2. As detailed in agenda item 2020-24, some reporting entities have reported CTLs that do not qualify as “conforming” CTLs per the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) on Schedule D-1: Long-Term Bonds. CTLs that do not qualify under the P&P Manual structural requirements are noted as “nonconforming” CTLs. During the November 12 discussion, the Working Group deferred final guidance on the reporting of nonconforming CTLs. This deferral was supported as the Working Group has a separate project to assess investments that are captured on Schedule D-1. With this project, it was identified that it would be undesirable to require an investment that is currently being reported on Schedule D-1 to be moved to a different schedule if there was potential for that investment to subsequently qualify for Schedule D-1.

3. Although the Working Group deferred final conclusion on the reporting of nonconforming CTLs, it was identified that the long-standing guidance detailed in the P&P Manual only permits CTLs that meet certain structural criteria, which is verified by the SVO, to be reported on Schedule D-1. Under this existing guidance, these conforming CTLs are also prohibited from using CRP ratings in determining NAIC designation but are required to utilize SVO-assigned NAIC designations obtained after the SVO verifies compliance with the structural elements. As such, to ensure that nonconforming CTLs are not provided more favorable provisions than conforming CTLs that meet structural requirements, the Working Group confirmed that only CTLs that are filed with the NAIC SVO by February 15, 2021, shall be reported on Schedule D-1. Key aspects noted in this direction:

   a. This direction is a limited-time exception to the NAIC Policy Statement on Coordination of the Accounting Practices and Procedures Manual and the Purposes and Procedures Manual of the Investment Analysis Office and shall not be inferred to other investments. Pursuant to the noted Policy Statement, obtaining an NAIC designation does not change an investment’s applicable SSAP, annual or quarterly statement reporting schedule, or override other SSAP guidance required
for the investment to be an admitted asset. Although nonconforming CTLs will be permitted to be reported on Schedule D-1 when filed with the SVO for future receipt of an SVO-assigned NAIC designation (even without meeting structural requirements), this is strictly a limited-time exception to prevent reporting schedule changes while a larger project on the scope of Schedule D-1 is considered.

b. The requirement to file the nonconforming CTL for an SVO-assigned NAIC designation for Schedule D-1 applies to all investments that represent credit tenant loans. It is not permissible for a reporting entity to classify an investment, which meets the characteristics of a credit tenant loan, as a different type of investment (for example, as a form of leased-backed security) for purposes of reporting the investment on Schedule D-1 without filing for an SVO-assigned NAIC designation.

c. The Working Group direction intends to only address nonconforming CTLs that have previously been reported on Schedule D-1 although they did not comply with the requirements of the P&P Manual. This direction is not intended to require, or permit, nonconforming CTLs that have been previously reported as mortgage loans (on Schedule B – Mortgage Loans) or as other invested assets (on Schedule BA – Other Long-Term Invested Assets) to be moved to a different reporting schedule. Nonconforming CTLs that have previously been reported on Schedule B or BA shall remain on that reporting schedule for the duration of this INT.

**INT 20-10 Consensus**

4. The Working Group reached a consensus to provide a limited time exception allowing nonconforming CTLs to continue to be reported on Schedule D-1 for year-end 2020 provided they have filed for an SVO-assigned NAIC designation. With the issuance of this interpretation, the Working Group confirmed the provisions and limitations detailed in paragraph 3, and summarized the resulting provisions below:

a. CTLs that qualify per the provisions of the P&P Manual are considered to be “conforming” CTLs and shall be reported on Schedule D-1 with the NAIC designation obtained from the SVO.

b. CTLs that do not qualify per the provisions of the P&P Manual to be “conforming” CTLs shall follow the accounting and reporting provisions detailed in the following subparagraphs. These CTLs are noted as “nonconforming CTLs.”

i. Nonconforming CTLs that have previously been reported on Schedule D-1 may continue to be reported on Schedule D-1 for year-end 2020 if they have filed for an SVO-assigned NAIC designation. This provision only requires that an entity file the security with the SVO by February 15, 2021, not that the entity receive the SVO-assigned designation prior to submitting their 2020 annual statutory financial statements. If an entity does not file the security with the SVO by February 15, 2021, the investment shall be reported on Schedule BA. If reporting on Schedule BA, these CTLs shall not be reported with a credit-rating provider (CRP) determined NAIC designation. For nonconforming CTLs that have been filed with the SVO and retained on Schedule D-1, the reporting entity is required to disclose the total amount of nonconforming CTLs reported on Schedule D-1 on Note 1 as if it were a permitted practice. The reporting entity shall complete the permitted practice disclosures required by SSAP No. 1—Accounting Policies, Risks & Uncertainties, and Other Disclosures, with two separate entries that detail the nonconforming CTLs that were reported on D-1 on one line, and the nonconforming CTLs that were not reported on Schedule BA on a separate line within this disclosure. (These lines will likely net to a zero impact to statutory surplus; therefore, the separate line reporting is required.)
ii. Nonconforming CTLs that have been previously reported on a different reporting schedule (e.g., Schedule B or Schedule BA) shall remain on the prior reporting schedule. There is no requirement for reporting entities to pursue SVO-assigned designations for these CTLs or disclose these nonconforming CTLs in Note 1. Furthermore, reporting entities that have previously reported nonconforming CTLs on Schedule D-1 that do not want to file with the SVO or that do not want to disclose in Note 1 pursuant to paragraph 4.b.i. are permitted to reclassify these CTLs to Schedule B or Schedule BA without NAIC designations.

5. The exceptions granted in this interpretation are applicable for the year-end 2020 statutory financial statement only. Nonconforming CTLs that have been filed with the SVO and are reported on Schedule D-1 shall continue the Note 1 reporting for each 2021 quarterly financial statement until an SVO-assigned designation is received. The provisions within this INT, and the ability to continue reporting nonconforming CTLs on Schedule D-1 with an SVO-assigned NAIC designation, are limited time exceptions that extend only to October 1, 2021. The exceptions provided in this INT shall not be interpreted to indicate the likely conclusion of the Working Group in determining the appropriate reporting schedule for nonconforming CTLs. All reporting entities shall be prepared to make adjustments to comply with the reporting schedule utilized for nonconforming CTLs upon final conclusion by the Working Group.

INT 20-10 Status

6. On November 18, 2020, the Statutory Accounting Principles (E) Working Group exposed this interpretation to provide a limited-time exception on the reporting of nonconforming CTLs. On December 18, 2020, the Working Group exposed revisions to this interpretation to allow continued D-1 reporting of nonconforming CTLs if they are filed with the SVO by February 15, 2021. With this provision, nonconforming CTLs reported on Schedule D-1 that have not received an SVO-assigned designation shall be disclosed in Note 1 as if a permitted practice. On December 28, 2020, the Working Group finalized action, via evote, to adopt the interpretation exposed December 18, 2020.

7. On December 11, 2021, the Statutory Accounting Principles (E) Working Group explicitly nullified this interpretation due to actions taken in July 2021 by the Valuation of Securities (E) Task Force, which amended the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) to define that credit tenant loans are specific to mortgage loans in scope of SSAP No. 37—Mortgage Loans. In addition, the edits to the P&P Manual clarify that security structures shall be assessed for accounting and reporting guidance in accordance with the provisions in SSAP No. 26R—Bonds and SSAP No. 43R—Loan-Backed and Structured Securities, thus the reporting exceptions provided in this INT were no longer required. The action to nullify occurred subsequent to the expiration date, but was done explicitly for historical documentation purposes.

7.8. No further discussion is planned.

Description of Issue: On July 15, 2021, the Valuation of Securities (E) Task Force adopted revisions to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) to clarify that the definition of a credit tenant loan (CTL), which defines CTLs as mortgage loans, is specific to “mortgage loans in scope of SSAP No. 37.” This limited amendment to the P&P Manual was suggested by the chair and vice chair of the Statutory Accounting Principles (E) Working Group to clarify that the application of the structural assessment to identify CTLs is limited to direct mortgage loans and relates to the potential reclassification of investments from Schedule B (Mortgage Loans) to Schedule D (Bonds) for qualifying investments. The amendment also clarifies that security structures, which are excluded from SSAP No. 37, are not subject to the P&P Manual CTL structural assessments and should be captured for accounting and reporting in accordance with the applicable SSAP within the NAIC Accounting Practices and Procedures Manual. With this Task Force discussion, it was highlighted that there is a current Working Group project to define principal concepts for bond reporting.

With the adoption of the Task Force guidance, NAIC staff has assessed whether INT 20-10: Reporting Nonconforming CTLs should be nullified and whether other revisions should be incorporated into SSAP No. 43R prior to the adoption of guidance in advance of the principle-based bond proposal project.

Review of INT 20-10:
INT 20-10 was adopted Dec. 28, 2020, to provide reporting exceptions for year-end 2020. This interpretation permitted continued reporting on Schedule D for nonconforming CTLs (and other structures which met the characteristics of a CTL) if they had been filed for an SVO-assigned designation by Feb. 15, 2021. Although an SVO-assigned designation was not required to be received before filing the statutory financial statements, reporting entities were required to disclose the nonconforming CTLs captured on Schedule D with a CRP rating in Note 1. Once the SVO-assigned designation was received, then the reporting entity would begin reporting the SVO-assigned designation (instead of the CRP rating) and the Note 1 disclosure would no longer be required. This interpretation also clarified that there would be no requirement to move investments to Schedule D (and file them with the SVO) if they had previously been reported on a different schedule (such as Schedule B or Schedule BA). This interpretation was set to expire Oct. 1, 2021. This limited effective date was set to allow for further review and consideration of these structures prior to year-end 2021 reporting.

Assessment of INT 20-10:
With the adoption of the Task Force edits, which clarify that security structures shall be assessed for accounting and reporting in accordance with the provisions in SSAP No. 26R and SSAP No. 43R, NAIC staff does not believe there is a need to retain INT 20-10 as the reporting exception provided within would no longer be necessary for security structures. (The identification of nonconforming CTLs as of year-end 2020 solely encompassed security structures with underlying real estate risk and did not include any direct mortgage loans that had been reclassified from Schedule B to Schedule D without meeting the SVO structural analysis.) With the nullification of INT 20-10 and Task Force clarifications, only direct mortgage loans would be assessed for reclassification from mortgage
loans to bonds under the CTL structural provisions. With the limited focus on these specific structures, there is no perceived need to reconsider the current structural provisions that need to be met (namely the 5% residual risk threshold) for those investments to be reclassified from mortgage loans to bonds. With the nullification of INT 20-10, the following guidance would be applicable:

- Mortgage loans in scope of SSAP No. 37 will continue past practice, with reporting entities having the ability to file the structures with the SVO for a structural assessment to determine whether the mortgage loan can be reclassified from Schedule B to Schedule D as a CTL.

- Security structures that have underlying real estate risk, whether they are referred to as CTLs or by another named (e.g., lease-backed securities) that qualify in scope of SSAP No. 26R—Bonds or SSAP No. 43R—Loan-Backed and Structured Securities shall follow the accounting and reporting provisions of those SSAPs. Investments that qualify within these SSAPs are reported on Schedule D-1: Long-Term Bonds. This is consistent with past intent of the SSAPs as the highest level of the statutory hierarchy (pursuant to Section V – Statutory Hierarchy of the Preamble to the AP&P Manual) as well as guidance in the NAIC Policy Statement on Coordination of the AP&P Manual and the P&P Manual. Per that guidance, obtaining an NAIC designation does not change in investment’s applicable SSAP, annual or quarterly statement reporting schedule or override other SSAP guidance required for an investment to be an admitted asset. That guidance identifies that there are limited instances in which a SSAP specifically identifies within its scope, the inclusion of specific SVO-Identified investments based on structural assessments (such as SVO-Identified Bond ETFs in scope of SSAP No. 26R). However, that guidance is specific to the inclusion of qualifying investments into the scope of a specific SSAP and does not provide the ability to remove investments from a specific SSAP that qualify under the SSAP’s scope provisions.

**Assessment of SSAP No. 43R:**
NAIC staff has recognized that the scope guidance of SSAP No. 43R does not name mortgage loans that qualify as CTLs after an SVO structural assessment. Furthermore, it has been identified that there are examples of securities in paragraph 27.b that have been cited as structures that are in scope of SSAP No. 43R. Paragraph 27 is not a scope paragraph but is in the section of the SSAP that addresses determination of the designation based on whether the investment is subject to the financial modeling guidance. (The original source of these examples were in a paragraph that identified investments that would not be financially modeled or that did not receive CRP ratings subject to the “modified filing exempt” provisions. Since the “MFE” concept was removed in 2020, SSAP No. 43 investments are either financially modeled or captured as an “all other loan-backed or structured security.”) With the removal of the MFE guidance, paragraph 27.b is now applicable to all securities not subject to financial modeling, but these examples are still included. (Note: **NAIC staff has an impression that there could be industry concern with removing these examples as it will cause questions on whether they can be reported in scope of SSAP No. 43R.**)

Although there is current “bond project” to establish principal concepts in determining whether an investment qualifies as a bond, the finalization and implementation of that project is expected to take time to complete. To address immediate issues with regards to clarifying the reporting of mortgage loan CTLs and other securities, NAIC staff proposes nonsubstantive revisions to remove the examples from paragraph 27.b and explicitly incorporate applicable provisions in the scope paragraphs of SSAP No. 43R.

**Existing Authoritative Literature:**

1. This statement establishes statutory accounting principles for investments in loan-backed securities, structured securities and mortgage-referenced securities. In accordance with SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, retained beneficial interests from the sale of loan-backed securities and structured securities are accounted for in accordance with this statement. Items captured in scope of this statement are collectively referred to as loan-backed securities.
Designation Guidance

27. For RMBS/CMBS securities within the scope of this statement, the initial NAIC designation used to determine the carrying value method and the final NAIC designation for reporting purposes is determined using a multi-step process. The P&P Manual provides detailed guidance. A general description of the processes is as follows:

a. Financial Modeling: Pursuant to the P&P Manual, the NAIC identifies select securities where financial modeling must be used to determine the NAIC designation. NAIC designation based on financial modeling incorporates the insurers’ carrying value for the security. For those securities that are financially modeled, the insurer must use NAIC CUSIP specific modeled breakpoints provided by the modelers in determining initial and final designation for these identified securities. As specified in the P&P Manual, securities where modeling results in zero expected loss in all scenarios and that would be equivalent to an NAIC designation and NAIC designation category of NAIC 1 and NAIC 1.A. respectively, if the filing exemption process in the P&P Manual was applied, are automatically considered to have a final NAIC designation of NAIC 1 and NAIC designation category of NAIC 1.A., regardless of the carrying value. The three-step process for modeled securities is as follows:

i. Step 1: Determine Initial Designation – The current amortized cost (divided by remaining par amount) of a loan-backed or structured security is compared to the modeled breakpoint values assigned to the six (6) NAIC designations for each CUSIP to establish the initial NAIC designation.

ii. Step 2: Determine Carrying Value Method – The carrying value method, either the amortized cost method or the lower of amortized cost or fair value method, is then determined as described in paragraph 26 based upon the initial NAIC designation from Step 1.

iii. Step 3: Determine Final Designation – The final NAIC designation is determined by comparing the carrying value (divided by remaining par amount) of a security (based on paragraph 27.a.ii.) to the NAIC CUSIP specific modeled breakpoint values assigned to the six (6) NAIC designations for each CUSIP. The final designation is mapped to an NAIC designation category according to the instructions in the P&P Manual. This final NAIC designation shall be applicable for statutory accounting and reporting purposes and the NAIC designation category will be used for investment schedule reporting and establishing RBC and AVR charges. The final NAIC designation is not used for establishing the appropriate carrying value method in Step 2 (paragraph 27.a.ii.).

b. All Other Loan-Backed and Structured Securities: For securities not subject to paragraph 27.a. (financial modeling) follow the established designation procedures according to the appropriate section of the P&P Manual. The NAIC designation shall be applicable for statutory accounting and reporting purposes (including determining the carrying value method and establishing the AVR charges). The carrying value method is established as described in paragraph 26. Examples of these securities include, but are not limited to equipment trust certificates, credit tenant loans (CTL), 5*/6* securities, interest only (IO) securities, securities with CRP ratings (excluding RMBS/CMBS), loan-backed and structured securities, and mortgage-referenced securities with SVO assigned NAIC designations.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): Previous activity was summarized above, in the ‘Description of Issue’ section. A prior agenda item 2020-24: Accounting and Reporting of Credit Tenant Loans in response to a Task Force referral was also developed
Information or issues (included in Description of Issue) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and take the following action:

1) Nullify INT 20-10 as no longer applicable. (If preferred, rather than nullifying immediately, this INT could continue and expire automatically on Oct. 1, 2021, without consideration of further extension.)

2) Dispose agenda item 2020-24: Accounting and Reporting of Credit Tenant Loans without statutory revisions. This agenda item had two exposures regarding CTLs prior to the development of INT 20-10 and the SVO adoption that clarified the definition of CTLs.

3) Expose revisions to SSAP No. 43R—Loan-Backed and Structured Securities to explicitly identify the SVO-Identified CTLs in scope of SSAP No. 43R. These revisions also propose to delete the examples of “other LBSS” in paragraph 27.b. If there are concerns that this deletion inadvertently removes any specific investment from the scope of SSAP No. 43R, those comments are requested to be shared during the exposure period.

It is noted that these modifications are intended to simply clarify current guidance prior to the adoption of bond proposal.

Proposed edits to SSAP No. 43R:

1. This statement establishes statutory accounting principles for investments in loan-backed securities, structured securities and mortgage-referenced securities. In accordance with SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, retained beneficial interests from the sale of loan-backed securities and structured securities are accounted for in accordance with this statement.

In addition, mortgage loans in scope of SSAP No. 37 that qualify under a SVO structural assessment are in scope of this statement as credit tenant loans (CTLs). Items captured in scope of this statement are collectively referred to as loan-backed securities

Designation Guidance

27. For RMBS/CMBS securities within the scope of this statement, the initial NAIC designation used to determine the carrying value method and the final NAIC designation for reporting purposes is determined using a multi-step process. The P&P Manual provides detailed guidance. A general description of the processes is as follows:

a. Financial Modeling: Pursuant to the P&P Manual, the NAIC identifies select securities where financial modeling must be used to determine the NAIC designation. NAIC designation based on financial modeling incorporates the insurers’ carrying value for the security. For those securities that are financially modeled, the insurer must use NAIC CUSIP specific modeled breakpoints provided by the modelers in determining initial and final designation for these identified securities. As specified in the P&P Manual, securities where modeling results in zero expected loss in all scenarios and that would be equivalent to an NAIC designation and NAIC designation category of NAIC 1 and NAIC 1.A., respectively, if the filing exemption process in the P&P Manual was applied, are automatically considered to have a final NAIC designation of NAIC 1 and NAIC designation category of NAIC 1.A., regardless of the carrying value. The three-step process for modeled securities is as follows:
i. Step 1: Determine Initial Designation – The current amortized cost (divided by remaining par amount) of a loan-backed or structured security is compared to the modeled breakpoint values assigned to the six (6) NAIC designations for each CUSIP to establish the initial NAIC designation.

ii. Step 2: Determine Carrying Value Method – The carrying value method, either the amortized cost method or the lower of amortized cost or fair value method, is then determined as described in paragraph 26 based upon the initial NAIC designation from Step 1.

iii. Step 3: Determine Final Designation – The final NAIC designation is determined by comparing the carrying value (divided by remaining par amount) of a security (based on paragraph 27.a.ii.) to the NAIC CUSIP specific modeled breakpoint values assigned to the six (6) NAIC designations for each CUSIP. The final designation is mapped to an NAIC designation category according to the instructions in the P&P Manual. This final NAIC designation shall be applicable for statutory accounting and reporting purposes and the NAIC designation category will be used for investment schedule reporting and establishing RBC and AVR charges. The final NAIC designation is not used for establishing the appropriate carrying value method in Step 2 (paragraph 27.a.ii.).

b. All Other Loan-Backed and Structured Securities: For securities not subject to paragraph 27.a. (financial modeling) follow the established designation procedures according to the appropriate section of the P&P Manual. The NAIC designation shall be applicable for statutory accounting and reporting purposes (including determining the carrying value method and establishing the AVR charges). The carrying value method is established as described in paragraph 26. Examples of these securities include, but are not limited to equipment trust certificates, credit tenant loans (CTL), 5*/6* securities, interest only (IO) securities, securities with CRP ratings (excluding RMBS/CMBS), loan-backed and structured securities, and mortgage-referenced securities with SVO assigned NAIC designations.

Staff Review Completed by: Julie Gann, NAIC Staff – July 2021

Status:
On August 26, 2021, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed the following:

1. Revisions to SSAP No. 43R—Loan-Backed and Structured Securities, as illustrated above, to explicitly identify the SVO-Identified CTLs are in scope of SSAP No. 43R. These revisions also propose to delete the examples of “other loan-backed and structured securities” in paragraph 27.b. Comments are requested if this deletion is perceived to remove investments from the scope of SSAP No. 43R.

2. Request for comment on the Working Group’s intent to nullify INT 20-10. (This INT nullifies automatically on Oct. 1, 2021, but it is anticipated that the explicit nullification will identify the revisions adopted by the VOSTF for historical reference.)

3. Disposal of agenda item 2020-24: Accounting and Reporting of Credit Tenant Loans without statutory revisions. This was the agenda item in response to the initial VOSTF referral and is no longer applicable with the adopted Task Force edits to clarify that CTLs are mortgage loans in scope of SSAP No. 37.

On December 11, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to SSAP No. 43R—Loan-Backed and Structured Securities, as illustrated above. The revisions 1) identify
that SVO-Identified credit tenant loans are in scope of SSAP No. 43R, and 2) delete various example references of “other loan-backed and structured securities” in paragraph 27.b. In addition, the Working Group nullified INT 20-10: Reporting Nonconforming CTLs and disposed agenda item 2020-24: Accounting and Reporting of Credit Tenant Loans without statutory revisions.

Description of Issue: SSAP No. 30R—Unaffiliated Common Stock directs the accounting and reporting of capital stock held in Federal Home Loan Banks (FHLB). As holding capital stock in a FHLB is a requirement for FHLB borrowing, the disclosure requirement for said borrowings is also detailed in SSAP No. 30R - regardless of if the reporting entity classifies the borrowings as debt pursuant to SSAP No. 15—Debt and Holding Company Obligations or as a funding agreement per SSAP No. 52—Deposit-Type Contracts. (Note: if the debt is classified as a funding agreement, SSAP No. 52 directs reporting entities to SSAP No. 30 for applicable disclosure requirements).

If the debt is classified as a funding agreement within the scope of SSAP No. 52, its applicable activity is reported in Exhibit 7 – Deposit-Type Contracts. However, Exhibit 7 includes columnar reporting of various deposit-type contracts, including guaranteed interest contracts (GIC), annuities certain, supplemental contracts, etc. Due to the varied nature of reporting based on policy forms, FHLB borrowings classified as a deposit-type contract and reported on Exhibit 7 are not readily identifiable to financial statement users. While statutory accounting revisions are not proposed, this agenda item has been drafted to document a referral to the Blanks (E) Working Group regarding the specific identification of FHLB borrowings, which have been classified as funding agreements reported on Exhibit 7.

Existing Authoritative Literature: All applicable SSAP No. 30R references for the accounting and reporting of FHLB capital stock as well as the disclosure requirements of FHLB borrowings have been included in this section. Please note that for brevity, applicable footnotes have not been included.

FHLB Capital Stock

14. FHLB capital stock is held by reporting entities that are members of an FHLB. Each reporting entity must acquire FHLB capital stock for membership and maintain capital stock holding sufficient to support its business activity (borrowings) in accordance with the respective FHLB’s capital plan. The price of FHLB capital stock cannot fluctuate, and all FHLB capital stock must be purchased, repurchased or transferred at its par value. FHLB capital stock is restricted for redemption in accordance with the FHLB capital plan and shall be coded as restricted within the financial statements (e.g., investment schedules and general interrogatories).

15. Acquisition of FHLB capital stock allows members to conduct business activity (borrowings) from an FHLB. The amount of capital stock acquired determines the reporting entity’s eligible borrowing amount. At a minimum, all borrowings from an FHLB (regardless of structure) must also be fully collateralized in accordance with the FHLB capital plan, which determines the amount of collateral required by type of pledged instrument. Collateral pledged to an FHLB shall be coded as restricted within the financial statements (e.g., investments schedules and general interrogatories). Collateral pledged to
an FHLB by a reporting entity FHLB member is considered an admitted asset if all of the conditions in paragraphs 15.a. through 15.d. are met:

a. The asset would have been admitted under SSAP No. 4;

b. The pledging insurer continues to receive the income on the pledged collateral;

c. The pledging insurer can remove and substitute other securities with little or advance notice to the FHLB as long as the insurer complies with related investment quality and market value provisions; and

d. There has been no uncured default or event to indicate an impairment or loss contingency for the pledged assets.

16. The guidance in paragraph 14 and paragraph 15 is specific for reporting entities that are FHLB members. A reporting entity that engages with an FHLB through an “affiliate arrangement” (meaning an affiliate of the reporting entity is the FHLB member), is not considered an FHLB member. In those situations, any FHLB capital stock held by the non-FHLB member reporting entity or collateral pledged to an FHLB on behalf of an affiliate shall be nonadmitted. Detail of the affiliate FHLB arrangement, including any collateral pledged or funds received, shall be captured as a related party transaction (as if the activity occurred directly with the affiliate) under the provisions of SSAP No. 25—Affiliates and Other Related Parties.

FHLB Disclosures

18. For reporting entity FHLB members, the following information shall be disclosed in the financial statements for current and prior year and between general account and separate account activity. The information in the disclosures shall be presented gross even if a right to offset exists per SSAP No. 64—Offsetting and Netting of Assets and Liabilities.

a. General description of FHLB agreements, with information on the nature of the agreement, type of borrowing (advances, lines of credit, borrowed money, etc.) and use of the funding.

b. Amount of FHLB capital stock held, in aggregate, and classified as follows: i) membership stock (separated by Class A and Class B); ii) Activity Stock; and iii) Excess Stock. For membership stock, report the amount of FHLB capital stock eligible for redemption and the anticipated timeframe for redemption: i) less than 6 months, ii) 6 months to 1 year, iii) 1 year to 3 years, and iv) 3 to 5 years.

c. Amount (fair value and carrying value) of collateral pledged to the FHLB as of the reporting date. In addition, report the maximum amount of collateral pledged to the FHLB at any time during the current reporting period. (Maximum shall be determined on the basis of carrying value, but with fair value also reported)

d. Aggregate amount of borrowings at the reporting date from the FHLB, reflecting compilation of all advances, loans, funding agreements, repurchase agreements, securities lending, etc., outstanding with the FHLB, and classify whether the borrowing is in substance: i) debt (SSAP No. 15—Debt and Holding Company Obligations), ii) a funding agreement (SSAP No. 52—Deposit-Type Contracts), or iii) Other. For funding agreements, report the total reserves established. Report the maximum amount of aggregate borrowings from an FHLB at any time during the current reporting period, the actual or estimated maximum borrowing capacity as determined by the insurer, with a description of how the borrowing capacity was determined, and whether current borrowings are subject to prepayment penalties.
19. The disclosures in paragraphs 17.c. through 17.f. shall be included in the annual audited statutory financial reports only. The FHLB disclosures in paragraph 18 are required in all interim and annual financial statements regardless if the activity is materially different from the activity reported during the prior reporting period. Refer to the Preamble for further discussion regarding disclosure requirements.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation:
NAIC staff recommends that the Working Group forward a proposal to the Blanks (E) Working Group to supplement the identification of FHLB borrowings that are classified as a deposit-type contract and reported on Exhibit 7 - Deposit-Type Contracts. The supplemental data to be captured is consistent with current requirements in SSAP No. 30R—Unaffiliated Common Stock, however this improved reporting granularity will significantly assist financial statement users with the ability to identify FHLB borrowings captured in Exhibit 7. The proposed additions to Exhibit 7 are shown below.

Staff Review Completed by: Jim Pinegar, NAIC Staff – October 2021

Status:
On October 25, 2021, in response to an e-vote to expose, the Statutory Accounting Principles (E) Working Group exposed this agenda item for public comment. This agenda item does not propose statutory accounting revisions, however resulted in a referral to the Blanks (E) Working Group to include a supplemental data capture footnote for FHLB borrowings that are classified as a deposit-type contract and reported on Exhibit 7 – Deposit-Type Contracts.

On December 11, 2021, the Statutory Accounting Principles (E) Working Group adopted this agenda item, which did not result in statutory accounting revisions, however the adoption expressed support of the corresponding Blanks (E) Working Group agenda item (2021-15BWG). The blanks agenda item includes a supplemental data capture footnote for FHLB borrowings that are classified as a deposit-type contract and reported on Exhibit 7 – Deposit-Type Contracts.

Description of Issue: This agenda item’s primary purpose is to propose minor revisions to SSAP No. 32R to clarify the applicable measurement methods for preferred stock. For a brief historical context, in July 2020, the Working Group adopted Issue Paper No. 164—Preferred Stock and substantively revised SSAP No. 32R—Preferred Stock. The substantively revised SSAP No. 32R was effective January 1, 2021, however in October 2020, agenda item 2020-31, permitted early application of the newly revised standard.

As described in Issue Paper No. 164, paragraph 17, the historical guidance in SSAP No. 32 captured different accounting and reporting provisions based on whether the preferred stock was classified as redeemable or perpetual, and whether the reporting entity maintained an Asset Valuation Reserve. Although these classifications were still considered appropriate, in 2020, the Statutory Accounting Principles (E) Working Group reviewed the permissible valuation methods for redeemable preferred stock – specifically the prior guidance in SSAP No. 32 that permitted “historical cost” as an applicable measurement method. During the development of SSAP No. 32R, and consistent with prior conclusions from U.S. GAAP, the Working Group concluded that “historical cost” is generally not an acceptable measurement method for this type of instrument. However, during the implementation of SSAP No. 32R, it was discovered that a lingering reference to “cost” being a permissible reporting value remained in the authoritative literature.

This agenda item has been drafted to 1) remove lingering references which indicate that cost is a permissible valuation method, and 2) remove descriptive language regarding redeemable preferred stock to ensure consistency with other identical edits made when SSAP No. 30 was substantively revised.

Existing Authoritative Literature: The primary outstanding reference to “cost” is found in paragraph 11 of SSAP No. 32R - relevant items have been bolded for emphasis.

Balance Sheet Amount

11. Preferred stock shall be valued based on (a) the underlying characteristics (redeemable, perpetual or mandatory convertible), (b) the quality rating expressed as an NAIC designation, and (c) whether an asset valuation reserve (AVR) is maintained by the reporting entity:

a. For reporting entities that do not maintain an AVR:

i. Highest-quality or high-quality redeemable preferred stocks (NAIC designations 1 and 2), which have characteristics of debt securities, shall be valued at cost or amortized cost. All other redeemable preferred stocks (NAIC designations 3 to 6) shall be reported at the lower of cost, amortized cost, or fair value.

ii. Perpetual preferred stock and publicly traded preferred stock warrants shall be reported at fair value, not to exceed any currently effective call price.
ii. Mandatory convertible preferred stocks (regardless if the preferred stock is redeemable or perpetual) shall be reported at fair value, not to exceed any currently effective call price, in the periods prior to conversion. Upon conversion to common stock, these securities shall be in scope of SSAP No. 30R.

iv. For preferred stocks reported at fair value, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus).

b. For reporting entities that maintain an AVR:

i. Highest-quality, high-quality or medium quality redeemable preferred stocks (NAIC designations 1 to 3) shall be valued at amortized cost. All other redeemable preferred stocks (NAIC designations 4 to 6) shall be reported at the lower of amortized cost or fair value.

ii. Perpetual preferred stock and publicly preferred stock warrants shall be valued at fair value, not to exceed any currently effective call price.

iii. Mandatory convertible preferred stocks (regardless if the preferred stock is redeemable or perpetual) shall be reported at fair value, not to exceed any currently effective call price, in the periods prior to conversion. Upon conversion to common stock, these securities shall be in scope of SSAP No. 30R.

iv. For preferred stocks reported at fair value, the accounting for unrealized gains and losses shall be in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): In addition to the previous activity that was summarized in the “Description of Issue” section, in Aug. 2021, the Working Group adopted revisions from agenda item 2021-10: SSAP No. 32R – Clarification of Effective Call Price. Adopted revisions clarified that the “effective call price” valuation limitation for instruments with outstanding call provisions shall only apply if the call is currently exercisable by the issuer or if the issuer has announced that the instrument will be redeemed/called.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 32R—Preferred Stock to remove lingering references indicating that cost is an allowable valuation method. Note that the additional proposed edits in SSAP No. 32R, paragraph 11.a.i., regarding removing the reference to “characteristics of debt securities” was proposed to ensure consistency with prior approved edits to yield what is now SSAP No. 32R, paragraph 11.b.i.
**Proposed edits to SSAP No. 32R:**

**Balance Sheet Amount**

11. Preferred stock shall be valued based on (a) the underlying characteristics (redeemable, perpetual or mandatory convertible), (b) the quality rating expressed as an NAIC designation, and (c) whether an asset valuation reserve (AVR) is maintained by the reporting entity:

   a. For reporting entities that do not maintain an AVR:
      
      i. Highest-quality or high-quality redeemable preferred stocks (NAIC designations 1 and 2), which have characteristics of debt securities, shall be valued at cost or amortized cost. All other redeemable preferred stocks (NAIC designations 3 to 6) shall be reported at the lower of cost, amortized cost, or fair value.
      
      ii. Perpetual preferred stock and publicly traded preferred stock warrants shall be reported at fair value, not to exceed any currently effective call price.
      
      iii. Mandatory convertible preferred stocks (regardless if the preferred stock is redeemable or perpetual) shall be reported at fair value, not to exceed any currently effective call price, in the periods prior to conversion. Upon conversion to common stock, these securities shall be in scope of SSAP No. 30R.
      
      iv. For preferred stocks reported at fair value, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus)

   b. For reporting entities that maintain an AVR:
      
      i. Highest-quality, high-quality or medium quality redeemable preferred stocks (NAIC designations 1 to 3) shall be valued at amortized cost. All other redeemable preferred stocks (NAIC designations 4 to 6) shall be reported at the lower of amortized cost or fair value.
      
      ii. Perpetual preferred stock and publicly preferred stock warrants shall be valued at fair value, not to exceed any currently effective call price.
      
      iii. Mandatory convertible preferred stocks (regardless if the preferred stock is redeemable or perpetual) shall be reported at fair value, not to exceed any currently effective call price, in the periods prior to conversion. Upon conversion to common stock, these securities shall be in scope of SSAP No. 30R.
      
      iv. For preferred stocks reported at fair value, the accounting for unrealized gains and losses shall be in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve.

**Staff Review Completed by:** Jim Pinegar, NAIC Staff – September 2021

**Status:**

On October 25, 2021, in response to an e-vote to expose, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 32R—Preferred Stock to remove lingering references which indicate that cost is an allowable valuation method for redeemable preferred stock.
On December 11, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to SSAP No. 32R—Preferred Stock, as illustrated above. The revisions remove lingering references which indicate that cost is an allowable valuation method for redeemable preferred stock. The revisions also included other minor updates to ensure consistent phraseology with prior modifications.

**Recommendation:**
NAIC staff recommend that the Statutory Accounting Principles (E) Working Group move this agenda item to the active listing, categorize as nonsubstantive, and expose editorial revisions as illustrated below.

**Status:**
On October 25, 2021, in response to an e-vote, the Statutory Accounting Principles (E) Working Group exposed the editorial revisions, shown below, for public comment.

On December 11, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed editorial revisions as shown below.

**SSAP No. 16R – Electronic Data Processing Equipment and Software**

11. This statement also adopts with modification the guidance reflected in ASC 350-40 for cloud computing arrangements as modified by ASU 2018-15, *Customer’s Accounting for Implementation Costs Incurred in a Cloud Computing Arrangement That Is a Service Contract* and in this statement. Consistent with U.S. GAAP, the guidance in this statement for cloud computing hosting arrangements varies based on whether the cloud computing arrangement is a service contract:

   a. An arrangement that is not a service contract applies to internal-use software if the 1) reporting entity has the contractual right to take possession of the software at any time during the hosting period without significant penalty; and 2) it is feasible for the reporting entity to either run the software on its own hardware or contract with another party unrelated to the vendor to host the software.

   b. If both conditions in paragraph 11.a. are not met, then the arrangement for internal-use software is considered a service contract.

12. For hosting arrangements that are not service contracts, reporting entities shall account for any internal-use software as follows:

   a. The reporting entity shall recognize an operating or non-operating system software asset for the costs incurred for the software license in accordance with paragraph 3 of this statement. This is a modification from U.S. GAAP in which the asset is recognized as an intangible asset. A liability shall also be recognized if payments for the software license are still required.
b. If the reporting entity has a hosting arrangement that includes both the acquisition of a software asset (pursuant to paragraph 112.a.) and an ongoing hosting arrangement, the reporting entity shall allocate the costs of the arrangement to the different elements. Costs for the ongoing hosting arrangement shall be accounted for in accordance with SSAP No. 22R—Leases.

SSAP No. 43R – Loan-Backed and Structured Securities

31. If the fair value of a loan-backed or structured security is less than its amortized cost basis at the balance sheet date, an entity shall assess whether the impairment is other than temporary. Amortized cost basis includes adjustments made to the cost of an investment for accretion, amortization, collection of cash, previous other-than-temporary impairments recognized as a realized loss (including any cumulative-effect adjustments recognized in accordance with paragraphs 58-60 of this statement).

Description of Issue: Pursuant to the Aug. 14, 2021 referral from the Financial Condition (E) Committee, the discussion involving SSAP No. 71—Policy Acquisition Costs and Commissions, has highlighted that the statutory accounting terminology of “substantive” and “nonsubstantive” to describe statutory accounting revisions being considered by the Statutory Accounting Principles (E) Working Group to the Accounting Practices and Procedures Manual (AP&P Manual) could be misunderstood by users that are not familiar with the specific definitions and intended application of those terms. To avoid the incorrect perception that these terms may reflect the degree of financial impact to companies based on their common usage, the Financial Condition (E) Committee requests that the Statutory Accounting Principles consider updating these terms to prevent future misunderstandings.

Additional Referral Excerpts:

The Financial Condition (E) Committee understands the terms “substantive” and “nonsubstantive” were crafted as part of the statutory accounting principles (SAP) codification, which was finalized in 1998, and were intended to be simple, concise terms to differentiate whether proposed revisions reflect new SAP concepts (substantive) or clarification of existing SAP concepts (nonsubstantive). The source location for the definitions and classification criteria of these terms is the NAIC Policy Statement on Maintenance of Statutory Accounting Principles, but it is noted that the terms and definitions are referred to throughout SAP guidance, other policy statements, issue papers, and agenda items.

The Working Group should consider eliminating “substantive” and “nonsubstantive” and instead refer to the type of revisions in accordance with the general nature in which those terms were intended to reflect. As such a revision that would have previously been considered “substantive” could be referred to as a “New SAP Concept” and a revision that would have previously been considered as “nonsubstantive” could be referred to as a “SAP Clarification.” The Committee is not proposing that the Working Group reassess the classification criteria but is simply requesting terminology changes to prevent future misinterpretations or assessments by others. As such, unless the Working Group believes further revisions are necessary, statutory revisions that would have been previously classified as “nonsubstantive” are anticipated to continue to fall within that definition and be captured under the new terminology as a “SAP Clarification.”

The referral also includes proposed revisions to the NAIC Policy Statement on Maintenance of Statutory Accounting Principles as potential suggestions to incorporate the proposed guidance change. (These proposed edits are shown in the Aug. 26, 2021, proposed edits for exposure.)
Existing Authoritative Literature:

Although the terms “substantive” and “nonsubstantive” are used throughout the AP&P Manual, the source location for the definitions of these terms is the **NAIC Policy Statement on Maintenance of Statutory Accounting Principles**:

**NAIC Policy Statement on Maintenance of Statutory Accounting Principles**

1. Statutory accounting principles (SAP) provide the basis for insurers to prepare financial statements to be filed with and utilized by state insurance departments for financial regulation purposes. Accuracy and completeness of such filings are critical to meaningful solvency monitoring. Accordingly, maintenance of SAP guidance for changes in the industry and changes in regulatory concerns is vital to preserving the usefulness of SAP financial statements.

2. The promulgation of new or revised SAP guidance by the NAIC ultimately requires action of the entire NAIC membership. Responsibility for proposing new or revised SAP guidance will be delegated through the NAIC committee structure to the Accounting Practices and Procedures (E) Task Force (Task Force). The Task Force will charge the Statutory Accounting Principles (E) Working Group (Working Group) with the exclusive responsibility to develop and propose new statements of statutory accounting principles (SSAPs), to revise existing SSAPs, and to issue interpretations.

**Composition of the Statutory Accounting Principles (E) Working Group**

3. The chair of the Task Force shall determine membership of the Working Group subject to approval by the Financial Condition (E) Committee. The Working Group shall be limited in size to no more than 15 members and will include representation from the four zones of the NAIC. Membership shall be vested in the state (until such time as the membership may be changed) but continuity of individuals, to the extent possible, is extremely desirable.

**Development of New or Substantively Revised SSAPs**

4. New SSAPs will be developed to address, but will not be limited to: 1) concepts not previously addressed by a SSAP and that do not fit within the scope of an existing SSAP; 2) concepts that fit within the scope of an existing SSAP, but the Working Group elects to supersede existing SSAPs; and 3) existing concepts that warrant significant revisions. Substantively-revised SSAPs will be developed to address, but will not be limited to: 1) concepts that fit within the accounting topic of an existing SSAP, but have not been addressed by the Working Group; 2) changes to the valuation and/or measurement of an existing SSAP; and 3) modifications to the overall application of existing SSAPs. The decision to undertake development of a new or substantively revised SSAP will rest with the Working Group. New or substantively revised SSAPs will have a specified effective date.

5. Research and drafting of new or substantially revised SSAPs will be performed by NAIC staff under the direction and supervision of the Working Group which may enlist the assistance of interested parties and/or consultants with requisite technical expertise as needed or desired. The first step in developing new and substantially revised SSAPs will commonly be the drafting of an issue paper, which will contain a summary of the issue, a summary conclusion, discussion, and a relevant literature section. Public comments will be solicited on an issue paper (at least one exposure period), and at least one public hearing will be held before the issue paper is converted to a SSAP. Upon approval by the Working Group, all proposed SSAPs will be exposed for public comment for a period commensurate with the length of the draft and the complexities of the issue(s). After a hearing of comments, adoption of new or substantively revised SSAPs (including any amendments from exposure) may be made by simple majority. If no comments are received during the public comment period, the Working Group may adopt the proposal collectively (one motion/vote) with other non-contested positions after the opportunity is given during the hearing to separately discuss the proposal. All new and substantively revised SSAPs must be on the agenda for at least one public hearing before presentation to the Task Force for consideration. Adoption by the Task Force, its parent and the NAIC membership shall be governed by the NAIC bylaws.
6. The Working Group may, by a super majority vote (7 out of 10 members, 8 out of 11 or 12, 9 out of 13, 10 out of 14, and 11 out of 15) elect to: 1) combine the IP and SSAP process, resulting in concurrent exposure of the two documents; 2) expose and adopt revisions to a SSAP prior to the drafting/adoption of the related IP; and/or 3) forego completion of an IP and only proceed with revisions to a substantively revised SSAP.

7. If accounting guidance, reserving standards, asset valuation standards, or any other standards or rules affecting accounting practices and procedures are first developed by other NAIC working groups, task forces, subcommittees, or committees, such proposed guidance, standards or rules shall be presented to the Working Group for consideration. In cases where such guidance has already been subjected to substantial due process (e.g., public comment periods and/or public hearings), the Working Group may elect to shorten comment periods and/or eliminate public hearings, and in such cases, will notify the Task Force of these actions.

Development of Nonsubstantive Revisions to SSAPs

8. Nonsubstantive revisions to SSAP will be developed to address, but will not be limited to: 1) clarification of the intent or application of existing SSAPs; 2) new disclosures and modification of existing disclosures; 3) revisions that do not change the intent of existing guidance; and 4) revisions to Appendix A—Excerpts of NAIC Model Laws to reflect amendments to NAIC adopted model laws and regulations. Research and drafting of nonsubstantive revisions will be performed by NAIC staff under the direction and supervision of the Working Group. Public comment will be solicited on nonsubstantive revisions, and the item will be included on the agenda for at least one public hearing before the Working Group adopts nonsubstantive revisions. Nonsubstantive revisions are considered effective immediately after adoption by the Working Group, unless the Working Group incorporates a specific effective date. If comments are not received during the public comment period, the Working Group may adopt the proposal collectively (one motion/vote) with other “non-contested” positions after opportunity is given during the hearing to separately discuss the proposal. At its discretion, the Working Group may request that an issue paper be drafted for nonsubstantive revisions in order to capture historical discussion and adopted revisions. Adoption of nonsubstantive revisions by the Task Force, its parent and the NAIC membership shall be governed by the NAIC bylaws.

Development of Interpretations to SSAPs and Referencing Interpretations Within SSAPs

Interpretations Which DO NOT Amend, Supersede or Conflict with Existing SSAPs

9. Interpretations may be developed to address issues requiring timely application or clarification of existing SSAP, which shall not amend, supersede or conflict with effective SSAPs. Issues being considered as an interpretation must be discussed at no less than two open meetings. (Original introduction of the issue when the Working Group identifies the intent to address the issue as an “interpretation” during a public discussion is considered the first open meeting discussion.) The process must allow opportunity for interested parties to provide comments, but as interpretations are intended to provide timely responses to questions of application or interpretation and clarification of guidance, no minimum exposure timeframe is required.

10. As these interpretations do not amend, supersede or conflict with existing SSAP guidance, the interpretation is effective upon Working Group adoption unless specifically stated otherwise. The voting requirement to adopt an interpretation of this type is a simple majority. The Working Group shall report the adopted interpretation to the Accounting Practices and Procedures (E) Task Force as part of its public report during the next NAIC national meeting (or earlier if applicable). Interpretations can be overturned, amended or deferred by a two-thirds majority of the Task Force membership. For clarification, a two-thirds majority of the Task Force requires two-thirds of the entire Task Force membership, not just those electing to vote. Additionally, interpretations can be overturned, amended, deferred, or referred to either the Task Force and/or the Working Group by a simple majority of the Financial Condition (E) Committee.
Interpretations Which Amend, Supersede or Conflict with Existing SSAPs

11. In certain circumstances such as catastrophes and other time-sensitive issues requiring immediate, temporary statutory accounting guidance, the Working Group may adopt an interpretation which creates new SAP or conflicts with existing SSAPs. Historically, these interpretations temporarily modified statutory accounting principles and/or specific disclosures were developed in response to nationally significant events (e.g., Hurricane Sandy, September 11, 2001). (Examples of time-sensitive issues that have previously provided INT exceptions to SAP include the transition from LIBOR and special situations such as the federal TALF program.) Interpretations that conflict with existing SSAPs shall be temporary and restricted to circumstances arising from the need to issue guidance for circumstances requiring immediate guidance. In order to adopt an interpretation that creates new SAP or conflicts with existing SSAPs, the Working Group must have 67% of its members voting (10 out of 15 members) with a super majority (7 out of 10, 8 out of 11 or 12, 9 out of 13, 10 out of 14, or 11 out of 15) supporting adoption.

   a. These interpretations are effective upon Working Group adoption, unless stated otherwise, and shall be reported to the Accounting Practices and Procedures (E) Task Force as part of its public report during the next NAIC national meeting (or earlier if applicable). In circumstances where the Working Group adopts an interpretation (which creates new SAP or conflicts with existing SSAPs) that is controversial in nature (i.e., due to regulator or industry feedback or could have a policy level impact), the Working Group may elect to postpone the effective date until the item has been discussed by the Task Force and the Financial Condition (E) Committee and both have had an opportunity to review the interpretation.

   b. These interpretations can be overturned, amended or deferred by a two-thirds majority of the Task Force membership. For clarification, a two-thirds majority of the Task Force requires two-thirds of the entire Task Force membership, not just those electing to vote. Additionally, interpretations can be overturned, amended, deferred, or referred to either the Task Force and/or the Working Group by a simple majority of the Financial Condition (E) Committee.

12. As new SSAPs are developed, it is essential to review and, if necessary, update the status of interpretations related to SSAPs that are being replaced and/or new SSAPs being developed. The following options are available to the Working Group when a SSAP with existing interpretations is replaced:

   a. Interpretation of the new SSAP - If the Working Group would like to maintain the interpretation, the new SSAP can be added to the list of statements interpreted by the interpretation. In addition, the status section of the new SSAP will list the interpretation number next to the heading “Interpreted by.”

   b. Nullification - When an interpretation is nullified by a subsequent SSAP or superseded by another interpretation, the interpretation is deemed no longer technically helpful, is shaded and moved to Appendix H (Superseded SSAPs and Nullified Interpretations), and the reason for the change is noted beneath the interpretation title. The status section of the SSAP describes the impact of the new guidance and the effect on the interpretation (for example, nullifies, incorporated in the new SSAP with paragraph reference, etc.).

   c. Incorporation - When an interpretation is incorporated into a new SSAP, the Working Group can choose from the following two options:

      i. If the interpretation only interprets one SSAP, then the interpretation is listed as being nullified under the “affects” section of the SSAP and is not referenced under the “interpreted by” section of the status page of the SSAP.
ii. If the interpretation references additional SSAPs, and the Working Group intends to maintain the guidance, the interpretation is unchanged (no nullification). The new SSAP (Summary of Issue section) reflects that the interpretation issue has been incorporated into the new statement.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing and expose revisions to the NAIC Policy Statement on Maintenance of Statutory Accounting Principles, as suggested by the Financial Condition (E) Committee in their Aug. 14, 2021, referral, to alter the terminology used when discussing types of statutory accounting revisions.

Due to the extent that these terms are currently used throughout the AP&P Manual, upon adoption of this terminology change, NAIC staff will utilize the new terminology on a go-forward basis. These updates will be limited to the guidance that describes the use of these terms and will not capture previously adopted SSAPs, issue papers or agenda items. The terms used in previously adopted guidance will remain, with the new terms being used prospectively when considering future revisions to statutory accounting.

NAIC Policy Statement on Maintenance of Statutory Accounting Principles

1. Statutory accounting principles (SAP) provide the basis for insurers to prepare financial statements to be filed with and utilized by state insurance departments for financial regulation purposes. Accuracy and completeness of such filings are critical to meaningful solvency monitoring. Accordingly, maintenance of SAP guidance for changes in the industry and changes in regulatory concerns is vital to preserving the usefulness of SAP financial statements.

2. The promulgation of new or revised SAP guidance by the NAIC ultimately requires action of the entire NAIC membership. Responsibility for proposing new or revised SAP guidance will be delegated through the NAIC committee structure to the Accounting Practices and Procedures (E) Task Force (Task Force). The Task Force will charge the Statutory Accounting Principles (E) Working Group (Working Group) with the exclusive responsibility to develop and propose new statements of statutory accounting principles (SSAPs), to revise existing SSAPs, and to issue interpretations.

Composition of the Statutory Accounting Principles (E) Working Group

3. The chair of the Task Force shall determine membership of the Working Group subject to approval by the Financial Condition (E) Committee. The Working Group shall be limited in size to no more than 15 members and will include representation from the four zones of the NAIC. Membership shall be vested in the state (until such time as the membership may be changed) but continuity of individuals, to the extent possible, is extremely desirable.
Development of New **SSAPs** or **New SAP Concepts** in an Existing SSAP

### Development of New SSAPs or New SAP Concepts in an Existing SSAP

4. New SSAPs will be developed to address, but will not be limited to: 1) concepts not previously addressed by a SSAP and that do not fit within the scope of an existing SSAP; 2) concepts that fit within the scope of an existing SSAP, but the Working Group elects to supersede existing SSAPs and 3) existing concepts that warrant significant revisions. Substantively revised New SAP concepts to existing SSAPs will be developed to address, but will not be limited to: 1) concepts that fit within the accounting topic of an existing SSAP, but have not been addressed by the Working Group; 2) changes to the valuation and/or measurement of an existing SSAP; and 3) modifications to the overall application of existing SSAPs. The decision to undertake development of a new SSAP or substantively a new SAP concept in an existing revised SSAP will rest with the Working Group. New SSAPs or substantively new SAP concept in an existing revised SSAPs will have a specified effective date.

5. Research and drafting of a new SSAP or substantially a new SAP concept in an existing revised SSAP will be performed by NAIC staff under the direction and supervision of the Working Group which may enlist the assistance of interested parties and/or consultants with requisite technical expertise as needed or desired. The first step in developing new SSAPs and substantively new SAP concepts in existing revised SSAPs will commonly be the drafting of an issue paper, which will contain a summary of the issue, a summary conclusion, discussion, and a relevant literature section. Public comments will be solicited on an issue paper (at least one exposure period), and at least one public hearing will be held before the issue paper is converted to a SSAP. Upon approval by the Working Group, all proposed SSAPs will be exposed for public comment for a period commensurate with the length of the draft and the complexities of the issue(s). After a hearing of comments, adoption of new SSAPs or new SAP concepts in existing substantially revised SSAPs (including any amendments from exposure) may be made by simple majority. If no comments are received during the public comment period, the Working Group may adopt the proposal collectively (one motion/vote) with other non-contested positions after the opportunity is given during the hearing to separately discuss the proposal. All new SSAPs and substantively revised new SAP concepts in existing SSAPs must be on the agenda for at least one public hearing before presentation to the Task Force for consideration. Adoption by the Task Force, its parent and the NAIC membership shall be governed by the NAIC bylaws.

6. The Working Group may, by a super majority vote (7 out of 10 members, 8 out of 11 or 12, 9 out of 13, 10 out of 14, and 11 out of 15) elect to: 1) combine the IP and SSAP process, resulting in concurrent exposure of the two documents; 2) expose and adopt revisions to a SSAP prior to the drafting/adoption of the related IP; and/or 3) forego completion of an IP and only proceed with a new SSAP or new SAP concepts in an existing revisions to a substantially revised SSAP.

7. If accounting guidance, reserving standards, asset valuation standards, or any other standards or rules affecting accounting practices and procedures are first developed by other NAIC working groups, task forces, subcommittees, or committees, such proposed guidance, standards or rules shall be presented to the Working Group for consideration. In cases where such guidance has already been subjected to substantial due process (e.g., public comment periods and/or public hearings), the Working Group may elect to shorten comment periods and/or eliminate public hearings, and in such cases, will notify the Task Force of these actions.

### Development of SAP Clarifications Nonsubstantive Revisions to SSAPs

8. **SAP clarifications** Nonsubstantive revisions to SAP will be developed to address, but will not be limited to: 1) clarification of the intent or application of existing SSAPs; 2) new disclosures and modification of existing disclosures; 3) revisions that do not change the intent of existing guidance; and 4) revisions to Appendix A—Excerpts of NAIC Model Laws to reflect amendments to NAIC adopted model laws and regulations. Research and drafting of SAP clarification nonsubstantive revisions will be performed by NAIC staff under the direction and supervision of the Working Group. Public comment will be solicited on
nonsubstantive these revisions, and the item will be included on the agenda for at least one public hearing before the Working Group adopts nonsubstantive revisions. Nonsubstantive SAP clarification revisions are considered effective immediately after adoption by the Working Group, unless the Working Group incorporates a specific effective date. If comments are not received during the public comment period, the Working Group may adopt the proposal collectively (one motion/vote) with other “non-contested” positions after opportunity is given during the hearing to separately discuss the proposal. At its discretion, the Working Group may request that an issue paper be drafted for nonsubstantive SAP clarification revisions in order to capture historical discussion and adopted revisions. Adoption of nonsubstantive these revisions by the Task Force, its parent and the NAIC membership shall be governed by the NAIC bylaws.

New Footnote 1: Prior to (adoption date), the term used to describe a new SAP concept was “substantive” and the term used to describe a SAP clarification was “nonsubstantive.” The new terms will be reflected in materials to describe revisions to statutory accounting principles on a prospective basis and historical documents will not be updated to reflect the revised terms.

Development of Interpretations to SSAPs and Referencing Interpretations Within SSAPs

Interpretations Which DO NOT Amend, Supersede or Conflict with Existing SSAPs

9. Interpretations may be developed to address issues requiring timely application or clarification of existing SAP, which shall not amend, supersede or conflict with effective SSAPs. Issues being considered as an interpretation must be discussed at no less than two open meetings. (Original introduction of the issue when the Working Group identifies the intent to address the issue as an “interpretation” during a public discussion is considered the first open meeting discussion.) The process must allow opportunity for interested parties to provide comments, but as interpretations are intended to provide timely responses to questions of application or interpretation and clarification of guidance, no minimum exposure timeframe is required.

10. As these interpretations do not amend, supersede or conflict with existing SSAP guidance, the interpretation is effective upon Working Group adoption unless specifically stated otherwise. The voting requirement to adopt an interpretation of this type is a simple majority. The Working Group shall report the adopted interpretation to the Accounting Practices and Procedures (E) Task Force as part of its public report during the next NAIC national meeting (or earlier if applicable). Interpretations can be overturned, amended or deferred by a two-thirds majority of the Task Force membership. For clarification, a two-thirds majority of the Task Force requires two-thirds of the entire Task Force membership, not just those electing to vote. Additionally, interpretations can be overturned, amended, deferred, or referred to either the Task Force and/or the Working Group by a simple majority of the Financial Condition (E) Committee.

Interpretations Which Amend, Supersede or Conflict with Existing SSAPs

11. In certain circumstances such as catastrophes and other time-sensitive issues requiring immediate, temporary statutory accounting guidance, the Working Group may adopt an interpretation which creates new SAP or conflicts with existing SSAPs. Historically, these interpretations temporarily modified statutory accounting principles and/or specific disclosures were developed in response to nationally significant events (e.g., Hurricane Sandy, September 11, 2001). (Examples of time-sensitive issues that have previously provided INT exceptions to SAP include the transition from LIBOR and special situations such as the federal TALF program.) Interpretations that conflict with existing SSAPs shall be temporary and restricted to circumstances arising from the need to issue guidance for circumstances requiring immediate guidance. In order to adopt an interpretation that creates new SAP or conflicts with existing SSAPs, the Working Group must have 67% of its members voting (10 out of 15 members) with a super majority (7 out of 10, 8 out of 11 or 12, 9 out of 13, 10 out of 14, or 11 out of 15) supporting adoption.
Ref #2021-14

a. These interpretations are effective upon Working Group adoption, unless stated otherwise, and shall be reported to the Accounting Practices and Procedures (E) Task Force as part of its public report during the next NAIC national meeting (or earlier if applicable). In circumstances where the Working Group adopts an interpretation (which creates new SAP or conflicts with existing SSAPs) that is controversial in nature (i.e., due to regulator or industry feedback or could have a policy level impact), the Working Group may elect to postpone the effective date until the item has been discussed by the Task Force and the Financial Condition (E) Committee and both have had an opportunity to review the interpretation.

b. These interpretations can be overturned, amended or deferred by a two-thirds majority of the Task Force membership. For clarification, a two-thirds majority of the Task Force requires two-thirds of the entire Task Force membership, not just those electing to vote. Additionally, interpretations can be overturned, amended, deferred, or referred to either the Task Force and/or the Working Group by a simple majority of the Financial Condition (E) Committee.

12. As new SSAPs are developed, it is essential to review and, if necessary, update the status of interpretations related to SSAPs that are being replaced and/or new SSAPs being developed. The following options are available to the Working Group when a SSAP with existing interpretations is replaced:

a. Interpretation of the new SSAP - If the Working Group would like to maintain the interpretation, the new SSAP can be added to the list of statements interpreted by the interpretation. In addition, the status section of the new SSAP will list the interpretation number next to the heading “Interpreted by.”

b. Nullification - When an interpretation is nullified by a subsequent SSAP or superseded by another interpretation, the interpretation is deemed no longer technically helpful, is shaded and moved to Appendix H (Superseded SSAPs and Nullified Interpretations), and the reason for the change is noted beneath the interpretation title. The status section of the SSAP describes the impact of the new guidance and the effect on the interpretation (for example, nullifies, incorporated in the new SSAP with paragraph reference, etc.).

c. Incorporation - When an interpretation is incorporated into a new SSAP, the Working Group can choose from the following two options:

i. If the interpretation only interprets one SSAP, then the interpretation is listed as being nullified under the “affects” section of the SSAP and is not referenced under the “interpreted by” section of the status page of the SSAP.

ii. If the interpretation references additional SSAPs, and the Working Group intends to maintain the guidance, the interpretation is unchanged (no nullification). The new SSAP (Summary of Issue section) reflects that the interpretation issue has been incorporated into the new statement.

Staff Review Completed by: Julie Gann, NAIC Staff – August 2021

Status:
On August 26, 2021, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to the NAIC Policy Statement on Maintenance of Statutory Accounting Principles, as illustrated above and suggested by the Financial Condition (E) Committee in their Aug. 14, 2021, referral, to alter the terminology used when discussing types of statutory accounting revisions.
On December 11, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to the *NAIC Policy Statement on Maintenance of Statutory Accounting Principles*, as illustrated above and suggested by the Financial Condition (E) Committee in their Aug. 14, 2021, referral. The revisions alter the terminology used when discussing types of statutory accounting revisions and are effective Jan. 1, 2022. Editorial revisions to update the use of the terms in other areas of the AP&P Manual, on a prospective basis, are being addressed separately in agenda item 2021-26EP.

https://naiconline.sharepoint.com/sites/NAICSupportStaffHub/Member Meetings/Fall 2021/TF/App/SAP/Minutes/Att One-L_21-14_SAP Terminology.docx
The Blanks (E) Working Group of the Accounting Practices and Procedures (E) Task Force met Nov. 16, 2021. The following Working Group members participated: Jake Garn, Chair (UT); Kim Hudson, Vice Chair (CA); William Arfanis (CT); N. Kevin Brown (DC); Tom Hudson (DE); Carolyn Morgan (FL); Daniel Mathis (IA); Roy Eft (IN); Judy Weaver (MI); Debbie Doggett (MO); Justin Schrader (NE); Patricia Gosselin (NH); Dale Bruggeman and Tracy Snow (OH); Diane Carter (OK); Melissa Greiner and Kimberly Rankin (PA); Trey Hancock (TN); Shawn Frederick and Jamie Walker (TX); Steve Drutz (WA); Adrian Jaramillo (WI); and Jamie Taylor (WV).

1. **Adopted its July 22 Minutes**

Mr. Garn said the Blanks (E) Working Group met July 22 and took the following action: 1) adopted proposal 2021-10BWG removing language in quarterly General Interrogatories Part 1, line 4.1 that requires filing of a quarterly merger/history form while still requiring the annual form; 2) adopted its editorial listing; 3) adopted the Health Actuarial Statement of Opinion Guidance for the 2021 reporting year; and 4) deferred four proposals for additional discussion for a 90-day public comment period ending Oct. 22.

Mr. Hudson made a motion, seconded by Ms. Gosselin, to adopt the Working Group’s July 22 minutes (see *NAIC Proceedings – Summer 2021, Accounting Practices and Procedures (E) Task Force, Attachment Two*). The motion passed unanimously.

2. **Withdraw an Item Previously Deferred**

a. **Agenda Item 2021-12BWG**

Mr. Drutz stated that this proposal makes changes to the Analysis of Operations by Lines of Business - Accident and Health for Life/Fraternal to capture health specific data captured on the Heath Analysis of Operations by Lines of Business but not on the Life/Fraternal Analysis of Operations page and add new crosschecks for the new lines.

Mr. Drutz stated that there were a lot of comments and discussions with interested parties on this proposal during the comment period. This proposal was modified from its original presentation but not modified during this latest comment period. Mr. Drutz stated that since he is proposing a replacement proposal—2021-17BWG—to be exposed at this meeting, he asked to withdraw this proposal. Mr. Garn stated that since Mr. Drutz is the proposal sponsor, he can withdraw without the need for a motion.

3. **Deferred a Proposal**

a. **Agenda Item 2021-13BWG**

Ms. Gosselin stated that this proposal adds a new supplement—Exhibit of Premiums and Losses (State Page) – Other Liability—to the property/casualty (P/C) blank to capture premium and loss data for annual statement line 17.1, line 17.2, and line 17.3. The purpose is to provide state insurance regulators with greater detail on business reported in the aggregate “other liability” category. The anticipated effective date is annual 2022. Ms. Gosselin stated that the proposal was modified from its original presentation at the last meeting to change incurred but not reported (IBNR) to “case reserves” and re-exposed to allow additional time for comments and discussion.

Ms. Gosselin stated that there were two comment letters received during the deferral/re-exposure period. Some of the comments included concerns over the cost to prepare versus benefits, recommendations to reduce format rationale for a reduction in the number of columns, and the basis of the category lines used in the proposal. Interested parties provided comments on how products are constructed in the data captured by industry. Ms. Gosselin stated that interested parties asked for deferral of this item and another re-exposure to allow additional time to evaluate the proposed alternative changes to the P/C annual statement.

Tip Tipton (Thrivent Financial) stated that interested parties have held a couple of meetings with state insurance regulators and NAIC staff to discuss this proposal. He stated that interested parties would appreciate being given additional time to determine an optimal solution to identify the inherent risks associated with the other liability category.
Ms. Gosselin made a motion, seconded by Mr. Hudson, to defer the proposal to allow for additional discussion. The motion passed unanimously.

4. **Adopted a Proposal Previously Deferred**
   
   a. **Agenda Item 2021-14BWG**
   
   Mr. Frederick stated that this proposal expands the number of lines of business reported on Schedule H to match the lines of business reported on the Health Statement. It modifies the instructions to be uniform between life/fraternal and P/C. Mr. Frederick stated that this proposal was modified with some line and column editorial corrections identified during the comment period.

   Mr. Frederick made a motion, seconded by Mr. Hudson, to adopt the proposal with the editorial revisions (Attachment Two-A). The motion passed unanimously.

5. **Rejected a Proposal Previously Deferred**
   
   a. **Agenda Item 2021-11BWG**
   
   This proposal adds the data capture elements of direct written exposures and direct earned exposures for the personal lines of business of homeowners and private passenger auto (PPA) to the P/C annual and quarterly statements. Birny Birnbaum (Center for Economic Justice—CEJ) stated that during the re-exposure/deferral period, interested parties reiterated their concerns expressed at the Working Group’s July 22 meeting. He stated that since the deferral, a memorandum has been received from the Financial Analysis (E) Working Group in which it states that there to be no value for financial analysts. He stated that there was no opportunity for stakeholders to participate in that discussion, so he is unclear as to how that decision was reached.

   Mr. Birnbaum stated that the Casualty Actuarial and Statistical (C) Task Force provided feedback on the proposal, as well as looked at alternatives for calculating the average premium in a more timely manner. He stated that these are not viable alternatives because what they propose is merely an add-on to an antiquated statistical reporting system. It does not leverage the world class financial system. This proposal is consistent with the initiatives of the NAIC State Ahead strategic plan. The current process does not provide company-specific analysis and does not meet the same time frames by a large margin.

   Mr. Birnbaum stated that he disagrees with the interested parties’ comments referring to this as statistical data and not financial data. He stated that there is a variety of information in the financial statements that are not explicit financial data but used indirectly for financial analysis. This proposal adds two measures of exposures that are similar to those found in the life financial statements in terms of covered lives or policies in force, as well as those referenced in other exhibits and schedules within the P/C statement. Mr. Birnbaum stated that this proposal would provide useful and relevant information not just to the regulatory analysts, but also to the public and policymakers.

   Mr. Garn stated that the Blanks (E) Working Group does not typically make policy decisions. The Working Group generally follows the direction of policymaking groups such as the Statutory Accounting Principles (E) Working Group, the Casualty Actuarial and Statistical (C) Task Force, or similar groups. Mr. Garn stated that absent clear direction from a policymaking group, the Blanks (E) Working Group has various options. He stated that it can vote to defer the proposal to allow additional time for discussion or propose a vote and see if a motion, second, and vote results in adoption, rejection, or the proposal not move forward for lack of a motion.

   Mr. Birnbaum stated that the NAIC has a policy that supports this proposal. First, the NAIC publishes average premium for homeowners and automobile coverage in the Casualty Actuarial and Statistical (C) Task Force reports. He states that as a matter of policy, the NAIC has determined that the information is relevant and useful for the public, state insurance regulators, and policymakers. This proposal takes that same policy but makes it more effective by speeding up the access to that information in a way that makes the data useful and usable. Second, this proposal is supported by the NAIC State Ahead initiatives and its broader policy. Mr. Birnbaum stated that the referral to the Task Force was not the relevant entity to ask for an opinion on the policy issue but rather to comment on whether the data conflicted with its statistical reports. He stated that the Market Analysis Procedures (D) Working Group would be the more appropriate group to review this request, as it would be the group that would use the data. He stated that while he would prefer that the Blanks (E) Working Group vote to adopt the proposal, he stated that he is willing to hear suggestions from state insurance regulators that might make the information more useful.
Ms. Walker stated that this proposal appears to be requesting the implementation of a policy change. She suggested that this proposal be referred to the Financial Condition (E) Committee and Property and Casualty Insurance (C) Committee to decide the policy issue and provide direction on whether the Working Group should continue to refine this particular proposal. Ms. Walker made a motion to refer this proposal to the Financial Condition (E) Committee and Property and Casualty Insurance (C) Committee. The motion died for lack of a second. Ms. Walker made a motion to reject the proposal. She suggested that a new proposal could be resubmitted at a later time when there is a policy decision with consensus from a technical committee.

Mr. Tipton stated that he heard collectively from interested parties confirming the opinion that the Working Group is not the appropriate group to decide on this data. He stated that with the comments received from the Casualty Actuarial and Statistical (C) Task Force and Financial Analysis (E) Working Group indicating the lack of support for the proposal, interested parties agree that rejection of this proposal is appropriate at this time.

Rachel Underwood (Cincinnati Insurance Companies) stated that the proposal sponsor agreed that the change would not be needed if the Casualty Actuarial and Statistical (C) Task Force could produce the reports faster. She stated that the Task Force indicated that it is not in favor of quarterly reports, and the averages per exposure do not change quickly nor significantly year-to-year. For historical averages, she has found that the average annual change in auto average premium per exposure from 2009 to 2018 was 3.1% or $32. In looking at a more narrow time range from 2014 to 2018, the average annual change was 4.9% or $52. For homeowners, the average premium exposure from 2013 to 2018 showed an average annual change of 3% or $33. For tenants policies of the same period, there was a decrease of 0.2% or $1. Ms. Underwood stated that the materiality does not justify the expense of having companies report the additional data. She stated that this level of detail is not used in the rate and forms filings. She stated that her company sends their data files to a third-party statistical agent, who is also a data contributor to the Task Force reports, which calculates the exposure counts.

Ms. Underwood indicated that the implementation project is estimated at approximately $300,000 over at least a six-month period. Over 2,500 P/C company statements are rolled into hundreds of filing groups. Assuming this would affect even 200 of these groups, she suggested the estimated cost to the industry being $60 million. She expressed concerns with the quality of the data.

Mr. Birnbaum stated that he has concerns with the accuracy of the figures quoted by Ms. Underwood. Mr. Garn stated that those discussions should be held at a technical group level and not with the Blanks (E) Working Group.

Ms. Walker made a motion, seconded by Mr. Mathis, to reject the proposal. The motion passed with Mr. Hudson and Mr. Arfanis opposed.

6. Exposed New Items

a. Agenda Item 2021-15BWG

Mr. Bruggeman stated that this blanks proposal is in response to the Statutory Accounting Principles (E) Working Group agenda item 2021-16. This agenda item was exposed by the Working Group and will be considered for adoption at the Fall National Meeting. The agenda item is in direct response to state insurance regulator comments stating that it is not feasible to identify where Federal Home Loan Bank (FHLB) funding agreements are captured in Exhibit 7: Deposit Type Contracts. As FHLB funding agreements can be captured on different types of deposit-type contract policy forms (e.g., as a guaranteed investment contracts, annuity certain, or other deposit funds), funding agreements can be reported differently on Exhibit 7 among reporting entities. Mr. Bruggeman stated that to preserve the current reporting on Exhibit 7 by type of policy form and obtain information on where FHLB funding agreements are captured, this blanks proposal proposes a new footnote to capture the FHLB funding agreement in each reporting category. He stated that although exposure of the blanks proposal is occurring before the Working Group considers adoption of agenda item 2021-16, any changes that might be made to its agenda item at the Fall National Meeting will be communicated to the Blanks (E) Working Group prior to it considering adoption of this item.

Hearing no objection from the Blanks (E) Working Group, the proposal was exposed for a public comment period ending March 4, 2022.

b. Agenda Item 2021-16BWG

Mr. Bruggeman stated that this blanks proposal is not in response to any current revisions nor issues being considered by the Statutory Accounting Principles (E) Working Group, but it reflects clarification to existing disclosures captured in Statement...
of Statutory Accounting Principles (SSAP) No. 101—Income Taxes and SSAP No. 22R—Leases. Revisions to the blanks only intend to clarify the instructions for reporting, result in consistency between the data-capture disclosure and the portable document format (PDF) submission, clarify the reporting of future lease payments.

Hearing no objection from the Blanks (E) Working Group, the proposal was exposed for a public comment period ending March 4, 2022.

c. **Agenda Item 2021-17BWG**

Mr. Drutz stated that this proposal replaces 2021-12BWG and modifies the Analysis of Operations by Lines of Business in the Health Blank to include all of health lines of business included in the Life/Fraternal Analysis of Operations by Lines of Business – Accident and Health. He stated that the proposal adds instructions for the new columns and adjusts the column references. It adds the Health Blank Analysis of Operations by Lines of Business as a supplement to the Life/Fraternal Blank with the appropriate instructions and crosschecks. It adds crosschecks to the Health Blank Analysis of Operations by Lines of Business to the Life/Fraternal Analysis of Operations by Lines of Business – Accident and Health instructions.

Hearing no objection from the Blanks (E) Working Group, the proposal was exposed for a public comment period ending March 4, 2022.

d. **Agenda Item 2021-18BWG**

Ms. Walker stated that this proposal modifies the Life Insurance exhibit (State Page) to include the line of business detail reported on the Analysis of Operations by Lines of Business pages. Two new Schedule T style pages, Exhibit of Claims Settled During the Current Year and Policy Exhibit, are created to include detail captured by state on the existing Life Insurance exhibit (State Page) that could not be included due to space restrictions. It adds definitions for life and annuity products to the lines of business definitions in the health appendix.

Hearing no objection from the Blanks (E) Working Group, the proposal was exposed for a public comment period ending March 4, 2022.

e. **Agenda Item 2021-19BWG**

Mr. Drutz stated that this proposal adds columns and lines to Underwriting and Investment Exhibits, Parts 1, 2, 2A, 2B, and 2D and the Exhibit of Premiums, Enrollment, and Utilization in the annual statement, bringing the lines of business reporting in line with Life/Fraternal and P/C. It adds columns and lines to the Exhibit of Premiums, Enrollment, and Utilization and Underwriting and Investment analysis of Claims Unpaid quarterly pages. The appropriate adjustments to the instructions are also being made.

Hearing no objection from the Blanks (E) Working Group, the proposal was exposed for a public comment period ending March 4, 2022.

f. **Agenda Item 2021-20BWG**

Mr. Garn stated that this proposal, beginning at line 72 of the Life/Fraternal Five-Year Historical, adds or deletes lines that do not pull in the specific lines of business reported on the Life/Fraternal Analysis of Operations by Lines of Business detail pages for life (individual and group), annuities (individual and group), and Accident and Health for line 33 of those pages.

Hearing no objection from the Blanks (E) Working Group, the proposal was exposed for a public comment period ending March 4, 2022.

g. **Agenda Item 2021-21BWG**

Mr. Bruggeman stated that this blanks proposal is sponsored by the Statutory Accounting Principles (E) Working Group and coincides with the revisions adopted at its Nov. 10 meeting to clarify the reporting of residual tranches. He stated that a residual tranche, pursuant to the definition adopted in SSAP No. 43R—Loan-Backed and Structured Securities, intends to capture securitization tranches and beneficial interests as well as other structures captured in scope of SSAP No. 43R, that reflect loss layers without any contractual payments, whether principal or interest, or both. He stated that payments to holders of these
investments occur after contractual interest and principal payments have been made to other tranches or interests and are based on the remaining available funds. Although payments to holders can occur throughout an investment’s duration and not just at maturity, such instances still reflect the residual amount permitted to be distributed after other holders have received contractual interest and principal payments.

Mr. Bruggeman stated that the revisions adopted by the Statutory Accounting Principles (E) Working Group at its Nov. 10 meeting confirm that residual tranches, although in scope of SSAP No. 43R, are required to be reported on Schedule BA and not Schedule D Part 1 beginning Dec. 31, 2022. This guidance permits reporting entities to continue reporting residual tranches on Schedule BA and permits entities that have historically reported on Schedule D Part 1, to move residual tranches to Schedule BA in advance of the effective date.

Mr. Bruggeman stated that this blanks proposal requests the establishment of specific reporting lines on Schedule BA to capture residual tranches for year-end 2022. As detailed in the proposal, it is requested that reporting lines separate residual tranches based on the type of underlying characteristics of fixed income, common stock, real estate, mortgage loans, or other. These categories are consistent with what is used for investments in scope of SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies.

Mr. Bruggeman stated that reporting entities that already report residual tranches on Schedule BA are permitted to continue using the prior reporting location already utilized, and entities that elect to move residual tranches to Schedule BA for year-end 2021 are also permitted to utilize the reporting line currently available on Schedule BA in determining the best reporting location based on the characteristics of the instrument. Effective Dec. 31, 2022, all residual tranches will be expected to be captured on the distinct reporting lines created for these items.

Mr. Bruggeman stated that the blanks proposal included in the meeting materials was developed before the adoption of agenda item 2021-15 by the Statutory Accountings Principles (E) Working Group. With adoption, the Working Group considered industry-requested editorial changes to the SSAP No. 43R definition of residual tranches. These revisions include deleting the reference to “non-rated” when describing residual interests and the removal of “interests of structured finance investments” from the definition. These revisions are considered editorial in nature, and it is requested that corresponding edits be reflected in the blanks proposal prior to exposure.

Hearing no objection from the Blanks (E) Working Group, the proposal was exposed for a public comment period ending March 4, 2022.

7. Adopted the Editorial Listing

Mr. Hudson made a motion, seconded by Ms. Gosselin, to adopt the Blanks (E) Working Group editorial listing (Attachment Two-B). The motion passed unanimously.

8. Approved the State Filing Checklists

Ms. Greiner made a motion, seconded by Ms. Doggett, to approve the State Filing Checklist templates (Attachment Two-C). The motion passed unanimously.

9. Discussed Other Matters

Mr. Tipton stated that there is a group of interested parties, especially on the health side, evaluating what is perceived to be a redundancy of health data, not only within the life blank but also in the P/C and health blanks. This group is putting together a document to begin this discussion between industry and state insurance regulators.

Mr. Bruggeman referenced a Nov. 10 memorandum from the Statutory Accounting Principles (E) Working Group and Valuation of Securities (E) Task Force to the Blanks (E) Working Group intending to notify the Blanks (E) Working Group and interested parties on the reporting of residual tranches retained on Schedule D-1: Long-Term Bonds for year-end 2021. As part of the bond proposal project, it was identified that there is inconsistency in practice with how residual tranches or interests are reported within the investment schedules, with some entities reporting on Schedule BA: Other Invested Assets and other entities reporting on Schedule D-1, with either a self-assigned NAIC 5GI or NAIC 6 designation. The Working Group confirmed with the Securities Valuation Office (SVO) that use of the NAIC 5GI process for residual tranches is an inaccurate application, and residual tranches or interests reported on Schedule D-1 shall be reported with an NAIC 6 designation.
The NAIC 5GI process, noted in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual), permits entities to self-assign an NAIC 5 when they can certify the following three components: 1) documentation necessary to permit a full credit analysis of the security does not exist, or an NAIC credit rating provider (CRP) rating for a filing exempt (FE) or private letter (PL) security is not available; 2) the issuer or obligor is current on all contracted interest and principal payments; and 3) the insurer has an actual expectation of ultimate payment of all contracted interest and principal payments. Mr. Bruggeman stated that use of the NAIC 5GI process for residual investments is an incorrect application of the guidance, as: 1) there are no contracted interest and principal payments to certify as current; and 2) the insurer cannot have an actual expectation of receiving all contractual principal and interest of the underlying collateral, as these tranches absorb the losses first for the securitization structure. Although cash flows may pass through to these holders at periodic intervals in the waterfall, ultimate returns depend on continued performance; therefore, there can be no actual expectation that future payments will be received. The Valuation of Securities (E) Task Force is currently incorporating edits to mitigate future misapplication of the NAIC 5GI process for residual tranches.

Mr. Bruggeman stated that although the action taken by the Statutory Accounting Principles (E) Working Group will require residual tranches or interests to be reported on Schedule BA for year-end 2022, these items can be retained on Schedule D Part 1 for year-end 2021. However, if retained on Schedule D Part 1, the reporting entity should record an NAIC 6 designation.

Mr. Garn stated that he would be resigning his position as chair of the Blanks (E) Working Group, effective Dec. 31. He stated that after serving a 14-year term, it is time for someone new to assume the chair position. He named his replacement as Ms. Gosselin.

Having no further business, the Blanks (E) Working Group adjourned.

Anticipated Effective Date: Annual 2022

**IDENTIFICATION OF ITEM(S) TO CHANGE**

Expanded the number of lines of business reported on Schedule H to match the lines of business reported on the Health Statement. Modified the instructions so they will be uniform between life/fraternal and property.

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of the proposal is to bring uniformity in the accident and health lines of business used on Schedule H with other schedules and exhibits in the annual statement.

**NAIC STAFF COMMENTS**

Comment on Effective Reporting Date: ________________________________

Other Comments:

** This section must be completed on all forms.
ANNUAL STATEMENT INSTRUCTIONS – LIFE\FRATERNAL

SCHEDULE H

ACCIDENT AND HEALTH EXHIBIT

Life/Fraternal: “Appropriately” where used in the Instructions for Schedule H, means the appropriate accident and health portions of referenced data. Reconciliation with figures drawn from other parts of the statement may only be possible with respect to Group Accident and Health (Column 3), Credit (Group and Individual) Accident and Health (Column 5) and Other Accident and Health (the combination of Columns 7 through 17), and, in some cases, may only be possible with respect to Total Accident and Health (Column 1) of Schedule H – Accident and Health Exhibit.

For definitions of lines of business, see the appendix of these instructions.

All amounts reportable in Parts 1 through 3 are net of reinsurance ceded, i.e., reinsurance assumed should be included, reinsurance ceded should be deducted, and net figures entered in the statement. Part 4, “Reinsurance,” displays the reinsurance assumed and ceded components.

Column 5 ——— Credit Accident and Health (Group and Individual)

Include: Business not exceeding 120 months duration.

This column is not applicable to Fraternal Benefit Societies.

Column 7 ——— Collectively Renewable

Include: Amounts pertaining to policies/certificates that are made available to groups of persons under a plan sponsored by an employer, or an association or a union of affiliated associations or unions, or a group of individuals supplying materials to a central point of collection or handling a common product or commodity, under which the reporting entity has agreed with respect to such policies/certificates that renewal will not be refused, subject to any specified age limit, while the reporting entity remains a member of the group specified in the agreement unless the reporting entity simultaneously refuses renewal to all other policies/certificates in the same group. A sponsored plan shall not include any arrangement where a reporting entity’s customary individual policies/certificates are made available without special underwriting considerations, and where the employer’s participation is limited to arranging for salary allotment premium payments with or without contribution by the employer. Such plans are sometimes referred to as payroll budget or salary allotment plans. A sponsored plan may be administered by an agent or trustee.

Amounts pertaining to policies/certificates issued by a company or group of companies under a plan, other than a group insurance plan, authorized by special legislation for the exclusive benefit of the aged through mass enrollment.

Amounts pertaining to policies/certificates issued under mass enrollment procedures to older people, such as those age 65 and over, in some geographic region or regions under which the reporting entity has agreed with respect to such policies/certificates that renewal will not be refused unless the reporting entity simultaneously refuses renewal to all other policies/certificates specified in the agreement.
Column 9 — Non-cancelable

Include: Amounts pertaining to policies/certificates that are guaranteed renewable for life or to a specified age, such as 60 or 65, at guaranteed premium rates.

Column 11 — Guaranteed Renewable

Include: Amounts pertaining to policies/certificates that are guaranteed renewable for life or to a specified age, such as 60 or 65, but under which the reporting entity reserves the right to change the scale of premium rates.

Column 13 — Non-renewable for Stated Reasons Only

Include: Amounts pertaining to policies/certificates in which the reporting entity has reserved the right to cancel or refuse renewal for one or more stated reasons, but has agreed implicitly or explicitly that, prior to a specified time or age, it will not cancel or decline renewal solely because of deterioration of health after issue.

Column 17 — All Other

Include: Any other accident and health coverages not specifically required in other columns. All Medicare Part D Prescription Drug Coverage, whether sold on a stand-alone basis or through a Medicare Advantage product and whether sold directly to an individual or through a group.

PART 1 – ANALYSIS OF UNDERWRITING OPERATIONS

In each % column of Part 1, show the percentage of Line 2 for Lines 3 through 14 inclusive.

Line 1 — Premiums Written

Life/Fraternal: Column 1 should agree with Schedule T, Column 4 Line 97 minus Line 98 if prepared on a written basis.

Property: Column 1 should agree with Underwriting and Investment Exhibit, Part 1B sum of Lines 13 through 15 (Column 1 + 2 + 3).

Columns 3, 5, 7, 9, 11, 13, 15, 17, 19, 21, 23 and 25 should agree with Underwriting and Investment Exhibit, Part 1B Column 1 + 2 + 3 Lines 13.1, 13.2, 14, 15.1, 15.2, 15.3, 15.4, 15.5, 15.6, 15.7, 15.8 and 15.9 respectively.

Should agree with “Total (All Business) minus Reinsurance Ceded” Line of Column 4, Schedule T, if prepared on a written basis.

Line 2 — Premiums Earned

Refer to SSAP No. 54R—Individual and Group Accident and Health Contracts for accounting guidance.

Should agree with Line 1 plus the change in unearned premiums and reserve for rate credits included in Part 2, Section A.
Line 3 – Incurred Claims

Report cash settlements during the year plus the change in claim liabilities, reserves and amounts recoverable from reinsurers.

**Life/Fraternal:** Should agree appropriately with both Exhibit 8, Part 2, Line 6.4 and also with Analysis of Operations by Lines of Business – Summary, Column 6, Line 13, in each case adjusted for the change in Exhibit 6 of Aggregate Accident and Health Reserves, Line 16 reserves.

**Property:** Column 1 should agree with Underwriting and Investment Exhibit, Part 2 sum of Lines 13 through 15 (Column 7).

Line 4 – Cost Containment Expenses

Report cost containment expenses in accordance with SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses.

**Life/Fraternal:** Should agree with Exhibit 2, Column 2, Line 10.

**Property:** Column 1 (Line 4 plus Line 8) should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and + 29) sum of Lines 13 through 15.

Column 3 – Line 4 plus Line 8 should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and + 29), Lines 13.1.

Column 5 – Line 4 plus Line 8 should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and + 29), Lines 13.2.

Column 7 – Line 4 plus Line 8 should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and + 29), Lines 15.4.

Column 9 – Line 4 plus Line 8 should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and + 29), Lines 15.15

Column 11 – Line 4 plus Line 8 should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and + 29), Lines 15.2.

Column 13 – Line 4 plus Line 8 should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and + 29), Lines 15.8.
Column 15 – Line 4 plus Line 8 should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and 29), Lines 15.6.

Column 17 – Line 4 plus Line 8 should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and 29), Lines 15.5.

Column 19 – Line 4 plus Line 8 should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and 29), Lines 14.

Column 21 – Line 4 plus Line 8 should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and 29), Lines 15.3.

Column 23 – Line 4 plus Line 8 should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and 29), Lines 15.7.

Column 25 – Line 4 plus Line 8 should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and 29), Lines 15.9.

Line 5 – Incurred Claims and Cost Containment Expenses

Should agree with the sum of Lines 3 and 4.

Line 6 – Increase in Contract Reserves

Should agree with Part 2, Section B, Line 5.

Line 7 – Commissions

Report incurred commissions and expense allowances on reinsurance.

Life/Fraternal: Should agree appropriately with the net of Exhibit 1, Part 2, Line 31 minus Line 26.3 and also with the net of Analysis of Operations by Lines of Business – Summary, Column 6, Line 21 plus Line 22, minus Line 6, Accident and Health columns.

Property: Column 1 should agree with Insurance Expense Exhibit, Part II sum of Lines 13 through 15 (Column 23).

Column 5 – Should agree with the Insurance Expense Exhibit, Part II, Column 23, Line 13.2.

Column 7 – Should agree with the Insurance Expense Exhibit, Part II, Column 23, Line 15.4.
Line 8  – Other General Insurance Expenses

Report general insurance expenses incurred and provision for claim expenses incurred in connection with pending and incurred but unreported claims not included in Cost Containment Expenses on Line 4 above.

**Life/Fraternal:** Should agree appropriately with Exhibit 2, Column 3, Line 10.

Line 9  – Taxes, Licenses and Fees

Report total taxes (excluding federal income taxes) plus state insurance department licenses and fees.

**Life/Fraternal:** Should agree appropriately with Exhibit 3, Column 2, Line 7 and also with Analysis of Operations by Lines of Business – Summary, Column 6, Line 24, Accident and Health columns.

**Property:** Column 1 should agree with Insurance Expense Exhibit, Part II sum of Lines 13 through 15 (Column 25).

**Column 3**  – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 13.1.

**Column 5**  – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 13.2.

**Column 7**  – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 15.4.
Column 9 – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 15.15.

Column 11 – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 15.2.

Column 13 – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 15.8.

Column 15 – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 15.6.

Column 17 – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 15.5.

Column 19 – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 15.4.

Column 21 – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 15.3.

Column 23 – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 15.7.

Column 25 – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 15.9.

Line 10 – Total Other Expenses Incurred
Sum of Lines 7, 8 and 9.

Line 11 – Aggregate Write-ins for Deductions
Enter the total of the write-ins listed in schedule “Details of Write-ins Aggregated at Line 11 for Deductions.”

Line 12 – Gain from Underwriting Before Dividends or Refunds
Report premiums earned less incurred claims, less increase in policy reserves and less total expenses incurred. Line 2 less the sum of Lines 5, 6, 10 and 11.

Line 13 – Dividends or Refunds

*Life/Fraternal:* Should agree appropriately with Analysis of Operations by Lines of Business – Summary, Column 6, Line 30, Accident and Health columns, and also with Exhibit 4, Dividends or Refunds, Column 2, Line 17.

*Property:* Column 1 should agree with Insurance Expense Exhibit, Part II sum of Lines 13 through 15 (Column 5).

Column 5 – Should agree with the Insurance Expense Exhibit, Part II, Column 5, Lines 13.2.
Column 7 – Should agree with the Insurance Expense Exhibit, Part II, Column 5, Lines 15.4.

Column 9 – Should agree with the Insurance Expense Exhibit, Part II, Column 5, Lines 15.15.

Column 11 – Should agree with the Insurance Expense Exhibit, Part II, Column 5, Lines 15.2.

Column 13 – Should agree with the Insurance Expense Exhibit, Part II, Column 5, Lines 15.8.

Column 15 – Should agree with the Insurance Expense Exhibit, Part II, Column 5, Lines 15.6.

Column 17 – Should agree with the Insurance Expense Exhibit, Part II, Column 5, Lines 15.5.

Column 21 – Should agree with the Insurance Expense Exhibit, Part II, Column 5, Lines 15.3.

Column 23 – Should agree with the Insurance Expense Exhibit, Part II, Column 5, Lines 15.7.

Column 25 – Should agree with the Insurance Expense Exhibit, Part II, Column 5, Lines 15.9.

Line 14 – Gain From Underwriting After Dividends or Refunds

Line 12 minus Line 13.

Details of Write-ins Aggregated on Line 11 for Deductions

List separately all deductions for which there is no pre-printed line on Schedule H – Part 1.

Include: Group conversions, transfers on account of group package policies and contracts, etc.
PART 2 – RESERVES AND LIABILITIES

SECTION A – PREMIUM RESERVES

Line 1  –  Unearned Premiums

**Life/Fratal:** Should agree appropriately with Exhibit 6, Line 1, net of applicable reinsurance ceded.

Line 2  –  Advance Premiums

**Life/Fratal:** Should agree appropriately with the sum of Exhibit 1, Part 1, Lines 4 and 14.

**Property:** Column 1 should agree with Underwriting and Investment Exhibit, Part 1A, Column 1 plus Column 2, sum of Lines 13, 14 and 15.

Line 3  –  Reserve for Rate Credits

**Life/Fratal:** Should agree appropriately with the net of Exhibit 6, Line 5, net of applicable reinsurance ceded, plus Page 3, Line 9.2 parenthetical amount #1 minus Page 2, Line 15.3, Column 3, accident and health portion.

**Not applicable to Fraternal Benefit Societies.**

**Property:** Column 1 should agree with Underwriting and Investment Exhibit, Part 1A, Column 4, sum of Lines 13, 14 and 15.

  **Column 2**  –  Should agree with the Underwriting and Investment Exhibit, Part 1A, Column 4, Line 13.1.

  **Column 3**  –  Should agree with the Underwriting and Investment Exhibit, Part 1A, Column 4, Line 13.2.

  **Column 4**  –  Should agree with the Underwriting and Investment Exhibit, Part 1A, Column 4, Line 15.4.

  **Column 5**  –  Should agree with the Underwriting and Investment Exhibit, Part 1A, Column 4, Line 15.5.

  **Column 6**  –  Should agree with the Underwriting and Investment Exhibit, Part 1A, Column 4, Line 15.2.

  **Column 7**  –  Should agree with the Underwriting and Investment Exhibit, Part 1A, Column 4, Line 15.8.

  **Column 8**  –  Should agree with the Underwriting and Investment Exhibit, Part 1A, Column 4, Line 15.6.

  **Column 9**  –  Should agree with the Underwriting and Investment Exhibit, Part 1A, Column 4, Line 15.5.

  **Column 10**  –  Should agree with the Underwriting and Investment Exhibit, Part 1A, Column 4, Line 14.
**SECTION B – CONTRACT RESERVES**

**Line 1** – Additional Reserves

Refer to *SSAP No. 54R—Individual and Group Accident and Health Contracts* for accounting guidance.

Include: Premium deficiency reserve.

Companies must carry a reserve in this line for any policy or block of policies:

(i) With which level premiums are used, or

(ii) With respect to which, due to the gross premium structure at issue, the value of future benefits exceeds the value of appropriate future valuation net premiums.

Companies must carry a reserve for any block of contracts for which future gross premiums when reduced by expenses for administration, commissions, and taxes will be insufficient to cover future claims or services.

**Line 2** – Reserve for Future Contingent Benefits

Companies must carry a reserve on this line that provides for the extension of benefits after termination of the policy or of any insurance thereunder. Such benefits, that actually accrue and are payable at some future date, are predicated on a condition or actual disability that exists at the termination of the insurance and that is usually not known to the insurance company. These benefits are normally provided by contract provision but may be payable because of court decisions or of departmental rulings.

An example of the type of benefit for which a reserve must be carried is the coverage for hospital confinement after the termination of an employee’s certificate but prior to the expiration of a stated period. This example is illustrative only and is not intended to limit the reserve to the benefits.
Some individual Accident and Health policies may also provide benefits similar to those under the “Extension of Benefits” section of a group policy.

Line 3 – Total Contract Reserves, Current Year
Sum of Lines 1 and 2.

Line 4 – Total Contract Reserves, Prior Year
Line 3 from prior year. [For 2022 this only applies to Column 1. For 2023 it applies to all columns.]

Line 5 – Increase in Contract Reserves
Line 3 minus Line 4.

SECTION C – CLAIM RESERVES AND LIABILITIES

Line 1 – Total Current Year
Life/Fraterna l: Should agree appropriately with the sum of Exhibit 6, Line 16 and Exhibit 8, Part 1, Line 4.4.

Property: Column 1 should agree with Underwriting and Investment Exhibit, Part 2 sum of Lines 13 through 15 (Column 5).

Also should agree with Part 3, Line 2.1 plus Part 3, Line 2.2 below.

Line 2 – Total Prior Year
Line 1 from prior year. [For 2022 this only applies to Column 1. For 2023 it applies to all columns.]

Should agree with Part 3, Line 3.2 below.

Property: Column 13 should agree with Underwriting and Investment Exhibit, Part 2, Column 6, sum of Lines 13, 14 and 15.

Line 3 – Increase
Line 1 minus Line 2.
PART 3 – TEST OF PRIOR YEAR’S CLAIM RESERVES AND LIABILITIES

Lines 1.1 and 1.2 – Claims Paid During the Year on Claims Incurred Prior to and During Current Year

Represents net payments made during the year less the change in amounts still recoverable from reinsurance.

Life/Fraternal: The sum of Lines 1.1 and 1.2 should agree appropriately with Exhibit 8, Part 2, Lines 1.4 minus Line 3 plus Line 5.

Lines 2.1, 2.2 and 3.2 – Claim Reserves and Liabilities, December 31 on Claims Incurred Prior to and During Current Year.

The sum of Lines 2.1 and 2.2 should equal Line C1 of Part 2 of this schedule and Line 3.2 should equal Line C2 of Part 2 of this Schedule. Line 3.3 represents the result of the test for adequacy of claim provisions. A negative figure will normally indicate a favorable reserve development.

PART 4 – REINSURANCE

Represents the reinsurance assumed and ceded components of Part 1, Lines 1, 2, 3 and 7 of this schedule.

SECTIONS A AND B

Line 2 – Premiums Earned

Premiums earned are before adjustment for the increase in policy reserves that has been treated as a separate deduction.

SECTION A—REINSURANCE ASSUMED

Line 2 – Premiums Earned

Premiums earned are before adjustment for the increase in policy reserves that has been treated as a separate deduction.

SECTION B—REINSURANCE CEDED

Line 2 – Premiums Earned

Premiums earned are before adjustment for the increase in policy reserves that has been treated as a separate deduction.
PART 5 – HEALTH CLAIMS

Companies with less than 5% of premiums in Accident and Health business should not complete this schedule.

Column 3 = Other

Include: All Medicare Part D Prescription Drug Coverage, whether sold on a stand-alone basis or through a Medicare Advantage product and whether sold directly to an individual or through a group.

A. DIRECT

Line 1 – Incurred Claims

Should agree with Line 3 plus Line 4 minus Line 2.

Line 2 – Beginning Claim Reserves and Liabilities

Life/Fraternal: Should agree with Exhibit 8, Part 2, Line 4.1, sum of Columns 9, 10 and 11, plus direct portion of Exhibit 6, Line 14, Column 1, Prior Year.

Line 3 – Ending Claim Reserves and Liabilities

Life/Fraternal: Should agree with Exhibit 8, Part 2, Line 2.1, sum of Columns 9, 10 and 11, plus direct portion of Exhibit 6, Line 14, Column 1.

Line 4 – Claims Paid

Life/Fraternal: Should agree with Exhibit 8, Part 2, Line 1.1, sum of Columns 9, 10 and 11.

Property: Should agree with Underwriting and Investment Exhibit, Part 2, Column 1, sum of Lines 13, 14 and 15.

Column 1 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 1, Line 13.1

Column 2 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 1, Line 13.2

Column 3 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 1, Line 15.4

Column 4 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 1, Line 15.15

Column 5 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 1, Line 15.2

Column 6 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 1, Line 15.8

Column 7 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 1, Line 15.6

Column 8 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 1, Line 15.5
### Column 9 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 1, Line 14.

### Column 10 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 1, Line 15.3.

### Column 11 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 1, Line 15.7.

### Column 12 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 1, Line 15.9.

## B. ASSUMED REINSURANCE

### Line 15 – Incurred Claims

Columns 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12 and 13 should agree with Schedule H, Part 4, Line A3, Columns 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13 and 1, respectively. Should also agree with Line 37 plus Line 48, minus Line 26.

### Line 26 – Beginning Claim Reserves and Liabilities

**Life/Fraternal:** Column 13 should agree with Exhibit 8, Part 2, Line 4.2, sum of Columns 9, 10 and 11 plus assumed portion of Exhibit 6, Line 14, Column 1, Prior Year.

### Line 37 – Ending Claim Reserves and Liabilities

**Life/Fraternal:** Column 13 should agree with Exhibit 8, Part 2, Line 2.2, sum of Columns 9, 10 and 11, plus assumed portion of Exhibit 6, Line 14, Column 1.

### Line 48 – Claims Paid

**Life/Fraternal:** Column 13 should agree with Exhibit 8, Part 2, Line 1.2, sum of Columns 9, 10 and 11.

**Property:** Column 13 should agree with Underwriting and Investment Exhibit, Part 2, Column 2, sum of Lines 13, 14 and 15.

Columns 1 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 2, Line 13.1.

Columns 2 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 2, Line 13.2.

Columns 3 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 2, Line 15.4.

Columns 4 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 2, Line 15.15.

Columns 5 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 2, Line 15.2.

Columns 6 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 2, Line 15.8.
Column 7 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 2, Line 15.6.

Column 8 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 2, Line 15.5.

Column 9 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 2, Line 14.

Column 10 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 2, Line 15.3.

Column 11 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 2, Line 15.7.

Column 12 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 2, Line 15.9.

C. **CEDED REINSURANCE**

Line 19 – Incurred Claims

Columns 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12 and 13 should agree with Schedule H, Part 4, Line B3, Columns 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13 and 1, respectively.

Should also agree with Line 113, plus Line 124, minus Line 102.

Line 210 – Beginning Claim Reserves and Liabilities

Include: Amounts recoverable from reinsurers.

*Life/Fraternal:* Column 13 should agree with Exhibit 8, Part 2, Line 1.3, sum of Columns 9, 10 and 11.

Line 311 – Ending Claim Reserves and Liabilities

Include: Amounts recoverable from reinsurers.

*Life/Fraternal:* Column 13 should agree with Exhibit 8, Part 2, Line 2.3, sum of Columns 9, 10 and 11.

Line 412 – Claims Paid

*Life/Fraternal:* Column 13 should agree with Exhibit 8, Part 2, Line 1.3, sum of Columns 9, 10 and 11.

*Property:* Column 13 should agree with Underwriting and Investment Exhibit, Part 2, Column 3, sum of Lines 13, 14 and 15.

Column 1 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 3, Line 13.1.

Column 2 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 3, Line 13.2.

ANNUAL STATEMENT INSTRUCTIONS –PROPERTY

SCHEDULE H

ACCIDENT AND HEALTH EXHIBIT

**Life/Fraternal:** “ Appropriately” where used in the Instructions for Schedule H, means the appropriate accident and health portions of referenced data. Reconciliation with figures drawn from other parts of the statement may only be possible with respect to Group Accident and Health (Column 3), Credit (Group and Individual) Accident and Health (Column 5) and Other Accident and Health (the combination of Columns 7 through 17), and, in some cases, may only be possible with respect to Total Accident and Health (Column 1) of Schedule H – Accident and Health Exhibit.

For definitions of lines of business, see the appendix of these instructions.

All amounts reportable in Parts 1 through 3 are net of reinsurance; (i.e., reinsurance assumed should be included, reinsurance ceded should be deducted, and net figures entered in the statement.) Part 4, Reinsurance displays the reinsurance assumed and ceded components.

Column 5 — Credit A & H (Group and Individual)

Include: __________ Business not exceeding 120 months duration.

Column 7 — Collectively Renewable

Include: __________ Amounts pertaining to policies that are made available to groups of persons under a plan sponsored by an employer, or an association or a union or affiliated associations or unions or a group of individuals supplying materials to a central point of collection or handling a common product or commodity, under which the reporting entity has agreed with respect to such policies that renewal will not be refused, subject to any specified age limit, while the insured remains a member of the group specified in the agreement unless the reporting entity simultaneously refuses renewal to all other policies in the same group. A sponsored plan shall not include any arrangement where a reporting entity’s customary individual policies are made available without special underwriting considerations and where the employer’s participation is limited to arranging for salary allotment premium payments with or without contribution by the employer. Such plans are sometimes referred to as payroll budget or salary allotment plans. A sponsored plan may be administered by an agent or trustee.

Amounts pertaining to policies issued by a company or group of companies under a plan, other than a group insurance plan, authorized by special legislation for the exclusive benefit of the aged through mass enrollment.

Amounts pertaining to policies issued under mass enrollment procedures to older people, such as those age 65 and over, in some geographic region or regions under which the reporting entity has agreed with respect to such policies that renewal will not be refused unless the reporting entity simultaneously refuses renewal to all other policies specified in the agreement.

Column 9 — Non-Cancelable

Include: __________ Amounts pertaining to policies, which are guaranteed renewable for life or to a specified age, such as 60 or 65, at guaranteed premium rates.
**Column 11 — Guaranteed Renewable**

Include: Amounts pertaining to policies that are guaranteed renewable for life or to a specified age, such as 60 or 65, but under which the reporting entity reserves the right to change the scale of premium rates.

**Column 13 — Non-Renewable for Stated Reasons Only**

Include: Amounts pertaining to policies in which the reporting entity has reserved the right to cancel or refuse renewal for one or more stated reasons, but has agreed implicitly or explicitly that, prior to a specified time or age, it will not cancel or decline renewal solely because of deterioration of health after issue.

**Column 17 — All Other**

Include: Any other accident and health coverages not specifically required in other columns. All Medicare Part D Prescription Drug Coverage, whether sold on a stand alone basis or through a Medicare Advantage product and whether sold directly to an individual or through a group.

---

**PART 1 – ANALYSIS OF UNDERWRITING OPERATIONS**

In each “%” column of Part 1, show the percentages of Line 2 for Lines 3 through 14 inclusive.

**Line 1 — Premiums Written**

- **Life/Fraternal:** Column 1 should agree with Schedule T, Column 4 Line 97 minus Line 98 if prepared on a written basis.
- **Property:** Column 1 should agree with Underwriting and Investment Exhibit, Part 1B sum of Lines 13 through 15 (Column 6).

Should agree appropriately with those shown in the Underwriting and Investment Exhibit, Part 1B.

**Line 2 — Premiums Earned**

Refer to SSAP No. 54R—Individual and Group Accident and Health Contracts for accounting guidance.

Should agree with Line 1 plus the change in unearned premiums and reserve for rate credits included in Part 2, Section A.

Should agree appropriately with those shown in the Underwriting and Investment Exhibit, Part 1.

**Line 3 — Incurred Claims**

Report cash settlements during the year plus the change in claim liabilities, reserves and amounts recoverable from reinsurers.

- **Life/Fraternal:** Should agree appropriately with both Exhibit 8, Part 2, Line 6.4 and also with Analysis of Operations by Lines of Business – Summary, Column 6, Line 13, in each case adjusted for the change in Exhibit 6 of Aggregate Accident and Health Reserves, Line 16 reserves.
Should agree appropriately with losses incurred as shown in the Underwriting and Investment Exhibit, Part 2.

Property: Column 1 should agree with Underwriting and Investment Exhibit, Part 2 sum of Lines 13 through 15 (Column 7).

Line 4 – Cost Containment Expenses

Report cost containment expenses in accordance with SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses.

Life/Frataln: Should agree with Exhibit 2, Column 2, Line 10.

Line 4 plus Line 8 should agree appropriately with the sum of Columns 9, 11, 27 and 29 of the Insurance Expense Exhibit, Part II.

Property: Column 1 (Line 4 plus Line 8) should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and + 29) sum of Lines 13 through 15.

Column 3 – Line 4 plus Line 8 should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and + 29), Lines 13.1.

Column 5 – Line 4 plus Line 8 should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and + 29), Lines 13.2.

Column 7 – Line 4 plus Line 8 should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and + 29), Lines 15.4.

Column 9 – Line 4 plus Line 8 should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and + 29), Lines 15.8.

Column 11 – Line 4 plus Line 8 should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and + 29), Lines 15.2.

Column 13 – Line 4 plus Line 8 should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and + 29), Lines 15.8.

Column 15 – Line 4 plus Line 8 should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and + 29), Lines 15.6.

Column 17 – Line 4 plus Line 8 should agree with the Insurance Expense Exhibit, Part II (Columns 9 + Column 11 + Column 27 and + 29), Lines 15.5.

Line 5  – Incurred Claims and Cost Containment Expenses

Sum of Lines 3 and 4.

Line 6  – Increase in Contract Reserves

Should agree with Schedule H, Part 2, Section B, Line 5.

Line 7  – Commissions

Report incurred commissions and expense allowances on reinsurance.

**Life/Fraternity:**

Should agree appropriately with the net of Exhibit 1, Part 2, Line 31 minus Line 26.3 and also with the net of Analysis of Operations by Lines of Business – Summary, Column 6, Line 21 plus Line 22, minus Line 6, Accident and Health columns.

**Property:**

Column 1 should agree with Insurance Expense Exhibit, Part II sum of Lines 13 through 15 (Column 23).

Column 5  – Should agree with the Insurance Expense Exhibit, Part II, Column 23, Line 13.2.

Column 7  – Should agree with the Insurance Expense Exhibit, Part II, Column 23, Line 15.4.

Column 9  – Should agree with the Insurance Expense Exhibit, Part II, Column 23, Line 15.5.

Column 11  – Should agree with the Insurance Expense Exhibit, Part II, Column 23, Line 15.2.

Column 17 – Should agree with the Insurance Expense Exhibit, Part II, Column 23, Lines 15.5.

Column 21 – Should agree with the Insurance Expense Exhibit, Part II, Column 23, Lines 15.3.

Column 23 – Should agree with the Insurance Expense Exhibit, Part II, Column 23, Lines 15.7.

Line 8 – Other General Insurance Expenses

Report general insurance expenses incurred and provision for claim expenses incurred in connection with pending and incurred but unreported claims not included in Cost Containment Expenses on Line 4 above.

Life/Fraternal: Should agree appropriately with Exhibit 2, Column 3, Line 10.

Line 4 plus Line 8 should agree appropriately with the sum of Columns 9, 11, 27 and 29 of the Insurance Expense Exhibit, Part II.

Line 9 – Taxes, Licenses and Fees

Report total taxes (excluding federal income taxes) plus state insurance department licenses and fees.

Life/Fraternal: Should agree appropriately with Exhibit 3, Column 2, Line 7 and also with Analysis of Operations by Lines of Business – Summary, Column 6, Line 24, Accident and Health columns.

Should agree appropriately with Column 25 of the Insurance Expense Exhibit, Part II.

Property: Column 1 should agree with Insurance Expense Exhibit, Part II sum of Lines 13 through 15 (Column 25).

Column 5 – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 13.2.

Column 7 – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 15.4.
Column 9 – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 15.9.

Column 11 – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 15.2.

Column 13 – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 15.8.

Column 15 – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 15.6.

Column 17 – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 15.5.

Column 21 – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 15.3.

Column 23 – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 15.7.

Column 25 – Should agree with the Insurance Expense Exhibit, Part II, Column 25, Lines 15.9.

Line 10 – Total Other Expenses Incurred

Sum of Lines 7, 8 and 9.

Line 11 – Aggregate Write-ins for Deductions

Enter the total of the write-ins listed in Schedule Detail of Write-ins Aggregated at Line 11 for Deductions.

Line 12 – Gain From Underwriting Before Dividends or Refunds

Report premiums earned less incurred claims, less increase in policy reserves and less total expenses incurred. Line 2 minus the sum of Lines 5, 6, 10 and 11.

Line 13 – Dividends or Refunds

Life/Fraternals: Should agree appropriately with Analysis of Operations by Lines of Business – Summary, Column 6, Line 30, Accident and Health columns, and also with Exhibit 4, Dividends or Refunds, Column 2, Line 17.

Should agree appropriately with Column 5 of the Insurance Expense Exhibit, Part II.

Property: Column 1 should agree with Insurance Expense Exhibit, Part II sum of Lines 13 through 15 (Column 5).

Column 5 – Should agree with the Insurance Expense Exhibit, Part II, Column 5, Lines 13.2.
| Column 7 | Should agree with the Insurance Expense Exhibit, Part II, Column 5, Line 15.4 |

| Column 25 | Should agree with the Insurance Expense Exhibit, Part II, Column 5, Line 15.9 |

**Line 14**  
Gain From Underwriting After Dividends or Refunds

Line 12 minus Line 13.

**Details of Write-ins Aggregated at Line 11 for Deductions**

List separately each category of deductions for which there is no pre-printed line on Schedule H, Part 1.

Include: Group conversions, transfers on account of group package policies and contracts, etc.
PART 2 – RESERVES AND LIABILITIES

SECTION A – PREMIUM RESERVES

Should agree appropriately with those in the Underwriting and Investment Exhibit, Part 1A minus amounts reported as contract reserves in Schedule H, Part 2, Section B, below.

Line 1 – Unearned Premiums

Life/Fraternal: Should agree appropriately with Exhibit 6, Line 1, net of applicable reinsurance ceded.

Property: Column 1 should agree with Underwriting and Investment Exhibit, Part 1A, Column 1 plus Column 2, sum of Lines 13, 14 and 15.

Line 2 – Advance Premiums

Life/Fraternal: Should agree appropriately with the sum of Exhibit 1, Part 1, Lines 4 and 14.

Line 3 – Reserve for Rate Credits

Life/Fraternal: Should agree appropriately with the net of Exhibit 6, Line 5, net of applicable reinsurance ceded, plus Page 3, Line 9.2 parenthetical amount #1 minus Page 2, Line 15.3, Column 3, accident and health portion.

Not applicable to Fraternal Benefit Societies.

Property: Column 1 should agree with Underwriting and Investment Exhibit, Part 1A, Column 4, sum of Lines 13, 14 and 15:

Column 3 – Should agree with Underwriting and Investment Exhibit, Part 1A, Column 4, Lines 13.2.

Column 4 – Should agree with Underwriting and Investment Exhibit, Part 1A, Column 4, Lines 15.4.

Column 5 – Should agree with Underwriting and Investment Exhibit, Part 1A, Column 4, Lines 15.5.

Column 6 – Should agree with Underwriting and Investment Exhibit, Part 1A, Column 4, Lines 15.2.

Column 7 – Should agree with Underwriting and Investment Exhibit, Part 1A, Column 4, Lines 15.8.

Column 8 – Should agree with Underwriting and Investment Exhibit, Part 1A, Column 4, Lines 15.6.

Column 9 – Should agree with Underwriting and Investment Exhibit, Part 1A, Column 4, Lines 15.5.

Column 10 – Should agree with Underwriting and Investment Exhibit, Part 1A, Column 4, Lines 14.
**SECTION B – CONTRACT RESERVES**

**Line 1** – Additional Reserves

Refer to *SSAP No. 54R—Individual and Group Accident and Health Contracts* for accounting guidance.

Include: Premium deficiency reserve.

Companies must carry a reserve in this line for any policy or block of policies:

(i) With which level premiums are used, or
(ii) With respect to which, due to the gross premium structure at issue, the value of future benefits exceeds the value of appropriate future valuation net premiums.

Companies must carry a reserve for any block of contracts for which future gross premiums when reduced by expenses for administration, commissions, and taxes will be insufficient to cover future claims or services.

**Line 2** – Reserve for Future Contingent Benefits

Companies must carry a reserve on this line that provides for the extension of benefits after termination of the policy or of any insurance thereunder. Such benefits, that actually accrue and are payable at some future date, are predicated on a condition or actual disability that exists at the termination of the insurance and that is usually not known to the insurance company. These benefits are normally provided by contract provision but may be payable because of court decisions or of departmental rulings.

An example of the type of benefit for which a reserve must be carried is the coverage for hospital confinement after the termination of an employee’s certificate but prior to the expiration of a stated period. This example is illustrative only and is not intended to limit the reserve to the benefits described. Some individual Accident and Health policies may also provide benefits similar to those under the “Extension of Benefits” section of a group policy.

</table>
PART 3 – TEST OF PRIOR YEAR’S CLAIM RESERVES AND LIABILITIES

Lines 1.1 and 1.2 – Claims Paid During the Year on Claims Incurred Prior to and During Current Year

Represents net payments made during the year less the change in amounts still recoverable from reinsurance.

Life/Fratal: The sum of Lines 1.1 and 1.2 should agree appropriately with Exhibit 8, Part 2, Lines 1.4 minus Line 3 plus Line 5.

Lines 2.1, 2.2 and 3.2 – Claim Reserves and Liabilities, December 31 on Claims Incurred Prior to and During Current Year

The sum of lines 2.1 and 2.2 should equal Line C1 of Part 2 of this schedule and Line 3.2 should equal Line C2 of Part 2 of this schedule. Line 3.3 represents the result of the test for adequacy of claim provisions. A negative figure will normally indicate a favorable reserve development.

PART 4 – REINSURANCE

Represents the reinsurance assumed and ceded components of Part 1, Lines 1, 2, 3 and 7 of this schedule.

SECTIONS A AND B

Line 2 – Premiums Earned

Premiums earned are before adjustment for the increase in policy reserves that has been treated as a separate deduction.

PART 5 – HEALTH CLAIMS

Companies with less than 5% of premiums in Accident and Health business should not complete this schedule.

Column 3 Other

Include: All Medicare Part D Prescription Drug Coverage, whether sold on a stand-alone basis or through a Medicare Advantage product and whether sold directly to an individual or through a group.

A. DIRECT

Line 1 – Incurred Claims

Should agree with Line 3 plus Line 4 minus Line 2.

Line 2 – Beginning Claim Reserves and Liabilities

Life/Fratal: Column 13 should agree with Exhibit 8, Part 2, Line 4.1, sum of Columns 9, 10 and 11, plus direct portion of Exhibit 6, Line 14, Column 1, Prior Year.

C. **Ceded Reinsurance**

Line **19** – Incurred Claims

Columns 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12 and 13 should agree with Schedule H, Part 4, Line B3, Columns 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13 and 1, respectively. Should also agree with Line **211**, plus Line **312**, minus Line **210**.

Line **210** – Beginning Claim Reserves and Liabilities

Include: Amounts recoverable from reinsurers.

Life/Fraternal: Column **13S** should agree with Exhibit 8, Part 2, Line 4.3, plus Line 5, sum of Columns 9, 10 and 11, plus Exhibit 6, Line 15, Column 1, Prior Year.

Line **312** – Ending Claim Reserves and Liabilities

Include: Amounts recoverable from reinsurers.

Life/Fraternal: Column **13S** should agree with Exhibit 8, Part 2, Line 2.3, plus Line 3, sum of Columns 9, 10 and 11, plus Exhibit 6, Line 15, Column 1.

Line **412** – Claims Paid

Life/Fraternal: Column **13S** should agree with Exhibit 8, Part 2, Line 1.3, sum of Columns 9, 10 and 11.

Property: Column **13** should agree with Underwriting and Investment Exhibit, Part 2, Column 3, sum of Lines 13, 14 and 15.

Column 1 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 3, Line **13.1**.

Column 2 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 3, Line **13.2**.

Column 3 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 3, Line **15.4**.

Column 4 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 3, Line **15.5**.

Column 5 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 3, Line **15.2**.

Column 6 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 3, Line **15.8**.

Column 7 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 3, Line **15.6**.
**D. NET**

**Incurred Claims**

Columns 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12 and 13 should agree with Schedule H, Part 1, Line 3, Columns 3, 5, 7, 9, 11, 13, 15, 17, 19, 21, 23, 25 and 1.

Should also agree with Line 315, plus Line 416, minus Line 214.

Should agree with Underwriting and Investment Exhibit, Part 2, Column 7, sum of Lines 13, 14 and 15 and Schedule H, Part 1, Line 3, Column 1.

**Beginning Claim Reserves and Liabilities**

Life/Fraternal: Column 13 should agree with Schedule H, Part 2, Line C2, Column 1, minus Exhibit 8, Part 2, Line 3, sum of Columns 9, 10 and 11.

Property: Columns 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12 and 13 should agree with Schedule H, Part 2, Line C2, Columns 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13 and 1, respectively.

Should agree with Underwriting and Investment Exhibit, Part 2, Column 6, sum of Lines 13, 14 and 15 and Schedule H, Part 2, Line C2, Column 1.

**Ending Claim Reserves and Liabilities**

Exclude: Amounts recoverable from reinsurers.

Life/Fraternal: Column 13 should agree with Exhibit 8, Part 2, Line 1.4, sum of Columns 9, 10 and 11.

Property: Columns 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12 and 13 should agree with Schedule H, Part 2, Line C1, Columns 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13 and 1, respectively.

Should agree with Underwriting and Investment Exhibit, Part 2, Column 5, sum of Lines 13, 14 and 15 and Schedule H, Part 2, Line C1, Column 1.

**Claims Paid**

Life/Fraternal: Column 13 should agree with Exhibit 8, Part 2, Line 1.4, sum of Columns 9, 10 and 11.
Property: Column 13 Should should agree with Underwriting and Investment Exhibit, Part 2, Column 4, sum of Lines 13, 14 and 15.

Column 1 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 4, Line 13.1.

Column 2 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 4, Line 13.2.

Column 3 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 4, Line 15.4.

Column 4 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 4, Line 15.51

Column 5 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 4, Line 15.2.

Column 6 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 4, Line 15.8.

Column 7 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 4, Line 15.6.

Column 8 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 4, Line 15.5.

Column 9 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 4, Line 14.

Column 10 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 4, Line 15.3.

Column 11 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 4, Line 15.7.

Column 12 – Should agree with the Underwriting and Investment Exhibit, Part 2, Column 4, Line 15.9.

E. NET INCURRED CLAIMS AND COST CONTAINMENT EXPENSES

Line 147 Incurred Claims and Cost Containment Expenses

Should agree with Schedule H, Part 1, Line 5, Column 1.

Line 248 Beginning Reserves and Liabilities

Life/Fraternal: Column 13 Should agree with Exhibit 2, Column 2, Line 11 plus Line 14 above.

Property: Should agree with Underwriting and Investment Exhibit, Part 3, Column 1 (in part), plus Line 14 above.

Line 319 Ending Reserves and Liabilities

Life/Fraternal: Column 13 Should agree with Exhibit 2, Column 2, Line 12 plus Line 15 above.
Property: Should agree with Underwriting and Investment Exhibit, Part 3, Column 1 (in part), plus Line 15 above.

Line 420 - Paid Claims and Cost Containment Expenses

Line 117 plus Line 218 minus Line 319.

Column 4 should agree with Schedule H, Part 1, Line 2 minus Line 6, Column 15.

Line 15.7 — Long-Term Care

Column 4 should agree with Schedule H, Part 1, Line 2 minus Line 6, Column 23.

Line 15.8 — Federal Employees Health Benefits Plan Premium

Column 4 should agree with Schedule H, Part 1, Line 2 minus Line 6, Column 13.

Line 15.9 — Other Health

Column 4 should agree with Schedule H, Part 1, Line 2 minus Line 6, Column 25.
UNDERWRITING AND INVESTMENT EXHIBIT

PART 1A – RECAPITULATION OF ALL PREMIUMS

Detail Eliminated to Conserve Space

Line 15 should include additional reserves on noncancelable accident and health policies.

Refer to SSAP No. 54R—*Individual and Group Accident and Health Contracts* for accounting guidance.

Attach to the annual statement a description of the methods used in computing this reserve for each type of coverage for which a reserve is held.

**Line 13.1** – Comprehensive (Hospital and Medical) Individual Group Accident and Health

Column 1 plus Column 2 should agree with Schedule H, Part 2, Line A1, Column 2.

**Line 13.2** – Comprehensive (Hospital and Medical) Group

Column 1 plus Column 2 should agree with Schedule H, Part 2, Line A1, Column 3.

**Line 14** – Credit Accident and Health

Column 1 plus Column 2 should agree with Schedule H, Part 2, Line A1, Column 410. Column 4 should agree with Schedule H, Part 2, Line A3, Column 310. Include: Business not exceeding 120 months duration.

**Line 15.1** – Vision Only Other Accident and Health

Column 1 plus Column 2 should agree with Schedule H, Part 2, Line A1, Columns 4 through 95.

**Line 15.2** – Dental Only

Column 1 plus Column 2 should agree with Schedule H, Part 2, Line A1, Columns 6.

**Line 15.3** – Disability Income

Column 1 plus Column 2 should agree with Schedule H, Part 2, Line A1, Columns 11.

**Line 15.4** – Medicare Supplement

Column 1 plus Column 2 should agree with Schedule H, Part 2, Line A1, Columns 4.

**Line 15.5** – Medicaid Title XIX

Column 1 plus Column 2 should agree with Schedule H, Part 2, Line A1, Columns 9.

**Line 15.6** – Medicare Title XVIII

Column 1 plus Column 2 should agree with Schedule H, Part 2, Line A1, Columns 8.
Line 15.7  –  Long-Term Care

Column 1 plus Column 2 should agree with Schedule H, Part 2, Line A1, Columns 12.

Line 15.8  –  Federal Employees Health Benefits Plan Premium

Column 1 plus Column 2 should agree with Schedule H, Part 2, Line A1, Columns 7.

Line 15.9  –  Other Health

Column 1 plus Column 2 should agree with Schedule H, Part 2, Line A1, Columns 13.

Line 34  –  Aggregate Write-ins for Other Lines of Business

Enter the total of the write-ins listed in schedule Details of Write-ins Aggregated at Line 34 for Other Lines of Business.

Line 36  –  Accrued Retrospective Premiums Based on Experience

Include:

- Accrued return retrospective premiums required by policy terms or law.
- Accrued MLR Rebates per the Public Health Service Act.

**Retrospective Premium Adjustment Made Through Earned Premium:**

Enter the total gross accrued retrospective debit adjustment based on experience, included as a negative amount in Column 4 if the company accrues for additional retrospective premiums by adjusting earned premiums.

**Retrospective Premium Adjustment Made Through Written Premium:**

Enter the total gross accrued retrospective credit adjustments based on experience if the company accrues for additional retrospective premiums by adjusting written premiums.

Refer to *SSAP No. 66—Retrospectively Rated Contracts*. Per SSAP No. 66, retrospective premium adjustments shall be estimated based on the experience to date.

Details of Write-ins Aggregated at Line 34 for Other Lines of Business

List separately each line of business for which there is no pre-printed line on Underwriting and Investment Exhibit, Part 1A.
UNDERWRITING AND INVESTMENT EXHIBIT

PART 1B – PREMIUMS WRITTEN

Column 1 – Direct Business

Line 35 should agree with Schedule T, Line 59, Column 2.

Column 6 – Net Premiums Written

Should agree with Underwriting and Investment Exhibit, Part 1, Column 1, for all lines.

Line 13.1 – Comprehensive (Hospital and Medical) Individual Group Accident and Health

Column 2 plus Column 3 should agree with Schedule H, Part 4, Line A1, Column 2.

Column 4 plus Column 5 should agree with Schedule H, Part 4, Line B1, Column 2.

Column 6 should agree with Schedule H, Part 1, Line 1, Column 3.

Line 13.2 – Comprehensive (Hospital and Medical) Group

Column 2 plus Column 3 should agree with Schedule H, Part 4, Line A1, Column 3.

Column 4 plus Column 5 should agree with Schedule H, Part 4, Line B1, Column 3.

Column 6 should agree with Schedule H, Part 1, Line 1, Column 5.

Line 14 – Credit Accident and Health

Column 2 plus Column 3 should agree with Schedule H, Part 4, Line A1, Column 310.

Column 4 plus Column 5 should agree with Schedule H, Part 4, Line B1, Column 310.

Column 6 should agree with Schedule H, Part 1, Line 1, Column 519.

Include: Business not exceeding 120 months duration.

Line 15.1 – Vision Only Other Accident and Health

Column 2 plus Column 3 should agree with Schedule H, Part 4, Line A1, Columns 4 through 95.

Column 4 plus Column 5 should agree with Schedule H, Part 4, Line B1, Columns 4 through 95.

Column 6 should agree with Schedule H, Part 1, Line 1, Columns 7 through 179.

Line 15.2 – Dental Only

Column 2 plus Column 3 should agree with Schedule H, Part 4, Line A1, Columns 6.

Column 4 plus Column 5 should agree with Schedule H, Part 4, Line B1, Columns 6.

Column 6 should agree with Schedule H, Part 1, Line 1, Columns 11.

Line 15.3 – Disability Income

Column 2 plus Column 3 should agree with Schedule H, Part 4, Line A1, Columns 11.
Column 4 plus Column 5 should agree with Schedule H, Part 4, Line B1, Columns 11.

Column 6 should agree with Schedule H, Part 1, Line 1, Columns 21.

Line 15.4 – Medicare Supplement

Column 2 plus Column 3 should agree with Schedule H, Part 4, Line A1, Columns 4.

Column 4 plus Column 5 should agree with Schedule H, Part 4, Line B1, Columns 4.

Column 6 should agree with Schedule H, Part 1, Line 1, Columns 7.

Line 15.5 – Medicaid Title XIX

Column 2 plus Column 3 should agree with Schedule H, Part 4, Line A1, Columns 9.

Column 4 plus Column 5 should agree with Schedule H, Part 4, Line B1, Columns 9.

Column 6 should agree with Schedule H, Part 1, Line 1, Columns 17.

Line 15.6 – Medicare Title XVIII

Column 2 plus Column 3 should agree with Schedule H, Part 4, Line A1, Columns 8.

Column 4 plus Column 5 should agree with Schedule H, Part 4, Line B1, Columns 8.

Column 6 should agree with Schedule H, Part 1, Line 1, Columns 15.

Line 15.7 – Long-Term Care

Column 2 plus Column 3 should agree with Schedule H, Part 4, Line A1, Columns 12.

Column 4 plus Column 5 should agree with Schedule H, Part 4, Line B1, Columns 12.

Column 6 should agree with Schedule H, Part 1, Line 1, Columns 23.

Line 15.8 – Federal Employees Health Benefits Plan Premium

Column 2 plus Column 3 should agree with Schedule H, Part 4, Line A1, Columns 7.

Column 4 plus Column 5 should agree with Schedule H, Part 4, Line B1, Columns 7.

Column 6 should agree with Schedule H, Part 1, Line 1, Columns 13.

Line 15.9 – Other Health

Column 2 plus Column 3 should agree with Schedule H, Part 4, Line A1, Columns 13.

Column 4 plus Column 5 should agree with Schedule H, Part 4, Line B1, Columns 13.

Column 6 should agree with Schedule H, Part 1, Line 1, Columns 25.

Line 35 – Totals

Column 4 plus Column 5 should agree with Schedule F, Part 3, Column 6, Total multiplied by 1000.
## UNDERWRITING AND INVESTMENT EXHIBIT

### PART 2 – LOSSES PAID AND INCURRED

Refer to SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses for accounting guidance.

<table>
<thead>
<tr>
<th>Column 1</th>
<th>Losses Paid Less Salvage – Direct Business</th>
</tr>
</thead>
<tbody>
<tr>
<td>Line 35</td>

General Instructions
For States to Complete Checklist

Each checklist is divided into five sections. The first section contains the major NAIC filings. The second section lists all of the NAIC supplements, whether they are to be bound into the statement or not. The third section lists items to be filed electronically with the NAIC. The fourth section is a list of all of the filings related to the audited financial statements. The fifth section lists state-specific filing requirements. **The items in the first four sections should remain in the same order as the examples.** This will enable companies to locate common information about a particular filing from each state. Finally, there is a section of notes to the instructions. The purpose of the Notes is to provide companies with state-specific information in a standard format. You may require more notes than provided; however, **the first notes should remain in the same order and format for each state.** Each state-specific note should contain state-specific instructions where any state deviates from specific NAIC instructions. The state should mail the company instructions to companies along with the checklist or post these instructions to its website. New requirements or changes to the checklists will be highlighted for your convenience.

Please Note: **Your state’s requirements for companies to file with the NAIC should be incorporated into this Checklist.**

**Column 1** Checklist

This column provides the company a method for marking completed forms or filings.

**Column 2** Line #

Refers to a standard filing number used for easy reference and which may change from year to year, but should remain the same between states (i.e., number 61 - Annual Statement Electronic Filing is the same for all jurisdictions.). States may expand the State Required Filings Section to include up to 100 filings required by any individual state.

**Column 3** Required Filings

Name of item or form to be filed. Each section is alphabetized. Please note that the items shown under “State Required Filings” may not apply to your state. The items included are those that a significant number of states require. Please add your state-specific filings in Section V.

**Form B – Holding Company Registration Statement, Form F – Enterprise Risk Report and ORSA Group Capital Calculation has have been added to the “State Required Filings” section of the checklist.**

If more than one state page is required from each company, please insert this requirement under “State Required Filings.” Likewise, if your state requires the Risk-Based Capital from your domestic companies to be filed with you in addition to companies filing this with the NAIC, please insert this requirement under “State Required Filings.”

The 1999 Annual Statement Instructions were modified to waive paper filings of certain NAIC supplements (those supplements previously included in the Electronic Filing Pilot Project) and certain investment schedule detail, if such investment schedule data is available to the states via the NAIC database. The checklists have been modified to reflect this action taken by the Blanks (EX) Task Force. XXX appears in the “Number of Copies” “Foreign” column for the appropriate schedules and exhibits. If you are deviating from the Annual Statement Instructions and wish to have these items filed in hard copy with your department, you should remove XXX from this column and insert the number of copies required. If you wish to request the documents, simply remove the XXX or N/A and insert the number of copies that you require.

**Column 4** Number of Copies

This column indicates the number of copies that a foreign or domestic company is required to file for each type of form. The 1999 Annual Statement Instructions were modified to exclude the requirement for filing paper copies of investment schedules from foreign companies if the data is captured on the NAIC database. The 1999 Annual Statement Instructions were modified to include the supplements that were part of the Electronic Filing Pilot. An XXX appears in the foreign column, if the schedule or supplement is included in either of these instructions. If you require paper copies of these schedules or supplements, you should remove XXX from this column and insert the number of copies required. An N/A appears in this column if the filing is only required with the state of domicile according to the NAIC Annual Statement Instructions. This does not preclude any state from requesting these documents from any company. If you wish to request the documents, simply remove the XXX or N/A and insert the number of copies that you require.
Column 5 Due Date

Due Date indicates the date a filing is required with the state insurance regulatory authority. If you do not require a specific filing, please replace the date with XXX. Use Note E to explain any other filing instructions regarding due dates.

Column 6 Form Source

This column contains one of three words: “NAIC,” “State,” or “Company.” If this column contains “NAIC,” the company must obtain the forms from the appropriate vendor. If this column contains “State,” the state will provide the forms with the filing instructions. If this column contains “Company,” the company, or its representative (e.g., its CPA firm), is expected to provide the form based upon the appropriate state instructions or the NAIC Annual Statement Instructions. Insert a “#” sign after the form source where the state has changed the requirements since last year or the item is a new NAIC blank. Do not insert a “#” sign if the NAIC blank has changed, as this would lead to many “#” signs, making its use somewhat meaningless.

Column 7 Applicable Notes

This column contains references to the Notes and Instructions that apply to each item. However, Notes A-K apply to all filings.

Item 85

Insert specific instructions related to appointment or change in Independent CPA.
Instructions and Suggested Language for the Notes

General:

1. **Suggested language** for each note should be used to the extent possible.

2. Some of the suggested language covers different ideas, for example, note E has several different issues that could apply. Where appropriate, combine language.

3. Where appropriate, list each item and special instructions (see notes H and K, for examples)

4. **Examples** for notes are shown in italics and should be replaced by your state-specific instructions.

**Note A** should provide the name(s), email address(es) and phone number(s) of a person that companies may contact with questions regarding filings. If there is more than one person, please indicate the types of calls each person takes, in addition to their name and number.

**Note B** should list the mailing address, and hand delivery address (if different) for required filings.

**Note C** should provide specific information related to the amount(s) and mailing address for filing fees.

**Note D** should list the mailing address for premium taxes (and a contact if appropriate). If your state has a different Department collect premium taxes (not the Department that collects other insurance information, fees), please indicate that Department, and provide a contact name if possible.

**Note E** should contain instructions on delivery dates, and any other special delivery instructions:

- **E-1** All filings must be physically received at one of the addresses in Note B no later than the indicated due date.
- **E-2** All filings must be postmarked no later than the indicated due date.

- All items must be mailed U.S. mail.
- If the due date falls on a weekend or holiday, then the deadline is extended to the next business day.
- or

**Note F** should describe any penalties for late filings

- Companies will be fined $100 per day for a late filing.
- Company’s license may be suspended if the annual statement is received more than 30 days late.

**Note G** should contain language on original signatures:

- Original signatures required on all filings from domestic companies. Foreign companies should follow the instructions in the NAIC Annual Statement Instructions.
- Original signatures required on all filings that require signatures.

**Note H** should contain other signature/notarization/certification instructions. These are examples and should be updated according to your state’s current requirements.

- The following officers are required to sign the annual statement:
CEOs; President; Treasurer

Special instructions:

Reinsurance Summary Statement — must be notarized

Note I ....should contain instructions on filing amended filings.

Amended items must be filed within 10 days of their amendment, along with an explanation of the amendments. If there are signature requirements for the original filing, same should be followed for any amendment.

Note J ....should contain instructions for companies to request an exemption or extension to a filing

Foreign companies must supply a written copy of any exemption or extension received by its state of domicile at least 10 days prior to the filing due date to receive such from Minnesota. Domestic companies should apply at least 30 days prior to the due date.

Note K ....should contain instructions on bar codes

Please use the bar codes supplied by Florida.

or

Please follow the instructions in the NAIC Annual Statement Instructions.

or

Bar codes for Minnesota filings should be generated according to NAIC instructions. The codes are:
Certificate of Deposit .................................................. 003
Credit Insurance Annual Report .......................................................... 004
Form 10K .................................................................................. 005
Independent Actuarial Opinion .......................................................... 006
Investment Policy Certification .......................................................... 007
Non comprehensive Accident & Health Exhibit ................................. 008
Report by Independent CPA Regarding Application of Valuation Procedures .......... 009
Report on Evaluation of Accounting Procedures and System of Internal Control .......... 010
Report of Ratio of Qualified Assets to Required Liabilities ...................... 011

Note L ....should have instructions for filing Signed Jurat page

If the state requires the filing of a Signed Jurat page for foreign companies, please indicate.

Note M ....should have instructions for NONE filings

If the state requires the filing of a “NONE” page, please indicate.

See NAIC Annual Statement Instructions for Supplemental Interrogatories. Exceptions to these instructions are noted on the form.

Note N ....Filings New, Discontinued or Materially Modified since last year.

None of the filings have been discontinued since last year

No longer required:
Listing of new Reinsurers

*If XXX appears in this column, this state does not require this filing, if hard copy is filed with the state of domicile and if the data is filed electronically with the NAIC. If N/A appears in this column, the filing is required with the domiciliary state. EO (electronic only filing).

**If Form Source is NAIC, the form should be obtained from the appropriate vendor.

***For those states that have adopted the NAIC Corporate Governance Annual Disclosure Model Act, an annual disclosure is required of all insurers or insurance groups by June 1. The Corporate Governance Annual Disclosure is a state filing only and should not be submitted by the company to the NAIC. Note however that this filing is intended to be submitted to the lead state if filed at the insurance group level. For more information on lead states, see the following NAIC URL: http://www.naic.org/public_lead_state_report.htm.

****For those states that have adopted the NAIC updated Holding Company Model Act, a Form F filing is required annually by holding company groups. Consistent with the Form B filing requirements, the Form F is a state filing only and should not be submitted by the company to the NAIC. Note however that this filing is intended to be submitted to the lead state. For more information on lead states, see the following NAIC URL: http://www.naic.org/public_lead_state_report.htm.

*****For those states that have adopted the NAIC Risk Management and Own Risk and Solvency Assessment Model Act, a summary report is required annually by insurers and insurance groups above a specified premium threshold. The ORSA Summary Report is a state filing only and should not be submitted by the company to the NAIC. Note however that this filing is intended to be submitted to the lead state if filed at the insurance group level. For more information on lead states, see the following NAIC URL: http://www.naic.org/public_lead_state_report.htm.

General Instructions
For Companies to Use Checklist

Please Note: This state’s instructions for companies to file with the NAIC are included in this Checklist. The NAIC will not be sending their own checklist this year.

Electronic Filing is intended to be filing(s) submitted to the NAIC via the NAIC Internet Filing Site which eliminates the need for a company to submit diskettes or CD-ROM to the NAIC. Companies are not required to file hard copy filings with the NAIC.

The Annual Statement Electronic Filing includes the annual statement data and all supplements due March 1, per the Annual Statement Instructions. This includes all detail investment schedules and other supplements for which the Annual Statement Instructions exempt printed detail.

The March.PDF Filing is the .pdf file for annual statement data, detail for investment schedules and supplements due March 1.

The Risk-Based Capital Electronic Filing includes all risk-based capital data.

The Risk-Based Capital.PDF Filing is the .pdf file for risk-based capital data.

The Supplemental Electronic Filing includes all supplements due April 1, per the Annual Statement Instructions.

The Supplemental.PDF Filing is the .pdf file for all supplemental schedules and exhibits due April 1.

The Quarterly Electronic Filing includes the complete quarterly filing and the PDF files for all quarterly data.

The Quarterly.PDF Filing is the .pdf file for quarterly statement data.

The June.PDF Filing is the .pdf file for the Audited Financial Statements and Accountants Letter of Qualifications.

<td>Indicates the number of copies that each foreign or domestic company is required to file for each type of form. The Blanks (EX) Task Force modified the 1999 Annual Statement Instructions to waive paper filings of certain NAIC supplements and certain investment schedule detail, if such investment schedule data is available to the states via the NAIC database. The checklists reflect this action taken by the Blanks (EX) Task Force. XXX appears in the “Number of Copies” “Foreign” column for the appropriate schedules and exhibits. Some states have chosen to waive printed quarterly and annual statements from their foreign insurers and have chosen to rely upon the NAIC database for these filings. This waiver could include supplemental annual statement filings. The XXX in this column might signify that the state has waived the paper filing of the annual statement and all supplements.</td>
<td></td>
</tr>
</tbody>
</table>

© 2021 National Association of Insurance Commissioners
Column (5) Due Date

Indicates the date on which the company must file the form.

Column (6) Form Source

This column contains one of three words: “NAIC,” “State,” or “Company.” If this column contains “NAIC,” the company must obtain the forms from the appropriate vendor. If this column contains “State,” the state will provide the forms with the filing instructions (generally, on the state web site). If this column contains “Company,” the company, or its representative (e.g., its CPA firm), is expected to provide the form based upon the appropriate state instructions or the NAIC Annual Statement Instructions.

Column (7) Applicable Notes

This column contains references to the Notes to the Instructions that apply to each item listed on the checklist. The company should carefully read these notes before submitting a filing.

*a* If XXX appears in this column, this state does not require this filing, if hard copy is filed with the state of domicile and if the data is filed electronically with the NAIC. If N/A appears in this column, the filing is required with the domiciliary state. EO (electronic only filing).

**If Form Source is NAIC, the form should be obtained from the appropriate vendor.

***For those states that have adopted the NAIC Corporate Governance Annual Disclosure Model Act, an annual disclosure is required of all insurers or insurance groups by June 1. The Corporate Governance Annual Disclosure is a state filing only and should not be submitted by the company to the NAIC. Note however that this filing is intended to be submitted to the lead state if filed at the insurance group level. For more information on lead states, see the following NAIC URL: [http://www.naic.org/public_lead_state_report.htm](http://www.naic.org/public_lead_state_report.htm).

****For those states that have adopted the NAIC updated Holding Company Model Act, a Form F filing is required annually by holding company groups. Consistent with the Form B filing requirements, the Form F is a state filing only and should not be submitted by the company to the NAIC. Note however that this filing is intended to be submitted to the lead state. For more information on lead states, see the following NAIC URL: [http://www.naic.org/public_lead_state_report.htm](http://www.naic.org/public_lead_state_report.htm).

*****For those states that have adopted the NAIC Risk Management and Own Risk and Solvency Assessment Model Act, a summary report is required annually by insurers and insurance groups above a specified premium threshold. The ORSA Summary Report is a state filing only and should not be submitted by the company to the NAIC. Note however that this filing is intended to be submitted to the lead state if filed at the insurance group level. For more information on lead states, see the following NAIC URL: [http://www.naic.org/public_lead_state_report.htm](http://www.naic.org/public_lead_state_report.htm).

General Instructions
For Companies to Use Checklist

Please Note: This state’s instructions for companies to file with the NAIC are included in this Checklist. The NAIC will not be sending their own checklist this year.

Electronic filing is intended to be filing(s) submitted to the NAIC via the NAIC Internet Filing Site which eliminates the need for a company to submit diskettes or CD-ROM to the NAIC. Companies are not required to file hard copy filings with the NAIC.

Column (1) Checklist
Companies may use the checklist to submit to a state, if the state requests it. Companies should copy the checklist and place an “x” in this column when submitting information to the state.

Column (2) Line #
Line # refers to a standard filing number used for easy reference. This line number may change from year to year.

Column (3) Required Filings
Name of item or form to be filed.

The Annual Statement Electronic Filing includes the annual statement data and all supplements due March 1, per the Annual Statement Instructions. This includes all detail investment schedules and other supplements for which the Annual Statement Instructions exempt printed detail.

The March.PDF Filing is the .pdf file for annual statement data, detail for investment schedules and supplements due March 1.

The Risk-Based Capital Electronic Filing includes all risk-based capital data.

The Risk-Based Capital.PDF Filing is the .pdf file for risk-based capital data.

The Separate Accounts Electronic Filing includes the separate accounts annual statement and investment schedule detail.

The Separate Accounts.PDF Filing is the .pdf file for the separate accounts annual statement and all investment schedule detail.

The Supplemental Electronic Filing includes all supplements due April 1, per the Annual Statement Instructions.

The Supplement.PDF Filing is the .pdf file for all supplemental schedules and exhibits due April 1.

The Quarterly Electronic Filing includes the quarterly statement data.

The Quarterly.PDF Filing is the .pdf for quarterly statement data.

The June.PDF Filing is the .pdf file for the Audited Financial Statements and Accountants Letter of Qualifications.

Column (4) Number of Copies
Indicates the number of copies that each foreign or domestic company is required to file for each type of form. The Blanks (EX) Task Force modified the 1999 Annual Statement Instructions to waive paper filings of certain NAIC supplements and certain investment schedule detail, if such investment schedule data is available to the states via the NAIC database. The checklists reflect this action taken by the Blanks (EX) Task Force. XXX appears in the “Number of Copies” “Foreign” column for the appropriate schedules and exhibits. Some states have chosen to waive printed quarterly and annual statements from their foreign insurers and to rely upon the NAIC database for these filings. This waiver could include supplemental annual statement filings. The XXX in this column might signify that the state has waived the paper filing of the annual statement and all supplements.
Column (5) Due Date

Indicates the date on which the company must file the form.

Column (6) Form Source

This column contains one of three words: “NAIC,” “State,” or “Company.” If this column contains “NAIC,” the company must obtain the forms from the appropriate vendor. If this column contains “State,” the state will provide the forms with the filing instructions. If this column contains “Company,” the company, or its representative (e.g., its CPA firm), is expected to provide the form based upon the appropriate state instructions or the NAIC Annual Statement Instructions.

Column (7) Applicable Notes

This column contains references to the Notes to the Instructions that apply to each item listed on the checklist. The company should carefully read these notes before submitting a filing.

*If XXX appears in this column, this state does not require this filing, if hard copy is filed with the state of domicile and if the data is filed electronically with the NAIC. If N/A appears in this column, the filing is required with the domiciliary state. EO (electronic only filing).

**If Form Source is NAIC, the form should be obtained from the appropriate vendor.

***For those states that have adopted the NAIC Corporate Governance Annual Disclosure Model Act, an annual disclosure is required of all insurers or insurance groups by June 1. The Corporate Governance Annual Disclosure is a state filing only and should not be submitted by the company to the NAIC. Note however that this filing is intended to be submitted to the lead state if filed at the insurance group level. For more information on lead states, see the following NAIC URL: http://www.naic.org/public_lead_state_report.htm.
***For those states that have adopted the NAIC updated Holding Company Model Act, a Form F filing is required annually by holding company groups. Consistent with the Form B filing requirements, the Form F is a state filing only and should not be submitted by the company to the NAIC. Note however that this filing is intended to be submitted to the lead state. For more information on lead states, see the following NAIC URL: http://www.naic.org/public_lead_state_report.htm

******For those states that have adopted the NAIC Risk Management and Own Risk and Solvency Assessment Model Act, a summary report is required annually by insurers and insurance groups above a specified premium threshold. The ORSA Summary Report is a state filing only and should not be submitted by the company to the NAIC. Note however that this filing is intended to be submitted to the lead state if filed at the insurance group level. For more information on lead states, see the following NAIC URL: http://www.naic.org/public_lead_state_report.htm

### General Instructions

**For Companies to Use Checklist**

**Please Note:** This state’s instructions for companies to file with the NAIC are included in this Checklist. The NAIC will not be sending their own checklist this year.

Electronic filing is intended to be filing(s) submitted to the NAIC via the NAIC Internet Filing Site which eliminates the need for a company to submit diskettes or CD-ROM to the NAIC. Companies are not required to file hard copy filings with the NAIC.

The **Annual Statement Electronic Filing** includes the annual statement data and all supplements due March 1, per the Annual Statement Instructions. This includes all detail investment schedules and other supplements for which the Annual Statement Instructions exempt printed detail.

The **March .PDF Filing** is the .pdf file for annual statement data, detail for investment schedules and supplements due March 1.

The **Risk-Based Capital Electronic Filing** includes all risk-based capital data.

The **Risk-Based Capital.PDF Filing** is the .pdf file for risk-based capital data.

The **Supplemental Electronic Filing** includes all supplements due April 1, per the Annual Statement Instructions.

The **Supplemental.PDF Filing** is the .pdf file for all supplemental schedules and exhibits due April 1.

The **Quarterly Statement Electronic Filing** includes the complete quarterly statement data.

The **Quarterly Statement.PDF Filing** is the .pdf file for quarterly statement data.

The **Combined Annual Statement Electronic Filing** includes the required pages of the combined annual statement and the combined Insurance Expense Exhibit.

The **Combined Annual Statement.PDF Filing** is the .pdf file for the Combined annual statement data and the combined Insurance Expense Exhibit.

The **June .PDF Filing** is the .pdf file for the Audited Financial Statements and Accountants Letter of Qualifications.

<tr>
<th>Column (4)</th>
<th>Number of Copies</th>
</tr>
</thead>
<tbody>
<tr>
<td>Indicates the number of copies that each foreign or domestic company is required to file for each type of form. The Blanks (EX) Task Force modified the 1999 Annual Statement Instructions to waive paper filings of certain NAIC supplements and certain investment schedule detail if such investment schedule data is available to the states via the NAIC database. The checklists reflect this action taken by the Blanks (EX) Task Force. XXX appears in the “Number of Copies” “Foreign” column for the appropriate schedules and exhibits. <strong>Some states have chosen to waive printed quarterly and annual statements from their foreign insurers and to rely upon the NAIC database for these filings. This waiver could include</strong></td>
<td></td>
</tr>
</tbody>
</table>

© 2021 National Association of Insurance Commissioners
supplemental annual statement filings. The XXX in this column might signify that the state has waived the paper filing of the annual statement and all supplements.

**Column (5) Due Date**

Indicates the date on which the company must file the form.

**Column (6) Form Source**

This column contains one of three words: “NAIC,” “State,” or “Company.” If this column contains “NAIC,” the company must obtain the forms from the appropriate vendor. If this column contains “State,” the state will provide the forms with the filing instructions. If this column contains “Company,” the company, or its representative (e.g., its CPA firm), is expected to provide the form based upon the appropriate state instructions or the NAIC Annual Statement Instructions.

**Column (7) Applicable Notes**

This column contains references to the Notes to the Instructions that apply to each item listed on the checklist. The company should carefully read these notes before submitting a filing.

*If XXX appears in this column, this state does not require this filing, if hard copy is filed with the state of domicile and if the data is filed electronically with the NAIC. If N/A appears in this column, the filing is required with the domiciliary state. EO (electronic only filing).

**If Form Source is NAIC, the form should be obtained from the appropriate vendor.

***For those states that have adopted the NAIC Corporate Governance Annual Disclosure Model Act, an annual disclosure is required of all insurers or insurance groups by June 1. The Corporate Governance Annual Disclosure is a state filing only and should not be submitted by the company to the NAIC. Note however that this filing is intended to be submitted to the lead state if filed at the insurance group level. For more information on lead states, see the following NAIC URL: [http://www.naic.org/public_lead_state_report.htm](http://www.naic.org/public_lead_state_report.htm).

****For those states that have adopted the NAIC updated Holding Company Model Act, a Form F Filing is required annually by holding company groups. Consistent with the Form B filing requirements, the Form F is a state filing only and should not be submitted by the company to the NAIC. Note however that this filing is intended to be submitted to the lead state. For more information on lead states, see the following NAIC URL: [http://www.naic.org/public_lead_state_report.htm](http://www.naic.org/public_lead_state_report.htm).

*****For those states that have adopted the NAIC Risk Management and Own Risk and Solvency Assessment Model Act, a summary report is required annually by insurers and insurance groups above a specified premium threshold. The ORSA Summary Report is a state filing only and should not be submitted by the company to the NAIC. Note however that this filing is intended to be submitted to the lead state if filed at the insurance group level. For more information on lead states, see the following NAIC URL: [http://www.naic.org/public_lead_state_report.htm](http://www.naic.org/public_lead_state_report.htm).

**General Instructions**

**For Companies to Use Checklist**

**Please Note:** This state’s instructions for companies to file with the NAIC are included in this Checklist. The NAIC will not be sending their own checklist this year.

Electronic filing is intended to be filing(s) submitted to the NAIC via the NAIC Internet Filing Site which eliminates the need for a company to submit diskettes or CD-ROM to the NAIC. Companies are not required to file hard copy filings with the NAIC.

**Column (1) Checklist**

Companies may use the checklist to submit to a state, if the state requests it. Companies should copy the checklist and place an “x” in this column when submitting information to the state.

**Column (2) Line #**

Line # refers to a standard filing number used for easy reference. This line number may change from year to year.

**Column (3) Required Filings**

Name of item or form to be filed.

The *Annual Statement Electronic Filing* includes the annual statement data and all supplements due March 1, per the *Annual Statement Instructions*. This includes all detail investment schedules and other supplements for which the *Annual Statement Instructions* exempt printed detail.

The *March.PDF Filing* is the .pdf file for the annual statement, detail for investment schedules and all supplements due March 1.

The *Supplemental Electronic Filing* includes all supplements due April 1, per the *Annual Statement Instructions*.

The *Supplemental.PDF Filing* is the .pdf file for all supplements due April 1.

The *Quarterly Electronic Filing* includes the quarterly statement data.

The *Quarterly.PDF Filing* is the .pdf for quarterly statement data.

The *June.PDF Filing* is the .pdf file for the Audited Financial Statements and Accountants Letter of Qualifications.

**Column (4) Number of Copies**

Indicates the number of copies that each foreign or domestic company is required to file for each type of form. The Blanks (EX) Task Force modified the 1999 *Annual Statement Instructions* to waive paper filings of certain NAIC supplements and certain investment schedule detail, if such investment schedule data is available to the states via the NAIC database. The checklists reflect this action taken by the Blanks (EX) Task Force. XXX appears in the “Number of Copies” “Foreign” column for the appropriate schedules and exhibits. *Some states have chosen to waive printed quarterly and annual statements from their foreign insurers and to rely upon the NAIC database for these filings. This waiver could include supplemental annual statement filings. The XXX in this column might signify that the state has waived the paper filing of the annual statement and all supplements.*

**Column (5) Due Date**

Indicates the date on which the company must file the form.
**Column (6)  Form Source**

This column contains one of three words: “NAIC,” “State,” or “Company.” If this column contains “NAIC,” the company must obtain the forms from the appropriate vendor. If this column contains “State,” the state will provide the forms with the filing instructions (generally, on its web site). If this column contains “Company,” the company, or its representative (e.g., its CPA firm), is expected to provide the form based upon the appropriate state instructions or the NAIC Annual Statement Instructions.

**Column (7)  Applicable Notes**

This column contains references to the Notes to the Instructions that apply to each item listed on the checklist. The company should carefully read these notes before submitting a filing.

The Capital Adequacy (E) Task Force met Nov. 17, 2021. The following Task Force members participated: Judith L. French, Chair, represented by Tom Botsko (OH); Cassie Brown, Vice Chair, represented by Rachel Hemphill (TX); Lori K. Wing-Heier represented by David Phifer (AK); Jim L. Ridling represented by Charles Hale (AL); Ricardo Lara represented by Thomas Reedy (CA); Andrew N. Mais represented by Wanchin Chou (CT); David Altmaier represented by Carolyn Morgan and Ray Spudeck (FL); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Kevin Fry (IL); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Russell Coy (KY); Chlora Lindley-Myers represented by John Rehagen and William Leung (MO); Mike Causey represented by Jackie Obusek (NC); Eric Dunning represented Michael Muldoon (NE); Glen Mulready represented by Eli Snowbarger (OK); Raymond G. Farmer represented by Michael Shull (SC); Mike Kreidler represented by Steve Drutz (WA); and Mark Afable represented by Amy Malm (WI).

1. Adopted its Sept. 30 Minutes

The Task Force conducted an e-vote that ended Sept. 30 to adopt its 2022 proposed charges. No significant changes were made to the charges.

Mr. Drutz made a motion, seconded by Mr. Chou to adopt the Task Force’s Sept. 30 minutes (Attachment One). The motion passed unanimously.

2. Adopted the Reports and Minutes of its Working Groups

a. Health Risk-Based Capital (E) Working Group

Mr. Drutz said the Health Risk-Based Capital (E) Working Group met Nov. 4 (Attachment Two) and took the following action: 1) exposed benchmark guidelines for Investment Income Adjustment for the Underwriting Risk Factors for a 30-day public comment period; and 2) discussed incorporating pandemic risk into the Health Risk-Based Capital (RBC) Formula.

b. Life Risk-Based Capital (E) Working Group

Mr. Botsko said the Life Risk-Based Capital (E) Working Group met Nov. 9 (Attachment Three) and took the following action: 1) exposed guidance on the bond factor changes for a 30-day public comment period; and 2) exposed the American Academy of Actuaries’ (Academy’s) C2 Mortality Risk Work Group recommendation on mortality factor updates for a 60-day public comment period.

c. Catastrophe Risk (E) Subgroup

Mr. Chou said the Catastrophe Risk (E) Subgroup met Oct. 27 (Attachment Four) and Sept. 28. During the Oct. 27 meeting, the Subgroup took the following action: 1) adopted its Sept. 28 minutes; 2) heard a presentation from Karen Clark & Company (KCC) regarding the KCC U.S. wildfire model, which included the current wildfire trends and an overview of the KCC U.S. wildfire model; 3) discussed the possibility of allowing additional third-party models or adjustments to the vendor models; and 4) heard updates from the Catastrophe Model Technical Review Ad Hoc Group.

d. Property and Casualty Risk-Based Capital (E) Working Group

Mr. Botsko said the Property and Casualty Risk-Based Capital (E) Working Group met Oct. 25 (Attachment Five) and took the following action: 1) adopted its July 22 minutes; 2) heard a report from the Catastrophe Risk (E) Subgroup; 3) exposed a draft recommendation to the Restructuring Mechanism (E) Subgroup for a 30-day public comment period ending Nov. 24. The draft recommendation was developed by the Working Group, which included the findings and recommendation of the runoff companies; 4) exposed proposal 2021-14-P (R3 Factor Adjustment) for a 30-day public comment period ending Nov. 24; and 5) heard an update on the status of the research on recommended adjustments to the formulas for premium and reserve risk to reflect the impact of interest rates from the Academy.
Mr. Chou made a motion, seconded by Mr. Reedy, to adopt the minutes of its working groups and subgroup. The motion passed unanimously.

Mr. Chou said the Catastrophe Risk (E) Subgroup and the Property and Casualty Risk-Based Capital (E) Working Group jointly conducted an e-vote that concluded Nov. 12 to adopt the 2021 (January through October) Catastrophe Event List. Both groups are planning to conduct another e-vote in January 2022 to adopt any November and December catastrophe events.

Mr. Chou made a motion, seconded by Mr. Reedy, to adopt proposal 2021-16 CR (2021 Catastrophe Event List) (Attachment Six). The motion passed unanimously.

4. **Adopted its Working Agenda**

Mr. Drutz said Item 19 was added to the Health RBC Working Agenda section to evaluate the underwriting risk factors for an adjustment of investment income based on a six-month U.S. Department of the Treasury (Treasury Department) bond on an annual basis. The second change was to Item 29 for bond evaluation, which was to change the priority status to a 3 and the expected completion date to year-end 2023 or later.

Mr. Drutz made a motion, seconded by Mr. Muldoon, to adopt its working agenda (Attachment Seven). The motion passed unanimously.

5. **Discussed a Memorandum to the Financial Condition (E) Committee**

Mr. Botsko said the Task Force has received numerous referrals over the past several years regarding investments that could potentially start being evaluated by the Securities Valuation Office (SVO) and reported with an NAIC designation in the investment schedules of the annual statement. The purpose of this new working group (RBC Investment Risk and Evaluation (E) Working Group) will be to evaluate the impact this could have, whether those changes are significant enough to change the current structure of the RBC formula, and whether the added granularity is beneficial to determine the appropriate capital standard. Mr. Botsko noted that an informal group was recently formed to discuss investment schedule reporting in the annual statement, and unlike the Investment Risk-Based Capital (E) Working Group that was recently disbanded, its focus was strictly with bond reporting and the RBC investment formula, and factors have been in place for 20 years, so a formal group is warranted to document its analysis for updates or justification of no changes to the factors and formula.

6. **Heard a Presentation from RMS Regarding its North America Wildfire HD Model**

Michael Young (Risk Management Solutions—RMS) provided a brief overview on its North America Wildfire High-Definition (HD) Model regarding: 1) the rationale for the development of its model; 2) key features and differentiators of the model; 3) factors influencing wildfire losses; and 4) the application of wildfire mitigation to insured property exposure. Mr. Chou encouraged all the interested parties to review this presentation and provide comments on the upcoming conference call.

Mr. Chou also stated that a Subgroup member met with the three wildfire modelers—i.e., AIR, KCC, and RMS—earlier to discuss the result of the impact analysis earlier. He said he believes that gaining a better understanding of the modeling results will enable the development of a better wildfire structure in the RBC formula. He said he expects that the initial RBC structure for wildfire will be ready for discussion in December. Thoughts and ideas on the structure are welcome at the upcoming meeting to complete this project effectively.

Having no further business, the Capital Adequacy (E) Task Force adjourned.

11_CapitalAdequacyTFmin.docx
The Capital Adequacy (E) Task Force conducted an e-vote that concluded Sept. 30, 2021. The following Task Force members participated: Judith L. French, Chair, represented by Tom Botsko (OH); Cassie Brown, Vice Chair, represented by Mike Boerner (TX); Jim L. Ridling represented by Sheila Travis (AL); Ricardo Lara represented by Thomas Reedy (CA); Andrew N. Mais represented Kathy Belfi (CT); Karima M. Woods represented by Philip Barlow (DC); David Altmaier represented by Carolyn Morgan (FL); Dana Popish Severinghaus represented by Kevin Fry (IL); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Russell Coy (KY); Chlora Lindley-Myers represented by John Rehagen (MO); Eric Dunning represented by Lindsay Crawford (NE); Mike Kreidler represented by Steve Drutz (WA); and Mark Afable represented by Amy Malm (WI).

1. **Adopted its 2022 Proposed Charges**

The Task Force conducted an e-vote to consider adoption of its 2022 proposed charges.

Mr. Mais made a motion, seconded by Mr. Rehagen, to adopt the Task Force’s 2022 proposed charges (Attachment One-A). The motion passed unanimously.

Having no further business, the Capital Adequacy (E) Task Force adjourned.
Draft: 8/17/21  
Adopted by the Executive (EX) Committee and Plenary, Dec. xx, 2021  
Adopted by the Financial Condition (E) Committee, Dec. xx, 2021  
Adopted by the Capital Adequacy (E) Task Force, TBD

2022 Proposed Charges

CAPITAL ADEQUACY (E) TASK FORCE

The mission of the Capital Adequacy (E) Task Force is to evaluate and recommend appropriate refinements to capital requirements for all types of insurers.

Ongoing Support of NAIC Programs, Products or Services

1. The Capital Adequacy (E) Task Force will:
   A. Evaluate emerging “risk” issues for referral to the risk-based capital (RBC) working groups/subgroups for certain issues involving more than one RBC formula. Monitor emerging and existing risks relative to their consistent or divergent treatment in the three RBC formulas.
   B. Review and evaluate company submissions for the schedule and corresponding adjustment to total adjusted capital (TAC).
   C. Evaluate relevant historical data and apply defined statistical safety levels over appropriate time horizons in developing recommendations for revisions to the current asset risk structure and factors in each of the RBC formulas.

2. The Health Risk-Based Capital (E) Working Group, Life Risk-Based Capital (E) Working Group and Property and Casualty Risk-Based Capital (E) Working Group will:
   A. Evaluate refinements to the existing NAIC risk-based capital (RBC) formulas implemented in prior year. Forward the final version of the structure of the current year life and fraternal, property/casualty (P/C) and health RBC formulas to the Financial Condition (E) Committee by June.
   B. Consider improvements and revisions to the various RBC blanks to: 1) conform the RBC blanks to changes made in other areas of the NAIC to promote uniformity; and 2) oversee the development of additional reporting formats within the existing RBC blanks as needs are identified. Any proposal that affects the RBC structure must be adopted no later than April 30 in the year of the change and adopted changes will be forwarded to the Financial Condition (E) Committee by the next scheduled meeting or conference call. Any adoptions made to the annual financial statement blanks or statutory accounting principles that affect an RBC change adopted by April 30 and results in an amended change may be considered by July 30 for those exceptions where the Capital Adequacy (E) Task Force votes to pursue by super-majority (two-thirds) consent of members present, no later than June 30 for the current reporting year.
   C. Monitor changes in accounting and reporting requirements resulting from the adoption and continuing maintenance of the revised Accounting Practices and Procedures Manual (AP&P Manual) to ensure that model laws, publications, formulas, analysis tools, etc., supported by the Task Force continue to meet regulatory objectives.
   D. Review the effectiveness of the NAIC’s RBC policies and procedures as they affect the accuracy, audit ability, timeliness of reporting access to RBC results and comparability between the RBC formulas. Report on data quality problems in the prior year RBC filings at the summer and fall national meetings.

3. The Variable Annuities Capital and Reserve (E/A) Subgroup, a joint subgroup of the Life Risk-Based Capital (E) Working Group and the Life Actuarial (A) Task Force, will:
   A. Monitor the impact of the changes to the variable annuities reserve framework and risk-based capital (RBC) calculation and determine if additional revisions need to be made.
   B. Develop and recommend appropriate changes including those to improve accuracy and clarity of variable annuity (VA) capital and reserve requirements.

4. The Longevity Risk (E/A) Subgroup, a joint subgroup of the Life Risk-Based Capital (E) Working Group and the Life Actuarial (A) Task Force, will:
   A. Provide recommendations for the appropriate treatment of longevity risk transfers by the new longevity factors.
5. The **Catastrophe Risk (E) Subgroup** of the Property and Casualty Risk-Based Capital (E) Working Group will:
   A. Recalculate the premium risk factors on an ex-catastrophe basis, if needed.
   B. Continue to update the U.S. and non-U.S catastrophe event list.
   C. Continue to evaluate the need for exemption criteria for insurers with minimal risk.
   D. Evaluate the risk-based capital (RBC) results inclusive of a catastrophe risk charge.
   E. Refine instructions for the catastrophe risk charge.
   F. Continue to evaluate any necessary refinements to the catastrophe risk formula.
   G. Evaluate other catastrophe risks for possible inclusion in the charge.

NAIC Support Staff: Jane Barr
The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met Nov. 4, 2021. The following Working Group members participated: Steve Drutz, Chair (WA); Jennifer Li (AL); Wanchin Chou (CT); Carolyn Morgan and Kyle Collins (FL); Michael Muldoon (NE); Tom Dudek (NY); Kimberly Rankin (PA); and Aaron Hodges (TX).

1. **Exposed Proposal 2021-18-H**

   Mr. Drutz said the Working Group adopted adjusted underwriting factors to include investment income for year-end 2021; during these discussions, the Working Group agreed to develop benchmarking guidelines to review the adjustment based on the current market environment. These discussions ranged from a five-year holding period to coincide with the five-year time horizon used in the development of the bond factors to a shorter holding period, such as the six-month treasury due to companies not recognizing investment income in their rate filings with the states. A 0.5% investment yield was incorporated into the factors for year-end 2021. Mr. Drutz said the proposed language states that the benchmarking parameters would be based on a six-month Treasury bond as of Jan. 1 of each year.

   Hearing no objections, the Working Group agreed to expose proposal 2021-18-H (Benchmarking Guidelines for Investment Income Adjustment in the Underwriting Risk Factors) for a 30-day public comment period ending Dec. 3.

2. **Adopted its 2021 Revised Working Agenda**

   Mr. Drutz said the working agenda was revised to include an agenda item for reviewing the investment income adjustment on Jan. 1 of each year. The six-month Treasury bond was used as the basis since this is what was used in the 2021 adjustment. Mr. Drutz said further modifications or changes can be incorporated based on the final benchmarking guidelines adopted.

   Mr. Drutz said an additional item that the Working Group may consider is related to the bond factors for the 20 designations; for year-end 2021, the health bond factors were adopted based on the American Academy of Actuaries (Academy) report and recommendations, while the life bond factors were adopted based on the Moody’s Analytics report. He said the asset risk component is typically not a material component of the health risk-based capital (RBC) formula; therefore, he recommended revising Item 29 on the working agenda to a Priority 3, and he expects a completion date of year-end 2023 or later. He said this will allow the Working Group to further evaluate the differences between the two methodologies and gather at least one year of data to analyze the new factors and overall impact of the bonds on the health formula. Mr. Chou asked what the plan would be if the expected completion date is 2023 and when the Working Group would begin discussing this. Mr. Drutz said the Working Group would need to get through at least the middle of 2022 to get the data and then coordinate these discussions with the Property and Casualty Risk-Based Capital (E) Working Group. Mr. Chou agreed with this approach to move forward.

   Mr. Chou made a motion, seconded by Mr. Dudek, to adopt the working agenda with the friendly amendment to revise Item 29 to a Priority 3 and an expected completion date of year-end 2023 or later (see NAIC Proceedings – Fall 2021, Capital Adequacy (E) Task Force, Attachment Seven). The motion passed unanimously.

3. **Received an Update from the Academy on H2 – Underwriting Risk Component Review**

   Steve Guzski (Academy) said the Health Solvency Subcommittee of the Academy is operating on multiple workstreams and meeting continually over the last few months to review the H2 – Underwriting Risk component. He said the Subcommittee is on track to deliver its initial report to the Working Group by year-end. Crystal Brown (NAIC) asked if the Working Group plans to propose changes to the factors or structure. Mr. Guzski said he does not have that information at this time, but with the multiple workstreams, there is one group assessing the formula and another group assessing the new risk factor development. He said the Subcommittee plans to convene to determine if there are any proposed changes that would be included in the initial report.
4. Relected an Update on the Excessive Growth Charge Ad Hoc Group and the Health Test Ad Hoc Group

Mr. Drutz said the Excessive Growth Charge Ad Hoc Group continued to meet and work on its analysis. He said the focus of the analysis has been to identify the factors that may be correlated and affected by excessive growth. The ad hoc group will continue its review and plans to meet later this month.

Mr. Drutz said the Health Test Ad Hoc Group met Nov. 3 and discussed the summary of the 2020 results and analysis. The ad hoc group discussed the continued inclusion of the reserve ratio in the test and whether that ratio should be adjusted. Mr. Drutz said a draft proposal has been developed and would remove the writing in five states or less and 75% of the writing in the domiciliary state requirements. The ad hoc group also discussed asset adequacy testing and the expectation of continuing to provide this in the actuarial opinion if a company were to move from the life blank to the health blank. The ad hoc group plans to meet again in early December.

5. Discussed Incorporating a Pandemic Risk Component into the Health RBC Formula

Mr. Drutz said the Working Group previously added a working agenda to consider the impact of pandemic risk and COVID-19 on the health RBC formula. The Working Group agreed to place a hold on reviewing this item until the world had moved further through the pandemic, as the full effects of the pandemic were not yet realized. Mr. Drutz asked the Working Group if it believes this item should remain on hold or if the Working Group should begin discussing it. The Working Group agreed to continue to table this discussion until next year.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.
The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met Nov. 9, 2021. The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Ben Bock (CA); Wanchin Chou (CT); Sean Collins (FL); Carrie Mears (IA); Vincent Tsang (IL); Ben Slutsker (MN); William Leung (MO); Derek Wallman (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. Adopted its Summer National Meeting Minutes

Mr. Chou made a motion, seconded by Mr. Schallhorn, to adopt the Working Group’s July 21 (see NAIC Proceedings – Summer 2021, Capital Adequacy (E) Task Force, Attachment Four) minutes. The motion passed unanimously.

2. Exposed the Guidance Document on Bond Factor Changes

Mr. Barlow said this was directed to NAIC staff to draft in order to assist financial examiners and other state insurance regulators as they review the results of 2021 risk-based capital (RBC) calculations for life insurers in light of the 2021 bond factor changes. The Working Group exposed the guidance document for a 30-day public comment period ending Dec. 9.

Chris Trost (American Academy of Actuaries—Academy), chair of the Academy’s C2 Mortality Work Group, said the last time the Work Group was able to provide a report was last year due to the focus on bonds, real estate, and longevity this year. He said the Work Group has continued its work and, where previous updates have been focused on methodology, the Work Group is now at a point to present its recommendations (Attachment Three-A). He noted that included with the recommendations is a full report (Attachment Three-B) that highlights the major changes in the proposed methodology along with detailed documentation on the methodology and assumptions. He said the Work Group is looking for additional feedback, questions, and any other information the Working Group would like to have provided.

Ryan Fleming (Academy) presented the recommendations. Discussing the overall framework and the mortality risk categories, he noted that while the previous recommendation included catastrophe risk, the Work Group has included two new components, one for a terrorism-type event as well as providing for some chance of a currently unknown event. Mr. Carmello asked about the work done for the original factors and suggested it was not stochastic. Mr. Fleming said it was a more limited number of potential scenarios related to various adverse events and did not involve running thousands of scenarios and getting a full distribution of results. Mr. Carmello said it appears these were more deterministic scenarios. Mr. Fleming highlighted what had changed in the recommendation from the original work and what had not as presented on slide six and noted that the expanded factor categories for both individual and group life are needed to reflect differences in mortality risk. He continued this aspect with the information in slides nine and 10, highlighting the relative contribution of the risk categories to the overall capital factors and noting that those factors should recognize that there are varying levels of flexibility to adjust premiums or mortality charges between the products.

The Working Group agreed to expose the Academy’s recommendations and report for a public comment period ending Jan. 10, 2022. Mr. Barlow suggested scheduling a meeting to continue discussion of this recommendation during the exposure period and asked Mr. Trost to work with NAIC staff on drafting the actual blank and instructions necessary for a formal proposal.

4. Discussed Other Matters

Mr. Barlow reminded the Working Group that there is work being done by the American Council of Life Insurers (ACLI) on making the necessary modifications to the asset valuation reserve (AVR) factors related to the bond factor changes. He also noted that Dave Fleming (NAIC) has continued work on the statistics review and that the goal is to have this presented to those Working Group members who volunteered in December.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
Academy C-2 Mortality Work Group Recommendation

Chris Trost, MAAA, FSA
Chairperson C-2 Mortality Work Group

Ryan Fleming, MAAA, FSA
Vice Chair C-2 Mortality Work Group

American Academy of Actuaries

National Association of Insurance Commissioners (NAIC) Life Risk-Based Capital (E) Working Group—November 9, 2021

Agenda

- Review Life RBC C-2 mortality overall approach and current risk-based capital (RBC) factors
- Present recommendation on updated C-2 factors
  - Structural changes to factor categories
  - Updated factors under the recommended structure
- Appendix:
  - Methodology, assumption, and risk distribution comparisons
  - Validation, peer review, limitations

Life RBC C-2 Mortality Overall Approach (1 of 2)

- Mortality risk is defined as adverse variance in life insurance deaths (i.e., insureds dying sooner than expected) over the remaining lifetime of a block of business while appropriately reflecting the pricing flexibility to adjust current mortality rates for emerging experience.
- C-2 requirement covers mortality risk up to the 95th percentile covering adverse experience in excess of the amount covered in statutory reserves.
- C-2 requirement includes mortality risks related to:
  - Volatility Risk—natural statistical deviations in experienced mortality
  - Level Risk—error in experience mortality assumption
  - Trend Risk—adverse mortality trend
  - Catastrophe Risks
    - Large temporary mortality increase from a severe event such as a pandemic or terrorism
    - Sustained mortality increase from an unknown risk

Life RBC C-2 Mortality Overall Approach (2 of 2)

- Evaluate mortality risks using stochastic simulation of projected statutory losses.
- Discount after-tax cash flows (at 2.765% after-tax discount rate [3.5% pre-tax]).
- Express capital requirement using a factor-based approach applied to Net Amount at Risk (NAR) and convert to pre-tax.
The C-2 component of RBC represents 17-18% of total life industry risk-based capital.

### Pre-Tax C-2 Factor Recommendation versus Current RBC

<table>

<tr>
<td>Length of Risk</td>
<td>↑ varies</td>
<td>↑ varies</td>
<td>Factors include seasonality of the length of mortality reserve period</td>
</tr>
</tbody>
</table>

### Lower Experience Mortality Rates

- The new model uses a distribution of rating classes using 2017 CSO tables
- 2023 Commissioners Standard Ordinary (CSO) mortality rates are significantly lower (50%-90%) than “88% of the 1975-80 Basic Table” used previously due to decades of mortality improvement in the U.S.
- An example at a typical age highlights the significant decrease

<table>
<thead>
<tr>
<th>Comparison of Experience Mortality Rates</th>

<th>% Difference</th>
</tr>
</thead>
<tbody>
<tr>
<td>0% to 70%</td>
<td>3.98</td>
<td>2.68</td>
<td>0.38</td>
</tr>
</tbody>
</table>

- Similar % decreases also occur at different gender, ages and underwriting classes
- Experience mortality manifests through the level risk component
C-2 Factor Attribution by Mortality Risk
Individual Life - 5-Year Projection Period Example

- Risks for large inforce blocks are spread proportionately between volatility/level, trend, and catastrophe.
- Smaller inforce blocks are subject to higher volatility and level risks, which result in higher factors versus larger blocks.

C-2 Factor Attribution by Mortality Risk
Group Life - 5-Year Projection Period Example

- Risks for large inforce blocks are spread proportionately between volatility/level, trend, and catastrophe.
- Smaller inforce blocks are subject to higher volatility and level risks, which result in higher factors versus larger blocks.

Expanded Categories to Three Products for Individual Life and Two Categories for Remaining Rate Terms for Group Life

Original 1990s Work
- 1993 factors used a 5-year risk exposure period for all individual life business and a 3-year risk exposure period for group life because it assumed that management actions would occur to reset current mortality rates to reflect emerging experience.

Current Work
- For individual life, management action to reset current mortality rates may be limited or non-existent for products that offer longer term mortality rate guarantees (e.g., Universal Life with Secondary Guarantees [ULSG], Level Term).
- For group life, there are varying lengths of premium rate terms in the marketplace.
- Factors aligned with the remaining risk exposure period of current mortality rates on an inforce block is appropriate. This risk differentiation can be accomplished by varying factors by product for individual life and by remaining premium term for group life.
- The recommendation is to expand factors into additional categories to reflect the current mortality rate risk exposure period over the remaining lifetime of an inforce block of business.

For individual life insurance, the recommendation is to differentiate into three product categories with definitions consistent with the annual statement – analysis of operations by line of business – individual life insurance and VM-20.

For group life insurance, the recommendation is to differentiate into two categories by remaining length of the rate term based on company records by group contract.
Two New Catastrophe Components

A terrorism component was developed based on industry experience from the September 11, 2001 terrorist attacks.

- Component assumes a 2.5% annual probability of an event.
- This component was intended to cover unknown risks that could materialize in the insured population.
- The component assumes a 2.5% annual probability of an event.

- In follow-up to a question at the 9/11/20 meeting, sensitivity testing was performed to adjust the component’s size.
- If the event occurs, it is sustained for the remainder of the projection period up to a maximum period of 10 years.
- The recommendation is to include these two new catastrophe components.

Recommended Updated C-2 Factors

<table>
<thead>
<tr>
<th>Pre-Tax Life RBC C-2 Factors</th>
<th>Per $1000 of NAR</th>
<th>Individual &amp; Industrial Life</th>
<th>Group &amp; Credit Life</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Universal Life with Secondary Guarantees</td>
<td>Term Life</td>
<td>All Other Life</td>
</tr>
<tr>
<td>First $50M (Small)</td>
<td>1.90</td>
<td>2.70</td>
<td>1.90</td>
</tr>

<td>1.70</td>
</tr>
<tr>
<td>US$5B Target</td>
<td>1.30</td>
<td>0.75</td>
<td>0.50</td>
</tr>
</tbody>
</table>

Notes:

- The other category is remaining premium rate terms 3 years and under, which is represented by a 3-year exposure period.
- Size bands were reviewed, and the recommendation is to combine the current middle two categories ($500M-$5B and $5B-$25B) into one category ($500M-$25B).
- The recommendation is to continue categorizing industrial life with individual life and credit life with group life.
- The recommendation is to continue with the 50% premium rate term.
- The recommendation is to include these two new catastrophe components.

Recommendation on Updated C-2 Factors

<td>0.45</td>
</tr>
<tr>
<td>$&gt; 20B</td>
<td>0.76</td>
<td>0.45</td>
</tr>
</tbody>
</table>

- Overall group industry impact would be a significant decrease in C-2 capital
- Factors decrease for all but one category: small size for longer rate terms which stays about the same
- Group life factors decreased due to the decades-long decline in experience mortality rates, and the exposure periods remain shorter term as compared to individual life
- C-2 is reduced by up to 50% of premium stabilization reserves

C-2 Factors as an Overall Mortality Increase and Observations Versus Other Capital Regimes

- Table translates factors to an overall mortality percentage increase for a 5-year risk exposure period
- Percentage increases are similar for other risk exposure periods with cumulative magnitudes being greater for longer periods
- For example, a 10% increase for 10 years is more severe than a 10% increase for 5 years
- Factors were reviewed against other capital regimes, including Canada, International Capital Standards (ICS), Solvency II and rating agency
- Mortality risk drivers are consistent
- Confirmed magnitudes are reasonable for the 95th percentile

Overall Mortality Increase

</table>

- The model was extensively sensitivity tested, and the following attributes increase mortality risk for companies concentrated in these areas
  - The C-2 Mortality Work Group doesn’t recommend differentiating RBC factors by these attributes; however, they may be useful to regulators when reviewing potentially weakly capitalized companies
  - Older Attained Ages: capital needs per unit of net amount at risk increase for attained ages 65 and older due to increasing mortality rates
  - Substandard/Classified Underwriting Classes: capital needs are higher due to higher mortality rates on unhealthier/riskier lives

Summary of Recommendations

1. The Academy C-2 Life Mortality Work Group recommends the factors shown on Slide 14 which reflect
2. Expanding factors into additional categories to reflect the current mortality rate risk exposure period over the remaining lifetime of an inforce block of business
   - For individual life insurance, the recommendation is to differentiate into three product categories with definitions considered will be an annual statement analysis of operations by the 5 largest – individual life insurance and life reinsurance life insurer.
   - For group life insurance, the recommendations can be differentiated into two categories by the remaining length of the in-force block of business.
3. Including the two new catastrophe components for 1) terrorism (expressed as a 5% annual probability of an extra 0.05 deaths per 1,000) and 2) the risk of a sustained mortality increase from an unknown event (expressed as a 2.5% annual probability of a 5% sustained mortality increase)
4. Combining the current middle two size categories into one category
5. Continue categorizing industrial life with individual life and credit life with group life
6. Continue with the 50% credit given for group life premium stabilization reserves
7. The work group opines that additional review of the adopted correlation factor with longevity C-2 is not necessary as the Life C-2 modeling was completed consistently with longevity

Sensitivity Testing: Other Attributes that Increase Mortality Risk

- The model was extensively sensitivity tested, and the following attributes increase mortality risk for companies concentrated in these areas
  - The C-2 Mortality Work Group doesn’t recommend differentiating RBC factors by these attributes; however, they may be useful to regulators when reviewing potentially weakly capitalized companies
  - Older Attained Ages: capital needs per unit of net amount at risk increase for attained ages 65 and older due to increasing mortality rates
  - Substandard/Classified Underwriting Classes: capital needs are higher due to higher mortality rates on unhealthier/riskier lives
Proposed Timeline

- A proposed timeline for a year-end 2022 implementation
- By end of Q4 2021: expose recommended final factors
- By end of Q1 2022: structural changes are adopted
- By end of Q2 2022: updated factors are adopted
- Year-end 2022: factors are implemented for year-end 2022 annual statements

Appendix: Model Validation, Peer Review, Limitations

**Validation:** Model assumptions were developed by the work group through reviewing current mortality research and studies applicable to the U.S. life insurance industry. The assumptions were discussed, revised, and agreed upon through the work group’s bi-weekly calls. Model results and sensitivities were also reviewed extensively by the work group. The work group also provided several updates to the NAIC Life Risk-Based Capital Working Group throughout the project and feedback was obtained from regulators.

**Peer Review:** The model was independently peer reviewed by a member of the work group. The peer review confirmed that the calculations performed by the model were reasonable for the intended purpose and were being applied as intended.

**Limitations:** The model is intended to stochastically project through Monte Carlo simulation the run-off of in-force life insurance blocks typical of U.S. life insurers in order to develop capital factors for use in the NAIC RBC formula for C-2 life insurance mortality risk. Other uses outside of this intended purpose may not be appropriate. Product features in the model were developed at a very basic level and consider differences in base statutory reserves, lapses, post-level term mortality experience, face amounts and attained ages. The model is not designed to replicate detailed product and in-force block characteristics unique to individual companies. In particular, ULSG products were not directly modeled. The work group concluded based on the modeling that the capital factors are insensitive to product differences for a given risk exposure period. The recommendation to differentiate based on product is an indirect way to get at the length of mortality rate guarantee, utilizes the current reporting structure of the annual statements, and is aligned with principles based reserving differentiation.

Mr. Philip Barlow
Chair, Life Risk-Based Capital (E) Working Group
National Association of Insurance Commissioners (NAIC)

Dear Philip,

On behalf of the C-2 Mortality Work Group of the American Academy of Actuaries\(^1\), we are providing a recommendation on updates to the Life Risk-Based Capital (RBC) C-2 Mortality Factors. The objective of the work group was to review and update the model developed in the early 1990’s, which was used in setting the currently applicable Life RBC C-2 factors.

The recommendation may be found in the attached report and accompanying slide presentation. The recommended factors are based on the following key changes.

1. Expanding factors into additional categories to reflect the assumed current mortality rate risk exposure period over the remaining lifetime of an inforce block of business.
2. Adding two catastrophe components for a) terrorism (expressed as a 5% annual probability of an extra 0.05 deaths per 1,000), and b) the risk of a sustained mortality increase from an unknown event (expressed as a 2.5% annual probability of a 5% sustained mortality increase). These two new components are in addition to the pandemic component previously included.
3. Combining the current middle two size categories into one category.

The remainder of the structure is recommended to stay the same. We look forward to presenting the work group’s recommendation at the November 9, 2021 Life Risk-Based Capital (E) Working Group meeting.

Sincerely,

Chris Trost, MAAA, FSA
Chairperson, C-2 Mortality Work Group
American Academy of Actuaries

Ryan Fleming, MAAA, FSA
Vice Chair, C-2 Mortality Work Group
American Academy of Actuaries

Executive Summary

Introduction

The purpose of this report is to document the model developed and used by the Academy C-2 Life Mortality Work Group in support of its work to consider and propose updates to the C-2 capital factors for life insurance mortality within the NAIC Risk-Based Capital formula. The objective of the work group was to review and update the model developed in the early 1990’s, which was used in setting the Life RBC C-2 factors which have been in place since 1993.

Mortality risk is defined as adverse variance in life insurance deaths (i.e., insureds dying sooner than expected) over the remaining lifetime of a block of business while appropriately reflecting the pricing flexibility to adjust current mortality rates for emerging experience. Life insurance mortality risk was evaluated by stochastic simulation through the model documented in this memo. The mortality risks evaluated were volatility, level, trend, and catastrophe. The model is intended to simulate the run-off of inforce life insurance blocks typical of U.S. life insurers.

The capital need, expressed as a dollar amount, is determined as the greatest present value of accumulated deficiencies at the 95th percentile of the stochastic distribution of scenarios over the remaining lifetime of a block of business while appropriately reflecting the pricing flexibility to adjust current mortality rates. Statutory losses are defined as the after-tax quantification of gross death benefits minus reserves released minus mortality margin present in reserves. The after-tax statutory losses are discounted to the present by using 20-year averages for U.S. swap rates. By selecting the largest present value accumulated loss across all projection years, the solved for capital ensures survival at all projection periods. Earlier period losses are not allowed to be offset by later period gains to reduce capital. The 95th percentile is the commonly accepted statistical safety level used for Life RBC C-2 mortality risk to identify weakly capitalized companies. The after-tax capital needs are translated to a factor expressed as a percentage of the initial net amount at risk (NAR), and are shown as an amount per $1,000 of NAR. The pre-tax factor is determined by taking the after-tax factor divided by (1 minus the tax rate).

The documentation includes descriptions of model inputs and assumptions, capital quantification method, results and sensitivities, validation and peer review and limitations.

Key Assumption Changes from Original Work

The following assumptions changes from the original work are highlighted as having the most significant impact on the modeled results.

1. Experience mortality rates are significantly lower than when the original work was completed, reflecting decades of U.S. insured population mortality improvement. This leads to lower capital need through the level risk component for large inforce blocks with credible mortality experience.

2. In place of the severe human immunodeficiency virus (HIV) scenarios assumed in the original work, a new catastrophe risk component was developed for an unknown sustained increase in mortality. The net impact of these two changes was a reduction in the capital need as the higher probability, higher severity HIV assumptions were replaced with the unknown risk component that has lower probability and severity.
3. The pandemic distribution was updated, and a terrorism component was added, leading to a modest increase in the capital need.

4. Trend risk was expanded to reflect a greater range of mortality trends and differences by age/gender cohorts. This update resulted in higher capital factors.

5. The capital quantification method was updated to a greatest present value of accumulated deficiencies (GPVAD) method with statutory losses defined as death benefits minus reserves released. This resulted in a modest increase compared to the prior method.

6. The risk exposure period to current mortality rates was expanded to reflect product and premium terms available in the marketplace. For individual life, the risk exposure periods were expanded from 5 years to 5 years, 10 years, and 20 years. For group life, the risk exposure periods were expanded from 3 years to 3 years and 5 years. The longer a company is exposed to current mortality rates without being able to adjust pricing, the greater the capital need.

The directional impact relative to the current RBC factors for large and small inforce block sizes is highlighted in Exhibit 1 below. For a 5-year risk exposure period, the overall impact of the model updates results in a significant decrease in most factors. However, the risk exposure period is a critical variable, and this component factors into the structural changes being recommended by this work group.

**Overall Results and Recommended C-2 Factors**

The recommended pre-tax factors per $1,000 of retained NAR are shown in Table 1 below. Business assumed by reinsurers is treated as direct for reinsurer financial statements. The factors are differentiated by individual & industrial life and group & credit life, consistent with the current framework. The modeling focused on individual and group life, and the work group evaluated the continued appropriateness of applying the factors to industrial life and credit life business. It is recommended that industrial life and credit life continue to be mapped to individual and group life, respectively, as the product attributes are similar. The factors are rounded to the nearest 0.05 to recognize the randomness inherent in the model (see Impact of Random Number Seed for additional information). Three size bands are recommended to represent inforce blocks of small, medium, and large sizes. This reflects combining the two middle
categories of the current framework as the risk characteristics are similar. The size bands were reviewed and continue to be relevant and appropriate, and a material portion of life insurers are represented within each category.

Within individual & industrial life, the factors are differentiated into three product categories: Universal life with secondary guarantees (ULSG), term life, and all other life. The product definitions are consistent with the annual statement – analysis of operations by line of business – individual life insurance and Valuation Manual (VM)-20. The differences by product category are the sole result of applying different risk exposure periods to an aggregate life inforce block. As described in Sensitivity 4 Individual Life Products under Model Sensitivities, the model produces consistent results by product for a given risk exposure period, as expressing the factor as a percentage of net amount at risk neutralizes product differences.

ULSG factors are the highest due to the longest current mortality rate exposure and are based on a 20-year risk exposure period for a mature inforce block. Term life factors are based on a typical 10-year risk exposure period for a mature inforce block. The industry is concentrated in 10-, 20- and 30-year level term. All other life factors are based on a 5-year risk exposure period and assume inforce pricing may be adjusted following adverse mortality experience due to the presence of non-guaranteed elements. Examples are universal life (UL) products without secondary guarantees and participating whole life products.

Within group & credit life, the factors are differentiated into two categories based on the remaining length of the premium term based on company records by group contract. The two categories are remaining rate terms over 3 years and remaining rate terms 3 years and under. The remaining rate terms over 3 years category is represented by a 5-year risk exposure period, and the remaining rate terms 3 years and under is represented by a 3-year risk exposure period. The risk exposure periods recognize a time lag between when experience emerges and when pricing is adjusted.

Table 2 and Table 3 compare the recommended factors versus the current RBC factors in place as of 12/31/2020.

* as of 2019 annual statement reporting

The overall individual life industry impact would be a modest decrease with industry exposure by NAR concentrated in term life business amongst large insurers. Factors increase for ULSG due to the long-term
exposure period to current mortality rates. As indicated in Exhibit 1, factors decrease for products with near-term inforce pricing flexibility (i.e., all other category). Small ULSG and term carriers would experience an increase on retained business. However, reinsurance is often used to transfer/mitigate the mortality risk for small carriers.

The overall group industry impact would be a significant decrease in C-2 capital. The factors decrease for all but one category: small size for longer rate terms which stays about the same. Group life factors decreased due to the decades-long decline in experience mortality rates, and the risk exposure periods remain shorter term as compared to individual life.

Credit for Group Life Premium Stabilization Reserves

The current RBC formula includes a 50% credit for group life premium stabilization reserves to offset the group life C-2 requirement. This component was reviewed by the work group. Based on a theoretical framework and professional experience, the 50% factor was deemed to be an appropriate offset to the capital requirement.

Correlation with Longevity C-2

The updated Life C-2 mortality modeling was completed consistent with the development of the adopted Longevity C-2 factors and correlation factor. Therefore, the work group opines that additional review of the adopted correlation factor is not necessary because of the updates to the Life C-2 mortality factors being recommended by this work group.

Introduction

The purpose of this report is to document the model developed and used by the Academy C-2 Life Mortality Work Group in support of its work to consider and propose updates to the C-2 capital factors for life insurance mortality within the NAIC Life Risk-Based Capital formula. The objective of the work group was to review and update the model developed in the early 1990’s, which was used in setting the Life RBC C-2 factors which have been in place since 1993.

Mortality risk is defined as adverse variance in life insurance deaths (i.e., insureds dying sooner than expected) over the remaining lifetime of a block of business while appropriately reflecting the pricing flexibility to adjust current mortality rates for emerging experience. Life insurance mortality risk was evaluated by stochastic simulation through the model documented in this memo. The mortality risks evaluated were volatility, level, trend, and catastrophe. The model is intended to simulate the run-off of inforce life insurance blocks typical of U.S. life insurers.
The capital need, expressed as a dollar amount, is determined as the GPVAD at the 95th percentile of the stochastic distribution of scenarios over the remaining lifetime of a block of business while appropriately reflecting the pricing flexibility to adjust current mortality rates. Statutory losses are defined as the after-tax quantification of gross death benefits minus reserves released minus mortality margin present in reserves. The after-tax statutory losses are discounted to the present by using 20-year averages for U.S. swap rates. By selecting the largest present value accumulated loss across all projection years, the solved for capital ensures survival at all projection periods. Earlier period losses are not allowed to be offset by later period gains to reduce capital. The 95th percentile is the commonly accepted statistical safety level used for Life RBC C-2 mortality risk to identify weakly capitalized companies. The after-tax capital needs are translated to a factor expressed as a percentage of the initial NAR, and are shown as amount per $1,000 of NAR. The pre-tax factor is determined by taking the after-tax factor divided by (1 minus the tax rate).

The documentation includes descriptions of model inputs and assumptions, capital quantification method, results and sensitivities, validation and peer review and limitations.

**Inputs and Assumptions**

This section describes the inputs and assumptions used by the model. Detail on specific assumptions is available upon request.

**Model Assumptions**

The model assumptions section are high-level parameters for running the model and include the following inputs.

- **Random Number Seed:** This is the random number seed for starting the sequence of numbers for the random number generator. This was randomly set to 25 for the modeling. This assumption is necessary in order to be able to exactly re-produce model results. Changing the random number seed will result in a different sequence of random numbers and changes to model results (See sensitivities).

- **Scenarios:** This is a number of scenarios the model runs. 10,000 scenarios were assumed to obtain a smooth and full distribution of results.

- **Projection Years:** This is a number of years the model will run for each scenario. The model is set up to run from 1-30 years. The projection period represents the risk exposure period for an inforce block where current mortality rates are at risk for adverse experience. 3-year and 5-year projection periods were selected for group life insurance to cover the typical remaining periods for rate terms for group products and the ability to re-price for mortality changes after this period. This was a change from the 3-year period assumed in the prior work. Individual life insurance was selected to run for projection periods of 5 years, 10 years, and 20 years. The 5-year period is intended to represent inforce blocks where pricing may be adjusted following adverse mortality experience due to the presence of non-guaranteed elements, which are not yet being charged at maximum levels. Longer projection periods are intended to represent inforce blocks that have little to no flexibility to respond to mortality changes over the remaining lifetime. ULSG factors are based on a 20-year risk exposure period for a mature inforce block. Term life factors are based on a typical 10-year risk exposure period for a mature inforce block. The industry is concentrated in 10-, 20- and 30-year level term.
• **Policies:** This is the assumed number of policies in a life insurer’s inforce block. Three size bands were modeled: 1,000,000 policies for large inforce blocks, 100,000 policies for medium inforce blocks, and 10,000 policies for small inforce blocks. Policy size weightings are applied by face amount subject to the retention limits.

• **Discount Rate (Pre-Tax):** Projected amounts are discounted to the present using this assumption converted to an after-tax rate. A 3.5% discount rate was selected based on the 2001-2020 average of 10-year U.S. swap rates. The selection of the discount rates is aligned with the same methodology used to determine the discount rate for the RBC C-1 bond factors. The methodology uses a 20-year average and is intended to represent a risk-free rate.

• **Retention Limit:** This represents the maximum retained face amount per policy for a company’s inforce block. Amounts above this limit are assumed to be reinsured (or not issued above the limit). Three retention limits were modeled based on company size: $1,000,000 for large inforce blocks, $250,000 for medium inforce blocks, and $50,000 for small inforce blocks. These assumptions are used to calibrate the total inforce block size for the three size categories. Results are insensitive to variations in retained face amount for a given number of policies (see Sensitivity 8 Face Amount under Model Sensitivities).

• **Tax Rate:** This represents the tax rate applied to pre-tax statutory losses to determine after-tax losses. The rate of 21% is based on the current U.S. corporate tax rate. It is also used to convert the discount rate to an after-tax rate.

**Initial Inforce Assumptions**

These set of assumptions are used to specify parameters for inforce weightings that is used to develop a block of inforce policies. Given the weights input in this section, the “Initial Inforce Loaded in Model” section is weighted to specify the inforce cohorts and policy counts run through the model processing. Based on the characteristics outlined, the inforce population may have up to 8,748 unique cohorts. The weightings assumed for the modeling analysis were developed using data from the two experience reports in the table below. The model has the ability to run individual and group life together, but the analysis was done modeling these separately to determine unique factors for each category.

<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Group Life</td>
<td>Society of Actuaries 2016 Group Life Experience Committee Report</td>
</tr>
</tbody>
</table>

• **Gender:** The overall percentages of males and females for individual and group life.

• **Underwriting Code:** The underwriting codes and rating class weightings for the inforce population. The underwriting code for a given cohort is used to map to a mortality based on that underwriting class. There are 5 underwriting codes/classes for individual life aligned with the categories for the 2017 Commissioners Standard Ordinary (CSO) mortality table: non-smoker best class (super preferred), non-smoker mid class (preferred), non-smoker residual (standard), smoker best class (preferred), and smoker residual (standard). Group life policies are not assumed to be underwritten and are mapped to mortality developed from the SOA 2016 group life experience study.
Product Code: The product weightings for the inforce population. There are four individual life products simulated: 10-year level term, 20-year level term, permanent whole life, and accumulation universal life. Group life is simulated as a term product. The following assumptions vary by product type.

- Attained Age and Policy Duration
- Face Amount
- Lapse Rates
- Post-level Term Mortality
- Reserve Factors

Attained Age and Duration: These are weightings by product that vary by attained age and duration.

Face Amount: These are weightings by product for various face amount sizes.

Mortality Risk Drivers

The model projects four categories of mortality risk through stochastic simulation: volatility, level, trend, and catastrophe. See the Experience Mortality Rates section for a description of the base mortality rates (referenced by q in the following formulas).

1. Volatility Risk: The risk of natural statistical deviations in mortality experience. These natural statistical deviations from expected deaths are represented in the model through a binomial distribution. Volatility risk decreases with increased exposure, and thus is lower for larger blocks than smaller blocks.

   \[ \text{Prob}[Deaths = n] = \binom{\text{Policies}}{n} \times q^n \times (1 - q)^{\text{Policies} - n} \]

2. Level Risk: The risk of incorrect experience mortality assumptions. This risk is also known as pricing risk. The level risk parameters were developed from two components. This component is consistent with the level risk component used by the Academy C2 Longevity Risk Task Force to develop RBC C-2 factors for longevity products.

   a. Statistical Sampling Volatility (Credibility): Assumes mortality rates are set with experience studies. Credibility of estimates is dependent on study size (number of policies and years in the study).

   \[ \text{Cred}(\sigma) = \sqrt{\frac{q(1-q)}{\text{Number of Policies \times Study Years}}} / q \]

   - Study Years: 5 years was selected to represent a company’s typical experience study period.
   - q per 1K: represents the experience mortality rate in the first projection year expressed per 1,000 lives. This value is calculated from initial inforce cells from the...
experience mortality tables (2017 CSO tables for individual life, 2016 group life experience table for group life).

- q: experience mortality rate in the first projection year, derived from “q per 1K”.

b. Natural Mortality Volatility: Assumes that there is natural volatility around the mortality mean.

- NatVol(σ) = 2.2%/$\sqrt{\text{Study Years}}$

- The 2.2% implied annual volatility was derived from an insured age-weighted regression on U.S. Social Security data from 1950 to 2014.

- Study Years: the natural mortality volatility scales down with the number of years in a company’s study period. 5 years was selected to represent a company’s typical experience study period.

c. Overall Level Mortality Volatility: The statistical sampling and natural volatility components are combined assuming independence.

- $\sigma_L = \sqrt{\text{Cred}(\sigma)^2 + \text{NatVol}(\sigma)^2}$

d. Level Mortality Mean: The average pricing error is assumed to be 0.00%.

- $\mu_L = 0.00\%$

3. Trend Risk: The risk that future mortality improvement is different than assumed. Historically, both mortality improvement (MI) and MI volatility have differed by historical period, gender, and age, among others. While average MI over long periods tends to stabilize, period to period MI can be quite different. An improvement distribution that captures these characteristics was developed while balancing the desire for simplicity. Deviation in mortality improvement is modeled across male/female and young/ middle/old ages as correlated normally distributed random variables. An MI deviation is generated for each cohort in each year of each scenario. This allows for large differences year-to-year consistent with historical data.

a. Years Since Study: 3 years was selected to represent a typical time period since a company’s last mortality experience study was completed. Mortality improvement is stochastically projected 3 years from the experience study table date to the model start date.

$[D_{YM}, D_{MM}, ..., D_{OF}] \sim N(\mu, \Sigma)$

Where:
- $\mu =$ zero vector = [0, 0, ..., 0]
- $\Sigma =$ covariance matrix calibrated with social security data 1950+
b. Covariance Matrix: Historical mortality improvement and covariance between gender and age was calibrated from insured age-weighted U.S. Social Security data from 1950 to 2014, consistent with the data source for level risk. The covariance matrix is shown in the following table, and the resulting correlations are shown as well.

4. **Catastrophe Risk**: The risk of a short-term spike in mortality or a longer-term increase in mortality from a currently unknown health event. This risk includes 3 components: a pandemic risk distribution, a terrorism risk distribution, and an unknown sustained risk distribution.

a. **Pandemic Risk**: The risk of a one-year increase in mortality from a new pandemic, such as a new flu strain. The distribution is discrete and was calibrated from historical observations and multiple sources: current RBC, Swiss Re’s model, Solvency II, U.S. Centers for Disease Control and Prevention (CDC)/Department of Health and Human Services Pandemic Severity Assessment Framework (PSAF). Rates are expressed as deaths per 1,000 lives and are applied as an add-on.
across all ages if triggered. Multiple pandemics may occur in a given scenario.

b. **Terrorism Risk:** The risk of a one-year increase in mortality from a terrorism event. The discrete distribution was calibrated based on U.S. life insurer experience from the Sept 11, 2011 terrorism events. The rate is expressed as deaths per 1,000 lives and is applied as an add-on across all ages if triggered. Multiple terrorism events may occur in a given scenario.

<td>0.0%</td>
</tr>
</tbody>
</table>

c. **Unknown Sustained Risk:** The risk of a sustained increase in mortality from an unknown health event. The discrete distribution was calibrated from two historical health events impacting the U.S. population: HIV and opioid abuse. The mortality increase is defined as a percentage increase applied across all ages if triggered. If the event is triggered in the scenario it continues for the lesser of the maximum duration assumption and remainder of the projection period. A 10-year period was selected for the maximum duration based on the historical events and to provide for an event lasting up to a decade. The maximum duration assumption is relevant only when modeling projection periods longer than this assumption. Given the sustained nature of the event, it can only occur once per scenario.

**Reserve Mortality Margin**

- **Load (Margin):** A 5% load was used for the load built into reserve mortality rates. This is intended to represent the margin companies have to absorb moderately adverse mortality experience through the conservatism built into statutory reserve calculations. This assumption was used in the current RBC factors and was deemed to remain consistent with moderately adverse experience. Capital is thus determined for 95th percentile experience above moderately adverse outcomes as represented by the 5% load.

**Experience Mortality Improvement**

- Experience mortality improvement is set equal to the 2017 SOA mortality improvement scale for use with Actuarial Guideline (AG) 38 and VM-20. The rates vary by age and gender and are converted to lognormal rates for input in the model.

**Lapse Rates**

- Lapse rates are set for each product type and vary by issue age, policy duration and underwriting class. For the recommended individual life capital factors, the simulated lapses are a weighted average of the four product types. For a given risk exposure period, results are insensitive to the product type (including lapses) as shown in Sensitivity 4 under the Model Sensitivities section.

  o **10-Year Term:** Lapse rates were developed using a combination of the SOA/LIMRA U.S. Individual Life Insurance Persistency Study for 2005-2007 and the SOA/RGA Report on the Lapse and Mortality Experience of Post-Level Premium Period Term Plans (2014). The 10-

---

2 Reinsurance Group of America
Year Term product is assumed to be a level term product for 10 years. Lapse rates spike beginning in year 10 at the end of the level term period.

- **20-Year Term**: Lapse rates were developed using a combination of the SOA/LIMRA U.S. Individual Life Insurance Persistency Study for 2005-2007 and the SOA/RGA Report on the Lapse and Mortality Experience of Post-Level Premium Period Term Plans (2014). The 20-Year Term product is assumed to be a level term product for 20 years. Lapse rates spike beginning in year 20 at the end of the level term period.

- **Permanent Whole Life**: Lapse rates were developed using the SOA/LIMRA U.S. Individual Life Insurance Persistency Study for 2005-2007. The Permanent Whole Life product is assumed to be a whole life product. Lapse rates are higher in early policy years and grade down with policy duration.

- **Accumulation Universal Life**: Lapse rates were developed using the SOA/LIMRA U.S. Individual Life Insurance Persistency Study for 2005-2007. The UL product is assumed to be a cash value accumulation universal life product. Lapse rates are higher in early policy years and grade down with policy duration.

- **Group**: Lapse rates were set equal to 10 Year Term rates for the first 5 policy durations. Durations 6 and later were assumed to remain constant. Sensitivity testing demonstrated that group life results are relatively insensitive to lapse rates.

**Post Level Term Mortality**

- Mortality experience for 10-year and 20-year term products following the level premium period is set through these assumptions through actual to expected ratios. Mortality rates spike following the level premium period because healthy insureds find new coverage, while unhealthy insureds are more likely to keep the coverage due to insurability concerns. The post-level term mortality actual to expected rates were developed using the SOA/RGA Report on the Lapse and Mortality Experience of Post-Level Premium Period Term Plans (2014).

**Experience Mortality Rates**

- **Individual Life**: Experience mortality rates were set using the 2017 CSO Unloaded Age Nearest Birthday (ANB) tables and vary by gender, smoking status, and underwriting class. Each table is structured as select and ultimate by issue ages 18-95 and select period policy durations 1-25. The 10 individual life tables have the following naming convention:
  - **Gender**: Male (M) or Female (F)
  - **Smoking Status**: Non-smoker (NS) or Smoker (SM)
  - **Underwriting Class**: Super Preferred (1), Preferred (2 for NS, 1 for SM), Residual (3 for NS, 2 for SM)

- **Group Life**: Experience mortality rates were developed using the SOA 2016 Group Life Experience Committee Report study. The table is structured by gender (male and female) and attained age.
Reserve Factors

- **Permanent Life:** Reserve factors for permanent life (whole life and cash value accumulation universal life) plans were developed using the 2017 CSO tables with a 3.5% interest rate and vary by gender and smoking status. Each table is structured as by issue ages 20-75 in 5-year increments and policy durations 1-101. The 4 individual life tables have the following naming convention:
  - Gender: Male (M) or Female (F)
  - Smoking Status: Non-smoker (NS) or Smoker (SM)

- **Term Life:** Reserve factors for term life (level term 10 and level term 20) plans were developed using the 2017 CSO tables with a 4.5% interest rate and vary by gender, smoking status, and underwriting class. Each table is structured as by issue ages 20-75 in 5-year increments and policy durations 1-10 for level term 10 and 1-20 for level term 20. The 20 individual life tables have the following naming convention:
  - Product: Level Term 10 (LT10) or Level Term 20 (LT20)
  - Gender: Male (M) or Female (F)
  - Smoking Status: Non-smoker (NS) or Smoker (SM)
  - Underwriting Class: Super Preferred (1), Preferred (2 for NS, 1 for SM), Residual (3 for NS, 2 for SM)

- **Group Life:** Reserves for group life were set simply as a yearly renewable term (YRT) reserve equal to ½ of the mortality rate for a given cohort based on gender and attained age. A separate table of factors was not needed.

**Capital Factor Quantification Method**

The capital need, expressed as a dollar amount, is determined as the GPVAD at the 95th percentile of the stochastic distribution of scenarios over the remaining lifetime of a block of business while appropriately reflecting the pricing flexibility to adjust current mortality rates. Statutory losses are defined as the after-tax quantification of gross death benefits minus reserves released minus mortality margin present in reserves. The after-tax statutory losses are discounted to the present by using 20-year averages for U.S. swap rates. By selecting the largest present value accumulated loss across all projection years, the solved for capital ensures survival at all projection periods. Earlier period losses are not allowed to be offset by later period gains to reduce capital. The 95th percentile is the regulator accepted statistical safety level used for Life RBC C-2 mortality risk to identify weakly capitalized companies. The after-tax capital needs are translated to a factor expressed as a percentage of the initial NAR and are shown as amount per $1,000 of NAR. The pre-tax factor is determined by taking the after-tax factor divided by (1 minus the tax rate).
Model Results

Overall Results and Recommended C-2 Factors

The recommended pre-tax factors per $1,000 of retained NAR are shown in Table 1 below. Business assumed by reinsurers is treated as direct for reinsurer financial statements. The factors are differentiated by individual & industrial life and group & credit life, consistent with the current framework. The modeling focused on individual and group life, and the work group evaluated the continued appropriateness of applying the factors to industrial life and credit life business. It is recommended that industrial life and credit life continue to be mapped to individual and group life, respectively, as the product attributes are similar. The factors are rounded to the nearest 0.05 to recognize the randomness inherent in the model (see Impact of Random Number Seed for additional information). Three size bands are recommended to represent inforce blocks of small, medium, and large sizes. This reflects combining the two middle categories in the current framework. The size bands continue to be relevant and appropriate as a material portion of life insurers are represented within each category.

Within individual & industrial life, the factors are differentiated into three product categories: ULSG, term life, and all other life. The product definitions are consistent with the annual statement – analysis of operations by line of business – individual life insurance and VM-20. The differences by product category are the sole result of applying different risk exposure periods to an aggregate life inforce block. As described in Sensitivity 4 Individual Life Products under Model Sensitivities, the model produces consistent results by product for a given risk exposure period, as expressing the factor as a percentage of net amount at risk neutralizes product differences.

ULSG factors are the highest due to the longest current mortality rate guarantees and are based on a 20-year risk exposure period for a mature inforce block. Term life factors are based on a typical 10-year risk exposure period for a mature inforce block. The industry is concentrated in 10-, 20- and 30-year level term. All other life factors are based on a 5-year risk exposure period and assume inforce pricing may be adjusted following adverse mortality experience due to the presence of non-guaranteed elements. Examples are universal life products without secondary guarantees and participating whole life products.

Within group & credit life, the factors are differentiated into two categories based on the remaining length of the premium term based on company records by group contract. The two categories are remaining rate terms over 3 years and remaining rate terms 3 years and under. The remaining rate terms over 3 years category is represented by a 5-year risk exposure period, and the remaining rate terms 3 years and under is represented by a 3-year risk exposure period. The risk exposure periods recognize a time lag between when experience emerges and when pricing is adjusted.

The overall individual life industry impact would be a modest decrease with industry exposure by NAR concentrated in term life business amongst large insurers. Factors increase for ULSG due to the long-term risk exposure period to current mortality rates. As indicated in Exhibit 1, factors decrease for products with near-term inforce pricing flexibility (i.e., all other category). Small ULSG and term carriers would experience an increase on retained business. However, reinsurance is typically used to transfer/mitigate the mortality risk.

</tr>
</tbody>
</table>

The overall group industry impact would be a significant decrease in C-2 capital. The factors decrease for all but one category: small size for longer rate terms which stays about the same. Group life factors decreased due to the decades-long decline in experience mortality rates, and the risk exposure periods remain shorter term as compared to individual life.

Credit for Group Life Premium Stabilization Reserves

The current RBC formula includes a 50% credit for group life premium stabilization reserves to offset the group life C-2 requirement. This component was reviewed by the work group. Based on a theoretical framework and professional experience, the 50% factor was deemed to be an appropriate offset to the capital requirement.

Correlation with Longevity C-2

The updated Life C-2 mortality modeling was completed consistent with the development of the adopted Longevity C-2 factors and correlation factor. Therefore, the work group opines that additional review of the adopted correlation factor is not necessary because of the updates to the Life C-2 mortality factors being recommended by this work group.
Attribution Analysis

The model mortality risk components were analyzed to determine the relative contribution to the overall recommended factors. Charts 1 and 2 below show the results of the attribution analysis for individual and group life. Individual and group life have similar breakdowns by inforce block size with small differences due to the inforce mix, experience mortality rates and other assumptions. For small inforce blocks, the primary mortality risk drivers are volatility and level risks. For large inforce blocks, catastrophe and trend risks become the primary drivers. For medium inforce blocks, the risks are relatively balanced between categories.

95th Percentile Mortality Increase

The 95th percentile capital factors were translated into overall mortality increases (% increase vs experience mortality) for the projection period. Table 4 highlights the results. As expected, the higher the capital factor, the larger the mortality increase. Differences between individual and group life are due to lapse assumptions. Group life has a higher overall lapse rate, which translates into a larger mortality increase needed to reproduce a given capital factor.

| Table 4 - Capital Factors Expressed as an Overall % Mortality Increase |
|---------------------------------|----------------|----------------|----------------|
| Inforce Block Size              | Large | Medium | Small |
| Individual Life                 |       |        |       |
| Group Life                      |       |        |       |
| 8%                              | 10%   | 22%    |
| 10%                             | 14%   | 31%    |

Model Sensitivities

Various sensitivity tests were performed to understand the results of the model under alternative assumptions. Most of the sensitivities were based on the individual life large inforce block size for a 5-year exposure period. However, the sensitivities are similar for group life (if applicable), for the small and medium inforce block sizes, and for different risk exposure periods.

1. Random Number Seed
The model results vary slightly depending on the initial random number seed selected as shown in the table below. As a result of these fluctuations even when running 10,000 scenarios, the recommendation was to round the factors to the nearest 0.05.

<table>
<thead>
<tr>
<th>Sensitivity 1 - Impact of Random Number Seed</th>
</tr>
</thead>

<td>RN Seed 65</td>
</tr>
<tr>
<td>RN Seed 75</td>
</tr>
<tr>
<td>RN Seed 85</td>
</tr>
<tr>
<td>RN Seed 95</td>
</tr>
</tbody>
</table>

2. Mortality Load (Margin)

Sensitivities under alternative mortality loads of 2.5% and 0% are shown in the table below. Lowering the mortality load increases the factor as this assumption is used to represent the amount of mortality margin embedded in statutory reserves. The 5% assumption maps to a 1 standard deviation moderately adverse standard at approximately the 85th percentile. For smaller inforce blocks the 5% mortality load covers less than 1 standard deviation of mortality experience due to the volatility and level risks present with low mortality credibility.

<table>
<thead>
<tr>
<th>Sensitivity 2 - Reserve Mortality Load Assumption</th>
</tr>
</thead>

<td>Factor</td>
</tr>
<tr>
<td>5% Reserve Mortality Load</td>
</tr>
<tr>
<td>2.5% Reserve Mortality Load</td>
</tr>
<tr>
<td>0% Reserve Mortality Load</td>
</tr>
</tbody>
</table>

3. Attained Age

Model results are stable for most of the initial attained age categories. The exception is for older attained ages where the factors increase due to higher mortality rates. Exposure to attained ages 65 and older is relatively small in the assumed inforce mixes based on industry data. However, if a company is concentrated in older age inforce business, then it is subject to higher mortality risk. The recommended factors are not differentiated by attained age due to the low percentage of inforce policies at older attained ages and the data not being readily available in the annual statements.

<table>
<thead>
<tr>

</tr>
<tr>
<td>Age 55</td>
</tr>
<tr>
<td>Age 65</td>
</tr>
<tr>
<td>Age 75</td>
</tr>
</tbody>
</table>
4. Individual Life Products

Model results by individual life product type are relatively stable as shown in the table below. Expressing the capital factors as a percentage of net amount at risk neutralizes product differences. For example, term life products have higher relative net amounts at risk than permanent life products for mature blocks, but the mortality risk is proportionate to the net amount at risk. Therefore, term products will tend to have higher dollar amounts of capital per policy or per unit of face amount due to being subject to higher net amounts at risk.

Given the small product differences, the recommended factors were developed by differentiating the projection period on an entire mix of inforce business containing all products. The risk exposure period as represented by the projection period is the critical variable in recognizing product differences.

As discussed in the Limitations section, product features are modeled at a very basic level and consider differences in base statutory reserves, lapses, post level term mortality experience, face amounts and attained ages.

<table>

<tr>
<td>Universal Life</td>
</tr>
</tbody>
</table>

5. Longer Projection Periods

The length of the projection period is a key assumption and is intended to represent the risk exposure period to current mortality rates over the remaining lifetime of a block of business. The impact of longer projection periods is shown in the table and chart below. Mortality risk increases with projection period as it exposes a company increasingly to trend risk and longer-term mortality shocks.

<table>
<thead>

</tr>
<tr>
<td>Male</td>
</tr>
</tbody>
</table>

7. Underwriting Class

Model results were measured for the best underwriting class (lowest experience mortality) and worst underwriting class (highest experience mortality), which highlights that factor increase slightly with higher experience mortality. However, it’s important to note that the mortality risk assumptions would be different if they were calibrated by underwriting class (versus the approach used to develop assumptions appropriate for the entire industry / inforce mix). Arguably, companies concentrated in exposure to less healthy / lower underwriting classes would be subject to higher mortality risk due to the higher experience mortality rates. The recommended factors are not differentiated by underwriting class due to the low percentage of inforce policies at residual underwriting classes and the data not being readily available in the annual statements.

</tr>
</tbody>
</table>

10. Tax Rate

The pre-tax factors are impacted very slightly by the tax rate through discounting (after-tax cash flows are discounted at an after-tax discount rate). The impact becomes slightly greater with longer projection periods. There is obviously a direct impact to the after-tax factors and RBC amounts based on the applicable corporate tax rate.

<table>
<thead>
<tr>
<th>Sensitivity 10 - Impact of Tax Rate</th>

<tr>
<td>Per $1,000 of Inforce NAR</td>
</tr>
<tr>
<td>21% Tax Rate</td>
</tr>
<tr>
<td>35% Tax Rate</td>
</tr>
</tbody>
</table>

11. Larger Number of Inforce Policies

A sensitivity test was performed with an even larger number of inforce policies to assess the impact. The volatility risk component is directly impacted by the inforce policies assumption. At 5 million inforce policies, the factor ends up a little lower. However, the volatility risk component can’t go lower than 0. Therefore, increasing the number of inforce policies beyond 1 million or even 5 million won’t materially decrease the large size factors.
12. Larger Retention Limit

A larger retention limit increases the large size pre-tax factor slightly due to increased fluctuation from the large face amounts inforce. This assumption is used primarily to control for inforce block size. Smaller inforce blocks are characterized by smaller retention limits as companies tend to reinsure mortality risk in excess of the capability to retain the risk on the balance sheet. If a company were to be concentrated in very large face amounts and a small amount of inforce policies, then it would be subject to higher mortality risk due to volatility.

<tr>
<td>1 Million Policies</td>
<td>0.50</td>
</tr>
<tr>
<td>5 Million Policies</td>
<td>0.43</td>
</tr>
</tbody>
</table>

13. Group Life Lapse Rates

A sensitivity test was performed with lower group life lapses to confirm that results are insensitive to this assumption. A 4% average annual lapse rate was assumed for sensitivity versus base lapse rates around 8% per year. The results confirmed that changes to this assumption do not materially change the results.

<td>0.474</td>
</tr>
</tbody>
</table>

14. Unknown Catastrophe Risk Probability

During the development of the unknown sustained catastrophe component, there was much debate surrounding the probability of the event occurring. There were arguments for both a 2.5% and 5% annual probability with the 2.5% ultimately being the work group’s recommendation. As shown in the table below, increasing the annual probability from 2.5% to 5.0% has only a modest impact on the factor. The reason for this result resides in the cumulative probabilities over the projection period. Since the factor is determined at the 95th percentile, both assumptions result in the unknown risk event being triggered (i.e. cumulative probabilities greater than 5%). The annual probability assumption therefore impacts the length of the event as once the event is triggered it is sustained for the rest of the projection period. A higher probability assumption increases the likelihood of a longer event occurring.

</tbody>
</table>
15. Individual Life Lapses

As with group life, results are relatively insensitive to lapse rates. While a separate sensitivity test is not shown here, differences in lapses are reflected in the product differences (see sensitivity test 4).

Comparison Versus Other Capital Regimes

The work group reviewed characteristics of non-U.S. based capital regimes to evaluate the mortality risks covered and capital requirements versus the results of this project. Other capital regimes have different intended purposes, so differences were expected. The reviews of other capital regimes confirmed that the U.S. Life RBC model includes the same mortality risk types and at an overall magnitude in the proximity of other regimes. One overall difference versus other regimes is that internal company-based modeling is used (or there is the company option to use).

- **Canada Life Insurance Capital Adequacy Test:** The Canadian framework assesses the same mortality risk components as the U.S. Life RBC model: volatility, level, trend, and catastrophe risks. The framework differs in that the capital requirement is unique to each individual company and is determined through company determined modeling.

- **International Association of Insurance Supervisors (IAIS) Insurance Capital Standard (ICS):** The IAIS framework uses a stress-based framework with shocks to the level of mortality (+10%), the trend in mortality, and the volatility in mortality. There is a separate catastrophe risk component equating to an additional 1 death per thousand. This framework is also completed through modeling by each individual entity. Management responses to mortality events are reflected in the modeling. The ICS separately has a basic capital requirement equating to a factor of 0.56 per thousand of NAR.

- **Solvency II:** This framework applies mortality stresses assessed at the 99.5th confidence interval. The standard formula applies a 15% mortality rate increase and is intended to cover volatility, trend, and level risks. The catastrophe risk is modeled as an additional 1.5 deaths per thousand. Companies have the option to use an approved internal model in place of the standard formula.

- **Standard & Poor’s (S&P) Ratings Model:** S&P uses a factor-based approach in assessing U.S. life insurer ratings. For mortality risk, the ratings model recognizes inforce block size differences, and the factors scale down with increasing inforce block size. For the BBB category, the capital factors range from 0.57 per thousand of NAR for the largest inforce blocks (> $100B NAR) to 2.29 per thousand of NAR for the smallest inforce blocks (< $1B NAR). Arguably, having capital below BBB levels is indicative of being weakly capitalized as a company would be rated below investment grade.

Validation and Peer Review

Model assumptions were developed by the work group through reviewing current mortality research and studies applicable to the U.S. life insurance industry. The assumptions were discussed, reviewed, and agreed upon through the work group’s bi-weekly calls. Model results and sensitivities were also reviewed extensively by the work group. The work group also provided several updates to the NAIC Life Risk-Based Capital Working Group throughout the project and feedback was obtained from regulators.
The model was independently peer reviewed by a member of the work group. The peer review confirmed that the calculations performed by the model were reasonable for the intended purpose and were being applied as intended. The detailed results of the peer review are documented separately by the work group.

Additional detailed documentation on model assumptions, output structure and modeling methodology was created by the work group and may be made available upon request.

**Limitations**

The model is intended to stochastically project through stochastic simulation the run-off of inforce life insurance blocks typical of U.S. life insurers in order to develop capital factors for use in the NAIC RBC formula for C-2 life insurance mortality risk. Other uses outside of this intended purpose may not be appropriate.

Product features in the model were developed at a very basic level and consider differences in base statutory reserves, lapses, post level term mortality experience, face amounts and attained ages. The model is not designed to replicate detailed product and inforce block characteristics unique to individual companies. In particular, ULSG products were not directly modeled. The work group concluded based on the modeling that the capital factors are insensitive to product differences for a given risk exposure period. The recommendation to differentiate based on product is an indirect way to get at the length of mortality rate guarantee, utilizes the current reporting structure of the annual statements, and is aligned with principles based reserving differentiation.
The Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met Oct. 27, 2021. The following Subgroup members participated: Wanchin Chou, Chair, and Qing He (CT); Jane Nelson (FL); Laura Clements, Lynne Wehmuller, and Giovanni Muzzarelli (CA); Judy Mottar (IL); Gordon Hay (NE); Anna Krylova (NM); Halina Smosna and Gloria Huberman (NY); Tom Botsko and Dale Bruggeman (OH); Andrew Schallhorn (OK); and Miriam Fisk, Monica Avila, and Rebecca Armon (TX).

1. **Adopted its Sept. 28 Minutes**

   The Subgroup met Sept. 28. During this meeting, the Subgroup took the following action: 1) discussed its 2021 working agenda; 2) heard a presentation from Karen Clark & Company (KCC) regarding the KCC U.S. wildfire model, which included the current wildfire trends and an overview of the KCC U.S. wildfire model; and 3) discussed the possibility of allowing additional third-party models or adjustments to the vendor models.

   Mr. Schallhorn made a motion, seconded by Mr. Botsko, to adopt the Subgroup’s Sept. 28 minutes (Attachment Four-A). The motion passed unanimously.

2. **Discussed the Possibility of Allowing Third-Party Models to Calculate the Catastrophe Model Losses**

   Mr. Chou said during the Subgroup’s previous meeting on Sept. 28, the Subgroup agreed that the KCC models for earthquakes and hurricanes meet the similar standards as the other approved commercial models had. He said a proposal was set up to include KCC earthquake and hurricane models as one of the approved third-party commercial vendor models to calculate the catastrophe risk charge.

   Mr. Chou said the purpose of the proposal is to include the KCC earthquake and hurricane models as one of the approved third-party commercial vendor models to calculate the catastrophe risk charge. He stated that the Florida Commission on Hurricane Loss Projection Methodology (FCHLPM) reviewed and verified the KCC hurricane model on June 4, 2021. The Subgroup believes that the KCC models seem to qualify under the same standards as the other modeling firms have for earthquakes and hurricanes. Mr. Chou asked the interested parties to review the proposal and provide comments during the exposure period.

   The Subgroup agreed to expose proposal 2021-15-CR (Adding KCC Models) for a 30-day public comment period ending Nov. 26.

4. **Heard an Update from its Catastrophe Model Technical Review Ad Hoc Group**

   Mr. Chou said the ad hoc group met Oct. 18 to discuss additional questions with Risk Management Solutions (RMS) on its wildfire model. She said the ad hoc group gained a better understanding on: 1) the landfire database; 2) historical data; 3) model parameters; 4) demand surge; and 5) period loss tables (PLTs) versus event loss tables (ELTs). Mr. Chou stated that there were 21 technical questions discussed with RMS, and he indicated that the ad hoc group will meet next month to review and discuss the impact analysis on different third-party commercial wildfire models.

   Having no further business, the Catastrophe Risk (E) Subgroup adjourned.
Catastrophe Risk (E) Subgroup  
Virtual Meeting  
September 28, 2021

The Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met Sept. 28, 2021. The following Subgroup members participated: Wanchin Chou, Chair, Susan Andrews, and Qing He (CT); Robert Ridenour, Vice Chair, David Altmaier, and Jane Nelson (FL); Li Lim, Laura Clements, Giovanni Muzzarelli, Mitra Sanandajifar, and Lynne Wehmueller (CA); Judy Mottar (IL); Gordon Hay (NE); Anna Krylova (NM); Halina Smosna (NY); Tom Botsko and Dale Bruggeman (OH); Andrew Schallhorn (OK); Will Davis (SC); and Miriam Fisk, Andy Liao, Rebecca Armon, and Monica Avila (TX).

1. Discussed its 2021 Working Agenda

Mr. Chou said one of the items in the 2021 working agenda that will require being accomplished by the 2022 Spring National Meeting is the implementation of the wildfire peril in the Rcat component for informational purposes only. He said he expects the Catastrophe Model Technical Review Ad Hoc Group will finish the entire review process by end of October. Mr. Chou also stated that different modeling firms are in the stage of preforming the impact analysis. Then, the Subgroup will start developing the formula structure of the wildfire peril base on the analysis results and findings. Mr. Chou said he anticipates the initial structure will be shared with all the interested parties at the Fall National Meeting.

2. Heard an Update from its Catastrophe Model Technical Review Ad Hoc Group

Ms. Wehmueller said the ad hoc group met twice to review some additional technical questions with Karen Clark & Company (KCC) on its wildfire model since the Summer National Meeting. She said the ad hoc group gained a better understanding on different aspects of its model during this question-and-answer (Q&A) section. She also said the ad hoc group will meet next month with Risk Management Solutions (RMS) to review/discuss some technical questions of its model. She said she anticipates the ad hoc group will have a better idea on how to implement the risk-based capital (RBC) charge for wildfire peril after the impact analysis is completed by the modeling firms.

3. Heard a Presentation from KCC Regarding the KCC U.S. Wildfire Reference Model

Glen Daraskevich (KCC) said this presentation includes the following main topics: 1) current wildfire trends; and 2) an overview of the KCC U.S. wildfire reference model. He stated that wildfires are a major driver of the U.S. insured losses, particularly in California. He indicated that the KCC U.S. Wildfire Model employs a physical modeling approach, which includes hazard, vulnerability, and financial modules. He stated that the hazard module predicts where the future events are most likely to occur. The vulnerability module estimates the level of damage that would occur to any type of structures. He also said the model has undergone meticulous validation of simulated events versus historical footprints, and it details evaluations of insurer claims data at an event and location resolution.

4. Discussed the Possibility of Allowing Additional Third-Party Models or Adjustments to the Vendor Models

Mr. Chou said another item listed in the working agenda that requires the Subgroup to address soon is to evaluate the possibility of allowing additional third-party models or adjustments to the vendor models to calculate the catastrophe model losses. He said the KCC earthquake and hurricane models have been reviewed and verified by the Florida Commission. He said he believes adding its models as one of the approved commercial models is worth considering. Mr. Botsko said he agrees. Scott Williamson (Reinsurance Association of America—RAA) said the RAA supports the KCC being added to the approval list. The seems to qualify under the same standards as the other modeling firms have. Mr. Chou said a proposal for adding the KCC models as one of the approval models for earthquake and hurricane perils will be drafted for discussion in the upcoming meeting.

Mr. Chou said the Subgroup will continue discussing all the outstanding issues in the meeting next month.

Having no further business, the Catastrophe Risk (E) Subgroup adjourned.

© 2021 National Association of Insurance Commissioners

The following Working Group members participated: Tom Botsko, Chair, and Dale Bruggeman (OH); Wanchin Chou, Susan Andrews, and Qing He (CT); Nicole Altieri Crockett (FL); Judy Mottar (IL); Leatrice Geckler (NM); Halina Smosna (NY); Will Davis (SC); Rebecca Armon, Miriam Fisk, and Monica Avila (TX).

1. Adopted its Summer National Meeting Minutes

Mr. Botsko said the Working Group met July 22 in lieu of the Summer National Meeting and took the following action: 1) adopted its June 9 and April 27 minutes, which included the following action: a) adopted proposal 2021-05-P (Underwriting Risk Line 1 Factors); b) adopted proposal 2021-08-P (P/C Bond Factors and Instructions); c) adopted proposal 2021-03-P (Credit Risk Instruction Modification); d) forwarded the response to the Restructuring Mechanisms (E) Subgroup; and e) heard a presentation on property/casualty (P/C) risk-based capital (RBC) underwriting risk factors from the American Academy of Actuaries (Academy); 2) adopted the report of the Catastrophe Risk (E) Subgroup, which included the following action: a) adopted its June 1 and April 26 minutes; b) adopted its 2021 working agenda items; c) received an update from its Catastrophe Model Technical Review Ad Hoc Group and; 3) adopted the 2021 P/C RBC Newsletter; 4) discussed 2020 P/C RBC statistics; 5) discussed its 2021 working agenda items; and 6) heard a presentation on a P/C RBC underwriting risk project from the Academy.

Mr. Chou made a motion, seconded by Ms. Mottar, to adopt the Working Group’s July 22 minutes (see NAIC Proceedings – Summer 2021, Capital Adequacy (E) Task Force, Attachment Five). The motion passed unanimously.

2. Adopted the Report of the Catastrophe Risk (E) Subgroup

Mr. Chou said the Subgroup met Sept. 28 and took the following action: 1) discussed its 2021 working agenda; 2) heard a presentation from Karen Clark & Company (KCC) regarding the KCC U.S. wildfire reference model; and 3) discussed the possibility of allowing additional third-party models or adjustments to the Vendor Models. He also stated that the Subgroup is finishing up the technical review with Risk Management Solutions (RMS) on the wildfire model and working on impact analysis with three wildfire modelers—AIR, KCC, and RMS. He said the Subgroup expects that the wildfire risk structure will be ready for discussion in December. He also indicated that the KCC hurricane models have been reviewed and verified by the Florida Commission. Most of the Subgroup members agreed that KCC seems to qualify under the same standards as the other modeling firms have for hurricane and earthquake.

Mr. Chou also provided an overview of the Subgroup’s Oct. 27 meeting in lieu of the Fall National Meeting, which included the following action: 1) adopted its Sept. 28 minutes; 2) discussed the possibility of allowing third-party models calculate the catastrophe model losses; 3) considered exposure of proposal 2021-15-CR (Adding KCC Model); 4) heard an update from the Catastrophe Model Technical Review Ad Hoc Group; 5) heard a presentation from RMS regarding its Wildfire High Definition (HD) Model; and 5) discussed the impact analysis on different third-party commercial wildfire models.

Mr. Chou made a motion, seconded by Ms. Smosna, to adopt the report of the Catastrophe Risk (E) Subgroup (see NAIC Proceedings – Fall 2021, Capital Adequacy (E) Task Force, Attachment Four). The motion passed unanimously.

3. Exposed a Draft Recommendation to the Restructuring Mechanism (E) Subgroup

Mr. Botsko said the Runoff Ad Hoc Group met Oct. 13 to continue discussing the best course of treatment of runoff companies. He stated that the drafted recommendation indicated that a run-off company should include the following characteristics: 1) no renewing of policies for at least 12 months; 2) no new direct or assumed business; and 3) no additional runoff blocks of business. Mr. Botsko also said the ad hoc group agrees with the international treatment of runoff companies, which is handled through the Analysis and Exam Teams. In addition, the ad hoc group recommended that the Working Group adjust the instruction to better reflect the unique runoff characteristics, such as removing: 1) the trend test from the RBC calculation; 2) the charge for premium growth; and 3) Rcat from the RBC formula. Lastly, Mr. Botsko stated that this recommendation letter will be shared.
with the Health Risk-Based Capital (E) Working Group and the Life Risk-Based Capital (E) Working Group for further consideration.

The Working Group agreed to expose the recommendation to the Restructuring Mechanism (E) Subgroup for a 30-day public comment period ending Nov. 24.

4. **Exposed Proposal 2021-14-P (R3 Factor Adjustment)**

Mr. Botsko said when the reinsurance recoverable credit risk charge was implemented in 2018, a load of operational risk was embedded in the R3 charge. Currently, the operational risk is separately addressed in the RBC as a stand-alone capital add-on; it results with duplication of the operational risk charge on the reinsurance recoverable component. He stated that this proposal intends to eliminate the double-counting effect of the operational risk charge on the component. He said NAIC staff performed an analysis to determine the impact on the RBC action levels by reducing the 2% reinsurance recoverable RBC charge for all reinsurance designation equivalents (Attachment Five-A). The result indicated that the impact is insignificant, as only three companies with Total Adjusted Capital (TAC) between zero to 75 million will change the RBC results from action level to no action.

The Working Group agreed to expose proposal 2021-14-P (R3 Factor Adjustment) for a 30-day public comment period ending Nov. 24.

5. **Heard Updates on a P/C RBC Underwriting Risk Project from the Academy**

David Traugott (Academy) provided a status on the recommended adjustments to the formulas for premium and reserve risk to reflect the impact of interest rates. He stated that this project is still a work in progress status; the results may change based on further review by the Academy Property and Casualty Risk-Based Capital Committee. He also stated that this presentation relates to premium risk only; an analysis of reserve risk is underway. During the presentation, he provided a brief overview of: 1) background of the Investment Income Adjustments (IIAs); 2) interest rate history 3) payment patterns; 4) risk charge versus interest rate; and 5) analysis of present value calibration. He also stated that the next steps in the Committee work plan include: 1) further examining the line-by-line risk charges to assess the extent to which the general approach described in the presentation is applicable by line; 2) applying the present value analysis to the RBC data for the short-tail lines; and 3) applying the same type of analysis to reserve risk.

Mr. Botsko said he appreciates all the Academy does for the Working Group. He said the Working Group will provide the needed support to ensure the projects are completed in time.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group adjourned.

The Examination Oversight (E) Task Force met Dec. 1, 2021. The following Task Force members participated: Judith L. French, Chair, represented by Dwight Radel (OH); Carter Lawrence, Vice Chair, represented by Joy Little (TN); Jim L. Ridling represented by Sean Duke (AL); Lori K. King-Heier represented by David Pfifer (AK); Alan McClain (AR); Evan G. Daniels represented by David Lee (AZ); Ricardo Lara represented by Susan Bernard and Laura Clements (CA); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by William Arfanis (CT); Karima M. Woods represented by N. Kevin Brown (DC); Dean L. Cameron represented by Eric Fletcher (ID); Amy L. Beard represented by Roy Eft and Jerry Ehlers (IN); Doug Ommen represented by Dan Matthiis (IA); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Jeff Gaither (KY); James J. Donelon represented by Stewart Guerin (LA); Gary D. Anderson represented by John Turchi (MA); Anita G. Fox represented by Judy Weaver (MI); Chlora Lindley-Myers represented by Shannon Schmoeger (MO); Jon Godfread represented by Matt Fischer (ND); Eric Dunning represented by Lindsay Crawford (NE); Chris Nicolopoulos represented by Colin Wilkins (NH); Russell Toal represented by Leatrice Geckler (NM); Glen Mulready represented by Eli Snowbarger (OK); Larry D. Deiter represented by Johanna Nickelson (SD); Cassie Brown represented by Shawn Frederick (TX); Scott A. White represented by David Smith and Doug Stolte (VA); Mike Kreidler represented by John Jacobson (WA); Mark Afable represented by Amy Malm (WI); and Jeff Rude represented by Linda Johnson and Doug Melvin (WY).

1. Adopted its Sept. 30 and Summer National Meeting Minutes

The Task Force conducted an e-vote that concluded on Sept. 30 to: 1) adopt its Summer National Meeting minutes; and 2) adopt its 2022 proposed charges.

Ms. Bernard made a motion, seconded by Ms. Malm, to adopt the Task Force’s Sept. 30 (Attachment One) and Aug. 5 (see NAIC Proceedings – Summer 2021, Examination Oversight (E) Task Force) minutes. The motion passed unanimously.

2. Adopted the Reports of its Working Groups

a. Electronic Workpaper (E) Working Group

Ms. Bernard provided the report of the Electronic Workpaper (E) Working Group. She stated that the Working Group met Nov. 16 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings, to continue work on its goals. She said the Working Group has continued to oversee and receive updates on the transition of the state insurance regulators’ workpaper documentation application. She encouraged state insurance regulators who wish to follow the progress of the transition to request to be added as an interested state insurance regulator.

b. Financial Analysis Solvency Tools (E) Working Group

Ms. Weaver provided the report of the Financial Analysis Solvency Tools (E) Working Group. She stated that the Working Group met Nov. 15 and conducted an e-vote that concluded on Oct. 12 to adopt revisions to the Financial Analysis Handbook on the following topics:

1. Liquidity Stress Test (LST): A new procedure and high-level guidance for the Lead State holding company analysis chapter was added to the previously adopted LST Framework and related Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450) revisions. This requests that the lead state review and determine if any concerns exist and, if necessary, seek further explanation from the insurer.

2. Group Capital Calculation (GCC): Guidance was included to incorporate the GCC into the analysis process, specifically to be utilized as an analysis tool, rather than a set of ratios.
c. **Financial Examiners Coordination (E) Working Group**

Mr. Radel provided the report of the Financial Examiners Coordination (E) Working Group. He stated that the Working Group met Nov. 29 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to continue work on its goals.

d. **Financial Examiners Handbook (E) Technical Group**

Ms. Bernard provided the report of the Financial Examiners Handbook (E) Technical Group. She stated that the Technical Group met Nov. 17 and Oct. 5 to adopt guidance for inclusion in the *Financial Condition Examiners Handbook* on the following topics:

1. Coordination Framework: The Coordination Framework was revised to clarify and simplify the roles and responsibilities of states that are or could be involved in a coordinated examination. As part of these revisions, the Technical Group expects to recommend that the Committee update its guidance related to the use of Exhibit Z for documenting exam coordination.

2. Completeness and Accuracy: The reserves and underwriting repositories were updated to enhance the procedures used for testing the completeness and accuracy of data. These updates reflect a broader range of testing procedures that auditors are using to test the completeness and accuracy of data, including placing more reliance on control testing and using analytical procedures.

e. **Information Technology (IT) Examination (E) Working Group**

Mr. Ehlers provided the report of the IT Examination (E) Working Group. He stated that the Working Group met Nov. 18 and Oct. 13 to adopt revisions on the following topics:

1. **Guidance within the Financial Condition Examiners Handbook:**
   a. Quality and Portability of Policyholder Data, in response to a referral from the Receivership Financial Analysis (E) Working Group:
      i. Sections 1–3 revised to include new guidance describing the importance of insurance companies maintaining data in a manner that would allow for the timely and efficient transfer of policyholder data, as well as tools that may be used in conducting this assessment.
      ii. Exhibit C – IT Planning Questionnaire and Instructional Notes were updated to include inquiries regarding comingled data and the accessibility and transferability of significant company data sets, as well as references to procedures within the IT work program that could be used in addressing related risks.
      iii. Exhibit C – Work Program was updated to include common controls, preliminary information requests, and possible test procedures regarding the accessibility and transferability of data.
   b. Ransomware and Other Cybersecurity Risks:
      i. Sections 1–3 revised to include new guidance describing ransomware and considerations for assessing an insurer’s overall cyber hygiene.
      ii. Exhibit C – Work Program was updated to include common controls, preliminary information requests, and possible test procedures regarding the nature of company backup systems and whether those backups are air-gapped and immutable.

2. **Cybersecurity Vulnerability Response Plan:** The *Cybersecurity Vulnerability Response Plan*, a new sound practices document which will be published on the Working Group’s public website, was developed in response to a referral from the Chief Financial Regulator Forum. This document provides additional guidance for assessing cyber vulnerabilities, including possible questions to ask insurers and procedures to perform if a cyber vulnerability is discovered in the period between full-scope examinations.

Mr. Kaumann made a motion, seconded by Mr. McClain, to adopt reports of the Electronic Workpaper (E) Working Group, the Financial Analysis Solvency Tools (E) Working Group (Attachment Two), the Financial Examiners Coordination (E) Working Group, the Financial Examiners Handbook (E) Technical Group (Attachment Three), and the IT Examination (E) Working Group (Attachment Four). The motion passed unanimously.

Having no further business, the Examination Oversight (E) Task Force adjourned into regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to receive reports on exams open past 22 months.
The Examination Oversight (E) Task Force conducted an e-vote that concluded Sept. 30, 2021. The following Task Force members participated: Jim L. Ridling (AL); Alan McClain represented by Mel Anderson (AR); Ricardo Lara represented by Susan Bernard (CA); Andrew N. Mais represented by William Arfanis (CT); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Stewart Guerin (LA); Anita G. Fox represented by Judy Weaver (MI); Chlora Lindley-Myers represented by Shannon Schmoeger (MO); Jon Godfread represented by Matt Fischer (ND); Eric Dunning represented by Lindsay Crawford (NE); Chris Nicolopoulos represented by Doug Bartlett (NH); Russell Toal (NM); Glen Mulready represented by Eli Snowbarger (OK); Elizabeth Kelleher Dwyer represented by Jack Broccoli (RI); Larry D. Deiter represented by Johanna Nickelson (SD); Cassie Brown represented by Shawn Frederick (TX); Jonathan T. Pike represented by Jake Garn (UT); Scott A. White represented by David Smith (VA); Mark Afable represented by Amy Malm (WI); and Jeff Rude (WY).

1. **Adopted its 2022 Proposed Charges**

The Task Force conducted an e-vote to consider adoption of its 2022 proposed charges (see NAIC Proceedings – Fall 2021, Financial Condition (E) Committee, Attachment One-D).

The Electronic Workpaper (E) Working Group revised its existing charges to reflect that a replacement for the TeamMate AM workpaper application has been selected, and the Working Group will shift its focus to overseeing the transition process and monitoring the use of the new application (TeamMate+) going forward.

The Information Technology (IT) Examination (E) Working Group added a new charge to reflect a growing need to monitor cybersecurity trends and develop guidance for IT examiners, as necessary.

The motion passed unanimously.

Having no further business, the Examination Oversight (E) Task Force adjourned.
The Financial Analysis Solvency Tools (E) Working Group of the Examination Oversight (E) Task Force met Nov. 15, 2021. The following Working Group members participated: Judy Weaver, Chair (MI); Patricia Gosselin, Vice Chair (NH); Shelia Travis (AL); Kurt Regner (AZ); Michelle Lo (CA); Kathy Belfi (CT); Carolyn Morgan (FL); Eric Moser (IL); Roy Eft (IN); Debbie Doggett (MO); Dwight Radel (OH); Kimberly Rankin (PA); Jack Broccoli (RI); Amy Garcia (TX); and Kristin Forsberg (WI).

1. **Adopted its Oct. 12 Minutes**

Ms. Doggett made a motion, seconded by Mr. Radel, to adopt the Working Group’s Oct. 12 minutes (Attachment Two-A). The motion passed unanimously.

2. **Discussed and Adopted Exposed Liquidity Stress Test (LST) Revisions to the 2021/2022 Handbook**

Ms. Weaver summarized the Liquidity Stress Test (LST) Framework exposure draft guidance revisions for the 2021/2022 edition of Handbook. The LST Framework and the related holding company models revisions were adopted by the NAIC earlier in 2021. Ms. Weaver provided two possible solutions to the text for consideration.

Ms. Weaver said a comment letter was received from America’s Health Insurance Plans (AHIP) on the proposed revisions to the draft LST guidance.

Tom Finnell (AHIP) summarized AHIP’s concerns and recommended additional guidance to caveat the scope criteria section of the guidance to clarify that the criteria would not be appropriate to health insurers and property/casualty (P/C) insurers as the LST guidance is more related to life insurers. Ms. Belfi agreed that a caveat may be needed to clarify the textual guidance for the Handbook. Mr. Eft also agreed that a caveat may be appropriate.

Todd Sells (NAIC) clarified that the LST Framework guidance on scope criteria was drafted so that the insurer group determined whether a P/C or health insurer entity is deemed to pose a material liquidity risk to the U.S. insurer group that triggered the scope criteria in a future year; then the P/C and health legal entity insurer within the group will perform the LST.

Mr. Finnell recommended a textual clarification to the scope criteria of the LST guidance to include the text “by the insurer group” to further clarify the scope criteria. The Working Group agreed with the clarification to the guidance.

Ms. Forsberg made a motion, seconded by Mr. Eft, to adopt the LST guidance (Attachment Two-B) with the recommended revision (Attachment Two-C). The motion passed unanimously.

3. ** Adopted GCC Framework Guidance to the Handbook**

Ms. Weaver summarized the Group Capital Calculation (GCC) Framework guidance developed by the Group Capital Calculation Drafting Group and recently adopted by the Group Capital Calculation (E) Working Group. Ms. Weaver explained that the guidance was envisioned as more of an analytical tool and beneficial to incorporate the GCC framework guidance into the analysis process. The GCC guidance was considered for inclusion in the 2021/2022 edition of the Handbook revisions. There were no comments received.
Ms. Belfi made a motion, seconded by Ms. Travis, to adopt the GCC guidance as adopted by the Group Capital Calculation (E) Working Group (Attachment Two-D and Attachment Two-E) and incorporate the guidance into the 2021/2022 Handbook revisions. The motion passed unanimously.

Having no further business, the Financial Analysis Solvency Tools (E) Working Group adjourned.
The Financial Analysis Solvency Tools (E) Working Group of the Examination Oversight (E) Task Force conducted an e-vote that concluded Oct. 12, 2021. The following Working Group members participated: Patricia Gosselin, Vice Chair (NH); Kurt Regner (AZ); Michelle Lo (CA); Lynn Beckner (MD); Debbie Doggett (MO); John Sirovetz (NJ); Tim Biler (OH); Kimberly Rankin (PA); Jack Broccoli (RI); Amy Garcia (TX); and Kristin Forsberg (WI).

1. **Adopted Exposed Revisions to the 2021/2022 Financial Analysis Handbook**

The Working Group conducted an e-vote to consider adoption of the exposed revisions to the 2021/2022 Financial Analysis Handbook.

A majority of the Working Group members voted in favor of adopting the revisions. The motion passed.

Having no further business, the Financial Analysis Solvency Tools (E) Working Group adjourned.
VI.C. Group-Wide Supervision – Insurance Holding Company System Analysis Guidance (Lead State)

Liquidity Stress Test

In 2021 the NAIC Executive Committee and Plenary adopted revisions to the *Insurance Holding Company System Model Act* (Model #440) that introduce a new filing requirement for a Liquidity Stress Test (LST). While insurer and insurer groups within the scope of the LST will submit required filings in 2021 under states’ examination authority, states are beginning the process of adopting Model #440 amendments into state laws. Additional lead state and non-lead state guidance will be developed in future years as regulators gain experience reviewing the LST filing.

Scope Criteria and LST Framework

- The Scope Criteria for insurers or insurance groups required to perform and file the LST and the instructions for the filings are outlined in the *NAIC 2020 Liquidity Stress Test Framework* which is located on the Financial Stability (E) Task Force webpage of the NAIC’s Website at: https://content.naic.org/cmte_e_financial_stability_tf.htm. Once an insurance group with two or more life insurers triggers the Scope Criteria for a specific year, then the LST is performed at the legal entity insurer level within the group. Results are aggregated at the group level.
- Property/Casualty and Health: Although the property/casualty and health insurers are not subject to the scope criteria in 2021, if a property/casualty or health legal entity insurer is deemed, by the insurer group, to pose material liquidity risk to a U.S. group that triggered the scope criteria in a future year, then the property/casualty and health legal entity insurer within the group will perform the LST.

Regulatory Goals of the LST per the *NAIC 2020 Liquidity Stress Test Framework*

The primary goal of the LST, and the specific stress scenarios utilized, are:

- First, for macroprudential uses – to allow the Financial Stability (E) Task Force to identify amounts of asset sales by insurers that could impact the markets under stressed environments. Thus, the selected stress scenarios are consciously focused on industry-wide stresses – those that can impact many insurers within a similar timeframe.
- Second, the liquidity stress testing is also meant to assist regulators in their micro prudential supervision, in the context of being helpful for domiciliary and lead state regulators to better understand liquidity stress testing programs at those legal entities’ insurers and insurance groups. The LST requires filing of reporting templates and other narrative disclosures referenced in the LST Framework to be submitted to the lead state by September 30.

Non-Lead State Reliance on the Lead State Analysis of LST

- The LST must be reviewed by the lead state and significant findings should be incorporated into the GPS branded risk assessments.
- To reduce duplication, non-lead domestic states may rely on the analysis work performed by the lead state.
- Because the LST is performed at a legal entity insurer level and aggregated on an insurance group level, if material risks and concerns are identified for a legal entity insurer, the lead state should communicate those concerns to the non-lead domestic state.
While the LST filing may provide good insights into a legal entity insurer’s assumptions, processes and worst case stress scenario results; a domestic state’s assessment of liquidity risk for the legal entity insurer should not rely solely on the LST. It is acceptable that a legal entity insurer may have its own liquidity stress test scenarios and manage liquidity differently from what is reported for the LST.

11. Liquidity: Evaluate the insurance holding company’s liquidity and document any negative trends and overall strength.

Liquidity Risk—e.g., assessment of cash flow trends; cash and short-term investments held; indications of liquidity shortfalls reflected in quantitative ratios (i.e., liquidity ratio); liquidity needs for high surrender activity impacted by economic changes; liquidity needs created by catastrophic events; liquidity requirements for future debt payments; available lines of credit; stress testing.

PROCEDURE #11 assists analysts in evaluating the liquidity of the group. Liquidity is important for any type of organization, but can be more important for others, including certain insurers or types of insurers who may have products or other aspects of their business plan that make them susceptible to immediate withdrawals. Having said that, most insurers’ cash flows are predictable, and it is an area that insurance regulation or business practices already address, including asset/liability matching required for life/annuity writers and the maintenance of very liquid assets. But this procedure requires an analysis that can generally only be conducted through understanding information developed by the group, which may be available through the risk-focused examination or otherwise requested by analysts. Updated information may be the best obtained in the periodic meeting with the group as discussed within Section VI.F. Own Risk and Solvency Assessment (ORSA) Procedures, unless the group is more susceptible to immediate withdrawals, in which case analysts may want to obtain/discuss the issue with the group sooner. Generally, issues impacting liquidity that are identified through holding company analysis should be presented within the Liquidity Risk classification of branded risk assessments.

12. Liquidity Stress Test (LST):

a. If the insurance group is subject to the requirements to perform and file an LST, review and determine if any concerns or material risks exist regarding the liquidity of the insurance group or any of its insurance legal entities performing the LST.

b. If concerns or material risks are identified, consider requesting further explanation from the insurance group about its liquidity risk management framework and internal liquidity stress tests.

PROCEDURE #12: The procedure instructs the analyst to review the results of the stress test scenarios included in the Liquidity Stress Test (LST) filing to supplement the assessment of the insurance group’s overall liquidity. Because the LST is performed at a legal entity level and risks are aggregated for the group, assess if the results of the LST identifies material risks at the insurance legal entity that should be included in the analysis and/or communicated to the non-lead state domestic state insurance regulator.

The instructions for the LST filings are outlined in the NAIC 2020 Liquidity Stress Test Framework which is located on the Financial Stability (E) Task Force webpage of the NAIC’s Website at: https://content.naic.org/cmte_e_financial_stability_tf.htm.
October 27, 2021

Judy Weaver, Chair
Financial Analysis Solvency Tools (E) Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

By e-mail to Ralph Villegas at: RVillegas@NAIC.org

Dear Ms. Weaver;

This submission is in response to the September 28, 2021, exposure by the Financial Analysis Solvency Tools (E) Working Group (FASTWG). The exposure relates to proposed guidance about Liquidity Stress Test (LST) filings that has been drafted for inclusion in the NAIC’s Financial Analysis Handbook (FAH) for eventual use by financial analysts of state insurance departments.

We understand that the intended focus of LST filings is on life insurers or groups that have triggered the activity-based scope criteria which has been set forth in the NAIC 2020 Liquidity Stress Test Framework. Indeed, and as noted in the exposure, “….property/casualty and health insurers are not subject to the scope criteria in 2021…” However, the proposed text then says as follows: “…if a property/casualty or health legal entity insurer is deemed to pose material liquidity risk to a U.S. group that triggered the scope criteria in a future year, then the property/casualty and health legal entity insurer within the group will perform the LST.”

While the text cited above refers to both health and property/casualty insurers, the following comments pertain specifically to health insurers and health plans, many of which are members of AHIP.

AHIP and its members find it difficult to foresee any plausible situation where a health insurer would “pose material liquidity risk to a U.S. group.” The business model of health insurers is very much focused on generating and managing cash flows from insured individuals and groups that is then used almost immediately to pay claims. To illustrate, based on 2020 data for the health sector, of claims incurred during the full calendar year, less than two months of those incurred claims remained unpaid and in reserve liabilities at the end of the year.

Put differently, there is very little need for health plans to accumulate and hold invested assets other than to support surplus and to cover unanticipated or emerging risks. As a result, health plans do not participate to any material degree (if at all) in the type of activities that the LST scope criteria has targeted, i.e., fixed and indexed annuities, funding agreements, derivatives, securities lending, repurchase agreements, and borrowing of money.
The LST scope criteria has identified those specific criteria as relevant to life insurers, has previously subjected them to testing, and has also included defined activity levels or dollar thresholds that would trigger an insurer or group being “in scope” for LST. That however is not the case for health insurers. Neither the exposure nor the NAIC 2020 Liquidity Stress Test Framework suggests any health-specific activities that could plausibly indicate liquidity stress of a health plan, much less indicate a level of such activity that might signal potentially material risk or subject either to testing. Consequently, an analyst’s determination that a “health legal entity insurer is deemed to pose material liquidity risk to a U.S. group” would, by necessity, be arbitrary inasmuch as there would be no pertinent guidance in the Financial Analysis Handbook.

Accordingly, AHIP objects to the language proposed by the exposure that could “scope-in” health insurers if they are “deemed to pose material liquidity risk to a U.S. group.”

If there are specific concerns that the FASTWG has about potential liquidity risks that health insurers might pose, AHIP would be glad to engage with members to address them. If we know what those concerns are, AHIP could suggest changes to the text that would provide criteria relevant to health plans and which would address those concerns. But as stated previously, and at the current time, AHIP and its members cannot foresee any plausible situation where a health insurer would “pose material liquidity risk to a U.S. group.”

We thank you again for the opportunity to comment and for your consideration of our views. We look forward to discussing them with you and the Working Group members.

Sincerely,

Bob Ridgeway

VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) Procedures

Review of the Group Capital Calculation

Consideration of the Insurance Holding Company System Structure

As the lead state begins to review the annual Group Capital Calculation filing for a particular group, it is important for the lead state to do so with consideration of the existing knowledge of both the organizational structure of the group, including changes in the structure from year to year, but more importantly the overall activities of each of the entities in the group which otherwise have the potential to transmit material risk to the insurers within the group. While the GCC will provide additional quantitative information on the entities in the group, the actual activities of the entities are also important in determining the scope of application of the GCC. The lead state is responsible for determining if any of the entities in the holding company structure should be excluded from the calculation, resulting in a smaller “scope of application” for the entities included in the GCC ratio. The filing includes a column for the group to propose what should be excluded as well as an additional column for the final determination made by the lead state. In general, the determination of scope of the application is suggested by the group but made in consultation and agreement with the lead state. This exercise should be undertaken in a manner that yields a clearly documented rationale for excluding entities or subgroups of the larger group. The Group Capital Calculation Instructions describes the basis for making this determination and the calculation itself is structured to facilitate this determination, with the inclusion in Schedule 1 of financial data for all entities within the holding company. Related to exclusion from the calculation itself is review of data for cases in which subgroups are completely excluded from the larger group, particularly with regard to Schedule 1; the rationale for the exclusion(s) should be provided in the GPS. The concept is that this Schedule 1 data should be utilized by the lead state in conjunction with its existing knowledge of the group and its activities (obtained from the Schedule Y, ORSA, Forms B/C, Form F, the non-insurance grid, etc.), and therefore likely material risks, to make this determination. To the extent the entities included in Schedule 1 differ from the analyst’s knowledge of the Group, further discussion and follow-up should be held with the group.

In the initial year(s) of a GCC filing, to help the analyst get comfortable with the Inventory and Schedule 1 process, consider the following:

- Gather appropriate background information for your group(s) (e.g., Group Profile Summary, ORSA, RBC Reports, Schedule Y)
- Determine that all Schedule Y entities are listed in schedule 1 or in the schedule BA list in the other information tab or that an entity’s omission is understood/explained
- Evaluate requests for exclusion of non-insurance/non-financial entities without material risk to determine if you agree with exclusion.
- Confirm that all insurers and financial entities are de-stacked in the inventory tab.
- Determine if grouping has been properly applied.
- Evaluate the level of risk assigned by the filer to financial entities without regulatory capital requirements.
- On a sample basis, check that the numbers reported in Schedule 1 and Inventory Tab look reasonable, especially for the insurers. A sample check should be sufficient.

The holding company structure and activities should also be utilized by the lead state in determining how to understand the GCC ratio. More specifically, information on structure can help in understanding the flow of capital used by the group among entities within the holding company structure. Also, understanding the following can assist in evaluating the flow of capital resources:
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) Procedures

- Domestic insurance operations
- International insurance operations
- Banking or other financial services operations subject to regulatory capital requirements
- Financial and non-financial operations not subject to regulatory capital requirements*

*The GCC instructions provide examples of financial versus non-financial entities in this category. All financial entities should be included in the scope of application of the GCC. However, there can be a broad array of entities that could be considered financial. The lead state should document the rationale for cases in which it concludes that an entity that may be financial in nature can nonetheless be classified in the group’s GCC filing as “non-financial” and thus excluded from the scope of the group for the GCC.

The GCC is intended to be used as an input into the GPS. The expectation is that the GCC summary section will help to document a high-level summary of the analyst’s take away of the GCC, as well as the Strategic branded risk. The manner in which the analyst determines what else should be documented beyond the GCC Summary and the Strategic branded risk should be based upon the following steps, since these steps contemplate the previously mentioned concept that the existing evaluation of the financial condition should be used in evaluating the depth of review of the GCC.

The GCC is a new analytical tool for use by regulators and it will take a number of years before there is both (1) sufficient data for any given group to provide the trend identification ultimately anticipated for the GCC; and (2) experience by regulators with its use. Analysts should be mindful that any stated threshold in the following procedures is for analysis purposes only and DOES NOT constitute a trigger for regulatory action. Rather, the stated threshold should be used as an opportunity for an analyst to understand issues and concerns that may be emerging and address them with the group, if needed. Nonetheless, the following procedure steps provide analysts with a framework to consider the GCC results in conjunction with other data and tools at their disposal, and to begin to gain and benefit from experience in utilizing the GCC as a new analytical tool.

- Procedure Step 1 suggests that a review of the components of the GCC is appropriate when the GCC ratio is trending downward.

- When Procedure Step 1 identifies the need to look further, Procedure Step 2 suggests determining, at a high level, the drivers of any decreases in the total available capital pursuant to the GCC. While there are numerous benefits of the GCC over consolidated approaches, the ability to drill down on the drivers is one of the more significant and is consistent with the states’ approach to not just looking at capital, but to the drivers of capital issues.

- When Procedure Step 1 identifies the need to look further, Procedure Step 3 suggests determining, at a high level, the driver of any increases in operating leverage, which is typically what drives insurance capital requirements up, be it asset risk/leverage or writings leverage. Similar to drivers of capital decreases, the GCC has detailed information on financial figures and ratios that can be used to isolate the issues.

- When either Procedure Step 2 or Step 3 identify the need to understand the situation better, Procedure Step 4 is similar in that it utilizes detailed information on capital allocation patterns used by the group over time that are necessary for the analyst to understand if there are any future negative trends in the GCC.

- When Procedure Steps 2, 3 and 4 together identify the need to understand the situation better, Procedure Steps 5, helps understand the steps the group/company is already taking or plans to take in order to address the issues they feel are appropriate, if any, considering existing capitalization levels may drive the group’s
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) Procedures

evaluation and therefore when steps may not be necessary. The guidance provided in these procedures is not intended to be exhaustive, but rather should give the analyst a starting point in better understanding the various issues.

- The guidance in these procedures is not intended to be exhaustive, but rather should give the analyst a starting point in better understanding the various issues.

- If the analyst determines after completing any of the above procedures (steps), that no further work is deemed necessary to fully document their understanding of the material risks of the group observable from the GCC (as well as the required information to be included in all GPS from the GCC), the rational for this determination should be documented by the analyst in any workpapers deemed appropriate by the state. In making this determination, it should be reiterated these procedures are not intended to be used in a checklist manner and judgement based upon and existing understanding of the group and existing information on the group obtained from the Form F, ORSA, or any other source is certainly part of that decision.

Procedure Step 1-Understand the Adequacy of Group Capital

1. Determine if the group capital position presents a risk its insurance subsidiaries based upon its recent trends and/or current measures in the GCC ratio.

<table>
<thead>
<tr>
<th>Branded Risk</th>
<th>Benchmark</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Has there been a decrease in the GCC ratio over last two or more years? If “yes”, determine the cause(s) of the decline.</td>
<td>ST</td>
</tr>
<tr>
<td>b. Has there been a decrease in the GCC Total Available Capital from prior year? If “yes”, determine the cause(s) of the decline.</td>
<td>ST</td>
</tr>
<tr>
<td>c. Has there been a negative trend in the GCC ratio over the past five years suggesting an overall pattern of declining capital?</td>
<td>ST</td>
</tr>
</tbody>
</table>

If the answer to any of the above questions is “yes”, but it is obvious that the negative trend is caused by something such as a restriction on the allowable debt, or a change in a corporate tax rate, or some other factor external to the group’s operations, note as such but do not proceed to step 2. In addition, if it is obvious that the negative trend is clearly driven from one entity in the group, understand the cause and document as such but do not proceed to step 2. However, in all other cases if the answer to any of the above questions is “yes”, the analyst should proceed with procedure step 2, understanding decreases in total GCC available capital and/or procedure step 3, understanding increases in leverage to determine the cause(s) of the negative trends.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) Procedures

Procedures Step 2-Understand Decreases in Total Available Capital

2. **Determine the source(s) of decreases in the GCC ratio or the GCC Total Available Capital**

Recognizing that not all declines in capital ratios are necessarily “negative”, i.e., they may be the result of sound capital management and ERM to more efficiently utilize capital, approved changes in the scope of application, or changes in underlying authority requirements, the intent of step 2 (and step 3) is to determine the actual source of the negative issues. In most cases, this equates to pinpointing the legal entity(ies) driving any negative trends. The analyst should proceed to steps 4 and 5, to understand more fully the actions the group, or the legal entity(ies) driving the negative trends, are already taking or plan to take to address the issues identified in step 2 that the group believes is needed. However, the analyst may already have a deep understanding of any such plans, and as a result, in some cases, it is possible that no further follow-up with the group will be necessary and that the lead state should simply update the GPS to be certain the main understanding of the issues is known to all of the regulators utilizing the GPS.

</tr>
<tr>
<td>l.</td>
<td>If due to legal losses, understand the underlying issues and degree of potential future legal losses.</td>
</tr>
<tr>
<td>m.</td>
<td>If due to non-insurance reported entities in the group, understand the relationship of the non-insurance operations to the insurance entities and the potential impact to the insurance operations (i.e., intercompany agreements, services, capital needs, etc.).</td>
</tr>
</tbody>
</table>
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) Procedures

**Procedure Step 3-Understand Increases in Operating Leverage**

3. **Determine the source(s) of any decreases in the GCC ratio due to increases in leverage**

Like step 2, the intent of step 3 is to determine the actual source of the negative issues. The difference between step 3 and step 2 is simply the types of issues. Step 2 is focused on issues that have resulted in negative capital trends. Step 3; however, is focused on the issues that impact the risk being considered in the GCC. In most cases that risk is either from the asset side or from the liability side where in both cases there has been an increase in such risk that has not been offset by a corresponding or equal increase in capital. In general, this is referred to as operating leverage, where this risk can manifest itself either through increased insurance writings (e.g., the ratio of premiums to capital or liabilities to capital), or through increased assets that also carry risk. The expectation is that other regulated entities also have capital requirements that increase as these different types of risks increase, similar to how the NAIC RBC considers different types of products and assets that carry more risk. It is also possible to have increased leverage outside of the insurance companies and other regulated entities. However, similar to other items noted in this document, such increases do not necessary represent negative trends; the analyst should further understand the drivers of such. In most cases, this equates to pinpointing the legal entity(ies) driving any negative trends. Similar to step 2, using an understanding of items in Procedure Step 4, to understand more fully the actions the group, or the legal entity(ies) driving the negative trends already being taken or planned to be taken by the group to address the issues identified in step 2 that the group believes is needed.

<table>

<tbody>
<tr>
<td>a. Review the ratio of available capital to calculated capital from each of the reported entities and compare to the same ratio from the prior year. Determine which entities may have led to the negative trends based upon corresponding increases in leverage (e.g., writings/capital ratios or liability to capital ratios).</td>
<td>MK, CR, RV, ST, OP, RP</td>
</tr>
<tr>
<td>b. Review the levels of operating leverage for each of the reported entities in the GCC as well as the same for the prior years as reported in the GCC to determine if there are particular entities showing signs of increasing operating leverage which may lead to future decreases in the GCC ratio or total available capital.</td>
<td>MK, CR, RV, ST, OP, RP</td>
</tr>
<tr>
<td>c. For each of the reported entities contributing to a meaningful decrease in the GCC due to an increase in operating leverage, request information that identifies the issues by inquiring first from the legal entity regulator or the group itself (e.g., non-insurance company), if applicable.</td>
<td>MK, CR, RV, ST, OP, RP</td>
</tr>
<tr>
<td>d. If operating leverage has increased, consider if growth may have resulted from underpriced products or a change in underwriting. Specifically inquire to determine if pricing was reduced to increase sales, or whether the growth is in new product lines or new geographic focus where the group may not have expertise. When considering pricing being modified, include those products that the price is adjusted through crediting rates.</td>
<td>PR/UW, OP, ST</td>

The analyst should proceed to steps 4 and 5 to understand more fully the actions by the group, or the legal entity(ies) driving the negative rend, are already taking or plan to take to address the issues identified in step 3, if that is not already clear from the information obtained in step 3. However, in some cases, it is possible that no further follow up with the group will be necessary, and that the lead state should simply update the GPS.

Procedure Step 4-Understand the Capital Allocation Patterns

4. Determine the capital allocation patterns to determine if some entities may put pressure on other legal entities.

Steps 2 and 3 are critical in understanding the issues faced by the group and in identifying the source of negative trends; and while additional follow up with the group is expected, before proceeding to Step 5, the lead state should understand the historical capital allocation patterns within the group and the future capital allocation actions that may be needed by the group if negative trends continue. The GCC includes data on historical capital allocation patterns (e.g., contributed capital received/paid or dividends received/paid), which help to illustrate which entities have historically needed more capital and which entities have capital that they have provided other entities in the group. While these patterns do not necessarily repeat themselves from one period to the next, there is often consistency in terms of entities that need capital or have excess capital, which may or may not be driven by losses, or by a change in strategy (e.g., increased writings at one company over another) by the group. These trends can also assist in discussions with the group about where capital may come from as a result of a future unexpected material event. Where similar information is also disclosed in Form F, the detail in the GCC may confirm what is already known by the analyst in this area and in some cases may provide greater detail.

VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) Procedures

Procedure Step 5-Consider the Need for Company Discussions for Reductions in Risk

5. Determine the group’s plans for addressing source(s) of any meaningful decreases in the GCC ratio or total GCC available capital. Please note, in some cases, the plan may be as simple as actions designed by the group to reverse a single negative trend.

Steps 5 is designed to assist in understanding the group’s plans for addressing any meaningful decreases in the GCC ratio or total available capital that were not intended by the group (i.e., that are not the results of capital management so as to efficiently utilize capital while still maintaining sufficient levels for Enterprise Risk Management needs). The specific plans of the group may or may not fully address all the issues but to the extent the group believes they have addressed what is needed, ultimately what is most important is that such information and the regulators plan for evaluating and monitoring the situation is known to the other regulators. There is a multitude of possibilities, and this guidance is not intended to address all of those. This includes the possible actions by the group and its legal entities. This also includes the possible actions to be taken by the regulators of the individual legal entities, which may include regulators choosing to put their legal entity into supervision, conservation, or some other form of receivership (which, by necessity and intent, would presumably be done based upon existing legal entity authority since there is no authority provided under the GCC). Similar to other areas, where similar information is also disclosed in Form F, further information may already be known in this area.

- a. Obtain a copy of the group’s most recent business plan and compare it to the prior year plan for variances. (See Additional Procedures below for additional follow-up analysis)

- b. Request information from the group on how it intends to address the issues or negative trends (those that are not planned or due to approved changes to the GCC scope of application or the result of changes in underlying legal entity capital requirements) identified in Steps 1-3. More specifically, determine how the group intends to decrease risk, and by what means.

- c. Based on information received in S.b., determine the group’s capacity to reduce risks or raise additional capital.

- d. Where the remaining capital is adequate, document the findings in the GPS (or another document) and make available to the supervisory college and or domestic states with the presumption no further action is deemed necessary.

- e. Consider whether the collective information suggests that any of the U.S. legal entity regulators should deem the legal entity to be in a “Hazardous Financial Condition” and take appropriate action to address based upon the facts and circumstances and the provisions of the state’s law (similar to NAIC Model 385).

- f. Where appropriate, consider holding a meeting of the supervisory college or of all the domestic states to fully understand the group’s plans. Where appropriate, require the group to present its plans to the supervisory college or all the domestic states.

- g. Where appropriate, determine if the plans proposed by the group are considered inadequate by any of the legal entity regulators, and more specifically if any are considering taking action over their applicable legal entity. If this is the case, hold a meeting of the supervisory college or of all the domestic states to provide this information.

- h. Where appropriate, consider holding a broader meeting of all impacted jurisdictions in which the group is selling insurance. Where appropriate, require the group to present its plans to all such regulators and for the regulators to announce their plans.
Purpose of the Group Capital Calculation (GCC) in Holding Company Analysis

The following information is intended to provide background and context concerning the issues/considerations for analysts when utilizing the NAIC Group Capital Calculation (GCC) for an insurance holding company group (hereafter referred to as “group”) completing the GCC where required. The GCC is a tool to quantitatively understand the group’s capital and the mathematically calculated risks within the group. The GCC framework is built on the RBC model; however, while RBC, as a capital requirement, has triggers in states’ laws to take formal actions, the GCC is not designed for that purpose and is instead designed as an analytical tool.

Background Information

In 2008, the NAIC Solvency Modernization Initiative (SMI) began to consider whether there were any lessons learned from the financial crisis that would cause the solvency framework to be modified. The NAIC determined that changes should be made in the area of group supervision, starting with the new annual requirement for the Lead State of each group operating in the U.S. to complete a written holding company analysis. Since that time, other changes to state laws have been made to further enhance group supervision (e.g., Form F, ORSA, and Corporate Governance reporting). All of these new tools are inputs into the previously mentioned holding company analysis, which is now summarized into a consistent tool used by all states that is known as the Group Profile Summary (GPS).

Benefits of the GCC & Methods to Achieve Them

The Group Capital Calculation Instructions describes the background, intent, and calculation for the GCC in detail. As stated in the Group Capital Calculation Instructions, the GCC and related reporting provides more transparency about a group’s structure and related risks to insurance regulators and makes those risks more identifiable and more easily quantified. In this regard, this tool is intended to assist regulators in better understanding the risks that the non-insurance entities may pose to the group and ultimately regulated insurance entities, how capital is distributed across an entire group, and whether and to what degree insurance companies’ capital may be put at risk from the operations of non-insurance entities, potentially undermining the insurance company’s financial condition. An analyst is not expected to understand non-insurance industries represented within the group but is expected to understand through this calculation if a non-regulated entity could place pressure on or provide relief to a regulated entity.

The manner in which the GCC achieves some of these intentions varies. For example, with regard to understanding how capital is distributed across an entire group, this can be seen in two ways. One is by viewing the Tab titled “Input 4-Analytics” for the display of the “Ratio of Actual to Required Capital”. The other is by viewing the same Tab for the display of “Required Capital” in a separate column. The degree of capital movement can also be seen in the “Input 4-Analytics” tab, with the display of the columns as follows: 1) Capital Contributions Received/(Paid); 2) Net Income. While one year of information can provide insights, a better understanding will be obtainable after further years of the GCC are reported within the template. Once five years of data are displayed in this “Input 4-Analytics” tab, it will allow the analyst to better understand the financial condition of the group as a whole as well as the risks posed by non-insurance entities in the group. Of course, such conclusions can only be made once the analyst sees the data and understands from the group what is occurring that is leading to such figures.
Recognizing that legal entity supervision and related tools (e.g., RBC) are the primary means to address inadequate capital, the GCC may provide an additional early warning signal to regulators regarding risks or activities of non-insurers within the group that may pose material risk to the insurance operations. This early warning signal can be seen with the trending of the financial information in the “Input 4-Analytics” tab as well as through the application of sensitivity analysis in the Input 5 Tab and inclusion of other relevant information in the Input 6 Tab. However, the analyst should also understand that other qualitative tools, such as the Form F, are capable of also providing early warning signals if properly reported by the group. In addition, since most holding company systems may have a larger percentage of their operations in the insurance businesses, the insurance trends for the U.S. insurers in the group should already be known and made available to the lead-state by the legal entity regulator(s) of the insurer(s). However, in the context of added policyholder protection, this may largely come into play with respect to the added quantitative data about non-insurers.

The GCC is an additional reporting requirement with important confidentiality protections built into the legal authority to require such reporting. State insurance regulators already have broad authority to take action when an insurer is financially distressed, and the GCC is designed to provide regulators with further insights to allow them to make informed decisions on both the need for action, and the type of action to take, as to the regulated entity, or additional requests for information from other entities. That said, the GCC and its related provisions in the NAIC’s Model Holding Company Act and corresponding regulation are not designed or otherwise intended for regulators to take regulatory action based on the reported level of a group’s GCC. Regulators will use other existing tools and authorities to take action, primarily at the legal entity level.

While the new information from the GCC may offer new insights, it is equally important to understand that it will be up to the analyst to work with the insurance group to actually understand what is leading to the figures reported in the GCC, and from that perspective, especially in the early years of the GCC, it will require learning by both the analyst and the group to really be able to utilize the GCC in a manner as suggested in these introductory paragraphs.

Other Considerations When Considering Such Benefits

Unforeseen events and economic conditions (e.g., pandemic, recession, etc.) may also create stresses on a group, reinforcing the value of the quantitative data included in the GCC. Some stresses are similar to those experienced during the financial crisis and others are more unique. However, because the GCC is based upon a methodology that gets its inputs from individual legal entities, the capital calculated for each legal entity certainly can only capture the allowed capital resources of the legal entities in the group. While such an aggregation-based methodology is an appropriate group-level capital measure, until experience is gained with the GCC, it is not known how the GCC will behave in response to business cycles and various risk events, in part because it only recognizes limited diversification benefits among entities in the group except for the diversification embedded in existing entity specific regulatory capital requirements. And while the GCC is not meant to be used in a way that compares groups to each other, it is also true that it is unknown how it will behave across groups, peers and even sectors. This is true because of its limited diversification benefit, the differences between group types (mutual v. stock holding company), grouping of entities, and scope of entities included in the calculation. It is also true because application of jurisdictional accounting principles and use of scalars could have an impact on this as well via the foreign insurer profile of the group. The quantitative data collected in the GCC will evolve as state insurance regulators and groups increase their understanding of the impact on available capital and calculated capital.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

The following guidance on the GCC is intended to be utilized in a manner that allows the GCC to enhance group-wide financial analysis and to be used as an additional input into the GPS. The GCC provides the quantification of risk within the group and when combined with the information from the ORSA on the amount of capital needed to run the company’s current business model and related risk appetite, puts the regulator in a much better position to understand the available capital and calculated capital within a group, as well as the financial condition of the group. Both are complementary tools to each other. The ORSA provides management’s internal approach to capital management and an understanding of the economics of the group. The GCC provides a standard model that can better enable the analyst to understand where the entire group stands with respect to existing legal entity requirements as well as broad measures of risk for non-insurers. Analysts should be mindful of the differences between the ORSA and the GCC. For example, in the case of a group with predominantly U.S. operations, the GCC will largely be based on the standard model/RBC of the U.S. subsidiaries. However, the ORSA is not constrained by a standard model and will reflect management’s internal approach to capital management and may utilize or benefit from an economic capital model, other internal models, stress testing and other means. As a result, while the GCC is an additional input into the GPS, it may provide data and signals that don’t align with the risk measures within the ORSA.

Overall Theme of Remaining Guidance

The previous information describes the purpose for considering the GCC within the context of the state’s holding company analysis and corresponding GPS. In general, the remainder of this guidance provides more depth to the specific information to be included in the GPS, and provides the analyst with a basic understanding of the GCC including why the entities included within the GCC may be a subset of those entities that are within the holding company structure; whether the trends within the GCC suggests questions should be raised with the group’s management; whether the underlying data suggests trends exist that should likewise be raised with the group or with the respective legal entity’s supervisor; whether the information in the GCC filing is generally aligned with other information available to the analyst, and if not, why not, and whether that evidences other questions or concerns that should be addressed, or how they may already have been resolved. Notably, the purpose of the GCC is NOT to trigger regulatory action. Thus, even though the GCC is intended as a group-wide measure and provides insights as to capital adequacy and risks across the group, any regulatory action would have to result from other information made available to the regulator and based on legislative authority.

Utilization of the Group Capital Calculation in the Lead State’s Responsibilities

The lead state is responsible for completing the holding company analysis and documenting a summary of that analysis in the GPS. The depth and frequency of the holding company analysis will depend on the characteristics (i.e., sophistication, complexity, financial strength) of the insurance holding company (group) system (or parts thereof), and the existing or potential issues and problems found during review of the insurance holding company filings.

Similarly, in the analysis of the GCC, the depth of the review in the “five-step process” and specific inquiries will vary based on each group’s unique situation. For example, in some groups, very little if any work (inquiries of the group) will be done after the first step due to generally positive trends of the ratio over time. In other groups, the analyst may need to proceed through each of the five steps. Exactly how the analyst proceeds through the guidance will be dictated by a multitude of factors and requires judgement and as a result, the steps and subprocedures should not be used as checklist, but rather as a guide in how to utilize the GCC to increase the analyst’s understanding of the group.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

GCC Construction That Also Impact its Utilization and Review

Some decision points may be addressed prior to the submission of a GCC template. These include: the scope of application (e.g., whether segments of the holding company system (group) should be excluded for financial conglomerates); whether a limited filing will be allowed (as permitted in Model Law #440 and Model Regulation #450); and whether subgroup reporting (as defined in the GCC instructions) of a foreign insurance group will be required. In general, the analytics provided by the GCC will be similar for all entities included in the template. See the Primer on the Group Capital Calculation Formula) at the end of this section to better understand these points.

These factors are also a consideration in determining the depth of the analysis of the GCC and subsequent correspondence with the group. Refer to chapter VI.B. Roles and Responsibilities of Group-wide Supervisor/Lead State for details on responsibilities for completing the GPS.

The utilization of the GCC can be summarized as an additional input into the GPS. More specifically, once the analyst completes their review of the GCC and trend of the ratio, a summary should be incorporated into the GPS to help support the assessment of strategic risk.

Documentation of Review of the GCC in the Group Profile Summary (GPS)

The purpose of these procedures is to explain how to document the GCC into the GPS. The following provides an example of a GCC Summary that represents the minimum expected input of the GCC into the GPS, with new information reported within the Strategic branded risk classification. The other purpose of this section is to determine if more follow-up with the group should be performed and, if so, to assess the information obtained from that additional review. The following is intended to assist in documenting the analyst’s understanding of the group’s GCC in the GPS.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

Group Capital Calculation (GCC) Summary

Summarize your assessment of the GCC both quantitatively and qualitatively, including any such items as may not be applicable to a branded risk category. For example, it may be appropriate to indicate “The review of the group’s GCC indicated the scope of the application is consistent with the lead state’s determination” and if possible, to summarize succinctly, the general scope of the GCC. For example, “the GCC includes all U.S. and Bermuda operations, but excludes ABC non-insurance operations in South American countries”. It may also be appropriate to identify key drivers of risks for the group within the GCC that are discussed later in the branded risk categories, as those risks supplement existing risk assessments derived from holding company analysis or are new risks that warrant further review. “The group’s GCC of 201% in the current year was impacted by a decline in Total Available Capital of $X which is related to group’s non-insurance operations in Bermuda and as well as the negative impact of market risks in the U.S. insurance legal entity ratio components, which based on further analysis has resulted from the recent financial market volatility”.

Branded Risk Assessment

**Strategic:** The group’s Group Capital Calculation is assessed as low-risk and stable and is a positive consideration in the overall assessment of strategic risk. The GCC has generally been reasonable and consistent over the past five years as illustrated in the following table. Additionally, refer to the GCC Summary for further details.

GCC Summary and Strategic Branded Risk Documentation:
The above information documented in a summary section of the GPS and into the strategic branded risk classification is expected to be the primary type of information that is always documented into the GPS. The GCC provides a capital measurement of the group and, consistent with the branded risk categories, should be reported in the strategic risk section. Similar to how RBC for an individual insurance entity is helpful in allowing the analyst to better understand other potential issues, given capital represents a relative measure of cushion for adverse risks, the GCC (and its inclusion in the GPS) helps regulators to understand the same, relative to a group. While the GCC is not a capital requirement, with specified ladders of intervention, each of the insurance legal entity figures are relative to individual company requirements, and therefore the GCC can provide a relative measure of risks in terms of the minimum capital levels of the insurers.

Other Branded Risk Documentation:
To the extent the GCC ratio is trending negatively, or GCC available capital is decreasing, the analyst may choose to include more information in the strategic branded risk section of the GPS that summarizes any key drivers of such findings if they did not fall into one of the branded risk categories. Those drivers of the change might be documented in other specific branded risk categories, for example Pricing/Underwriting if driven by group-wide weak insurance underwriting, or reserving if the group-wide drivers were reserve deficiencies, etc. References to other branded risk categories may also be appropriate. However, this may not always occur or be possible for the analyst to pinpoint given the multitude of risks within any insurer’s regulatory capital requirement formulas.
This guidance is simply meant to suggest that if the GCC does in fact appear to show particular trends that are noteworthy on specific risks, further documentation into that (applicable) branded risk may be appropriate.

A determination for when documentation of risks from the GCC into other branded risk categories may be appropriate is driven by whether any of the thresholds in Procedures 1 were met, and by the rest of the GCC information as described in Procedures 2-4. The GCC Summary is intended to be high-level, therefore other more detailed observations from reviewing the GCC should generally not be documented into the GPS unless they are specifically insightful, add to a high-level understanding of the group’s financial condition, or are specific to a branded risk category as stated.

Other Considerations:
In addition to the broad guidance provided herein on the documentation of the GCC in the GPS, the analyst should also understand the following more general points that could impact the GCC result for a particular group. Judgement is required when considering these points:

- Asset-liability accounting or economic mismatches may lead to volatility within components of the GCC ratio, and potentially in the GCC ratio as a whole. For instance, if an entity is in a market-based regime, and if economic risks are unhedged, the entity’s solvency ratio may fluctuate with economic conditions. As another example, if an insurance entity’s liabilities are subject to U.S. RBC and statutory valuations, and if associated hedging is subject to a market-based valuation, volatility may result due to accounting mismatches. The factors that create volatility will be significantly influenced by the accounting standards used in each applicable regime.
- Regime changes may lead to noticeable changes in the GCC ratio that are not necessarily reflective of changes in the entity’s underlying business. Regime changes can include changes in valuation, risk-based capital, available capital, tax rates, or the use/discontinuation of permitted or prescribed practices. In some jurisdictions a regime change could involve the use/discontinuation of an “internal model” or “partial internal model,” which is a tailored set of risk charges and/or risk correlations and is intended to align insurer and regulatory perspectives of risk and capital.
- The GCC provides a means for analysts to identify non-insurance operations outside of the insurance group and to determine the extent of risk they may pose to the insures within the group. However, in doing so, analysts should understand that findings from review of Forms B, D and F might be equally valuable in these situations.
- When understanding capital requirements for non-insurer financial entities that are not subject to regulatory capital requirements, consideration should be given to the appropriateness of the GCC’s capital charge for a specific entity’s financial operations (e.g., an entity conducting a large volume or large dollar of complex transactions but with little net revenue or equity).
- When understanding capital requirements for non-insurer / non-financial entities, consideration should be given to the appropriateness of the level of risk assigned to specific entities.

Detailed Observation Documentation:
More detailed observations shall be documented separately from the GPS and in a form not dictated by this handbook. As in all holding company analysis, the level of documentation is determined by the lead state insurance department and is dependent on the characteristics and complexity of the group and its risks. These detailed observations generally need to only note the drivers of trends and/or actions being taken by the group to mitigate risks. In some cases, these points can be easily summarized into the GPS. In other cases they are too
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

Detailed and should be documented instead within a separate document not dictated in form by this handbook. The analysts should not spend time documenting either subtle changes within the GCC or individual company movements that do not create a trend at the group level or identify a growing weakness in the group. However, judgment is required to make this determination. For example, a 10% (not point change) decrease in an RBC ratio of one of the smaller insurers within the group generally would not be documented. By contrast, a 10% decrease (not point change) in an RBC ratio in one of the larger insurers in the group that causes, either alone or jointly with other insurers, a 10% decrease in the GCC should be noted. However, it should be understood also that this 10% threshold is not intended to be used as a “bright-line.” In fact it is possible the 10% is not necessarily indicative of any negative trends at all. This could be the case when for example there was a change in the regulatory capital requirement. Therefore, again, judgement is required in making these determinations and this, as well as other thresholds used in this guidance, are not meant to be bright lines. As the GCC is used more, both by the individual analyst and by the various states, using judgement around these thresholds is expected to become easier as the judgement is informed by experience.

**Specific Procedures for Completing Review and Understanding of the GCC**

The following procedures should be used by the analyst in their review and documentation of results of the GCC. However, if the analyst determines after completing any of the above procedures (steps), that no further work is deemed necessary to fully document the material risks of the group observable from the GCC (as well as the required information to be included in the GPS from the GCC), this should be documented by the analyst in any workpapers deemed appropriate by the state along with the general reasons supporting that conclusion. In making this determination, it should be reiterated these procedures are not intended to be used in a checklist manner and judgement based upon existing information on the group obtained from the Form F, ORSA, or any other source is certainly part of that decision.

**Procedures Step 1**

The purpose of procedures 1 is to assess the GCC level, and to identify the drivers of any changes in the GCC, in order to summarize and to document that overall assessment in the GPS and its strategic risk category, which is the minimum expected input of the GCC into the GPS. However, the analyst should understand that in the early years of the GCC, a limited amount of prior year(s) comparative data will be available, therefore requiring more judgement in determining if or where further analysis is warranted. Such judgement may need to be based upon various factors, including but not limited to other known information regarding the applicable group obtained from other sources (ORSA, Form F, Form B, etc.).

Procedure 1 is also intended to help the analyst determine if more follow-up review work should be performed. However, if the answer to any of the questions in 1 is “yes”, the analyst should proceed with step 2, understanding decreases in total available capital and/or step 3, understanding increases in leverage to determine the cause(s) of the negative trends. In the example provided above, the trends are positive with no decreases in the base ratio except in PY1; presumably the analyst may have performed some level of inquiry to the holding company to understand the driver of the drop.

**Procedures Step 2a-2m**

Unlike step 1, the intent of step 2 (and 3) is to determine the actual source of the negative issues and where they should be documented in the GPS. Procedure 2a is specifically focused on identifying the category of legal entities (and subsequently the individual legal entities) that might be driving the issues by looking at the ratio of actual-to-required capital for the legal entity insurers over the available years reported. The following sample of
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

A table from the GCC calculation completed by the group from the data in Schedule 1 can be helpful in determining the source of the issues.

Procedure 2b recognizes that the GCC does allow some debt to be included in capital up to a predetermined limit and can drive the overall GCC ratio. The following sample table taken from the GCC calculation using the data in Schedule 1 can be helpful in making this determination. Cases where debt is issued to address risk-driven reductions in the GCC ratio may not offset those reductions. This data metric may not be available in the case of a “limited filing”.

<table>

Procedure 2c recognizes that profitability (e.g. net income/net loss) is generally one of the biggest drivers of changes in capital and utilizing the following table from the GCC can assist in identifying if there are entities reporting net losses that may be driving the decreases in capital. The following table taken from the GCC using the data in Schedule 1 can be helpful in determining the source of the issues.

VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

Procedure 2d is focused on requesting more specific information from the legal entity regulator or the group to better identify the source of the issue(s). Procedures 2e-2l simply contemplates that if the source of the issues can be identified into one of the branded risk categories, it should be documented in the detailed workpapers and into the appropriate branded risk category of the GPS. However, it is recognized that the source of issues may be in multiple branded risk categories, in which case documentation of each of the sources into the detailed workpapers is still appropriate. However, documentation into one of the single branded risk categories of the GPS is only appropriate if that risk category is a material driver of the negative trends. Procedure 2m is intended to identify if the source of issues is related to non-insurance operations. The GCC is intended to provide for more consistent analysis of risks to an insurer that may originate from non-insurance entities within the holding company system.

Procedures Step 3a-3f

Procedure 3a is specifically focused on identifying the category of legal entities (and subsequently the individual legal entities) that might be driving the issues by looking at indicators of leverage, e.g., leverage ratios, where this risk may manifest itself either through increased writings or exposure, or through increased balances relative to capital and surplus. The following sample of a table from the GCC calculation using the data in Schedule 1 can be helpful in determining the source of the issues.

Procedure 3b is more forward-looking by suggesting the analyst look at the same leverage ratios used in 3a to determine if the trends might continue and lead to further decreases in the GCC ratio. Procedure 3c simply requests the analyst use the leverage information to target questions to the group to better identify the drivers. Procedure 3d-3f are all questions designed to help the analyst consider whether the changes in leverage will lead to greater underwriting risk, reserving risk, or market and credit risk. Procedures 3d-3f provide general inquiries for additional information for the analyst. However, these inquiries may also appropriately provide a basis for the analyst to hold conversations with the group on the same topics to understand how the group views these topics and how the group is managing and monitoring these risks. For groups filing an ORSA, see also documentation within the ORSA report for additional information on the identified risks and the group’s monitoring of risks, as well as consistency of the discussion with management and management’s observations in the ORSA Summary report.

Procedures Step 4a-4b. Procedure 4a is intended to help the lead state understand the historical capital allocation patterns or the likely future needed capital allocation patterns by simply documenting those in the detail analysis workpapers. This includes, for example, noting that there is consistency in the entities generating net income and distributing it further through the group, and in some cases may require distribution through other insurers, which in the US often requires approval if considered extraordinary. Procedure 4a is intended to utilize that knowledge, along with other planned actions of the group, to understand whether problems with repaying debt or other obligations in the group could occur. The intent is to be in a better position for discussions with the group on where the group may expect capital to come from to support future expected activity or future unexpected material events. The following sample of tables from the GCC calculation using data in Schedule 1 can be helpful in determining the source of the issues.

**Procedures Step 5a-5h.** Procedures 5a-5h are designed for those uncommon situations where the group believes they need to reduce risk because raising capital may be unlikely (see appendix for further discussion on that topic). Before performing this procedure, Procedure Step 2 (Evaluating Decreases in Total Capital) and Procedure Step 3 (Evaluating Increases in Operating Leverage) will have already been performed to determine whether capital is decreasing, or operating leverage is increasing. As such, after considering information that may already be available to the regulator on the business plan, Procedure 5b is largely focused on better understanding directly from the group the group’s reaction to the apparent negative trends. The analyst should understand that some of these trends may have already been known, through for example the ORSA review and discussions.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

of the ORSA by the lead state. In fact, the key takeaways may already be documented in the GPS and therefore the remaining procedures in this section may be irrelevant and could be skipped if recently considered and understood. In addition, such trends from Procedure Steps 2 and 3 may suggest no additional information is necessary. It is for this reason that the first procedure is focused on the group's existing business plan as it is possible these trends may have been expected. Further, Procedure 5a is based on the belief that reducing risk by the group may have been previously incorporated into the group's latest business plan, which may have been obtained from the Annual Form F Filing.

Procedure 5b on the other hand contemplates that the manner to address any unexpected negative trends may not have been incorporated into the latest business plan and thus further contemplates that the analyst speaks with the group or identified insurer causing the negative trend to understand how the issue is to be addressed. However, it should be recognized that some trends that may appear to be "negative", e.g., a decline in the reported GCC, may actually be the result of a conscious decision by the group to more efficiently deploy capital while remaining at sufficient levels from an ERM perspective. This procedure is not meant to suggest action must be taken by a regulator, but only to help the analyst understand whether a trend is in fact "negative" or not, and if so, what the group has already decided or plans on doing to address the issue, if any, and appropriately document. Some of what the group is currently doing may already be known by the lead state, either through the ORSA, the Form F, or a periodic meeting with the group that some states conduct annually. However, the procedure provides an opportunity for the analyst to ensure they understand the drivers and what if anything the group is already doing to address the underlying issues as the group thinks is appropriate. To be clear, increases in operating leverage are often planned, and often come with expected future actions by the group, such as capital injections or future transactions that may reduce risk. On the other hand, decreases in capital sometimes are not expected, and may not result in immediate action, but it is possible that they may lead the group to contemplate future actions to take. Therefore, these discussions would allow these potential actions to be better understood by the analyst and documented.

Procedure 5c contemplates assessing if the group has the ability and resources to either reduce its risks or to raise additional capital. See the section below for further Considerations of the Group's Capacity to Raise Capital. This procedure is not intended to suggest the analyst has the capacity to make this determination on their own, but rather to question the reasonableness of the possibility. Further, the GCC and related provisions in the NAIC's Model Holding Company Act and corresponding regulation are not designed or otherwise intended for regulators to take regulatory action based on the reported level of a group's GCC; regulators will use other existing tools and authorities to take action, primarily at the legal entity level.

Procedure 5d contemplates that the group or legal entity may believe no action is necessary because it believes current capital is adequate to meet its business plan, which is more likely to be the case when a one-time reduction of capital as opposed to a growth in leverage that may continue. Procedure 5e is for the rare situation where the legal entity insurers have been strained or face impending pressure contemplated within NAIC Model 385—Model Regulation to Define Standards and Commissioner's Authority for Companies Deemed to be in Hazardous Financial Condition that would suggest one or more of the insurers may be in a hazardous financial condition. Procedure 5f is designed to suggest the analyst bring the collective supervisors of the legal entity insurers together for a supervisory college to fully understand what is occurring and the identified legal entity's plans for addressing the underlying issues. Procedure 5g is an extension of Procedure 5f as it contemplates the regulators discussing whether the proposed actions from the legal entity(ies) in the group is adequate. This action could represent something either informally done before an insurer is in a regulatory action level, or formally once an insurer is in a regulatory action level. Procedure 5h is similar to the other actions contemplated
Additional Procedures – Business Plans

While there is a multitude of possibilities which are beyond the scope of this guidance to address, the following provides some of the related issues that may be helpful to the analyst to consider.

**Group’s Business Plan (or collective legal entities):**

**Planning Process:**

- Understand the overall planning process (who is involved, how frequently it occurs, etc.) and how the overall initiatives are determined
- Understand the estimate of the impact of the proposed actions on financial results
- Review the plan’s assumptions for reasonableness. Consider the likelihood of variations in the assumptions and the resulting impact on the future financial results
  - Consider subcategories of changes including:
    - Overall potential changes in investment strategy
    - Overall potential changes in underwriting strategy or risk concentrations
    - Overall impact on financing matters (e.g., debt, requirements, etc.)
    - Overall impact on derivatives to mitigate economic conditions
    - Overall changes in governance or risk management procedures
    - Increased ceded reinsurance transactions (common approach to reducing risk/increasing surplus):
      - Details regarding the revised strategy
      - Specifics on types of coverage such as assumption reinsurance, loss portfolio transfers
      - Transfer of risk considerations

**Variances to Projections:**

- Consider the history of explanations regarding variances in projected financial results and the insurer’s actual results. If analysts determine the goals of the business plan are not attainable and/or projections are unreasonable, a revised business plan may be requested.
- Identify any internal or external issues not considered in the plan that may affect future financial results. Examples of such issues include the following: 1) the existence of competitors to limit future sales levels; 2) recent state legislation restricting the company’s product designs; or 3) the loss of key marketing personnel.
### VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

#### Evaluating a Business Plan:

Analyzers should consider further detail where necessary in evaluating the proposed revised business plan but also monitor, on a periodic basis, the insurer’s progress in achieving the initiatives included in the group’s plan. Assuming that the analyst has determined that a decline in the GCC is material and to considered a negative event, i.e., it was not the result of capital management and planning to more efficiently utilize capital while staying within sound levels to achieve ERM objectives, the goal of the plan would then be to address the underlying causes that led to the issues and an improvement in subsequent GCC ratio results. Detail considerations for improving the plan may include the following (where considered inadequate):

- Trending comparative measures of targeted risk exposures including (where applicable):
  - Asset mix by detailed types
  - Credit risk by detailed types
  - Business writings/ratios by detailed product
- Impacts on financing items:
  - Projected cash flow movements for ongoing principal and interest payments on debt
  - Impact on debt interest coverage ratio, other debt covenants, rating agency ratings
  - Discussion of impact on parental guarantees and/or capital maintenance agreements
  - Expected source and form of liquidity should guarantees be called upon
- Impact of reasonable possible stress scenarios
- How the individual legal entities’ capital will be maintained at required levels

#### Consultation with Other Regulators

- Consult with members of the supervisory college (if applicable) or other domestic states for input in evaluating the revised business plan

---

### Considerations Regarding Ability of the Entities in the Group to Raise Capital

The following is designed simply as a reminder of considerations the lead state would contemplate when discussing the group system response to the issues identified in this section. More specifically, in most situations a group will first consider ways to reduce risk. In limited situations, it may consider trying to raise additional capital. While this is typically not an option for a group that is currently not performing as it anticipated, in some situations alternative sources of capital may be raised if the holders of the newly issued equity securities are given rights that are attractive to the holder. In addition, in some cases the group may have the ability to issue other forms of capital (e.g., debt), which can be used to inject into the insurance subsidiaries. While these facts are not unique to the utilization of the group capital calculation, they are worth a reminder along with relevant other related details.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

New Equity Considerations

Public Holding Company
While no two groups are the same, issuing public stock may be limited for the reasons previously identified. In addition, regulators are reminded that a public holding company may be obligated to pay dividends in order to maintain expectations of their shareholders, making the reduction of risk a more viable action under the circumstances.

Private Holding Company
While no two groups are alike, a private company has some of the same characteristics as a public company in terms of owners’ expectations, but usually such expectations differ from a public company, and it may be more feasible for a private company given their access to specific individuals that may have a higher interest in additional capital rights.

Mutual Insurance Company
A mutual insurer is limited in terms of its access to capital because it cannot issue new stock but can issue surplus notes.

Mutual Holding Company
Because mutual holding companies have characteristics of both public companies and mutual companies, there are implications of how such a structure affects its operations.

Non-profit Health Company
Insurers that are non-profits are generally charitable organizations and it is not uncommon for some types of insurers, particularly those that provide health insurance, to have some history as a non-profit. It may be helpful to understand these types of dynamics when considering a group structure.

Fraternal Associations
Regulators often find similarities between a fraternal benefit society and a mutual insurer because both can be limited in terms of their ability to raise additional funds but can issue surplus notes. If allowed within state law and the charter, the fraternal could assess members or adjust members policy values.

Reciprocal Exchanges
Regulators often find similarities between reciprocal exchanges and fraternal benefit societies and mutual insurers because they can be limited in terms of their ability to raise additional funds. Although this is a general consideration for the regulator when evaluating the group system, there is generally much more that must be understood because in some cases, the reciprocal may be able to assess policies that can serve a similar purpose as raising capital.

New Debt Considerations

Through discussions with the group, understand the potential impact of any new debt on the group system, including specifically the extent of future additional reliance on the insurance operations and whether those insurers have the capacity for such. Also consider an updated review of the following:

- Total debt service requirements.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

- Revenue streams expected to be utilized to service the debt.
- Any new guarantees for the benefit of affiliates.
- Any new pledge of assets for the benefit of affiliates.
- Any new contingent liabilities on behalf of affiliates.

General Holding Company Considerations

International Holding Company Structure
This section is applicable only to those international groups that are required to complete the GCC, which may be relatively few considering many international holding companies have a non-US groupwide supervisor and are exempt from the GCC. Those foreign groups that are required to complete the GCC will generally file a “subgroup” GCC that includes insurance entities that are part of the group’s U.S. operations. In those situations, the analysts should understand the structure to determine if it has any impact on this analysis. Analysts should direct any regulatory concerns to the appropriate organization contact to ensure a prompt reply or resolution. In some organizations, the appropriate organization contact will often be associated with the U.S. insurance operations, while in others, an advisory board may have been established to communicate with regulators.

Capital / Operational Commitment to U.S. Operations
Some holding companies may consider their U.S. insurance enterprises non-core and may be less invested in their ongoing business operations or financial support. Analysts should be aware of a holding company’s stated commitment to ensure the continued stability of U.S. insurance operations. This commitment may include a written or verbal parental guarantee.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

Primer on the Group Capital Calculation Formula

The National Association of Insurance Commissioners (NAIC) began development of the Group Capital Calculation (GCC) in late 2015 following extensive deliberation on potential measurement models and methodologies. The GCC uses a bottom-up aggregation approach, accounting for all available capital/financial resources, and the required regulatory capital based on the measurement of assets and liabilities of the various corporate entities, including insurers, other financial entities, and non-financial businesses.

The GCC Aggregation Methodology

As illustrated in the sample tables above, the proposed GCC is an aggregation or grouping of the available financial resources and calculated capital of all legal entities that potentially could pose material risk to the insurers in the group. The GCC allows some discretion in determining what entities under common control but outside of the defined Insurance Group may be excluded from the scope of application in the GCC. When reviewing a group’s choice of entities to be excluded from application of the GCC, the following points should be considered:

- The regulatory evaluation should be based on the criteria for material risk (e.g., structural separation, no history of cross subsidies, or other criteria as defined in the GCC instructions).
- Group requests for reducing the scope of application of the base GCC should be based on supporting information and a rationale provided by the group.
- Information on excluded entities should be made available upon request from the analyst.

The GCC includes the following types of entities (listed with the general approach of calculated capital toward each).

U.S. Insurers – The available capital of U.S. domiciled insurers is determined by statutory accounting principles (SAP) as defined by state law and the NAIC Accounting Practices and Procedures Manual, which defines assets, liabilities, and net available capital/financial resources, sometimes referred to as policyholder surplus. The calculated capital for these insurers is subject to state law that requires these insurers to maintain minimum capital based on the applicable NAIC Risk-Based Capital formula at 200% x Authorized Control Level.

Non-U.S. insurers – Similar to the available capital and calculated required capital of U.S. insurers, the available and calculated capital of non-U.S. insurers is determined by reference to the home jurisdiction’s basis of accounting and capital requirements converted to U.S. dollars. While most non-U.S. jurisdictions do not possess the same level of industry specific technical guidance as included in the NAIC Accounting Practices and Procedures Manual, all jurisdictions have established accounting standards that insurers are required to follow to determine available capital/financial resources. In some cases, this represents local Generally Accepted Accounting Principles (GAAP), which may or may not be consistent with International Financial Reporting Standards (IFRS).

DRAFTING NOTE: While the GCC utilizes the available capital and home jurisdictions’ capital requirement, for jurisdictions where data is available, the use of appropriate scalars is currently being explored to produce more comparable measures for risk which can be aggregated into the group-wide measure. One such scaling methodology is included as part of a sensitivity analysis in the GCC template. That scalar methodology uses aggregated data from the U.S. and other jurisdictions at the first intervention level to recognize that (for...
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

example) state regulators often have much higher reserve requirements, incorporating amounts that are required to be carried as capital in other jurisdictions. For jurisdictions where the data is not available, the full jurisdictional requirement at the first intervention level is used.

U.S. Insurers Not Subject to RBC – Some types of U.S. insurers are not subject to an RBC formula (e.g., Financial Guaranty Insurers, Title Insurers). For these entities, the available capital/financial resources are determined by reference to state law and the NAIC Accounting Practices and Procedures Manual. However, since an RBC formula does not exist, calculated capital is determined by reference to the minimum capital requirements set out in state law (or 300% of reserves for Title insurers). For U.S. captive insurers, available capital is determined based upon the states accounting requirements, but the calculated capital is required to be calculated using the applicable RBC formula even if RBC does not apply to that entity in its state of domicile.

Banking or Other Financial Service Operations Subject to Regulatory Capital Requirements – Non-insurers such as banks are subject to their own regulatory valuation methods (typically GAAP with tiering of available capital) and their own regulatory capital requirements (e.g., OCC, Federal Reserve, FDIC, or other requirements for banks). These regulatory values are used for the GCC.

- Financial and non-financial operations not subject to regulatory capital requirements – In general, financial entities (as defined in the GCC Instructions) are subject to a higher capital charge in the GCC than the non-financial entities. However, the GCC does require available capital/financial resources and calculated capital to be gathered for all such entities that pose a material risk to insurers. In both cases the GCC will utilize the valuation used by such legal entities (typically U.S. GAAP) and a calculated capital based upon a risk factor. All entities within the defined insurance group (definition included in GCC Instructions) must be included
- All financial entities (definition included in GCC Instructions) must be included
- The level of risk (low / medium / high) and associated capital calculation assigned to a financial entity will be selected by the group and evaluated by the lead -state reviewer
- Non-financial entities that are subsidiaries of U.S. insurers, foreign insurers, or banks where a capital charge for the non-financial entity is included in the regulated Parent’s capital formula will remain with the Parent and will not be inventoried. Regulators already have access to the financials of these entities if needed (if causing unrealized losses within the insurer).

Eliminations
The GCC uses an aggregation and elimination approach, where each of the above legal entities’ available capital/financial resources and calculated capital are combined, then eliminations are utilized to prevent any double counting of available capital/financial resources or calculated capital. The following example illustrates the use of eliminations for both available capital/financial resources and calculated capital. However, in practice the GCC only requires the foreign insurers and other financial entities owned by an insurance company to be “de-stacked” so if AA Holding Company was a U.S. insurer (e.g., AA Insurance Company) the capital required and calculated capital for DD Insurance Agency as a nonfinancial entity would remain in the values of AA Insurance Company and not be de-stacked.
In the above example, available capital/financial resources are referred to as available regulatory capital (ARC) and total authorized capital (TAC1) and minimum calculated capital is referred to as minimum regulatory capital (MRC) and authorized control level (ACL2). The GCC will allow non-insurance / non-financial entities owned by RBC filers in the group to remain within the available capital and calculated capital of the parent, so no eliminations are required for these entities. As shown, since AA Holding Company owns each of the other business entities in the organizational chart, $38 million (which is the amount of available capital/financial resources in the subsidiaries of AA) is eliminated from the TAC column since accounting methods include those as an asset on AA Insurance Company’s balance sheet. Also, the GCC includes capital calculations for AA Holding Company and DD Insurance Agency as part of the MRC in addition to the regulatory capital already included for the insurance subsidiaries. The MRC of the subsidiaries is eliminated from the parent’s (AA Holding Company) calculated capital. Therefore, in this example $4.81 million of calculated capital is eliminated from the MRC. Finally, the MRC of U.S. insurance subsidiary is multiplied by 2 in order to reflect Company Action Level (CAL) RBC as required in the GCC.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) – Analyst Reference Guide

Debt - It is important to note that the available capital used in deriving the GCC recognizes a portion of the group’s senior and hybrid debt as capital. This allowance recognizes that debt that is not already recognized as available capital/financial resources under all known accounting principles (SAP, U.S. GAAP or IFRS) may have some value to the group under the U.S. insurance regulatory requirements where debt proceeds are contributed down to the insurance companies and where extraordinary dividends must be approved by the state. Qualifying debt along with limitations thereon are described in the GCC instructions as is the calculation for the additional available capital. In addition to looking at the group’s debt leverage, consideration should be given to how the allowance for additional capital from debt interacts with changes in available capital and capital requirements from year to year. The impact of procyclical changes in the allowance for debt as capital should be assessed.

Other Information Included in the GCC
The GCC includes selected financial information (net income, premiums, liabilities, debt, etc.) that is captured in Schedule 1 and in the “Analytics” tabs of the GCC, which is meant to be used to help isolate potential strengths and weaknesses of the group and more specifically where such exist among the entities in the group. Some important information related to other features in the GCC also should be considered and are discussed below. Schedule 1, a simplified version of the Inventory Tab, and most analytics are required in the case of a limited filing. However, data is not required for the capital instruments, sensitivity analysis and other information tabs in a limited filing.

Grouping - The GCC separately allows certain financial entities (e.g., asset managers) and non-financial entities included in the GCC to have their values and capital calculation combined (grouped) for more efficient reporting and analysis. Although the GCC instructions set parameters for such grouping, the general expectation is that regulators will work with each applicable GCC filer in determining where grouping is and is not appropriate outside of what is allowed within the GCC instructions. Grouping should be viewed in the context of materiality. A single entity conducting a given activity may not be material, but when all entities conducting the same activity are combined, they may then be material.

Excluded entities – The GCC provides two mechanisms for the exclusion of non-financial entities in Schedule 1 and in the Inventory Tab at the discretion of the lead state. State regulators should consider whether any of the information collected in the GCC template, should be collected for an entity or group of similar entities that would otherwise be excluded from the GCC ratio calculation. Regulators should separately monitor increases in the level of activity of an “excluded” entity or group of similar entities for purposes of materiality and potential subsequent inclusion in the GCC.

Sensitivity analysis - A tab devoted to sensitivity analysis is included in the GCC. These informational items provide the regulator with impact of discretion in excluding listed entities and alternative perspectives on risk charges for non-financial entities and foreign insurers. Monitoring of these items can help the regulator identify areas where the GCC may be improved, or capital calculations adjusted in the future. One item included in the sensitivity analysis is a “sensitivity test” that increases the overall calibration of the calculated capital in the GCC from its normal 200% x ACL RBC calibration to 300% x ACL RBC.

Accounting Adjustments - The impact of accounting adjustments and related detailed information is collected in the GCC template in the Inventory Tab and in the Other Information Tab respectively. Such adjustments can be material during the de-stacking process. For example, a consolidated holding company may include GAAP values for entities that would otherwise be valued under regulatory accounting rules (e.g., Statutory Accounting Principles - SAP) on a stand-alone basis. When the regulated entity is de-stacked the difference between the GAAP values and SAP values will be removed from the group’s available capital. These “lost” values can result in a material reduction in the inventoried available capital compared to consolidated available capital. Understanding
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) – Analyst Reference Guide

the impact and the components of this adjustment can help the regulator when considering the impact of issuing new debt or when evaluating the allowance for debt as capital calculated in the GCC template.

Intangible Assets – Acquisitions, mergers and reorganization often create significant intangible assets at a holding company level or possibly at an operating company (other than a regulated entity) level. The GCC template collects information on intangible assets held by inventoried entities in the Other Information Tab. The available capital associated with the value of entities whose assets are materially comprised of intangible assets should be evaluated in the context of fungible resources and in assessing the adequacy of the capital calculation assessed on such entities.

Dividend pass-thru (gross view of dividends) – Schedule 1D collects information on dividends paid and received within the group. It also includes a column that indicates whether dividends were declared but not yet paid, as well as cases where dividends received where retained or “passed through” to another affiliate or paid out in dividends to shareholders. This information will assist the regulator in evaluating the movement of capital within the group to fund strategic insurance and non-insurance operations or activities (e.g., expansion of activities) or to fund entity specific capital shortfalls. It also provides a window to capital leaving the group (e.g., debt repayment, stock repurchase, or dividends to shareholders).

Considerations When Exempting Groups

As stated elsewhere within this guidance, the GCC and its related provisions in the NAICs Model Holding Company Act and corresponding regulation are not designed or otherwise intended for regulators to take regulatory action based on the reported level of a group’s GCC. Rather, the GCC is intended to be a tool to better understand the risks of the group, mostly through the trending of the financial information in the “Input 4-Analytics” tab. However, specific to the provisions of the NAICs Model Holding Company Act and corresponding regulation, the Group Capital Calculation (E) Working Group did believe that the GCC might be more helpful for some groups and not as much for others when it developed criteria within the Act and the regulation for exemptions. On this point, the Working Group believed that in general the GCC would be more helpful for those groups that had 1) non-U.S. insurers within the group; 2) a bank within the group, or 3) a more material degree of non-insurers. Specific to the point regarding non-U.S. insurers or banks, the GCC is based upon the premise that the most relevant measure of capital is the actual legal entity requirements of capital from the applicable regulator. On this point, the required capital, as well as the trending of information on these particular legal entities might be the most valuable, particularly if the relative operations and assets of these entities compared to the U.S. RBC filers is material. Similarly, while the calculated capital on the non-insurance entities may not be as relevant as required capital on regulated insurers or banks, if the operations and assets of non-insurers relative to those of US RBC filers are material, the GCC may provide greater value to such types of groups.

To these points, the NAICs Model Holding Company Act and corresponding regulation contain possible exemptions for groups that have less than $1 billion in premium and that do not possess any of the three characteristics just described. The possible exemptions exist after the GCC has been filed once, because without seeing the completed GCC at least once for a group, it may be difficult for the lead-state to determine if the GCC has value. However, it should also be understood that these three criteria of non-U.S. insurer, bank, or non-material non-insurers are not the only situations where the GCC would be valuable to the lead-state. As a reminder, all states are required to assess the sufficiency of capital within the holding company structure; prior to the GCC, this was done using various methods (e.g., debt to equity ratios, interest coverage ratios, existing RBC ratios and relative size of insurance). The GCC is expected to enhance a state’s ability to make this assessment more easily. Therefore, in deciding if a group should be exempted, the lead-state will need to consider a number of factors, including how easily it can make this assessment without the GCC. For small groups where the U.S. RBC operations and assets are much larger than the non-insurance operations, it is likely the GCC would provide a smaller degree of value and exempting from the GCC may be appropriate. However, the analyst should also consider the fact that
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) – Analyst Reference Guide

the simpler the holding company structure, the more easily the GCC can be completed. Specifically, given all of the data included in the GCC is existing data and therefore readily available to the company, a smaller and simple structured group should be able to accumulate into the GCC template in a short period of time. Also worth considering is that if such operations are contained within a number of different U.S. insurers where it is difficult to determine the degree of double counting of capital, the GCC may provide more value. To be clear, these are not the only situations where the GCC might be helpful even with a relatively small group. This is because the value may come from figures the GCC requires that the state may have otherwise not been aware of. Specifically, the GCC may identify non-RBC filers who may be experiencing some level of financial difficulties. This possible identification of information the lead-state was not otherwise aware of is the primary reason the Working Group suggested the GCC be filed once before deciding on whether a group should be exempted. While the NAIC Accreditation program may not require a state to have such authority to have the GCC filed once before exempting, this background information provided herein is intended to encourage the state to consider such possibilities before deciding on exempting a group, particularly since it may be difficult to stop an exemption in a given year once it’s provided. In summary, as with everything else described in this documentation, the GCC requires judgement on behalf of the analyst and the lead-state which is based upon multiple factors including the lead-state’s existing knowledge of the group. The same applies when considering whether a group should be exempt.
The Financial Examiners Handbook (E) Technical Group of the Examination Oversight (E) Task Force met Nov. 17, 2021. The following Technical Group members participated: Susan Bernard, Chair (CA); John Litweiler, Vice Chair (WI); Blasé Abreo (AL); William Arfanis (CT); N. Kevin Brown (DC); Cindy Andersen (IL); Grace Kelly (MN); Shannon Schmoeger (MO); Andrea Johnson (NE); Colin Wilkins (NH); Tracy Snow (OH); Eli Snowbarger (OK); Matt Milford (PA); and John Jacobson (WA).

1. **Adopted its Oct. 5 Minutes**

The Financial Examiners Handbook (E) Technical Group met Oct. 5 and took the following action: 1) exposed handbook guidance related to completeness and accuracy repository revisions and coordination framework revisions.

Mr. Litweiler made a motion, seconded by Mr. Snow, to adopt its Oct. 5 minutes (Attachment Three-A). The motion passed unanimously.

2. **Adopted Handbook Guidance**

   a. **Completeness and Accuracy Revisions**

Ms. Bernard said the first set of revisions to consider for adoption relate to enhancements to examination repositories to address the completeness and accuracy of claims data. She said one comment letter was received from Connecticut (Attachment Three-C) during the exposure period. The comment letter recommended that the proposed phase 5 procedure on the Life Reserves repository related to obtaining policyholder confirmations be removed. Ms. Bernard stated that there was some debate on the last call regarding whether this procedure would typically be performed by examiners. NAIC staff updated the Life Reserves repository to reflect this deletion proposed by Connecticut.

   b. **Coordination Framework Revisions**

Ms. Bernard said the next set of revisions to consider for adoption relate to the exam coordination framework and are intended to clarify and simplify the roles and responsibilities of states that are, or could be, involved in a coordinated examination. She said one formal comment letter was received during the exposure period from America’s Health Insurance Plans—AHIP (Attachment Three-E). The comment letter and informal feedback received resulted in minor amendments to the coordination framework revisions. Ms. Bernard said the comment letter included one suggestion that was not accepted regarding additional guidance for safeguarding and maintaining the confidentiality of information in examination files. As standards for protection and confidentiality of sensitive data are typically prescribed at the state level and may vary significantly from state to state, no revisions were made as a result of this recommendation.

Tom Finnell (AHIP) said he appreciates the Technical Group’s review and efforts to make clarifying amendments to the coordination framework revisions in response to AHIP’s comment letter. He indicated that he understands why the specific confidentiality and security guidance recommendation was not included within these revisions, but he noted that he hopes there is a central place within NAIC materials where there is sufficient guidance to ensure that proper security measures are being used.

Mr. Litweiler made a motion, seconded by Mr. Arfanis, to adopt the guidance related to: 1) completeness and accuracy revisions (Attachment Three-B); and 2) coordination framework revisions (Attachment Three-D). The motion passed unanimously.

Having no further business, the Financial Examiners Handbook (E) Technical Group adjourned.

FEHTG 11-17-21 Minutes_FINAL.docx
The Financial Examiners Handbook (E) Technical Group of the Examination Oversight (E) Task Force met Oct. 5, 2021. The following Technical Group members participated: Susan Bernard, Chair (CA); John Litweiler, Vice Chair (WI); Richard Russell (AL); William Arfanis (CT); N. Kevin Brown (DC); Gracy Kelly (MN); Shannon Schmoeger (MO); Justin Schrader (NE); Colin Wilkins (NH); Juan Collado (NJ); Tracy Snow (OH); Eli Snowbarger (OK); Matt Milford (PA); and John Jacobson (WA).

1. **Exposed Handbook Guidance**
   
a. **Completeness and Accuracy Revisions**

Ms. Bernard said the first set of revisions to consider for exposure relate to enhancements to examination repositories to address the completeness and accuracy of claims data. She said external auditors’ approach to testing the completeness and accuracy of data has evolved and now consists of a broader range of testing procedures than are accounted for in the existing examination repositories, including greater reliance on control testing and performance of analytical procedures. She said proposed updates will help ensure that the examination repositories reflect examples of common controls that may be in place at the insurer, as well as provide examples of the type of testing that examiners may perform to address those risks or that may be available for the exam team to leverage in its assessment.

Elise Klebba (NAIC) said revisions were made to the Reserves/Claims Handling – Health, Reserves/Claims Handling – Life, Reserves/Claims Handling – P&C, and Underwriting examination repositories. These revisions primarily focused on the addition of analytical procedures and enhanced collaboration with an actuarial specialist to identify specific data elements and/or lines of business to focus testing on areas of greater concern or risk.

Ms. Klebba explained that the existing Phase 5 detail test procedures for risks addressing completeness and accuracy are robust and direct examiners to review large samples of data to validate those assertions. While this extent of testing is appropriate in some circumstances, there may be times when analytical procedures are more appropriate based on the calculated residual risk. Additionally, examiners are encouraged to utilize the work of external auditors, when appropriate, to reduce the examiner’s review of financial reporting risks during an examination so they can instead focus on risk more directly related to a company’s solvency position. Aligning the example procedures within the examination repositories with the type of procedures external auditors perform during financial statement audits may assist examiners in identifying where they may be able to leverage existing audit work.

Ms. Klebba said some risks are written in a way that suggests both completeness and accuracy exam assertions are addressed through the corresponding test procedures. However, she noted that in practice, the testing performed during examinations may only address one of the exam assertions, rather than both, resulting in a risk not being fully addressed.

Mr. Milford and Mr. Schmoeger affirmed the perception that examiners may look at one assertion or the other, and clarifying the intent of the risk statement or the corresponding procedures would likely be helpful to examiners. While the Technical Group discussed whether separating the applicable risks such that each risk is focused on one exam assertion would help alleviate this issue, the Technical Group ultimately determined that clearer risk statements may be sufficient.

Ms. Klebba noted that one of the proposed revisions included a new detail test procedure to obtain policyholder confirmations to validate completeness of in-force balances. Although this is a procedure commonly performed by external auditors, she asked if this is a procedure state insurance regulators would be comfortable performing, or if it would cause confusion or raise questions by policyholders and/or companies under examination. Mr. Litweiler and Mr. Milford indicated that this is not a procedure they would likely perform. Ms. Bernard suggested that the procedure remain for consideration during the exposure period, and she asked that others weigh in on the appropriateness of including this procedure in the examination repository.

Mr. Arfanis asked if adding analytical procedures as optional Phase 5 procedures implies that an analytical procedure could be used to mitigate a high residual risk. Bailey Henning (NAIC) said testing performed in Phase 5 of an examination should be commensurate with the residual risk rating; therefore, a high residual risk rating may warrant in-depth, substantive testing to
be performed (e.g., taking a large sample of policies and validating certain information from within the policy). However, analytical procedures may be appropriate for a risk with a moderate residual risk rating. She said the Financial Condition Examiners Handbook (Handbook) provides additional detail for differentiating the nature, timing, and extent of procedures to be performed based on a residual risk rating, including the examiners professional judgment. Bruce Jenson (NAIC) added that external auditors are doing more analytical procedures, particularly around completeness testing. For example, external auditors may rely on analytical procedures to evaluate claim cutoff by looking at claim counts from month to month.

b. Coordination Framework Revisions

Ms. Bernard said the next set of revisions to consider for exposure relate to the exam coordination framework. She said the Financial Examiners Coordination (E) Working Group has received feedback from state insurance regulators and industry on aspects of exam coordination that could be improved. In response to this feedback, the Working Group formed a drafting group to review the feedback provided and the existing guidance to determine how best to implement the suggestions.

Ms. Henning said the drafting group sought to simplify the guidance within the coordination framework and clarify the roles and responsibilities of each state that has a company in a holding company group. She said throughout this process, the drafting group did not create new requirements; however, in some cases, the existing requirements were embedded in lengthy paragraphs or otherwise overlooked. Therefore, some of these requirements were made more prominent through the proposed revisions. Ms. Henning also noted that the proposed revisions add context to some of the existing requirements, including relevant timing for certain responsibilities to take place and additional considerations for the states involved. She also said the responsibilities for each state with a company in a holding company group have been re-ordered to flow in a manner consistent with how each step typically occurs in real time.

Ms. Henning gave an example of a requirement that was made more prominent through the proposed revisions. She said existing guidance directed examiners to provide informal and formal notifications when a coordinated examination was expected to be conducted in the future. These two different notifications serve different purposes and have different timing requirements. Therefore, the drafting group proposed separating these two notifications into two separate steps and adding additional context describing when each notification should be provided, for what purpose, and to whom. Ms. Henning said many of the revisions proposed throughout the document are similar in nature.

Ms. Henning said the drafting group also suggests that the Technical Group consider a recommendation to the Financial Regulation Standards and Accreditation (F) Committee to revise its guideline related to the use of Exhibit Z – Exam Coordination, as a key purpose of Exhibit Z is to facilitate communication with other states regarding exam coordination. The Handbook states that Exhibit Z should be completed when a holding company group includes companies from multiple states, whereas the Accreditation Manual states that Exhibit Z should be completed when a holding company group includes multiple insurance companies. Ms. Henning said although no revisions to Exhibit Z are proposed at this time, the Working Group expects to revisit this exhibit in the future after a replacement workpaper program has been implemented in order to synchronize the exhibit with the work program procedure steps.

Jeff Martin (UnitedHealthcare—UHC) expressed his appreciation for the work completed by the drafting group, and he indicated a willingness to collaborate with the Technical Group on this subject in the future.

The Technical Group agreed to expose the proposed revisions for a 30-day public comment period ending Nov. 5.

Ms. Bernard recommended that the Technical Group project related to updating the capital and surplus repository to incorporate high-level internal capital model review procedures be deferred until 2022. She said the Technical Group adopted extensive revisions related to the review and utilization of the Own Risk and Solvency Assessment (ORSA) summary report during 2020, and it would like more states to have the opportunity to conduct an examination using those updated procedures before the Technical Group proposes additional revisions in this area.

Having no further business, the Financial Examiners Handbook (E) Technical Group adjourned.
EXAMINATION REPOSITORY – RESERVES/CLAIMS HANDLING (HEALTH)

Annual Statement Blank Line Items

Listed below are the corresponding Annual Statement line items that are related to the identified risks contained in this exam repository:

Claims Unpaid (Less Reinsurance Ceded)
Accrued Medical Incentive Pool and Bonus Payments
Unpaid Claims Adjustment Expenses
Aggregate Health Policy Reserves
Aggregate Life Policy Reserves
Property/Casualty Unearned Premium Reserves
Aggregate Health Claim Reserves

Relevant Statements of Statutory Accounting Principles (SSAPs)

The relevant SSAPs related to the health insurance reserving process, regardless of whether or not the corresponding risks are included within this exam repository, are listed below:

No. 5R Liabilities, Contingencies and Impairments of Assets – Revised
No. 50 Classifications of Insurance or Managed Care Contracts
No. 54R Individual and Group Accident and Health Contracts
No. 55 Unpaid Claims, Losses and Loss Adjustment Expenses
No. 61R Life, Deposit-Type and Accident and Health Reinsurance – Revised
No. 66 Retrospectively Rated Contracts
No. 107 Risk-Sharing Provisions of the Affordable Care Act

The insurer has appropriately established procedures to include policy lapse rates when calculating the reserving estimates. Given to policy lapse rates.

The insurer has an established process (although assumptions and methodologies may change) to estimate the claims unpaid, claim reserves, policy reserves and premium deficiency reserves on an annual basis.

The insurer maintains a fully staffed, well-qualified actuarial department that is under the direction of a fellow of the Society of Actuaries (FSA) or member of the American Academy of Actuaries (MAAA) and is experienced in the lines of business written by the insurer.

Senior management uses either internal or independent actuaries to conduct reserve analyses of all major lines of business annually. If performed in-house, review and test the actuarial peer review process.

</table>

The insurer’s board of directors (or committee thereof) receives an annual presentation on the actuarial analysis process.

Management receives regular reports on claims ratios (including claims unpaid, claims reserve, policy reserve and premium deficiency reserve) by line or class of business for accident year and calendar year, as well as other key ratios, and reviews unusual fluctuations on a timely basis to review reserves for adequacy.

**Identified Risk**

- underwriting, reserving or claims handling processes are not appropriately considered within the insurer’s reserving assumptions and methodologies.

**Critical Risks**

- legal environment (e.g., changes in case law, award amounts, trends in the number of claims being litigated) are being taken into consideration by the reserving unit in a timely manner.

- The insurer has procedures in place for the underwriting, case reserving and claims handling units to communicate changes in their processes to the reserving unit in a timely manner.

- The computations of reinsurance credits within the reserves are not performed correctly. (See also Examination Repository – Reinsurance Ceding Insurer)

- The insurer applies reinsurance credits to reserves by reviewing reinsurance treaties in place at the insurer, as well as historical results.

- The insurer is not properly recording case reserves (assumed or ceded) for contracts subject to reinsurance.

**Possible Controls**

- The reserving actuary calculates the reserve on a gross basis and determines the net basis by estimating the reinsurance credits and applying them to the gross reserve.

- The insurer applies reinsurance credits to reserves by reviewing reinsurance treaties in place at the insurer, as well as historical results.

- The insurer has policies in place to verify that case reserves subject to reinsurance are valid and accurate (within contract time frame, covered under

**Possible Test of Controls**

- Test the operating effectiveness of the insurer’s process for reviewing the reserve analysis to determine whether reserves have been estimated on a gross basis, including management approval and sign-off.

- Test the operating effectiveness of the insurer’s process to estimate reinsurance credits for reserves, including management approval and sign-off.

- Review documentation of reinsurance treaties in place.

**Possible Detail Tests**

- in the insurer’s internal processes have been properly incorporated in the insurer’s reserving assumptions and methodologies.

- Compare the annual financial statement net and gross incurred and paid loss presentation for consistency with reinsurance treaties in place at the insurer.

- Consider the reasonableness of reinsurance credits taken, based on a review of the insurer’s reinsurance program and treaties in place.

The insurer applies reinsurance credits to life reserves by reviewing reinsurance treaties in place at the insurer, as well as historical results.

Test the operating effectiveness of the insurer's process to estimate reinsurance credits for life reserves, including management approval and sign-off.

Consider the reasonableness of reinsurance credits taken, based on a review of the insurer's reinsurance program and treaties in place.

Compare the corresponding reserve held by the reinsurer with the credit taken by the insurer and identify all reasons for differences.

To: Susan Benard, Chair, NAIC Financial Examiners Handbook (E) Technical Group
    Bailey Henning, NAIC Financial Examination Manager

Re: Comment on the Life Reserve Repository Exposure

Connecticut would like to thank the technical group for exposing the proposed revisions to the Life Reserves Repository. We request the members to consider the following suggestion:

For the identified risk of “In-force data is not complete or accurate nor consistent with accounting records” a new Possible Detail Test was recommended as follows - “send confirmations to policyholder to verify accuracy of significant attributes” (page 34).

We would suggest to remove this new possible detail test for the following reasons:

- Timing of when the confirmations will be returned could be well after the completion of Phase 5 for this key activity.
- A small percentage return rate is highly likely.

If the external auditors sent confirmations these can be obviously utilized for a possible detail test.

We appreciate your consideration of our comments and look forward to the next technical group discussion.

Thank you,

William Arfanis

William Arfanis
Examination Manager
Connecticut Insurance Department
D. Coordination of Holding Company Group Exams

A coordinated group examination should attempt to be a comprehensive and simultaneous examination of insurance entities in a holding company group, which may be domiciled in multiple states. The phrases “holding company group” and “group” are used interchangeably throughout this section and are meant to include insurers that meet the definition for inclusion in an “insurance holding company system” as defined in the Insurance Holding Company System Regulatory Act (§440), as well as entities that do not belong to the same group code, but may share common systems, are tied together through large transactions or could otherwise benefit from being examined together by a group under common control that does not meet this definition but would benefit from coordinated examination efforts. Coordination among the states should include the timing, scope and extent of examination procedures, utilization of specialists (e.g., information systems and actuarial) and their work products, and allocation of work among examiners. This coordination promotes communication among the states and the efficient use of resources, provides an avenue for multiple perspectives to be shared, and minimizes the duplication of work.

Exam coordination among insurers of a group or holding company system is critical for effective solvency regulation. When examinations are conducted on a group of insurers, the goal is to gain efficiencies and prevent duplication of testing wherever possible. Group examinations not only provide information on each insurer individually, but also provide an avenue for regulators to understand and evaluate the risks of the holding company group as a whole. Under Model §440, regulators have the authority to examine “any insurer registered under Section 4 and its affiliates to ascertain the financial condition of the insurer, including the enterprise risk to the insurer by the ultimate controlling party, or by any entity or combination of entities within the insurance holding company system, or by the insurance holding company system on a consolidated basis.” Therefore, in conducting a coordinated group exam, the lead state or exam facilitator should work with the assigned financial analyst to identify and address any significant concerns at the group level with the potential to threaten the solvency of the insurers being examined. In this situation, a group examination report may be issued by the lead state, but does not reduce the need to obtain evidence about the solvency of each insurer or eliminate requirements for individual examination reports.

States should coordinate examinations of all types of insurers operating in holding company groups when possible, including health insurers that operate primarily as health maintenance organizations (HMOs). Even though these organizations are often composed of single-state entities, they could still share processes, controls and decision-making that might be more efficiently reviewed through a coordinated group examination.

When conducting a coordinated examination, states participating in the examination will often have access to information that is considered sensitive and/or confidential. The NAIC Financial Regulation Standards and Accreditation Program requires that the states allow for the sharing of otherwise confidential information and administrative or judicial orders to other state regulatory officials, providing that those officials are required, under their law, to maintain its confidentiality. The NAIC Master Information Sharing and Confidentiality Agreement allows for signatory states to share confidential information with another signatory state that can demonstrate that its laws will protect the confidentiality of the shared information. This agreement is designed to eliminate the need for states to sign numerous multi-state agreements on a myriad of regulatory subjects.

Before, during and after a group examination, the Lead State, Exam Facilitator and any other regulators that have domiciles in the group—whether participating in the group exam or not—should be prepared to discuss relevant information with the NAIC Financial Examiners Coordination (E) Working Group. This information could include, but is not limited to, scheduling a group exam, the progress of a group exam, and why coordination did or did not occur between states for a particular group.

Determining the Lead State and Subgroups of Companies

Every insurance holding company system has individual characteristics that make it unique. Therefore, an evaluation of these traits is required to determine how examinations for the group should be coordinated and which individual state is known as the Lead State, should assume the leadership role in coordinating group examinations. The Lead State assumed this responsibility will be known as the Lead State and is charged with the coordination of all financial exams for the holding company group, as well as other regulatory solvency monitoring activities, such as group supervision, including holding surplus.
company analysis, group profile summary (GPS), assessments of the group’s corporate governance and ERM functions, etc.) as defined within the Financial Analysis Handbook.

In most situations to date, the Lead State has emerged by mutual agreement (i.e., self-initiative on its part and recognition by other states), generally as a result of the organizational structure of the group or as a result of the domicile of primary corporate and operational offices. The input of domestic regulators within the group also plays critical role in determining which state should be chosen to fulfill the role of the Lead State. Other factors that may be considered when determining the Lead State are:

- State with the largest number of domestic insurance companies in the group.
- State of large or largest premium volume or exposure.
- Domiciliary state of top-tiered insurance company in an insurance holding company system.
- Physical location of the main corporate offices or largest operational offices of the group.
- Expertise in the area of concern and experience of staff in like situations.
- State whose regulatory requirements have driven the design of the organization’s infrastructure.

Input from domestic regulators in the group, as well as holding company personnel, should be considered when determining how the companies in the group might be broken up into subgroups for financial exam purposes, if necessary. Because each group has its own unique characteristics, as do the companies within each group, it might be appropriate to separate the group into smaller factions and identify an Exam Facilitator for each subgroup examination. In order to gather information to make this decision and to assist in planning the coordinated examination, the Lead State might review group information contained in the Lead State Summary Report on iSite+, as well as request that holding company group personnel provide information to be considered in grouping companies within the holding company group for financial examinations. At a minimum, the information provided should include the topics of corporate governance of the group, risk management and decision-making, key functional activities and processes, lines of business, and computer systems. This information request is also included in Exhibit Z, Part One.

Responsibilities of the Lead State

The primary purpose of the Lead State is to promote the coordination of exams for all entities within the group. In achieving this goal, the Lead State should fulfill the following responsibilities:

1. Develop, maintain and communicate group coordination plan:
   
   The Lead State should actively encourage all states within the group to participate in coordinated group examinations when possible. To help facilitate participation by all states, the Lead State should develop, maintain and communicate a global group coordination plan, using Exhibit Z, Part Two-A, or a similar document. The group coordination plan may include, but is not limited to, information about potential subgroups, anticipated examination schedule, primary location of fieldwork, etc. The Lead State should also consider whether other entities that do not share a group code should be involved in the coordinated examination. For example, there may be entities that share services or other financial relationships with the entities in the group but are not under common control or do not have an assigned NAIC code (i.e., captive insurance companies or other risk-bearing entities, warranties, etc.). Consideration of whether these entities may benefit from involvement and/or awareness of the coordinated examination should be documented in the coordination plan, when appropriate. Such a plan would allow ample time for the states to make the necessary arrangements to participate in future coordinated efforts.

   The frequency at which the coordination plan is updated and communicated to domestic regulators within the group may vary based on the size and complexity of the group. At minimum, the group coordination plan should be updated and communicated at least 4 months prior to the as-of date of an expected examination. However, updates should be made and appropriately communicated based on relevant changes to the group and/or examination schedule.
The Lead State should be prepared to discuss relevant information pertaining to the global coordination plan and the status of coordination efforts with the NAIC Financial Examiners Coordination (E) Working Group as requested. If selected, the Lead State would be required to present such information to the Financial Examiners Coordination (E) Working Group at an NAIC national meeting.

2. Monitor the status of existing examinations activities performed on all entities within the group.

This requires the Lead State to have an understanding of the progress of all ongoing exams performed on all entities within the group. The Lead State should also be aware of the significant results of all recently completed exams. If consistent problems are identified during examination efforts, the Lead State may need to become involved in addressing the issues at the group level.

3. Identify subgroups when appropriate that may be appropriate for performing coordinated examinations.

In situations where it is not feasible for all legal entities within a group to be examined at one time, it is the Lead State’s responsibility to determine subgroups for ongoing examination purposes. The Lead State should consider company use input from the company, including responses to (i.e., Exhibit Z, Part One), as well as input from other domestic regulators within the group when making this determination. In addition, the Lead State should receive input from other domestic regulators within the group when making this decision. The use of subgroups should be reflected in the group coordination plan (i.e., Exhibit Z, Part Two-A). However, it is the Lead State’s responsibility to determine subgroups for ongoing examination coordination purposes.

4. Schedule the coordinated examination:

For each holding company group, consideration should be given to the priority of each entity within the group when determining the frequency at which group examinations should be performed. The Lead State should obtain input from all of the key domestic regulators within a group (or subset of companies) before determining the “as-of” date for the next examination. This input may be obtained through the use of a supervisory college, conference calls conducted through the financial analysis process, or other meetings to discuss the financial regulation of a particular group.

In addition to basing the frequency of full-scope group examinations on the financial strength of the group, regulators should consider performing limited-scope exams when specific concerns arise with the holding company group. Whenever conclusions are reached regarding the scheduling of full or limited-scope group examinations, prompt notification...
should be provided to all states with domestics in the group (or subset of companies) to enable all domestic states the opportunity to participate in the group examination.

The group examination schedule should not preempt consideration of a state’s prioritization schedule or postpone examinations of troubled companies, nor should it interfere with the state’s obligation to conduct a full scope examination of its domestic insurance companies in accordance with state statutes. However, states should remain flexible and attempt to coordinate, when appropriate, to ensure an effective and efficient examination. In some circumstances, this may necessitate accelerating the examination schedule of one or multiple legal entities in the group in order to synchronize the examination schedule.

5. Notify others regulators and the companies in the group of an upcoming examination (informal notification):–

The Lead State should notify other states that have domestics in the group of the exam well in advance of significant planning work to allow them the opportunity to participate on the examination. Advance notification should also be extended to the companies that will be examined as part of the group examination to allow them to prepare. An informal notification to the other state regulators and the companies should occur as early as possible and is recommended at least six months prior to the “as-of” date (e.g., 12/31/20xx) of the examination. In most circumstances, the formal calling of the group examination in FEETS should occur at least 90 days before the anticipated start date of the group examination by the Lead State. The timing difference between the informal notification and the calling in FEETS allows the Lead State time to determine specific attributes of the group exam, such as the primary contact person and the anticipated start date of the exam that may not be known six months before the “as-of” date. If an exam is scheduled due to specific concerns with a group of companies that do not allow the exam to be called in FEETS at least 90 days before the anticipated start date, the Lead State should document an explanation for inclusion in the group exam workpapers and notify other state insurance regulators as soon as possible.

The Lead State or Exam Facilitator (if known at the time) should also notify the companies that will be examined as part of the group examination to allow them and their respective external auditors time to prepare. This notification should occur at least six months before the “as-of” date of the group examination.

6. Call group examination(s) in FEETS (formal notification): and determine the Exam Facilitator for each group examination called—

The chief examiner of the Lead State or designee is responsible for placing the group examination call in FEETS to simultaneously examine the entire group (or subset) of insurance companies involved in an insurance holding company group. When calling the group examination(s), the Lead State should indicate (by “inviting”) which legal entities in the group will be examined together.

- **Timing of the group exam call:**
  In most circumstances, the formal calling of the group examination in FEETS should occur at least 90 days before the anticipated start date of the group examination by the Lead State. The timing difference between the informal notification and the calling in FEETS allows the Lead State time to determine specific attributes of the group exam, such as the primary contact person and the anticipated start date of the exam that may not be known six months before the “as-of” date.

  If an exam is scheduled due to specific concerns with a group of companies that do not allow the exam to be called in FEETS at least 90 days before the anticipated start date, the Lead State should document an explanation for inclusion in the group exam workpapers and notify other state insurance regulators as soon as possible.

- **Assign Exam Facilitator (if applicable):**
  One of the first responsibilities of the Lead State when a group exam is planned is to call the group examination in FEETS and to determine who will perform the role of Exam Facilitator. In many situations, it is expected that the Lead State will assume the Exam Facilitator role itself to conduct and lead the group examination. However, in situations where subgroups have been formed that don’t involve
the Lead State, it is anticipated that the Exam Facilitator role will be delegated to an accredited state within the group. If the responsibility is delegated, the accepting state would then assume the responsibilities associated with conducting that group examination. The role of Exam Facilitator is typically temporary in nature because it pertains only to a specific group examination being performed; once that exam has been closed, the need for an Exam Facilitator is no longer present and any assumed responsibilities remit back to the Lead State (if they were delegated). For some groups that maintain clear long-term subgroups, the Exam Facilitator role may be more permanent.

The selection of the Exam Facilitator can be accomplished through a review of the documentation provided by the holding company group personnel and through discussions with the impacted states. The regulated entities should also be allowed to provide input on the Exam Facilitator determination process where appropriate. The designated contact person should be the chief examiner, or equivalent, for the Exam Facilitator of each group exam.

**Please Note:** Due to the design of FEETS, the Lead State will always call the exam in FEETS, regardless of whether there is a different state designated to facilitate the group exam. If a different state has been delegated the responsibilities of the Exam Facilitator, the Lead State must designate the Exam Facilitator in the FEETS group exam call. Once the Exam Facilitator has been assigned in FEETS, that state will be able to make changes to the assigned group exam, including close the group exam upon completion.

- **Other Considerations:**
  It is recommended that all group examinations be called in FEETS regardless of what type(s) of insurers are being examined. For example, if a group exam is being conducted for a group of HMOs that are all single-state entities, the group exam should still be called in FEETS for informational and tracking purposes. Specific requirements regarding calling an exam in FEETS can be found in the “Responsibilities of the Lead State” section above.

  Additionally, when calling a group exam in FEETS, only entities that share an NAIC group code are pre-populated. However, there may be other entities that should be considered for inclusion in the group exam. This may include affiliated companies that do not have an NAIC code (i.e., captive insurance companies, other risk-bearing entities, warranties, etc.). It may also include Unaffiliated companies that have significant influence or could materially impact insurers in the group should also be considered for inclusion in the group examination (e.g., a company that has a significant reinsurance relationship with a company belonging to the holding company group). The examination of companies that are members of a holding company system having only a reinsurance relationship with the company under the examination may be conducted on a limited basis to verify the complete nature of transactions (obligations, liabilities and assets transferred between parties). Consideration of inclusion should also be extended to affiliated companies that may share services or other financial relationships with companies in the group but do not belong to the same group or that do not have an NAIC code (i.e., captive insurance companies or other risk-bearing entities, warranties, etc.).

---

1. Act as the Exam Facilitator for all group examinations as deemed appropriate—The responsibilities associated with this role are outlined later in this section.

7. Maintain communication with the group personnel—The Lead State should serve as the primary regulatory contact with top management of the group on an ongoing basis regarding overall coordination activities for companies within the group. Additionally, the Lead State is responsible for elevating significant solvency concerns to top management of the group when issues are unable to be resolved at lower levels within the group.
8. Act as the Exam Facilitator, as deemed appropriate:
   As noted above, unless otherwise assigned, the Lead State will also act as the Exam Facilitator for coordinated examinations of companies within the group, for all group examinations, as deemed appropriate. The responsibilities associated with this role are outlined later in this section.

Additional Considerations for Scheduling a Coordinated Group Exam

For each holding company group, consideration should be given to the priority of each entity within the group when determining the frequency at which group examinations should be performed. The Lead State should obtain input from all of the key domestic regulators within a group (or subset of companies) before determining the "as of" date for the next examination. This input may be obtained through the use of a supervisory college, conference calls conducted through the financial analysis process, or other meetings to discuss the financial regulation of a particular group. In addition to basing the frequency of full-scope group examinations on the financial strength of the group, regulators should consider performing limited-scope exams when specific concerns arise with the holding company group. Whenever conclusions are reached regarding the scheduling of full or limited-scope group examinations, prompt notification should be provided to all states with domestics in the group (or subset of companies) to enable all domestic states the opportunity to participate in the group examination.

The chief examiner of the Lead State or designee is responsible for placing the group examination call to simultaneously examine the entire group (or subset) of insurance companies involved in an insurance holding company group. It is recommended that all group examinations be called in FEETS regardless of what type(s) of insurers are being examined. For example, if a group exam is being conducted for a group of HMOs that are all single-state entities, the group exam should still be called in FEETS for informational and tracking purposes. Specific requirements regarding calling an exam in FEETS can be found in the “Responsibilities of the Lead State” section above.

Unaffiliated entities that have significant influence or could materially impact insurers in the group should also be considered for inclusion in the group examination. The examination of companies that are members of a holding company system having only a reinsurance relationship with the company under the examination may be conducted on a limited basis to verify the complete nature of transactions (obligations, liabilities and assets transferred between parties).

Responsibilities of the Exam Facilitator

The role of Exam Facilitator may vary from exam to exam; however, certain responsibilities assigned to this role are shown below. As discussed in the “Review and Reliance on Another State’s Workpapers” section following this section, the Exam Facilitator is responsible for the overall quality of work performed in completion of a fully-coordinated group examination. Additionally, the Exam Facilitator for all examinations must be an accredited state.

1. Develop an examination team:
   Once it has been determined that a coordinated group exam will be conducted, a determination should be made of all of the states that will have a direct role in the examination. The Exam Facilitator should work with the states in the group to determine the necessary staffing requirements for the specific examination at hand, including which states within the group plan to have a direct role in the examination and whether additional specialists are needed.

   The Exam Facilitator should contact the participating states to establish points of contact by name/role, determine the amount of interest in participating in the coordinated examination, and establish lines of communication with participating states. Preferably, the Exam Facilitator should designate a primary and a back-up point of contact for communications with the organization under review and with other state regulators, and with other stakeholders, federal Reserve, federal and state banking agencies, functional regulators and the public. At a minimum, information for the primary contact person should be provided for the group exam in FEETS.
While developing the exam team for a group examination, the Exam Facilitator should coordinate and utilize any available resources (within the group or contracted) that are necessary and appropriate to complete an effective and efficient examination. These may include, but are not limited to, financial analysts, financial or market conduct examiners, IT examiners, actuaries, legal counsel, rate and form experts, or valuation experts. Consideration should be given to the areas of expertise needed to complete the examination. If possible, states participating in the group exam should consider utilizing the same staffing resources when efficient to do so. For example, it may be efficient to utilize the work of one actuary who could become familiar with the general processes utilized by the group of insurers instead of contracting several different actuaries who would all have to familiarize themselves with the same processes.

The Exam Facilitator should contact the participating states to establish points of contact by name/role, determine the amount of interest in participating in the coordinated examination, and establish lines of communication with participating states. Preferably, the Exam Facilitator should designate a primary and a back-up point of contact for communications with the organization under review and with other state regulators, Federal Reserve, federal and state banking agencies, functional regulators and the public. At a minimum, information for the primary contact person must be provided for the group exam in FEETS.

2. Seek input from other regulators:
   During the planning stages of an exam, the Exam Facilitator should request input from other regulators regarding any areas of concern that should be addressed during the group exam. Input should be requested from any states with domestics in the group or subgroup, as applicable, even if a state is unable to participate in the fully coordinated exam. This responsibility includes obtaining input from each state regarding the key activities and inherent risks it anticipates for each of its domestic companies. Consistent with the guidance in Phase 1, identification of key activities and risks should primarily be determined by areas that represent significant solvency concerns. The Exam Facilitator should also contact regulators of holding company groups that include an entity or entities that are at least in part regulated outside the state insurance regulatory structure for items to consider or address during the examination.

Once the Exam Facilitator has accumulated information from each regulator, in addition to information related to its own domestics, it should determine which key activities/inherent risks will and will not be addressed as part of the group examination and notify the other state insurance regulators. Testing performed by participating states in areas deemed insignificant to the overall group examination are considered state-specific procedures and, therefore, the oversight of such work is outside of the Exam Facilitator’s responsibility.

3. Delegate responsibilities among the examination team:
   Once the multi-state examination “team” has been established, the Exam Facilitator should clearly delegate responsibilities between itself and any participating examiners with input from participating states. The Exam Facilitator should develop a process to manage information requests going to holding company group personnel to prevent redundancy. The Exam Facilitator should also attempt to coordinate the timing of work that will be performed by all states participating on the group exam to the extent possible. This includes organizing a review of shared processes and controls and determining which state(s) are responsible for which key activities and processes. When delegating responsibilities, the Exam Facilitator should consider the resources needed and available for the task among the participating states as well as the expertise and ability to supervise personnel as necessary. Although certain tasks may be delegated among participating states, the Exam Facilitator remains responsible for the overall quality of work performed in completion of a coordinated group examination and should review such work accordingly.

One of those responsibilities includes meeting with internal and external auditors. The Exam Facilitator should ensure completion of Exhibit E – Audit Review Procedures for the group examination. The Exam Facilitator should also coordinate the communication of obtaining and reviewing any relevant auditor workpapers to prevent redundancy between states.

In Phase 5, detail testing may be necessary to obtain additional exam evidence for any particular identified risk. With input from the participating states, the Exam Facilitator should determine whether detail testing will be
performed as part of the group examination or if the testing will be performed separately by each domestic regulator. Regardless of which method is used, if detail testing will involve substantive testing of individual account balances, the testing should be applied at an individual company level based on the residual risks determined during the group exam (assuming the identified risk was one that was assessed during the group exam). In other words, the materiality levels for each individual company should be utilized.

When selecting what substantive testing should be performed, the materiality levels for each individual company should be utilized so that exam evidence will be obtained for each insurer based on its dollar value. However, if detail testing will consist of testing the attributes (or accept/reject testing) of underlying data utilized in other calculations (e.g., loss reserves, unearned premiums), the testing may be performed at the group level because the examiner is testing the occurrence of a particular attribute in a population subject to the same control processes. For pooling arrangements, see the “Exceptions to Consider Related to Coordinating Group Exams” section below.

4. Establish lines of communication with top management in the group:
   related to the group exam being performed — The Exam Facilitator should ensure that there are regular and candid discussions occur with top management of the insurance companies regarding the results of the ongoing group examination. A structure for obtaining updated information from company management regarding the ongoing exam should also be established. If significant solvency concerns arise that are unable to be resolved by the Exam Facilitator, the issue should be raised to the Lead State, if different, to address with top management of the group.

5. Obtain a thorough understanding of the companies being examined: as part of the group exam as they relate to the organization as a whole — The Exam Facilitator should obtain as much insight as possible into about the organization as a whole group/subgroup when leading a coordinated group exam effort. To gain this understanding, the Exam Facilitator should focus on the holding company, or ultimate controlling entity, and subsequently on its underlying subsidiaries that will be included in the group exam. The Exam Facilitator should also take the predominant primary role in obtaining and reviewing analysis work pertaining to the organization as a whole-group/subgroup in preparation for the group exams by working with the individual domestic states and foreign regulators to complete a collective understanding of the holding company group.

6. Coordinate and conduct C-level interviews: Interview management and board members at the holding company level — The Exam Facilitator should perform interviews of the upper-level management and members of the board, and its committees, at the level at which oversight and management of the group’s primary insurance activities are performed. Participating states may provide questions to the Exam Facilitator that they would like asked during interviews. These states may also participate in the interviews in limited situations when deemed appropriate. These interviews should be conducted in-person if possible, and it may be beneficial to schedule them during regularly scheduled board committee meetings if convenient for scheduling purposes. When these interviews are completed, the information should be distributed and shared among regulators as necessary to prevent unnecessary duplication of efforts. When subgroups are utilized, the Exam Facilitator of the subgroup should consult with the Lead State to determine whether a corporate governance assessment has been performed at the holding company level and if it would be appropriate to leverage at the subgroup level.

7. Share information with participating states during the group exam — Procedures should be established regarding how information will be shared, including ensuring that all participating states have real-time access to the information. This step is critical to establish the Exam Facilitator as a true “facilitator” by supplying the states and other functional regulators with the appropriate information. This can be accomplished through periodic status meetings (i.e., monthly) among the participating states and/or verbal or written updates from the Exam Facilitator to the broader group of state insurance regulators.

Real-time access of workpapers could also be accomplished through the use of a shared hosting environment like NAIC Citrix server or other tools available to individual states. When possible, the examination team should conduct work within the same examination file to allow for enhanced collaboration among exam participants.
Utilizing the same examination file may also reduce the possibility of duplicative documentation and enable other participants to observe and review work in real time. Insurance departments should develop methods to receive, as well as to communicate, pertinent information regarding holding companies and insurance groups to other affected states and other functional regulators.

8. Review the work performed by participating states:—

As noted previously, the Exam Facilitator is responsible for the overall quality of work performed in completion of a fully coordinated examination. Therefore, the Exam Facilitator should perform a sufficient level of review of work completed by participating states on behalf of the coordinated exam effort to gain comfort that the quality of work meets the examination objectives and the Exam Facilitator’s expectations. When determining the extent of review, the Exam Facilitator should consider its comfort and experience with the quality of work performed by each participating state. The accreditation status of participating states may also be considered in determining the level of review necessary to gain comfort in the quality of the work performed. As discussed in the “Review and Reliance on Another State’s Workpapers” section following this section, the Exam Facilitator is responsible for the overall quality of work performed in completion of a fully coordinated group examination.

9. Promote consistency in examination deliverables:—

The Exam Facilitator should communicate with all states involved in the coordinated effort to promote consistency of information shared in management letters and examination reports. If the Exam Facilitator determines that examination deliverables will include reporting at the group level (i.e., a group management letter), in addition to the legal entity examination deliverables, the Exam Facilitator should consult with the Lead State (if different) and other states participating in the examination to determine which results and observations will be included. Additional guidance for preparing management letters, including considerations for determining the significance and severity of findings or comments to be communicated as well as the level at which corrective measures can be taken can be found in Section 2-7.

10. Distribute information to participating states and other functional regulators, when applicable:—

In limited situations, participating states may opt to work in a standalone examination file that is separate from the coordinated group examination file. If this happens, once the work of the group is completed, the Exam Facilitator is required to provide all participating state(s) an electronic copy of the corresponding workpapers related to the group examination for inclusion in the workpapers for their respective individual company exams. The Exam Facilitator should also communicate the completion of the group exam procedures to the holding company group personnel and to indicate that any work after that point is being performed by individual states for their individual domestics.

The NAIC Financial Regulation Standards and Accreditation Program requires that the states allow for the sharing of otherwise confidential information and administrative or judicial orders to other state regulatory officials, providing that those officials are required, under their law, to maintain its confidentiality. The NAIC Master Information Sharing and Confidentiality Agreement allows for signatory states to share confidential information with another signatory state that can demonstrate that its laws will protect the confidentiality of the shared information. This agreement is designed to eliminate the need for states to sign numerous multi-state agreements on a myriad of regulatory subjects.

11. Resolve any disputes or disagreements regarding the group examination:—

The Exam Facilitator should settle any disagreements among participating states prior to finalizing the coordinated examination. If the Exam Facilitator is unable to resolve the issue at hand, it should defer the issue to the Lead State (if different than the Exam Facilitator). If the issue is not able to be resolved at that level, the Financial Examiners Coordination (E) Working Group can be consulted for timely resolution.

12. Hold an exit conference with the participating states:—

Once the group exam work is completed, the Exam Facilitator should host an exit conference to discuss the overall results of the group exam and possible steps for regulating the holding company group in the future. The Lead State should be invited to participate in the exit conference if they were not already participating in
the examination. During this meeting, the Lead State and the Exam Facilitator should discuss with the participating states when the next group exam should be scheduled and update the group coordination plan accordingly, based on the topics included in the “Additional Considerations for Scheduling a Coordinated Group Exam” section above. If the regulators have difficulty coming to an agreement regarding the next group exam date, they should reach out to consult the Financial Examiners Coordination (E) Working Group for input and assistance.

13. Close the group examination in the NAIC-FEETS

Upon the completion of the group examination, the Exam Facilitator should ensure that each participating state has linked its individual examination(s) to the group examination in FEETS. Once work in support of the coordinated group exam has been completed and each participating state has linked its individual examination(s) to the group exam, the Exam Facilitator should close the group examination. Each domestic state is responsible for closing its individual examination(s) upon completion, as noted within the “Responsibilities of States Participating in a Coordinated Exam” section below.

Responsibilities of States Participating in a Fully Coordinated Exam

In general, the role of each participating state that is not the Exam Facilitator is to pledge some level of cooperation and coordination with other states and to give support and recognition to the Exam Facilitator. In order to be considered a participating state, a state must demonstrate active involvement throughout the duration of the coordinated examination. This can be accomplished in a number of specific ways as described below:

Indicate willingness to participate in the coordinated examination

1. Respond to informal and formal notifications of anticipated coordinated exam:
   When planning a coordinated examination, the Lead State (or Exam Facilitator, if different) will typically issue an informal notification of an upcoming examination several months in advance of the planned examination as-of date. Participating states are encouraged to respond to the informal notification in a timely manner to allow the Lead State/Exam Facilitator to adequately plan for the coordinated examination. Each participating state is encouraged to be flexible when attempting to coordinate and should consider the long-term benefits of coordination regarding participation on the group exam.

   The Lead State (or Exam Facilitator, if different) will also issue a formal notification (sent via email by FEETS) of an upcoming coordinated examination at least 90 days prior to the examination as-of date. The participating state(s) should respond to the Exam Facilitator within 30 days of receiving the email notification regarding the calling of a group examination. Each participating state is encouraged to be flexible when attempting to coordinate and should consider the long-term benefits of coordination.

   Note: If a state plans to examine a legal entity that belongs to a holding company group, it should first contact the Lead State to determine whether a coordinated examination is planned or should be considered.

2. Call individual exam(s) in FEETS and link to the group exam:
   If the state(s) plan to participate in the coordinated examination, it should call an individual exam in FEETS for each domestic legal entity that will be examined as part of the coordinated examination. Each applicable individual examination should also be linked to the group examination in FEETS.

Participation in exam planning

3. Actively participate in the planning phases of the group exam—Provide input to the Exam Facilitator:
   During the planning phases, the participating state(s) should communicate key activities, inherent risks or other areas of concern for each domestic company that the participating state(s) would like to be addressed during the
group exam, as well as The participating state(s) should also provide an overview of any state-required specific procedures (i.e., required compliance testing) the participating state plans to perform.

Consistent with the guidance in Phase 1, identification of key activities and risks should primarily be determined by areas that represent significant solvency concerns. The states should be notified by work with the Exam Facilitator to determine which risks will and will not be addressed as part of the group examination. This information should help the state in determining whether additional risks will need to be addressed outside of the group examination efforts.

Testing performed by participating state(s) in areas deemed insignificant to the overall group examination are considered state-specific procedures and, therefore, the quality of such work is the responsibility of the participating state.

Active involvement in the planning phases of the exam may include documenting correspondence with the Exam Facilitator and other participating states, reviewing and signing off on the planning memo, participating in the discussion of risk identification, etc.

4. Coordinate the use of any-examination resources, including contracted examiners and specialists, with the Exam Facilitator:
The participating state(s) should provide specific expertise and resources to assist the Exam Facilitator and other states throughout the group examination process as requested. The participating state(s) should coordinate the use of contracted examiners and specialists, when possible.

5. Coordinate information requests with the Exam Facilitator:
Offer constructive suggestions for information requests, interview questions, coordinated actions and timeliness of information. Any general communication on behalf of the group exam should be discussed with the Exam Facilitator prior to contacting company personnel to prevent duplication, if possible. This includes any information requests being sent as part of the group examination.

6. Consider interviewing individuals at the legal-entity level:
who are unique to the participating state’s particular insurer, if necessary. The participating state(s) should also provide the Exam Facilitator with interview questions to cover during C-Level interviews performed for the coordinated group exam, if any. The participating state(s) may also consider conducting interviews with individuals at the legal-entity level, if deemed necessary (e.g., to address matters specific to the legal entity that were not addressed through the group C-Level interviews).

Completion of testwork and other responsibilities

7. Complete delegated group responsibilities:
The participating state(s) are expected to complete group responsibilities delegated by the Exam Facilitator to the satisfaction of the Exam Facilitator, which may include:
• completing assigned testing, such responsibilities may also include clearing review points
• addressing feedback provided by the Exam Facilitator,
• performing detail reviews of testwork completed by its own staff’s testwork and
• other responsibilities as communicated by the Exam Facilitator.

8. Leverage work performed in fulfillment of the coordinated effort:
The participating state(s) should leverage work performed in fulfillment of the coordinated effort, even when completed by other states within the group. Participating state(s) should avoid creating duplicative documentation and instead include a limited number of hyperlinks and/or key workpapers that are necessary to understand where coordinated work is located.
9. Provide adequate oversight of the work of its own staff, contract examiners, specialists and consultants:—

It is not the responsibility of the Exam Facilitator to supervise personnel from other states on a day-to-day basis. Each state must provide adequate oversight of its examiners, regardless of whether they are state employees or contract examiners, and should consider the allotted time that has been budgeted for the work of that state’s resources. Each state will be held accountable for the performance of personnel it has scheduled on any group examination.

10. Be engaged throughout the examination:

The participating state(s) should be informed and prepared to share information and perspectives pertinent to the group examination and the respective domestic insurers, —This includes actively participating in conference calls and meetings arranged by the Exam Facilitator.

Participation at the conclusion of the exam

11. Participate in the exit conference:

Demonstrate participation in the exit conference hosted by the Exam Facilitator by providing any relevant information, input and conclusions on the group exam as well as input on exam deliverables (i.e., exam report, management letter). As discussed in the “Responsibilities of Exam Facilitator” section above, when preparing examination deliverables, guidance at Section 2-7 should be considered.

12. Close individual examination(s) in FEETS:

At the conclusion of the examination(s), issue report(s) of domestic(s) by uploading the report(s) to FEETS and closing the exam(s) in FEETS. Upon the completion of the individual examination(s), the participating state should ensure that the individual examination(s) for its domestic(s) being examined as part of the group examination are linked to the group exam call in FEETS (if not already done). The participating state must distribute the report(s) of its domestic(s) to the states in which the insurer(s) are licensed and/or transacting business by uploading the exam report(s) to FEETS and closing the exam. This shall occur no more than 30 days beyond the adoption date of the exam report(s). When closing the examination(s) in FEETS, include the next planned “as-of” date for each domestic that should be consistent with what was discussed during the exit conference.

Exceptions to Special Considerations Related to Coordinating Group Exams

Differing exam cycles:
The Lead State should take state statutes into consideration because they may differ regarding how often a financial examination is required (e.g., three to five years). Several insurers within a holding company system with different states of domicile may be on varying cycles when their exams are performed. If it is deemed beneficial for states to participate on a group exam even though their legal entities are not yet due for an examination, those states, after discussions with the Lead State, may consider accelerating their next exam “as-of” date in order to match the “as-of” date of the group examination.

Use of subgroups:
In striving toward examination coordination, it is important to note that complete coordination may not improve the examination efficiencies for some groups. In some circumstances, different Exam Facilitators are required to separate the companies within a group on different examination coordination schedules. Regulators will be able to utilize the NAIC Group Exam Report in FEETS to assist with determining how companies within the group may have been separated into subgroups based on previous group exams performed. The use of subgroups should also be described in the coordination plan for the group. This is in accordance with examination coordination efforts illustrating that coordination efficiencies have been achieved for those companies with similar systems, management, and/or control processes across legal entities, business units or lines of business within a group.

Responding to a specific issue/concern not relevant to the entire group:
A situation may arise where a domestic regulator has concerns about a particular insurer within a group that is not determined to be significant to the group overall. In these situations, in order to attempt to keep domestic insurers coordinated as part of a group examination, the domestic regulator should consider performing a limited-scope exam on that entity, if possible. However, if a limited-scope exam is insufficient and a full-scope examination of the domestic entity is warranted outside the normal group exam schedule, the Lead State should be notified and the examination should be performed by the domestic regulator utilizing work previously completed by the group as appropriate. After the examination is performed, the domestic regulator should attempt to coordinate future examinations with the group if at all possible.

Non-participating states utilizing group examination work:

Although a state may be unable to participate on a group examination at a certain point in time, that state may benefit from receiving group exam workpapers completed at any time during the exam period for its individual domestic exam(s). In these cases, the non-participating state should contact the Lead State and Exam Facilitator directly to obtain access to those workpapers and they should be made available. The non-participating state should give adequate time for the request to be fulfilled and for the requested workpapers to be adequately reviewed before the work is provided to the non-participating state. This does not require a review of all the exam work, but only the specific work requested so the work can be received timely.

Similar to utilizing the work from external/internal auditors, if an examiner plans to utilize documentation that was performed on a group exam from a year prior to the current examination “as-of” date, the examiner should obtain evidence that the item documented (e.g., internal controls) has not changed subsequent to the prior period testing. The more reliance that is placed on the prior period documentation received from the group exam, the more examination evidence should be obtained. Verification that the item documented has not changed should be obtained by a combination of inquiry, observation, reperformance and examination of documents, and should be clearly documented in the examination workpapers. If it has significantly changed since the prior period, the examiner should not utilize the prior period workpapers for that area as examination evidence.

Pooling arrangements and the use of group materiality:

When conducting an examination of a group that pools 100% of its business through the use of a pooling arrangement, it may be acceptable to calculate materiality at the group level. Group materiality may be beneficial for these situations because the risks are consistently shared throughout the group, and any detail testing that is based on materiality will take all the transactions of the group into consideration. With the Exam Facilitator leading the discussion, the regulators within the group should determine if this is appropriate for the group of insurers in a pooling arrangement and if exam evidence is being obtained for all insurers under examination.

E. Review and Reliance on Another State’s Workpapers

For a number of reasons, state insurance regulators have recognized that a growing need to more fully coordinating their regulatory efforts. One such reason is the realization that the analysis helps ensure a more complete understanding of an individual company may not be complete without understanding, within the context of the insurance holding company group of which the individual company is a part. Insurers within an insurance holding company group may have common management and similar information systems and/or control processes. Therefore, if the insurer under examination is part of an insurance holding company group, the domestic state could benefit from the work of another state if that other state’s examination procedures address the domestic insurer’s financial statements or internal control procedures.

Depending on how the examination is coordinated, the extent of documentation required to explain the reliance of a domestic state on the work of another state varies. There are three general scenarios that may affect the extent of documentation.

1. Lead State/Exam Facilitator, conducting a fully coordinated group examination.

   -When a coordinated group examination is conducted in this manner, the Lead State/Exam Facilitator is responsible for the overall quality of the work performed in support of the coordinated exam conclusions. Any work performed that is solely related to an individual domestic is excluded from the Lead State/Exam Facilitator’s work.
responsibility. For a discussion of specific responsibilities of the Lead State/Exam Facilitator, refer to the “Responsibilities of the Lead State” and the “Responsibilities of the Exam Facilitator” sections above. Additionally, Exhibit Z, Part Two – Section A and/or Exhibit Z, Part Two – Section B should be completed in this scenario.

2. Participating State in a fully-coordinated group examination.

To demonstrate adequate participation, the participating state should complete Exhibit Z, Part Two – Section C to assist in documenting compliance with the responsibilities outlined in the “Responsibilities of States Participating in a Fully-Coordinated Exam” section above. Such documentation may be supplemented by a separate memo, if deemed necessary, to demonstrate compliance. In addition, the participating state assumes ownership of any state-specific procedures that are performed and is responsible for the quality of such work.

3. States not participating in a fully-coordinated group examination.

States in this category conducted a standalone examination separate from the fully-coordinated group examination. States in this category are responsible for all work contained in the examination file. If a state is utilizing existing work but was not directly involved in the planning, oversight and review of the examination work, this state takes ownership of the project and is responsible for the overall quality of work performed in support of examination conclusions.

This state should perform a review of the testing state’s work program and conclusions to ensure the work being relied upon is sufficient to meet the needs of its examination. When determining the extent of review, the state utilizing the work of another state should consider its comfort and experience with the quality of work performed by that state. In addition, the accreditation status of other states may also be considered in determining the level of review to be performed by the relying state. Exhibit Z, Part Two – Section D should be completed in this scenario.

By e-mail to Bailey Henning at BHenning@NAIC.org

Re: Proposed Handbook Revisions, October 5, 2021

Dear Ms. Bernard:

This submission is in response to the Financial Examiners Handbook (E) Technical Group’s October 5, 2021 exposure of proposed revisions to the Financial Examiners Handbook. Our concerns with the proposed revisions are few, and most of our comments are intended only to clarify areas which may be confusing.

On page 2, in the first paragraph, there is this language: “…other groups under common control that do not meet this definition for [inclusion in an “insurance holding company system” as defined in the Insurance Holding Company System Regulatory Act (#440)] but would benefit from coordinated examination efforts.”

- It is not clear to AHIP what examples of such “other groups” there may be, and it may not be clear to examiners either. Therefore, we suggest providing some indicative examples of such “other groups.”

On page 6, under “other considerations” there is this phrase: “Unaffiliated entities that have significant influence or could materially impact insurers in the group should also be considered for inclusion in the group examination.” An example is provided, i.e., of an unaffiliated entity that has a reinsurance relationship with the entity/group under examination.

- Again, if there are other indicative examples (in this instance, of such “unaffiliated entities”) it would be helpful to cite them in the text.

On page 9, item 7 contains this phrase: “Real-time access of workpapers could also be accomplished through the use of a shared hosting environment.”

- As worded, this seems to invite any number of possible tools for the Exam Coordinator to utilize, some of which may not be adequately secure, and all of which would require appropriate use and protocols to assure confidentiality of the insurer/group’s information. AHIP suggests that additional guidance in those
respects be provided, or reference be made elsewhere to existing applicable NAIC guidance which addresses such concerns regarding confidentiality and security of company information.

On page 10, item 9 has this language: “If the Exam Facilitator determines that examination deliverables will include reporting at the group level (i.e., a group management letter), in addition to the legal entity examination deliverables, the Exam Facilitator should consult with the Lead State (if different) and other states participating in the examination to determine which results and observations will be included. Additional guidance for preparing management letters can be found in Section 2-7.”

- While we agree that the Lead State should determine which results and observations should be included in a group management letter, such a determination should consider that, due to materiality or other factors, some results and observations are more appropriately the responsibility of management or the Board only at the legal entity level. Examination findings and recommendations at the legal entity level that may also be appropriate for inclusion in a group management letter should be limited to those that are, or which could become, material at the group level, or which relate, or could relate, to multiple entities within the group and which could thus have a broader impact across the group.

We appreciate the opportunity to review and comment, as well as for your consideration of our views. We look forward to discussing them with you and the Working Group members.

Sincerely,

Bob Ridgeway
Bridgeway@ahip.org

Cc: Tom Finnell
The IT Examination (E) Working Group of the Examination Oversight (E) Task Force met Nov. 18, 2021. The following Working Group members participated: Jerry Ehlers, Chair (IN); Ber Vang, Vice Chair (CA); Blasé Abreo (AL); Mel Anderson (AR); William Arfanis and Ken Roulier (CT); Ginny Godek (IL); Shane Mead (KS); Dmitriy Valekha (MD); Kim Dobbs and Cynthia Amann (MO); Justin Schrader (NE); Eileen Fox (NY); Metty Nyangoro (OH); Eli Snowbarger (OK); Melissa Greiner and Matt Milford (PA); and Eleanor Lu (WI).

1. **adopted the Cybersecurity Vulnerability Response Plan**

Mr. Ehlers said the first item to consider for adoption is the **Cybersecurity Vulnerability Response Plan**, a sound practices document which was developed in response to a referral received from the Chief Financial Regulator Forum (Attachment Four-A). This referral asked that additional guidance be developed to assist state insurance regulators in evaluating emerging cybersecurity vulnerabilities and determining whether additional investigation is needed. Mr. Ehlers asked Jacob Steilen (NAIC) to summarize the comments received during the exposure period (Attachment Four-B). There were several editorial comments incorporated as friendly amendments. Mr. Steilen said that one comment was received from the American Property Casualty Insurance Association (APCIA) regarding the introduction of the concept of significance or materiality when evaluating which cybersecurity vulnerabilities to investigate. Mr. Mead explained that incorporating such wording would conflict with the National Institute of Standards and Technology (NIST) definitions outlined in the document and referenced at SP 800-53 Rev. 5, Page 421. Ms. Dobbs agreed and said introducing the concept of materiality also introduces semantics in debating what is meant by “material” with the company. The Working Group decided to reject the addition of materiality into the document.

Jeff Martin (UnitedHealthcare—UHC) asked if each state’s adoption status of the **Insurance Data Security Model Law** would affect any of the procedures recommended in this document. Bruce Jenson (NAIC) said that Model #668 has notification requirements in the event a breach has occurred, whereas this document is concerned with vulnerabilities that may or may not lead to a breach situation. Therefore, it is unlikely that the adoption status will affect the recommended procedures within this document.

Angela Gleason (APCIA) stated that her organization is concerned that this document may lead to an increase in inquiries that could result in companies having less time available to monitor and protect policyholders. Mr. Jenson explained that the existing process for making inquiries about emerging vulnerabilities varies by state. He said this document is intended to create a more consistent and streamlined approach to such inquiries, as well as to help guide state insurance regulators in evaluating whether additional investigation is warranted as a result of the inquiry. Furthermore, the document emphasizes the lead state taking a primary role in these efforts, which should mitigate the concerns regarding a potential increase in the volume of inquiries. Mr. Ehlers stated that the procedures in this document are not required to be performed but are useful in guiding state insurance regulators in these circumstances.

Ms. Amann made a motion, seconded by Mr. Arfanis, to post the **Cybersecurity Vulnerability Response Plan**, as amended, to the group’s web page (Attachment Four-C). The motion passed.

2. **adopted Guidance for Inclusion in the Handbook**

   a. **Guidance for Evaluating Accessibility and Transferability of Policyholder Data**

Mr. Ehlers said the next set of revisions to consider for adoption were developed in response to a referral from the Receivership Financial Analysis (E) Working Group (Attachment Four-D) and are intended to provide IT examiners additional guidance for evaluating the accessibility and transferability of policyholder data, if warranted, during the IT review of a financial condition examination. Mr. Ehlers asked Mr. Steilen to summarize the comments received on the exposed **Financial Condition Examiners Handbook** revisions in this area during the exposure period. A comment was received from the National Conference of Insurance Guaranty Funds (NCIGF) recommending adding language specifying that these proposed procedures should only be invoked for insurers in hazardous financial condition.
Ms. Gleason said industry has some concern that the proposed procedures imply that legacy systems will be required to be updated to a format consistent with Uniform Data Standards (UDS). Mr. Steilen indicated that is not the intention of these revisions. He said that the proposed guidance is subject to the risk assessment, as is consistent with the overall risk-focused approach to financial condition examinations. Therefore, the proposed procedures are subject to the IT examiner’s discretion and are not required to be performed on each examination.

Barbara Cox (NCIGF) said that the intent of the request by the NCIGF is to strike a balance between companies in good financial condition conducting business as usual, while avoiding challenges that can occur in the event of receivership due to companies using antiquated systems, data being maintained by third parties, etc. She said the intention is not to create a burden for companies and that she believes the proposed guidance appropriately reflects this goal. Ms. Dobbs commented that the proposed language already states that the financial condition of the insurer can be a factor considered when applying these procedures. She also explained that vulnerabilities can happen in healthy insurers and eventually lead to financial troubles, so waiting for a financial trigger could delay valuable investigation time. The Working Group agreed that the financial condition of the insurer should remain as an item that could be considered during investigation but is not a requirement for deploying these procedures.

Tom Finnell (America’s Health Insurance Plans—AHIP) asked a question regarding the transferability of data and if it needs to be clarified, the places to which data might be transferred. Mr. Steilen said the proposed revisions to the Exhibit C, Part Two – IT Work Program Instructional Notes include examples of possible scenarios in which data may need to be transferred beyond a receivership event.

Mr. Roulier made a motion, seconded by Mr. Vang, to adopt the guidance for evaluating the accessibility and transferability of policyholder data for incorporation into the following sections of the Handbook: 1) Section 1-3 narrative guidance; 2) Exhibit C, Part One - IT Planning Questionnaire (ITPQ); and 3) Exhibit C, Part Two – IT Work Program and Instructional Notes (Attachment Four-E). The motion passed.

b. Ransomware Guidance

Mr. Ehlers said the final set of revisions to consider for adoption were developed in response to the growing prevalence of ransomware attacks and the effect of such attacks on an insurer’s operations. Mr. Ehlers asked Mr. Steilen to summarize the comments received during the exposure period. Mr. Vang suggested broadening the proposed procedure related to employee training from email phishing training to information security training. Mr. Meade suggested the language of information security awareness training. The Working Group agreed. A comment was received from the National Association of Mutual Insurance Companies (NAMIC) regarding the definition of “offline.” The Working Group agreed to change this word to “immutable” to convey the concepts that the backups should be unable to be edited.

Ms. Amann made a motion, seconded by Mr. Valekha, to adopt the ransomware guidance, as amended, for incorporation into the following sections of the Handbook: 1) Section 1-3 narrative guidance and 2) Exhibit C, Part Two – IT Work Program (Attachment Four-F). The motion passed.

Having no further business, the IT Examination (E) Working Group adjourned.
MEMORANDUM

TO: Jerry Ehlers (IN), Chair of the IT Examination (E) Working Group

FROM: Judy Weaver (MI), Facilitator of the Chief Financial Regulator Forum

DATE: March 16, 2021

RE: Referral on Cyber Vulnerability Guidance

On its March 16, 2021 call, the Chief Financial Regulator Forum discussed the recent cyber vulnerabilities and exposures that may have impacted various insurance companies, including the Solar Winds cyberattack and the Microsoft Exchange Server zero-day vulnerabilities. In discussing these potential exposures, financial regulators indicated a need for additional guidance on how to address significant vulnerabilities with the potential to impact domestic insurers in a timely manner as they emerge.

While existing IT Examination guidance in the *Financial Condition Examiners Handbook* includes procedures for evaluating cybersecurity controls in place at an insurer, including patch maintenance and intrusion detection processes, those procedures are typically only conducted during a scheduled full-scope examination. As such, the Chief Financial Regulator community is requesting that the Working Group consider the development of additional guidance and procedures for regulator use in evaluating an insurer’s response to significant emerging vulnerabilities and exposures, outside of a full-scope financial examination. Such procedures should be flexible enough to be incorporated into limited scope/interim examination efforts, the ongoing financial analysis process, or even into ad-hoc inquiries/requests for information.

In developing such guidance, the Working Group is encouraged to consider whether it would be more appropriate for such guidance to be included in NAIC handbooks, or as a separate best-practice tool maintained elsewhere. In addition, the Working Group is encouraged to consider coordinating efforts in this area with the Market Conduct Examinations Guidelines (D) Working Group, given its role in maintaining a post-breach checklist and related guidance in the *Market Regulation Handbook*.

If there are any questions regarding the proposed recommendation, please contact either me or NAIC staff (Bruce Jenson at bjenson@naic.org) for clarification.

Thank you for your consideration of this referral.

RE:  IT Exam Referral – Cyber Vulnerability Best Practices and Ransomware Updates

Dear Mr. Steilen:

The American Property Casualty Insurance Association (APCIA)\(^1\) appreciates the opportunity to comment on the recent draft Cyber Vulnerabilities Best Practice document (Vulnerability Best Practices) and Ransomware updates.

**Referral on Cyber Vulnerability Guidance**

Industry shares the same resiliency goals and objectives as regulators and we believe the current framework of regulation and examination is robust and provides visibility into the processes and procedures that are critical to maintaining a secure environment. Nevertheless, we do appreciate that additional balanced guidance for high-risk incidents could be helpful. APCIA is concerned that as drafted this additional layer of guidance could become overly burdensome, particularly during a time when organizations are focused on assessing and hardening their systems.

For instance, the draft Vulnerability Best Practices loosely defines the triggers for an interim exam. Given the nature and purpose of this document it is important to elaborate on when an additional review may be necessary. To carefully balance the need of the regulator and the organization’s need to focus resources on protecting information and systems, the guidance should be narrowly tailored on significant vulnerabilities – those that are high risk and externally facing or are prominent supplier vulnerabilities.

Additionally, the guidance may consider taking an approach that is less akin to an examination and instead view this as an opportunity to enable information sharing and alerting companies to the real-world threats that are out there. The New York Department of Financial Services took this approach after SolarWinds. DFS issued an alert and simply asked those impacted to assess their risk and assure DFS that they were on top of the matter. In many circumstances, this threshold inquiry will be sufficient.

---

\(^1\) Representing nearly 60 percent of the U.S. property casualty insurance market, the American Property Casualty Insurance Association (APCIA) promotes and protects the viability of private competition for the benefit of consumers and insurers. APCIA represents the broadest cross-section of home, auto, and business insurers of any national trade association. APCIA members represent all sizes, structures, and regions, protecting families, communities, and businesses in the U.S. and across the globe.
The draft Vulnerability Best Practices also includes definitions. We suggest that the definition of “Vulnerability” be amended to state, “Material weakness in an information system . . .” Also, rather than add another definition for a breach, which creates an additional standard, the guidance should simply indicate that each state has defined this term in its breach notification laws.

Respectfully, recognizing the creation of the new Cybersecurity Working Group and that the draft Vulnerability Best Practices is not part of the Handbook, we would welcome additional time and opportunity to collaborate on this document.

**Ransomware Updates**
Consistent with the risk-based and flexible approach critical to any information security program, APCIA urges the group to avoid a requirement that all back-ups be air gapped. Some platforms are much easier than others to air gap based upon the backup technology. For instance, modern technology solutions may offer different controls that may be just as effective as an air gap. Further, even if it was possible to air gap the newer technologies, it could have potential operational impacts. As such, the group may consider a statement that acknowledges air gaps as well as other “isolated and appropriate protection mechanisms” that a company may utilize.

**Referral on Data Transfer Guidance**
APCIA wants to confirm that the data transfer guidance being proposed in the Handbook is limited to the original intended scope of receivership and insolvency situations. The draft is unclear as to the scope and seems to suggest it would look at all companies and their structures for ease of data transfer. If that is the case, is this creating a Uniform Data Standard (UDS) without specifically stating such? As noted in our March comment letter, APCIA would oppose Uniform Data Standards (UDS) for all companies. Receivership/insolvency of carriers affects a small percentage of the insurance companies and the current language in the Financial Condition Examiners Handbook (Handbook) seems appropriate. The cost and burden to ensure all systems follow UDS would be overly burdensome and costly for financially sound companies with little benefit realized, since most companies will never go into receivership. If the Handbook needs amended, we urge clarity that the language does not create a UDS for all companies and it is limited only to high priority companies such as those in receivership or in a troubled condition.

Thank you again for the opportunity to provide feedback and we welcome additional dialogue and are happy to answer any questions that you may have.

Respectfully submitted,

Angela Gleason
November 12, 2021

Mr. Jerry Ehlers, Chair
Information Technology (IT) Examination (E) Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

Attn: Mr. Jacob Steiien, NAIC Financial Examination Specialist via electronic mail filing

Dear Mr. Ehlers:

We appreciate the opportunity to provide comments to the Information Technology (IT) Examination (E) Working Group in response to the documents that were exposed during the conference call held on October 13, 2021. Our comments are related to the Ransomware Updates portion of the exposures.

On the first page of the exposed document, an added bullet indicates the examiners should “Require strong passwords and multi-factor authentication.” Generally, and broadly “requiring” MFA may present challenges to organizations. We would recommend language such as “where appropriate” or similar caveat for MFA.

On the second page of the exposure, two new test procedures have been added to the Exhibit C Table. We understand these to be aimed at containing ransomware after it has entered a network. If an organization is impacted by a ransomware attack, restoring from backups is one solution. Having air gapped backups helps ensure your backups are not also impacted by the ransomware and are available to restore the environment. The internal firewalls would help prevent machines impacted by ransomware from spreading it to other machines.

While we believe neither control is necessarily bad, perhaps focus should be more on preventative controls to keep ransomware from entering our network to begin with. Training employees to spot phishing emails which may contain links to ransomware and then periodically testing them on this through phishing campaigns. Companies should not allow employees to have the administrative right necessary for ransomware to install itself. It could run anti-malware software which can identify and block ransomware.
In summary, we suggest changing focus to front-end controls rather than back-end controls. Testing for air gapped backups and internal firewalls may not be necessary if the Company has the appropriate front-end preventative controls in place.

Thank you for your consideration of these suggested revisions. Should you or members of the Technical Group have questions or comments, I would be glad to address them.

Sincerely,

Jeff Martin

To: Bailey Henning, Financial Examination Manager
   Jacob Steilen, Financial Examination and Accreditation Specialist

RE: RFAWG Referral Exposure Draft – Information Technology (IT) Examination (E) Working Group

Dear Ms. Henning and Mr. Steilen:

NCIGF is the national coordinating body for the property casualty guaranty funds. We worked closely with the RFAWG on their referral dated March 22, 2021, and we applaud your efforts to respond with the exposure draft relating to this referral.

We have two minor changes to suggest. With regard to Section 1-3, we suggest that a clarification be made to make the discussion relating to data migration be limited to companies at a company control level or lower as prescribed by the Risk-Based Capital (RBC) for Insurers Model Act. Our suggestion appears on p. 10 of Section 1-3 and we excerpt the relevant text below: (our change is marked in underline text.)

The solvency outlook of the company may be considered when discussing if data migration to a more uniform format is necessary—it is recommended that this be considered only when the company is at a “company control” level or lower.

We feel this change will recognize our common goal of ensuring troubled companies that may be placed into liquidation at some point can be smoothly transitioned to the guaranty funds. At the same time this modification avoids creating undue burdens on going concerns in sound financial status.

As a purely technical matter, we suggest the reference on this same page to Uniform Data Standards be changed to NAIC Uniform Data Standards.

Thank you for considering our comments.

Att. 14 – Ransomware updates.pdf

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Bailey and Jacob,

Thank you for giving attention to these important IT considerations, particularly on the emerging issue of ransomware. Our members are very much interested in these issues and find a lot of value in the changes made to the IT section of the Exam HB in recent years. As we continue to receive feedback on these important issues, it is worth noting that our members are continuously evolving to update their IT systems; therefore, as I’m sure you are both aware, the problems and issues continue to evolve as well. Having said that, we did receive feedback on the ransomware updates added to Section 1-3; however, we didn’t include them in a formal comment letter, as we weren’t sure how others are interpreting the guidance. We share the following feedback/questions for the working group to consider. And for what it is worth, we have made one suggested edit to the first point raised, but I’m not sure if that addresses all the concerns.

Ransomware Financial Examination Guidance: Received member feedback that terms used in the proposed IT exam guidance, such as “offline,” “inaccessible from the internet” and “Inaccessible remotely” need to be clarified.

A. Addition to “General Information Technology Review: Ransomware Updates to Consider” – Ransomware: Have system backups that are stored in an air gapped, offline environment that is inaccessible from the internet; this backup can be quickly deployed in the event the production environment is infected. Companies should test backup deployment regularly.

1. They are interpreting the term “inaccessible from the internet” to mean that it’s not accessible without a VPN. Their system is like many systems in that their backup is the cloud, which is accessible from the internet through VPN; however, not everyone has access (need credentials and device).
   - It appears to be common to have backups accessible through the internet (VPN). Companies generally locate backup facilities 25+ miles away and only a handful of personnel can access them via a VPN site to site connection.

2. They have questions about the term “offline environment”
   - Does this mean online briefly for the backup and then unplugged subsequently?

NAMIC Suggestion: Would this capture issue 1 and 2? Are there concerns with this approach?

Have system backups that are stored in an air gapped, offline environment that is inaccessible from the internet, or stored at an offsite location accessible via a secure (i.e., VPN) internet connection with limited access to only credentialled personnel; this backup can be quickly deployed in the event the production environment is infected. Companies should test backup deployment regularly.

B. Common Controls

3. DSS 04:08: Common Control: The backup environment should be isolated, air gapped,
and inaccessible from the internet so that information cannot be accessed remotely.

Preliminary Information Request: Provide evidence that backup and storage environments are properly isolated and inaccessible remotely.

- What does “remotely” mean? “inaccessible remotely.”
- “inaccessible remotely” could be interpreted to mean that a physical visit to the backup site would be required to do the work.
- VPN is not the same as “remotely”
- Does that mean you cannot access the backup via a secure (VPN) internet connection?

Thank you for all the work you do. Have a good weekend.

-Jon

Given the potential impact on company operations, the working group is currently developing guidance to help IT examiners address this issue. A new subsection is being proposed to be added to Section 1-3 to reflect recent research on the topic and to tighten up the guidance related to the protection of system backups in the event of a ransomware attack.

Cybersecurity Vulnerability Response Plan

OVERVIEW

Cyber vulnerabilities have become increasingly prevalent and significant as cybercriminals seek to exploit vulnerabilities to breach a company’s information technology (IT) security defenses. Conducting a preliminary investigation of possible exposure to these vulnerabilities as they arise can help financial regulators evaluate the operational resiliency of their groups/domestic insurance companies and determine whether a cyber event has occurred that would require further investigation.

However, it is important to note that reported vulnerabilities do not necessarily indicate a cybersecurity breach that would trigger formal notifications and consumer protection requirements, as companies should be addressing vulnerabilities before they can be exploited. As such, many states assign the responsibility for investigation of significant reported vulnerabilities to financial regulators either as a follow-up to ongoing financial exam work in assessing and monitoring IT security controls or as part of an ad-hoc financial analysis inquiry where appropriate. Recent examples of such vulnerabilities include the Microsoft Exchange Server weaknesses, the SolarWinds remote code execution vulnerability, and the Qualys cloud storage vulnerability. Vulnerabilities include threats to the company’s internal systems, as well as breaches at third parties that host, or have easy access to, company confidential data.

The primary purpose of this document is to guide examiners and/or analysts through the ad-hoc inquiry that may be necessary when a cybersecurity exposure or vulnerability has been identified or alleged in the period between full-scope examinations. It is, however, up to those examiners or analysts to use sound professional judgement when deciding to undertake such inquiries.

The results of the ad-hoc inquiry may warrant additional investigation, which could include calling a targeted examination, performing interim work, and/or follow-up on recommendations by the department analyst. If additional investigation is warranted, examiners should consult Exhibit C – IT Work Program in the Financial Condition Examiners Handbook to identify relevant procedures.

If, after investigating potential vulnerabilities, the domestic/lead state determines that a cybersecurity breach has occurred, information on the breach should be promptly shared with market conduct regulators and other affected states in accordance with existing regulatory guidance. Protocols in the Market Regulation Handbook can then be used in situations where a breach has occurred, specifically the post-breach checklist in Addendum A to Operations/Management Standard 17 Chapter 20 – General Examination Standards.
Terms & Definitions

- **Vulnerability** – Weakness in an information system, system security procedures, internal controls, or implementation that could be exploited or triggered by a threat source.

- **Incident** – An occurrence that actually or imminently jeopardizes, without lawful authority, the confidentiality, integrity, or availability of information or an information system, or constitutes a violation or imminent threat of violation of law, security policies, security procedures, or acceptable use policies.

- **Breach** – The loss of control, compromise, unauthorized disclosure, unauthorized acquisition, or any similar occurrence where: a person other than an authorized user accesses or potentially accesses personal identifiable information (PII), or an authorized user accesses PII for an other than authorized purpose.

*Definitions provided by the National Institute of Standards and Technology (NIST) glossary linked [here](NIST SP 800-53 rev. 5, Page 421)*

**ACTION ITEMS FOR REGULATORS AFTER A VULNERABILITY HAS BEEN IDENTIFIED**

The following section provides common questions and answers to help regulators determine an appropriate course of action in responding to identification of an emerging vulnerability.

1. **Which insurers should regulators contact regarding an identified vulnerability?**
   Professional judgment should be used by the department in determining which insurers to contact based on previous examination and analysis work, as well as the size and severity of the vulnerability identified.

2. **Which state(s) should lead the effort of responding to notification of an emerging vulnerability?**
   In recognition of the lead state approach to financial regulation and deference to a domestic regulator, as well as to reduce the number of overlapping requests and to create efficiencies for both insurers and regulators, the lead state (for groups) and/or domestic regulator should lead the effort of investigating significant vulnerabilities.

3. **What area of the department should take responsibility for investigating cyber vulnerabilities and breaches?**
   It is up to each department to determine which area should take responsibility for investigating vulnerabilities, which could be affected by subject matter expertise and availability, the NAIC has primarily classified follow-up procedures for known breaches as a market regulation activity and has included such procedures in the *Market Regulation Handbook*. This is primarily due to the importance of ensuring adequate consumer protection post breach. However, given that a breach can also affect an insurer’s solvency position, coordination with financial regulators in post-breach follow-up activities is encouraged.
Investigations related to significant vulnerabilities are typically viewed as following up on financial exam work to assess IT security controls. As such, it is recommended that financial regulators take the lead in addressing significant identified vulnerabilities. However, given the potential for a vulnerability exposure to turn into a breach, early coordination with market regulation is encouraged.

4. **Does the adoption status of the NAIC’s Insurance Data Security Model Law (#668) (or other relevant state law) affect a state’s response?**
   
   As this guidance focuses primarily on addressing an identified vulnerability, as opposed to an incident or breach, it is not clear whether information on the vulnerability and how it has been addressed would be reported to the department unless or until an actual incident or breach has occurred. As a result, it may be appropriate to proactively address an identified vulnerability even if your department has reporting requirements already in place. Proactive investigation of identified vulnerabilities with insurers may help prevent breaches from occurring that the department would otherwise have to address down the line. However, before taking steps to address an identified vulnerability, the regulator should ensure that the department has not yet received a notice from the insurer on this exposure.

   Those states that have passed Model #668 may find themselves at an advantage as they will be informed of breaches in a timely manner and will have greater opportunity to speak and coordinate with their licensees, as well as with other states.

5. **If the investigation of cyber vulnerabilities identifies a need to take additional steps in addressing IT control processes, how can this work be performed so that it can be used on the next full scope exam?**

   The most effective way to conduct this investigation in a manner that would allow the results to be integrated into an upcoming full-scope exam would be to use the interim work concept as defined by the [Financial Condition Examiners Handbook](#) (see Section 1-1, Part I). Interim work is intended to provide examiners the opportunity to conduct exam procedures in areas that are considered inherently risky but are not known to present an immediate concern. A separate examination report is not required in the interim period as information deemed appropriate for report purposes will be included within the full-scope examination report. However, results of interim work are expected to be documented in Exhibit AA—Summary Review Memorandum.

   **Example Scenario:**
   
   Let us assume a software vulnerability was identified. If after having received what the team has determined to be adequate information, and having thoroughly reviewed all of this information, the team should then conclude whether the insurer has taken
appropriate steps to mitigate concerns related to this vulnerability or whether additional actions are warranted. In this example, the exam team concludes it is necessary to check the insurer’s patch management protocols. To investigate the vulnerability, the team performs interim work and learns that the company has an updated patch negating the vulnerability. Additionally, the team selects a sample of insurer servers to verify they are at the right version/patch level. From here, the team would inquire about the vulnerability and how the insurer handled it. The team, having received adequate responses, concludes that the insurer has taken appropriate steps to mitigate concerns related to this vulnerability.

At the time of the full-scope exam, this work could be used to help address the DSS 05.01 procedure on Exhibit C. However, before leveraging interim work, the exam team should perform roll-forward procedures to determine whether the processes tested in the interim period are still in place and substantially the same, as changes may affect the conclusions that were reached in the interim period. For additional guidance about rolling forward interim work procedures for use in the full-scope exam, see Section 1-1 in the Financial Condition Examiners Handbook.

POSSIBLE QUESTIONS IN DETERMINING AN INSURER’S EXPOSURE TO A KNOWN VULNERABILITY

The following questions can be used to help a regulator determine an insurer’s exposure to a known vulnerability, as well as any steps taken to mitigate and address the vulnerability (if exposed). These questions should be customized to the specific situation identified. As the topics addressed and questions raised are largely in line with topics covered during an examination IT review, regulators are encouraged to work with their IT specialists, if necessary, to customize the inquiries, evaluate the appropriateness of responses received, and determine if any additional follow-up is necessary. If specialist resources are not available to a state in this area, NAIC IT security staff may be available to assist in this regard. Where appropriate, corresponding topics from Exhibit C – Evaluation of Controls in Information Technology from the Financial Condition Examiners Handbook have been included to assist in evaluating an insurer’s response to a specific question.

1. Does the insurance company have any exposure to the discovered vulnerability?

2. If applicable, has the insurance company deployed updates to affected [application] servers?
   a. What are the insurance company’s patch management protocols?
   b. Was the recommended patch applied?
   c. What steps were taken between when the vulnerability was discovered and when the patch was applied to mitigate the risk?
   d. If the insurance company has not been able to patch, has it followed [application vendor/developer] instructions for how to mitigate through reconfiguration?

See Exhibit C ITPQ question #5
e. Has the insurance company taken steps to investigate its systems and logs for exploitation, persistence, or evidence of lateral movement? If so, has the insurance company remediated any identified exploitation or persistence and investigated its environment for indications of lateral movement?

*See Exhibit C DSS 05.07*

3. For vulnerabilities derived from breaches at insurer third parties:
   a. Was company data exposed, or does the third party have easy access to your data?
   b. Has access been restricted?
   c. What steps have been taken to mitigate the risk that your data was exposed?
   d. What communication has taken place?
   e. Has the insurance company addressed this issue with its third-party service providers, if applicable?

*See Exhibit C ITPQ Question #3*
Conclusions & Next Steps

<table>
<thead>
<tr>
<th>Conclusions Reached</th>
</tr>
</thead>
<tbody>
<tr>
<td>No breach or control issues discovered.</td>
</tr>
<tr>
<td>Mitigating factors were strong and/or further procedures proved there was no additional material risk.</td>
</tr>
<tr>
<td>No breach discovered, but concerns noted on adequacy of controls.</td>
</tr>
<tr>
<td>No signs of a breach occurring, but during inquiry and investigation concerns were noted regarding the adequacy of controls.</td>
</tr>
<tr>
<td>Further information still required.</td>
</tr>
<tr>
<td>Still not certain whether a breach occurred and/or information was extracted by an unauthorized party.</td>
</tr>
<tr>
<td>Breach discovered.</td>
</tr>
<tr>
<td>Information was accessed and extracted by an unauthorized party.</td>
</tr>
<tr>
<td>No further action required. Findings can be incorporated into the next scheduled exam.</td>
</tr>
<tr>
<td>Document the risk identified and the control processes surrounding that risk. Communicate with analyst for ongoing monitoring. Schedule a targeted exam or interim work to look into the issue further.</td>
</tr>
<tr>
<td>Consider calling a targeted exam regarding the issue. Perform additional interim work. Analyst provides ongoing monitoring.</td>
</tr>
<tr>
<td>Contact Market Conduct department (or similar department) and begin hand-off of the investigation to them.</td>
</tr>

RE: Data Transfer Guidance in the IT Work Program of the Financial Condition Examiners Handbook

The RFAWG has discussed concerns noted in recent receiverships of insurance companies whereby receivers and guaranty funds continue to face challenges, including technical challenges, related to the timely and efficient transfer of data (e.g., claims data and policyholder records) from the insurance company in receivership to the receiver and/or guaranty funds. This generally occurs when data is not stored in a usable format or data is stored in information technology (IT) systems that are not easily extractable or transferable. Challenges with data and records may arise when insolvent insurance companies have used third-party administrator(s) (TPA) or have multiple IT platforms and legacy systems. In the case of a TPA, it is not uncommon for data to be comingled between clients. Understanding an insurance company’s IT systems and data in advance of any future insolvency helps to minimize costs and delays in claims payments at the onset of the receivership process.

The RFAWG recognizes that the Financial Condition Examiners Handbook contains some existing guidance regarding receivership considerations, including the following language that was added to the Considerations for Potentially Troubled Insurance Companies section of the Handbook in 2019:

If receivership or liquidation is triggered, and assets are transferred to the receiver or guaranty fund to settle obligations, it is important that the company’s data be maintained in such a format to ensure that policies can continue to be maintained and claims can continue to be paid. For example, the company should have the ability to export its claims data through a defined format (Uniform Data Standards [UDS]) that would allow the data to be received and utilized by a third-party guaranty fund. Therefore, the examination may include additional procedures as part of the IT review to identify and locate data storage and processes, understand the format of the data, and ensure that proper functionality exists for timely and efficient export of policy and claims data in the event of a receivership.

However, given the continued issues noted in this area, RFAWG feels it would be beneficial for ITEWG to consider additional guidance specific to the IT review conducted during a financial condition examination, including the incorporation of specific procedures into Exhibit C – Evaluation of Controls in Information Technology. This is particularly relevant when insurers are considered by the domestic state insurance regulator to be financially troubled or high priority; however, given that correcting data format and system issues may take time for insurers to resolve, claims data formatting and storage considerations may be relevant for all examinations.

The RFAWG recommends that such guidance address the following:

- Gain and document an understanding of the insurance company’s IT systems, data storage, data formats and any legacy systems.
- Based on the appropriate RBC level, review and test whether claims data, reserve information and policyholder records held by the insurer and by any TPAs are capable of being easily and timely accessible and extracted, and if necessary, translated into a format used by receivers and guaranty funds in the event of insolvency.
  - Property and Casualty Guaranty Funds utilize the Uniform Data Standards (UDS) reporting system for the timely and efficient transfer of claims data and policyholder records.
Life and Health Guaranty Associations do not utilize UDS; however, they require easy and timely advance access to data to establish agreements and infrastructures to either transfer or continue administration of the insolvent company’s policyholders.

Information often needed in receivership includes for example: in force; policyholder information (policy master files), policy values; policy forms; claims files & history; rate files & history; reserves; information by line of business, provider/vendor agreements.

- Encourage mitigation by the insurance company or its TPA of any data or IT system format, storage and transferability issues found during examination.
- Consideration of utilizing receivers and guaranty funds as resources at any point in the data evaluation and mitigation process.

If you have questions, please contact Jane Koenigsman, NAIC Staff, at jkoenigs@naic.org.
General Considerations

- Elements of a training that are tailored to the employee’s specific roles, responsibilities, and access rights.

Since cybersecurity threats are constantly evolving, it is important to have a strong and up-to-date training regimen. Additionally, in a strong cybersecurity program trainings should be performed on a consistent and periodic (e.g. annually) basis to ensure the information reaching the employees is commensurate with the modern-day threats facing the company. As regulators evaluate the appropriateness of the program, they should consider whether the training is mandatory for all employees and whether it includes procedures and instructions for employees to follow in the event that the employee has a good faith, fact-based belief that a breach or cybersecurity event may have occurred.

Vulnerability Management

In the most robust information security programs, companies understand that not all vulnerabilities can be eliminated, typically due to business needs or time and resources. However, companies should have an understanding and should inventory their identified vulnerabilities as well as have a plan to ensure vulnerabilities that can’t be eliminated are mitigated as much as possible. For instance, if the insurer is unable to confirm that a third-party service provider is able to secure their own access to the company’s information system, the company should ensure they monitor the service provider’s access to determine if improper activity occurs on the company’s network. As many vulnerabilities originate with a company’s patching practice, it is important that regulators obtain an understanding of the company’s patch management. Research suggests that in any given year, the majority of breaches have a root in a Common Vulnerability and Exposure (CVE) that often has been known and identified for several years. An insurer should maintain a strong practice of patch management, or at least a practice of understanding and mitigating existing vulnerabilities as an important part of a robust security program. For vulnerabilities discovered between exam periods, the NAIC maintains a Cyber Vulnerabilities document on the IT Examination (E) Working Group webpage with company questions and follow-up procedures to learn more about the extent of the vulnerability, how that information can be used going forward, and possible actions to be taken, if warranted (e.g., targeted exam procedures, additional interim procedures, etc.).

Ransomware

Ransomware is one of the more common manifestations of a cybersecurity risk. Ransomware attacks pose a significant risk to confidentiality and availability on company data. It is difficult to predict when and where a ransomware attack will strike, so it is important for a company to maintain strong cyber hygiene habits to stay ready for ransomware attacks. At a minimum, insurers with good cyber hygiene do the following:

- Patch their systems/networks regularly, timely, and in accordance with application updates
- Require strong passwords, and multi-factor authentication, where appropriate
- Have information security awareness training, including email filtering and anti-phishing training for employees, with periodic phishing test campaigns
- Monitor and react to suspicious activity on their network
- Have system backups that are stored in an air gapped, immutable environment that is inaccessible from the internet, this backup can be quickly deployed in the event the production environment is infected. Companies should test backup deployment regularly.
- Have firewalls, or other mechanisms within the network so someone with unauthorized access cannot move laterally
- Limit user access rights to the minimum necessary to perform their job
- Have and test a robust incident response plan

Company Acquisitions

Finally, in situations where a company has recently acquired/integrated another company, the IT examiner should also pay special attention to the procedures performed in integrating company systems. This is often when companies are most vulnerable to cybersecurity threats as controls are often in flux and mistakes in integration may create vulnerabilities that are not easily identified or remedied.

Exhibit C, Part Two (Instruction Note 3) includes specific mention of risk statements and sections of the exhibit that can be applied to ensure the examination has an appropriate response to identified cybersecurity risks.
SECTION 1 – GENERAL EXAMINATION GUIDANCE

General Considerations

Note that the findings identified through the review of the company’s cybersecurity control environment should be communicated to the financial examiner via the IT Summary Memo.

Uniformity of Data for Timely & Efficient Transfer

Legacy systems with uncommon and difficult-to-access data structures should be flagged for further investigation as part of the IT review. Companies with multiple IT platforms, multiple cloud storage providers, or that rely on MGAs or TPAs may be at a higher risk, especially if its data is stored in a commingled environment. The ability to migrate and transfer data may be relevant in a number of scenarios including switching service providers, merging with or acquiring another company, company insolvency necessitating the transfer of policyholder data to the guarantee fund, etc. If the data is found to be in a format that is not conducive with timely and efficient data transfer, the IT examination team is encouraged to notify the insurer to discuss data migration and the possible need for a more uniform data standard (for example, NAIC Uniform Data Standards—UDS—for property and casualty companies). The IT exam team may also review contracts with third-party data storage providers for clauses on data transfer rights. The solvency outlook of the company may be considered when discussing if data migration to a more uniform format is necessary. See DSS 01.01 in Exhibit C for common controls, information requests, and possible procedures regarding the quality, timeliness, and availability of data. In summary, the data should be stored in a format which allows it to be accessed, utilized, and efficiently transferred, if necessary.

Note: While NAIC Uniform Data Standards apply specifically to property and casualty companies, all companies should have the ability to export claims data through a defined format that would allow the data to be received and utilized by a third-party guaranty fund, if necessary. See the NAIC UDS Operations Manual for more information. This manual is maintained by the National Conference of Insurance Guaranty Funds. The following sections would be most applicable to examiners:

- A Record Extended Table Appendix: IX
- B Record Extended Table Appendix: XIX
- G Record Extended Table Appendix: LVIII
- F Record Extended Table Appendix: LIV
- I Record Extended Table Appendix: LXV
- Coverage Codes: 15-1
- Transaction Codes: 14-1
- Other Code Tables: 16-1

Customization for Small Companies

When conducting an IT review of a small company or a company with a non-complex IT environment, it is acceptable to limit the extent of test procedures performed. However, the examination must adhere to the six-step process outlined above. This includes obtaining the ITPQ responses from the insurer, completing a basic work program, and preparing a summary memo concluding on the results of the IT review and its impact on the rest of the examination.

The most significant area to be customized for small insurers is the IT work program. Regardless of size or complexity, some level of testing is required to be performed to verify the design and operating effectiveness of the insurer’s IT environment; however, the presentation of such work may vary. It is recommended that IT examiners perform some level of review for IT general controls in place within each domain of the COBIT Framework. This may be shown using a customized version of Exhibit C – Part Two, where a limited number of controls applicable to the insurer are populated and reviewed. In limited circumstances, as described below, IT examiners may bypass the utilization of Exhibit C – Part Two:

1. If the CPAs or the company’s internal audit function (if deemed independent) have performed a review of ITGCs that sufficiently cover risks within each of the COBIT domains, the IT examiner may rely on such work without mapping or linking the work to a separate work program. However, the IT examiner must document their comfort with and planned reliance on the work performed.
PART ONE – INFORMATION TECHNOLOGY PLANNING QUESTIONNAIRE (ITPQ)

For the questions below, provide the requested documentation and the name, title, telephone number and e-mail address of the individual who will be most able to discuss and clarify the information presented.

If a particular section does not apply to your company, give a brief explanation of why it does not apply. All responses should be in the form of a separate summary memorandum, headed with the corresponding section label. Where possible, electronic responses are preferred.

1. Use of Information Technology
   If the company does not process its business electronically, provide a narrative description explaining how the company’s business is processed. The remainder of this section does not need to be completed.

   If the company only processes business electronically on a stand-alone personal computer and does not use networking technology, provide a narrative description explaining how business is processed, including the type of application software being used. The remainder of this section does not need to be completed.

2. Information Technology Governance
   a. Provide the name, telephone number and e-mail address of the chief information officer (or equivalent).
   b. Provide specific detailed organizational charts for the company’s IT department, and/or any affiliates providing IT services, that show its various functional divisions (i.e., operations, programming, support services, etc.). Show reporting relationships of the IT department within the organization.
   c. Provide an executive overview of your company’s IT strategic plans, including plans for e-commerce.
   d. Provide an executive overview of your IT steering committee, or other group that establishes and directs IT policies and strategies, indicating the membership of the group and the frequency of their meetings.
   e. Provide an overview of ERM program, if not already provided, and associated touchpoints in relation to IT risks.
   f. Describe the frequency, type, and content of interaction with the company’s board of directors regarding key IT risks, such as cybersecurity.

3. Information Technology Infrastructure
   a. Provide the name, telephone number and e-mail address of the chief technology officer (or equivalent).
   b. Provide a listing of the locations of all data-processing centers used by your company, whether owned by the company or by a third-party administrator that processes data for the company.
   c. Provide a system-wide map or topography, showing all hardware platforms and network connections, indicating all internal and external access points. In addition, complete a separate Systems Summary Grid for each platform (see Attachment 1). A sample Systems Summary Grid is provided with this questionnaire (see Attachment 2).
   d. Provide a narrative explanation of the application-level interfaces (manual and automated) among the various programs/platforms (e.g., claims system feeds into the accounting system).
   e. Provide a list of any business or data-processing services provided by the company to any other entities, including affiliates, indicating the type of service provided and a summary of the terms of the agreements (e.g., named parties, effective date, period and services covered). Also indicate if a service level agreement (SLA) exists for each of these services.
   f. Provide a list of any business or data-processing services performed by any other entities on behalf of the company, such as a third-party administrator (TPA, MGA, GA, etc.) or an affiliate, indicating the type of service provided and a summary of the terms of the agreements (e.g., named parties, effective date, period,
location and services covered). Also indicate if an SLA exists for each of these services and if data stored at
the TPA is comingled with other data sets or clearly segregated.

g. Describe any business the company is conducting through electronic channels, indicating the type and volume
of business and the date when it was implemented. Note: E-commerce methods of transmission might include
voice recognition units (VRUs), the Internet, third-party extranets, and wireless and broadband
communications media.

4. Information Technology Audits, Reviews and Risk Assessments

a. Provide the name, telephone number and e-mail address for the partner of your company’s independent
external audit team and the internal audit director (or equivalent), if they exist.

b. Provide a list of any IT audits/reviews performed within the past two years, including e-commerce areas,
cybersecurity assessments and any IT related reviews of financial significant 3rd party vendors Include the
dates, review subjects and who performed the audits/reviews (e.g., internal audit, external audit, SOC 1 Type
II Reports, SOC for Cybersecurity reports, cyber self-assessment tools, Sarbanes-Oxley, state insurance
departments, governmental agencies, and/or any other contractor or affiliate that might have performed an
audit/review).

c. Arrange for a copy of the IT work included in the most recent audit workpapers to be provided from the
company’s external audit firm. The workpapers should be provided no later than the response date identified
for the IT Planning Questionnaire.

d. Please provide all current assessments of the company’s IT risks, whether internally or externally conducted.

5. Information Technology Security

a. Provide the name, telephone number and e-mail address for the chief security officer (or equivalent).

b. Provide a copy of all IT security related policies.

If not explicitly described in the policies or if formal, written policies exists, please provide a detailed
description of:

- Data Confidentiality – Discuss how data elements are classified and who determines which
  individuals/roles have access to data elements.

- Data Encryption – Discuss if confidential data is encrypted both at rest and in transit, including the
  process and methods of encryption.

- System and Network Access Controls – Discuss how access is controlled (network-level, server-level,
  application-level, or a combination), which directory services are used for network access, whether
  authentication servers are used, etc.

- Multi-Factor Authentication – Discuss the current use of multi-factor authentication including where
  it’s used, the type being used, and any plans for expanding its’ usage.

- Anti-virus/Anti-malware – Discuss the anti-virus/anti-malware software, and patch management
  program in place including the systems used and the strategy for keeping these products current.

- Security Logging & Monitoring – Discuss the process and tools used for logging and monitoring
  security events across network devices, servers, endpoints, systems and applications. Also discuss
  how the company aggregates and correlates this information across the breadth of monitoring points.

- Intrusion Detection & Prevention – Discuss the program in place to detect and prevent intrusion into
  the company’s network and systems including the types of tools and technology being used.

- Vulnerability Management – Discuss the company’s vulnerability management program including the
  scope of coverage, tools and techniques, frequency of scanning, reporting of known vulnerabilities,
  remediation, etc.
• Penetration Testing – Discuss the types and frequency of penetration testing and whether it’s conducted by internal employees or external firms. Also discuss whether the company uses advanced techniques such as red and blue team exercises.

• Security Awareness Training – Discuss the security awareness training program required for all employees including how often it’s required and how participation is tracked. Also discuss the contents of the training program and whether advanced techniques such as anti-phishing campaigns are conducted to reinforce the program.

• IT Asset Inventories – Discuss the inventory management program in place for physical devices, software and applications.

• Third–Party Vendor Management – Discuss the program to assess and address security risks posed by third-party service providers including the group(s) responsible risk ranking or tiering.

• Data Loss Prevention – Discuss the program in place to detect and prevent protected information from leaving the company.

c. Provide a description of the types of sensitive information that is maintained or accessed by the company (e.g. Social Security numbers, protected health information, personally identifiable information, etc.) and the approximate amount of records containing each type of information. For each type of sensitive information, provide the number of outside vendors who have access to or maintain sensitive information.

d. If applicable, provide a description of updates to the company’s controls and/or processes to ensure compliance with the General Data Protection Regulation (GDPR) or other applicable data protection requirements.

6. Information Technology (IT) Security – Incident Response

a. Provide documentation of the response plan in place for cybersecurity incidents. (Note that this may be covered by the disaster recovery plan, but the plan provided should include consideration of IT-specific events.)

b. Provide a listing of any instances in which confidential company or policyholder information was or was likely to have been breached. Include the following information in the response provided:

   • How the event was detected.
   • Correlation of events and evaluation of threat/incident.
   • Resolution of threat, or creation and escalation of an appropriate work order.
   • Post-remediation analysis, including any resulting change in controls/operations to mitigate threat of event reoccurrence.
   • Extent of involvement of senior levels of management.
   • Extent of expenses (including legal claims to be incurred) as a result of the incident.
   • Details on the information that was compromised (both in quantity of information breached and type of information that was breached).

7. System Development/Change Management

a. Provide the name, telephone number and e-mail address for the system architect/chief software engineer (or equivalent).

b. Provide an executive overview of the company’s system development life cycle (SDLC) and change-management methodologies and indicate whether the company uses internal personnel and/or external vendors to develop and/or change its systems or programs. Include discussion of the process used when purchasing application solutions.
c. Provide the name, vendor, version number and platform for all change management/system development software, if utilized.

8. Business Continuity
   a. Provide the name, telephone number and e-mail address of the individual responsible for maintaining, updating and testing the company’s business continuity and disaster recovery plans.
   b. Provide a copy of your IT business continuity and disaster recovery plans (if not already provided in response to the above questions), including information on any contracts for alternate sites (i.e., named parties, site location, type of site, effective date and period covered). Also, provide evidence of the last test results for the plans and management’s resolutions of any test discrepancies.
   c. Provide a description of your company’s data and systems backup strategy, including your records retention policy.
   d. Provide a copy of the most current business impact analysis.

9. Financially Significant Systems
   a. If the company uses multiple platforms/systems to process financial transactions — including premium, claim, reinsurance and investment transactions — include a reconciliation of amounts processed on each separate system to total dollar amount processed during the prior year. Indicate whether the company anticipates any change in processing volumes during the current year. Note: The Technology Summary tool provided on iSite+ or a comparable substitute that provides the same information should be used to accomplish this purpose.
   b. Identify and discuss other significant critical management reporting/operational systems, such as data warehouses, sales and marketing systems, communication systems, management dashboards and any other management information systems.
   c. Discuss the accessibility and transferability of significant datasets (i.e., policy admin data, claims data, etc.). Indicate whether data is able to be queried and transferred in the event of an audit, new storage service provider, or other event that would require data to be relocated.
**Systems Summary Grid**

For each primary hardware platform, list the application software products used in each of the insurance business cycles.

© 2021 National Association of Insurance Commissioners
INSTRUCTION NOTE 1: After the examiner has identified controls over the company’s IT environment, based on the company’s responses to the ITPQ and other information provided to the examiner, the examiner may determine that these controls over the company’s IT environment should be tested for operating effectiveness. Section 1, Part III of this Handbook provides specific guidance on sampling for tests of controls and should be utilized by the examiner when testing the company’s identified controls. In some cases, the examiner may be asked to assist in the financial examination, as outlined in the “General Information Technology Review” in Section 1, Part III of this Handbook. If it is determined that some of this work includes substantive testing, the examiner should utilize the substantive sampling guidance provided in Section 1, Part III of this Handbook.

INSTRUCTION NOTE 2: The following issues are addressed in Part One (ITPQ) and Part Two (Evaluation of Controls in IT Work Program). If the ITPQ is utilized and subsequently it is determined that all sections and risks included in the IT work program should be addressed, the responses received in the ITPQ should be considered when requesting information on the corresponding sections of the IT work program listed below.

INSTRUCTION NOTE 3: Examiners may determine that cybersecurity risks are significant for the insurer under examination. This may be based on responses provided to the ITPQ, results of planning and examiner’s judgment. To ensure that the examination procedures performed include an adequate response to the insurer’s cybersecurity risk, which can affect multiple facets of the IT environment, examiners may consider performing procedures in relation to risk statements APO 1, APO 10, APO 12, DSS 02 and DSS 05. Note these risk statements and associated procedures may or may not explicitly mention the threat of cybersecurity in the language presented, but examiners should customize the procedures provided to respond to this risk as appropriate. Examiners may determine that additional risks are relevant when considering cybersecurity exposure, and should tailor their work program based on information available on the exam. Additional considerations for cybersecurity concerns are located in Section 1-III (A) of the Examination Handbook guidance, entitled “General Information Technology Review.”

INSTRUCTION NOTE 4: Examiners should consider the overall accessibility and transferability of the company’s claims and policyholder data. Holistically, the exam team should determine whether the company would be able to transfer its data efficiently and effectively to another location should that need occur (e.g., when switching service providers, in the event of an audit or receivership, etc.). Companies that rely heavily on legacy systems, MGAs, multiple cloud platforms, TPAs, or that commingle claims data may be at a higher risk. Risk statements APO 03, APO 04, DSS 04, and DSS 05 can be referenced for procedures surrounding data quality, infrastructure, security, and portability.

Section 1-3: Letter A: General Information Technology Review

Ransomware

Ransomware is one of the more common manifestations of a cybersecurity risk. Ransomware attacks pose a significant risk to confidentiality and availability on company data. It is difficult to predict when and where a ransomware attack will strike, so it is important for a company to maintain strong cyber hygiene habits to stay ready for ransomware attacks. At a minimum, insurers with good cyber hygiene do the following:

- Patch their systems/networks regularly, timely, and in accordance with application updates
- Require strong passwords, and multi-factor authentication, where appropriate
- Have information security awareness training, including email filtering and anti-phishing training for employees, with periodic phishing test campaigns
- Monitor and react to suspicious activity on their network
- Have system backups that are stored in an air gapped, immutable environment that is inaccessible from the internet, this backup can be quickly deployed in the event the production environment is infected. Companies should test backup deployment regularly.
- Have firewalls, or other mechanisms within the network so someone with unauthorized access cannot move laterally
- Limit user access rights to the minimum necessary to perform their job
- Have and test a robust incident response plan

Exhibit C – Part 2 Narrative guidance – Instructional Notes

Adding areas of focus in the Exhibit C table in a similar format as the procedures related to cybersecurity.

INSTRUCTION NOTE 3: Examiners may determine that cybersecurity risks are significant for the insurer under examination. This may be based on responses provided to the ITPQ, results of planning and examiner’s judgment. To ensure that the examination procedures performed include an adequate response to the insurer’s cybersecurity risk, which can affect multiple facets of the IT environment, examiners may consider performing procedures in relation to risk statements APO 1, APO 10, APO 12, DSS 02 and DSS 05. Note these risk statements and associated procedures may or may not explicitly mention the threat of cybersecurity in the language presented, but examiners should customize the procedures provided to respond to this risk as appropriate. DSS 04 covers the protection of system backups in the event of a ransomware attack. Examiners may determine that additional risks are relevant when considering cybersecurity and ransomware exposure, and should tailor their work program based on information available on the exam. Additional considerations for cybersecurity concerns are located in Section 1-III (A) of the Examination Handbook guidance, entitled “General Information Technology Review.”
### Exhibit C – Part 2 Table

**DSS 04 Risk Statement** - Inadequate continuity management may result in the inability to ensure critical business functions.

**DSS 04.07:**

<table>
<thead>
<tr>
<th>Common Controls</th>
<th>Preliminary Information Request</th>
<th>Possible Test Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>All critical backup media, documentation and other IT resources necessary for IT recovery and continuity plans are stored off-site in a secure location.</td>
<td>Provide a copy of policies and procedures relating to the backup of systems and data, including copies of recovery procedures for off-site backups and information about off-site backup locations and/or service providers.</td>
<td>Inquire and verify that data is protected and secured when taken off-site and while in transit to the storage location. Inquire and verify that the backup facilities are not subject to the same risks as the primary site. Inquire and verify that there is an air gap, or other protection mechanisms, between the company's production environment and backup systems. The air gap (whether logical or physical) should be designed in a manner that if a ransomware attack infects the company's main production systems, the immutable, offline backups could be deployed to replace the infected systems.</td>
</tr>
</tbody>
</table>

**DSS 04.08:**

| The company has procedures in place for backup and restoration of systems, applications, data and documentation that are consistent with its business requirements and continuity plan. The backup environment should be isolated, air gapped, and inaccessible from the internet so that information cannot be accessed or changed remotely. | Provide evidence that backup and storage requirements for critical systems, applications, data and related documents are periodically reviewed and aligned with risks and the continuity plan. Provide evidence that backup and storage environments are properly isolated. | Verify that critical systems, applications, data and related documents that affect business operations are periodically reviewed for alignment with the risk management model and IT service continuity plan. Verify that adequate policies and procedures for backup of systems, applications, data and documentation exist and consider factors including: 1) Frequency and age of backups. Older backups can be used in the event a newer backup copy is infected. 2) Type of backups (e.g., disk mirroring, external media, full, incremental, air gapped, immutable, offline copy, etc.). 3) Automated online backups. 4) Data types (e.g., voice, optical). 5) Creation of logs. 6) Critical end-user computing data (e.g., spreadsheets). 7) Physical and logical location of data sources. 8) Security and access rights. 9) Encryption. |

Financial Stability (E) Task Force
Virtual Meeting (in lieu of meeting at the 2021 Fall National Meeting)
December 7, 2021

The Financial Stability (E) Task Force met Dec. 7, 2021. The following Task Force members participated: Marlene Caride, Chair (NJ); Eric A. Cioppa, Vice Chair (ME); Alan McClain (AR); Ricardo Lara represented by Kim Hudson (CA); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by Philip Barlow (DC); David Altmaier represented by Ray Spudeck (FL); Doug Ommen (IA); Gary D. Anderson represented by Christopher Joyce (MA); Kathleen A. Birrane represented by Lynn Beckner (MD); Chlora Lindley-Myers represented by John Rehagen (MO); Eric Dunning represented by Justin Schrader (NE); Adrienne A. Harris represented by Bill Carmello (NY); Jessica K. Altman represented by Melissa Greiner (PA); Raymond G. Farmer represented by Michael Shull (SC); Carter Lawrence represented by Bill Huddleston (TN); Cassie Brown represented by Mike Boerner (TX); and Scott A. White represented by Thomas J. Sanford (VA).

1. **Heard Opening Remarks**

Commissioner Caride said materials for consideration and discussion for this meeting are available on the NAIC website in the Committees section under the Financial Condition (E) Committee.

2. **Adopted its Sept. 30 and Summer National Meeting Minutes**

The Task Force met Sept. 30 and took the following action: 1) adopted its 2022 proposed charges; 2) received an update on private equity; and 3) received a macroprudential risk update.

Mr. Rehagen made a motion, seconded by Superintendent Cioppa, to adopt the Task Force’s Sept. 30 (Attachment One) and July 27 (see NAIC Proceedings – Summer 2021, Financial Stability (E) Task Force) minutes. The motion passed unanimously.

3. **Heard an Update on FSOC Developments**

Superintendent Cioppa reported that President Joe Biden signed an executive order on climate-related financial risk on May 20. He summarized the Financial Stability Oversight Council’s (FSOC) responsibilities from the executive order as focusing on:

- Assessing the climate-related financial risk, including both physical and transition risks, to the financial stability of the federal government and the U.S. financial system.
- Facilitating the sharing of climate-related financial risk data and information among FSOC member agencies and other agencies.
- Including discussion of climate risk in the FSOC’s annual report to the U.S. Congress.

Superintendent Cioppa said the effort receiving the most attention is a request for FSOC to issue a special report on FSOC member agencies’ efforts to integrate consideration of climate-related financial risk in their policies and programs, including a discussion of:

- The necessity of any actions to enhance climate-related disclosures by regulated entities to mitigate climate-related financial risk to the financial system and a recommended implementation plan for those actions;
- Any current approaches to incorporating the consideration of climate-related financial risk into their respective regulatory and supervisory activities and any impediments in adopting those approaches;
- Recommended processes to identify climate-related financial risk to the financial stability of the U.S.; and
- Any other recommendations on how identified climate-related financial risk can be mitigated, including through new or revised regulatory standards.

Superintendent Cioppa added that the FSOC made some key recommendations to its member agencies with the release of this requested report on Oct. 21, including in broad terms:

- Update existing regulations to address climate risk, particularly for vulnerable populations;
- Build out staff and data resources to assess climate risk on both sides of the balance sheet;
• Develop mechanisms to share data and information between FSOC members; and
• Refine public disclosures on climate risk.

To close the report on climate activities, Superintendent Cioppa stated the FSOC is creating two internal climate-related committees to facilitate cooperation and information sharing among FSOC members and to review their collective efforts to respond to the report recommendations.

Superintendent Cioppa also reported on the increased investment in, and ownership of, life insurers by private equity firms. He noted that the Federal Insurance Office (FIO) and others have raised questions about the business model, affiliated transactions, investment transparency, fee structures, and other aspects of these enterprises, which are often driven by the low interest rate environment. He said the NAIC has focused on this area in the past but indicated renewed interest at the state and federal level. He stated that while the interest is often framed as a private equity phenomenon, the types of investments and structures are often driven by the low interest rate environment and thus are not limited to private equity ownership structures. Superintendent Cioppa supports the Macroprudential (E) Working Group’s active consideration of some oversight enhancements.

4. Received the Report of the Macroprudential (E) Working Group

Mr. Schrader reported that the Macroprudential (E) Working Group met Nov. 30 and Oct. 18 in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities or individuals) and paragraph 4 (internal or administrative matters of the NAIC or any NAIC staff) of the NAIC Statement on Open Meetings. He added that the Working Group primarily discussed private equity (PE)-owned insurers and the liquidity stress test (LST) project.

Mr. Schrader said that historically there were relatively few PE-owned insurers, so most of the state insurance regulatory response centered on relevant questions state insurance regulators should ask during the analysis and examination processes. He noted that recently, PE acquisitions of insurers have increased and, therefore, state insurance regulators’ interest in PE-owned insurers has been increasing. He said that state insurance regulators have been tracking PE concerns. However, he cautioned that complex group structures and agreements are occurring even with more traditional holding companies and that investment-related considerations may exist for any legal entity involved in specific transactions, even when affiliates and related parties are not involved.

Mr. Schrader emphasized the importance of having a single point of contact for all NAIC matters related to PE-owned insurers, which could be the Working Group since the work is addressed by its charges. He added that in this role, the Working Group would also need to monitor and maintain status information on work occurring at other committees. Mr. Schrader reported that the Working Group constructed a list of regulatory considerations related to PE-owned insurers, but he noted that the considerations are not limited to the PE ownership model, and some may even be present in stand-alone legal entity insurers.

Mr. Schrader requested that the Task Force affirm the role of the Working Group as the coordinator of considerations related to PE-owned insurers and expose an initial draft of considerations for a 30-day public comment period. He added that the Working Group will finalize the initial list of considerations and then assess each consideration to determine if further work is deemed necessary, and if so, by which NAIC committee. He suggested that if work is not already underway at other NAIC committees, a referral will be developed and sent. He said that for all such work at other committees, the Working Group’s staff support will maintain status information.

Mr. Schrader reported the Working Group reviewed the results from the recently filed 2020 LST and started discussing plans for next year’s filings. He added that the Working Group plans to reconvene the LST Study Group to begin planning the 2021 LST framework, with filings due in 2022. He said the Working Group has scheduled a regulator-to-regulator meeting in December and will schedule a meeting with industry participants in early January 2022. Mr. Schrader summarized the LST filings generally showed state insurance regulators what they expected, as follows, but with data to support those expectations:

• The insurance industry has a strong liquidity position, which helps to avert significant asset sales even in worst case scenario models.
• Insurers’ own worst-case scenarios resulted in the largest amount of modeled assets sales.
• Modeled asset sales compared to average daily trading volumes of those assets suggest minimal, if any, impact to capital markets under the most stressful scenarios, which was the primary macroprudential consideration of the LST.

Mr. Schrader noted that state insurance regulators will want to further consider these results since this was the initial LST. Mr. Schrader then made a motion, seconded by Commissioner Ommen, for the Task Force to receive the Macroprudential (E) Working Group’s report. The motion passed unanimously.
Mr. Boerner made a motion, seconded by Commissioner Ommen, for the Task Force to affirm the Macroprudential (E) Working Group as the coordinator of considerations related to private equity owners of insurers and to expose its initial draft list of considerations for a 30-day public comment period (Attachment Two). The motion passed unanimously. Subsequent to the Task Force meeting, the Chair, Commissioner Caride extended the comment period to end on Jan. 18, 2022.

5. Received the Report of the Valuation Analysis (E) Working Group

Mr. Boerner reported that in 2019, the Task Force made a request to the Valuation Analysis (E) Working Group to assess a potential concern related to economic scenario generators (ESG) developed by the American Academy of Actuaries (Academy). He stated the concern is that the ESG may be deficient by not adequately considering a very low interest rate environment, which could raise a material risk at the macroprudential level in the U.S., particularly for variable annuities. Mr. Boerner said that in the interim period until a new ESG is in place, the Task Force asked the Working Group to assess this concern and provide assurance that any issues either have been addressed or will be addressed. He summarized that an initial response by the Working Group to the Task Force was provided in November 2019 based on the Working Group’s monitoring and review of insurers representing 90% of the U.S. variable annuity (VA) business in force. He added that the Working Group’s most recent effort involved a request for insurers to perform two VA stress tests, which had the purpose to assess, at an industry level, the impact of a continuation of persistently low interest rates on VA reserves and risk-based capital (RBC). He summarized the details of the VA stress tests:

- Twenty-three insurers provided data for year-end 2020.
- For the first stress test, insurers were asked to produce the same results but replace stochastic interest rate scenarios with a prescribed deterministic interest rate scenario.
- For the second stress test, insurers were asked to repeat the calculation but replace the prescribed interest rate scenario with one defined by the insurer as being the worst moderately adverse low interest rate condition.
- The first stress test showed an increase of $6.3 billion or 13%, and the second stress test showed an increase of $5.6 billion or 12% for a base of $48.2 billion of pre-reinsurance ceded reserves for guaranteed benefits.
- The first stress test showed an increase of $1.8 billion or 24%, and the second stress test showed an increase of $1 billion or 13% for a base of $7.5 billion of RBC.

Jennifer Frasier (NAIC) said that most insurers reported that they have taken actions or are planning future actions to address interest rate risk to calculate their RBC and variable annuity reserves, such as:

- Repricing.
- Redesigning or discontinuing products.
- Changing hedging or adjusting investment strategies.
- Using a more conservative proprietary ESG.

Commissioner Caride asked if the Working Group will continue to monitor this issue until the revised ESG is in effect and provide the Task Force with updates regarding any concerns. Mr. Boerner confirmed that the Working Group will do so.

Mr. Boerner made a motion, seconded by Mr. Chou, for the Task Force to receive the report of the Valuation Analysis (E) Working Group (Attachment Three). The motion passed unanimously.

6. Heard an International Update

Tim Nauheimer (NAIC) reported that the International Association of Insurance Supervisors (IAIS) has completed the global monitoring exercise (GME) for 2021, which included analysis of data received in connection with the individual insurer monitoring (IIM) and the sector wide monitoring (SWM) exercises. He added that the IAIS has issued the summary confidential report to the Financial Stability Board (FSB). Mr. Nauheimer said for the next cycle of the GME, the IAIS may not only include additional data requests on climate and cyber-risks, but also credit risk, low interest rate environment, and PE ownership, which emerged as part of the three themes from the last GME. He stressed that the IAIS recognizes the need to strike a balance with respect to burden for insurers and supervisors by optimizing the data requested to perform the analysis. Mr. Nauheimer added the IAIS is also considering data row deletions, which the NAIC hopes will result in no additional rows on a net basis after considering all the additions and deletions as prescribed in the technical specifications. He also said the next publication of the Global Insurance Market Report (GIMAR) will focus on cyber-risk.

Mr. Nauheimer reported that the IAIS launched its second consultation on the development of liquidity metrics with comments due Jan. 23, 2022. He summarized that the latest IAIS consultation focuses on developing the Phase II approach, which uses a
company’s cash-flow projections which aligns with the NAIC’s adopted domestic approach to assessing liquidity risk. He said interested parties should provide comments prior to the Jan. 23, 2022, deadline.

Having no further business, the Financial Stability (E) Task Force adjourned.
The Financial Stability (E) Task Force met Sept. 30, 2021. The following Task Force members participated: Marlene Caride, Chair (NJ); Eric A. Cioppa, Vice Chair, represented by Vanessa Sullivan (ME); Alan McClain represented by Mel Anderson (AR); Ricardo Lara represented by Susan Bernard (CA); Andrew N. Mais represented by Kathy Belfi (CT); Karima M. Woods represented by Philip Barlow (DC); David Altmaier represented by Carolyn Morgan (FL); Doug Ommen represented by Carrie Mears (IA); Gary D. Anderson represented by John Turchi (MA); Kathleen A. Birrane represented by Lynn Beckner (MD); Eric Dunning represented by Justin Schrader (NE); Adrienne A. Harris represented by Bill Carmello (NY); Jessica K. Altman represented by Kimberly Rankin (PA); Raymond G. Farmer represented by Michael Shull (SC); Carter Lawrence represented by Trey Hancock (TN); and Cassie Brown represented by Jamie Walker (TX). Also participating were: Robert Wake (ME); and Cameron Piatt (OH).

1. **Heard Opening Remarks**

Commissioner Caride said materials for consideration and discussion for this meeting were sent by email to the member, interested state insurance regulator, and interested party distribution lists for the Task Force, but they are also available on the NAIC website in the Committees section under the Financial Condition (E) Committee.

2. **Considered Adoption of its Charges**

Mr. Carmello made a motion, seconded by Mr. Barlow, to adopt the Task Force’s charges (see NAIC Proceedings – Fall 2021, Financial Condition (E) Committee, Attachment One-D). The motion passed unanimously.

3. **Heard an Update on Private Equity**

Eric Kolchinsky (NAIC) reported that private equity (PE) firms have increasingly been intertwined with insurance companies because of low interest rates and the changing PE business model. He added that the NAIC’s Capital Markets Bureau (CMB) maintains a manually researched and constantly updated list of 177 companies owned or controlled by PE. He concluded that PE-owned companies focus far more on investing in asset-backed securities (ABS) than the insurance industry as a whole: 25% vs 10% of total bonds in 2020.

Mr. Kolchinsky summarized that concern about PE ownership of insurance companies has been broadly expressed but to be actionable, these concerns need to be translated into a specific characteristic or behavior that differentiates the PE ownership structure from other insurance companies. He suggested using a “first principles” approach to zero in on the concern and list potential next steps.

Mr. Kolchinsky said transactions of affiliates have been a key regulatory concern, but the current regulatory framework was developed in the context of stock companies and mutuals. He added that insurers may use dividends, salaries, or benefits to extract excessive value so regulations focus on the oversight of value extraction by, for example, gating dividends and salaries. He explained that unlike stock companies and mutuals, PE-owned insurance companies look to extract value via fees rather than primarily dividends or salaries. He noted that state insurance regulators review and approve affiliated transactions but cautioned that it is not clear if all appropriate PE transactions are captured.

Mr. Kolchinsky elaborated that PE-owned insurance companies seeking to generate fees are the ultimate risk taker, but the relationships between PE and the insurer are not always clear:

- 1st degree affiliates are structured vehicles, which are managed by the PE-owned company’s asset management affiliate, but it is common for PE-owned companies to report affiliate-managed collateral loan obligations (CLOs) and other structured finance products as unaffiliated.
- 2nd degree affiliates are the debt and equity of PE-owned companies held by CLOs or collateral funding obligations that are either affiliated or unaffiliated and are held by the insurer. For example, the CMB found that for one large insurer, about 70% of its CLOs hold some exposure to the PE’s portfolio companies.
In terms of next steps, Mr. Kolchinsky suggested a new definition for PE-owned insurer:

“Financial Entity Owned Insurer is a regulated insurer, which is controlled by or has a long-term investment management agreement with an entity, which:

1) Derives the majority of its revenue through the management of or investment in financial assets.
2) Is not itself a regulated insurer.
3) Has some minimum amount of assets under management.”

Mr. Kolchinsky also suggested enhanced disclosures that bolster the definition of affiliate to include entities managed by an affiliate of the Financial Entity Owned Insurer:

- Fees paid or accrued to 1st and 2nd degree affiliates.
- Assets under management of all affiliates.
- Investments where there are other relationships with 1st and 2nd degree affiliates.

Ms. Belfi said considerable work goes into approving affiliate and investment manager agreements because it is an affiliate relationship. She asked if creating an investment or charging a fee is what is not currently being captured. Mr. Kolchinsky agreed and noted that, for example, for a CLO, there is no disclosure of a contract of the asset manager’s part of the trustee as the investor, but an affiliate may be receiving fees where an insurance company is an investor in the trust.

Mr. Barlow suggested that at least a 1st degree affiliate should be captured under the Insurance Holding Company System Regulatory Act (#440), but he asked if the new definition of a PE-owned insurer should be included. Mr. Kolchinsky responded that the company studied had good reporting, but Model #440 may not capture the new definition of a PE-owned insurer.

Ms. Mears asked if there are recommendations for the Task Force. Mr. Kolchinsky responded that he is looking for feedback and then further work would be referred to the appropriate committees. Ms. Mears asked if traditional insurers that own an asset management firm would be included. Mr. Kolchinsky responded that if the insurer owns an asset management firm, that is excluded from the definition because the insurer is already regulated. Ms. Mears asked if the presentation covers the scope of the work to be done. Mr. Kolchinsky said he views the presentation as a starting point, but there needs to be an understanding of the relationships between affiliates to determine what the solutions are and if the relationships are de minimis, then maybe nothing needs to be done. Ms. Mears asked if enhanced reporting would capture the traditional insurer that owns the asset manager who sponsors a CLO. Mr. Kolchinsky responded he would be open to that if the Task Force agrees on broader disclosures.

Mr. Wake said definitions would be clearer if 1st and 2nd degree affiliates are called 2nd and 3rd degree affiliates with the understanding that 1st degree affiliate is what Model #440 already defines. He added that consideration should be given to sorting out traditional insurers from these PE-owned insurer business models by defining the kind of transactions in an officially neutral way to determine the activities of asset management that are problematic and those that are not, rather than just looking if the controlling entity happens to be a financial entity. He suggested screening out traditional insurance activities that are not problematic through careful definitions and de minimis standards. He concluded that a traditional insurer that adopts some of those problematic practices could be included, but a PE-owned insurer that behaves like a traditional insurer could be excluded. Mr. Kolchinsky agreed.

Mr. Piatt said some state insurance regulators may have been on the Sept. 29 call regarding referral of the multistate NAIC Uniform Certificate of Authority Application (UCAA), known as Form A, when a PE-owned insurer wants to acquire an insurer. He added that the definition of a PE-owned insurer in that context is different. He asked for clarification of the definition. Mr. Kolchinsky responded that defining is a difficult task, but the focus is on fee generation.

Commissioner Caride said Todd Sells (NAIC) will receive all emails with respect to feedback to Mr. Kolchinsky’s presentation from members and interested parties.

4. **Heard a Macroprudential Risk Assessment Update**

Tim Nauheimer (NAIC) reported that the International Association of Insurance Supervisors (IAIS) has completed a large component of the global monitoring exercise (GME), which included analysis of data received in connection with the individual
insurer monitoring (IIM) and the sector wide monitoring (SWM) exercises. He added that several firms were identified for follow-up action, which included a questionnaire sent to the group wide supervisor. He said the IAIS plans to release the next draft of the public consultation on liquidity metrics in mid-November, which utilizes a company’s cash flow projections and more aligns with the NAIC’s approach to assessing liquidity risk.

Mr. Nauheimer reported that reminders were sent to lead states of the insurers in scope of the NAIC’s liquidity stress test in the event lead states wanted to follow up with their insurers’ filings due Sept. 30. He added that NAIC staff will compile submitted data from lead states and present them to the Macroprudential (E) Working Group. He said the Working Group will continue to develop the risk assessment framework, and a small drafting group of NAIC staff has been established to address the risk assessment details and finalize a proof of concept of the risk dashboard. The Working Group plans to use existing aggregated company data filed with the NAIC and public sources to conduct a risk assessment. The Working Group will have a call on Oct. 18 to receive the first version of the risk dashboard, and it hopes to have a first draft submitted for input by the Task Force later this year.

Stephen Broadie (American Property Casualty Insurance Association—APCIA) asked if the Oct. 18 Working Group call will be open or closed. Mr. Nauheimer responded that the initial call will be closed to get the framework for the risk dashboard in place, but some subsequent calls at the Task Force will be open.

Martin Mair (MetLife) asked what role the chief risk officer (CRO) council will play with respect to the development of the risk dashboard. Mr. Nauheimer responded that NAIC staff reached out to the CRO council for initial feedback on the risk dashboard, but he expects that NAIC staff will reach out again to collaborate.

Having no further business, the Financial Stability (E) Task Force adjourned.
Regulatory Considerations Applicable (But Not Exclusive) to Private Equity (PE) Owned Insurers

A summary of currently identified regulatory considerations follows with no consideration of priority or importance (green underlined font indicates current or completed work by another NAIC committee group). Most of these considerations are not limited to PE owned insurers and are applicable to any insurers demonstrating the respective activities.

1. Regulators may not be obtaining clear pictures of risk due to holding companies structuring contractual agreements in a manner to avoid regulatory disclosures and requirements. Additionally, affiliated/related party agreements impacting the insurer’s risks may be structured to avoid disclosure (for example, by not including the insurer as a party to the agreement).

2. Control is presumed to exist where ownership is >=10%, but control considerations may exist with less than 10% ownership. For example, a party may exercise a controlling influence over an insurer through Board and management representation or contractual arrangements, including non-customary minority shareholder rights or covenants, investment management agreement (IMA) provisions such as onerous or costly IMA termination provisions, or excessive control or discretion given over the investment strategy and its implementation.

3. The material terms of the IMA and whether they are arm’s length—including the amount and types of investment management fees paid by the insurer, the termination provisions (how difficult or costly it would be for the insurer to terminate the IMA) and the degree of discretion or control of the investment manager over investment guidelines, allocation, and decisions.

4. Owners of insurers may be focused on short-term results which may not be in alignment with the long-term nature of liabilities in life products. For example, excessive investment management fees paid to an affiliate of the owner of an insurer may effectively act as a form of unauthorized dividend in addition to reducing the insurer’s overall investment returns. Similarly, owners of insurers may not be willing to transfer capital to a troubled insurer.

5. Operational, governance and market conduct practices being impacted by the different priorities and level of insurance experience possessed by entrants into the insurance market without prior insurance experience, including, but not limited to, PE owners. For example, a reliance on TPAs due to the acquiring firm’s lack of expertise may not be sufficient to administer the business. Such practices could lead to lapse, early surrender, and/or exchanges of contracts with in-the-money guarantees and other important policyholder coverage and benefits.

6. No uniform or widely accepted definition of PE and challenges in maintaining a complete list of insurers’ material relationships with PE firms. (UCAA [National Treatment WG] dealt with some items related to PE.) This definition may not be required as the considerations included in this document are applicable across insurance ownership types.

7. The lack of identification of related party-originated investments (including structured securities). For example, this may create potential conflicts of interests and excessive and/or hidden fees in the portfolio structure. Assets created and managed by affiliates may include fees at different levels of the value chain. Regulatory disclosures may be required to identify underlying related party/affiliated investments and/or collateral within structured security investments. (An agenda item and blanks proposal are being developed by SAPWG.)

8. Though the blanks include affiliated investment disclosures, it is not easy to identify underlying affiliated investments and/or collateral within structured security investments.

9. Broader considerations exist around asset manager affiliates (not just PE owners) and disclaimers of affiliation avoiding current affiliate investment disclosures. (A new Sc Y, Pt 3, has been adopted and will be in effect for year-end 2021. This schedule will identify all entities with greater than 10%...
ownership – regardless of any disclaimer of affiliation - and whether there is a disclaimer of control/disclaimer of affiliation. It will also identify the ultimate controlling party. Additionally, SAPWG is developing a proposal to revamp Schedule D reporting, with primary concepts to determine what reflects a qualifying bond and to identify different types of investments more clearly, including asset-backed securities.)

10. The material increases in privately structured securities (both by affiliated and non-affiliated asset managers), which introduce other sources of risk or increase traditional credit risk, such as complexity risk and illiquidity risk, and involve a lack of transparency. (The NAIC Capital Markets Bureau continues to monitor this and issue regular reports, but much of the work is complex and time-intensive with a lot of manual research required. The NAIC Securities Valuation Office will begin receiving private rating rationale reports in 2022; these will offer some transparency into these private securities.)

11. The level of reliance on rating agency ratings and their appropriateness for regulatory purposes (e.g., accuracy, consistency, comparability, applicability, interchangeability, and transparency). (VOSTF has previously addressed and will continue to address this issue.)

12. The trend of life insurers in pension risk transfer (PRT) business and supporting such business with the more complex investments outlined above (LATF has exposed questions aimed at determining if an Actuarial Guideline is needed to achieve a primary goal of ensuring claims-paying ability even if the complex assets (often private equity-related) did not perform as the company expects, and a secondary goal to require stress testing and best practices related to valuation of non-publicly traded assets. Additionally, enhanced reporting in 2021 Separate Accounts blank will specifically identify assets backing PRT liabilities.) Considerations have also been raised regarding the RBC treatment of PRT business.
   a. Review applicability of Department of Labor protections resulting for pension beneficiaries in a PRT transaction.
   b. Review state guaranty associations’ coverage for group annuity certificate holders (pension beneficiaries) in receivership compared to Pension Benefit Guaranty Corporation (PBGC) protection.

13. Insurers’ use of offshore reinsurers (including captives) and complex affiliated sidecar vehicles to maximize capital efficiency and introduce complexities into the group structure.

From: Mike Boerner, Chair of the Valuation Analysis (E) Working Group  
Date: December 7, 2021  
Re: Response to Request from the Financial Stability (E) Task Force

I. Executive Summary

In 2019, the Financial Stability (E) Task Force (FSTF) made a request to the Valuation Analysis (E) Working Group (VAWG) to assess a potential concern related to Economic Scenario Generators (ESGs) developed by the American Academy of Actuaries (Academy). It was suggested that there is a deficiency in the current ESG in that it doesn’t adequately consider a very low or negative interest rate environment, and more specifically that this raises a material risk at the macro prudential level in the U.S., particularly for variable annuities. To allay any concerns during the interim period until a new ESG is in place, the FSTF asked the VAWG to assess this concern and provide assurance that any issues either have been addressed, or will be able to be addressed.

An initial response was provided to the FSTF on November 27, 2019 (see Appendix A) based on the VAWG’s monitoring and review of companies representing over 90% of the U.S. variable annuity (VA) business inforce. Since then, the VAWG has continued to assess the materiality of variable annuity interest rate risk and the approaches companies have taken to measure and manage it. The most recent effort involved a request for the companies to perform two stress tests for disclosure (VA Stress Tests). The purpose was to assess, at an industry level, the impact of a continuation of persistently low interest rates on VA reserves and risk-based capital. This report provides details and key findings from the VA Stress Tests as well as an update on the development of the new ESG.

For both of the VA Stress Tests, the company’s actual reserves and risk-based capital as of 12/31/2020 were used as a baseline for comparison. For Stress Test #1, companies were asked to produce the same results, but replace the stochastic interest rate scenarios with a prescribed deterministic interest rate scenario. For Stress Test #2, companies were asked to repeat the calculation, but replace the prescribed deterministic scenario with one defined by the company as being the worst moderately adverse low interest rate condition.

For 23 companies combined, the baseline for pre-reinsurance ceded guaranteed benefit reserves plus risk-based capital was $55.7 billion. Stress Test #1 produced a total of $63.8 billion, an increase of $8.1 billion (15%). The result was similar for Stress Test #2, which produced an increase of $6.6 billion (12%). For additional context, this compares to the entire life and annuity sector’s capital and surplus of $451 billion as of 12/31/20.

Separating out the reserve and risk-based capital impacts, the results are as follows. In total, the baseline for the pre-reinsurance ceded reserves for guaranteed benefits was $48.2 billion, with Stress Test #1 showing an increase of $6.3 billion (13%) and Stress Test #2 showing an increase of $5.6 billion (12%). The total baseline for risk-based capital was $7.5 billion, with Stress Test #1 showing an increase of $1.8 billion (24%) and Stress Test #2 showing an increase of $1.0 billion (13%).

Most companies have taken actions or are planning future actions to address interest rate risk, such as: repricing, redesigning, or discontinuing products; changing hedging or adjusting investment strategies; or using a more conservative proprietary ESG. These actions provide a level of assurance that companies are addressing the impact of persistently low interest rates. The VAWG plans to continue to track this concern and, as appropriate, will provide referrals to domestic state regulators for additional review and follow-up of individual companies.

The implementation of a new ESG is in progress. An ESG Drafting Group is developing recommendations for ESG objectives and resulting ESG scenarios for the Life Actuarial (A) Task Force (LATF) to consider.
II. VA Stress Tests

A. Background

Variable Annuity writers that represent over 90% of the U.S. variable annuity business inforce were contacted in December 2020 and asked to perform two stress tests for disclosure by 3/31/2021. The purpose of the tests was for VAWG to assess, at an industry level, the impact of a continuation of persistently low interest rates on variable annuity reserves and risk-based capital.

B. Stress Test Instructions

Companies were asked to perform two stress tests according to the following instructions:

After calculating 12/31/2020 variable annuity reserves and risk-based capital as normal, repeat the calculations, replacing the stochastic interest rate scenarios with a single deterministic interest rate scenario.

Interest rate dependent scenarios under the VM-21 framework (e.g., bond fund returns, money market returns) should be adjusted to align with this deterministic interest rate scenario, but all other components of the modeling should remain the same (e.g., the same stochastic equity scenarios, investment strategy, clearly defined hedging strategy modeling, etc. should be used for the stress test).

Stress Test #1 (Regulator defined):
Start with the U.S. Treasury yield curve as of 12/31/20. Assume this Treasury curve remains level for the first 5 years of the projection period, and then has annual parallel shifts by the amount of max [0, (1.5% - T0)/5] in years 6-10 where T0 denotes the 10-year Treasury rate as of 12/31/20. Assume that the yield curve remains level thereafter.

<table>

<tr>
<td>T0*</td>
<td>0.93%</td>
<td>1.044%</td>
<td>1.158%</td>
<td>1.272%</td>
<td>1.386%</td>
<td>1.5%</td>
</tr>
</tbody>
</table>

Stress Test #2 (Company defined):
The deterministic scenario should represent the worst moderately adverse low interest rate condition the company believes it would need to pass, starting with the U.S. Treasury yield curve as of 12/31/20 and developing afterwards in a way the company feels is appropriate. This may include either parallel or non-parallel shifts of the yield curve. Companies were asked to provide a complete description of the stress test used.

C. Summary of Results for Stress Test #1

Results for Stress Test #1 were calculated in comparison to a baseline of actual reserves and risk-based capital at year-end 2020. Shown below, for all surveyed companies combined, is the increase in total reserves for guaranteed benefits (which excludes the cash surrender value) plus risk-based capital over the baseline.

<table>
<thead>
<tr>
<th></th>
<th>Baseline</th>
<th>Increase over Baseline</th>
<th>% Increase over Baseline</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pre-Reinsurance Ceded Reserve for Guaranteed Benefits</td>
<td>$48.2 B</td>
<td>$6.3 B</td>
<td>13%</td>
</tr>
<tr>
<td>Risk-Based Capital</td>
<td>$7.5 B</td>
<td>$1.8 B</td>
<td>24%</td>
</tr>
<tr>
<td>Total</td>
<td>$55.7 B</td>
<td>$8.1 B</td>
<td>15%</td>
</tr>
</tbody>
</table>
Looking at the Reserve for Guaranteed Benefits at the company level, the results ranged from a 500% increase to a 20% decrease.
- Approximately 35% of the companies showed more than a 20% increase over baseline
- Approximately 40% of the companies showed an increase over baseline of 0% to 20%
- Approximately 25% of the companies showed a decrease from the baseline

Many companies provided comments to explain the stress test results. Companies that reported reserve increases gave reasons such as increased hedge costs, decreased investment yields, and higher claims. Companies that reported reserve decreases gave reasons such as using a proprietary ESG for baseline/actual that produced a more conservative result than the stress test, reflecting an increased hedge benefit, and producing improvements based on asset/liability management strategies.

At the company level, changes to Risk-Based Capital ranged from a 120% increase to a 20% decrease.
- Approximately 30% of the companies showed no change
- Approximately 50% of the companies showed an increase
- Approximately 20% of the companies showed a decrease

D. Summary of Results for Stress Test #2

Results for Stress Test #2 were calculated in comparison to a baseline of actual reserves and risk-based capital at year-end 2020. Shown below, for all surveyed companies combined, is the increase in total reserves for guaranteed benefits (which excludes the cash surrender value) plus risk-based capital over the baseline.

<table>
<thead>
<tr>
<th></th>
<th>Baseline</th>
<th>Increase over Baseline</th>
<th>% Increase over Baseline</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pre-Reinsurance Ceded Reserve for Guaranteed Benefits</td>
<td>$48.2 B</td>
<td>$5.6 B</td>
<td>12%</td>
</tr>
<tr>
<td>Risk-Based Capital</td>
<td>$7.5 B</td>
<td>$1.0 B</td>
<td>13%</td>
</tr>
<tr>
<td>Total</td>
<td>$55.7 B</td>
<td>$6.6 B</td>
<td>12%</td>
</tr>
</tbody>
</table>

Looking at the Reserve for Guaranteed Benefits at the company level, the results ranged from a 250% increase to a 60% decrease.
- Approximately 35% of the companies showed more than a 20% increase over baseline
- Approximately 45% of the companies showed an increase over baseline of 0% to 20%
- Approximately 20% of the companies showed a decrease from the baseline

Stress Test #2 allowed companies to select their own moderately adverse deterministic interest rate scenario. Companies had a wide range of views on what they considered to be the worst moderately adverse, and took a variety of approaches for performing Stress Test #2. These included:
- Assuming level interest rates throughout the projection period
- Using same design as Stress Test #1 but grading to a different long-term rate
- Grading to ultimate interest rate with parallel shift to other points on the treasury curve
- Using non-parallel yield curve shifts
- Setting stress test to produce results similar to the baseline, implying a view that the baseline was the worst moderately adverse

At the company level, changes to Risk-Based Capital ranged from a 100% increase to a 20% decrease.
- Approximately 30% of the companies showed no change
- Approximately 30% of the companies showed an increase
- Approximately 40% of the companies showed a decrease
E. Summary of Actions to Address Risk of Continued Low Interest Rates

Companies were asked, “If interest rates remain low for the next 15-20 years, what, if anything, would your company consider doing differently?” Companies provided open-ended responses that addressed actions already taken as well as potential future actions. A categorized summary of qualitative responses from 24 companies is shown below. (Note that 23 companies were used for the quantitative analysis, as disclosed in the Executive Summary. Due to a special case exception, one company was included in the qualitative count but not the quantitative count.)

III. Update on the Economic Scenario Generator

The implementation of a new ESG is in progress. An ESG Drafting Group, consisting of LATF members, Life Risk-Based Capital (E) Working Group members, the selected ESG vendor (Conning), Academy and ACLI representatives, and subject matter experts, is developing recommendations for calibrating the ESG. An industry field test is planned prior to finalizing the calibration. Ultimately, Valuation Manual amendments and RBC instruction changes will be necessary to incorporate prescription of the new ESG.
IV. Appendix A (Prior Report)

To: Commissioner Marlene Caride, Chair of the Financial Stability (EX) Task Force  
From: Mike Boerner, Chair of the Valuation Analysis (E) Working Group  
Date: November 27, 2019  
Re: Response to Request from the Financial Stability (EX) Task Force

Executive Summary

On 6/17/19, you made a request to the Valuation Analysis (E) Working Group (VAWG) to assess a potential concern related to Economic Scenario Generators (ESGs) developed by the American Academy of Actuaries (Academy). These ESGs are currently prescribed (or encouraged) for the following calculations: (1) Risk-Based Capital for Variable Annuities (C-3 Phase II) and certain annuities or single premium life insurance products (C-3 Phase 1); (2) Statutory Reserves for Variable Annuities (Actuarial Guideline 43 and VM-21 of the Valuation Manual); and (3) Statutory Reserves for Life & Variable Life Insurance (VM-20 of the Valuation Manual). One insurer suggested that there is a deficiency in the current ESG in that it doesn’t adequately consider a very low or negative interest rate environment, and more specifically that this raises a material risk at the macro prudential level in the U.S., particularly for variable annuities.

The Life Actuarial (A) Task Force (LATF) has begun a process to replace the Academy ESGs. However, to allay any concerns during the interim period until a new ESG is in place, you requested that the VAWG assess this insurer’s concern and provide assurance that any issues either have been addressed, or will be able to be addressed.

To assess the concern during the interim period (which is expected to be several years), the VAWG sent an information request to companies representing over 90% of the U.S. variable annuity business inforce. The responses indicate that overall, companies are aware of the significance of variable annuity interest rate risk, and have taken various actions to measure and manage it. However, there were findings for individual companies that will require further review and follow-up. The VAWG also sees a need for continued monitoring via coordinated reviews of companies’ future variable annuity filings, similar to those currently performed for LTC AG51 reports and the VM-31 Life PBR Actuarial Reports.

The VAWG plans to take the following actions to provide assurance that any issues regarding companies’ variable annuity interest rate risk will be addressed: 1) Questions regarding findings of concern and informational questions for individual companies will be developed, for referral to domestic state regulators for review and follow-up; 2) A communication will be sent to state regulators to alert them to the concern raised regarding interest rate risk for variable annuities, and to encourage them to focus on this as they assess risks, conduct financial reviews, and review companies’ asset adequacy testing; 3) A recommendation will be made to review and consider enhancements to the Financial Condition Examiner’s Handbook to address review of proprietary ESGs used for hedging and other purposes; and 4) A coordinated review of the VM-31 Variable Annuity PBR Actuarial Reports and C3 Phase II reports will be performed for all early adopters of the new variable annuity framework for reserves and capital. The framework becomes mandatory for all inforce business in 2020. However, companies may elect to early adopt as of 12/31/19.

This report provides key findings from the information request, including materiality of variable annuity interest rate risk and the approaches companies have taken to measure and manage it. The report concludes with information on current usage of the Academy ESGs, the status of the RFP for a new ESG, and the potential length of the interim period before the new ESG will be implemented.
Industry VA Information Request

To assess the concern raised regarding variable annuity interest rate risk in the interim period before a new ESG is implemented, an information request was sent to 24 companies representing over 90% of the U.S. variable annuity business inforce. Companies were asked to provide the following information:
2. A discussion on how the company is addressing the risks to variable annuities from an extended period of low interest rates, including commentary on actions taken and planned beyond the use of the Academy ESG, if applicable. As part of this discussion companies were asked to include: a) a description of the types of guarantees provided on their variable annuities; b) information on how the company measures and manages interest rate risk from variable annuities and associated guarantees; and c) an assessment of the materiality of this risk to the company.

Key Findings

Summarized below are some of the key findings from the VAWG’s review of industry responses.

Types of Guarantees Provided on Variable Annuities

Nearly all companies offered a Guaranteed Minimum Death Benefit (GMDB) on their products. Most companies also offered one or more of the following types of guaranteed living benefits:
- Guaranteed Minimum Income Benefit (GMIB)
- Guaranteed Minimum Withdrawal Benefit (GMWB)
- Guaranteed Minimum Accumulation Benefit (GMAB)
- A fixed account with or without a market value adjustment, with a guaranteed minimum interest rate

Materiality of Interest Rate Risk

The vast majority of companies acknowledged that interest rate risk from VA guarantees represents a material risk for their company. For the few remaining companies, this risk was not viewed as material either because the VA block represents a relatively small percentage of total inforce business, or because the risk was completely or largely transferred to a reinsurer.

Measurement and Management of Interest Rate Risk

ESGs produce stochastic interest rate scenarios which are used to measure and manage risk. However, ESGs are not the only tools used for this purpose. Pre-defined deterministic scenarios, such as the NY7 scenarios commonly used in asset adequacy testing, can be effective as well. Many companies also monitor earnings volatility (e.g. economic, Statutory, GAAP).

The vast majority of companies have a hedging program in place to manage interest rate risk, and typically other risks as well, such as equity risk. Many of these companies have a Clearly Defined Hedging Strategy, meaning that specific criteria defined in the Valuation Manual have been met. Some companies noted that they have recently made changes to their hedging approach, such as increasing the amount of interest rate hedging.

Some companies disclosed the results of their hedging programs and reported high hedge effectiveness. This information was not specifically requested and was not provided by most companies.

Nearly all companies with a hedging program indicated that they do not rely on the Academy ESGs for hedging. Proprietary ESGs are commonly used for this, as well as other purposes (e.g. economic capital, and day-to-day risk management).
Management Actions

In addition to the activities mentioned above, many companies have taken actions to further address interest rate risk. Actions cited in the survey include but are not limited to those listed below.

- Discontinuing sales - About a third of the companies surveyed are no longer selling variable annuities. Of those currently issuing new business, some have discontinued sales of one or more of their guaranteed living benefits.
- Lowering the guaranteed minimum interest rates offered on fixed accounts for new sales, or discontinuing fixed accounts altogether
- De-risking guaranteed living benefits, e.g. by adjusting fees and/or benefits
- Offering a lump sum to certain contract holders in exchange for termination of a guaranteed living benefit
- Some companies hold additional reserves beyond the minimum requirements

Use of Academy ESGs for Statutory Reserves and Capital

Nearly all companies provided information on the type of ESG used in calculating 2018 statutory reserves and capital. Approximately 75% used an Academy ESG, with or without modifications. Of these companies, many used the Academy VM-20 ESG, which will be prescribed in 2020 under the new VA framework. Some used an older Academy C-3 Phase 1 ESG, which has a higher, less conservative long-term interest rate assumption. However, some companies adjusted this assumption to bring it closer to that used in the Academy VM-20 ESG. Other companies did not specifically state which Academy ESG they used. The remaining 25% of the companies used a proprietary ESG, and about half of these appear to be more conservative than the Academy VM-20 ESG. Companies may continue to use these ESGs under the new VA framework, since the Academy VM-20 ESG is prescribed as the minimum standard.

ESG RFP Status and Potential Length of Interim Period

The process of implementing a new ESG is expected to take several years. There is agreement that the Academy ESGs must be replaced and that various enhancements will be necessary, including adequate consideration of a prolonged low interest rate environment. However, many steps will be needed prior to implementation, since the intent is to consider prescribing the new ESG for all of the calculations noted in the first paragraph of this report.

Progress has been made on this initiative. At the time of your request to the VAWG, an informal subgroup of LATF was considering various alternatives to replace the Academy ESGs. On 7/16/19, an open meeting of the Life RBC Working Group (LRBC WG) and LATF was held to discuss the alternatives, and a request was made that NAIC staff move forward with the RFP process to select an ESG vendor to develop and maintain a new prescribed ESG.

A group consisting of regulators, NAIC staff, Academy representatives, and other industry subject matter experts has been formed and has met several times to work on a draft RFP. The target timeframe for completion is Q1, 2020, although it may take longer. The RFP will then need to be adopted by LATF and the Life Insurance and Annuities (A) Committee and presented to the NAIC Executive (EX) Committee for final approval, including a request for appropriate funding. The NAIC will then issue the RFP, and submissions will be reviewed based upon weighted criteria as specified within the issued RFP. A recommendation for award will then be submitted to the NAIC Executive (EX) Committee for final approval.

Once an ESG vendor has been selected, implementation of the ESG will require additional steps such as the following: 1) consideration and adoption of any potential ESG parameter modifications desired by regulators; 2) an impact study to assess the results; 3) drafting, exposure, and adoption of any Valuation Manual amendments and RBC instruction changes necessary to incorporate prescription of the new ESG; 4) documentation on the ESG methodology and parameters; and 5) training on the use of the ESG. This entire process is expected to be completed no sooner than 2022 (i.e. effective for the 2022 Valuation Manual).

Mais represented by Jared Kosky (CT); David Altmaier represented by Toma Wilkerson (FL); Colin M. Hayashida represented by Patrick P. Lo (HI); Doug Ommen represented by Kim Cross (IA); Dana Popish Severinghaus represented by Kevin Baldwin (IL); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Bill Clark (KY); Gary D. Anderson represented by Christopher Joyce (MA); Eric Cioppa represented by Randall Gregg (ME); Anita G. Fox represented by Jackie Obusek (NC); Chlora Lindley-Myers represented by Shelley Forrest (MO); Glen Mulready represented by Donna Wilson (OK); Mike Causey represented by Laura Lyon Slaymaker (PA); Elizabeth Kelleher Dwyer represented by Matt Gendron (RI); and Johnathan T. Pike represented by Jake Garn (UT).

1. **Adopted its Oct. 21 Minutes**

Mr. Riewe said the Task Force met Oct. 21 and took the following action: 1) adopted its Summer National Meeting minutes; 2) exposed a referral to the Financial Regulation Standards and Accreditation (F) Committee regarding receivership amendments to the *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) for a 30-day public comment period ending Nov. 22; 3) exposed a draft memorandum to state insurance departments on receivership and guaranty fund laws for a 30-day public comment period ending Nov. 22; and 4) heard an update on international resolution activities.

Ms. Obusek made a motion, seconded by Ms. Wilkerson, to adopt the Task Force’s Oct. 21 minutes (Attachment One). The motion passed unanimously.

2. **Adopted a Referral to the Financial Regulation Standards and Accreditation (F) Committee**

Mr. Riewe said the Executive (EX) Committee and Plenary adopted the receivership revisions to Model #440 and Model #450 at the Summer National Meeting. During its Oct. 21 meeting, the Task Force exposed for a referral to the Financial Regulation Standards and Accreditation (F) Committee recommending the receivership revisions be “Acceptable, but Not Required” to be adopted by states under Part A Standards, rather than identifying “substantially similar” provisions that would be required for a 30-day public comment period ending Nov. 22. No comments were received.

Ms. Slaymaker made a motion, seconded by Ms. Wilkerson, to adopt the referral to be sent to the Financial Regulation Standards and Accreditation (F) Committee (Attachment Two). The motion passed unanimously.

3. **Adopted a Memorandum to State Insurance Departments**

Mr. Riewe said when the Task Force adopted the final recommendations from the Macroprudential Initiative (MPI), it had identified several provisions of receivership law that were considered important to a multi-jurisdictional receivership. These are provisions for which all states should consider reviewing their laws and potentially make updates. During its Oct. 21 meeting, the Task Force exposed a draft memorandum to state insurance departments encouraging them to consider a review of their laws and adopt updates, including these provisions, the Model #440 and Model #450 receivership amendments, recently adopted guidelines, and the 2017 amendments to the *Life and Health Insurance Guaranty Association Model Act* (#520) for a 30-day public comment period ending Nov. 22.

Mr. Riewe said one comment was received from the National Organization of Life and Health Insurance Guaranty Association (NOLHGA) requesting a correction to the paragraph on “Conflict of Law” (Attachment Three). Mr. Riewe and Mr. Baldwin agreed with NOLHGA’s proposed change.

Ms. Wilson made a motion, seconded by Mr. Kaumann, to adopt the memorandum with the edits from NOLHGA (Attachment Four). The motion passed unanimously.

Ms. Wilkerson said the Receivership Financial Analysis (E) Working Group met Nov. 15, in lieu of the Fall National Meeting, in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss companies in receivership.

Ms. Wilkerson made a motion, seconded by Mr. Kaumann, to adopt the report of the Receivership Financial Analysis (E) Working Group. The motion passed unanimously.

5. **Adopted the Report of the Receiver’s Handbook (E) Subgroup**

Mr. Baldwin said the Receiver’s Handbook (E) Subgroup met Nov. 18 to expose revisions to Chapter 1 and Chapter 2 of the *Receiver’s Handbook for Insurance Company Insolvencies* (Handbook) for a 30-day public comment period ending Dec. 20. The Subgroup is currently working on revisions to the other chapters of the Handbook.

Ms. Wilkerson made a motion, seconded by Ms. Slaymaker, to adopt the report of the Receiver’s Handbook (E) Subgroup (Attachment Five). The motion passed unanimously.

6. **Heard an Update on Federal Activities**

Patrick Celestine (NAIC) said the NAIC’s proposed State Insurance Receivership Priority (SIRP) Act establishes a claim filing deadline in the Federal Priority Act (FPA) for the U.S. Department of Justice (DOJ) to file claims of the U.S. to insolvent insurance company estates and to ensure state insurance regulators are not held personally liable if claims of the government are not paid first. The Government Relations (EX) Leadership Council approved the SIRP Act in April. Several members of the Task Force and NAIC staff are working with U.S. Rep. Madeleine Dean’s office to finalize edits to the SIRP Act. Rep. Dean’s office plans to introduce the SIRP Act despite the objections that the DOJ has expressed. It is expected to be introduced to the U.S. House of Representatives in early 2022.

Having no further business, the Receivership and Insolvency (E) Task Force adjourned.

[https://naiconline.sharepoint.com/w/r/sites/NAICSupportStaffHub/Member%20Meetings/Fall%202021/TF/Receivership/RITF_Minutes113021%20final.docx?d=wdfeb5d0316d4a38ac599eab87f02a86&csf=1&web=1&e=4CG5p](https://naiconline.sharepoint.com/w/r/sites/NAICSupportStaffHub/Member%20Meetings/Fall%202021/TF/Receivership/RITF_Minutes113021%20final.docx?d=wdfeb5d0316d4a38ac599eab87f02a86&csf=1&web=1&e=4CG5p)
The Receivership and Insolvency (E) Task Force met Oct. 21, 2021. The following Task Force members participated: Cassie Brown, Chair, represented by Brian Riewe (TX); James J. Donelon, Vice Chair (LA); Peni Itula Sapini Teo represented by Elizabeth Perri (AS); Michael Conway and Rolf Kaumann (CO); Andrew N. Mais represented by Jared Kosky (CT); David Altmaier represented by Toma Wilkerson (FL); Colin M. Hayashida represented by Patrick P. Lo (HI); Doug Ommen represented by Kim Cross (IA); Dana Popish Severyinghaus represented by Kevin Baldwin (IL); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Bill Clark (KY); Gary D. Anderson represented by Christopher Joyce (MA); Eric A. Cioppa represented by Robert Wake (ME); Anita G. Fox represented by Randall Gregg (MI); Chlora Lindley-Myers and Shelley Forrest (MO); Mike Causey represented by Jackie Obusek (NC); Eric Dunning and Justin Schrader (NE); Russell Toal represented by Victoria Baca (NM); Glen Mulready represented by Donna Wilson (OK); Jessica K. Altman represented by Laura Lyon Slaymaker (PA); Elizabeth Kelleher Dwyer represented by Matt Gendron (RI); Raymond G. Farmer represented by Michael Shull (SC); and Johnathan T. Pike (UT).

1. **Adopted its Summer National Meeting Minutes**

Mr. Riewe said the Task Force met July 27 in lieu of the Summer National Meeting. Ms. Wilkerson made a motion, seconded by Mr. Baldwin, to adopt the Task Force’s July 27 minutes (see [NAIC Proceedings – Summer 2021, Receivership and Insolvency (E) Task Force](#)). The motion passed unanimously.

2. **Exposed a Draft Referral to the Financial Regulation Standards and Accreditation (F) Committee**

Mr. Riewe said the Executive (EX) Committee and Plenary adopted the receivership revisions to the *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) at the Summer National Meeting. As the Task Force and its working group were responsible for drafting these model revisions, the Task Force will need to send a referral recommending the Part A Standard that should be considered by the Financial Regulation Standards and Accreditation (F) Committee. Part A standards are those laws and regulations that are required to ensure a state has authority to regulate financial solvency of insurers.

Mr. Riewe said the Task Force sought the input of members to draft an initial recommendation. With one exception, the feedback received was in favor of recommending that the revisions be acceptable, but not required to be adopted by states, rather than identifying substantially similar provisions that would be required. Since there were other revisions to these models for group capital and liquidity stress testing, states are hopefully considering all the model revisions together on their merits and the benefits to receiverships regardless of accreditation requirements. Mr. Wake said while he would like to see more substantive accreditation standards for receivership and insolvency, it is an excellent referral.

Hearing no objections, the draft referral was released for a 30-day public comment period ending Nov. 22.

3. **Exposed a Draft Memorandum to State Insurance Departments**

Mr. Riewe said when the Task Force adopted the final recommendations from the Macroprudential Initiative (MPI), it had identified several provisions of receivership law that were considered important to a multi-jurisdictional receivership. These are provisions for which all states should consider reviewing their laws and potentially making updates. This included conflicts of law, continuation of coverage, priority of distribution, full faith, and credit on stays and injunctions. In addition to those, the NAIC has adopted the receivership revisions to Model #440 and Model #450 and adopted the new *Guideline for Administration of Large Deductible Policies in Receivership* (#1980) and *Guideline for Definition of Reciprocal State in Receivership* (#1985). Lastly, while 34 states have adopted those 2017 revisions to the *Life and Health Insurance Guaranty Association Model Act* (#520), the memorandum reminds state insurance departments to consider adoption. The draft memorandum is intended to encourage states to consider a review of their laws and adopt updates. The memorandum is concise and may be used as a starting point for discussion with each state insurance department’s legal or legislative liaison staff. Any volunteers willing to speak at zone meetings could use this memorandum as talking points for those discussions.

Hearing no objections, the draft memorandum was released for a 30-day public comment period ending Nov. 22.

© 2021 National Association of Insurance Commissioners
4. **Heard an Update on International Resolution Activities**

Mr. Wake said the International Association of Insurance Supervisors (IAIS) Resolution Working Group adopted the *Application Paper on Resolution Powers and Planning*. The Working Group began work on an application paper on policyholder protection schemes. Mr. Wake said the U.S. is undergoing a targeted jurisdictional assessment regarding the holistic framework, which includes an assessment of resolution and crisis management.

Having no further business, the Receivership and Insolvency (E) Task Force adjourned.
On August 17, 2021, the NAIC Executive (EX) Committee and Plenary unanimously adopted revisions to the NAIC Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). The revisions help ensure efficient coordination with affiliates and to enforce the continuation of essential services by an affiliate to an insurer in the event of insolvency.

These revisions were drafted by the Receivership Law (E) Working Group under charges assigned by the Receivership and Insolvency (E) Task Force. These revisions, referred to as the “receivership revisions” do not include recent revisions to Models #440 and #450 for group capital calculation or liquidity stress test. The receivership revisions address the continuation of essential services through affiliated intercompany agreements with an insurer that is placed into receivership by: 1) bringing affiliate service providers deemed “integral” or “essential” to an insurer’s operations under the jurisdiction of a rehabilitator, conservator, or liquidator for purposes of interpreting, enforcing, and overseeing the affiliate’s obligations under the service agreement and give the commissioner authority to require that “integral” or “essential” affiliate service providers consent to such jurisdiction; 2) further clarifying the ownership of data and records of the insurer that are held by the affiliate; and 3) clarifying that premiums of the insurer held by the affiliate are the property of the insurer and rights of offset are determined by receivership law. See attachment A for a copy of the amendments.

The recommendation for Part A Accreditation Standards is that these receivership revisions be considered acceptable, but not required to be adopted by states. However, the revisions are considered important and all states are encouraged to adopt them. States may consider adoption of the changes in conjunction with opening their holding company laws to consider adoption of the Group Capital Calculation and Liquidity Stress Test revisions.

The Task Force will continue to encourage states to adopt these revisions based on the benefits these revisions add to state regulation, and to the goal of improving efficiencies in receivership and reducing costs to a receivership estate.
11/29/21
Comments from Joni Forsythe, NOLHGA:

We were looking over the materials for the upcoming RITF meeting tomorrow and wanted to raise a concern with respect to Attachment Three, the Memo re Recently Adopted Model Amendments. We support the NAIC’s outreach effort with respect the model laws, but believe there is a correction needed in the first bullet point relating to conflicts of laws. As written, it appears to contradict the actual text of IRMA section 102, which is pasted immediately below.

Here is the actual text of section 102

Section 102. Conflicts of Law

This Act, Title [XXX], and the state insurance guaranty association acts constitute this state’s insurer receivership laws, and these laws shall be construed together in a manner that is consistent. In the event of a conflict between the insurer receivership laws and the provisions of any other law, the insurer receivership laws shall prevail.

IRMA section 102 provides that the state receivership act and the state GA acts collectively constitute the state’s insurer receivership laws. The receivership and GA statutes are to be construed in a manner that is consistent, and if there is a conflict between these laws and other state laws, the state’s insurer receivership laws prevail. The bullet point in the memo does not address the collective reference to receivership acts and GA acts as the state’s insurer receivership laws and instead comments on potential conflicts between the two. This was an important and much negotiated provision that was ultimately adopted into IRMA. We would ask that the memo be adjusted to reflect that correction. The language noted in blue below could be used in place of the current bullet. The substitution should not be controversial since it tracks the language actually adopted into IRMA.

Insurer Receivership Model Act (#555, “IRMA”)

- Conflicts of Law (IRMA §102) was added as a new section in IRMA. It provides that the state’s receivership act and insurance guaranty association acts constitute the state’s insurer receivership laws, and these laws shall be construed together in a manner that is consistent. In the event of a conflict between the insurer receivership laws and the provisions of any other law, the insurer receivership laws shall prevail.

Please let us know if you should have any questions about our request or if we can be of further assistance. We are happy to discuss if that would be helpful.

Best Regards,
Joni
In 2020, the Task Force concluded its Macroprudential Initiative (MPI) to evaluate receivership and guaranty fund laws. Through this process the Task Force highlighted several topics that it identified as being critical for states laws with respect to a multi-jurisdictional receivership and which may require a state’s attention.

The Task Force encourages state insurance departments to review their receivership and guaranty fund laws to ensure it addresses the following topics.

**Insurer Receivership Model Act (#555, “IRMA”)**

- **Conflicts of Law (IRMA §102)** was added as a new section in IRMA. It provides that the state’s receivership act and insurance guaranty association acts constitute the state’s insurer receivership laws, and these laws shall be construed together in a manner that is consistent. In the event of a conflict between the insurer receivership laws and the provisions of any other law, the insurer receivership laws shall prevail. The benefit of having this provision is that it prevents potential legal delays in the administration of a receivership.

- **Continuation of Coverage (IRMA §502)** provides that all insurance policies, excluding life, disability, long term care, health, or annuities, are cancelled at a specified time unless the Liquidator, with the consent of the receivership court, extends the period. This provision was re-written and improved in IRMA.

  The Task Force conducted a survey in 2019 that showed that states’ laws differ with respect to IRMA §502 from having provisions substantially similar to IRMA §502B, or to a prior version of Model #555, or a state has no continuation of coverage provision, or no exclusions for life and health lines of business. This provision has been the subject of litigation in receivership. For these reasons, states are encouraged to review their law against IRMA and consider amendments.

- **Priority of Distribution (IRMA §801)** of estate assets is a provision that was rewritten in IRMA. It outlines the priority scheme for payment of claims, which places policyholder claims above that of unsecured creditors or shareholders. The benefit of having this provision is that it furthers state insurance department goals to protect policyholders in the administration of a receivership.

**Reciprocal State; Full Faith and Credit on Stays and Injunctions**

An effective stay provision promotes judicial economy and predictability, which benefits all participants in the receivership process. However, the significant improvements in IRMA regarding stays have not been widely adopted.
Further background on the topic is available in the 2017 Financial Condition (E) Committee memorandum posted to the NAIC website. States are encouraged to review their receivership laws, and consider the following:

1) States with no stay provisions, or provisions based on older NAIC models, should compare their laws to the more recent NAIC Models, and evaluate the benefits of a more comprehensive stay. (IRMA §108)

2) States with no reciprocity provisions, or provisions based on older NAIC models, should consider adopting a provision similar to IRLMA § 5 (C) (2) or IRMA § 1002 (A). In the alternative, a state could update its definition of a “reciprocal state.” In 2021, the NAIC adopted the Guideline for Definition of Reciprocal State in Receivership Laws (GDL#1985) that defines reciprocal state as any state that has enacted a law setting forth a scheme for receivership.

Ancillary Conservation of Foreign Insurers (IRMA §1001) provides for ancillary conservation of an insurer writing in the state but domiciled in another state, in limited circumstances. Ancillary conservation is relevant to insurers conducting business in multiple jurisdictions, should be coordinated with the domiciliary state, and may require consideration of whether the involved states are reciprocal.

2021 Revisions to the Insurance Holding Company System Model Act and Regulation (#440 & #450)

In 2021, the NAIC adopted receivership revisions to the NAIC Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). The revisions address the continuation of essential services through affiliated agreements with an insurer that is placed into receivership by bringing affiliate service providers deemed “integral” or “essential” to an insurer’s operations under the jurisdiction of the receiver; clarify the ownership of data and records and premiums of the insurer that are held by the affiliate; and, outline provisions that should be included in affiliated management services and cost sharing agreements in the event the insurer is placed into receivership.

The Task Force encourages state insurance departments to consider these Model amendments based on the benefits these revisions add to state regulation, and to the goal of improving efficiencies in receivership and reducing costs to a receivership estate.

Treatment of Workers Compensation Large Deductible Policies

In 2021, the NAIC adopted the Guideline for Administration of Large Deductible Policies in Receivership (GDL#1980) to address the treatment of large deductible policies in receivership. The Guideline makes significant improvements over IRMA §712 Administration of Loss Reimbursement Policies, and the National Conference of Insurance Guaranty Funds (NCIGF) Model Large Deductible Legislation, Administration of Large Deductible Policies and Insured Large Deductible Collateral. The Guideline provides that the guaranty associations, on behalf of the claimants, are entitled to any deductible reimbursements from the policyholder and the right to draw on the collateral. While some states already have existing laws on this topic, states that do not or that wish to update their existing laws, are encouraged to consider Guideline #1980.

2017 Revisions to the Life and Health Insurance Guaranty Association Model Act (#520)

The 2017 amendments to Model #520 aimed to address issues arising in connection with guaranty fund coverage in insolvencies of insurers writing long-term care insurance. While states have made good progress adopting these
amendments with 34 states adopting to date, remaining states are encouraged to consider adoption. Further guidance is available in the Task Force’s 2018 memorandum, which is posted to the NAIC website.¹

For further resources or information about these Model Laws and Guidelines, states may contact NAIC staff, jkoenigsman@naic.org.

The Receiver’s Handbook (E) Subgroup of the Receivership and Insolvency (E) Task Force met Nov. 18, 2021. The following Subgroup members participated: Kevin Baldwin, Chair (IL); Toma Wilkerson, Vice Chair (FL); Joe Holloway (CA); Jared Kosky (CT); James Gerber (MI); Leatrice Geckler (NM); Donna Wilson and Jamin Dawes (OK); Laura Lyon Slaymaker and Crystal McDonald (PA); and Brian Riewe (TX).

1. **Adopted its June 14 Minutes**

   The Subgroup met June 14 and took the following action: 1) adopted its May 26 minutes; 2) discussed the drafting group process; and 3) demonstrated the SharePoint Collaboration website to the drafting groups. Mr. Baldwin noted that the minutes from the June meeting were in the meeting materials.

   Mr. Geckler made a motion, seconded by Ms. Wilson, to adopt the Subgroup’s June 14 minutes (*see NAIC Proceedings – Summer 2021, Receivership and Insolvency (E) Task Force, Attachment Two*). The motion passed unanimously.

2. **Exposed Revised Chapter 1 and Chapter 2 of the Receiver’s Handbook**

   Mr. Baldwin thanked the volunteers who had participated in the drafting groups for Chapters 1 and Chapter 2 of the *Receiver’s Handbook for Insurance Company Insolvencies* (Receiver’s Handbook). Chapter 1 had extensive revisions and was presented in the meeting materials as a clean copy. To view the original Receiver’s Handbook, the current Receiver’s Handbook version is posted on the Subgroup’s website under the documents tab. Chapter 2 was presented in the materials as a markup version of the original Receiver’s Handbook chapter. The Subgroup considered public exposure of revised Chapter 1 and Chapter 2 for a 30-day period with all comments to be sent to Sherry Flippo (NAIC).

   Mr. Holloway made a motion, seconded by Ms. Wilkerson, to expose Chapters 1 and Chapter 2 of the Receiver’s Handbook for a 30-day public comment period ending Dec. 20. The motion passed unanimously.

   Having no further business, the Receiver’s Handbook (E) Subgroup adjourned.

(#787) as of Nov. 30, 2021 (Attachment Five) ............................................................................... 10-1111
Reinsurance (E) Task Force
San Diego, California
December 13, 2021

The Reinsurance (E) Task Force met in San Diego, CA, Dec. 13, 2021. The following Task Force members participated: Chlora Lindley-Myers, Chair, and John Rehagen (MO); Raymond G. Farmer, Vice Chair, represented by Daniel Morris (SC); Lori K. Wing-Heier represented by David Phifer (AK); Jim L. Ridling represented by Sean Duke (AL); Alan McClain, represented by Chris Erwin (AR); Ricardo Lara represented by Virginia Christy and Robert Ridenour (FL); John F. King, represented by Geraldine Farr (GA); Doug Ommen represented by Kim Cross (IA); Dana Popish Severinghaus represented by Susan Berry (IL); Amy L. Beard represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Vicki Lloyd (KY); James J. Donelon represented by Stewart Guerin (LA); Gary D. Anderson represented by Christopher Joyce (MA); Eric A. Cioppa represented by Robert Wake (ME); Troy Downing, represented by Steve Matthews (MT); Mike Causey represented by Jackie Obusek (NC); Jon Godfread represented by Matt Fischer (ND); Eric Dunning represented by Lindsay Crawford (NE); Chris Nicolopoulos represented by Doug Bartlett (NH); Marlene Caride represented by David Wolf (NJ); Russell Toal, represented by Jennifer Catechis (NM); Adrienne A. Harris represented by Roberto Paradis (NY); Judith L. French represented by Dale Bruggeman (OH); Glen Mulready represented by Eli Snowbarger (OK); Elizabeth Kelleher Dwyer represented by Jack Broccoli (RI); Cassie Brown represented by Jamie Walker (TX); Jonathan T. Pike represented by Jake Garn (UT); Scott A. White represented by Greg Chew and Doug Stolte (VA); and Mark Afable represented by Amy Malm (WI).

1. Adopted its Summer National Meeting Minutes

Mr. Eft made a motion, seconded by Ms. Cross, to adopt the Task Force’s July 27 minutes (see NAIC Proceedings – Summer 2021, Reinsurance (E) Task Force). The motion passed unanimously.

Jake Stultz (NAIC) provided the report of the Reinsurance Financial Analysis (E) Working Group. He stated that the Working Group met in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings. He stated that the Working Group met Aug. 25 to discuss the comments received by the Reinsurance (E) Task Force on the ReFAWG Review Process for Passporting Certified and Reciprocal Jurisdiction Reinsurers (ReFAWG Process). He noted that the Working Group then met on Oct. 13 and Nov. 23 to complete the annual certified reinsurer reviews and to approve the first four reciprocal jurisdiction reinsurers for passporting. He stated that the Working Group intends to meet one more time in 2021 to approve several more reciprocal jurisdiction reinsurers for passporting.

Mr. Hudson made a motion, seconded by Mr. Wake, to adopt the Working Group’s report. The motion passed unanimously.

3. Adopted the ReFAWG Process

Mr. Rehagen stated that the ReFAWG Process is based on the Reinsurance Financial Analysis (E) Working Group Procedures Manual (ReFAWG Manual), which is a regulator-only document. He noted that the ReFAWG Manual will be updated to reflect the adoption of the 2019 revisions to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786) after the ReFAWG Process has been adopted. Mr. Rehagen noted that the ReFAWG Process was initially exposed on June 17 for a 30-day public comment period and that six comment letters were received. The ReFAWG Process was discussed by the Task Force at the Summer National Meeting and was then exposed on Sept. 17 (Attachment Two), and two comment letters (Attachment Three) were received. The Task Force again exposed the ReFAWG Process on Nov. 11 for a 21-day public comment period, and no public comments were received.

Dan Schelp (NAIC) stated that revisions included in the ReFAWG Process to be adopted today are mostly stylistic in nature. He stated that the provisions in Model #785 and Model #786 align closely with the original provisions of the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (EU Covered Agreement) and the “Bilateral Agreement Between the United States of America and the United Kingdom on Prudential Measures Regarding Insurance and Reinsurance,” and that the ReFAWG Process was drafted to mirror Model #785 and Model #786. Mr. Schelp noted that NAIC staff had discussions with representatives from the Federal Insurance...
Office (FIO), and that they are supportive of the efforts to provide guidance to both the states and insurers regarding the passporting process. He noted that the Working Group would review and verify if any changes are needed in the Uniform Checklist for Reciprocal Jurisdiction Reinsurers based on the revisions to the ReFAWG Process document or the ReFAWG Manual.

Mr. Hudson made a motion, seconded by Mr. Phifer, to adopt the ReFAWG Review Process for Passporting Certified and Reciprocal Jurisdiction Reinsurers (Attachment One). The motion passed unanimously.

4. Received a Status Report on the Reinsurance Activities of the Mutual Recognition of Jurisdictions (E) Working Group

Mr. Wake stated that the Working Group met Sept. 22 in regulator-to-regulator session to discuss the Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation (GCC Process). He stated that the Working Group met Nov. 18 to adopt the GCC Process for consideration by the Financial Condition (E) Committee and to reapprove the status of Bermuda, France, Germany, Ireland, Japan, Switzerland, and the United Kingdom (UK) as qualified jurisdictions and Bermuda, Japan, and Switzerland as reciprocal jurisdictions.

Mr. Wake stated that on May 27, the Mutual Recognition of Jurisdictions (E) Working Group recommended the Republic of Korea be approved as a qualified jurisdiction and that on June 3, the Task Force exposed the Republic of Korea: Final Evaluation Report for a 30-day public comment period. He noted that the Task Force was notified of an ongoing issue with data localization requirements in the Republic of Korea that needed to be remediated before the process can move forward. He stated that at the Summer National Meeting, the Task Force referred this issue back to the Working Group. Mr. Wake stated that a small group of regulators have held calls with the Republic of Korea Financial Supervisory Service (FSS) and the Financial Services Commission (FSC) and with U.S. insurance trade groups to better understand the situation. He said he will provide an update to the Task Force when he has additional information.

5. Received a Status Report on the States’ Implementation of the 2019 Revisions to Model #785 and Model #786

Mr. Stultz stated that as of Dec. 9, 46 U.S. jurisdictions have adopted the 2019 revisions to Model #785, while four jurisdictions have action under consideration. He noted that 25 states have adopted the revisions to Model #786, and 11 jurisdictions currently have action under consideration. He stated that the maps showing the adoption of the 2019 revisions to Model #785 and Model #786 were included in the meeting materials (Attachment Four).

Mr. Stultz stated that the 2019 revisions to the models must be adopted by the states prior to Sept. 1, 2022, which is the date when the FIO must complete its federal preemption reviews under the Covered Agreements. He stated that the Task Force will provide support to the states to meet this deadline. Mr. Stultz recommended that all states and jurisdictions adopt the 2019 revisions to Model #785 and Model #786 as soon as possible and no later than July 1, 2022, in order to give the FIO sufficient time for its federal preemption analysis.

Mr. Stultz stated that the current adoption maps can be found on the Task Force’s web page. He noted that he and Mr. Schelp can answer any technical questions during the legislative process, and Holly Weatherford (NAIC) is working directly with the states on the adoption of the 2019 revisions to Model #785 and Model #786.

6. Received a Status Report on the States’ Implementation of Model #787

Mr. Stultz stated that the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) becomes an accreditation standard on Sept. 1, 2022, with enforcement beginning on Jan. 1, 2023. He noted that as of Nov. 30, eight jurisdictions have adopted Model #787, with another 10 jurisdictions with action under consideration. He stated that the map showing the current adoption status for Model #787 was included in the meeting materials (Attachment Five) and added that the adoption of Model #787 is unrelated to the Covered Agreements and is not potentially subject to federal preemption.

Mr. Stultz noted that Model #787 mirrors Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (AG 48), and that under the accreditation standards, a state may meet the requirements through an administrative practice, such as an actuarial guideline, and added that if a state adopts Model #787, it also will need to adopt Section 5B(4) of Model #785.

Having no further business, the Reinsurance (E) Task Force adjourned.
ReFAWG Review Process for Passporting Certified and Reciprocal Jurisdiction Reinsurers

Reinsurance Financial Analysis (E) Working Group
ReFAWG Review Process for Passporting
Certified and Reciprocal Jurisdiction Reinsurers
(“ReFAWG Review Process”)

1. ReFAWG Review Process

The Reinsurance Financial Analysis (E) Working Group (ReFAWG) normally operates in Executive Session, in accordance with the NAIC Policy Statement on Open Meetings and in open session when addressing policy issues. The authority of the Working Group is limited to that of an advisory body. This authority is derived from the 2011 Preface to Credit for Reinsurance Models, which provided that the purpose of the Working Group is “to provide advisory support and assistance to states in the review of reinsurance collateral reduction applications. Such a process with respect to the review of applications for reinsurance collateral reduction and qualified jurisdictions should strengthen state regulation and prevent regulatory arbitrage.”

a. In November 2011, the NAIC adopted revisions to its Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) which reduce the prior reinsurance collateral requirements for non-U.S. licensed reinsurers that are licensed and domiciled in Qualified Jurisdictions and establish a certification process for reinsurers under which a Certified Reinsurer is eligible for collateral reduction with respect to contracts entered into or renewed subsequent to certification. The authority to issue individual ratings of certified reinsurers is reserved to the NAIC member jurisdictions under their respective statutes and regulations. While this forum is intended to strengthen state regulation and prevent regulatory arbitrage, it is not within the authority of the Working Group to assign collateral requirements for individual reinsurers.

b. On June 25, 2019, the NAIC adopted further revisions to the models, which implement the reinsurance collateral provisions of the Covered Agreements with the European Union (EU) and the United Kingdom (UK). The revisions eliminate reinsurance collateral requirements and local presence requirements for EU and UK reinsurers that maintain a minimum amount of own-funds equivalent to $250 million USD and a solvency capital requirement (SCR) of 100% under Solvency II. The revisions also incorporate the “Reciprocal Jurisdiction” concept. Reciprocal Jurisdiction status is afforded to (1) jurisdictions subject to an in-force Covered Agreement within the U.S.; (2) accredited U.S. jurisdictions; and (3) Qualified Jurisdictions if they meet certain requirements in the credit for reinsurance models. ReFAWG has also been given additional responsibilities with respect to these “Reciprocal Jurisdiction Reinsurers.” ReFAWG will coordinate its efforts with the Mutual Recognition of Jurisdictions (E) Working Group (formerly known as the Qualified Jurisdictions (E) Working Group).

c. Issues upon which the Working Group may provide advisory support and assistance include but are not limited to:

i. Provide advisory support and assistance to states in the review of reinsurance collateral reduction applications. Such a process with respect to the review of applications for
reinsurance collateral reduction and qualified jurisdictions should strengthen state regulation and prevent regulatory arbitrage.

ii. Provide a forum for discussion, among NAIC jurisdictions, of reinsurance issues related to specific companies, entities or individuals.

iii. Support, encourage, promote and coordinate multi-state efforts in addressing issues related to certified reinsurers, including but not limited to multi-state recognition of certified reinsurers.

iv. Provide analytical expertise and support to the states with respect to certified reinsurers and applicants for certification.

v. Interact with domiciliary regulators of ceding insurers and certifying states to assist and advise on the most appropriate regulatory strategies, methods and actions with respect to certified reinsurers.

vi. Provide advisory support with respect to issues related to the determination of qualified jurisdictions.

vii. Ensure the public passporting website remains current.

viii. For reinsurers domiciled in Reciprocal Jurisdictions, determine the best and most effective approaches for the financial solvency surveillance to assist the states in their work to protect the interests of policyholders.

2. **Lead States and Passporting Process**

a. A reinsurer seeking recognition as either a Certified Reinsurer or a Reciprocal Jurisdiction Reinsurer must submit certain information to each state in which it seeks such recognition. A reinsurer may decide to make a filing with a Lead State and use the NAIC Passporting process to facilitate multi-state recognition or a reinsurer may decide to submit the information to each state as a separate application. Under the ReFAWG Review Process, ReFAWG will assist the states with the initial review of this information and provide guidance to the states in making their review of the reinsurer to determine whether it has met the regulatory requirements to be recognized as a Certified Reinsurer and/or a Reciprocal Jurisdiction Reinsurer.

b. **Passporting for Certified Reinsurers** - In addition to this assistance to individual states, ReFAWG will also assist with a passporting process for the states. “Passporting” refers to the process under which a state has the discretion to defer to the certification of a reinsurer (and the rating assigned to that certified reinsurer) by another state. Under this process, a reinsurer will apply to an initial state for certification, referred to as the “Lead State,” which will begin its analysis of the reinsurer and notify ReFAWG of the application. The Lead State will complete its initial analysis and will submit filing information and other documentation to ReFAWG for a peer review. Upon completion of the confidential peer review process, ReFAWG will make its recommendation concerning both the certified status of the reinsurer and its rating. The Lead State then makes the final determination regarding certification, upon which the Lead State notifies ReFAWG and the certified reinsurer is eligible to apply for passporting into other states. States are encouraged to utilize the passporting process to reduce the amount of documentation filed with the states and reduce duplicate filings.
c. **Passporting for Reciprocal Jurisdiction Reinsurers** - A similar Passporting Process is in place with respect to Reciprocal Jurisdiction Reinsurers as outlined in Sections 5 and 6 below. In order to facilitate multi-state recognition of assuming insurers and to encourage uniformity among the states, the NAIC has initiated a process called “passporting” under which the commissioner has the discretion to defer to another state’s determination with respect to compliance with this section. Passporting is based upon individual state regulatory authority, and states are encouraged to act in a uniform manner in order to facilitate the passporting process. States are also encouraged to utilize the passporting process to reduce the amount of documentation filed with the states and reduce duplicate filings.

d. **Discretion to Defer to Lead State** - If an NAIC accredited jurisdiction has determined that the conditions set forth for recognition as a Reciprocal Jurisdiction Reinsurer have been met, the commissioner of any other state has the discretion to defer to that jurisdiction’s determination and add such assuming insurer to the list of assuming insurers to which cessions shall be granted credit. The commissioner may accept financial documentation filed with the Lead State or with the NAIC and is encouraged to support a uniform submission and approval process among the states of the NAIC. ReFAWG and the Mutual Recognition of Jurisdictions (E) Working Group will coordinate efforts to obtain and disseminate to the states financial information regarding both Certified Reinsurers and Reciprocal Jurisdiction Reinsurers and disseminate it to the states.

e. **Communication with ReFAWG** - The ReFAWG Review Process is designed to facilitate communication of relevant information with respect to individual reinsurers or reinsurance related issues by allowing interested state insurance regulators the opportunity to monitor the ReFAWG meetings and discussion. It should be noted that the process for engaging ReFAWG in the consideration of an application is intended to be flexible. Specific circumstances may necessitate discussion between ReFAWG and any states that have received any application in order to determine an appropriate lead state on a case-by-case basis.

f. **Change of Lead State** - The Lead State for a Certified Reinsurer and/or a Reciprocal Jurisdiction Reinsurer may change based upon mutual agreement between the current lead state and any other state where the reinsurer is recognized or certified, with input to be provided by ReFAWG. Upon a change in lead state, NAIC staff will provide timely notification to all states. In order to facilitate a change of lead state from one state to another, both states should discuss the rationale for the change during a regulator-only ReFAWG meeting. NAIC Staff will update the lead state and note such change on NAIC systems and send notice to ReFAWG and interested regulators.

3. **ReFAWG Review Process for Certified Reinsurers**

ReFAWG makes available to the states a *Uniform Application Checklist for Certified Reinsurers* (Exhibit 1) for certification of reinsurers based upon the requirements of the Credit for Reinsurance Model Law and Regulation. It is intended that the checklist be used by lead states for the initial/renewal application review and by ReFAWG in its review of Passporting requests.
The following provide a timeline for these filings:

In order to be eligible for certification, the assuming insurer shall meet the following requirements:

a. **Qualified Jurisdiction** - The assuming insurer must be domiciled and licensed to transact insurance or reinsurance in a Qualified Jurisdiction. The applicant must be in good standing and provide a copy of the certificate of authority or license to transact insurance and/or reinsurance business.

b. **Capital and Surplus** - The assuming insurer must maintain capital and surplus of no less than $250,000,000 as reported within its audited financial statement. This requirement may also be satisfied by an association including incorporated and individual unincorporated underwriters having minimum capital and surplus equivalents (net of liabilities) of at least $250,000,000 and a central fund containing a balance of at least $250,000,000.

c. **Financial Strength Ratings** - The assuming insurer must maintain financial strength ratings from two or more rating agencies deemed acceptable by the commissioner. These ratings shall be based on interactive communication between the rating agency and the assuming insurer and shall not be based solely on publicly available information. The applicant must provide the rating agency report. If the rating is a group rating, the rationale for the group rating must be provided. Initial or Affirmed financial strength rating dates must be within 15 months of the application date/renewal filing date. Acceptable rating agencies include: A.M. Best, Fitch Ratings, Moody’s, Standard & Poor’s or any other Nationally Recognized Statistical Rating Organization by the SEC. *Kroll is not recognized as an acceptable rating organization in Model #786 but has been recognized as an acceptable rating organization by the Reinsurance (E) Task Force.*

d. The following table outlines the necessary ratings needed to meet a secure level:
### Ratings Collateral Required A.M. Best Standard & Poor’s Moody’s Fitch Kroll

| Secure – 1 | 0% | A++ | AAA | Aaa | AAA | AAA |
| Secure – 2 | 10% | A+ | AA+, AA, AA- | Aa1, Aa2, Aa3 | AA+, AA, AA- | AA+, AA, AA- |
| Secure – 3 | 20% | A | A+, A | A1, A2 | A+, A | A+, A |
| Secure – 4 | 50% | A- | A- | A3 | A- | A- |
| Secure – 5 | 75% | B++, B+ | BBB+, BBB, BBB- | Baa1, Baa2, Baa3 | BBB+, BBB, BBB- | BBB+, BBB, BBB- |

e. **Protocol for Considering a Group Rating** - Section 8B(4) of the *Credit for Reinsurance Model Regulation* (#786) provides, in relevant part: “Each certified reinsurer shall be rated on a legal entity basis, with due consideration being given to the group rating where appropriate....” Understanding the rating agency basis for utilizing a group rating is a key factor in determining whether an applicant’s group rating may be considered appropriate. The recommended protocol for understanding the rationale involves one or more of the following protocol steps:

i. For reasons set forth in the rating agency report or its published ratings standards or guidelines, the rating agency utilizes the group rating as a consequence of finding that the company had sufficient interconnectivity with the group;

ii. For reasons set forth in the rating agency report or its published ratings standards or guidelines, the rating agency enhances the group rating due to the subsidiary’s potential benefit of capital support from one or more affiliated companies;

iii. The group rating was utilized because the subsidiary derives benefit from its inclusion within a financially strong and well-capitalized insurance group;

iv. The lead state has contacted the rating agency and was provided a written explanation for the use of the group rating;
v. Other factors deemed appropriate by the Reinsurance Financial Analysis (E) Working Group; or

vi. To assist the Lead State in the assessment of the appropriateness of the use of a group rating, applicants are encouraged to provide their rational for the use of a group rating.

f. Changes in Ratings

Section 8(B)(7)(a) of Model #786 provides that a certified reinsurer is required to notify the Commissioner of a certifying state within 10 days of any regulatory actions taken against the certified reinsurer, any change in the provisions of its domiciliary license or any change in rating by an approved rating agency, including a statement describing such changes and the reasons. The certified reinsurer may also fulfill this requirement by notifying its Lead State commissioner, with this information being distributed to other certifying states by the NAIC through the ReFAWG process. Upon receipt of any such notification, a certifying state should immediately notify ReFAWG in order to facilitate communication of the information to other states. ReFAWG will subsequently send notification to all applicable regulators and may coordinate an interim meeting as deemed appropriate in order to discuss the issue(s).

Changes requiring action by a certifying state in accordance with statute and/or regulation may include but are not limited to: deterioration in financial condition; downgrade in a financial strength rating; change in the status of its domiciliary license; change in the qualification status of its domestic jurisdiction; and the triggering of certain thresholds with respect to reinsurance obligations to U.S. ceding insurers that are past due (in accordance with Section 8(B) of Model #786). While such changes may require action under statute or regulation, the ReFAWG process is intended to facilitate communication and coordination with respect to the date upon which changes in a certified reinsurer’s rating/status are effective, as well as discussion of any other relevant issues.

As part of the ongoing review process, other information may come to the attention of a certifying state and/or ReFAWG that warrants consideration with respect to a certified reinsurer’s rating/status. While ReFAWG cannot require a state to delay any action with respect to a certified reinsurer’s rating/status, certifying states are strongly encouraged to notify ReFAWG prior to taking any related action, as the ReFAWG process will serve to provide a proactive regulatory mechanism for communication of such information, discussion among regulators with respect to changes being considered on the basis of subjective rating criteria, and possible coordination of applicable effective dates if such changes are enacted. Upon receipt of any such information, ReFAWG will send notification to the NAIC Chief Financial Regulators listing and may coordinate an interim meeting as deemed appropriate in order to discuss the issue(s).

g. Schedule F/S (Ceded Reinsurance) – Applicants domiciled in the U.S. must provide the most recent NAIC Annual Statement Blank Schedule F (property/casualty) and/or Schedule S (life and health). Applicants domiciled outside the U.S. must provide Form CR-F (property/casualty) and/or Form CR-S (life and health), completed in accordance with the instructions.
h. **Disputed and/or Overdue Reinsurance Claims** - The applicant must provide a detailed explanation regarding reinsurance obligations to U.S. cedents that are in dispute and/or more than 90 days past due that exceed 5% of its total reinsurance obligations to U.S. cedents as of the end of its prior financial reporting year or reinsurance obligations to any of the top 10 U.S. cedents (based on the amount of outstanding reinsurance obligations as of the end of its prior financial reporting year) that are in dispute and/or more than 90 days past due exceed 10% of its reinsurance obligations to that U.S. cedent. The applicant must then provide a description of its business practices in dealing with U.S. ceding insurers and a statement that the applicant commits to comply with all contractual requirements applicable to reinsurance contracts with U.S. ceding insurers.

i. **Mechanisms Used to Secure Obligations Incurred as a Certified Reinsurer** - The applicant must specify the mechanisms it will use to secure obligations incurred as a Certified Reinsurer. Use of multi-beneficiary trust must include: (1) approval from the domiciliary regulator; (2) the form of the trust that will be used as a certified reinsurer; and (3) the form of the trust that will be used to secure obligations incurred outside of the applicant’s certified reinsurer status (if applicable).

j. **Regulatory Actions** – The applicant must provide a description of any regulatory actions taken against the applicant. Include details on all regulatory actions, fines, and penalties. Further, a description of any changes in with respect to the provisions of the applicant’s domiciliary license should be provided.

k. **Audited Financial Report and Actuarial Opinion** – As filed with its non-U.S. jurisdiction supervisor, with a translation into English, the applicant must file audited financial statement for the current and prior year and an actuarial opinion (must be stand-alone, or the functional equivalent under the Supervisor’s applicable Actuarial Function Holder Regime).

l. **Solvent Schemes of Arrangement** - The applicant must provide a description of any past, present, or proposed future participation in any solvent scheme of arrangement, or similar procedure, involving U.S. ceding insurers.

m. **Form CR-1** - The applicant must provide a state lead state specific Form CR-1, which must be properly executed by an officer authorized to bind the applicant to the commitments set forth in the form.

n. **Other Requirements** - The applicant must commit to comply with other reasonable requirements deemed necessary for certification by the certifying state. Further, the applicant must provide a statement that it agrees to post 100% security upon the entry of an order of rehabilitation or conservation against the ceding insurer or its estate.

o. **Public Notice** - The commissioner is required to post notice on the insurance department’s website promptly upon receipt of any application for certification, including instructions on how members of the public may respond to the application. The commissioner may not take final action on the application until at least 30 days after posting such notice. The commissioner will consider any comments received during the public notice period with respect to this application.
4. **Certified Reinsurers – Certified by Another NAIC Accredited Jurisdiction**

If an applicant for certification has been certified as a reinsurer in an NAIC accredited jurisdiction, the state has the discretion to defer to that jurisdiction’s certification and assigned rating (i.e., passporting) as provided in the *Uniform Application Checklist for Certified Reinsurers* (Exhibit 1).

To assist in the determination to defer to another jurisdiction’s certification the following documents are required:

a. **Qualified Jurisdiction** - The assuming insurer must be domiciled and licensed to transact insurance or reinsurance in a Qualified Jurisdiction.

b. **Verification of Certification Issued by an NAIC Accredited Jurisdiction** – The applicant must provide a copy of the approval letter or other documentation provided to the applicant by the NAIC accredited jurisdiction. The letter should include the state, rating and collateral percentage assigned, effective date, lines of business, and the applicant’s statement on compliance. ReFAWG may also verify a certification issued by an NAIC accredited jurisdiction through its internal processes.

c. **Mechanisms Used to Secure Obligations Incurred as a Certified Reinsurer** - The applicant must specify the mechanisms it will use to secure obligations incurred as a Certified Reinsurer. Use of multi-beneficiary trust must include: (1) approval from the domiciliary regulator; (2) the form of the trust that will be used as a certified reinsurer; and (3) the form of the trust that will be used to secure obligations incurred outside of the applicant’s certified reinsurer status (if applicable).

d. **Form CR-1** - The applicant must provide a state lead state specific Form CR-1, which must be properly executed by an officer authorized to bind the applicant to the commitments set forth in the form.

e. **Other Requirements** - The applicant must commit to comply with other reasonable requirements deemed necessary for certification by the certifying state. Further, they must provide a statement that they agree to post 100% security upon the entry of an order of rehabilitation or conservation against the ceding insurer or its estate.

f. **Public Notice** - The commissioner is required to post notice on the insurance department’s website promptly upon receipt of any application for certification, including instructions on how members of the public may respond to the application. The commissioner may not take final action on the application until at least 30 days after posting such notice. The commissioner will consider any comments received during the public notice period with respect to this application.
5. **Reciprocal Jurisdiction Process - Initial Application to Lead State**

**Annual Verification of Minimum Standards:**

Pursuant to the *Uniform Checklist for Reciprocal Jurisdiction Reinsurers* (Exhibit 2), the “Lead State” will uniformly require assuming insurers to provide the following documentation so that other states may rely upon the Lead State’s determination:

a. **Status of Reciprocal Jurisdiction** - The assuming insurer must be licensed to write reinsurance by, and have its head office or be domiciled in, a Reciprocal Jurisdiction that is listed on the *NAIC List of Reciprocal Jurisdictions*. A “Reciprocal Jurisdiction” is a jurisdiction, as designated by the commissioner, that meets one of the following: (1) a non-U.S. jurisdiction that is subject to an in-force Covered Agreement with the United States; (2) a U.S. jurisdiction that meets the requirements for accreditation under the NAIC Financial Standards and Accreditation Program; or (3) a Qualified Jurisdiction that has been determined by the commissioner to meet all applicable requirements to be a Reciprocal Jurisdiction. The Reciprocal Jurisdiction Reinsurer should identify which type of jurisdiction it is domiciled in and provide any documentation to confirm this status if requested by the commissioner.

b. **Minimum Capital and Surplus** - The assuming insurer must have and maintain on an ongoing basis minimum capital and surplus, or its equivalent, calculated on at least an annual basis as of the preceding December 31 or at the annual date otherwise statutorily reported to the Reciprocal Jurisdiction: no less than $250,000,000 (USD); or if the assuming insurer is an association, including incorporated and individual unincorporated underwriters: minimum capital and surplus equivalents (net of liabilities) or own funds of the equivalent of at least $250,000,000 (USD); and a central fund containing a balance of the equivalent of at least $250,000,000 (USD). The assuming insurer’s supervisory authority must confirm to the Lead State commissioner on an annual basis according to the methodology of its domiciliary jurisdiction that the assuming insurer satisfies this requirement. The Mutual Recognition of Jurisdictions (E) Working Group will coordinate the confirmations of the domiciliary jurisdictions with ReFAWG with respect to individual Reciprocal Jurisdiction Reinsurers.
c. **Minimum Solvency or Capital Ratio** - The assuming insurer must have and maintain on an ongoing basis a minimum solvency or capital ratio: The ratio specified in the applicable in-force Covered Agreement where the assuming insurer has its head office or is domiciled; or if the assuming insurer is domiciled in an accredited state, a risk-based capital (RBC) ratio of three hundred percent (300%) of the authorized control level, calculated in accordance with the formula developed by the NAIC; or if the assuming insurer is domiciled in a Reciprocal Jurisdiction that is a Qualified Jurisdiction, such solvency or capital ratio as the commissioner determines to be an effective measure of solvency. The assuming insurer’s supervisory authority must confirm to the Lead State commissioner on an annual basis that the assuming insurer complies with this requirement. The Mutual Recognition of Jurisdictions (E) Working Group will coordinate the confirmations of the domiciliary jurisdictions with ReFAWG with respect to individual Reciprocal Jurisdiction Reinsurers.

d. **Form RJ-1** - The assuming insurer must provide a signed Form RJ-1, which must be properly executed by an officer of the assuming insurer.

e. **Audited Financial Report** - The assuming insurer’s annual audited financial statements, in accordance with the applicable law of the jurisdiction of its head office or domiciliary jurisdiction, as applicable, including the external audit report as provided under Section 9C(5)(a) of Model #786.

f. **Solvency and Financial Condition Report or Actuarial Opinion** – The applicant must submit a solvency and financial condition report or actuarial opinion, if filed with the assuming insurer’s supervisor as provided under Section 9C(5)(b) of Model #786.

g. **Overdue Reinsurance Claims** – The applicant must submit a list of all disputed and overdue reinsurance claims outstanding for 90 days or more, regarding reinsurance assumed from ceding insurers domiciled in the United States as provided under Section 9C(5)(c) of Model #786. The commissioner shall request the reinsurer to provide the information required to demonstrate the reinsurer’s practice of prompt payment of claims under its reinsurance agreements prior to entry into a reinsurance agreement, and annually thereafter, in order to demonstrate compliance with Section 9C(6) of Model #786.

h. **Assumed and Ceded Reinsurance Schedules** – The applicant must submit information regarding the assuming insurer’s assumed reinsurance by ceding insurer, ceded reinsurance by the assuming insurer, and reinsurance recoverable on paid and unpaid losses by the assuming insurer as provided under Section 9C(5)(d) of Model #786. Applicants domiciled in the U.S. must provide the most recent NAIC Annual Statement Blank Schedule F (property/casualty) and/or Schedule S (life and health). Applicants domiciled outside the U.S. may provide this information using Form CR-F (property/casualty) and/or Form CR-S (life and health), which ReFAWG considers sufficient to meet this requirement. Alternatively, information as outlined in paragraph 3.h of the ReFAWG Review Process regarding the U.S. cedents of Reciprocal Jurisdiction Reinsurers that is voluntarily submitted may also be accepted by states. If the commissioner has reason to believe the reinsurer has material unpaid claims outside of the U.S., the commissioner may request the reinsurer to
provide the information required to demonstrate the reinsurer’s practice of prompt payment of claims under its reinsurance agreements.

i. **Prompt Payment of Claims** - The assuming insurer must maintain a practice of prompt payment of claims under reinsurance agreements. The lack of prompt payment will be evidenced if any of the following criteria is met: (1) more than fifteen percent (15%) of the reinsurance recoverables from the assuming insurer are overdue and in dispute as reported to the commissioner; (2) more than fifteen percent (15%) of the assuming insurer’s ceding insurers or reinsurers have overdue reinsurance recoverable on paid losses of 90 days or more which are not in dispute and which exceed for each ceding insurer $100,000, or as otherwise specified in a Covered Agreement; or (3) the aggregate amount of reinsurance recoverable on paid losses which are not in dispute, but are overdue by 90 days or more, exceeds $50,000,000, or as otherwise specified in a Covered Agreement.

6. **Reciprocal Jurisdiction Process – Passporting States**

Per the *Uniform Checklist for Reciprocal Jurisdiction Reinsurers* (Exhibit 2), if an NAIC accredited jurisdiction has determined that the conditions set forth under the *Filing Requirements for Lead States* have been met, the commissioner has the discretion to defer to that jurisdiction’s determination and add such assuming insurer to the list of assuming insurers to which cessions shall be granted credit. The commissioner may accept financial documentation filed with the Lead State or with the NAIC. The following document is required to be filed with the state:

a. **Form RJ-1** - The assuming insurer must provide a signed Form RJ-1, which must be properly executed by an officer of the assuming insurer.

b. **Verification of Determination Issued by an NAIC Accredited Jurisdiction** – The applicant must provide a copy of the approval letter or other documentation provided to the applicant by the NAIC accredited jurisdiction. The letter should include the state, effective date, and lines of business.

7. **NAIC Staff Review of Certified and Reciprocal Jurisdiction Reinsurers**

The reinsurer will file this information with the initial reviewing state and such Lead State will submit the information to ReFAWG in accordance with the applicable information sharing process. This submission by the Lead State will also facilitate other states’ access to the information. NAIC staff shall prepare a report for review by ReFAWG intended to provide information regarding whether the Lead State’s submission meets the requirements of the ReFAWG Review Process, and to determine whether there are any deficiencies in the application. This report will be considered confidential but may be made available to states through the NAIC’s information sharing process.
NAIC Staff under the direction of ReFAWG will assist in the review of the filings and in monitoring the ongoing condition of the reinsurers. If during the review process or during an interim period ReFAWG determines that a reinsurer’s assigned rating or status may warrant reconsideration, notice will be sent to the Lead State. The specific issues identified will be presented for discussion during the next ReFAWG meeting.

8. Process for Ongoing Monitoring of Reinsurers

Certified and Reciprocal Jurisdiction Reinsurers are required to file specific information to a certifying state on an ongoing basis. NAIC Staff and ReFAWG will review this information in an effort to assist states with the ongoing monitoring of the reinsurers. Subject to applicable state law, all non-public information submitted by reinsurers shall be kept confidential and regulator only.

9. Withdrawal/Termination of a Certified or Reciprocal Jurisdiction Reinsurer

When a reinsurer requests to withdraw its status or the lead state terminates the reinsurer’s status as a certified or reciprocal reinsurer, notice of this action should be promptly conveyed to the appropriate NAIC Staff. Once NAIC Staff receives notification of withdrawal or termination, the applicable Passported Certified Reinsurers List(s) will be updated to reflect this status change. The Passported reinsurer will follow the lead state’s laws regarding its withdrawal or termination regarding any active reinsurance contracts.

10. Interaction Between Certified Reinsurers and Reciprocal Jurisdiction Reinsurers Status

a. Under Section 8A(5) Model #786, credit for reinsurance shall apply only to reinsurance contracts entered into or renewed on or after the effective date of the certification of the assuming insurer with respect to Certified Reinsurers. Under Section 2F(7) of the Credit for Reinsurance Model Law (#785), credit shall be taken with respect to Reciprocal Jurisdiction Reinsurers only for reinsurance agreements entered into, amended, or renewed on or after the effective date of the statute adding this subsection, and only with respect to losses incurred and reserves reported on or after the later of (i) the date on which the assuming insurer has met all eligibility requirements to be designated a Reciprocal Jurisdiction Reinsurer, and (ii) the effective date of the new reinsurance agreement, amendment, or renewal.

b. It is expected that certain assuming insurers may be considered to be Certified Reinsurers for purposes of in-force business or business with existing liabilities and Reciprocal Jurisdiction Reinsurers with respect to reinsurance agreements entered into, amended, or renewed on or after the effective date. In addition, these same reinsurers may also have certain blocks of business that are fully collateralized under the prior provisions of Model #785 and Model #786. The NAIC Blanks have been amended to reflect the status of these reinsurers with respect to each type of insurance assumed.

c. With respect to those reinsurers that are currently Certified Reinsurers but are seeking recognition by ReFAWG as Reciprocal Jurisdiction Reinsurers for passporting purposes, the same process as
outlined in paragraphs 3-6 of this ReFAWG Review Process must be followed. A Form RJ-1 must be filed with each state in which the reinsurer seeks recognition as a Reciprocal Jurisdiction Reinsurer, and the reinsurer must meet all other applicable requirements. However, states may share this information with other states through the NAIC and the ReFAWG Review Process, and previously filed information used in the review of the reinsurer as a Certified Reinsurer may also be utilized in its review as a Reciprocal Jurisdiction Reinsurer. For example, a Reciprocal Jurisdiction Reinsurer may cross reference information/documentation that has been filed with respect to its status as a Certified Reinsurer, so that it is not necessary to file duplicative documents. ReFAWG will take full advantage of the passporting process, with the intent of reducing the amount of documentation filed with the states and reduce duplicate filings.

d. During the initial phases of the implementation of the review of Reciprocal Jurisdiction Reinsurers, not all states may have fully implemented their internal processes for performing these reviews. During this interim period, if a Reciprocal Reinsurer has been approved by a lead state and ReFAWG, the Reciprocal Jurisdiction Reinsurer may seek passporting approval from other states that have adopted the model law and regulation even where a formal internal process for doing so has not yet been finalized. States and Reciprocal Jurisdiction Reinsurers are encouraged to communicate on these issues and, as appropriate, to coordinate through the NAIC to facilitate the passporting process.

11. Commissioner Shall Create and Publish Lists

Section 2E(3) of Model #785 and Section 8C(1) of Model #786 require the commissioner to publish a list of Qualified Jurisdictions, while Section 2E(4) of Model #785 and Section 8B(2) of Model #786 require the commissioner to publish a list of all Certified Reinsurers and their ratings. Section 2F(2) & (3) of Model #785 and Section 9D and E of Model #786 require the commissioner to (a) timely create and publish a list of Reciprocal Jurisdictions; and (b) timely create and publish a list of Reciprocal Jurisdiction Reinsurers. It is expected that the commissioner will publish these respective lists on the insurance department’s website, along with special instructions or other guidance as to how Certified Reinsurers and Reciprocal Jurisdiction Reinsurers may meet the applicable filing requirements under the models. There currently are no specific requirements as to the format in which these lists must be published, but ReFAWG and NAIC staff will assist the states with questions on the publication of these lists. In addition, ReFAWG will maintain links on its NAIC webpage to the lists published on the insurance departments’ webpages.
ReFAWG Review Process for Passporting Certified and Reciprocal Jurisdiction Reinsurers

Reinsurance Financial Analysis (E) Working Group
ReFAWG Review Process for Passorting
Certified and Reciprocal Jurisdiction Reinsurers
(“ReFAWG Review Process”)

1. ReFAWG Review Process

The Reinsurance Financial Analysis (E) Working Group (ReFAWG) normally operates in Executive Session, in accordance with the NAIC Policy Statement on Open Meetings and in open session when addressing policy issues. The authority of the Working Group is limited to that of an advisory body. This authority is derived from the 2011 Preface to Credit for Reinsurance Models, which provided that the purpose of the Working Group is “to provide advisory support and assistance to states in the review of reinsurance collateral reduction applications. Such a process with respect to the review of applications for reinsurance collateral reduction and qualified jurisdictions should strengthen state regulation and prevent regulatory arbitrage.”

a. In November 2011, the NAIC adopted revisions to its Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) which reduce the prior reinsurance collateral requirements for non-U.S. licensed reinsurers that are licensed and domiciled in Qualified Jurisdictions and establish a certification process for reinsurers under which a Certified Reinsurer is eligible for collateral reduction with respect to contracts entered into or renewed subsequent to certification. The authority to issue individual ratings of certified reinsurers is reserved to the NAIC member jurisdictions under their respective statutes and regulations. While this forum is intended to strengthen state regulation and prevent regulatory arbitrage, it is not within the authority of the Working Group to assign collateral requirements for individual reinsurers.

b. On June 25, 2019, the NAIC adopted further revisions to the models, which implement the reinsurance collateral provisions of the Covered Agreements with the European Union (EU) and the United Kingdom (UK). These revisions create a new type of jurisdiction, which is called a Reciprocal Jurisdiction and eliminates reinsurance collateral requirements and local presence requirements for EU and UK reinsurers that maintain a minimum amount of own-funds equivalent to $250 million USD and a solvency capital requirement (SCR) of 100% under Solvency II. The revisions also provide incorporate the “Reciprocal Jurisdiction” concept. Reciprocal Jurisdiction status is afforded to (1) jurisdictions subject to an in-force Covered Agreement within the U.S.; (2) accredited U.S. jurisdictions; and (3) Qualified Jurisdictions if they meet certain requirements in the credit for reinsurance models. ReFAWG has also been given additional responsibilities with respect to these “Reciprocal Jurisdiction Reinsurers.” ReFAWG will coordinate its efforts with the Mutual Recognition of Jurisdictions (E) Working Group (formerly known as the Qualified Jurisdictions (E) Working Group).

c. Issues upon which the Working Group may provide advisory support and assistance include but are not limited to:
i. Provide advisory support and assistance to states in the review of reinsurance collateral reduction applications. Such a process with respect to the review of applications for reinsurance collateral reduction and qualified jurisdictions should strengthen state regulation and prevent regulatory arbitrage.

ii. Provide a forum for discussion, among NAIC jurisdictions, of reinsurance issues related to specific companies, entities or individuals.

iii. Support, encourage, promote and coordinate multi-state efforts in addressing issues related to certified reinsurers, including but not limited to multi-state recognition of certified reinsurers.

iv. Provide analytical expertise and support to the states with respect to certified reinsurers and applicants for certification.

v. Interact with domiciliary regulators of ceding insurers and certifying states to assist and advise on the most appropriate regulatory strategies, methods and actions with respect to certified reinsurers.

vi. Provide advisory support with respect to issues related to the determination of qualified jurisdictions.

vii. Ensure the public passporting website remains current.

viii. For reinsurers domiciled in Reciprocal Jurisdictions, determine the best and most effective approaches for the financial solvency surveillance to assist the states in their work to protect the interests of policyholders.

2. **Lead States and Passporting Process**

a. A reinsurer seeking recognition as either a Certified Reinsurer or a Reciprocal Jurisdiction Reinsurer must submit certain information to each state in which it seeks such recognition. A reinsurer may decide to make a filing with a Lead State and use the NAIC Passporting process to facilitate multi-state recognition or a reinsurer may decide to submit the information to each state as a separate application. Under the ReFAWG Review Process, ReFAWG will assist the states with the initial review of this information and provide guidance to the states in making their review of the reinsurer to determine whether it has met the regulatory requirements to be recognized as a Certified Reinsurer and/or a Reciprocal Jurisdiction Reinsurer.

b. **Certified Reinsurers** - In addition to this assistance to individual states, ReFAWG will also assist with a passporting process for the states. “Passporting” refers to the process under which a state has the discretion to defer to the certification of a reinsurer (and the rating assigned to that certified reinsurer) by another state. Under this process, a reinsurer will apply to an initial state for certification, referred to as the “Lead State,” which will begin its analysis of the reinsurer and notify ReFAWG of the application. The Lead State will complete its initial analysis and will submit filing information and other documentation to ReFAWG for a peer review. Upon completion of the confidential peer review process, ReFAWG will make its recommendation concerning both the certified status of the reinsurer and its rating. The Lead State then makes the final determination regarding certification, upon which the Lead State notifies ReFAWG and the certified reinsurer is eligible to apply for passporting into other states.
c. **Reciprocal Jurisdiction Reinsurers** - A similar Passporting Process is in place with respect to Reciprocal Jurisdiction Reinsurers. In order to facilitate multi-state recognition of assuming insurers and to encourage uniformity among the states, the NAIC has initiated a process called “passporting” under which the commissioner has the discretion to defer to another state’s determination with respect to compliance with this section. Passporting is based upon individual state regulatory authority, and states are encouraged to act in a uniform manner in order to facilitate the passporting process. States are also encouraged to utilize the passporting process to reduce the amount of documentation filed with the states and reduce duplicate filings.

d. If an NAIC accredited jurisdiction has determined that the conditions set forth for recognition as a Reciprocal Jurisdiction Reinsurer have been met, the commissioner of any other state has the discretion to defer to that jurisdiction’s determination and add such assuming insurer to the list of assuming insurers to which cessions shall be granted credit. The commissioner may accept financial documentation filed with the Lead State or with the NAIC and is encouraged to support a uniform submission and approval process among the states of the NAIC. ReFAWG and the Mutual Recognition of Jurisdictions (E) Working Group will coordinate efforts to obtain and disseminate to the states financial information regarding both Certified Reinsurers and Reciprocal Jurisdiction Reinsurers.

e. The ReFAWG Review Process is designed to facilitate communication of relevant information with respect to individual reinsurers or reinsurance related issues by allowing interested state insurance regulators the opportunity to monitor the ReFAWG meetings and discussion. It should be noted that the process for engaging ReFAWG in the consideration of an application is intended to be flexible. Specific circumstances may necessitate discussion between ReFAWG and any states that have received any application in order to determine an appropriate lead state on a case-by-case basis.

f. **Change of Lead State** - The Lead State may change based upon mutual agreement between the current lead state and any other state where the reinsurer is certified, with input to be provided by ReFAWG. Upon a change in lead state, NAIC staff will provide timely notification to all states. In order to facilitate a change of lead state from one state to another, both states should discuss the rationale for the change during a regulator-only ReFAWG meeting. NAIC Staff will update the lead state and note such change on NAIC systems and send notice to ReFAWG and interested regulators.

3. **ReFAWG Review Process for Certified Reinsurers**

ReFAWG makes available to the states a *Uniform Application Checklist for Certified Reinsurers* (Exhibit 1) for certification of reinsurers based upon the requirements of the Credit for Reinsurance Model Law and Regulation. It is intended that the checklist be used by lead states for the initial/renewal application review and by ReFAWG in its review of Passpor ting requests.

The following provide a timeline for filings:

© 2021 National Association of Insurance Commissioners
In order to be eligible for certification, the assuming insurer shall meet the following requirements:

a. **Qualified Jurisdiction** - The assuming insurer must be domiciled and licensed to transact insurance or reinsurance in a Qualified Jurisdiction. The applicant must be in good standing and provide a copy of the certificate of authority or license to transact insurance and/or reinsurance business.

b. **Capital and Surplus** - The assuming insurer must maintain capital and surplus of no less than $250,000,000 as reported within its audited financial statement. This requirement may also be satisfied by an association including incorporated and individual unincorporated underwriters having minimum capital and surplus equivalents (net of liabilities) of at least $250,000,000 and a central fund containing a balance of at least $250,000,000.

c. **Financial Strength Ratings** - The assuming insurer must maintain financial strength ratings from two or more rating agencies deemed acceptable by the commissioner. These ratings shall be based on interactive communication between the rating agency and the assuming insurer and shall not be based solely on publicly available information. The applicant must provide the rating agency report. If the rating is a group rating, the rationale for the group rating must be provided. Initial or Affirmed financial strength rating dates must be within 15 months of the application date/renewal filing date. Acceptable rating agencies include: A.M. Best, Fitch Ratings, Moody’s, Standard & Poor’s or any other Nationally Recognized Statistical Rating Organization by the SEC. *Kroll is not recognized as an acceptable rating organization in Model #786 but has been recognized as an acceptable rating organization by the Reinsurance (E) Task Force.*

d. The following table outlines the necessary ratings needed to meet a secure level:

e. **Protocol for Considering a Group Rating** - Section 8B(4) of the *Credit for Reinsurance Model Regulation* (#786) provides, in relevant part: “Each certified reinsurer shall be rated on a legal entity basis, with due consideration being given to the group rating where appropriate....” Understanding the rating agency basis for utilizing a group rating is a key factor in determining whether an applicant’s group rating may be considered appropriate. The recommended protocol for understanding the rationale involves one or more of the following protocol steps:

i. For reasons set forth in the rating agency report or its published ratings standards or guidelines, the rating agency utilizes the group rating as a consequence of finding that the company had sufficient interconnectivity with the group;

ii. For reasons set forth in the rating agency report or its published ratings standards or guidelines, the rating agency enhances the group rating due to the subsidiary’s potential benefit of capital support from one or more affiliated companies;

iii. The group rating was utilized because the subsidiary derives benefit from its inclusion within a financially strong and well-capitalized insurance group;

iv. The lead state has contacted the rating agency and was provided a written explanation for the use of the group rating;
v. Other factors deemed appropriate by the Reinsurance Financial Analysis (E) Working Group; or

vi. To assist the Lead State in the assessment of the appropriateness of the use of a group rating, applicants are encouraged to provide their rational for the use of a group rating.

f. Changes in Ratings

Section 8(B)(7)(a) of Model #786 provides that a certified reinsurer is required to notify the Commissioner of a certifying state within 10 days of any regulatory actions taken against the certified reinsurer, any change in the provisions of its domiciliary license or any change in rating by an approved rating agency, including a statement describing such changes and the reasons. The certified reinsurer may also fulfill this requirement by notifying its Lead State commissioner, with this information being distributed to other certifying states by the NAIC through the ReFAWG process. Upon receipt of any such notification, a certifying state should immediately notify ReFAWG in order to facilitate communication of the information to other states. ReFAWG will subsequently send notification to all applicable regulators and may coordinate an interim meeting as deemed appropriate in order to discuss the issue(s).

Changes requiring action by a certifying state in accordance with statute and/or regulation may include but are not limited to: deterioration in financial condition; downgrade in a financial strength rating; change in the status of its domiciliary license; change in the qualification status of its domestic jurisdiction; and the triggering of certain thresholds with respect to reinsurance obligations to U.S. ceding insurers that are past due (in accordance with Section 8(B) of Model #786). While such changes may require action under statute or regulation, the ReFAWG process is intended to facilitate communication and coordination with respect to the date upon which changes in a certified reinsurer’s rating/status are effective, as well as discussion of any other relevant issues. As part of the ongoing review process, other information may come to the attention of a certifying state and/or ReFAWG that warrants consideration with respect to a certified reinsurer’s rating/status. While ReFAWG cannot require a state to delay any action with respect to a certified reinsurer’s rating/status, certifying states are strongly encouraged to notify ReFAWG prior to taking any related action, as the ReFAWG process will serve to provide a proactive regulatory mechanism for communication of such information, discussion among regulators with respect to changes being considered on the basis of subjective rating criteria, and possible coordination of applicable effective dates if such changes are enacted. Upon receipt of any such information, ReFAWG will send notification to the NAIC Chief Financial Regulators listing and may coordinate an interim meeting as deemed appropriate in order to discuss the issue(s).

g. Schedule F/S (Ceded Reinsurance) – Applicants domiciled in the U.S. must provide the most recent NAIC Annual Statement Blank Schedule F (property/casualty) and/or Schedule S (life and health). Applicants domiciled outside the U.S. must provide Form CR-F (property/casualty) and/or Form CR-S (life and health), completed in accordance with the instructions.
h. **Disputed and/or Overdue Reinsurance Claims** - The applicant must provide a detailed explanation regarding reinsurance obligations to U.S. cedents that are in dispute and/or more than 90 days past due that exceed 5% of its total reinsurance obligations to U.S. cedents as of the end of its prior financial reporting year or reinsurance obligations to any of the top 10 U.S. cedents (based on the amount of outstanding reinsurance obligations as of the end of its prior financial reporting year) that are in dispute and/or more than 90 days past due exceed 10% of its reinsurance obligations to that U.S. cedent. The applicant must then provide a description of its business practices in dealing with U.S. ceding insurers and a statement that the applicant commits to comply with all contractual requirements applicable to reinsurance contracts with U.S. ceding insurers.

i. **Mechanisms Used to Secure Obligations Incurred as a Certified Reinsurer** - The applicant must specify the mechanisms it will use to secure obligations incurred as a Certified Reinsurer. Use of multi-beneficiary trust must include: (1) approval from the domiciliary regulator; (2) the form of the trust that will be used as a certified reinsurer; and (3) the form of the trust that will be used to secure obligations incurred outside of the applicant’s certified reinsurer status (if applicable).

j. **Regulatory Actions** – The applicant must provide a description of any regulatory actions taken against the applicant. Include details on all regulatory actions, fines, and penalties. Further, a description of any changes in with respect to the provisions of the applicant’s domiciliary license should be provided.

k. **Audited Financial Report and Actuarial Opinion** – As filed with its non-U.S. jurisdiction supervisor, with a translation into English, the applicant must file audited financial statement for the current and prior year and an actuarial opinion (must be stand-alone, or the functional equivalent under the Supervisor’s applicable Actuarial Function Holder Regime).

l. **Solvent Schemes of Arrangement** - The applicant must provide a description of any past, present, or proposed future participation in any solvent scheme of arrangement, or similar procedure, involving U.S. ceding insurers.

m. **Form CR-1** - The applicant must provide a state lead state specific Form CR-1, which must be properly executed by an officer authorized to bind the applicant to the commitments set forth in the form.

n. **Other Requirements** - The applicant must commit to comply with other reasonable requirements deemed necessary for certification by the certifying state. Further, the applicant must provide a statement that it agrees to post 100% security upon the entry of an order of rehabilitation or conservation against the ceding insurer or its estate.

o. **Public Notice** - The commissioner is required to post notice on the insurance department’s website promptly upon receipt of any application for certification, including instructions on how members of the public may respond to the application. The commissioner may not take final action on the application until at least 30 days after posting such notice. The commissioner will consider any comments received during the public notice period with respect to this application.
4. **Certified Reinsurers – Certified by Another NAIC Accredited Jurisdiction**

If an applicant for certification has been certified as a reinsurer in an NAIC accredited jurisdiction, the state has the discretion to defer to that jurisdiction’s certification and assigned rating (i.e., passporting) as provided in the *Uniform Application Checklist for Certified Reinsurers* (Exhibit 1).

To assist in the determination to defer to another jurisdiction’s certification the following documents are required:

a. **Qualified Jurisdiction** - The assuming insurer must be domiciled and licensed to transact insurance or reinsurance in a Qualified Jurisdiction.

b. **Verification of Certification Issued by an NAIC Accredited Jurisdiction** – The applicant must provide a copy of the approval letter or other documentation provided to the applicant by the NAIC accredited jurisdiction. The letter should include the state, rating and collateral percentage assigned, effective date, lines of business, and the applicant’s statement on compliance. ReFAWG may also verify a certification issued by an NAIC accredited jurisdiction through its internal processes.

c. **Mechanisms Used to Secure Obligations Incurred as a Certified Reinsurer** - The applicant must specify the mechanisms it will use to secure obligations incurred as a Certified Reinsurer. Use of multi-beneficiary trust must include: (1) approval from the domiciliary regulator; (2) the form of the trust that will be used as a certified reinsurer; and (3) the form of the trust that will be used to secure obligations incurred outside of the applicant’s certified reinsurer status (if applicable).

d. **Form CR-1** - The applicant must provide a state lead state specific Form CR-1, which must be properly executed by an officer authorized to bind the applicant to the commitments set forth in the form.

e. **Other Requirements** - The applicant must commit to comply with other reasonable requirements deemed necessary for certification by the certifying state. Further, they must provide a statement that they agree to post 100% security upon the entry of an order of rehabilitation or conservation against the ceding insurer or its estate.

f. **Public Notice** - The commissioner is required to post notice on the insurance department’s website promptly upon receipt of any application for certification, including instructions on how members of the public may respond to the application. The commissioner may not take final action on the application until at least 30 days after posting such notice. The commissioner will consider any comments received during the public notice period with respect to this application.
5. **Reciprocal Jurisdiction Process - Initial Application to Lead State**

Pursuant to the *Uniform Checklist for Reciprocal Jurisdiction Reinsurers* (Exhibit 2), the “Lead State” will uniformly require assuming insurers to provide the following documentation so that other states may rely upon the Lead State’s determination:

a. **Status of Reciprocal Jurisdiction** - The assuming insurer must be licensed to write reinsurance by, and have its head office or be domiciled in, a Reciprocal Jurisdiction that is listed on the NAIC List of Reciprocal Jurisdictions. A “Reciprocal Jurisdiction” is a jurisdiction, as designated by the commissioner, that meets one of the following: (1) a non-U.S. jurisdiction that is subject to an in-force Covered Agreement with the United States; (2) a U.S. jurisdiction that meets the requirements for accreditation under the NAIC Financial Standards and Accreditation Program; or (3) a Qualified Jurisdiction that has been determined by the commissioner to meet all applicable requirements to be a Reciprocal Jurisdiction. The Reciprocal Jurisdiction Reinsurer should identify which type of jurisdiction it is domiciled in and provide any documentation to confirm this status if requested by the commissioner.

b. **Minimum Capital and Surplus** - The assuming insurer must have and maintain on an ongoing basis minimum capital and surplus, or its equivalent, calculated on at least an annual basis as of the preceding December 31 or at the annual date otherwise statutorily reported to the Reciprocal Jurisdiction: no less than $250,000,000 (USD); or if the assuming insurer is an association, including incorporated and individual unincorporated underwriters: minimum capital and surplus equivalents (net of liabilities) or own funds of the equivalent of at least $250,000,000 (USD); and a central fund containing a balance of the equivalent of at least $250,000,000 (USD). The assuming insurer’s supervisory authority must confirm to the Lead State commissioner on an annual basis according to the methodology of its domiciliary jurisdiction that the assuming insurer complies with satisfies this requirement. The Mutual Recognition of Jurisdictions (E) Working Group will coordinate the confirmations of the domiciliary jurisdictions with ReFAWG with respect to individual Reciprocal Jurisdiction Reinsurers.
c. **Minimum Solvency or Capital Ratio** - The assuming insurer must have and maintain on an ongoing basis a minimum solvency or capital ratio. The ratio specified in the applicable in-force Covered Agreement where the assuming insurer has its head office or is domiciled; or if the assuming insurer is domiciled in an accredited state, a risk-based capital (RBC) ratio of three hundred percent (300%) of the authorized control level, calculated in accordance with the formula developed by the NAIC; or if the assuming insurer is domiciled in a Reciprocal Jurisdiction that is a Qualified Jurisdiction, such solvency or capital ratio as the commissioner determines to be an effective measure of solvency. The assuming insurer’s supervisory authority must confirm to the Lead State commissioner on an annual basis that the assuming insurer complies with this requirement. The Mutual Recognition of Jurisdictions (E) Working Group will coordinate the confirmations of the domiciliary jurisdictions with ReFAWG with respect to individual Reciprocal Jurisdiction Reinsurers.

d. **Form RJ-1** - The assuming insurer must agree to and provide a signed Form RJ-1, which must be properly executed by an officer of the assuming insurer.

e. **Audited Financial Report** - The assuming insurer’s annual audited financial statements, in accordance with the applicable law of the jurisdiction of its head office or domiciliary jurisdiction, as applicable, including the external audit report as provided under Section 9C(5)(a) of Model #786.

f. **Solvency and Financial Condition Report or Actuarial Opinion** – The applicant must submit a solvency and financial condition report or actuarial opinion, if filed with the assuming insurer’s supervisor as provided under Section 9C(5)(b) of Model #786.

g. **Overdue Reinsurance Claims** – The applicant must submit a list of all disputed and overdue reinsurance claims outstanding for 90 days or more, regarding reinsurance assumed from ceding insurers domiciled in the United States as provided under Section 9C(5)(c) of Model #786.

h. **Assumed and Ceded Reinsurance Schedules** – The applicant must submit information regarding the assuming insurer’s assumed reinsurance by ceding insurer, ceded reinsurance by the assuming insurer, and reinsurance recoverable on paid and unpaid losses by the assuming insurer as provided under Section 9C(5)(d) of Model #786. Applicants domiciled in the U.S. must provide the most recent NAIC Annual Statement Blank Schedule F (property/casualty) and/or Schedule S (life and health). Applicants domiciled outside the U.S. may provide this information using Form CR-F (property/casualty) and/or Form CR-S (life and health), which ReFAWG considers sufficient to meet this requirement. **This is for purposes of evaluating Prompt Payment of Claims. Alternatively, information as outlined in paragraph 3.h of the ReFAWG Review Process regarding the U.S. cedents of Reciprocal Jurisdiction Reinsurers that is voluntarily submitted may also be accepted by states. If the commissioner has reason to believe the reinsurer has material unpaid claims outside of the U.S., the commissioner may request the reinsurer to provide the information required to demonstrate the reinsurer’s practice of prompt payment of claims under its reinsurance agreements.**
i. **Prompt Payment of Claims** - The assuming insurer must maintain a practice of prompt payment of claims under reinsurance agreements. The lack of prompt payment will be evidenced if any of the following criteria is met: (1) more than fifteen percent (15%) of the reinsurance recoverables from the assuming insurer are overdue and in dispute as reported to the commissioner; (2) more than fifteen percent (15%) of the assuming insurer’s ceding insurers or reinsurers have overdue reinsurance recoverable on paid losses of 90 days or more which are not in dispute and which exceed for each ceding insurer $100,000, or as otherwise specified in a Covered Agreement; or (3) the aggregate amount of reinsurance recoverable on paid losses which are not in dispute, but are overdue by 90 days or more, exceeds $50,000,000, or as otherwise specified in a Covered Agreement.

6. **Reciprocal Jurisdiction Process – Passporting States**

Per the *Uniform Checklist for Reciprocal Jurisdiction reinsurers* (Exhibit 2), if an NAIC accredited jurisdiction has determined that the conditions set forth under the *Filing Requirements for Lead States* have been met, the commissioner has the discretion to defer to that jurisdiction’s determination and add such assuming insurer to the list of assuming insurers to which cessions shall be granted credit. The commissioner may accept financial documentation filed with the Lead State or with the NAIC. The following document is required to be filed with the state:

a. **Form RJ-1** - The assuming insurer must agree to and provide a signed Form RJ-1, which must be properly executed by an officer of the assuming insurer.

b. **Verification of Determination Issued by an NAIC Accredited Jurisdiction** – The applicant must provide a copy of the approval letter or other documentation provided to the applicant by the NAIC accredited jurisdiction. The letter should include the state, effective date, and lines of business.

7. **NAIC Staff Review of Certified and Reciprocal Jurisdiction Reinsurers**

The reinsurer will file this information with the initial reviewing state and such Lead State will submit the information to ReFAWG in accordance with the applicable information sharing process. This submission by the Lead State will also facilitate other states’ access to the information. NAIC staff shall prepare a report for review by ReFAWG intended to provide information regarding whether the Lead State’s submission meets the requirements of the ReFAWG Review Process, and to determine whether there are any deficiencies in the application. This report will be considered confidential but may be made available to states through the NAIC’s information sharing process.

NAIC Staff under the direction of ReFAWG will assist in the review of the filings and in monitoring the ongoing condition of the reinsurers. If during the review process or during an interim period ReFAWG determines that a reinsurer’s assigned rating or status may warrant reconsideration, notice will be sent to the Lead State. The specific issues identified will be presented for discussion during the next ReFAWG meeting.
8. **Process for Ongoing Monitoring of Certified Reinsurers**

Certified and Reciprocal Jurisdiction Reinsurers are required to file specific information to a certifying state on an ongoing basis. NAIC Staff and ReFAWG will review this information in an effort to assist states with the ongoing monitoring of the reinsurers. **Subject to applicable state law, all non-public information submitted by reinsurers shall be kept confidential and regulator only.** which is not otherwise public information subject to disclosure shall be exempted from disclosure under the state’s law equivalent of its Freedom of Information Act and shall be withheld from public disclosure.

9. **Withdrawal/Termination of a Certified or Reciprocal Jurisdiction Reinsurer**

When a reinsurer requests to withdraw its status or the lead state terminates the reinsurer’s status as a certified or reciprocal reinsurer, notice of this action should be promptly conveyed to the appropriate NAIC Staff. Once NAIC Staff receives notification of withdrawal or termination, the Passported Certified Reinsurers List(s) will be updated to reflect this status change. The Passported reinsurer will follow the lead state’s laws regarding its withdrawal or termination regarding any active reinsurance contracts.

10. **Interaction Between Certified Reinsurers and Reciprocal Jurisdiction Reinsurers**

   a. Under Section 8A(5) Model #786, credit for reinsurance shall apply only to reinsurance contracts entered into or renewed on or after the effective date of the certification of the assuming insurer with respect to Certified Reinsurers. Under Section 2F(7) of the **Credit for Reinsurance Model Law (#785)**, credit shall be taken with respect to Reciprocal Jurisdiction Reinsurers only for reinsurance agreements entered into, amended, or renewed on or after the effective date of the statute adding this subsection, and only with respect to losses incurred and reserves reported on or after the later of (i) the date on which the assuming insurer has met all eligibility requirements to be designated a Reciprocal Jurisdiction Reinsurer, and (ii) the effective date of the new reinsurance agreement, amendment, or renewal.

   b. It is expected that certain assuming insurers may be considered to be Certified Reinsurers for purposes of in-force business **or business with existing liabilities** and Reciprocal Jurisdiction Reinsurers with respect to reinsurance agreements entered into, amended, or renewed on or after the effective date. In addition, these same reinsurers may also have certain blocks of business that are fully collateralized under the prior provisions of Model #785 and Model #786. The NAIC Blanks will be amended to reflect the status of these reinsurers with respect to each type of insurance assumed.

   c. With respect to those reinsurers that are currently Certified Reinsurers but are seeking recognition by ReFAWG as Reciprocal Jurisdiction Reinsurers for passporting purposes, the same process as outlined in paragraphs 3-6 of this ReFAWG Review Process must be followed. A Form RJ-1 must be filed with each state in which the reinsurer seeks recognition as a Reciprocal Jurisdiction Reinsurer, and the reinsurer must meet all other applicable requirements. However, states may share this information with other states through the NAIC and the ReFAWG Review Process, and previously filed information used in the review of the reinsurer as a Certified Reinsurer may also...
be utilized in its review as a Reciprocal Jurisdiction Reinsurer. For example, a Reciprocal Jurisdiction Reinsurer may cross reference information/documentation that has been filed with respect to its status as a Certified Reinsurer, so that it is not necessary to file duplicative documents. ReFAWG will take full advantage of the passporting process, with the intent of reducing the amount of documentation filed with the states and reduce duplicate filings.

During the initial phases of the implementation of the review of Reciprocal Jurisdiction Reinsurers, not all states may have fully implemented their internal processes for performing these reviews. During this interim period, if a Reciprocal Reinsurer has been approved by a lead state and ReFAWG, the Reciprocal Jurisdiction Reinsurer may seek passporting approval from other states that have adopted the model law and regulation even where a formal internal process for doing so has not yet been finalized. States and Reciprocal Jurisdiction Reinsurers are encouraged to communicate on these issues and, as appropriate, to coordinate through the NAIC to facilitate the passporting process.

11. **Commissioner Shall Create and Publish Lists**

Section 2E(3) of Model #785 and Section 8C(1) of Model #786 require the commissioner to publish a list of Qualified Jurisdictions, while Section 2E(4) of Model #785 and Section 8B(2) of Model #786 require the commissioner to publish a list of all Certified Reinsurers and their ratings. Section 2F(2) & (3) of Model #785 and Section 9D and E of Model #786 require the commissioner to (a) timely create and publish a list of Reciprocal Jurisdictions; and (b) timely create and publish a list of Reciprocal Jurisdiction Reinsurers. It is expected that the commissioner will publish these respective lists on the insurance department’s website, along with special instructions or other guidance as to how Certified Reinsurers and Reciprocal Jurisdiction Reinsurers may meet the applicable filing requirements under the models. There currently are no specific requirements as to the format in which these lists must be published, but ReFAWG and NAIC staff will assist the states with questions on the publication of these lists. In addition, ReFAWG will maintain links on its NAIC webpage to the lists published on the insurance departments’ webpages.

Mr. Daniel Schelp  
Chief Counsel, Regulatory Affairs  
National Association of Insurance Commissioners  
1100 Walnut Street, Suite 1500  
Kansas City, MO 64106-2197

Dear Mr. Stultz and Mr. Schelp:

Thank you for the opportunity to again, on behalf of the International Underwriting Association of London (IUA), submit comments on the Review Process. The IUA and its members that maintain certified reinsurer status and that plan to obtain reciprocal reinsurer status remain vitally interested in working with the NAIC and state regulators in these two areas. The IUA and its members truly appreciate the changes that have been made in the September 17th draft of the Review Process, particularly:

- the statement in section 2.d. that encourages states “to support a uniform submission and approval process” for both certified and reciprocal reinsurers;

- the affirmations: (i) in section 3.f. that ReFAWG will seek to centralize notifications to certifying states as to ratings changes, and (ii) in section 5.b. that ReFAWG will coordinate with the Mutual Recognition Working Group to ensure that with respect to reciprocal reinsurers that a single annual home country regulator certification as to maintenance of minimum capital and surplus and satisfaction of minimum capital and solvency ratios will be made available to all states; and

- in section 10.c. permitting reinsurers that have secured certified reinsurer status to cross-reference information and documentation already compiled and filed so that duplicate filings of such information and documentation can be eliminated in the reciprocal reinsurer process.
October 8, 2021
Page 2

As you know, in our initial July 19th comment letter, we addressed at length the subject of disputed and overdue claims and the disclosure differences between certified and reciprocal reinsurers in the event that there are disputed or overdue claims. For reinsurers that will maintain status as both certified and reciprocal reinsurers, we continue to urge that lead states and ReFAWG adopt what would be in essence a two stage review process at least during a transition period when the same reinsurer has both certified and reciprocal reinsurer status—first, apply the certified reinsurer metrics and second, as and when necessary, apply the reciprocal reinsurer metrics. We have quoted below for ease of reference the relevant paragraph from our July 19th letter

“…assuming that the Certified/Reciprocal Reinsurer making a filing triggers either of the Certified Reinsurer disputed and overdue metrics—one for individual cedents (more than 10% of obligations owed to any Top 10 cedent) and the other for the reinsurer’s portfolio of assumed reinsurance from U.S. cedents (5% of all U.S. reinsurance obligations), the Lead State or ReFAWG could then require preparation of a Reciprocal Reinsurer-specific disputed or overdue claims report using the metrics in the two Covered Agreements and in Section 5.i. of the ReFAWG Review Process. Specifically, for the reinsurer’s book of U.S. reinsurance business overall are the disputed or overdue obligations in excess of 15% of the reinsurer’s total book? And for individual reinsureds, if more than 15% of them have overdue (undisputed) recoverables, does the reinsurer owe more than $100,000 to each of them?”

For all reinsurers that will be both certified and reciprocal reinsurers for the foreseeable future, we believe that the September 17th draft of the Review Process materially advances the overarching goal of promoting uniformity and consistency with respect to the passport processes for both certified and reciprocal reinsurers. The IUA and its members will be pleased to continue working with lead states and the ReFAWG to improve and fine tune the review process based on experience in the coming years.

Yours sincerely,

Re: NAIC Request for Comments on Revised ReFAWG Review Process for Passporting Certified and Reciprocal Jurisdiction Reinsurers

Dear Director Lindley-Myers:

The Reinsurance Association of America (RAA) appreciates the opportunity to submit comments on the NAIC’s revised exposure draft of the ReFAWG Review process for Passporting Certified and Reciprocal Jurisdiction Reinsurers. The Reinsurance Association of America (RAA) is a national trade association representing reinsurance companies doing business in the United States. RAA membership is diverse, including reinsurance underwriters and intermediaries licensed in the U.S. and those that conduct business on a cross-border basis. The RAA also has life reinsurance affiliates and insurance-linked securities (ILS) fund managers and market participants that are engaged in the assumption of property/casualty risks. The RAA represents its members before state, federal and international bodies.

We appreciate the Reinsurance Task Force’s continued thoughtful engagement with respect to implementation of its 2019 revisions to the NAIC Credit for Reinsurance Model Law and Model Regulation, including its continued work on the passporting process for certified and reciprocal jurisdiction reinsurers. As we have stated previously, this is an important part of the implementation process for the U.S./EU and U.S./UK covered agreements and in the NAIC’s broader revision of the credit for reinsurance framework in the U.S. The revised draft of the ReFAWG Review process for Passporting Certified and Reciprocal Jurisdiction Reinsurers provides needed clarification and guidance for industry and we support the changes as reflected in the draft.

In addition, we continue to urge states to include guidance regarding the NAIC ReFAWG passporting process – along with other NAIC resources relating to Certified and Reciprocal Reinsurers and Qualified and Reciprocal Jurisdictions – on state websites. In addition, each state should specify on its website its process for entertaining applications for Reciprocal Reinsurers, including whether they are open to passporting so that a company seeking to do business through this process knows and understands the process it must complete in that jurisdiction. Further, we believe it would be helpful for ReFAWG and the NAIC to draft sample document(s) that states could evaluate, use or adapt in developing their own websites and related processes for Certified and Reciprocal reinsurers. This would help ensure clarity, consistency and expediency in the process for both state regulators and applicants.
We would be happy to answer any questions or discuss any concerns.

Sincerely,

Karalee C. Morell  
SVP and General Counsel  
Reinsurance Association of America

RISK RETENTION GROUP (E) TASK FORCE

Risk Retention Group (E) Task Force Nov. 30, 2021, Minutes.................................................................10-1113
Preliminary Memorandum Regarding Initial Licensing of the Risk Retention Group (RRG) (Attachment One).10-1115
The Risk Retention Group (E) Task Force met Nov. 30, 2021. The following Task Force members participated: Michael S. Pieciak, Chair, represented by Sandra Bigglestone (VT); Karima M. Woods, Vice Chair, represented by Sean O'Donnell (DC); Andrew N. Mais represented by Fenhua Liu (CT); Sharon P. Clark represented by Russell Coy (KY); and Russell Toal (NM). Also participating were: Steve Kinion (DE); and Christine Brown (VT).

1. **Adopted its Summer National Meeting Minutes**

   Mr. O'Donnell made a motion, seconded by Mr. Coy, to adopt the Task Force’s July 26, minutes (see NAIC Proceedings – Summer 2021, Risk Retention Group (E) Task Force) minutes. The motion passed unanimously.

2. **Discussed a Proposed Preliminary Memorandum**

   Ms. Bigglestone stated that during its July 26 meeting, the Task Force discussed results of the survey conducted earlier this year and formed an initial plan to address concerns. There were two areas of focus. The first is the preparation of a template that can be completed by a domiciliary state when a new risk retention group (RRG) is formed and there is no Insurer Profile Summary (IPS) available. This template can be provided upon request to states the RRG is registering in. The second is to review the registration form and consider if additional guidance or instructions for either the state or the RRG would help reduce the delays that occur when the form is incomplete. A group of volunteers took on these tasks. They completed a template for what is now called the Preliminary Memorandum, (Attachment One). They also discussed the NAIC Uniform Registration Form (registration form), but they thought that the Preliminary Memorandum may address many of the concerns of state insurance regulators reviewing the registration form. The volunteers also discussed that there may still be questions/concerns from RRGs completing the forms, but they thought they lacked the necessary perspective to address concerns from the insurer side.

   Ms. Brown provided an overview of the memorandum, stating that the volunteers believe it will be a helpful tool for sharing with non-domiciliary regulators, and it will form the basis of the IPS once the company files its annual statement.

   Ms. Bigglestone and Ms. Liu agreed the memorandum would be helpful and should be considered by the Task Force.

   Ms. Bigglestone stated that the memorandum will likely be exposed in spring 2022 for further consideration by the Task Force.

3. **Received Updates Regarding the Proposed Accreditation Standard for the GCC**

   In 2020, the NAIC adopted revisions to the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). The revisions include a requirement for all groups to submit a group capital calculation (GCC). Per the models, all groups with at least one insurer and one affiliate are subject to the filing, at least once. The Financial Regulation Standards and Accreditation (F) Committee discussed a referral recommending that the changes become an accreditation standard for all states. As a result of this discussion, the Committee voted to expose the referral for a one-year public comment period beginning Jan. 1, 2022. The exposure is subject to final approval by Plenary at the Fall National Meeting. The exposure by the Committee also altered two key items from the initial referral. First, the Committee proposes an effective date of Jan. 1, 2026, for all states. Second, and most important to the discussion at this Task Force, the Committee proposed an accreditation standard that does not include the requirement for each group to file the GCC at least once before an exemption can be granted. This means that a commissioner has discretion to grant an exemption to the filing without receiving an initial filing from the insurance group. Ms. Bigglestone noted that this is not an automatic exemption; it must specifically be granted by the commissioner. However, it does allow states more flexibility.

   Ms. Bigglestone stated that per the Task Force’s charges, it intends to provide a comment letter during the one-year exposure period next year regarding the application of the standard to RRGs.

   Mr. O’Donnell said the additional flexibility would be helpful for RRGs in a holding company group. Mr. Kinion asked for clarification regarding which groups are subject to the GCC, including whether captives were subject to the GCC. Robert Myers
(National Risk Retention Association—NRRA) also asked for clarification regarding a size threshold for groups filing the GCC. Dan Schelp (NAIC) confirmed that a group is defined as at least one insurer and at least one affiliate. There is no threshold for filing a GCC. There is a threshold in Model #450 that allows groups with less than $1 billion in premium to request an exemption from the filing after at least one initial filing. The proposed accreditation requirement does not include the requirement to file at least once prior to a commissioner granting an exemption. Captives are generally excluded from the accreditation program. Therefore, they are not required to be subject to the holding company models and, as a result, the GCC. However, RRGs licensed as captives are subject to accreditation, and each standard must be considered for applicability to RRGs, including the GCC.

Ms. Bigglestone noted that additional guidance for considerations when granting exemptions may need to be developed if the accreditation standard is adopted as proposed.

4. Received Updates on Related NAIC and/or Federal Actions

Ms. Bigglestone noted that the Task Force continues its ongoing commitment to promote educational and communication opportunities. One such opportunity was the NRRA conference in early November, which included a state insurance regulator panel discussing regulation of RRGs. Anyone aware of future educational opportunities or resources is encouraged to communicate with the Task Force.

Ms. Bigglestone noted that the Surplus Lines (C) Task Force is working to update the Nonadmitted Insurance Model Act (#870). On Nov. 23, the NRRA sent a letter to the drafting group working on updates to Model #870, which comments on the definition of “home state” as it relates to an insured being a member of an unaffiliated group. The revisions in the NAIC model act establish the allocation of premium for affiliated groups, but they do not address unaffiliated groups. Since risk purchasing groups (RPGs) are primarily made up of unaffiliated members or insurance buyers, the current draft revisions complicate how premium tax will be collected from RPGs. The NRRA’s letter also draws attention to previous discussions and conclusions reached by the Surplus Lines (E) Task Force with respect to RPGs that may contradict current discussions. The work of the drafting group is still ongoing.

Having no further business, the Risk Retention Group (E) Task Force adjourned.

Risk Retention Group E Task Force 11-30-21 Minutes
RRG Preliminary Memorandum

An RRG Preliminary Memorandum is developed by the domestic state for a risk retention group (RRG) upon approving the initial licensing of the RRG. The information in this document will serve as a summary of key considerations in assessing and approving the license. The information will also serve as the base for developing an Insurer Profile Summary (IPS) once the RRG begins writing business and files its annual statement. The role of the RRG Preliminary Memorandum is for both internal communication within the domestic state and for external communication with other states in which the RRG is authorized to register and has submitted a registration form. In accordance with the federal Liability Risk Retention Act (LRRA) a non-domestic state must rely on the domestic state to approve which states the RRG may write in. The non-domestic state does not perform their own review of the application for licensing in the domestic state but relies on the information in the RRGs registration form and communication from the domestic regulator. The RRG Preliminary Memorandum is not required, however, its use can help improve transparency and communication between regulators and reduce potential delays in registration. Additional recommendations regarding transparency and communication can be found in the RRG best practices and frequently asked questions documents on the Risk Retention Group (E) Task Force website.

A template that can be used to develop the RRG Preliminary Memorandum is provided below; however, the actual form and content should be determined by each respective state.
XX DEPARTMENT OF INSURANCE
RRG PRELIMINARY MEMORANDUM
COMPANY NAME
Date of Review

BUSINESS SUMMARY
Provide a brief description of the risk retention group (RRG) and a summary of the business operations of the RRG. Consider inclusion of the following.

- Purpose of the RRG and the benefits gained by creating the RRG (i.e., is it meeting a need not met in the commercial market, formed by a promoter looking for a group, etc.).
- Describe the approved coverages and comment on their compliance with the LRRA. Include policy limits and net retention.
- Describe the ownership structure and/or key members, association, or sponsor.
- Describe the capital structure of the RRG. Include minimum capital and surplus requirements, use of letters of credit, surplus notes, ability to raise additional capital, etc.
- Comment on how the business is produced (i.e., direct writings, agent(s), managing general agent (MGA), managing general underwriter (MGU)).

GOVERNANCE
Discuss the makeup of the board of directors and other oversight considerations including compliance with governance requirements in the Model Risk Retention Act (#705).

Discuss if the RRG is MGA or producer controlled.

Discuss service providers used.

Confirm background checks were done.

PROFORMA FINANCIAL SNAPSHOT
Proforma financial data may be summarized in a narrative format, chart format, or a combination. Information may include key financial statement items and/or key ratios. Sample data is shown below but the format, number of years of data, line items and ratios included should be customized. Consideration should be given to what information provides the most insight for the newly formed RRG. Information related to the feasibility study, including who performed the study may also be included.

### AREAS OF INTEREST

Provide a brief summary of the following items when applicable or noteworthy.

- Reinsurance
- Investment policy
- Related Parties
- Restrictions or special requirements such as permitted practices
- Additional details for coverages that require special underwriting, discounting and tail coverages
- Other

### IMPACT OF HOLDING COMPANY ON INSURER

Summarize the evaluation of the impact of the holding company system on the domestic insurer. Or state that the RRG is not part of a holding company group. The summary should include whether a disclaimer of affiliation or any other exemption or waiver related to holding company requirements has been granted, and the rationale for the determination.

### KEY RISKS AND SUPERVISORY PLAN

Summarize key risks identified and/or items that require further monitoring by the analyst or specific testing by the examiner. In addition, indicate if the Company is or should be subject to any enhanced monitoring, such as monthly reporting, a targeted examination or a more frequent exam cycle. Key risks may relate to the areas of interest above or may be separate considerations. Information should be brief and include prospective considerations.

Document the date of the first expected examination and the planned examination cycle.

## Analysis Follow-Up

## Examination Follow-Up
The domiciliary state maintains authority and has responsibility to regulate the formation and operation of a Risk Retention Group (RRG). Therefore, when concerns arise in a non-domiciliary state about a RRG, the best resource is the domiciliary state. This includes concerns about solvency and capital levels, financial condition, or other non-compliance of an RRG as well as operational questions and concerns that should be directed to the domiciliary state.

States are encouraged to examine their RRG laws to make certain that they are consistent with (1) the federal Liability Risk Retention Act (LRRA) and (2) the NAIC Model Risk Retention Act (#705).

**Questions/Concerns from Non-domiciliary State**

Upon initial registration of an RRG in a non-domiciliary state, it is not uncommon for questions to arise that are best directed to the domiciliary state. Attachment A outlines a sample Inquiry Template that can be used to request this information. The template may be customized as deemed appropriate by the non-domiciliary state. Domiciliary states should respond in a timely manner to such requests.

Questions about operations and financial solvency that arise following initial registration should also be addressed to the domiciliary state.

If significant concerns still exist after communication with the domiciliary state and the non-domiciliary state concludes that the RRG is not compliant with any of the specific procedures set forth in the LRRA, the following steps may be undertaken:

- a. Refer to your own state RRG statute to ensure compliance of your prospective action;
- b. Provide written notice of any non-compliance directly to the RRG;
- c. Submit a demand for examination of the RRG to the domiciliary regulator, as provided by the LRRA ([15 U.S.C. S3902(a)(1)(E)])
- d. Institute suit in a court of competent jurisdiction.

A non-domiciliary state may request the following from the domiciliary state and similarly, the domiciliary state should be prepared to provide the following to the non-domiciliary state:

- e. Insurer Profile Summary (IPS)
- f. Inquire about the extent of biographical affidavit review and results of background checks
- g. Most recent examination report (may be obtained from I-Site)
- h. Amendments to the RRG’s business plan or feasibility study
- i. Verification of domiciliary state approval to expand into non-domiciliary state

Alternatively, **the following documents may be used for this request with modifications as necessary:**

- **Attachment A – Inquiry Template** (when specific questions or concerns not typically addressed on the above documents arise) may be used for this request with modifications as necessary.
- **Attachment B – RRG Preliminary Memorandum** (for a new RRG in which the IPS is not yet available)
**Registration Timeline**

The registration process for RRGs should be shorter than the licensing process for other types of insurers as the RRG is responsible only for a complete registration form* and the related attachments. The non-domiciliary state cannot reject a complete registration* that complies with those laws of the non-domiciliary state that are not preempted under the LRRA. In the event a non-domiciliary state has concerns with an RRG registration, such concerns should be raised with the domiciliary state, who has the authority to regulate the formation and operation of an RRG. The following guidelines take into consideration similar guidelines for ordinary insurance companies, and adherence is at the discretion of each state.

- A non-domiciliary state should review the registration form to ensure all required information is entered on the form within 10 business days of its receipt of the form and notify the Risk Retention Group of the need to submit any missing elements.
- Following receipt of a complete registration*, a non-domiciliary state should notify the RRG within 30 days that its registration is confirmed.
- The domiciliary state should respond to inquiries from a non-domiciliary state in a prompt manner, typically no later than 10 business days after receiving the inquiry.

*Refer to the document titled “Risk Retention Groups: Frequently Asked Questions”, 3(c) for the definition of a complete registration form.

**Domiciliary State Responsibilities**

When a domiciliary state identifies an RRG as troubled or potentially troubled, the State insurance regulator should make efforts to communicate proactively with other state insurance regulators in which the RRG is registered (consistent with the **Troubled Insurance Company Handbook**). Although the domiciliary regulator is responsible for taking actions involving their domiciliary RRGs, awareness by a non-domiciliary state may help them to proactively do what they can to protect their residents and respond to policyholder complaints or concerns directed to them.

**General Licensing Guidance**

Domiciliary states should ensure the RRG’s application for licensing, which includes the plan of operation and feasibility study, includes the following, at a minimum:

- information sufficient to verify that its members are engaged in businesses or activities similar or related with respect to the liability to which such members are exposed by virtue of any related, similar or common business, trade, product, services, premises or operations;
- information sufficient to verify that the liability insurance coverage to be provided by the Risk Retention Group will only cover the members of the Risk Retention Group;
- for each state in which it intends to operate, information regarding the liability insurance coverages, deductibles, coverage limits, rates and/or rating/underwriting methodology for each line of commercial liability insurance the group intends to offer;
historical and expected loss experience of proposed members and national experience of similar exposures to the extent that this experience is reasonably available;
- appropriate opinions/feasibility work by a qualified independent casualty actuary, including a determination of minimum premium participation levels required to commence operation and to prevent a hazardous financial condition;
- pro forma financial statements and projections, including assumptions, on an expected and adverse basis;
- identification of Board of Directors, including independence determination;
- biographical affidavits for all BOD members;
- evidence of compliance with corporate governance standards, including draft policies;
- underwriting and claim procedures;
- marketing methods and materials if available;
- draft insurance policies;
- names of reinsurers and reinsurance agreements, if available;
- investment policies;
- identification of each state in which the RRG intends to write business/register;
- identification of service providers, including fee structure and relationships to members; and
- subsequent material revisions to the plan of operation or feasibility study.
Attachment A – Inquiry Template

The above-subject company has applied for Registration as a Risk Retention Group (“RRG”) in the State of _______ to write __________ liability coverage to its members who are in the business of __________________________. As you can appreciate, due to the provisions of the Liability Risk Retention Act of 1986 the (state) has limited authority to regulate RRGs and therefore to a large extent, the (state) relies on the RRGs’ domiciliary state to exercise general oversight and responsibility in the areas of licensing, solvency, rates and marketing. As part of our due diligence, we would appreciate any information your office can share with us regarding the company with respect to the following items, some of which may be satisfied by providing the Insurer Profile Summary:

1. Any significant concerns the State of [domicile] has regarding the company.
2. Any issues that may have a significant impact on the company going forward.
3. Any issues regarding the number of consumer complaints the company has in [state of domicile] or other states that may have been brought to your attention.
4. Comments and/or concerns about the financial condition of the company.
5. Comments and/or concerns about the management or performance of the company.
6. Results of any financial analysis and/or market conduct findings.
7. The company’s priority level within the Financial Analysis Division.
8. Any conditions imposed by your Department upon the company’s license.
9. Any significant non-compliance issues with the State of [domicile] regulatory authority including filing requirements and corrective action, if any.
10. Comments regarding the company’s application for registration in the State of [state registering].
11. Approval from State of [domicile] for the RRG to register in the State of [state registering].

P&P Manual Amendment to Clarify the Exclusion of Residual Tranches and Interests from Schedule D-1 Reporting and Provide Temporary NAIC Designation Instructions (Attachment Four) ................................................................. 10-1166

Comment Letter Regarding the Proposed P&P Manual Amendment Clarifying 5GI Mapping to NAIC Designation Category (Attachment Five) ........................................................................................................... 10-1172

P&P Manual Amendment for Private Letter Rating Securities and the Corresponding NAIC Designation Category for NAIC 5GI (Attachment Six) ..................................................................................................... 10-1173
The Valuation of Securities (E) Task Force met in San Diego, CA, Dec. 12, 2021. The following Task Force members participated: Dana Popish Severinghaus, Chair, represented by Kevin Fry (IL); Doug Ommen, Vice Chair, represented by Carrie Mears (IA); Lori K. Wing-Heier represented by David Pfifer (AK); Ricardo Lara represented by Laura Clements (CA); Andrew N. Mais represented by Kathy Belfi and Ken Cotrone (CT); Trinidad Navarro represented by Rylynn Brown (DE); David Altmaier represented by Ray Spudeck and Virginia Christy (FL); Dean L. Cameron represented by Eric Fletcher (ID); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Stewart Guerin (LA); Kathleen A. Birrane represented by Matt Kozak (MD); Gary D. Anderson represented by John A. Turchi (MA); Chlora Lindley-Myers represented by Debbie Doggett (MO); Eric Dunning represented by Lindsay Crawford and Justin Schrader (NE); Marlene Caride represented by John Sirovetz (NJ); Russell Toal represented by Lea Geckler (NM); Adrienne A. Harris represented by Jim Everett (NY); Cassie Brown represented by Jamie Walker (TX); Jonathan T. Pike represented by Jake Garn (UT); Scott A. White represented by Doug Stolte and Greg Chew (VA); Mike Kreidler represented by Tim Hays (WA); and Mark Afable represented by Amy Malm (WI).

1. **Adopted its Nov. 17, Sept. 30, and Summer National Meeting Minutes**

   Mr. Fry said the first item on our agenda is to consider the adoption of the minutes from the Summer National Meeting, and the Sept. 30 and Nov. 17 interim meeting conference calls.

   Ms. Belfi made a motion, seconded by Ms. Walker, to adopt the Task Force’s July 15 (see NAIC Proceedings – Summer 2021, Valuation of Securities (E) Task Force, Nov. 17 (Attachment One), and Sept. 30 (Attachment Two) minutes. The motion passed unanimously.

2. **Adopted an Amendment to the P&P Manual to Remove Residual Tranches from Receiving an NAIC Designation**

   Mr. Fry said our next agenda item is to discuss and consider adoption of a proposed amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) to remove residual tranches from receiving an NAIC Designation. Residual tranches capture securitization tranches and beneficial interests that reflect loss layers without any contractual payment of principal or interest. Instead, residual tranches are paid after contractual payments of principal or interest have been made to other tranches and are based on the remaining available funds.

   Charles Therriault (NAIC) said the Statutory Accounting Principles (E) Working Group identified inconsistencies in how residual tranches and interests were being reported, with some entities reporting them on Schedule BA: Other Long Term Invested Assets and others reporting them on Schedule D-1: Long-Term Bonds with either self-assigned NAIC 5GI or NAIC 6 Designations. To prevent further inconsistency and direct appropriate reporting, on Nov. 10, the Working Group adopted an amendment to SSAP 43R – Loan Backed and Structured Securities to clarify that residual tranches and interests shall be reported on Schedule BA. To accommodate the timeframe needed for a Blanks (E) Working Group proposal to expand reporting lines on Schedule BA to capture residual tranches and interests, the Working Group’s amendment permits residual tranches and interests currently reported on Schedule D-1 to continue to be reported on Schedule D-1 for 2021 reporting with an ultimate effective date of Dec. 31, 2022.

   The SVO staff agree with the Working Groups recommendation that during this window when residual tranches currently reported on Schedule D-1 are permitted to stay on Schedule D-1, they should be allowed to do so only with an NAIC 6* Designation and not an NAIC 5GI Designation. This is consistent with the Working Group’s adopted change. The NAIC 5GI Designation is not appropriate for residual tranches and interests because according to the P&P Manual, “an insurance company is permitted to self-assign an NAIC 5GI to an obligation if it meets all of the following criteria:

   1. Documentation necessary to permit a full credit analysis of the security by the SVO does not exist or an NAIC CRP rating for an FE or PL security is not available.
   2. The issuer or obligor is current on all contracted interest and principal payments.
   3. The insurer has an actual expectation of ultimate payment of all contracted interest and principal.
Assignment of an NAIC 5GI Designation for residual investments is an incorrect application of the guidance as: there are no contracted interest and principal payments to certify as current and the insurer cannot have an actual expectation of receiving all contractual principal and interest of the underlying collateral as these tranches absorb the losses first for the securitization structure. Although cash flows may pass through to the residual holders at periodic intervals under the waterfall, ultimate returns depend on continued performance so, therefore, there can be no actual expectation that future payments will be received. Along with the proposed P&P Manual language requiring residuals to be reported on Schedule BA, there is a proposed provision stating that for 2021 year-end reporting residuals will be permitted on Schedule D-1 with an NAIC 6. If adopted, the SVO requests the Task Force’s permission to remove that provision from the 2022 version of the P&P Manual, without further authorization.

There were other requests from the Working Group related to NAIC 5GI and 6 that the SVO would like to bring up with the Task Force next year (Attachment Three). The SVO staff recommends adoption of this amendment today.

Mr. Kozak made a motion, seconded by Mr. Chew, to adopt the amendment to the P&P Manual to clarify proper reporting and designation for residual tranches and interests (Attachment Four). The motion passed unanimously.

3. **Adopted an Amendment to the P&P Manual to Clarify 5GI Mapping to NAIC Designation Category**

Mr. Fry said the next item is to discuss and consider adoption of a technical correction amendment to the P&P Manual clarifying 5GI mapping to a Designation Category in the recently amended Private Letter Rating section.

Marc Perlman (NAIC) said at the May 24 meeting the Task Force adopted an amendment to the P&P Manual requiring the submission of Private Rating Letter Rationale Reports with certain Private Rating Letters filed with the SVO. In the May amendment certain language, which is currently in the printed December 2020 version of the P&P, which clarifies that an NAIC 5GI Designation is the equivalent of an NAIC 5.B Designation Category, was mistakenly omitted. The SVO proposes a non-substantive technical amendment to the May amendment to reinsert the omitted language (Attachment Five).

Ms. Doggett made a motion, seconded by Ms. Clements, to adopt this amendment to the P&P Manual to clarify the mapping of NAIC 5GI to a Designation Category (Attachment Six). The motion passed unanimously.

4. **Exposed an Amendment to the P&P Manual to Update the Definition of Other Non-Payment Risk Assigned a Subscript “S”**

Mr. Fry said the next agenda item is to discuss and consider exposure of a proposed amendment to the P&P Manual to update the Definition of Other Non-Payment Risks Assigned a Subscript “S.”

Charles Therriault (NAIC) said securities that possess “Other Non-Payment Risks” are intended to be reviewed by the SVO but these investments have not been explicitly included on the list of Specific Populations of Securities Not Eligible For Filing Exemption in Part Three of the P&P Manual. Securities with other non-payment risks are identified through assignment of the Administrative Symbol “S” as a subscript to the NAIC Designation. This amendment would add “Securities with Other Non-Payment Risks” to the list of securities that are ineligible for filing exemption.

As noted in Part One, paragraph 90, of the P&P Manual:

> An objective of the VOS/TF is to assess the financial ability of an insurer to pay claims. For example, the regulatory assumption is that a fixed income instrument called debt by its originator or issuer requires that the issuer make scheduled payments of interest and fully repay the principal amount to the insurer on a date certain. A contractual modification that is inconsistent with this assumption creates a rebuttable inference that the security or instrument contains an additional or other non-payment risk created by the contract that may result in the insurer not being paid in accordance with the underlying regulatory assumption. The SVO is required to identify securities that contain such contractual modifications and quantify the possibility that such contracts will result in a diminution in payment to the insurer, so this can be reflected in the NAIC Designation assigned to the security through the application of the notching process.

The proposed amendment would further clarify through additional illustrations securities that would also be considered as having “Other Non-Payment Risks”. These would include securities that:
a) Incorporate the performance of other assets to determine their contractual payments, either directly or indirectly through reference pools, equity baskets, or indices.

b) Receive payments as the remainder or residual cashflow after all other payment obligations have been made.

c) Receive additional performance or bonus cashflows; or have no contractual events of payment default.

Mr. Fry said this amendment enhances the guidance around the subscript “S” and does not change policy in any way but makes it clearer with additional examples.

Mr. Fry directed the SVO to expose the proposed amendment to the P&P Manual to update the definition of Other Non-Payment Risks Assigned a Subscript “S” for a 60-day public comment period ending Friday, Feb. 11, 2022.

5. Exposed an Amendment to the P&P Manual to Update the Definition of PPS

Mr. Fry said next is to discuss and consider exposure of a proposed amendment to the P&P Manual to update definition of principal protected securities. In May of last year, the Task Force adopted an amendment to the P&P defining principal protected securities and making them ineligible for Filing Exemption. The SVO has seen new transactions with similar risks, but which do not precisely fit the current definition.

Marc Perlman (NAIC) said last May the Task Force adopted an amendment to the P&P to include principal protected securities (PPS) as a new security type ineligible for the filing exempt process. At the time, the types of PPS which the SVO had seen were mixes of a traditional bond or bonds with additional assets that could possess any characteristic. These additional assets, which the SVO called “performance assets,” were intended to generate excess return. They included, among other things, derivatives, common stock, commodities and equity indices. The performance assets often included undisclosed assets and were typically not securities that would otherwise be permitted on Schedule D, Part 1 as a bond. In each case, the external credit rating was based solely on the component dedicated to the repayment of principal and ignored the risks and statutory prohibitions of reporting the performance asset on Schedule D, Part 1.

Recently, the SVO received a proposal for a security which poses many of the same risks as a PPS but was structured in a way that it did not cleanly fit the definition in the P&P. In this example, the security was not issued by a special purpose vehicle (SPV) holding an “underlying” principal protection bond and the performance asset. “Underlying” is a key component of the current definition. Rather, the security was the direct obligation of a large financial institution whose obligation it was to pay principal at maturity and a premium based on the performance of referenced indices, including an equity index and an index comprised of equities, fixed-income instruments, futures and other financial assets. Though the obligation was solely that of the issuing financial institution, meaning there were no underlying bonds or performance assets, the structure posed the same risk of exposure to a performance asset because the amount of the issuer’s payment obligation was directly dependent on the performance of the referenced indices. Additionally, unlike a PPS transaction with an underlying bond and performance asset, the likelihood of payment of that performance asset premium, whatever the amount might be, was linked directly to the creditworthiness of the issuer. As such, the SVO proposes amending the P&P Manual definition of Principal Protected Securities to account for alternate structures which pose similar risks.

Mr. Fry said the objective of this amendment is to take the PPS methodology and expanded it to include these newer securities. Mr. Fry directed the SVO to expose this proposed amendment to the P&P Manual to update the definition of Principal Protected Security for a 60-day public comment period ending, Friday, Feb. 11, 2021.

6. Exposed an Amendment to the P&P Manual to Assign NAIC Designations to Investments with a Fixed Income Component for Reporting on Schedule BA

Mr. Fry said next is to discuss and consider exposure of a proposed amendment to the P&P Manual to add guidance on the designation of Schedule BA assets with fixed income characteristics. There are potentially many securities which do not qualify as bonds for purposes of reporting on Schedule D-1 but which have fixed income characteristics. If it were possible to assign a designation to these investments, they could potentially benefit from more favorable RBC treatment on Schedule BA.

Marc Perlman (NAIC) said the SVO recommends updating the instructions in Part Three of the P&P Manual to include guidance related to the assignment of NAIC Designations to Schedule BA assets with underlying characteristics of bonds or fixed income instruments. Part One of the P&P Manual currently permits the SVO to assign NAIC Designations to Schedule BA assets with underlying characteristics of bonds or fixed income instruments, but there is currently no specific guidance for the SVO in Part Three. Including the proposed provisions would enable the SVO to assign NAIC Designations to Schedule BA assets which are not expressly covered by other sections of the P&P Manual (such as Schedule BA Funds). Schedule BA assets
for life and fraternal insurers would benefit from NAIC Designations because they would be eligible for more favorable RBC treatment.

The SVO’s authority to assign NAIC Designations to certain Schedule BA assets already exists. Part One of P&P Manual states that, “The SVO is assigned to assess investment securities reported to state regulators on Schedule D and Schedule BA.”. Additionally, the P&P explains that to be eligible for the assignment of an NAIC Designation a Schedule BA asset must have underlying characteristics of a bond or fixed income instrument. This proposed amendment would potentially make various types of assets eligible for an NAIC Designation which currently are not. Each asset would need to be individually assessed by the SVO for bond or fixed income characteristics.

Mr. Fry said this issue has been around for a while where on Schedule BA a fixed income like investment receives an NAIC designation from the SVO for a life or fraternal insurer but a property and casualty insurer would not receive that same risk-based capital (RBC) treatment. There are a lot of asset classes that maybe are not specifically designed as a bond but the SVO could assign a designation to it. Thinking forward with the bond project, if any assets fall off schedule D-1, this would at least give it a potential home if they can satisfy the requirements of the SVO with the designation.

Mr. Fry directed the SVO to expose this proposed amendment to the P&P Manual to add guidance on the designation of Schedule BA assets with fixed income characteristics for a 60-day public comment period ending, Friday, Feb. 11, 2021.

7. **Exposed an Amendment to the P&P Manual to Permit the SVO to Assign NAIC Designations to Unrated Subsidiaries of in WCFI Transactions**

Mr. Fry said the next item on the agenda is to discuss and consider exposure of a proposed amendment to the P&P Manual to permit the SVO to Assign NAIC Designations to unrated subsidiaries in Working Capital Finance Investment (WCFI) transactions. The Task Force has gone through several iterations of this amendment over the past year. In this latest version the SVO is reintroducing a proposal under which the Task Force would give the SVO discretion to notch down from the parent’s rating in certain circumstances. It adheres very closely to an earlier version of the proposal.

Marc Perlman (NAIC) said the SVO received comments from certain insurers and other interested parties that it should assign NAIC Designations to WCFIs with unguaranteed and unrated obligors, based on the implied support from an obligor’s NAIC Credit Rating Provider rated parent.

In November 2020, the Task Force exposed a proposed amendment to the P&P Manual to direct the SVO to rely upon the NAIC Designation or NAIC CRP Rating equivalent of the subsidiary obligor’s parent entity, with allowance for the SVO to notch down from the parent’s rating or NAIC Designation due to its assessment of certain factors regarding the parent/subsidiary relationship. In response to feedback from some Task Force members and interested parties, the SVO subsequently presented a revised proposal to the Task Force at the Summer 2021 National Meeting to remove its discretion to notch because, as demonstrated in our memorandum to the Task Force of Oct. 16 of last year, the SVO found no generally accepted analytical technique or methodology to support the assumption that a parent entity will necessarily support its subsidiary in times of financial distress. That revised amendment was also not adopted by the Task Force.

The SVO is now proposing a new clean amendment which is substantially similar to the original and reflects the comments from some Task Force and Statutory Accounting Principles (E) Working Group members that they would like the SVO to retain discretion to notch down, as it deems appropriate. Like the November 2020 amendment, the Task Force would direct the SVO to imply the parent’s support of its subsidiary and would give the SVO discretion to assign an NAIC Designation to the subsidiary which is lower than that of the parent based on its assessment of the parent/subsidiary relationship. However, this new proposal clarifies that if the SVO notches the NAIC Designation of a subsidiary obligor down from that of its parent resulting in a credit assessment below an NAIC 2, the WCFI program would not be eligible for an NAIC Designation because it would no longer meet the definition of an eligible “Obligor” in SSAP 105R – Working Capital Finance Investments.

Mr. Fry said one thing that is important to regulators is that the Task Force created a framework for working capital finance investments and put a lot of guardrails around them. This is one of the reasons why the Task Force got comfortable with this asset class. Some these subsidiaries that issue the working capital finance notes do not have a rating but are consolidated into a larger group and a top entity is rated. There are a lot of interconnectedness and relationships between those entities short of a full guarantee of it, but it has a place in the structure. In those cases, the Task Force could use this policy to just use the top rating. If the SVO saw something abnormal or something that was a little out of place from that what would be normally seen, the SVO could notch. If it does not pass the NAIC smell test for any reasons, the SVO can notch it down. If it falls below investment grade it will not even be allowed to be admitted. It will make a lot of sense for the Task Force, if it decides to go
with this policy, to monitor the activity and what the transaction looking like. If there was anything about them that is concerning, the policy could always be adjusted. The Financial Accounting Standards Board (FASB) and U.S. Securities Exchange Commission (SEC) are looking at these investments too. FASB is looking at possibly creating new disclosure requirements.

Mr. Fry directed the SVO to expose this proposed amendment to the P&P Manual to assign NAIC Designations to unrated subsidiaries in Working Capital Finance Investment transactions for a 60-day public comment period ending Friday, Feb. 11, 2021.

8. **Heard a Staff Report on the Use of NAIC Designations by Other Jurisdictions in the Regulation of Insurers**

Mr. Fry said the next item is to discuss a recent request that the SVO received related to non-U.S. jurisdictions wishing to reference NAIC Designations.

Charles Therriault (NAIC) said the SVO was made aware of regulators or insurers in non-U.S. jurisdictions, such as the Bermuda Monetary Authority and Japan’s Financial Services Agency, either referencing NAIC Designations in their regulatory processes or wanting to reference them. The P&P Manual is very specific that NAIC Designations are only intended for NAIC members consisting of the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories. For example, the P&P says of the intended, proper and authorized use of NAIC Designations is the following:

1. An NAIC designation for quality (NAIC Designation) of a security is produced solely for NAIC members who should interpret the designation for quality, in the context of the NAIC Financial Regulation Standards and Accreditation Program, a member’s state insurance laws and regulations, and the regulatory or financial solvency profile of a specific insurance company.

2. Because an NAIC Designation, is not produced to aid the investment decision-making process, NAIC Designations are not deemed to be suitable for use by anyone but NAIC members.

3. NAIC Designations are not intended to be and should not be used as if they were the functional equivalent of the credit ratings of nationally recognized statistical rating organizations or other rating organizations whose ratings are intended to be used by investors as predictive opinions of default risk.

4. The use or adoption of NAIC Designations by anyone other than NAIC members is improper and is not authorized by the NAIC.

5. NAIC Designations and other analytical products of the SVO and SSG are produced solely for the benefit of NAIC members in their capacity as state insurance department officials for use in the NAIC Financial Regulation Standards and Accreditation Program.

If, despite the noted restrictions on the use of NAIC Designations, NAIC members consider it worthwhile to have the ability to approve the use of NAIC Designations by the insurance regulators of certain non-member jurisdictions, the SVO would recommend certain conditions to be met. These conditions would include acknowledgement by the requesting regulator in a memo of understanding (i) of the intended purposes of NAIC Designations (including that NAIC Designations are not the functional equivalent of credit ratings), and (ii) that the requesting regulator’s uses may deviate from the NAIC’s intended purposes. Additionally, a formal process would need to be created, involving necessary amendments to the P&P Manual, to authorize and rescind authorization of the requesting jurisdiction. Consideration of the jurisdiction’s recognition by the Mutual Recognition of Jurisdictions (E) Working Group could be another requirement of authorization. Once authorized and listed in the P&P Manual, insurers in that jurisdiction could then be given access to the SVO List of Investment Securities compiled in AVS+ and be permitted to file securities with the SVO. The SVO is issuing this report just to request guidance from the Task Force on how to proceed forward.

Mr. Fry said as a regulator over the years, there are certain jurisdictions, i.e. Cayman, if you form an insurer or reinsurer there, it can also select the accounting methodology to use there, the U.S. RBC system is an option. And in that case, regulators are very comfortable with that as the ratings are understandable and how they are used. In that context, it would seem useful. It is important to acknowledge that NAIC designations are produced for NAIC members and intended for NAIC regulatory purposes. From a legal perspective, it would be important to be upfront with the limitations of NAIC designations. Before pursuing all that, this is letting the Task Force know it is something being considered. If there are no concerns, the SVO staff will proceed along these lines of developing some guidance that would clarify the issues. Task Force member can reach out to the SVO staff if they have any comments. No action is needed at this time other than soliciting input from the Task Force.
9. **Heard a Staff Report on Rating Issues and Proposed Changes to the FE Process**

Mr. Fry said the next item is to hear a report from the Investment Analysis Office on issues they are seeing with the NAIC’s use of ratings. This issue has been before the Task Force several times, most recently it was discussed at the Task Force’s Educational Session this October during a confidential session. The themes in this memo echo the findings of the Rating Agency Working Group that was formed to study the NAIC’s reliance on rating agencies after the Financial Crisis in 2008. The Working Group’s recommendation were adopted by the NAIC in 2010 and it may be time for the Task Force to refresh themselves on these adopted items.

Charles Therriault (NAIC) said the SVO, Structured Securities Group (SSG) and Capital Markets Bureau (CMB) staff have raised our concerns about the NAIC’s reliance on rating agency ratings several times. The SVO staff have twice before analyzed cross rating agency rating differences and the results of this most recent analysis is consistent with the prior reviews. As was requested by the Task Force last year when it was discussing private letter rating rationale reports, the SVO provided the Task Force with an in-depth review into some of the specific issues and inconsistencies it is seeing. The SVO walked the Task Force through 43 different privately rated securities that had risk assessments that were materially different that the SVO staff’s assessment, material being 3-6+ rating notches higher or 1-2 full ratings categories higher. This was not intended to be an exhaustive audit of all privately rated securities was only highlighting to the Task Force that there are meaningful deviations that SVO is seeing in risk assessment that can result in inappropriately low Risk Based Capital (RBC) for very risky assets.

The NAIC relies heavily on credit rating providers to assess the risk for the vast majoring of insurer investments. This reliance comes with no oversight as to the analytical basis for those ratings, the applicability or strength of the methodology, or the consistency of the resulting risk assessments. The SVO is not charged with monitoring credit rating providers or authorized to use its judgement or discretion to determine how, when and if a CRP rating should be used for NAIC purposes. Quoting from some of the Rating Agency (E) Working Groups recommendations from 2010:

> VOS should continue to develop independent analytical processes to assess investment risks. These mechanisms can be tailored to address unique regulatory concerns and should be developed for use either as supplements or alternatives to ratings, depending upon the specific regulatory process under consideration.

> ARO (we now call them credit rating providers or CRPs) ratings have a role in regulation; however, since the ratings cannot be used to measure all the risk that a single investment or a mix of investments may represent in an insurer’s portfolio, NAIC policy on the use of ARO ratings should be highly selective and incorporate both supplemental and alternative risk assessment benchmarks.

> NAIC should evaluate whether to expand the use of SVO and increase regulator reliance on the SVO for evaluating credit and other risks of securities.

> Consideration should be given to modifying the filing exempt rule to adjust for securities with new additional ARO ratings and other measures (such as V Scores and Parameter Sensitivities) when deemed applicable. The need for difference RBC and/or some other additional regulatory process should be evaluated. Such processes could include the use of market information on price direction and of yield trends in addition to ARO ratings for some or all filing exempt securities. Securities highlighted by this process can be reviewed by the SVO with the objective of adjusting the ARO rating to help ensure an accurate RBC charge.

The Working Group’s recommendations are matched by staff’s concerns today, that CRP rating does not reflect a reasonable assessment of a security’s risk and the validity of the resulting RBC ratio, that relies upon that CRP rating to determine the factor to apply to that security, may be significantly compromised.

Marc Perlman (NAIC) said a common misconception about SEC oversight of rating agencies. Many people think that the SEC’s recognition of a rating agency as an NRSRO means that the SEC has reviewed and approved of that rating agency’s criteria and methodologies. That is not the case. NRSROs are regulated by the SEC, but under the Credit Rating Agency Reform Act of 2006, (which introduced Section 15 of the Securities Exchange Act) the SEC and States are forbidden from regulating NRSRO methodologies. The SEC cannot approve of or regulate the substance of a rating agency’s methodologies.

It cannot opine on the quality of a methodology. The SEC can enforce adherence to the process by which those methodologies were created and are applied.
The purpose of rating agency regulation is to improve ratings quality through transparency and competition. It’s not to create uniform rating agencies with fungible methodologies and ratings but rather to expose the differences between the agencies. Like other federal approaches to securities regulation, NRSRO regulation focuses on accurate disclosure, allowing users of ratings, like the NAIC, to choose the NRSRO that best meets their needs.

Charles Therriault (NAIC) said in the attachment there are three different types of analysis comparing rating agency ratings, one looking the absolute values of rating notch differences between CRPs that rated the same security, the next cross-correlations between each CRP on securities rated by both and finally a principal component analysis that statistically portrays how alike or dissimilar each CRP is to one another. The identity of each rating agency was concealed to maintain confidentiality, but these charts show that there are significant differences between ratings agencies. Ratings are not fungible; a AAA is not a AAA no matter which CRP generates it. And because CRP assessments of risk are different, IAO staff believe, as did the Rating Agency (E) Working Group, that how each CRP’s ratings are used in NAIC processes should also be different.

Eric Kolchinsky (NAIC) said some of the options that could be used for a better use of rating agency information are listed in the memo. The first option is to require at least two or sometimes more ratings for each security and then use the lowest of the two. If a security only has one rating, there is a process by which it is identified so that the SVO can look at the quality of that rating. Option two is a study, so this would look at the process by which the NAIC came up to the risk-based capital analysis. Those provide specific thresholds for each performance, rating, and the historical performance of each rating agency could be compared to those benchmarks, the thresholds. That is a lengthy process, but quite doable. Option three is something like what the NAIC does for RMBS and CMBS. The rating agencies are one of the few vendors that do not go through a RFQ or request for qualifications. Under this option they would be looked at like any other vendor and set up qualifications. The NAIC could look at that process of using that information at the NAIC and create a closer contractual relationship between the NAIC and rating agencies. Option four is for the Task Force to eliminate one or more rating agencies that could be done based on criteria, based on recommendations from a state or based on recommendations from another group such as the Financial Analysis (E) Working Group (FAWG). And lastly, a combination of one or more of these options as well, the options are not exclusive to one another.

Mr. Fry said the filing exempt (FE) process is something that Task Force has looked at a lot over the years. In 2004 the idea about letting companies self-designate was talked about but did not come to fruition. Rating agencies have been the NAIC’s best option for RBC framework, leveraging off their credit ratings to turn them into a factor and that runs through RBC. The Task Force has seen some securities that do draw questions. This memo that was put out is a great starting point. There are a lot of questions that will be generated from this memo and a lot of people would like to understand the sample better and understand some of the statistics behind it. This document best purpose will be a starting point of discussion for the Task Force. One approach could be as Task Force goes into next year, form a smaller group of regulators, industry participants, and rating agencies, in a regulator only setting. This document could be used and gather everyone else's ideas because feedback is needed. Something needs to be done with FE, like anything else, it needs to be enhanced over time and doing what it's supposed to do. The SVO and regulators do not want to go fast and cause market turmoil and uncertainty. This must be a careful and collaborative approach.

Ms. Mears said she supports the idea of moving forward with a small study group that includes industry and has seen the benefits of that in other Working Groups and Task Forces. That collaboration between regulators, industry, other potential interested parties, and stakeholders can result in a proposal here that makes a lot of sense and addresses the core issues that has been seen. She appreciates the work that the SVO has done to bring these issues to light and agrees that it should be a priority next year.

Mr. Schrader said there are a number of different asset classes that are rated. The Task Force needs to look holistically at some rating agencies that have different methodologies and different types of classes. Is very important to make sure the regulators who are relying upon this understand what they are relying upon. If there are issues or concerns, the states have the authority to take action within their statute. It is most important to be consistent and hold the entire industry to the same standard. As Ms. Mears and Mr. Fry mentioned, to give the industry some certainty that when they invest in an asset, they sort of know upfront have a reasonable assumption of what the effects may be.

Mr. Fry received the report to use it as a basis for beginning discussions in 2022 and encouraged feedback.

10. **Heard a Staff Report on a Project of the Statutory Accounting Principles (E) Working Group**

Mr. Fry said the next agenda item is to hear a report on projects before the Statutory Accounting Principles (E) Working Group.
Julie Gann (NAIC) said this report is just more of the coordination initiative to identify key items that the Working Group addressed to this Task Force as well. The Working Group met Saturday, Dec. 12th with a full agenda and addressed several items.

With regards to adopted items, the first is related to credit tenant loans. The Working Group adopted revisions to SSAP No. 43R – Loan-Backed and Structured Securities to explicitly identify the SVO identified credit tenant loans in scope. It is the final step with the credit tenant loan discussions over the last couple of years. With that adoption, examples from paragraph 27 were removed, which is not a scope paragraph, from the contents of the statements of statutory accounting principles (SSAP). The Working Group also explicitly notified the INT on credit tenant loans, which is 20-10 and had already expired. The Working Group wanted to identify the revisions that were adopted by the Task Force and the action by the Working Group was explicitly noted for historical purposes. The Working Group disposed the agenda item that had been drafted for credit tenant loans as it was no longer necessary.

The Working Group also adopted an agenda item indicating support for enhanced reporting of Federal Home Loan Bank borrowings in Exhibit 7 when they are structured as deposit type contracts. There were no statutory accounting revisions for that item, but it is support for a blanks proposal which is currently out there. It will be in effect for 2022, not for this year end. There was some regulator feedback wanting to have those breakouts on Exhibit 7 as to where the Federal Home Loan Bank borrowings were captured. These changes will have a 2022 effective date.

With regards to exposures, first, the Working Group exposed revisions to SSAP No. 25 – Affiliates and Other Related Parties and SSAP No. 43R to improve the reporting of related party investments. This agenda item does two things. First, it clarifies the reporting of affiliated investments in accordance with the existing definition of an affiliate that is in the model law, SSAP No. 25 and SSAP No. 97 – Investments in Subsidiary, Controlled and Affiliated Entities. The Working Group is trying not to conflict with that existing definition, but what it also does is it proposes new reporting of related party investments through an electronic column in the investment schedule that would encompass all investments that are reported on the investment schedules. The goal there is to identify the involvement of related parties with regards to investments held. A key element has to do with if the related party is an originator or a sponsor of an investment, but the investment may not reflect an investment in the related party, per se. That is currently exposed for comment. It is also going to have a blanks proposal with an anticipated effective date of 2022, and it is anticipated that the blanks proposal will be exposed by the end of the year, if not early January.

The Working Group also exposed revisions to SSAP No. 43R are to reflect adopted changes from this Task Force as it pertains to the NAIC designation and the designation category for RMBS/CMBS under the financial modeling procedure. This has two options in the exposure. The first one is to reflect the revisions that were adopted by this Task Force in the SSAP No. 43R. The second option is to remove all that guidance from SSAP No. 43R and instead refer to the P&P Manual for guidance. And if you go back in time, that was the original process for those designations. In 2008, in response to the financial crisis and when the financial modeling was created, the Working Group pulled that guidance into SSAP No. 43R. The question is being asked if there is a need to continue that guidance in the SSAP or just refer to the P&P Manual. The Working Group would like feedback from the Task Force and industry with regards to those two options.

With regards to the bond proposal project, two items were exposed. The first is a reporting option discussion draft that presents different options for changes on Schedule D-1. This is a sizable change that is being considered for reporting on Schedule D-1, and the full intent is to have improved granularity and transparency on the investments that are being reported. In addition to reporting lines for the types of investments. It also asks questions on the current columns are captured, such as the code column, the collateral type of column, the bond characteristic column and asks questions on what information is currently being utilized, what is beneficial, what should be added. There are a lot of questions in that discussion draft, so definitely looking for feedback from regulators and industry with regards to that. Also on the bond proposal project, the Working Group exposed tracked changes to the principal concepts for a credit enhancement which is a required component for classifying an investment as an asset backed security. Originally, the terminology was for it a sufficient credit enhancement, and that was revised to be a substantive credit enhancement to better reflect the principal intent of that guidance. That is reflected both in the principle-based bond definition guidance, as well as in the examples that go along with that principle-based bond definitions.

The Working Group also exposed revisions to expand the information that is reported for subsidiary controlled and affiliated investments (SCA) on Schedule D-6-1. Those SCAs are filed with the NAIC and used to go to the New York office. Now they come to the Kansas City Office. NAIC staff have seen over time where there may be NAIC staff adjustments based on the guidance that is in SSAP No. 97 and those revisions are not reflected in the next year's report in Schedule D-6-1. It is a recurring issue with regards to the adjustments not being made. These enhancements to Schedule D-6-1 are also in the electronic columns, and they just identify the NAIC adjusted value from the prior year, as well as additional information on the filing information. It is easier for the regulators to see if there is a sizable difference from what the company reported to what the NAIC adjusted
value was. The comment deadline for all these exposures is Feb. 18, 2022. There were two other exposures not discussed today that had an earlier comment deadline of Jan. 14. All the adoptions and exposures are on the SAPWG summary, which should be posted.

11. **Discussed Other Matters**

Charles Therriault (NAIC) said the licensing for AVS+ system, where the NAIC produces and publishes NAIC designations and prices, has now moved to a full calendar year for 2022. There was a transition period in 2021 where the fee was adjusted for the 11-month period last year. The licenses used to renew in January and now it will be for the full calendar year. The 2022 fee is a little different from 2021 because it represents a full year, whereas last year it was just the 11-month period.

Mr. Fry announced that Kathy Belfi and himself are retiring in 2022.

Having no further business, the Valuation of Securities (E) Task Force adjourned.
The Valuation of Securities (E) Task Force met Nov. 17, 2021. The following Task Force members participated: Dana Popish Severinghaus, Chair, represented by Kevin Fry (IL); Doug Ommen, Vice Chair, represented by Carrie Mears (IA); Ricardo Lara represented by Laura Clements (CA); Andrew N. Mais represented by Kenneth Cotrone (CT); Dean L. Cameron represented by Eric Fletcher (ID); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Stewart Guerin (LA); Gary D. Anderson represented by John Turchi (MA); Kathleen A. Birrane represented by Matt Kozak (MD); Chlora Lindley-Myers represented by Debbie Doggett (MO); Eric Dunning represented by Lindsay Crawford (NE); Marlene Caride represented by Nakia Reid (NJ); Adrienne A. Harris represented by Jim Everett (NY); Cassie Brown represented by Amy Garcia (TX); Jonathan T. Pike represented by Jake Garn (UT); Scott A. White represented by Doug Stolte (VA); Mike Kreidler represented by Tim Hays (WA); and Mark Afable represented by Michael Erdman (WI).

1. **Adopted an Amendment to the P&P Manual to Add the DFC to the U.S. Government Full Faith and Credit – Filing Exempt List**

Mr. Fry said the first agenda item is to discuss and consider adoption of an amendment to the *Purposes & Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) for the addition of the U.S. International Development Finance Corporation (DFC) to the “U.S. Government Full Faith and Credit – Filing Exempt” list. This list reflects entities that are instrumentalities of the U.S. government, and the debt obligations issued by them must be fully guaranteed or insured as to the timely payment of principal and interest by the full faith and credit of the U.S. government. Satisfying this high standard permits them to be filing exempt (FE) and reported as an NAIC designation category of 1.A.

Marc Perlman (NAIC) said this is an amendment to add the DFC to the “U.S. Government Full Faith and Credit – Filing Exempt” list in Part 1 of the P&P Manual. Under the 2018 Better Utilization of Investments Leading to Development Act (BUILD Act), the U.S. Overseas Private Investment Corporation (OPIC) and the Development Credit Authority of the U.S. Agency for International Development (USAID) were reorganized and merged into a new agency called the DFC. The purpose of the DFC is to facilitate the participation of private sector capital and skills in the economic development of less developed countries and countries transitioning to market economies, while advancing U.S. foreign policy interests. It is authorized to do so by making loans or guaranties according to terms and conditions specified in the BUILD Act.

Under the BUILD Act, the support provided by the DFC, and existing support provided by the OPIC and the USAID, shall continue, to constitute obligations of the U.S., and the full faith and credit of the U.S. is pledged for the full payment and performance of its obligations. The DFC is authorized to borrow from the U.S. Department of the Treasury (Treasury Department) to fulfill such obligations of the U.S.

Based on this express full faith and credit, the Securities Valuation Office (SVO) recommends adding the DFC to the “U.S. Government Full Faith and Credit – Filing Exempt” list in Part 1 of the P&P Manual and recommends maintaining the OPIC and the USAID on the list even though they have been subsumed by the DFC, because certain obligations of those agencies may still be outstanding.

For the avoidance of doubt, any security issued by an entity on the “U.S. Government Full Faith and Credit – Filing Exempt” list shall be filed with the SVO if the security’s principal and interest are not *fully* guaranteed by the U.S. government. For certain entities on the list, statutes may require parties other than the U.S. government full faith and credit guarantor to bear a risk of loss equal to a specified percentage of the guaranteed support. For example, the BUILD Act requires parties to a project to bear the risk of loss in an amount of at least 20 percent of the guaranteed support of the DFC. If an insurance company, as investor, is the party bearing that risk of loss, meaning the securities it purchased are not fully guaranteed by the DFC or another entity on the list, it would need to file those securities with the SVO.

The P&P Manual explains that the SVO has no compliance mechanism for these U.S. government obligations and encourages insurers that are uncertain about the FE status of a security to either file it with the SVO or use the Regulatory Treatment Analysis Service (RTAS) – Emerging Investment Vehicle process.
Mike Reis (American Council of Life Insurers—ACLI and the North American Securities Valuation Association—NASVA) said the ACLI and NASVA support the proposal.

Ms. Doggett made a motion, seconded by Mr. Guerin, to adopt the amendment to the P&P Manual for the addition of the DFC to the “U.S. Government Full Faith and Credit – Filing Exempt” list (Attachment One-A). The motion passed unanimously.

2. **Adopted an Amendment to the P&P Manual to Add Bank Loans**

Mr. Fry said the next agenda item is to discuss and consider adoption of a P&P Manual amendment to include bank loans to the definition of “obligation.”

Mr. Perlman said since 2018 the *Accounting Practices and Procedures Manual* (AP&P Manual) has included bank loans issued directly by a reporting entity or acquired through a participation, syndication, or assignment in *Statement of Statutory Accounting Principles (SSAP) No. 26R—Bonds*. Pursuant to SSAP No. 26R, “bank loans” mean fixed-income instruments, representing indebtedness of a borrower, made by a financial institution.

To maintain consistency with the bond definition in SSAP No. 26R, the SVO proposes amending the P&P Manual to clarify that the SVO can assess and assign NAIC designations to bank loans and the relevant filing instructions and methodology. The filing instructions and methodology would follow that of other corporate obligations. To be clear, SSAP No. 26R already includes bank loans in the definition of “bond,” so this amendment would only align the P&P Manual to the AP&P Manual and would not be changing current statutory guidance.

Mr. Reis said the ACLI and NASVA support the proposal.

Mr. Fletcher made a motion, seconded by Ms. Reid, to adopt the amendment to the P&P Manual to add bank loans (Attachment One-B). The motion passed unanimously.

3. **Exposed a Referral from the Statutory Accounting Principles (E) Working Group and a Proposed Amendment to the P&P Manual to Remove Residuals Tranches From Receiving an NAIC Designation**

Mr. Fry said the next agenda item is to receive a referral from the Statutory Accounting Principles (E) Working Group and consider exposure of a proposed amendment to the P&P Manual to remove residual tranches from receiving an NAIC designation. Residual tranches capture securitization tranches and beneficial interests that reflect loss layers without any contractual payment of principal or interest. Instead, residual tranches are paid after contractual payments of principle and interests have been made to other tranches and are based on the remaining available funds.

Charles A. Therriault (NAIC) said the Statutory Accounting Principles (E) Working Group identified inconsistencies in how residual tranches and interests were being reported, with some entities reporting them on Schedule BA: Other Long-Term Invested Assets, and others reporting them on Schedule D-1: Long-Term Bonds with either self-assigned NAIC 5GI or NAIC 6 designations. To prevent further inconsistency and direct appropriate reporting, on Nov. 10, the Working Group adopted an amendment to SSAP No. 43R—Loan-Backed and Structured Securities to clarify that residual tranches and interests shall be reported on Schedule BA. To accommodate the time frame needed for a Blanks (E) Working Group proposal to expand reporting lines on Schedule BA to capture residual tranches and interests, the Working Group’s amendment permits residual tranches and interests currently reported on Schedule D-1 to continue to be reported on Schedule D-1 for reporting year 2021 with an ultimate effective date of Dec. 31, 2022.

The SVO recommends that during this window when residual tranches currently reported on Schedule D-1 are permitted to stay on D-1, they should be allowed to do so only with an NAIC 6* designation and not an NAIC 5GI designation. This is consistent with the Working Group’s adopted change. The NAIC 5GI designation is not appropriate for residual tranches and interests because according to the P&P Manual, an insurance company is permitted to self-assign an NAIC 5GI to an obligation if it meets all of the following criteria:

- Documentation necessary to permit a full credit analysis of the security by the SVO does not exist or an NAIC credit rating provider (CRP) rating for an FE or private letter (PL) security is not available.
- The issuer or obligor is current on all contracted interest and principal payments.
- The insurer has an actual expectation of ultimate payment of all contracted interest and principal.
Assignment of an NAIC 5GI designation for residual investments is an incorrect application of the guidance because: 1) there are no contracted interest and principal payments to certify as current; and 2) the insurer cannot have an actual expectation of receiving all contractual principal and interest of the underlying collateral as these tranches absorb the losses first for the securitization structure. Although cash flows may pass through to the residual holders at periodic intervals under the waterfall, ultimate returns depend on continued performance. Therefore, there can be no actual expectation that future payments will be received.

Along with the proposed P&P Manual language requiring residuals to be reported on Schedule BA, there is a proposed provision stating that for 2021 year-end reporting, residuals will be permitted on Schedule D-1 with an NAIC 6. If adopted, the SVO requests the Task Force’s permission to remove that provision from the December 2022 version of the P&P Manual without further authorization as it will be an obsolete instruction.

Next year, the SVO would like to address additional items in the Working Group’s referral with the Task Force regarding the meanings of NAIC 5GI and 6, namely:

- Clarifications to ensure that the NAIC 5GI self-assigned designation is permitted only for securities that could be reviewed for an NAIC designation if the documentation to support a credit analysis could be submitted.
- Clarification that self-assigning an NAIC 6* for securities that do not qualify for NAIC 5GI is not a declaration of potential default. Rather, the self-assignment indicates that the security could not be reviewed for a full credit analysis, and the requirements for an NAIC 5GI could not be met.

Mr. Cohen (KKR & Co. Inc.) asked about the definition of the “residual interest.” For structured securities that are unrated at the tranche level but the securitization meets safe harbor rules modeling, should insurers expect to receive modeling results for those securities within the securitization? Eric Kolchinsky (NAIC) said there are a number of other limitations on what does and does not get modeled within the modeling process. Safe harbor is one of them, and the ability and model fit is another issue that is considered when modeling securities. Mr. Cohen said for single-asset, single-borrower commercial mortgage-backed securities (CMBS) transactions, where the securitization is backed by a single mortgage, there are ranging anywhere from 40% loan-to-value (LTV) to up to 75% LTV. The ratings designations are based on rating agency framework. In the cases of tranches that might be above a 60% LTV, there are not a lot of ratings on them and they are unrated, but they do receive contractual principal and interest. For these transactions that are not pool transactions, that are straightforward mortgage securitizations, the question is what should we expect to receive for modeling results. And if not, if capital designations can be provided for the rest of the capital structure, and there is a situation where an insurance company owns mezzanine debt that is junior to this tranche, can some type of designation framework be created? Mr. Therriault suggested taking the question offline because it is unrelated to the amendment the Task Force is considering.

Mr. Fry directed the SVO to expose the P&P Manual amendment to clarify proper reporting and designation for residual tranches and interests for a 15-day public comment period ending Dec. 2 so that the Task Force can consider it for adoption at the Fall National Meeting.

4. Exposed a Proposed Technical Correction Amendment to the P&P Manual Clarifying 5GI Mapping to the NAIC Designation Category

Mr. Fry said the next item is to receive and consider exposure of a technical correction amendment to the P&P Manual clarifying 5GI mapping to a designation category in the recently amended PL rating section.

Mr. Perlman said that during at the Task Force’s May 24 meeting, it adopted an amendment to the P&P Manual requiring the submission of private rating letter rationale reports with certain private rating letters filed with the SVO. In the May amendment, certain language, which is currently in the printed December 2020 version of the P&P Manual and clarifies that an NAIC 5GI designation is the equivalent of an NAIC 5.B designation category, was mistakenly omitted. The SVO proposes a non-substantive technical amendment to the May amendment to reinsert the omitted language.

Mr. Fry directed the SVO to expose this non-substantive technical correction amendment to the P&P Manual to clarify the mapping of NAIC 5GI to a designation category for a 15-day public comment period ending Dec. 2 so that the Task Force can consider it for adoption at the Fall National Meeting.
5. **Receive a Report from the SSG on the Year-End Process**

Mr. Fry said the next agenda item is to receive a report from the Structured Securities Group (SSG) on the year-end process.

Mr. Kolchinsky said everyone should receive two files, one for legacy with breakpoints and one for non-legacy with designations. The year-end process is on time and should be delivered within normal schedule. The SSG has a lot of work to do next year. There are two main issues to deal with: 1) introduce new scenarios through the cycle. For residential mortgage-backed securities (RMBS), the SSG will draw from the same distribution that was done for the current year, and for CMBS, new scenarios will be introduced; and 2) there will be new mappings to map all 20 NAIC designation categories and 19 breakpoints based on the new risk-based capital (RBC) factors. This will all go through the Task Force next year.

Having no further business, the Valuation of Securities (E) Task Force adjourned.

CC: Eric Kolchinsky, Director, NAIC Structured Securities Group (SSG) and Capital Markets Bureau 

DATE: September 3, 2021 

In October 2018 the Better Utilization of Investments Leading to Development ("BUILD") Act was signed into law. The BUILD Act reorganized and merged existing United State government development finance and aid programs, the U.S. Overseas Private Investment Corporation ("OPIC") and the Development Credit Authority of the United Stated Agency for International Development ("USAID"), into a new agency called the U.S. International Development Finance Corporation ("DFC"). The purposed of the DFC is to facilitate the participation of private sector capital and skills in the economic development of less developed countries and countries transitioning to market economies, while advancing U.S. foreign policy interests. It is authorized to do so by making loans or guaranties according to terms and conditions specified in the BUILD Act. 

Pursuant to the BUILD Act, the support provided by the DFC shall, and existing support provided by OPIC and USAID shall continue, to constitute obligations of the United States, and the full faith and credit of the United States is thereby pledged for the full payment and performance of such obligations. The DFC is authorized to borrow from the U.S. Treasury to fulfill such obligations of the United States. 

Based on this express full faith and credit, the SVO recommends adding the DFC to the “U.S. Government Full Faith and Credit – Filing Exempt” list in Part One of the P&P. We recommend maintaining OPIC and USAID on the list even though they have been subsumed by the DFC, because certain obligations of those agencies may still be outstanding. 

For the avoidance of doubt, any security issued by an entity on the “U.S. Government Full Faith and Credit – Filing Exempt” list shall be filed with the SVO if the security is not fully guaranteed by the U.S. government. For certain entities on the list, statute may require parties other than the U.S. government
full faith and credit guarantor to bear a risk of loss equal to a specified percentage of the guaranteed support. For example, the BUILD Act requires parties to a project to bear the risk of loss in an amount of at least 20 percent of the guaranteed support of the DFC. If an insurance company, as investor, is the party bearing that risk of loss, meaning the securities it purchased are not fully guaranteed by the DFC or another entity on the list, it would need to file those securities with the SVO.

The P&P explains that the SVO has no compliance mechanism for these U.S. Government Obligations and encourages insurers which are uncertain about the Filing Exempt status of a security to either file it with the SVO or use the Regulatory Treatment Analysis Service (RTAS) – Emerging Investment Vehicle process. (P&P Part One, Paragraphs 75-76).

**Proposed Amendment** - The text changes to include the DFC on the “U.S. Government Full Faith and Credit – Filing Exempt” list is shown below with additions in red underline and deletions in red strikethrough, as it would appear in the 2021 P&P Manual format.
PART ONE

POLICIES OF THE NAIC VALUATION OF SECURITIES (E) TASK FORCE
FILING EXEMPTION FOR U.S. GOVERNMENT SECURITIES

Initial Filing Conventions and Documentation

66. **U.S. Government Securities Required to Be Filed with the SVO** – U.S. Government debt that is not issued by, or guaranteed or insured by, those entities listed in below are subject to the filing exemption when rated by an NAIC CRP, otherwise, they must be filed with the SVO.

SVO Publishing Conventions for Filing Exempt U.S. Government Securities

67. **U.S. Treasury Obligations** – U.S. Treasury Obligations are added to the VOS Process automatically, and they appear in the VOS Product. The NAIC Designation is **NAIC 1** and the NAIC Designation Category is **NAIC 1.A**.

Other Filing Exempt U.S. Government Securities

68. A single entry is in the AVS+ Products in its normal CUSIP sequence, followed by the description “All Issues” for the securities listed below.

69. Because these securities are Filing Exempt, CUSIP numbers are not published in the AVS+ Products. The securities should, however, be reported with a CUSIP in the appropriate section of Schedule D. The NAIC Designation is **NAIC 1** and the NAIC Designation Category is **NAIC 1.A**.

Filing Requirements for U.S. Government Securities

70. No filing is required for the securities deemed exempt from filing below unless a state insurance department has specifically requested the SVO to evaluate an exempt security.

71. For U.S. Government Securities required to be filed with the SVO, the reporting insurance company shall submit:

- A prospectus of the security that includes a description of the U.S. government program under which it is issued; and
- Appropriate evidence that the security or other obligation is backed by the U.S. government, an agency of the U.S. government or a U.S. government sponsored enterprise.

72. A variety of documents are acceptable as evidence that the issuer in question has some degree of support from the U.S. government. A copy of the legislation that created the entity or the program is acceptable as evidence of government support. Additionally, a copy of the guaranty or insurance policy for the transaction is also good evidence of government support. Another acceptable form of evidence is evidence of an NAIC CRP rating with a copy of the rating rationale memorandum discussing the role of U.S. government support. Oftentimes, the prospectus for the security describes in sufficient
detail the relationship of the entity to the U.S. government, its agency or its government-sponsored enterprise.

73. It is not enough to merely establish a relationship between the U.S. government and the entity. It is necessary to provide materials that specifically describe all of the financial terms of the obligation and the manner in which the U.S. government will pay the obligation.

Subsequent Filing
74. No subsequent report (i.e., an annual update filing) is required for non-exempt U.S. government securities. However, a material credit events filing is required for nonexempt U.S. government securities if:

- The legislation authorizing the program has been rescinded;
- The transaction terms and/or the transaction documents have been waived, amended or modified; or
- If the legal commitment of the U.S. government, U.S. government agency or U.S. government sponsored entity has been allowed to lapse or has been withdrawn.

Filing Exemption for Direct Claims on, or Backed by Full Faith and Credit of, the United States
75. This section defines what the NAIC deems to be U.S. Government Obligations. They are not required to be filed with the SVO.

NOTE: Because these filing exemption provisions are set forth without any compliance mechanism, the SVO will not be able to verify whether insurers have filed all securities that are required to be filed with the SVO. State insurance department regulators may wish to create their own compliance mechanisms to protect any interests they may have relative to their domiciliary insurers.

76. The SVO does not have responsibility for determining whether specific securities should be filing exempt. An insurer who is uncertain whether a specific security qualifies for exemption should not contact the SVO for guidance, but should either file the security with the SVO or use the RTAS – Emerging Investment Vehicle Service process and obtain an opinion on exemption for that security.

Definitions
77. U.S. Government Obligation – All direct claims (including securities, loans, and leases) on, and the portions of claims that are directly and unconditionally issued, guaranteed or insured by the U.S. Government or its agencies.

78. U.S. Government Agency – An instrumentality of the U.S. Government the debt
Obligations of which are fully guaranteed or insured as to the timely payment of principal and interest by the full faith and credit of the U.S. Government. This category includes in addition to direct claims on, and the portions of claims that are directly and unconditionally guaranteed by, the U.S. Government agencies listed below, claims collateralized by securities issued or guaranteed by the U.S. Government agencies listed below for which a positive margin of collateral is maintained on a daily basis, fully taking into account any change in the insurance company’s exposure to the obligor or counterparty under a claim in relation to the market value of the collateral held in support of that claim.

Filing Exemption for Other U.S. Government Obligations

79. Obligations issued and either guaranteed or insured, as to the timely payment of principal and interest, by the government agencies or government-sponsored enterprises listed below are filing exempt. They are not backed by the full faith and credit of the U.S. Government. The filing exemption here is based on an analytical judgment that the combined creditworthiness of the entity itself and U.S. government support for that entity provides confidence that the issuer will be able to pay its obligation on a full and timely basis at the level of an NAIC 1 quality designation and an NAIC Designation Category of NAIC 1.A. For the avoidance of doubt, preferred stock or similar securities of the government agencies or government-sponsored enterprises listed below are not considered guaranteed or insured and hence are not subject of this section.

RE: Addition of a Bank Loans section to the Purposes Procedures Manual of the NAIC Investment  
Analysis Office

DATE: September 3, 2021

Summary – Since 2018 the Accounting Practices and Procedures Manual has included bank loans issued directly by a reporting entity or acquired through a participation, syndication or assignment in SSAP No. 26R – Bonds. Pursuant to SSAP No. 26R, bank loans means fixed-income instruments, representing indebtedness of a borrower, made by a financial institution.

In order to maintain consistency with the bond definition in SSAP No. 26R - Bonds, the SVO proposes amending the Purposes and Procedures Manual of the NAIC Investment Analysis Office (the “P&P Manual”) to clarify that the SVO can assess and assign NAIC Designations to bank loans and the relevant filing instructions and methodology. The filing instructions and methodology would follow that of other corporate obligations.

Proposed Amendment - The text changes to add bank loans to the SVO’s credit assessment responsibilities is shown below with additions in red underline and deletions in red strikethrough, as it would appear in the 2021 P&P Manual format.
PART THREE

SVO PROCEDURES AND METHODOLOGY FOR PRODUCTION OF NAIC DESIGNATIONS
GENERAL CORPORATE AND MUNICIPAL METHODOLOGY FOR INDEPENDENT CREDIT QUALITY ASSESSMENT

NOTE: See “Special Instructions” (discussing Short-Term Investments, Circular Transactions, Mandatory Convertible Securities, Unrated Hybrid Securities and Sub-Paragraph D Companies) in Part One for policies that impact assignment of NAIC Designations.

27. Corporate bonds defined as the Obligations² of domestic and foreign corporations, and preferred stock shall be distinguished on the basis of the categories discussed below. The creditworthiness of the issuer of any particular category of Obligation shall be assessed by reference to the general, and any special, rating methodology discussed in this Part, unless the context of the analysis requires a different approach.

² Obligation means bonds, notes, debentures, certificates, including equipment trust certificates, production payments, bank certificates of deposit, bankers’ acceptances, credit tenant loans, loans secured by financing net leases, bank loans made by a financial institution (issued directly by a reporting entity or acquired through a participation, syndication or assignment (each, as defined in SSAP No. 26R – Bonds)), and other evidences of indebtedness for the payment of money (or a participation, certificates or other evidences of an interest in any of the foregoing), whether constituting general obligations of the issuer or payable only out of certain revenues or certain funds pledged or otherwise dedicated for payment.
BANK LOANS
The Valuation of Securities (E) Task Force met Sept. 30, 2021. The following Task Force members participated: Dana Popish Severinghaus, Chair, represented by Kevin Fry (IL); Doug Ommen, Vice Chair, represented by Carrie Mears (IA); Lori K. Wing-Heier represented by Wally Thomas (AK); Ricardo Lara represented by Laura Clements (CA); Andrew N. Mais represented by Kenneth Cotrone (CT); Trinidad Navarro represented by Rylynn Brown (DE); David Altmaier represented by Carolyn Morgan (FL); Dean L. Cameron represented by Eric Fletcher (ID); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Stewart Guerin (LA); Gary D. Anderson represented by John Turchi (MA); Kathleen A. Birrane represented by Matt Kozak (MD); Chlora Lindley-Myers represented by Debbie Doggett (MO); Marlene Caride represented by Nakia Reid and John Sirovetz (NJ); Adrienne A. Harris represented by Jim Everett (NY); Cassie Brown represented by Amy Garcia (TX); Jonathan T. Pike represented by Jake Garn (UT); Scott A. White represented by Doug Stolte (VA); and Mike Kreidler represented by Tim Hays (WA).

1. **Adopted its 2022 Proposed Charges**

Mr. Fry said the Task Force’s 2022 proposed charges are unchanged, but there was a charge inadvertently omitted in the materials for the Summer National Meeting. That omission has been corrected along with the deletion of a reference to the Investment Risk-Based Capital (E) Working Group, which has been disbanded.

Mr. Thomas made a motion, seconded by Ms. Clements, to adopt the Task Force’s 2022 proposed charges (*see NAIC Proceedings – Fall 2021, Financial Condition (E) Committee, Attachment One-D*). The motion passed unanimously.

2. **Exposed a P&P Manual Amendment to Add the DFC to the “U.S. Government Full Faith and Credit – Filing Exempt” List**

Mr. Fry said the next agenda item is to discuss an amendment to the *Purpose and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) to add the U.S. International Development Finance Corporation (DFC) to the “U.S. Government Full Faith and Credit – Filing Exempt” list. This list reflects entities that are instrumentalities of the U.S. government, and the debt obligations issued by them must be fully guaranteed or insured as to the timely payment of principal and interest by the full faith and credit of the U.S. government. Satisfying this high standard permits them to be Filing Exempt (FE) and reported as an NAIC Designation Category of 1.A.

Marc Perlman (NAIC) said an industry participant requested that the Securities Valuations Office (SVO) add the DFC to the “U.S. Government Full Faith and Credit – Filing Exempt” list in Part One of the P&P Manual.

In October 2018, the Better Utilization of Investments Leading to Development (BUILD) Act was signed into law. The BUILD Act reorganized and merged existing U.S. government development finance and aid programs, the Overseas Private Investment Corporation (OPIC), and the Development Credit Authority (DCA) of the U.S. Agency for International Development (USAID) into a new agency; i.e., the DFC. The purpose of the DFC is to facilitate the participation of private sector capital and skills in the economic development of less developed countries and countries transitioning to market economies, while advancing U.S. foreign policy interests. It is authorized to do so by making loans or guaranties according to terms and conditions specified in the BUILD Act.

Pursuant to the BUILD Act, the support provided by the DFC and existing support provided by the OPIC and USAID shall continue to constitute obligations of the U.S., and the full faith and credit of the U.S. is pledged for the full payment and performance of its obligations. The DFC is authorized to borrow from the U.S. Department of the Treasury (Treasury Department) to fulfill such obligations of the U.S. government.

Based on this express full faith and credit, the SVO recommends adding the DFC to the “U.S. Government Full Faith and Credit – Filing Exempt” list in Part One of the P&P Manual. The SVO recommends maintaining the OPIC and USAID on the list even though they have been subsumed by the DFC, because certain obligations of those agencies may still be outstanding.
For the avoidance of doubt, any security issued by an entity on the “U.S. Government Full Faith and Credit – Filing Exempt” list shall be filed with the SVO if the security is not fully guaranteed by the U.S. government. For certain entities on the list, statute may require parties other than the U.S. government full faith and credit guarantor to bear a risk of loss equal to a specified percentage of the guaranteed support. For example, the BUILD Act requires parties to a project to bear the risk of loss in an amount of at least 20% of the guaranteed support of the DFC. If an insurance company, as investor, is the party bearing that risk of loss, meaning the securities it purchased are not fully guaranteed by the DFC or another entity on the list, it would need to file those securities with the SVO.

The P&P Manual explains that the SVO has no compliance mechanism for these U.S. government obligations and encourages insurers that are uncertain about the FE status of a security to either file it with the SVO or use the Regulatory Treatment Analysis Service (RTAS) – Emerging Investment Vehicle process.

Mr. Fry directed the SVO to expose this P&P Manual amendment for the addition of the DFC to the “U.S. Government Full Faith and Credit – Filing Exempt” list for a 30-day public comment period ending Oct. 30.

3. Adopted a P&P Manual Amendment to Add Spanish GAAP to the List of Countries and Associated National Financial Presentation Standards

Mr. Fry said the next agenda item is to discuss and consider for adoption an amendment to the P&P Manual to add Spanish Generally Accepted Accounting Principles (GAAP) to the list of Countries and Associated National Financial Presentation Standards. There is a specific process that must be followed in the P&P Manual to add to the list of accepted National Financial Presentation Standards. Unlike other amendments that the Task Force considers, this process concludes with an assessment and recommendation by the SVO regarding whether the requested national accounting standard leads to an NAIC Designation analogous to those created by the use of a global financial presentation standard such as U.S. GAAP or International Financial Reporting Standards (IFRS).

Charles Therriault (NAIC) said in 2013, the Task Force adopted a procedure, outlined in Part Two, paragraphs 174–181 of the P&P Manual, on how to submit requests to consider other National Financial Presentation Standards and what steps must occur. The process and actions taken are as follows:

- A national insurance association (but not individual insurers or other persons) may, by written request, ask the SVO to study the feasibility of adding a country and the associated National GAAP or National IFRS.

In March 2021, the SVO received a letter from the American Council of Life Insurers (ACLI) requesting the SVO to consider the National GAAP/National IFRS of Spain for addition to the National Financial Presentation Standards.

- The national insurance association will, as necessary, identify an accounting firm that is an expert in the national accounting system of the country proposed for inclusion on the list of Countries and Associated National Financial Presentation Standards.

The requirement of this step has been fulfilled. The ACLI identified Deloitte of Spain as an expert in the national accounting system of Spain.

- The national insurance association will work with the SVO to create an educational session on those aspects of financial presentation relevant to the SVO for the purposes of its credit risk assessment.

This requirement has been fulfilled. On June 22, Joaquin Sánchez-Horneros, Director and member of the IFRS Centre of Excellence at Deloitte Spain, along with Pablo Castillo Lekuona, Senior Manager in the Department of Global Capital Markets and Accounting IFRS, gave a presentation to SVO analysts.

- The educational session will focus on the material differences between accounting methods for the income statement and balance sheet and shall include such further or additional areas as the SVO shall deem necessary in view of the specific country and national accounting system proposed.
The June 22 presentation by Deloitte included detailed differences between Spanish GAAP and IFRS, including a case study demonstrating the financial statement impact on a company over three years, comparing IFRS to Spanish GAAP.

- **At the conclusion of such educational sessions, the SVO shall assess whether the educational session provides a sufficient basis for it to make needed adjustments to the financial information presented under the national accounting standard.**

Based on the Deloitte presentation, including the reconciliation case study, it appears that most differences between Spanish GAAP and IFRS can be identified with additional disclosure sufficient to allow an analyst to make any necessary adjustments to an analysis.

- **The SVO shall then assess whether the application of the adjustments in one or more transactions confirms that the use of the national accounting standard leads to the creation of NAIC Designations analogous (in the information they convey about credit risk) to those created by using a Global Financial Presentation Standard.**

The presentation of the Spanish GAAP review by Deloitte was sufficient for the SVO to draw conclusions as to the ability to analyze credits presented under these accounting guidelines.

The SVO recommends that Spanish GAAP be added to the list of Countries and Associated National Financial Presentation Standards in the P&P Manual, with the additional disclosures noted in the amendment. Catherine Cosentino (NAIC) and Rosemarie Kalinowski (NAIC), the SVO analysts that performed the study, will review the principal differences between Spanish GAAP and IFRS, along with the requested mitigants.

Ms. Cosentino said in reviewing Spanish GAAP versus IFRS, the following differences were identified:

- **Operating Leases** – Spanish GAAP do not bring these leases on to the balance sheet; they are accounted for as operating leases. Operating lease income and expense corresponding to the lessor and lessee are considered to be income and expenses of the year in which they accrue, respectively. The impact is that lessor income is higher and lessee income is lower than that reported for IFRS, and debt is lower than that of IFRS if adjustments are not made.
- **Government Grants** – Spanish GAAP initially accounts for the grants as equity and subsequently charges it to the income statement as amortization over time, whereas IFRS prohibits recognizing them immediately as equity. The impact is that equity will be inflated for capital grants, and related debt to cap will be lower than it would be if calculated under IFRS.
- **Intangible Assets** – Spanish GAAP allows research and development costs to be capitalized with a presumption of a useful life limit of five years. IFRS does not allow research costs to be capitalized. It allows development costs to be capitalized under certain requirements, which will be amortized over their useful life. The impact is that assets are higher than under IFRS since research is capitalized and net income will be lower because of the goodwill amortization, and assets and equity will be undervalued relative to IFRS.
- **Financial Instrument (valuation)** – Spanish GAAP values financial assets at lower acquisition cost and market, while financial liabilities are valued at repayment value. All changes in fair value of financial liabilities are recognized in the income statement. For IFRS, financial assets are valued at fair value, while financial liabilities are valued at amortized cost. All changes in fair value of financial liabilities are recognized in equity. The impact is that asset value will be understated relative to IFRS if fair value and cost are different. Regarding financial liabilities, changes in fair value will affect the income statement under Spanish GAAP, which could affect financial ratio calculations involving net income, as well as the calculation of earnings before interest, taxes, depreciation, and amortization (EBITDA).
- **Financial Instrument (available for sale) Impairment/Reorganization** – Spanish GAAP allows for fresh-start accounting in certain situations, while IFRS does not recognize fresh-start. The impact is that reported assets may be overstated under Spanish GAAP.
- **Joint Ventures** – Spanish GAAP allows for proportionate consolidation, but if it is a 50/50 joint venture, then the equity method can be used. For IFRS, only the equity method is used. The impact is that revenue and operating income will be higher than under IFRS if proportionate consolidation is used. This is likely to significantly distort results if a company has large joint venture holdings.

As just mentioned, there are several important differences between Spanish GAAP and IFRS that will require mitigants. The items referenced will require additional audited disclosures either in the notes to the financial statements or as supplemental
Disclosure, thereby allowing the SVO to adjust the financial statements so that the use of Spanish GAAP will have no impact on the ultimate NAIC Designation. Some of these disclosures may not be contained in the notes to Spanish GAAP financial statements; therefore, the following items should be submitted, along with the Spanish GAAP statements:

- A complete set of audited financial statements, which includes balance sheet, income statement, and consolidated statement of cash flows for at least one year, three years, if available.
- Disclosure of operating lease commitments in a manner similar to that required by IFRS or US GAAP.
- Disclosure of government grants, including initial amount and year-to-date (YTD) and cumulative amortization.
- Disclosure of gross capitalized research costs and cumulative amortization.
- Disclosure of gross goodwill and cumulative amortization, including goodwill created by fresh-start accounting.
- Disclosure in the change in fair value for financial assets and liabilities.
- Disclosure on joint ventures not using the equity method, including full financial results.

Mr. Fry said the SVO made a recommendation to accept Spanish GAAP statements if these disclosures are provided, which has been done for other countries. Mr. Fry asked if any Task Force members object to considering this for adoption, and there were no objections. Michael M. Monahan (ACLI) said the ACLI has reviewed all the required disclosures and agrees that they are fair and adequate; the ACLI supports adoption at this meeting.

Ms. Mears made a motion, seconded by Mr. Thomas, to adopt the amendment to the P&P Manual to add Spanish GAAP to the list of Countries and Associated National Financial Presentation Standards (Attachment Two-A). The motion passed unanimously.

4. Exposed a Proposed Amendment to the P&P Manual to Add Bank Loans

Mr. Fry said the next item on the agenda is to receive and discuss a P&P Manual amendment to include bank loans in the definition of obligation.

Mr. Perlman said since 2018, the Accounting Practices and Procedures Manual (AP&P Manual) has included bank loans issued directly by a reporting entity or acquired through a participation, syndication, or assignment in Statement of Statutory Accounting Principles (SSAP) No. 26R—Bonds. Pursuant to SSAP No. 26R, bank loans means fixed-income instruments, representing indebtedness of a borrower, made by a financial institution.

To maintain consistency with the bond definition in SSAP No. 26R, the SVO proposes amending the P&P Manual to clarify that the SVO can assess and assign NAIC Designations to bank loans and the relevant filing instructions and methodology for them. The filing instructions and methodology would follow that of other corporate obligations.

Mr. Everett asked if given that a lot of these bank loans are not securities, they are different from bonds, they are treated differently, and they are regulated differently with different trade mechanics, there is a way to get an assessment on how these would be assessed compared to bonds.

Mr. Therriault said the traditional methodology would follow that of a corporate bond. A bank loan credit risk would not be viewed differently than a corporate bond credit risk; it would be the same analysis process. They are securities reported on Schedule D with other bonds.

Mr. Everett said there are differences as to trading and other things like that, and their seniority in bankruptcy is not being considered. Mr. Therriault said the SVO would consider those issues in the analysis of any corporate security; i.e., its relative position in the capital structure, how much debt is involved, and whether there is any collateral involved that will support the security. Those are all things normally considered for any security. Mr. Perlman said the SVO considers this a clarification amendment for consistency with the SSAP and not an addition.

Mr. Everett asked if there would be a distinction between secured and unsecured loans. Mr. Perlman said it would be looked at as with a corporate debt, and it is part of the methodology currently in the P&P Manual. Mr. Therriault said this amendment is adding bank loans as a footnote to the corporate debt methodology. There is not a separate methodology section being introduced; the corporate methodology will be applied to bank loans.
Mr. Fry ask how this is identified in SSAP No. 26R. Mr. Perlman said it is listed under the bond definition. Bank loans are listed separately in the back of SSAP No. 26R; there is an exhibit with a glossary with definitions, and that is what is being referred to in the amendment. Mr. Fry said it should be made clear that this is a type of security that falls under what the SVO can apply and review this methodology towards. Mr. Therriault said there is a section in the P&P Manual with a header for bank loans, but it did not have any substance. This amendment is to include bank loans in the corporate methodology section as a footnote and remove that header.

Mr. Everett asked if the securities being discussed are for federal antifraud purposes or just for reporting. If they are securities under the Federal Reserve Act, then they are like bonds, and disclosures must be made. But if they are bank loans, then the disclosure and fraud requirements of the securities laws will not apply. Mr. Therriault said the SVO does not make that level of distinction and neither does the SSAP. Mr. Everett said if they are not securities, then they are not within the purview. Mr. Therriault said the amendment is following the definition of SSAP No. 26R. Mr. Everett said disclosures that are made under the possible sanction of federal securities laws are often different from those that are made outside of those laws. If there is a default in a bank loan, the recovery and cure procedures are dependent on whether the loans are secured or unsecured and where they fit within Articles 8 or 9 of the Uniform Commercial Code (UCC). Those are key differences between loans and bonds, and that is where the question is coming from. Mr. Perlman said there are securities that are unsecured. Mr. Everett said not all loans are securities. Mr. Perlman said Article 9 could also apply to a security with a security interest. Mr. Everett said there is a difference in the priorities setting under Article 9. Mr. Therriault said the SVO looks to see whether there is support to ensure that payments are made. But if there is no credit support, there will be no benefit to collateral if it is not intended to provide a means by which to make payments to the investor. The point of the NAIC Designation is the expectation that principal and interest will be paid on a timely basis. It does not go through the default and recovery process that may occur in bankruptcy.

Mr. Everett said there are also differences in the way they bank loans are traded, which affects liquidity. Mr. Therriault said he would expect liquidity concerns to be reflected in the market value. Mr. Everett said in a bond, there is a promise to pay, but in a syndicated loan, there is an investor that is subject to the decision of the syndicator to collect on the loan.

Mr. Fry directed the SVO to expose the amendment to add bank loans to the definition of obligation to the P&P Manual for a 30-day public comment period ending Oct. 30.

5. Exposed a Proposed Amendment to the P&P Manual to Add Zero-Loss Criteria for Legacy-Modeled RMBS and CMBS

Mr. Fry said the next item on the agenda is to receive and discuss a P&P Manual amendment to add back zero-loss criteria for legacy-modeled residential mortgage-backed securities (RMBS) and commercial mortgage-backed securities (CMBS).

Mr. Therriault said this was initiated from a memo received from the ACLI requesting that the zero-loss rules be applied back to Part Four of the P&P Manual for RMBS and CMBS. The amendment that is being proposed is to add back the zero-loss criteria and map it to an NAIC Designation Category 1.A. for legacy RMBS or CMBS that are financially modeled and experience zero-losses under any of the scenarios being run. As the Structured Securities Group (SSG) moves forward next year in 2022, some of the new scenarios will probably need to be updated in the P&P Manual, but this amendment will provide guidance through year-end 2021. There was a desire to move this through quickly so insurers would know as soon as possible that the Task Force has approved this amendment and they can move forward with system changes and other modifications that may be necessary to accommodate the update.

Tracy Lindsey (North American Securities Valuation Association—NASVA) thanked the SVO for acknowledging the impact to insurers and turning this around quickly to get it into the regulatory systems. Vendors will need to release a change, because it is a late adoption, but completely support the change. Mr. Monahan also said the ACLI appreciates the SVO’s sensitivity of timing in getting this change implemented, and it would support a short exposure period of 10 or 15 days.

Mr. Fry directed the SVO to expose the amendment to the P&P Manual to add back zero-loss criteria for legacy-modeled RMBS and CMBS for a 15-day public comment period ending Oct. 15 and conduct an e-vote if there are no substantive comments.

6. Heard a Report from the SSG on the Year-End Process

Eric Kolchinsky (NAIC) reviewed a presentation for the SSG’s year-end modeling process. The SSG is running through-the-cycle scenarios for RMBS. For CMBS, the SSG is using the normal approach that was used previously. There was an adjustment to the base case; the base case last year had a huge impact for COVID-19, and it was adjusted to make a much smaller impact.

© 2021 National Association of Insurance Commissioners 5
for COVID-19 this year. There is still a lot of uncertainty, especially in CMBS, but this time, the uncertainty is sort of broad. Last year, it was known that things were going to get worse. In the current case, it is not clear that anyone has a good idea of what will happen. A lot of stress has been taken out of the base case scenario.

The SSG will be implementing zero-loss for legacy bonds. It will be a “Y/N” column in the appropriate file. The securities that are zero-loss for non-legacy will be assigned an NAIC Designation Category 1.A. The others will follow the mid-NAIC Designation categories for each one. The threshold for zero-loss and break points are to be determined and will be disclosed. There will be a mid-year update based on what is expected for scenarios, up-to-date financials, and on a pro forma basis by the end of October or early November. The SSG and BlackRock have been working very hard on this.

The SSG will likely introduce several through-the-cycle scenarios in 2022, both for RMBS and CMBS. The SSG is targeting between eight and 12 scenarios because 19 thresholds or break points will be needed. If only four scenarios were kept, there would be bonds clustering around one or the other. This is intended to be a lot more sensitive, and there is no intention to change which way things go, better or worse. The SSG would like to create something aligned with what has been done in the prior distributions but just a little bit more sensitive, given that there will be many more thresholds or break points. This will be brought to the Task Force for its approval, along with the 19 thresholds and break points based on the new risk-based capital (RBC) standards that were set out.

Zero-loss will not apply to non-legacy that will be assigned NAIC Designation Category 1.A for the smallest loss possible. The SSG would also consider, depending on demand, a mid-year update file 2022 if there is interest. Resecuritizations of real estate mortgage investment conduit (Re-REMICs), in terms of what is a legacy or non-legacy, the SSG looks through to the underlying and if the underlying is legacy, it is treated as legacy for break point or NAIC Designations. The other question is the format; there will be two files: a file for legacy securities and another for non-legacy securities. The legacy securities file will look much like the old file. The non-legacy will look like the Automated Valuation Service (AVS+) file. The NASVA and third-party administrators (TPAs) have been working on all of these files.

Francisco Paez (MetLife) said the approach is clear with the legacy securities with the “yes” or “no” indicator for zero-loss mapping to NAIC Designation Category 1.A. He asked whether non-legacy securities, the ones that do not have any loss, are mapped to NAIC Designation Category 1.A also or if the SSG provides the NAIC Designation. Mr. Kolchinsky said that is correct, those securities that meet the threshold for no loss will be assigned an NAIC Designation Category 1.A directly in the file.

At the beginning of the year, removing the zero-loss completely was discussed. There has since been a request from the ACLI to include it again. For legacy securities, this is becoming a smaller group each year. The SSG does not see an issue with adding back the zero-loss concept for legacy securities; however, since the language was taken out of the P&P Manual, it needs the Task Force’s approval to add it back, which is the request in the prior agenda item. Once the new categories and the new approach for 2022 for the 19 break points and thresholds are set, there will be additional P&P Manual updates needed for next year.

Mr. Fry asked what the ramifications would be if the Task Force does not support adding zero-loss securities. Mr. Kolchinsky said an analysis of the ramifications has not been conducted. He said he supports adding back the zero-loss case for the legacy securities to maintain the status quo from last year and the prior years.

Mr. Paez said the inclusion of the zero-loss securities this year avoids a more asymmetric treatment of modeled security versus other bonds at the AAA level. Most zero-loss securities in modeled securities that are non-legacy are really going to be AAA, and they represent by and large the biggest component of the capital structure of securitizations. From that perspective, including it gives a symmetric treatment of AAA structured securities or non-structured securities.

7. Discussed Other Matters

Ms. Lindsey asked to quickly discuss the status of private rating letters, providing rationale to the SVO, and what that looks like starting Jan. 1, 2022. This was an adopted change, and industry has been working with rating agencies to ensure that they provide that information starting Jan. 1, 2022 and looking at the current private rating letter population to see which ones have rationale that can be provided to the SVO starting Jan. 1, 2022. The NASVA met with the SVO and some folks from Kansas City Managed IT to discuss what that will look like for filers, and it sounds like it will take some time to get VISION and AVS+ updated to accommodate the changes in the filings. Feeds will be a ways out, and manual filings could be a bit of a
challenge in the short term. There was a discussion about timing and what implementation looks like or what the expectations are from state insurance regulators if it is mid-year next year versus Jan. 1.

Mr. Therriault said the expectation is that there will be a VISION enhancement next year to permit the filing of the private letter (PL) rating rationale reports. Hopefully that will be done by mid-year, but that is not certain. It will be a transition over time. The NAIC has spent a tremendous amount of energy this past year on making the modifications necessary for the financially modeled securities. Filers can submit those rational reports if there is a manual PL rating filing, to the extent that they are available. They can also be emailed to the analyst, as necessary, and the SVO will start accumulating them. The expectation is that the VISION application, which is the system that houses all our filings from insurers, will have an acknowledgment field somewhere in the system to be able to identify that a ratings rationale report has been received for the current year. This will permit insurance companies to know whether it was received. It will take time to build out this enhancement, and progress updates will be provided to industry and the Task Force, certainly at each of the national meetings.

Mr. Fry asked for clarification that the adopted amendment require ratings rationale reports to be filed by Jan. 1, 2022. Mr. Therriault said that is correct starting Jan. 1, 2022 but they can be submitted any time during the year.

Mr. Fry said the workaround is to manually send them in until such time as the system can handle them, and the SVO will update the Task Force periodically in between.

Mr. Therriault said there will be manual processes until VISION can be updated, and for a physical PL rating, the rationale report can be attached as an additional document when submitted.

Mr. Lindsey asked if it would it be fair to tell the reporting folks to hold off on that PL suffix until closer to the end of the year, because that is one indicator as to whether the rationale has been filed and accepted. Mr. Therriault agreed that would be fair.

Having no further business, the Valuation of Securities (E) Task Force adjourned.

RE: Addition of Spanish GAAP in the list of Countries and Associated National Financial Presentation
     Standards (the List) in the Purposes and Procedures Manual of the NAIC Investment Analysis
     Office (the “P&P Manual”)

DATE: September 1, 2021

Summary - At present, financial statements submitted to the Security Valuations Office (SVO) for analysis
must be audited and prepared in accordance with either a Global Financial Presentation Standard (US
Generally Accepted Accounting Principles (US GAAP) or International Financial Reporting Standards (IFRS)
or a Reconciled Financial Presentation Standard (local GAAP reconciled to US GAAP or IFRS) unless the
SVO has been specifically authorized to use a National Financial Presentation Standard.

Currently, the SVO is authorized to accept audited financial statements prepared in accordance with the
following National Financial Presentation Standards:

- Canadian Accounting Standards for Private Enterprises but only for non-financial institutions.
- UK Financial Reporting Standard (FRS) 102 (which encompasses Irish companies reporting
  under FRS 102).
- Australian GAAP.
- German GAAP.
- French GAAP but subject to the presentation of additional documentation as specified above
  and annually thereafter as specified below.
- Dutch (Netherlands) GAAP.
- Italian GAAP but subject to the presentation of additional documentation as specified above
  and annually thereafter as specified below.
- Belgian GAAP.
Swiss GAAP FER presented on the basis of the whole body of rules and regulations of Swiss GAAP FER ("Core FER" and other Swiss GAAP FER Standards), but subject to the presentation of additional documentation as specified in this Manual.

In 2013, the Valuation of Securities (E) Task Force adopted a procedure, as outlined in Part Two, paragraph 174 of the Purposes and Procedures Manual (P&P Manual) of the NAIC Investment Analysis Office, to submit requests to consider other National Financial Presentation Standard as follows:

A national insurance association (but not individual insurers or other persons) may, by written request, ask the SVO to study the feasibility of adding a country and the associated National GAAP or National IFRS. The SVO is authorized, but not required, to hold discussions with representatives of the national insurance association to evaluate whether the criteria specified below has been met and to formulate a recommendation to the VOS/TF. The SVO may not assign an NAIC Designation to or otherwise assess a security under the proposed national standard until the VOS/TF has, by amendment to this Manual, added the proposed country and the associated National GAAP or National IFRS.

In March 2021, the SVO received a letter from the American Council of Life Insurers (ACLI) requesting the SVO to consider the National GAAP/National IFRS of Spain for addition to the National Financial Presentation Standards. This letter included information supporting the request as required in Part Two, paragraph 175, of the P&P Manual, including evidence that certain companies in the targeted country are not required to use a Global Financial Presentation Standard, and that investment opportunities exist in the targeted country.

Having received the industry request and required information, Part Two, paragraphs 177-181 of the P&P Manual further establishes a process that the SVO must follow in order to have a National GAAP or National IFRS accepted as a National Financial Presentation Standards. The steps in this process are as follows:

177. The national insurance association will, as necessary, identify an accounting firm that is an expert in the national accounting system of the country proposed for inclusion on the List of Countries and associated National Financial Presentation Standard.

The requirement of this step has been fulfilled. The ACLI identified Deloitte of Spain as an expert in the national accounting system of Spain.

178. The national insurance association will work with the SVO to create an educational session on those aspects of financial presentation relevant to the SVO for purposes of its credit risk assessment.

This requirement has been fulfilled. On June 22, 2021, Joaquin Sánchez-Horneros, Director and member of the IFRS Centre of Excellence of Deloitte Spain, along with Pablo Castillo Lekuona, Senior Manager in the Department of Global Capital Markets and Accounting IFRS, gave a presentation to SVO analysts.
179. The educational session will focus on the material differences between accounting methods for the income statement and balance sheet, and shall include such further or additional areas as the SVO shall deem necessary in view of the specific country and national accounting system proposed.

The June 22, 2021 presentation by Deloitte included detailed differences between Spanish GAAP and IFRS including a case study demonstrating the financial statement impact on a company over three years, comparing IFRS to Spanish GAAP. The case study demonstrated the adjustments required to bridge from one standard to another, although no one given example is necessarily representative of the absolute magnitude of difference on financial measures for any other company.

180. At the conclusion of such educational session, the SVO shall assess whether the educational session provides a sufficient basis for it to make needed adjustments to the financial information presented under the national accounting standard.

Based on the Deloitte presentation, including the reconciliation case study, it appears that most differences between Spanish GAAP and IFRS can be identified with additional disclosure sufficient to allow an analyst to make any necessary adjustments to an analysis. As noted below, the SVO will request additional information if the footnotes to the financial statements prepared in accordance with Spanish GAAP fail to provide adequate information.

181. The SVO shall then assess whether the application of the adjustments in one or more transactions confirms that the use of the national accounting standard leads to the creation of NAIC Designations analogous (in the information they convey about credit risk) to those created by the use of a Global Financial Presentation Standard.

The presentation of the Spanish GAAP review by Deloitte was sufficient for the SVO to draw conclusions as to the ability to analyze credits presented under these accounting guidelines.

The principal differences between Spanish GAAP and IFRS focus on several categories:

- **Operating Leases**
  - **Spanish GAAP**: Not brought on to the balance sheet; accounted for as operating leases. Operating lease income and expense corresponding to the lessor and lessee are considered respectively, to be income and expenses of the year in which they accrue.
  - **IFRS**: Brought on to the balance sheet. Recorded as an asset (right of use) and a corresponding lease liability by the lessee.
  - **Impact**: Lessor: income is higher / Lessee: income is lower than that reported for IFRS and debt is lower than that of IFRS.

- **Government Grants**
  - **Spanish GAAP**: Initially accounted for as equity and subsequently charged to the income statement as amortization over time.
IFRS: Prohibits recognizing them immediately as equity. In the case of capital grants, it is allowed to record them by reducing assets. Grants related to expenses can be presented in the income statement as income or netting the corresponding expenses.

Impact: Equity will be inflated for capital grants and related debt to cap will be lower than that calculated under IFRS. Net income will be lower in each subsequent year than that under IFRS calculation but should be reconcilable if footnotes provide disclosure.

- **Intangible Assets**
  - Spanish GAAP: Research & development costs can be capitalized. Presumption of a useful life limit of 5 years in the amortization of these costs and computer programs, unless proven otherwise.
  - IFRS: Research costs are not capitalized. Only development costs can be capitalized under certain requirements, which will be amortized over their useful life (no time limit).
  - Impact: Assets are higher than under IFRS since research is capitalized; net income will be lower than under IFRS in each subsequent year due to amortization of research. However, this should be reconcilable if footnotes provide disclosure.

- **Goodwill**
  - Spanish GAAP: Amortizable over 10 years.
  - IFRS: Not amortizable. If fair value goes below historical cost, an impairment must be recorded.
  - Impact: Net income is lower than under IFRS due to ongoing goodwill amortization; assets and equity will be undervalued relative to IFRS due to the amortization. Debt to cap calculations will be higher than under IFRS due to the lower equity. However, this should be reconcilable if footnotes provide disclosure.

- **Financial instrument-valuation**
  - Spanish GAAP:
    - Financial assets: lower of acquisition cost and market
    - Financial liabilities: repayment value
    - Financial liabilities: all changes in fair value are recognized in the income statement
  - IFRS:
    - Financial assets: fair value
    - Financial liabilities: amortized cost
    - Financial liabilities: changes in fair value are recognized in equity
  - Impact:
    - Financial assets: Asset value will be understated relative to IFRS if fair value and cost are different.
    - Financial liabilities: Changes in fair value will impact the income statement under Spanish GAAP, which could affect financial ratio calculations involving net income, such as net income/revenues, as well as the calculation of EBITDA if these adjustments cannot be clearly identified in the footnote disclosure.

- **Financial instruments (available for sale): Impairment/reorganization**
  - Spanish GAAP: Fresh start in certain situations
The conclusion is that there are several important differences between Spanish GAAP and IFRS. The items referenced above will require additional disclosures in the notes or audited supplement to the financial statements, thereby allowing the SVO to adjust the financial statements so that the use of Spanish GAAP financial statements will have no impact on the ultimate designation. Some of these disclosures may not be contained in the notes to Spanish GAAP financial statements, so the following items, certified by the auditor, should be submitted along with the Spanish GAAP statements:

- A complete set of audited financial statements (for at least three years, if available) comprising: balance sheet, income statement and consolidated statement of cash flows;
- Disclosure of operating lease commitments in a manner similar to that required by IFRS or US GAAP;
- Disclosure of Government Grants, initial amount and year-to-date and cumulative amortization;
- Disclosure of gross capitalized research costs and cumulative amortization;
- Disclosure of gross goodwill and cumulative amortization, including goodwill created by fresh-start accounting;
- Disclosure of the change in fair value for financial assets and liabilities;
- Disclosure on joint ventures not using the equity method including full financial results;

Proposed Amendment - The text changes to include Spanish GAAP on the list of Countries and Associated National Financial Presentation Standards is shown below with additions in red underline and deletions in red strikethrough, as it would appear in the 2020 P&P Manual format.
PART TWO
OPERATIONAL AND ADMINISTRATIVE INSTRUCTIONS
APPLICABLE TO THE SVO
Information Requirements Associated with the Use of a National Financial Presentation Standard

182. Insurance companies who file securities whose issuers present financial information in accordance with a National Financial Presentation Standard shall:

- Where materially different from Global Financial Presentation Standards, identify how local accounting standards treat specific issues relevant to assessment of credit risk.

- Provide written descriptions of the accounting difference the insurer considered, and of how it resolved concerns about the accounting differences during the investment decision making process.

- Be prepared to provide the SVO with access to the issuer’s management or to convey questions and retrieve information from the issuer’s management.

- Include a consolidated statement of cash flows for the past three years. See the definition of Audited Financial Statement for additional guidance pertaining to this requirement.

- For filings presented on the basis of French generally accepted auditing standards GAAP, the following additional documentation is required:
  - Disclosure of finance lease obligations;
  - Disclosure of operating lease commitments in a manner similar to that required by IFRS or US GAAP;
  - Disclosure of pension assets and liabilities as well as any other post-employment plan obligations (key is disclosure of any unfunded amount);
  - Disclosure of the amount of treasury stock, if any, and how it is accounted for; and
  - Segment reporting of sales, assets, income and depreciation.

- For filings presented on the basis of Italian GAAP, the following additional documentation is required:
  - A consolidated statement of cash flows for three years;
  - Disclosure of finance lease obligations;
Disclosure of operating lease commitments in a manner similar to that required by IFRS or U.S. GAAP;

Disclosure of pension assets and liabilities, as well as any other post-employment plan obligations, especially of any unfunded amounts; and

Disclosure of the amount of Treasury stock, if any, and how it is accounted for.

For filings presented on the basis of the whole body of rules and regulations of Swiss GAAP FER (“Core FER” and other Swiss GAAP FER Standards), the insurer always provides the following information:

- Full set of audited financial statements, including a statement of cash flows;
- Disclosure of finance lease and operating lease commitments in a manner similar to that required by IFRS or US GAAP;
- Disclosure of pension assets and liabilities as well as any other post-employment plan obligations, especially any unfunded amount;
- Disclosure of the amount of treasury stock, if any, and how it is accounted for;
- Segment reporting of sales, assets, income and depreciation;
- Signed Auditor’s Opinion; and
- Consolidation information and consolidated financial statements where relevant.

For filings presented on the basis of Spanish GAAP, the following additional documentation is required:

- A complete set of audited financial statements (for at least three years, if available) comprising: balance sheet, income statement and consolidated statement of cash flows;
- Disclosure of operating lease commitments in a manner similar to that required by IFRS or US GAAP;
- Disclosure of Government Grants, initial amount and year-to-date and cumulative amortization;
- Disclosure of gross capitalized research costs and cumulative amortization;
- Disclosure of gross goodwill and cumulative amortization, including goodwill created by fresh-start accounting;
Disclosure in the change in fair value for financial assets and liabilities;

Disclosure of joint ventures recorded not using the equity method, including full financial results;

Countries and Associated National Financial Presentation Standards

183. The SVO is authorized to accept Audited Financial Statements prepared in accordance with the following National Financial Presentation Standards:

- Canadian Accounting Standards for Private Enterprises but only for non-financial institutions.
- UK Financial Reporting Standard (FRS) 102 (which encompasses Irish companies reporting under FRS 102).
- Australian GAAP.
- German GAAP.
- French GAAP but subject to the presentation of additional documentation as specified above and annually thereafter as specified below in this Manual.
- Dutch (Netherlands) GAAP.
- Italian GAAP but subject to the presentation of additional documentation as specified above and annually thereafter as specified below in this Manual.
- Belgian GAAP.
- Swiss GAAP FER presented on the basis of the whole body of rules and regulations of Swiss GAAP FER (“Core FER” and other Swiss GAAP FER Standards), but subject to the presentation of additional documentation as specified in this Manual.
- Spanish GAAP but subject to the presentation of additional documentation as specified above and annually thereafter as specified in this Manual.
TO: Kevin Fry, Chair, Valuation of Securities (E) Task Force
FROM: Dale Bruggeman, Chair of the Statutory Accounting Principles (E) Working Group
Carrie Mears, Vice-Chair of the Statutory Accounting Principles (E) Working Group
RE: Provisions for NAIC 5GI Designations
DATE: November 15, 2021

The purpose of this referral is to request that the Valuation of Securities (E) Task Force review the NAIC 5GI guidance detailed in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* and consider whether modifications are necessary to clarify the intent of the guidance and mitigate misapplications. As an example, the Working Group was made aware of situations in which residual tranches, which do not have contractual interest or principal payments, were being designated as NAIC 5GI by reporting entities. Although there was broad agreement by key industry representatives and state insurance regulators that the NAIC 5GI should not be permitted for these residual tranches, potential refinement to clarify the NAIC 5GI provisions may prevent future misapplication.

**Residual Tranches Defined per SSAP No. 43R—Loan-Backed and Structured Securities:**
Reference to “residual tranches or interests” intends to capture securitization tranches and beneficial interests as well as other structures captured in scope of this statement, that reflect loss layers without any contractual payments, whether principal or interest, or both. Payments to holders of these investments occur after contractual interest and principal payments have been made to other tranches or interests and are based on the remaining available funds. Although payments to holders can occur throughout an investment's duration (and not just at maturity), such instances still reflect the residual amount permitted to be distributed after other holders have received contractual interest and principal payments.

In addition to clarifying that the guidance cannot be applied to residual tranches, as defined in SSAP No. 43R, the following concepts are provided as suggestions for possible clarification:

- Clarifications to ensure that the NAIC 5GI self-assigned designation is permitted only for securities that could be reviewed for an NAIC designation if the documentation to support a credit analysis could be submitted. In other words, the 5GI process is not intended to be used for securities that would not qualify for a designation even if a full credit analysis could be performed. Securities that cannot be reviewed for an NAIC designation due to the lack of a process / methodology for the type of security or structure are not permitted to be self-assigned an NAIC 5GI designation.

- Clarification that self-assigning an NAIC 6* for securities that do not qualify for NAIC 5GI is not a declaration of potential default. Rather, the self-assignment indicates that the security...
could not be reviewed for a full credit analysis and the requirements for an NAIC 5GI could not be met.

Thank you for considering these potential clarifications. Please contact Dale Bruggeman, or Carrie Mears, SAPWG Chair and Vice Chair, with any questions.

RE: Exposure Draft to Clarify the Exclusion of Residual Tranches and Interests from Schedule D-1 Reporting and to Provide Temporary NAIC Designation Instructions

Dear Mr. Fry:

The American Council of Life Insurers (ACLI) and the North American Securities Valuation Association (NASVA) (“the undersigned”) appreciate the opportunity to comment on the memo exposed after the November 19th, 2021, Valuation of Securities Task Force meeting to “Clarify the Exclusion of Residual Tranches and Interests from Schedule D-1 Reporting and to Provide Temporary NAIC Designation Instructions.”

The undersigned fully support the proposed criteria addition. We truly appreciate the constructive dialogue with you, and the Securities Valuation Office.

We thank you for your continued engagement on the topic.

Sincerely,

Mike Monahan
Senior Director, Accounting Policy

Tracey Lindsey
NASVA
TO: Kevin Fry, Chair, Valuation of Securities (E) Task Force

       Marc Perlman, Managing Investment Counsel, NAIC Securities Valuation Office (SVO)
CC: Eric Kolchinsky, Director, NAIC Structured Securities Group (SSG) and Capital Markets Bureau
RE: Amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (the “P&P Manual) to the clarify the exclusion of Residual Tranches and Interests from Schedule D-1 reporting and to provide temporary NAIC Designation instructions
DATE: November 1, 2021

Summary – The Statutory Accounting Principles (E) Working Group (the “Working Group”) identified inconsistencies in how residual tranches and interests were being reported with some entities reporting them on Schedule BA – Other Long Term Invested Assets and others reporting them on Schedule D-1: Long-Term Bonds with either self-assigned NAIC 5GI or NAIC 6 Designations. To prevent further inconsistency and direct appropriate reporting, on September 9, 2021, the Working Group exposed an amendment to SSAP 43R – Loan Backed and Structured Securities to clarify that residual tranches and interests shall be report on Schedule BA. The Working Group plans to consider adoption of this amendment at their November 10, 2021, meeting.

The amendment creates a December 31, 2022 effective date for all residual tranches and interests to be reported on Schedule BA without an NAIC Designation. To accommodate the timeframe needed for Blanks (E) Working Group proposal 2021-21BWG to expand reporting lines on Schedule BA to capture residual tranches and interests, the Working Group’s amendment permits residual tranches and interests currently reported on Schedule D-1 to continue to be reported on Schedule D-1 for reporting year 2021 but only with an NAIC 6* Designation and not an inappropriate NAIC 5GI Designation.

The NAIC 5GI Designation is not appropriate for residual tranches and interests (see definition from SSAP 43R below). Pursuant to the “P&P Manual, an insurance company is permitted to self-assign an NAIC 5GI to an obligation if it meets all of the following criteria:

1. Documentation necessary to permit a full credit analysis of the security by the SVO does not exist or an NAIC CRP rating for an FE or PL security is not available.
2. The issuer or obligor is current on all contracted interest and principal payments.
3. The insurer has an actual expectation of ultimate payment of all contracted interest and principal.

© 2021 National Association of Insurance Commissioners
Assignment of an NAIC 5GI Designation for residual investments is an incorrect application of the guidance as (a) there are no contracted interest and principal payments to certify as current and (b) the insurer cannot have an actual expectation of receiving all contractual principal and interest of the underlying collateral as these tranches absorb the losses first for the securitization structure. Although cash flows may pass through to the residual holders at periodic intervals pursuant to the waterfall, ultimate returns depend on continued performance so, therefore, there can be no actual expectation that future payments will be received.

The proposed amendment to SSAP 43R – Loan Backed and Structured Securities section 26.c., says:

For residual tranches or interestsFN captured in scope of this statement, all reporting entities (regardless of AVR) shall report the item on Schedule BA: Other Long-Term Invested Assets at the lower of amortized cost or fair value. Changes in the reported value from the prior period shall be recorded as unrealized gains or losses.

Footnote: Reference to “residual tranches or interests” intends to capture securitization tranches and beneficial interests as well as other structures captured in scope of this statement, that reflect loss layers without any contractual payments, whether principal or interest, or both. Payments to holders of these investments occur after contractual interest and principal payments have been made to other tranches or interests and are based on the remaining available funds. Although payments to holders can occur throughout an investment’s duration (and not just at maturity), such instances still reflect the residual amount permitted to be distributed after other holders have received contractual interest and principal payments.

The SVO recommends amendments to the P&P Manual to clarify the reporting requirements for residual tranches and interests in line with SSAP 43R, if and as amended.

Proposed Amendment - The text changes to include reporting instructions for residual tranches and interests is shown below with additions in red underline and deletions in red strikethrough, as it would appear in the 2021 P&P Manual format. The SVO requests the Task Force’s permission to remove the paragraph with the “NOTE REGARDING RESIDUAL TRANCHE OR INTERESTS” from the December 31, 2022 version of the P&P Manual, without further authorization from the Task Force, as it will become obsolete at that time.
PART TWO

OPERATIONAL AND ADMINISTRATIVE INSTRUCTIONS APPLICABLE TO THE SVO
NAIC DESIGNATIONS RELATED TO SPECIAL REPORTING INSTRUCTIONS

27. An insurance company that self-assigns a 5GI must attest that securities receiving this designation meet all required qualifications by completing the appropriate general interrogatory in the statutory financial statements. If documentation necessary for the SVO to perform a full credit analysis for a security does not exist or if an NAIC CRP credit rating for an FE or PL security is not available, but the issuer is not current on contractual interest and principal payments, and/or if the insurer does not have an actual expectation of ultimate payment of all contracted interest and principal, the insurance company is required to self-assign this security an NAIC 6*.

28. NAIC 6* is assigned by an insurer to an obligation in lieu of reporting the obligation with appropriate documentation in instances in which appropriate documentation does not exist, but the requirements for an insurance company to assign a 5GI are not met.

29. Securities with NAIC 5GI Designations are deemed to possess the credit characteristics of securities assigned an NAIC 5 Designation. A security assigned an NAIC 5GI Designation incurs the regulatory treatment associated with an NAIC 5 Designation.

30. Securities an insurance company previously assigned as NAIC 5GI are permitted to subsequently receive this designation if the requirements for an NAIC 5GI designation continue to be met.

31. Securities with NAIC 6* Designations are deemed to possess the credit characteristics of securities assigned an NAIC 6 Designation. Therefore, a security assigned an NAIC 6* Designation incurs the regulatory treatment associated with an NAIC 6 Designation.

32. Securities that are residual tranches or interests, as defined in SSAP 43R – Loan Backed and Structured Securities, shall be reported on Schedule BA - Other Long-Term Invested Assets, without an NAIC Designation and are ineligible to be assigned an NAIC 5GI or NAIC 6* Designation.

NOTE REGARDING RESIDUAL TRANCHES OR INTERESTS: For 2021 year-end reporting only, residual tranches or interests previously reported on Schedule D-1: Long-Term Bonds shall be permitted to be reported on Schedule D-1 with an NAIC 6* Designation, however an NAIC 5GI is not permitted.

NOTE: The GI after the quality indicator 5 refers to General Interrogatory and distinguishes NAIC 5GI from an NAIC 5 Designation. The asterisk (*) after the quality indicator 6 distinguishes the NAIC 6* Designation from an NAIC 6 Designation.
PART THREE
SVO PROCEDURES AND METHODOLOGY FOR PRODUCTION OF NAIC DESIGNATIONS
FE SECURITIES

Filing Exemption

3. Bonds, within the scope of SSAP No. 26R and SSAP No. 43R (excluding RMBS and CMBS subject to financial modeling) and Preferred Stock within scope of SSAP No. 32, that have been assigned an Eligible NAIC CRP Rating, as described in this Manual, are exempt from filing with the SVO (FE securities) with the exception of Bonds and/or Preferred Stock explicitly excluded below.

Specific Populations of Securities Not Eligible for Filing Exemption

4. The filing exemption procedure does not apply to:

- **Residual tranches or interests** - As defined in SSAP 43R – Loan Backed and Structured Securities, residual tranches or interests shall be reported on Schedule BA - Other Long-Term Invested Assets, without an NAIC Designation and are therefore not eligible for filing exemption.

RE: Non-substantive technical amendment to the P&P Manual for Private Letter Rating Securities and the corresponding NAIC Designation Category for NAIC 5GI

DATE: November 1, 2021

Summary – At the May 24, 2021 Task Force meeting the Task Force adopted an amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) requiring the submission of Private Rating Letter Rationale Reports with certain Private Rating Letters filed with the SVO. In the May amendment certain language, currently in the printed December 2020 version of the P&P, which clarifies that an NAIC 5GI Designation is the equivalent of an NAIC 5.B Designation Category, was erroneously omitted. The SVO proposes a non-substantive technical amendment to the May amendment by re-inserting the omitted language as shown below in red (additions underlined and deletions with strikethrough), as well as including identical language in one paragraph adopted pursuant to the May 2021 amendment.
PART THREE
SVO PROCEDURES AND METHODOLOGY FOR PRODUCTION
OF NAIC DESIGNATIONS
PROCEDURE APPLICABLE TO FILING EXEMPT (FE) SECURITIES AND PRIVATE LETTER (PL) RATING SECURITIES

12. For (a) PL Securities issued from January 1, 2018 to December 31, 2021 subject to a confidentiality agreement executed prior to January 1, 2022, which confidentiality agreement remains in force, for which an insurance company cannot provide a copy of a private rating letter rationale report to the SVO due to confidentiality or other contractual reasons (“waived submission PLR securities”), the insurer may report such securities on such securities’ General Interrogatory (i.e., a PLGI security), and (b) PL Securities issued after January 1, 2022, for which an insurance company cannot provide a copy of a private rating letter rationale report to the SVO due to confidentiality or other contractual reasons (“deferred submission PLR securities”) the insurer may report such securities on such securities’ General Interrogatory (i.e., a PLGI security) until and including December 31, 2023, after which time, if the insurance company still cannot provide a copy of a private rating letter rationale report for whatever reason, the securities can be reported with an NAIC 5GI Designation and an NAIC Designation Category of NAIC 5.B GI in accordance with the guidance specified below.

Conditions to Filing Exemption for PL Securities Issued on or After January 1, 2018

16. An insurer that owns a PL security that is not filing exempt shall either: (a) file the security with the necessary documentation with the SVO for an analytically determined NAIC Designation; or (b) self-assign an NAIC 5GI and an NAIC Designation Category of NAIC 5.B GI to the security and report using the Interrogatory procedure; in either case within 120 days of purchase.

Producing NAIC Designations for PL Securities

22. If the SVO verifies that the security:

- Has been assigned a credit rating but that the credit rating is not an Eligible NAIC CRP Credit Rating; or
- Has not been rated by an NAIC CRP; or
- Is no longer subject to a private letter rating; or
- Is a type of security that is ineligible to receive an NAIC Designation with a NAIC CRP Credit Rating.

The SVO shall notify the insurer that the security is not eligible for filing exemption. The insurance company shall then either file that security and necessary documentation with the SVO for an independent credit assessment or assign an **NAIC 5GI Regulatory Designation** and an **NAIC Designation Category of NAIC 5.B GI** to the security in the related Interrogatory.

If the SVO deems a security ineligible to receive an NAIC Designation per the instructions in this Manual because (a) the security is ineligible for Filing Exception according to “Specific Populations of Securities Not Eligible for Filing Exemption” in this Part or (b) the security is of a type outside the scope of SSAP No. 26R - Bonds, SSAP No. 32- Preferred Stock, or SSAP No. 43R – Loan Backed and Structured Securities then, for such a security, the SVO will provide a brief explanation in VISION, accessible to all VISION account holders, of why the security will not be provided an NAIC Designation.

23. An **NAIC 5GI Designation** and an **NAIC Designation Category of NAIC 5.B GI** may also be used in connection with the designation of PL securities rated by an NAIC CRP (i.e., for private letter ratings issued on or after January 1, 2018) when the documentation is not available for the SVO to assign an NAIC Designation. For purposes of this section, the documentation is not available for the SVO to assign an NAIC Designation if (a) the NAIC CRP credit rating is not included in the applicable CRP credit rating feed (or other form of direct delivery from the NAIC CRP) and the insurer is unable to provide a copy of the private letter rating documentation, (b) for private letter ratings issued on or after January 1, 2022, an insurance company does not provide a copy of a private rating letter rationale report to the SVO for which there are no confidentiality or contractual limitations or (c) for deferred submission PLR securities, if the insurance company does not submit the private rating letter rationale report to the SVO on or after January 1, 2024.
The Financial Regulation Standards and Accreditation (F) Committee did not meet at the Fall National Meeting.
Draft: 12/20/21

International Insurance Relations (G) Committee
San Diego, California
December 15, 2021

The International Insurance Relations (G) Committee met in San Diego, CA, Dec. 15, 2021. The following Committee members participated: Gary D. Anderson, Chair (MA); Raymond G. Farmer, Vice Chair (SC); Andrew N. Mais (CT); Karima M. Woods (DC); David Altmaier (FL); Doug Ommen (IA); James J. Donelon represented by Tom Travis (LA); Kathleen A. Birrane (MD); Anita G. Fox (MI); Chlora Lindley-Myers (MO); Eric Dunning (NE); Marlene Caride (NJ); Andrew R. Stolfi (OR); and Jessica K. Altman (PA).

1. **Adopted its Summer National Meeting Minutes**

Director Lindley-Myers made a motion, seconded by Director Fox, to adopt the Committee’s Aug. 16 minutes (see NAIC Proceedings – Summer 2021, International Insurance Relations (G) Committee). The motion passed unanimously.

2. **Adopted its 2022 Proposed Charges**

Commissioner Anderson introduced the Committee’s 2022 proposed charges, noting they are the same as those for 2021.

Commissioner Mais made a motion, seconded by Mr. Travis, to adopt the Committee’s 2022 proposed charges (Attachment One). The motion passed unanimously.

3. **Discussed International Efforts on Insurer Culture**

Commissioner Anderson spotlighted the topic of insurer culture, noting that it is a topic just as important to the Committee as any other. He reported that last month, the International Association of Insurance Supervisors (IAIS) released its *Issues Paper on Insurer Culture* (Issues Paper), and it is a theme that will continue to be part of global regulatory discussions. He explained that the purpose of this agenda item was to hear more about work going on at the international level on insurer culture and to hear from an insurer on how it approaches culture.

Julien Reid (Autorité des Marchés Financiers (AMF) gave a review of the Issues Paper, as lead of the drafting team. He noted the Issues Paper explores the concept of insurer culture as a point of intersection for prudential and conduct risks, with examples to illustrate the broader role of culture in managing these risks. Mr. Reid addressed work being done or planning to be done as it relates to culture in Quebec and in Canada more broadly. He explained that conduct of business and customer issues are under the exclusive purview of the provinces in Canada. He also noted that the AMF worked within the topic of culture by issuing first governance guidelines in 2009 and conduct of business guidelines in 2006, which enhanced their supervision work related to culture as well. Lastly, he said that the AMF passed an insurers act that now requires a board member must embed corporate culture throughout their organization, and it provides regulatory action powers if companies do not comply accordingly.

Commissioner Anderson noted that like other jurisdictions, state insurance supervisors recognize the importance of an insurer’s culture within their internal workings. Commissioner Anderson highlighted various insurer culture considerations found in the NAIC *Financial Analysis Handbook* and the *Financial Condition Examiners Handbook*.

Jon Richter (MetLife) and Cindy Pace (MetLife) presented on culture from MetLife’s perspective. They highlighted how MetLife approaches culture, its importance to MetLife’s workings, how to build and support high-functioning culture, and how the commitment to diversity, equity and inclusion (DE&I) fosters open dialogue and ensures high-functioning culture. Mr. Richter outlined the way culture is embedded in the workings of the organization’s Risk, Audit, Governance, and Corporate Responsibility committees. Ms. Pace focused her remarks on why DE&I is pivotal to driving culture. She noted that MetLife has challenged itself to make a bold commitment to their employees and customers at Met Life as a positive step towards shaping their corporate culture.

Director Farmer commented that issues of insurer culture are not a philosophical discussion, but goes to how regulators, insurers, and the industry at large treat customers and their employees. Director Fox asked about sustaining cultural discussions in the new hybrid work reality. Dr. Pace said values, vision, and a purpose are essential to accountability, regardless of whether
an employee is present in an office or not. She mentioned that equity is a core tenant of an employee’s decision of where they want to work, and that must be factored into corporate culture.

With respect to future international work on culture, Jonathon Dixon (IAIS) noted this as a key theme of the IAIS, and he highlighted a recently released statement on the importance of DE&I for the workings and mission of the IAIS. He noted that advancing this topic is not only important for a business imperative, but also it supports sound prudential and consumer outcomes and sustainability objectives.

4. Heard an Update on Key 2021 and 2022 Activities of the IAIS

Commissioner Anderson reported on recent IAIS activities, starting with an update on the development of criteria to assess whether the aggregation method (AM) provides comparable outcomes to the insurance capital standard (ICS). He noted the planned public consultation on draft comparability criteria will be launched in the first half of 2022.

Commissioner Anderson said another important area of work underway is the Global Monitoring Exercise (GME), which is an important component of the holistic framework for systemic risk. He added that the IAIS recently published its GME public report, which draws on data from approximately 60 of the largest international insurance groups and close to 40 insurance supervisors, covering more than 90% of global gross written premiums. The full GME has been completed for the first time as last year’s focused on the impact of COVID-19.

Commissioner Anderson concluded the IAIS update with a review of three recently published papers, which were discussed during previous Committee meetings: 1) an Issues Paper on Insurer Culture; 2) a Revised Application Paper on Supervisory Colleges; and 3) a Revised Application Paper on Combating Money Laundering and Terrorist Financing.

5. Heard an Update on International Activities

a. Regional Supervisory Cooperation

Director Farmer reported that Director Dean L. Cameron (ID) participated virtually in the Taiwan Insurance Institute’s Insurance and Economic Development Forum on Dec. 2, giving remarks on the “New Blue Ocean of the Insurance Industry After the Epidemic.” Next, he noted Commissioner Altmaier and Director Cameron met with Bermuda Monetary Authority (BMA) senior staff while in Hamilton, Bermuda, to participate in the Association of Bermuda Insurers and Reinsurers (ABIR) roundtable webinar “Leveraging International Reinsurance to Address the Climate risk Protection Gap” and to meet with ABIR board members. The NAIC met with the Financial Services Agency (FSA) of Japan for a biannual bilateral dialogue on Nov. 30. The NAIC and the FSA discussed various topics and developments, including climate risk and resilience, liquidity stress testing (LST), innovation and technology, long-term care insurance (LTCI), and DE&I.

Director Farmer said the European Union (EU)-U.S. Insurance Dialogue Project (Project) held a public virtual webinar on Oct. 19 on its continued progress and future priorities, with representatives of the NAIC, including: Commissioner Birrane and Commissioner Ommen; the Federal Insurance Office (FIO) of the U.S. Department of the Treasury (Treasury Department); and the European Insurance and Occupational Pensions Authority (EIOPA). Summary reports of the work conducted by the Project’s three working groups on cybersecurity, cyber insurance, and big data/artificial intelligence (AI) during 2020–2021 were published and are available on the NAIC website. He reported that going forward, the project will focus on three topics: 1) climate risk financial oversight, including climate risk disclosures, supervisory reporting, and other financial surveillance; 2) climate risk and resilience, including innovative technology, pre-disaster mitigation and adaptation efforts, and modelling; and 3) innovation and technology, which will include topics such as big data, AI, and supervisory technology (Suptech) as a regulatory tool.

Director Farmer reported that the 2021 NAIC Fall International Fellows Program was held virtually Oct. 18–22, with more than 90 global regulators from more than 20 countries participating. He noted that beginning in 2022, the Fellows Program’s spring sessions will be held virtually, while the Fall sessions will be held in person. He said that in an effort to plan ahead for the Fall 2022 Fellows Program scheduled to begin Oct. 10, 2022, any state interested in hosting a Fellow next fall should contact NAIC staff.

b. OECD

Director Farmer reported that the Organisation for Economic Co-operation and Development’s (OECD’s) Insurance and Private Pensions Committee (IPPC) met virtually Dec. 9–10 and covered updates on various workstreams underway at the IPPC. This
included a roundtable on the role of the insurance sector in responding to climate change and featured speakers from international organizations including the Sustainable Insurance Forum (SIF), IAIS, and Net-Zero Insurance Alliance (NZIA). He noted that during the meeting, the NAIC provided a brief snapshot of the state of the insurance industry post-pandemic, potential challenges to those market sectors moving forward, and an update on the cyber insurance market.

c. SIF

Director Farmer said the NAIC, alongside individual state SIF members—California, New York, Vermont, and Washington—participated in a virtual meeting in October. The SIF discussed progress relative to the three workstreams agreed to in its work plan: 1) impacts of climate-related risks on insurability of assets; 2) broader sustainability issues beyond climate change; and 3) climate risks in the actuarial processes. He reported that Maryland recently also became a SIF member.

6. Discussed Other Matters

Commissioner Anderson reminded attendees about the NAIC’s 2022 International Insurance Forum to be held in Washington DC, May 12–13, 2022. He also introduced new staff members to the NAIC’s international relations team and thanked Ekrem Sarper as a former staff member for his years of work and dedication to the NAIC’s international efforts and activities.

Having no further business, the International Insurance Relations (G) Committee adjourned.

G Cmte Minutes
The mission of the International Insurance Relations (G) Committee is to: 1) coordinate NAIC participation in international discussions on and the development of insurance regulatory and supervisory standards; 2) promote international cooperation; 3) coordinate on international insurance matters with the U.S. federal government, including the U.S. Department of the Treasury (Treasury Department), the Federal Reserve Board, the Office of the U.S. Trade Representative (USTR), the U.S. Department of Commerce, and other federal agencies; and 4) provide an open forum for NAIC communication with U.S. interested parties and stakeholders on international insurance matters.

Ongoing Support of NAIC Programs, Products or Services

1. The International Insurance Relations (G) Committee will:
   A. Monitor and assess international activities at forums like the International Association of Insurance Supervisors (IAIS), the Financial Stability Board (FSB), and the Organisation for Economic Co-operation and Development (OECD), among others, that affect U.S. insurance regulation, U.S insurance consumers, and the U.S. insurance industry.
   B. Support and facilitate the participation of state insurance regulators and the NAIC in relevant IAIS, FSB, OECD, and similar workstreams.
   C. Develop NAIC policy on international activities, coordinating, as necessary, with other NAIC committees, task forces, and working groups and communicating key international developments to those NAIC groups.
   D. Coordinate and facilitate state efforts to participate in key bilateral and multilateral dialogues, projects, conferences, and training opportunities with international regulators and international organizations, both directly and in coordination with the federal government, as appropriate.
   E. Strengthen international regulatory systems and relationships by interacting with international regulators and sharing U.S. supervisory best practices, including conducting an International Fellows Program and educational (technical assistance) seminars to provide an understanding of the U.S. state-based system of insurance regulation.
   F. Coordinate the NAIC’s participation in the International Monetary Fund (IMF)/World Bank Financial Sector Assessment Program (FSAP).
   G. Coordinate state efforts to assist in achieving U.S. international trade objectives through reviewing relevant materials, developing input, and providing assistance and expertise on insurance matters to the USTR and/or other federal entities.

NAIC Support Staff: Ryan Workman/Nikhail Nigam

NAIC/CONSUMER LIAISON COMMITTEE

NAIC/Consumer Liaison Committee Dec. 13, 2021, Minutes .................................................................13-2
NAIC/Consumer Liaison Committee Oct. 19, 2021, Minutes (Attachment One)........................................13-8
NAIC/American Indian and Alaska Native Liaison Committee Dec. 11, 2021, Minutes (Attachment Two) ....13-9
NAIC/American Indian and Alaska Native Liaison Committee Oct. 15, 2021, Minutes (Attachment Two-A) .........................................................................................................................13-11
The NAIC/Consumer Liaison Committee met in San Diego, CA, Dec. 13, 2021. The following Committee members participated: Michael Conway, Chair (CO); Andrew R. Stolfi, Vice Chair (OR); Lori K. Wing-Heier represented by Anna Latham (AK); Jim L. Ridling (AL); Evan G. Daniels represented by Maria Ailor (AZ); Ricardo Lara represented by Lucy Jabourian (CA); Andrew N. Mais represented by Kurt Swan (CT); Karima M. Woods represented by Sharon Shipp (DC); Trinidad Navarro represented by Frank Pyle (DE); Dean L. Cameron represented by Randy Pipal (ID); Vicki Schmidt (KS); Sharon P. Clark represented by Vicki Lloyd (KY); James J. Donelon represented by Jeff Zewe (LA); Kathleen A. Berrane represented by Kory Boone (MD); Anita G. Fox represented by Renee Campbell (MI); Mike Chaney, Ryan Blakeney, and Andy Case (MS); Mike Causey represented by Tracy Biethn and Kathy Shortt (NC); Jon Godtfred and Johnny Palsgraaf (ND); Eric Dunning (NE); Adrienne A. Harris, Sumit Sud, My Chi To, and Avani Shah (NY); Judith L. French represented by Jana Jarrett (OH); Jessica K. Altman (PA); and Tanji J. Northrup (UT). Also participating was Paige Duhamel (NM).

1. **Announced Reaffirmation of its 2021 Mission Statement for 2022**

Commissioner Conway said the Committee reaffirmed its mission statement for 2022 via e-vote effective Oct. 19 (Attachment One).

2. **Adopted its Summer National Meeting Minutes**

Commissioner Stolfi made a motion, seconded by Commissioner Altman, to adopt the Committee’s Aug. 14 minutes (see *NAIC Proceedings – Summer 2021, NAIC/Consumer Liaison Committee*). The motion passed unanimously.

3. **Heard a Report on the Activities of the NAIC/Consumer Board of Trustees Activities**

Commissioner Conway said as chair of the NAIC Consumer Board of Trustees that works in conjunction with this committee, he wanted to mention that the Board is composed of six state insurance regulator members and six funded consumer representative members. The Board meets in closed, confidential sessions because it administers the NAIC Consumer Participation Program, which may require discussions of a confidential nature concerning personal information. Commissioner Conway said this Board met earlier today at the Hilton to appoint consumer representatives to serve in 2022; however, he said notifications of status to all applicants will not be announced until February 2022.

4. **Observed the Presentation by Consumer Representatives of their Excellence in Consumer Advocacy Award**

Katie Keith (Out2Enroll) and Harry Ting (Healthcare Consumer Advocate) presented Commissioner Altman with the Consumer Representatives’ Excellence in Consumer Advocacy Award. Commissioner Altman said it was an honor to be selected by consumer representatives to receive their award.

5. **Heard an Update on Federal Health Policy Developments and Recommendations for States**

Deborah Darcy (American Kidney Fund—AKF) said she had hoped to provide an update on the provisions of a recently enacted federal Medicaid Coverage Act (MCA) and Build Back Better Act (BBBA) at this meeting. Since neither of these acts has been enacted yet, she said sharing the major themes of what these two acts hope to accomplish is the next best thing. She said expanded tax credits is one of the main issues, as the prior tax credit period of Feb. 15 – Aug. 15 resulted in 2.8 million Americans being enrolled. She said the Advance Premium Tax Credit (APTC) led to most enrollees saving $67 (or 50%) in premium per month. She said half of those who enrolled during this period had a monthly premium of $10 or less prior to the special enrollment period (SEP), compared with only 25% of that after the regular open enrollment period (OEP). She said the American Rescue Act was enacted to end disparities and inequities because it expanded Medicare in a way that helped people of color. She said Medicaid also expanded benefits and increased coverage by providing enhanced federal matching funds available for the Medicaid expansion population for two years in states that had not yet expanded Medicaid to two years and filled the coverage gap for 2.2 million Americans, as well as extending coverage for postpartum women from 60 days to one year. She said 75% of those helped live in Florida, Georgia, North Carolina, and Texas. She said 58% of people in the Medicaid coverage gap were in racial and ethnic minorities, with 28% identifying themselves as African American/Black, 28% Hispanic/Latino, 1% American Indian or Alaska Native, and 1% Asian or Pacific Islander. She said 550,000 are deemed
essential workers. She said control measures for blood pressure and glucose (diabetes) have improved in expansion states compared with non-expansion states, and the improvements in blood pressure and glucose control are greatest for African American/Black and Hispanic/Latino residents. Compared to states that did not expand Medicaid, she said people with end-stage renal disease (ESRD) living in states that expanded the program had lower mortality rates after going on dialysis, and more patients were preemptively placed on the transplant list so they could be on dialysis for a shorter period. She said the BBBA passed by the U.S. House of Representatives (House) on Nov. 19 included provisions that would: 1) limit the price charged by private group and individual health insurance plans for insulin to no more than $35 a month for pens or vials starting in 2023; 2) implement a phased in Medicare Drug Negotiation Program for Part B starting in 2027 and Part D starting in 2026; 3) limit Part D annual out-of-pocket to $2,000; and 4) implement smoothing, which means deductibles could be paid over several months rather than being hit with a large bill at the beginning of the year. She said she wanted to thank the Consumer Information (B) Subgroup, Brenda J. Cude (University of Georgia), Bonnie Burns (California Health Advocates), and Eric Ellsworth (Consumers Checkbook/Center for the Study of Services) for their work on the consumer education materials for the No Surprises Act (NSA) because getting the word out to consumers in a way that they understand is vital to the success of the program, which begins in a few weeks. She also offered NAIC consumer representatives’ assistance to state insurance regulators in spreading the word and educating consumers about this act.

Carl Schmid (HIV+Hepatitis Policy Institute) said the interim final rule on Drug Transparency was released on Nov. 17 with comments due Jan. 24, 2022, and the first annual filing due Dec. 27, 2022. He said plans must report on: 1) total health care spending by type of cost, including prescriptions; 2) the 50 most frequently dispensed brand prescriptions; 3) the 50 costliest prescriptions by total annual spending; 4) the 50 prescriptions with the greatest increase in plan or coverage expenditures; 5) rebates, fees, and other remuneration paid by drug manufacturers to the plan or issuer in each therapeutic class of drugs, as well as for each of the 25 prescriptions that yielded the highest amount of rebates; and 6) the impact of rebates, fees, and other remuneration on premiums and out-of-pocket costs.

Commissioner Conway said he was sorry to interrupt, but it was necessary to stop Mr. Schmid because they were at the 15-minute mark. He said he is committed to having Mr. Schmid finish his presentation at a future meeting.

6. Heard a Presentation on Insurance Privacy Protection: Do the “Right” Thing – A Consumer Perspective

Dr. Ting said the Privacy Protections (D) Working Group was charged with determining what rights insurance consumers should have regarding the collection and use of their personal data. He said the rights looked at included: 1) the right to opt-in to data sharing; 2) the right to opt-out of data sharing; 3) the right to correct; 4) the right to delete data; 5) the right to data portability; and 6) the right to restrict the use and collection of data. He said these are the types of fundamental or inalienable rights guaranteed to all Americans in the U.S. Declaration of Independence. He said consumer rights should be defined by ethical principles, such as the Fair Information Principles. Commissioner Ridling asked Dr. Ting to explain what such principles include. Dr. Ting said he was referring to the NAIC Code of Fair Information Practices issued in 1973, which requires: 1) openness – personal data record-keeping should not be hidden; 2) access – people should be able to find out what info is collected and its use; 3) secondary use – people should be able to prevent use of their info obtained for one purpose from being used or made available for other purposes without the person’s consent; 4) correction – people should be able to correct or amend an inaccurate record about them; and 5) security – organizations must ensure the reliability of the data for their intended use and take precautions to prevent its misuse. He said the NAIC needs to use its Fair Information Principles for the insurance industry as the basis for revising its model acts and regulations. He said state insurance regulators have had to update its principles due to changes in technology and data practices, new and increasingly invasive technologies, the collection of personal data beyond what is needed, the uses of artificial intelligence (AI) that can have unwanted consequences, significant security breaches posing serious fraud risks, and increasing consumer concerns about privacy. He said NAIC privacy models are outdated and need to be updated using fair information practices that are relevant to the real world.

Dr. Ting said corporate privacy policies are too complex according to a Pew Research Center survey of 4,272 adults in 2019. He said the results of this survey indicated that adults do not understand company privacy policies; only 9% of adults always read the privacy policy; when adults read the policies, only 22% read the policies completely before agreeing to their terms; and 79% are concerned with how companies use their information, especially data consumers that do not wish to share. He said the results of the Ipsos 2018 Global Advisor survey of over 1,000 U.S. adults indicated that 75% said consumers should be able to refuse to let companies collect their data; 66% would be more comfortable if their data were not shared or sold; and 53% did not trust financial services companies to use their data “in the right way.” He said companies collect excessive data according to Bessemer Venture Partners because, “data collection has been the default habit for engineers and database architects for the past few decades…engineers tend to collect more data because they don’t know if an AI model could potentially benefit from it in the future.” He said a survey by Lewis & Ellis Actuaries and Consultants found that most insurance companies surveyed check social media sites during the underwriting process. He said most insurers use Google, and some check LinkedIn,
Facebook, Instagram, or Twitter to collect consumer data. He said collecting consumer data not needed for intended transactions facilitates the insurer’s use of hidden algorithms that may harm certain populations unintentionally or illegally.

Dr. Ting said personal data is poorly protected on the internet as privacy policies note, “[w]e may use cookies and other technologies such as web beacons and pixels to collect information about your online activities over time and across third-party websites or online services which may allow a third party to track your online activities over time and across different sites when you use the Websites; or The Websites may not respond to Do Not Track requests or headers from some or all browsers.” He said “Dark Pattern” interfaces subvert user intent, but Facebook and Google have privacy intrusive defaults, where users who want the privacy friendly option must go through a significantly longer process. He said they even obscure some of these settings so the user cannot know the more privacy intrusive option was preselected. He said the popups from Facebook, Google, and Windows 10 have design, symbols, and wording that nudge users away from the privacy friendly choices. He said choices are worded to compel users to make certain choices, while key information is omitted or downplayed. He said none of them let the user freely postpone decisions. He also said Facebook and Google threaten users with loss of functionality or deletion of the user account if the user does not choose the privacy intrusive option.

Dr. Ting said through Internet of Things (IoT) data collection, U.S. patients may have little access to their raw data collected and held by device manufacturers in the U.S. under the Health Insurance Portability and Accountability Act of 1996 (HIPAA) Privacy Rules. He said under the Sept. 15 Federal Trade Commissioner (FTC) policy statement, the 2009 Health Breach Notification Rule covers personal health information collected by digital apps and wearable devices. He said data breaches are inevitable. He said data breaches occur, no matter how diligent organizations are about data security. He said in the Identity Theft Research Center (ITRC) statement to the U.S. Senate (Senate) Committee on Commerce, Science, and Transportation, 1,291 publicly reported breaches were reported through September 2021, which exceeded those reported in 2020 by 17% and amounted to 160 million people affected in the third quarter of 2021. He said privacy enforcement capability is poor; and current privacy laws are woefully out of date and fail to provide the necessary protections for the modern age. He said consumers also now face threats from foreign adversaries that target the personal data stored in U.S. companies and U.S. government agencies. He said the FTC only has authority to bring enforcement actions against unfair and deceptive practices in the marketplace, and it lacks the ability to create prospective rules for data security. Dr. Ting said the Consumer Financial Protection Bureau (CFPB) similarly lacks data protection authority and only has jurisdiction over financial institutions. He said neither of these agencies possess the resources needed to address data security.

Dr. Ting recommended that the NAIC adopt the following Fair Insurance Industry Information Principles: What I Deserve as a Consumer: 1) notice – notice of purpose and rights at the time of collection; 2) openness – clear and periodic notice of privacy policies and practices, as well as reasons for any adverse actions; 3) collection – data minimization (only data needed for transaction); 4) data quality – keep relevant, accurate, up-to-date as long as used; 5) use limitation – only as needed for provision of insurance, except as permitted or required by law; the ability to opt-out of sharing with affiliates, where not requested; and when sharing with unrelated third parties prohibited unless consent given for specific parties; 6) access – ability to obtain information in consumer-friendly formats and sources of data in reasonable time frames; 7) correction – right to correct, amend, delete, or add information where accuracy is legally disputed; 8) data security – protect all information linked to the consumer through reasonable safeguards and delete or de-identify when no longer used; and 9) accountability – appropriate penalties to incent compliance.

In summary, Dr. Ting said privacy protection should focus on protecting consumers; protections should be based on values and ethics; and the NAIC needs to agree upon Fair Insurance Principles for the insurance industry and then apply those principles to revise its model laws and regulations.

Commissioner Stolfi said he understands that Dr. Ting was instrumental in other meetings and discussions on this topic, and he asked Dr. Ting if he has any suggestions as to legislation that is in effect that could be used as a model for the NAIC. Dr. Ting said the European Union’s (EU’s) General Data Protection Regulation (GDPR), the California’s Privacy Act and Regulation, and other legislation each have aspects that fit his recommendations; however, he said protections of consumers should pertain to all data, not just to personal health data. He also said consumers should have to opt-in to the sharing of any of their data, not just health data. Dr. Ting said other laws he has seen appear to be there to protect Google and its profits more so than consumers.

7. **Heard a Presentation on Regulatory Failures in Credit-Related Insurance**

Birny Birnbaum (Center for Economic Justice—CEJ) said credit-related insurance provides coverage to pay off debt, such as a mortgage loan if the insured dies or becomes disabled or unemployed. He said it is also referred to as title insurance or forced-placed insurance. He said it is the intent of this insurance to provide benefits to the consumer; however, in most cases, he said
lenders get the bulk of the benefits. He said this was evident by the loss ratios for credit insurance that historically run about 44%. He said another disadvantage of credit-related insurance is the lender has all the power, and the consumer has none. He said reverse competition should be the norm for insurance placement though title insurance because when profits are up, underwriting costs are down, and data collection is automated; then title insurers should be filing for lower rates. However, he said title insurers are not filing for lower rates, and he wonders why they were not. He said this situation has been going on for many years without relief from state insurance regulators. He recommended that state insurance regulators review current state regulations, models, and bulletins to prevent arbitration of rates by credit-related insurers and provide an additional layer of protection for consumers of such insurance products in the future. Amy Bach (United Policyholders) asked why loss ratios for credit-related insurance are half that of regular insurance. Mr. Birnbaum said it is because lender-placed insurance is considered group insurance, so it should be available for less premium unless it has a higher loss ratio rather than provide kickbacks to lenders. Peter Kochenburger (University of Connecticut School of Law) asked if any states have statutory limits. Mr. Birnbaum said Louisiana and Texas are good examples of how credit-related insurance should work. He said Louisiana requires higher rates by statute, and Texas statutes require the insurance commissioner to set the base rates and then allow companies to add only 15%. He said in most states, the minimum loss ratio for credit-related insurance is way too low.

8. Heard a Presentation on When Private Options Shrink for Insuring Properties – Residual Market Entities and Consumer Challenges

Ms. Bach said data charts produced by the Insurance Information Institute (III) provide insight into what happens when private insurance options for insuring property shrink. She said it limits the choices that consumers have to the insurers of last resort, which are the Fair Plans, or the Beach and Windstorm Plans provided by states. She said the tension points surrounding private and public insurers occur because public plans: 1) take all comers so they are treated like a risk pool; 2) have rate caps and provide subsidies; 3) provide greater adequacy of coverage and maximum dwelling limits; 4) post their loss assessments; 5) engage reinsurance through catastrophe funds; 6) have the prevailing view that private coverage should be superior to public options; and 7) engage in recent legislation. She said as climate change reduces private appetite for insuring existing homes, public options can and should provide essential, affordable protection. She said logic suggests that there should be different standards for the pricing and quality of policies on newly constructed homes in regions vulnerable to climate change, which means the insurance industry is distinguishing between coming to the risk prior to any climate change occurrence versus the increase in risk that has occurred during ownership of the home. She said a comparison of how three states are set up for urban risk sheds light on residual market entities and the subsequent challenges to consumers. She said the California Fair Plan (CFP) was established by statute (California Insurance Code sections 10091 et seq.) in August 1968, and all licensed property/casualty (P/C) insurers that write basic property insurance required by Insurance Code sections 10091(a) and 10095(a) are members of the Fair Access to Insurance Requirements (FAIR) Plan. She said the FAIR Plan issues policies on behalf of its member companies, and each member company participates in the profits, losses, and expenses of the FAIR Plan in direct proportion to its market share of business written in the state. She said the basic policy does not match an HO-3 about fire, lightning, internal explosion, or smoke. She said it contained limited loss of use coverage; its coverage for vandalism is optional; the maximum dwelling limit increased from $1.5 million to $3 million in 2021; and it has some options for replacement cost coverage or deductible levels. She said the CFP is a critical financial lifeline for California property owners that recently changed, so the requirement of three turn downs to get a CFP policy is no longer enforced. She said the California Department of Insurance (DOI) and CFP are in litigation over the HO-3 mandate, and that legislature gave the California DOI non-renewal moratorium authority, which has significantly helped maintain stability in the private market and prevent drastic overpopulation of CFP. She quoted CFP President Annelise Bovet as saying, “Jivan urged lawmakers to make other insurers also write more policies in fire-prone areas so that fewer people are having to turn to the FAIR Plan,” and she jokingly said she pretty regularly works in an opposite world. Ms. Bovet said, “I probably run the only company where success is measured by a shrinking portfolio and a shrinking customer base, because that is actually a sign of a very healthy voluntary or private market. At the moment, however, she said that is not the case.”

Ms. Bach said Florida’s Citizens Plan was created by the Florida Legislature in August 2002 as a not-for-profit, tax-exempt, government entity to provide property insurance to eligible Florida property owners unable to find insurance coverage in the private market. She said Citizens is funded by policyholder premiums; however, Florida now also requires that Citizens levy assessments on most Florida policyholders if it experiences a deficit in the wake of a particularly devastating storm or a series of storms. She said Citizens operates according to statutory requirements established by the Florida Legislature and is governed by a Board of Governors that administers a Plan of Operation approved by the Florida Financial Services Commission, an oversight panel made up of the governor, chief financial officer (CFO), attorney general, and commissioner of agriculture. She said Citizens’ basic policy matches an HO-3 form; the maximum available dwelling limits are county-specific ($700,000, $1 million); and its options include code upgrade coverage, sinkhole coverage, and replacement cost on contents. She said Florida law requires that Citizens create programs to help return Citizens’ policies to the private market and reduce the risk of assessments for all Floridians. She said these programs are subject to the approval of the Office of Insurance Regulation (OIR),
and the depopulation program works with private market insurance companies interested in offering coverage to Citizens’ policyholders. She said participating companies must be approved by the OIR, and approved takeout companies can offer to take over your Citizens policy at any time during your policy period. She said the Depopulation Unit works directly with active and prospective Florida insurers and representatives to facilitate the transfer of policies; the Citizens’ policy count had swelled in 2012 to 1.5 million; and Depopulation efforts whittled the count to a low of 419,475 in October 2019. She said Citizens is now on course to see its policy count surpass 1 million in 2022, rising further by the end of the year. One driver of an accelerating rate of policies to Citizens has been reinsurance costs, which have risen considerably for some Florida carriers.

Ms. Bach said Florida residents can purchase Citizens insurance if they cannot find private insurance or a private insurer’s policy is priced 15% above a comparable Citizens’ offering, and state law precludes Citizens from raising renewal rates more than 10%. She said notable in Florida is the Florida Market Assistance Plan (FMAP), which provides a free referral service that helps consumers find personal residential insurance with authorized private market insurance companies. She said the Florida Hurricane Catastrophe Fund (FHCF) is a tax-exempt state trust fund that provides reimbursement to residential property insurers for a portion of their Florida catastrophic hurricane losses. She said it is intended to be self-supporting, with funding primarily from actuariarily determined premiums paid by residential property insurance companies and, in some circumstances, revenue bonds backed by emergency assessments on a variety of P/C insurance premiums.

Ms. Bach said the Louisiana Citizens’ Plan was created by the Louisiana legislature in 2006 (RS 22:1430.2) as a nonprofit organization to provide insurance products for residential and commercial property applicants who are in good faith entitled, but unable, to procure insurance through the voluntary insurance marketplace. She said coverage basics include an HO-3 and other options. She said Louisiana Citizens developed a process in 2008 to “depopulate” whereby new or existing private insurance companies are encouraged to assume policies currently covered by Louisiana Citizens from policies approved for depopulation in accordance with LSA-R.S. 22:2314. Through this process, she said Louisiana Citizens can transfer selected policies back to the private insurance market in accordance with LSA-R.S. 22: 2314. She said Citizens, which covers properties that the private insurance industry will not, is now in its 14th round of depopulation; however, despite three hurricanes and two tropical storms hitting Louisiana during the 2020 season, she said Citizens reported no uptick in home or business owners seeking coverage, a sign of health in the local insurance market. She quoted Commissioner Donelon who said, “[b]y enacting a proactive reinsurance strategy and using modeling to select policies for depopulation, Citizens is in a strong financial position and providing stability to the homeowners market during a turbulent time.” Commissioner Donelon is also quoted as saying, “despite the multiple hurricanes that hit the Louisiana coast last year, Citizens is in a great place to weather these financial storms and continue to support private sector competition in the property insurance marketplace.” Ms. Bach said at present, Citizens is responsible for over 38,600 policies in Louisiana and 0.28% of the state’s homeowners’ market, but it expects to increase its policy count by around 5,000 next year, while at the same time depopulating roughly 100 policies. She said Louisiana Citizens expanded its commercial limits to $10 million on an individual building; $3.2 million for contents; and $20 million in the aggregate, versus previous limits of $5.5 million, $2.2 million, and $11 million, respectively. She said board members noted that the increase would better enable Citizens to accommodate policyholders seeking coverage when they already have an open claim with an insurer during renewals.

Commissioner Conway said it was good to know that the residual markets are available if they are needed, and he asked Ms. Bach which plan she prefers. Ms. Bach said she likes the California FAIR Plan model the best and not just because she lived in California.

9.  Heard a Presentation on the Impact on Demand Surge Post-Disaster on the Labor and Materials Costs of Reconstruction

Ken Klein (California Western School of Law) said he is a law professor who has been researching how natural disasters expose and exacerbate the issues of insurance affordability, insurance availability, and underinsurance. He said his focus is on homeowners’ underinsurance due to demand surge rather than guaranteed replacement but full coverage up to a cap equal to the cost of labor and the cost of goods (e.g., price gouging). He said the primary factors arguably causing significant post-disaster underinsurance is that the insurer inaccurately estimates the reconstruction cost and homeowners accept the insurer’s quote of Coverage A before the disaster. He said after the disaster, the reality of demand surge sets in. He said the cost numbers surge, then level out. He said according to Core Logic, 15% to 30% of the increase in construction costs curbs in six months after a disaster and peaks six months after that (with the location of the neighborhood being the deciding factor of percentage) with it taking many years to reabsorb. He said demand surge is covered in Coverage A limits in a Replacement Cost Value (RCV) policy; an Extended Replacement Cost (ERC) endorsement in a hazard policy; and via optional over insurance in a National Flood Insurance Program (NFIP) policy. He said in California’s 2008 wild fires, of the insureds who had full RCV and ERC, 59% are still underinsured. He said a study of one insurer after the 2017 Wine Country fires found that 94% of homeowners who had full RCV and 50% who had ERC were still underinsured by 10% or more. He said most people do not have total losses, except during catastrophic events, and those are not currently being tracked. He said further research is needed into pre-demand surge, then re-estimation followed by a comparison of guesstimates.
Mr. Klein said state insurance regulators are urged to gather more insights such as: 1) whether Coverage A anticipates or should anticipate demand surge; i.e., a comparison of: a) the percentage of insured homes with a prediction of demand surge included in the estimated reconstruction costs (for purposes of quoting coverage); and b) the percentage total losses that are a result of a catastrophe event; 2) how much demand surge a home actually experiences; i.e., a comparison of: a) early post-disaster reconstruction estimates on a home; and b) a second estimate months later (where the only variable between the estimates is the date the estimate was done); 3) how well Coverage A predicts demand surge; i.e., a comparison of: a) demand surge experienced by a home; and b) the demand surge predictions in the estimate of cost of reconstruction of that home.

Mr. Klein said possible action items for state insurance regulators might be to require: 1) inclusion of demand surge in RCV estimates; 2) disclosure to the state insurance regulator of how demand surge calculations are made; 3) disclosure to state insurance regulators and insureds of what percentage of demand surge is in RCV estimates; 4) toll time period limits on policyholder benefits if demand surge delays reconstruction (e.g., Colorado DOI Bulletin No. B-5.42); and 5) reform Coverage A limits if Coverage A estimates either do not include demand surge or materially underestimate demand surge as measured by historical percentages.

Commissioner Conway said Grand County is dealing with the type of demand surge that Mr. Klein described in his presentation.

Having no further business, the NAIC/Consumer Liaison Committee adjourned.
The NAIC/Consumer Liaison Committee conducted an e-vote that concluded Oct. 19, 2021. The following Committee members participated: Michael Conway, Chair (CO); Andrew R. Stolfi, Vice Chair (OR); Lori K. Wing-Heier represented by Anna Latham (AK); Jim L. Ridling (AL); Alan McClain (AR); Ricardo Lara represented by Lucy Jabourian (CA); Andrew N. Mais represented by Kurt Swan (CT); Trinidad Navarro represented by Frank Pyle (DE); John F. King (GA); Dean L. Cameron represented by Randy Pipal (ID); Vicki Schmidt (KS); Sharon P. Clark represented by Vicki Lloyd (KY); James J. Donelon represented by Jeff Zewe (LA); Anita G. Fox represented by Renee Campbell (MI); Chlora Lindley-Meyer (MO); Mike Causey represented by Tracy Biehn and Kathy Shortt (NC); Jon Godfread and Johnny Palsgraaf (ND); Linda A. Lacewell (NV); Jessica K. Altman (PA); and Scott A. White (VA).

1. **Reaffirmed its 2021 Mission Statement for 2022**

Commissioner Conway said the Committee reaffirmed its mission statement for 2022.

Having no further business, the NAIC/Consumer Liaison Committee adjourned.
The American Indian and Alaska Native Liaison Committee met December 11, 2021. The following Committee members participated: Lori K. Wing-Heier, Chair (AK); Jeff Rude, Vice Chair (WY); Michael Conway (CO); Trinidad Navarro (DE); Grace Arnold and Peter Brickwedde (MN); Troy Downing (MT); Mike Causey represented by Tracy Biehn (NC); Jon Godfread represented by Chris Aufenthie and Johnny Palsgraaf (ND); Glen Mulready represented by Teresa Green (OK); Andrew R. Stolfi represented by Raven Collins (OR); and Mike Kreidler represented by Todd Dixon (WA).

1. **Announced Reaffirmation of its Mission Statement for 2022**

Director Wing-Heier said the Committee reaffirmed its mission statement for 2022 via e-vote effective Oct. 16 (Attachment Two-A).

2. **Heard a Presentation from MIGIZI on its P/C Claims Experience**

Director Wing-Heier said Kelly Drummer (MIGIZI and Oglala Tribe), will be speaking about her experiences with property/casualty (P/C) insurance following the riots in Minneapolis, MN, the summer of 2020.

Ms. Drummer said MIGIZI means “bald eagle” in her native language and that she followed in the extraordinary leadership of Laura Waterman Wittstock and Elaine Salinas at the organization. During the last three years, she said that she facilitated the MIGIZI capital campaign and subsequent move to a beautiful new space that was lost eight months later to fire in the civil uprising. Ms. Drummer said that today she is working diligently on a campaign for MIGIZI’s new home at 1845 Lake Street that will be a state-of-the-art media production and green jobs training space. She said that she has been instrumental in building the capacity in MIGIZI programming and development of resources to support the 45-year-old American Indian youth organization. Prior to joining MIGIZI in November 2018, Ms. Drummer said she served as founding president and CEO of the Tiwahe Foundation for seven years. She said Tiwahe is an American Indian community foundation that focuses on providing micro grants to American Indian communities, strengthening leadership initiatives, and network building. During her 23 years of philanthropy and nonprofit work, Ms. Drummer said she has worked with the Minneapolis Jewish Community Foundation (JCF), The Family Partnership, Headwaters Foundation for Justice (HFJ), and New Foundations – a Project for Pride in Living (PPL) program. She said she currently serves on the Saint Paul Foundation Community Impact Committee, The Family Partnership board of directors, and other projects that benefit American Indian women and youth. Ms. Drummer said she earned a master’s degree in philanthropy and development from St. Mary’s University of Minnesota and a bachelor’s degree in cultural anthropology from the University of Minnesota (Minneapolis, MN). She said she currently lives in Minneapolis with her husband and five children.

Ms. Drummer said MIGIZI suffered a total loss of its new building during the civil unrest a block from the Third Precinct in Minneapolis. In July 2019, following a $1.7 million campaign, she said MIGIZI purchased and renovated its sacred space only to see it smothered between the seven fires surrounding its block on May 28, 2020. Ms. Drummer said this was just the start of their journey in navigating this loss with their insurance carrier. She said this is MIGIZI’s story and the story of many other small minority-owned businesses in Minneapolis that have had to navigate the insurance system. Ms. Drummer said MIGIZI is still dealing with the process of acquiring payment for its claims for its business expense loss; an increase of insurance costs by 50%; and the fear of rising rates as MIGIZI rebuilds on Lake Street. She said MIGIZI runs three care programs that include working with public schools, which the fires closed, so the children have been out of the school setting for 18 months. Ms. Drummer said the Indigenous Pathways program trains 60 youth every year on social media, resulting in a certification and training program focused on broadcasting and radio. She said the youth are paid to participate in the training program. Ms. Drummer said the Protect the Herd program produced 40 public service announcements (PSAs) on public radio. In June 2008, MIGIZI purchased its prior building and land for $800,000 and then spent $1 million renovating it. When the space was opened in July 019, it was insured for $5 million. She said that the location sustained no damage, no broken windows, and no graffiti during the riots. However, she said the roof caught fire as it jumped from the three buildings next to it. Ms. Drummer said the insurance coverage was up for renewal at this time and that the agency did not renew the coverage even though the organization had maintained coverage with the agency for 44 years. She said the organization secured liability and P/C insurance on May 29, 2020. Ms. Drummer said MIGIZI’s property was declared a total loss. Building code restrictions and the list of property
that had been lost indicated that replacing the furnishings would require $5 million to $6 million. She said this meant the replacement value had increased from $1 million to $6 million and that MIGIZI was underinsured.

Director Wing-Heier asked Ms. Drummer what the most difficult part of the insurance claims process had been thus far. Ms. Drummer said it was such complex problem because MIGIZI shared an adjacent wall with neighboring businesses and that those neighboring businesses were also underinsured. She said the city of Minneapolis did the demolition in September, which saved a lot. However, price gouging at the time contributed to placing most of the risk on MIGIZI and the other business owners. Ms. Drummer said the most difficult lesson learned is that being underinsured resulted from not having the knowledge as a nonprofit to have fine art and ancestral artifacts received as donations from tribal leaders appraised and insured under separate riders. She noted that many of the items were rare, historical items (such as ancient tribal language recordings on tape) and, therefore, impossible to replace at any cost. Ms. Drummer said the furnishings were all brand new, so they were easy to evaluate and determine a replacement cost. However, she said that many of the old items that were lost to the fire, like the antique tapestry donated by the tribe that had not been appraised because such items are one of a kind, rare, and irreplaceable. She said they are still in the claims process with the insurer. Ms. Drummer said some of the business expense losses have also been paid, but others were also still in the claims process. She said as a nonprofit organization, this tragedy had a silver lining as it had led to more gifts being donated to MIGIZI, all of which are currently being given a replacement value through the insurer with the help of an attorney and appraiser. Ms. Drummer said a lease was signed in March 2021 on the new location, with all furnishings and equipment having been donated. Then, on June 16, 2021, the University of Minnesota donated space for MIGIZI. She said insurance increased 50% to 80%, with an overall increase of 26% and a property increase of 51%.

Ms. Drummer said MIGIZI will be rebuilding with solar power and geothermal heating and cooling. She said many of the buildings around them are still damaged, including the shared adjacent wall, which will need another $1.5 million over and above the $2.5 million already donated. Ms. Drummer said they also need a spokesperson to assist while she serves as an advisor to the rebuilding of the programs and to deal with all the stress caused during the insurance process.

Director Wing-Heier said she sympathized with Ms. Drummer, the MIGIZI organization, and all the tribal members affected as priceless artwork is the hardest to value for insurance purposes. She said she hopes the outcome of this disaster will only be good for MIGIZI for the future.

Having no further business, the NAIC/American Indian and Alaska Native Liaison Committee adjourned.
The NAIC/American Indian and Alaska Native Liaison Committee conducted an e-vote that concluded Oct. 16, 2021. The following Committee members participated: Lori K.
