Commissioner Altman: Chair
Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup
Cc: Eric King

Comments to NAIC Draft- Issued Related to Wellness Benefits In LTCI Contracts

Dear Commissioner Altman:

We appreciate the opportunity to comment on the subgroup’s draft exposure document on issues related to wellness benefits in long-term care insurance policies. We are encouraged that insurers are interested in this issue and that some have already had limited experience with pilot projects. We do think that new ideas and benefits like these need close cooperation between industry and regulators to avoid unintended consequences and to explore and encourage what’s possible. Consumer groups can help industry and regulators understand a wide variety of situations and services that can help policyholders age in place and potentially delay some claims and could perhaps also delay the need for more extensive care or institutional care.

Long-term care imposes a need for care that is not covered as medical care because it deals with disabling conditions that occur with aging, such as breakdowns in functional ability or the onset of dementia. Care needs are supportive in nature and generally require the assistance of another person. The need for institutional care, often delivered in memory care units of assisted living facilities or other institutional settings, is often the result of advancing dementias.

The eventual need for long-term care is personally unpredictable and difficult to plan and prepare for. Federal data shows that 70% of people over the age of 65 will develop severe needs for long-term care services and supports before they die, and 48% will use some paid care over their lifetime. Individuals however cannot accurately predict their own future need for care. For most people this future risk is a frighteningly expensive uncertainty. Insurance to pay for this kind of care has escalated beyond the ability of most middle income Americans to pay for it, and those who have it are challenged to keep it with the rising cost of premiums.

When asked, most people say they intend to remain in their own homes if they need care. However, they have no clear idea if that will be possible, what kind of care they will need, how they will get that care, or more importantly how they will pay for it. Currently, most people with insurance have bought an income stream to pay for care, but their family will have to build out the care system for the impaired family member and bill and distribute any insurance payment. The type and quality of care providers available to them will depend on where they live, their knowledge of long-term care services and supports, and the availability of those services where the impaired person lives.

Early access to home modification and technology can be useful to help people remain in their homes, both before the need for long-term care begins, and later to delay or prevent the need for a greater amount of care or for institutional care. These newer types of services and devices can support
Caregivers and help an impaired person remain in their own home, or delay or prevent further impairment. Services such as fall prevention assessment programs, supportive equipment to prevent falls, electronic monitoring systems, technological alarms and sensors, community services and senior centers that encourage socialization all have the potential to delay, mitigate, or even prevent a later claim for long-term care benefits.

Care coordination is an important component and can help families of an impaired person utilize all the services, equipment, supplies, and benefits that may be available to them through private or public means. Care management and coordination can bring organization and efficiency to finding and utilizing services, constructing and monitoring an individualized system of care. Helping people age in place is an important factor in delaying or keeping people out of more expensive institutional settings.

We are encouraged by the idea of new benefits or services that can support policyholders in their own home, that help them maintain their independence, and that support caregivers who in the majority of families are younger family members often sacrificing their own economic condition to care for an older family member. New technology and devices might help a family caregiver remain at work with the ability to monitor an impaired family member at home. New systems of care such as the Villages movement, paid transportation like Uber and Lyft, and emerging meal delivery systems can all contribute to this expanding discussion of how to help people age in place and how to construct systems that can provide for these new ways of providing care.

We think important issues have been identified in the draft document for industry and regulators. We are however concerned that any new benefits be appropriately described in a contract, and fairly applied and available when needed. We are also concerned about how new enticing benefits are advertised, both by agents and brokers and by companies. As we’ve seen with MA plans, benefits can be portrayed as universally available when in practice those same benefits are limited in application to specific sets of circumstances.

While we understand that some services and benefits are likely to result in increased premium cost and an increase in claims costs, some claims costs might be offset by these newer services by delaying or moderating the need for paid care. Actuarial scrutiny of all these factors and subsequent trends will be an important component of regulatory review. We plan to be an active participant as the subgroup explores these ideas that could become part of pre-claim benefits, or become a common covered benefit in future long-term care insurance contracts.

Sincerely,

Bonnie Burns, Consultant
California Health Advocates

Vermont Comments

LTC (EX) Multi-state Actuarial Rate Review Framework

On p. 14, in appendix D, Principles for Reduced Benefit Options (RBO) Associated with LTCI Rate Increases, it reads:

*Exploration of innovation, particularly where an outcome of improved health and lower claim costs are possible:

- Regulators and interested parties should continue to study the idea of offerings being made by insurers including potentially being tied to rate increases, e.g., providing hand railings for fall prevention in high-risk homes, and identifying the pros and cons of such an approach.

Rate increases for long-term care policies typically add thousands of dollars to the annual premium paid for the policy. These types of rate increases are significant and may be a hardship to elderly consumers on fixed incomes. Consumers may not be able to consider their own best interest in the face of a significant change to annual expenses. Any offer associated with a rate action, and which involves the collection of data through artificial intelligence should clearly explain how information will be collected and used to avoid profiting and potential discriminator actions on behalf of the insurer. Also, any offer to an insured tied to rate increases should be supported with data showing why and how the rate impact is directly correlated to the offer.

Consider this example:

- A consumer on a fixed income receives notice that long-term care premiums will increase by $3,000 annually.
- That consumer now faces $3,000 of new expenses.
- If the consumer checks a box, they will receive a smart device that will collect data from their home and computer.
- If they select this option, they will not have to pay any rate increase.

The consumer may not be in the position to act in their own best interest and may not be able to consider these options carefully for several reasons. First, the consumer may not fully understand the technology proposed, the data to be collected, and the privacy implications. Second, the consumer may not realize that there may be several other options to modify their policy and reduce premiums besides accepting the new technology option. The technology option may seem like the only choice available.

The MSA subgroup should consider keeping the wellness program offers separate from implementation of large rate increases (greater than 10%). Then, there would be no question that the consumer was coerced, rather than persuaded, to take part in any wellness program.
The Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup of the Long-Term Care Insurance (EX) Task Force met Sept. 27, 2021. The following Subgroup members participated: Jessica K. Altman, Chair, and Shannen Logue (PA); Emily Smith (CA); Frank Pyle (DE); Doug Ommen (IA); Eric Anderson (IL); Stewart Guerin (LA); Karen Dennis (MI); Fred Andersen (MN); Carter Lawrence (TN); Barbara Snyder (TX); Tomasz Serbinowski (UT); Bob Grissom (VA); Anna Van Fleet (VT); Melanie Anderson (WA); and Joylynn Fix (WV).

1. Discussed Comments Received on a Draft RBO Consumer Notices Checklist.

Ms. Van Fleet presented a version of a draft Reduced Benefit Options (RBO) Consumer Notices Checklist (Checklist) (Attachment Eleven-A) that incorporates comments received on the draft, with notes on the proposed treatment of each comment.

Ms. Van Fleet said discussion at the next meeting will focus on questions 6, 7, 25, and 49. Commissioner Altman said the Subgroup will schedule another meeting to continue discussion of the comments on the Checklist using the version that reflects revisions made today.

Having no further business, the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup adjourned.

Checklist for Premium Increase Communications

AUTHORITY

The Long-Term Care Insurance Reduced Benefit Options (RBO) (EX) Subgroup is composed of regulators from 17 state insurance departments. It has been tasked with assisting the Long-Term Care Insurance (EX) Task Force in completing the following charge:

*Identify options to provide consumers with choices regarding modifications to long-term care insurance (LTCI) contract benefits where policies are no longer affordable due to rate increases.*

The Long-Term Care Insurance (EX) Task Force adopted the Long-Term Care Insurance RBO Communication Principles. The Long-Term Care Insurance RBO EX Subgroup has been charged with developing a complementary checklist that can be leveraged by state regulators and Long-Term Care Insurance insurers.

INTRODUCTION

This checklist is intended to establish a consistent approach to drafting and reviewing Long-Term Care Insurance RBO policyholder communications. The checklist can be used as guidance and does not carry the weight of law or impose any legal liability.

State regulators may consider the checklist excessive, deficient, or not focused on issues specific to consumer experience in a particular state. State regulators are encouraged to modify the checklist to suit the needs of the Department.

Leveraging the checklist could enable insurers and state regulators to mitigate consumer confusion, complaints, improve the quality of the communication, and ensure the information presented:

- Reads in a clear, logical, not overly complex manner.
- Identifies if the options are presented fairly and without subtle coercion.
- Includes appropriate referrals to external resources, definitions, disclosures, and visualization tools.

*Suggested Edits from BB & BC:

State regulators may consider the checklist excessive, deficient, or not focused on issues specific to consumer experience in a particular state. State regulators are encouraged to modify the checklist to suit the needs of the Department.
Leveraging the checklist could enable insurers and state regulators to mitigate consumer confusion, and complaints, improve the quality of the consumer communications, and to ensure the information presented. The checklist seeks to ensure that consumer communications:

- Reads in a clear, logical, not overly complex manner.
- Identifies if the options are presented fairly and without subtle coercion.
- Includes appropriate referrals to external resources, definitions, disclosures, and visualization tools.

[The LTC Task Force? The RBO\[A7\][A8][A9][A10] Subgroup?] RECOMMENDS that state regulators adapt the checklist to reflect their state regulations, laws, or statutes and adopt use the checklist when reviewing filed Long-Term Care Insurance RBO Communications.

CALLS ON all insurance companies to consider the checklist when developing reduced benefit option policyholder communications in the event of a rate increase.

Attachment Eleven-A
Long-Term Care Insurance (EX) Task Force
12/12/21
The Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup of the Long-Term Care Insurance (EX) Task Force met Aug. 23, 2021. The following Subgroup members participated: Jessica K. Altman, Chair, and Shannen Logue (PA); Perry Kupferman (CA); Susan Jennette (DE); Andria Seip (IA); Dana Popish Severinghaus (IL); Stewart Guerin (LA); Karen Dennis (MI); Rhonda Ahrens (NE); Larry D. Deiter (SD); Brian Hoffmeister (TN); Tomasz Serbinowski (UT); Bob Grissom (VA); Anna Van Fleet (VT); Melanie Anderson (WA); and Joylynn Fix (WV).

1. **Discussed Comments Received on a Draft RBO Consumer Notices Checklist.**

Ms. Van Fleet presented a version of a draft Reduced Benefit Options (RBO) Consumer Notices Checklist (Checklist) (Attachment Twelve-A) that incorporates comments received on the draft, with notes on the proposed treatment of each comment.

Commissioner Altman said the Subgroup will schedule another meeting to finish discussion of comments on Checklist questions 6, 7, 25, and 49.

Having no further business, the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup adjourned.
Checklist for Premium Increase Communications

AUTHORITY

The Long-Term Care Insurance Reduced Benefit Options (RBO) (EX) Subgroup is composed of regulators from 17 state insurance departments. It has been tasked with assisting the Long-Term Care Insurance (EX) Task Force in completing the following charge:

Identify options to provide consumers with choices regarding modifications to long-term care insurance (LTCI) contract benefits where policies are no longer affordable due to rate increases.

The Long-Term Care Insurance (EX) Task Force adopted the Long-Term Care Insurance RBO Communication Principles. The Long-Term Care Insurance RBO EX Subgroup has been charged with developing a complementary checklist that can be leveraged by state regulators and Long-Term Care Insurance insurers.

INTRODUCTION

This checklist is intended to establish a consistent approach to drafting and reviewing Long-Term Care Insurance RBO policyholder communications. The checklist can be used as guidance and does not carry the weight of law or impose any legal liability.

State regulators may consider the checklist excessive, deficient, or not focused on issues specific to consumer experience in a particular state. State regulators are encouraged to modify the checklist to suit the needs of the Department.

Leveraging the checklist could enable insurers and state regulators to mitigate consumer confusion, and complaints, improve the quality of the communication, and ensure the information presented:

- Reads in a clear, logical, not overly complex manner.
- Identifies if the options are presented fairly and without subtle coercion.
- Includes appropriate referrals to external resources, definitions, disclosures, and visualization tools.

Suggested Edits from BB & BC:

State regulators may consider the checklist excessive, deficient, or not focused on issues specific to consumer experience in a particular state. State regulators are encouraged to modify the checklist to suit the needs of the Department.
Leveraging the checklist could enable insurers and state regulators to mitigate consumer confusion, and complaints, improve the quality of the consumer communications, and to ensure the information presented: The checklist seeks to ensure that consumer communications:

- Reads in a clear, logical, not overly complex manner.
- Identifies if the options are presented fairly and without subtle coercion.
- Includes appropriate referrals to external resources, definitions, disclosures, and visualization tools.

[The LTC Task Force? The RBO Subgroup?] RECOMMENDS that state regulators adapt the checklist to reflect their state regulations, laws, or statutes and adopt use the checklist when reviewing filed Long-Term Care Insurance RBO Communications.

CALLS ON all insurance companies to consider the checklist when developing reduced benefit option policyholder communications in the event of a rate increase.

Issues related to LTC wellness benefits

Adopted by LTCI Reduced Benefit Options (EX) Subgroup - 12/07/2021

Objective:
The objective of this paper is to increase clarity to regulators, insurance companies, and interested parties regarding issues related to innovative long-term care wellness programs.

Background:
Stand-alone long-term care insurance is a unique industry, in that higher-than-expected claims’ costs have resulted in substantial rate increases for consumers and financial losses and in some cases solvency concerns for insurance companies.

Firms are developing technological and other approaches that could be used by insurance companies to potentially prevent, delay, or lower the severity of LTC claims and improve health outcomes in a space called “LTC wellness”. Examples of these early, pre-insurance-claim interventions include:

- Fall prevention programs;
- Home modification consultations, analysis, and implementation to facilitate aging in place;
- Caregiver support programs for both formal and informal caregivers;
- Next generation care coordination services;
- Improvements in cognitive impairment prevention and early diagnosis, potentially involving technology supplemented by a physician’s cognitive risk evaluation.

In light of systemic, LTC-related financial challenges, insurance companies, insurance regulators, and tech firms are interested in working together to explore some of these claim cost-reducing innovations. Here are some potential barriers to increased adoption of these new approaches and how those barriers could potentially be addressed, with details provided below the list:

1. Analysis of effectiveness
2. Unfair discrimination
3. Consumer confusion
4. Rebating
5. Tax considerations
6. Regulatory role in approving or evaluating LTC wellness approaches
7. Actuarial considerations
8. Data privacy
9. Other considerations
1. Analysis of effectiveness
   a. Issue: In light of the lag time between policyholder age during LTC wellness efforts and policyholder age when claim incidence becomes more common, what issues arise from insurers’ lack of knowledge of effectiveness of LTC wellness programs in reducing claim costs, and how can those issues be addressed?
      i. The cost of innovation efforts, with no guarantee of any returns, may dissuade some insurance companies from pursuing these programs.
         1. Expenses vary - in many cases are upfront and significant.
         2. The financial impact on claims cost is typically unknown and down the road.
      ii. Designing pilot programs is difficult because there is such a variety of programs available, and each block of LTC insurance policies has unique characteristics that might influence the effectiveness of a given program.
      iii. Some companies are concerned about regulatory reaction to these changes.
   b. Current observations
      i. Industry representatives described some current or likely upcoming LTC wellness efforts at the May 4, 2021 NAIC Reduced Benefit Option Subgroup meeting. A theme was that there is great supply and demand for LTC wellness innovation efforts.
      ii. Some insurance companies are exploring or implementing pilot programs. Very early signs on the effectiveness of interventions on impact on policyholder health and claim costs are promising, but data development is slow, and it is difficult to implement control trials.
         1. Insurance companies are eager for data and for ways to effectively share data within the legal and regulatory framework so that the industry can effectively respond to positive policyholder experiences and discontinue any programs that fail to make an impact.
      iii. Because there is little competition in the stand-alone LTC insurance market, due to the financial losses accumulated and many insurance companies exiting the actively selling market, sharing of ideas between companies on management of active policies may be possible, although care should be taken regarding anti-trust issues.
      iv. Effectiveness may increase or decrease if targeting certain policyholders.
      v. Development of experience showing effectiveness will be a work in progress.
   c. Addressing of Issues
      i. Lack of data: With most LTC wellness programs being under-developed or being implemented recently, data is lacking on the extent to which resulting claim cost decreases offset the costs of the programs.
      ii. How to measure health impact: Whether an LTC wellness program effectively reduces claim costs or not, will there be approaches established to measure health benefits to policyholders?
      iii. Data sharing: Facilitating the sharing of data, between vendors and insurance companies, and perhaps involving public programs such as Medicaid, is a key element of analyzing effectiveness.
d. Next steps
   i. Regulators engage with insurance companies to learn of recent developments.
   ii. Research public programs’ data on effectiveness of LTC wellness programs to see if
       Medicare Advantage, Med Supp, or Medicaid / PACE data is available, relevant, and used.
       Also, look into potential independent living / senior facility wellness experience as well as
       health and life insurance wellness experience.
   iii. Determine an approach to monitor success of programs. For example, if 3 to 4 companies
       are applying 3 to 4 pilot programs and finding success, it would be good news regarding
       broader, future efforts.
       1. Facilitate the sharing of general results (i.e., not individual policyholder data)
          among those insurance companies in a way that is within the legal and regulatory
          boundaries.
   iv. Regulators ensure capital supporting LTC liabilities is adequate under a range of scenarios,
       including one where claims costs continue to increase.

2. Prevention of unfair discrimination related to extra-contractual benefits and costs
   a. Issue: how does an insurer offer a wellness initiative that is not unfairly discriminatory to discrete
      populations within the broader group of policyholders?
   b. Current observations
      i. There may be state anti-discrimination and bias-related legal issues to address if certain
         policyholders are targeted, including through Big Data, to receive extra benefits.
         1. For instance, if older policyholders have less of an online footprint than younger
            policyholders, how would this impact the accuracy of the targeting of LTC
            wellness benefits or otherwise introduce bias?
         2. [Birny Birnbaum May 4 comment]: If wellness or other efforts to address specific
            conditions are based on age or the health of the policyholder, this seems like
            normal value-added products and services for loss prevention and not an
            example of unfair discrimination.
            a. Issues to address are likely related to creating a clear framework for
               compliance related to the use of data analytics and artificial intelligence.
   c. Addressing of issues
      i. Equality: How policyholders are offered wellness initiatives could be unfairly
         discriminatory.
         1. Policyholders of “the same class and of essentially the same hazard” must be
         2. How may an insurer “classify” policyholders post underwriting? Regulators may
            need to provide guidance on how to classify policyholders.
            a. What is fair? The insurers will need to provide justification.
            i. For example, under the Model Law the availability of the value-
               added product or service must be based on documented
               objective criteria and offered in a manner that is not unfairly
               discriminatory.
b. May classification be made by jurisdiction? Does that impact the LTC Multi-State Actuarial Rate Review (MSA) program’s overarching goals?
   c. May classification be made by product form?

ii. **Selection:** How policyholders are selected for wellness initiatives could be unfairly discriminatory.
   1. Wellness initiatives may be costly to the insurer. How can an insurer test it to validate the benefits before rolling it out more broadly?
      a. Under the Model Act, the insurer may provide the product or service in a manner that is not unfairly discriminatory as part of a pilot or testing program for no more than one year.
      b. Initial selection of participants may be the most important for antidiscrimination. That selection for pilots should consider including, but not limited to, a wide range of individuals from various geographic, economic, social, marital, age, racial, and ethnic populations to ensure meaningful data is collected, as appropriate to the wellness initiative.
   2. Would a random selection of policyholders be unfair?
   3. Should policyholders be given the option to participate in a wellness initiative?
      a. Must all policyholders be given the option to participate?
   4. How much time/data is needed to prove the initiative is valuable?
   5. Prior to offering a wellness program, an insurer should have a logical hypothesis of what benefits could be derived from the program.
      a. Even if benefits are available to all those who utilize, the initiatives may be limited in application depending on a policyholder’s specific circumstances.

iii. **Accessibility:** How a wellness initiative operates could be unfairly discriminatory.
   1. Does it limit who can participate based on the medium and cost of the equipment or technology? For example:
      a. Does it require access to a computer or internet for online participation?
      b. Does it require access to a smart phone, texting minutes, etc., to use an app?
      c. Does it require access to roads, pools, sidewalks?
      d. Does it require technical skills to use software or hardware?
      e. Will insurers utilize different communication methods, such as phone, text, e-mail, or mail?
   2. Does any such limitation require alternatives for those unable to participate in the initiative?

iv. **Uniformity:** If guidance is issued on wellness initiatives, how would states adopt the guidance, especially if states have different standards for allowing wellness programs in LTC insurance?
   1. Have all states adopted the Model Law? If not, what have hurdles been for states that have not adopted the model? Will states adopt updates to the Model Law?
   2. Standards for unfair discrimination, including in the specific context of wellness initiatives, may vary by state requiring insurers and regulators to be aware of the specific requirements of the jurisdiction in question.
a. For example, Alaska permits rewards under wellness programs but requires that the reward be available for “all similarly situated individuals.” See AK Stat § 21.36.110.

3. If some states allowed wellness initiatives and not others, would this conflict with other initiatives, such as the MSA?

d. Dependencies
   i. Unfair discrimination guidance needs to consider other wellness initiative issues that include:
      1. Analyzing Effectiveness
      2. Actuarial Impacts
      3. Rebate Standards and Limitations
         a. What if an insurer offers the service at a cost (full or portion) for the policyholder(s) after the pilot?
      4. Regulatory Evaluation

3. Consumer confusion
   a. Issue: potential consumer confusion concerning LTC wellness programs will be highly variable dependent upon factors such as the nature of the program, the consumers involved, and the complexity of regulatory issues.

   b. Addressing of issues:
      i. Wellness programs with simple to understand direct connections to prevention of common medical issues (e.g., installing a grab bar) will provoke far less confusion than more esoteric programs based on new technological services (e.g., data collection/monitoring of insured activities) with not yet proven results. Simpler programs may also trigger fewer and less complex regulatory/statutory requirements related to privacy, consent, disclosure, etc. resulting in programs that will be more easily understood and documented. Programs with newer technology, more data collection and manipulation, and which are connected to more complex care issues will be more confusing and will trigger more complicated regulatory/statutory requirements.
         1. In these scenarios, there may be a need to first educate consumers on the technology and the data collection/usage and then the program and its potential benefits before disclosure and informed consent can occur. The ability to prevent confusion and achieve adequate education and understanding may be further impacted by the level of technological sophistication and mental acuity of the consumer, factors which often decline with age.
ii. Designing effective communication regarding insurer LTC wellness programs will require in-depth engagement with LTC consumers, policyholders, family members, eldercare subject matter experts, and NAIC consumer representatives. When the vetting group engages with Medicaid programs, PACE, etc. to learn about best practices in wellness programming, the vetting group should take the opportunity to learn about the successes and failures in communication used in implementing these programs, including any relevant focus group data available.

iii. In addition to engaging with Medicaid and PACE, the following organizations may have valuable insights: National Council on Aging (www.ncoa.org), AARP (www.aarp.org), and the National Institute on Aging (www.nia.nih.gov). In addition to engaging with NAIC representatives and these national organizations, the Vermont team would also propose to reach out to Vermont’s sister agencies in state government (The Agency of Disabilities, Aging, and Independent Living (DAIL), and the Agency of Human Services, (AHS)). Lastly, Emily Brown serves on the board of directors for Central Vermont Home Health and Hospice. Engagement with this local group may provide rural eldercare perspectives missing at the national level.

iv. Focus groups designed to elicit feedback on communication style are most helpful when the programming has been determined. In the alternative, guidelines for communication and disclosure designed to minimize confusion and maximize understanding would need to be developed along a spectrum of wellness programs of increasing complexity. The results of vetting group work around rebating, program effectiveness, data privacy, loss of tax-preferred status, and discrimination concerns will determine components of what needs to be tested in focus groups. For instance, if the loss of tax-preferred status is something the vetting group can address at the federal level, it will not need to be considered when determining barriers to effective communication.

v. Building consensus around terminology and building trust are essential to effective communication. In a Medicaid setting, the PACE program (Programs for All Inclusive Care for the Elderly), wellness efforts include a multidisciplinary team of health professionals coordinating care and no cost share on services. (Source: https://www.medicaid.gov/medicaid/long-term-services-supports/pace/programs-all-inclusive-care-elderly-benefits/index.html) . This builds trust through human contact with medical professionals.

1. This type of communication is vastly different than the communication between an insurer and a long-term care policyholder facing a rate increase, where participation may have some impact on the premium rate increase the consumer must pay. As a result, extra care will need to be taken to ensure policyholders truly understand the offer and the level of participation required and that they do not acquiesce based on confusion or because they feel they have no other choice.
vi. As the wellness vetting subgroup works through the issues (program effectiveness, discrimination, data privacy, and tax considerations), the Vermont team hopes to build on the conversations planned with subject matter experts in eldercare programming. The vetting group should plan to add time at the end of the process to explore and understand the vetted programs with consumers via focus group(s) to best anticipate and mitigate consumer confusion.

4. Rebating

a. Issue: whether some long-term care wellness benefits for policyholders run afoul of the NAIC Model anti-rebating laws or are otherwise prohibited. Those wellness plans may be designed to prevent or lower the severity of LTC insurance claims or to improve health outcomes (“Wellness Initiative”).

b. Addressing issues:

i. **NAIC Model Law.** The recently amended version of the NAIC Model Unfair Trade Practices Act (#880) (“Model Law”) explicitly exempts the type of Wellness Initiatives currently being considered from the prohibition on rebates as an unfair trade practice. Specifically, § 4 (H)(2)(e) of the Model Law excludes from “the definition of discrimination or rebates . . . [t]he offer or provision . . . of value-added products or services at no or reduced cost,” even “when such products or services are not specified in the policy of insurance,” if the product or service meets certain requirements. Amongst procedural requirements, the Model Law requires that the product or service (a) relate to the insurance coverage, (b) be “primarily designed to satisfy” one of nine functions, including providing loss mitigation, reducing claim costs, enhancing health, and incentivizing behavioral changes, and (c) cost a reasonable amount in comparison to premiums or coverage. As the Wellness Initiatives in question would be designed to prevent or lower the severity of LTC insurance claims and improve health outcomes, as long as their cost is reasonably related to the premiums or coverage, then they should not be considered rebates under the recently amended Unfair Trade Practice Act.

ii. **Variations in State Law.** The above cited language from the Unfair Trade Practices Act, § 4 (H)(2)(e), however, is a recent December 2020 addition to the Model Law. As such, most states have yet to specifically address that update and have only enacted a prior version of the Unfair Trade Practices Act. Unfortunately, the old language of the Model Law was less flexible on this point, which led a number of states to carve out exceptions by individual amendments, regulations, bulletins, or desk drawer rules. And the Unfair Trade Practices Act is not the only model law with language prohibiting rebates in the business of insurance. As such, it is much less certain whether the Wellness Initiatives at issue would trigger the law’s anti-rebating provision. And the many state initiatives in this area do not permit a uniform analysis of rebating in each adopting jurisdiction as the precise language, interpretation, and application of the law varies by state.
1. As a result, whether Wellness Initiatives could arguably be considered a rebate remains a question subject to the specifics of each individual state’s rebating law and how each jurisdiction has interpreted and applied that law. To provide a few examples of the variations in state law, even amongst states that have adopted the prior Model Law:
   a. **Alaska**: Statutorily excludes “a reward under a wellness program established under a health care plan that favors an individual” from the definition of rebates so long as seven requirements, including the program being designed to promote health or prevent disease, are met. See AK Stat § 21.36.110.
   b. **Maine**: Statutorily permits provision of a value-added service that is related to the coverage provided by an insurance contract, without fee or at a reduced fee, if it is (a) included within the insurance contract, (b) directly related to the servicing of the insurance contract, or (c) offered to provide risk control for the benefit of a client. See Me. Stat. tit. 24-A, § 2163-A.

2. Thus, under the current legal landscape, those seeking to introduce Wellness Initiatives would need to confirm whether such an initiative would be permissible under each relevant jurisdiction’s rebating law and if there are any state specific requirements for offering such an initiative.

iii. **Trends in State Law.** Notwithstanding the variation in individual state’s laws and if and how they have been amended or interpreted, there does appear to be a general trend that “services are not prohibited if they are directly related to the insurance product sold, are intended to reduce claims, and are provided in a fair and nondiscriminatory manner.” J. Parson, D. Marlett, S. Powell, *Time to Dust Off the Anti- Rebate Laws*, 36 J. Ins. Reg. 7, at 8 (2017). Under this general approach, which aligns with the substantive result of the language in the current Model Law, a Wellness Initiative should not be prohibited as impermissible rebating.

iv. **Policy Considerations.** The exemptions in the current Model Law and the trend amongst states to permit certain services even if they are not contained within the insurance contract appear to be logical limitations on the scope of anti-rebating statutes. In short, Wellness Initiatives are not the type of conduct that anti-rebating statutes were originally designed to protect consumers against. This is particularly true in the context of LTC insurance where consideration of these initiatives only began significantly after the policies were initially sold, where the initiatives do not begin at the moment the policy is issued, and where the policies have proven to be unprofitable for the insurers. In other words, it is fair to assume that Wellness Initiatives in this context are not being used to either induce the policyholder to enter into the insurance contract, nor to expand the insurer’s share of the LTC insurance market. Rather, they are targeted at improving policyholder health and reducing the frequency and severity of claims.
c. **Next steps:**
   i. Given the current legal landscape with respect to rebating, to facilitate the success of Wellness Initiatives jurisdictions could either:
      1. adopt the recently added rebating exemptions found in the current version of the Model Law, which would explicitly permit such initiatives, or
      2. take action to interpret and apply their existing laws in a manner that would allow the provision of products or services that are directly related to the insurance policy in question and designed to reduce claims or improve health.
   
   ii. Absent adoption of the current version of the Model Law, however, insurers would need to conduct a state-by-state evaluation of rebating laws in all relevant jurisdictions before implementing a Wellness Initiative.

5. **Tax considerations**
   a. Issue: will non-ADL / non-cognitive benefits cause tax issues for policyholders?
   b. Current observations
      i. In order for a contract to be a “qualified long-term care insurance contract” (QLTCI) as defined in 26 USC 7702B, it must satisfy a number of definitional requirements, including that such a contract must provide insurance coverage only of qualified long-term care services and it generally cannot provide a cash value. There may be adverse tax consequences for consumers if a contract provided benefits that are inconsistent with the definitional requirements.
   c. **Addressing issues:**
      i. If a QLTCI contract meets the statutory definition, it is treated as an accident and health insurance contract. See 26 USC 7702B(a)(1). The NAIC is addressing the addition of wellness benefits to QLTCI contracts, and it is understood that insurers would only offer such benefits where this could be done without forfeiting the contract’s tax qualified status. Wellness benefits may include provision of home assessments to identify risks which could lead to a chronic illness such as tripping hazards, installation of ramps and railings, caregiver training for family members and sharing information regarding local LTC providers to those in need or anticipating assistance.
      
      ii. While not exactly on point, two interpretive letters* from the Internal Revenue Service responded to questions from a taxpayer regarding the inclusion of riders to QLTCI that 1) “allow access to information pertaining to health, wellness and long term care that promotes and encourages a healthy lifestyle,” and 2) allow participation in voluntary incentive programs that are based on periodic health assessments and other medical criteria evidencing health living and could result in premium discounts or increases in benefits.
iii. The interpretive letters observe that 26 USC 7702B was enacted to provide incentive for individuals to take financial responsibility for their long-term needs and therefore generally provides favorable tax treatment with respect to QLTCI and qualified long-term care services meeting the statutory requirements. The Code defines “qualified long-term care services” as necessary diagnostic, preventive, therapeutic, curing, treating, mitigating and rehabilitative services and maintenance or personal care services which are required by a chronically ill individuals and are pursuant to a plan of care prescribed by a licensed health care practitioner. The IRS further observed that, in essence, the rider allows the contract to be implemented based on the risk profile of the insured. The IRS held that the inclusion of the rider in a QLTCI contract will not cause the contract to be treated as providing insurance coverage other than of qualified long-term care services.

* The guidance contained in the interpretive letters is directed only to the requesting taxpayer(s) and may not be used or cited as precedent.

d. Next steps:
   i. Insurers and policyholders could benefit from federal guidance regarding tax qualification of broad classes of QLTCI, including QLTCI combo products. Such guidance would clearly articulate:
      1. Safe harbor product features that would not be inconsistent with the tax qualification requirements for QLTCI;
      2. That the safe harbors are not exhaustive of permissible wellness and other features for reducing the risk of chronic illness or severity of any future chronic illness; and
      3. That the IRS may supplement safe harbor guidance as appropriate, and that taxpayers may utilize the private letter ruling process of clarifying the treatment of particular features not covered by safe harbors.

6. Regulatory role in approving or evaluating LTC wellness approaches
   a. Issue: there is question as to whether LTC wellness approaches need to be approved by regulators or will be implemented by companies and later evaluated by regulators.
   b. Current observations:
      i. There is little regulatory clarity or uniformity regarding LTC wellness programs.
   c. Addressing issues
      i. Idea:
         1. Provide guidance that companies should have available, upon request, documentation of their programs and documentation that key issues our group identified have been addressed.
            a. These issues include company plans to accumulate data on programs’ effectiveness, avoiding unfair discrimination, preventing consumer confusion, their take on rebating, avoiding unfavorable consumer tax issues, and data privacy.
2. States retain the right to conduct back-end reviews, targeting any critical areas of regulatory focus.
3. Companies and regulators need to ensure that this approach is in compliance with existing state laws.
   a. The NAIC Model Unfair Trade Practices Law appears to contemplate either a “provide notice and opportunity for objection” approach or a “documented criteria must be maintained by the insurer and produced to the regulator upon request” approach, depending on the circumstances.

ii. Considerations:
1. Balance between holding companies accountable while not creating a burden that could prevent or slow up companies from pursuing beneficial programs.
2. There may be mixed policies regarding pre-approval or filing of documentation by state. An effort to make any filing process as efficient as possible for regulators and companies should be pursued to avoid any unconstructive burdens.
3. Companies being alerted that documentation must be available would likely ensure they at least attempt to address each of the issues prior to implementing a program.
4. Would states be interested in being provided notice of development of a new wellness program? Would states want to be notified of every change in or addition to a program? In what form would the notification occur?
5. Would a state have a right to object to an aspect of a program? If the objection leads to elimination of the program in that state, would that lead to other concerns, e.g., discrimination?
6. Would development of a uniform LTC wellness template help creating uniformity in how states interact with companies offering programs?
7. Need to determine consequences for a company that does not maintain the required documentation.

iii. After experiencing several companies’ pilot programs and identifying actual problem areas (as opposed to hypothetical issues), it is possible regulators will want to pursue a targeted pre-approval process or up-front receipt of documentation. That could be decided at a later date.

iv. Next steps
   i. Analyze flexibility in existing laws that would allow for innovation that could potentially result in better health for policyholders and lower costs for insurance companies.
   ii. Consider developing a template that a company could fill in with narrative explanation of how they have considered identified issues in development of a LTC wellness program. An efficient manner to have this information received by interested regulators resulting from a single company filing (perhaps through SERFF or an NAIC portal) can be pursued.
7. Actuarial considerations
   a. Issue: how are actuarial issues such as valuation, rate increase reviews, and reasonable value of benefits and options impacted by LTC wellness benefits?
   b. Current observations
      i. Although health outcomes can be expected to improve, to some extent, with LTC wellness programs, it is unclear how future claim costs will be impacted in comparison to the investment in the programs.
      ii. As data emerges, actuarial issues related to the impact of LTC wellness benefits on future claim incidence and severity, could impact rate increases and reserves.
   c. Addressing of Issues
      i. Valuation: Under moderately adverse conditions, as data emerges, future cash flows associated with LTC wellness programs and potential claim cost reductions resulting from the programs may be incorporated into reserve adequacy testing, including Actuarial Guideline 51 stand-alone long-term care analysis, per actuarial standards of practice.
      ii. Rates: As data emerges, future cash flows associated with LTC wellness programs and potential claim cost reductions resulting from the programs may be incorporated into lifetime loss ratio projections associated with rate-increase filings, per actuarial standards of practice.
      iii. The NAIC Guidance Manual for Rating Aspect of the Long-Term Care Insurance Model Regulation and NAIC Health Actuarial Task Force-adopted Consolidated, Most Commonly Asked Questions - States' LTC Rate Increase Reviews document suggest that consistency between rate increase assumptions and reserve adequacy assumptions (noting reserve adequacy assumptions may include a margin to account for moderately adverse conditions) may be expected by some regulators.
      iv. Reasonable value: The Long-term Care (EX) Task Force has tentatively established guidance that reduced benefit options in lieu of rate increases should provide reasonable value in comparison to the economic value of maintaining benefits and paying the increased premium. To the extent that LTC wellness benefits are tied into reduced benefit options, the holistic concept of reasonable value will likely be a consideration.
   d. Next steps
      i. Determine the NAIC venue to work through LTC wellness actuarial issues.

8. Data privacy
   a. Issue: utilization of consumers’ data for wellness initiatives can be used to develop the marketing strategy and a specific wellness initiative, as well as to analyze the impact or effects of a wellness initiative. The use of Big Data or artificial intelligence to develop the target demographic for new sales, the selection of the existing consumers for wellness initiatives, or to determine the results of the initiative, could result in an insurer or third-party data vendor using the data in a way that could be unethical, discriminatory, confusing, or otherwise problematic.
      i. With many of the tech advancements, data on the policyholder would be accessed to, e.g., help identify warning signs of risks such as falls and early-stage dementia.
   b. Current observations
i. The standards applied by insurance companies and tech firm vendors to ensure certain levels of privacy are generally unknown.

ii. There are lessons from other types of insurance on the types of privacy-related issues that may develop.

iii. There are cases, and perhaps a trend, of programs/interventions being implemented without utilizing significant amounts of policyholder personally identifiable information.

iv. States’ continuous adoption of data and privacy regulations will need to be available for insurers to assess the compliance of their wellness initiatives.

c. Addressing of issues

   i. Data Use to Identify Wellness Initiatives:
      1. Policyholders’ considerations:
         a. Confusion about why they are being solicited for the initiative.
         b. Suspicion about the motivation of the insurer.
         c. General lack of awareness that data is being collected, and what data is being collected.
         d. General lack the awareness or understanding on how data is collected and used.
         e. Will they know if their data was used to determine a specific wellness initiative for them versus being selected as part of a class of policyholders?
         f. Will the policyholder know what data is going to be used prior to participation?
         g. Should the policyholder have the option to “opt in/out” of their data being used internally for other initiatives or for external sale or use?
         h. Should policyholders have the ability to have appropriate control over their information, including the ability to access and correct inaccuracies, consistent with legitimate business purposes and/or legal requirements to retain such information?
      2. Insurer considerations:
         a. Should insurer communications include why a wellness initiative is being offered; including what data is being used?
         b. How should insurers use clear and concise notice about the collection, use, and disclosure of personal information?
         c. Should insurers purchase data regarding their policyholders (e.g. data that shows specific policyholders may have a near term claim - purchasing canes, grab bars, electronic fall detectors, etc.)?
         d. How should wellness initiatives be marketed to a policyholder? Insurers may need to limit what is advertised on the envelope, postcard, etc. due to HIPAA concerns.
         e. Should insurers partner with vendors or service providers to supply specific policyholder data to the wellness company? What data should be sent? How will the data be transferred?
f. Should insurers focus their data on policyholder specific needs and only offer services relevant to the ongoing needs?

g. How are opt in/out options, disclosures, etc. being shared with the consumer? Email, letter, text, etc. Is it appropriate to the policyholder’s needs or preferences?

h. When using third party data providers, what screening or data protection programs are in place?

ii. **Data Use During Wellness Initiative Development:**

   1. Should insurers purchase policyholder specific information from third party data sources?
      a. Data collected during purchases, search history, television programming, etc.
      b. Should it always be headless, anonymized, or deidentified?
   2. When considering big data, are there unacceptable “correlations”? How will insurers recognize relevant correlations vs irrelevant statistically significant correlations?
   3. Are there data use standards, controls, definitions of personal data, or a data privacy review body in place to ensure the data is used, stored, or shared ethically?
   4. When evaluating the data for wellness initiatives, will it focus on policyholder specific information – for example, will the policyholder’s claims detail or demographic factors determine the type of wellness initiative offered to that policyholder?
   5. Will the risk of a data breach be assessed and protected against by the insurer as well as all vendors or third-party data suppliers?
   6. Does the insurer have procedures in place to notify the policyholders of a potential breach?

iii. **Wellness Results Data Use:**

   1. Should the results be sold? Aggregate vs specific demographic information?
   2. Should insurers use the results internally for cross marketing other wellness initiatives?
   3. Should the policyholder be notified and have the option to “opt in/out” of letting the insurer use the data?
   4. Should the results be shared with the policyholder, POA, third party notifier? What guardrails should be in place relative to that sharing?
   5. How should the data be shared, if at all, with other vendors or service providers?
   6. How long will the data be retained? Will the data be destroyed or disposed?

d. **Dependencies**

   i. Unfair Discrimination

   ii. States’ adoption of wellness initiatives could make it difficult to implement a program uniformly.

e. **Next steps:**
i. Reach out to experts in the health insurance and Medicare Advantage, Medicare Supplement, or Medicaid / PACE areas to learn from their experiences.
ii. Identify applicable state privacy laws and HIPAA anti-marketing restrictions.
iii. Require insurance companies to provide information on privacy protection matters when claims management processes are established.
iv. Determine if policyholder approval of use of expanded data can be established at certain points in time:
   1. At times of options in lieu of rate increases, can insurance companies get agreement to attain more policyholder data?
v. Can new contracts be written with evergreen access to some private data?

9. Other considerations
   a. Issue: other legal or market and administrative issues may come into play as LTC wellness programs are established.
   b. Current observations
      i. There are dozens or hundreds of cutting-edge technological advancements being developed to help with aspects of LTC claims management.
         1. It is difficult for insurance companies and regulators to determine which tech advancements are most promising in terms of likelihood of success and degree of impact on consumer health and reducing claims cost.
      ii. TPAs or reinsurers used by direct-writing insurance companies may be resistant to administering these additional activities or may be concerned about potential legal ramifications that could impact their firms.
      iii. Insurers could potentially be subject to requirements if a policyholder, e.g., is identified as having cognitive impairment and therefore be a risk related to driving or finances.
   c. Next steps
      i. Determine if there is objection to an insurance company offering an extra-contractual wellness benefit that is not tied to loss ratio / benefits / contracted obligations, i.e., out of expenses?
      ii. Determine if benefits offered outside the contract could be considered in a similar category as because a reduced benefit option in lieu of a rate increase, which is essentially a mutually-agreed-to restructuring of the insurance contract.
      iii. Either identify or ensure industry members are identifying requirements related to disclosing, e.g., when a policyholder has cognitive impairment and may be a high-risk driver.
      iv. Regulatory guidance may help innovators engage in this space.

10. Miscellaneous topics
    a. How will insurers report on issues and learnings?
    b. This document will likely need to be updated with new learnings or issues.
c. Continuous collaboration with insurers regarding issues or new initiatives will likely be needed.

d. Note that there are hybrid products that contain wellness benefits. However, the scope of this document is wellness associated with stand-alone LTC insurance policies, which tend to have more volatile financial profiles than hybrid products.
Checklist for Premium Increase Communications

Adopted by the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup 11/19/21

AUTHORITY

The Long-Term Care Insurance Reduced Benefit Options (RBO) (EX) Subgroup is composed of regulators from 17 state insurance departments. It has been tasked with assisting the Long-Term Care Insurance (EX) Task Force in completing the following charge:

*Identify options to provide consumers with choices regarding modifications to long-term care insurance (LTCl) contract benefits where policies are no longer affordable due to rate increases.*

The Long-Term Care Insurance (EX) Task Force (Task Force) adopted the Long-Term Care Insurance RBO Communication Principles. The Long-Term Care Insurance RBO EX Subgroup has been charged with developing a complementary checklist that can be leveraged by state regulators and Long-Term Care Insurance insurers.

INTRODUCTION

This checklist is intended to establish a consistent approach to drafting and reviewing Long-Term Care Insurance RBO policyholder communications. The checklist can be used as guidance and does not carry the weight of law or impose any legal liability.

State regulators who consider the checklist excessive, deficient, or not focused on issues specific to consumer experiences in their state are encouraged to modify the checklist to suit the needs of the Department.

Leveraging the checklist could enable insurers and state regulators to mitigate consumer confusion and complaints, improve the quality of consumer communications, and ensure that consumer communications:

- Read in a clear, logical, not overly complex manner.
- Present options fairly and without subtle coercion.
- Include appropriate referrals to external resources, definitions, disclosures, and visualization tools.
The Task Force RECOMMENDS that state regulators adapt the checklist to reflect their state regulations, laws, or statutes and use the checklist when reviewing filed Long-Term Care Insurance RBO Communications.

CALLS ON all insurance companies to consider the checklist when developing reduced benefit option policyholder communications in the event of a rate increase.

### Checklist for Premium Increase Communications

| Insurer name: |  |
| Date of filing: |  |
| Product form: |  |
| Tracking number(s) SERFF rate filing: |  |
| Tracking number(s) SERFF form filing: |  |

<th><strong>SERFF FILING</strong></th>
<th>Page Reference and Filing Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>1. Does the filing contain all required materials including: policyholder communication, supplemental FAQ, graphs, illustrations, website screenshots (expected if communication refers policyholder to website for more information)?</td>
<td></td>
</tr>
<tr>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>2. Has actuarial review of the rate increase been completed?</td>
<td></td>
</tr>
<tr>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>3. Will notice of the rate action be mailed at least 45 days prior to the policyholder anniversary date (or billing date if state law allows)?</td>
<td></td>
</tr>
<tr>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>4. Have all new innovative RBO options presented in the communication been clearly explained in the filing? Have they been vetted by policy and actuarial staff?</td>
<td></td>
</tr>
</tbody>
</table>
5. Do reviewers understand any variable information that appears in the communication?

6. Were state-specific or contract-specific pre-rate increase filing notification procedures followed? For example: VT has insurers notify consumers of rate increases when filed in addition to notification Y before effective date. PA posts filed rate increase details on their website.

<table>
<thead>
<tr>
<th>Yes</th>
<th>No</th>
<th>N/A</th>
</tr>
</thead>
</table>

7. Is the communication easy to follow? Does it flow logically? Does it display the essential information and/or the primary action first (followed by the nonessential information)? Is the primary message of the communication presented first and clearly worded?

8. Are all technical insurance terms clearly explained in the communication?

9. Are all technical terms used consistently throughout the communication?

10. Is the communication in an easily readable font? For example: Is the type at least 11-point type?

11. Does the communication use headings to help the reader find information easily?

12. Is white space (margins, lines spacing, and spacing between paragraphs) sufficient and consistent?

13. Are tables, charts, and other graphics, easy to read and understand? (See question 18 for reference).
<table>
<thead>
<tr>
<th>Question</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>14. Are the grade level and reading ease scores appropriate according to state readability standards?</td>
<td>☐ ☐ ☐</td>
</tr>
<tr>
<td>15. Are reduced benefit options clear and not misleading? For example: Are there side-by-side illustrations of options compared with current benefits?</td>
<td>☐ ☐ ☐</td>
</tr>
<tr>
<td>16. Does the communication include diminished contrast features that may make it harder to read? Examples include: Use of Italics, Narrow margins (top and bottom less than 1.5 inches), All caps (all bold is acceptable), Difficult to read text (fonts other than Sans Serif or Courier), Different colors throughout, Small font</td>
<td>☐ ☐ ☐</td>
</tr>
<tr>
<td>Reviewers should aim to review these communications in the size and contrast in which a consumer would see them; a print test may be beneficial.</td>
<td></td>
</tr>
<tr>
<td>17. If FAQs are included, are they succinct and easy to understand?</td>
<td>☐ ☐ ☐</td>
</tr>
<tr>
<td>18. Does the communication include notice that policyholders with disabilities and policyholders for whom English is not a first language can request ongoing accommodations that will enable them to read online and written materials and notices? For example, accessibility of its online and written material to all interested parties, including those with disabilities such as blindness or macular degeneration deafness and hearing loss, learning disabilities,</td>

</table>
The Special (EX) Committee on Race and Insurance met in San Diego, CA, Dec. 14, 2021. The following Special Committee members participated: David Altmaier, Co-Chair (FL); Dean L. Cameron, Co-Chair (ID); Raymond G. Farmer, Chair Emeritus (SC); Andrew N. Mais, Co-Vice Chair (CT); Chlora Lindley-Myers, Co-Vice Chair (MO); Lori K. Wing-Heier (AK); Jim L. Ridling (AL); Alan McClain (AR); Peni Itula Sapini Teo represented by Elizabeth Perri (AS); Ricardo Lara (CA); Michael Conway (CO); Karima M. Woods (DC); Trinidad Navarro (DE); Colin M. Hayashida (HI); Doug Ommen (IA); Dana Popish Severyninghaus (IL); Amy L. Beard (IN); Vicki Schmidt (KS); Sharon P. Clark (KY); James J. Donelon (LA); Gary D. Anderson (MA); Kathleen A. Birrane (MD); Eric A. Cioppa (ME); Anita G. Fox (MI); Grace Arnold (MN); Edward M. Deleon Guerrero (MP); Mike Chaney (MS); Mike Causey represented by Michelle Osborne (NC); Jon Godfread (ND); Eric Dunning (NE); Marlene Caride (NJ); Russell Toal (NM); Barbara D. Richardson (NV); Adrienne A. Harris represented by My Chi To (NY); Judith L. French represented by Tynesia Dorsey (OK); James J. Donelon (LA); Gary D. Anderson (MA); Kathleen A. Birrane (MD); Eric A. Cioppa (ME); Anita G. Fox (MI); Grace Arnold (MN); Edward M. Deleon Guerrero (MP); Mike Chaney (MS); Mike Causey represented by Michelle Osborne (NC); Jon Godfread (ND); Eric Dunning (NE); Marlene Caride (NJ); Russell Toal (NM); Barbara D. Richardson (NV); Adrienne A. Harris represented by My Chi To (NY); Judith L. French represented by Tynesia Dorsey (OK); Andrew R. Stolfi (OR); Jessica K. Altman (PA); Elizabeth Kelleher Dwyer (RI); Larry D. Deiter (SD); Carter Lawrence (TN); Cassie Brown (TX); Jonathan T. Pike (UT); Scott A. White represented by Rebecca Nichols (VA); Tregenza A. Roach (VI); Michael S. Pieciak represented by Rosemary Raszka (VT); Mike Kreidler (WA); Mark Afable (WI); Allan L. McVey (WV); and Jeff Rude (WY).

1. **Adopted its Summer National Meeting Minutes**

Director Lindley-Myers made a motion, seconded by Ms. Osborne, to adopt the Special Committee’s Aug. 15 minutes (see *NAIC Proceedings – Summer 2021, Special (EX) Committee on Race and Insurance*). The motion passed unanimously.

2. **Received a Status Report on Workstream One**

Superintendent Cioppa reported that Workstream One is charged with continuing research and analysis to identify issues and develop specific recommendations on action steps state insurance regulators and companies can take to improve the level of diversity and inclusion in the industry, including: 1) seeking additional engagement from stakeholders to understand the efficacy of diversity-related programs, how companies measure their progress, and what state insurance regulators can do to support these efforts; and 2) collecting input on any existing gaps in available industry diversity-related data.

Since the adoption of its 2021/2022 charges, the Workstream met in regulator-only session three times and held one open call with stakeholders. The Workstream initially met in September to regroup and discuss its updated charges and next steps.

In October, the Workstream heard a presentation from California and New York regarding their respective diversity, equity, and inclusion (DE&I) efforts and the diversity-related industry data that these states are collecting.

In November, the Workstream held a public call with stakeholders to better understand industry diversity-related programs, how companies are measuring progress, and what state insurance regulators can do to support these efforts. Representatives from several companies and trades spoke, including: the American Property Casualty Insurance Association (APCIA); Blue Cross and Blue Shield of Illinois (BCBSIL); Cambia; CUNA Mutual Group; the Greater New York Mutual Insurance Company; the National Association of Mutual Insurance Companies (NAMIC); Shelter Insurance; and Zurich North America (Zurich). Their testimonies were encouraging, and state insurance regulators are pleased by the industry’s willingness to step up and take action. The Special Committee asked three of the presenters—APCIA, Dr. Leroy David Nunery (Plūs Ultré LLC), BCBSIL, and Zurich to provide an update to the Special Committee, as it believes their testimony will benefit the full Special Committee.

The Workstream is now discussing next steps. State insurance regulators want to support the insurance industry in increasing diversity and inclusion at all levels of their organizations and be of assistance in bringing more and diverse talent into the applicant pool. The Workstream looks forward to continuing this important work.

3. **Received a Status Report on Workstream Two**

Commissioner Stolfi reported that Workstream Two continues gathering responses to the survey intended to examine, at the zone level, best practices and initiatives state insurance departments may consider when promoting DE&I in their departments.
The Workstream will meet to discuss a method and forum to share diversity and inclusion best practices among state insurance regulators. So far, 26 responses have been received. The Special Committee sent a reminder email earlier this week with a link to the survey, and it encourages every state to respond as soon as possible.

The NAIC continues with its work implementing diversity initiatives. Previously, the Special Committee asked members to share their diversity contacts with Evelyn Boswell, NAIC Director of Diversity, Equity, and Inclusion.

Ms. Boswell convened the first State Diversity Leader’s Forum held on Oct. 18. This Forum provides a space for diversity leaders in each state to come together and discuss best practices in promoting diversity in their respective insurance departments. Ms. Boswell also convened the DE&I table talk during this meeting. If anyone would like to be included in these efforts, they should please send diversity contact information to Ms. Boswell.

4. Received a Status Report on Workstream Three

Commissioner Schmidt reported that Workstream Three met Dec. 1 and heard from interested parties about its Charge F to: 1) continue research and analysis of insurance, legal, and regulatory approaches to address unfair discrimination, disparate treatment, proxy discrimination, and disparate impact; and 2) make recommendations for statutory and regulatory changes and additional steps, including developing analytical and regulatory tools to assist state insurance regulators in defining, identifying, and addressing unfair discrimination.

The Workstream believes an important first step to address this charge is to consider the drafting of a white paper to define some of these terms, as well as to set forth next steps for the Workstream.

During its Dec. 1 conference call, the Casualty Actuarial Society (CAS) previewed several papers it will be releasing in early 2022 that will: 1) define discrimination in insurance; 2) understand potential influences of racial bias on property/casualty (P/C) insurance; 3) provide approaches to address racial bias in financial services, including lessons learned for the insurance industry; and 4) assess methods for quantifying discriminatory effects on protected classes in insurance. The CAS provided the Workstream with an overview of those papers, and the Workstream believes the papers will be useful in drafting the white paper.

The Workstream also heard from several other consumer and industry groups about how to define these terms, as well as how to audit algorithms to ensure there is no disparate impact. The presentation slides and audio are posted on the NAIC website. The Workstream will continue these discussions with a goal of drafting a white paper outline and taking comments on that outline.

5. Received a Status Report on Workstream Four

Commissioner Afable reported that Workstream Four held a regulator-only session in October to discuss how best to develop a work plan related to its charges. After reviewing its charges, the Workstream members concluded that there is a need for data to drive discussion and advance the understanding of these issues and next steps. The Workstream, in conjunction with the other workstreams, needs to explore how best to move forward with identifying data that may already exist, in addition to collecting data going forward.

The Workstream will meet in open session in January to review how it fits into the larger work of the Special Committee and the other workstreams as it moves forward to address the issues identified in its charges.

6. Received a Status Report on Workstream Five

Commissioner Altman reported that since Workstream Five’s last update to the Special Committee at the Summer National Meeting, the Workstream met Dec. 3, Nov. 18, Oct. 14, Sept. 9, and Aug. 26. Most of these meetings have focused on the Workstream’s draft “Principles for Data Collection” document.

As currently drafted, the “Principles for Data Collection” document provides high-level guiding principles for the collection and treatment of data on race, ethnicity, and other demographic characteristics in the health insurance business. The document reflects the Workstream’s discussions and recommendations from various stakeholders provided during several of the Workstream’s meetings. Commissioner Altman said one consistent theme expressed by stakeholders is that robust data collection is a key to both quantifying existing disparities and evaluating the effectiveness of initiatives to address those disparities.
In developing the document, the Workstream worked to include high-level principles to guide in the collection, maintenance, protection, and reporting of enrollee demographic data, while acknowledging the regulatory barriers to such collection and the sensitive nature of collecting and using such data from enrollees.

Commissioner Altman noted that the Workstream received robust feedback, much of which has been accepted and thoroughly discussed. She thanked the stakeholders from industry, the consumer representatives, the state insurance regulators, and all for the level of discussion the Workstream has been able to have so far.

During its Dec. 3 meeting, Commissioner Altman said the Workstream almost completed its discussions on the draft document, including potential revisions based on the comments received. The Workstream plans to hold one last meeting to finalize the document before the end of the year or early next year. After the data collection document is finalized, the Workstream will forward it to the Special Committee for consideration.

Commissioner Lara reported that in addition to discussions on the data collection document, the Workstream’s Sept. 9 meeting focused on other issues identified in the Workstream’s report to the Special Committee as areas it wanted to obtain more information around maternal health disparities and coverage losses among children. The Workstream heard a presentation on maternal health disparities and how state insurance regulators can improve maternal health disparities, such as more enhanced data collection and ensuring network adequacy standards provide access to quality providers and culturally competent care.

The presentation on coverage losses among children highlighted the benefits to children of being insured and pointed out the adverse effects to maternal and infant outcomes for uninsured mothers. The presenters also highlighted the increase in the rate of uninsured children in recent years, particularly for Latinx children. To address these issues, the presenters had several recommendations, including enhancing outreach to community-based organizations.

The Workstream also moved forward with another area it identified in its report to the Special Committee as being extremely important—provider networks, provider directories, and cultural competency. During the Workstream’s Oct. 14 meeting, it reviewed a draft Provider Network white paper outline. The outline reflects the Workstream discussions during its July 8 meeting. The Workstream exposed the outline for a public comment period ending Nov. 8. As part of that exposure, the Workstream asked for volunteers based on the outline to draft sections of the white paper. In looking ahead, the Workstream plans to finalize the Provider Network white paper outline early next year and assign volunteers to draft sections.

Birny Birnbaum (Center for Economic Justice—CEJ) thanked the members of the Special Committee for its work on race and insurance. He noted that with the DE&I framework, it is important to measure in order to track progress, just as important as identifying the right things to measure is critically important. The CEJ suggests that it is not sufficient to simply measure activities. Outcomes should also be measured so it can be determined if progress is being made (e.g., whether NAIC events feature speakers and participants from communities of color and whether the NAIC and state insurance departments increase the number of people of color in senior management).

Mr. Birnbaum said while the NAIC DE&I framework and report highlights the NAIC’s activities, no metrics were seen for measuring success. He noted that in some areas, progress has been slow. For example, today's Center for Insurance Policy and Research (CIPR) event on lessons learned from the pandemic includes no consumer stakeholders or stakeholders from communities of color.

Mr. Birnbaum said he mentions this to raise awareness, not to criticize, and to make the point that to know progress is being made on DE&I, measurables should be identified to measure outcomes. He said his final point is that DE&I is obviously critical to offer opportunities to members of communities of color, but DE&I alone cannot address structural racism. He said it does not matter how many people of color you have in senior management if you are not taking the steps to address the structural forces that disproportionately affect communities of color. He urged NAIC members to put some metrics in place for DE&I and set up other work to make progress in the Special Committee’s efforts.

7. **Heard an Update on CO SB 21-169 – Restrict Insurers’ Use of External Consumer Data**

Commissioner Conway provided an update on Colorado Senate Bill 21-169. He said the core goal of the legislation is to protect Colorado consumers from insurance practices that result in unfair discrimination based on race, color, national or ethnic origin, religion, sex, sexual orientation, disability, gender identity, or gender expression. He said the law is focused on ensuring external consumer data is not used in a way that unfairly discriminates against consumers. He said the core idea came from recognizing that the insurance department would not have the resources or expertise to compete with insurance companies and state insurance regulators and the industry need to find a way to ensure the industry is using big data components responsibly.
He said the intention is to find ways for the industry to stress test their own systems, identify issues that may be occurring with big data systems and algorithms, and take corrective action to address consumer harms identified. To address questions about there being a potential problem requiring legislation, he shared a few examples of different studies that have been performed over the year. He noted that this has been a well-documented issue where there are potential issues with big data and artificial intelligence (AI) not only within the insurance industry but outside the insurance industry. The auto insurance study cited is a ProPublica study. The life insurance study was done by Haven Life. The homeowners insurance study was done by St. John’s University. The studies will be posted on the Colorado Division’s website.

Commissioner Conway said at its core, the law says a simple correlation to risk will not be sufficient if the underlying insurance practice also correlates to a protected class and negatively affects that class. He said it will be a balancing test that the law requires to be defined through a stakeholder process. He said the law is primarily focused on personal lines of insurance, life, health, property, and casualty. He said the insurance practices subject to the law are marketing, underwriting, pricing, utilization management, reimbursement methodologies, and claims management. He said the risk management framework required by the law includes providing information on the external consumer data and information source used, explaining how it is used, establishing and maintaining a risk management framework, attesting to its implementation, and providing an assessment of the results of the framework or a similar process. He said the plan is to begin stakeholder meetings in mid-January 2022, and the rules will be effective, at the earliest, Jan. 1, 2023. He encouraged all stakeholders to engage with him in the process and check the Division’s website regularly for updates.

Commissioner Altman asked if Commissioner Conway plans to share aggregate information, broad outcomes, or lessons learned from the process, either publicly or with fellow state insurance regulators. Commissioner Conway said at a bare minimum, the information will be shared on an aggregated level.

8. Heard Comments from Interested Parties

a. APCIA/Plus Ultré LLC

Jessica Hanson Hanna (APCIA) provided an introduction on the APCIA’s industry initiatives to promote and advance a more diverse and inclusive industry. She said the APCIA cofounded the insurance careers movement, a global grassroots initiative that brings together more than 1,000 insurance companies, agents and brokers, trade associations, and other industry partners to inspire more people to choose insurance as a career and remain working in the insurance industry. Other initiatives she listed include the APCIA Board of Directors’ DE&I strategic priority, the APCIA’s Emerging Leaders program, and a board level APCIA working group on social equity and inclusion established in 2020 to oversee the APCIA’s initiatives and long-term planning. Finally, the APCIA created its DE&I catalog created in partnership with Dr. Nunery to catalog its members’ diversity and inclusion programs at the workforce level, the board level, and the supply chain level on an anonymized basis. The APCIA’s four key goals are to: 1) establish DE&I investment and commitment among its membership; 2) understand the depth of DE&I practices among its member companies; 3) be able to provide guidance and insights to members as a trusted industry repository of information; and 4) inform the PC industry on advocacy and reputational positioning on DE&I issues at the local, regional, and national levels.

Dr. Nunery noted that the DE&I catalog assessed and captured aggregated P/C insurance DE&I practices on a voluntarily basis from 52 different organizations and a number of small, medium, and large companies based on direct premiums written. The catalog captured information on diversity, market served, employee bases, geography, size, and infrastructure. Dr. Nunery reviewed slides showing how the participating companies have adopted and implemented DE&I practices.

Dr. Nunery noted that DE&I is an emerging discipline; just a few years ago no one was really talking about it as a professional practice or approach, and these practices vary depending on the company’s clients, the board makeup, who the employees are, and the adoption rate. In essence, there is a mixture of results, and the larger companies, those with 1 billion or more direct premiums written, tend to have a deeper embedding likely because they have the infrastructure to do so. Dr. Nunery said if DE&I is embedded as either a core value or strategic element, it should go to a depth that includes personal accountability. Regarding DE&I alignment to objectives and compensation, he said 73% of companies did not have DE&I metrics included as part of organizational key performance indicators, and 85% have not done that in terms of compensation. He said the more executives and managers that are measured on DE&I practices, the more progress will be made.

Dr. Nunery went on to cover conducting and responding to employee surveys, recruiting challenges in hiring practices, and having a chief diversity office on staff with the authority to ensure that implementation moves forward and DE&I is embedded. Dr. Nunery talked in more detail about recruitment, retention policies and practices, and the importance of sharing information and practices. He said the challenge is putting diversity into practice and measuring outcomes. Regarding diverse recruiting
strategies, he said a big challenge is making insurance a destination students and career changers should be aware of. It is important to quantify recruiting practices and efforts by doing things such as asking interviewed candidates and hiring managers for feedback. Dr. Nunery concluded with the impact and engagement of DE&I on governance and boards of directors by sharing the importance of bringing board members, managers, executives, and commissioners into the conversation so there is a sense of what can be accomplished beyond hiring diverse employees and engaging every community so they feel a part of what is being done.

b. BCBSIL

Harmony Harrington (BCBSIL) said the Health Care Service Corporation (HCSC), which includes BCBSIL, supports an environment where all 24,000 employees and nearly 17 million members and community members should feel valued, empowered, and recognized for their unique talents, perspectives, and differences. DE&I really permeates all areas of the company and is part of the fabric of how the company has been built.

Ms. Harrington went on to share more about HCSC’s DE&I efforts. She said all HCSC employees complete an annual DE&I education course designed to meet employees where they are in their journey and build each year. The HCSC also offers a monthly speaker series with topics that include how to be an inclusive ally, what the difference is between equity and equality and why it matters, and even generational diversity at work. Ms. Harrington said BCBSIL continues to advance its ability to collect data internally and create diverse pipelines through annual talent reviews and succession planning efforts. She shared metrics of the diverse workforce. She shared more about employee-initiated business resource groups where employees participate in mentoring, develop professionally, educate the company on culture, and get involved in the community. She talked about BCBSIL efforts in Chicago opening two multipurpose community centers in partnership with local nonprofit organizations offering employee workspace and a community health and wellness hub, as well as launching a high school student development program with local nonprofits providing mentorship and job shadowing designed to address social determinants of health, including education, access, and equity economic stability and emotional and social support.

Ms. Harrington went on to talk about BCBSIL efforts addressing health equity, cultural competency, and implicit bias in health care. BCBSIL created the Institute for Physician Diversity (IPD) to strategically partner the payer with academic medical schools, teaching hospitals, and nonprofit associations to contribute to the systematic increase in the number of underrepresented minority physicians through innovative alliances and collective accountability with medical schools, graduate medical education programs, and other medical education stakeholders. Ms. Harrington said BCBSIL also developed the Health Equity Hospital Quality Incentive Pilot Program with the goal to improve care and quality by reducing racial and ethnic health disparities for members who get care at participating health systems that demonstrate a commitment to pursuing health equity and reducing health disparities for members served at the hospital. She said other BCBSIL health equity work with providers includes grants awarded to organizations to support health care organizations and hospitals in eliminating an identified health care disparity in their local community, as well as BCBSIL-funded cultural competency and implicit bias education, including incentives for value-based care arrangements to complete the trainings.

Ms. Harrington said BCBSIL is focused on and committed to not only the physical health improvement of communities, but also the economic health improvement; understanding an individual's geography can also determine their best health. She provided examples of community engagement like health education and outreach teams, employee engagement through volunteerism, the neighborhood community centers, and community grants and sponsorship supporting frontline community organization that support access to care, shelters, behavioral health care, maternal health supports, and COVID-19 health education and access.

Commissioner Lara noted the Special Committee has seen a language barrier in terms of access to health care, especially for immigrant communities that do not feel comfortable speaking in English or have the translation. He asked what strategies BCBSIL is implementing to be able to eliminate that language barrier.

Ms. Harrington noted that from a BCBSIL perspective, it has member facing customer advocates who speak or help translate in a variety of languages to best serve diverse members. From a community perspective, BCBSIL partners with nonprofit local organizations on the ground that can help educate and support community members on their health journey. For the community centers, BCBSIL hired from the community, with employees who speak Spanish and can work with Spanish speaking community members.
c. **Zurich**

Jose Ramos (Zurich) noted that in conversations about race and insurance, it is important to talk about representation. He said within the actuarial profession there is not a lot of black and Hispanic representation, specifically it is a combined less than 5%, and the representation of people of color in the insurance industry drops off at progressive levels of leadership. He said as he advanced in his career, it was very rare for him to work with colleagues who were black or Hispanic or who had his background or looked like him.

Mr. Ramos went on to talk about Zurich’s diversity and inclusion efforts, which includes an Executive Diversity and Inclusion Council chaired by the chief executive officer (CEO), a DE&I office, nine employee resource groups, and DE&I councils within different business units in the organization. He said Zurich is continuing to make progress on DE&I and is focused on strategically aligning and connecting DE&I efforts across the organization to maximize impact. He said Zurich is looking to embed DE&I throughout the organization. For employees, Zurich has leadership programs with a focus on diverse representation, development programs at mid-career levels, and an apprenticeship program for employees that are starting out their insurance career. Mr. Ramos said to accelerate progress, Zurich is looking to have greater levels of accountability in the business units and leadership across their organization.

Mr. Ramos concluded his remarks talking about representation, transparency, and metrics measuring progress. Regarding transparency, he said Zurich released to employees and externally gender, race, and ethnic representation at different levels of the organization, including senior leadership and management. In terms of analytics metrics insights, he said Zurich is focused on turning data into insights and having an evidence-based approach where it can prove or disprove assumptions based on a combination of quantitative and qualitative evidence allowing the organization to focus on the behaviors that lead to meaningful change. He said Zurich will keep working to understand the trends, patterns, and drivers to better understand the different dimensions of diversity and trends that Zurich is seeing in representation.

Commissioner Altmaier noted that CEJ and NAMIC had submitted additional comments that are available on the website.

Having no further business, the Special (EX) Committee on Race and Insurance adjourned.
The Information Systems (EX1) Task Force met Nov. 18, 2021. The following Task Force members participated: Ricardo Lara, Chair, represented by David Noronha (CA); Kathleen A. Birrane, Vice Chair, represented by Paula Keen (MD); Lori K. Wing-Heier represented by Anna Latham (AK); Alan McClain represented by Letty Hardee (AR); Michael Conway represented by Peg Brown (CO); Trinidad Navarro represented by Tim Li (DE); Colin M. Hayashida (HI); Sharon P. Clark represented by Satish Akula (KY); Chlora Lindley-Myers, Cynthia Amann, and Jo LeDuc (MO); Barbara D. Richardson (NV); Judith L. French represented by Tynesia Dorsey (OH); Cassie Brown represented by Luke Bellsnyder (TX); and Scott A. White represented by Vicki Ayers and Trish Todd (VA). Also participating were: Bud Leiner (AZ); Rebecca Smid (FL); Tate Flott, Brenda Johnson, and Linda Scott (KS); Bruce Matlock (LA); Laurie Scully (ND); Rachel Chester (RI); Joseph Javier (SC); and Chad Thompson (UT).

1. **Adopted its Summer National Meeting Minutes**

2. **Received an IT Operational Summary Report**

Scott Morris (NAIC) highlighted several sections included in the Information Technology (IT) Operational Report received by the Task Force members. The report provides updates on technology initiatives at the NAIC, upcoming improvements, impacts to state technology, new offerings from the NAIC, and general updates on the activities of the NAIC technology team.

   a. **Product Highlights**

The State Based Systems (SBS) team is focusing on new state implementations. Two states went live successfully: 1) Vermont on Aug. 17 (warranty period has completed); and 2) Connecticut on Nov. 8. Work is underway to implement Kansas in January 2022, Massachusetts in February 2022, and Hawaii in the third quarter of 2022. Additionally, a high probability state is in contract negotiations for June 2022.

Other key product highlights include:

- The first phase of the System for Electronic Rates & Forms Filing (SERFF) Modernization project is complete. Key outputs included a future state architectural diagram with the proposed set of tools and a seven-stage implementation plan. Next steps with the Oversight Group are to: 1) demonstrate the sampling of features developed during the project; 2) share the timeline, costs, and tooling; and 3) discuss options for moving forward.
- The Structured Securities (STS) platform in the Automated Valuation Service Plus (AVS+) was updated to enable 12,745 residential mortgage-backed securities (RMBS) and commercial mortgage-backed securities (CMBS) to receive an NAIC designation instead of price breakpoints to determine the designation. This new information will be available in the year-end 2021 file.
- Four of the five cloud environments have been migrated to Amazon Web Services (AWS) from the NAIC data center. The fifth environment (Production) is planned for migration on Dec. 4.

   b. **Innovation and Technology**

The Regulatory Data Collection (RDC) system continues to evolve to meet the ever-increasing data collection needs of state insurance regulators.

- In September, RDC collected data for the 2018 and 2019 principle-based reserving (PBR) data submissions due on Sept. 30. Nearly 213 million records were processed for these two large submissions, most of which were submitted on the last two days of the month. One of the larger files, with more than 7 million records, was processed in approximately 15 minutes. Recent system performance enhancements and the ability to instantly scale up computing resources in the cloud positioned RDC well to meet this record demand with relative ease.
• Other recent enhancements have drastically decreased the time needed to set up a new data call while reducing the reliance on Information Technology Group (ITG) technical staff.

The Center for Insurance Policy and Research (CIPR) team joined with the NAIC’s Legal Division to build a Tableau dashboard tool to visualize and compare the NAIC’s Insurance Data Security Model Law (#668) with the laws as adopted by each state. There are about 190 NAIC model laws and many versions adopted by state legislatures with varying degrees of differences to the original model. The tool allows state insurance regulators to see similarities and deviations from the model language and view a side-by-side comparison of sections of the model. The team has plans to build out additional dashboards for other NAIC models.

On Sept. 1, ITG hosted the annual 2021 NAIC Demo Day event. Demo Day is as an opportunity to spread awareness of new technology uses at the NAIC and provide a forum for staff to present their exciting new work to leadership and peers. This two-and-a-half-hour virtual event was attended by staff across the organization and consisted of nine presentations, each approximately 15 minutes in length.

3. Received a Portfolio Update and Project Status Reports

Sherry Stevens (NAIC) reported on the project portfolio. As of November, the NAIC’s technical project portfolio includes 21 active technical projects. Two projects completed since the last report.

Having no further business, the Information Systems (EX1) Task Force adjourned.
LIFE INSURANCE AND ANNUITIES (A) COMMITTEE

Life Insurance and Annuities (A) Committee Dec. 15, 2021, Minutes................................................................. 6-2
Accelerated Underwriting (A) Working Group Dec. 6, 2021, Minutes (Attachment One)........................................ 6-5
Accelerated Underwriting Educational Paper Draft Nov. 8, 2021 (Attachment One-A) ................................. 6-8
Life Insurance Illustration Issues (A) Working Group Chair Report (Attachment Two) .................................. 6-19
Date: 12/20/21

Life Insurance and Annuities (A) Committee
San Diego, California
December 15, 2021

The Life Insurance and Annuities (A) Committee met in San Diego, CA, Dec. 15, 2021. The following Committee members participated: Glen Mulready, Vice Chair (OK); Jim L. Ridling (AL); Karima M. Woods represented by Philip Barlow (DC); Doug Ommen represented by Kim Cross (IA); Dean L. Cameron represented by Randy Pipal (ID); Vicki Schmidt (KS); James J. Donelon represented by Tom Travis (LA); Barbara D. Richardson (NV); Adrienne A. Harris represented by My Chi To (NY); Judith L. French represented by Jana Jarret (OH); Elizabeth Kelleher Dwyer (RI); Carter Lawrence represented by Brian Hoffmeister (TN); and Mark Afable represented by Nathan Houdek and Richard Wicks (WI). Also participating was: Mike Boerner (TX).

1. **Adopted its Summer National Meeting Minutes**

   Director French made a motion, seconded by Mr. Travis, to adopt the Committee’s Aug. 16 minutes (see NAIC Proceedings – Summer 2021, Life Insurance and Annuities (A) Committee). The motion passed unanimously.

2. **Adopted the Reports of its Working Group and Task Force**

   Director French made a motion, seconded by Mr. Travis, to adopt the following reports: the Accelerated Underwriting (A) Working Group, including its Dec. 6 minutes (Attachment One); and the Life Actuarial (A) Task Force. The motion passed unanimously.

3. **Received a Memorandum from the Life Actuarial (A) Task Force and the Valuation Analysis (E) Working Group on the FSAP Recommendation.**

   Commissioner Mulready explained that Mr. Boerner authored a memorandum as chair of the Life Actuarial (A) Task Force and the Valuation Analysis (E) Working Group to the Life Insurance and Annuities (A) Committee following up on a recommendation in the 2020 Financial Sector Assessment Program (FSAP) report regarding actuarial resources. The memorandum explains that having the necessary actuarial support for principle-based reserving (PBR) is important, and to that end the NAIC has added seven actuaries to its staff to help with PBR, mostly just to help PBR work as it was designed. Commissioner Mulready said the memorandum from Mr. Boerner indicates appreciation for the resources provided and states that if more resources are needed, NAIC leadership will be notified. Commissioner Mulready explained that the Committee is receiving this memorandum and is committed to monitoring how things are developing with PBR.

4. **Adopted the Life Actuarial (A) Task Force’s 2022 Proposed Charges**

   Mr. Boerner summarized the Life Actuarial Task Force’s 2022 Proposed charges. He explained that the charges are largely unchanged from 2021 and only make necessary extensions to the time frames for completing the charges.

   Birny Birnbaum (Center for Economic Justice—CEJ) commented that he would like to see actuaries move away from having charges addressing consumer-facing issues, like the Indexed Universal Life (IUL) Illustration (A) Subgroup charge to: Monitor the results and practices of IUL illustrations following implementation of Actuarial Guideline XLIX-A—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest to Policies Sold On or After December 14, 2020 (AG 49-A). Provide recommendations for consideration of changes to Life Insurance Illustrations Model Regulation (#582) to the Life Actuarial (A) Task Force, as needed.

   Mr. Birnbaum said he wrote a comment letter suggesting that the Life Insurance and Annuities (A) Committee adopt a new charge to broadly look at issues involving life insurance illustrations.

   Director French made a motion, seconded by Mr. Travis, to adopt the Life Actuarial (A) Task Force’s 2022 proposed charges. (see NAIC Proceedings – Fall 2021, Executive (EX) Committee and Plenary, Attachment Three). The motion passed unanimously.
5. **Adopted Revisions to AG 25**

Mr. Boerner said that revisions to *Actuarial Guideline XXV—Calculation of Minimum Reserves and Minimum Nonforfeiture Values for Policies With Guaranteed Increasing Death Benefits Based on an Index* (AG 25) pertain to very specific types of life insurance products, which include pre-need funeral policies and other small dollar policies with guaranteed increasing death benefits tied to a cost of living index. He said the revisions include the removal of the fixed 4% nonforfeiture interest rate floor to align AG 25 with the *Valuation Manual*.

Director French made a motion, seconded by Commissioner Schmidt, to adopt the revisions to AG 25 *(see NAIC Proceedings – Fall 2021, Executive (EX) Committee and Plenary, Attachment Five)*. The motion passed unanimously.

6. **Adopted the 2022 GRET**

Mr. Boerner explained that the development and adoption of the Generally Recognized Expense Table (GRET) is an annual process to provide expenses that are used by a significant percentage of life insurance companies in their life insurance illustrations pursuant to the *Life Insurance Illustrations Model Regulation* (#582). As in previous years, the Society of Actuaries (SOA) Committee on Life Insurance Company Expenses submitted its GRET analysis to the Life Actuarial (A) Task Force for the upcoming year. The SOA followed the same methodology in developing the 2022 GRET as last year for the 2021 GRET.

Commissioner Schmidt made a motion, seconded by Superintendent Dwyer, to adopt the 2022 GRET *(see NAIC Proceedings – Fall 2021, Executive (EX) Committee and Plenary, Attachment Four)*. The motion passed unanimously.

7. **Adopted its 2022 Proposed Charges**

Commissioner Mulready explained that the 2022 proposed charges of the Life Insurance and Annuities (A) Committee were included in the meeting materials and had been posted on the Committee web page since Nov. 15. He said that the proposed charges are largely unchanged from the 2021 charges and reflect the working groups and their charges that were disbanded during 2021. He said the proposed 2022 charges also include an update to the Annuity Suitability (A) Working Group charge to reflect that the Working Group is continuing its work on a frequently asked questions (FAQ) document.

Commissioner Mulready explained that there were a few issues with the charges for the Committee to discuss. He reminded the Committee that at the Summer National Meeting, it asked Mr. Wicka, chair of the Life Insurance Illustration Issues (A) Working Group, to draft a “chair report” to guide the Committee in discussing the future of the Working Group and its charge. Additionally, Mr. Birnbaum submitted comments on the proposed charges.

Commissioner Mulready said the chair report (Attachment Two) is included in the meeting materials and was posted along with the Committee’s proposed charges on Nov. 15. He explained that the chair report includes an overview of the Life Insurance Illustrations Issues (A) Working Group’s history and progress to date. He said the report also includes the chair’s recommendations that the Committee adopt the “chair report” as the final report of the Working Group and disband the Working Group. The report explains that the chair report will be part of the official record in the *NAIC Proceedings*, making the revisions the Working Group has developed to date available for individual states to consider when exploring the possibility of enacting a summary disclosure requirement.

Commissioner Mulready said that NAIC funded consumer representative Brenda J. Cude (University of Georgia) and Mr. Birnbaum commented on the chair report. Commissioner Mulready explained that Ms. Cude wrote in support of keeping the Working Group and made four points in support of her view: 1) well-crafted disclosures are helpful to consumers, and consumer testing could ensure the policy overview is helpful; 2) states may be laboratories for policy change, but not typically for the development of consumer disclosures like the policy overview; 3) it is not clear that continuing with the Working Group is not supported by a sufficient number of the NAIC members; and 4) the templates are too unfinished to be picked up by the states. There needs to at least be an explanation of the purpose of the templates and drafting notes to indicate where the information should be specific to the policy.

Commissioner Mulready said that Mr. Birnbaum submitted two comment letters—one on the 2022 proposed charges and the other on the chair report. On the 2022 proposed charges, Mr. Birnbaum suggested: 1) creating a new charge to review existing NAIC models that address life insurance illustrations in order to develop consistent content and consumer protection principles throughout; and 2) retaining the substance of the Life Insurance Illustration Issues (A) Working Group, but renaming the group and revising the charge to develop a policy overview document to replace the policy summary in the *Life Insurance Disclosure*
Model Regulation (#580). He explained that Mr. Birnbaum’s second letter was addressing the chair report and urged the Committee to retain the revised charge as outlined in his comment letter on the proposed charges.

Ms. To shared New York’s perspective on the recommendation in the chair report. She said the chair report was thoughtful, detailed, and useful. She said New York appreciates the consideration that led to the recommendation in the report to disband the Working Group and delete its charge, but New York is disappointed that such an important consumer protection issue did not generate the level of support necessary to move forward with the policy overview. She said the chair report highlights that specific issues had been identified with the documents used by insurers that hinder consumer understanding of life insurance products, which are complex. She said the report explained that in recognition of these issues, stakeholders coalesced around the idea of a short consumer-friendly overview that summarizes a policy’s key features, but that the same group of stakeholders could not reach consensus on the form of a summary or when it would be presented to consumers.

Ms. To said that New York does not believe that this is a good outcome for consumers. She said consumers should have clear, concise, accurate, and realistic descriptions and illustrations of the complex products they purchase, which is not a controversial position. She said there are obviously different ways of achieving that goal, but New York thinks that a uniform policy overview would have been an important step in the right direction. She mentioned that the chair report invites states to play their role as the laboratories for policy change and experiment with the disclosures and disclosure model. Ms. To said that New York intends to take up that invitation.

Mr. Birnbaum offered some comments in opposition to disbanding the Working Group and its charge. He said that it is critical to understand that illustrations are not only the primary tool used by producers to sell products, but also they determine the structure and complexity of products. He said this is known based on insurer behavior after Actuarial Guideline XLIX-A—The Application of the Life Illustrations Model Regulation to Policies With Index-Based Interest to Policies Sold on or After December 14, 2020 (AG 49) was changed and companies changed their products in order to maintain high accumulation values.

Mr. Birnbaum also questioned the assertion in the report that there was a lack of consensus. He said there was little representation on the Working Group in terms of the number of states. He said he cannot understand why there was a lack of consensus on the issue of providing consumers with a buyer’s guide and a better summary overview for shopping prior to purchase. He said the issue that seems to stymie consensus is that consumers should not get information necessary to make a purchase decision prior to the purchase.

He also said the assertion that the states could take the work product developed so far, when it is unadopted and opposed by industry, does not make sense. He said unfinished Working Group products is not a recipe for uniform and consistent high-level consumer protection across the states. He said it is a recipe for disparate treatment across the states. He said that with leadership and support from the Committee, the policy overview could be completed expeditiously.

Commissioner Mulready mentioned that the Life Insurance Online Guide (A) Working Group does not have a chair. He said that if this continues to be a priority for the Committee, there needs to be a chair, or possibly co-chairs, and he asked for volunteers. He suggested perhaps Jennifer Cook (NAIC) could put together some information regarding the Working Group that might be helpful in recruiting a new chair.

Ms. Cross made a motion, seconded by Commissioner Schmidt, to revise the 2022 proposed charges as recommended in the chair report by adopting the chair report as the final work product of the Life Insurance Illustration Issues (A) Working Group and disbanding the Working Group and its charge (see NAIC Proceedings – Fall 2021, Executive (EX) Committee and Plenary, Attachment Three). The motion passed, with Mr. Barlow voting no.

Having no further business, the Life Insurance and Annuities (A) Committee adjourned.
The Accelerated Underwriting (A) Working Group of the Life Insurance and Annuities (A) Committee met Dec. 6, 2021. The following Working Group members participated: Mark Afable, Chair (WI); Grace Arnold, Vice Chair (MN); Jason Lapham (CO); Cynthia Amann (MO); Chris Aufenthie (ND); Lori Barron (OH); Elizabeth Kelleher Dwyer (RI); and Lichiou Lee (WA).

1. Discussed the Latest Draft of the Accelerated Underwriting Educational Report

Commissioner Afable explained that the purpose of the meeting is to discuss the comments received on the latest draft accelerated underwriting educational report dated Nov. 8 (Attachment One-A). He said the Working Group exposed the report on Nov. 8 for a public comment period ending Dec. 3. He added that the report is available on the Working Group’s web page.

Commissioner Arnold explained that this is the first time the entire report has been exposed for comment; although, parts of the report have been released previously and revised based on comments received. She said four comment letters on the Nov. 8 draft report were submitted from Birny Birnbaum (Center for Economic Justice—CEJ); Brendan Bridgeland (Center for Insurance Research—CIR); Sue Bartholf (American Academy of Actuaries—Academy); and David Leifer and Gabrielle Griffith (American Council of Life Insurers—ACLI).

Commissioner Arnold offered each of the commenters the opportunity to summarize their comment letters.

a. Center for Economic Justice

Mr. Birnbaum said his comment letter is lengthy, but he mentioned four specific points he wanted to highlight. First, he said the definition of accelerated underwriting used in the draft report is problematic. He said the report misses the key distinction between traditional underwriting and accelerated underwriting; i.e., the acquisition and use of non-traditional, non-medical data. He said it is not the use of predictive models or machine learning (ML) that distinguishes traditional underwriting from accelerated underwriting. He said the new regulatory oversight steps needed to protect consumers from unfair discrimination and racial bias are obscured by conflating non-traditional and non-medical information with predictive modeling, which has long been used in traditional underwriting.

Second, Mr. Birnbaum said categorizing data into traditional data, non-traditional data, and Fair Credit Reporting Act (FCRA) data is problematic. He said the FCRA protects data that falls in the other two categories and is not an appropriate third category of data. He suggested that the FCRA should be discussed in the context of providing a template for some of the regulatory changes and new consumer protections needed for accelerated underwriting.

Mr. Birnbaum said another shortcoming in the report is that the NAIC’s artificial intelligence (AI) principles are simply repeated, and there is no discussion on how to implement them. He said the purpose of the AI principles was to serve as the foundation for working groups to develop the application-specific regulatory guidance needed to operationalize those principles. He said the paper should make recommendations for specific regulatory actions (e.g., new uses of existing regulatory authorities and tools and new regulatory authorities) needed to ensure that the AI principles are implemented for accelerated underwriting.

Mr. Birnbaum also said he strongly disagrees with the suggestion in the report that market conduct examinations are sufficient to ensure that accelerated underwriting algorithms meet all the stated regulatory goals. He said market conduct examinations are not the appropriate tool to establish the new guidance needed for insurers’ use of big data and AI. He said there are no standards for market conduct examiners, nor are there existing metrics or data sources available to market analysts to trigger the types of concerns raised in the paper regarding racial bias or problems with data or algorithms. He said the recommendations in the paper need to be expanded. He said they are subject to misinterpretation due to their brevity.

Mr. Birnbaum referenced seven specific statutory and regulatory recommendations in his comment letter that he would like the Working Group to consider including in the paper:
1. Require life insurers to routinely file a list of the types, sources, and uses of non-medical data for life insurance marketing, underwriting, claim settlement, and antifraud.

2. Require life insurers to routinely file and state insurance regulators to routinely review algorithms used for marketing, underwriting, claims settlement, and antifraud in the same manner that auto and home insurers are required to file credit-based insurance scoring models.

3. Require that all data sources used by insurers meet the consumer protection requirements of the FCRA, including consent, disclosure, challenge, and correction.

4. Develop specific guidance and requirements for insurer testing of data sources and algorithms for actuarial soundness and protected class bias. (Look to the approach used by the New York Department of Financial Services [NYDFS] in the cited Circular 1.)

5. Recommend the development of guidance for life insurer collection and treatment of applicant data on race, ethnicity, and other demographic characteristics to assist insurers and state insurance regulators in assessing proxy discrimination and disparate impact based on protected class characteristics.

6. Develop and update guidance for third parties providing pricing algorithms to insurers. Absent oversight of vendors providing these collective-pricing or collective-claims settlement algorithms, the third-party algorithm provider may be engaging in prohibited antitrust and anti-competitive activities.

7. Request that the Market Regulation and Consumer Affairs (D) Committee direct the Market Conduct Annual Statement Blanks (D) Working Group to complete its work on the accelerated underwriting revisions to the Life Insurance Market Conduct Annual Statement (MCAS) line independently of the work of the Accelerated Underwriting (A) Working Group.

Mr. Aufenthie asked Mr. Birnbaum to explain his understanding of the difference between non-medical data and non-traditional data. Mr. Birnbaum explained that non-medical data, like credit information, is used in traditional underwriting; but this same data, or variations of this data is broken down in a much more granular level to become non-traditional data. Another example is biometric screening at one end and facial recognition. Mr. Aufenthie asked Mr. Birnbaum whether he agrees with the statement that process is just as important as the data. Mr. Birnbaum replied that he mostly agrees with the statement. He said the use of new data sources necessarily requires the use of predictive models and AI. He said the new data is not used to predict mortality, like traditional data, but to achieve the same outcomes as traditional underwriting. He said this is why focusing on predictive modeling misses the sources and uses of new types of data. However, he said focusing on the sources and types of new data will necessarily lead to looking at the predictive models and ways companies are using this data.

b. Center for Insurance Research

Mr. Bridgeland said he supports Mr. Birnbaum’s comment letter and the detailed analysis he provided regarding the numerous consumer issues arising from the use of accelerated underwriting programs. Mr. Bridgeland explained that his comments focus on making editorial and language suggestions designed to provide a more balanced tone and support the purpose of the paper as an “educational report” rather than an “advocacy piece.” He said analysis of the benefits of accelerated underwriting to consumers is ongoing and some of his suggested revisions are intended to support this reality. Some of his other suggested revisions clarify that not all jurisdictions allow the use of behavioral data or credit scores, and other comments question the meaning of terms used like assessor data or voter information. Mr. Bridgeland also questioned the inclusion of possible data sources, like voice recognition to determine smoker status, as being untested scientifically, and the facial recognition, given the evidence of racial bias in its use that has come to light. Karl Ricanek (Lapetus Solutions Inc.) explained that facial recognition is the technology that was at issue in the film “Coded Bias,” but there is also facial analytics, which is different, and perhaps the report should make the distinction.

c. American Academy of Actuaries

Ms. Bartholf summarized the Academy’s comment letter. She said the Academy supports the general direction of the draft report, but it is concerned that some of the recommendations may be challenging to implement from a practical standpoint, and others may require more detail in order to ensure that they support the Working Group’s charge.
Ms. Bartholf also said the Academy observed that many of the presentations provided to the Working Group included consumer benefits of accelerated underwriting, but the paper tends to focus on the potential issues. She said the Academy believes the paper might be more balanced if it included more discussion of the favorable impacts to the consumer.

Ms. Bartholf also said the Working Group heard from a variety of stakeholders regarding different practices and with different perspectives, but not all of the information provided should be generalized across the life insurance industry. She said the Academy comment letter includes some specific suggested revisions throughout the paper to avoid overgeneralizations.

Ms. Bartholf said the Academy is concerned with the definition in the report. She said the definition conflates the general concept of accelerated underwriting and the use of data and predictive models in underwriting. She said data and predictive models are used in all forms of underwriting. She said the Academy recommends revisiting this definition and the use of these terms in the report.

Ms. Bartholf said the Academy questions the footnote reference to Actuarial Standard of Practice (ASOP) No. 12—Risk Classification (for All Practice Areas) in the bullet point “FCRA data may be used to predict mortality, but there may not be a reasonable explanation for that correlation.” She said the Academy does not see a relationship to ASOP No. 12, and it suggests quoting the applicable language or removing the reference.

d. American Council of Life Insurers

Mr. Leifer summarized the ACLI comment letter. He said the ACLI likes how the paper is developing and believes there is useful information contained in the current draft that should be helpful to state insurance regulators and stakeholders as accelerated underwriting evolves. He said the ACLI comment letter includes a few language tweaks that are self-explanatory. He said from a big picture perspective, the ACLI is concerned that there are some negative inferences about accelerated underwriting that have not happened. He said accelerated underwriting is an evolving area, but the report should be careful not to overgeneralize.

Mr. Leifer said the ACLI is concerned that in places throughout the paper, the types of data used in traditional underwriting versus accelerated underwriting are mischaracterized, as well as the types of data sources, combining those that are more typically or traditionally used with more novel ones that are not used with prevalence (if at all) by the life industry. He said the ACLI recommends emphasizing in the paper that while the technology is new, its risk for unfair discrimination should not be viewed differently than traditional underwriting. Peter Kochenburger (University of Connecticut School of Law) said it is essential to examine racial bias beyond traditional underwriting.

2. Discussed Next Steps

Commissioner Arnold explained that the ad hoc drafting group planned to meet and discuss the comments provided in detail. She said the plan is to revise the report and expose it for another public comment period prior to the 2022 Spring National Meeting.

Having no further business, the Accelerated Underwriting (A) Working Group adjourned.

Abbreviated Summary of Presentations
National Association of Insurance Commissioners (NAIC) Principles on Artificial Intelligence (AI)
Casualty Actuarial and Statistical (C) Task Force Regulatory Review of Predictive Models White Paper

Introduction

In 2019, the National Association of Insurance Commissioners (NAIC) established the Accelerated Underwriting (A) Working Group to consider the use of external data and data analytics in accelerated life insurance underwriting, including consideration of the ongoing work of the Life Actuarial (A) Task Force on the issue and, if appropriate, draft guidance for the states. In addition, the 2021 charges of the Special Committee on Race and Insurance direct the working group to include an assessment of and recommendations, as necessary, regarding the impact of accelerated underwriting on minority populations. A more detailed procedural background can be found in the appendix. This paper is the output of over a year's work by regulators to understand the current state of the industry and its use of accelerated underwriting. It summarizes what the Working Group has learned over the past year, contextualizes that learning and the topic of accelerated underwriting within other NAIC work and standard regulatory product evaluation processes, and makes recommendations for regulators and insurers when evaluating accelerated underwriting.

Accelerated underwriting in life insurance may provide potential benefits to both consumers and insurers, if applied in a fair and non-discriminatory manner. In order to fairly deliver the benefits of more convenient and cost-effective processes, regulators and insurers should be guided by current law related to fair trade practices and unfair discrimination. Much of the discussion in this paper is framed in these general terms. The Working Group believes the charge to specifically address the impact on minority populations is included in these terms, and we have provided examples to illustrate the impact on minority populations. Future work products of the Working Group may address the charge from the Special Committee on Race and Insurance in more detail.

What is Accelerated Underwriting?

Throughout this paper, we use the term accelerated underwriting in life insurance. We propose the following as a definition:

Accelerated underwriting in life insurance is a process to replace traditional underwriting and allow some applications to have certain medical requirements, e.g., paramedical exams and fluid collection, waived. The process generally uses predictive models or machine learning algorithms to analyze data pertaining to the applicant, which includes both traditional and non-traditional underwriting data provided by the applicant directly, as well as data obtained through external sources.

Predictive models examine data sets for patterns to predict and assign the risk category, e.g., a model developer enters data points (potentially hundreds of thousands), and the model finds patterns and identifies future predictions of risk and assigns an insured to a risk category.¹ Machine learning algorithms are a process or set of

¹ For a more detailed discussion of predictive models in property and casualty insurance, see the Casualty Actuarial and Statistical (C) Task Force Regulatory Review of Predictive Models White Paper, Adopted by the Property and Casualty Insurance (C) Committee on Dec. 8, 2020.
rules executed to solve an equation\(^2\), e.g., a life insurance underwriter uses a set of rules to place an individual insured in a particular risk category. The ‘learning’ part of machine learning means that those programs change how they process data over time, much as humans change how they process data by learning. Machine learning often falls into two groups: supervised or unsupervised. The difference between the two is whether the program is directed to analyze patterns or is self-automated.

Predictive models or machine learning trains a system to make judgments when exposed to data that is unfamiliar to serve as a substitute for human-centric decision making. These are both subcategories of artificial intelligence, which should not be confused with a static rule-based algorithm.

Life insurance underwriting is the process of determining eligibility and classifying applicants into risk categories to determine the appropriate rate to charge for transferring the financial risk associated with insuring the applicant. Traditional life insurance underwriting involves assessing the applicant’s physical health, then determining whether an applicant is eligible for coverage and the risk class to which that individual belongs. Accelerated underwriting relies on predictive models or machine learning algorithms to perform some of the tasks of an underwriter. The exact parameters of the application of accelerated underwriting vary by insurer.

Presentations made to the Working Group indicated that life insurers use accelerated underwriting in primarily two ways: 1) Accelerated underwriting is used to triage applicants, where unsuccessful applicants are re-routed to traditional underwriting, and successful ones continue through the accelerated underwriting process; or 2) Accelerated underwriting is used to rate applicants based on risk categories.

Most predictive or machine learning algorithms used in life insurance underwriting are in their second or third generation. The COVID-19 pandemic sped up the adoption of accelerated underwriting in the industry as both consumers and insurers looked for options to purchase and write policies that relied more on technology and involved less in-person contact. This has highlighted the need for ongoing monitoring of the machine learning algorithms—both their development and their uses in the marketplace.

Presentations made to the Working Group indicated that adverse underwriting decisions are sometimes reviewed by human underwriters. Companies presenting to the Working Group stated that the accelerated underwriting process is less cumbersome, costs less than traditional underwriting, improves the underwriting experience for consumers, shortens issue times, and increases policy acceptance rates.\(^3\)

---

**General Discussion of Issues and Recommendations**

Increasing automation of life insurance underwriting presents new regulatory challenges. Regulators must ensure that the process is **fair, transparent, and secure**. With regard to accelerated underwriting in life insurance:

---

\(^2\) The Big Data and Artificial Intelligence (EX) Working Group developed a survey to conduct analysis on private passenger automobile (PPA) insurers’ use and governance of big data, as used in an artificial intelligence (AI) and machine learning (ML) system. The survey is being conducted under the examination authority of Connecticut, Illinois, Iowa, Louisiana, Nevada, North Dakota, Pennsylvania, Rhode Island, and Wisconsin. This analysis will help inform the Working Group in completing its long-term goals of developing guidance and recommendations to update the existing regulatory framework for the use of big data and AI, including how to monitor and oversee the industry’s compliance with the NAIC’s AI principles. The survey work may be expanded to other lines of insurance as needed, such as life insurance and homeowners insurance. For the purposes of the survey only, AI/ML is defined as, “an automated process in which a system begins recognizing patterns without being specifically programmed to achieve a pre-determined result.” This is different from a standard algorithm that consists of a process or set of rules executed to solve an equation or problem in a pre-determined fashion, and evolving algorithms are considered a subset of AI/ML.

© 2021 National Association of Insurance Commissioners
insurance, this concern pertains to input data, the predictive model or machine learning algorithm, and the results of the process. One particular challenge is the potential for unfair discrimination. Due to the fact that accelerated underwriting relies on predictive models or machine learning algorithms, it may lead to unexpected or unfairly discriminatory outcomes even though the input data may not be overtly discriminatory. It is critical to test the conclusions up front, on the back end, as well as, randomly, to ensure the machine learning algorithm does not produce unfairly discriminatory ratings. Testing can also be important in determining if a machine learning algorithm is accurate across demographic categories.

Such scrutiny is especially important when behavioral data is utilized. Behavioral data may include gym membership, one’s profession, marital status, family size, grocery shopping habits, wearable technology, and credit attributes. Although medical data has a scientific linkage with mortality, behavioral data may lead to questionable conclusions as correlation may be confused with causation.

**Recommendations**

Consistent with the artificial intelligence principles approved by the NAIC in 2020⁴, the use of accelerated underwriting in life insurance should be fair and transparent. Companies should be accountable for operating in compliance with applicable laws, and the process and data used needs to be secure. To accomplish these objectives, regulators should dialogue with life insurers and third-party vendors to determine if consumer data is being used in problematic or unfair ways or generating unfair outcomes.

Insurers and other parties involved in accelerated underwriting in life insurance should:

- Take steps to ensure data inputs are transparent, accurate, reliable, and the data itself does not have any unfair bias.
- Ensure that the external data sources, algorithms or predictive models are based on sound actuarial principles with a valid explanation or rationale for any claimed correlation or causal connection.
- Ensure that the predictive models or machine learning algorithm within accelerated underwriting has an intended outcome and that outcome is being achieved.
- Ensure that the predictive models or machine learning algorithm achieve an outcome that is not unfairly discriminatory.
- Be able to provide the reason(s) for an adverse underwriting decision to the consumer and all information upon which the insurer based its adverse underwriting decision.
- Take steps to protect consumer privacy and ensure consumer data is secure.
- Have a mechanism in place to correct mistakes if found.
- Produce information upon request as part of regular rate and policy reviews or market conduct examinations.

**Input data**

---

⁴ See National Association of Insurance Commissioners (NAIC) Principles on Artificial Intelligence (AI) – Fair and Ethical a. AI actors should respect the rule of law throughout the AI life cycle. This includes, but is not limited to, insurance laws and regulations, such as those relating to trade practices, unfair discrimination, access to insurance, underwriting, privacy, consumer protection and eligibility practices, rate making standards, advertising decisions, claims practices, and solvency. b. Consistent with the risk-based foundation of insurance, AI actors should proactively engage in responsible stewardship of trustworthy AI in pursuit of beneficial outcomes for consumers and to avoid proxy discrimination against protected classes. AI systems should not be designed to harm or deceive people and should be implemented in a manner that avoids harmful or unintended consequences and corrects and remediates for such consequences when they occur.
Predictive models or machine learning algorithms within the accelerated underwriting process rely heavily on data and multiple variables. Examples of the variables used by some accelerated underwriting models include customer disclosures, prescription history, digital health records, credit attributes, medical information bureau data, public records, motor vehicle reports, smartphone apps, consumer activity wearables, claim acceleration tools, individual consumer risk development systems, purchasing history, behavior learned through cell phone usage, and social media because accelerated underwriting relies on predictive models or machine learning algorithms, it may lead to unexpected or unfairly discriminatory outcomes, even though the input data may be facially neutral.

### Traditional Data

Traditional data used in life insurance underwriting includes data collected through a traditional underwriting process. This data may include the following:

- Application data, e.g., medical records, prescription questions, vocation questions, financial profile
- Tele-interview
- Medical records
- Data from the Medical Information Bureau (MIB) \(^5\)
- Data from Motor Vehicle Records
- Prescription drug history
- Public records, e.g., criminal records, bankruptcy records, civil litigation, etc.
- Paramedical or medical exam, including EKG’s in some instances
- Fluids, e.g., blood, urine, swab/saliva test to determine tobacco usage
- Financial and tax information

Considerations for use of Traditional Data

- Traditional data has a long and established history in the life insurance industry. Carriers, producers, and consumers are generally familiar with the process.
- Traditional data has a history of usage by insurance carriers. Trained underwriters and producers have years of experience and often understand the process well.
- The relationship of the traditional data elements to the risk is well established and consumers understand how the elements impact their risk classification or premium charged.
- State statutes and case laws were developed based on the use of traditional data containing consumer protections created under the assumption that this was the type of data collected or reviewed during an underwriting process.
- Presentations made to the Working Group represented that time and costs associated with obtaining and reviewing traditional data are significant.

### FCRA Data

Data is subject to the federal Fair Credit Reporting Act (FCRA), which means applicants:

1. Should have a right to be told if this information is used to deny insurance, and
2. Have the ability to request the data a consumer reporting agency is providing to an insurer.

Considerations for use of FCRA Data

- FCRA data is readily available.
- FCRA data is updated regularly.

---

\(^5\) This data is subject to the Fair Credit Reporting Act (FCRA).
• FCRA data is already used in property/casualty lines of business.
• There is existing regulation and oversight by the Federal Trade Commission (FTC) and Consumer Financial Protection Bureau (CFPB).
• Not all FCRA data is useful/relevant to life insurance underwriting.
• If there is a dispute about findings, a consumer will have to obtain additional information and formally dispute these findings.
• FCRA data is extensive and accessing such data may result in access to non-usable credit attributes. In other words, significantly more data may be collected than is needed to determine risk.
• As additional rating factors are introduced via insurance scores or with specific data elements, unfair discrimination, including disparate impact, may be introduced or amplified.
• FCRA data may be used to predict mortality, but there may not be a reasonable explanation for that correlation.6

Nontraditional Data

Nontraditional data used in life insurance underwriting may include the following:
• Public records, e.g., assessor data, genealogy records, criminal records, court filings, voter information
• Property/casualty data from adjacent carrier(s)
• Marketing and social data, e.g., shopping habits, mortgage amount/lender, occupation and education, and social media, etc.
• Professional licenses
• Voice recognition used to determine smoking status
• Facial recognition
• Wearable devices

Considerations for use of Nontraditional Data

- Nontraditional data may be used to predict mortality, but there may not be a reasonable explanation for that correlation.
- As additional rating factors are introduced via insurance scores or with specific data elements, disparate impact across and between demographic groups may be introduced or amplified.
- Nontraditional data does not have the same consumer protections as FCRA and traditional data. For example:
  - There may not be a clear path for consumers to know how data affected their application and how inaccurate data may be corrected.
  - The type and purpose of data accessed are not required to be disclosed to the consumer.
  - There may be privacy concerns about the extent of the use of nontraditional data.

Recommendations

Existing regulations apply to accelerated underwriting programs in the same way as traditional underwriting programs. State Departments of Insurance (DOIs) have broad regulatory authority to make inquiries into the processes and procedures of life insurers in order to investigate potential unfair trade practices. Complaints about underwriting practices are opportunities for DOIs to review a life insurer’s use of accelerated underwriting and data collection methods. Additional DOI actions may include market conduct and on-site examinations as appropriate under existing authority.

---

6 See Actuarial Standards of Practice (ASOP) No. 12
Specifically, examiners may:
- Review the life insurer’s underwriting practices and underwriting guidelines during an examination or upon initial submission of the policy rates and forms and confirm the proper use of the data elements.
- Request that explanation provided to the consumer for any negative action taken by the life insurer adequately informs the consumer as to why a particular action was taken without the consumer having to make additional inquiries.
- Request information about source data regardless of whether the data or score is provided by a third party.

Form and rate reviewers may:
- Request that the life insurer provides information about how a predictive model or machine learning algorithm will be used.
- Consider requiring the filing of models used to analyze data.
- Consider questioning the extent to which data elements correlate to applicant risk.
- Request information about source data regardless of whether the data or score is provided by a third party.

Life insurers have a responsibility to understand the data they are using. To accomplish this, life insurers should conduct post-issue audits and data analysis. For example, analyses such as evaluating claims and lapse rates may be helpful. Life insurers and third-party vendors should ensure data inputs are accurate and reliable.

Life insurers and third-party vendors should ensure that the external data sources, algorithms, or predictive models are developed with sufficient internal controls and oversight and based on sound actuarial principles with a valid explanation or rationale for any claimed correlation and causal connection.

Data Privacy

Data privacy—a consumer’s ability to retain control over what data can be shared about them and with whom—is not a concern unique to accelerated underwriting in life insurance. Protecting consumer privacy is an issue across all lines of insurance and is the subject of the NAIC Privacy Protections (D) Working Group, formed in 2019 under the parent committee of Market Regulation and Consumer Affairs (D) Committee.

The Working Group’s charge is to review the state insurance privacy protections regarding the collection, use, and disclosure of information gathered in connection with insurance transactions, and make recommended changes, as needed, to certain NAIC models and other existing federal or state statutes. 7

---

7 The Working Group has focused its reviews on the Insurance Information and Privacy Protection Model Act #670, and the Privacy of Consumer Financial and Health Information Regulation Model Act #672 – both drafted in response to the enactment of GLBA, and #668 – the Insurance Data Security Model Act, enacted in 2019/20. With a great deal of research assistance from NAIC Legal Staff, the Working Group prepared a gap analysis – upon which it continues to work. The Working Group is also reviewing the consumer data privacy protections other than those already in these models, such as the numerous provisions contained in federal acts such as the Fair Credit Reporting Act (FCRA), the Gramm-Leach Bliley Act (GLBA), the Health Insurance Portability and Affordability Act (HIPAA), Electronic Health Records (EHR), etc. The Working Group is also analyzing the various provisions of recently enacted legislation, such as California’s Consumer Privacy Act (CCPA) and its Consumer Data Privacy Regulation (CCPR), Virginia’s and Colorado’s recently enacted Consumer Privacy Protection laws, certain provisions of the European General Data Protection Regulation (GDPR), the NAIC’s Record Retention Model Regulation and the NAIC’s Unfair Claims Practice Model Act (UCPA). There are a lot of jurisdictional issues that remain to be sorted through.
The primary focus of the Working Group is on the six consumer data privacy rights or types of consumer data privacy protections identified in the NAIC’s Member adopted *Strategy for Consumer Data Privacy Protections* policy statement. The secondary focus is on issues such as notice requirements and standards, disclosure of information collected, disclosure of shared information, requirements to disclose sources of information, requirements to disclose business purposes, and a requirement to disclose third party involvement. The current assignments for the Working Group are intended to create a framework for the policy statement: defining the parameters of these consumer rights by offering suggested definitions, examples of consumer risks, and what may not be protected in federal laws or not covered under NAIC Model laws.

The Privacy Protections Working Group’s policy statement will address the following consumer privacy rights:

1) Right to opt-out of data sharing
2) Right to opt-in of data sharing
3) Right to correct information
4) Right to delete information
5) Right to data portability
6) Right to restrict the use of data

The Accelerated Underwriting (A) Working Group will continue to watch the work of this group. If at any point issues unique to accelerated underwriting arise, we will endeavor to address them in a future work product.

---

8 For purposes of the Working Group’s paper, the use of the term “right” should be read as a basic protection, or, denoting access to making a request and not as a guarantee of having the requested right acted upon in the manner as the consumer requests.

9 For purposes of the Working Group’s paper there is a distinction between an individual’s data and information that results from the use of this data, e.g., the insurance score that results from the use of an algorithm.
Appendix A: Additional Procedural Background
At the 2019 NAIC Summer National Meeting, the Life Insurance and Annuities (A) Committee discussed a referral it had received from the Big Data (EX) Working Group. The Big Data Working Group had discussed the use of predictive models in accelerated underwriting in life insurance, instead of medical examinations and the collection of fluids. The Big Data Working Group agreed that the issue would be most appropriately addressed by the life insurance subject matter experts and voted to refer the issue of the use of external data and data analytics in accelerated underwriting in life insurance to the Life Insurance and Annuities (A) Committee (Committee).10

The Committee discussed the referral and acknowledged that there are a multitude of issues surrounding insurers’ use of data models and data analytics; issues that extend into many areas of insurance and overlap with the work of several groups at the NAIC. In addition to the Big Data (EX) Working Group, there is the Innovation and Technology (EX) Task Force, the Artificial Intelligence (EX) Working Group, the Casualty Actuarial and Statistical (C) Task Force, and the Privacy Protections (D) Working Group. The Life Actuarial Task Force was also looking at the use of accelerated underwriting in life insurance from an actuarial perspective, including looking at any potential impact on insurer solvency.

The Committee agreed that an effort to delve into accelerated underwriting in life insurance would need to be narrowly focused while taking into account the work of these other NAIC groups touching on the same topic.

Robert Muriel (IL) chaired the Working Group and Grace Arnold (MN) was the vice-chair. The following were Working Group members: Jason Lapham (CO); Russ Gibson (IA); Rich Piazza (LA); Cynthia Amann (MO); Rhonda Ahrens and Laura Arp (NE); Ross Hartley and Chris Aufenthie (ND); Lori Barron (OH); Elizabeth Kelleher Dwyer (RI); Lichiou Lee (WA); Mark Afable (WI). In January 2021, Commissioner Afable became chair of the Working Group and the rest of the membership remained the same.

The Working Group met for the first time on Oct 2, 2019, and developed a work plan to accomplish its charge. The work plan contemplated the Accelerated Underwriting (A) Working Group progressing through three phases with the goal of completing its charge by the 2020 Fall National Meeting. The first phase was focused on information-gathering. The second phase focused on identifying the issues and deciding on a work product, with the final phase devoted to drafting.

During the information gathering phase, the Working Group heard 15 presentations from varying stakeholders, including an academic (Professor Patrick Brockett11), insurance companies, consulting firms (Deloitte and Milliman), a consumer advocate (Birny Birnbaum—CEJ), the American Academy of Actuaries, lawyers from 2 Illinois law firms (Foley & Lardner and Edelson), a machine learning assurance company (Monitaur), and a data analytics company (Verisk). Several of the presentations were held in regulator-only meetings when requested by presenters in order to share proprietary and confidential company-specific information.

Regulators from the Working Group volunteered to participate in two ad hoc groups to tackle the second and third phases of its work plan: There was an ad hoc NAIC liaison group to ensure awareness of and coordination with any work, including guidelines or protocols, developed by other NAIC groups, past and present, that related to the Working Group. There was also an ad hoc drafting group that agreed to take the information gathered, identify issues, recommend and draft a work product for review and approval by the Working Group.

---

11 Gus Wortham Chair in Risk Management and Insurance at the University of Texas at Austin and Editor, North American Actuarial Journal.
In November 2020, the ad hoc drafting group shared with the Accelerated Underwriting (A) Working Group a proposed draft outline for an educational report exploring accelerated underwriting in life insurance to provide guidance to regulators, industry, and consumer advocates, and other stakeholders. In February 2021, the ad hoc groups merged.

Artificial Intelligence/Machine Learning (AI/ML)

AI/ML describes an automated process in which a system begins recognizing patterns without being specifically programmed to achieve a pre-determined result. This is different from a standard algorithm in that an algorithm is a process or set of rules executed to solve an equation or problem in a pre-determined fashion. Evolving algorithms are considered a subset of AI/ML.

Artificial Intelligence / Machine Learning Systems include:

- Systems that adapt and adjust to new data and experience without manual human intervention.
- Systems that arrive at results for which the outcomes and the stepwise approach toward the outcomes were not configured in advance by a human programmer.
- Systems that dynamically respond to conditions in the external environment without the specific nature of such responses being known in advance to the designers of the systems.
- Systems that utilize neural networks and/or deep-learning algorithms, such as supervised, semi-supervised, and unsupervised learning algorithms.
- Systems that engage in automatic speech recognition, facial recognition, image recognition, text recognition, natural language processing, generation of customer-specific recommendations, automated customer communications (e.g., chatbots with non-preprogrammed prompts), autonomous or semi-autonomous vehicle operation or data gathering, or any other approach that does not require either preprogramming or a manual human intervention in every instance of an action or decision.
- Systems that automatically generate adaptive responses based on interactions with a consumer or third party.
- Systems that determine which data elements to rely upon, in a non-preprogrammed fashion, among a variety of possible alternatives.

Artificial Intelligence / Machine Learning Systems are not:

- Static “scorecards” that deterministically map consumer or other risk characteristics to treatments or decisions. (However, an AI/ML system may use the output of such static “scorecards” as input data for the AI/ML system to consider.)
- Systems with solely preprogrammed decision rules (e.g., “If A, then B” applied invariably in all situations).
- Tables of point or factor assignments in rating plans.
- Static rate making and/or predictive modeling methodologies, including linear regression, generalized linear modeling (GLM), or generalized additive modeling (GAM). Purely informational static databases, such as databases used to obtain reference amounts for claim settlements, or static databases pertaining to consumer characteristics or experience, regardless of the amount of information in the database. However, if AI/ML is used to create a static predictive model, that AI/ML system is considered within the scope of this survey.
- Deterministic “phone trees” that navigate consumers through pre-recorded voice prompts.
• Any approach that an insurer could have realistically utilized in the year 2000 or prior.

**AI/ML Use Descriptions and/or Explanations**

**Underwriting: AI/ML Uses**

- **Automated Approval**: Approving an application without human intervention on that particular application.
- **Automated Denial**: Denying an application without human intervention on that particular application.
- **Underwriting Tier Determination**: Decisions regarding the criteria to use to establish specific named or numbered categories (called tiers) which utilize combinations of attributes that affect an insurer’s underwriting decision.
- **Company Placement**: Decisions regarding which of several affiliated companies within an insurance group will accept an individual risk.
- **Input into Non-Automated Approval Decision**: Providing data, analysis, or recommendations regarding a decision to approve an application in a situation where a human decision-maker still has the ability and responsibility to affirmatively consider this information and make a decision independently of the AI/ML system. In this situation, the AI/ML system cannot automatically approve the application, and protocols exist that ensure that each recommendation from the AI/ML system is actively reviewed and not adopted by default.
- **Input into Non-Automated Denial Decision**: Providing data, analysis, or recommendations regarding a decision to deny an application in a situation where a human decision-maker still has the ability and responsibility to affirmatively consider this information and make a decision independently of the AI/ML system. In this situation, the AI/ML system cannot automatically deny the application, and protocols exist that ensure that each recommendation from the AI/ML system is actively reviewed and not adopted by default.
- **Automate Processing Thru the Agency Channel**: Enabling agencies to receive certain information about applicants automatically without specifically requesting that information and/or to provide quotes to the applicants and/or recommend a decision regarding the application to the agent without being based on preprogrammed decision rules.
CHAIR REPORT
LIFE INSURANCE ILLUSTRATION ISSUES (A) WORKING GROUP

Per the request of the Life Insurance and Annuities (A) Committee, this report provides an overview of the Life Insurance Illustrations (A) Working Group’s (LIIWG) history and progress to date. The report also includes the Chair’s recommendations regarding the future direction of the Working Group.

In 2016, concerns were raised at the NAIC regarding consumer understanding of complex life insurance products such as indexed universal life products. The A Committee decided to address these concerns by forming a Working Group to explore how consumer understanding for all life insurance products could be improved. The Working Group was given a broad charge over all life products and the charge was not limited to indexed universal life products.

The LIIWG is charged to:

- Explore how the narrative summary required by Section 7B of the Life Insurance Illustrations Model Regulation (#582) and the policy summary required by Section 5A(2) of the Life Insurance Disclosure Model Regulation (#580) can be enhanced to promote consumer readability and understandability of these life insurance policy summaries, including how they are designed, formatted and accessed by consumers.

Current Summary Disclosure Requirements in NAIC Model Regulations

Before discussing the working group, I believe it is helpful to understand the current requirements in the NAIC model regulations that are part of the working group’s charge. The model regulations take a two-track approach to consumer disclosure requirements. Policies are divided into those identified to be marketed with an illustration and those identified to be marketed without an illustration.

No policy is required to be illustrated, however, those policies that are illustrated must follow the requirements of the Life Insurance Illustrations Model Regulation (#582) (Illustrations Model). Specifically relevant to the working group’s charge, illustrations must contain a “narrative summary” that is a “brief description of the policy being illustrated.” This description must include things such as the premium outlay, a description of any policy features shown in the illustration, and definitions of key terms used in the illustration.

For policies that are not illustrated, the Life Insurance Disclosure Model Regulation (#580) (Disclosure Model) requires that the policyholder be provided with a “policy summary” which is defined “as a written statement describing the elements of the policy.” The information that must be provided in a policy summary includes the annual premium for the basic policy and each optional rider, the amount payable upon death, the total guaranteed cash surrender value and information regarding policy loan interest rates.

Under the two model regulations, a policyholder will always receive some form of summary disclosure, either in the form of the narrative summary accompanying an illustration or a policy summary for the unillustrated products. However, while there is some overlap, the information required for each summary is not exactly the same.

History of Working Group Activity

To complete its charge, the Working Group first decided that it needed to review current narrative summaries and policy summaries to identify any issues that could be addressed to improve consumer understanding. The Working Group requested, and the American Council of Life Insurers (ACLI) compiled, sample narrative summaries and policy summaries for the three main types of life insurance products: term, whole and universal life. The Working Group established an ad hoc subgroup consisting of regulators, life insurers and consumer representatives to review these summaries to identify areas that could be improved.

During this review, several issues were identified as hampering the usefulness of narrative and policy summaries in promoting consumer understanding of life products. (See, for example, NAIC Proceedings – Summer 2016, Life Insurance and Annuities (A) Committee, Attachment Five and NAIC Proceedings – Spring 2017, Life Insurance and Annuities (A) Committee,
Attachment Nine-A). One overarching issue identified was that the narrative and policy summaries were often not designed as direct consumer disclosures. They were designed to be explained to the consumer by a financial professional and serve as a tool for the key features of the policy to be identified by a financial professional. To make these documents more consumer friendly would, to a certain extent, require a change in the audience they were written for.

The group also identified three specific issues with the summaries themselves. First, it was determined that current summary disclosures were quite lengthy which impeded consumer understanding. For example, summary disclosures for even simple term policies often ran to ten or more pages. Given the length of these summaries, it could be difficult for a consumer to locate key features of the policy.

Second, the summaries showed variations in layout and the accessibility of the language used. As can be expected, the samples varied in quality between different insurers and some samples were more consumer-friendly then others. Some summaries also contained puffery or marketing language that were not necessarily directly related to the purpose of the disclosure.

Third, the structure of the model regulations drove some of the issues with the summary’s length and made them less consumer friendly. For example, the narrative summary requires that key terms in the illustration be described and defined. These definitions would often run several pages. While these definitions are important to understanding the illustration, they run counter to the narrative summaries purpose to provide a “brief” description of the policy. Similarly, the policy summary requires a five-year illustration of the policy’s premium and benefit patterns that serves as a kind of “mini-illustration.” Thus, both the narrative summary and policy summary work to cross purposes to some degree as they are required to be both brief summaries of the policy and to provide comprehensive information.

While the ad hoc group was reviewing the sample documents, a consensus emerged between the life insurers, regulators and consumer representatives as to how the Working Group could meet its charge. There was agreement that a one or two-page summary disclosure or “Policy Overview” should be created that only listed a policy’s key features. This document would be created specifically for consumers while leaving the current structure of the narrative and policy summaries in place. The consensus was that current summaries served important purposes such as defining key terms and providing the “mini-illustration,” but that the key features of the policy should be listed in a more accessible way.

This context is important to address one of the comments made by the ACLI. Specifically, that the Working Group did not identify any specific issues or problems with current summaries. As stated, the ad hoc group did in fact identify specific issues that hindered consumer understanding of life insurance products. More importantly, a consensus developed that a Policy Overview document would be helpful to consumers and meet the working group’s charges. With agreement from all interested parties, including the life insurer representatives, on exploring a possible solution, there was little value in spending a great deal of time indexing issues beyond those already noted in the meeting minutes.

Development of a Policy Overview Document

To develop the Policy Overview, the Working Group started by identifying the key elements that consumers should be aware of in purchasing a life insurance policy. To complete this task, the Working Group started with simple term products before identifying key features in whole and universal life products. The key elements identified by the Working Group include basic features of the policy such as the premium, benefit amount, loan and investment features, riders and other benefits. It also included elements that would be unique to each type of life product such as the term of the policy or a description of the cost of insurance charges for universal products.

After identifying the key elements, the Working Group began developing revisions to the Disclosure Model to create the legal structure for the adoption of the Policy Overview. Changes were made to the Disclosure Model to require a short, consumer-friendly disclosure containing the required key elements that would be provided in the same form for illustrated and non-illustrated products. While there was general agreement on the key elements to be included in the Policy Overview, there were a couple of issues where there was not consensus that I will highlight.

The first area of disagreement was whether the Policy Overview should have a required format or whether insurers should be given latitude as to how they developed the Policy Overview. Consumer representatives argued that the Policy Overview should

---

1 The working group considered adopting this policy overview as a cover page to the narrative summary of an illustration or to the policy summary for the non-illustrated products. As discussions progressed a consensus emerged that the policy overview should be a separate document that was provided to the consumer in the same form for illustrated and non-illustrated products.
be delivered on a required template so that consumers could compare products from different insurers. The life insurance industry supported more flexibility arguing that life insurers needed to have the ability to customize the Policy Overview to their specific products. The Working Group determined that a template would not be required but that the Working Group would develop sample Policy Overviews that insurers could use as an example in creating the Policy Overview.

The second issue of disagreement involved the delivery requirement for the Policy Overview. The current delivery requirement in the Disclosure Model requires that the buyer’s guide and policy summary be delivered “prior to accepting the applicant’s initial premium” or if the “policy for which application is made contains an unconditional refund provision” delivery may be made with the policy. Some regulators and the life insurance industry supported keeping the current delivery requirement. However, other regulators and consumer representatives argued that the Policy Overview should be required to be delivered at the time of application. They argued that the Policy Overview would be of most use to consumers prior to purchase and that the delivery of the Policy Overview at application would not be burdensome due to changes in technology that made delivery easier.

Because there was no consensus from the Working Group on the delivery requirement, the Working Group requested that the Life Insurance and Annuities (A) Committee provide direction on what the delivery requirement should be. The Chair of the Committee at the time instructed the Working Group to draft the model law changes in the alternative so that the Committee could decide the issue of timing of delivery.

Attached to this report are two version of the amendments to the Disclosure Model. Attachment A contains the amendments to the model law to adopt a Policy Overview without changing the delivery requirement, i.e., delivery at the time of policy delivery if there is a free look period. Attachment B contains the amendments to the model law to adopt the Policy Overview with language that requires that the Policy Overview be delivered at application. The delivery language included was modified from the Annuity Disclosure Model Law (#245). That language reads:

Where the application for a life insurance policy is taken at a face-to-face meeting, the applicant at or before the time of application shall be given the Policy Overview. Where the application for a life insurance policy is taken by means other than in a face-to-face meeting, the applicant shall be sent the Policy Overview not later than five business days after the receipt of the application.

After completing work on the revisions to the Model Regulation, the Working Group turned to developing the sample Policy Overview. The Working Group looked for existing disclosure documents that might serve as a starting point for the development of the Policy Overview. It was noted that in 2007 the ACLI developed a drafting guide and focus-group tested templates for insurers to develop annuity disclosures “in a truly consumer-friendly manner.” The Working Group asked the ACLI and its members if they would be willing to develop similar templates for the proposed Policy Overview. The ACLI declined the working group’s invitation to do so. Nevertheless, the Working Group used these annuity disclosure templates as the base to build the Policy Overview samples.

In early 2021, the Working Group completed its development of sample Policy Overviews for term products after incorporating comments from the life insurance industry, consumer representatives, and regulators. Attachment C to this report is the sample Policy Overview with the current delivery requirements. Attachment D contains the sample Policy Overview for a delivery requirement at application. The Working Group decided to present the attached draft model law revisions and sample Policy Overviews to the Life Insurance and Annuities (A) Committee for consideration and for further guidance. The Committee issued a request for comment on these drafts from interested parties on August 11, 2021.

**Chair’s Recommendations**

---

2 It should also be noted that there are some minor differences in the key data elements for the alternative revisions to account for the different delivery requirements. For example, the revisions for delivery at application require an estimated premium versus the actual premium since the actual premium would not be known prior to underwriting.

3 While work on the sample templates was ongoing, in 2020 ACLI informed the A committee that it opposed the enactment of a policy overview document arguing that it would not enhance consumer understanding of life insurance products. ACLI also declined to provide comments on the sample policy overviews to be delivered at application because of their opposition to changing the delivery requirement.
After review of the comments received from interested parties and discussions with members of the Committee, the following are my recommendations as Chair for the future of the Working Group. These recommendations are based solely on my opinion and have not been adopted by the Working Group.

The comments received by the Life Insurance and Annuities (A) Committee show that there is not a consensus regarding whether the proposed Policy Overview will aid consumers in understanding life products. ACLI, Finseca, the National Association of Insurance and Financial Advisors (NAIFA), the National Alliance of Life Companies (NALC) and the states of Ohio and Utah all expressed opposition to the adoption of a Policy Overview requirement. While the comments differed to various degrees, they all expressed concern that an additional consumer disclosure will only serve to further confuse consumers or provide little additional value.

Consumer Representatives Brenda Cude and Birny Birnbaum as well as the state of New York expressed support for the development of the Policy Overview. They argue that the Policy Overview would be helpful to consumers and serve to increase consumer understanding of life products.

Both sides of the issue make valid points regarding the proposed Policy Overview and it is not possible to determine whether the Policy Overview will aid consumers without it being used in the marketplace. This new disclosure may aid consumers by providing a simple way to access key information or it may create confusion or simply be redundant. At this point, it is simply a matter of opinion whether or not this document would improve consumer understanding. This uncertainty, in my opinion, argues against the adoption of NAIC model law revisions to require a Policy Overview.

First, one of the NAIC’s criteria for adoption of a model law is that the issue calls for a minimum national standard. There is currently a minimum national standard for consumer disclosures in the Illustrations and Disclosure models. To adopt significant changes to this national standard and encourage states to adopt them, there should be relative certainty and agreement that the revisions will have the desired effect. As noted, it is untested and a matter of disagreement whether or not the Policy Overview will aid consumers.

In many instances, NAIC model laws are based on regulations or laws that have been enacted by some states or other regulators. To my knowledge, no state has adopted a summary disclosure requirement such as the one that is being contemplated by the working group. This is an area where the state’s strengths as laboratories for policy change should be utilized and where a top-down approach seems inappropriate. To be clear, the Policy Overview that was developed may be an effective way to aid consumer understanding of life products but until this idea is tried by some states it is not clear this should be adopted as a best practice and national standard by the NAIC.

Second, based on the comment letters and my discussions with commissioners, I question whether the proposed model meets the NAIC’s requirement for the approval of a model law. Adoption of a model law requires approval by two-thirds of the NAIC members. Voting to approve indicates that the member will support adoption of the model in their state as a priority. Three states submitted comments on the adoption of a Policy Overview, two opposed the changes and one state supported it. Among the states that have not commented, I have not received an indication that the adoption of a summary disclosure for life insurance is currently a top priority of their state.

For these reasons, it is my recommendation that the Life Insurance and Annuities (A) Committee not adopt the Policy Overview revisions as a model law change. For states that are interested in pursuing regulation in this area, the revisions that were developed by the Working Group are attached to this report and can be used as a starting point for individual states that wish to enact a Policy Overview or similar summary disclosure requirement. If summary disclosures of life insurance products prove effective in educating consumers, the NAIC can always revisit whether such requirements should be adopted as a national standard with the benefit of the experience of those states.

In summary, I recommend that the Committee consider adopting this report as the final report of the Working Group and the Working Group be disbanded. By adopting this report, the revisions the Working Group has developed will be available for individual states to consider when exploring the possibility of enacting a summary disclosure requirement.

Finally, I would like to thank all the members of the Working Group for their time and commitment and their insightful comments on how we could improve consumer understanding of life insurance products. It is my hope that the life insurance industry can use some of these insights in drafting more consumer-friendly disclosures.
LIFE INSURANCE DISCLOSURE MODEL REGULATION

Section 1. Authority

This rule is adopted and promulgated by the commissioner of insurance pursuant to [insert state equivalent to Section 4A(1) of the Unfair Trade Practices Act] of the Insurance Code.

Drafting Note: Insert title of chief insurance regulatory official wherever the term “commissioner” appears.

Section 2. Purpose

A. The purpose of this regulation is to require insurers to deliver to purchasers of life insurance information that will improve the buyer’s ability to select the most appropriate plan of life insurance for the buyer’s needs and improve the buyer’s understanding of the basic features of the policy that has been purchased or is under consideration.

B. This regulation does not prohibit the use of additional material that is not a violation of this regulation or any other [state] statute or regulation.

Section 3. Scope

A. Except for the exemptions specified in Section 3B, this regulation shall apply to any solicitation, negotiation or procurement of life insurance occurring within this state. Section 5B shall apply only to an existing nonexempt policy held by a policyowner residing in this state. This regulation shall apply to any issuer of life insurance contracts including fraternal benefit societies.

B. This regulation shall not apply to:

(1) Individual and group annuity contracts;

(2) Credit life insurance;

(3) Group life insurance (except for disclosures relating to preneed funeral contracts or prearrangements; these disclosure requirements shall extend to the issuance or delivery of certificates as well as to the master policy);
(4) Life insurance policies issued in connection with pension and welfare plans as defined by and which are subject to the federal Employee Retirement Income Security Act of 1974 (ERISA), 29 U.S.C. Section 1001 et seq. as amended; or

(5) Variable life insurance under which the amount or duration of the life insurance varies according to the investment experience of a separate account.

Section 4. Definitions

For the purposes of this regulation, the following definitions shall apply:

A. “Buyer’s Guide” means the current Life Insurance Buyer’s Guide adopted by the National Association of Insurance Commissioners (NAIC) or language approved by the commissioner.

B. “Current scale of nonguaranteed elements” means a formula or other mechanism that produces values for an illustration as if there is no change in the basis of those values after the time of illustration.

C. “Illustration” means a presentation or depiction that includes non-guaranteed elements of a policy of life insurance over a period of years that is subject to [insert state equivalent to Life Insurance Illustrations Model Regulation (#582)].

D. “Nonguaranteed elements” means the premiums, credited interest rates (including any bonus), benefits, values, non-interest based credits, charges or elements of formulas used to determine any of these, that are subject to company discretion and are not guaranteed at issue. An element is considered non-guaranteed if any of the underlying non-guaranteed elements are used in its calculation.

E. “Policy data” means a display or schedule of numerical values, both guaranteed and nonguaranteed for each policy year or a series of designated policy years of the following information: illustrated annual, other periodic, and terminal dividends; premiums; death benefits; cash surrender values and endowment benefits.

F. “Policy Overview” means a brief summary of the policy prepared in accordance with this regulation and an example may be found in Appendix A.

G. “Guaranteed Premium and Benefit Patterns Summary” is a separate document that accompanies the Policy Overview where the insurer has identified the policy as one that will not be marketed with an illustration.

H. “Preneed funeral contract or prearrangement” means an agreement by or for an individual before that individual’s death relating to the purchase or provision of specific funeral or cemetery merchandise or services.

Section 5. Duties of Insurers

A. Requirements Applicable Generally

(1) The insurer shall provide a Buyer’s Guide to all prospective purchasers, prior to accepting the applicant’s initial premium or premium deposit. However, if the policy for which application is made contains an unconditional refund provision of at least ten (10) days, the Buyer’s Guide may be delivered with the policy or prior to delivery of the policy.

(2) The insurer shall provide a Policy Overview to all prospective purchasers. Delivery of the Policy Overview shall be consistent with the time for delivery of the Buyer’s Guide as specified in Paragraph (1). Insurers should endeavor to limit the length of the Policy Overview to the minimum length necessary to reasonably inform consumers of the information required to be included in the Policy Overview. The Policy Overview is not required to be in a specific format beyond the requirements of this Section. The Policy Overview must be prepared in language and in a format that would be understood by a typical person within the segment of the public to which the policy
is directed. A sample Policy Overview that meets the requirements of this Section is provided in Appendix A. A Policy Overview shall include the following topics with appropriate headings:

(a) An introductory section containing the following language: “This document lists this insurance policy’s key features and benefits. You can get a similar summary of key policy features from other insurance companies to help you compare similar policies. If you have questions about life insurance generally or other types of policies, the National Association of Insurance Commissioners has useful information at https://content.naic.org/consumer/life-insurance.htm/. If you have questions about this particular life insurance policy, ask the agent, broker, advisor, or a company representative. If you have questions about company or agent licensing, contact [insert reference to state department of insurance].”

(b) “Company [and Agent Information]” which shall contain the name, address, email address and phone contact information of the insurance company and insurance agent, if an agent is involved.

(c) “Information We Use to Determine Your Premium” which shall include the following information about the policy owner and insured, as applicable:

(i) A brief description of the data elements that the insurer collects from the applicant and other sources that are used to determine an applicant’s premium;

(ii) A brief description of the policy features that will affect the amount of premium such as the amount of the death benefit and optional riders;

(iii) How risk class is assessed to generate the quote.

(d) “Cost Information” which shall include the following information, as applicable:

(i) An explanation of how much the life insurance policy costs or is estimated to cost at the time of application, including initial premium or the estimated premium quoted at the time of application and an explanation of differences in costs based on premium mode selected;

(ii) A summary of the available options for funding the policy and the minimum funding needed to maintain the policy in force;

(iii) An explanation of whether the premium can vary and, if so, how the premium will be determined;

(iv) An explanation of any costs associated with cancelling the policy (i.e. surrender charges) and, if yes, the period of time the charges apply or, if no, whether any money is eligible to be returned;

(v) If applicable, a narrative description of fees other than premium;

(vi) If applicable, a narrative explanation of the cost of insurance fee, how the cost of insurance fee changes with age, a narrative explanation of the net amount of risk to which the fee will apply, and the maximum allowable cost of insurance fee allowed under the policy.

(e) “Policy Information” which shall include the following information, as applicable:

(i) Policy type (Including single or joint policy);

(ii) Policy name;
(iii) State of issue;  
(iv) An indication of whether the policy is term or permanent life insurance, and if it is term insurance, the length of the initial term, including whether and how the term may be extended;  
(v) If the Policy Overview is provided prior to underwriting, a general description of what the policyholder needs to do to obtain the policy;  
(vi) If the Policy Overview is provided prior to underwriting, the following statement: “In the course of considering an insured’s application, an insurer may request or collect health information about the insured in variety of ways.” The statement shall indicate whether a physical examination or questionnaire will be required;  
(vii) Death benefit or the death benefit as applied for;  
(viii) A yes or no indication of whether the death benefit can change, and if yes, a summary of the reasons and timing for a change in the death benefit;  
(ix) Policy loan options and applicable charges.  

(f) “Additional Policy Benefits” which shall include the following information, as applicable:  
(i) A yes or no indication of whether a waiver of premium or deductions option is available, and if yes, a summary of the options available;  
(ii) A yes or no indication of whether policy conversion options exist and, if yes, a brief summary of conversion options available;  
(iii) If the policy has a term, a yes or no indication of whether there are o  
(iv) A yes or no indication of the availability of optional riders and, if yes, a summary of how the insured may obtain additional information regarding the availability and costs of optional riders;  
(vi) A yes or no indication of any living benefit option(s), and if yes, a summary of the option(s);  
(vii) A yes or no indication of whether the policy can accumulate cash value, and if yes, a summary of the benefit;  
(viii) A yes or no indication of whether there are guaranteed interest rates on fixed accounts and, if yes, the amount of the guaranteed interest rate;  
(ix) A yes or no indication of whether there are indexed account options and if yes, a summary of how the insured may obtain additional information regarding indexed account options.  

(3) The insurer shall provide a Guaranteed Premium and Benefits Patterns Summary to prospective purchasers where the insurer identified the policy form as one that will not be marketed with an illustration. Delivery of the Guaranteed Premium and Benefits Patterns Summary shall be consistent with the time for delivery of the Buyer’s Guide as specified in Paragraph (1). The Guaranteed Premium and Benefits Pattern Summary shall show guarantees only and include all required information set out in a manner that does not minimize or render any portion of the summary.
obscure. Any amounts that remain level for two (2) or more years of the policy may be represented by a single number if it is clearly indicated what amounts are applicable for each policy year. Amounts shall be listed in total, not on a per thousand or per unit basis. If more than one insured is covered under one policy or rider, death benefits shall be displayed separately for each insured or for each class of insureds if death benefits do not differ within the class. Zero amounts shall be displayed as a blank space. The following amounts, where applicable, for the first five (5) policy years and representative policy years thereafter sufficient to clearly illustrate the premium and benefit patterns; including at least one age from sixty (60) through sixty-five (65) and policy maturity:

(a) The annual premium for the basic policy;
(b) The annual premium for each optional rider;
(c) The amount payable upon death at the beginning of the policy year regardless of the cause of death, other than suicide or other specifically enumerated exclusions, that is provided by the basic policy and each optional rider; with benefits provided under the basic policy and each rider shown separately;
(d) The total guaranteed cash surrender values at the end of the year with values shown separately for the basic policy and each rider;
(e) Any endowment amounts payable under the policy that are not included under cash surrender values above;
(f) The effective policy loan annual percentage interest rate, if the policy contains this provision, specifying whether this rate is applied in advance or in arrears. If the policy loan interest rate is adjustable, the Guaranteed Premium and Benefits Patterns Summary shall also indicate that the annual percentage rate will be determined by the company in accordance with the provisions of the policy and the applicable law.

B. Requirements Applicable to Existing Policies.

(1) Upon request by the policyowner, the insurer shall furnish either policy data or an in force illustration as follows:

(a) For policies issued prior to the effective date of [insert state equivalent to Life Insurance Illustrations Model Regulation], the insurer shall furnish policy data, or, at its option, an in force illustration meeting the requirements of [insert state equivalent to Life Insurance Illustrations Model Regulation].

(b) For policies issued after the effective date of the illustration regulation that were declared not to be used with an illustration, the insurer shall furnish policy data, limited to guaranteed values, if it has chosen not to furnish an in force illustration meeting the requirements of the regulation.

(c) If the policy was issued after the effective date of the illustration regulation and declared to be used with an illustration, an in force illustration shall be provided.

(d) Unless otherwise requested, the policy data shall be provided for twenty (20) consecutive years beginning with the previous policy anniversary. The statement of policy data shall include nonguaranteed elements according to the current scale, the amount of outstanding policy loans, and the current policy loan interest rate. Policy values shown shall be based on the current application of nonguaranteed elements in effect at the time of the request. The insurer may charge a reasonable fee, not to exceed $[insert amount], for the preparation of the statement.
(2) If a life insurance company changes its method of determining scales of nonguaranteed elements on existing policies; it shall, no later than when the first payment is made on the new basis, advise each affected policy owner residing in this state of this change and of its implication on affected policies. This requirement shall not apply to policies for which the amount payable upon death under the basic policy as of the date when advice would otherwise be required does not exceed $5,000.

(3) If the insurer makes a material revision in the terms and conditions under which it will limit its right to change any nonguaranteed factor; it shall, no later than the first policy anniversary following the revision, advise each affected policy owner residing in this state.

Section 6. Preneed Funeral Contracts or Prearrangements

The following information shall be adequately disclosed at the time an application is made, prior to accepting the applicant’s initial premium or deposit; for a preneed funeral contract or prearrangement that is funded or to be funded by a life insurance policy:

A. The fact that a life insurance policy is involved or being used to fund a prearrangement;
B. The nature of the relationship among the soliciting agent or agents, the provider of the funeral or cemetery merchandise or services, the administrator and any other person;
C. The relationship of the life insurance policy to the funding of the prearrangement and the nature and existence of any guarantees relating to the prearrangement;
D. The impact on the prearrangement:
   (1) Of any changes in the life insurance policy including but not limited to, changes in the assignment, beneficiary designation or use of the proceeds;
   (2) Of any penalties to be incurred by the policyholder as a result of failure to make premium payments;
   (3) Of any penalties to be incurred or monies to be received as a result of cancellation or surrender of the life insurance policy;
E. A list of the merchandise and services which are applied or contracted for in the prearrangement and all relevant information concerning the price of the funeral services, including an indication that the purchase price is either guaranteed at the time of purchase or to be determined at the time of need;
F. All relevant information concerning what occurs and whether any entitlements or obligations arise if there is a difference between the proceeds of the life insurance policy and the amount actually needed to fund the prearrangement;
G. Any penalties or restrictions, including but not limited to geographic restrictions or the inability of the provider to perform, on the delivery of merchandise, services or the prearrangement guarantee; and

Drafting Note: States should consider whether the insurance regulator has the authority to enforce the provisions of Subsections E, F and G.

H. If so, the fact that a sales commission or other form of compensation is being paid and the identity of the individuals or entities to whom it is paid.

Section 7. General Rules

A. Each insurer shall maintain, at its home office or principal office, a complete file containing one copy of each document authorized and used by the insurer pursuant to this regulation. The file shall contain one copy of
each authorized form for a period of three (3) years following the date of its last authorized use unless otherwise provided by this regulation.

B. An agent shall inform the prospective purchaser, prior to commencing a life insurance sales presentation, that he or she is acting as a life insurance agent and inform the prospective purchaser of the full name of the insurance company which the agent is representing to the buyer. In sales situations in which an agent is not involved, the insurer shall identify its full name.

C. An insurance producer shall not use terms such as “financial planner,” “investment advisor,” “financial consultant,” or “financial counseling” in such a way as to imply that he or she is primarily engaged in an advisory business in which compensation is unrelated to sales unless that is actually the case. This provision is not intended to preclude persons who hold some form of formal recognized financial planning or consultant designation from using this designation even when they are only selling insurance. This provision also is not intended to preclude persons who are members of a recognized trade or professional association having such terms as part of its name from citing membership, providing that a person citing membership, if authorized only to sell insurance products, shall disclose that fact. This provision does not permit persons to charge an additional fee for services that are customarily associated with the solicitation, negotiation or servicing of policies.

D. Any reference to nonguaranteed elements shall include a statement that the item is not guaranteed and is based on the company’s current scale of nonguaranteed elements (use appropriate special term such as “current dividend” or “current rate” scale.) If a nonguaranteed element would be reduced by the existence of a policy loan, a statement to that effect shall be included in any reference to nonguaranteed elements. A presentation or depiction of a policy issued after the effective date of the [insert citation to state equivalent to Life Insurance Illustrations Model Regulation] that includes nonguaranteed elements over a period of years shall be governed by that regulation.

Section 8. Failure to Comply

Failure of an insurer to provide or deliver a Buyer’s Guide, an in force illustration, a policy summary or policy data as provided in Section 5 shall constitute an omission that misrepresents the benefits, advantages, conditions or terms of an insurance policy.

Section 9. Separability

If any provisions of this rule be held invalid, the remainder shall not be affected.

Section 10. Effective Date

This rule shall become effective [insert a date at least 6 months following adoption by the regulatory authority].
LIFE INSURANCE DISCLOSURE MODEL REGULATION

Table of Contents
Section 1. Authority
Section 2. Purpose
Section 3. Scope
Section 4. Definitions
Section 5. Duties of Insurers
Section 6. Preneed Funeral Contracts or Prearrangements
Section 7. General Rules
Section 8. Failure to Comply
Section 9. Separability
Section 10. Effective Date

Section 1. Authority

This rule is adopted and promulgated by the commissioner of insurance pursuant to [insert state equivalent to Section 4A(1) of the Unfair Trade Practices Act] of the Insurance Code.

Drafting Note: Insert title of chief insurance regulatory official wherever the term “commissioner” appears.

Section 2. Purpose

A. The purpose of this regulation is to require insurers to deliver to purchasers of life insurance information that will improve the buyer’s ability to select the most appropriate plan of life insurance for the buyer’s needs and improve the buyer’s understanding of the basic features of the policy that has been purchased or is under consideration.

B. This regulation does not prohibit the use of additional material that is not a violation of this regulation or any other [state] statute or regulation.

Section 3. Scope

A. Except for the exemptions specified in Section 3B, this regulation shall apply to any solicitation, negotiation or procurement of life insurance occurring within this state. Section 3B shall apply only to an existing nonexempt policy held by a policyowner residing in this state. This regulation shall apply to any issuer of life insurance contracts including fraternal benefit societies.

B. This regulation shall not apply to:

(1) Individual and group annuity contracts;
(2) Credit life insurance;
(3) Group life insurance (except for disclosures relating to preneed funeral contracts or prearrangements; these disclosure requirements shall extend to the issuance or delivery of certificates as well as to the master policy);
Life Insurance and Annuities (A) Committee
12/15/21

(4) Life insurance policies issued in connection with pension and welfare plans as defined by and which are subject to the federal Employee Retirement Income Security Act of 1974 (ERISA), 29 U.S.C. Section 1001 et seq. as amended; or

(5) Variable life insurance under which the amount or duration of the life insurance varies according to the investment experience of a separate account.

Section 4. Definitions

For the purposes of this regulation, the following definitions shall apply:

A. “Buyer’s Guide” means the current Life Insurance Buyer’s Guide adopted by the National Association of Insurance Commissioners (NAIC) or language approved by the commissioner.

B. “Current scale of nonguaranteed elements” means a formula or other mechanism that produces values for an illustration as if there is no change in the basis of those values after the time of illustration.

C. “Illustration” means a presentation or depiction that includes non-guaranteed elements of a policy of life insurance over a period of years that is subject to Life Insurance Illustrations Model Regulation (#582).

D. “Nonguaranteed elements” means the premiums, credited interest rates (including any bonus), benefits, values, non-interest based credits, charges or elements of formulas used to determine any of these, that are subject to company discretion and are not guaranteed at issue. An element is considered non-guaranteed if any of the underlying non-guaranteed elements are used in its calculation.

E. “Policy data” means a display or schedule of numerical values, both guaranteed and nonguaranteed for each policy year or a series of designated policy years of the following information: illustrated annual, other periodic, and terminal dividends; premiums; death benefits; cash surrender values and endowment benefits.

F. “Policy Overview” means a brief summary of the policy prepared in accordance with this regulation and an example may be found in Appendix A.

G. “Guaranteed Premium and Benefit Patterns Summary” is a separate document that accompanies the Policy Overview where the insurer has identified the policy as one that will not be marketed with an illustration.

H. “Preneed funeral contract or prearrangement” means an agreement by or for an individual before that individual’s death relating to the purchase or provision of specific funeral or cemetery merchandise or services.

Section 5. Duties of Insurers

A. Requirements Applicable Generally

(1) The insurer shall provide a Buyer’s Guide to all prospective purchasers, prior to accepting the applicant’s initial premium or premium deposit. However, if the policy for which application is made contains an unconditional refund provision of at least ten (10) days, the Buyer’s Guide may be delivered with the policy or prior to delivery of the policy.

(2) The insurer shall provide a Policy Overview to all prospective purchasers. Where the application for a life insurance policy is taken at a face-to-face meeting, the applicant at or before the time of application shall be given the Policy Overview. Where the application for a life insurance policy is taken by means other than in a face-to-face meeting, the applicant shall be sent the Policy Overview not later than five business days after the receipt of the application. The Policy Overview is a summary of the high level features and terms of the policy. Insurers should endeavor to limit the length of the Policy Overview to the minimum length necessary to reasonably inform consumers of
the information required to be included in the Policy Overview. The Policy Overview is not required to be in a specific format beyond the requirements of this Section. The Policy Overview must be prepared in language and in a format that would be understood by a typical person within the segment of the public to which the policy is directed. A sample Policy Overview that meets the requirements of this Section is provided in Appendix A. A Policy Overview shall include the following topics with appropriate headings:

(b) An introductory section containing the following language: “This document lists this insurance policy’s key features and benefits. You can get a similar summary of key policy features from other insurance companies to help you compare similar policies. If you have questions about life insurance generally or other types of policies, the National Association of Insurance Commissioners has useful information at https://content.naic.org/consumer/life-insurance.htm/. If you have questions about this particular life insurance policy, ask the agent, broker, advisor, or a company representative. If you have questions about company or agent licensing, contact [insert reference to state department of insurance].”

(c) “Company [and Agent] Information” which shall contain the name, address, email address and phone contact information of the insurance company and insurance agent, if an agent is involved.

c) “Information We Use to Determine Your Premium” which shall include the following information about the policy owner and insured, as applicable:

(i.) A brief description of the data elements that the insurer collects from the applicant and other sources that are used to determine an applicant’s premium;

(ii.) A brief description of the policy features that will affect the amount of premium such as the amount of the death benefit and optional riders;

(iii) How risk class is assessed to generate the quote;

d) “Cost Information” which shall include the following information, as applicable:

(i) An explanation of how much the life insurance policy is estimated to cost at the time of application, including the estimated premium and an explanation of the differences in cost based on premium mode selected;

(ii) A summary of the available options for funding the policy and the minimum funding needed to maintain the policy in force;

(iii) An of whether the premium can vary and, if so, how the premium will be determined;

(iv) An explanation of any costs associated with cancelling the policy (i.e. surrender charges) and, if yes, the period of time the charges apply or, if no, whether any money is eligible to be returned;

(iv) A yes or no indication of whether there is an option to lower benefits to reduce premium;

(v) If applicable, a narrative description of fees other than premium;

(vi) If applicable, a narrative explanation of the cost of insurance fee, how the cost of insurance fee changes with age, a narrative explanation of the net amount of risk
“Policy Information” which shall include the following information, as applicable:

(i) Policy type (including single or joint policy);

(ii) Policy name;

(iii) State of issue;

(iv) An indication of whether the policy is term or permanent life insurance, and if it is term insurance, the length of the initial term, including whether and how the term may be extended;

(v) A general description of what the policyholder needs to do to obtain the policy;

(vi) The following statement: “In the course of considering an insured’s application, an insurer may request or collect health information about the insured in variety of ways.” The statement shall indicate whether a physical examination or questionnaire will be required;

(vii) Death benefit that is available or the death benefit as applied for;

(viii) A yes or no indication of whether the death benefit can change, and if yes, a summary of the reasons and timing for a change in the death benefit;

(f) “Additional Policy Benefits” which shall include the following information, as applicable:

(ii) A yes or no indication of whether a waiver of premium or deductions option is available, and if yes, a summary of the options available;

(ii) A yes or no indication of whether policy conversion options exist and, if yes, a summary of conversion options available;

(iii) A yes or no indication of the availability of optional riders and, if yes, a summary of how the insured may obtain additional information regarding the availability and costs of optional riders;

(iv) A yes or no indication of any living benefit option(s), and if yes, a summary of the option(s);

(v) A yes or no indication of whether the policy can accumulate cash value, and if yes, a summary of the benefit;

(vi) A yes or no indication of whether there are guaranteed interest rates on fixed accounts and, if yes, the amount of the guaranteed interest rate;

(vii) A yes or no indication of whether there are indexed account options and if yes, a summary of how the insured may obtain additional information regarding indexed account options.
(3) The insurer shall provide a Guaranteed Premium and Benefits Patterns Summary to prospective purchasers where the insurer identified the policy form as one that will not be marketed with an illustration. Delivery of the Guaranteed Premium and Benefits Patterns Summary shall be consistent with the time for delivery of the Buyer’s Guide as specified in Paragraph (1). The Guaranteed Premium and Benefits Pattern Summary shall show guarantees only and include all required information set out in a manner that does not minimize or render any portion of the summary obscure. Any amounts that remain level for two (2) or more years of the policy may be represented by a single number if it is clearly indicated what amounts are applicable for each policy year. Amounts shall be listed in total, not on a per thousand or per unit basis. If more than one insured is covered under one policy or rider, death benefits shall be displayed separately for each insured or for each class of insureds if death benefits do not differ within the class. Zero amounts shall be displayed as a blank space. The following amounts, where applicable, for the first five (5) policy years and representative policy years thereafter sufficient to clearly illustrate the premium and benefit patterns; including at least one age from sixty (60) through sixty-five (65) and policy maturity:

(a) The annual premium for the basic policy;
(b) The annual premium for each optional rider;
(c) The amount payable upon death at the beginning of the policy year regardless of the cause of death, other than suicide or other specifically enumerated exclusions, that is provided by the basic policy and each optional rider, with benefits provided under the basic policy and each rider shown separately;
(d) The total guaranteed cash surrender values at the end of the year with values shown separately for the basic policy and each rider;
(e) Any endowment amounts payable under the policy that are not included under cash surrender values above;
(f) The effective policy loan annual percentage interest rate, if the policy contains this provision, specifying whether this rate is applied in advance or in arrears. If the policy loan interest rate is adjustable, the Guaranteed Premium and Benefits Patterns Summary shall also indicate that the annual percentage rate will be determined by the company in accordance with the provisions of the policy and the applicable law.

B. Requirements Applicable to Existing Policies.

(1) Upon request by the policyowner, the insurer shall furnish either policy data or an in force illustration as follows:

(a) For policies issued prior to the effective date of [insert state equivalent to Life Insurance Illustrations Model Regulation], the insurer shall furnish policy data, or, at its option, an in force illustration meeting the requirements of [insert state equivalent to Life Insurance Illustrations Model Regulation].

(b) For policies issued after the effective date of the illustration regulation that were declared not to be used with an illustration, the insurer shall furnish policy data, limited to guaranteed values, if it has chosen not to furnish an in force illustration meeting the requirements of the regulation.

(c) If the policy was issued after the effective date of the illustration regulation and declared to be used with an illustration, an in force illustration shall be provided.
(d) Unless otherwise requested, the policy data shall be provided for twenty (20) consecutive years beginning with the previous policy anniversary. The statement of policy data shall include nonguaranteed elements according to the current scale, the amount of outstanding policy loans, and the current policy loan interest rate. Policy values shown shall be based on the current application of nonguaranteed elements in effect at the time of the request. The insurer may charge a reasonable fee, not to exceed $[insert amount], for the preparation of the statement.

(2) If a life insurance company changes its method of determining scales of nonguaranteed elements on existing policies; it shall, no later than when the first payment is made on the new basis, advise each affected policy owner residing in this state of this change and of its implication on affected policies. This requirement shall not apply to policies for which the amount payable upon death under the basic policy as of the date when advice would otherwise be required does not exceed $5,000.

(3) If the insurer makes a material revision in the terms and conditions under which it will limit its right to change any nonguaranteed factor; it shall, no later than the first policy anniversary following the revision, advise each affected policy owner residing in this state.

Section 6. Preneed Funeral Contracts or Prearrangements

The following information shall be adequately disclosed at the time an application is made, prior to accepting the applicant’s initial premium or deposit; for a preneed funeral contract or prearrangement that is funded or to be funded by a life insurance policy:

A. The fact that a life insurance policy is involved or being used to fund a prearrangement;

B. The nature of the relationship among the soliciting agent or agents, the provider of the funeral or cemetery merchandise or services, the administrator and any other person;

C. The relationship of the life insurance policy to the funding of the prearrangement and the nature and existence of any guarantees relating to the prearrangement;

D. The impact on the prearrangement:

   (1) Of any changes in the life insurance policy including but not limited to, changes in the assignment, beneficiary designation or use of the proceeds;

   (2) Of any penalties to be incurred by the policyholder as a result of failure to make premium payments;

   (3) Of any penalties to be incurred or monies to be received as a result of cancellation or surrender of the life insurance policy;

E. A list of the merchandise and services which are applied or contracted for in the prearrangement and all relevant information concerning the price of the funeral services, including an indication that the purchase price is either guaranteed at the time of purchase or to be determined at the time of need;

F. All relevant information concerning what occurs and whether any entitlements or obligations arise if there is a difference between the proceeds of the life insurance policy and the amount actually needed to fund the prearrangement;

G. Any penalties or restrictions, including but not limited to geographic restrictions or the inability of the provider to perform, on the delivery of merchandise, services or the prearrangement guarantee; and

Drafting Note: States should consider whether the insurance regulator has the authority to enforce the provisions of Subsections E, F and G.
H. If so, the fact that a sales commission or other form of compensation is being paid and the identity of the individuals or entities to whom it is paid.

Section 7. General Rules

A. Each insurer shall maintain, at its home office or principal office, a complete file containing one copy of each document authorized and used by the insurer pursuant to this regulation. The file shall contain one copy of each authorized form for a period of three (3) years following the date of its last authorized use unless otherwise provided by this regulation.

B. An agent shall inform the prospective purchaser, prior to commencing a life insurance sales presentation, that he or she is acting as a life insurance agent and inform the prospective purchaser of the full name of the insurance company which the agent is representing to the buyer. In sales situations in which an agent is not involved, the insurer shall identify its full name.

C. An insurance producer shall not use terms such as “financial planner,” “investment advisor,” “financial consultant,” or “financial counseling” in such a way as to imply that he or she is primarily engaged in an advisory business in which compensation is unrelated to sales unless that is actually the case. This provision is not intended to preclude persons who hold some form of formal recognized financial planning or consultant designation from using this designation even when they are only selling insurance. This provision also is not intended to preclude persons who are members of a recognized trade or professional association having such terms as part of its name from citing membership, providing that a person citing membership, if authorized only to sell insurance products, shall disclose that fact. This provision does not permit persons to charge an additional fee for services that are customarily associated with the solicitation, negotiation or servicing of policies.

D. Any reference to nonguaranteed elements shall include a statement that the item is not guaranteed and is based on the company’s current scale of nonguaranteed elements (use appropriate special term such as “current dividend” or “current rate” scale.) If a nonguaranteed element would be reduced by the existence of a policy loan, a statement to that effect shall be included in any reference to nonguaranteed elements. A presentation or depiction of a policy issued after the effective date of the [insert citation to state equivalent to Life Insurance Illustrations Model Regulation] that includes nonguaranteed elements over a period of years shall be governed by that regulation.

Section 8. Failure to Comply

Failure of an insurer to provide or deliver a Buyer’s Guide, an in force illustration, a policy summary or policy data as provided in Section 5 shall constitute an omission that misrepresents the benefits, advantages, conditions or terms of an insurance policy.

Section 9. Separability

If any provisions of this rule be held invalid, the remainder shall not be affected.

Section 10. Effective Date

This rule shall become effective [insert a date at least 6 months following adoption by the regulatory authority].

Information We Use to Determine Your Premium

Policy Owner and Insured
This overview is prepared for John Smith for insurance on the life of John Smith.

Information We Obtain From You

Age
Sex
Family History
Tobacco Use
Occupation
Hobbies

Information We Obtain From Other Sources

Credit Reports
Motor Vehicle Registration
Auto, Home and other Insurance Claims
Driving Records
Medical Prescriptions
Criminal History

Policy Features that will Affect the Premium

Amount of the Death Benefit
Optional Riders

How We Assess Your Risk
We have X rate levels for (smokers/non smokers). John Smith’s premium will be based on the Y best of the X levels.
Cost Information

What Does this Life Insurance Policy Cost?

The premium is $AAA annually or $BBB quarterly or $CCC monthly. You may pay the premium monthly, quarterly or semi-annually or annually. If you pay premiums monthly, quarterly or semi-annually the total premium you pay will be more than if you pay annually.

Will my premium ever change?

The premium will stay the same for the initial term of the policy. After that term ends, the premium will increase each year if you chose to renew the policy.

Are there any costs if I decide to cancel the policy? Do I get any money back if I cancel the policy?

No, there are no costs to cancel this policy. However, if you do cancel this policy, you won’t get any money back.

Policy Information

What is the name of this policy?

This is a policy to be issued in Wisconsin called Guaranteed Level Term.

Does the policy ever end? If so, what is the term of the policy

Yes. The policy ends when the term you choose (20 years) ends but you can choose to renew this policy each year until you are age 95. The premium will increase each year you renew the policy.

What is the death benefit?

The death benefit is $500,000.

Can the death benefit change?

No, the death benefit will stay the same unless you ask, and the company agrees to increase it.

Can I take a loan from my policy?

No. You can’t borrow money from this policy.

Additional Policy Benefits

Does the policy have a waiver of premium option?

Yes, you can buy a waiver of premium rider for an extra cost. A waiver of premium rider for this policy means you won’t have to pay premiums after you’ve been totally disabled for at least 4 months.

Can I convert this policy to another type of life insurance?

Yes, you can convert this policy to a whole life insurance policy before the policy term ends, as long as you’re younger than age 70.

Are there other policy enhancements or optional riders available for this policy?

Yes, there are other policy enhancements – know as riders. Ask the agent, broker, advisor, or a company representative offering this product about them.
Is there a policy option that allows me to access my death benefit while I’m alive?

Yes, for additional premium, you can get part of your death benefit before you die if you are terminally ill.

Does this policy accumulate cash value?

No. This policy provides no cash benefits other than the death benefit.

**Information We Use to Determine Your Premium**

**Policy Owner and Insured**

This overview is prepared for John Smith for insurance on the life of John Smith.

**Information We Obtain From You**

Age
Sex
Family History
Tobacco Use
Occupation
Hobbies

**Information We Obtain From Other Sources**

Credit Reports
Motor Vehicle Registration
Auto, Home and other Insurance Claims
Driving Records
Medical Prescriptions
Criminal History

**Policy Features that will Affect the Premium**

Amount of the Death Benefit
Optional Riders

**How We Assess Your Risk**

We have X rate levels for (smokers/non smokers). John Smith’s premium will be based on the Y best of the X levels.
Cost Information

What Does this Life Insurance Policy Cost?

The premium is $AAA annually or $BBB quarterly or $CCC monthly. You may pay the premium monthly, quarterly or semi-annually or annually. If you pay premiums monthly, quarterly or semi-annually the total premium you pay will be more than if you pay annually.

Will my premium ever change?

The premium will stay the same for the initial term of the policy. After that term ends, the premium will increase each year if you chose to renew the policy.

Are there any costs if I decide to cancel the policy? Do I get any money back if I cancel the policy?

No, there are no costs to cancel this policy. However, if you do cancel this policy, you won’t get any money back.

Policy Information

What is the name of this policy?

This is a policy to be issued in Wisconsin called Guaranteed Level Term.

Does the policy ever end? If so, what is the term of the policy?

Yes. The policy ends when the term you choose (20 years) ends, but you can choose to renew this policy each year until you are age 95.

Can I extend the term of coverage?

Yes. After the initial term ends, you can renew this policy until you are age 95. The premium will increase each year you renew the policy.

What is the death benefit?

You have selected a death benefit of $500,000 to generate this quote. You may select a death benefit between $250,000 and $2 million subject to underwriting approval.

Can I take a loan from my policy?

No. You can’t borrow money from this policy.

What do I need to do to buy this policy?

You’ll need to fill out an application. You also must go through an underwriting process. Underwriters review your application and decide if you’re eligible to buy this policy, and, if you are, what your premium would be and how much coverage you could buy.

In the course of considering your application, an insurer may request or collect health information about you in a variety of ways. You might be approved to buy a policy without any information about your health. If you aren’t, you may still be eligible for this policy, but you’ll be required to fill out a health questionnaire and undergo a physical examination.
Additional Policy Benefits

**Does the policy have a waiver of premium option?**

Yes, you can buy a waiver of premium rider for an extra cost. A waiver of premium rider for this policy means that you won’t have to pay premiums after you’ve been totally disabled for at least 4 months.

**Can I convert this policy to another type of life insurance?**

Yes, you can convert this policy to a whole life insurance policy before the policy term ends, as long as you’re younger than age 70.

**Are there other policy enhancements or optional riders available for this policy?**

Yes, there are other policy enhancements – known as riders. agent, broker, advisor or a company representative offering this product about them.

**Is there a policy option that allows me to access my death benefit while I’m alive?**

Yes, for additional premium, you can get part of your death benefit before you die if you are terminally ill.

**Does this policy accumulate cash value?**

No. This policy provides no cash benefits other than the death benefit.

© 2021 National Association of Insurance Commissioners
The Life Actuarial (A) Task Force met Dec. 8, 2021. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner, Rachel Hemphill, and Karen Jiang (TX); Judith L. French, Vice Chair, represented by Peter Weber (OH); Lori K. Wing-Heier represented by Sharon Comstock (AK); Jim L. Ridling represented by Charles Hale (AL); Ricardo Lara represented by Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Bruce Sartain and Vincent Tsang (IL); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Kevin Clarkson (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Glen Mulready represented by Andrew Schallhorn (OK); Jonathan T. Pike represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

1. **Adopted its Dec. 1, Nov. 18, Nov. 4, Oct. 21, Sept. 30, and Sept. 16 Minutes**

The Task Force met Dec. 1, Nov. 18, Nov. 4, Oct. 21, Sept. 30, and Sept. 16. During these meetings, the Task Force took the following action: 1) adopted its Summer National Meeting minutes; 2) adopted its 2022 proposed charges; 3) adopted the Society of Actuaries’ (SOA’s) 2022 Generally Recognized Expense Table (GRET); 4) adopted the SOA historical mortality improvement (HMI) recommendation and the HMI scale factors; 5) adopted amendment proposal 2021-13, which corrects language that allows the addition of prescribed mortality margins for some Life/Long-Term Care (LTC) combination products to decrease, rather than increase, modeled reserves; 6) adopted amendment proposal 2021-12, which corrects a reference error in VM-21, Requirements for Principle-Based Reserves for Variable Annuities, and clarifies the requirements for variable annuity contracts with no minimum guaranteed benefits under three prescribed assumptions in VM-21 Section 6C; 7) exposed amendment proposal 2021-11, which addresses items related to VM-21 information necessary for regulatory review that companies did not include in their VM-31, PBR Actuarial Report Requirements for Business Subject to a Principle-Based Valuation, reports; and 8) adopted revisions to *Actuarial Guideline XXV—Calculation of Minimum Reserves and Minimum Nonforfeiture Values for Policies with Guaranteed Increasing Death Benefits Based on an Index* (AG 25), which remove the fixed 4% nonforfeiture rate floor to align AG 25 with the VM-02, Minimum Nonforfeiture Mortality and Interest, changes implemented for the 2021 Valuation Manual.

Mr. Leung made a motion, seconded by Mr. Yanacheak, to adopt the Task Force’s Dec. 1 (Attachment One), Nov. 18 (Attachment Two), Nov. 4 (Attachment Three), Oct. 21 (Attachment Four), Sept. 30 (Attachment Five), and Sept. 16 (Attachment Six) minutes; The motion passed unanimously.

2. **Adopted the Report of the Longevity Risk (E/A) Subgroup**

Mr. Leung made a motion, seconded by Mr. Yanacheak, to adopt the report of the Longevity Risk (E/A) Subgroup (Attachment Seven). The motion passed unanimously.

3. **Adopted the Report of the GI Life Valuation (A) Subgroup**

Mr. Leung made a motion, seconded by Mr. Yanacheak, to adopt the report of the Guaranteed Issue (GI) Life Valuation (A) Subgroup (Attachment Eight). The motion passed unanimously.

4. **Adopted the Report of the Experience Reporting (A) Subgroup**

Mr. Leung made a motion, seconded by Mr. Yanacheak, to adopt the report of the Experience Reporting (A) Subgroup (Attachment Nine). The motion passed unanimously.

5. **Adopted the Report of the VM-22 (A) Subgroup**

Mr. Sartain said the comment letters on the VM-22, Statutory Maximum Valuation Interest Rates for Income Annuities, Framework exposure are posted on the Valuation Manual (VM)-22 (A) Subgroup web page. He said the Subgroup will work.
on consolidating the comments in preparation for a discussion on Subgroup calls that will begin in January, with a goal of having a second exposure next summer.

Mr. Sartain said the Subgroup created a drafting group to develop prescribed assumptions for a standard projection amount (SPA). He said it has not been decided whether the SPA will be used as a floor or a disclosure item. He said the varying nature of fixed annuities makes developing an SPA for VM-22 more challenging than the VM-21 SPA development efforts. He noted that the drafting group has been subdivided into two groups. The first group focuses on mortality, and the second group focuses on contract holder behavior. Mr. Sartain said the mortality group decided to use four product categories: structured settlements, other individual payout annuities, deferred annuities, and group annuities and pension risk transfer business. He said the short-term plan is to develop product assumptions for use in a VM-22 field test and a process for determining the appropriate assumptions for the future. He said factors generated from recent studies may be applied to existing basic mortality tables in the short-term approach. He indicated that the long-term approach for group annuities may be to collect company mortality data by adding to the VM-51, Experience Reporting Formats, data call.

Mr. Sartain said the Subgroup sent a letter to the American Academy of Actuaries (Academy) and the SOA requesting the development of mortality assumptions appropriate for use as prescribed assumptions for an SPA for structured settlements. He said similar requests for mortality assumptions have been drafted for other individual payout annuities and deferred annuities.

Mr. Leung made a motion, seconded by Mr. Chou, to adopt the report of the VM-22 (A) Subgroup. The motion passed unanimously.

6. Adopted the Report of the Index-Linked Variable Annuity (A) Subgroup

Mr. Weber said the Subgroup is charged with recommending changes to nonforfeiture or interim values to help address non-uniform state insurance department review and approval of index-linked variable annuities (ILVAs), also known as registered index-linked annuities (RILAs). He said the products are filed as variable annuity contracts and as such are exempted from the requirements of the Standard Nonforfeiture Law for Individual Deferred Annuities (#805). He said the Subgroup is considering what requirements are necessary for a product to be deemed a variable contract. He said the Variable Annuity Model Regulation (#250) defines a variable annuity as a product that provides for annuity benefits that vary according to the investment experience of a separate account or accounts. He said with respect to interim values, the ILVA should be consistent with this definition of variable products. He said state insurance regulators want to avoid the situation where the contract holder experiences losses if the separate account value drops, without experiencing commensurate reward when the separate account value increases. He said the Subgroup has developed an actuarial guideline to provide guidance on how ILVAs can be shown to have benefits consistent with the supporting assets. He said the proposed guideline is currently exposed for a public comment period ending Jan. 27, 2022.

Mr. Weber made a motion, seconded by Mr. Clarkson, to adopt the report of the Index-Linked Variable Annuity (A) Subgroup, including its Nov. 23 (Attachment Ten) and Sept. 23 (Attachment Eleven) minutes. The motion passed unanimously.

7. Adopted the Report of the IUL Illustration (A) Subgroup

Mr. Andersen provided background on the indexed universal life (IUL) illustration issues that led to the development of Actuarial Guideline XLIX—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest (AG 49) and Actuarial Guideline XLIX-A—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest Sold On or After December 14, 2020 (AG 49A). He said state insurance regulator reviews have revealed that while illustrated credited rates may have lowered, they have not lowered as much as was contemplated when AG 49-A was adopted. He said a key development that has been identified is the increased use of volatility-controlled funds to rebalance between equities and fixed income assets. He said volatility-controlled funds provide downside protection. He noted that although they may be marketed as uncapped funds, they do not provide an upside that is close to the returns available from uncapped Standard and Poor’s 500 index (S&P 500) funds. He said the main issue that has been identified is companies are increasingly using a portion of the policy hedge budget to provide upside potential to applying a volatility-controlled index, with the remainder funding a fixed bonus for policyholders. He said this reflects some companies’ beliefs that a volatility-controlled fund with a fixed bonus allows illustrations that are more favorable than a traditional capped S&P 500. He said a summary of the issues will be made available to expose for public comment.

Mr. Leung made a motion, seconded by Mr. Yanacheak, to adopt the report of the IUL Illustration (A) Subgroup. The motion passed unanimously.
8. **Re-Exposed Amendment Proposal 2021-11**

Connie Tang (Academy Variable Annuity Reserves and Capital Work Group) said the Academy comment letter (Attachment Twelve) on the exposure of amendment proposal 2021-11 (Attachment Thirteen) suggests quantifying the assumption margins before using a floor and simplifying the assumption margin analysis by focusing on margin analysis for individual risk factors on the 70% conditional tail expectation (CTE 70) instead of CTE 70 and CTE 98. She said an alternative suggestion is to use CTE 70 (adjusted) for the individual margin analysis. Ms. Hemphill said CTE 70 (adjusted) was considered, but the drafters of the amendment proposal chose CTE 70 (best efforts) because it provides a more complete view. She said CTE 98 is needed for the Total Asset Requirement (TAR), so the drafters would not want to remove it. She agreed to consider revising the amendment proposal to incorporate the suggestion of quantifying the margins before applying a floor.

Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI comments (Attachment Fourteen) are supportive of adding the guidance in the amendment proposal to VM-21, but it questions the importance of the sensitivity testing requirements and how they can be used to help determine a reasonable margin. He said it is also not clear how the qualified actuary will use the sensitivity testing when setting their margin. He suggested removing that part of the language from the amendment proposal and VM-20, Requirements for Principle-Based Reserves for Life Products. He noted several other suggested edits in the comment letter.

Ms. Hemphill shared an updated draft of the amendment proposal for Task Force consideration. She said most of the ACLI comments were incorporated into the updated draft. The ACLI comments that were not accepted related to sensitivity testing and setting margins for more than one assumption. In response to the Academy comments, Ms. Hemphill proposed adding additional language to paragraphs ii and iii of VM-31 Section 3F(13)d.

Mr. Weber made a motion, seconded by Mr. Yanacheak, to re-expose amendment proposal 2021-11 (Attachment Fifteen), including the edits in response to the accepted ACLI and Academy comments, for a 38-day public comment period ending Jan. 14, 2022. The motion passed unanimously.

9. **Heard an Update on the ESG**

Scott O’Neal (NAIC) presented a slide deck (Attachment Sixteen) on the status of the economic scenario generator (ESG). He said it is unlikely that the ESG will be available for inclusion in the 2023 Valuation Manual. Mr. Boerner said inclusion in the 2023 Valuation Manual would require the Task Force adoption of changes by July 2022. He said given that the field test will not end until summer 2022, there will not be enough time for amendment proposals to be developed and adopted for inclusion in the Valuation Manual.

Mr. O’Neal said Conning has developed a new GEMS Treasury model calibration based on the acceptance criteria defined by the ESG Drafting Group. He said NAIC staff and Conning are analyzing the scenarios based on the new calibration. Those scenarios are expected to be presented to the Drafting Group later in the month. Upon approval of the scenarios by the Drafting Group, the scenarios will be discussed publicly at a joint meeting of the Task Force and the Life Risk-Based Capital (E) Working Group.

Mr. O’Neal discussed the key decisions in the development of the GEMS Equity Model. He said a major consideration is the theoretical and historical relationship between equities and Treasury rates. He said for equity returns and dividends, the GEMS Equity Model is configured with a linkage to Treasury rates. He said there are various ways to link equities and Treasuries, but he noted that it is unknown how much time and effort might be required to alter the existing GEMS equity/treasury linkage if the Drafting Group chooses to modify the GEMS linkage or use a different method. Mr. Bayerle stressed that the equity/treasury linkage is a critical assumption. He said it will be helpful if the Drafting Group provides an estimate of the time to modify the GEMS linkage or change to another method.

Mr. O’Neal said other decisions to be made for the Equity Model include those related to the risk/return relationship between different equity indices and the responsiveness of equity rates to changes in initial market conditions. He said the Drafting Group must also decide whether to use the GEMS Corporate Model in its current form or propose changes to the model. As with the GEMS Equity Model, changes to the GEMS Corporate Model will require development time and effort from Conning.

10. **Discussed Comments on the Proposed AAT Actuarial Guideline Exposure**

Mr. Andersen said the Task Force exposed the concept of an actuarial guideline focusing on the modeling of complex or high yielding assets in asset adequacy testing (AAT) on Sept. 30 for a public comment period ending Dec. 1. His presentation...
Mr. Andersen said after reviewing the information provided by the companies, the concept of an actuarial guideline focusing on the modeling of complex assets was exposed. Commenters were asked to provide feedback on the product scope, the size scope, whether the focus should be on constraints or standards of documentation, and the potential effective date of the guideline. Mr. Andersen discussed a summary of the comments submitted. He said the consensus of the commenters is that the scope should be broadened to include all life insurance company liabilities, especially liabilities related to supporting assets that have significant investment risk. He said there was a consensus that any exemption that is allowed should not be based on the size of the company because even small companies are investing more aggressively but could potentially focus on a ratio of complex, higher-yield assets to overall assets. He said commenters were split on whether to establish constraints or establish documentation requirements. He said there was a consensus to target year-end 2022 as the adoption date for the guideline. He noted that the year-end 2021 activity of appointed actuaries could inform the degree to which the guideline resorts to drastic measures. His final slides listed some potential goals of the AAT guideline.

Mr. Bayerle said while the ACLI comment letter (Attachment Eighteen) supports the regulatory efforts, it has concerns about the need to develop a guideline. He said its preference is to address the issues by enhancing documentation. Edward L. Toy (Risk & Regulatory Consulting LLC—RRC) said the RRC comment letter (Attachment Nineteen) focused on volatility, liquidity, complexity, and credit issues. He offered to assist in the development of a definition of complex assets. Mr. Leung said in addition to his comment letter (Attachment Twenty), he recommends that the Academy practice note on the treatment of spread and default cost assumptions in modeling assets for cashflow testing may be a good source of guidance. Aaron Sarfatti (Equitable) said the Equitable comments (Attachment Twenty-One) express its preference for guardrails, as opposed to constraints. He offered to assist in the development of a definition of complex assets. Mr. Leung noted that the year-end 2021 activity of appointed actuaries could inform the degree to which the guideline resorts to drastic measures. His final slides listed some potential goals of the AAT guideline.

Mr. Andersen said he will provide a revised request for comments focused on the argument of developing constraints versus solely relying on documentation.

11. Heard an Update on the Experience Reporting Data Collection Project

Pat Allison (NAIC) gave a presentation (Attachment Twenty-Six) on the mortality experience data collection project. A total of 110 companies are subject to mortality experience data collection for the 2018 and 2019 observation years, representing 87.5% of industry claims subject to mortality experience data collection. Ms. Allison said companies began submitting data on June 7, with initial submissions due by Sept. 30. She noted that the deadline for companies to correct their submissions is the end of December. She said the schedule calls for the NAIC to submit the aggregate experience data file to the SOA by May 31, 2022. She said to date, 105 companies have submitted data. Four of the remaining five companies have uploaded their data but have yet to submit it. The state insurance regulator for the outstanding company will be contacted by NAIC staff to assist with getting the company to submit its data.

Ms. Allison explained the rules-based data checks, reconciliations, and controls applied to the data upon submission. She said communications are sent to companies whose submissions do not meet the applicable standards. She noted that because of their size and the complexity of their policies, large companies tend to have lower percentages of acceptable data than small companies. She explained that NAIC staff are also reviewing field distributions to check the reasonableness of data. The 150 field distribution charts help identify items such as systematic errors and unusual or unlikely reporting patterns. Ms. Allison noted that there could be very reasonable explanations for the anomalies in the data. She said identification of an anomaly does

© 2021 National Association of Insurance Commissioners
not mean the data is wrong, but it is merely an indication that the company should review the data and provide a valid explanation where possible. She said explanations are tracked to avoid repeating the question next year. She anticipates the process will be easier next year.

Ms. Allison said the NAIC recommends that the Task Force extend the deadline for corrected submissions to March 31, 2022. She said the extension will allow companies more time to correct and resubmit their data. She encouraged companies to not delay submitting their data; they should submit the data as soon as they have addressed the data exceptions and the questions from the data validation and field distribution reviews. She said extending the deadline will not adversely affect the target date for submitting data to the SOA. Mr. Boerner noted that the ability to extend the deadline is provided in the *Valuation Manual*.

The Task Force agreed to extend the deadline to March 31, 2022, without objection.

12. **Heard an Update on FMI**

Marianne Purushotham (Academy Mortality Improvements Life Working Group [MILWG] and SOA Preferred Mortality Project Oversight Group [Joint Committee]) presented an update (Attachment Twenty-Seven) on the methodology for developing future mortality improvement (FMI) rates applicable to the VM-20 reserve valuation. The rates are reviewed annually in a manner similar to the process used for the valuation basic table (VBT) scales. Ms. Purushotham noted that changes to the scale will be subject to a threshold of materiality. A best estimate scale and a loaded scale will be developed. The scales will vary by gender and attained age, and they will be applicable for a 20-year period.

Ms. Purushotham said the Joint Committee will develop a recommendation for reflecting the impact of COVID-19 and determine a method for smoothing FMI rates before presenting the scales to the Task Force for exposure by June 30, 2022. She expects to provide responses to exposure comments and seek Task Force approval of the FMI rates by mid-September 2022. She noted that the appendix to the presentation provides a review of the FMI scale development.

13. **Heard an Update on SOA Research and Education**

Dale Hall (SOA) gave a presentation (Attachment Twenty-Eight) on post-level term lapse and mortality predictive modeling. He said there is sufficient experience to compare graded premium, “jump to annual renewal term” premium experience, and analyze post-level term experience for 15-year level term policies. He said linear regression is used to build a model for shock lapse at the end of the level year period. He encouraged companies to access the model on the SOA website. The presentation also provided SOA analysis of HMI drivers since 1950.

14. **Heard an Update on the Recent Activities of the Academy LPC**

Laura Hanson (Academy Life Practice Council [LPC]) gave a presentation (Attachment Twenty-Nine) on the LPC’s recent activities. She highlighted Academy accomplishments, such as the recent Academy webinars, boot camp, and annual meeting. She mentioned the upcoming Winter 2022 Life Policy Update webinar scheduled for January. She noted Academy efforts to provide policy analysis on the use of annuities in retirement plans, the use of data and algorithms in risk classification and underwriting, and supporting efforts to promote diversity and inclusion within the actuarial profession and in life insurance products.

Having no further business, the Life Actuarial (A) Task Force adjourned.
The Life Actuarial (A) Task Force met Dec. 1, 2021. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner, Rachel Hemphill, and Karen Jiang (TX); Judith L. French, Vice Chair, represented by Peter Weber (OH); Lori K. Wing-Heier represented by Sharon Comstock (AK); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Ben Bock and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Dana Popish Severinghaus represented by Bruce Sartain and Vincent Tsang (IL); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Jonathan T. Pike represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

1. **Adopted AG 25**

Reggie Mazyck (NAIC) said no comments on *Actuarial Guideline XXV—Calculation of Minimum Reserves and Minimum Nonforfeiture Values for Policies with Guaranteed Increasing Death Benefits Based on an Index* (AG 25) were submitted during the public comment period. Jessica Sever (National Alliance of Life Companies—NALC) expressed NALC’s agreement with the revisions to the guideline. Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI also agrees with the revisions.

Mr. Chou made a motion, seconded by Mr. Weber, to adopt AG 25 (Attachment One-A). The motion passed unanimously.

Having no further business, the Life Actuarial (A) Task Force adjourned.

ACTUARIAL GUIDELINE XXV

CALCULATION OF MINIMUM RESERVES AND MINIMUM NONFORFEITURE VALUES
FOR POLICIES WITH GUARANTEED INCREASING DEATH BENEFITS BASED ON AN INDEX

A. Valuation - Text

For a policy where premiums are fixed in amount at issue which provides for whole life insurance with the amount of death benefit adjusted periodically with the Consumer Price Index or another cost of living index, the value of the minimum reserve at any time shall be based on the maximum valuation interest rate for the year of issue and an acceptable mortality table for life insurance statutory reserves and based on the death benefit and premium pattern adjusted as provided in the policy by reasonable annual increases based on the index. The present value of future benefits component shall be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit. If the policy provides for future premiums and such premiums are also adjusted periodically with the Consumer Price Index or another cost of living index, the present value of future premiums component shall likewise be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit. The assumption as to what is a reasonable annual increase in death benefits based on the index must not be less than the maximum valuation interest rate for the year of issue less:

1. 2.0% If the annual increase is limited to an annual and non-cumulative maximum of 0% through 5.0%
2. 1.5% If the annual increase is limited to an annual and cumulative maximum of 0% through 5.0%.
3. 1.5% If the annual increase is limited to an annual and non-cumulative maximum of 5.01% through 10.0%.
4. 1.25% If the annual increase is limited to an annual and cumulative maximum of 5.01% through 10.0%.
5. 1.0% For all other plans.

The term “annual and non-cumulative maximum” refers to a maximum where each annual increase is limited to the lower of the maximum or the increase in the index without carry forward of excess index increases.

The term “annual and cumulative maximum” refers to a maximum where each annual increase is limited to the lower of the maximum or the increase in the index with carry forward of excess index increases.

In no event shall the assumption as to an annual increase based on the index be less than 1.0%.

This guideline for valuation shall be effective immediately for policies issued on or after January 1, 1991.

B. Nonforfeiture – Text

The threshold amount shall be $10,000 until December 31, 2009. For years beginning after December 31, 2009, the threshold amount for a calendar year shall be the product of $10,000 and the ratio of 1) the index for June of the prior year to 2) 136.0 (the index as of June 30, 1991), rounded to the nearest $25. If this calculation would result in an increase in the threshold amount of less than $500, the unadjusted threshold amount from the prior year shall continue in effect for the next calendar year. In no calendar year shall the increase in threshold amount exceed 5% of the prior calendar year threshold amount.

The index used to determine the threshold amount for years beginning after December 31, 2009, shall be the Consumer Price Index for All Urban Consumers (CPI-U) as of June 30 of that year. If this index is no longer available, another index which, in the actuary’s opinion, reflects the change in general consumer prices for the year should be substituted.

I. FOR POLICIES WHERE ANY DEATH BENEFIT FOR ANY POLICY YEAR WOULD EXCEED THE THRESHOLD AMOUNT EVEN IN ABSENCE OF ANY ANNUAL INCREASES BASED ON THE INDEX

For a policy where premiums are fixed in amount at issue which provides for whole life insurance with the amount of death benefit adjusted periodically with the Consumer Price Index or another cost of living index, the value of the minimum nonforfeiture benefit at any time shall be based on the maximum nonforfeiture interest rate for the year of issue and an
acceptable mortality table for life insurance nonforfeiture and based on the death benefit and premium pattern adjusted as provided in the policy by reasonable annual increases based on the index. The present value of future benefits component shall be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit. If the policy provides for future premiums and such premiums are also adjusted periodically with the Consumer Price Index or another cost of living index, the present value of future premiums component shall likewise be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit. The assumption as to what is a reasonable annual increase in death benefits based on the index must not be less than the maximum valuation interest rate for the year of issue less:

1. 2.0% If the annual increase is limited to an annual and non-cumulative maximum of 0% through 5.0%.
2. 1.5% If the annual increase is limited to an annual and cumulative maximum of 0% through 5.0%.
3. 1.5% If the annual increase is limited to an annual and non-cumulative maximum of 5.01% through 10.0%.
4. 1.25% If the annual increase is limited to an annual and cumulative maximum of 5.01% through 10.0%.
5. 1.0% For all other plans.

The term “annual and non-cumulative maximum” refers to a maximum where each annual increase is limited to the lower of the maximum or the increase in the index without carry forward of excess index increases.

The term “annual and cumulative maximum” refers to a maximum where each annual increase is limited to the lower of the maximum or the increase in the index with carry forward of excess index increases.

In no event shall the assumption as to an annual increase based on the index be less than 1.0%.

II. FOR POLICIES WHERE ANY DEATH BENEFIT FOR ANY POLICY YEAR WOULD NOT EXCEED THE THRESHOLD AMOUNT IN ABSENCE OF ANY ANNUAL INCREASES BASED ON THE INDEX

For a policy where premiums are fixed in amount at issue which provides for whole life insurance with the amount of death benefit adjusted periodically with the Consumer Price Index or another cost-of-living index, the unadjusted value of the minimum nonforfeiture benefit at any time shall be based on a level death benefit, an acceptable mortality table for life insurance nonforfeiture and a nonforfeiture interest rate equal to the greater of (a) and (b):

(a) the nonforfeiture interest rate defined in Section 3 of VM-02, Minimum Nonforfeiture Mortality and Interest, less:
   1. 4.5%–0 bp If the annual increase based on the index is limited to a maximum of 0% through 5.0%.
   2. 4.25%–25 bp If the annual increase based on the index is limited to a maximum of 5.01% through 10.0%.
   3. 4.0%–50 bp For all other plans.

(b) The Applicable Accumulation Test Minimum Rate in the Cash Value Accumulation Test under IRS Section 7702 (Life Insurance Contract Defined) of the U.S. Internal Revenue Code.

The present value of future benefits component shall be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit. If the policy provides for future premiums and such premiums are also adjusted periodically with the Consumer Price Index or another cost-of-living index, the present value of future premiums component shall likewise be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit.

For purposes of this guideline multiple policies on a single life shall be aggregated and only those policies aggregating not more than $10,000 (or the threshold amount1 after December 31, 2009), shall be considered under B.II.

This guideline for nonforfeiture shall be effective immediately for policies issued on or after January 1, 1991.

BACKGROUND
A number of companies are marketing individual life insurance policies with guaranteed increasing death benefits tied into a consumer price index or another cost-of-living index and are for low initial amounts of insurance sold through funeral directors to provide for burial expenses. Some of the policies provide for graded death benefits such as the return of premium with or without interest for the early policy years or for a fixed scheduled increase in death benefits prior to the operation of the index. In some cases, there is a maximum on the increase for any year. The vast majority of such policies are single premium policies, but some are annual premium policies (generally limited payment). The annual premium may or may not be subject to adjustment with the index.

Since the changes in the index are not known at issue, but from past experience, increases within a given range can be expected with a high probability, it is necessary to assume some increases and then to continually adjust the present value of future benefits component and, if appropriate, the present value of future premiums component in the reserve and nonforfeiture calculation.

Theoretically the same assumed increases in the death benefits should be used for both valuation and nonforfeiture. This guideline so provides for policies where the amount of death benefit in any given policy year would exceed $10,000 (or the threshold amount after December 31, 2009), even if there were no increases based on the index. For practical purposes this may mean that such policies are not marketable for higher amounts as it is most likely that such policies will not qualify under the IRS Section 7702. The cash value accumulation test to qualify thereunder requires a minimum interest rate of 4% and an assumed level amount of death benefits.

In the case of policies for an initial amount of insurance of $5,000 or less, the IRS rules provide an exception to the prohibition of assuming increasing death benefits. However, since many of the policies for very low amounts of initial face amount of insurance would require relatively high expenses if underwritten, many of the policies are issued with simplified underwriting or on a guaranteed issue basis with lower amounts of death benefits in the early policy years, some of the resulting annual increases are such as would disqualify many of the policies for the exception. Therefore, it is recommended that policies for low amounts of insurance be allowed to qualify under the cash value accumulation test by permitting the nonforfeiture values to be based on a level death benefit and a net assumed nonforfeiture interest rate equal to the maximum nonforfeiture interest rate less an assumed increase based on the index and such factors then adjusted by the projected increases will approximate factors based on assumed increases and the maximum nonforfeiture interest rate. However, the net interest rate is likely to be less than 4%. Thus, the procedure of assuming a level death benefit and a net assumed rate of not less than 4% the VM-02 nonforfeiture interest rate, Applicable Accumulation Test Minimum Rate in the Cash Value Accumulation Test under IRS Section 7702 for policies of low amounts of insurance is apt to produce lower cash values than the procedure for large amounts of insurance. Such lower values can be justified based upon the fact that the highly specialized market is prearranged funeral expenses for very small amounts of insurance per policy.

To emphasize the qualification with the IRS rules for the very low amounts of insurance, the nonforfeiture guideline for small amount policies is stated in terms of the net rate, a level death benefit and continual adjustment.

For solvency purposes, reserves should be conservative. The same rules apply for reserve regardless of the size of the policy. That is, lower reserves are not permitted for policies with very low amounts of insurance per policy.

Paragraph 5c(3) of the Model Standard Nonforfeiture Law states that unscheduled changes do not need to be taken into account until the time of the change. The changes guaranteed according to an index are a hybrid, i.e., the changes are scheduled but the amount of the change is not known until the index is determined. Thus, the changes must be recognized at issue. This guideline is a hybrid with increases assumed at issue either explicitly or implicitly but with further adjustments made at the time the increase based on the index is determined.

1 In 2010, the actuarial guideline was modified to substitute a threshold amount for 10,000, such threshold being increased by the change in the CPI-U, the CPI for All Urban Consumers.
The Life Actuarial (A) Task Force and the VM-22 (A) Subgroup of the Life Actuarial (A) Task Force met Nov. 18, 2021. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner, Rachel Hemphill, and Karen Jiang (TX); Judith L. French, Vice Chair, represented by Peter Weber (OH); Lori K. Wing-Heier represented by Sharon Comstock (AK); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Ben Bock and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Bruce Sartain and Vincent Tsang (IL); Amy L. Beard represented by Stephen Chamblee (IN); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Jonathan T. Pike represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

The following Subgroup members participated: Bruce Sartain, Chair, and Vincent Tsang (IL); Elaine Lam and Thomas Reedy (CA); Lei Rao-Knight (CT); Mike Yanacheak (IA); Nicole Boyd (KS); William Leung (MO); Seong-min Eom (NJ); Bill Carmello and Amanda Fenwick (NY); Jonathan T. Pike represented by Tomasz Serbinowski (UT); and Craig Chupp (VA). Also participating was: Ben Slutsker (MN).

1. **Adopted Amendment Proposal 2021-12**

Mr. Chupp proposed an edit to amendment proposal 2021-12 to correct misnumbering.

Mr. Weber made a motion, seconded by Mr. Chou, to adopt amendment proposal 2021-12 (Attachment Two-A), including the editorial change identified by Mr. Chupp. The motion passed unanimously.

2. **Re-Exposed AG 25**

Mr. Chupp said that after discussing his comment letter (Attachment Two-B) with NAIC staff, he agreed to withdraw his first comment. He said that the changes proposed in his second proposal, his fourth comment, and the latter half of his fifth comment were added to *Actuarial Guideline XXV—Calculation of Minimum Reserves and Minimum Nonforfeiture Values for Policies with Guaranteed Increasing Death Benefits Based on an Index (AG 25)* (Attachment Two-C). He said his third comment and the first part of his fifth comment are outside of the scope of the current exposure and will be deferred for a future review of AG 25. Jim Hodges (National Alliance of Life Companies—NALC) said the proposed revisions satisfactorily address the issues the NALC requested the Task Force to consider.

Mr. Chupp made a motion, seconded by Mr. Slutsker, to re-expose AG 25 for a 12-day public comment period ending Nov. 29. The motion passed unanimously.

3. **Agreed to Send a Request for Mortality Rate Development to the SOA and the Academy**

Mr. Sartain said the Standard Projection Amount Drafting Group of the VM-22 (A) Subgroup has drafted a request (Attachment Two-D) for the Society of Actuaries (SOA) and the American Academy of Actuaries (Academy) to develop rates for structured settlement mortality. He asked the Subgroup to approve forwarding the request to the SOA and the Academy. The Subgroup agreed, without objection, to forward the request to the SOA and the Academy.

Having no further business, the Life Actuarial (A) Task Force adjourned.

Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
PBR Staff of Texas Department of Insurance

Title of the Issue:

2. Three prescribed assumptions do not have clear requirements for VA contracts with no minimum guaranteed benefits in Additional Standard Projection Amount in VM-21 Section 6.C. These three prescribed assumptions are Partial Withdrawal, Account Value Depletion, and Other Voluntary Contract Termination.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

January 1, 2022 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

1. VM-21 requires the CSMP method for Additional Standard Projection Amount be applied to a seriatim in-force to capture the impact of model offices under a few deterministic scenarios. There is an incorrect section reference for the in force method required for the prescribed amounts calculation in the CSMP method. There are also other incorrect section references that need to be corrected.

2. VM-21 does not make clear what requirements should be used for VA contract with no minimum guaranteed benefit for the prescribed assumptions for partial withdrawal, account value depletion and other voluntary contract termination. The requirements for these three prescribed assumptions for VA contracts with no minimum guaranteed benefits should be added to VM-21 Section 6.C.

For Partial Withdrawal assumption, it is reasonable to set the partial withdrawal rate at 3.5% or greater for VA contract with no minimum benefit since the prescribed partial withdrawal rate is 3.5% for GMDB only without guaranteed growth in the benefit basis. For Account Value Depletion assumption, the termination is assumed when the Contract’s account value reaches zero. For Other Voluntary Contract Terminations
assumption, the requirement should be clearly referred to Table 6.3 defined in Full Surrenders of Section 6.C.6.
VM-21 Section 6.B.3

3. Calculation Methodology

   a. CSMP Method:

   i. The company shall apply this method to a seriatim in force.

   ii. Calculate the scenario reserve, as defined in VM-01 and discussed further in Section 4.B, for each of the prescribed market paths outlined in Section 6.B.6 using the same method and assumptions as those that the company uses to calculate scenario reserves for the purposes of determining the CTE70 (adjusted), as outlined in Section 9.C. These scenario reserves shall collectively be referred to as a Company Standard Projection Set.

   iii. Identify the market path from the Company Standard Projection Set such that the scenario reserve is closest to the CTE70 (adjusted), designated as Path A. This scenario reserve shall be referred to as Company Amount A.

   iv. Identify the following four market paths:

      • Two paths with the same starting interest rate as Path A, but equity shocks +/− 5% from that of Path A.

      • Two paths with the same equity fund returns as Path A, but the next higher and next lower interest rate shocks.

   From the four paths, identify Path B whose reserve value is:

      • If Company Amount A is lower than CTE70 (adjusted), the smallest reserve value that is greater than CTE70 (adjusted).

      • If Company Amount A is greater than CTE70 (adjusted), the greatest reserve value that is less than CTE70 (adjusted).

   If none of the four paths satisfy the stated condition, discard the identified Path A, and redo steps (ii i) and (ii iv) using the next closest scenario to CTE70 (adjusted) to be the new Path A in step (iii).

   For the path designated as Path B, the scenario reserve shall be referred to as Company Amount B.

   v. Recalculate the scenario reserves for Path A and Path B using the same method as outlined in step (ii) above, but substitute the assumptions prescribed in Section 6.C and use the modeled in force prescribed by Section 6.B.2a seriatim in force. These scenario reserves shall be referred to as Prescribed Amount A and Prescribed Amount B, respectively.

   vi. Calculate the Prescribed Projections Amount as:
Prescribed Projections Amount

\[ \text{Prescribed Projections Amount} = \text{Prescribed Amount A} + (\text{CTE70 (adjusted)} - \text{Company Amount A}) \times \left( \frac{\text{Prescribed Amount B} - \text{Prescribed Amount A}}{\text{Company Amount B} - \text{Company Amount A}} \right) \]

**VM-21 Section 6.B.6.a**

a. Equity Fund Returns

Eight equity fund return market paths shall be used. These market paths differ only in the prescribed gross return in the first projection year.

The eight prescribed gross returns for equity funds in the first projection year shall be negative 25% to positive 10%, at 5% intervals. These gross returns shall be projected to occur linearly over the full projection year. After the first projection year, all prescribed equity fund return market paths shall assume total gross returns of 3% per annum.

If the eight prescribed equity fund market paths are insufficient for a company to calculate the additional standard projection amount via steps (i) through (vii) outlined in Section 6.B.3.a, then the company shall include additional equity fund market paths that increase or decrease the prescribed gross returns in the first projection year by 5% increments at a time.

**VM-21 Section 6.B.6.b**

If the five prescribed interest rate market paths are insufficient for a company to calculate the Additional Standard Projection Amount via steps (i) through (vii) outlined in Section 6.B.3.a, then the company shall include additional interest rate market paths that increase or decrease the prescribed starting Treasury Department rates at each point on the term structure by increments equal to 25% of the difference between the Treasury Department rate as of the valuation date and 0.01%. The lowest interest rate to be used in this analysis is 0.01%.

**VM-21 Section 6.C.4**

4. Partial Withdrawals

jk. For contracts with no minimum guaranteed benefits, the partial withdrawal amount each year shall equal 3.5% of the Account Value.

jkl. There may be instances where the company has certain data limitations, (e.g., with respect to policies that are not enrolled in an automatic withdrawal program but have exercised a non-excess withdrawal in the contract year immediately preceding the valuation date [Section 6.C.4.g and
Section 6.C.4.i]. The company may employ an appropriate proxy method if it does not result in a material understatement of the reserve.

VM-21 Section 6.C.10
10. Account Value Depletions

The following assumptions shall be used when a contract’s Account Value reaches zero:

a. If the contract has a GMWB, the contract shall take partial withdrawals that are equal in amount each year to the guaranteed maximum annual withdrawal amount.

b. If the contract has a GMIB, the contract shall annuitize immediately. If the GMIB contractually terminates upon account value depletion, such termination provision is assumed to be voided in order to approximate the contract holder’s election to annuitize immediately before the depletion of the account value.

c. If the contract has any other guaranteed benefits, including a GMDB, the contract shall remain in-force. If the guaranteed benefits contractually terminate upon account value depletion, such termination provisions are assumed to be voided in order to approximate the contract holder’s retaining adequate Account Value to maintain the guaranteed benefits in force.

At the option of the company, fees associated with the contract and guaranteed benefits may continue to be charged and modeled as collected even if the account value has reached zero. While the contract must remain in-force, benefit features may still be terminated according to contractual terms other than account value depletion provisions.

d. If the contract has no minimum guaranteed benefits, the contract should be terminated according to contractual terms.

VM-21 Section 6.C.11
11. Other Voluntary Contract Terminations

For contracts that have other elective provisions that allow a contract holder to terminate the contract voluntarily, the termination rate shall be calculated based on the Standard Table for Full Surrenders as detailed above in Table 6.3 with the following adjustments:

a. If the contract holder is not yet eligible to terminate the contract under the elective provisions, the termination rate shall be zero.

b. After the contract holder becomes eligible to terminate the contract under the elective provisions, the termination rate shall be determined using the “Subsequent years” column of Table 6.3.

c. In using Table 6.3, the ITM of a contract’s guaranteed benefit shall be calculated based on the ratio of the guaranteed benefit’s GAPV to the termination value of the contract. The termination value of the contract shall be calculated as the GAPV of the payment stream that the contract holder is entitled to receive upon termination of the contract; if the contract holder has multiple options for the payment stream, the termination value shall be the highest GAPV of these options.
d. For GMWB or hybrid GMIB contracts, for all contract years in which a withdrawal is projected, the termination rate obtained from Table 6.3 shall be additionally multiplied by 60%.

For calculating the ITM of a hybrid GMIB, the guaranteed benefit’s GAPV shall be the larger of the Annuitization GAPV or the Withdrawal GAPV.

e. For contracts with no minimum guaranteed benefits, ITM is 0%; for all contract years in which a withdrawal is projected, the termination rate obtained from Table 6.3 shall be the row in the table for ITM < 50% using the “Subsequent years” column of Table 6.3.
Date: November 4, 2021

Virginia is submitting comments regarding the following exposure:

**AG 25 Revision (Calculation of Minimum Reserves and Minimum Nonforfeiture Values for Policies with Guaranteed Increasing Death Benefits Based on an Index)**

**Comments:**

1. In the first paragraph of B.II, the use of a comma in the title of VM-02 is confusing. Other references to the Valuation Manual in actuarial guidelines do not include the title of the VM section, but just simply use a reference such as VM-21. The reference to VM-02 in the first paragraph under B.II should eliminate the title of VM-02 or use a colon to match exactly the title used in the VM, as such: “VM-02: Minimum Nonforfeiture Mortality and Interest”.

2. The nonforfeiture interest rate used under B.II should not be allowed to be less than the Applicable Accumulation Test Minimum Rate in the CVAT under Section 7702. If the nonforfeiture interest rate under B.II is less than the Section 7702 interest rate, then it seems likely that the policy would not be able to qualify as life insurance under Section 7702. Suggested wording is as follows:

   ... a nonforfeiture interest rate equal to the greater of (a) and (b):

   a. the nonforfeiture interest rate defined in Section 3 of VM-02, less:

      i. 0 bp, if the annual increase based on the index is limited to a maximum of 0% through 5.0%,

      ii. 25 bp, if the annual increase based on the index is limited to a maximum of 5.01% through 10.0%, or

      iii. 50 bp, for all other plans.

   b. the Applicable Accumulation Test Minimum Rate in the Cash Value Accumulation Test under Section 7702 (Life Insurance Contract Defined) of the U.S. Internal Revenue Code.”

3. The current wording under B.II of AG 25 regarding the annual adjustment to the present value of future benefits component does not seem to be correct. Since the procedure under B.II is based on a level death benefit, should not the adjustment be the ratio of the current death benefit to the initially projected amount of death benefit?
4. The nonforfeiture interest rate under B.II will always be less than or equal to the VM-02 rate. Therefore, the 3rd sentence of the 4th paragraph under “Background” should read as follows: “Therefore, it is recommended that policies for low amounts of insurance be allowed to qualify under the cash value accumulation test by permitting the nonforfeiture values to be based on a level death benefit and an interest rate no greater than the VM-02 nonforfeiture interest rate and requiring such values to be updated as increases based on the index take place.”

5. I do not fully understand the 5th paragraph under “Background”. The point of this paragraph seems to be to point out that the procedure under B.II is likely to produce lower cash values than the procedure for large amounts of insurance under B.I and that these lower cash values are justified for very small amounts of insurance. I did some sample calculations and it seems that this would still be true with the AG 25 revisions. I also did some sample calculations assuming level premiums and it still seems to hold true. Thus, I am not sure that it is necessary to qualify that this paragraph only applies for single premium policies. Also, the wording in the first sentence is very confusing and does not make sense. It seems to say that the adjusted factors using the B.II procedure will approximate factors based on assumed increases using the B.I procedure. However, I worked through an example with a single premium policy and the cash values adjusted by the ratio of the current death benefit to the initial level death benefit were much lower in the early durations and then grew at a faster rate so that the cash value was equal to the cash value using the B.I procedure at the terminal age. Given this, I recommend that the first sentence be deleted. The 2nd sentence that states that the net assumed rate is not less than the VM-02 nonforfeiture interest rate is incorrect. The 2nd sentence (which would really be the 1st sentence if the existing 1st sentence is deleted) could be re-written as follows: “The procedure of assuming a level death benefit and a net assumed rate that cannot be more than 50 bp lower than the VM-02 nonforfeiture interest rate for policies of low amounts of insurance is apt to produce lower cash values than the procedure for large amounts of insurance.”

Thank you for your consideration of these comments.

ACTUARIAL GUIDELINE XXV

CALCULATION OF MINIMUM RESERVES AND MINIMUM NONFORFEITURE VALUES
FOR POLICIES WITH GUARANTEED INCREASING
DEATH BENEFITS BASED ON AN INDEX

A. Valuation - Text

For a policy where premiums are fixed in amount at issue which provides for whole life insurance with the amount of death benefit adjusted periodically with the Consumer Price Index or another cost of living index, the value of the minimum reserve at any time shall be based on the maximum valuation interest rate for the year of issue and an acceptable mortality table for life insurance statutory reserves and based on the death benefit and premium pattern adjusted as provided in the policy by reasonable annual increases based on the index. The present value of future benefits component shall be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit. If the policy provides for future premiums and such premiums are also adjusted periodically with the Consumer Price Index or another cost of living index, the present value of future premiums component shall likewise be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit. The assumption as to what is a reasonable annual increase in death benefits based on the index must not be less than the maximum valuation interest rate for the year of issue less:

1. 2.0% If the annual increase is limited to an annual and non-cumulative maximum of 0% through 5.0%
2. 1.5% If the annual increase is limited to an annual and cumulative maximum of 0% through 5.0%
3. 1.5% If the annual increase is limited to an annual and non-cumulative maximum of 5.01% through 10.0%
4. 1.25% If the annual increase is limited to an annual and cumulative maximum of 5.01% through 10.0%
5. 1.0% For all other plans.

The term “annual and non-cumulative maximum” refers to a maximum where each annual increase is limited to the lower of the maximum or the increase in the index without carry forward of excess index increases.

The term “annual and cumulative maximum” refers to a maximum where each annual increase is limited to the lower of the maximum or the increase in the index with carry forward of excess index increases.

In no event shall the assumption as to an annual increase based on the index be less than 1.0%.

This guideline for valuation shall be effective immediately for policies issued on or after January 1, 1991.

B. Nonforfeiture – Text

The threshold amount shall be $10,000 until December 31, 2009. For years beginning after December 31, 2009, the threshold amount for a calendar year shall be the product of $10,000 and the ratio of 1) the index for June of the prior year to 2) 136.0 (the index as of June 30, 1991), rounded to the nearest $25. If this calculation would result in an increase in the threshold amount of less than $500, the unadjusted threshold amount from the prior year shall continue in effect for the next calendar year. In no calendar year shall the increase in threshold amount exceed 5% of the prior calendar year threshold amount.

The index used to determine the threshold amount for years beginning after December 31, 2009, shall be the Consumer Price Index for All Urban Consumers (CPI-U) as of June 30 of that year. If this index is no longer available, another index which, in the actuary’s opinion, reflects the change in general consumer prices for the year should be substituted.

I. FOR POLICIES WHERE ANY DEATH BENEFIT FOR ANY POLICY YEAR WOULD EXCEED THE THRESHOLD AMOUNT EVEN IN ABSENCE OF ANY ANNUAL INCREASES BASED ON THE INDEX

For a policy where premiums are fixed in amount at issue which provides for whole life insurance with the amount of death benefit adjusted periodically with the Consumer Price Index or another cost of living index, the value of the minimum nonforfeiture benefit at any time shall be based on the maximum nonforfeiture interest rate for the year of issue and an acceptable mortality table for life insurance nonforfeiture and based on the death benefit and premium pattern adjusted as provided in the policy by reasonable annual increases based on the index. The present value of future benefits component shall be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of
death benefit. If the policy provides for future premiums and such premiums are also adjusted periodically with the Consumer Price Index or another cost of living index, the present value of future premiums component shall likewise be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit. The assumption as to what is a reasonable annual increase in death benefits based on the index must not be less than the maximum valuation interest rate for the year of issue less:

1. 2.0% If the annual increase is limited to an annual and non-cumulative maximum of 0% through 5.0%.
2. 1.5% If the annual increase is limited to an annual and cumulative maximum of 0% through 5.0%.
3. 1.5% If the annual increase is limited to an annual and non-cumulative maximum of 5.01% through 10.0%.
4. 1.25% If the annual increase is limited to an annual and cumulative maximum of 5.01% through 10.0%.
5. 1.0% For all other plans.

The term “annual and non-cumulative maximum” refers to a maximum where each annual increase is limited to the lower of the maximum or the increase in the index without carry forward of excess index increases.

The term “annual and cumulative maximum” refers to a maximum where each annual increase is limited to the lower of the maximum or the increase in the index with carry forward of excess index increases.

In no event shall the assumption as to an annual increase based on the index be less than 1.0%.

II. FOR POLICIES WHERE ANY DEATH BENEFIT FOR ANY POLICY YEAR WOULD NOT EXCEED THE THRESHOLD AMOUNT IN ABSENCE OF ANY ANNUAL INCREASES BASED ON THE INDEX

For a policy where premiums are fixed in amount at issue which provides for whole life insurance with the amount of death benefit adjusted periodically with the Consumer Price Index or another cost of living index, the unadjusted value of the minimum nonforfeiture benefit at any time shall be based on a level death benefit, an acceptable mortality table for life insurance nonforfeiture and a nonforfeiture interest rate equal to the greater of (a) and (b):

(a) the nonforfeiture interest rate defined in Section 3 of VM-02, Minimum Nonforfeiture Mortality and Interest, less:
   1. 0 bp If the annual increase based on the index is limited to a maximum of 0% through 5.0%.
   2. 25 bp If the annual increase based on the index is limited to a maximum of 5.01% through 10.0%.
   3. 50 bp For all other plans.

(b) The Applicable Accumulation Test Minimum Rate in the Cash Value Accumulation Test under Section 7702 (Life Insurance Contract Defined) of the U.S. Internal Revenue Code.

The present value of future benefits component shall be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit. If the policy provides for future premiums and such premiums are also adjusted periodically with the Consumer Price Index or another cost of living index, the present value of future premiums component shall likewise be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit.

For purposes of this guideline multiple policies on a single life shall be aggregated and only those policies aggregating not more than $10,000 (or the threshold amount after December 31, 2009), shall be considered under B.II.

This guideline for nonforfeiture shall be effective immediately for policies issued on or after January 1, 1991.

BACKGROUND

A number of companies are marketing individual life insurance policies with guaranteed increasing death benefits tied in to a consumer price index or another cost of living index and are for low initial amounts of insurance sold through funeral directors to provide for burial expenses. Some of the policies provide for graded death benefits such as the return of premium with or without interest for the early policy years or for a fixed scheduled increase in death benefits prior to the operation of the index. In some cases there is a maximum on the increase for any year. The vast majority of such policies are single
premium policies but some are annual premium policies (generally limited payment). The annual premium may or may not be subject to adjustment with the index.

Since the changes in the index are not known at issue, but from past experience, increases within a given range can be expected with a high probability, it is necessary to assume some increases and then to continually adjust the present value of future benefits component and, if appropriate, the present value of future premiums component in the reserve and nonforfeiture calculation.

Theoretically the same assumed increases in the death benefits should be used for both valuation and nonforfeiture. This guideline so provides for policies where the amount of death benefit in any given policy year would exceed $10,000 (or the threshold amount\(^1\) after December 31, 2009), even if there were no increases based on the index. For practical purposes this may mean that such policies are not marketable for higher amounts as it is most likely that such policies will not qualify under the IRS Section 7702. The cash value accumulation test to qualify thereunder requires a minimum interest rate and an assumed level amount of death benefits.

In the case of policies for an initial amount of insurance of $5,000 or less, the IRS rules provide an exception to the prohibition of assuming increasing death benefits. However, since many of the policies for very low amounts of initial face amount of insurance would require relatively high expenses if underwritten, many of the policies are issued with simplified underwriting or on a guaranteed issue basis with lower amounts of death benefits in the early policy years, some of the resulting annual increases are such as would disqualify many of the policies for the exception. Therefore, it is recommended that policies for low amounts of insurance be allowed to qualify under the cash value accumulation test by permitting the nonforfeiture values to be based on a level death benefit and an interest rate not less than the Applicable Accumulation Test Minimum Rate in the Cash Value Accumulation Test under IRS Section 7702 and requiring such values to be updated as increases based on the index take place. The amount in this guideline is set at $10,000 (or the threshold amount\(^1\) after December 31, 2009), to allow for future adjustments and for different patterns of benefits for low amounts.

For single premium policies, the value of nonforfeiture benefits based on a level death benefit and a net assumed nonforfeiture interest rate equal to the maximum nonforfeiture interest rate less an assumed increase based on the index and such factors then adjusted by the projected increases will approximate factors based on the index and the maximum nonforfeiture interest rate. The procedure of assuming a level death benefit and a net assumed rate of not less than the Applicable Accumulation Test Minimum Rate in the Cash Value Accumulation Test under IRS Section 7702 for policies of low amounts of insurance is apt to produce lower cash values than the procedure for large amounts of insurance. Such lower values can be justified based upon the fact that the highly specialized market is prearranged funeral expenses for very small amounts of insurance per policy.

To emphasize the qualification with the IRS rules for the very low amounts of insurance, the nonforfeiture guideline for small amount policies is stated in terms of the net rate, a level death benefit and continual adjustment.

For solvency purposes, reserves should be conservative. The same rules apply for reserve regardless of the size of the policy. That is, lower reserves are not permitted for policies with very low amounts of insurance per policy.

Paragraph 5c(3) of the Model Standard Nonforfeiture Law states that unscheduled changes do not need to be taken into account until the time of the change. The changes guaranteed according to an index are a hybrid, i.e. the changes are scheduled but the amount of the change is not known until the index is determined. Thus the changes must be recognized at issue. This guideline is a hybrid with increases assumed at issue either explicitly or implicitly but with further adjustments made at the time the increase based on the index is determined.

\[^1\] In 2010, the actuarial guideline was modified to substitute a threshold amount for 10,000, such threshold being increased by the change in the CPI-U, the CPI for All Urban Consumers.
NAIC Life Actuarial (A) Task Force’s Valuation Manual (VM) - 22 (A) Subgroup requests assistance from the American Academy of Actuaries (the Academy) and the Society of Actuaries (SOA) with respect to the development of appropriate mortality rates to be used as prescribed assumptions within a VM-22 Standard Projection Amount per the Standard Projection Amount Drafting Group’s Statement of Intent. Specifically the VM-22 (A) Subgroup requests the following:

1) In the short term develop best estimate mortality rates for standard Structured Settlement Annuities (SSAs), and if time permits substandard SSAs. We expect the SOA and the Academy to use their professional judgment as to how best to proceed. Our current expectation is that a set of mortality adjustment factors will be applied to the current statutorily prescribed 1983 Individual Annuity Mortality (IAM) Basic Table and the mortality adjustment factors will be developed based on SOA 2005-2017 Structured Settlement Mortality Experience Study. We request the mortality rates be completed in time for the VM-22 Field Study that is currently scheduled to be performed in May 2022.

2) In the longer term develop a new best estimate mortality table for SSAs. We expect the SOA and the Academy to use their professional judgment as to how best to proceed. Our current expectation is for the table to be developed based on the SOA 2005-2017 Structured Settlement Mortality Experience Study.

Thank You,

Bruce Sartain, Chair, NAIC Life Actuarial (A) Task Force VM - 22 (A) Subgroup

* Explore the feasibility of creating a Standard Projection Amount (SPA) using methodology consistent with VM-21. The Drafting Group (DG) will identify the (most) material assumptions by product line, identify appropriate data sources, and determine SPA prescribed assumptions. Those prescribed assumptions will be used to identify company outlier assumptions and substituted for company assumptions in a re-run of the stochastic reserve calculation. The DG is not expected to make a recommendation as to whether the SPA should result in a reserve floor or disclosure item.
The Life Actuarial (A) Task Force met Nov. 4, 2021. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner, Rachel Hemphill, and Karen Jiang (TX); Judith L. French, Vice Chair, represented by Peter Weber (OH); Lori K. Wing-Heier represented by Sharon Comstock (AK); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Ben Bock and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Dana Popish Severinghaus represented by Bruce Sartain and Vincent Tsang (IL); Amy L. Beard represented by Stephen Chamblee (IN); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen (MN); Chloria Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Glen Mulready represented by Andrew Schallhorn (OK); Jonathan T. Pike represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

1. Re-Exposed Amendment Proposal 2021-12

Bill Wilton (Unaffiliated) discussed his comment letter (Attachment Three-A), which recommends that the reference in amendment proposal 2021-12 (Attachment Three-B) to 0% in-the-money (ITM) be changed to 100% ITM. He said the benefit or guarantee is perceived to be ITM when it provides value in excess of the account value. He said when there is no guaranteed benefit, it is considered at-the-money, which implies that the ITM percentage should be 100%. Ms. Jiang disagreed. She said that Section 6 of VM-21, Requirements for Principle-Based Reserves for Variable Annuities, defines ITM as the ratio of the greatest accumulated present value (GAPV) of a guaranteed benefit to the account value (AV). She said that in the case where there is no guaranteed benefit, the GAPV is zero. Therefore, the ratio of GAPV to AV would be zero.

Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI comment letter (Attachment Three-C) expressed agreement with the changes in the amendment proposal but suggested a few clarifications. He said the requirements of Section 6.B.3.a.i are intended to apply only to Section 6.B.3.a.v and not to Section 6.B.3.a.ii through Section 6.B.3.a.iv. He suggested deleting Section 6.B.3.a.i and revising the wording of what then becomes Section 6.B.3.a.iv by removing the phrase “the modeled in force prescribed by Section 6.B.3.a.i.” Ms. Jiang agreed with the ACLI edits. She provided a version of amendment proposal 2021-12 that includes the changes suggested by the ACLI and other renumbering changes for potential re-exposure.

Mr. Leung made a motion, seconded by Mr. Weber, to re-expose the new version amendment proposal 2021-12 (Attachment Three-D), including the identified edits, for a 12-day public comment period ending Nov. 16. The motion passed unanimously.

2. Adopted Amendment Proposal 2021-13

Mr. Bock made a motion, seconded by Mr. Weber, to adopt amendment proposal 2021-13 (Attachment Three-E), after striking the last sentence in the guidance note. The motion passed unanimously.

3. Received an Update on the ESG

Scott O’Neal (NAIC) provided a presentation (Attachment Three-F) on the status of the economic scenario generator (ESG). He said a large part of the work on the ESG has been the development of acceptance criteria for the treasury model. He noted that the presentation lists the acceptance criteria in priority order. He said Conning Inc. is working on a new Treasury calibration based on the acceptance criteria. He noted that while Conning is working on the Treasury calibration, the ESG drafting group is beginning to work on the equity model. Mr. Carmello voiced concern that the low for long criteria is not conservative enough. He also suggested that the presentation highlight that December 2020 is the reference point for validation of the current acceptance criteria.
4. Received an Update on the Experience Data Collection Project

Pat Allison (NAIC) said the experience data collection project has participation from 110 companies representing 87.5% of industry claims. She said 83 of the participating companies previously participated in either the Kansas or New York data calls. She said 75 full submissions and nine partial submissions have been received. She noted that NAIC staff are currently reviewing submissions and providing validation packages to assist companies in their file cleanup efforts. She said the NAIC staff review also includes analyzing field distributions to screen company data for year-to-year consistency.

5. Discussed Other Matters

Reggie Mazyck (NAIC) said revisions to Actuarial Guideline XXV—Calculation of Minimum Reserves and Minimum Nonforfeiture Values for Policies with Guaranteed Increasing Death Benefits Based on an Index (AG 25) were exposed by the Task Force chair for a public comment period ending Nov. 17. He said the change, which removes the fixed 4% nonforfeiture rate floor, aligns the guideline with the VM-02, Minimum Nonforfeiture Mortality and Interest, changes implemented for the 2021 Valuation Manual. Mr. Mazyck said the Task Force plans to adopt AG 25 prior to the Fall National Meeting. He said the Life Insurance and Annuities (A) Committee and the Executive (EX) Committee and Plenary are expected to consider adoption of AG 25 during the Fall National Meeting.

Having no further business, the Life Actuarial (A) Task Force adjourned.

Re: APF 2021-12

I appreciate the opportunity to provide comments on amendment proposal form 2021-12 proposed by the PBR Staff of Texas Department of Insurance.

I would like clarification on Section 6.C.11. What is the rationale for referencing 0% ITM?

In Section 6.C.3. the following is stated:

The GAPV represents the actuarial present value of the lump sum or income payments associated with a guaranteed benefit. For the purpose of calculating the GAPV, such payments shall include the portion that is paid out of the contract holder’s Account Value.

Since there are no minimum guaranteed benefits and assuming that an account value still exists on the contract, the current requirements of VM-21 would imply a 100% ITM, not 0%.

Should Section 6.C.11 be revised as follows:

e. For contracts with no minimum guaranteed benefits, ITM is 100%; for all contract years in which a withdrawal is projected, the termination rate obtained from Table 6.3 shall be the row in the table for ITM 100-125% < 50% using the “Subsequent years” column of Table 6.3.

Similarly, in Section 6 Full Surrenders, it appears that the current requirements also stated the ITM as 0%. It would seem that ITM should also be 100% in this section. The modification would be:

For contracts with no minimum guaranteed benefits, ITM is 100%; and the row in the table for ITM 100-125% < 50% would apply.

Sincerely,

William H. Wilton, FSA, MAAA
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
PBR Staff of Texas Department of Insurance

Title of the Issue:

2. Three prescribed assumptions do not have clear requirements for VA contracts with no minimum guaranteed benefits in Additional Standard Projection Amount in VM-21 Section 6.C. These three prescribed assumptions are Partial Withdrawal, Account Value Depletion, and Other Voluntary Contract Termination.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

January 1, 20224 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

1. VM-21 requires the CSMP method for Additional Standard Projection Amount be applied to a seriatim in-force to capture the impact of model offices under a few deterministic scenarios. There is an incorrect section reference for the in force method required for the prescribed amounts calculation in the CSMP method. There are also other incorrect section references that need to be corrected.

2. VM-21 does not make clear what requirements should be used for VA contract with no minimum guaranteed benefit for the prescribed assumptions for partial withdrawal, account value depletion and other voluntary contract termination. The requirements for these three prescribed assumptions for VA contracts with no minimum guaranteed benefits should be added to VM-21 Section 6.C.

For Partial Withdrawal assumption, it is reasonable to set the partial withdrawal rate at 3.5% or greater for VA contract with no minimum benefit since the prescribed partial withdrawal rate is 3.5% for GMDB only without guaranteed growth in the benefit basis. For Account Value Depletion assumption, the termination is assumed when the Contract’s account value reaches zero. For Other Voluntary Contract Terminations
assumption, the requirement should be clearly referred to Table 6.3 defined in Full Surrenders of Section 6.C.6.
VM-21 Section 6.B.3

3. Calculation Methodology

a. CSMP Method:

i. The company shall apply this method to a seriatim in-force.

ii. Calculate the scenario reserve, as defined in VM-01 and discussed further in Section 4.B, for each of the prescribed market paths outlined in Section 6.B.6 using the same method and assumptions as those that the company uses to calculate scenario reserves for the purposes of determining the CTE70 (adjusted), 2 as outlined in Section 9.C. These scenario reserves shall collectively be referred to as a Company Standard Projection Set.

ii. Identify the market path from the Company Standard Projection Set such that the scenario reserve is closest to the CTE70 (adjusted), designated as Path A. This scenario reserve shall be referred to as Company Amount A.

iii. Identify the following four market paths:

- Two paths with the same starting interest rate as Path A, but equity shocks +/− 5% from that of Path A.

- Two paths with the same equity fund returns as Path A, but the next higher and next lower interest rate shocks.

From the four paths, identify Path B whose reserve value is:

- If Company Amount A is lower than CTE70 (adjusted), the smallest reserve value that is greater than CTE70 (adjusted).

- If Company Amount A is greater than CTE70 (adjusted), the greatest reserve value that is less than CTE70 (adjusted).

If none of the four paths satisfy the stated condition, discard the identified Path A, and redo steps (ii i) and (iiiv ) using the next closest scenario to CTE70 (adjusted) to be the new Path A in step (iii).

For the path designated as Path B, the scenario reserve shall be referred to as Company Amount B.

iv. Recalculate the scenario reserves for Path A and Path B using the same method as outlined in step (ii) above, but substitute the assumptions prescribed in Section 6.C and use the modeled in-force prescribed by Section 6.B.2a seriatim in force. These scenario reserves shall be referred to as Prescribed Amount A and Prescribed Amount B, respectively.

v. Calculate the Prescribed Projections Amount as:
Prescribed Projections Amount

\[ = \text{Prescribed Amount } A + (\text{CTE70 (adjusted)} - \text{Company Amount } A) \]
\[ \times \frac{\text{Prescribed Amount } B - \text{Prescribed Amount } A}{\text{Company Amount } B - \text{Company Amount } A} \]

**VM-21 Section 6.B.6.a**

a. Equity Fund Returns

Eight equity fund return market paths shall be used. These market paths differ only in the prescribed gross return in the first projection year.

The eight prescribed gross returns for equity funds in the first projection year shall be negative 25% to positive 10%, at 5% intervals. These gross returns shall be projected to occur linearly over the full projection year. After the first projection year, all prescribed equity fund return market paths shall assume total gross returns of 3% per annum.

If the eight prescribed equity fund market paths are insufficient for a company to calculate the additional standard projection amount via steps (i) through (vii) outlined in Section 6.B.3.a, then the company shall include additional equity fund market paths that increase or decrease the prescribed gross returns in the first projection year by 5% increments at a time.

**VM-21 Section 6.B.6.b**

If the five prescribed interest rate market paths are insufficient for a company to calculate the Additional Standard Projection Amount via steps (i) through (vii) outlined in Section 6.B.3.a, then the company shall include additional interest rate market paths that increase or decrease the prescribed starting Treasury Department rates at each point on the term structure by increments equal to 25% of the difference between the Treasury Department rate as of the valuation date and 0.01%. The lowest interest rate to be used in this analysis is 0.01%.

**VM-21 Section 6.C.4**

4. Partial Withdrawals

i. For contracts with no minimum guaranteed benefits, the partial withdrawal amount each year shall equal 3.5% of the Account Value.

j. There may be instances where the company has certain data limitations, (e.g., with respect to policies that are not enrolled in an automatic withdrawal program but have exercised a non-excess withdrawal in the contract year immediately preceding the valuation date [Section 6.C.4.g and Section 6.C.4.i]). The company may employ an appropriate proxy method if it does not result in a material understatement of the reserve.
VM-21 Section 6.C.10

10. Account Value Depletions
The following assumptions shall be used when a contract’s Account Value reaches zero:

a. If the contract has a GMWB, the contract shall take partial withdrawals that are equal in amount each year to the guaranteed maximum annual withdrawal amount.

b. If the contract has a GMIB, the contract shall annuitize immediately. If the GMIB contractually terminates upon account value depletion, such termination provision is assumed to be voided in order to approximate the contract holder’s election to annuitize immediately before the depletion of the account value.

c. If the contract has any other guaranteed benefits, including a GMDB, the contract shall remain in-force. If the guaranteed benefits contractually terminate upon account value depletion, such termination provisions are assumed to be voided in order to approximate the contract holder’s retaining adequate Account Value to maintain the guaranteed benefits in force.

At the option of the company, fees associated with the contract and guaranteed benefits may continue to be charged and modeled as collected even if the account value has reached zero. While the contract must remain in-force, benefit features may still be terminated according to contractual terms other than account value depletion provisions.

d. If the contract has no minimum guaranteed benefits, the contract should be terminated according to contractual terms.

VM-21 Section 6.C.11

11. Other Voluntary Contract Terminations
For contracts that have other elective provisions that allow a contract holder to terminate the contract voluntarily, the termination rate shall be calculated based on the Standard Table for Full Surrenders as detailed above in Table 6.3 with the following adjustments:

a. If the contract holder is not yet eligible to terminate the contract under the elective provisions, the termination rate shall be zero.

b. After the contract holder becomes eligible to terminate the contract under the elective provisions, the termination rate shall be determined using the “Subsequent years” column of Table 6.3.

c. In using Table 6.3, the ITM of a contract’s guaranteed benefit shall be calculated based on the ratio of the guaranteed benefit’s GAPV to the termination value of the contract. The termination value of the contract shall be calculated as the GAPV of the payment stream that the contract holder is entitled to receive upon termination of the contract; if the contract holder has multiple options for the payment stream, the termination value shall be the highest GAPV of these options.

d. For GMWB or hybrid GMIB contracts, for all contract years in which a
withdrawal is projected, the termination rate obtained from Table 6.3 shall be additionally multiplied by 60%.

For calculating the ITM of a hybrid GMIB, the guaranteed benefit’s GAPV shall be the larger of the Annuitzation GAPV or the Withdrawal GAPV.

e. For contracts with no minimum guaranteed benefits, ITM is 0%; for all contract years in which a withdrawal is projected, the termination rate obtained from Table 6.3 shall be the row in the table for ITM < 50% using the “Subsequent years” column of Table 6.3.
Mr. Mike Boerner
Chair, NAIC Life Actuarial Task Force (LATF)

Re: APFs 2021-12 and 2021-13

Dear Mr. Boerner:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit the following comments on APFs 2021-12 and 2021-13.

APF 2021-12
We agree with the proposed changes, but we do have an alternate suggestion for the first proposal that should further enhance the clarity of CSMP implementation for both regulators and companies. It is ACLI’s understanding that the requirements of 6.B.3.a.i intend to apply to 6.B.3.a.v, and not 6.B.3.a.ii through 6.B.3.a.iv. In the current order, this may be a potential source of confusion. We would suggest striking 6.B.3.a.i, relabeling the remaining romanettes and references to them, then revising the text in what will now be 6.B.3.a.iv (as opposed to 6.B.3.a.v) as follows:

iv. Recalculate the scenario reserves for Path A and Path B using the same method as outlined in step (ii) above, but substitute the assumptions prescribed in Section 6.C and use a seriatim inforce the modeled in force prescribed by Section 6.B.3.a.i. These scenario reserves shall be referred to as Prescribed Amount A and Prescribed Amount B, respectively.

APF 2021-13
ACLI believes that a robust principle-based framework should appropriately reflect inherent offsets between risks. However, we do recognize the inherently conservative nature of the statutory reserve framework. We do have concerns regarding the last sentence of the guidance note; given the risks are offsetting, it may not be possible to achieve the level of margin described in this sentence. For this reason, we recommend striking that sentence.

We appreciate the consideration of our comments and look forward to discussing on a future call. Thank you.
Sincerely,

[Signature]

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

1. VM-21 requires the CSMP method for Additional Standard Projection Amount be applied to a seriatim in-force to capture the impact of model offices under a few deterministic scenarios. There is an incorrect section reference for the in force method required for the prescribed amounts calculation in the CSMP method. There are also other incorrect section references that need to be corrected.

2. VM-21 does not make clear what requirements should be used for VA contract with no minimum guaranteed benefit for the prescribed assumptions for partial withdrawal, account value depletion and other voluntary contract termination. The requirements for these three prescribed assumptions for VA contracts with no minimum guaranteed benefits should be added to VM-21 Section 6.C.

For Partial Withdrawal assumption, it is reasonable to set the partial withdrawal rate at 3.5% or greater for VA contract with no minimum benefit since the prescribed partial withdrawal rate is 3.5% for GMDB only without guaranteed growth in the benefit basis. For Account Value Depletion assumption, the termination is assumed when the Contract’s account value reaches zero. For Other Voluntary Contract Terminations
assumption, the requirement should be clearly referred to Table 6.3 defined in Full Surrenders of Section 6.C.6.
VM-21 Section 6.B.3
3. Calculation Methodology

a. CSMP Method:

   i.ii. Calculate the scenario reserve, as defined in VM-01 and discussed further in Section 4.B, for each of the prescribed market paths outlined in Section 6.B.6 using the same method and assumptions as those that the company uses to calculate scenario reserves for the purposes of determining the CTE70 (adjusted), 2 as outlined in Section 9.C. These scenario reserves shall collectively be referred to as a Company Standard Projection Set.

   iii.ii. Identify the market path from the Company Standard Projection Set such that the scenario reserve is closest to the CTE70 (adjusted), designated as Path A. This scenario reserve shall be referred to as Company Amount A.

   iv.iii. Identify the following four market paths:

      • Two paths with the same starting interest rate as Path A, but equity shocks +/− 5% from that of Path A.

      • Two paths with the same equity fund returns as Path A, but the next higher and next lower interest rate shocks.

         From the four paths, identify Path B whose reserve value is:

         • If Company Amount A is lower than CTE70 (adjusted), the smallest reserve value that is greater than CTE70 (adjusted).

         • If Company Amount A is greater than CTE70 (adjusted), the greatest reserve value that is less than CTE70 (adjusted).

         If none of the four paths satisfy the stated condition, discard the identified Path A, and redo steps (ii) and (iii) using the next closest scenario to CTE70 (adjusted) to be the new Path A in step (iii).

         For the path designated as Path B, the scenario reserve shall be referred to as Company Amount B.

   v.iv. Recalculate the scenario reserves for Path A and Path B using the same method as outlined in step (ii) above, but substitute the assumptions prescribed in Section 6.C and use the modeled in force prescribed by Section 6.B.2a seriatim in force. These scenario reserves shall be referred to as Prescribed Amount A and Prescribed Amount B, respectively.

   v.v. Calculate the Prescribed Projections Amount as:
Prescribed Projections Amount

\[ = \text{Prescribed Amount } A + (\text{CTE70 (adjusted)} - \text{Company Amount } A) \]

\[ \times \left( \frac{\text{Prescribed Amount } B - \text{Prescribed Amount } A}{\text{Company Amount } B - \text{Company Amount } A} \right) \]

**VM-21 Section 6.B.6.a**

**Equity Fund Returns**

Eight equity fund return market paths shall be used. These market paths differ only in the prescribed gross return in the first projection year.

The eight prescribed gross returns for equity funds in the first projection year shall be negative 25% to positive 10%, at 5% intervals. These gross returns shall be projected to occur linearly over the full projection year. After the first projection year, all prescribed equity fund return market paths shall assume total gross returns of 3% per annum.

If the eight prescribed equity fund market paths are insufficient for a company to calculate the additional standard projection amount via steps (i) through (vii) outlined in Section 6.B.3.a, then the company shall include additional equity fund market paths that increase or decrease the prescribed gross returns in the first projection year by 5% increments at a time.

**VM-21 Section 6.B.6.b**

If the five prescribed interest rate market paths are insufficient for a company to calculate the Additional Standard Projection Amount via steps (i) through (vii) outlined in Section 6.B.3.a, then the company shall include additional interest rate market paths that increase or decrease the prescribed starting Treasury Department rates at each point on the term structure by increments equal to 25% of the difference between the Treasury Department rate as of the valuation date and 0.01%. The lowest interest rate to be used in this analysis is 0.01%.

**VM-21 Section 6.C.4**

4. Partial Withdrawals

\[ j. \text{ For contracts with no minimum guaranteed benefits, the partial withdrawal amount each year shall equal 3.5\% of the Account Value.} \]

\[ k. \text{ There may be instances where the company has certain data limitations, (e.g., with respect to policies that are not enrolled in an automatic withdrawal program but have exercised a non-excess withdrawal in the contract year immediately preceding the valuation date [Section 6.C.4.g and} \]
Section 6.C.4). The company may employ an appropriate proxy method if it does not result in a material understatement of the reserve.

**VM-21 Section 6.C.10**

10. Account Value Depletions
The following assumptions shall be used when a contract’s Account Value reaches zero:

a. If the contract has a GMWB, the contract shall take partial withdrawals that are equal in amount each year to the guaranteed maximum annual withdrawal amount.

b. If the contract has a GMIB, the contract shall annuitize immediately. If the GMIB contractually terminates upon account value depletion, such termination provision is assumed to be voided in order to approximate the contract holder’s election to annuitize immediately before the depletion of the account value.

c. If the contract has any other guaranteed benefits, including a GMDB, the contract shall remain in-force. If the guaranteed benefits contractually terminate upon account value depletion, such termination provisions are assumed to be voided in order to approximate the contract holder’s retaining adequate Account Value to maintain the guaranteed benefits in-force. At the option of the company, fees associated with the contract and guaranteed benefits may continue to be charged and modeled as collected even if the account value has reached zero. While the contract must remain in-force, benefit features may still be terminated according to contractual terms other than account value depletion provisions.

d. If the contract has no minimum guaranteed benefits, the contract should be terminated according to contractual terms.

**VM-21 Section 6.C.11**

11. Other Voluntary Contract Terminations
For contracts that have other elective provisions that allow a contract holder to terminate the contract voluntarily, the termination rate shall be calculated based on the Standard Table for Full Surrenders as detailed above in Table 6.3 with the following adjustments:

a. If the contract holder is not yet eligible to terminate the contract under the elective provisions, the termination rate shall be zero.

b. After the contract holder becomes eligible to terminate the contract under the elective provisions, the termination rate shall be determined using the “Subsequent years” column of Table 6.3.

c. In using Table 6.3, the ITM of a contract’s guaranteed benefit shall be calculated based on the ratio of the guaranteed benefit’s GAPV to the termination value of the contract. The termination value of the contract shall be calculated as the GAPV of the payment stream that the contract holder is entitled to receive upon termination of the contract; if the contract holder has multiple options for the payment stream, the termination value shall be the highest GAPV of these options.
d. For GMWB or hybrid GMIB contracts, for all contract years in which a withdrawal is projected, the termination rate obtained from Table 6.3 shall be additionally multiplied by 60%.

For calculating the ITM of a hybrid GMIB, the guaranteed benefit’s GAPV shall be the larger of the Annuitzation GAPV or the Withdrawal GAPV.

e. For contracts with no minimum guaranteed benefits, ITM is 0%; for all contract years in which a withdrawal is projected, the termination rate obtained from Table 6.3 shall be the row in the table for ITM < 50% using the “Subsequent years” column of Table 6.3.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

   Joint submission by:
   -- Staff of Office of Principle-Based Reserving, California Department of Insurance
   -- Texas Department of Insurance

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

   See attached Appendix.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

   See attached Appendix.

NAIC Staff Comments:
Appendix

ISSUE:

It has been observed that adding the prescribed mortality margins for some Life/LTC combination products cause modeled reserves to decrease rather than increase.

SECTION:

REDLINE:

(New) VM-20 Section 9.C.6.e

e. In the event that the prescribed mortality margins set forth above do not produce a reserve increase of adequate magnitude – and in particular when the prescribed margins produce a decrease in the reserve – the company shall derive and use margins that do produce an appropriately conservative result.

Guidance Note: This can occur, for example, when a rider -- such as a long-term care rider -- is being valued together with the base policy, pursuant to Section II, Subsection 6 of the Valuation Manual. Reductions to mortality rates, rather than additions, would potentially be needed in such cases. Such a product/rider combination would likely need to be in its own separate mortality segment. In the case of the product/rider combination, and adequate magnitude for a reserve increase can be thought of in terms of the size of reserve increase that would occur for the product using the tabular prescribed margins if the rider had not been present.

VM-20 Section 9.C.7.a

a. If applicable industry basic tables are used in lieu of company experience as the anticipated experience assumptions, or if the level of credibility of the data as provided in Section 9.C.5 is less than 20%, the prudent estimate assumptions for each mortality segment shall equal the respective mortality rates in the applicable industry basic tables as provided in Section 9.C.3, including any applicable improvement pursuant to Section 9.C.3.g, plus the prescribed margin as provided in Section 9.C.6.c, and further adjusted by plus any applicable additional margin changes pursuant to Section 9.C.6.d.v and/or Section 9.C.6.d.vi and/or Section 9.C.6.e.

VM-20 Section 9.C.7.b.v

v. For each policy in a given mortality segment, from the start of the projection through policy duration E, the prudent estimate mortality assumptions are the company experience mortality rates (as defined in Section 9.C.2), plus the prescribed margin pursuant to Section 9.C.6.b, and further adjusted by plus any applicable additional margin changes pursuant to Section 9.C.6.d or Section 9.C.6.e.
(New) VM-31 Section 3.D.3.o

  o. Adjustments to Prescribed Margins - Description and rationale for any adjustments made to prescribed mortality margins pursuant to VM-20 Section 9.C.6.d or 9.C.6.e.

**REASONING:**

We want to make sure that mortality margins always increase, rather than decreased, the modeled reserve.

| **4.** | Initial Yield Curve Fit, Yield Curve Shapes in Projection, and Steady State Yield Curve Shape | a) Review initial actual vs. fitted spot curve differences for a sampling of 5 dates representing different shapes and rate levels for the entire curve and review fitted curves qualitatively to confirm they stylistically mimic the different actual yield curve shapes  
  b) The frequency of different yield curve shapes in early durations should be reasonable considering the shape of the starting yield curve (e.g. a flatter yield curve leads to more inversions).  
  c) The steady state curve has normal shape (not inverted for short maturities, longer vs shorter maturities, or between long maturities) |
| **5.** | Realized short and long maturity volatility at different interest rate levels | a) No Criteria for realized short and long maturity volatility at different interest rate levels |
The Life Actuarial (A) Task Force met Oct. 21, 2021. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner; Rachel Hemphill, and Karen Jiang (TX); Judith L. French, Vice Chair, represented by Peter Weber (OH); Lori K. Wing-Heier represented by Sharon Comstock (AK); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Ben Bock and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Bruce Sartain and Vincent Tsang (IL); Amy L. Beard represented by Sharon Comstock (AK); Peter Weber represented by Stephen Chamblee (IN); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Derek Wallman (NE); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Jonathan T. Pike represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

1. **Adopted the SOA Historical Mortality Improvement Factors**

Marianne Purushotham (Society of Actuaries—SOA) presented the SOA Historical Mortality Improvement (HMI) Recommendation 2021 Scale Update (Attachment Four-A) and the HMI Scale Factors (Attachment Four-B). She said slide 10 of the presentation provides the recommendation for application of the HMI scale for 2021. The SOA recommends: 1) applying the same methodology used in past years; 2) decreasing the HMI scale for males and females; and 3) having individual companies use temporary mortality adjustments to reflect their expectations related to the effects of COVID-19 on short-term mortality levels. She said as more data is amassed, COVID-19 impacts will be reflected in future historical mortality improvement factors. Mr. Chupp expressed concern about the mortality deterioration between ages 25 and 40 that was eliminated by the smoothing technique. Ms. Purushotham said that because the smoothing was applied to all ages, the deterioration in the 25 to 40 age range is spread across all other ages and dampens the mortality improvement in the other age ranges. She said the SOA will consider using a different smoothing technique in the future. Mr. Boerner requested that the HMI Scale Factors and the recommendations on slide 10 for application of the HMI scale be reflected on the SOA website once they are adopted.

Mr. Leung made a motion, seconded by Mr. Unger, to adopt the HMI Factors and the SOA recommendations on slide 10 of the presentation. The motion passed unanimously.

2. **Exposed Amendment Proposal 2021-11**

Ms. Hemphill said amendment proposal 2021-11 seeks to address items related to VM-21, Requirements for Principle-Based Reserves for Variable Annuities, information necessary for review that companies did not include in their VM-31, PBR Actuarial Report Requirements for Business Subject to a Principle-Based Valuation reports. She recommended the changes to VM-21 and referenced the sections of VM-20, Requirements for Principle-Based Reserves for Life Products that the changes are intended to parallel. Mr. Chupp indicated a few reference changes that should be made prior to exposure.

Mr. Weber made a motion, seconded by Mr. Andersen, to expose amendment proposal 2021-11 (Attachment Four-C) for a 40-day public comment period ending Dec. 1, including the edits suggested by Mr. Chupp. The motion passed unanimously.

3. **Discussed Other Matters**

Mr. Mazyck announced that the exposure of the proposed actuarial guideline on asset adequacy testing was extended to Dec. 1.

Having no further business, the Life Actuarial (A) Task Force adjourned.

Historical Mortality Improvement Recommendation (VM-20)  
2021 Scale Update

Mortality Improvements Life Work Group (MILWG) of the 
Academy Life Experience Committee and SOA Preferred 
Mortality Project Oversight Group (“Joint Committee”)

Agenda

- Review standard methodology used for 
  Historical Mortality Improvement (HMI) 
  scale development each year
- Review results of application of the 
  methodology for 2021
- Recommendation for HMI scale for use 
  with 2021 valuation under VM20
HMI Standard Methodology

- Most recent HMI data—last 10 years
- Source: Social Security Administration (SSA)
- Historical data only available through the end of the year that is 2 years prior to the current valuation year
- Most recent SSA Alt 2 forecast of future improvements over longer period (20 years)
- Alt 2 = intermediate projection from most recent SSA Trustees Report release
- Average of historical data and forecasted components
- With smoothing process applied

Historical Component:
10-Year Historical Average Annual Improvement

Male 10 Yr Historical Averages - SSA Data

Scale Year / Data Years:
- 2021 / 2009-2019
- 2020 / 2008-2018

Attained Age

2021 Scale Year    2020 Scale Year    2019 Scale Year    2018 Scale Year
Historical Component:
10-Year Historical Average Annual Improvement

Female 10 Yr Historical Averages - SSA Data

Smoothed Preliminary—Male
Comparison by Scale Year - 2021 Scale Revised

Males - Compare Smoothed Rates
Smoothed Preliminary—Female
Comparison by Scale Year - 2021 Scale Revised

Recommendation for Application of HMI Scale for 2021 Revised

Recommendation
- Use standard methodology for the published HMI scale for 2021
- Decrease the HMI scale for males and for females for 2021 based on the application of the standard methodology
- Recommend individual companies reflect their expectations around COVID-19 impacts for short-term mortality levels as part of a temporary mortality adjustment

Impact on the 12/31/21 Valuation
- Bring up to valuation date (standard Valuation Basic Table (VBT))
- Note: Companies start with different base mortality levels
  - Possibly higher mortality for the near term to reflect COVID-19
  - HMI scale would not attempt to adjust for COVID-19 as the exposure and the handling of deaths in the underlying company data will vary

Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
PBR Staff of Texas Department of Insurance

Title of the Issue:
Add a section for other assumptions requirement in VM-21 which covers general guidance and requirements for assumptions, and expense assumptions.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-21 Section 1.C.2.b, VM-21 Section 12, VM-21 Section 13, VM-21 Section 1.B, VM-21 Section 10.A, VM-31 Section 3.F.3.d, VM-31 Section 3.F.13.d

January 1, 2021 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

A new section is needed in VM-21 to provide general guidance and requirements for assumptions, similar to VM-20, to address assumption reporting issues identified in VM-21 PBR report reviews, e.g., some companies don’t discuss regular assumption reviews for any necessary updates. In addition, this section provides the specific requirements for assumptions that have not been covered in previous sections of VM-21, i.e., the expense assumptions. VM-21 is not very explicit about expenses (e.g., whether they are fully allocated or include one-time expenses). For VM-20, we have had some material impacts from how companies treat one-time expenses that may be multi-year but temporary. Companies could understatement expenses if there is no adjustment for periodic or other recurrent expenses in expense study years where they do not occur. This APF is to make the VM-21 expense assumption requirement explicit and consistent with what is specified in VM-20 Section 9.E. The new section can also be used to cover any other assumptions requirements that need to be addressed in the future. The reporting requirement of the sensitivity testing and the impact of margin analysis is added to VM-31 to help regulators better understand how companies comply with the newly added assumption guidance and requirements.
VM-21 Section 1.C.2.b

a) Liability risks

i. Reinsurer default, impairment or rating downgrade known to have occurred before or on the valuation date.

ii. Mortality/longevity, persistency/lapse, partial withdrawal and premium payment risks.

iii. Utilization risk associated with guaranteed living benefits.

iv. Anticipated mortality trends based on observed patterns of mortality improvement or deterioration, where permitted.

v. Annuitzation risks.

vi. Additional premium dump-ins (high interest rate guarantees in low interest rate environments).

vii. Applicable expense risks, including fluctuation in maintenance expenses directly attributable to the business, future commission expenses, and expense inflation/growth.

VM-21 Section 12 (new)

Section 12: Other Guidance and Requirements for Assumptions

A. Overview

This section provides guidance and requirements in general for setting prudent estimate assumptions when determining either the stochastic reserve or the reserve for any contracts determined using the Alternative Methodology. It also provides specific guidance and requirements for expense assumptions.

B. General Assumption Requirements

1. The company shall use prudent estimate assumptions for risk factors that are not stochastically modeled by applying margins to the anticipated experience assumptions if such risk factors have been categorized as material risks by following Section 1.B Principle 3 and requirements in Section 12.C.

2. The company shall establish the prudent estimate assumptions for risk factors in compliance with the requirements in Section 12 of Model #820 and must periodically review and update the assumptions as appropriate in accordance with these requirements.

3. The company shall model the following risk factors stochastically unless the company
elects the Alternative Methodology defined in Section 7:

a. Interest rate movements (i.e., Treasury interest rate curves).

b. Equity performance (e.g., Standard & Poor’s 500 index [S&P 500] returns and returns of other equity investments).

4. If the company elects to stochastically model risk factors in addition to the economic scenarios, the requirements in this section for determining prudent estimate assumptions for these risk factors do not apply.

5. The company shall use its own experience, if relevant and credible, to establish an anticipated experience assumption for any risk factor. To the extent that company experience is not available or credible, the company may use industry experience or other data to establish the anticipated experience assumption, making modifications as needed to reflect the circumstances of the company.

a. For risk factors (such as mortality) to which statistical credibility theory may be appropriately applied, the company shall establish anticipated experience assumptions for the risk factor by combining relevant company experience with industry experience data, tables or other applicable data in a manner that is consistent with credibility theory and accepted actuarial practice.

b. For risk factors (such as utilization of guaranteed living benefits) that do not lend themselves to the use of statistical credibility theory, and for risk factors (such as some of the lapse assumptions) to which statistical credibility theory can be appropriately applied but cannot currently be applied due to lack of industry data, the company shall establish anticipated experience assumptions in a manner that is consistent with accepted actuarial practice and that reflects any available relevant company experience, any available relevant industry experience, or any other experience data that are available and relevant. Such techniques include:

i. Adopting standard assumptions published by professional, industry or regulatory organizations to the extent they reflect any available relevant company experience or reasonable expectations.

ii. Applying factors to relevant industry experience tables or other relevant data to reflect any available relevant company experience and differences in expected...
experience from that underlying the base tables or data due to differences between the risk characteristics of the company experience and the risk characteristics of the experience underlying the base tables or data.

iii. Blending any available relevant company experience with any available relevant industry experience and/or other applicable data using weightings established in a manner that is consistent with accepted actuarial practice and that reflects the risk characteristics of the underlying contracts and/or company practices.

c. For risk factors that have limited or no experience or other applicable data to draw upon, the assumptions shall be established using sound actuarial judgment and the most relevant data available, if such data exists.

d. For any assumption that is set in accordance with the requirements of Section 12.B.5.c, the qualified actuary to whom responsibility for this group of contracts is assigned shall use sensitivity testing and disclose the analysis performed to ensure that the assumption is set at the conservative end of the plausible range.

e. The qualified actuary, to whom responsibility for this group of contracts is assigned, shall annually review relevant emerging experience for the purpose of assessing the appropriateness of the anticipated experience assumption. If the results of statistical or other testing indicate that previously anticipated experience for a given factor is inadequate, then the qualified actuary shall set a new, adequate, anticipated experience assumption for the factor.

6. The company shall sensitivity test risk factors that are not stochastically modeled and examine the impact on the stochastic reserve. The company shall update the sensitivity tests periodically as appropriate. The company may update the tests less frequently, but no less than every 3 years, when the tests show less sensitivity of the stochastic reserve to changes in the assumptions being tested or the experience is not changing rapidly. Providing there is no material impact on the results of the sensitivity testing, the company may perform sensitivity testing:

a. Using samples of the contracts in force rather than performing the entire valuation for each alternative assumption set.

b. Using data from prior periods.

Guidance Note: Sensitivity testing every risk factor on an annual basis is not required. For some risk factors, it may be reasonable, in lieu of sensitivity testing, to employ statistical measures for margins, such as adding one or more standard deviations to the anticipated experience assumption.
The company shall vary the prudent estimate assumptions from scenario to scenario within the stochastic reserve calculation in an appropriate manner to reflect the scenario-dependent risks.

C. Assumption Margins

The company shall include margins to provide for adverse deviations and estimation error in the prudent estimate assumption for each risk factor that is not stochastically modeled or prescribed, subject to the following:

1. The level of margin applied to the anticipated experience assumptions may be determined in aggregate or independently as discussed in Section 1.B Principle 3. It is not permissible to set a margin less toward the conservative end of the spectrum to recognize, in whole or in part, implicit or prescribed margins that are present, or are believed to be present, in other risk factors.

Risks that are stochastically modeled (e.g., interest rates, equity returns) or have prescribed margins or guardrails (e.g., assets, revenue sharing) shall be considered material risks. Other risks generally considered to be material include, but are not limited to, mortality, contract holder behavior, maintenance and overhead expenses, inflation and implied volatility. In some cases, the list of material risks may also include acquisition expenses, partial withdrawals, policy loans, annuitizations, account transfers and deposits, and/or option elections that contain an element of anti-selection.

2. The greater the uncertainty in the anticipated experience assumption, the larger the required margin, with the margin added or subtracted as needed to produce a larger modeled TAR than would otherwise result. For example, the company shall use a larger margin when:
   a. The experience data have less relevance or lower credibility.
   b. The experience data are of lower quality, such as incomplete, internally inconsistent or not current.
   c. There is doubt about the reliability of the anticipated experience assumption, such as, but not limited to, recent changes in circumstances or changes in company policies.
   d. There are constraints in the modeling that limit an effective reflection of the risk factor.

3. In complying with the sensitivity testing requirements in Section 12.B.6 above, greater analysis and more detailed justification are needed to determine the level of uncertainty when establishing margins for risk factors that produce greater sensitivity on the stochastic reserve.
4. A margin is permitted but not required for assumptions that do not represent material risks.

5. A margin should reflect the magnitude of fluctuations in historical experience of the company for the risk factor, as appropriate.

6. The company shall apply the method used to determine the margin consistently on each valuation date but is permitted to change the method from the prior year if the rationale for the change and the impact on the stochastic reserve is disclosed.

D. Expense Assumptions

1. General Prudent Estimate Expense Assumption Requirements

In determining prudent estimate expense assumptions, the company:

a. May spread certain information technology development costs and other capital expenditures over a reasonable number of years in accordance with accepted statutory accounting principles as defined in the Statements of Statutory Accounting Principles.

Guidance Note: Care should be taken with regard to the potential interaction with the inflation assumption below.

b. Shall assume that the company is a going concern.

c. Shall choose an appropriate expense basis that properly aligns the actual expense to the assumption. If values are not significant, they may be aggregated into a different base assumption.

Guidance Note: For example, death benefit expenses should be modeled with an expense assumption that is per death incurred.

d. Shall reflect the impact of inflation.

e. Shall not assume future expense improvements.

f. Shall not include assumptions for federal income taxes (and expenses paid to provide fraternal benefits in lieu of federal income taxes) and foreign income taxes.

G. Shall use assumptions that are consistent with other related assumptions.
h. Shall use fully allocated expenses.

**Guidance Note:** Expense assumptions should reflect the direct costs associated with the block of contracts being modeled, as well as indirect costs and overhead costs that have been allocated to the modeled contracts.

i. Shall allocate expenses using an allocation method that is consistent across company lines of business. Such allocation must be determined in a manner that is within the range of actuarial practice and methodology and consistent with applicable ASOPs. Allocations may not be done for the purpose of decreasing the stochastic reserve.

j. Shall reflect expense efficiencies that are derived and realized from the combination of blocks of business due to a business acquisition or merger in the expense assumption only when any future costs associated with achieving the efficiencies are also recognized.

**Guidance Note:** For example, the combining of two similar blocks of business on the same administrative system may yield some expense savings on a per unit basis, but any future cost of the system conversion should also be considered in the final assumption. If all costs for the conversion are in the past, then there would be no future expenses to reflect in the valuation.

k. Shall reflect the direct costs associated with the contracts being modeled, as well as an appropriate portion of indirect costs and overhead (i.e., expense assumptions representing fully allocated expenses should be used), including expenses categorized in the annual statement as “taxes, licenses and fees” (Exhibit 3 of the annual statement) in the expense assumption.

l. Shall include acquisition expenses associated with business in force as of the valuation date and significant non-recurring expenses expected to be incurred after the valuation date in the expense assumption.

m. For contracts sold under a new policy form or due to entry into a new product line, the company shall use expense factors that are consistent with the expense factors used to determine anticipated experience assumptions for contracts from an existing block of mature contracts taking into account:

i. Any differences in the expected long-term expense levels between the block of new contacts and the block of mature contracts.

ii. That all expenses must be fully allocated as required.
under Section 142.DE.1d above.

2. Margins for Prudent Estimate Expense Assumptions

The company shall determine margins for expense assumptions following Section 12.C.

VM-21 Section 13

Section 13: Allocation of the Aggregate Reserve to the Contract Level

VM-21 Section 1.B

Principle 3: The implementation of a model involves decisions about the experience assumptions and the modeling techniques to be used in measuring the risks to which the company is exposed. Generally, assumptions are to be based on the conservative end of the confidence interval. The choice of a conservative estimate for each assumption may result in a distorted measure of the total risk. Conceptually, the choice of assumptions and the modeling decisions should be made so that the final result approximates what would be obtained for the stochastic reserve at the required CTE level if it were possible to calculate results over the joint distribution of all future outcomes. In applying this concept to the actual calculation of the stochastic reserve, the company should be guided by evolving practice and expanding knowledge base in the measurement and management of risk.

Guidance Note: The intent of Principle 3 is to describe the conceptual framework for setting assumptions. Section 10 provides the requirements and guidance for setting contract holder behavior assumptions and includes alternatives to this framework if the company is unable to fully apply this principle. More guidance and requirements for setting assumptions in general are provided in Section 12.

VM-21 Section 10.A

Section 10: Contract Holder Behavior Assumptions

A. General

Contract holder behavior assumptions encompass actions such as lapses, withdrawals, transfers, recurring deposits, benefit utilization, option election, etc. Contract holder behavior is difficult to predict accurately, and variance in behavior assumptions can significantly affect the results. In the absence of relevant and fully credible empirical data, the company should set behavior assumptions as guided by Principle 3 in Section 1.B and Section 12.

VM-31 Section 3.F.3.d

3. Liability Assumptions and Margins – A listing of the assumptions and margins used in the projections to determine the stochastic reserve, including a discussion of the source(s) and the rationale for each assumption:

a. Premiums and Subsequent Deposits – Description of premiums and subsequent deposits.
b. **Interest Crediting Strategy** – Description of the interest crediting strategy.

c. **Commissions** – Description of commissions, including any commission chargebacks.

d. **Expenses Other than Commissions** – Description and listing of insurance company expenses other than commissions, such as overhead, including:

   i. Method used to allocate expenses to the contracts included in a principle-based valuation under VM-21 and a statement confirming that expenses have been fully allocated in accordance with VM-21 Section 12.D.1.b.

   ii. Method used to apply the allocated expenses to model segments or sub-segments within the cash-flow model.

   iii. Identification of types of costs that were spread, and for how many years, if any cost spreading was done pursuant to VM-21 Section 12.D.1.a.

   iv. Method used to determine margins.

---

**VM-31 Section 3.F.13.c (new)**

**c. Sensitivity Tests** – For each distinct product type for which margins were established:

i. List the specific sensitivity tests performed for each risk factor or combination of risk factors, other than those discussed in Section 3.D.3.h.iv and 3.D.3.i.ii.

   

   ii. Indicate whether the reserve was calculated based on the anticipated experience assumptions or prudent estimate assumptions for all other risk factors while performing the tests.

   

   iii. Provide the numerical results of the sensitivity tests for both reserves and capital.

   

   iv. Explain how the results of sensitivity tests were used or considered in developing assumptions.

---

**VM-31 Section 3.F.13.d (new)**

**d. Impact of Margin**

i. Company can perform the impact of margin analysis using off-cycle data. The analysis can be done less frequently than annual unless there is change or update in the margins, but not less frequently than every 3 years.
ii. Impact of Margins for Each Risk Factor – The impact of margins on the stochastic reserve for each risk factor, or group of risk factors, that has a material impact on the stochastic reserve, determined by subtracting (i) from (ii), expressed in both dollar amounts and percentages:

(1) The CTE70(best efforts), as outlined in VM-21 Section 9.C, but with the reserve calculated based on the anticipated experience assumption for the risk factor and prudent estimate assumptions for all other risk factors.

(2) The CTE70(best efforts), as outlined in VM-21 Section 9.C, for that group of contracts as reported.

(3) Repeat the impact analysis using the same method on CTE(98) levels.

Guidance Note: Pursuant to VM-21, margins must increase TAR, so the impact of each margin, as calculated above on CTE(98), must be positive.

iii. Aggregate Impact of Margins – the aggregate impact of all margins on the stochastic reserve for that group of contracts determined by subtracting (1) from (2), expressed in both dollar amounts and percentages:

(1) The CTE70(best efforts), as outlined in VM-21 Section 9.C, for that group of contracts, but with the reserve calculated based on anticipated experience assumptions for all risk factors prior to the addition of any margins.

(2) The CTE70(best efforts), as outlined in VM-21 Section 9.C, for that group of contracts as reported.

(3) Repeat the impact analysis using the same method on CTE(98) levels.

iv. Impact of Implicit Margins – For purposes of the disclosures required in 13.d.ii and 13.d.iii above:

(1) If the company believes the method used to determine anticipated experience assumptions includes an implicit margin, the company can adjust the anticipated experience assumptions to remove this implicit margin for this reporting purpose only. If any such adjustment is made, the company shall document the rationale and method used to determine the anticipated experience assumption.

(2) Since the company is not required to determine an anticipated experience assumption or a prudent estimate assumption for risk factors that are prescribed (i.e., interest rates movements, equity performance, default costs and net spreads on reinvestment assets), when determining the impact of margins, the prescribed assumption shall be deemed to be the prudent estimate assumption for the risk factor, and the company can elect to determine an anticipated experience assumption for the risk factor, based on the company's anticipated experience for the risk factor. If this is elected, the company shall document the rationale and method used to determine the anticipated experience assumption.
The Life Actuarial (A) Task Force met Sept. 30, 2021. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner, Rachel Hemphill, and Karen Jiang (TX); Judith L. French, Vice Chair, represented by Peter Weber (OH); Lori K. Wing-Heier represented by Sharon Comstock (AK); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Ben Bock and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Dana Popish Severinghaus represented by Bruce Sartain and Vincent Tsang (IL); Amy L. Beard represented by Stephen Chamblee (IN); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Kevin Clarkson (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Glen Muley represented by Andrew Schallhorn (OK); and Scott A. White represented by Craig Chupp (VA).

1. Exposed Concepts and Questions Related to a Proposed Actuarial Guideline on AAT

Mr. Andersen said the Valuation Analysis (E) Working Group identified a potential concern about how blocks of legacy deferred annuity products with 3% or higher lifetime credited rate guarantees are being supported in the current low interest rate environment. He noted that transactions related to this business, including acquisitions of companies and reinsurance deals, has resulted in an increased concentration of this risk being held by firms that support the risk with nontraditional assets. He said state insurance regulators should pool their actuarial and capital markets expertise to identify good practices and bad practices. He said state insurance regulators want to avoid the possibility of a company setting up $900 of risky assets in support of a $1,000 liability. The risk of such a scenario occurring increases as the assets held become more complex and are less subject to publicly available valuation. He said the Working Group found that some complex assets have an appropriate risk return profile to support the underlying liability, while others were found to have inflated investment or reinvestment net yield assumptions.

Mr. Andersen said there is a consensus among state insurance regulators discussing this issue that an actuarial guideline should be developed to help ensure reserve adequacy and claims paying ability under moderately adverse conditions, including conditions negatively affecting cash flows from complex assets. He said the guideline should also clarify how margins for uncertainty are established, such that the greater the uncertainty, the larger the required margin and resulting reserve. He said other goals of the guideline will be to recognize that higher asset returns are to some extent associated with higher risk. He said it is possible that sensitivity testing for complex assets supporting certain business, including fixed annuities, may be required. He said the guideline is not contemplated to be a standalone requirement but will provide guidance on modeling and existing asset adequacy requirements. He said the document being considered for exposure represents questions that must be addressed as the guideline is developed. He said there is a possibility that some of the guidance could apply before year-end 2022. Brian Bayerle (American Council of Life Insurers—ACLI) asked how the applicability prior to year-end 2022 would work. Mr. Andersen said it is possible that certain documentation requirements could apply prior to year-end 2022. He asked interested parties to comment on the applicability date.

Mr. Andersen made a motion, seconded by Ms. Eom, to expose the concepts and questions related to a proposed actuarial guideline on AAT (Attachment Five-A) for a 45-day public comment period ending Nov. 15. The motion passed unanimously.

2. Adopted its Summer National Meeting Minutes

Mr. Sartain recommended placing the first sentence of the second paragraph on the report of the VM-22 (A) Subgroup just after the second sentence of the first paragraph and deleting the remainder of the second paragraph.

Mr. Weber made a motion, seconded by Mr. Leung, to adopt the Task Force’s Aug. 12 minutes, including the revision recommended by Mr. Sartain (see NAIC Proceedings – Summer 2021, Life Actuarial (A) Task Force). The motion passed unanimously.
3. **Adopted its 2022 Proposed Charges**

Mr. Boerner questioned whether the target completion dates for the Guaranteed Issue (GI) Life Valuation (A) Subgroup charges and the Longevity Risk (E/A) Subgroup charges should be retained. He pointed out that no other Subgroup charges have target dates. Reggie Mazyck (NAIC) said the target dates were set by the former chair. He suggested removing the target dates to not unfairly saddle the next chair with target dates in which they did not have input.

Mr. Chou made a motion, seconded by Mr. Schallhorn, to adopt the Task Force’s 2022 proposed charges (Attachment Five-B), after removing the target dates. The motion passed unanimously.

4. **Exposed Amendment Proposal 2021-12**

Ms. Hemphill said amendment proposal 2021-12 (Attachment Five-C) corrects a reference error in VM-21, Requirements for Principle-Based Reserves for Variable Annuities, and clarifies the requirements for variable annuity contracts with no minimum guaranteed benefits under three prescribed assumptions in VM-21 Section 6C.

Mr. Weber made a motion, seconded by Mr. Leung, to expose amendment proposal 2021-12 for a 28-day public comment period ending Oct. 27. The motion passed unanimously.

5. **Exposed Amendment Proposal 2021-13**

Mr. Bock said amendment proposal 2021-13 (Attachment Five-D) corrects language that allows the addition of prescribed mortality margins for some Life/Long-Term Care (LTC) combination products to decrease, rather than increase, modeled reserves. Ms. Hemphill suggested changing the word “actuary” in the revision proposed for Section 9C(6)e of VM-20, Requirements for Principle-Based Reserves for Life Products, to “company.”

Mr. Bock made a motion, seconded by Mr. Unger, to expose amendment proposal 2021-13, including the change suggested by Ms. Hemphill, for a 28-day public comment period ending Oct. 27. The motion passed unanimously.

Having no further business, the Life Actuarial (A) Task Force adjourned.
Consider concept of an actuarial guideline focusing on modeling of complex or high-yielding assets in asset adequacy testing.

Development of an actuarial guideline focusing on modeling of complex or high-yielding assets in asset adequacy testing (AAT), with particular interest in receiving feedback on the following issues:

- **Product scope**: Should the focus be on assets supporting fixed annuities or assets supporting all life insurer liabilities subject to AAT?
- **Size scope**: Should only life insurers or blocks exceeding a certain size threshold be subject to the actuarial guideline?
- **Constraints or documentation**: Should the actuarial guideline focus on establishing constraints related to the modeling of complex or high gross yield assets (impacting AAT results) or providing detailed documentation and sensitivity testing on the modeling of such assets (potentially not impacting AAT results)?
- **Effective date**: Is a year-end 2022 effective date for the actuarial guideline reasonable, or should some guidance apply before that date?
2022 Proposed Charges

LIFE ACTUARIAL (A) TASK FORCE

The mission of the Life Actuarial (A) Task Force is to identify, investigate, and develop solutions to actuarial problems in the life insurance industry.

Ongoing Support of NAIC Programs, Products and Services

1. The Life Actuarial (A) Task Force will:
   A. Work to keep reserve, reporting, and other actuarial-related requirements current. This includes principle-based reserving (PBR) and other requirements in the Valuation Manual, actuarial guidelines, and recommendations for appropriate actuarial reporting in blanks. Respond to charges from the Life Insurance and Annuities (A) Committee and referrals from other groups or committees, as appropriate.
   B. Report progress on all work to the Life Insurance and Annuities (A) Committee and provide updates to the Financial Condition (E) Committee on matters related to life insurance company solvency. This work includes the following:
      1. Work with the American Academy of Actuaries (Academy) and the Society of Actuaries (SOA) to develop new mortality tables for valuation and minimum nonforfeiture requirements, as appropriate, for life insurance and annuities.
      2. Provide recommendations for guidance and requirements for accelerated underwriting, as needed.
      3. Evaluate and provide recommendations regarding the VM-21, Requirements for Principle-Based Reserves for Variable Annuities/Actuarial Guideline XLIII—CARVM for Variable Annuities (AG 43) Standard Projection Amount, which may include continuing as a required floor or providing as disclosure. This evaluation is to be completed prior to year-end 2023.
      4. Work with the SOA on the annual development of the Generally Recognized Expense Table (GRET) factors.
      5. Provide recommendations and changes, as appropriate, to other reserve and nonforfeiture requirements to address issues and provide actuarial assistance and commentary to other NAIC committees relative to their work on actuarial matters.
      6. Work with the selected vendor to develop and implement the new economic scenario generator (ESG) for use in regulatory reserve and capital calculations.
      7. Monitor international developments regarding life and health insurance reserving, capital, and related topics. Compare and benchmark with PBR requirements.

2. The Variable Annuities Capital and Reserve (E/A) Subgroup of the Life Risk-Based Capital (E) Working Group and the Life Actuarial (A) Task Force will:
   A. Monitor the impact of the changes to the variable annuities (VA) reserve framework and risk-based capital (RBC) calculation and determine if additional revisions need to be made.
   B. Develop and recommend appropriate changes, including those to improve accuracy and clarity of VA capital and reserve requirements.

3. The Experience Reporting (A) Subgroup will:
   A. Continue development of the experience reporting requirements within the Valuation Manual. Provide input, as appropriate, for the process regarding the experience reporting agent, data collection, and subsequent analysis and use of experience submitted.

4. The Indexed Universal Life (IUL) Illustration (A) Subgroup will:
   A. Monitor the results and practices of IUL illustrations following implementation of Actuarial Guideline XLIX-A—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest to Policies Sold On or After December 14, 2020 (AG 49-A). Provide recommendations for consideration of changes to Life Insurance Illustrations Model Regulation (#582) to the Life Actuarial (A) Task Force, as needed.

5. The Longevity Risk (E/A) Subgroup of the Life Actuarial (A) Task Force and the Life Risk-Based Capital (E) Working Group will:
   A. Provide recommendations for recognizing longevity risk in statutory reserves and/or RBC, as appropriate.
6. The **Valuation Manual (VM)-22 (A) Subgroup** will:
   A. Recommend requirements, as appropriate, for non-variable (fixed) annuities in the accumulation and payout phases for consideration by the Life Actuarial (A) Task Force. Continue working with the Academy on a PBR methodology for non-variable annuities.

7. The **Guaranteed Issue (GI) Life Valuation (A) Subgroup** will:
   A. Provide recommendations regarding valuation requirements for GI life business, including any appropriate mortality table(s) for valuation as well as nonforfeiture.

8. The **Index-Linked Variable Annuity (A) Subgroup** will:
   A. Provide recommendations and changes, as appropriate, to nonforfeiture or interim value requirements related to index-linked variable annuities (ILVAs).

Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

**Identification:**
PBR Staff of Texas Department of Insurance

**Title of the Issue:**

2. Three prescribed assumptions do not have clear requirements for VA contracts with no minimum guaranteed benefits in Additional Standard Projection Amount in VM-21 Section 6.C. These three prescribed assumptions are Partial Withdrawal, Account Value Depletion, and Other Voluntary Contract Termination.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-21 Section 6.B.3.a.v, VM-21 Section 6.C.4, VM-21 Section 6.C.10, VM-21 Section 6.C.11

January 1, 2021 NAIC *Valuation Manual*

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

1. VM-21 requires the CSMP method for Additional Standard Projection Amount be applied to a seriatim in-force to capture the impact of model offices under a few deterministic scenarios. There is an incorrect section reference for the in force method required for the prescribed amounts calculation in the CSMP method.

2. VM-21 does not make clear what requirements should be used for VA contract with no minimum guaranteed benefit for the prescribed assumptions for partial withdrawal, account value depletion and other voluntary contract termination. The requirements for these three prescribed assumptions for VA contracts with no minimum guaranteed benefits should be added to VM-21 Section 6.C.

For Partial Withdrawal assumption, it is reasonable to set the partial withdrawal rate at 3.5% or greater for VA contract with no minimum benefit since the prescribed partial withdrawal rate is 3.5% for GMDB only without guaranteed growth in the benefit basis. For Account Value Depletion assumption, the termination is assumed when the Contract’s account value reaches zero. For Other Voluntary Contract Terminations assumption, the requirement should be clearly referred to Table 6.3 defined in Full Surrenders of Section 6.C.6.
VM-21 Section 6.B.3

3. Calculation Methodology

   a. CSMP Method:

      i. The company shall apply this method to a seriatim in-force.

      ii. Calculate the scenario reserve, as defined in VM-01 and discussed further in Section 4.B, for each of the prescribed market paths outlined in Section 6.B.6 using the same method and assumptions as those that the company uses to calculate scenario reserves for the purposes of determining the CTE70 (adjusted), \(^2\) as outlined in Section 9.C. These scenario reserves shall collectively be referred to as a Company Standard Projection Set.

      iii. Identify the market path from the Company Standard Projection Set such that the scenario reserve is closest to the CTE70 (adjusted), designated as Path A. This scenario reserve shall be referred to as Company Amount A.

      iv. Identify the following four market paths:

         - Two paths with the same starting interest rate as Path A, but equity shocks ±5% from that of Path A.

         - Two paths with the same equity fund returns as Path A, but the next higher and next lower interest rate shocks.

         From the four paths, identify Path B whose reserve value is:

         - If Company Amount A is lower than CTE70 (adjusted), the smallest reserve value that is greater than CTE70 (adjusted).

         - If Company Amount A is greater than CTE70 (adjusted), the greatest reserve value that is less than CTE70 (adjusted).

         If none of these paths satisfy the stated condition, discard the identified Path A, and redo steps (iii) and (iv) using the next closest scenario to CTE70 (adjusted) to be the new Path A in step (iii).

         For the path designated as Path B, the scenario reserve shall be referred to as Company Amount B.

   v. Recalculate the scenario reserves for Path A and Path B using the same method as outlined in step (ii) above, but substitute the assumptions prescribed in Section 6.C and use the modeled in force prescribed by Section 6.B.3.a.i2. These scenario reserves shall be referred to as Prescribed Amount A and Prescribed Amount B, respectively.

   vi. Calculate the Prescribed Projections Amount as:
Prescribed Projections Amount

\[ \text{Prescribed Projections Amount} = \text{Prescribed Amount A} + (\text{CTE70 (adjusted)} - \text{Company Amount A}) \times \left( \frac{\text{Prescribed Amount B} - \text{Prescribed Amount A}}{\text{Company Amount B} - \text{Company Amount A}} \right) \]

**VM-21 Section 6.C.4**
4. Partial Withdrawals

j. For contracts with no minimum guaranteed benefits, the partial withdrawal amount each year shall equal 3.5% of the Account Value.

jk. There may be instances where the company has certain data limitations, (e.g., with respect to policies that are not enrolled in an automatic withdrawal program but have exercised a non-excess withdrawal in the contract year immediately preceding the valuation date [Section 6.C.4.g and Section 6.C.4.i]). The company may employ an appropriate proxy method if it does not result in a material understatement of the reserve.

**VM-21 Section 6.C.10**
10. Account Value Depletions
The following assumptions shall be used when a contract’s Account Value reaches zero:

a. If the contract has a GMWB, the contract shall take partial withdrawals that are equal in amount each year to the guaranteed maximum annual withdrawal amount.

b. If the contract has a GMIB, the contract shall annuitize immediately. If the GMIB contractually terminates upon account value depletion, such termination provision is assumed to be voided in order to approximate the contract holder’s election to annuitize immediately before the depletion of the account value.

c. If the contract has any other guaranteed benefits, including a GMDB, the contract shall remain in-force. If the guaranteed benefits contractually terminate upon account value depletion, such termination provisions are assumed to be voided in order to approximate the contract holder’s retaining adequate Account Value to maintain the guaranteed benefits in-force. At the option of the company, fees associated with the contract and guaranteed benefits may continue to be charged and modeled as collected even if the account value has reached zero. While the contract must remain in-force, benefit features may still be terminated according to contractual terms other than account value depletion provisions.

d. If the contract has no minimum guaranteed benefits, the contract should be terminated according to contractual terms.
VM-21 Section 6.C.11

11. Other Voluntary Contract Terminations

For contracts that have other elective provisions that allow a contract holder to terminate the contract voluntarily, the termination rate shall be calculated based on the Standard Table for Full Surrenders as detailed above in Table 6.3 with the following adjustments:

a. If the contract holder is not yet eligible to terminate the contract under the elective provisions, the termination rate shall be zero.

b. After the contract holder becomes eligible to terminate the contract under the elective provisions, the termination rate shall be determined using the “Subsequent years” column of Table 6.3.

c. In using Table 6.3, the ITM of a contract’s guaranteed benefit shall be calculated based on the ratio of the guaranteed benefit’s GAPV to the termination value of the contract. The termination value of the contract shall be calculated as the GAPV of the payment stream that the contract holder is entitled to receive upon termination of the contract; if the contract holder has multiple options for the payment stream, the termination value shall be the highest GAPV of these options.

d. For GMWB or hybrid GMIB contracts, for all contract years in which a withdrawal is projected, the termination rate obtained from Table 6.3 shall be additionally multiplied by 60%.

For calculating the ITM of a hybrid GMIB, the guaranteed benefit’s GAPV shall be the larger of the Annuity GAPV or the Withdrawal GAPV.

e. For contracts with no minimum guaranteed benefits, ITM is 0%; for all contract years in which a withdrawal is projected, the termination rate obtained from Table 6.3 shall be the row in the table for ITM < 50% using the “Subsequent years” column of Table 6.3.

NAIC Staff Comments:

W:\National Meetings\2015\...\TF\LHA\
Appendix

ISSUE:

It has been observed that adding the prescribed mortality margins for some Life/LTC combination products cause modeled reserves to decrease rather than increase.

SECTION:

REDLINE:

(New) VM-20 Section 9.C.6.e

e. In the event that the prescribed mortality margins set forth above do not produce a reserve increase of adequate magnitude – and in particular when the prescribed margins produce a decrease in the reserve – the company shall derive and use margins that do produce an appropriately conservative result.

Guidance Note: This can occur, for example, when a rider -- such as a long-term care rider -- is being valued together with the base policy, pursuant to Section II, Subsection 6 of the Valuation Manual. Reductions to mortality rates, rather than additions, would potentially be needed in such cases. Such a product/rider combination would likely need to be in its own separate mortality segment. In the case of the product/rider combination, an adequate magnitude for a reserve increase can be thought of in terms of the size of reserve increase that would occur for the product using the tabular prescribed margins if the rider had not been present.

VM-20 Section 9.C.7.a

a. If applicable industry basic tables are used in lieu of company experience as the anticipated experience assumptions, or if the level of credibility of the data as provided in Section 9.C.5 is less than 20%, the prudent estimate assumptions for each mortality segment shall equal the respective mortality rates in the applicable industry basic tables as provided in Section 9.C.3, including any applicable improvement pursuant to Section 9.C.3.g, plus the prescribed margin as provided in Section 9.C.6.c, and further adjusted by any applicable additional margin changes pursuant to Section 9.C.6.d.v and/or Section 9.C.6.d.vi and/or Section 9.C.6.e.

VM-20 Section 9.C.7.b.v

v. For each policy in a given mortality segment, from the start of the projection through policy duration E, the prudent estimate mortality assumptions are the company experience mortality rates (as defined in Section 9.C.2), plus the prescribed margin pursuant to Section 9.C.6.b, and further adjusted by any applicable additional margin changes pursuant to Section 9.C.6.d or Section 9.C.6.e.
(New) VM-31 Section 3.D.3.o

o. Adjustments to Prescribed Margins - Description and rationale for any adjustments made to prescribed mortality margins pursuant to VM-20 Section 9.C.6.d or 9.C.6.e.

REASONING:

We want to make sure that mortality margins always increase, rather than decreased, the modeled reserve.
The Life Actuarial (A) Task Force met Sept. 16, 2021. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner, Rachel Hemphill, and Karen Jiang (TX); Judith L. French, Vice Chair, represented by Peter Weber (OH); Lori K. Wing-Heier represented by Sharon Comstock (AK); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Thomas Reedy (CA); Andrew N. Mais represented by Wanchin Chou (CT); Dana Popish Severinghaus represented by Bruce Sartain and Vincent Tsang (IL); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Rhonda Ahrens (NE); Marlene Caride represented by Kevin Clarkson (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Glen Mulready represented by Andrew Schallhorn (OK); and Jonathan T. Pike represented by Tomasz Serbinowski (UT).

1. **Adopted the 2022 GRET**

Mr. Leung made a motion, seconded by Mr. Weber, to adopt the Society of Actuaries’ (SOA’s) 2022 Generally Recognized Expense Table (GRET) (Attachment Six-A). The motion passed unanimously.

2. **Exposed the SOA HMI 2021 Scale Recommendation**

Marianne Purushotham (SOA) presented the SOA Historical Mortality Improvement (HMI) 2021 scale recommendation (Attachment Six-B). She said since 2014, the SOA has applied a standard methodology to develop the HMI scale. The methodology averages a historical component and a forward-looking component to develop the scale, and it uses a smoothing process to eliminate volatility. The historical component is a short-term estimate of the mortality trend since the publication of the 2015 Valuation Basic Table (VBT). The forward-looking component is based on the U.S. Social Security Administration (SSA) Alt2 forecast of future improvements over the next 20 years. Ms. Purushotham noted that there is a difference in experience between the general population data used in the Alt2 forecast and insured population data. She said currently, because of the “noise” in the insured population data, the SOA chooses to use general population data from the SSA. She said in the future, the SOA will look at mortality within the general population by socio-economic group to better differentiate the data.

Ms. Purushotham discussed the graphs, comparing the smoothed and unsmoothed scales by gender for 2018 through 2021. She said the SOA recommends no change to the female scale and a decrease in the male scale for 2021. She recommended that individual companies reflect their expectations for COVID-19 impacts on short-term mortality as part of a temporary mortality adjustment.

Mr. Weber made a motion, seconded by Mr. Kupferman, to expose the SOA HMI 2021 scale recommendation, including the Microsoft Excel tables (Attachment Six-C), for a 21-day public comment period ending Oct. 6. The motion passed unanimously.

Having no further business, the Life Actuarial (A) Task Force adjourned.
TO: Reggie Mazyck, NAIC
FROM: Pete Miller, Experience Study Actuary, Society of Actuaries (SOA)
Tony Phipps, Chair, SOA Committee on Life Insurance Company Expenses
DATE: August 4, 2021
RE: 2022 Generally Recognized Expense Table (GRET) – SOA Analysis

Dear Mr. Mazyck:

As in previous years, the Society of Actuaries expresses its thanks to NAIC staff for their assistance and responsiveness in providing Annual Statement expense and unit data for the 2022 GRET analysis for use with individual life insurance sales illustrations. The analysis is based on expense and expense related information reported on companies’ 2019 and 2020 Annual Statements. This project has been completed to assist the Life Actuarial Task Force (LATF) in its consideration of potential revisions to the GRET that could become effective for calendar year 2022. This memo describes the analysis and resultant findings.

NAIC staff provided Annual Statement data for life insurance companies for calendar years 2019 and 2020. This included data from 776 companies in 2019 and 771 companies in 2020. This decrease resumes the trend of small decreases from year to year. Of the total companies, 375 were in both years and passed the outlier exclusion tests and were included as a base for the GRET factors (292 companies passed similar tests last year).

APPROACH USED
The methodology for calculating the recommended GRET factors based on this data is similar to that followed the last several years. The methodology was last altered in 2015. The changes made at that time can be found in the recommendation letter sent to LATF on July 30, 2015.1

To calculate updated GRET factors, the average of the factors from the two most recent years (2019 and 2020 for those companies with data available for both years) of Annual Statement data was used. For each company an actual-to-expected ratio was calculated. Companies with ratios that fell outside predetermined parameters were excluded. This process was completed three times to stabilize the average rates. The boundaries of the exclusions have been modified from time to time; however, there were no adjustments made this year. Unit expense seed factors (the seeds for all distribution channel categories are the same), as shown in Appendix B, were used to compute total expected expenses. Thus, these seed factors were used to implicitly allocate expenses between acquisition and maintenance expenses, as well as among the three acquisition expense factors (on a direct of ceded reinsurance basis).

Companies were categorized by their reported distribution channel (four categories were used as described in Appendix A included below). There remain a significant number of companies for which no distribution channel was provided, as no responses to the annual surveys have been received from those companies. The characteristics of these companies vary significantly, including companies not currently writing new business or whose major line of business is not individual life insurance. Any advice or assistance from LATF in future

1 https://www.soa.org/Files/Research/Projects/research-2016-gret-recommendation.pdf
years to increase the response rate to the surveys of companies that submit Annual Statements in order to reduce the number of companies in the “Other” category would be most welcomed. The intention is to continue surveying the companies in future years to enable enhancement of this multiple distribution channel information.

Companies were excluded from the analysis if in either 2019 or 2020 (1) their actual to expected ratios were considered outliers, often due to low business volume, (2) the average first year and single premium per policy were more than $40,000, (3) they are known reinsurance companies or (4) their data were not included in the data supplied by the NAIC. To derive the overall GRET factors, the unweighted average of the remaining companies’ actual-to-expected ratios for each respective category was calculated. The resulting factors were rounded, as shown in Table 1.

THE RECOMMENDATION

The above methodology results in the proposed 2022 GRET values shown in Table 1. To facilitate comparisons, the current 2021 GRET factors are shown in Table 2. Further characteristics of the type of companies represented in each category are included in the last two columns in Table 1, including the average premium per policy issued and the average face amount ($000s) per policy issued.

To facilitate comparisons, the current 2021 GRET factors are shown in Table 2. Further characteristics of the type of companies represented in each category are included in the last two columns in Table 1, including the average premium per policy issued and the average face amount ($000s) per policy issued.

* Includes companies that did not respond to this or prior year surveys 292
In previous recommendations, an effort was made to reduce volatility in the GRET factors from year-to-year by limiting the change in GRET factors between years to about ten percent of the prior value. The changes from the 2021 GRET were reviewed to ensure that a significant change was not made in this year’s GRET recommendation.

The Independent, Niche Marketing and Other distribution channel categories experienced a change greater than ten percent so the factors for this line were capped at the ten percent level (the Acquisition per unit factor changed somewhat more than 10% because of rounding) from the corresponding 2021 GRET values. The volatility occurred due to incorrect NAIC data for 2018 for some companies, which caused their actual to expected ratios to be considered outliers and they were not included in the calculation. This resulted in lower final 2021 GRET factors and subsequently the same for the 2022 recommendation. Over the next one to three years, the ten percent cap will allow this difference to be graded in so calculated GRET will be used for the final recommended GRET factors.

**USAGE OF THE GRET**

This year’s survey, responded to by companies’ Annual Statement correspondent, included a question regarding whether the 2021 GRET table was used in its illustrations by the company. Last year, 29% of the responders indicated their company used the GRET for sales illustration purposes, with similar percentage results by size of company; this contrasted with about 28% in 2019. This year, 31% of responding companies indicated that they used the GRET in 2020 for sales illustration purposes. The range was from 11% for Direct Marketing to 43% for Independent. Based on the information received over the last several years, the variation in GRET usage appears to be in large part due to the relatively small sample size and different responders to the surveys.

We hope LATF finds this information helpful and sufficient for consideration of a potential update to the GRET. If you require further analysis or have questions, please contact Pete Miller at 847-706-3566.

Kindest personal regards,

Pete Miller, ASA, MAAA
Experience Study Actuary
Society of Actuaries

Tony Phipps, FSA, MAAA
Chair, SOA Committee on
Life Insurance Company Expenses
APPENDIX A -- DISTRIBUTION CHANNELS

The following is a description of distribution channels used in the development of recommended 2022 GRET values:

1. **Independent** – Business written by a company that markets its insurance policies through an independent insurance agent or insurance broker not primarily affiliated with any one insurance company. These agencies or agents are not employed by the company and operate without an exclusive distribution contract with the company. These include most PPGA arrangements.

2. **Career** – Business written by a company that markets insurance and investment products through a sales force primarily affiliated with one insurance company. These companies recruit, finance, train, and often house financial professionals who are typically referred to as career agents or multi-line exclusive agents.

3. **Direct Marketing** – Business written by a company that markets its own insurance policies direct to the consumer through methods such as direct mail, print media, broadcast media, telemarketing, retail centers and kiosks, internet or other media. No direct field compensation is involved.

4. **Niche Marketers** – Business written by home service, pre-need, or final expense insurance companies as well as niche-market companies selling small face amount life products through a variety of distribution channels.

5. **Other** – Companies surveyed were only provided with the four options described above. Nonetheless since there were many companies for which we did not receive a response (or whose response in past years’ surveys confirmed an “other” categorization (see below), values for the “other” category are given in the tables in this memo. It was also included to indicate how many life insurance companies with no response (to this survey and prior surveys) and to indicate whether their exclusion has introduced a bias into the resulting values.
APPENDIX B – UNIT EXPENSE SEEDS

The expense seeds used in the 2014 and prior GRETs were differentiated between branch office and all other categories, due to the results of a relatively old study that had indicated that branch office acquisition cost expressed on a per Face Amount basis was about double that of other distribution channels. Due to the elimination of the branch office category in the 2015 GRET, non-differentiated unit expense seeds have been used in the current and immediately prior studies.

The unit expense seeds used in the 2022 GRET and the 2021 GRET recommendations were based on the average of the 2006 through 2010 Annual SOA expense studies. These studies differentiated unit expenses by type of individual life insurance policy (term and permanent coverages). As neither the GRET nor the Annual Statement data provided differentiates between these two types of coverage, the unit expense seed was derived by judgment based this information. The following shows the averages derived from the Annual SOA studies and the seeds used in this study. Beginning with the 2020 Annual Statement submission this information will become more readily available.

Historical Mortality Improvement Recommendation (VM-20)
2021 Scale Update

Mortality Improvements Life Work Group (MILWG) of the
Academy Life Experience Committee and SOA Preferred
Mortality Project Oversight Group (“Joint Committee”)

Agenda

- Review standard methodology used for Historical Mortality Improvement (HMI) scale development each year
- Review results of application of the methodology for 2021
- Recommendation for HMI scale for use with 2021 valuation under VM20
HMI Standard Methodology

- Most recent HMI data—last 10 years
- Source: Social Security Administration (SSA)
- Historical data only available through the end of the year that is 2 years prior to the current valuation year

- Most recent SSA Alt 2 forecast of future improvements over longer period (20 years)
- Alt 2 = intermediate projection from most recent SSA Trustees Report release

- Average of historical data and forecasted components
- With smoothing process applied

Historical Component:

10-Year Historical Average Annual Improvement

Male 10 Yr Historical Averages - SSA Data

Scale Year / Data Years:
- 2021 / 2009-2019
- 2020 / 2008-2018

Attained Age
Historical Component:
10-Year Historical Average Annual Improvement

Female 10 Yr Historical Averages - SSA Data

Scale Year / Data Years:
2021 / 2009-2019
2020 / 2008-2018
2018 / 2006-2016

Mortality Improvement Rates

Attained Age

F - 2021  F - 2020  F - 2019  F - 2018

Recommendation for Application of HMI Scale for 2021
Revised

Recommendation

- Use standard methodology for the published HMI scale for 2021
- Decrease the HMI scale for males and for females for 2021 based on the application of the standard methodology
- Recommend individual companies reflect their expectations around COVID-19 impacts for short-term mortality levels as part of a temporary mortality adjustment

Impact on the 12/31/21 Valuation

- Bring up to valuation date (standard Valuation Basic Table (VBT))
- Note: Companies start with different base mortality levels
  - Possibly higher mortality for the near term to reflect COVID-19
  - HMI scale would not attempt to adjust for COVID-19 as the exposure and the handling of deaths in the underlying company data will vary

Longevity Risk (E/A) Subgroup

To: Mike Boerner, Chair
The Life Actuarial (A) Task Force

Subject: The Report of Longevity Risk (E/A) Subgroup to the Life Actuarial (A) Task Force

The Longevity Risk (E/A) Subgroup has not met since the Summer National Meeting. A new Subgroup chair has been appointed. The Subgroup will coordinate with the PRT Mortality Drafting Group of the VM-22 (A) Subgroup to assess risks associated with pension risk transfer business.
December 8, 2021

From: Reggie Mazyck, NAIC Support Staff
Guaranteed Issue (GI) Life Valuation (A) Subgroup

To: Mike Boerner, Chair
The Life Actuarial (A) Task Force

Subject: The Report of Guaranteed Issue (GI) Life Valuation (A) Subgroup to the Life Actuarial (A) Task Force

The Guaranteed Issue (GI) Life Valuation (A) Subgroup has not met since the Summer National Meeting. It is awaiting the appointment of a new chair. Otherwise, it is in a dormant/monitoring mode given that there have been no new known studies of GI Life mortality that could prove useful in formulating a new prescriptive requirement for the reserves for GI Life products. One direction the subgroup could go is to continue consideration of how to adopt the GI Life table but require companies with credible experience to use a credibility weighted mortality whether their experience is lower or higher than the table.
Dec 8, 2021

From: Fred Andersen, Chair
The Experience Reporting (A) Subgroup

To: Mike Boerner, Chair
The Life Actuarial (A) Task Force

Subject: The Report of the Experience Reporting (A) Subgroup to the Life Actuarial (A) Task Force

The Experience Reporting (A) Subgroup has not met since the Summer National Meeting. Upcoming projects include monitoring the plans for collecting life insurance mortality and policyholder behavior data using the NAIC as the statistical agent, starting to develop mandatory reporting of variable annuity data, and continuing to work on evaluating actuarial aspects of accelerated underwriting.
Index-Linked Variable Annuity (A) Subgroup
Virtual Meeting
November 23, 2021

The Index-Linked Variable Annuity (A) Subgroup of the Life Actuarial (A) Task Force met Nov. 23, 2021. The following Subgroup members participated: Peter Weber, Chair (OH); Tomasz Serbinowski, Vice Chair (UT); Sarvjit Samra (CA); Vincent Tsang (IL); Derek Wallman (NE); Kevin Clarkson and David Wolf (NJ); Bill Carmello and Michael Cebula (NY); Mengting Kim and Mike Boerner (TX); and Craig Chupp (VA).

1. Exposed the Draft Actuarial Guideline for ILVAs

Mr. Weber said index-linked variable annuities (ILVAs) are filed as variable products. As such, they are exempt from nonforfeiture requirements, which are a source of consumer protection. He said the usual tradeoff available to variable product owners in lieu of nonforfeiture values is the availability of unitized separate account values at surrender. He said that the ILVA product does not have the safeguard of nonforfeiture, nor does it have unitized values. He said the proposed actuarial guideline (Attachment Ten-A) seeks to remedy this issue by providing guidance for how a non-unit-linked product can be considered to provide values that vary according to the investment experience of a separate account. He said the guideline clarifies the application of the Standard Nonforfeiture Law for Individual Deferred Annuities (#805) and the Variable Annuity Model Regulation (#250) to ILVAs to provide values that vary according to the investment experience of the assets in the underlying separate account, therefore allowing them to be considered variable annuities. Mr. Serbinowski provided an overview of the proposed guideline. He noted that the guideline is not a finished product but is intended to be a good starting point for discussion. He recommended that state insurance regulators review non-unitized products being filed as variable in their states to ensure that they are in conformance with the requirements of Model #250.

Wayne Mehlman (American Council of Life Insurers—ACLI) and Steve Roth (Committee of Annuity Insurers) said an industry drafting group has been developed to create a revised version of the proposed guideline. He said the aims of the revised version are to: 1) ensure that there are more choices and options for ILVA clients; 2) maintain the transparency of the interim or unitized value designs; 3) preserve the ability for carriers to use spread based rather than fee-based manufacturing model; and 4) allow flexibility in new product innovation and development. He said that industry believes the proposed guideline is currently too prescriptive and should be more principle-based.

The Subgroup agreed, without objection, to expose the proposed actuarial guideline for a 60-day public comment period ending Jan. 27, 2022.

Having no further business, the Index-Linked Variable Annuity (A) Subgroup adjourned.

https://naiconline.sharepoint.com/w:/r/sites/NAICSupportStaffHub/Member Meetings/Fall 2021/TF/LifeActuarial/ILVA/11_23/11_23 ILVA Minutes.docx
**Background**

Variable annuities are exempted from the scope of NAIC Model 805, Standard Nonforfeiture Law for Individual Deferred Annuities. The Model does not define the term "variable annuity". NAIC Model 250, Variable Annuity Model Regulation, provides requirements for nonforfeiture benefits. Model 250 also defines variable annuities as "contracts that provide for annuity benefits that vary according to the investment experience of a separate account."

Section 7B of the Model 250 provides that "to the extent that a variable annuity contract provides benefits that do not vary in accordance with the investment performance of a separate account" the contract shall satisfy the requirements of Model 805.

The application of the Model 250 to a traditional variable annuity with unit-linked values is straightforward. The unit-linked feature provides an automatic linkage between annuity values and the investment experience of a separate account. Daily values (market values of the separate account assets) are the basis of all the benefits, including surrender values.

Recently, a number of insurers introduced new, hybrid annuity products with periodic credits based on the performance of a specified portfolio of assets, typically through an index. These hybrid products typically are not unit-linked and do not invest in the assets whose performance forms the basis for the periodic credits.

There is no established terminology for these hybrid products. These products go by several names, including structured annuities, registered index-linked annuities, or index-linked variable annuities, among others. This guideline refers to them as index-linked variable annuities (ILVA).

The fact that ILVA products are not unit-linked means they don't have daily values determined by the market prices of the underlying assets. Instead, they provide interim values defined by contractual provisions. These interim values may or may not reflect the market values of the actual assets held by the insurer in support of the product guarantees.

Many ILVA products are registered with the SEC and claim to be exempt from model 805 as variable annuities. However, because they are not unit-linked, the question arises whether they provide values that vary according to the investment experience of a separate account, as required in Model 250.

The purpose of this guideline is to clarify the application of the Models 805 and 250 to those hybrid products. Specifically, the guideline provides conditions under which a non-unit-linked product can be considered to provide values that vary according to the
investment experience of a separate account, and therefore be considered a variable annuity under Model 250 and exempt from Model 805.

**Scope**

This guideline applies to any annuity contract claiming exemption from Model 805 on the basis that it is variable and that it is not unit-linked.

This guidance applies to index-linked crediting features that are provided through non-unitized separate account(s) that are built into policies or contracts (with or without unitized subaccounts) or added to such by rider, endorsement, or amendment. This guidance applies to both insulated and non-insulated separate account products.

This guideline does not apply to products supported by a general account and subject to the requirements of NAIC Model 805, Standard Nonforfeiture Law for Individual Deferred Annuities.

**Definitions**

“Hypothetical Portfolio” means hypothetical portfolio of fixed income assets and derivative assets designed to replicate an Index Option Value at the end of the Index Term.

“Interim value” means the value, attributable to one or more index options, used in determining the death benefit, withdrawal amount, annuitization amount or surrender value at any time other than the start date and end date of an index term.

“Index Strategy” means a method used to determine index credits with specified index or indices and cap, buffer, participation rate, spread, margin or other index crediting elements.

“Index Option Value” means the contract value or other well-defined base value in an index option at an index term start date or end date.

“Index Term” means the period of time from the term start date to the term end date over which an index change and index credit is determined.
Principles

This guideline is based on the following principles:

1. The Interim Value methodology must provide equity to both the contract holder and the company. Equity in this case, means that the Interim Values approximate the actual market values of the separate account assets backing the policies or contracts.

2. There exists a hypothetical portfolio containing fixed-income assets and derivatives that use values consistent with the underlying market prices of the hypothetical derivative assets at the time the index crediting elements are determined.

3. Such hypothetical portfolio must be designed to perfectly hedge the benefit guarantees at the end of the term.

4. The market value of such hypothetical portfolio is determinable based on the daily values of the hypothetical portfolio’s assets.

Text

Interim values must be based on the market value of the separate account assets supporting the guarantees in the contract. That determination may be based on the actual separate account assets or based on a hypothetical portfolio of supporting assets described herein.

The value of the Hypothetical Portfolio at any time is the sum of the Fixed-Income Asset Proxy value (with or without a market-value adjustment) and the Derivative Asset Proxy value.

“Fixed-Income Asset Proxy” represents a zero-coupon bond that accrues interest, simple or compound, over the Index Term and matures for a value equal to the initial Index Option Value.

“Derivative Asset Proxy” is a package of hypothetical derivative assets designed to hedge the risks associated with guaranteeing the Index Option Value.

The value of the Derivative Asset Proxy plus the value of the Fixed-Income Asset Proxy shall match the Index Option Value at the end of the Index Term as determined by the Index Strategy.

Assumptions used to value the Hypothetical Portfolio including yields, implied volatility, risk-free rate, and dividend yield:

1. Must be supported by market prices of the Fixed-Income Asset Proxy and Derivative Asset Proxy at the time index crediting elements are determined;
2. May be static throughout the Index Term or may be dynamic. If dynamic assumptions are used, the assumptions must be based on market prices of the Fixed-Income Asset Proxy and Derivative Asset Proxy at the time of valuation.

The initial value of the Fixed-Income Asset Proxy is equal to the initial Index Option Value less the initial value of the Derivative Asset Proxy. Drafting Note: The difference is expected to be small, as any profit provisions, spreads, and expenses should be reflected as explicit charges disclosed in the contract. Any explicit charges deducted at the beginning of the Index Term would decrease the Index Option Value for the purpose of the comparison to the Hypothetical Portfolio value. There may need to be a provision for recognition of periodic charges to be assessed over the Index Term in the comparison required above.

The company (or actuary) must describe the Hypothetical Portfolio and the assumptions used to calculate its value at any time. The product filing must quantify the maximum difference between the value of the Hypothetical Portfolio and the Index Option Value at the beginning of the Index Term. The actuary must justify and explain the source of any material differences.

Company must provide an actuary’s certification that provisions of this guideline are being met. <What, if any, details need to be provided in the cert or its support?>

**Effective Date**

Questions to commenters
The Index-Linked Variable Annuity (A) Subgroup of the Life Actuarial (A) Task Force met Sept. 23, 2021. The following Subgroup members participated: Peter Weber, Chair (OH); Tomasz Serbinowski, Vice Chair (UT); Sarvjit Samra (CA); Derek Wallman (NE); Kevin Clarkson and David Wolf (NJ); Bill Carmello (NY); and Mengting Kim (TX). Also participating were: Vincent Tsang (IL); David Sky (NH); and Mike Boerner (TX).

1. Discussed Establishing Interim Values for ILVAs

Mr. Weber discussed the list of options (Attachment Eleven-A) for the consideration of the Subgroup. Mr. Clarkson suggested that the Subgroup determine the order of importance for addressing the following items: 1) determining the definition of the product; 2) resolving the valuation and nonforfeiture issues; 3) deciding how closely the returns must come to matching the underlying index; and 4) the equity of the interim value provisions. Mr. Weber noted that valuation issues are outside of the scope of the Subgroup charges. He said he wants to focus on the Subgroup charge to provide recommendations for interim values.

Mr. Samra voiced support for basing any new guidance on state regulations currently in use. He asked if Mr. Weber’s survey of state regulations also included state-issued bulletins or notices companies could use as guidance. Mr. Weber responded that his survey, which was informal and conducted verbally, did not uncover any notices or bulletins. He said most states provided companies with a list of questions intended to promote disclosure.

Mr. Tsang said Illinois Regulation 1551 provides a definition for a variable contract, but it does not cover index-linked variable annuity (ILVA) products and other contracts that provide guarantees. Mr. Serbinowski said the ILVA may be covered if it is registered under the Securities Act of 1933. Mr. Weber suggested using the regulation as a template for developing a regulation that addresses interim values. Mr. Carmello said the New York State Department of Financial Services (NYSDFS) has a draft ILVA regulation that bases interim values on the market value of the segment guarantees or the prorated value based on the term of the guarantee. He said the buffer is included as part of the prorated value. He said the proration method is not perfect, but it has the advantage of being simple. Mr. Serbinowski said he favors developing an Actuarial Guideline that follows the path of the Illinois regulation, but it provides a slightly different interpretation of how benefits may follow the performance of the asset values. Mr. Carmello said the guideline should be applied to new issues only. Mr. Sky suggested notifying the commissioner of the intent to develop new requirements and recommending a moratorium on new ILVA product approvals. Mr. Carmello said it is probably too late for such a recommendation. Mr. Weber said he, Mr. Serbinowski, and a few others will begin work on the guideline.

Having no further business, the Index-Linked Variable Annuity (A) Subgroup adjourned.
<table>
<thead>
<tr>
<th>Approach</th>
<th>Pros</th>
<th>Cons</th>
</tr>
</thead>
</table>
| Do nothing | • No impact to currently marketed products | • Not uniform and increased non-uniformity if states tighten standards on their own to address evolving designs  
• No minimum value provided  
• Evolving designs are less equitable to contract holder |
| Base guidance on a current states’ approach where such exists*. Or a blending of approaches | • Uniformity  
• Likely minimal effort to implement  
• Likely minimal impact on current marketed products | • Not well defined  
• Depends on the approach |
| Guidance for how these products can be considered variable (Compact approach) | • Uniformity  
• Potentially minimal impact on currently marketed products | • May be difficult to define |
| Modify model 805 and/or develop separate requirements for hybrid separate account products | • Uniformity | • Considerable effort  
• Such approach should be part of a more in-depth review and modification of the model beyond just ILVAs  
• Requires individual state adoption |
| Reject products as variable | • Regulatory framework exists but it must be strictly enforced | • Non-compliant products currently exist in market  
• Disrupts an important segment of the market between VAs and FIAS  
• Since many states will allow these products anyway, creates increased non-uniformity (this may be worse than “do nothing”) |

* Approaches shared through an informal state survey were aligned with but generally, less formal than the Illinois regulation’s expanded definition of “variable”. The states’ guidance included standard questions in review and disclosure requirements. Elements that could be incorporated into a recommended approach.
IL – Regulation 1551

Variable Contract means any policy or contract that provides for life insurance or annuity benefits that vary according to the investment experience of any separate account or accounts maintained by the insurer as to that policy or contract, as provided for in Section 245.21 of the Code; or any policy or contract that is registered under the Securities Act of 1933, as amended (15 USC 77a et seq.), and that provides for benefits that vary according to the performance of an index, when the funds are not guaranteed as to principal or a stated rate of interest and in which the supporting assets are held and reported in a noninsulated separate account in which changes in asset values substantially match changes in contractual benefits from inception of the contract.

What is a metric for “substantially match”? Could states accept actuary’s certification that they substantially match? Would a demonstration be required? What would a demonstration of that look like?
December 1, 2021

Mr. Mike Boerner
Chair, Life Actuarial (A) Task Force
National Association of Insurance Commissioners

Re: Amendment Proposal Form (APF) 2021-11

Dear Mr. Boerner,

On behalf of the Variable Annuity Reserves & Capital Work Group (VARCWG) of the American Academy of Actuaries,¹ I am pleased to provide comments on the proposed assumption disclosure requirements in APF 2021-11.

VARCWG believes that the proposed disclosures in VM-31 Section 3.F.13.d.ii and iii should consider unfloored conditional tail expectations (CTEs)—i.e., calculate the CTE without requiring that the scenario reserve for any scenario be no less than the cash surrender value. Quantifications before the cash surrender value floor are likely to provide a better understanding of the conservatism selected for the assumption.

It may also be possible to simplify the assumption margin analysis.

For example, one approach would be to simplify the assessment of individual risk factors in VM-31 Section 3.F.13.d.ii by using CTE 70 (adjusted) instead of CTE 70 (best efforts) and removing the CTE 98 requirement.

- Using CTE 70 (adjusted) for the assumption margin analysis is consistent with the use of CTE 70 (adjusted) to assess assumption outliers in the Standard Projection and in other disclosures.
- The CTE (adjusted) basis may make the analysis more tractable and/or less subject to estimation noise from simplifications for companies with a Clearly Defined Hedging Strategy (CDHS).

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
- The analogous disclosure requirement for VM-20 reserves uses only the Deterministic Reserve even if there are stochastic reserves.

- If desired, CTE 70 (adjusted) could be added to the VM-31 Section 3.F.13.d.iii aggregate margin disclosure requirements to connect the individual margin analysis to the aggregate CTE 70 and CTE 98 margin analysis.

Another approach would also remove the CTE 98 requirement from VM-31 Section 3.F.13.d.ii but allow actuaries to use either CTE (adjusted) or CTE (best efforts) for both VM-31 Section 3.F.13.d.ii and iii and disclose their selected basis and rationale. Both measures provide insights into assumption margins, and some actuaries may determine that one is more appropriate than the other based upon the underlying facts and circumstances.

Thank you for your consideration of these comments. Please contact Academy life policy analyst Khloe Greenwood (greenwood@actuary.org) with any questions.

Sincerely,
Connie Tang, MAAA, FSA, CERA, CFA
Chairperson, VARCWG
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
PBR Staff of Texas Department of Insurance

Title of the Issue:
Add a section for other assumptions requirement in VM-21 which covers general guidance and requirements for assumptions, and expense assumptions.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-21 Section 1.C.2.b, VM-21 Section 12, VM-21 Section 13, VM-21 Section 1.B, VM-21 Section 10.A, VM-31 Section 3.F.3.d, VM-31 Section 3.F.13.d

January 1, 2021 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

A new section is needed in VM-21 to provide general guidance and requirements for assumptions, similar to VM-20, to address assumption reporting issues identified in VM-21 PBR report reviews, e.g., some companies don’t discuss regular assumption reviews for any necessary updates. In addition, this section provides the specific requirements for assumptions that have not been covered in previous sections of VM-21, i.e., the expense assumptions. VM-21 is not very explicit about expenses (e.g., whether they are fully allocated or include one-time expenses). For VM-20, we have had some material impacts from how companies treat one-time expenses that may be multi-year but temporary. Companies could understate expenses if there is no adjustment for periodic or other recurrent expenses in expense study years where they do not occur. This APF is to make the VM-21 expense assumption requirement explicit and consistent with what is specified in VM-20 Section 9.E. The new section can also be used to cover any other assumptions requirements that need to be addressed in the future. The reporting requirement of the sensitivity testing and the impact of margin analysis is added to VM-31 to help regulators better understand how companies comply with the newly added assumption guidance and requirements.
VM-21 Section 1.C.2.b

a) Liability risks

i. Reinsurer default, impairment or rating downgrade known to have occurred before or on the valuation date.

ii. Mortality/longevity, persistency/lapse, partial withdrawal and premium payment risks.

iii. Utilization risk associated with guaranteed living benefits.

iv. Anticipated mortality trends based on observed patterns of mortality improvement or deterioration, where permitted.

v. Annuitization risks.

vi. Additional premium dump-ins (high interest rate guarantees in low interest rate environments).

vii. Applicable expense risks, including fluctuation in maintenance expenses directly attributable to the business, future commission expenses, and expense inflation/growth.

VM-21 Section 12 (new)

Section 12: Other Guidance and Requirements for Assumptions

A. Overview

This section provides guidance and requirements in general for setting prudent estimate assumptions when determining either the stochastic reserve or the reserve for any contracts determined using the Alternative Methodology. It also provides specific guidance and requirements for expense assumptions.

B. General Assumption Requirements

1. The company shall use prudent estimate assumptions for risk factors that are not stochastically modeled by applying margins to the anticipated experience assumptions if such risk factors have been categorized as material risks by following Section 1.B Principle 3 and requirements in Section 12.C.

2. The company shall establish the prudent estimate assumptions for risk factors in compliance with the requirements in Section 12 of Model #820 and must periodically review and update the assumptions as appropriate in accordance with these requirements.

3. The company shall model the following risk factors stochastically unless the company
elects the Alternative Methodology defined in Section 7:

a. Interest rate movements (i.e., Treasury interest rate curves).

b. Equity performance (e.g., Standard & Poor’s 500 index [S&P 500] returns and returns of other equity investments).

4. If the company elects to stochastically model risk factors in addition to the economic scenarios, the requirements in this section for determining prudent estimate assumptions for these risk factors do not apply.

Guidance Note: It is expected that companies will not stochastically model risk factors other than the economic scenarios, such as contract holder behavior or mortality, until VM-21 has more specific guidance and requirements available. Companies shall discuss with domiciliary regulators if they wish to stochastically model other risk factors.

5. The company shall use its own experience, if relevant and credible, to establish an anticipated experience assumption for any risk factor. To the extent that company experience is not available or credible, the company may use industry experience or other data to establish the anticipated experience assumption, making modifications as needed to reflect the circumstances of the company.

a. For risk factors (such as mortality) to which statistical credibility theory may be appropriately applied, the company shall establish anticipated experience assumptions for the risk factor by combining relevant company experience with industry experience data, tables or other applicable data in a manner that is consistent with credibility theory and accepted actuarial practice.

b. For risk factors (such as utilization of guaranteed living benefits) that do not lend themselves to the use of statistical credibility theory, and for risk factors (such as some of the lapse assumptions) to which statistical credibility theory can be appropriately applied but cannot currently be applied due to lack of industry data, the company shall establish anticipated experience assumptions in a manner that is consistent with accepted actuarial practice and that reflects any available relevant company experience, any available relevant industry experience, or any other experience data that are available and relevant. Such techniques include:

i. Adopting standard assumptions published by professional, industry or regulatory organizations to the extent they reflect any available relevant company experience or reasonable expectations.

ii. Applying factors to relevant industry experience tables or other relevant data to reflect any available relevant company experience and differences in expected...
experience from that underlying the base tables or data due to differences between the risk characteristics of the company experience and the risk characteristics of the experience underlying the base tables or data.

iii. Blending any available relevant company experience with any available relevant industry experience and/or other applicable data using weightings established in a manner that is consistent with accepted actuarial practice and that reflects the risk characteristics of the underlying contracts and/or company practices.

c. For risk factors that have limited or no experience or other applicable data to draw upon, the assumptions shall be established using sound actuarial judgment and the most relevant data available, if such data exists.

d. For any assumption that is set in accordance with the requirements of Section 12.B.5.c, the qualified actuary to whom responsibility for this group of contracts is assigned shall use sensitivity testing and disclose the analysis performed to ensure that the assumption is set at the conservative end of the plausible range.

e. The qualified actuary, to whom responsibility for this group of contracts is assigned, shall annually review relevant emerging experience for the purpose of assessing the appropriateness of the anticipated experience assumption. If the results of statistical or other testing indicate that previously anticipated experience for a given factor is inadequate, then the qualified actuary shall set a new, adequate, anticipated experience assumption for the factor.

6. The company shall sensitivity test risk factors that are not stochastically modeled and examine the impact on the stochastic reserve. The company shall update the sensitivity tests periodically as appropriate. The company may update the tests less frequently, but no less than every 3 years, when the tests show less sensitivity of the stochastic reserve to changes in the assumptions being tested or the experience is not changing rapidly. Providing there is no material impact on the results of the sensitivity testing, the company may perform sensitivity testing:

a. Using samples of the contracts in force rather than performing the entire valuation for each alternative assumption set.

b. Using data from prior periods.

Guidance Note: Sensitivity testing every risk factor on an annual basis is not required. For some risk factors, it may be reasonable, in lieu of sensitivity testing, to employ statistical measures for margins, such as adding one or more standard deviations to the anticipated experience assumption.
7. The company shall vary the prudent estimate assumptions from scenario to scenario within the stochastic reserve calculation in an appropriate manner to reflect the scenario-dependent risks.

C. Assumption Margins

The company shall include margins to provide for adverse deviations and estimation error in the prudent estimate assumption for each risk factor that is not stochastically modeled or prescribed, subject to the following:

1. The level of margin applied to the anticipated experience assumptions may be determined in aggregate or independently as discussed in Section 1.B Principle 3. It is not permissible to set a margin less toward the conservative end of the spectrum to recognize, in whole or in part, implicit or prescribed margins that are present, or are believed to be present, in other risk factors.

Risks that are stochastically modeled (e.g., interest rates, equity returns) or have prescribed margins or guardrails (e.g., assets, revenue sharing) shall be considered material risks. Other risks generally considered to be material include, but are not limited to, mortality, contract holder behavior, maintenance and overhead expenses, inflation and implied volatility. In some cases, the list of material risks may also include acquisition expenses, partial withdrawals, policy loans, annuitizations, account transfers and deposits, and/or option elections that contain an element of anti-selection.

2. The greater the uncertainty in the anticipated experience assumption, the larger the required margin, with the margin added or subtracted as needed to produce a larger modeled TAR than would otherwise result. For example, the company shall use a larger margin when:

   a. The experience data have less relevance or lower credibility.

   b. The experience data are of lower quality, such as incomplete, internally inconsistent or not current.

   c. There is doubt about the reliability of the anticipated experience assumption, such as, but not limited to, recent changes in circumstances or changes in company policies.

   d. There are constraints in the modeling that limit an effective reflection of the risk factor.

3. In complying with the sensitivity testing requirements in Section 12.B.6 above, greater analysis and more detailed justification are needed to determine the level of uncertainty when establishing margins for risk factors that produce greater sensitivity on the stochastic reserve.
4. A margin is permitted but not required for assumptions that do not represent material risks.

5. A margin should reflect the magnitude of fluctuations in historical experience of the company for the risk factor, as appropriate.

6. The company shall apply the method used to determine the margin consistently on each valuation date but is permitted to change the method from the prior year if the rationale for the change and the impact on the stochastic reserve is disclosed.

D. Expense Assumptions

1. General Prudent Estimate Expense Assumption Requirements

In determining prudent estimate expense assumptions, the company:

a. May spread certain information technology development costs and other capital expenditures over a reasonable number of years in accordance with accepted statutory accounting principles as defined in the Statements of Statutory Accounting Principles.

Guidance Note: Care should be taken with regard to the potential interaction with the inflation assumption below.

b. Shall assume that the company is a going concern.

c. Shall choose an appropriate expense basis that properly aligns the actual expense to the assumption. If values are not significant, they may be aggregated into a different base assumption.

Guidance Note: For example, death benefit expenses should be modeled with an expense assumption that is per death incurred.

d. Shall reflect the impact of inflation.

e. Shall not assume future expense improvements.

f. Shall not include assumptions for federal income taxes (and expenses paid to provide fraternal benefits in lieu of federal income taxes) and foreign income taxes.

g. Shall use assumptions that are consistent with other related assumptions.
h. Shall use fully allocated expenses.

Guidance Note: Expense assumptions should reflect the direct costs associated with the block of contracts being modeled, as well as indirect costs and overhead costs that have been allocated to the modeled contracts.

i. Shall allocate expenses using an allocation method that is consistent across company lines of business. Such allocation must be determined in a manner that is within the range of actuarial practice and methodology and consistent with applicable ASOPs. Allocations may not be done for the purpose of decreasing the stochastic reserve.

j. Shall reflect expense efficiencies that are derived and realized from the combination of blocks of business due to a business acquisition or merger in the expense assumption only when any future costs associated with achieving the efficiencies are also recognized.

Guidance Note: For example, the combining of two similar blocks of business on the same administrative system may yield some expense savings on a per unit basis, but any future cost of the system conversion should also be considered in the final assumption. If all costs for the conversion are in the past, then there would be no future expenses to reflect in the valuation.

k. Shall reflect the direct costs associated with the contracts being modeled, as well as an appropriate portion of indirect costs and overhead (i.e., expense assumptions representing fully allocated expenses should be used), including expenses categorized in the annual statement as “taxes, licenses and fees” (Exhibit 3 of the annual statement) in the expense assumption.

l. Shall include acquisition expenses associated with business in force as of the valuation date and significant non-recurring expenses expected to be incurred after the valuation date in the expense assumption.

m. For contracts sold under a new policy form or due to entry into a new product line, the company shall use expense factors that are consistent with the expense factors used to determine anticipated experience assumptions for contracts from an existing block of mature contracts taking into account:

   i. Any differences in the expected long-term expense levels between the block of new contacts and the block of mature contracts.

   ii. That all expenses must be fully allocated as required.
under Section 142.D6.1.a.i above.

2. Margins for Prudent Estimate Expense Assumptions

The company shall determine margins for expense assumptions following Section 12.C.

VM-21 Section 13

Section 13A: Allocation of the Aggregate Reserve to the Contract Level

VM-21 Section 1.B

Principle 3: The implementation of a model involves decisions about the experience assumptions and the modeling techniques to be used in measuring the risks to which the company is exposed. Generally, assumptions are to be based on the conservative end of the confidence interval. The choice of a conservative estimate for each assumption may result in a distorted measure of the total risk. Conceptually, the choice of assumptions and the modeling decisions should be made so that the final result approximates what would be obtained for the stochastic reserve at the required CTE level if it were possible to calculate results over the joint distribution of all future outcomes. In applying this concept to the actual calculation of the stochastic reserve, the company should be guided by evolving practice and expanding knowledge base in the measurement and management of risk.

Guidance Note: The intent of Principle 3 is to describe the conceptual framework for setting assumptions. Section 10 provides the requirements and guidance for setting contract holder behavior assumptions and includes alternatives to this framework if the company is unable to fully apply this principle. More guidance and requirements for setting assumptions in general are provided in Section 12.

VM-21 Section 10.A

Section 10: Contract Holder Behavior Assumptions

A. General

Contract holder behavior assumptions encompass actions such as lapses, withdrawals, transfers, recurring deposits, benefit utilization, option election, etc. Contract holder behavior is difficult to predict accurately, and variance in behavior assumptions can significantly affect the results. In the absence of relevant and fully credible empirical data, the company should set behavior assumptions as guided by Principle 3 in Section 1.B and Section 12.

VM-31 Section 3.F.3.d

3. Liability Assumptions and Margins – A listing of the assumptions and margins used in the projections to determine the stochastic reserve, including a discussion of the source(s) and the rationale for each assumption:

a. Premiums and Subsequent Deposits – Description of premiums and subsequent deposits.
b. Interest Crediting Strategy – Description of the interest crediting strategy.

c. Commissions – Description of commissions, including any commission chargebacks.

d. Expenses Other than Commissions – Description and listing of insurance company expenses other than commissions, such as overhead, including:

i. Method used to allocate expenses to the contracts included in a principle-based valuation under VM-21 and a statement confirming that expenses have been fully allocated in accordance with VM-21 Section 12.D.1.h.

ii. Method used to apply the allocated expenses to model segments or sub-segments within the cash-flow model.

iii. Identification of types of costs that were spread, and for how many years, if any cost spreading was done pursuant to VM-21 Section 12.D.1.a.

ii.iv. Method used to determine margins.

VM-31 Section 3.F.13.c (new)

c. Sensitivity Tests – For each distinct product type for which margins were established:

i. List the specific sensitivity tests performed for each risk factor or combination of risk factors, rather than those discussed in Sections 3.D.3.h.ii. and 3.D.3.i.ii.

ii. Indicate whether the reserve was calculated based on the anticipated experience assumptions or prudent estimate assumptions for all other risk factors while performing the tests.

iii. Provide the numerical results of the sensitivity tests for both reserves and capital.

iv. Explain how the results of sensitivity tests were used or considered in developing assumptions.

VM-31 Section 3.F.13.d (new)

d. Impact of Margin

i. Company can perform the impact of margin analysis using off-cycle data. The analysis can be done less frequently than annual unless there is change or update in the margins, but not less frequently than every 3 years.
ii. Impact of Margins for Each Risk Factor – The impact of margins on the stochastic reserve for each risk factor, or group of risk factors, that has a material impact on the stochastic reserve, determined by subtracting (i) from (ii), expressed in both dollar amounts and percentages:

(1) The CTE70(best efforts), as outlined in VM-21 Section 9.C, but with the reserve calculated based on the anticipated experience assumption for the risk factor and prudent estimate assumptions for all other risk factors.

(2) The CTE70(best efforts), as outlined in VM-21 Section 9.C, for that group of contracts as reported.

(3) Repeat the impact analysis using the same method on CTE(98) levels.

Guidance Note: Pursuant to VM-21, margins must increase TAR, so the impact of each margin, as calculated above on CTE(98), must be positive.

iii. Aggregate Impact of Margins – the aggregate impact of all margins on the stochastic reserve for that group of contracts determined by subtracting (1) from (2), expressed in both dollar amounts and percentages:

(1) The CTE70(best efforts), as outlined in VM-21 Section 9.C, for that group of contracts, but with the reserve calculated based on anticipated experience assumptions for all risk factors prior to the addition of any margins.

(2) The CTE70(best efforts), as outlined in VM-21 Section 9.C, for that group of contracts as reported.

(3) Repeat the impact analysis using the same method on CTE(98) levels.

iv. Impact of Implicit Margins – For purposes of the disclosures required in 13.d.ii and 13.d.iii above:

(1) If the company believes the method used to determine anticipated experience assumptions includes an implicit margin, the company can adjust the anticipated experience assumptions to remove this implicit margin for this reporting purpose only. If any such adjustment is made, the company shall document the rationale and method used to determine the anticipated experience assumption.

(2) Since the company is not required to determine an anticipated experience assumption or a prudent estimate assumption for risk factors that are prescribed (i.e., interest rates movements, equity performance, default costs and net spreads on reinvestment assets), when determining the impact of margins, the prescribed assumption shall be deemed to be the prudent estimate assumption for the risk factor, and the company can elect to determine an anticipated experience assumption for the risk factor, based on the company's anticipated experience for the risk factor. If this is elected, the company shall document the rationale and method used to determine the anticipated experience assumption.
Brian Bayerle  
Senior Actuary  

December 1, 2021  

Mr. Mike Boerner  
Chair, NAIC Life Actuarial Task Force (LATF)  

Re: APF 2021-11  

Dear Mr. Boerner:  

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit the following comments on APF 2021-11.  

ACLI is supportive of regulatory requirements that ensure appropriate assumptions and margins, as well as disclosures that provide regulators useful insights into how a company has determined reserves. Industry is, however, concerned about further increases in reporting requirements that do not provide significant value to regulators. Therefore, although we support the majority of this APF, we are concerned about the inclusion of language regarding sensitivity testing in VM-21 Section 12.B.6. The margins on the assumptions are intended to account for the uncertainty around the assumptions, not the sensitivity of reserves to a given assumption; thus, it is unclear how this information assists regulators in assessing the reasonableness of the margin. The phrase "no material impact" also may be a source of confusion, as certain assumptions can display different sensitivities in different market conditions. Further, it is unclear how, if at all, the qualified actuary is intended to use the results of this sensitivity testing. For this reason, ACLI believes this requirement should be removed from APF 2021-11.  

The proposed requirements regarding sensitivity testing in this APF are like those found in VM-20. Consequently, the same comment above holds for VM-20; namely, that sensitivity tests appear to have little regulatory value concerning the determination of margins because sensitivity is different from uncertainty. Accordingly, ACLI believes that strong consideration should be given to removing the sensitivity testing requirements from VM-20 as well.  

In addition to the primary concern raised above, we have the following additional comments:  
• VM-21, Section 12.B.4 Guidance Note: The last sentence of the guidance note states that “Companies shall discuss...”, and we would like clarification if this language is intended as a requirement or a suggestion. If the latter, we would suggest changing to “Companies may shall discuss....”  

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133  

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 94 percent of industry assets in the United States.

• VM-21, Section 12.C.1: This language seems to require a conservative margin on every individual assumption without recognizing potential impacts from other margins. That appears to contradict Principle 3, which says, “The choice of a conservative estimate for each assumption may result in a distorted measure of the total risk.” Principle 3 implies that margins should be set to get to an appropriate overall level of conservatism.

• VM-31, Section 3.F.13.d.ii.3: The Guidance Note implies that TAR is equal to CTE(98), which is inaccurate. TAR is equal to reserves plus C-3 RBC, which will not be equal to CTE(98) due to the factors within the C-3 RBC formula.

We appreciate the consideration of our comments and look forward to discussing on a future call. Thank you.

Sincerely,

[Signature]

Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

   **Identification:**
   PBR Staff of Texas Department of Insurance

   **Title of the Issue:**
   Add a section for other assumptions requirement in VM-21 which covers general guidance and requirements for assumptions, and expense assumptions.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

   VM-21 Section 1.C.2.b, VM-21 Section 12, VM-21 Section 13, VM-21 Section 1.B, VM-21 Section 10.A, VM-31 Section 3.F.3.d, VM-31 Section 3.F.13.d

   January 1, 2021 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

   See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

   A new section is needed in VM-21 to provide general guidance and requirements for assumptions, similar to VM-20, to address assumption reporting issues identified in VM-21 PBR report reviews, e.g., some companies don’t discuss regular assumption reviews for any necessary updates. In addition, this section provides the specific requirements for assumptions that have not been covered in previous sections of VM-21, i.e., the expense assumptions. VM-21 is not very explicit about expenses (e.g., whether they are fully allocated or include one-time expenses). For VM-20, we have had some material impacts from how companies treat one-time expenses that may be multi-year but temporary. Companies could understate expenses if there is no adjustment for periodic or other recurrent expenses in expense study years where they do not occur. This APF is to make the VM-21 expense assumption requirement explicit and consistent with what is specified in VM-20 Section 9.E. The new section can also be used to cover any other assumptions requirements that need to be addressed in the future. The reporting requirement of the sensitivity testing and the impact of margin analysis is added to VM-31 to help regulators better understand how companies comply with the newly added assumption guidance and requirements.
VM-21 Section 1.C.2.b

1. Liability risks
   a. Reinsurer default, impairment or rating downgrade known to have occurred before or on the valuation date.
   b. Mortality/longevity, persistency/lapse, partial withdrawal and premium payment risks.
   c. Utilization risk associated with guaranteed living benefits.
   d. Anticipated mortality trends based on observed patterns of mortality improvement or deterioration, where permitted.
   e. Annuitzation risks.
   f. Additional premium dump-ins (high interest rate guarantees in low interest rate environments).
   g. Applicable expense risks, including fluctuation in maintenance expenses directly attributable to the business, future commission expenses, and expense inflation/growth.

VM-21 Section 12 (new)

Section 12: Other Guidance and Requirements for Assumptions

A. Overview

This section provides guidance and requirements in general for setting prudent estimate assumptions when determining either the stochastic reserve or the reserve for any contracts determined using the Alternative Methodology. It also provides specific guidance and requirements for expense assumptions.

B. General Assumption Requirements

1. The company shall use prudent estimate assumptions for risk factors that are not stochastically modeled by applying margins to the anticipated experience assumptions if such risk factors have been categorized as material risks by following Section 1.B Principle 3 and requirements in Section 12.C.

2. The company shall establish the prudent estimate assumptions for risk factors in compliance with the requirements in Section 12 of Model #820 and must periodically review and update the assumptions as appropriate in accordance with these requirements.

3. The company shall model the following risk factors stochastically unless the company
elects the Alternative Methodology defined in Section 7:

a. Interest rate movements (i.e., Treasury interest rate curves).

b. Equity performance (e.g., Standard & Poor’s 500 index [S&P 500] returns and returns of other equity investments).

4. If the company elects to stochastically model risk factors in addition to the economic scenarios, the requirements in this section for determining prudent estimate assumptions for these risk factors do not apply.

It is expected that companies will not stochastically model risk factors other than the economic scenarios, such as contract holder behavior or mortality, until VM-21 has more specific guidance and requirements available. Companies shall discuss with domiciliary regulators if they wish to stochastically model other risk factors.

5. The company shall use its own experience, if relevant and credible, to establish an anticipated experience assumption for any risk factor. To the extent that company experience is not available or credible, the company may use industry experience or other data to establish the anticipated experience assumption, making modifications as needed to reflect the circumstances of the company.

a. For risk factors (such as mortality) to which statistical credibility theory may be appropriately applied, the company shall establish anticipated experience assumptions for the risk factor by combining relevant company experience with industry experience data, tables or other applicable data in a manner that is consistent with credibility theory and accepted actuarial practice.

b. For risk factors (such as utilization of guaranteed living benefits) that do not lend themselves to the use of statistical credibility theory, and for risk factors (such as some of the lapse assumptions) to which statistical credibility theory can be appropriately applied but cannot currently be applied due to lack of industry data, the company shall establish anticipated experience assumptions in a manner that is consistent with accepted actuarial practice and that reflects any available relevant company experience, any available relevant industry experience, or any other experience data that are available and relevant. Such techniques include:

i. Adopting standard assumptions published by professional, industry or regulatory organizations to the extent they reflect any available relevant company experience or reasonable expectations.

ii. Applying factors to relevant industry experience tables or other relevant data to reflect any available relevant company experience and differences in expected
experience from that underlying the base tables or data due to differences between the risk characteristics of the company experience and the risk characteristics of the experience underlying the base tables or data.

iii. Blending any available relevant company experience with any available relevant industry experience and/or other applicable data using weightings established in a manner that is consistent with accepted actuarial practice and that reflects the risk characteristics of the underlying contracts and/or company practices.

c. For risk factors that have limited or no experience or other applicable data to draw upon, the assumptions shall be established using sound actuarial judgement and the most relevant data available, if such data exists.

d. For any assumption that is set in accordance with the requirements of Section 12.B.5.c, the qualified actuary to whom responsibility for this group of contracts is assigned shall use sensitivity testing and disclose the analysis performed to ensure that the assumption is set at the conservative end of the plausible range.

e. The qualified actuary to whom responsibility for this group of contracts is assigned, shall annually review relevant emerging experience for the purpose of assessing the appropriateness of the anticipated experience assumption. If the results of statistical or other testing indicate that previously anticipated experience for a given factor is inadequate, then the qualified actuary shall set a new, adequate, anticipated experience assumption for the factor.

6. The company shall sensitivity test material risk factors that are not stochastically modeled and examine the impact on the stochastic reserve. The company shall update the sensitivity tests periodically as appropriate. The company may update the tests less frequently, but no less than every 3 years, when the tests show less sensitivity of the stochastic reserve to changes in the assumptions being tested or the experience is not changing rapidly. Providing there is no material impact on the results of the sensitivity testing, the company may perform sensitivity testing:

a. Using samples of the contracts in force rather than performing the entire valuation for each alternative assumption set.

b. Using data from prior periods.

Guidance Note: Sensitivity testing every risk factor on an annual basis is not required. For some risk factors, it may be reasonable, in lieu of sensitivity testing, to employ statistical measures for margins, such as adding one or more standard deviations to the anticipated experience assumption.
7. The company shall vary the prudent estimate assumptions from scenario to scenario within the stochastic reserve calculation in an appropriate manner to reflect the scenario-dependent risks.

C. Assumption Margins

The company shall include margins to provide for adverse deviations and estimation error in the prudent estimate assumptions for each risk factor that are not stochastically modeled or prescribed, subject to the following:

1. The level of margin applied to the anticipated experience assumptions may be determined in aggregate or independently as discussed in Section 1.B Principle 3. It is not permissible to set a margin less toward the conservative end of the spectrum to recognize, in whole or in part, implicit or prescribed margins that are present, or are believed to be present, in other risk factors.

Risks that are stochastically modeled (e.g., interest rates, equity returns) or have prescribed margins or guardrails (e.g., assets, revenue sharing) shall be considered material risks. Other risks generally considered to be material include, but are not limited to, mortality, contract holder behavior, maintenance and overhead expenses, inflation and implied volatility. In some cases, the list of material risks may also include acquisition expenses, partial withdrawals, policy loans, annuitizations, account transfers and deposits, and/or option elections that contain an element of anti-selection.

2. The greater the uncertainty in the anticipated experience assumption, the larger the required margin, with the margin added or subtracted as needed to produce a larger modeled TAR than would otherwise result. For example, the company shall use a larger margin when:
   a. The experience data have less relevance or lower credibility.
   b. The experience data are of lower quality, such as incomplete, internally inconsistent or not current.
   c. There is doubt about the reliability of the anticipated experience assumption, such as, but not limited to, recent changes in circumstances or changes in company policies.
   d. There are constraints in the modeling that limit an effective reflection of the risk factor.

3. In complying with the sensitivity testing requirements in Section 12.B.6 above, greater analysis and more detailed justification are needed to determine the level of uncertainty when establishing margins for risk factors that produce greater sensitivity on the stochastic reserve.
4. A margin is permitted but not required for assumptions that do not represent material risks.

5. A margin should reflect the magnitude of fluctuations in historical experience of the company for the risk factor, as appropriate.

6. The company shall apply the method used to determine the margin consistently on each valuation date but is permitted to change the method from the prior year if the rationale for the change and the impact on the stochastic reserve is disclosed.

D. Expense Assumptions

1. General Prudent Estimate Expense Assumption Requirements

   In determining prudent estimate expense assumptions, the company:

   a. May spread certain information technology development costs and other capital expenditures over a reasonable number of years in accordance with accepted statutory accounting principles as defined in the Statements of Statutory Accounting Principles.

   b. Shall assume that the company is a going concern.

   c. Shall choose an appropriate expense basis that properly aligns the actual expense to the assumption. If values are not significant, they may be aggregated into a different base assumption.

   d. Shall reflect the impact of inflation.

   e. Shall not assume future expense improvements.

   f. Shall not include assumptions for federal income taxes (and expenses paid to provide fraternal benefits in lieu of federal income taxes) and foreign income taxes.

   g. Shall use assumptions that are consistent with other related assumptions.

Guidance Note: Care should be taken with regard to the potential interaction with the inflation assumption below.

Guidance Note: For example, death benefit expenses should be modeled with an expense assumption that is per death incurred.
h. Shall use fully allocated expenses.

**Guidance Note:** Expense assumptions should reflect the direct costs associated with the block of contracts being modeled, as well as indirect costs and overhead costs that have been allocated to the modeled contracts.

i. Shall allocate expenses using an allocation method that is consistent across company lines of business. Such allocation must be determined in a manner that is within the range of actuarial practice and methodology and consistent with applicable ASOPs. Allocations may not be done for the purpose of decreasing the stochastic reserve.

**Guidance Note:** For example, the combining of two similar blocks of business on the same administrative system may yield some expense savings on a per unit basis, but any future cost of the system conversion should also be considered in the final assumption. If all costs for the conversion are in the past, then there would be no future expenses to reflect in the valuation.

j. Shall reflect expense efficiencies that are derived and realized from the combination of blocks of business due to a business acquisition or merger in the expense assumption only when any future costs associated with achieving the efficiencies are also recognized.

k. Shall reflect the direct costs associated with the contracts being modeled, as well as an appropriate portion of indirect costs and overhead (i.e., expense assumptions representing fully allocated expenses should be used), including expenses categorized in the annual statement as “taxes, licenses and fees” (Exhibit 3 of the annual statement) in the expense assumption.

l. Shall include acquisition expenses associated with business in force as of the valuation date and significant non-recurring expenses expected to be incurred after the valuation date in the expense assumption.

m. For contracts sold under a new policy form or due to entry into a new product line, the company shall use expense factors that are consistent with the expense factors used to determine anticipated experience assumptions for contracts from an existing block of mature contracts taking into account:

   i. Any differences in the expected long-term expense levels between the block of new contacts and the block of mature contracts.

   ii. That all expenses must be fully allocated as required.
under Section 12.ED.1.b above.

2. Margins for Prudent Estimate Expense Assumptions

The company shall determine margins for expense assumptions following Section 12.C.

VM-21 Section 13

Section 13: Allocation of the Aggregate Reserve to the Contract Level

VM-21 Section 1.B

Principle 3: The implementation of a model involves decisions about the experience assumptions and the modeling techniques to be used in measuring the risks to which the company is exposed. Generally, assumptions are to be based on the conservative end of the confidence interval. The choice of a conservative estimate for each assumption may result in a distorted measure of the total risk. Conceptually, the choice of assumptions and the modeling decisions should be made so that the final result approximates what would be obtained for the stochastic reserve at the required CTE level if it were possible to calculate results over the joint distribution of all future outcomes. In applying this concept to the actual calculation of the stochastic reserve, the company should be guided by evolving practice and expanding knowledge base in the measurement and management of risk.

Guidance Note: The intent of Principle 3 is to describe the conceptual framework for setting assumptions. Section 10 provides the requirements and guidance for setting contract holder behavior assumptions and includes alternatives to this framework if the company is unable to fully apply this principle. More guidance and requirements for setting assumptions in general are provided in Section 12.

VM-21 Section 10.A

Section 10: Contract Holder Behavior Assumptions

A. General

Contract holder behavior assumptions encompass actions such as lapses, withdrawals, transfers, recurring deposits, benefit utilization, option election, etc. Contract holder behavior is difficult to predict accurately, and variance in behavior assumptions can significantly affect the results. In the absence of relevant and fully credible empirical data, the company should set behavior assumptions as guided by Principle 3 in Section 1.B and Section 12.

VM-31 Section 3.F.3.d

3. Liability Assumptions and Margins – A listing of the assumptions and margins used in the projections to determine the stochastic reserve, including a discussion of the source(s) and the rationale for each assumption:

a. Premiums and Subsequent Deposits – Description of premiums and subsequent deposits.
b. **Interest Crediting Strategy** – Description of the interest crediting strategy.

c. **Commissions** – Description of commissions, including any commission chargebacks.

d. **Expenses Other than Commissions** – Description and listing of insurance company expenses other than commissions, such as overhead, including:

   i. Method used to allocate expenses to the contracts included in a principle-based valuation under VM-21 and a statement confirming that expenses have been fully allocated in accordance with VM-21 Section 12.D.1.h.

   ii. Method used to apply the allocated expenses to model segments or sub-segments within the cash-flow model.

   iii. Identification of types of costs that were spread, and for how many years, if any cost spreading was done pursuant to VM-21 Section 12.D.1.a.

   iv. Method used to determine margins.

---

**VM-31 Section 3.F.13.c (new)**

**c. Sensitivity Tests**  
For each distinct product type for which margins were established:

   i. List the specific sensitivity tests performed for each risk factor or combination of risk factors other than those discussed in Section 3.F.3.h.vi and 3.F.3.i.ii.

   ii. Indicate whether the reserve was calculated based on the anticipated experience assumptions or prudent estimate assumptions for all other risk factors while performing the tests.

   iii. Provide the numerical results of the sensitivity tests for both reserves and capital.

   iv. Explain how the results of sensitivity tests were used or considered in developing assumptions.

---

**VM-31 Section 3.F.13.d (new)**

d. **Impact of Margin**

   i. Company can perform the impact of margin analysis using off-cycle data. The analysis can be done less frequently than annual unless there is change or update in the margins, but not less frequently than every 3 years.

   ii. Impact of Margins for Each Risk Factor – The impact of margins on the stochastic reserve for each risk factor, or group of risk factors, that has a material impact on the stochastic reserve, determined...
by subtracting (i) from (ii), expressed in both dollar amounts and percentages. For the purposes of this analysis, calculate the CTE without requiring that the scenario reserve for any scenario be no less than the cash surrender value:

(1) The CTE70(best efforts), as outlined in VM-21 Section 9.C, but with the reserve calculated based on the anticipated experience assumption for the risk factor and prudent estimate assumptions for all other risk factors.

(2) The CTE70(best efforts), as outlined in VM-21 Section 9.C, for that group of contracts as reported.

(3) Repeat the impact analysis using the same method on CTE(98) levels.

iii. Aggregate Impact of Margins – the aggregate impact of all margins on the stochastic reserve for that group of contracts determined by subtracting (1) from (2), expressed in both dollar amounts and percentages. For the purposes of this analysis, calculate the CTE without requiring that the scenario reserve for any scenario be no less than the cash surrender value:

(1) The CTE70(best efforts), as outlined in VM-21 Section 9.C, for that group of contracts, but with the reserve calculated based on anticipated experience assumptions for all risk factors prior to the addition of any margins.

(2) The CTE70(best efforts), as outlined in VM-21 Section 9.C, for that group of contracts as reported.

(3) Repeat the impact analysis using the same method on CTE(98) levels.

iv. Impact of Implicit Margins – For purposes of the disclosures required in 13.d.ii and 13.d.iii above:

(1) If the company believes the method used to determine anticipated experience assumptions includes an implicit margin, the company can adjust the anticipated experience assumptions to remove this implicit margin for this reporting purpose only. If any such adjustment is made, the company shall document the rationale and method used to determine the anticipated experience assumption.

(2) Since the company is not required to determine an anticipated experience assumption or a prudent estimate assumption for risk factors that are prescribed (i.e., interest rates movements, equity performance, default costs and net spreads on reinvestment assets), when determining the impact of margins, the prescribed assumption shall be deemed to be the prudent estimate assumption for the risk factor, and the company can elect to determine an anticipated experience assumption for the risk factor, based on the company’s anticipated experience for the risk factor. If this is elected, the company shall document the rationale and method used to determine the anticipated experience assumption.
NAIC ESG Update
NAIC National Meeting - Fall 2021

Scott O’Neal, FSA, MAAA - NAIC Life Examination Actuary
Dan Finn, FCAS, ASA - Managing Director at Conning

December 8, 2021

Agenda

1. Treasury Model Calibration Update
2. Key Decisions for Equity Model
3. Key Decisions for Corporate Model
Treasury Model Calibration Update

- Conning has developed a new calibration of the GEMS® Treasury model according to the acceptance criteria defined by the ESG Drafting Group (see Appendix 1).
- NAIC Staff and Conning are analyzing the Treasury scenarios from the new calibration to ensure that they meet the most important acceptance criteria while making appropriate tradeoffs, where necessary.
- The analysis of the scenarios is expected to be completed shortly to be presented at an upcoming ESG Drafting Group in December for additional discussion.
- The ESG Drafting Group may request tweaks to the Treasury scenarios upon review.
- After the ESG Drafting Group approves the scenarios, a discussion of the Treasury scenarios will occur on a public Life Actuarial (A) Task Force (LATF) and Life Risk-Based Capital (E) Working Group (LRBC WG) meeting.

Key Decisions for Equity Model:
Relationship between equities and Treasury rates

<table>
<thead>
<tr>
<th>Theoretical and Historical Relationship</th>
<th>Modeling Considerations</th>
</tr>
</thead>
<tbody>
<tr>
<td>The relationship between equities and Treasury rates, commonly referred to as the “Equity Risk Premium”, reflects the additional return investors demand to invest in risky equity assets over the risk-free return offered by U.S. Treasuries.</td>
<td>As currently configured, the GEMS® equity model contains a linkage to Treasury rates in both the process governing equity returns as well as the dividend process.</td>
</tr>
<tr>
<td>It is difficult to see strong relationships in historical data between equities and Treasuries because the equity market is so volatile.</td>
<td>There are a number of ways that the relationship between equities and interest rates could be defined in the model, including a formulaic linkage, correlation factors, and linking long-term equity targets to long-term interest rate targets. Alternatively, the equity returns could be set to be independent of the Treasury rates.</td>
</tr>
<tr>
<td>The idea of an “Equity Risk Premium” is consistent with a number of theoretical concepts, including the Capital Asset Pricing Model (CAPM) and the Sharpe Ratio</td>
<td>Altering GEMS® existing equity/Treasury linkage by specifying an alternative relationship between equities and treasuries or assuming independence would require a currently unknown amount of development time and effort.</td>
</tr>
</tbody>
</table>
Key Decisions for Equity Model: Other Considerations

Risk/return relationship for and between different equity indices

- The GEMS® equity model will produce returns for a variety of U.S. and international funds.
- Typically, it is reasonable to assume that there is a relationship with expected return and volatility, such that "it would generally be inappropriate to assume that a market or fund consistently "outperforms" (lower risk, higher expected return relative to the efficient frontier) over the long term." (VM-21 Section B.C.4)
- Recent historical data (since 1987) for the International Diversified Equity fund (MSCI EAFE) has shown underperformance on a risk-adjusted basis relative to the Diversified Large Cap U.S. Equity fund (S&P 500). However, an evaluation of the longer historical record has shown both periods of under- and over-performance for the International Diversified Equity fund.

How should equity rates respond to changes in initial market conditions

- Changes to recent and/or initial market conditions such as equity returns, equity volatility, and Treasury rates can influence future equity returns. For example, the Chicago Board Options Exchange Volatility Index (VIX) reflects the market's estimate of future volatility. When the VIX is high, there tends to be more volatility in the short term.
- Some subject-matter experts from the ESG Drafting Group have suggested that initial/recent market conditions should not impact equity returns beyond the near term (~six years) with most of the impacts from initial conditions experienced in the first two years.

Key Decisions for Corporate Model

Corporate Model Complexity

- The GEMS® corporate model has the capability to produce bond fund returns that reflect dynamic spreads, credit rating transitions, and defaults.
- Bond fund returns produced by the ESG will be used to model policyholder separate account investments in bond funds and general account investments in bond funds where applicable.
- Regulators will have to weigh the benefits of a complex model that is able to capture the key dynamics that drive bond fund returns versus the desire for a simplified model.
- It will be a development effort for Conning to produce a new simplified corporate model if that is the direction chosen by regulators.
### Appendix 1: Treasury Model Acceptance Criteria

<table>
<thead>
<tr>
<th>Item</th>
<th>Category</th>
<th>Suggested Direction for Next Iteration</th>
</tr>
</thead>
</table>
| 1.   | Low For Long | 10 and 30-year geometric average of 20yr UST below current level  
|      |           | a) 10-year threshold: 10%  
|      |           | b) 30-year threshold: 5%  
| 2.   | Prevalence of High Rates, Upper Bound on Treasury Rates | a) The scenario set should reasonably reflect history, with some allowance for more extreme high and low interest rate environments  
|      |           | b) Upper Bound:  
|      |           | i. [20%] is >= [99%]-tile on the 3M yield fan chart, and no more than [5%] of scenarios have 3M yields that go above [20%] in the first 30 years  
|      |           | ii. [20%] is >= [99%]-tile on the 10Y yield fan chart, and no more than [5%] of scenarios have 10Y yields that go above [20%] in the first 30 years  
| 3.   | Lower Bound on Negative Interest Rates, Arbitrage Free Considerations | Apply the following guidance for negative rates:  
|      |           | a) All maturities could experience negative interest rates  
|      |           | b) Interest rates may remain negative for multi-year time periods  
|      |           | c) Rates should generally not be lower than -1.5%  
|      |           | A floor will likely be employed but the exact form of the floor will be determined later  
| 4.   | Initial Yield Curve Fit, Yield Curve Shapes in Projection, and Steady State Yield Curve Shape | a) Review initial actual vs. fitted spot curve differences for a sampling of 5 dates representing different shapes and rate levels for the entire curve and review fitted curves qualitatively to confirm they stylistically mimic the different actual yield curve shapes  
|      |           | b) The frequency of different yield curve shapes in early durations should be reasonable considering the shape of the starting yield curve (e.g. a flatter yield curve leads to more inversions).  
|      |           | c) The steady state curve has normal shape (not inverted for short maturities, longer vs shorter maturities, or between long maturities)  
| 5.   | Realized short and long maturity volatility at different interest rate levels | a) No Criteria for realized short and long maturity volatility at different interest rate levels  

© 2021 National Association of Insurance Commissioners
Life Actuarial (A) Task Force

Modeling of complex assets in asset adequacy testing

December 8, 2021
Webex

Drivers of project

- Rapid entry of private equity firms into life insurer
  - Owners of life insurers
  - Acquirers of fixed annuity blocks
- Valuation Analysis (E) Working Group charge
  - Identify concerns re: life insurers’ asset adequacy testing (AAT)
- MN Department, coordinating with VAWG, collected information from 27 companies representing 17 groups
  - Details on AAT, including modeling of complex assets
  - Scope: one or more of: connected to private equity, large fixed annuity exposure, complex assets
  - Company-specific information is confidential, per SVL
Information collected

- Richness of liability guarantees
  - Implying pressure to attain yield to support the liabilities
- Non-traditional assets, amount and valuation of
  - Including CLOs, ABS, BA assets
- Assumed net yields on existing and reinvestment assets
- Investment manager, arrangement, expertise, fees
- Other actuarial assumptions: lapse, borrowing
- Reinsurance ceded

Findings

- Sampling of responses
- If investment assumptions are too optimistic:
  - Inappropriately signal adequacy of formula reserves
  - Additional AAT reserves won't be held
  - Understated reserves
  - Inflated surplus
  - Inflated RBC ratios
  - Money leaving the insurer under inappropriate circumstances
    - e.g., through shareholder dividends
  - Claims-paying ability in jeopardy
Findings (in some cases) and risks

- Inflated net yields
  - Simplistic modeling - similar level of defaults assumed for higher-yielding complex assets as for similarly-rated corporate bonds

- Internal modeling of asset values
  - When no CUSIP and no deep secondary market
  - Risk of asset values being overstated is high

- CLO performance
  - Generally performed well in recent years
  - Some assume this high performance will continue for the length of the projection

- Investment manager relationships and expenses
  - Is an inappropriate amount of money leaving the insurer?
  - In some cases, AAT modeling of investment expenses appears simplistic

Other findings

- Creation of structured assets
  - Packaging of underlying collateral, selling lower tranches
  - Ensure modeling captures tail risk and realistic cash flows

- Offshore / affiliated reinsurance
  - To address perceived reserve redundancy, tax favorability, and increasing RBC ratios

- Trend towards less liquid assets
  - To attain high yield, recognizing low liquidity of some liabilities
  - Ensure appropriate modeling in scenarios where asset sale needed
LATF Exposure – Sept 2021

- Findings and rapid increase in private equity / complex asset / life insurer activity -> need for action
- Action item: development of actuarial guideline, focused on modeling of complex assets
- Comment period re:
  - Product scope
  - Size scope
  - Focus on constraints / standards of documentation
  - Effective date

Comments: Scope

- Activity beyond fixed annuities has occurred
- Potential consensus is all liabilities with significant investment risk should be in the scope
- Exemption or phase in for some cases?
  - Exemption by size of insurer may not be appropriate
    - Even some smaller insurers are getting more aggressive with investments
  - Perhaps exemption if complex assets are a small portion of the portfolio
  - Need to focus on definition of complex assets if exemption put in place
Comments: Establishment of Constraints

- Establishing constraints on asset assumptions - Pros
  - Needed to prevent further optimism in assumptions
  - Discourage race to the bottom (re: minimizing reflection of risk associated with high returns)
  - Level playing field
  - Consistent with moderately adverse condition requirement
  - VM-20 already has constraints on net yields
    - Why would other blocks be treated differently?

- Establishing constraints on asset assumptions - Cons
  - Difficult to establish a one-size-fits-all constraint without being too restrictive
  - Analysis of risk/reward relationship is key, will vary by situation
  - Additional documentation will help in the understanding of the modeling

Comments: Effective date

- YE 2021 is too early for an AG adoption
  - However, insurers should be on notice – expect robust support for assumptions
  - Particularly those that can be viewed as optimistic

- YE 2022 target for AG adoption
  - Perhaps narrower scope for 2022, broader scope for 2023
Potential AG AAT goals

- Uniform guidance for support of asset-related AAT assumptions
- Help ensure reserve adequacy and claims-paying ability in moderately adverse conditions
  - Including conditions negatively impacting complex asset cash flows
- Clarify how margins for uncertainty are established such that the greater the uncertainty the larger the margin and resulting reserve
  - If modeling of asset risk is simplistic, add margin
- Recognize that higher gross returns are, to some extent, associated with higher risk
  - Assumptions should fit reasonably within the risk-return spectrum

Potential AG AAT goals

- Require sensitivity testing of complex asset returns;
- Identify expectations in practice regarding the valuation of complex assets
- Require additional documentation of investment fee income relationships with affiliated / close entities
Next steps

- Draft Actuarial Guideline, considering comments
- Refine AG draft in early 2022
Brian Bayerle  
Senior Actuary  

December 1, 2021  

Mr. Mike Boerner  
Chair, NAIC Life Actuarial Task Force (LATF)  

Mr. Fred Andersen  
Chief Life Actuary, Minnesota Department of Commerce  

Re: Proposed Actuarial Guideline on Complex Assets in Asset Adequacy Testing  

Dear Messrs. Boerner and Andersen:  

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit the following comments on the proposed Actuarial Guideline to address the modeling of complex assets in Asset Adequacy Testing (AAT).  

ACLI encourages the task force to provide a clear, concise, public statement of the regulatory concern that would guide drafting efforts and facilitate the assessment of any proposed solutions. Based on public comments to date, ACLI understands that regulators are concerned about assumed projected yields, used in the context of asset adequacy testing, for certain complex and high-yielding assets that some companies have used to back in-force blocks of fixed annuities.  

Given our current understanding, we believe that a prudent initial approach involves developing additional disclosures in VM-30 instead of the proposed Actuarial Guideline. For example, disclosures could include details of the assets, describe characteristics including credit and liquidity, and explain modeling practices, including the development of projected returns. Such disclosures would also provide consistency across the states. ACLI welcomes the opportunity to assist in the development of appropriate and meaningful disclosures.  

We believe that disclosure is preferable to an actuarial guideline at this stage for several reasons. First, we believe well-designed disclosures provide regulators with greater insight and allow for productive discussions between regulators and appointed actuaries. Second, enhanced disclosures encourage appointed actuaries to devote additional attention and provide additional support and justification to modeling practices. Finally, disclosures inform the development of subsequent measures, if any are necessary.
We have the following specific comments regarding the exposed questions:

**Product scope:** Should the focus be on assets supporting fixed annuities or assets supporting all life insurer liabilities subject to AAT?

**ACLI response:** If regulators are concerned about the modeling of certain categories of assets, then the material use of assets to back any line of business is more relevant than the fact that such assets are being used to back any particular product line. Additionally, AAT is by definition based on a holistic view of each company’s balance sheet and is not specific to a particular line of business such as fixed annuities.

**Size scope:** Should only life insurers or blocks exceeding a certain size threshold be subject to the actuarial guideline?

**ACLI response:** We believe that it is appropriate to develop size/materiality thresholds for both the size of the block and the material use of complex/high-yielding assets. Immaterial exposures should be exempt from any new requirements.

**Constraints or documentation:** Should the Actuarial Guideline focus on establishing constraints related to the modeling of complex or high gross yield assets (impacting AAT results) or providing detailed documentation and sensitivity testing on the modeling of such assets (potentially not impacting AAT results)?

**ACLI response:** Given our current understanding of the concern, ACLI believes regulators should focus on detailed documentation and disclosures around the use of such assets as discussed above. Our thinking may evolve as we better understand the concerns of the regulators.

**Effective date:** Is a year-end 2022 effective date for the Actuarial Guideline reasonable, or should some guidance apply before that date?

**ACLI response:** Given our current understanding of the regulatory concern, we believe it is most appropriate to develop appropriate disclosures in VM-30, which would complement the existing documentation requirements already in VM-30. Given the lead time required for changes to the Valuation Manual, revised requirements would be effective for the 2023 Valuation Manual. If regulators believe the disclosures are necessary sooner, the task force can release guidance along with the adoption of the APF. Additionally, state regulators can request a variety of additional information from carriers using existing authority.

We appreciate the consideration of our comments and look forward to discussing on a future call. Thank you.
Sincerely,

[Signature]

Memo

To: Mike Boerner, Chair, Life Actuarial Task Force
From: Tricia Matson, Partner and Ed Toy, Director
Date: November 18, 2021
Subject: RRC comments regarding AG on complex assets

Background
The Life Actuarial Task Force (LATF) issued a request for feedback related to the concept of an actuarial guideline (AG) focusing on modeling of complex or high-yielding assets in asset adequacy testing (AAT). This request relates to the increasing use of complex investments to back reserves, and the importance of appropriately capturing the risks associated with those assets in AAT. RRC appreciates the opportunity to offer our comments. Should you have any questions, we would be glad to discuss our comments with you and the LATF members.

RRC Comments

- Overall comments:
  - We applaud these efforts. There are many unique risks associated with some of the invested assets that are increasingly being used to back insurance liabilities. As noted, many of these invested assets present unique challenges due to their complexity, but they also often represent assets that are opaque, are highly volatile from a fair value standpoint and are illiquid. While these complex investments can provide benefits to the insurer and the policyholder (typically in the form of higher yields), it is critical that the reserves (and capital) supporting the business appropriately take the additional risk exposures into account.
  - We support doing this in the near term via an Actuarial Guideline. We would also encourage LATF and the NAIC to consider how to incorporate guidance more directly into the valuation manual and into the risk-based capital formula.
  - We believe that current guidance to Appointed Actuaries (in Actuarial Standards of Practice that apply to AAT) already require appropriate inclusion of asset risks in AAT; however, more specific guidance in the form of an AG may be helpful to Appointed Actuaries and may improve consistency of industry practice and policyholder protection.

- Regarding Product Scope (Should the focus be on assets supporting fixed annuities or assets supporting all life insurer liabilities subject to AAT?)
  - We believe the scope should include all products.
  - We see use of complex investments backing life insurance and long term care, and see no reason why the associated risks should be considered in fixed annuity reserves but not other types of products.
• Regarding Size Scope (Should only life insurers or blocks exceeding a certain size threshold be subject to the actuarial guideline?)
  o We do not think the size of the insurer or the block should impact application of the guidance. If an insurer is willing to take the risk, we believe the insurer should be able to appropriately understand the unique nature of some of these assets and reserve for the risk.
  o That said, if complex assets are less than some defined immaterial percentage of the total assets backing the reserves or are very short duration in nature, limiting application of the guidance might be appropriate.

• Regarding Constraints or Documentation (Should the actuarial guideline focus on establishing constraints related to the modeling of complex or high gross yield assets (impacting AAT results) or providing detailed documentation and sensitivity testing on the modeling of such assets (potentially not impacting AAT results)?)
  o We believe that a higher risk profile for any invested assets should result in additional provision for risk in the reserve analysis, and therefore we favor a “constraints” approach. We also believe that this approach is aligned with existing guidance, which requires that reserves cover moderately adverse conditions.
  o In addition to specific constraints, inclusion of explicit disclosure requirements and/or sensitivity tests may also be helpful. For example, many of the “newer” investments do not have as much historical data for use in setting assumptions regarding investment yield, cash flow profile, default or prepayment, thereby making both provisions for adverse deviation and sensitivity testing important. The availability of reliable data may also be informative in determining what would be appropriately considered “moderately adverse”.

• Regarding Effective Date (Is a year-end 2022 effective date for the actuarial guideline reasonable, or should some guidance apply before that date?)
  o Since there is current guidance (albeit not necessarily prescriptive) in ASOPs, and new guidance should generally be implemented with sufficient notice so that companies can make good faith efforts to comply, we believe that year-end 2022 is sufficient.
  o We also recognize that to develop, vet, and adopt good guidance on this complex topic takes time, so it may also make sense to adopt interim guidance for year-end 2022, and further enhance that guidance for subsequent year ends.
Life Actuarial (A) Task Force
Exposure Draft
Please send comments to Reggie Mazyck (RMazyck@NAIC.Org) by close of business December 1

Consider concept of an actuarial guideline focusing on modeling of complex or high-yielding assets in asset adequacy testing.

Development of an actuarial guideline focusing on modeling of complex or high-yielding assets in asset adequacy testing (AAT), with particular interest in receiving feedback on the following issues:

- **Product scope**: Should the focus be on assets supporting fixed annuities or assets supporting all life insurer liabilities subject to AAT?
  Investing in complex and/or high-yielding assets is not a stand-alone issue for fixed annuity products. Providing guideline for all life insurer liabilities subject to AAT is not expected to dilute the focus for assets supporting fixed annuities.

- **Size scope**: Should only life insurers or blocks exceeding a certain size threshold be subject to the actuarial guideline?
  When the actuarial guideline is specifically applied to assets, it should not be limited to certain size of business. Smaller companies asset assumptions should follow the same guideline as it applies to larger companies.

- **Constraints or documentation**: Should the actuarial guideline focus on establishing constraints related to the modeling of complex or high gross yield assets (impacting AAT results) or providing detailed documentation and sensitivity testing on the modeling of such assets (potentially not impacting AAT results)?
  The actuarial guideline should focus on establishing constraints related to the modeling of complex or high gross yield assets (impacting AAT results), which should include detailed documentation, and supplemental sensitivity tests. The regulating actuary who review the actuarial memorandum may not have adequate experience in assessing the risk underlying these complex/high yielding assets. Simply relying on documentation and sensitivity test does not give sufficient support for regulators to review and challenge the assumptions used.

- **Effective date**: Is a year-end 2022 effective date for the actuarial guideline reasonable, or should some guidance apply before that date?
  Year-end 2022 effective date for the actuarial guideline appears reasonable. Providing guidance before that date would imply year-end 2021 effectiveness, which would seem too rush and not much time for industry to react.

In addition, I wonder if LATF would be interested in expanding the scope to cover all assets including the non-callable corporate bonds with regularly updated assumptions for PBR purposes. These should cover
a) if reinvestment strategy should be consistent with the company’s investment strategy for the relevant block of business.
b) If default assumptions should be allowed to be less than Table A less margin.
Life Actuarial (A) Task Force
Exposure Draft
Please send comments to Reggie Mazyck (RMazyck@NAIC.Org) by close of business December 1

c) If current spreads and ultimate spread should be allowed to be higher than the VM-20 spreads as published in Table F and Table G for Current Benchmark Spreads and Table H & Table I for Long Term Spreads.
d) If a grading period is used to bridge current spread and ultimate spread, what range of grading period would be considered acceptable in light of the four year prescribed in VM-20.

FROM: Aaron Sarfatti, Chief Risk Officer
SUBJECT: Equitable Comments on the concept of developing an Actuarial Guideline on modeling complex or high-yielding assets in Asset Adequacy Testing (AAT).

Equitable appreciates the opportunity to comment on the concept of developing an Actuarial Guideline on modeling of complex or high-yielding assets in Asset Adequacy Testing (AAT). We support an Actuarial Guideline to govern spread recognition as a first step in a necessary broader effort to establish consistent national standards for AAT. Our viewpoints are summarized in the table below:

<table>
<thead>
<tr>
<th>Question</th>
<th>Recommendation</th>
<th>Rationale</th>
</tr>
</thead>
</table>
| Should the AG constrain spreads or require enhanced documentation?       | Constrained via guardrails   | • Spread forecasts are inherently subjective; guardrails govern against “unbridled optimism” in judgments  
|                                                                          |                              | • Guardrails simplify governance and improve comparability across firms (within and across states)  
|                                                                          |                              | • Documenting subjective forecasts in detail is a low value activity for both regulators and industry |
| When should be the effective date?                                       | Year-end 2022                | • Design of a simple guardrail is readily achievable  
|                                                                          |                              | • Field testing of impact should be straightforward and readily estimable by firms (e.g. DV01 estimate) |
| What other reforms to AAT should be pursued?1                           | Introduce an aggregate investment spread cap equal to the “A-rated” corporate bond spread + a modest illiquidity premium | • Subjectivity and inconsistency in spread recognition applies to all investment classes  
|                                                                          | Harmonize capital markets scenarios (interest rates, equity returns) | • Aggregate spread cap best ensures resilience of reserves to “above market” spread recognition  
|                                                                          |                              | • “A rated” bond spread is the emergent standard for spread recognition in other public accounting and regulatory regimes (FASB, IAIS, VM-22, etc.)  
|                                                                          |                              | • Illiquidity allowance reflects “benefit of doubt” for superior spread generation through private credit |

For background, Equitable views the life insurance industry and regulatory system as having arrived at a critical juncture that calls for increased reliance on a robust AAT framework:

- Sustained low interest rates has manifested in a material gap between the (i) market yields at which firms can reinvest maturing investments and (ii) Stat Valuation Rates that drive reserves.
- Consequently, the life industry has begun to increase investment risk concentrations both directly and through reinsurance, with structured securities a common tool for increasing yields; industry surveys have further shown that actuarial judgments regarding what constitutes “moderately adverse” future interest rate scenarios are further diverging in consistency - in particular, whether the continuation of prevailing market yields qualifies as moderately adverse
- The result is a rising reliance on AAT as the *de facto* reserving standard for many life insurers, which today is inconsistent in its governance of high sensitivity input judgments such as the projected recognition of investment spreads, among other factors
- Moreover, the prevalence of market-based regulatory regimes is increasing internationally, and there are growing calls for the NAIC Model Law and RBC system to demonstrate substantive equivalence with such regimes to avoid the imposition of supplemental regimes on select firms.

These combined factors increase the imperative to enact standards that boost comparability across firms, necessary to ensure the resilience of reserves in a low interest rate environment. Maintaining the current AAT framework, with its inconsistency across firms and non-standard use of inputs that are common to all financial markets (e.g. US Treasury rates), is no longer in the best interests of the US regulator community. A broader-based reform of AAT as recommended represents the most pragmatic way both to introduce necessary consistency across firms and on common market factors, as well as demonstrate substantive equivalence with international regimes that staves off the imposition of supplementary regulatory regimes (like the International Capital Standard) that could challenge industry capital management.2

So, in summary, Equitable fully supports the plan to create a formal Actuarial Guideline to ensure companies do not assume complex assets generate high gross returns with little deduction for risk – but also to encourage regulators to consider this as simply the first step in a broader reform necessary to harmonize AAT across firms irrespective of their state of domicile.

Below are our thoughts on specific items requested for comment in the exposure; on the questions of product and size scope, our views are appropriately captured in the ACLI comment letter. We note that the exposure was limited and so would appreciate any additional information that can be shared to help us better address and understand regulator concerns.

**Constraint or Documentation:**

*Question*: Should the actuarial guideline focus on establishing constraints related to the modeling of complex or high gross yield assets (impacting AAT results) or providing detailed documentation and sensitivity testing on the modeling of such assets (potentially not impacting AAT results)?

---

2 See IAIS HLP1, a requirement for reciprocal regimes (including the US-proposed Aggregation Method) to demonstrate consistent movements in reserves and capital with the market-based ICS design.
**Equitable Perspective:** Equitable believes that formal guidance should establish guardrails related to the modeling of complex or high yielding assets. Imposing a constraint rather than a documentation requirement would provide the issue with the appropriate focus. We note that in the current low interest rate environment, AAT requirements frequently become the de facto reserve requirement, validating the importance of this topic and need for formal guardrails.

Equitable suggests a credit spread cap of a single-“A-“corporate bond spread plus a modest illiquidity premium as a potential guardrail for such complex assets. We firmly believe that companies should not be incentivized and rewarded for taking on higher investment risk without a commensurate reserve increase, and this guardrail would ensure that reserves are appropriately risk adjusted. We note that the single-A curve is widely recognized in the insurance industry as an appropriate measure of fair value (e.g., GAAP LDTI, VM22, etc.), and we believe that adding a modest illiquidity premium is appropriate to reflect the ability of insurers to realize such a premium given the long-dated nature of their liabilities.

Credit spread limits are an important part of a principle-based reserving framework. Such limits ensure reserves do not rely on excessive amounts of credit spread in excess of industry investment and pricing practices. As an example of the significance of spread assumptions within AAT reserves, we examined the market value AAT requirement of a 20-year guaranteed investment contract (GIC) liability as of December 2020. The chart below shows the results, namely that the market value of liabilities significantly decreases as the assumed asset spread increases. While a portion of this risk is contemplated in the Risk-Based Capital framework, the C-1 charges are not significant enough to offset the impacts on reserves shown below at higher spread levels. Assuming elevated spreads can cause insurers to hold insufficient AAT reserves, thereby impairing their claims-paying ability.

If the guideline is not retained for reserving, we propose that it be retained for dividend setting practices. This will result in companies retaining necessary capital, instead of paying dividends, to pay for future policyholder obligations.

**Additional Equitable Perspective on AAT:**
In addition to the potential introduction of guardrails on the spreads of complex or high yielding assets assumed in cash flow testing discussed above and contemplated in the NAIC exposure, Equitable posits that broader AAT reform within the NAIC regulatory framework is necessary. In particular, this includes some basic standardization of the interest rate scenario(s) tested in AAT and an aggregate guardrail on spread recognition across all asset classes. As noted above, in the current interest rate environment AAT requirements frequently become the binding reserve requirement, thus necessitating the need for some guardrails on the most important inputs into the AAT calculation.
**Effective Date:**

*Question:* Is a year-end 2022 effective date for the actuarial guideline reasonable, or should some guidance apply before that date?

*Equitable Perspective:* Equitable supports a year-end 2022 goal for an Actuarial Guideline.

Equitable appreciates the opportunity to comment on this exposed proposal and we look forward to working with regulators to reach an appropriate framework for modeling of complex assets within the Asset Adequacy Testing framework. We are available to discuss our comments further as desired.

Sincerely,

Mr. Mike Boerner
Chair, Life Actuarial (A) Task Force
National Association of Insurance Commissioners

Re: Consider concept of an actuarial guideline on asset adequacy testing focusing on modeling of complex or high-yielding assets

Dear Mr. Boerner,

The American Academy of Actuaries’\(^1\) Life Practice Council (LPC) has formed an ad hoc task force\(^2\) to provide comment on the exposure of LATF’s proposal on consideration of a conceptional actuarial guideline on asset adequacy testing (AAT) with a comment period ending December 1.

Before we respond to the specific questions that were included in the exposure, we would like to note that the ad hoc task force was unable to form an opinion on many of the issues raised because we did not have a clear understanding of the specific practices giving rise to regulators’ concerns.

We would also like to note that several Actuarial Standards of Practice (ASOPs) currently exist for actuaries when modeling complex or high-yielding assets in AAT. Specifically, the actuary should:

- Identify the assets chosen for the analysis (ASOP No. 7);
- Consider any known factors that are likely to have a material effect on asset cash flows and/or the insurer’s investment strategy (ASOP No. 7);
- Choose assets that are appropriate for the analysis (ASOP No. 22);
- Use assumptions that are appropriate for the analysis (ASOP No. 22);
- Document the assumptions used and provide supporting rationale for the appropriateness of the assumptions (ASOP No. 22);
- Disclose the assets chosen and provide supporting rationale for the appropriateness of the assets (ASOP No. 22\(^3\));
- Review data for reasonableness, consistency and limitations, and provide appropriate disclosures (ASOP No. 23);

\(^1\) The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

\(^2\) The members of the ad hoc task force are listed at the end of this comment letter.

\(^3\) Version that will be effective June 1, 2022.
• Identify the methods, procedures, assumptions and data used with sufficient clarity as to allow for an objective appraisal of the reasonableness of the actuary’s work (ASOP No. 41);
• Confirm that the selected model reasonably meets the intended purpose (ASOP No. 56);
• Make reasonable efforts to confirm that the model structure, data, assumptions, governance and controls, and model testing and output validation are consistent with the intended purpose (ASOP No. 56); and
• Understand important aspects of the model being used, as well as known weaknesses and limitations (ASOP No. 56).

Nevertheless, we recognize that there may be differences among actuaries in this evolving area, and a regulatory effort to promote more transparency around actuarial practices and uniformity in the related disclosures would be a positive step. For such an effort, we note that revisions to VM-30 may be preferable to a new actuarial guideline because VM-30 contains the Actuarial Opinion and Memorandum Regulation (AOMR) requirements for AAT.

With those comments in mind, responses to the specific questions that were included in the exposure are provided below.

**Product scope: Should the focus be on assets supporting fixed annuities or assets supporting all life insurer liabilities subject to AAT?**

We believe the focus should be on assets supporting all liabilities subject to AAT because considerations and best practices for the modeling of the assets would be applicable regardless of the liabilities supported by those assets.

**Size scope: Should only life insurers or blocks exceeding a certain size threshold be subject to the actuarial guideline?**

We believe an appropriate threshold would be based on the materiality of the assets to the AAT because a small exposure can be material to the AAT. Thus, all insurers or blocks with a material percentage of these assets should be subject to the requirements, regardless the size of the insurer or block.

**Constraints or documentation: Should the actuarial guideline focus on establishing constraints related to the modeling of complex or high gross yield assets (impacting AAT results) or providing detailed documentation and sensitivity testing on the modeling of such assets (potentially not impacting AAT results)?**

As stated above, a regulatory effort that is focused on disclosures would be beneficial. Such disclosures would promote more transparency and uniformity and could stimulate more robust actuarial analysis in support of the disclosures.
We are unable to comment on the establishment of constraints because we do not have a clear understanding of the specific practices giving rise to the regulators’ concerns. We would be pleased to provide comments on such an approach if LATF outlines specific concerns.

**Effective date:** *Is a year-end 2022 effective date for the actuarial guideline reasonable, or should some guidance apply before that date?*

A year-end 2022 effective date seems reasonable if LATF establishes disclosure requirements; however, more time may be needed for implementation if LATF establishes constraints.

In summary, we note that several ASOPs apply to the actuary when modeling complex or high-yielding assets in AAT, and a regulatory effort that brings more transparency to these practices would be a positive development. Such an effort should apply to the assets regardless of the liabilities they support and should apply to assets that are material to the AAT. Focusing on disclosure requirements would promote more transparency and uniformity of the disclosures and could stimulate more robust actuarial analysis in support of the disclosures.

Thank you for your consideration of these comments. Please contact Academy life policy analyst, Khloe Greenwood ([greenwood@actuary.org](mailto:greenwood@actuary.org)), with any questions.

Consider concept of an actuarial guideline focusing on modeling of complex or high-yielding assets in asset adequacy testing.

Submitted by David Yetter - NCDOI

Development of an actuarial guideline focusing on modeling of complex or high-yielding assets in asset adequacy testing (AAT), with particular interest in receiving feedback on the following issues:

- **Product scope**: Should the focus be on assets supporting fixed annuities or assets supporting all life insurer liabilities subject to AAT? NC would prefer the focus to be on assets supporting all life insurer liabilities. There are concerns that if the focus was only looking at just assets supporting annuities, companies could just move/switch assets.

- **Size scope**: Should only life insurers or blocks exceeding a certain size threshold be subject to the actuarial guideline? We would be more concerned with the percentage of the liability the asset (or assets) is supporting. In other words, if the high-yielding assets are supporting 50% of the block, we should be concerned. If the high-yielding assets are supporting 0.5%, it’s probably not worth including.

- **Constraints or documentation**: Should the actuarial guideline focus on establishing constraints related to the modeling of complex or high gross yield assets (impacting AAT results) or providing detailed documentation and sensitivity testing on the modeling of such assets (potentially not impacting AAT results)? NC would rather see detailed documentation and sensitivity testing on the modeling. The company, hopefully, understands the asset much better than anyone else. There should not be constraints on modeling new or unique assets. By having the company provide detailed documentation, the regulator can decide what factors could affect the value of that asset.

- **Effective date**: Is a year-end 2022 effective date for the actuarial guideline reasonable, or should some guidance apply before that date?
Life Actuarial (A) Task Force
Exposure Draft

Consider concept of an actuarial guideline focusing on modeling of complex or high-yielding assets in asset adequacy testing.

Development of an actuarial guideline focusing on modeling of complex or high-yielding assets in asset adequacy testing (AAT), with particular interest in receiving feedback on the following issues:

- **Product scope:** Should the focus be on assets supporting fixed annuities or assets supporting all life insurer liabilities subject to AAT?

  I believe this approach should apply to both fixed annuities and to life insurance liabilities. The performance of the ALT assets is not linked to the liabilities, so the approach to modeling the assets should be consistent by product line.

- **Size scope:** Should only life insurers or blocks exceeding a certain size threshold be subject to the actuarial guideline?

  I would link the size of the block would not matter. The approach to modeling these assets should be appropriate and consistent across all life insurers.

- **Constraints or documentation:** Should the actuarial guideline focus on establishing constraints related to the modeling of complex or high gross yield assets (impacting AAT results) or providing detailed documentation and sensitivity testing on the modeling of such assets (potentially not impacting AAT results)?

  I am not sure what constraints would mean. Does this suggest that the approach can be aggressive, but the guideline will limit the aggressiveness? I have discussed CFT analysis with other actuaries that use ALTS for CFT. Their comments seem to fall under two buckets (both of which are concerning):

  o The ALTS are only 5% of the portfolio, so it was immaterial. If the ALTs are assumed to earn 12% and this replaces assets earning 3%, then the impact is an extra 45bps of return. It seems difficult to argue immateriality.

  o The ALTS are expected to have a 12% return, so the appointed actuary uses 8% to be “conservative” and model as a bond. We are talking about assets that could have an annual return distribution from -30% to +30%. It also has cash flows that are dissimilar from other asset types (pledged capital, contributions, distributions). The NII is not realized until distributions occur. The analysis needs to recognize the asset cash flows and NII pattern used to support the liability cash flows.

  It seems like the AG should require detailed documentation on the ALT modeling approach. In addition, ALTS are one of the most volatile asset types used by Life insurers. It seems like the AG should require the analysis to capture the volatility of the asset type. Some of the requirements to consider include:

  o The analysis should capture the cash flows of the asset type. This would include contributions, distributions, and total returns.
Life Actuarial (A) Task Force
Exposure Draft
Please send comments to Reggie Mazyck (RMazyck@NAIC.Org)
by close of business December 1

- The analysis should capture the distributions of the outcomes from the
  A/L analysis. This may require stochastic analysis that captures the
  distribution of results for the ALTs and for the other assets supporting
  the liabilities. It could use the NY7 scenarios and run number of paths of
  stochastic asset spreads, defaults (migrations), and equity returns for
  each scenario. It seems like reserve sufficiency is an 85th percentile
  measure, so a focus at the 85th percentile seems reasonable to consider.
  (I would suggest Conning could provide these paths for each NY
  scenario)
- The requirements should consider the illiquidity of the asset type. The
  analysis shouldn’t be allowed to disinvest an asset type that is illiquid.

(This approach is difficult to implement, but the volatility of the asset class requires this
level of detail. If the appointed actuary is going to use these asset types to support CFT,
then the analysis requires this level of thoroughness. I would pose this question: How
would the appointed actuary know the assets are adequate to support the liabilities
without this type of analysis?)

- **Effective date**: Is a year-end 2022 effective date for the actuarial guideline
  reasonable, or should some guidance apply before that date?
EOY 2022 seems appropriate if a documentation approach is used. The industry would
need time to implement.
Comment on the Actuarial Guideline for AAT Exposure
Received 9/30/21
Submitter: Anonymous

I. My main suggestion would be to be broader in how you look at and write things up (rather than focusing on a specific asset such as CLOs).

II. Areas of investment-related risk likely not captured in credit ratings include:
   1. Liquidity
   2. Volatility of returns
   3. Volatility of fair market valuation
   4. Difficulty in assessing fair market valuation

Life insurers have largely been trying to get more yield by going farther out on the spectrum for one or all of those risks. Guidance could include adjustments related to those risks.
Update on Mortality Experience Data Collection

Pat Allison, FSA, MAAA
December 8, 2021

Agenda

- Current Data Collection Timeline
- NAIC Data Review Process and Status
- Recommended Deadline Extension
2021 Experience Data Collection Timeline

<table>
<thead>
<tr>
<th>Date</th>
<th>Event Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>6/7/21</td>
<td>NAIC notified companies that they could begin submitting data for the 2018 and 2019 observation years. A total of 110 companies, representing 87.5% of industry claims, are subject to the mortality experience data collection.</td>
</tr>
<tr>
<td>9/30/21</td>
<td>Deadline for initial submissions. A complete submission includes 2 years of data submitted using the Regulatory Data Collection (RDC) tool as well as Control Totals, Reconciliation to Exhibit of Life Insurance, and VM-51 Appendix Questionnaires.</td>
</tr>
<tr>
<td>12/31/21</td>
<td>Deadline for companies to make corrections to data submissions.</td>
</tr>
<tr>
<td>5/31/22</td>
<td>NAIC to submit aggregate experience data to SOA.</td>
</tr>
</tbody>
</table>

Data Review Process and Status

1. Data submissions - RDC Tool gives immediate feedback on form and format data exceptions (Example of a data exception: Smoker Status has an invalid code)
   Status: 100 companies have submitted their data for the 2018 and 2019 observation years. The remaining 10 companies have uploaded their data but have not yet submitted it.

2. Control Totals and Reconciliation to Annual Statement – These serve as an inclusion controls, ensuring that all records intended to be submitted were received, and that only business in scope was submitted.
   Status: The NAIC is having ongoing communication with companies regarding any control totals and reconciliations that do not match the data submission.

3. VM-51 Appendix Questionnaires – Preferred Class Structure Questionnaires, Mortality Claims Questionnaire, Additional Plan Code Form
   Status: Most companies have completed these.
Data Review Process and Status (continued)

4. Rules-Based Data Validation - includes all RDC checks, plus more complex data validations (e.g., year-over-year data comparisons) added by NAIC actuarial staff. A list of the validations can be found on the NAIC website (https://content.naic.org/pbr_data.htm - Scroll down to VM-50 / VM-51 Experience Reporting). A company will need to meet a minimum threshold of acceptable data in order to be included in the aggregate file to be sent to the SOA.

Status: Initial data submissions range from 0% - 100% acceptable.

- Small companies tend to have higher percentages of acceptable data. Large companies are generally more complex. There are often many product types, multiple admin systems, and sometimes coordination is required with 3rd party administrators.
- Common reasons for lower acceptance percentages include:
  - Face Amount is missing, zero, or negative.
  - Inconsistencies in year-over-year data (e.g., changes in issue age, smoker status, or number of classes in preferred class structure)

---

Data Review Process (continued)

5. Field Distribution Review - checks data reasonability in accordance with VM-50 Section 4.B.8. To do this, the NAIC created approximately 150 charts and tables in Tableau to help identify potential systematic errors, unusual or unlikely reporting patterns in the data, etc. Note: Data corrections may be needed even if review step #4 indicates that 100% of the data passes the rules-based tests.

Status: Typically, companies are receiving at least 60 comments/questions for which a written response is required.

- Common questions are regarding:
  - Small face amounts (<$5,000) – These may represent paid-up additions in some cases.
  - Preferred classes – There is confusion on how to code preferred and standard classes.
  - Underwriting type – Many companies have coded a high percentage of records as Unknown, Not Underwritten, or Underwritten with unknown fluid collection.
  - Terminations – These appear low for some companies.
  - Unlikely gender and smoker status concentrations (e.g., plan codes with 100% females)

- Note: There may be reasonable explanations for apparent data anomalies. In this case, the NAIC will keep track of company responses so that questions are not repeated in future years.
Recommendation for Deadline Extension

- The VM-51 deadline for corrected data submissions is 12/31/21.
- NAIC staff recommends a deadline extension to 3/31/22 to allow companies more time to review NAIC feedback, provide responses, and make corrections as needed.
  - It is anticipated that companies may need to submit more than one corrected file. We encourage companies to resubmit as soon as they feel they have addressed the data exceptions and questions from the data validation and field distribution review.
- A deadline extension is not expected to delay delivery of aggregated data to the SOA by 5/31/22.
Future Mortality Improvement Scale Development (VM-20)
UPDATE

Mortality Improvements Life Work Group (MILWG) of the Academy Life Experience Committee and SOA Preferred Mortality Project Oversight Group (“Joint Committee”)

RECAP: Individual Life Insurance Future Mortality Improvement (FMI) for VM-20 Products

GOAL: To allow a prudent level of future mortality improvement (FMI) for VM-20 products beginning with the 2022 valuation manual

- FMI scale will be developed, updated and made available to practitioners annually
- Updates will be limited to a threshold of materiality for making a change
- Two versions of the scale will be published: Basic (“Best Estimate”) and Loaded (“with margin”)
- Period of scale application: 20 years
- Varies only by gender and attained age
Topics for Presentation

- 2022 scale development plan
- Issues to be addressed in 2022 recommendation
- Next steps/future considerations

### 2022 MI Scale Development Plan (VM-20)

<table>
<thead>
<tr>
<th><strong>2022 MI Scale Development</strong></th>

<tr>
<td>3. Develop recommendation for reflecting COVID impact</td>
<td>5/1/2022</td>
</tr>
<tr>
<td>4. Determine method for smoothing (FMI)</td>
<td>6/1/2022</td>
</tr>
<tr>
<td>5. Finalize approach for application of margin</td>
<td>6/1/2022</td>
</tr>
<tr>
<td>6. Develop revised version of 2022 HMI and FMI scales - apply COVID, smoothing, and margin adjustments</td>
<td>6/15/2022</td>
</tr>
<tr>
<td>8. Develop final recommendation for HMI and FMI scales for 2022 (basic and loaded versions) and present to IATF for exposure</td>
<td>6/30/2022</td>
</tr>
<tr>
<td>9. Receive SSA mortality improvement data (final SOA estimates for 2022)</td>
<td>8/15/2022</td>
</tr>
<tr>
<td>10. Respond to exposure comments obtain IATF approval of 2022 HMI and FMI scales - both basic and loaded versions</td>
<td>9/15/2022</td>
</tr>
<tr>
<td>11. Publish 2022 HMI and FMI scales on SOA website</td>
<td>9/30/2022</td>
</tr>
</tbody>
</table>
Issues to be Addressed in 2022 Scale Recommendation

- COVID-19 impacts
- Smoothing method
- Margin application

Issues to be Addressed in 2022 Scale Recommendation
COVID-19 Impacts

- Quantification of COVID-19 impact
  - Data sources
  - Short vs medium vs longer term impacts
  - Return to improvement over time or continued deterioration
  - Insured vs general population impacts
  - Differences in COVID-19 impact/adjustment approaches by company

- Approach for reflecting impacts
  - Direct adjustment or reflected in margins
  - Consistency across product lines ("Think Tank Group" recommendations)
Issues to be Addressed in 2022 Scale Recommendation Smoothing Method

- Unsmoothed historical estimates vary materially by age
- Consider reflecting larger differences in smoothed rates for FMI recommendation
- Consider implications to HMI smoothing for 2022
Issues to be Addressed in 2022 Scale Recommendation Margin Application

- Apply any adjustments for COVID-19 impacts as determined by subgroup work
- Specify approach for application where FMI rates are zero, near zero or negative

Next Steps and future considerations

- Threshold of materiality for making a change in a given year
- Impacts of opioid epidemic
- Obesity impacts
- Mental health impacts
- Slowdown in cardiovascular mortality improvement
- Smoker status impacts
- Socioeconomic differences (between general and insured population beyond COVID-19 impacts)

Appendix

FMI Scale Development—Methodology Review

- Best estimate FMI grades from the historical basis to a long-term MI rate (“LTMIR”) at 10 years
- Remains level from 10 to 15 years
- Grades to no additional improvement at 20 years
- Separate exercise for initial published scale to consider COVID-19 impacts
Sample Best Estimate FMI Rates
Unsmoothed—Male—2020 Valuation

Example Best Estimate FMI Rates
Unsmoothed—Female—2020 Valuation
2020 Smoothed Best Estimate FMI Rates

Margin Recommendation

MARGIN ON THEINCREMENTALMORTALITY IMPROVEMENT SCALE
- Margin will be included for all companies
  - Companies may use a more conservative MI scale but not less conservative
  - Margin will take the form of a flat % reduction in the best estimate MI scale
    - Recommendation for 25% flat reduction
Considerations in Margin Recommendation

- 25% reduction in best estimate scale is a material cushion to reserve impact

- Conservatism in best estimate MI scale
  - Not explicitly included
  - Methodology has some conservatism—i.e., limiting cumulative improvements to 20 years

- Ability to change best estimate MI scale each year
  - No lock in of assumptions under VM-20
  - Corrections can be made if trends change
SOCIETY OF ACTUARIES
RESEARCH UPDATE TO LATF
December 8, 2021
R. DALE HALL, FSA, MAAA, CERA, CFA
Managing Director of Research

U.S. Post-Level Term Lapse and Mortality Predictive Modeling Report
U.S. Post Level Term Lapse and Mortality

• Previous PLT report published in 2014
  • Included data from 37 companies
  • 317,000 policy years in duration 11
  • Did not include significant predictive modeling
• Current study began in January, 2019
  • Included data from 25 companies
  • 737,000 policy years in duration 11
  • Enough experience to:
    • Compare graded vs jump to ART premium experience
    • Analyze PLT experience for 15-year LT policies

U.S. Post Level Term Lapse and Mortality

• Key findings
  • Shock lapse at the end of the term is the pivotal variable
  • Other variables have greater impact for lower premium increases (esp. up to 3x premium increases)
  • Lapses in each duration are higher if the shock lapse is higher
  • For graded, subsequent premium jumps in the PLT period were an important driver of lapsation
  • Mortality deterioration in PLT was higher for higher shock lapses
  • For higher shock lapse ranges, the mortality deterioration wore off quickly; this was not the case for graded or low shock lapses
U.S. Post Level Term Lapse and Mortality

• Modeling approach
  • Use Generalized Linear Regression to build a model for the shock lapse at the end of the level term
    • Include all variables and interactions found to be significant
  • Add the predicted shock lapse as a new variable to the dataset
  • Use the data, including the predicted shock lapse, to build separate models (Step 2 Models) for experience during the PLT period for:
    • Lapse experience
    • Mortality experience

• Tableau Link: https://tableau.soa.org/t/soa-public/views/USPost-LevelTermPredictiveModelingInteractiveTool/1-ShockLapseOverview
Analysis of Historical U.S. Population Mortality Improvement Drivers Since 1950

Research Objective

• Authors: Andres Villegas, lead researcher

• Builds on earlier SOA-sponsored project “Components of Historical Mortality Improvements” (Li et al., 2017a,b).

• Identifying significant mortality drivers in the U.S. population that have a high likelihood of being linked to the improvement or deterioration of mortality by age, period and cohort (APC) components.

• Quantifying possible correlations using cause of death and other relevant data sources and quantifying the likely degree of causality between each APC mortality improvement component and the relevant extrinsic drivers.
Data Source

- HMD Cause of Death Data 1959-2016
- 6 broad causes of death - circulatory diseases, neoplasms, respiratory diseases, digestive system diseases, external causes and other causes.
- 26 subcategories
- 9 Risk factors associated with mortality – AIDS and tuberculosis, alcohol abuse, dementia and Alzheimers, diabetes and obesity, drug dependency, homicide, hypertensive disease, self harm, smoking
Age Standardized Death Rates - Subcause

Life Practice Council Update

Laura Hanson, MAAA, FSA
Outgoing Vice President

Agenda

☐ Webinars and Events
☐ Recent Activities and Deliverables
☐ Ongoing Efforts
Webinars and Events

- **Recent**
  - *PBR Boot Camp: The Regulatory Perspective* (Oct 13)
  - Academy Annual Meeting (Nov 4-5)
    - Life breakout sessions on reinsurance, long-term care, and registered index-linked annuities
- **Upcoming**
  - Winter 2022 Life Policy Update Webinar (January 2022)

Recent Activity

- Presented recommendations on updated C-2 mortality factors to the NAIC’s Life Risk-Based Capital Working Group
- Submitted comments to the Actuarial Standards Board on the exposure draft of ASOP No. 24
- Published an exposure draft on considerations regarding Market Risk Benefits
- Published an updated version of the Life Illustrations Practice Note
Recent Activity (continued)

- Submitted comments to LATF on Asset Adequacy Testing modeling
- Submitted comments to LATF on APF 2021-11
- Submitted comments to Accelerated Underwriting (A) Working Group on the charges and scope of the working group

Ongoing Activities

- Provide input on Economic Scenario Generator development
- Develop VM-22 and C-3 field study for non-variable annuities
- Publish the VM-21 Practice Note Addendum
- Publish FAQs on changes to tax reserve calculations and reporting under the federal Tax Cuts and Jobs Act of 2017
Ongoing Activities (continued)

- Provide public policy analysis on:
  - The use of annuities in retirement plans, including changes as a result of the federal SECURE* Act
  - The use of data and algorithms in risk classification and underwriting
  - Efforts to promote diversity and inclusion in the profession and in life insurance products

* Setting Every Community Up for Retirement Enhancement

Recent Academy Activities

- Released a major issue paper, *Big Data and Algorithms in Actuarial Modeling and Consumer Impacts*, from the Data Science and Analytics Committee
- Updated U.S. Qualifications Standards effective January 1, 2022
- Council on Professionalism and Education (CoPE)
Thank You

| Health Insurance and Managed Care (B) Committee 2022 Proposed Charges (Attachment Seven) ............................... 7-72 |
The Health Insurance and Managed Care (B) Committee met in San Diego, CA, Dec. 15, 2021. The following Committee members participated: Jon Godfread, Chair (ND); Jessica K. Altman, Vice Chair (PA); Lori K. Wing-Heier (AK); Michael Conway (CO); John F. King (GA); Dean L. Cameron (ID); Kathleen A. Birrane (MD); Anita G. Fox (MI); Grace Arnold (MN); Russell Toal (NM); Glen Mulready (OK); Andrew R. Stolfi (OR); Jonathan T. Pike (UT); Mike Kreidler (WA); and Allan L. McVey represented by Tonya Gill espie (WV). Also participating were: Elizabeth Perri (AS); Ricardo Lara (CA); Frank Pyle (DE); Michelle B. Santos (GU); Doug Ommen and Andria Seip (IA); Vicki Schmidt (KS); Carter Lawrence (TN); and Jeff Rude (WY).

1. **Adopted its Summer National Meeting Minutes**

   Superintendent Toal made a motion, seconded by Commissioner Stolfi, to adopt the Committee’s Aug. 16 minutes (see NAIC Proceedings – Summer 2021, Health Insurance and Managed Care (B) Committee). The motion passed unanimously.

2. **Adopted its Subgroup, Working Group, and Task Force Reports**

   Commissioner Pike made a motion, seconded by Superintendent Toal, to adopt the following reports: 1) the Consumer Information (B) Subgroup, including its Dec. 2 (Attachment One), Oct. 20 (Attachment Two), Oct. 14 (Attachment Three), and Aug. 24 (Attachment Four) minutes; 2) the Health Innovations (B) Working Group, including its Dec. 11 (Attachment Five) and Nov. 2 (Attachment Six) minutes; 3) the Health Actuarial (B) Task Force; 4) the Regulatory Framework (B) Task Force; and 5) the Senior Issues (B) Task Force. The motion passed unanimously.

3. **Adopted its 2022 Proposed Charges**

   Commissioner Godfread said the Committee’s 2022 proposed charges were posted on the Committee’s web page and exposed for a public comment period ending Dec. 1. He said the Committee received no comments. Superintendent Toal made a motion, seconded by Commissioner Birrane, to adopt the Committee’s 2022 proposed charges (Attachment Seven). The motion passed unanimously.

4. **Adopted its Task Forces’ 2022 Proposed Charges**

   Commissioner Godfread said prior to the call, NAIC staff distributed the 2022 proposed charges for the Health Actuarial (B) Task Force, the Regulatory Framework (B) Task Force, and the Senior Issues (B) Task Force. The Health Actuarial (B) Task Force adopted its 2022 proposed charges during its Sept. 14 meeting. The Regulatory Framework (B) Task Force adopted its 2022 proposed charges during its Nov. 9 meeting. The Senior Issues (B) Task Force adopted its 2022 proposed charges during its Oct. 6 meeting.

   Commissioner Mulready made a motion, seconded by Director Fox, to adopt the 2022 proposed charges for the Health Actuarial (B) Task Force, the Regulatory Framework (B) Task Force, and the Senior Issues (B) Task Force (see NAIC Proceedings – Fall 2021, Executive (EX) Committee and Plenary, Attachment Three). The motion passed unanimously.

5. **Heard an Update from the CCIIO**

   Jeff Wu (Center for Consumer Information and Insurance Oversight—CCIIO) provided an update on the Biden administration’s current and future activities of interest to the Committee. He discussed the status of the 2022 open enrollment period noting a strong volume of enrollment both in the marketplace plans through HealthCare.gov and the state marketplaces. He highlighted the Biden administration’s $80 million in grants for outreach and enrollment assistance provided to assisters and navigators to assist consumers in their 2022 open enrollment plan selections. He also said approximately 2.8 million people enrolled in marketplace plans during the special enrollment period (SEP). He said approximately 2.1 million people have enrolled in federal marketplace plans, and approximately 700,000 enrolled in state-based exchange plans. He said these enrollments are in addition to the approximately 82 million people enrolled in Medicaid and the Children’s Health Insurance Program (CHIP). He discussed the Biden administration’s plans for unwinding the process and preparing for the end of the COVID-19 public health emergency to smoothly transition people from Medicaid and CHIP to other forms of coverage. He
said the CCIIO is working with its fellow centers, particularly the federal Center for Medicaid and CHIP Services (CMCS), and exploring all available options to limit coverage gaps and coverage losses for those consumers who will be going through the redetermination process. He noted that the NAIC and state insurance regulators will play a huge role in this process. He encouraged state insurance regulators to reach out to the CCIIO with any suggestions and concerns related to this unwinding process.

Mr. Wu discussed the CCIIO’s efforts related to the implementation and enforcement of the federal No Surprises Act (NSA), including the issuance of several sets of interim final and proposed rules. He highlighted the CCIIO’s creation of an NSA website with focus pages for specific stakeholders, such as providers and consumers. He said the CCIIO recognizes the need for extensive outreach and education to stakeholders about the NSA’s provisions and its consumer protections and responsibilities.

Mr. Wu said the CCIIO recognizes that the states are in different positions as far as enforcement when the NSA becomes effective Jan. 1, 2022. He discussed how the federal agencies charged with implementing the NSA can work together with the states to address any implementation and enforcement issues. He said the CCIIO has held meetings with the states to discuss NSA enforcement and has begun sending out letters to the states outlining whether the federal agencies or the states will be responsible for enforcing which provisions of the NSA.

Mr. Wu said despite the necessary focus on the NSA and its implementation, the CCIIO is continuing its work with the states on implementation and enforcement of the provisions of the federal Consolidated Appropriations Act of 2021 (CAA), which amended the federal Mental Health Parity and Addiction Equity Act (MHPAEA) to provide important new protections. He also noted the concerns state insurance regulators have had and have discussed with the CCIIO related to producer and plan marketing and enrollment practices.

Mr. Wu highlighted Kentucky, Maine, and New Mexico’s successful transition from federal marketplaces to full state-based marketplaces for 2022. He noted that these transitions create great opportunities for these states to have really focused specific programs for their residents. He also said the federal Affordable Care Act’s (ACA’s) section 1332 waiver program is still available and open for state applicants interested in pursuing new waivers that expand coverage and access; in particular, waivers that have a focus on underserved populations. He said the CCIIO plans to distribute approximately another $450 million to support the efforts of 14 states that have existing section 1332 waivers.

Mr. Wu said in addition to these initiatives, the federal Centers of Medicare & Medicaid Services (CMS) plans to focus on issues related to health equity as part of its work. He said such health disparities have particularly come to light with the COVID-19 public health emergency. However, he noted that the federal government cannot work on these issues alone, and it needs the help of all stakeholders to address these issues. He highlighted Colorado’s essential health benefit benchmark initiative, which the CMS approved earlier this year. He explained that this new benchmark plan is intended to promote access to coverage for gender affirming care by discouraging the use of a one-size-fits-all framework for transgender persons. He said this initiative is a great example of the important and innovative work the states can do. He said the CCIIO is open to engaging other states regarding these types of and other important and innovative initiatives that a state feels is appropriate for their residents.

Commissioner Altman noted that NSA implementation starts Jan. 1, 2022. She asked Mr. Wu about his thoughts on how the states and the CCIIO can work together to share information on any issues that arise as NSA implementation begins. Mr. Wu said he believes implementing the NSA will be a different and more challenging process than what has occurred before, such as the process for implementing the ACA. He said he believes it will be a gradual, ongoing process. He said particularly in the early months of implementation, communication with stakeholders will be key. He noted the current education and outreach efforts the CCIIO is conducting, particularly with providers.

Commissioner Conway said as one of the states that had a balance billing law prior to the NSA’s enactment, Colorado has been examining ways to align its law with the NSA to streamline provisions and make the implementation and enforcement process as efficient and effective for stakeholders—health care providers, consumers, and hospitals—as possible. He said one of the areas Colorado is finding it difficult to align relates to the arbitration process, particularly in a situation when a provider enters into the federal independent dispute resolution (IDR) process, but later it is determined that the plan involved is state regulated. Upon discovery of this, the provider is kicked out of the federal IDR process and referred to the state IDR process. He acknowledged that Mr. Wu most likely has no immediate answer to his concern. He urged the CCIIO to keep this issue in mind; and as NSA implementation moves forward, the CCIIO should consider and explore ways to address this issue, including allowing in such situations, a state-regulated plan to use the federal IDR process and having the arbitrators follow state law
requirements to conduct the IDR. Mr. Wu acknowledged the potential operational complexity of Commissioner Conway’s suggestion, but he agreed that it would be worthwhile to discuss this issue further in the future.

Commissioner Kreidler asked Mr. Wu when the proposed federal Notice of Benefit and Payment Parameters for 2022 rules would be released. Mr. Wu noted that the CCIIO’s timing for releasing the rules in the past has been challenging for stakeholders to incorporate all its requirements. He said the CCIIO hopes to release the proposed rules by the end of the year or shortly thereafter.

Commissioner Godfread reiterated the NAIC’s and state insurance regulators’ commitment to work with the CCIIO and other federal agencies regarding NSA implementation. He said he anticipates that this collaboration and Committee discussions on the NSA will continue in the coming year.

6. Discussed the Committee’s NSA Consumer and Provider Outreach Materials

Commissioner Godfread said at the Committee’s meeting during the Summer National Meeting, the Committee discussed developing consumer-facing and provider-facing outreach and education materials on the NSA to assist state insurance departments in educating and reaching out to consumers, providers, and insurers about the NSA, prior to its Jan. 1, 2022, starting date. He said based on that discussion, NAIC staff prepared a template that state departments of insurance (DOIs) can tailor to their needs to educate and inform providers in their state about their responsibilities under the NSA for plans starting in 2022. He also said based on those Committee discussions, the Consumer Information (B) Subgroup developed a consumer-facing document tailored to educate consumers on the NSA and the new protections it offers for balance bills. The Subgroup discussed and approved that document during a meeting on Dec. 2. Commissioner Godfread asked the Committee if it believes any additional materials would be needed at this time, such as specific materials for insurers. After discussion, the Committee decided that the current materials were sufficient and could also be used as part of a state DOI’s education and outreach to insurers.

7. Heard a Presentation from the KFF on Findings from the 2021 EHBS

Gary Claxton (Kaiser Family Foundation—KFF) and Matthew Rae (KFF) provided a summary overview of the findings from the KFF’s 2021 Employer Health Benefits Survey (EHBS). For the 2021 survey, the KFF revised it to ask about changes employers and health plans made to address potential issues and uncertainties related to the COVID-19 pandemic. Mr. Claxton said one expected finding related to this issue was an increase by some employers in the use of telemedicine to provide some health care services. He said many employers have also taken steps to assist employees and family members with the stress caused by the COVID-19 pandemic by offering enhanced mental and behavioral health benefits. Employers have also made changes to their health promotion and wellness programs. Mr. Claxton highlighted another survey finding: i.e., the increase in the number of small employers offering level-funded premium plans. He explained that these arrangements combine a relatively small self-funded component with stop-loss insurance, which limits the employer’s liability to low attachment points that transfer a substantial share of the risk to insurers.

Mr. Claxton noted that health insurance coverage remains expensive; but generally, over the past few years, premiums and annual deductibles have remained steady or flat. He said the survey also found that the level of employee cost-sharing has remained flat after previous years of increases. He suggested that this may be due to employers not wanting to make drastic plan changes because of the COVID-19 pandemic.

Commissioner Godfread explained that the reason the Committee invited the KFF to discuss its 2021 EHBS survey findings was because the Committee over the past few years has focused its discussion on the individual market and individual health plans. He said it is also important for the Committee to understand what is happening in the employer market, particularly the small employer market. He encouraged Committee members to view the full 2021 EBHS report on the KFF’s website.

Commissioner Altman noted that as Mr. Claxton stated, although the level of employee cost-sharing has leveled off over the past few years, prior to that level of employee cost-sharing, particularly with respect to deductibles, it has increased over the years. She asked Mr. Claxton if he could discuss empirically or anecdotally about how the current state of coverage in the small group market from a generosity and affordability perspective compares to the individual market taking into consideration the provisions of the federal American Rescue Plan Act of 2021 (ARPA) focusing on lowering the cost of premium for individuals obtaining coverage through the health insurance marketplaces. Mr. Claxton discussed options small employers might take to make coverage more affordable, including not offering coverage, particularly if the employees have lower incomes and can obtain coverage through the health insurance marketplaces and the use of level-funded plans. With respect to level-funded premium plans, Mr. Claxton explained that these plans might have less generous benefits than ACA-compliant plans because
they are not subject to the ACA’s essential health benefit requirements and mental health parity requirements. These plans would also probably be more affordable because they are medically underwritten as well. Mr. Claxton said it is important for state insurance regulators to be aware of these potential trends in the small group market and any possible impact of these types of plans being offered in the small group market versus the plans being offered in the ACA-compliant market.

8. Received an Update on the Special (EX) Committee on Race and Insurance Workstream Five’s Work

Commissioner Altman and Commissioner Lara, co-chairs of the Special (EX) Committee on Race and Insurance Workstream Five, provided an update to the Committee on Workstream Five’s work to date. Commissioner Altman said since the Workstream’s last update, it met Dec. 3, Nov. 18, Oct. 14, Sept. 9, and Aug. 26. She said most of these meetings focused on the Workstream’s work related to its “Principles for Data Collection” document. She said during its Dec. 3 meeting, the Workstream almost completed its work on the document. The Workstream plans to meet Dec. 20 to consider final revisions to the document and, if finalized, forward it document to the Special Committee for its consideration.

Commissioner Lara said in addition to the Workstream’s work on the “Principles for Data Collection” document, during some of the other meetings, the Workstream discussed a draft outline for its proposed white paper on provider networks, provider directories, and cultural competency, and it exposed it for a public comment period ending Nov. 8. He said the Workstream anticipates holding a meeting early next year to discuss the comments received and assign Workstream members to begin drafting sections of the proposed white paper.

Having no further business, the Health Insurance and Managed Care (B) Committee adjourned.

B Cmte Dec 15 minutes
The Consumer Information (B) Subgroup of the Health Insurance and Managed Care (B) Committee met Dec. 2, 2021. The following Subgroup members participated: Mary Kwei, Chair, Patricia Dorn, and Paul Meyer (MD); Debra Judy, Vice Chair, Jill Mullen, and Tara Smith (CO); William Rodgers and Yada Horace, and Anthony L. Williams (AL); Michele MacKenzie, Shannon Hohl, Kathy McGill (ID); Ryan Gillespie (IL); Jenifer Groth, Alex Peck, and Kim van Rooy (IN); LeAnn Crow and Brenda Johnson (KS); Tricia Hearth, Gregory Maus, and Maybeth Moses (MN); Cynthia Amann, Carrie Couch, Amy Hoyt, Jo LeDuc, and Jessica Schrimpf (MO); Kathy Shortt (NC); Maggie Reinert (NE); Cuc Nguyen and Rebecca Ross (OK); Elizabeth Hart and Lars Thorne (PA); Gretchen Brodkorb (SD); Stephanie Cope, Scott McAnally, Jennifer Ramcharan, and Vickie Trice (TN); Heidi Clausen, Jaakob Sundberg, and Shelley Wiseman (UT); and Barbara Belling, Eric Cormany, Monica Hale, Christina Keeley, Rebecca Rebholz, Jennifer Stegall, Jody Ullman, and Julie Walsh (WI). Also participating was: Patrick Smock (RI).

1. **Adopted a Consumer Brief on Balance Billing**

Ms. Kwei brought up the consumer brief “New Protections Against Surprise Medical Bills.” She thanked the Subgroup members who had drafted the document and contributed edits. She said state insurance departments could use the document as a template and insert their own language regarding any state laws on balance billing or make other changes.

The Subgroup discussed the template. Kris Hathaway (America’s Health Insurance Plans—AHIP) suggested including something about the requirement that providers produce an estimate of costs when they ask a consumer to waive balance billing protections. Brenda J. Cude (University of Georgia) provided a statement on this requirement that the Subgroup decided to include. Ms. Cude asked about the use of the terms “hospitalist” and intensivist.” Some Subgroup members said the terms are not understandable for consumers, and others said they are important to include because federal regulations specifically prohibit waiver of balance bills from these professionals. The Subgroup decided to add brief parenthetical explanations of the terms.

Subgroup members further decided to update language about plans’ coverage of out-of-network providers and to clarify that surprise bills are unexpected balance bills.

Ms. Brodkorb made a motion, seconded by Ms. McGill, to adopt the template with the changes agreed to during the meeting (Attachment One-A). The motion passed unanimously.

Having no further business, the Consumer Information (B) Subgroup adjourned.
New Protections from Surprise Medical Bills

You may have heard stories from friends or in the news about balance bills or surprise bills from health care providers. Starting in 2022, a new law will protect you from many types of surprise bills. Here are the basics about the new protections and some examples of how they can protect consumers.

What is balance billing?

Balance billing happens when a health care provider (a doctor, for example) bills a patient after the patient’s health insurance company has paid its share of the bill. The balance bill is for the difference between the provider’s charge and the price the insurance company set, after the patient has paid any copays, coinsurance, or deductibles.

Balance billing can happen when a patient receives covered health care services from an out-of-network provider or an out-of-network facility (a hospital, for example).

In-network providers agree with an insurance company to accept the insurance payment in full, and don’t balance bill. Out-of-network providers don’t have this same agreement with insurers.

Some health plans, such as Preferred Provider Organization (PPO) or Point of Service (POS) plans, include some coverage for out-of-network care, but the provider may still balance bill the patient if state or federal protections don’t apply. Other plans don’t include coverage for out-of-network services and the patient is responsible for all of the costs of out-of-network care. Medicare and Medicaid have their own protections against balance billing.

What is surprise billing?

Surprise billing happens when a patient receives an unexpected balance bill after they receive care from an out-of-network provider or at an out-of-network facility, such as a hospital. It can happen for both emergency and non-emergency care. Typically, patients don’t know the provider or facility is out-of-network until they receive the bill.

Some states have laws or regulations that protect patients against surprise billing. However, state laws generally don’t apply to self-insured health plans, and most people who get coverage through an employer are in self-insured health plans. Now, a new federal law protects consumers in self-insured health plans as well as consumers in states that don’t have their own protections.

What protections are in place?

A new federal law, the No Surprises Act, protects you from:

- Surprise bills for covered emergency out-of-network services, including air ambulance services (but not ground ambulance services), and
- Surprise bills for covered non-emergency services at an in-network facility.

The law applies to health insurance plans starting in 2022. It applies to the self-insured health plans that employers offer as well as plans from health insurance companies.

- A facility (such as a hospital or freestanding emergency room (ER)) or a provider (such as a doctor) may not bill you more than your in-network coinsurance, copays, or deductibles for emergency services, even if the facility or provider is out-of-network.
- If your health plan requires you to pay copays, coinsurance, and/or deductibles for in-network care, you’re responsible for those.
- The new law also protects you when you receive non-emergency services from out-of-network providers (such as an anesthesiologist) at in-network facilities. An out-of-network provider may not bill you more than your in-network copays, coinsurance, or deductibles for covered services performed at an in-network facility.
You can never be asked to waive your protections and agree to pay more for out-of-network care at an in-network facility for care related to emergency medicine, anesthesiology, pathology, radiology, or neonatology—or for services provided by assistant surgeons, hospitalists (doctors who focus on care of hospitalized patients), and intensivists (doctors who care for patients needing intensive care), or for diagnostic services including radiology and lab services.

You still can agree in advance to be treated by an out-of-network provider in some situations, such as when you choose an out-of-network surgeon knowing the cost will be higher. The provider must give you information in advance about what your share of the costs will be. If you did that, you’d be expected to pay the balance bill as well as your out-of-network coinsurance, deductibles, and copays.

What else should I know?

- Your health plan and the facilities and providers that serve you must send you a notice of your rights under the new law.

- If you’ve received a surprise bill that you think isn’t allowed under the new law, you can file an appeal with your insurance company or ask for an external review of the company’s decision. You also can file a complaint with the [State Insurance Commissioner] or the federal Department of Health and Human Services.

- An independent dispute resolution (IDR) process, or another process your state sets up, is available to settle bills. Providers and insurance companies can use this process to settle disputes about your bill without putting you in the middle. A similar dispute resolution process is available for individuals who are uninsured, in certain circumstances, such as when the actual charges are much higher than the estimated charges.

- Other protections in the new law require insurance companies to keep their provider directories updated. They also must limit your copays, coinsurance, or deductibles to in-network amounts if you rely on inaccurate information in a provider directory.

- You can get more information and make complaints to federal agencies by calling 1-800-985-3059.

See the next page for examples of how the No Surprises Act protections apply.
Examples of Surprise Bill Protections

Q. Deion fell off a ladder, hitting his head and breaking his arm. He was taken to the nearest emergency room. He needed covered imaging and radiology services as well as surgery. Now bills are starting to come in. What is he responsible for paying? How can he get help if he's receiving bills that don't match the explanation of benefits (EOB) from his health insurance plan?

A. For emergency care he received, Deion is only responsible for paying his in-network deductibles, copays, and coinsurance, even if health care providers who were not in his plan network treated him or he was taken to a facility that was out-of-network. If the bills don't match his explanation of benefits (EOB), Deion can call his health insurer first. If he isn't satisfied with the insurer’s response, he can contact [insert state agency].

If Deion is admitted to the hospital after he receives care in the emergency room, he should know that any out-of-network health care providers at the facility may ask him to consent to continuing care and to agree to pay higher amounts. They can only ask for his consent to receive out-of-network care once he is stabilized, able to understand the information about his care and out-of-pocket costs, and it is safe to travel to an in-network facility using non-emergency transportation. If those conditions are met, Deion can decide if he wants to continue with the out-of-network provider, or travel to a provider who participates in his health plan's network. If he stays with the out-of-network provider and consents to out-of-network billing, he'll be responsible for any out-of-network deductibles, copays, or coinsurance. He'll also be responsible for the amount the provider charges that is more than what the insurance company pays (the balance bill).

Q. Bill had chest pains and went to his local hospital's emergency room. The doctors there said he had to be transported to a hospital in a major city for full treatment and he had to go by air ambulance to make it in time. Bill was flown to the larger hospital and is now doing well. Bill's wife, Nancy, has heard scary stories about air ambulance costs and is starting to worry. Are there any protections for someone who is transported by air ambulance in an emergency?

A. If the air ambulance company has an in-network contract with Bill’s health insurance plan, then Bill will only have to pay the in-network deductibles, coinsurance, or copays. The air ambulance company will accept their contracted amount as payment in full.

Starting in 2022, the new federal No Surprises Act protects patients even if the air ambulance company doesn’t have an in-network contract with their health insurance plan. Bill will only have to pay the deductibles, copays, or coinsurance that he would have to pay if the air ambulance were in-network. Federal law will help the air ambulance and the health insurance companies determine how to pay the rest of the bill.

Q. Elena is scheduled for a biopsy, a service that her health plan covers. Her hospital and surgeon are in-network with her health plan, but the hospital uses anesthesiologists and pathologists that are not in-network. Does this mean everything will be covered as in-network, or could Elena have some unexpected charges?

A. Surgery for a biopsy can involve health care providers that you don’t get to choose, such as an anesthesiologist and a pathologist. Starting in 2022, when Elena chooses an in-network facility and surgeon for her procedure, all of her out-of-pocket costs will be at the in-network rate. That includes the costs for any out-of-network providers she didn’t choose who participate in her care.

Q. Hannah changes jobs and her family is covered under a new employer health plan. Hannah and her husband's doctors are in-network with the new company, but their child’s pediatrician is not. How can they find an in-network pediatrician? Can they rely on the online provider directory for accurate information?

A. Hannah can review her new health plan’s online provider directory or call the insurance company to get information. An insurance company may have different networks for different health plans. It’s important to look at the directory for your specific health plan.

Most people rely on their health plan to give them accurate information about in-network health care providers. [States may insert protections in their laws.]

Starting in 2022, federal law requires health care providers to update their information with insurance companies when there is a change. In turn, insurance companies must verify that the information in their provider directories is complete.
If Hannah calls the insurance company to ask for a list of in-network pediatricians, the insurance company has one business day to give her a list. If Hannah relies on inaccurate information from the insurance company that a provider is in-network, then Hannah will be responsible only for the in-network deductibles, copays, or coinsurance.
The Consumer Information (B) Subgroup of the Health Insurance and Managed Care (B) Committee conducted an e-vote that concluded Oct. 20, 2021. The following Subgroup members participated: Mary Kwei, Chair (MD); Debra Judy, Vice Chair (CO); Anthony L. Williams (AL); Michelle Baldock (IL); LeAnn Crow (KS); Judith Watters (ME); Carrie Couch (MO); Laura Arp (NE); Cue Nguyen (OK); Jill Kruger (SD); Vickie Trice (TN); and Jennifer Steagall (WI).

1. **Adopted Updates to “Frequently Asked Questions About Health Care Reform”**

The Subgroup conducted an e-vote to consider adoption of a revised and updated version of “Frequently Asked Questions about Health Care Reform” (Attachment Two-A). The motion passed unanimously.

Having no further business, the Consumer Information (B) Subgroup adjourned.

PURPOSE

This document is designed for state insurance departments to use as they give answers to frequently asked questions (FAQ) and guide consumers about their health care choices. This document reflects regulations and guidance received from the federal government as of October 2021 and is subject to change.

This document isn’t intended to be given directly to consumers. States will need to modify this document to include state-specific information and terminology. Content in [brackets] must be edited to provide state-specific information. Drafting notes indicate where states may choose to add additional clarity on state policies. While some sections may be useful for direct-to-consumer communications, the document’s primary purpose is to give insurance department staff accurate and understandable information to use when they respond to consumer questions about healthcare reform.

Note that the federal Affordable Care Act (ACA) and related regulations refer to “exchanges” that operate in the states, while federal guidance documents refer to these exchanges as “marketplaces.” This document uses the term “exchanges.” However, some states may decide to follow federal guidance and use the term “marketplaces.”

Note, also, that states will need to modify this FAQ if the state has combined the exchange for individuals and families with the Small Business Health Options Program (SHOP) exchange.

HEALTH CARE REFORM OVERVIEW

Health care has changed in many ways as a result of the passage and implementation of the Patient Protection and Affordable Care Act, Public Law 111-148 (PPACA), and the Health Care and Education Reconciliation Act of 2010, Public Law 111-152. These two laws are collectively known as the ACA.

Q 1: When did the ACA take effect?

The ACA was enacted March 23, 2010.

Q 2: What changes have taken place?

Several changes took place before January 1, 2014:

- Lifetime and annual dollar limits on essential health benefits (EHB) are not allowed. Annual dollar limits on EHB were also phased out by January 1, 2014.
- Consumers are guaranteed certain appeal rights.
- Nearly all adult children up to age 26 are eligible to remain on a parent’s health insurance policy, regardless of the child’s marital status, financial dependency, enrollment in school, or place of residence.
- Insurers must cover certain preventive services without cost-sharing. (See Question 24.)
- Medical loss ratio (MLR) standards limit how much of premium dollars insurers can spend on administrative expenses.
- Many insurers must use a standardized Summary of Benefits and Coverage (SBC), which makes it easier to compare plans.
- Small businesses that provide health care for employees can apply for a tax credit.
- Persons with Medicare prescription drug coverage receive a rebate to help cover the cost of the “donut hole.” For 2022, consumers in a Medicare Part D standard plan no longer face a donut hole, but cost-sharing may vary for other plans.

Several major changes became effective for non-grandfathered individual and small group plans sold or renewed on or after January 1, 2014:
• Plans must include new consumer protections. Health insurers can’t deny or refuse to renew coverage because of a pre-existing medical condition. They also can’t charge a higher premium due to a person’s gender or health condition.
• Insurers must cover routine medical costs if a person participates in a clinical trial for cancer or other life-threatening diseases.
• Many, though not all, insurance plans must cover a minimum set of essential health benefits (EHB) and can’t put annual dollar limits on these benefits.
• Individuals and families may qualify for financial assistance when they shop in the health insurance exchanges. The American Rescue Plan Act increased the amount of financial assistance and removed the income limit of 400% of the federal poverty limit to qualify for assistance. This change will sunset at the end of 2022 if there is no additional legislation.
• In the small group market, from the period November 15 to December 15 each year, small employers can purchase coverage for their workers without having to meet minimum participation or minimum contribution requirements.

Note: Plans sold before March 23, 2010 that have had no significant changes are considered “grandfathered” and aren’t required to comply with many of these requirements. (See Question 31 on grandfathering.) Additionally, plans sold before January 1, 2014 may—if allowed by the state—continue to be renewed through policy years beginning on or before October 1, 2022 without coming into compliance with certain reforms. (See Question 31 on transitional policies.)

Q 3: Where can a person find more information about the ACA, including detailed timeline information?

For more general and detailed information about the ACA and its key provisions, visit the federal government’s website at www.healthcare.gov, or call 1-800-318-2596 (TTY: 1-855-889-4325).

For information about implementation of the ACA in [insert name of state], contact [insert name of state exchange] at [email address] or [xxx-xxx-xxxx].

There are also several other helpful sites and resources for more information about the ACA, including: Kaiser Family Foundation (www.kff.org/health-reform/); Commonwealth Fund (https://www.commonwealthfund.org/health-care-coverage-and-access); The Robert Wood Johnson Foundation (www.rwjf.org); the Georgetown Center on Health Insurance Reforms (https://chir.georgetown.edu/#); and the Center on Budget and Policy Priorities (www.healthreformbeyondthebasics.org).

Q 4: Do the consumer protections of the ACA apply to all health coverage?

No, the ACA consumer protections don’t apply to all health coverage. The ACA largely established new protections in the individual and small group markets, which includes policies sold through the exchanges in every state. Health coverage sold outside of the individual or small group markets, or that is not considered insurance, may not be required to comply with some or any of these protections.

Consumers may have questions about several types of coverage other than the qualified health plans sold through exchanges.

• Short-term, limited duration insurance. Several protections applicable in the individual market do not apply to short-term, limited duration insurance. However, state law or regulation may add some protections. Because the ACA does not apply, these plans may do any or all of the things in the list below, unless prohibited by state law or regulation:
  o deny coverage or increase premium due to health status,
  o exclude essential health benefits,
  o refuse renewal,
  o limit coverage of pre-existing conditions,
  o establish annual or lifetime benefit maximums,
  o set a yearly out-of-pocket maximum above $8,700, or
  o exceed medical loss ratio standards without rebating premium.
• Association health plans. Depending on the structure of the association and state law, consumer protections in the individual, small group, or large group market plans may apply to association health plans.
• Health care sharing ministry. These coverage arrangements are not considered to be insurance, so the requirements and protections described in this FAQ do not apply.
• Fixed indemnity insurance. The requirements and protections described in this FAQ generally do not apply. **Drafting Note:** States may want to add more details about state-level protections that apply to the coverage types mentioned in the bullets above.

**EXCHANGE BASICS**

Q 5: What is the [insert name of state health insurance exchange]? (For questions about the [insert name of state SHOP exchange], see Questions 42-46, 48-52, and 71-74).

The [insert name of state exchange] is the name of [insert name of state]’s health insurance exchange. The ACA created health insurance exchanges as places where individuals, families, and small employers can compare private health insurance plans and shop for coverage. Exchanges also provide access to a tax credit to help individuals pay for coverage. (See Questions 83-86.) Through exchanges, individuals may also qualify for help to lower their out-of-pocket costs (deductibles, coinsurance, or copayments) when they receive health care services. Insurers may sell plans through the exchange, as well as in the market outside the exchange. Premium tax credits and cost-sharing reductions aren’t available for plans sold outside the exchange.

**Drafting Note:** States that have no market outside the exchange should modify the previous paragraph accordingly. States should note, however, that some individuals such as incarcerated individuals and immigrants not legally present cannot be denied coverage on the basis of health status even though they will not be able to buy coverage through the exchange. (See Questions 121-122.)

To learn more, or to apply for coverage through the [insert name of state exchange], individuals and families should visit the website for the [insert name of state exchange] at [insert link to state exchange website]. For more general information about health insurance exchanges, visit the federal government’s website at [https://www.healthcare.gov/what-is-the-health-insurance-marketplace](https://www.healthcare.gov/what-is-the-health-insurance-marketplace).

Q 6: Are there different types of health insurance exchanges?

While the basic features of exchanges are the same in all of the states, the ACA allows for differences in who operates them. Some exchange operation options include the federal government operating the exchange, the state operating the exchange, and a partnership between the federal and state governments to operate the exchange. Please contact [insert state consumer affairs contact information] to learn how it is operated.

Q 7: What is a CO-OP plan?

CO-OP stands for Consumer Operated and Oriented Plan, which is a type of health insurer created under the ACA. The ACA gave low interest loans to private organizations to create a new type of nonprofit insurer designed to increase the plan choices available through the state exchanges. Any profits earned by CO-OPs must be applied to either lower premiums or expand benefits for customers. The federal Center for Consumer Information and Insurance Oversight (CCIIO) in the U.S. Department of Health and Human Services (HHS) maintains oversight of the CO-OPs. CO-OPs also must be governed by their members (or customers) and are required to offer plans through their respective states’ exchanges.

In [insert name of state], the [insert name of CO-OP] is the CO-OP available through the [insert name of state exchange]. If a CO-OP in the state is no longer available or enrollment has been capped, then consumers can explore other coverage options through the exchange during the open enrollment period (or may be eligible for a special enrollment period (SEP) if their CO-OP coverage ends outside of the open enrollment period).

To find out more about the CO-OP program, please visit [http://www.cms.gov/CCIIO/Programs-and-Initiatives/Insurance-Programs/Consumer-Operated-and-Oriented-Plan-Program.html](http://www.cms.gov/CCIIO/Programs-and-Initiatives/Insurance-Programs/Consumer-Operated-and-Oriented-Plan-Program.html).
Drafting Note: States should modify or eliminate this question if there aren’t any CO-OPs in the state, if the CO-OP is no longer available, or enrollment has been capped.

Q 8: If consumers live in one state but work in another, to which state’s exchange should they apply?
Consumers who don’t have access to coverage through their employer (or their spouse’s employer) should apply for coverage in the state where they live.

Q 9: Who can buy a plan through the [insert name of state exchange]?
In [insert name of state], any individual or family who wants may buy coverage through the [insert name of state exchange]. The only people who can’t are those who are not lawfully present in the U.S. (see Questions 121-122), incarcerated individuals (other than pending disposition of charges) (see Question 123), and generally, people on Medicare (see Question 94). While most individuals and families can buy coverage through the exchange, eligibility for tax credits and subsidies is dependent on lacking access to other coverage, e.g., Medicaid/Medicare eligibility, offers of affordable employer-sponsored coverage (see Question 85). When individuals become eligible for Medicare while enrolled in an exchange plan, they will no longer be eligible for any premium tax credits or cost-sharing reductions.

Small employers (employers with fewer than [XX] employees) may buy health insurance for their employees through the [insert name of state SHOP exchange]. If a state SHOP exchange has not been established in a state, healthcare.gov generally directs small employers to contact brokers or insurance companies directly. (For more information about the [insert name of state SHOP exchange], see Questions 42-46, 48-52, and 71-74).

Drafting Note: States should insert the appropriate number in place of XX above, taking into account the specific state rules for SHOP participation.

Q 10: When are consumers able to enroll in plans through the [insert name of state exchange]?
Consumers may enroll during the annual open enrollment period or when they qualify for a special enrollment period. In [insert name of state], open enrollment through [insert name of state exchange] for 2022 coverage for individuals and families begins [November 1, 2021], and continues through [January 15, 2022].

Coverage effective dates depend on the date of enrollment and are contingent on consumers paying the first month’s premium directly to the insurance company. Enrollment during a special enrollment period will be effective on either the first day of the following month if a consumer enrolls by the 15th of the month, or on the first day of the second following month, if a consumer enrolls after the 15th of the month.

During open enrollment, consumers may change plans, change insurance companies, or stay with the plan they have, if it’s still available. Current enrollees will also receive a new eligibility determination to determine if they will receive more or less financial help in the form of premium tax credits or cost-sharing reductions. If a consumer does not actively select a new plan and is eligible for auto-renewal, they will be automatically re-enrolled into the closest comparable plan for [Plan Year]. So, consumers who want to make changes to their coverage effective on January 1 must choose a plan by [December 15].

Drafting Note: States should insert the appropriate dates for their Open Enrollment Periods.

Q 11: What if a consumer wants to enroll or change plans outside of the open enrollment period?
Consumers may be eligible to enroll in coverage at times other than during the open enrollment period. There are special enrollment periods (SEPs) for individuals or families if they experience certain events. Some examples of events that trigger an SEP include: 1) loss of minimum essential coverage for an individual or their dependent; 2) gaining or becoming a dependent (such as marriage or the birth/adoption of a baby); and 3) being enrolled in a plan without tax credits and then becoming newly eligible for tax credits. (See Question 85.) The federal website https://www.healthcare.gov/coverage-outside-open-enrollment/special-enrollment-period/ lists possible options for consumers to obtain coverage outside an open enrollment period. Consumers generally have 60 days from the date of the event that triggered a SEP to enroll in coverage. Additional information about SEP rules is available at https://www.healthreformbeyondthebasics.org SEP reference chart/.
Consumers can apply for coverage through [insert name of state exchange] any time during the year, regardless of whether it’s an enrollment period. The [insert name of state exchange] will process applications and tell consumers whether or not they can enroll or must wait until an enrollment period. The exchange will also provide guidance on whether the applicant may be eligible for other types of coverage. Contact the [insert name of state exchange] at [insert website] or [insert phone number] for information about whether a consumer might be eligible to enroll in coverage through the [insert name of state exchange] during a SEP. People who are eligible for Medicaid and the Children’s Health Insurance Program (CHIP) can apply and enroll in [insert name of state Medicaid agency] at any time. People who become eligible for Medicare while enrolled in [insert name of exchange] should immediately notify the exchange and enroll in Medicare. (See Question 94.)

Q 12: How can a consumer prepare to enroll in a plan through the [insert name of state exchange]?

The federal website https://www.healthcare.gov/apply-and-enroll/get-ready-to-apply/ has suggestions for things consumers should think about to prepare to enroll in a plan through the exchange. The [insert name of state department of insurance] website at [insert website] has helpful information for consumers who are thinking about enrolling in a plan through the [insert name of state exchange]. Consumers can also make an appointment with a navigator, certified application counselor, insurance agent or broker, or other assister to help prepare for enrollment and compare plans. To find those who can assist consumers, go to Find Local Help at: https://localhelp.healthcare.gov/.

Consumers can start gathering basic information about household income, such as their most recent tax return if they filed one, or other income information. A full list of required documents is available at https://marketplace.cms.gov/outreach-and-education/marketplace-application-checklist.pdf. Many people will qualify for financial help to make insurance affordable, and consumers will need income information to find out how much help they are eligible for. Consumers can find more information about how to save money on coverage at https://www.healthcare.gov/lower-costs/.

SHOPPING FOR HEALTH INSURANCE: WHAT IS COVERED?

Q 13: What types of plans are available through the [insert name of state exchange]?

Health plans sold through the [insert name of state exchange] must meet comprehensive standards for items and services that must be covered. (See Question 16.) To help consumers compare costs, plans available through the [insert name of state exchange] are organized in four tiers/levels, that estimate the generosity of the plans’ coverage:

- **Bronze level** – The plan must cover about 60% of expected costs across a standard population. This is the lowest level of coverage.
- **Silver level** – The plan must cover about 70% of expected costs across a standard population.
- **Gold level** – The plan must cover about 80% of expected costs across a standard population.
- **Platinum level** – The plan must cover about 90% of expected costs across a standard population. This is the highest level of coverage.

In addition, catastrophic plans cover the same services, but their coverage is slightly less generous than the bronze level plans. A catastrophic plan may be a less expensive option for those who are eligible. Individuals are eligible to purchase a catastrophic plan if:

1. The individual is under the age 30.
2. The individual is over the age of 30 and qualifies for a “hardship exemption” (https://www.healthcare.gov/health-coverage-exemptions/hardship-exemptions/)
3. The individual is over the age of 30 and is unable to afford the lowest priced-coverage available to them. (https://www.healthcare.gov/exemptions-tool/#/results/2018/details/marketplace-affordability)

Premium tax credits and cost-sharing reductions are not available for catastrophic plans. Also, catastrophic plans cannot be used with health savings accounts (HSAs).

Stand-alone dental plans are available through the [insert name of state exchange]. (See Question 25.)
Q 14: What is actuarial value?

Actuarial value is how much of a standard population’s medical spending the health insurance plans in each metal level would cover. Percentages (60% for bronze, 70% for silver, 80% for gold, and 90% for platinum) represent the approximate actuarial value of plans at each level. A higher percentage means the plan covers more of a standard population’s costs (and the population pays less out of pocket). A lower percentage means the plan covers less (and the people who have the plan pay more out of pocket). The actuarial value calculation focuses on cost-sharing charges so that a bronze plan would have higher enrollee cost-sharing amounts compared to a gold plan. There also may be differences in how benefits are covered, such as differences in the prescription drugs that are covered or how many physical therapy visits the plan covers. The law requires all metal level plans and catastrophic plans to cover the essential health benefits (EHB). (See Q. 16)

Actuarial value is calculated for a standard population and does not mean that the plan will pay that percentage of any given person’s actual costs. For instance, a silver tier plan will pay more than 70% of covered medical expenses for some people and less than 70% for other people.

Actuarial value does not give other information about a plan that may be important to a particular person or affect their costs. It does not indicate how broad or narrow a plan’s provider network is, the quality of the provider network, information about the plan’s customer service and support, how broad or narrow the drug formulary is, or what the premium levels are. All of this information is important for consumers to consider when they choose a plan.

See https://www.healthcare.gov/choose-a-plan/ for more consumer information about choosing a plan.

Q 15: How do the tiers (bronze, silver, gold, and platinum) help consumers compare plans?

The tiers are a way to categorize plans based on “actuarial value.” Plans within each tier have a similar actuarial value, even if they cover different benefits or have different types of cost-sharing. While all plans in a tier must cover essential health benefits (EHB) (see Question 16), the details of their coverage (such as how many physical therapy visits are covered or which prescription drugs are covered) may be different. Not all plans in the same tier have the same benefits or cost-sharing requirements. Some plans may offer benefits in addition to the EHB.

The metal levels show the amount of cost-sharing required by the plan. Metal levels do not give consumers a signal about the plan’s provider network size, quality, or any other aspect of coverage.

Q 16: What services/benefits must plans cover? What are essential health benefits (EHB)?

Many plans sold in the individual and small group market, including all of those sold through the [insert name of state exchange] and [insert name of state SHOP exchange] must cover, at a minimum, a comprehensive set of benefits known as essential health benefits (EHB). These EHB include the following:

- Ambulatory patient services
- Emergency services
- Hospitalization
- Maternity and newborn care
- Mental health and substance use disorder services, including behavioral health treatment
- Prescription drugs
- Rehabilitative and habilitative services and devices
- Laboratory services
- Preventive and wellness services, including chronic disease management
- Pediatric services, including oral and vision care

“Grandfathered,” “transitional,” and “short-term” plans in the individual and small group markets aren’t required to include EHB. For more information about these plans, see Questions 30-31.

For more detailed information about essential health benefits in [insert name of state] and other states, visit https://www.cms.gov/cciio/resources/data-resources/ehb.html#ehb

© 2021 National Association of Insurance Commissioners 12
Q 17: What insurance companies will offer coverage through the [Insert name of state exchange]? How can consumers get a list of companies and plans available?

There are listings of the health plans available through the [insert name of state exchange] on its website: [Insert link to state exchange website]. People without access to the Internet can call the customer service line for the [insert name of state exchange] at [insert phone number] or get help from an agent, broker, or other type of assister. (See Question 61.)

Q 18: How can a consumer find out the details about what a particular plan covers?

All individual and small group plans offered after January 1, 2014, will cover essential health benefits (EHB) (see Question 16), except grandfathered, transitional, and short-term plans. (See Questions 30-31 and 91.)

To learn if a specific benefit is covered, and at what level, check a plan’s Summary of Benefits and Coverage (SBC). The SBC is a uniform document that includes details about what a plan does and does not cover. It also includes information about what kinds of costs a consumer can expect to pay out of pocket, such as copayments, coinsurance, and deductibles. An insurance company must provide an SBC for all health plans except for short-term and limited benefit plans. An SBC gives information in the same way for every plan to make it easier to compare plans. SBCs are available on the federal government’s website at www.healthcare.gov, the [insert name of state exchange] website at [insert link], the insurance company’s website, or from an agent or broker for plans offered in the market outside the exchange.

It should be noted that the SBC provides only a summary of the benefits. More detailed information is available through the insurer or an insurance agent or broker, and each SBC must include a link to a copy of the actual individual coverage policy or group certificate of coverage that will provide more detailed information.

The [insert name of state exchange] website at [insert link] includes information about what each plan covers and links to the insurer’s plan brochures.

Q 19: How can consumers compare benefits and understand what a plan covers?

In addition to getting a Summary of Benefits and Coverage (SBC) (see Question 18), consumers can get information about the health plan options available in their state online at the [insert name of state exchange] website at [insert link], through the [insert name of state exchange]’s toll-free telephone number, or from agents, brokers, navigators, or consumer assisters. To find those that can help consumers in their area, direct them to “Find Local Help” at https://localhelp.healthcare.gov/

Q 20: How can consumers see and compare premiums for plans?

The [insert name of state exchange] is set up to let consumers compare policies based on premiums, provider network, actuarial value, and other factors. In addition to premium costs, consumers should look at all the benefits and cost-sharing provisions when choosing a plan because plans with the lowest premium often have the highest out-of-pocket costs.

Consumers can get information to compare premiums from the [insert name of state exchange] website at [insert link] or call center at [insert phone number]. Also, navigators, certified application counselors, insurance agents or brokers, or other assisters should be able to help consumers compare plans.

Drafting Note: States that allow stand-alone vision plans to be sold through the exchange should change this answer to include stand-alone vision plans.

Q 21: Can a person or a health insurance issuer take benefits out of a plan? What if a consumer doesn’t need all of the benefits in a plan?
No. Neither consumers nor health insurance issuers can take benefits out of a plan. At a minimum, every health plan on the [insert name of state exchange] must provide coverage for all the essential health benefits (EHB) the ACA requires. (See Question 16.) Even though a person may not need every benefit in a plan, plans must cover all the essential benefits to share risk across a broad pool of consumers and be sure all benefits are available to everyone. This also helps to protect people from risks they cannot always predict across their lifetimes.

There may be short-term plans or limited benefit plans available that don’t cover all the essential health benefits (EHB).

Drafting Note: States with an individual mandate may want to add: Consumers who don’t have a plan that provides minimum essential coverage may have to pay a penalty when they file their state income taxes. The federal penalty was reduced to $0 starting with tax year 2019. (See Question 59.)

Q 22: Can consumers’ health conditions affect what coverage they are able to get?

No. Under the ACA, health insurance companies no longer can leave coverage out of a plan based on a person’s health condition, a practice that used to be known as a “pre-existing condition exclusion.” Nor can they charge a higher premium because of a person’s health condition. These protections apply whether a person buys an individual market plan through the exchange or outside the exchange. It is important to note that the prohibitions on pre-existing condition exclusions do not apply to short-term or limited benefit plans.

Q 23: Can an insurance company charge tobacco users more than non-tobacco users?

Under the ACA, health insurance companies in the individual and small group markets can charge consumers who use tobacco products a higher premium. People who use tobacco may be charged up to [insert state-specific tobacco surcharge – no higher than 50%] more than people who do not use tobacco. Consumers in group plans may not have to pay this extra charge if they complete a tobacco cessation program and cannot be charged more if they aren’t offered an opportunity to complete a tobacco cessation program. This does not apply to coverage that is not considered comprehensive individual coverage, including short-term plans.

Drafting Note: States that don’t allow the tobacco surcharge should replace the previous paragraph with the following one: In [insert name of state], health insurance companies cannot charge consumers a higher premium for being a tobacco user.

Q 24: What are preventive benefits and how are they covered?

Preventive benefits are designed to keep people healthy by providing screening for early detection of certain health conditions or to help prevent illnesses. The ACA requires that individual market and non-grandfathered group health plans cover many preventive services with no out-of-pocket costs (meaning no deductibles, copayments, and coinsurance) for all new plans sold after September 23, 2010. Some of these covered preventive services are:

- Colorectal cancer screenings, including polyp removal for individuals 45 or older.
- Immunizations and vaccines for adults and children
- Counseling to help adults stop smoking
- Well-woman check-ups, as well as mammograms and cervical cancer screenings
- Well-baby and well-child exams for children

As long as there is an in-network provider in a plan to do a particular preventive service, the plan can charge for that preventive service when an out-of-network provider does it. If there is no in-network provider available to provide a particular preventive service, then the plan can’t charge for the preventive service when an out-of-network provider delivers them.

For more detailed information about covered preventive services, visit the federal government’s website at https://www.healthcare.gov/what-are-my-preventive-care-benefits

Q 25: Are dental or vision benefits available through the [insert name of state exchange]?
The ACA requires plans sold through the [insert name of state exchange] to include vision coverage for children, so children’s vision benefits are included in plans through the [insert name of state exchange]. Dental benefits are treated differently. The ACA lets insurance companies offer health plans through the [insert name of state exchange] that don’t include children’s dental benefits as long as the [insert name of state exchange] offers a stand-alone dental plan that includes a children’s (pediatric) dental benefit.

Plans aren’t required to include dental or vision coverage for adults, but a plan can choose to include these benefits as part of its coverage. Check a plan’s Summary of Benefits and Coverage (SBC) to learn if the plan includes dental or vision coverage for adults.

Some insurance companies may offer stand-alone dental plans through the [insert name of state exchange]. Check the [insert name of state exchange] website at [insert link] for more information.

Check the federal website at www.healthcare.gov for more information about dental benefits.

**Drafting Note:** States where consumers may buy dental coverage without buying health coverage should add a sentence to explain, if appropriate.

**Drafting Note:** States that allow people with Medicare to buy dental plans through the exchange should include this information in this answer.

**Drafting Note:** States that allow stand-alone vision plans to be sold through the exchange should change the answer to this question as appropriate.

**Q 26: How does a consumer find out what drugs a plan covers?**

Health insurers keep lists of which drugs are covered and which are covered at the lowest cost for each of their plans. These lists are called formularies. Drug cost-sharing is often “tiered”—that is, consumers pay less for a generic drug, more for a brand name drug, and sometimes even more for a “nonpreferred” brand name drug. Consumers should review the formularies in any plan they are considering to be sure the plan meets their prescription drug needs and to know what cost-sharing is required for any given drug. For plans that use formularies, the Summary of Benefits and Coverage (SBC) includes an online link where consumers can find information about the plan’s drug coverage. Consumers also can call health insurers for information about formularies.

Formulary information is also available on [insert name of state exchange]’s website [insert link]. If a consumer enrolls in coverage and needs access to a drug not on the plan’s formulary, then the enrollee may be able to use the drug exceptions process to request and gain access to the needed drug.

**Drafting Note:** States should add language to describe their rules regarding whether the insurance company can change the formulary or tiering after the consumer has bought the plan.

**Q 27: What are out-of-network services, and do consumers have any coverage for them?**

Services are considered out-of-network if they are from a doctor, hospital, or other provider that does not have a contractual relationship with a particular health plan. Not all plans cover out-of-network services, but when they do, a consumer’s share of the cost is usually a lot higher than for an in-network service. (See Question 24 on preventive services and Question 29 on emergency services.) Whenever possible, consumers should find out whether a provider is in-network before they receive services. Consumers also should find out if their regular or desired health care providers are in-network before they buy a plan. Also, different plans offered by the same insurer may have different provider networks, so consumers should be careful to look at the network for their specific plan. When reviewing plans to buy, the specific plan name should be on the Summary of Benefits and Coverage (SBC). After a consumer buys a plan, he or she can find the specific plan name on the cover page of the policy document or on their health insurance identification card.

Though the ACA limits how much money a person must spend each year on his or her family’s health care, health insurers are allowed, although not required by federal law, to count the cost of out-of-network services toward these limits.
A plan’s Summary of Benefits and Coverage (SBC) includes information about coverage for out-of-network services and a link to the plan’s website and the provider network.

**Q 28: How do consumers determine if their doctor or dentist is in the network?**

The [insert name of state exchange] website (at [insert website]) lets consumers look up whether their doctor is in the plan network. For plans with a provider network, the Summary of Benefits and Coverage (SBC) includes an online link to a list of network providers. Because plan networks may change regularly, consumers also should check with the doctor or dentist before they schedule an appointment to learn if the provider is still in the plan’s network.

**Q 29: Do consumers have access to emergency care out-of-network?**

Yes. The ACA requires many health plans that provide benefits for emergency services to cover them regardless of whether the provider is in or out of the network. Under the ACA, health plans are not allowed to charge a higher copayment or coinsurance amount for out-of-network services received in an emergency. In addition, [insert name of state] prohibits balance billing for emergency care received out-of-network, meaning only in-network rates apply for all emergency care.

The No Surprises Act provides federal protections against balance bills for emergency services and care at in-network facilities. Most provisions of the No Surprises Act are effective for plan years beginning on or after January 1, 2022. The plans that are covered by this Federal law are: Fully insured plans, Self-funded plans, and Grandfathered plans. *The legislation does not protect those insured by short-term health plans and excepted benefit, dental and vision plans.*

See link: [https://www.cms.gov/nosurprises](https://www.cms.gov/nosurprises)

**Drafting Note:** States that allow health care providers to balance bill for emergency care received out-of-network should replace the previous paragraph with the following:

Yes. The ACA requires many health plans that provide benefits for emergency services to cover those services whether the provider is in or out of the network. While health plans are not allowed to charge a higher copayment or coinsurance for out-of-network services received in an emergency, [Insert state name] allows health care providers to bill consumers for the difference between the cost of emergency care received out-of-network and the amount the plan allows. For more information about [insert name of state]’s rules on balance billing, please contact [insert specific state contact information]. Under federal law, to limit amounts of balance billing for out-of-network emergency services, insurers must calculate amounts they pay for such services to yield the highest payment of the following three amounts:

(A) The amount negotiated with in-network providers for the emergency service provided, excluding any in-network copayment or coinsurance imposed with respect to the participant, beneficiary, or enrollee.

(B) The amount for the emergency service calculated using the same method the plan uses to determine payments for out-of-network services (such as the usual, customary, and reasonable amount), excluding any in-network copayment or coinsurance imposed with respect to the participant, beneficiary, or enrollee.

(C) The amount that would be paid under Medicare Parts A or B for the emergency service, excluding any in-network copayment or coinsurance imposed with respect to the participant, beneficiary, or enrollee.

**Q 30: What is a “grandfathered” health plan?**

A grandfathered health plan is a plan that has existed continuously prior to March 23, 2010, and that has not made certain significant changes in the plan. Grandfathered plans are not subject to many of the ACA requirements, such as the requirement that plans cover essential health benefits (EHB) (see Question 16), but they are considered to provide minimum essential coverage under the ACA. (See Question 59.)

Grandfathered plans may lose their “grandfather” status if a plan makes certain changes, such as a major increase in their cost-sharing (coinsurance, deductibles, copayments) or dropping benefits to diagnose or treat a particular condition.
Employer-sponsored plans that significantly increase the employee share of the premium also could lose “grandfathered” status. If a plan’s “grandfathered” status is forfeited, that plan would have to follow the applicable ACA requirements.

In the individual market, a consumer cannot enroll in a grandfathered plan with a new enrollment. However, consumers who are already enrolled in an individual market plan prior to March 23, 2010 can renew their coverage in that grandfathered plan.

A plan must show in the plan materials if it is a grandfathered plan. Also, consumers can check with their insurance company or employer to figure out if their plan is grandfathered.

Q 31: Can consumers keep an existing plan that isn’t grandfathered, but doesn’t comply with the ACA reforms (known as transitional plans or “grandmothered” plans)?

It depends. In November 2013, CMS announced a transitional policy that would let insurers, if the state allows, to extend policyholders’ 2013 coverage for up to several more years even if the plan didn’t follow certain ACA reforms. These transitional plans can no longer be sold to new customers (after January 1, 2014), and individuals who bought them aren’t eligible for subsidies. An individual or small business that has one of these plans would be notified by the insurer. If a consumer has a transitional plan, they should check with their insurance carrier to learn if it will renew their plan and what changes, if any, it will be making to the plan.

**Drafting Note:** States that did not adopt this policy, applied it only in certain markets (i.e., in the small group market but not the individual market), or that have already phased out transitional plans would need to edit this answer accordingly or delete it entirely.

**EMPLOYER-SPONSORED COVERAGE**

Q 32: Is employer-based coverage required to cover dependents (spouses and children)?

Under the ACA, if an employer with 50 or more employees doesn’t offer coverage that meets minimum standards to employees and their dependents and employees access premium tax credits through the exchange, then the employer may have to pay a tax penalty. (See Questions 55-56.) However, for purposes of this penalty, the IRS has interpreted the phrase “and their dependents” to mean children under age 26 but not spouses. For more information, see [https://www.irs.gov/affordable-care-act/employers/employer-shared-responsibility-provisions](https://www.irs.gov). Small employers with fewer than 50 employees that don’t offer coverage to employees or their dependents are not subject to any tax penalties, but may qualify for a tax credit if they choose to offer coverage. (See Question 54.)

Also, if employer-based coverage includes children, then the ACA requires employers to let children up to age 26 stay on their parents’ policy. Adult children up to age 26 can stay on their parents’ policy whether or not they live in their parents’ home, are married, or the parents no longer claim them as a dependent on their tax return. The employee can be required to pay for this coverage, however.

An employer who offers health benefits to employees must also offer the same health benefits to similarly-situated employees who are eligible for Medicare. This rule applies when an employee is 65 or older and the employer has 20 or more employees. This rule applies to dependents when an employer offers health benefits that include dependents.

Q 33: What can a consumer do when employer-based health coverage ends?

Under the Consolidated Omnibus Budget Reconciliation Act (COBRA), a federal health law since 1986, when employees and their dependents lose employer-based coverage, they are still eligible to stay on their employer’s group health plan, even though that coverage would otherwise end. COBRA doesn’t apply to employers with fewer than 20 employees [insert state mini-COBA law information if applicable]. Employees or their dependents who are eligible for Medicare when employer group health coverage ends are eligible to enroll in COBRA. However, COBRA coverage is expensive and will only pay benefits secondary to Medicare benefits, even if the Medicare-eligible individual has not enrolled in Medicare. The most recent Department of Labor model COBRA notice includes more specific information about coordination of benefits between

© 2021 National Association of Insurance Commissioners
these two programs. This model notice can be found at https://www.dol.gov/agencies/ebsa/laws-and-regulations/laws/cobra. If an individual is enrolled in COBRA coverage and subsequently becomes eligible for Medicare, then primary COBRA benefits will end.

Drafting Note: COBRA is secondary to Medicare benefits because Medicare secondary payer rules that apply to employer group health benefits don’t apply to COBRA benefits. Most employer group health plans have strong coordination of benefit rules. Medicare-eligible individuals are subject to recovery actions if COBRA mistakenly pays primary benefits even if the Medicare-eligible individual has not actually enrolled for those benefits.

COBRA coverage can be expensive because the former employer isn’t required to pay any part of the premium. Those who have lost employer-based health coverage may be eligible to access advance premium tax credits to buy a more affordable individual or family policy through the [insert name of state exchange] (see Questions 85-86), even if the loss of coverage occurs outside of the open enrollment period. Consumers enrolled in COBRA don’t qualify for advance premium tax credits. Dropping COBRA coverage outside of an open enrollment period doesn’t qualify as a special enrollment opportunity.

Q 34: Must a consumer use all available COBRA coverage before buying coverage through the exchange with subsidies?

No. COBRA allows group health plan participants and beneficiaries to continue coverage under their group health plan for a limited period of time after certain events cause a loss of coverage, such as voluntary or involuntary job loss, reduction in the number of hours worked, transition between jobs, death, and divorce. Individuals who lose eligibility for minimum essential coverage, including employer-based coverage, will be eligible for a special enrollment period (SEP) during when they can buy coverage on the [insert name of state exchange] or in the individual market outside of the exchange. At this time, they also may apply for advance premium tax credits and cost-sharing reductions through [insert name of state exchange] to learn if they are eligible to receive them. However, individuals who have already enrolled in COBRA coverage must wait until the next open enrollment period or until that COBRA coverage has been exhausted before enrolling in an individual market plan.

Medicare-eligible former employees have an 8-month SEP to enroll in Medicare Part B that starts on the date of their last month of employment. If they enroll during this SEP, there is no late enrollment premium penalty or other coverage restrictions. They have 63 days to enroll in Medicare Part D from the last date without prescription drug benefits that are at least equivalent to Medicare’s.

Q 35: If a consumer has access to employer-based coverage, can an employer make the consumer wait before becoming eligible for benefits?

Yes. Employers may require a waiting period before individuals become eligible for benefits. Under the ACA, this waiting period can’t be longer than 90 days. Employers also may impose an additional one-month orientation period before the waiting period begins. For more information, consumers should contact their employer’s human resources department.

Q 36: Can a consumer with access to employer-based coverage get a tax credit to buy a plan through the [insert name of state exchange]?

A consumer who has access to employer-based coverage is free to buy a plan through the [insert name of state exchange], but tax credits to buy the coverage are available only if the employer’s plan isn’t affordable or doesn’t provide minimum value. (See Question 85.) Consumers who have access to employer-based coverage that is affordable and provides minimum value will not be able to get tax credits and cost-sharing reductions.

Coverage isn’t affordable if the cost of employee-only coverage under the lowest-cost employer plan is more than 9.61% of the employee’s annual household income in 2022. The plan doesn’t provide minimum value if it pays for less than 60% of medical costs that the plan covers, or if it doesn’t provide substantial coverage of inpatient hospital or physician services. The HHS and IRS have developed a minimum value calculator available at www.cms.gov/CCIIO/Resources/Regulations-and-Guidance/Downloads/mv-calculator-final-4-11-2013.xlsm.

Consumers can learn if an employer plan meets minimum value by looking at the Summary of Benefits and Coverage (SBC) or by asking the employer to fill out an Employer Coverage Tool. This form provides information that will help the consumer
answer application questions correctly at the [insert name of state exchange]. The Employer Coverage Tool can be found at https://marketplace.cms.gov/applications-and-forms/employer-coverage-tool.pdf

There’s more information on [insert name of state exchange]’s website at [insert link] and on the IRS websites listed below:

www.irs.gov/Affordable-Care-Act/Individuals-and-Families/The-Premium-Tax-Credit

Q 37: If a consumer is offered employer-based coverage that would cover a spouse or dependents, can that consumer’s spouse or children get a tax credit to buy coverage through the exchange?

It depends on whether the employer-based coverage is affordable and meets minimum value. If the premiums for employee-only coverage in the lowest-cost plan are less than 9.61% of household income and the coverage provides minimum value, then no one in the family who is eligible for the plan is eligible for premium tax credits. This may be the case even when it would be unaffordable for a spouse or children to enroll in the plan, based on the cost of family coverage. Depending on state eligibility rules, the children may be eligible for Medicaid or CHIP coverage. (See Question 102.) Contact the [insert name of state exchange] to learn more.

Q 38: What is a health reimbursement arrangement?

In a health reimbursement arrangement (HRA), an employer may offer employees tax-free funds they can use to buy health coverage. There are different types of HRAs. In an individual coverage HRA, an employer may offer funds instead of a group health plan to some or all employees. The employees use the funds to buy individual market health plans for themselves and their families. In an excepted benefits HRA, an employer may offer funds and a group health plan. The employees and their families may use the HRA funds to buy health coverage other than comprehensive health coverage, such as dental and vision coverage or short-term, limited duration health insurance.

A Medicare-eligible employee can have an HRA if the employee is enrolled in a health care flexible spending account (HCFSA). The employer can pay Medicare Part B and Part D premiums for active employees only if the employer payment plan is integrated with the group health plan. (See Department of Labor rules.)

Q 39: If a consumer is offered a health reimbursement arrangement, can that consumer get a tax credit to buy coverage through the exchange?

The answer depends on the amount of the HRA the employer offers. If the employer offers enough money through an HRA to make an exchange plan affordable for an employee, then neither the employee nor their dependents are eligible for a premium tax credit. If the amount of the HRA isn’t enough to make an exchange plan affordable, then the employee and their dependents may still receive a premium tax credit. If the HRA is a qualified small employer HRA (QSEHRA), then the amount of the tax credit is reduced by the amount of the QSEHRA. More information about HRAs and small businesses can be found at: https://www.healthcare.gov/small-businesses/learn-more/qsehra/

The [state exchange name] might not take a consumer’s HRA into account when calculating how much premium tax credit the consumer is eligible for. In that case, the consumer may want to apply less than the full amount of the credit they are awarded when they pay their premiums each month. This can help to prevent the need to pay back some of the credit when the consumer files his or her federal income tax return.

Q 40: What are Health Savings Accounts?

Individuals may contribute to tax-advantaged Health Savings Accounts (HSAs) when they are enrolled in a health plan that meets certain IRS requirements to be an "HSA-qualified" health insurance plan. The plan must have a minimum deductible (presently $1400 for self-only coverage and $2800 for family coverage). The deductible must apply to all covered benefits received from in-network providers. Importantly, only certain "preventive care" benefits may be provided before the
deductible is met. The health plan must not be limited to vision, dental, disability, workers' compensation and other so-called "excepted benefits" or other types of limited coverage.

An individual is not eligible to contribute to an HSA for any month that they: (1) have coverage under any health insurance plan or other arrangement (including employer-sponsored health flexible spending arrangements or health reimbursement arrangements) that does not apply a deductible equal to or exceeding the minimums described above; (2) are enrolled in Medicare; or (3) can be claimed as a dependent on another individual's tax return.

A Medicare beneficiary cannot contribute to an HSA once they are enrolled in Medicare. For individuals that enroll in Medicare after they turn 65, their Medicare effective date could be retroactive up to six months which could impact their eligibility to make HSA contributions. HSA account owners can still use their HSA funds to pay Medicare premiums (all Parts but not Medicare Supplement insurance), deductibles, co-pays, coinsurance, as well as other eligible expenses for services not covered by Medicare (e.g., dental, vision, hearing).

Q 41: When an employee is enrolled in employer-based coverage and in Medicare, is Medicare a primary or secondary payer?

When an employee or a dependent is eligible for Medicare, the size of the employer group determines if the group plan is primary or secondary to Medicare. When an employee or a dependent is 65 or older and there are 20 or more employees, the employer group health plan is primary. When an employee or their dependent is disabled and there are 100 or more employees, the group health plan is primary. The number of employees includes both full-time and part-time employees. If the employer has fewer than 20 or 100 employees, then Medicare will be primary and the group health plan will be secondary coverage.

Q 42: What is the [insert name of state SHOP exchange]?

Under the ACA, states or the federal government may create Small Business Health Options Program (SHOP) exchanges, where small employers who want to offer coverage to their employees can shop for plans. In [insert name of state], the SHOP exchange is called the [insert name of state SHOP exchange]. The SHOP can allow a small employer to offer a range of small group plans to their workers. Eligible employers can apply for the Small Business Health Care Tax Credit if they offer coverage through the SHOP and meet certain other criteria. The SHOP has no minimum contribution requirements for employers, but some states may impose a contribution requirement in addition to a minimum participation rate. Employers who are interested in applying for the Small Business Health Care Tax Credit, however, must contribute at least 50% of the cost of their employees’ premiums to be eligible for the credit. Just as with the regular small group market, employers who sign up for coverage during the small group open enrollment period that runs from November 15 to December 15 will face no minimum participation requirements. Coverage would then be effective for workers beginning January 1.

The ACA calls for “employee choice” in the SHOP exchanges. Under this provision, small employers may choose to give their employees a choice of health plans from multiple insurers across all metal levels (See Question 15) on the SHOP exchange. In some states, employers may also choose to offer coverage from one insurance company. Whether or not they offer employees choice, in most states, employers will work with their SHOP-registered agent or broker or insurance company (or companies) to obtain application, enrollment, and billing information.

There’s more information about the [insert name of state SHOP exchange] at [insert link to state SHOP exchange website]. There are resources with information about small employer issues and the ACA on the following websites:

http://healthcare.gov/small-businesses

U.S. Department of Labor Patient Protection and Affordable Care Act information

Affordable Care Act Tax Provisions

© 2021 National Association of Insurance Commissioners
Q 43: Is there a cost to participate in [insert name of state SHOP exchange]?

There’s no fee for small employers or their employees to enroll in SHOP coverage. Some employers may be eligible for the Small Business Health Care Tax Credit, which can be worth up to 50% of the employer’s premium contribution.

Q 44: Can insurers charge more (or less) for policies sold through [insert name of state SHOP exchange]?

No. Insurers must charge the same for similar plans whether they’re sold through the [insert name of state SHOP exchange] or in the market outside of the [insert name of state SHOP exchange].

Q 45: What happens if an employer’s staff increases to more than [50] employees in the year after the employer bought coverage through the SHOP?

Once enrolled in SHOP exchange, businesses can renew their coverage even if the number of their employees increases to more than [50].

Drafting Note: States should modify the number of employees in accordance with the state definition of small employer.

Q 46: How are small employers defined?

In [state], small employers who are eligible for coverage in the small group market or in the SHOP exchange are those with [50] or fewer employees. The definition may be different in other states.

Drafting Note: States should modify the number of employees in accordance with the state definition of small employer.

Q 47: How do employers with full-time and part-time employees know whether they’re required to pay a penalty if they don’t offer health insurance to their workers?

Small employers are not required to pay a penalty if they do not offer health coverage. To avoid the penalty, large employers must be considered to have at least 50 full-time equivalent employees. Penalties are assessed against employers with at least 50 full-time equivalent employees who 1) do not offer health coverage that meets minimum standards or 2) have an employee who gets coverage through the exchange and gets the premium tax credit. (See Questions 55-56).

Q 48: Are health insurers required to sell their plans through the federal SHOP exchange?

Beginning January 1, 2018, SHOP plans are no longer offered through the federal SHOP Exchange. Instead, there are two options to enroll in a SHOP plan, which are:

1. Work with a SHOP-registered agent or broker.
2. Sign up with an insurance company.

For more SHOP information, including SHOP plans and prices, click on the Healthcare.gov link below.

Drafting Note: Consumers should not create an account, log into an existing account, or start an application on HealthCare.gov for SHOP coverage, even if that is how they enrolled in SHOP coverage in the past.

Q 49: Are small employers required to buy a health plan for their employees through [insert name of state SHOP exchange]?
No. Small employers may buy health insurance for employees through the [insert name of state SHOP exchange] or in the market outside the exchange. However, to be eligible for the Small Business Health Care Tax Credit (see Question 57), in most cases a small employer must have bought the coverage through the SHOP exchange. It is important for small employers to understand and compare all options available to them. State-licensed health insurance agents and brokers, including SHOP registered agents and brokers, are available to help small employers compare options and determine which plan best meets their needs.

More information about the Small Business Health Care Tax Credit is available at

**Drafting Note:** States that require small employers to buy health insurance for their employees through the exchange should modify this answer as appropriate.

**Q 50:** Will consumers be better off with individual coverage through the [insert name of state exchange] rather than through the small employer coverage?

Maybe. It depends on many variables, such as the employees’ out-of-pocket expenses under the small group plan offered, the consumers’ personal circumstances, and the premiums of plans available through the exchange. Employees, their spouses, and dependents offered coverage through an employer are usually not eligible for premium tax credits, so small employer-sponsored coverage could cost less than individual coverage through the federal exchange.

Employers and employees should compare rates for plans offered through the [insert name of state exchange] and for plans in the market outside the [insert name of state exchange].

**Q 51:** Are there participation rates that insurers can require employers to meet to be eligible to buy small group coverage through the [insert name of state SHOP exchange] or in the market outside the [insert name of state SHOP exchange]?

As a result of the ACA, insurers offering coverage in the small group market can’t deny coverage to a small employer who doesn’t meet minimum participation requirements, if the employer seeks coverage during the small group open enrollment period that runs from November 15 to December 15 each year. Outside of that time period, insurers in the small group market can require small employers to meet participation requirements through the [insert name of state exchange] or outside the [insert name of state exchange] consistent with [insert name of state] law.

[Insert name of state] law doesn’t allow a small employer insurer to impose more stringent requirements than the following:

- [insert participation limits consistent with state law]

**Drafting Note:** States with state-based exchanges may impose minimum participation rates as a condition of participation in a state SHOP exchange. In states with a federally-facilitated exchange, the SHOP has a default minimum participation rate of 70% for qualified health plans (QHPs). The minimum participation rate also will be adjusted higher or lower depending on state law or general insurer practice. For more information, see this link: https://marketplace.cms.gov/outreach-and-education/shop-minimum-participation-rates.pdf

**Q 52:** Can small employers who are the sole employees of their business buy small group coverage either through the [insert name of state SHOP exchange] or the outside market?

Neither federal nor state law lets insurers sell small group health insurance plans to self-employed individuals with no common law employees through the SHOP.

Contact the [insert name of state exchange] at [insert link] or [phone number] or a licensed agent or broker for help.
Q 53: How does rating work in the small group market?

Under the ACA, there is adjusted community rating in the small group market. This means that the rates each employer pays for health insurance depends on the claims experience of the insurer’s entire small group market in [insert name of state], rather than the claims experience of that employer’s small group.

The ACA offers states the option to combine the individual and small group markets. By combining the markets, risk is pooled among a larger number of policyholders. A larger risk pool increases rate stability; however, initially premiums for individuals are likely to be lower on average, while premiums for small employers are likely to be higher.

Q 54: Do small employers who don’t offer health care insurance coverage to their employees have to pay a tax penalty?

No. Small employers who want to provide coverage may be eligible for the Small Business Health Care Tax Credit to help make insurance more affordable.

If the employer does offer coverage, then the coverage must meet the ACA’s minimum standards for small group insurance plans, as well as specific requirements that apply to the small group market, such as coverage of essential health benefits (EHB) and the prohibition on discrimination based on health status.

In [insert name of state], the [insert name of state SHOP exchange] is a place where small employers who want to offer coverage to their employees can shop. There’s more information about the [insert name of state SHOP exchange] at [insert link to state SHOP exchange website].

Q 55: Do large employers have to offer health care insurance coverage to their employees? What about seasonal employees?

Under the ACA, if an applicable large employer doesn’t offer affordable coverage that provides minimum value to full-time employees (and their dependents1), and an employee gets a premium tax credit, then the employer has to pay a penalty. For employer-based coverage to be considered affordable in 2022, the premiums for the plan’s employee-only option must be less than 9.61% of his or her 2022 annual household income.

To offer minimum value, the plan must pay at least 60% of the medical costs for services the plan covers and include substantial coverage of inpatient hospital and physician services. The HHS and IRS have developed a minimum value calculator at www.cms.gov/CCIIO/Resources/Regulations-and-Guidance/Downloads/mv-calculator-final-4-11-2013.xlsm.

Applicable large employers are employers with 50 or more full-time employees, including full-time equivalent (FTE) employees. Full-time employees are employees with 30 hours or more of service in a week. The number of FTE employees is determined by adding the number of hours of service in a month for all part-time workers and dividing by 120 hours per month. The term “applicable large employer” is used for the employer shared responsibility and information reporting provisions of the ACA.

Penalties were assessed starting January 1, 2016 against employers with 50 or more FTE employees who do not offer health coverage if an employee gets the premium tax credit.

Employers with a large seasonal workforce (such as agricultural workers hired for the harvest season or retail clerks hired for the holiday season) are given leeway under the ACA not to count seasonal employees to decide if they meet the definition of

---

1 The rules implementing employer shared responsibility provisions have interpreted the phrase “and their dependents” to mean children under age 26, but not spouses. There’s more information at https://www.irs.gov/affordable-care-act/employers/employer-shared-responsibility-provisions.
a large employer. If the employer has more than 50 full-time or FTE employees during 120 or fewer days per year, then the employer doesn’t have to count those employees for those months.

For more information, go to the IRS website at https://www.irs.gov/affordable-care-act/employers/employer-shared-responsibility-provisions. IRS Publication 5208 also has information to determine if an employer is an applicable large employer.

This question does not take into account all possible situations. Employers should consult a tax professional for help with their particular situation.

Q 56: What are the penalties if large employers don’t provide coverage?

Large employers may have to pay a tax penalty if they don’t offer affordable coverage that provides minimum value (see Question 55) for at least 95% of their full-time employees and their dependents, or all but five full-time employees, whichever is greater, and at least one of their employees gets premium tax credits through the [insert name of state exchange].

In general, an applicable large employer that does not offer minimum essential coverage to at least 95 percent of its full-time employees (and their dependents) will be liable for the first of two types of employer shared responsibility payments if at least one full-time employee receives the premium tax credit for purchasing coverage through the exchange. On an annual basis, this payment is equal to $2,320 (indexed for future years) for each full-time employee, with the first 30 employees excluded from the calculation. This calculation is based on all full-time employees (minus 30), including full-time employees who have minimum essential coverage under the employer’s plan or from another source.

In general, an applicable large employer that does offer minimum essential coverage to at least 95 percent of its full-time employees (and their dependents) will be liable for the second type of employer shared responsibility payment if at least one full-time employee receives the premium tax credit because the minimum essential coverage offered was not affordable, did not provide minimum value, or because the employee was not one of the at least 95 percent of full-time employees offered minimum essential coverage. On an annual basis, this payment is equal to $3,480 (indexed for future years) but only for each full-time employee who receives the premium tax credit. The total payment in this instance cannot exceed the amount the employer would have owed had the employer not offered minimum essential coverage to at least 95 percent of its full-time employees (and their dependents).

Medicaid-eligible employees can’t get premium tax credits, so employers will not face penalties for employees who receive Medicaid coverage or for employees’ children who receive CHIP coverage.

Q 57: How do small employers find out if they’re eligible for the Small Business Health Care Tax Credit?

Employers who buy coverage for their employees through the [insert name of state SHOP exchange] may be eligible for the Small Business Health Care Tax Credit. To qualify, the employer must: 1) have fewer than 25 full-time equivalent employees; 2) pay employees an average annual wage that’s less than $50,000; and 3) pay at least half of the insurance premiums.

The tax credit operates on a sliding scale, with a maximum credit of 50% of the employer’s share of the premium costs. It is only available to small employers buying health insurance through [insert name of state SHOP exchange]. The tax credit may be worth up to 50% of an employer’s contribution toward employees’ premium costs (up to 35% for tax-exempt employers).
Q 58: What ACA requirements apply to large employers?

Several ACA requirements apply to non-grandfathered health plans that large employers offer on either an insured or self-insured basis. The requirements include limits on out-of-pocket expenditures and waiting periods, no annual or lifetime dollar limits on coverage of essential health benefits or cost-sharing for preventive services, the requirement that coverage be offered to adult children up to age 26, and the requirement of access to internal and external appeals. Also, as noted in Question 56, large employers are required to offer affordable and adequate coverage, or face a tax penalty.

ACA REQUIREMENT TO HAVE BASIC HEALTH CARE COVERAGE (INDIVIDUAL MANDATE)

Q 59: What is the individual responsibility requirement, and does it mean consumers must maintain coverage?

Under the ACA, consumers and their dependent children are required to have “minimum essential coverage,” unless they qualify for an exemption. This requirement is known as “individual shared responsibility” or the “individual mandate.” However, beginning in 2019, the federal tax penalty for going without coverage was reduced to $0. Therefore, those without coverage will have to pay out of pocket for any health care expenses they incur, but they will not pay an additional tax penalty.

This link to the IRS website has more information: www.irs.gov/Affordable-Care-Act/Individuals-and-Families/ACA-Individual-Shared-Responsibility-Provision-Minimum-Essential-Coverage

Coverage purchased through an exchange counts as minimum essential coverage, and so do other types of coverage. Employer-sponsored coverage, grandfathered plans, Medicare, Medicaid, and CHIP are all minimum essential coverage. Short-term health plans, fixed indemnity insurance, and coverage through a health care sharing ministry are not minimum essential coverage.

Check the website at www.healthcare.gov/fees/fee-for-not-being-covered/ for more information.

Q 60: Without a tax penalty, is having minimum essential coverage important?

After 2018, the tax penalty for not having minimum essential coverage (MEC) was reduced to $0. There’s more information about the penalty at http://www.healthcare.gov/fees-exemptions/fee-for-not-being-covered/

Individuals who are not enrolled in minimum essential coverage (MEC) are not eligible for one type of Special Enrollment Period (SEP). Those who are enrolled in MEC that ends are eligible for an SEP that allows them to enroll in individual market coverage, including exchange coverage. Those who are enrolled in coverage that is not MEC do not qualify for this SEP. Therefore, if their coverage ends, they need to wait until the next Open Enrollment Period or until they qualify for another SEP to enroll. Individuals cannot be eligible for premium tax credits until they are enrolled in an exchange plan.

And, of course, having coverage offers consumers some protection against high health costs, even if there is no tax penalty for going without coverage.

Drafting Note: States with their own penalties for not having MEC should include that information.
ENROLLING IN HEALTH CARE COVERAGE: WHERE CAN CONSUMERS GET HELP?

Q 61: Where do consumers go for help to choose and enroll in a plan?

Consumers should make a list of questions before they shop for a health plan. Consumers should gather information about their household income and set a budget for health insurance. Consumers should find out if they can stay with their current doctors and pharmacy, whether their medications are covered, and understand how insurance works—including understanding deductibles, out-of-pocket maximums, and copayments.

There are several resources from the Kaiser Family Foundation, Consumer Reports, the NAIC, HHS, and the U.S. Department of Labor (DOL) to help consumers understand how insurance works, the different insurance options, and what to consider when buying coverage. For questions about Medicare and other health coverage, consumers can contact the state SHIP.

A standard form called the Summary of Benefits and Coverage, or SBC, and the companion set of uniform definitions, also is available for many health insurance plans. This information can help consumers compare different insurance options. (See Question 18.) Consumers can get the form and definitions through the [insert name of state exchange] at [insert link to state exchange website], or ask the plan for it. The [insert name of state exchange] also can direct consumers to more information and resources about the options that are available.

Consumers who are eligible to buy coverage through the [insert name of state exchange] can enroll through the [insert name of state exchange] website at [insert link], by phone at [insert phone number], or in person through [insert links and contact information].

Also, a few types of individuals are trained to help consumers make decisions about health coverage:

A. Insurance agents or brokers

Health insurance agents and brokers sell insurance coverage from one or more insurance companies. Health insurance agents and brokers are licensed by [insert name of state] and receive continuing education related to their job. They can help educate consumers about health insurance policies, help consumers apply for coverage, and advise consumers about the type of health insurance coverage that best suits them and their family. Agents and brokers can sell consumers insurance plans in the market outside the exchange, as they always have.

Agents and brokers who want to sell policies through the [insert name of state exchange] have extra training from the HHS or the state-based exchange. They have passed a test at the end of their training to sell insurance policies through the [insert name of state exchange]. [Insert name of state] requires agents and brokers to have extra state-specific training before they sell through the [insert name of state exchange]. A list of agents and brokers authorized to sell through the [insert name of state exchange] is available on the [insert name of state exchange] website at [insert link]. Consumers may want to talk with more than one agent or broker before they decide which plan to buy. (See Question 68.)

Drafting Note: If a state doesn’t have a list of agents and brokers on the exchange, then modify the answer accordingly.

B. Navigators

Navigators are individuals trained to help consumers understand the insurance policies available through the [insert name of state exchange] and answer consumer questions about the [insert name of state exchange]. They also can answer questions about insurance affordability programs, including Medicaid and CHIP. Navigators also can help educate consumers about their health insurance policy options and help them apply for coverage. Navigators get grants from the [insert name of state exchange] to receive training to help consumers. After training, they must pass a test and be certified by [insert name of state exchange]. In [insert name of state], navigators also must have extra state-specific training before they can help consumers. Consumers can contact navigators at [insert state contact information]. (See Question 69.)

Drafting Note: States where the HHS will be doing training and certification should modify the preceding paragraph accordingly. The HHS will certify navigators in the federally-facilitated exchanges.
C. In-person assistance personnel

In-person assistance personnel generally do the same things as navigators. In-person assistance personnel have received and successfully completed comprehensive training. They also can help educate consumers about health insurance policies and help them apply for coverage. [Insert name of state] has set up an in-person assistance program. Consumers can contact in-person assistance personnel at [insert contact information].

Drafting Note: States should delete this section if they do not have in-person assistance personnel.

D. Certified application counselors

Certified application counselors provide enrollment assistance to consumers. Certified application counselors receive and successfully complete comprehensive training. They, too, can help educate consumers about health insurance plans and help them complete an application for coverage. In [insert name of state], examples of application counselors include staff at [insert name of local community health centers or hospitals or consumer nonprofit organizations].

Drafting Note: States will need to customize this section depending on the type of exchange they have and what kinds of individuals will be assisting consumers. More customization may be necessary if the state has any licensure or certification requirements.

Q 62: May consumers directly enroll for coverage through insurers?

Yes. Consumers may buy coverage directly from an insurance company. However, consumers should make sure that the coverage they buy is offered through the [insert state name of state exchange] and that the insurer has an agreement to do direct enrollment through the [insert name of state exchange] so they can get any tax credits or cost-sharing reductions to which they are entitled.

Consumers enrolling directly through the insurance company portal may not see all plans available through the [insert name of state exchange]. An insurance company portal may also offer plans that are not offered through the exchange. An enrollee who buys one of those plans is not eligible for premium tax credits.

Drafting Note: States that do not allow insurers to enroll consumers directly into plans through the exchange should change this answer accordingly.

Q 63: How are people who help consumers enroll in health coverage paid?

Insurance agents and brokers may have an agreement that the insurance company will pay them if they enroll consumers in a health insurance policy consistent with state law. The state-based exchange may set rules about paying health insurance agents and brokers from the exchange or directly from insurance companies. In [insert name of state], the agent or broker will be paid an amount agreed to by the health insurance agent or broker and the company.

In [insert name of state], navigators will get funding from [insert funding source]. They don’t get enrollment-based reimbursement from insurance companies and aren’t allowed to charge a fee.

In-person assistance personnel will be paid by [insert funding source]. They don’t get enrollment-based reimbursement from insurance companies and aren’t allowed to charge a fee.

Certified application counselors will not be paid through the [insert name of state exchange]. They don’t get enrollment-based reimbursement from insurance companies and aren’t allowed to charge a fee. They may, however, receive federal funding through other grant programs, or Medicaid, or from another source.

Q 64: How can consumers find an insurance agent or broker to help them enroll in a plan?

In [insert state name], the [insert name of state health insurance exchange] website at [insert link] lists insurance agents and brokers authorized to enroll individuals, families, and small businesses in coverage through the [insert name of state exchange].
exchange]. Consumers can contact the [insert state Insurance Department] for a list of licensed health insurance agents and brokers in their area. Some agents and brokers don’t contract with all health plans, so consumers must make sure they know the full list of plans that are available to them before they ask an agent or broker for help. Also, health insurance agents and brokers may or may not be able to help individuals complete the enrollment process for Medicaid or CHIP after they get an eligibility decision.

There’s also helpful information at healthcare.gov https://localhelp.healthcare.gov/

**Drafting Note:** States should modify this answer consistent with the information available in the state.

Q 65: What are the qualifications required for health insurance agents and brokers to participate in the [insert name of state exchange]?

In [insert name of state], health insurance agents and brokers are regulated by the [insert name of state department of insurance]. Agents and brokers receive training from the [insert name of state exchange or the HHS]. The insurance companies must appoint the insurance agents and brokers who sell their plans through the [insert name of state exchange]. An agent or broker selling plans through the [insert name of state exchange] must provide information about all plans that are offered on the [insert name of state exchange], even if the agent or broker isn’t authorized to sell some of those plans.

**Drafting Note:** States that don’t require agents and brokers to be appointed to all the insurance companies selling through the exchange or that don’t require agents to provide information about all plans available through the exchange should modify the previous paragraph accordingly.

Q 66: Where should consumers go if they have a problem enrolling in a plan through the [insert name of state exchange]?

The [insert name of state exchange] should be able to help consumers with any problems. In particular, [insert name of state exchange] operates a call center to help answer consumer questions. The number for the call center is [insert number]. The phone number is available on the [insert name of state exchange] website at [insert link]. Insurance agents and brokers, navigators, in-person assistance personnel, and certified application counselors also should be able to help. (See Question 61.) Consumers can also contact the [insert name of state insurance department] at [insert phone number] to file a complaint or report a concern about a negative experience with an insurance company, agent and broker, navigator, in-person assister, or certified application counselor during and after the enrollment process.

Q 67: Do consumers have to re-enroll annually?

Eligibility for premium assistance and enrollment in a health plan will be decided annually using updated income, family size, and tax information (when authorized). Each year, before the open enrollment period, the [insert name of state exchange] will check income data and send a notice to consumers who are determined eligible for enrollment in a plan through the [insert name of state exchange]. This notice explains the consumer’s eligibility for the upcoming year and tells the consumer to let the [insert name of state exchange] know of any changes. After this, there will be an annual open enrollment period for consumers to change plans or insurance companies if they want to.

All consumers are encouraged to go to the exchange to review all of their options and to update income and other information to ensure the correct subsidy is received. Those enrolled in a plan through the exchange in 2021 who are eligible for auto-renewal and choose not to re-enroll or enroll in a different plan by December 15, 2021 will be automatically re-enrolled in their current or similar plan. For the 2022 coverage year, the key dates are as follows:

- **November 1, 2021:** Open enrollment starts—the first day a consumer can apply for 2022 coverage.
- **December 15, 2021:** The last date to enroll for coverage that starts January 1, 2022.
- **December 31, 2021:** The date when all 2021 exchange coverage ends, no matter when the consumer enrolled.
- **January 1, 2022:** The date 2022 coverage can start if consumers applied by December 15, 2021, or consumers were automatically re-enrolled in their 2021 plan or a similar plan.
• **January 15, 2022**: The last date to enroll in 2022 plan year coverage, with an effective date of February 1, 2022. Consumers who miss this deadline can’t sign up for a comprehensive individual market health plan inside or outside the exchange or change plans unless they qualify for a special enrollment period (SEP). (See Question 11.)

During the year, consumers with coverage through the [insert name of state exchange] must report certain life changes to the [insert name of state exchange]. Consumers should report changes as soon as possible, especially changes that qualify a consumer for a SEP. Consumers eligible for a SEP typically have 60 days to enroll in new coverage. (See Question 11.) Life changes include changes in income from a new job and getting married or divorced. See [www.healthcare.gov/how-do-i-report-life-changes-to-the-marketplace/](http://www.healthcare.gov/how-do-i-report-life-changes-to-the-marketplace/) [or cite to SBM if appropriate] for information about reporting life changes.

Consumers who have not requested financial assistance don’t need to report changes related to financial assistance eligibility.

**Drafting Note**: Some state-based marketplaces may have different deadlines for automatic re-enrollment and end dates for open enrollment and the timeframes above should be revised accordingly.

**Q 68: How do insurance agents and brokers help consumers with enrollment through the [insert name of state exchange]?”**

In [insert name of state], health insurance companies appoint agents and brokers. Insurance companies make sure the agent’s license is valid and registered with the [insert name of state exchange]. The agent can help consumers log on to the [insert name of state exchange]. Consumers should log into their own [insert name of state exchange] account. The agent or broker can help consumers as needed. The agent or broker then works with consumers to complete the application. Consumers are prompted to enter the insurance professional’s [insert name of state exchange] user identification number and national producer number on the application to show that the professional helped them.

**Drafting Note**: States should change this answer as appropriate to reflect the process in the state.

**Q 69: How does a navigator help consumers with enrollment through the [insert name of state exchange]?”**

In [insert name of state], navigators can help consumers create an account and log on to the [insert name of state exchange]. Consumers should log into their own [insert name of state exchange] account. The navigator can help consumers as needed to complete the application. Consumers may be prompted to enter the navigator’s [insert name of state exchange] user identification number on the application to show that the navigator helped them.

The navigator can help consumers to compare health plans and answer questions about health insurance policies in general. The navigator can answer questions from consumers about the differences in health plans and what they might mean for them, but the navigator **CANNOT** recommend or suggest which health plan would be best for consumers and their families. Navigators aren’t permitted to collect premium payments on behalf of an insurer or the [insert name of state exchange]. Consumers are asked to enter the navigator’s [insert name of state exchange] user identification number on the enrollment page to show that the navigator helped them.

Navigators **CANNOT** sell, solicit, or negotiate a health plan through the [insert name of state exchange]. They **CANNOT** suggest that one plan would be better for the individual than another.

**Drafting Note**: States should change this answer as appropriate to reflect the process in the state.

**Q 70: How do in-person assisters or certified application counselors help consumers with enrollment through the [insert name of state exchange]?”**

In [insert name of state], the in-person assister or certified application counselor can help consumers create an account and log on to the [insert name of state exchange]. Consumers should log in to their own [insert name of state exchange] account. The in-person assister or certified application counselor can help consumers as needed to complete the eligibility application. Consumers may be prompted to enter the in-person assister’s or the certified application counselor’s [insert name of state exchange] user identification number on the application to show that the assister or counselor helped them.
The in-person assister or certified application counselor can help consumers compare health plans and answer questions about health insurance policies in general. The assister or counselor can answer questions from the consumer about the differences in health plans and what they might mean to them (such as explaining deductibles or out-of-pocket limits), but the assister or counselor CANNOT recommend or suggest which health plan would be best for consumers and their families. Consumers are asked to enter the in-person assister’s or certified application counselor’s [insert name of state exchange] user identification number on the enrollment page to show that they helped them.

The in-person assister or certified application counselor CANNOT sell, solicit, or negotiate a health plan through the [insert name of state exchange]. They CANNOT suggest that one plan would be better for the individual than another.

**Drafting Note:** States should change this answer as appropriate to reflect the process in the state.

**Q 71: Can small employers use licensed insurance agents or brokers to buy health insurance through [insert name of state SHOP exchange]?**

Yes. Licensed insurance agents and brokers are available to help small employers compare and determine which health plan best meets their needs, like they do today. This is true whether they’re interested in buying coverage in the market outside the [insert name of state SHOP exchange] or through the [insert name of state SHOP exchange].

Licensed insurance agents and brokers are able to compare plans in the market outside the [insert name of state SHOP exchange] with those offered through the [insert name of state SHOP exchange] to decide where they can buy the plan best for them. Employers may wish to talk with more than one agent or broker before making a decision about which plan to buy.

**Q 72: May small employers use navigators to buy health insurance?**

Navigators, by law, aren’t allowed to sell health insurance unless they have an agent/broker license. Navigators are available to help small employers view plan options displayed on the [insert name of state SHOP exchange] website and can help small employers to enroll through the [insert name of SHOP exchange]. Navigators can explain the parts of the plans offered through the [insert name of state SHOP exchange] but CANNOT legally offer advice as to which plan is a better fit for the small employer. Only a licensed insurance agent or broker is qualified and allowed to offer this advice.

**Q 73: How can an insurance agent or broker help a small employer participate the [insert name of state SHOP exchange]?**

An insurance agent or broker can help any small employer, as has been true in the past. The agent or broker can help the employer decide which health insurance policy would be best for them, enroll employees in the plan, file health insurance claims, and understand the process of enrollment.

In the [insert name of state SHOP exchange], the HHS expects that insurance agents and brokers will be in contact with employers both before and after enrollment, as they will be a primary contact for customer service issues.

**Q 74: What is the benefit of using an insurance agent to enroll in the [insert name of state exchange] or the [insert name of state SHOP exchange]?**

Whether consumers are individuals or small group businesses, the insurance agent or broker can work with their needs and requirements. Agents and brokers have a working knowledge of the qualified health plans and their benefits. An agent or broker may help individual consumers or small employers create an account with the [insert name of state exchange] or [insert name of state SHOP exchange] if needed, but consumers, or a legally authorized representative, must create their own [insert name of state exchange] username and password. Consumers should not share this information with third parties, including insurance agents or brokers.

**Q 75: Will an insurance agent or broker show consumers all of the plan choices available through the [insert name of state exchange]?
In [insert name of state], agents and brokers aren’t required to show consumers all available health plans. If the consumer is using the [insert name of state exchange] website with the help of an agent or broker, then all QHP choices will be displayed. If the agent or broker goes through an insurance company portal, all plans available through the [insert name of state exchange] may not be shown, but other plans available in the market outside the exchange—that aren’t eligible for the advance premium tax credit—may be shown. Consumers should ask the insurance agent or broker if they’re being shown all of the plans available through the [insert name of state exchange] and whether tax credits or cost-sharing reductions apply to the plans they are looking at.

All agents and brokers must follow applicable [insert name of state] laws, regulations, and [insert name of state exchange] requirements, including standards related to relationships or appointments with insurance companies.

[Insert name of state] expects that the insurance agent or broker will tell consumers if the information given is about health plans with which the agent or broker has a business relationship and that consumers can always directly access the [insert name of state exchange] website. They’ll find information about other available qualified health plans there. The [insert name of state] expects that insurance agents and brokers will advise consumers to check with the [insert name of state exchange] about available tax credits or cost-sharing reductions.

**Drafting Note:** States should modify this answer if agents and brokers are required to show consumers all options available through the exchange.

**Q 76: Will consumers have to share their personal information, including their tax returns, with an agent or broker, navigator, in-person assistance personnel, or certified application counselor?**

No. A consumer shouldn’t share personal information, including tax returns, with an agent or broker, navigator, in-person assistance personnel, or certified application counselor. When consumers complete the application on the [insert name of state exchange] website with the help of an agent or broker, navigator, or assister, they should be able to fill out and submit their eligibility application without the agent, navigator, or assister in direct view of the application. While consumers applying for financial assistance are asked to enter their income, income figures from the IRS won’t be shown during the application process, whether the consumer gets help filling out the application or does it independently. In [insert name of state], after completing the registration and training, agents or brokers, navigators, in-person assistance personnel, and certified application counselors must complete and comply with a privacy and security agreement and get a user ID to use with the [insert name of state exchange].

**Q 77: Will consumers have to share their account username and password with an insurance agent or broker, navigator, in-person assister, or certified application counselor?**

No. An agent or broker, navigator, in-person assistance personnel, or certified application counselor should never ask for a consumer’s account username and password. If a consumer is asked to share a username or password, then he or she should immediately contact the [insert name of state insurance department] at [insert phone number] and discuss this with the consumer assistance representatives.

**Q 78: What help should an insurance agent or broker, navigator, in-person assister, or certified application counselor give consumers if they or their dependents are eligible for Medicaid or CHIP?**

Agents or brokers, navigators, in-person assisters, and certified application counselors will work with all consumers who ask for help with [insert name of state exchange] enrollment, including those eligible for Medicaid or CHIP. The [insert name of state exchange] will send a notice to consumers who are eligible for Medicaid or CHIP. An agent or broker, navigator, in-person assister, or certified application counselor working with these consumers is expected to refer consumers to the [insert name of state Medicaid and CHIP agency]. Agent and broker, navigator, in-person assister, and certified application counselor training will include information about where to direct Medicaid- or CHIP-eligible consumers.

Agents and brokers should be able to give consumers a referral to a navigator, in-person assister, certified application counselor, or the [insert name of state Medicaid agency]. Navigators, in-person assisters, and certified application counselors should help all consumers seeking assistance with completing an application through the [insert name of state exchange]. If the [insert name of state exchange] assesses the consumer as Medicaid- or CHIP-eligible, then the navigator, in-person...
assister, or certified application counselor may refer the consumer to the state Medicaid agency for more information. Navigators, in-person assisters, and certified application counselors often are not required to help consumers fill out a state Medicaid application if it is different from the application used by the [insert name of state exchange], but they can refer consumers to appropriate resources in those cases.

Q 79: May an insurance agent or broker continue to work with consumers once they’re enrolled in a plan through the [insert name of state exchange]?

Insurance agents and brokers may continue to communicate with consumers after they’ve enrolled in a plan through the [insert name of state exchange], as long as the communications follow any laws and regulations that apply.

The communications also must follow the privacy and security standards the [insert name of state exchange] has adopted (pursuant to 45 C.F.R. §155.260). These standards limit how an agent or broker may use any information gained to provide help and services to qualified consumers.

COSTS AND ASSISTANCE WITH COSTS

Q 80: Is there cost-sharing for contraceptives?

With the exception of health plans sponsored by certain employers that have religious or moral objections to contraception, all plans, including those offered through the [insert state name of state exchange], must cover in-network doctor-prescribed FDA-approved methods of contraception without cost-sharing.

For specific information about a plan’s contraceptive coverage, consumers should check the plan’s SBC (see Question 18) or ask their employer or benefits administrator. There’s more information about contraceptive coverage on the federal website at www.healthcare.gov/coverage/birth-control-benefits/ and www.cms.gov/ccio/resources/fact-sheets-and-faqs/downloads/aca_implementation_faqs26.pdf

Q 81: How much do plans offered through the [insert name of state exchange] cost?

There are a variety of plans intended to fit different budgets, both through the [insert name of state exchange] and in the market outside the exchange. Also, many consumers purchasing coverage through [insert name of state exchange] qualify for the premium tax credits (see Questions 84-85), which pay for part of their premium and help lower the cost of coverage.

Consumers whose incomes are below a certain amount may be eligible for a premium tax credit and a Silver plan that features lower cost-sharing and lower out-of-pocket costs (copayments, coinsurance and deductibles) without paying a higher premium. Check with the [insert name of state exchange] at [insert link] or direct the consumer to an online calculator to estimate whether they may qualify for subsidies: [https://www.kff.org/interactive/subsidy-calculator/](https://www.kff.org/interactive/subsidy-calculator/)

To see specific costs of plans offered through the [insert name of state exchange], go to [insert state exchange website], call [insert state exchange telephone number], or talk to a navigator, certified application counselor, in-person assister, insurance agent or broker, or other assister. (See Question 61.)

Q 82: Do plans offered through the [insert name of state exchange] have large out-of-pocket costs?

The health insurance plans available through the [insert name of state exchange] feature a variety of out-of-pocket costs for consumers. But, the ACA requires that all non-grandfathered plans (including most plans that people get from an employer) limit consumers’ annual out-of-pocket costs for in-network essential health benefits (EHB) services to no more than $8,700 for individuals and $17,400 for families in 2022. These maximum out-of-pocket amounts will go up in future years. However, out-of-network services do not count toward these limits on annual out-of-pocket costs. (See Question 27.) There are separate out-of-pocket maximums for stand-alone dental plans.

Plans are required to cover certain preventive services without cost-sharing. (See Question 24.) Also, consumers whose incomes are below a certain amount may be eligible for a premium tax credit and a Silver plan, which features lower cost-sharing and lower out-of-pocket costs (copayments, coinsurance and deductibles) without paying a higher premium. Check
with the [insert name of state exchange] at [insert link] or direct the consumer to an online calculator to estimate whether they may qualify for subsidies: https://www.kff.org/interactive/subsidy-calculator/

Navigators, certified application counselors, in-person assisters, agents or brokers, or other assisters should be able to help consumers learn if they qualify. Also, the exchange application tells consumers whether they might be eligible for Medicaid or CHIP programs, which have very limited out-of-pocket costs.

Q 83: Where can consumers inquire to learn if they’re eligible for help paying premiums or for Medicaid?

Consumers may apply with the [insert name of state exchange] or the [insert name of state Medicaid agency]. The [insert name of state exchange] determines eligibility for advance payments of premium tax credits and cost-sharing reductions. The [insert name of state exchange] also assesses Medicaid and CHIP eligibility and makes a referral, if appropriate, to the [insert name of state Medicaid agency] for a final determination.

Consumers also may apply directly with the [insert name of state Medicaid agency]. The [insert name of state Medicaid agency] will enroll eligible consumers in Medicaid or CHIP, or send their information to the [insert name of state exchange] to determine their eligibility for advance payments of the premium tax credit and cost-sharing reductions if they aren’t eligible for Medicaid or CHIP.

Drafting Note: States with a different process will need to modify this answer accordingly.

Q 84: Is there help for consumers who can’t afford coverage?

Yes, consumers with low or moderate incomes can qualify for reduced costs, through Medicaid, CHIP, or exchange coverage, but eligibility rules apply. Most states use federal government funds to expand Medicaid so that it covers adults with an income at or lower than 138% of the federal poverty level. In 2022, that is roughly $17,800 for a family of one and $36,400 for a family of four. Consumers should contact the [insert name of state exchange] or the [insert name of state Medicaid agency] directly if they think they might be eligible for Medicaid.

In [insert name of state], children may be able to get coverage through Medicaid or CHIP programs for which their parents aren’t eligible. Some families may find it more affordable to enroll their children in Medicaid or CHIP and buy coverage for the parents through the exchange.

Drafting Note: States may need to modify the answer to this question depending on the state’s decisions regarding Medicaid expansion.

Q 85: Who’s eligible for premium tax credits and cost-sharing reductions?

The ACA created premium tax credits and cost-sharing reductions to help cut costs for eligible consumers who buy a plan through the [insert name of state exchange]. (See Question 84.) The amount of the tax credit or cost-sharing reduction depends on family size and income and varies on a sliding scale: Larger families and families with lower incomes get the most help. Tax credits and cost-sharing reductions aren’t available for individuals who are eligible for Medicaid, CHIP, Medicare, or qualifying employer-sponsored coverage. Consumers who forget to update the [insert name of state exchange] about changes in their eligibility for other coverage might owe money at tax time. More information about tax credits and cost-sharing reductions is available at www.healthcare.gov

This link allows consumers to estimate how much financial help is available for them: www.healthcare.gov/lower-costs/qualifying-for-lower-costs/

Q 86: How do premium tax credits to buy coverage through the [insert name of state exchange] work?

Consumers who qualify for premium tax credits can either receive them in advance, or they can wait until they file their taxes. The advance payment is sent to the insurance company that offers the plan the consumer has chosen and is used to
reduce the monthly insurance premium. Consumers also have the choice to wait to receive their tax credits until they file their federal income tax return. They also can use just part of their estimated tax credit in advance.

Consumers who want to use their tax credit in advance need to be as accurate as possible to estimate how much income they expect to have in the year they get coverage. If they underestimate their income and the tax credit is overestimated, then they may have to repay part of their tax credit at tax time.

Consumers need to update the [insert name of state exchange] during the year about any changes in income, family size (like having a baby), employment (like getting a job where health coverage is offered), or becoming eligible for Medicare. The [insert name of state exchange] will change the tax credit amount to reflect the new information. Consumers who forget to update the [insert name of state exchange] about such changes might owe money at tax time or realize they could have been using a larger tax credit amount in advance.

Consumers who don’t use the tax credit in advance don’t have to tell the [insert name of state exchange] about any changes to their income or employment during the year. They can get the tax credit on their tax returns.

Consumers may go to the [insert name of state exchange] website at [insert link] or call the [insert name of the state exchange] at [insert telephone number] for more information about tax credits. Navigators, certified application counselors, in-person assisters, agents or brokers, or other assisters also are able to give consumers information about the tax credit. There’s more information about premium tax credits on the federal website www.healthcare.gov.

Q 87: Is an individual who is a victim of domestic abuse and separated (but not divorced) from his or her spouse eligible for subsidies on the exchange?

Yes. In general, married couples must file a joint tax return in order to be eligible for a premium tax credit and cost-sharing reductions. For victims of domestic abuse, however, contacting their spouse to file a joint return may present a risk and may be legally prohibited if a restraining order is in place. As a result, married individuals who are victims of domestic abuse may still be eligible for subsidies if they are living separately from their spouse. Consumers in this situation should list “unmarried” on their exchange application and can do that without fear of penalty for misstating their marital status. For more information, see www.healthcare.gov/income-and-household-information/household-size or www.irs.gov.

Q 88: If a consumer is eligible for premium tax credits, is there a grace period before a company can terminate the consumer for non-payment of premiums?

Yes. The ACA requires insurance companies to give enrollees who receive premium tax credits a 90-day grace period for non-payment of premiums before the policy can be terminated, provided the enrollee has paid at least one month’s premium. Claims must be paid during the first 30 days of the grace period, but the insurer may suspend payments to providers during the remainder of the grace period. In order to keep coverage at the end of the grace period, a consumer’s account must be fully paid within 90 days of missing a premium payment. For example, a consumer who misses a payment in July but makes payments in August and September will be terminated in October if he or she has not also paid the missing payment from July. And, a company may deny coverage in the next year if the consumer is in the grace period. For example, a consumer who misses a payment in November and December may be denied coverage in January if they haven’t paid premiums due the year before.

Drafting Note: States should review their laws for other grace periods that might apply.

Q 89: What should consumers do if they find themselves enrolled in both exchange coverage with premium tax credits and Medicaid, CHIP, or Medicare?

The [insert name of exchange] conducts periodic data matching to identify individuals enrolled in both private insurance with premium tax credits and Medicare or private insurance with premium tax credits and Medicaid/CHIP and sends notices to those consumers. Upon receiving the notice, consumers may end their exchange coverage with premium tax credits by contacting the exchange.
When individuals become eligible for Medicaid, CHIP, or Medicare while enrolled in an exchange plan, they will no longer be eligible for any premium tax credits or cost-sharing reductions. If a consumer wants to maintain exchange coverage while enrolled in Medicaid or CHIP, they will have to pay the full premium. Private plans generally may not cover an individual for the same benefits covered by Medicare, so people who become eligible for Medicare while enrolled in [insert name of exchange] should immediately notify the exchange to end their coverage and enroll in Medicare.

A consumer who wants to maintain exchange coverage while enrolled in Medicaid/CHIP may apply for coverage without financial assistance during the annual open enrollment period or a special enrollment period (SEP). Consumers who are no longer enrolled in Medicaid/CHIP or the exchange with premium tax credits after the data match don’t need to do anything else. However, they might opt to contact their state Medicaid or CHIP agency to confirm that they aren’t enrolled. Consumers who are enrolled in both Medicaid/CHIP and private insurance with premium tax credits should end exchange coverage with premium tax credits, because consumers determined eligible for Medicaid/CHIP aren’t eligible for exchange coverage with premium tax credits or cost-sharing reductions.

When a consumer is enrolled in exchange coverage with premium tax credits or cost-sharing reductions and simultaneously covered by Medicaid, CHIP, or Medicare, the consumer likely will have to pay back all or some of the tax credits received for the months after they were determined to be eligible for Medicare or Medicaid/CHIP. Consumers who receive the notice but have more recently been denied eligibility for Medicaid or CHIP do not need to take any further action with [insert name of state exchange], but they may want to contact their state Medicaid or CHIP agency to confirm that they’re not enrolled.

QUESTIONS ABOUT OTHER TYPES OF COVERAGE

Q 90: What is available in the market outside the [insert name of state exchange]?

In [insert state name], health insurance coverage is also available in the market outside the [insert name of state exchange]. However, if consumers want to take advantage of premium tax credits to help pay for part of their premiums or for cost-sharing assistance, then they must buy coverage through the [insert name of state exchange]. (See Question 84 and Question 85.)

Consumers may buy plans in the market outside the exchange that aren’t required to cover the essential health benefits (EHB), such as fixed indemnity plans, short-term policies, or insurance coverage and discount plans that include only specialty or ancillary services (for example, hearing, chiropractic, etc.) Note, though, that these policies don’t have to comply with ACA reforms such as the requirement that plans cover pre-existing conditions. (See Question 4.) The NAIC has some resources discussing these types of plans:

https://www.naic.org/documents/consumer_alert_health_sharing_ministries.htm

Contact [insert state Department of Insurance contact] or an insurance agent or broker for help.

Q 91: What are short-term plans?

Under federal law, short-term plans are those with an initial term of no more than 364 days that include a statement describing potential coverage limitations. Short-term plans may be renewed at the option of the insurer, but the same policy may only be in effect for up to three years in total. Short-term plans are not required to comply with many of the consumer protections of the ACA. For instance, they may charge different premiums based on an applicant’s health conditions, exclude essential health benefits, and exclude coverage for pre-existing conditions.

Drafting note: States with their own regulations on short-term plans should add a statement that describes allowable short-term plans, including duration restrictions, rating requirements, or benefit mandates.

Q 92: If consumers already have coverage, may they buy separate policies for their children?

Consumers who already have coverage for themselves are eligible to buy a policy for a child through the [insert name of state exchange]. The ACA requires that any health plan offered through the exchange also must be offered as a child-only plan at the same tier of coverage. Consumers also may be eligible for tax credits for child-only plans they buy through the [insert
name of state exchange]. Visit the [insert name of state exchange] website at [insert website for the state exchange] for more information about child-only plans available through the [insert name of state exchange].

However, children who aren’t legal residents of the United States aren’t eligible for child-only plans through the [insert name of state exchange]. Consumers may be able to buy a child-only policy in the market outside the [insert name of state exchange], either directly from an insurer or through an agent or broker. For a list of licensed insurers in [insert name of state], visit the [name of state department of insurance] website at [insert link]. A child also may be eligible for Medicaid (contact [insert name of state Medicaid agency] at [insert contact information]) or coverage through [insert state Children’s Health Insurance Program (CHIP)]. To learn more about CHIP plans, visit www.insurekidsnow.gov.

**ACA MEDICARE-RELATED QUESTIONS**

**Q 93: Who should consumers contact with questions about Medicare, Medicare Supplement insurance, or Medicare Advantage Plans?**

Medicare coverage, Medicare Supplement insurance (Medigap), and Medicare Advantage plans aren’t available through the [insert name of state exchange]. Consumers who are currently enrolled in Medicare may not buy coverage through the exchange. Enrollees who are enrolled in Medicare because of end stage renal disease (ESRD) can enroll in a Medicare Advantage plan beginning in 2021. Questions involving the ACA and Medicare, Medicare Supplement insurance, or Medicare Advantage Plans can be referred to [insert name of State Health Insurance Program (SHIP)] at [insert contact information]. The federal government’s Medicare website, www.medicare.gov, also has more information about health reform and Medicare changes.

**Q 94: Are people who pay premiums for Medicare Part A able to enroll through the [insert name of exchange]?**

Individuals who aren’t entitled to premium-free Medicare Part A may buy coverage through [insert name of exchange] instead of paying the Part A premium and being enrolled in Part A, and they may also be eligible for a tax credit. This includes those beneficiaries who only enrolled in Medicare Part B because they couldn’t afford the Part A premium. In both cases, these beneficiaries must disenroll from Medicare Part A, if they have it, and from Medicare Part B, if they have it. There are consequences to substituting a qualified health plan (QHP) for Medicare. Consumers may pay higher premiums for Medicare if they decide to enroll in Medicare in the future and may have a gap in benefits. The [insert name of SHIP] at [insert contact information] should be able to give consumers more information about their choices.

**Q 95: Can a person with ESRD (End Stage Renal Disease) enroll in or stay in an Exchange plan instead of enrolling in Medicare?**

If a consumer with ESRD has not applied for Medicare, then she or he can stay in or apply for coverage through the [insert name of exchange]. However, there are consequences of delaying Medicare benefits. Individuals with ESRD may not be eligible for certain Medicare benefits if they enroll in Medicare in the future, may pay a higher premium for late enrollment, or may have a delay in benefits when they begin. The [insert name of SHIP] at [insert contact information] should be able to give consumers more information about these complex choices.

**Drafting Note:** Medicare beneficiaries with ESRD can enroll in Medicare Advantage Plans.

**Q 96: If individuals become eligible for Medicare and are already in a QHP, can they stay in their plan?**

A person who stays in a QHP* and is eligible for or enrolled in Medicare is no longer eligible to receive any tax credits. If the consumer has been receiving an advance premium tax credit, then the consumer must report eligibility for Medicare to the [insert name of state exchange] to end the tax credit. A consumer who does not do this will be liable to repay the tax credits for which they were not eligible.

Without the enrollee’s authorization, a QHP may not terminate coverage from a policy in which the individual was enrolled upon becoming eligible for Medicare. However, a QHP is not designed to coordinate its benefits with Medicare. Both the premium and the benefits of a QHP are designed to provide primary coverage, not supplemental coverage. Depending on state law, a QHP may reduce its benefits to pay covered expenses that remain after Medicare pays, but the premium will stay...
the same. This may happen even if the individual does not sign up for Part B of Medicare. Consumers are encouraged to enroll in Medicare when they are eligible to avoid premium penalties and delayed benefits later. The [insert name of SHIP] at [insert contact information] should be able to give consumers more information about how and when to enroll in Medicare and any penalties that can apply.

*Note that this information (except for the tax credit) applies to individual coverage inside and outside an exchange.

Q 97: Is there anything consumers and their dependents who are already on Medicare and have employer-based coverage need to do because of the ACA?

Generally, there’s nothing consumers need to do because of the ACA if they’re already on Medicare and have employer-based coverage. If consumers have coverage through a large employer and that employer’s current benefits pay first and Medicare pays second, then the ACA didn’t change that.

If the employer changes the benefits that cover consumers or their dependents, then they will send consumers a notice about those changes. Consumers can ask their employer’s human resources department how those changes work with Medicare.

The [insert name of SHIP] at [insert contact information] should be able to give consumers more information about how their existing coverage works with Medicare.

Q 98: Is there anything consumers and their dependents who are already on Medicare and have retiree coverage from an employer need to do because of the ACA?

The ACA didn’t change retiree benefits. Consumers should contact their employer’s human resources department for help. Consumers who need more information about how Medicare and retiree benefits work together can contact the SHIP at [insert contact information].

Q 99: Will consumers with Medicare Supplement insurance be affected by the ACA?

No. The ACA doesn’t change the cost-sharing for Medicare supplement policies.

Q 100: How will consumers’ Medicare prescription drug “donut hole” be affected?

The ACA began closing the “donut hole” in 2011, and it was closed entirely effective for 2019. The donut hole was closed by combining a discount on the cost of brand-name drugs and a gradual increase in the share of prescription drug costs for both generics and brand name drugs that the Medicare Part D plan pays, until a beneficiary only owes 25% of the total cost. In the standard plan, Medicare beneficiaries whose prescription drug costs are greater than the Part D deductible will need to pay only a 25% coinsurance rate (after meeting the plan’s deductible, if any) until their expenditures reach the catastrophic level. In other plans, cost-sharing may vary.

For more information, contact Medicare at www.medicare.gov or 1-800-MEDICARE or the [insert name of SHIP] at [insert contact information].

Q 101: What about long term care (LTC) insurance policies?

The [insert name of state exchange] doesn’t include long term care (LTC) insurance policies, and policies sold on the [insert name of state exchange] don’t typically cover LTC services. Insurance agents and brokers still sell LTC insurance outside the exchange. The HHS website https://acl.gov/ltchas information about LTC insurance and the NAIC has produced a Shopper’s Guide available at https://www.naic.org/documents/prod_serv_consumer_ltc_lp.pdf
ACA MEDICAID-RELATED QUESTIONS

Q 102: Where can consumers find more information about Medicaid?

Contact the [insert name of state Medicaid agency] at [insert contact information] with any questions or concerns about Medicaid and the ACA. Also, the HHS website has basic information about Medicaid posted at www.healthcare.gov.

Q 103: Did consumers’ eligibility for Medicaid change under the ACA?

The ACA provides funds for states to expand their eligibility for Medicaid. Childless adults with income below 138% of the federal poverty level generally were not eligible for Medicaid prior to the ACA. Most states have used ACA funds to open eligibility to this group. The pre-ACA Medicaid eligibility categories continue to be eligible for Medicaid, although the financial method to decide eligibility has changed. Medicaid-eligible consumers include children, pregnant women, parents (or other caretaker relatives), blind, disabled, or elderly, and they still need to meet the financial eligibility test set by [insert name of state]. Contact the [insert state Medicaid agency] at [insert contact information] for more information.

Drafting Note: States that have not expanded Medicaid should modify this answer as appropriate.

There is more information about who is eligible for Medicaid and the Children’s Health Insurance Program at this link: https://www.healthcare.gov/medicaid-chip/.

Q 104: What is the expanded Medicaid eligibility category under the ACA?

Adults who weren’t eligible for Medicaid in the past may be eligible under the ACA. [Insert name of state] has decided to expand Medicaid coverage to new groups, now covering childless adults with household income under 138% of the federal poverty level. Contact the [insert name of state Medicaid agency] at [insert contact information] for more information.

Drafting Note: States that have not expanded Medicaid will need to revise this answer accordingly.

There is more information about who is eligible for Medicaid and the Children’s Health Insurance Program at this link: https://www.healthcare.gov/medicaid-chip/.

Q 105: What is the federal poverty level (FPL), and why is it important in the context of health care coverage?

The FPL is how the federal government defines poverty, and it’s used to decide who’s eligible for federal subsidies and entitlement programs. In states that expanded Medicaid, childless adults under 65 with incomes up to 138% of the FPL (or about $36,000 for a family of four) generally can get Medicaid coverage. Children, parents, pregnant women, seniors, and people with disabilities have different income limits. People with incomes above these levels may be eligible for premium tax credits to help them buy a plan through the [insert name of state exchange]. Cost-sharing reductions are available until a family’s income reaches 250% of the FPL. Individuals who are eligible for both Medicare and Medicaid, or whose incomes don’t exceed certain amounts, may be eligible for one of several low-income programs to supplement their Medicare benefits. The [insert name of SHIP] at [insert contact information] should be able to give consumers more information about their eligibility for these low-income programs.

Drafting Note: States that didn’t expand Medicaid will need to revise the previous paragraph accordingly.

This link has general information about income levels at which financial help or coverage is available, as well as what counts as income: www.healthcare.gov/lower-costs/qualifying-for-lower-costs/.

Q 106: What benefits are available for childless adults eligible for Medicaid?

Each state that expanded Medicaid has defined the benefit package for this newly-eligible group. The benchmark benefit package needs to at least include the essential health benefits (EHB) available through the [insert name of state exchange]. (See Question 16.) Contact the [insert name of state Medicaid agency] at [insert contact information] for more information.
Q 107: Are undocumented immigrants eligible for Medicaid?

Undocumented immigrants are not eligible for most categories of Medicaid coverage, but may receive services in emergency circumstances.

Q 108: How do consumers apply for Medicaid?

Consumers can apply online through the [insert name of state exchange]. They also can apply by mail, fax, or in person. If a consumer applies through the [insert name of state exchange], then his or her eligibility for Medicaid also will be assessed, and the consumer’s application will be transferred to the [insert name of state Medicaid agency] for final determination. Under the law, there’s “no wrong door” to apply for health coverage, whether it’s through [insert name of state Medicaid agency], CHIP, or the [insert name of state exchange]. If a consumer isn’t eligible for Medicaid, then the consumer’s eligibility for coverage through the [insert name of state exchange] and for premium tax credits or cost-sharing reductions will be evaluated.

Q 109: Will consumers still need to submit documents to prove their income?

As much as possible, the [insert name of state exchange] uses existing data sources or gets information from various federal and state agencies, such as the IRS, to verify income. The rules are designed to ensure a high degree of program integrity and reduce the amount of paperwork that consumers need to provide.

Some consumers will be asked to provide documents to prove their income. There are separate processes to verify income to qualify for Medicaid and CHIP and for premium tax credits and cost-sharing reductions. To verify income for Medicaid, CHIP, premium tax credits, and cost-sharing reductions, [insert name of state exchange] will use data from the IRS, the Social Security Administration (SSA), and other income data sources.

For Medicaid and CHIP, issues that come up about verifying income will be resolved through a process of explanations and documentation. For premium tax credits and cost-sharing reductions, most verification issues will be resolved through a process of explanations and documentation. But, to limit the administrative burden, the [insert name of state exchange] may use a sample-based review in some cases.

COMMON CONCERNS ABOUT HOW THE ACA AFFECTS CONSUMERS

Q 110: Does the ACA eliminate private health insurance?

No. There is still private health insurance under the ACA. The ACA created health insurance exchanges (see Questions 5-6) where consumers can compare and shop for private insurance plans. The ACA also sets many new federal rules and protections that apply to people who buy private health insurance in each state. (See Questions 2 and 4.)

Q 111: Does the ACA include rules about insurance premiums?

For individual and small group health insurance market plans covered by the ACA’s rating rules, premiums may only vary based on an individual’s age, the area of the state in which the policy is sold, tobacco use, and family composition. For covered plans, these are the only factors that an insurance company can use when it sets premiums. Covered plans can’t refuse to insure or charge higher premiums to consumers with medical problems. The ACA also reduces the difference in premiums covered plans charge for younger and older people and eliminates differences between premiums charged for men and women. These rating rules cover individual and small group health plans offered through the exchanges or outside of them, but do not apply to short-term, limited duration plans.

To help make coverage affordable, many consumers who buy qualified health plans through the individual market exchanges are eligible for premium tax credits. Also, consumers under age 30 or who obtain a hardship exemption may be eligible to buy catastrophic plans, which cost less.
Drafting Note: States may want to link to rate submissions and final approvals. States that don’t allow the tobacco surcharge or use a different ratio than 1.5:1 should note that health insurance companies are prevented from charging consumers a higher premium for being a tobacco user or are limited in the amount of tobacco surcharge they can apply.

Q 112: Does the ACA address discrimination?

ACA explicitly prohibits insurance companies from discriminating on the basis of race, color, national origin, sex, age, or disability.

Section 1557 of the ACA prohibits discrimination by any health program or activity receiving funds from HHS. The scope of this prohibition was first outlined via final rule in 2016, which broadly defined the areas of prohibited discrimination. Gender identity was a controversial inclusion in the rule. On June 12, 2020, a final rule was published that changed the 2016 regulations to limit the applicability. One of the changes in the 2020 rule was to remove the prohibition on discrimination based on gender identity. On June 15, 2020, the U.S. Supreme Court held that discrimination on the basis of sex included discrimination based on gender identity. HHS announced that effective May 10, 2021, it would interpret and enforce § 1557’s prohibition on discrimination to include discrimination based on sexual orientation and gender identity.

Health insurers, however, must follow any state laws and regulations that apply to marketing and can’t use marketing practices or benefit designs that will discourage individuals with significant health needs from enrolling. Health insurers must also provide meaningful access for individuals with limited English proficiency and post taglines in the languages spoken by persons with limited English proficiency.

Insurance companies won’t pay for services not covered by a plan, such as care that isn’t medically necessary. Consumers have the right to ask their insurance company to reconsider a decision to deny coverage and, after that, consumers have the right to an independent external review of the decision. (See Question 117.)

Q 113: What are the income tax implications of the ACA?

The [insert name of department of insurance] does not interpret or enforce obligations under the tax code. Consumers can contact the IRS or their tax advisor for information.

Q 114: Where else can consumers find answers to health insurance questions?

[Insert links to State DOI, Exchange, Medicaid, navigator organizations, etc.]

Q 115: What does the health plan “accreditation status” information on the exchange website mean?

Accreditation is a comprehensive process by private, nonprofit organizations that review how well health plans deliver care and how they work to improve the delivery of care over time. Health plans offered through the [insert name of state exchange] must be certified by a recognized accrediting body, such as URAQ and/or the National Committee for Quality Assurance (NCQA).

Part of the certification requires that the plan is accredited by a recognized accrediting entity within a time frame set by the [insert name of state exchange]. Accreditation ensures that the plans sold on the [insert name of state exchange] meet minimum quality, access, nondiscrimination, and marketing standards in the ACA.

Q 116: What does the health plan “consumer experience” information on the [insert name of state exchange] website mean?

Consumer experience ratings come from surveys that ask individuals who have coverage through a health insurance plan how they like the plan. These individuals also rate the quality of the medical care they receive and the accessibility of the medical care that they need.
Q 117: What appeal rights do consumers have?

Consumers have a right to appeal an unfavorable coverage decision by their health insurance company. Insurance companies must give consumers owning an individual policy a first-level internal appeal, administered by the company, and if the company upholds its initial unfavorable coverage decision, then it must provide an external review administered by an independent third party. Consumers in individual policies may also be able to request a voluntary second-level internal appeal. However, those two levels of internal appeals must also be done within the time limit imposed by the law for all internal appeal process, whether one or two levels. Expedited review for emergency situations is available. For group policies, the insurance company may require two levels of internal appeals before the external review option. For more information about how to appeal a health insurance company’s unfavorable coverage decision (often referred to an Explanation of Benefits, or EOB), plan or policy documents, or contact [insert state insurance department] at [insert telephone number].

Consumers also can file complaints with [insert name of state insurance department] when claims are denied, or when they believe that their health insurance company isn’t properly following the legal appeals process. Consumers can contact the state insurance department at [insert contact information].

Note that there is a separate appeals process if a consumer is dissatisfied with an eligibility decision made by [insert name of state exchange]. The consumer can contact [insert name of state exchange] for more information.

Q 118: Where do consumers file a complaint for a product sold through the [insert name of state exchange]? What about plans sold in the market outside the [insert name of state exchange]?

Consumers should first contact the insurance company with any complaint about benefits or services they’re not receiving. If consumers aren’t satisfied, they should contact the [insert name of state exchange] for help with questions or complaints.

The [insert state department of insurance] investigates complaints about insurance companies and can either look up consumers’ complaints or direct consumers to the right place to file a [insert name of state exchange] related complaint. The [insert state insurance department] is ready to help consumers with any question or complaint they may have about their coverage. To find out more about filing appeals, consumers can contact the [insert state department of insurance] at [insert contact information].

Q 119: If consumers apply for coverage in the market outside the [insert name of state exchange], what are the rules regarding open and special enrollment?

In [insert name of state], insurance companies sell policies in the market outside the exchange. Enrollment periods for coverage outside the [insert name of state exchange] generally are the same as enrollment periods through the exchange. (See Question 11.) Contact the [insert name of state department of insurance] at [insert contact information], or an insurance agent or broker for more information about enrollment.

If someone is not eligible to enroll in health coverage through the [insert name of state exchange] or does not want to enroll in coverage through the [insert name of state exchange], insurers must make policies available in the [insert name of state exchange] available outside the [insert name of state exchange], although the policies aren’t required to be marketed as available outside the [insert name of state exchange].

For more information about special enrollment periods (SEPs), see this link: https://www.healthreformbeyondthebasics.org/sep-reference-chart/

QUESTIONS INVOLVING SPECIAL CIRCUMSTANCES AND POPULATIONS

Q 120: What is available for consumers with chronic conditions? Does the ACA help them get better coverage?

Yes. All plans subject to the ACA must insure consumers with a chronic or pre-existing medical condition, must cover pre-existing conditions, and can’t charge higher premiums because of a health or medical condition. They are also required to offer comprehensive coverage. Discrimination on the basis of age, disability, or expected length of life is prohibited.
Coverage for these benefits is available from the beginning of the policy coverage period, without a waiting period, even if there was no prior coverage. Many plans include wellness programs to help consumers manage chronic conditions.

Q 121: What options are there for consumers with children who aren’t citizens or legal residents?

Consumers won’t be able to buy a policy through the [insert name of state exchange] for those children who aren’t lawfully present, but they may be able to buy a policy directly from an insurance company or through an agent. Insurers that sell policies through the exchange must make those policies available upon request to individuals, including children, who are not eligible to participate in the [insert name of state exchange]. For a list of licensed insurance companies in [insert name of state], visit [insert link]. Lawfully-present children also may be eligible for [insert name of state Medicaid and CHIP]. To learn more about these plans, go to www.insurekidsnow.gov

Q 122: Are immigrants not legally present eligible for coverage through the [insert name of state exchange] or for premium tax credits?

No. Immigrants not legally present aren’t eligible for coverage through the [insert name of state exchange]. They also aren’t eligible for advance payment of premium tax credits. Insurers that sell policies through the exchange, however, must make those policies available upon request to individuals, including children, who aren’t eligible to participate in the [insert name of state exchange].

Q 123: Are incarcerated people eligible for coverage through the [insert name of state exchange] or for premium tax credits?

No. Incarcerated people generally aren’t eligible for coverage through the [insert name of state exchange]. They also aren’t eligible for advance payments of the premium tax credits. Consumers who are incarcerated pending the disposition of charges are eligible. Insurers that sell policies through the exchange must make those policies available upon request to individuals, including children, who are not eligible to participate in the [insert name of state exchange].

Q 124: Are tribal members eligible for coverage through the [insert name of state exchange] or for premium tax credits?

Yes. Tribal members may buy coverage through the [insert name of state exchange]. Tribal members have access to enrollment continuously. They’re also eligible for premium tax credits. And, because of the federal government’s special trust responsibility, members of federally-recognized Indian tribes are eligible to receive benefits not available to others, such as plans with no cost-sharing, under certain circumstances. For more information, go to www.healthcare.gov or the website for the Indian Health Service (IHS) agency within the HHS at www.ihs.gov/

QUESTIONS ABOUT MLR

Q 125: What is the Medical Loss Ratio (MLR) requirement?

The ACA’s MLR requirement is that health insurers must spend at least a certain percentage of consumers’ premium dollars on direct medical care and health care quality improvement. The MLR limits the amount of premium dollars spent on administrative expenses, such as overhead, marketing, salaries, and profit.

The ACA requires that health insurance companies providing coverage in the large employer market (usually 50 or more employees) must spend at least 85% of premiums on direct medical care and quality improvement activities. Health insurers who provide coverage in the small employer market (usually fewer than 50 employees) and individual market must spend at least 80% of premiums on direct medical care and quality improvement activities, or they must rebate (refund) the extra premium.

Q 126: What is an MLR Rebate?
Under federal law, if a health insurer doesn’t meet the MLR target (described in Question 125), then that health insurer must give consumers or employers a rebate for the amount of premiums it collected that was greater than the target.

**Q 127: How can consumers learn if their insurer paid rebates?**

Companies that pay rebates send notices to enrollees. The list of the rebates paid can be found at www.cms.gov/CCIIO/Resources/Data-Resources/mlr.html

**QUESTIONS ABOUT WHETHER A PLAN ISLEGITIMATE**

**Q 128: Why is this a time to be especially on guard against health insurance fraud?**

Health insurance rules and regulations are constantly changing. Con artists posing as representatives of the federal government or posing as legitimate insurance agents, brokers, or navigators might try to steal consumers’ money, identity, or health information through various health insurance schemes. For instance, criminals might try to convince consumers to reveal personal information to receive a “national health insurance card” or a new Medicare card under the ACA. Or they may also try to sell consumers health insurance policies that are fake, worthless, or not what they claim to be. These scams are often attempted through automated telephone calls or websites that mimic legitimate sites.

**Q 129: Can consumers get help from their current insurance agent or insurance company to buy health insurance coverage through the [insert name of state exchange]?**

Yes. Working with individuals known personally or known to be working for a licensed agency or company is a dependable way to avoid fraud.

**Q 130: If consumers don’t have a relationship with an insurance agent or company, where should they go for help?**

When consumers contact the [insert name of state exchange], they’ll have the option to contact a navigator specifically trained to help them choose the best health insurance product for their needs.

**Drafting Note:** States without navigators should update this response to provide alternate sources for consumer assistance.

**Q 131: If someone comes to consumers’ homes, calls consumers out of the blue, or sends emails to offer consumers health insurance coverage for a terrific premium, how will consumers know whether the person and the health insurance coverage are legitimate?**

Remember this simple formula: **STOP – CALL – CONFIRM.**

**STOP –** Consumers should ask the person for identification and a phone number where they may be reached later. If the person refuses to give this information for any reason, or tries to pressure them into signing any document, then consumers should immediately hang up, close their door, or walk away.

Consumers should NOT volunteer their Social Security number (SSN) or a credit/debit card number to anyone unless they personally know the individual. Likewise, they should NOT sign any paperwork or write a check.

**CALL –** Consumers then should contact the [insert name of state department of insurance] or the [insert name of state exchange]. The insurance company or agent or broker, as well as the navigator, must be registered or licensed with the [insert state department of insurance] before they can sell coverage or counsel consumers through the [insert name of state exchange].

**Drafting Note:** States should modify the previous paragraph as necessary to reference the entity charged with registering or licensing navigators.
CONFIRM – Consumers should always confirm that the company, agent, or broker offering insurance coverage, or the navigator trying to providing assistance, is authorized to provide information or coverage before they sign any documents or give any personal information.

Remember that if something seems too good to be true, it usually is.
The Consumer Information (B) Subgroup of the Health Insurance and Managed Care (B) Committee met Oct. 14, 2021. The following Subgroup members participated: Mary Kwei, Chair, and Paul Meyer (MD); Debra Judy, Vice Chair (CO); William Rodgers (AL); Kristen Finau, Kathy McGill, Randy Pipal, Weston Trexler, and Fernanda Vallejo (ID); Michelle Baldock (IL); Alex Peck (IN); LeAnn Crow, Chris Hollenbeck, Tate Flott, and Brenda Johnson (KS); Judith Watters (ME); Candace Gergen, Gregory Maus, and Sherri Mortensen-Brown (MN); Carrie Couch, Amy Hoyt, and Jo LeDuc, (MO); Cuc Nguyen, Mike Rhoads, and Rebecca Ross (OK); Gretchen Brodkorb and Jill Kruger (SD); Brian Hoffmeister, Bill Huddleston, Scott McAnally, Jennifer Ramcharan, and Vickie Trice (TN); and Eric Cormany, Darcy Paskey, Jennifer Stegall, and Julie Walsh (WI). Also participating was: Patrick Smock (RI).

1. **Discussed “Frequently Asked Questions About Health Care Reform”**

Ms. Kwei said the NAIC’s Communications Department created branded versions of the claims guides the Subgroup previously approved, and they are available on the NAIC website. She thanked the Subgroup members who contributed edits to “Frequently Asked Questions About Health Care Reform,” as well as Brenda J. Cude (University of Georgia) for reviewing the document. She said Ms. Cude had two outstanding questions about the document. The Subgroup discussed whether the use of the term “excepted benefits” was clear, and it decided it is an appropriate term because the document is intended for state insurance regulators. The second question was regarding the term “applicable large employer.” The Subgroup discussed whether all large employers are applicable large employers and how often department of insurance (DOI) staff are called to respond to questions about them. It considered adding a link to Internal Revenue Service (IRS) information or adding an additional question to the document that defines “applicable large employer.”

Ms. Kwei asked whether Subgroup members or interested parties had other comments or edits on “Frequently Asked Questions About Health Care Reform,” and no one offered any. The Subgroup decided to conduct a vote to approve “Frequently Asked Questions About Health Care Reform” by email.

2. **Discussed a Consumer Brief on Balance Billing**

Ms. Kwei brought up balance billing and the federal No Surprises Act (NSA). She said previous Subgroup discussions have concluded that there is not yet enough information available to develop a useful document for consumers. She said the Health Insurance and Managed Care (B) Committee discussed overall education on the NSA, including materials targeted at consumers, insurers, and providers.

Ms. Kwei asked if any states have been working on consumer information on either state or federal balance billing protections and whether the Subgroup could offer any helpful assistance. No members or interested parties made suggestions.

Ms. Kwei said the Committee is working on a template that state DOIs could use to educate providers on the coming effective date of the NSA. She suggested that the Subgroup could develop a similar template that states could use for consumers. Ms. Cude said consumers are expected to have many questions about the NSA protections, so materials would be helpful.

Ms. Kwei suggested that the Subgroup develop a very simple document on balance billing, including scenarios of what could happen and what consumers can do to respond to certain situations. Ms. Cude said documents should help consumers apply knowledge, not just provide definitions. Subgroup members agreed that a scenario-based approach would be helpful. Kris Hathaway (America’s Health Insurance Plans—AHIP) said AHIP has developed a one-pager on balance billing protections, and she said she would share it.

The Subgroup decided that it should develop draft materials by late November, circulate them, and aim to finalize materials by mid-December. The materials would be for consumer use, not targeted to insurance department staff.

Having no further business, the Consumer Information (B) Subgroup adjourned.
Consumer Information (B) Subgroup
Virtual Meeting
August 24, 2021

The Consumer Information (B) Subgroup of the Health Insurance and Managed Care (B) Committee met Aug. 24, 2021. The following Subgroup members participated: Mary Kwei, Chair, and Paul Meyer (MD); Debra Judy, Vice Chair (CO); Yada Horace, William Rodgers, and Anthony L. Williams (AL); Kathy McGill, Randy Pipal, and Weston Trexler (ID); Ryan Gillespie (IL); Jenifer Groth (IN); LeAnn Crow, Tate Flott, and Tom Treacy (KS); Judith Watters (ME); Carrie Couch, Amy Hoyt, Jo LeDuc, Jessica Schrimpf, and Michelle Vickers (MO); Tracy Biehn and Kathy Shortt (NC); Martin Swanson (NE); Landon Hubbart and Rebecca Ross (OK); David Buono and Elizabeth Hart (PA); Candy Holbrook and Bill Huddleston and Scott McAnally (TN); Heidi Clausen and Jaakob Sundberg (UT); and Diane Dambach, Christina Keely, Darcy Paskey, and Jennifer Stegall (WI). Also participating was: Jana Jarret (OH).

1. **Adopted Consumer Guides on the Claims Process**

Ms. Kwei said the consumer guides are intended to stand on their own, but they also cover the entire claims process from filing a claim to external appeals. She said edits had been incorporated from Brenda J. Cude (University of Georgia) and Subgroup members.

Ms. Watters made a motion, seconded by Ms. Kruger, to adopt the consumer guides (Attachment Four-A). The motion passed unanimously.

Ms. Kwei said that the guides would be emailed and posted to the Subgroup’s website and that states are free to add their own content.

2. **Heard a Presentation on Consumer Group Perspectives on Barriers to Insurance**

Ms. Kwei said consumer representatives had requested time to share the results of a survey.

Ms. Cude said the survey was conducted due to the NAIC’s attention to diversity and to inform the work of state insurance regulators. She said it was funded by the Robert Wood Johnson Foundation (RWJF), and its purpose was to gather information on challenges to access and identify any systemic discrimination. She said it was an online survey of state, local, and regional grassroots, nonprofit, and community organizations with information across different lines of insurance, including health.

Harry Ting (Health Care Consumer Advocate) explained survey results that show the most pressing health insurance issues for constituents of the surveyed organizations, including unaffordability and difficulty of understanding coverage and costs. He also shared results on where consumers get information about insurance, which included family and friends, as well as community organizations at the top, followed by internet searches, agents and brokers, and TV and radio. He said consumer groups reported little interaction with state insurance departments. He said it would be more impactful for state insurance departments to distribute information through community organizations in addition to the departments’ websites and social media. He said the Subgroup should consider adding to its 2022 charges completion of a survey on best practices by state insurance departments in communicating with consumers. Ms. Cude added that information could also be distributed via programs like income tax assistance. She said insurance department public information officers (PIOs) and other stakeholders may not be aware of materials on the Subgroup’s website.

Ms. Judy asked about what difficulties consumers have in understanding coverage. Ms. Cude said further conversations with community organizations would be helpful since they perceive that information is not understandable. Mr. Ting said few organizations felt their constituents check insurance department websites and that presentations to the groups would be beneficial. Ms. Kwei said Maryland had made or planned presentations to groups representing communities like LGBTQ individuals or rural residents.

Bonnie Burns (California Health Advocates) said consumer understanding of insurance terms is low. Mr. Ting said community organizations can be helpful in walking through concepts and definitions, and Ms. Cude said prepared content can help in improving understanding. Ms. Burns and Mr. Ting discussed the value of using employers, State Health Insurance Assistance Program (SHIP) counselors, and unemployment assistance staff in reaching consumers who need health insurance information.
Mr. Ting asked for reactions to the suggestion of new charges for a survey of best practices in consumer information. Ms. Watters suggested looking at entities external to state insurance departments as well. Ms. Cude said part of surveying state insurance departments could be asking about other agencies in their states or outside groups that do consumer communication well.

Ms. Ross said the Oklahoma Insurance Department has a section on its website with health options for the unemployed, including videos and updated information.

3. Discussed Future Work Products for the Subgroup

Ms. Kwei said the Subgroup has been waiting for further federal guidance on the federal No Surprises Act (NSA) before producing a guide on balance billing and asked for input on whether to move forward or continue to wait. Ms. Kruger said she is concerned that too little information is available. Ms. Judy said any document would have to be high-level because of differing state laws. Ms. Cude said a basic document with definitions and examples would be helpful. Ms. Judy said states with balance billing laws may already have that information available, so the Subgroup should build on what exists.

Ms. Kwei said the Subgroup traditionally updates its *Frequently Asked Questions About Health Care Reform* document by the beginning of Open Enrollment, coming on Nov. 1. She asked how the Subgroup should proceed this year, given the frequently asked questions (FAQ) addendum produced earlier in the year. Ms. Watters said the Beyond the Basics website has some updated information. The Subgroup discussed the extent of updates that are needed. Ms. Judy said the FAQ updates should take precedence over a guide on balance billing. Ms. Kwei suggested that Subgroup members could take sections of the FAQ, review them, and make suggested updates.

Ms. Cude said some links on the Subgroup website do not work and asked whether content on the NAIC’s consumer website is compatible with the Subgroup’s work.

Having no further business, the Consumer Information (B) Subgroup adjourned.

Con Info 8.24.21 Min
Health Care Bills: Codes and Claims

To get paid for medical care you receive, providers usually bill your health insurer directly using what’s known as a “claim” form. However, sometimes you may have to submit a claim yourself. To process a claim correctly, your insurer needs to know the billing codes for the medical care you received. You’ll need a detailed bill with billing codes from your provider to send with your claim.

Usually insurers pay claims. But, if your insurer denies a claim, it could be because you or your provider used the wrong billing code on the claim form. Knowing how codes are used can help you get your bill paid.

How are billing codes used on a claim?

Providers use billing codes to describe the service(s) you received. The codes let providers send insurers very detailed information in a condensed way.

There are different types of billing codes. Two types are:

- **Diagnosis codes**, which also may be called the ICD-10 codes. These codes describe the condition for which you received treatment. For example, E10.9 is the diagnostic code for Type 1 diabetes mellitus without complications.
- **Procedure codes**, which include but aren’t limited to Current Procedural Terminology ® (CPT) codes. These codes describe the treatment you receive. For example, CPT code 95251 is the procedure code for “ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation, and report.” You might refer to this simply as glucose monitoring.

Hospitals and other facilities also use billing codes to bundle a group of codes and charge one fee for the various items and services provided. An example is Diagnosis-Related Group (DRG) 638 for Diabetes without complications or comorbidities.

Why would an insurer deny a claim based on a billing code?

An insurer may deny a claim for many reasons. A billing code could be one reason. An insurer could deny a claim if the billing code doesn’t exist, your policy doesn’t cover it, or if the code doesn’t match the other information in the claim.

For example, your provider’s billing office could use one of five different levels of codes to code a general visit to your family doctor. Which code it uses depends on the complexity or length of your visit. The insurer could deny the claim if the doctor’s office bills for a higher-level code than the medical record describes. Or, it could ask the doctor’s office to re-submit the claim with a lower-level code.

If your insurer denies your claim, you should call your insurer to ask questions. If the billing codes were the reason for the denial, ask your provider’s billing office to check the code(s) submitted and re-submit the claim.

You also can file an appeal of a denied claim. See the companion guide Health Care Bills: How To Appeal A Denied Claim.
Health Care Bills: Explanation of Benefits

After you receive medical care, your health insurer will send you information about your claim in an Explanation of Benefits or EOB. The EOB is not a bill. It’s the insurer’s explanation of how the costs of services are shared between you and the insurer.

What does an EOB tell me?

An EOB tells how much each provider charged, how much the health insurer paid, and how much you owe each provider. Be sure to compare the “owed” amounts on the EOB with amounts on bills from your providers and what you’ve already paid.

What does an EOB look like?

Not all EOBs look alike, but here are a few things to look for on your EOB.

- *Information about the person who received the services.* This includes the health insurance ID number and the member name, sometimes identified as “patient.” If it’s your insurance, the EOB often refers to the patient as “self.” If the insurance is through your spouse or your parent, then their name will be on the EOB.
• A list of services received, including the dates you received them. There also may be billing codes. (See companion guide Health Care Bills: Codes and Claims.) If those aren’t on the EOB, there should be notes about how to get the codes if you need or want them.

• Information about the provider or facility. This will name the person (doctor, nurse practitioner, psychologist, physical therapist) or facility (laboratory, hospital) that provided the service.

• The amount the provider or facility billed the insurer.

• The “allowed” amount. This is the amount the insurer will pay the provider for the health care you received. The allowed amount is negotiated between the provider and the insurer.

• The amount the insurer paid for each service.

• The amount you owe the provider. This may include money you paid during your visit.

• Information about denials and other details or notes. The insurer may use codes to explain denial reasons and notes. You should see an explanation of the codes on the EOB.

How else is an EOB helpful?

An EOB is an important tool to help you track how much you’ve spent out-of-pocket for covered health care costs. That helps you know how far along you are in meeting your deductible and out-of-pocket limit for the year. If you’ve reached your out-of-pocket limit and you’re asked to pay for services, you should contact your insurer right away.

You’ll also find instructions on your EOB to file a grievance or appeal if the insurer denies coverage for services or only pays part of the claim.

Who receives an EOB?

Usually, the insurer sends the EOB to the primary person on the health plan. If an employer provides the insurance, the employee usually receives the EOB, including EOBs for a spouse and dependents on the plan.

You may ask the insurer to send your EOBs to a different address for confidential services or if the information on an EOB would put you in danger.
Health Care Bills: Filing Health Insurance Claims

When you receive medical care, you usually pay the provider (doctor, hospital, therapist, etc.) your share of the bill. You expect your health insurer to pay the rest of the bill. To get that payment, the provider files a claim with your insurer.

But sometimes you may have to file a claim with the insurer yourself. This could happen if you see an out-of-network provider or if the provider doesn’t accept your insurance.

If you need to file your own health insurance claim, here’s what you need to know:

**How do I file a claim with my insurer?**

You’ll find a claim form on most health insurers’ websites, along with information on how to submit the claim. Look at your health insurance card for your insurer’s website or a phone number to call for information about filing a claim.

**What will I need?**

You will need the following to file a claim:

- **An itemized bill from your health care provider.** Ask the provider for this. The bill should include the date you received care and a list of services you received with the provider’s charge and a description and/or billing code for each service.
- **Your personal information,** including your social security number, your health insurance ID number, and, if you received medical care due to an accident or illness at work, your employment status.
- **Whether to send payment directly to the provider or to you.** If the insurer sends the payment to you, you’re responsible for paying the provider.

**When do I file the claim?**

File the claim as soon as possible after you receive the medical care. Many insurers have a deadline to file a claim, such as no more than 90 days after you receive care.

**Where do I submit the claim?**

Look for an address on the claim form. If it's not there, check the insurer’s website and the back of your health insurance card or call your insurer.

**What happens after I file the claim?**

After you file the claim, the insurer has a limited time to tell you if it will pay the claim. How long the insurer has varies by state.
After the insurer reviews the claim, it will send you an Explanation of Benefits or EOB (See companion guide Health Care Bills: Explanation of Benefits). If the insurer is paying the claim, it will send the payment as you directed, either to the provider or to you.

Your health care provider may send you a bill before the insurer has reviewed the claim. If so, call the provider’s billing office. Ask to delay payment until after the claim is processed. Check the EOB to know the correct amount you owe the provider.
Health Care Bills: How to Appeal a Denied Claim

When you receive medical care, either you or your provider (doctor, hospital, therapist, etc.) must file a claim with your health insurer. Often, the provider files the claim. Most of the time, the insurer pays the claim. But, sometimes the insurer refuses to pay part or all of the claim for services you believe should have been covered. You have a right to appeal that decision.

There are two types of appeals—an internal appeal and an external review.

Here are the steps you can take if your insurer denies a claim

File an Internal Appeal

You file an internal appeal to ask your insurer to review a decision to deny a claim. You have up to six months (180 days) after you learn a claim was denied to file an internal appeal.

- To learn how to file an internal appeal, look at the claim denial or call the customer service number on your insurance card/materials.
- An internal appeal usually requires you to write a letter. Be sure to include in the letter your name, claim number, and health insurance ID number, and any other information you have to support your claim. (See reverse side for sample letter.)
- If the insurer denied a claim for a medical reason, you’ll need your health care provider’s help to file an appeal. Ask your provider to write a letter explaining why the care was medically necessary. Send that letter with your appeal.

After it receives your appeal, the insurer has a set amount of time to review it and make a decision. How much time the insurer has varies by state. If a delay in receiving medical care could harm your life, health, or ability to function, you can ask that the appeal be reviewed quickly (“on an expedited basis”).

And if your insurer still says “No”....

File an External Review

If your insurer still denies the claim after the internal appeal, you can ask for an external review. An independent review organization will do the external review. You may have a limited time to ask for an external review after you receive the decision from your internal appeal.

- You should find the information about how to ask for an external review on your internal appeal notice.
- Your state’s insurance regulatory agency is usually in charge of the external review process.
- You can submit information you didn’t include in your internal appeal to support your position.
- The external reviewer has a limited time to reach a decision.
- The external reviewer will give you and your insurer a written notice of its decision.
- The insurer must pay the claim if the external reviewer decides the insurer should.

Things to Keep in Mind

Medicare and Medicaid

If you’re enrolled in Medicare or Medicaid, there are different rules for appeals.

- For Medicare, call 1-800-MEDICARE to ask for information about free help to appeal a decision.
- For Medicaid, contact your state’s Medicaid agency for help.

Keep Records

Keep detailed records, including bills from your provider, notices from your insurer, copies of denial letters, appeal requests, and medical information related to your case.

Take Detailed Notes and Set Response Deadlines

Keep notes about the dates/times of all calls and other communication, names of people with whom you had
conversations, and details of all conversations. Ask about and make notes of any set deadlines for expected responses or information from your insurer.

Sample letter to request an internal appeal
Add your own information when you see italics below.

Re: Name of Insured
Plan ID#:
Claim #:

To Whom It May Concern:

I am writing to request a review of your denial of the claim for treatment or services provided by name of provider on date provided.

The reason for the denial was listed as (reason listed for denial), but I have reviewed my policy and believe the service should be covered. Here is where you may provide more detailed information about the situation. Write short, factual statements. Do not include emotional wording. If you’re including documents, include a list of what you’re sending here.

If you need additional information, I can be reached at telephone number and/or e-mail address. I look forward to receiving your response as soon as possible.

Sincerely,

Signature

Health Care Bills: Understanding Medical Necessity

What is medical necessity?

Typically, health insurance plans only provide benefits for treatments or services that are “medically necessary.” So, what does that mean?

Your policy will define medically necessary. But usually “Medically necessary” or “medical necessity” means health care a prudent physician, using professional standards and judgment, would give a patient. These are services that:

- Evaluate, diagnose, or treat an illness, injury, disease, or its symptoms;
- Follow generally accepted standards of medical practice;
- Are “clinically appropriate,” meaning the level of care would be effective to treat the patient’s illness, injury, or disease;
- Aren’t primarily for the convenience of the patient, health care provider, or insured’s family;
- Don’t cost more than another service or series of services that would be at least as effective; and
- Are not for experimental, investigational, or cosmetic purposes.

How does medical necessity affect coverage of my health care services?

Medical necessity limits health insurance payments for cosmetic procedures, treatments that haven’t been proven to be effective, or treatments that are more expensive than others that also are effective.

How is “medical necessity” determined?

A doctor’s prescription or order for a service is the first evidence of medical necessity. If the insurer asks for more proof that the claim meets the standard for medical necessity, it may ask your doctor or other provider for a “Letter of Medical Necessity.” The request for a letter typically is part of a “certification” or “utilization review” process. This process lets the insurer review medical services to decide if they cover the service. This can be done before, during, or after the treatment.

In a “precertification review,” the insurer decides if the requested treatment satisfies the plan’s requirements for medical necessity before the treatment is provided. The insurer typically reviews the Letter of Medical Necessity, medical records, and the plan’s medical policy.

In a “concurrent review,” the insurer decides if the treatment is medically necessary while it’s ongoing.

In a “retrospective review,” the insurer decides if services already provided were medically necessary or, in the case of emergency services, whether they truly required emergency care. The decision is made after you receive the treatment.

What are medical guidelines?

All insurers follow guidelines that determine if a treatment is within accepted standards in the medical community. An insurer must make its medical guidelines available to you if it used them to make a decision to deny you coverage.

Are experimental, investigational, or cosmetic services medically necessary?
Some definitions of medical necessity specifically exclude services for “experimental, investigational, or cosmetic purposes.” An insurer’s medical guidelines determine if a treatment is considered experimental for your condition. An insurer also follows its medical guidelines to decide if treatments that could be considered cosmetic also have a medical purpose. Insurers may use medical records to decide if services are medically necessary, but they also may base decisions on the available scientific literature.

**Does medical necessity affect coverage for emergency services?**

After you receive emergency services, insurers may review your care to decide if emergency care was appropriate for your diagnosis and medically necessary. To decide, insurers use a “prudent layperson” standard. Getting approval before you receive medical services (precertification) isn’t necessary if a prudent layperson would believe there was an emergency condition and delaying treatment would make that condition worse.
The Health Innovations (B) Working Group met in San Diego, CA, Dec. 11, 2021. The following Working Group members participated: Andrew R. Stolfi, Chair, and TK Keen (OR); Laura Arp, Co-Vice Chair, and Martin Swanson (NE); Nathan Houdek and Jennifer Stegall, Co-Vice Chairs (WI); Andria Seip (IA); Julie Holmes (KS); Robert Wake (ME); Cynthia Anman (MO); Jon Godfread (ND); Maureen Belanger (NH); Paige Duhamel (NM); David Buono and Shannen Logue (PA); Chris Herrick (TX); Tanji J. Northrup (UT); Molly Nollette (WA); and Joylynn Fix (WV). Also participating were: Lori K. Wing-Heier (AK); David Altmaier and Chris Struk (FL); Weston Trexler (ID); Stephanie McGee (NV); and Glen Mulready (OK).

1. Heard a Presentation on Health Plan Efforts to Address Health Disparities

Commissioner Stolfi reviewed the changes the Working Group received from the Special (EX) Committee on Race and Insurance. He said the Working Group plans to evaluate existing research on the health disparities impacts of telehealth and alternative payment models and hear from stakeholders on these topics.

Dr. John Lumpkin (Blue Cross and Blue Shield of North Carolina—BCBS NC) described his organization’s work to develop a health equity index score. He shared a statement from BCBS NC that says, “[n]o community can truly be healthy until racism no longer exists.” He said North Carolina counties can be divided into tiers based on their economic distress. He said a health equity index can provide accountability to measure what works. He said BCBS NC’s index measures both racial and economic disparities and currently shows a summary score for overall equity of 87%. He said the index score would be used to support BCBS NC’s priorities of improved data on race, ethnicity, and language; improve maternal care; increase behavioral health access; and increase immunizations and wellness visits. He described an example of work to improve maternal health, particularly for Black Americans.

Commissioner Stolfi asked how other states can develop similar health equity index scores. Dr. Lumpkin said health insurance plans cannot do it alone, and states should work with a range of stakeholders to develop coordinated measures. Commissioner Stolfi asked what strategies BCBS NC has used to collect data. Dr. Lumpkin said the biggest challenge in developing the index was that race and ethnicity data are not readily available. He said some data is self-reported by enrollees, and other data is calculated, but the best data is reported by consumers. Commissioner Stolfi asked what state insurance regulators can do to support industry efforts to reduce health disparities. Dr. Lumpkin said there must be an open partnership between state insurance regulators and regulated plans.

Dr. Darrell Gray (Anthem) presented on the company’s efforts to improve health equity. He said Anthem has an integrated approach to whole health that includes physical, behavioral, social, and pharmacy health and incorporates consumers, communities, and associates. He described the difference between equality and equity, and he said Anthem’s approach to equity is data-driven, inclusive, and nimble. He stressed the importance of addressing a variety of needs, including upstream (poverty, racism, and discrimination), midstream (housing, transportation, and violence), and downstream (chronic disease, poor nutrition, and poor mental health). He said Anthem is working to develop a Whole Health Index that includes measures of global health, social drivers, and clinical quality. He described three steps for identifying social needs, coordinating social care, and creating social interventions. He said health-related social needs contribute to 70–80% of clinical outcomes, while clinical care contributes only 20%.

Ms. Seip asked in what markets Anthem is applying its social interventions. Dr. Gray said the company’s goal is to deploy them across all public and private markets in which it operates. Mr. Houdek asked what length of time the company expects to move from the first step of identifying social needs to the third step of creating social interventions. Dr. Gray said it varies greatly by the type of need, the population, and the insurance market being served. Commissioner Stolfi asked how state insurance regulators can support industry efforts to reduce health disparities. Dr. Gray said assisting with data definition and collection efforts would be helpful since the company does not have complete self-reported data on race and ethnicity or sexual orientation and gender identity. He said New York has been able to get better data on race and ethnicity in its individual market through updates to collection practices in its state-based exchange.
2. **Heard a Presentation on the Health Disparities Impacts of Telehealth and Alternative Payment Models**

Kelly Edmiston (NAIC) presented the findings of research he conducted with the Center for Insurance Policy and Research (CIPR) colleagues on the health disparities impacts of the rise in telehealth services and the move to alternative payment models. He said the key take-away is that both telehealth and alternative payment models have the potential to improve health and reduce disparities, but they must evolve to do so because they are not there yet. He said prior to the pandemic, the share of claims delivered through telehealth was minimal, grew enormously early in the pandemic, and has since declined but not to pre-pandemic levels. He said telehealth can provide greater access to culturally competent care based on language, race, or gender. He said telehealth is especially effective for chronic conditions, which disproportionately affect vulnerable populations. He said the potential of telehealth is limited by restricted access to broadband connections. He said telehealth requires significant upfront costs, and uncertainty in payment policies can limit needed investments.

Mr. Edmiston said alternative payment models seek to reduce the incentive to overtreat and the disincentive to treat underserved populations, which occurs because underserved or vulnerable populations may need more low-margin care. He said value-based payment models are intended to reduce the cost of care without reducing quality or improve quality without increasing cost. He said research has not shown value-based payments to be effective in reducing disparities, despite the potential to do so. He said models can include social risk factors, but they are not currently sophisticated enough due to data limitations.

Mr. Keen asked whether any single telehealth technology platform has emerged and whether it allows medical records to be easily exchanged between patients and providers. Mr. Edmiston said the fast adoption of electronic health records is a good sign for telehealth. He said there are multiple models that exist for telehealth, and some have higher sales than others. He said basic digital literacy is more important than the technology used. Ms. Seip asked whether alternative payment models that incorporate social determinants of health have better outcomes than those that do not. Mr. Edmiston said research on Medicare Advantage showed small effects of accountable care organizations overall, and the measurement of social determinants is not adequate yet to reach a conclusion. Mr. Trexler asked whether payment parity rules are related to the needed investments in telehealth. Mr. Edmiston said some states have added parity requirements since the pandemic, and they may be temporary. He said this may limit providers’ willingness to make investments. Mr. Trexler asked whether telehealth could result in lower health care costs overall. Mr. Edmiston said telehealth use has leveled off in the last year and is likely here to stay. Mr. Wake said telehealth is different from in-person health care. He said Maine imposed temporary payment parity during the pandemic because telehealth needed to substitute for in-person care, but it does not always need to be a substitute. He said in cases where different services are provided through telehealth, payment parity is not appropriate because it is one-size-fits-all. He said telehealth providers need equity in payments, not equality. Ms. Arp asked about the age distribution of patients who use telehealth. Mr. Edmiston said consumers who use telehealth tend to be older than those who do not, and non-white populations are less likely to use it. He said urban consumers are more likely to use it, potentially due to a lack of broadband access in rural areas. Ms. Arp said state insurance regulators could look at telehealth as a bonus, requiring in-person networks to be adequate while offering access to more culturally competent or specialized providers through telehealth.

3. **Discussed Other Matters**

Commissioner Stolfi said NAIC staff would ask the Working Group what questions the presentations raised and how else members would like to dig into the issues highlighted. In addition, NAIC staff would ask members how they want to move toward developing recommendations related to race and insurance work.

Having no further business, the Health Innovations (B) Working Group adjourned.
The Health Innovations (B) Working Group of the Health Insurance and Managed Care (B) Committee met Nov. 2, 2021. The following Working Group members participated: Andrew R. Stolfi, Chair, TK Keen, and Cassie Soucy (OR); Laura Arp, Co-Vice Chair (NE); Nathan Houdek and Jennifer Stegall, Co-Vice Chairs, Barbara Belling, Diane Dambach, Mark Prodoehl, Rebecca Rebholz, Julie Walsh, and Richard Wicka (WI); Howard Liebers (DC); Andria Seip and Cynthia Banks Radke (IA); Meghann Leaird and Scott Shover (IN); Craig Van Aalst, LeAnn Crow, Julie Holmes, Brenda Johnson, and Tate Flott (KS); Renee Campbell, Karen Dennis, and Stephanie Francis (MI); Cam Jenkins, Andrew Kleinendorst, and Gregory Maus (MN); Chris Murrah, Amy Hoyt, and Jessica Schrmpf (MO); Chrystal Bartuska and Angie Voegele (ND); Michelle Heaton (NH); Philip Gennace (NJ); Colin Baillio, Sahar Hassanin, Bogdanka Kurahovic, and Viara Ianakieva (NM); Mark Garratt (NV); Jessica K. Altman, Katie Dzurec, Katie Merritt, and Sandra L. Ykema (PA); Rachel Bowden, Valerie Brown, Essi Eargle, Ryan Jaffe, R. Michael Markham, and Michael Nored (TX); Heidi Clausen, Tanji J. Northrup, and Jaakob Sundberg (UT); and Jane Beyer, Rory Paine-Donovan, and Molly Nollette (WA).

1. **Heard a Presentation on Using State Rate Review Authority to Limit Premium Growth**

Commissioner Stolfi said states have a number of tools to address health insurance prices and premium affordability. He introduced Professor Erin Fuse Brown of Georgia State University, who wrote a toolkit on using rate review to address premium affordability. Professor Fuse Brown said the toolkit is intended to help other states follow a model that Rhode Island employed to limit growth in health insurance premiums.

Professor Fuse Brown said the main determinant of health care prices is consolidation and the market power of providers, not utilization or health status. She said hospital costs can be limited by using insurance rate review authority, even if it is a circuitous route for doing so. She explained that Rhode Island’s affordability standard capped increases in hospital rates, which reduced growth in inpatient spending and total spending. She said steps could employ a number of steps to follow Rhode Island’s approach: assess existing authority, pass revised rate review authority, and adopt regulations to implement new standards. She said statutory language should give the insurance commissioner authority to protect the consumers and the public interest. She suggested that regulations could be used to establish an affordability standard which could be tied to overall inflation and potentially split between inpatient and outpatient services.

Professor Fuse Brown acknowledged that enhanced affordability review requires greater resources from insurance departments. She said that hospital prices are a reasonable place to start that helps to avoid taking on the entire market for health care services. She said that using one affordability standard does not address redistributing resources to provide greater revenue to critical access hospitals, rural hospitals, or others the state wants to support.

Commissioner Stolfi asked how states can enforce limits to hospital rates when insurance regulators have authority over insurers, but not hospitals directly. Professor Fuse Brown said that an affordability standard in law gives insurers a stronger position in negotiations with hospitals. Eric Ellsworth (Consumer Checkbook) asked how the standard could be adjusted for critical access or rural hospitals. Professor Fuse Brown said that a waiver process or other flexibility could be used to address these types of hospitals, but doing so can create political difficulty. Commissioner Altman asked about the impact of implementing an affordability standard only in the individual and small group markets. Professor Fuse Brown said it may be worth starting in these markets and there may be positive spill-overs to the large group market if the same contracts are used across markets.

2. **Heard a Presentation on State Policy Considerations with Enhanced Premium Tax Credits**

Commissioner Stolfi introduced Jason Levitis and Daniel Meuse (State Health and Value Strategies) to discuss how the larger premium tax credits affect premium affordability and choices states have in responding.

Mr. Meuse said the temporary tax credit changes change the calculus for state efforts to reduce the base level of premiums. He said the Build Back Better Act would extent those credits through 2025. He emphasized the importance of building flexibility into state policies so they can work if the enhanced credits stay in place or if they go away. He said some states provided their
own subsidies prior to the availability of enhanced federal subsidies. He explained how federal subsidies have been enhanced, increasing the value of the subsidies and making them available to many people who were previous ineligible.

Mr. Levitis described how the Build Back Better Act would extend the enhanced subsidies for three additional years and make other changes. He said continued uncertainty is likely, particularly because the enhanced subsidies would not be made permanent. He said states do not need to refrain from action due to the uncertainty. He reviewed several policy options. He said additional state subsidies are no longer as helpful. He said cost sharing assistance is more valuable for enrollees. He said the family glitch could be addressed through federal administrative action. He said states could target subsidies for younger consumers or undocumented residents. He said to deal with uncertainty and changing circumstances, states can provide administrative authority for state regulators or a state-based marketplace to set affordability parameters year by year.

Mr. Meuse said states may want to shift away from premium reduction and toward plan generosity, stronger networks, and higher actuarial value within allowable limits. He said enhanced tax credits reduce concerns with Section 1332 waiver deficit neutrality requirements and increase the funds available. He said states with existing reinsurance programs are getting greater funding, but may not be impacting consumers as much as they did previously.

Mr. Levitis said states can make use of facilitated enrollment and greater outreach with or without enhanced premium subsidies.

3. **Discussed Work on Race and Insurance**

Commissioner Stolfi asked members and interested parties for input on presentations for the Working Group’s session at the Fall National Meeting. He said the session would focus on the Working Group’s charges from the Special Committee on Race and Insurance, particularly around telehealth, alternative payment models, and their impacts on health disparities.

Having no further business, the Health Innovations (B) Working Group adjourned.
2022 Proposed Charges

HEALTH INSURANCE AND MANAGED CARE (B) COMMITTEE

The mission of the Health Insurance and Managed Care (B) Committee is to consider issues relating to all aspects of health insurance.

Ongoing Support of NAIC Programs, Products or Services

1. The Health Insurance and Managed Care (B) Committee will:
   A. Respond to inquiries from the U.S. Congress (Congress), the White House, and federal agencies; analyze policy implications and their effect on the states of proposed and enacted federal legislation and regulations; and communicate the NAIC’s position through letters and testimony, when requested.
   B. Monitor the activities of the Health Actuarial (B) Task Force.
   C. Monitor the activities of the Regulatory Framework (B) Task Force.
   D. Monitor the activities of the Senior Issues (B) Task Force.
   E. Serve as the official liaison between the NAIC and the Joint Commission on Accreditation of Healthcare Organizations (Joint Commission), the National Committee for Quality Assurance (NCQA), and the Utilization Review Accreditation Commission (URAC).
   F. Examine factors that contribute to rising health care costs and insurance premiums. Review state initiatives to address cost drivers.
   G. Coordinate with appropriate Market Regulation and Consumer Affairs (D) Committee groups, as necessary, on health benefit plan and producer enforcement issues.
   H. Coordinate with the Market Regulation and Consumer Affairs (D) Committee, as necessary, to collect uniform data and monitor market conduct trends on plans that are not regulated under the federal Affordable Care Act (ACA), including short-term, limited-duration (STLD) insurance, association health plans (AHPs), and packaged indemnity health products.

2. The Consumer Information (B) Subgroup will:
   A. Develop information or resources, as needed, that would be helpful to state insurance regulators and others in assisting consumers to better understand health insurance.
   B. Review NAIC publications that touch on health insurance to determine if they need updating. If updates are needed, suggest specific revisions to the appropriate NAIC group or NAIC division to make the changes.

3. The Health Innovations (B) Working Group will:
   A. Gather and share information, best practices, experience, and data to inform and support health innovation at the state and national levels, including, but not limited to, state flexibility options through the ACA and other health insurance-related policy initiatives.
   B. Discuss state innovations related to health care—i.e., access, insurance plan designs, underlying medical and prescription drug costs, stability for health care and insurance as a whole, health insurer and provider consolidation or competition, the use of data in regulatory and policy decision-making, and health care delivery and financing models—to achieve better patient outcomes and lower spending trends.
   C. Explore sources and methods for state insurance regulators to obtain data to inform health reform initiatives.
   D. Disseminate materials and reports, via the NAIC, to the states and the U.S. territories wishing to utilize the information gathered by the Working Group.
   E. Take up other matters as directed by the Health Insurance and Managed Care (B) Committee.

NAIC Support Staff: Jolie H. Matthews/Brian R. Webb/Jennifer R. Cook

The Health Actuarial (B) Task Force met Nov. 29, 2021. The following Task Force members participated: Eric A. Cioppa, Chair, represented by Marti Hooper (ME); Andrew N. Mais, Co-Vice Chair, represented by Paul Lombardo (CT); Jonathan T. Pike, Co-Vice Chair, represented by Jaakob Sundberg (UT); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Lan Brown (CA); Michael Conway represented by Eric Unger (CO); Colin M. Hayashida represented by Kathleen Nakasone (HI); Dean L. Cameron represented by Weston Trexler (ID); Vicki Schmidt represented by Nicole Boyd (KS); Anita G. Fox represented by Kevin Dyke (MI); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Michael Muldoon (NE); Marlene Caride represented by Seong-min Eom (NJ); Russell Toal (NM); Judith L. French represented by Laura Miller (OH); Glen Mulready represented by Andrew Schallhorn (OK); Jessica K. Altman represented by Shannen Logue (PA); Carter Lawrence represented by Brian Hoffmeister (TN); Cassie Brown represented by R. Michael Markham (TX); Scott A. White represented by David Shea (VA); Mike Kreidler represented by Lichiou Lee (WA); Mark Afable represented by Rebecca Rebholz (WV); and Allan L. McVey represented by Joylynn Fix (WV).

1. Adopted its Sept. 14 Minutes

The Task Force met Sept. 14 and took the following action: 1) adopted its April 23 and April 6 minutes and the May 17 and March 29 minutes of the Long-Term Care Actuarial (B) Working Group; 2) disbanded the Health Care Reform Actuarial (B) Working Group and the State Rate Review (B) Subgroup; 3) adopted its 2022 proposed charges; and 4) discussed its proposal to revise instructions for the Health Annual Statement of Actuarial Opinion (SAO).

Mr. Lombardo made a motion, seconded by Mr. Leung, to adopt the Task Force’s Sept. 14 minutes (Attachment One). The motion passed unanimously.

2. Heard an Update from the Federal CCIIO

Megan Mason (federal Center for Consumer Information and Insurance Oversight—CCIIO) presented an update (Attachment Two) on a system connection between the System for Electronic Rates & Forms Filing (SERFF) and the Health Insurance Oversight System (HIOS) Unified Rate Review (URR) module.

3. Heard an Update on SOA Health Care Trend Research

Dale Hall (Society of Actuaries—SOA) gave an update (Attachment Three) on SOA health care trend research.

4. Heard an Update from the Academy Health Practice Council

Barb Klever (American Academy of Actuaries—Academy) gave an update (Attachment Four) on Academy Health Practice Council activities.

5. Heard an Update from the Academy and the SOA Research Institute on an LTCI Mortality and Lapse Study

Warren Jones (Academy—Retired) and Bruce Stahl (Reinsurance Group of America—RGA) gave an update (Attachment Five) on a long-term care insurance (LTCI) mortality and lapse study.

6. Discussed a Proposal to Revise Instructions for the Health Annual Statement SAO

Ms. Hooper said the Task Force submitted a proposal for changes to instructions for the Health Annual SAO related to the definition of “actuarial assets” to the Blanks (E) Working Group in May. She said the Actuarial Standards Board (ASB) received comments while exposing Actuarial Standard of Practice (ASOP) No. 28 that indicated some actuaries believe the NAIC Health Annual Statement instructions regarding SAOs are not in concert with the proposed ASOP. She said the Annual Statement instructions specifically address the treatment of actuarial liabilities but not actuarial assets. She said to avoid future confusion on the matter, the Task Force intends to update the wording for the 2022 instructions to clarify that both actuarial liabilities and assets should be considered in the opinion. She said the proposal was submitted past the deadline for inclusion in the 2021 Annual Statement instructions, but the Task Force views this as a clarification and not a change in practice; actuaries...
should be considering actuarial assets when making SAOs. She said the Task Force sent a letter to the Working Group in June requesting that this clarification be included as guidance for completion of 2021 Health Annual Statement SAOs. She said the Task Force will schedule a meeting to discuss the proposal as it stands and any additional items that should be included in the 2022 Health Annual Statement instructions.

Ms. Hooper said the Task Force was asked by the Senior Issues (B) Task Force for input on the impact on Medicare supplement insurance plans by the addition of dental, hearing, and vision benefits to Medicare Part B. Brian R. Webb (NAIC) said at this time, only hearing benefits are being considered for coverage under Medicare Part B by federal legislators. Ms. Hooper said Maine recently added hearing aid coverage for adults as a mandated benefit in its federal Affordable Care Act (ACA) major medical insurance plans. She said this benefit was not added to Medicare supplement plans, as was erroneously reported by various sources. She said the possibility of the availability of non-prescription hearing aids could reduce the pricing impact of the addition of hearing benefits to Medicare Part B. She said the Task Force will be available to provide input in the event that hearing coverage is added.

Mr. Sundberg said the financial impact on Medicare supplement plans of the addition of hearing benefits does not concern him, but the addition of vision and dental benefits is of financial significance, and the Task Force should examine the potential impacts of these additions.

8. Heard an Update on STLD Insurance Plans in Idaho

Mr. Trexler gave a presentation (Attachment Six) on short-term, limited-duration (STLD) insurance plan experience in the Idaho market.

Having no further business, the Health Actuarial (B) Task Force adjourned.

https://naiconline.sharepoint.com/w:/r/sites/NAICSupportStaffHub/Member%20Meetings/Fall%202021/TF/HealthActuarial/Conference%20Calls/11-29%20HATF/11-29-21%20HATF.docx?d=w873e3a43feb64a3691b6a759848004b7&csf=1&web=1&src=0b62Fv
Health Actuarial (B) Task Force
Virtual Meeting
September 14, 2021

The Health Actuarial (B) Task Force met Sept. 14, 2021. The following Task Force members participated: Eric A. Cioppa, Chair, represented by Marti Hooper (ME); Andrew N. Mais, Co-Vice Chair, represented by Paul Lombardo (CT); Jonathan T. Pike, Co-Vice Chair, represented by Jaak Sundberg (UT); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Lan Brown (CA); Michael Conway represented by Eric Unger (CO); Colin M. Hayashida represented by Kathleen Nakasone (HI); Dean L. Cameron represented by Weston Trexler (ID); Dana Popish Severinghaus represented by Eric Anderson (IL); Amy L. Beard represented by Stephen Chamblee (IN); Anita G. Fox represented by Kevin Dyke (MI); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Michael Muldoon (NE); Marlene Caride represented by Seong-min Eom (NJ); Russell Toal (NM); Glen Mulready represented by Andrew Schallhorn (OK); Jessica K. Altman represented by Tracie Gray (PA); Carter Lawrence (TN); Doug Slape represented by Barbara Snyder (TX); Scott A. White represented by David Shea (VA); and Mike Kreidler represented by Lichiou Lee (WA).

1. **Adopted its April 23 and April 6 Minutes, and the May 17 and March 29 Minutes of the Long-Term Care Actuarial (B) Working Group**

Mr. Toal made a motion, seconded by Mr. Leung, to adopt the Task Force’s April 23 (Attachment One-A) and April 6 (Attachment One-B) minutes, and the May 17 (Attachment One-C) and March 29 (Attachment One-D) minutes of the Long-Term Care Actuarial (B) Working Group. The motion passed unanimously.

2. **Adopted a Motion to Disband the Health Care Reform Actuarial (B) Working Group and the State Rate Review (B) Subgroup**

Mr. Shea said the functions of the Health Care Reform Actuarial (B) Working Group and the State Rate Review (B) Subgroup can be performed at the Task Force level. He made a motion, seconded by Mr. Dyke, to disband both the Working Group and the Subgroup. The motion passed unanimously.

3. **Adopted its Proposed 2022 Charges**

Ms. Eom made a motion, seconded by Mr. Shea, to adopt its 2022 proposed charges (Attachment One-E). The motion passed unanimously.

4. **Discussed its Proposal to Revise Instructions for the Health Annual Statement SAO**

Mr. Sundberg said the Task Force needs to revisit its proposal to revise the language in Section 4, Section 5, Section 7 and Section 9 of the instructions for the health Statement of Actuarial Opinion (SAO) to ensure that all items—actuarial assets and liabilities—within the scope of the SAO are treated consistently, and provide a final recommendation to the Blanks (E) Working Group. Ms. Hooper said the Task Force will begin work on this.

Having no further business, the Health Actuarial (B) Task Force adjourned.
The Health Actuarial (B) Task Force met April 23, 2021. The following Task Force members participated: Eric A. Cioppa, Chair, represented by Marti Hooper (ME); Andrew N. Mais, Co-Vice Chair, represented by Paul Lombardo (CT); Jonathan T. Pike, Co-Vice Chair, represented by Jaak Sundberg (UT); Lori K. Wing-Heier represented by Sarah Bailey (AK); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Perry Kupferman (CA); Michael Conway represented by Eric Unger (CO); Colin M. Hayashida represented by Kathleen Nakasone (HI); Dean L. Cameron represented by Weston Trexler (ID); Dana Popish Severinghaus represented by Eric Anderson (IL); Anita G. Fox represented by Kevin Dyke (MI); Grace Arnold represented by Julia Lyng (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Michael Muldoon (NE); Marlene Caride represented by Seong-min Eom (NJ); Russell Toal (NM); Judith L. French represented by Laura Miller (OH); Glen Mulready represented by Andrew Schallhorn (OK); Jessica K. Altman represented by Tracie Gray (PA); Doug Slape represented by Barbara Snyder (TX); Scott A. White represented by David Shea (VA); Mike Kreidler represented by Lichiou Lee (WA); Mark Afable represented by Brian Brown (WI); and James A. Dodrill represented by Joylynn Fix (WV).

1. Exposed a Proposal to Revise the Instructions for the Health SAO

Ms. Hooper said the Task Force received several comment letters in response to an exposure of a proposal to revise the language in Section 4, Section 5, Section 7 and Section 9 of the instructions for the health Statement of Actuarial Opinion (SAO) to ensure that all items—actuarial assets and liabilities—within the scope of the SAO are treated consistently.

Mr. Leung gave a summary of comments from Missouri (Attachment One-A1).

Ms. Lee gave a summary of comments from Washington (Attachment One-A2). Annette James (NovaRest Actuarial Consulting) suggested that “actuarial asset” and “actuarial liability” be defined as:

“Actuarial asset” means an actuarial item presented as an asset in the annual statement and included in the scope of the Statement of Actuarial Opinion.

“Actuarial liability” means an actuarial item presented as a liability in the annual statement and included in the scope of the Statement of Actuarial Opinion.

The Task Force agreed to include these definitions in the revisions to the proposal.

Barbara Klever (Blue Cross Blue Shield Association—BCBSA) gave a summary of comments from the BCBSA (Attachment One-A3). The Task Force agreed to the suggested change to Section 7.C.

Marc Lambright (Oliver Wyman) gave a summary of comments from the American Academy of Actuaries (Academy) (Attachment One-A4).

James Braue (UnitedHealth Group—UHG) gave a summary of comments from the UHG (Attachment One-A5).

The Task Force agreed to expose the proposal with the revisions discussed during the meeting (Attachment One-A6) for a public comment period ending May 7.

Having no further business, the Health Actuarial (B) Task Force adjourned.
Mr King,

Missouri has the following comments regarding the Health Statement of Actuarial Opinion Instructions Change Proposal, together with suggested changes in the attached redlined proposal:

1. The original requirement in Section 7C that the amounts carried in the balance sheet on account of the items identified above ... are at least as great as the minimum aggregate amounts required by any state, refers to the reserve and liabilities identified. The inclusion of actuarial assets in Sections 4 and 5 makes the opinion expressed on minimum aggregated amounts confusing. If not clarifying, one may think that a minimum amount of actuarial asset is required. A simple way to address the issue is to continue the prescribed language in the opinion with the understanding that actuarial assets are simply actuarial liabilities of negative value and the opinion is about the reasonableness and adequacy of actuarial liabilities or reserves reported. This change will make the original proposed revisions to Section 7D and Section 9 unnecessary.

2. Another simplification in Section 9 is simply refer to “the reserves or assets included in the of the opinion for a certain item or items in question” as “the amounts for a certain item or items in question.”

https://naiconline.sharepoint.com/:b:/r/sites/NAICSupportStaffHub/Member%20Meetings/Summer%202021/TF/HealthActuarial/Conference%20Calls/4-23%20HATF/Exposure%20Comments/MO%20Comments.pdf?csf=1&web=1&e=Ytza3e
Section 1C.

The Actuarial Memorandum and underlying actuarial work papers supporting the Actuarial Opinion will be available for regulatory examination for seven years.

The Actuarial Memorandum contains significant proprietary information. It is expected that the Memorandum will be held confidential and is not intended for public inspection. The Memorandum must be available by May 1 of the year following the year-end for which the opinion was rendered or within two weeks after a request from an individual state commissioner.

The Actuarial Memorandum should conform to the documentation and disclosure requirements of the Standards of Practice as promulgated from time to time by the Actuarial Standards Board. The Actuarial Memorandum should contain both narrative and technical components. The narrative component should provide sufficient detail to clearly explain to company management, the regulator, or other authority the findings, recommendations and conclusions, as well as their significance. The technical component should provide sufficient documentation and disclosure for another actuary practicing in the same field to evaluate the work. This technical component must show the analysis from the basic data, (e.g., claim lags) to the conclusions.

The Memorandum must also include:

- An exhibit which ties to the Annual Statement and compares the actuary’s conclusions to the carried amounts;
- Documentation of the required reconciliation from the data used for analysis to the Underwriting and Investment Exhibit, Part 2B;
- Any other follow-up studies documenting the prior year’s claim liability and claim reserve run-off as considered necessary by the actuary; and
- Documentation of the assumptions used for contract reserves, other actuarial liabilities, actuarial assets, and related items and any material changes to those assumptions from the assumptions used in the previous memorandum. Such documentation should address any studies which support the adequacy of any margin in such reserves.

Section 4.

The IDENTIFICATION section should specifically indicate the appointed actuary’s relationship to the company, qualifications for acting as appointed actuary, date of appointment, and should specify that the appointment was made by the Board of Directors, or its equivalent or by a committee of the Board.

A person who is not a Member of the American Academy of Actuaries but is recognized by the Academy as qualified must attach, each year, a copy of the approval letter from the Academy.

This section should contain only one of the following:

For a Member of the American Academy of Actuaries who is an employee of the organization, the opening paragraph of the opinion should contain all the following sentences if the appointed actuary is using the prescribed wording:

"I, (name and title of actuary), am an employee of (named organization) and a member of the American Academy of Actuaries. I was appointed by [named organization] and its (name of Board of Directors, or its equivalent, or
committee of the Board) to render an opinion with regard to loss reserves, actuarial liabilities, actuarial assets, and related items on [date of appointment] in accordance with the requirements of the annual statement instructions. I meet the Academy qualification standards for rendering the opinion.”

For a consultant who is a Member of the American Academy of Actuaries, the opening paragraph of the opinion should contain all the following sentences if the appointed actuary is using the prescribed wording:

“I, (name and title of consultant), am associated with the firm of (name of firm). I am a member of the American Academy of Actuaries and have been retained by the (name of organization) to render an opinion with regard to loss reserves, actuarial liabilities, actuarial assets, and related items. I was appointed on [date of appointment] in accordance with the requirements of the annual statement instructions. I meet the Academy qualification standards for rendering the opinion.”

For an employee other than a member of the American Academy of Actuaries, the opening paragraph of the opinion should contain both the following sentences if the appointed actuary is using the prescribed wording:

“I, (name and title), am an employee of (name of organization) and am recognized by the American Academy of Actuaries as qualified to perform actuarial valuations for organizations of this kind. I was appointed (name of organization) with regard to such valuations on loss reserves, actuarial liabilities, actuarial assets, and related items. I was appointed on [date of appointment] in accordance with the requirements of the annual statement instructions.”

For a consultant other than a member of the American Academy of Actuaries, the opening paragraph of the opinion should contain all the following sentences if the appointed actuary is using the prescribed wording:

“I, (name and title of consultant), am associated with the firm of (name of firm). I am recognized by the American Academy of Actuaries as qualified to perform actuarial valuations for organizations of this kind and have been retained by the (name of organization) with regard to such valuations on loss reserves, actuarial liabilities, actuarial assets, and related items. I was appointed by (name of organization) with regard to such valuations on loss reserves, actuarial liabilities, actuarial assets, and related items. I was appointed on [date of appointment] in accordance with the requirements of the annual statement instructions.”

Section 5.

The SCOPE section should contain only the following statement (including all specified lines even if the value is zero) if the appointed actuary is using the prescribed wording:

“I have examined the assumptions and methods used in determining loss reserves, actuarial liabilities, and related items listed below, as shown in the annual statement of the organization as prepared for filing with state regulatory officials, as of December 31, 20__.

A. Claims unpaid (Page 3, Line 1);
B. Accrued medical incentive pool and bonus payments (Page 3, Line 2);
C. Unpaid claims adjustment expenses (Page 3, Line 3);
D. Aggregate health policy reserves (Page 3, Line 4) including unearned premium reserves, premium deficiency reserves and additional policy reserves from the Underwriting and Investment Exhibit, Part 2D,
E. Aggregate life policy reserves (Page 3, Line 5);
F. Property/casualty unearned premium reserves (Page 3, Line 6);
G. Aggregate health claim reserves (Page 3, Line 7);
H. Any other loss reserves, actuarial liabilities, or related items presented as liabilities in the annual statement;
I. Specified actuarial items presented as assets in the annual statement.”

Items H and I are not intended to include the liabilities and assets associated with benefits provided to employees of the organization, or the organization’s directors or trustees, except to the extent that such benefits are provided through insurance or annuity contracts of a type that the organization is authorized to issue in the ordinary course of its business. For example, liabilities for employee pensions generally would not be within the scope of the Actuarial Opinion. However, if the organization is licensed to issue life insurance, then liabilities arising from life insurance policies or certificates issued by the organization to its employees would be within the scope of the Actuarial Opinion just as would the comparable liabilities arising from policies or contracts issued to unrelated parties.

If there are any items included in items H or I, they should be listed using appropriate annual statement captions and line references. The phrase “Not Applicable” should be placed under the item description for either item H or I if there is nothing to be listed. Any listings under items H and I do not constitute either “additional wording” or “revised wording” for purposes of the Table of Key Indicators.

If for either item H or item I there is more than one line item to be listed, the line items under the general H or I heading should be numbered sequentially.

The amounts of any assets listed under item I should be the gross amount of the asset (Page 2, Column 1 of the Annual Statement), not the net admitted amount (Page 2, Column 3).

For items A through G listed in the SCOPE section and each sub-line for items H and I, the item label should be followed by the amount of that item as reported in the annual statement. These stated amounts do not constitute either “additional wording” or “revised wording” for purposes of the Table of Key Indicators. Where the phrase “Not Applicable” is used in item H or item I, it means that there are no such items to be included in the Opinion, so there should be no value shown as a stated amount.

For example:

I. Specified actuarial items presented as assets in the annual statement, as follows:

1. Accrued retrospective premiums (Page 2, line 15.3, column 1)

Section 6.

The RELIANCE section should contain only one of the following if the appointed actuary is using the prescribed wording:

If the appointed actuary has examined the asset and liability records, the reliance section should include only the following statement:

“My examination included such review of the actuarial assumptions and actuarial methods and of the underlying basic asset and liability records and such tests of the actuarial calculations as I considered necessary. I also reconciled the underlying basic liability records to the Underwriting and Investment Exhibit, Part 2B of the company’s current annual statement.”

If the appointed actuary has not examined the underlying records, but has relied upon data (e.g., asset or liability records) prepared by the company, the reliance section should include only the following statement:

“In forming my opinion on [specify types of reserves] I relied upon data prepared by [name and title of company officer certifying liability records or other data] as certified in the attached statements. I evaluated that data for reasonableness and consistency. I also reconciled that data to the Underwriting and Investment Exhibit, Part 2B of the company’s current annual statement. In other respects, my examination included review of the actuarial assumptions and actuarial methods used and tests of the calculations I considered necessary.”

Attached to the appointed actuary’s opinion should be a statement by each person relied upon and a precise identification of the items subject to reliance. In addition, the persons on whom the appointed actuary relies shall
each provide a certification that precisely identifies the items on which the person is providing information and a statement as to the accuracy, completeness or reasonableness, as applicable, of the items. This certification shall include the signature, title, company, address and telephone number of the person rendering the certification, as well as the date on which it is signed.

Section 7.

The OPINION section should include only the following statement if the appointed actuary is using the prescribed wording:

“In my opinion, the amounts carried in the balance sheet on account of the items identified above:

A. Are in accordance with accepted actuarial standards consistently applied and are fairly stated in accordance with sound actuarial principles;

B. Are based on actuarial assumptions relevant to contract provisions and appropriate to the purpose for which the statement was prepared;

C. Meet the requirements of the Insurance Laws and regulations of the state of [state of domicile] and:

(Use of one the following phrases, as appropriate, is considered prescribed wording. Replacing “[list states]” with an actual list of states in parentheses is also considered prescribed wording.)

are at least as great as the minimum aggregate amounts required by any state in which the statement is filed

or

are at least as great as the minimum aggregate amounts required by any state with the exception of the following states [list states]. For each listed state a separate statement of actuarial opinion was submitted to that state that complies with the requirements of that state;

D. Make a good and sufficient provision for all unpaid claims and other actuarial liabilities of the organization under the terms of its contracts and agreements when such liabilities are considered in combination with any actuarial assets included in the scope of this opinion;

E. Are computed on the basis of assumptions and methods consistent with those used in computing the corresponding items in the annual statement of the preceding year-end; and

F. Include appropriate provision for all actuarial items that ought to be established.

The Underwriting and Investment Exhibit, Part 2B was reviewed for reasonableness and consistency with the applicable Actuarial Standards of Practice.

Actuarial methods, considerations, and analyses used in forming my opinion conform to the relevant Standards of Practice as promulgated from time to time by the Actuarial Standards Board, which standards form the basis of this statement of opinion.”

Section 9.

If the appointed actuary is able form an opinion that is not qualified, adverse or inconclusive as those terms are defined below, he or she should issue a statement of unqualified opinion. If the opinion is adverse, qualified or inconclusive, the appointed actuary should issue an adverse, qualified or inconclusive opinion explicitly stating the reason(s) for such opinion. In all circumstances the category of opinion should be explicitly identified in the TABLE of KEY INDICATORS section of the Actuarial Opinion.
An adverse opinion is an actuarial opinion in which the appointed actuary determines that the reserves and liabilities, when considered in combination with any assets included in the scope of the opinion, are not good and sufficient. (An adverse opinion does not meet item D of Section 7.)

When, in the actuary’s opinion, the reserves or amount of a certain item (or items) are in question because they cannot be reasonably estimated or the actuary is otherwise unable to render an opinion on those items, the actuary should issue a qualified opinion. Such a qualified opinion should state whether the stated reserve amounts make a good and sufficient provision for the liabilities associated with the specified reserves, when considered in combination with any assets included in the scope of the opinion, except for the item (or items) to which the qualification relates. The actuary is not required to issue a qualified opinion if the actuary reasonably believes that the item or items in question are not likely to be material. (A qualified opinion does not meet one or more of the items A, B, C or F of Section 7.)

The actuary’s ability to give an opinion is dependent upon data, analyses, assumptions and related information that are sufficient to support a conclusion. If the actuary cannot reach a conclusion due to deficiencies or limitations in the data, analyses, assumptions or related information, then the actuary should issue an inconclusive opinion. An inconclusive opinion shall include a description of the reasons a conclusion could not be reached.

RE: Health Statement of Actuarial Opinion Instructions Exposure Draft

Dear Superintendent Cioppa:

The Blue Cross Blue Shield Association (BCBSA) appreciates the opportunity to provide comments on the proposed revisions to the Health Statement of Actuarial Opinion Instructions.

BCBSA is a national federation of 35 independent, community-based and locally operated Blue Cross and Blue Shield companies (Plans) that collectively provide health care coverage for one in three Americans. For more than 90 years, Blue Cross and Blue Shield companies have offered quality health care coverage in all markets across America – serving those who purchase coverage on their own as well as those who obtain coverage through an employer, Medicare and Medicaid.

BCBSA agrees that revisions should be made to align the instructions with Actuarial Standard of Practice (ASOP) 28 by including actuarial assets in the scope. We have the following comments to clarify some of the revisions.

Under Section 5, we suggest that the insertion “actuarial assets” should be replaced with “actuarial assets included and identified in the scope of the actuarial opinion” to clarify that the opinion only covers assets specifically identified in the scope.

Under Section 7.C., insert at the beginning of 7.C the words “The loss reserves and actuarial liabilities” and then continue with “meet the requirements……” to clarify that minimum aggregate amounts required by states are typically specific to loss reserves and actuarial liabilities rather than the combination of loss reserves, actuarial liabilities and actuarial assets.

Under Section 9, we suggest that the word “actuarial” be inserted before the word “assets” in the revisions shown in the second and third paragraphs.
We appreciate your consideration of our comments. If you have any questions or want additional information, please contact Barb Klever at barbara.klever@bcbsa.com.

Sincerely,

Barbara Klever, FSA, MAAA
Senior Actuary, Policy

Re: Request for comments on proposal to modify the definition of “actuarial assets” as used in the instructions for the Health Statement of Actuarial Opinion

Dear Mr. King:

I write on behalf of the American Academy of Actuaries (Academy)¹ Financial Reporting and Solvency Committee of the Health Practice Council regarding the blanks proposal to modify the instructions for the Health Statement of Actuarial Opinion to address “actuarial assets,” which we have reviewed. We appreciate the opportunity to provide the following comments.

Generally, we believe the changes are appropriate as they address the inclusion of wording reflecting that actuarial assets need to be covered by the actuarial opinion. We have the following specific comments:

1. The wording modifications in Sections 4. and 5. are fairly minor (addition of words: “actuarial assets”) and sensible considering actuaries are required to opine on both actuarial assets and liabilities.

2. The wording added in Section 7.D: “Make a good and sufficient provision for all unpaid claims and other actuarial liabilities of the organization under the terms of its contracts and agreements, when such liabilities are considered in combination with any actuarial assets included in the scope of this opinion…” while a bit cumbersome, would essentially result in the actuary signing off on actuarial assets and liabilities held on the balance sheet considering good and sufficient concepts, so is not objectionable.

3. The revisions in Section 9. incorporate actuarial assets wording into instructions related to considerations when issuing adverse, qualified or inconclusive opinions, which is appropriate.

4. One item that is not addressed in the Instructions to the Annual Health Statement Blank, Actuarial Opinion is the definition of an “actuarial asset.” While actuaries generally can point to other guidance to determine what could reasonably be

The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
considered an “actuarial asset,” it does not appear to be well defined within the NAIC instructions. The NAIC may want to consider adding some certainty to what is a reasonable approach to determining what constitutes an “actuarial asset” to be included in the Actuarial Opinion.

Re: Proposed changes to the Health Annual Statement instructions for the Actuarial Opinion.

Dear Ms. Hooper:

I am writing on behalf of UnitedHealth Group with regard to the proposed changes to the Health Annual Statement instructions for the Actuarial Opinion, as exposed for comment by your Task Force on April 6, 2021. Overall, we are supportive of the proposed changes. However, there are two aspects of the proposal that we feel deserve further comment.

First, we would like to emphasize that we believe that the proposal does not represent a change from what is currently required by the existing instructions. In particular:

- Sections 4 and 5 of the instructions refer to “loss reserves, actuarial liabilities, and related items.” We consider the term “related items” to include the actuarial assets that are within the scope of the Actuarial Opinion. Generally speaking, the assets are either claim-related, and therefore can be viewed as supplementing the actuarial liabilities for claims; or they are premium-related, and can be viewed as supplementing the actuarial liabilities for policy reserves. Accordingly, we do not feel that the existing language of Sections 4 and 5 is inconsistent with the inclusion of actuarial assets.

- In Section 7, the prescribed wording begins, “In my opinion, the amounts carried in the balance sheet on account of the items identified above: …” The “items identified above” are all of the items listed in the Scope section of the Actuarial Opinion, including the actuarial assets. Therefore, all of the subsequent statements in Section 7 must be deemed to apply to the actuarial assets, unless clearly inapplicable.
In Section 9, the language regarding qualified Actuarial Opinions certainly could be construed to apply only to actuarial liabilities. However, we believe that as a practical matter, both the Appointed Actuary and any regulatory reviewer of the Actuarial Opinion would recognize that an Actuarial Opinion might be qualified with regard to an actuarial asset, as well.

Therefore, we view the proposed changes to be a clarification of the existing requirements, rather than a change to those requirements. That said, we welcome such a clarification, especially with regard to Section 9, where the existing language is somewhat misleading.

Second, we wish to point out that the statements in the Opinion section of the Actuarial Opinion (Section 7 of the instructions) cannot readily be applied to the net of the actuarial liabilities and assets, as there was some discussion of that issue during your April 6 conference call. Perhaps the clearest case is statement C, which requires the Appointed Actuary to affirm that the amounts identified in the Scope section “are at least as great as the minimum aggregate amounts required by any state.” An amount that has been reduced by netting the actuarial assets against it is unlikely to meet a state’s minimum liability standards. With regard to how each of the statements applies to the combination of liabilities and assets, we note the following.

- Statements A and F could conceivably be applied to the net of the actuarial liabilities and actuarial assets.

- Statements B and E can be considered to apply to the liabilities and assets collectively; they relate to assumptions and methodology rather than the numerical amounts of the actuarial items.

- Statement C typically will apply only to the liabilities. That does not necessarily need to be spelled out explicitly, because there probably are no state minimum requirements applicable to actuarial assets, in which case the requirement is effectively zero. That being the case, the amount of any asset will automatically be at least as great as what’s required (i.e., will be greater than or equal to zero).

- Statement D is the “good and sufficient” statement. In order to meet the “good and sufficient” standard, the assets and liabilities must incorporate a certain degree of conservatism or “margin,” whether implicit, explicit, or both. We believe that in practice, that standard means that the liabilities within the scope of the Actuarial Opinion, in aggregate, must include an adequate provision for a reasonable degree of adverse deviation from the anticipated experience, and that such provision must not be materially impaired by any overstatement of the aggregate assets that are within the scope of the Actuarial Opinion.

Accordingly, it does not seem that there is a uniform way that actuarial assets can be addressed by the statements in the Opinion section. If your Task Force believes that more clarity is needed, we suggest that rather than trying to revise the Opinion statements, you could include guidance in the instructions (just as guidance about the type of Actuarial Opinion is provided in Section 9 of the instructions).
In conclusion, we support the proposed changes, and we suggest that any additional clarification of Section 7 be made through additional instructions rather than through changes to the prescribed wording of the Statement of Actuarial Opinion. The bullet points above concerning statements A through F might serve as a starting point for such instructions, if desired.

We would be happy to discuss these comments with you and the Task Force.

### IDENTIFICATION OF ITEM(S) TO CHANGE

See the following page for details of proposed changes.

### REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to revise the language in sections 4, 5, 7 and 9 of the orange blank annual statement instructions related to the actuarial opinion to ensure that all items (actuarial assets and liabilities) within the scope of the statement of actuarial opinion are treated consistently. Currently, reserves and liabilities are referenced in sections 4, 5, 7 and 9 of the orange blank annual statement instructions. Since actuarial assets are included in the scope of the actuarial opinion, it is important that these instructions provide guidance to appointed actuaries that apply to all actuarial items, assets as well as liabilities, included in the scope of the actuarial opinion.

### NAIC STAFF COMMENTS

Comment on Effective Reporting Date: ____________

Other Comments: ____________

---

** This section must be completed on all forms. Revised 7/18/2018
IDENTIFICATION OF ITEM(S) TO CHANGE

Instructions to Annual Health Statement Blank, Actuarial Opinion (Actuarial Opinion Instructions):

Modify section 1A. (Definitions), of the actuarial opinion instructions to add definitions of “actuarial asset” and “actuarial liability”.

Modify section 4 (Identification section), section 5 (Scope section), and section 7 (Opinion section) of the actuarial opinion instructions to ensure that the opinion’s prescribed wording clearly indicates that the actuary’s opinion covers actuarial assets as well as actuarial liabilities.

Modify section 9 of the actuarial opinion instructions to ensure that guidance related to the type of opinion rendered by an appointed actuary covers both actuarial assets and actuarial liabilities.

Section 1

1A. Definitions

“Insurer” means an entity authorized to write accident and health contracts under the laws of any state and which files on the Health Blank.

“Actuarial Memorandum” means a document or other presentation prepared as a formal means of conveying the appointed actuary’s professional conclusions and recommendations, of recording and communicating the methods and procedures, of assuring that the parties addressed are aware of the significance of the appointed actuary’s opinion or findings and that documents memorandum is further described in Section 1C.

“Actuarial asset” means an actuarial item presented as an asset in the annual statement and included in the scope of the Statement of Actuarial Opinion.

“Actuarial liability” means an actuarial item presented as a liability in the annual statement and included in the scope of the Statement of Actuarial Opinion.

Section 4

4. The IDENTIFICATION section should specifically indicate the appointed actuary’s relationship to the company, qualifications for acting as appointed actuary, date of appointment, and should specify that the appointment was made by the Board of Directors, or its equivalent or by a committee of the Board. A person who is not a Member of the American Academy of Actuaries but is recognized by the Academy as qualified must attach, each year, a copy of the approval letter from the Academy.

This section should contain only one of the following:

For a Member of the American Academy of Actuaries who is an employee of the organization, the opening paragraph of the opinion should contain all the following sentences if the appointed actuary is using the prescribed wording:

“I, (name and title of actuary), am an employee of (named organization) and a member of the American Academy of Actuaries. I was appointed on [date of appointment] in accordance with the requirements of the annual statement instructions. I meet the Academy qualification standards for rendering the opinion.”

For a consultant who is a Member of the American Academy of Actuaries, the opening paragraph of the opinion should contain all the following sentences if the appointed actuary is using the prescribed wording:

“I, (name and title of consultant), am associated with the firm of (name of firm). I am a member of the American Academy of Actuaries and have been retained by the (name of organization) to render an opinion with regard to loss reserves, actuarial liabilities, actuarial assets, and related items. I was appointed on [date of appointment] in accordance with the requirements of the annual statement instructions. I meet the Academy qualification standards for rendering the opinion.”
Section 5:
5. The SCOPE section should contain only the following statement (including all specified lines even if the value is zero) if the appointed actuary is using the prescribed wording:

“I have examined the assumptions and methods used in determining loss reserves, actuarial liabilities, actuarial assets, and related items listed below, as shown in the annual statement of the organization as prepared for filing with state regulatory officials, as of December 31, 20__.

Section 7:
7. The OPINION section should include only the following statement if the appointed actuary is using the prescribed wording:

“In my opinion, the amounts carried in the balance sheet on account of the items identified above:

A. Are in accordance with accepted actuarial standards consistently applied and are fairly stated in accordance with sound actuarial principles;

B. Are based on actuarial assumptions relevant to contract provisions and appropriate to the purpose for which the statement was prepared;

C. Meet the requirements of the Insurance Laws and regulations of the state of [state of domicile] and:
   (Use of one the following phrases, as appropriate, is considered prescribed wording. Replacing “[list states]” with an actual list of states in parentheses is also considered prescribed wording.)
   the loss reserves and actuarial liabilities are at least as great as the minimum aggregate amounts required by any state,
   or
   the loss reserves and actuarial liabilities are at least as great as the minimum aggregate amounts required by any state with the exception of the following states [list states]. For each listed state a separate statement of actuarial opinion was submitted to that state that complies with the requirements of that state;

D. Make a good and sufficient provision for all unpaid claims and other actuarial liabilities of the organization under the terms of its contracts and agreements, when such liabilities are considered in combination with any actuarial assets included in the scope of this opinion...”

Section 9:
9. If the appointed actuary is able form an opinion that is not qualified, adverse or inconclusive as those terms are defined below, he or she should issue a statement of unqualified opinion. If the opinion is adverse, qualified or inconclusive, the appointed actuary should issue an adverse, qualified or inconclusive opinion explicitly stating the reason(s) for such opinion. In all circumstances the category of opinion should be explicitly identified in the TABLE of KEY INDICATORS section of the Actuarial Opinion.

An adverse opinion is an actuarial opinion in which the appointed actuary determines that the reserves and liabilities, when considered in combination with any actuarial assets included in the scope of the opinion, are not good and sufficient. (An adverse opinion does not meet item D of Section 7.)

When, in the actuary’s opinion, the reserves or actuarial assets included in the scope of the opinion for a certain item or items are in question because they cannot be reasonably estimated or the actuary is unable to render an opinion on those items, the actuary should issue a qualified opinion. Such a qualified opinion should state whether the stated reserve amount makes a good and sufficient provision for the liabilities associated with the specified reserves, when considered in combination with any actuarial assets included in the scope of the opinion, except for the item or items to which the qualification relates. The actuary is not required to issue a qualified opinion if the actuary reasonably believes that the item or items in question are not likely to be material. (A qualified opinion does not meet one or more of the items A, B, C or F of Section 7.)
The actuary’s ability to give an opinion is dependent upon data, analyses, assumptions and related information that are sufficient to support a conclusion. If the actuary cannot reach a conclusion due to deficiencies or limitations in the data, analyses, assumptions or related information, then the actuary should issue an inconclusive opinion. An inconclusive opinion shall include a description of the reasons a conclusion could not be reached.
The Health Actuarial (B) Task Force met April 6, 2021. The following Task Force members participated: Eric A. Cioppa, Chair, represented by Marti Hooper (ME); Andrew N. Mais, Co-Vice Chair, represented by Paul Lombardo (CT); Jonathan T. Pike, Co-Vice Chair, represented by Jaakob Sundberg (UT); Lori K. Wing-Heier represented by Sarah Bailey (AK); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Perry Kupferman (CA); Michael Conway represented by Eric Unger (CO); Dean L. Cameron represented by Weston Trexler (ID); Dana Popish Severinghaus represented by Eric Anderson (IL); Anita G. Fox represented by Kevin Dyke (MI); Grace Arnold represented by Julia Lyng (MN); Chlora Lindley-Myers represented by William Leung (MO); Mike Causey represented by David Yetter (NC); Bruce R. Ramge represented by Michael Muldoon (NE); Marlene Caride represented by Seong-min Eom (NJ); Judith L. French represented by Laura Miller (OH); Glen Mulready represented by Andrew Schallhorn (OK); Jessica K. Altman represented by Jim Laverty (PA); Doug Slape represented by Barbara Snyder (TX); Scott A. White represented by David Shea (VA); Mike Kreidler represented by Amy Peach (WA); Mark Afable represented by Brian Brown (WI); and James A. Dodrill represented by Joylynn Fix (WV).

1. Exposed a Proposal to Revise the Instructions for the Health SAO

Annette James (NovaRest Actuarial Consulting) presented a proposal (Attachment One-B1) to revise the language in Section 4, Section 5, Section 7 and Section 9 of the instructions for the health Statement of Actuarial Opinion (SAO) to ensure that all items (actuarial assets and liabilities) within the scope of the SAO are treated consistently.

Ms. Hooper said the Task Force will expose the proposal for a 10-day public comment period ending April 16.

Having no further business, the Health Actuarial (B) Task Force adjourned.

Revised 7/18/2018
IDENTIFICATION OF ITEM(S) TO CHANGE

Instructions to Annual Health Statement Blank, Actuarial Opinion (Actuarial Opinion Instructions):

Modify sections 4 (Identification section), section 5 (Scope section), and section 7 (Opinion section) of the actuarial opinion instructions to ensure that the opinion’s prescribed wording clearly indicates that the actuary’s opinion covers actuarial assets as well as actuarial liabilities.

Modify section 9 of the actuarial opinion instructions to ensure that guidance related to the type of opinion rendered by an appointed actuary covers both actuarial assets and actuarial liabilities.

**Section 4**

4. The IDENTIFICATION section should specifically indicate the appointed actuary’s relationship to the company, qualifications for acting as appointed actuary, date of appointment, and should specify that the appointment was made by the Board of Directors, or its equivalent or by a committee of the Board.

A person who is not a Member of the American Academy of Actuaries but is recognized by the Academy as qualified must attach, each year, a copy of the approval letter from the Academy.

This section should contain only one of the following:

For a Member of the American Academy of Actuaries who is an employee of the organization, the opening paragraph of the opinion should contain all the following sentences if the appointed actuary is using the prescribed wording:

“I, (name and title of actuary), am an employee of (named organization) and a member of the American Academy of Actuaries. I was appointed on [date of appointment] in accordance with the requirements of the annual statement instructions. I meet the Academy qualification standards for rendering the opinion.”

For a consultant who is a Member of the American Academy of Actuaries, the opening paragraph of the opinion should contain all the following sentences if the appointed actuary is using the prescribed wording:

“I, (name and title of consultant), am associated with the firm of (name of firm). I am a member of the American Academy of Actuaries and have been retained by the (name of organization) to render an opinion with regard to loss reserves, actuarial liabilities, actuarial assets, and related items. I was appointed on [date of appointment] in accordance with the requirements of the annual statement instructions. I meet the Academy qualification standards for rendering the opinion.”

**Section 5:**

5. The SCOPE section should contain only the following statement (including all specified lines even if the value is zero) if the appointed actuary is using the prescribed wording:

“I have examined the assumptions and methods used in determining loss reserves, actuarial liabilities, actuarial assets, and related items listed below, as shown in the annual statement of the organization as prepared for filing with state regulatory officials, as of December 31, 20__.”

**Section 7:**

7. The OPINION section should include only the following statement if the appointed actuary is using the prescribed wording:

“In my opinion, the amounts carried in the balance sheet on account of the items identified above:

A. Are in accordance with accepted actuarial standards consistently applied and are fairly stated in accordance with sound actuarial principles;

B. Are based on actuarial assumptions relevant to contract provisions and appropriate to the purpose for which the statement was prepared;
C. Meet the requirements of the Insurance Laws and regulations of the state of [state of domicile] and:
(Use of one the following phrases, as appropriate, is considered prescribed wording. Replacing “[list states]” with an actual list of states in parentheses is also considered prescribed wording.)
are at least as great as the minimum aggregate amounts required by any state,
or
are at least as great as the minimum aggregate amounts required by any state with the exception of the following states [list states]. For each listed state a separate statement of actuarial opinion was submitted to that state that complies with the requirements of that state;

D. Make a good and sufficient provision for all unpaid claims and other actuarial liabilities of the organization under the terms of its contracts and agreements, when such liabilities are considered in combination with any actuarial assets included in the scope of this opinion…”

Section 9:

9. If the appointed actuary is able form an opinion that is not qualified, adverse or inconclusive as those terms are defined below, he or she should issue a statement of unqualified opinion. If the opinion is adverse, qualified or inconclusive, the appointed actuary should issue an adverse, qualified or inconclusive opinion explicitly stating the reason(s) for such opinion. In all circumstances the category of opinion should be explicitly identified in the TABLE of KEY INDICATORS section of the Actuarial Opinion.

An adverse opinion is an actuarial opinion in which the appointed actuary determines that the reserves and liabilities, when considered in combination with any assets included in the scope of the opinion, are not good and sufficient. (An adverse opinion does not meet item D of Section 7.)

When, in the actuary’s opinion, the reserves or assets included in the scope of the opinion for a certain item or items are in question because they cannot be reasonably estimated or the actuary is unable to render an opinion on those items, the actuary should issue a qualified opinion. Such a qualified opinion should state whether the stated reserve amount makes a good and sufficient provision for the liabilities associated with the specified reserves, when considered in combination with any assets included in the scope of the opinion, except for the item or items to which the qualification relates. The actuary is not required to issue a qualified opinion if the actuary reasonably believes that the item or items in question are not likely to be material. (A qualified opinion does not meet one or more of the items A, B, C or F of Section 7.)

The actuary’s ability to give an opinion is dependent upon data, analyses, assumptions and related information that are sufficient to support a conclusion. If the actuary cannot reach a conclusion due to deficiencies or limitations in the data, analyses, assumptions or related information, then the actuary should issue an inconclusive opinion. An inconclusive opinion shall include a description of the reasons a conclusion could not be reached.
The Long-Term Care Actuarial (B) Working Group of the Health Actuarial (B) Task Force met May 17, 2021. The following Working Group members participated: Perry Kupferman, Chair (CA); Jennifer Li (AL); Paul Lombardo (CT); Benjamin Ben (FL); Nicole Boyd (KS); Marti Hooper (ME); Fred Andersen (MN); Rhonda Ahrens (NE); Anna Krylova (NM); Bill Carmello (NY); Andrew Schallhorn (OK); Jim Laverty (PA); Andrew Dvorine (SC); Barbara Snyder and Mike Boerner (TX); and Tomasz Serbinowski (UT).

1. Discussed an LTCI Data Call

Mr. Kupferman said the purpose of the meeting is to gauge state insurance regulator and industry interest in conducting a mandatory long-term care insurance (LTCI) morbidity data call. He said he is concerned that federal Health Insurance Portability and Accountability Act of 1996 (HIPAA) restrictions will preclude collection of needed data for individuals older than age 90, and this is a block of data that is crucial for the success of the project. Pete Miller (Society of Actuaries—SOA) said he is confident this data can be collected at a level that will not violate HIPPA and be of sufficient granularity to be useful.

Mr. Kupferman said LTCI companies rely on company experience or consultant experience studies for reserving, and he would like the NAIC to sponsor a mandatory LTCI data call to be used for this purpose.

Mr. Andersen said approximately five years ago, the Life Actuarial (A) Task Force’s Experience Reporting (A) Subgroup evaluated whether mandatory company data reporting is warranted for various lines of business, and one of the lines evaluated was LTCI. He said LTCI was ranked as very high for morbidity data usefulness and low to moderate for the usefulness of industry-wide averages. He said there is not currently a tested format for collecting LTCI morbidity data, but recent SOA experience study formats may be convertible to a Valuation Manual (VM)-51, Experience Reporting Formats, structure.

Mr. Andersen gave an overview of a life insurance mortality data call by New York. He said New York and Kansas led the effort, MIB acted as the statistical agent, and the SOA aggregated the data. He said the data call was highly successful, but it took two to three years to complete and required new state laws to be written. He said the data call was conducted annually, and there has never been an annual experience study conducted for LTCI. Ms. Ahrens said an annual LTCI experience study would be too burdensome.

Mr. Carmello asked if authority like that for life insurance principle-based reserving (PBR) is needed for a similar LTCI project. Ms. Ahrens said the scope of the current VM-51 includes health insurance, so authority for LTCI is not an issue. Mr. Boerner noted that the current Health Actuarial (B) Task Force charge to “[d]evelop LTCI experience reporting requirements in VM-50, Experience Reporting Requirements, and VM-51, Experience Reporting Formats, of the Valuation Manual” allows for conducting an LTCI data call.

Ms. Boyd said an LTCI data call overseen by Kansas went smoothly, but it was expensive. She said the data was collected by MIB and then forwarded to the SOA for analysis. She said there was not much pushback from subject companies concerning providing data.

Mr. Lombardo said Connecticut supports a mandatory LTCI data call, and it is very important for state insurance regulators and industry. He said he believes companies will comply with the request.

Dan Schelp (NAIC) said the NAIC is concerned the study may violate aspects of HIPPPAA and with the availability of needed financial and staff resources for the project.

Pat Allison (NAIC) said the NAIC’s current life insurance PBR data collection goes through a two-step validation process. She said the data is first checked for missing or disallowed values, then a more detailed analysis of the data’s appropriateness is conducted.

Ray Nelson (America’s Health Insurance Plans—AHIP) said he is concerned that requiring companies to submit data to the data call while also voluntarily contributing data to current SOA studies may be overly burdensome. He asked if the SOA...
studies can be expanded to meet the needs of an NAIC data call. Ms. Ahrens said she believes expansion of its studies is the direction the SOA is heading in. She said a feasible way forward is for the SOA to modify the design of its studies to fit into a form that fits the VM-51 statistical plan. She said the SOA has indicated it has the appetite for such an approach.

Mr. Andersen proposed providing the proposal below to be used to survey Working Group members for their opinions on the usefulness of an NAIC mandatory data call. He said he believes taking the time to explore all of these issues and then weighing the pros and cons before making a commitment will lead to a better chance of having a helpful, useful project.

The recommendation is to start laying the groundwork, without 100% commitment at this time, toward collecting the LTCI morbidity data starting in 2024.

The regulatory actuaries can reach out to industry to determine how helpful mandatory data collection resulting in tables of industry averages will be. The question is whether it adds much value when the SOA and Milliman already have voluntary studies and the Valuation Analysis (E) Working Group has access to timely information direct from the companies.

NAIC staff can investigate issues such as resources, technology, operations, legal issues, and money availability. The ultimate decision would be made by NAIC leadership.

Mr. Kupferman agreed to surveying Working Group members on the proposal’s merit.

Having no further business, the Long-Term Care Actuarial (B) Working Group adjourned.
The Long-Term Care Actuarial (B) Working Group of the Health Actuarial (B) Task Force met March 29, 2021. The following Working Group members participated: Perry Kupferman, Chair (CA); Jennifer Li (AL); Paul Lombardo (CT); Benjamin Ben (FL); Nicole Boyd (KS); Marti Hooper (ME); Fred Andersen (MN); Rhonda Ahrens (NE); Anna Krylova (NM); Bill Carmello (NY); Laura Miller (OH); Andrew Schallhorn (OK); Jim Laverty (PA); Andrew Dvorine (SC); Barbara Snyder (TX); and Tomasz Serbinowski (UT).

1. **Heard a Presentation from the SOA on COVID-19 Impacts on LTCI**

   Mike Bergerson (Milliman) and Robert Eaton (Milliman) gave a presentation (Attachment One-D) on the Society of Actuaries’ (SOA’s) survey of long-term care insurance (LTCI) companies’ reaction to the impact of COVID-19 on LTCI mortality, voluntary lapse and morbidity experience.

   Mr. Kupferman suggested that it may be interesting to analyze the experience data separated by policyholders who were in long-term care (LTC) facilities during the exposure period and those who were not. He also suggested analyzing the data separated by individual versus group LTCI and attained age brackets. He said the effects of the vaccination rate should also be considered.

   Mr. Andersen said recent state insurance regulator analyses of reserves held by LTCI companies shows COVID-19 impacts that are similar to those shown in the SOA survey.

   Having no further business, the Long-Term Care Actuarial (B) Working Group adjourned.
### Background

- The Society of Actuaries (SOA) retained Milliman, Inc. (Milliman) to conduct a survey on the impact of COVID-19 on Long-Term Care (LTC) insurance mortality, voluntary lapse, and morbidity experience.
- The survey studied the emerging impact of COVID-19 for the period from April 1, 2020 through September 30, 2020.
- The survey did not reflect the surge of COVID-19 morbidity and mortality that took place after September 2020; further survey work is necessary to assess the impact of those cases.
- The survey was sent to companies with LTC blocks of insurance. 15 companies participated in the survey, which represented approximately 50% of the insured lives in force at year-end 2019.

### Active Life Mortality

- About half of the respondents reported observing an increase in active life mortality.

</tbody>
</table>
Disabled Life Mortality

• About half of the respondents reported observing an increase in disabled life mortality.

Additional Comments on Mortality

• Three companies observed a higher mortality impact on disabled life mortality than on active life mortality. Two companies observed a smaller impact on disabled life mortality compared to active life mortality.
• A number of companies indicated that mortality levels increased initially but started to regress towards pre-COVID levels by the end of the survey reporting period.

Voluntary Lapse

• Results on voluntary lapse rates were mixed.
• A number of companies indicated that they have not adjusted lapse rates for premium grace period extensions due to COVID-19.

Morbidity
Claim Incidence

- The biggest impact on morbidity observed by companies thus far has been related to claim incidence.
- Seven companies (58%) reported seeing a shift in claim status toward a home health care setting. This was true for both existing claims and new claims but especially so for new claims.
- Some companies indicated that claim incidence levels decreased initially but started to regress toward pre-COVID levels by September 2020.

Claim Reserves

- A majority of the respondents reported observing a decrease in claim reserves.
- This is consistent with the increase in disabled mortality and decrease in claim incidence experience observed by many companies.

Other Reserves

- Half of respondents indicated there was no impact on gross premium reserves (GPR), premium deficiency reserves (PDR), or additional actuarial reserves (AAR). Of the companies that indicated there was an impact, most said one or more of these reserves increased as a result of a decrease in new money interest rates.
- For companies that reported no impact on GPR, PDR, or AAR reserves, we believe that companies are indicating they have not changed valuation assumptions due to COVID-19. However, some companies may be indicating there is no net change (i.e., no impact) due to updates in valuation assumptions from COVID-19.
What’s next?

• Continued research as data emerges on shorter-term impacts
• Watching data closely to see if short-term habits become long-term
• Shift towards home health care instead of facility
• Hygiene/social changes – impact on regular flu in the future
• Following medical research to understand any longer lasting health impacts from COVID-19 and considering potential impact on LTC assumptions
2022 PROPOSED CHARGES

HEALTH ACTUARIAL (B) TASK FORCE

The mission of the Health Actuarial (B) Task Force is to identify, investigate, and develop solutions to actuarial problems in the health insurance industry.

Ongoing Support of NAIC Programs, Products or Services

1. The **Health Actuarial (B) Task Force** will:
   - A. Provide recommendations, as appropriate, to address issues and provide actuarial assistance and commentary with respect to model requirements for appropriate long-term care insurance (LTCI) rates, rating practices, and rate changes.
   - B. Provide support for issues related to implementation of, and/or changes to, the federal Affordable Care Act (ACA).
   - C. Continue to develop health insurance reserving requirements (VM-25, Health Insurance Reserves Minimum Reserve Requirements) using a principle-based reserving (PBR) framework.
   - D. Develop LTCI experience reporting requirements in VM-50, Experience Reporting Requirements, and VM-51, Experience Reporting Formats, of the *Valuation Manual*.
   - E. Provide recommendations, as appropriate, to address issues and provide actuarial assistance and commentary to other NAIC groups relative to their work on health actuarial matters.

2. The **Long-Term Care Actuarial (B) Working Group** will:
   - A. Assist the Health Actuarial (B) Task Force in completing the following charges:
     - 1. Provide recommendations, as appropriate, to address issues and provide actuarial assistance and commentary with respect to model requirements for appropriate LTCI rates, rating practices, and rate changes.
     - 2. Continue to develop health insurance reserving requirements (VM-25, Health Insurance Reserves Minimum Reserve Requirements) using a PBR framework.
     - 3. Develop LTCI experience reporting requirements in VM-50, Experience Reporting Requirements, and VM-51, Experience Reporting Formats, of the *Valuation Manual*.

3. The **Long-Term Care Pricing (B) Subgroup** will:
   - A. Assist the Long-Term Care Actuarial (B) Working Group in completing the following charge:
     - 1. Provide recommendations, as appropriate, to address issues and provide actuarial assistance and commentary with respect to model requirements for appropriate LTCI rates, rating practices, and rate changes.

4. The **Long-Term Care Valuation (B) Subgroup** will:
   - A. Assist the Long-Term Care Actuarial (B) Working Group in completing the following charges:
     - 1. Continue to develop health insurance reserving requirements (VM-25, Health Insurance Reserves Minimum Reserve Requirements) using a PBR framework.
     - 2. Develop LTCI experience reporting requirements in VM-50, Experience Reporting Requirements, and VM-51, Experience Reporting Formats, of the *Valuation Manual*.

NAIC Support Staff: Eric King

SERFF to URR Module Transfer

Presentation for the Health Actuarial Task Force of the National Association of Insurance Commissioners

November 29, 2021

Megan Mason
Dir. Rate Review, CCIO, CMS

The CMS and NAIC development teams have been working on a system connection between the System for Electronic Rates & Forms Filing (SERFF) and the Health Insurance Oversight System Unified Rate Review (HIOS URR) module tentatively scheduled for release in Spring 2022. This connection allows automatic data and file transfers between the two systems to reduce duplicative manual entry work for both Issuers and State reviewers. The new system connection is Not Applicable to States without an Effective Rate Review process, or states that do not utilize the SERFF system. The issuers in these states should continue to submit filings in the HIOS URR module directly.

---

**STEP 1 – New Tab in SERFF**

All rate filing information for the individual and small group markets will be entered directly into SERFF where there will be a new tab added titled URRT. This includes:
- Part I – URRT
- Part II – Written Description Justifying the Rate Increase
- Part III – Rate Filing Documentation (both the Actuarial Memorandum and the Redacted Actuarial Memorandum)

Once validated by the system, the information will be automatically transferred to the URR module of HIOS.

---

**STEP 2 – Is the URRT Required?**

Once the user navigates to the URRT view, they will be asked if URRT is applicable to this rate filing:

The Unified Rate Review Template is required to be submitted by issuers (for both QHPs and non-QHPs) offering a single risk pool plan in the individual or small group market. Issuers can submit quarterly rate changes for the small group market if allowed by the State regulatory authority. Quarterly rate changes must be submitted at least 105 days prior to the effective date of the rate change (or earlier State deadline).

Note: These filings do not include Student Health or Excepted Benefit products, such as Stand-alone Dental products.

Is the URRT required for this filing? ☑️ ☐️ ☐️
STEP 3 – Adding the URRT

The second field is the template itself; additional items cannot be uploaded until the template has been added:

**Actuarial Memorandum**
- Can only be added after the Uniform Rate Review Template is added.
- Actuarial Memorandum - Redacted: Can only be added after the Uniform Rate Review Template is added.

STEP 4 – Validation of the URRT

Once the template has been uploaded, it will be sent to CMS for validation and a message appears to the issuer:

**Uniform Rate Review Template**
To download the latest version of the Uniform Rate Review Template, please visit the CMS website at [https://www.sherrff.org/cms/uploaded URRT template]. Please upload the NRL version of the template created by the issuer and not the text file itself.

**In Progress: URRT validation with CMS in progress. Check back later for validation success or failures.**

STEP 5 – Regenerated URRT

Once the validation request has been processed, the message will update accordingly. If the validation is successful, SERRF also displays the regenerated Excel file:

**Success: CMS URRT validation was successful.**

STEP 6 – Actuarial Memorandum

Issuers will be required to upload the Actuarial Memorandum and Redacted Actuarial Memorandum:

**Actuarial Memorandum**
The actuarial memorandum, including a corresponding actuarial certification, must be submitted with each uniform rate review template. This document should contain all necessary assumptions and methodologies that support the entries in the URRT. This document must be a PDF.

**Actuarial Memorandum - Redacted**
A redacted version of the Actuarial Memorandum. This redacted document will be made available to the issuer and CMS. It should not contain any information that is private, secret or confidential or sensitive to financial information. This document must be a PDF.
STEP 7 – Consumer Justification Narrative

Issuers can upload the Consumer Justification Narrative (CJN) if not above threshold, but if the CJN is required, they will also be required to upload the CJN and the user interface indicates this new requirement:

STEP 8 – Supporting Documentation

Finally, there is the Additional Supporting Documentation section where up to 30 files can be uploaded.

STEP 9 – Other SERFF Functions

Upon submission of the filing, the information from the URRT tab will be submitted to the state but also sent to CMS. The template and supporting URR items can also have the following SERFF functions applied, but these functions will not be transferred to the URR module of HIOS:

- Request Confidentiality
- Objections/Objections Letters
- Change Schedule Items
- Response Letters
- Amendment Letters
- State Public Access

STEP 10 – State Determinations

Finally, once the state review is complete, the state will mark the URRT as complete as their determination. If the filing contains only plans below the threshold:

<table>
<thead>
<tr>
<th>Acknowledge Review</th>
<th>URRT Reviews</th>
</tr>
</thead>
<tbody>
<tr>
<td>HOS ID</td>
<td>1234</td>
</tr>
</tbody>
</table>

URRT Documents
STEP 10 – State Determinations (cont.)

If the filing contains at least one plan above the threshold:

Select URRT determination

Comments

Send to CMS

STEP 11 – Determination Display

Once a state regulator enters a final determination, the following information will be displayed. The URRT determination and the comments will be sent to the URR Module of HIOS and displayed on ratereview.healthcare.gov. Once a determination has been sent to CMS, there can be no further action on the URRT tab from the issuer or the state.

American Academy of Actuaries
Health Practice Council
2021 Updates
Barbara Klever, MAAA, FSA
Vice Chairperson, Health Practice Council
American Academy of Actuaries

About the American Academy of Actuaries
The Academy assists public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy and its boards also set qualification, practice, and other professionalism and ethical standards for actuaries credentialed by one or more of the five U.S.-based actuarial organizations in the United States.

Public Policy and the Academy
The Academy, through its public policy work, seeks to address pressing issues that require or would benefit from the application of sound actuarial principles. The Academy provides unbiased actuarial expertise and advice to public policy decision-makers and stakeholders at the state, federal, and international levels in all areas of actuarial practice.

Key Health Policy Priorities for 2021
- COVID-19: Implications for Health Care Utilization and Spending
- Health Insurance Coverage and the Affordable Care Act
- Health Equity
- Long-Term Care
- Medicare Sustainability
COVID-19: Implications for Health Care Utilization and Spending

Additional Academy HPC Updates

- Practice Note: Actuarial Standard of Practice (ASOP) No. 6—Development of Age-Specific Retiree Health Cost Assumptions, Including Applications to Pooled and Non-Pooled Health Plans
  - Oct. 2021 Presentation at the CCA Annual Meeting

- The Academy formed the Climate Change Joint Task Force in Oct. 2021, and membership is comprised of the HPC, the Casualty Practice Council (CPC), and the Risk Management and Financial Reporting Council (RMFRC).

HPC NAIC Workstreams—HATF

- Health Actuarial (B) Task Force
  - Request for comments on proposal to modify the definition of “actuarial assets” as used in the instructions for the Health Statement of Actuarial Opinion
  - April and May 2021 Academy comment letters

HPC NAIC Workstreams—HRBC

- Health Risk-Based Capital (E) Working Group
  - Request for Analysis to Incorporate Investment Income into the Underwriting Risk Component of the Health Risk-Based Capital Formula
    - Jan. 2021, Feb. 2021, and April 2021 Academy comment letters
  - Request for Comprehensive Review of the H2—Underwriting Risk Component and Managed Care Credit Calculation in the Health Risk-Based Capital Formula
    - July 2021 Academy comment letter
HPC NAIC Workstreams—LTC (EX)

- NAIC Long-Term Care Insurance (EX) Task Force Long-term Care Insurance MSA Framework. Academy comments on:
  - Long-Term Care Insurance (LTC) Multistate Rate Review Framework
  - Actuarial Sections
  - Operational and Actuarial Sections, Sept. 2021 Exposures
- Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup
  - Academy comments on exposure draft, Issues Related to LTC Wellness Benefits

HPC NAIC Workstreams—Special (EX) R&I Workstream #5

- NAIC Special (EX) Committee on Race and Insurance—Workstream 5 (Health)
  - Comments on Exposure Draft of White Paper on Provider Network Outline
  - Comments on the Revised Exposure Draft of Principles for Data Collection

2021 HPC Virtual Hill Visits

- April 15 and 16, 2021, via Zoom
- More than 20 Academy volunteers took part in 24 meetings with Hill and agency staffers
- Issues discussed included: Medicaid and Medicare, health equity, telehealth, COVID-19, surprise billing, prescription drug prices, long-term care (LTC), and the Affordable Care Act (ACA)

Academy Presentations

- Feb. 2021 Senior Health Fellow presentation on “Medicare Solvency Projections and Potential Policy Solutions” webinar sponsored by the Alliance for Health Policy.
- April 2021 presentation to Columbus Actuarial Club on “Long-Term Care Insurance: Public Policy Update”
- May 2021 Academy webinar on “Health Equity: An Actuarial Perspective”
- June 2021 presentation to the SOA on “Health Equity: How Actuaries Are Contributing to Efforts to Reduce Health Disparities”
- Oct. 2021 presentations to the CCA on “Social Determinants of Health & Health Equity” and “ASOP No. 6 Practice Note”
Academy 2021 Annual Meeting and Public Policy Forum

- Nov. 4 and 5, 2021, annual conference
- Three health-specific breakout sessions
  - "Addressing the Risk of Medicare Insolvency"
  - "Regulating the Affordable Care Act: What’s New for 2022"—Presentation from CMS/CCIIO
  - "Expanding Access to Health Insurance Coverage"
- Plenaries covering cross-practice equity and COVID-19 issues

Requests of the LTC Valuation Work Group

- Develop a replacement mortality table for LTC active life reserves
  - Based on the 2012 Individual Annuity Mortality Table
  - Recommend a margin for conservatism
- Develop a replacement lapse table
  - Recommend a margin for conservatism
- Consider developing tables for valuation on total lives basis as well as active lives basis

Executive Summary

- Developed valuation mortality table
  - Mortality is select and ultimate; all previous valuation mortality tables have been aggregate
  - Optional factors are provided for marital status and risk class
  - Mortality tables are provided for both total lives and active lives (off-claim) exposures
  - Margin for valuation mortality tables is included
  - Tables are included in the report as an Excel file
Executive Summary

- Developed valuation lapse table
  - Valuation lapse tables are developed separately for individual and group coverages; current valuation lapse tables vary for group coverage only for durations 5+ (3% v 2%)
  - Optional factors are provided for marital status and risk class for individual coverages only
  - Lapse tables are provided for both total lives and active lives (off-claim) exposures
  - Margin for valuation lapse tables is included

Recommended Mortality Tables (Total Lives)

Death Counts (Total Lives) By Sex, Risk Class, Attained Age, and Marital Status

Recommended Mortality Table (Total Lives)

Data Credibility for Group Lapses

Minimum of Number of Group Lapses and 1,082 (Full Credibility) by Issue Age Group and Policy Duration

Mortality Improvement to 2020

Recommended Mortality Improvement
- The study period is 2008 through 2011
- Recommend to apply improvement trend using the 2012 Individual Annuity Mortality Basic tables (2012 IAM) G2 scale from 2010 to 2020 (11 years)
- Recommended tables represent industry experience as of 2020
- G2 scale applies to both total lives and active lives

Alternatives for Mortality Improvement
- The mortality tables can be made dynamic by continuing to apply the G2 scale to future valuation dates
- For first principle valuation approach, G2 scale can be applied to both active lives and disabled lives

© 2021 National Association of Insurance Commissioners
Recommended Margins

- 10% for mortality
- 15% for lapse
- Same for total lives and active lives

Idaho’s Enhanced Short Term Health Plans

Wes Trexler
Deputy Director
Idaho Department of Insurance
doi.idaho.gov

Issues and Objectives

- APTC has limitations and gaps
  - Variable income – risky to lose APTC
  - “Family glitch” – employer offers unaffordable spouse or dependent coverage
  - Even with APTC, can still be unaffordable or higher cost than considered reasonable
- Consumers seeking non-major medical or non-insurance health options due to lower cost
  - Stacked limited benefits
  - Back-to-back short-term
  - Associations
  - Health sharing
  - Direct primary care

Traditional Short-term Plans

- Not guaranteed issue
- Not renewable
- Total duration less than 12 months (per Idaho statute)
- Preexisting conditions excluded
- Any licensed carrier can offer, without major medical presence
- Fewer benefits offered
- Internal limitations on covered benefits
- Fewer applicable consumer protections
- Consumers misunderstand their risks with limitations
- Being utilized for more than short-term needs

Legal Path for Enhanced STPs

2019 Idaho Rule 18.04.15
- Issued as temporary then final
- Applies to both Traditional STLDPs and ESTPs
- Delineates Trad from ESTPs
- Sets out enrollment, eligibility, renewal, reissuance, rating, coverage, and disclosure provisions for both

2019 Idaho House Bill 275
- Modified individual major medical insurance chapter
- Defined ESTP
- Added ESTP to “Health Benefit Plan” definition
- Rules shall include federally-compliant STLDP renewability
- Rules may require Essential Health Benefits
Enhanced vs Nonrenewable

<table>
<thead>
<tr>

Are we achieving objectives?

Thousands of Idahoans finding value
Up from 4 Exchange carriers to 6 in 2022
- Interest expressed in ESTPs
- Agents appreciate another comprehensive option for tentative purchasers

Revised nonrenewable short-term products
- Fewer internal benefit caps
- Clearer application and disclosures
- Reduced issuance of multiple short-term policies

Continued federal regulatory uncertainty

Thank you!

Regulatory Framework (B) Task Force
Virtual Meeting (in lieu of meeting at the 2021 Fall National Meeting)
November 30, 2021

The Regulatory Framework (B) Task Force met Nov. 30, 2021. The following Task Force members participated: Michael Conway, Chair (CO); Glen Mulready, Vice Chair, represented by Mike Rhoads (OK); Lori K. Wing-Heier represented by Sarah Bailey (AK); Jim L. Ridling represented by William Rodgers and Yada Horace (AL); Peni Itula Sapini Teo represented by Elizabeth Perri (AS); Evan G. Daniels represented by Erin Klug (AZ); Andrew N. Mais represented by Jared Kosky (CT); David Altmaier represented by Chris Struk and Shannon Doheny (FL); Doug Ommen represented by Andria Seip (IL); Amy L. Beard represented by Alex Peck (IN); Vicki Schmidt (KS); Sharon P. Clark (KY); Gary D. Anderson represented by Kevin Beagan (MA); Eric A. Cioppa represented by Timothy Schott and Joanne Rawlings-Sekunda (ME); Anita G. Fox represented by Sarah Wohlford (MI); Grace Arnold represented by Galen Benshoof and Sherri Mortensen-Brown (MN); Clora Lindley-Myers (MO); Mike Causey represented by Ted Hamby (NC); Jon Godfread represented by Chrystal Bartuska (ND); Eric Dunning represented by Laura Arp (NE); Chris Nicolopoulos represented by Michelle Heaton and Roni Karnis (NH); Marlene Caride represented by Philip Gennace (NJ); Judith L. French represented by Laura Miller and George McNab (OH); Andrew R. Stolfi represented by TK Keen (OR); Jessica K. Altman (PA); Larry D. Deiter represented by Jill Kruger and Candy Holbrook (SD); Cassie Brown represented by Rachel Bowden (TX); Scott A. White represented by Julie Blauvelt, Bob Grissom, and James Young (VA); Mike Kreidler represented by Molly Nollette and Jane Beyer (WA); Mark Afable represented by Nathan Houdek (WI); and Allan L. McVey represented by Joylynn Fix and Ellen Potter (WV).

1. **Adopted its Nov. 9 and Summer National Meeting Minutes**

The Task Force met Nov. 9 to adopt its 2022 proposed charges.

Mr. Keen made a motion, seconded by Ms. Kruger, to adopt the Task Force’s Nov. 9 (Attachment One) and July 28 (see *NAIC Proceedings – Summer 2021, Regulatory Framework (B) Task Force*) minutes. The motion passed unanimously.

2. **Adopted its Subgroup and Working Group Reports**

Mr. Keen made a motion, seconded by Commissioner Clark, to adopt the following reports: the Accident and Sickness Insurance Minimum Standards (B) Subgroup, including its Nov. 1 (Attachment Two), Oct. 4 (Attachment Three), Sept. 20 (Attachment Four), Aug. 23 (Attachment Five), Aug. 9 (Attachment Six), and July 26 (Attachment Seven) minutes; the Employee Retirement Income Security Act (ERISA) (B) Working Group, including its Oct. 8 (Attachment Eight) and July 30 (Attachment Nine), minutes; the Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group, including its Aug. 5 minutes (Attachment Ten); and the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup. The motion passed unanimously.

3. **Heard a Presentation on the NSA Federal Regulations and Implications for the States**

Katie Keith (Out2Enroll) and Jack Hoadley (Georgetown University Health Policy Institute) presented on the recently issued federal No Surprises Act (NSA) interim final rules (IFR), interim proposed rules (IPR) and implications for the states. Ms. Keith provided an overview of the NSA’s scope and its protections, including what types of plans it covers and where its protections apply for plan years beginning on or after Jan. 1, 2022. She said the NSA’s IFR was issued July 1 with an effective date of Sept. 13. The IFR was issued jointly by the U.S. Department of Labor (DOL), the U.S. Department of Health and Human Services (HHS), the U.S. Department of the Treasury (Treasury Department), and the U.S. Office of Personnel Management (OPM).

Ms. Keith said the IFR includes provisions focused on both patients and regulated entities. She explained that the patient-focused provisions outline how patients can calculate cost-sharing, include notice-and-consent waivers provisions, and establish a consolidated complaints process. The regulated entities-focused provisions outline how to calculate the qualifying payment amount and include disclosure requirements and provisions related to communications between insurers and providers.

Ms. Keith said the DOL, the HHS, the Treasury Department, and the OPM jointly issued IPR Sept. 10 concerns the submission of information about air ambulance services and the process the HHS will take to investigate and enforce NSA violations. She
said the IPR highlights the states as being the primary enforcers for state-regulated insurers and providers. The DOL is the primary enforcer for self-insured health plans. The federal government is backup enforcer if a state fails to substantially enforce. Ms. Keith said that it is anticipated that the federal agencies will provide enforcement letters to each state outlining provision-by-provision whether the state and federal government will enforce that particular NSA provision.

Ms. Keith said the DOL, the HHS, the Treasury Department, and the OPM jointly issued a second IFR Sept. 30. She said the major focus of this IFR is on the independent dispute resolution (IDR) process. Other provisions include requirements related to good-faith cost estimates for uninsured patients and patients who have insurance coverage but do not wish to submit a claim for services to their insurer and requirements related to the patient-provider dispute resolution process when cost estimates are wrong.

Mr. Hoadley detailed the major provisions in the first IFR. He discussed the scope of the NSA’s balance billing protections with respect to the types of payers and providers subject to its requirements. He explained that IFR sets out provisions to determine the qualifying payment amount (QPA) for purposes of the federal IDR process. The IFR spells out definitions and methodology for determining the QPA. It also includes additional provisions affecting the QPA, including minimizing the influence of outlier prices that could skew the QPA higher. Mr. Hoadley also explained that the IFR defines what a “specified state law” is for purposes of determining what method will be used to determine the amount of payment to an out-of-network provider, which could be either a payment standard or arbitration or a combination of both. The IFR also specifies that states with self-funded opt-in programs can maintain those programs. If state law does not apply, the NSA applies.

Mr. Hoadley discussed the different state approaches to determining QPAs. Some states take a hybrid approach using both a payment standard or rule and an IDR process. Other states use a payment statement standard only or an IDR process only. He also discussed the federal agencies’ requirements for entities conducting the IDR process to use in making payment determinations.

Mr. Hoadley reiterated that the IFR confirms that state departments of insurance (DOIs) are the primary enforcers of provisions that apply to insurers and fully insured health products. He also noted that state officials are responsible for enforcing the law against providers, but the HHS will enforce the NSA’s requirements in states that choose not to or that fail to substantially enforce the law. The DOL will enforce the NSA’s provisions for self-funded group health plans. Mr. Hoadley said that it is anticipated that the HHS will enter into collaborative enforcement agreements with many states. He said the IFR proposes a consolidated complaints process for patients and others.

Mr. Hoadley discussed provisions in the second IFR concerning the good-faith cost estimates for uninsured patients and patients who have insurance coverage but do not wish to submit a claim for services to their insurer and requirements related to the patient-provider dispute resolution process when cost estimates are wrong. He said the federal agencies are still working on federal rules for insured patients with respect to these provisions. It is anticipated these rules will be issued sometime in early 2022. He said that due to this delay in rulemaking, the federal agencies have agreed not to enforce these provisions during 2022, but entities subject to these provisions must still comply and adopt a good faith, reasonable interpretation of the law.

Mr. Hoadley discussed provisions in the NSA concerning data reporting and other mechanisms for purposes of determining the NSA’s effect on various health care-related factors, such as its effect on health care costs, provider networks, and provider consolidation. He noted that for the states having balance billing protection laws prior to the enactment of the NSA, analyses trying to determine those laws’ effect on similar health care-related factors is limited. Depending on the state approach taken to determine payment amount, some studies of these state laws indicate little impact, while others indicate mixed impacts.

Commissioner Conway asked about the good faith attempt to participate in a carrier’s network a provider can cite and use in the provider’s arguments for determining the appropriate QPA. He asked if this provision is tied to a specific carrier or the market, generally. Mr. Hoadley said he does not believe the IFR addresses that issue, but the provision most likely is tied to the specific carrier that is the subject of the arbitration process.

Commissioner Conway asked if the federal rules address the situation when a provider enters into the federal IDR process, but later it is determined that the plan involved is state-regulated and the state has its own IDR process. Mr. Hoadley said he believes the arbitrator, as one of its responsibilities, will screen cases and ultimately tell the parties they will need to use the state IDR process. He acknowledged that other situations could be more complex, including cases involving multiple state IDR processes. He said in such complex cases, the federal rules seem to indicate the federal IDR process would be used.

Mr. Keen asked about the notices the federal Centers for Medicare & Medicaid (CMS) sends out as part of its petition process about organizations applying to become a certified independent dispute resolution entity (IDRE). He noted that from a state
insurance regulator’s perspective, the given short time frame included in the petition process and the sparse information CMS provides on these organizations make it hard to evaluate them. He asked if Mr. Hoadley or Ms. Keith had any thoughts on what state insurance regulators should be looking in their evaluation of these applicants. Mr. Hoadley said he has no insight on the issue, but he said it would be important for the states to discuss whether any state is familiar with an applicant and provide their experiences with that organization to other states. Ms. Keith said that from her perspective, the certification criteria in the federal rules is quite strong, which could be evidenced by the fact that only a small number of organizations have applied to date. She said that from her experience in talking to the states, the states are looking for organizations that have medical and billing expertise and understand market dynamics, among other things. Commissioner Conway asked about the ability for the parties to challenge the choice of arbitrator. Mr. Hoadley said the federal rules contemplate the parties agreeing on a particular arbitrator, but if the parties cannot agree, the federal agencies would select. He said that he does not believe the federal rules provide for a party to object to the selected arbitrator, unless possibly due to a conflict-of-interest concern. Mr. Hoadley said that for some states that use the arbitration process, the state has a list of potential arbitrators, and the parties can object to one or more being selected, but the federal IDR process is not structured this way.

Commissioner Conway asked for those states that had a surprise bill law prior to the NSA and are now thinking about aligning these sorts of issues and ways to address them will evolve over time. and because of this, the IDRE would need to be aware of, and address, any actual or perceived conflicts of interest. He said to how some of organizations applying to be IDREs are structured. He said that certainly an IDRE would need medical expertise and to use the federal IDR process and as such, eliminate the need to maintain a parallel and potentially duplicative process. She said the federal agencies implementing the NSA have not been discussing this issue. Commissioner Conway agreed that in some cases, allowing an “opt-in” could be more efficient.

Commissioner Conway asked for those states that had a surprise bill law prior to the NSA and are now thinking about aligning the state law with the NSA, what provisions should the state focus on as part of this process. He said Colorado has focused on those provisions it thinks would be preempted by the federal law to avoid confusion. Mr. Hoadley agreed that there will be confusion about which law applies, state or federal, in some situations. He said the states may look at the types of services, providers, and facilities covered under their laws versus the NSA as provisions to focus on. Ms. Keith agreed. She said states also will have to think about retaining those provisions in their laws that are more protective, such as Colorado’s more protective ground ambulance provisions. Ms. Keith said one question has been raised is if those states with a state IDR process could opt to use the federal IDR process and as such, eliminate the need to maintain a parallel and potentially duplicative process. She said the federal agencies implementing the NSA have not been discussing this issue. Commissioner Conway agreed that in some cases, allowing an “opt-in” could be more efficient.

4. Discussed Model #76 and the NSA

Jolie Matthews (NAIC) said Section 110 of the NSA expands the scope of external review to include adverse benefit determinations related to disputes under the NSA, such as whether a plan or insurer complied with the NSA’s cost-sharing and other protections. She said that because the NSA applies to grandfathered health plans, external review extends to those plans as well. She explained that federal Affordable Care Act (ACA) requires non-grandfathered group health plans and insurers offering group and individual coverage to comply with state external review processes so long as those processes met certain standards. She said that to meet the ACA’s standards, state laws on external review must, at a minimum, reflect the consumer protections included in the Uniform Health Carrier External Review Model Act (#76), and external review must be available for adverse benefit determinations based on requirements for medical necessity, appropriateness, health care setting, level of care, or effectiveness of a covered benefit. She said the NSA expands the scope of the adverse benefit determinations currently provided under Model #76. She said the Task Force has at least four options to consider to address the issue: 1) substantively revise Model #76 to expand its scope to cover NSA disputes; 2) non-substantively revise Model #76, such as adding a drafting note alerting the states about the issue; 3) develop a memorandum or directive to the states to alerting them about the issue; or 4) take no action.

Commissioner Conway suggested that the Task Force form an ad hoc group to work with NAIC staff to develop a recommendation for the Task Force’s consideration to address the issue. There was no objection to his suggestion. Commissioner Conway asked Task Force members to send an email to NAIC staff expressing interest in serving on the ad hoc group. Ms. Matthews said she intends to have the ad hoc group meet sometime in January 2022 for it to make a recommendation to the Task Force on next steps in February.

Having no further business, the Regulatory Framework (B) Task Force adjourned.
The Regulatory Framework (B) Task Force met Nov. 9, 2021. The following Task Force members participated: Michael Conway, Chair (CO); Glen Mulready, Vice Chair, represented by Cuc Nguyen (OK); Lori K. Wing-Heier represented by Sarah Bailey (AK); Jim L. Ridling represented by Jimmy Gunn, Yada Horace, and William Rodgers (AL); Evan G. Daniels represented by Jon Savary and Erin Klug (AZ); Andrew N. Mais represented by Jared Kosky (CT); Karima M. Woods represented by Howard Liebers (DC); David Atmjaier represented by Chris Struk and Shannon Doheny (FL); Doug Ommen (IA); Dean L. Cameron represented by Weston Trexler (ID); Dana Popish Severinghaus (IL); Amy L. Beard represented by Alex Peck and Meghann Leaird (IN); Vicki Schmidt represented by Julie Holmes and Tate Flott (KS); Sharon P. Clark represented by Daniel McIlwain (KY); Gary D. Anderson represented by Kevin Beagan (MA); Eric A. Cioppa represented by Robert Wake (ME); Anita G. Fox represented by Renee Campbell and Sarah Wohlford (MI); Grace Arnold represented by Galen Benshoof (MN); Chlora Lindley-Myers (MO); Mike Causey represented by Ted Hamby (NC); Jon Godfred represented by Chrystal Bartuska (ND); Eric Dunning represented by Laura Arp (NE); Chris Nicolopoulos represented by Michelle Heaton (NJ); Marlene Caride represented by Channell McDevitt (NJ); Judith L. French represented by Theresa Schaefer and George McNab (OH); Andrew R. Stolfi represented by TK Keen (OR); Jessica K. Altman represented by Katie Merritt (PA); Larry D. Deiter represented by Jill Kruger (SD); Cassie Brown represented by Hilary Sayre and Michael Nored (TX); Jonathan T. Pike represented by Tanji J. Northrup (UT); Scott A. White represented by Julie Blauvelt, Bob Grissom, and Bradley Marsh (VA); Mike Kreidler represented by Molly Nollette (WA); Mark Afable represented by Nathan Houdek and Jennifer Stegall (WI); and Allan L. McVey (WV).

1. Adopted its 2022 Proposed Charges

Commissioner Conway said prior to the meeting, NAIC staff distributed the Task Force’s 2022 proposed charges for a public comment period that ended Oct. 22. He said the Task Force received comments from the American Bankers Association (ABA) Health Savings Account (HSA) Council, the NAIC consumer representatives, and the Obesity Action Coalition (OAC). He said the comments suggest that the Task Force add two new charges and revise the Task Force’s existing charges for the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup.

Commissioner Conway said at this point, he is not inclined to recommend that the Task Force add the additional suggested charges given the NAIC’s incoming president’s desire to have NAIC groups focus on their core work. He said the nature of the suggested new charges do not seem to quite fit into the Task Force’s core work and could be better suited for other NAIC groups. He said despite his inclination against adding the suggested new charges, he believes the Task Force should hear from each of the commenters beginning with the ABA HSA Council.

Jeffrey Klein (McIntyre & Lemon PLLC), speaking on behalf of the ABA HSA Council, remarked on the ABA HSA Council’s prior work with the NAIC and the states on several matters relevant to cost-sharing in general and on rules governing third-party payments on behalf of enrollees or insureds. He said the ABA HSA Council has been particularly cognizant of the recent federal Internal Revenue Service (IRS) correspondence with the Illinois Department of Insurance (DOI), its distribution, and awareness of it by other state DOIs. He said because so much of the NAIC’s efforts in this area are on consumer protection, the ABA HSA Council is concerned that well-intended but misguided proposals can have an unintended consequence on HSA account owners and their ability to contribute to their HSA, because the cost-sharing legislation of concern does not conform to IRS guidance. He said because the NAIC should, and does, share its concern in that regard, the ABA HSA Council suggests that the Task Force add a new 2022 proposed charge for the Task Force to “monitor, analyze, and report to the states the effect of cost-sharing legislative mandates and the efficacy of Health Savings Accounts (HSAs) and the relevancy of recent Internal Revenue Service (IRS) guidance about such mandates.”

Carl Schmid (HIV+Hepatitis Policy Institute) said over the past few years, many of the NAIC consumer representatives have raised the issue of insurers and pharmacy benefit managers (PBMs) not counting copayment assistance as part of an enrollee’s deductible and cost-sharing requirements. He said these policies significantly increase consumer costs and reduce access to prescription drugs and other covered services. He said given this, in response to the ABA HSA Council’s suggested new 2022 proposed charge relative to copayment assistance for prescription drugs, the NAIC consumer representatives submitted an additional comment letter suggesting that if the Task Force adds the charge, the Task Force should consider broadening the charge to explore the impact of high prescription drug cost-sharing on consumers on their medication adherence along with the
value of copayment assistance. He also said the NAIC consumer representatives disagree with the ABA HSA Council’s interpretation of the IRS guidance.

Commissioner Conway said this discussion, including the differences of opinion related to the IRS guidance letter detailed in the comment letters, indicates that before the Task Force actively discusses adding any new charges related to this issue, the Task Force needs to discuss them further. He said if he remains the Task Force chair for 2022, he will include a discussion of the copayment accumulator adjustment program and the IRS guidance for the Task Force’s meeting prior to or during the 2022 Spring National Meeting. There was no objection to his suggestion.

Joe Nadglowski (OAC) said the OAC suggests that the Task Force add a new 2022 proposed charge, much like the Task Force’s current charges related to mental health parity (MHP) and substance use disorder (SUD), to explore the effects of obesity on state-regulated health insurance. He said specifically, the OAC recommends that the Task Force explore: 1) obesity discrimination; 2) access to treatment and specialists; 3) costs on the health care system, particularly the insurance industry; and 4) insurer considerations for treating obesity as a chronic condition. Commissioner Conway said he appreciates the OAC bringing these issues to the Task Force for its consideration because they are issues that everyone should be discussing more. He said he believes the states have been individually looking at these issues and have taken different approaches to try to address them. He said Colorado is looking at incorporating an obesity component for its standardized plan, which it plans to launch sometime next year.

Commissioner Conway said as he indicated at the beginning of the meeting, he believes the Task Force needs more discussion on these issues before considering a new charge. He said he believes there will be additional opportunities for the Task Force to have such discussions. He also said he would like to have additional time to reach out to other NAIC groups that might be more appropriate to take on these issues instead of the Task Force. There was no objection from the Task Force for not adding the OAC’s suggested 2022 proposed charge.

Commissioner Conway said the NAIC consumer representatives’ first comment letter on the Task Force’s 2022 proposed charges suggests revising the charges for the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup to flip the current charges such that the charge concerning the white paper is the first charge and the charge to develop a possible NAIC model regulating PBMs is the second charge. Mr. Schmid said the NAIC consumer representatives also suggest adding language to the second sentence in that charge as follows, “[b]ased on issues identified in the white paper.” He said the NAIC consumer representatives’ comments suggest that the Subgroup develop the white paper first and then consider moving forward with the new NAIC model after the white paper is completed. Mr. Keen expressed support for the NAIC consumer representatives’ suggested revisions to the Subgroup’s charges. He noted, however, that given the rejection of the proposed NAIC model regulating PBMs at the Summer National Meeting, after the Subgroup completes the white paper, he anticipates that there will be a lot of discussion on whether it makes sense for the Subgroup to develop the model due to differences of opinion on the scope and breadth of PBM regulation and whether state DOIs are the appropriate entity to regulate PBMs.

Mr. Keen made a motion, seconded by Mr. Trexler, to adopt the Task Force’s 2022 proposed charges (Attachment One-A). The motion passed unanimously.

Having no further business, the Regulatory Framework (B) Task Force adjourned.

RFTF Nov 9 Minutes
2022 PROPOSED CHARGES

REGULATORY FRAMEWORK (B) TASK FORCE

The mission of the Regulatory Framework (B) Task Force is to: 1) develop NAIC model acts and regulations for state health care initiatives; and 2) consider policy issues affecting state health insurance regulation.

Ongoing Support of NAIC Programs, Products and Services

1. The Regulatory Framework (B) Task Force will:
   A. Coordinate and develop the provision of technical assistance to the states regarding state-level implementation issues raised by federal health legislation and regulations.
   B. Review managed health care reforms, their delivery systems occurring in the marketplace, and other forms of health care delivery. Recommend appropriate revisions to regulatory jurisdiction, authority, and structures.
   C. Consider the development of new NAIC model laws and regulations and the revision of existing NAIC model laws and regulations, including those affected by federal legislation and final federal regulations promulgated pursuant to such legislation.
   D. Continue to review NAIC models recommended for revision by the former Affordable Care Act (ACA) Model Review (B) Working Group and, as appropriate, appoint a working group or subgroup to revise the NAIC model(s) prioritized for revision in 2022.
   E. At the direction of the Health Insurance and Managed Care (B) Committee, through the work of the Employee Retirement Income Security Act (ERISA) (B) Working Group, monitor, analyze, and report developments related to association health plans (AHPs).
   F. Monitor, analyze, and report, as necessary, developments related to short-term, limited-duration (STLD) coverage.

2. The Accident and Sickness Insurance Minimum Standards (B) Subgroup will:
   A. Review and consider revisions to the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171).

3. The ERISA (B) Working Group will:
   A. Monitor, report, and analyze developments related to the federal ERISA, and make recommendations regarding NAIC strategy and policy with respect to those developments.
   B. Monitor, facilitate, and coordinate with the states and the U.S. Department of Labor (DOL) efforts related to sham health plans.
   C. Monitor, facilitate, and coordinate with the states and the DOL regarding compliance and enforcement efforts regarding the ACA that relate to ERISA.

4. The Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group will:
   A. Monitor, report, and analyze developments related to the federal Paul Wellstone and Pete Domenici MHPAEA of 2008, and make recommendations regarding NAIC strategy and policy with respect to those developments.
   B. Monitor, facilitate, and coordinate best practices with the states, the DOL, and the U.S. Department of Health and Human Services (HHS) related to the MHPAEA.
   C. Monitor, facilitate, and coordinate with the states and the DOL regarding compliance and enforcement efforts regarding the ACA that relate to the MHPAEA.
   D. Provide supplemental resources to support documentation and reporting in the MHPAEA chapter of the NAIC Market Regulation Handbook.
   E. Coordinate with and provide input to Market Regulation and Consumer Affairs (D) Committee groups, as necessary, regarding mental health parity market conduct examinations.
5. The Pharmacy Benefit Manager Regulatory Issues (B) Subgroup will:
   A. Develop a white paper to: 1) analyze and assess the role PBMs, pharmacy services administrative organizations (PSAOs), and other supply chain entities play in the provision of prescription drug benefits; 2) identify, examine, and describe current and emerging state regulatory approaches to PBM business practices, such as price transparency and reporting requirements, rebating, and spread pricing, including the implications of the Rutledge v. Pharmaceutical Care Management Association (PCMA) decision on such business practices; and 3) discuss any challenges, if any, the states have encountered in implementing such laws and/or regulations.
   B. Consider developing a new NAIC model to establish a licensing or registration process for pharmacy benefit managers (PBMs). Based on issues identified in the white paper, the Subgroup may consider including in the new NAIC model provisions on PBM prescription drug pricing and cost transparency.

NAIC Support Staff: Jolie H. Matthews/Jennifer R. Cook

RFTF 2022 Proposed Charges
The Accident and Sickness Insurance Minimum Standards (B) Subcommittee of the Regulatory Framework (B) Task Force met Nov. 1, 2021. The following Subcommittee members participated: Laura Arp, Co-Chair and Martin Swanson (NE); Andy Schallhorn, Co-Chair (OK); Debra Judy (CO); Howard Liebers (DC); Chris Struk (FL); Robert Wake (ME); Frank Opelka (LA); Sherri Mortensen-Brown (MN); Camille Anderson-Weddelle, Cynthia Amann, Amy Hoyt and Carrie Couch (MO); Glynda Daniels (SC); Rachel Bowden (TX); Tanji Northrup (UT); Anna Van Fleet, Christine Menard-O’Neil, Mary Block, and Jamie Gile (VT); Mary Schaefer (WA); and Nathan Houdek (WI).

1. **Continued Discussion of Products Regulated Under Model #171**

Mr. Schallhorn said the purpose of this meeting is for the NAIC consumer representatives provide a consumer perspective on the products regulated Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171). However, before the Subcommittee hears that presentation, the Subcommittee will provide an opportunity for Jackson Williams (Dialysis Patients Citizens—DPC) ask his additional questions of the industry representatives related to their presentations during the Subcommittee’s Sept. 20 meeting.

Mr. Williams asked Cindy Goff (American Council of Life Insurers—ACLI) to discuss which category or categories of products, if any, regulated by the Supplementary and Short Term Health Insurance Minimum Standards Model Act (#170) (formerly known as the Accident and Sickness Insurance Minimum Standards Model Act) and Model #171 pose the greatest risk of consumers being unable to seek and find value among competing vendors. Ms. Goff said she could not think of any category or categories of products that consumers could not seek and find value among competing vendors. She said all of the products regulated under Model #170 and Model #171 offer value to consumers. There are a large number of insurers in the market selling these products, which provides for a competitive market and keeps premiums at an affordable rate. Mr. Jackson asked the extent employers are active purchasers or in other words, the extent to which these products are put out for competitive bidding. Ms. Goff said group sales of these products are done through competitive bidding like other kinds of insurance products, such as major medical products. She said the ACLI has compiled figures showing that employer involvement in the sale of these products they offer to their employees on a voluntary basis is about 96% if those group products sold. Mr. Jackson asked if such sales are on an annual basis. Ms. Goff said that depends on the employer. Each employer differs on how long they keep the products in place. She noted that some products are sold with rate guarantees that can be in effect for three to five years. As such, in those cases, there would be no changes in the offering during that time frame.

Mr. Jackson asked Ms. Goff about the average commission expense ratio for supplemental products. Ms. Goff said the answer to this question depends on how a carrier sells the product. She said some carriers do not use independent agents to sell their products. Their employees who are agents sell them. She said if independent agents sell the products for a carrier, depending on the intensity of work required of the agent, for the first year, the commission could range from zero to 50% of premium. Ms. Goff said that generally, the premium for supplemental products is very low, typically $50 to $100 dollars per month. As such, the percentage commission paid on that premium is very low. She also explained that typically the first year the commission is high because the work is more intense. Over time, the commission levels off quite a bit. Mr. Jackson asked if the average commission has risen over the past 10 years. Ms. Goff said the answer to this question depends on how a carrier sells the product. She said some carriers do not use independent agents to sell their products. Their employees who are agents sell them. She said if independent agents sell the products for a carrier, depending on the intensity of work required of the agent, for the first year, the commission could range from zero to 50% of premium. Ms. Goff said that generally, the premium for supplemental products is very low, typically $50 to $100 dollars per month. As such, the percentage commission paid on that premium is very low. She also explained that typically the first year the commission is high because the work is more intense. Over time, the commission levels off quite a bit from that high. Mr. Williams asked Ms. Goff about the average commission expense ratio for supplemental products. Ms. Goff said the answer to this question depends on how a carrier sells the product. She said some carriers do not use independent agents to sell their products. Their employees who are agents sell them. She said if independent agents sell the products for a carrier, depending on the intensity of work required of the agent, for the first year, the commission could range from zero to 50% of premium. Ms. Goff said that generally, the premium for supplemental products is very low, typically $50 to $100 dollars per month. As such, the percentage commission paid on that premium is very low. She also explained that typically the first year the commission is high because the work is more intense. Over time, the commission levels off quite a bit from that high. Mr. Jackson asked if the average commission has risen over the past 10 years. Ms. Goff said that based on a polling of some ACLI members, the ACLI has not seen any increase in average commission during that time frame. She explained how commissions must be filed and approved providing little flexibility for carriers to lower and increase them. Mr. Williams said in asking these questions, he is trying to figure out why the loss ratios for supplemental products are going down. Ms. Goff expressed disagreement with Mr. Williams assertion that loss ratios are going down. She said there are loss ratio can fluctuate over the course of 10 to 20 years; and when an insurer sees such a trend, they try to make adjustments to address it. She also pointed out that supplemental products are very low premium products and cannot be compared with other types of products, particularly comprehensive health insurance products.

Mr. Williams asked about payments made under critical illness plans for COVID-related illnesses. Ms. Goff said depending on the type of policy and whether the services are covered under the policy, payments are being made for COVID-related illnesses. She said many insurers have made adjustments in their plans, such as in their hospitalization benefits, to clarify to consumers that services provided in relation to COVID are covered. Mr. Williams asked if the ACLI knows with respect to critical illness
plans, how much insurers have paid out for COVID-related expenses. Ms. Goff said that for the ACLI to obtain this information, it would have to probably conduct a formal survey of its members. She explained that even if she conducted such a member survey, it would not complete because there are some insurers, who are not members of the ACLI, such as UnitedHealthcare and Aetna, that have big blocks of this kind of business. The ACLI does not have access to their information.

Mr. Schallhorn asked Ms. Goff if she has seen insurers specifically add COVID as a benefit trigger in their critical illness plans. Ms. Goff said she has not seen specific language, but insurers have made it clear to consumers that COVID is one of the triggers.

Mr. Williams said that in the ACLI’s presentation, Ms. Goff said that a survey found that 89% of enrollees who made a claim agree that the purchase of the product was a valuable investment. He asked Ms. Goff if such a survey was taken at the time an enrollee switched jobs and terminated coverage, would a smaller percentage of enrollees agree that the product was a valuable investment. Ms. Goff said that for any type of insurance product, she would imagine that there would be a smaller percentage of enrollees agreeing that a product was a valuable investment under such a scenario. She said the important question is whether the product performed as promised and whether at the time the consumer needed it if the consumer found value in having the product, which would be an important question for any type of insurance product, not just for supplemental products.

Mr. Williams asked if the ACLI knew how much money a middle-aged enrollee would pay in premiums over eight years for the average supplemental benefits plan. Ms. Goff said the ACLI does not have that information. Mr. Williams asked about the typical claim payout for such an enrollee over the same timeframe. Ms. Goff said the ACLI does not have that information either. She would have to conduct a survey answer both questions.

The Subgroup discussed a question concerning the application of the Coordination of Benefits Model Regulation (#120), which was answered during the Subgroup’s Oct. 4 meeting. Chris Petersen (Arbor Strategies LLC) reiterated that supplemental benefit product plans do not coordinate with other plans. These plans pay regardless of whether the consumer has other plans that would cover the same benefit. He said that except for dental and vision plans, Model #120 prohibits such coordination to ensure the consumer gets the full benefit of the premium dollars paid from both plans. Bonnie Burns (California Health Advocates—CHA) said Model #120 allows insurers to coordinate as secondary coverage when an individual is eligible for Medicare Part B, whether the individual is enrolled or not. She said this applies to limited benefit policies as well. Mr. Petersen said there are different coordination rules for Medicare. He said case law has determined that Medicare is always primary. Ms. Burns said she has raised an issue with the NAIC on several occasions regarding COBRA coverage, which limited benefit plans can use to coordinate coverage whether the individual is actually enrolled in COBRA coverage or not. Mr. Petersen said he would have to look at the issue before providing a definitive answer, but he believes that the issues Ms. Burns is raising is a Model #120 issue not an issue for Model #170 or Model #171. The Subgroup discussed what products Ms. Burns is referencing when using the term “limited benefit plan” because there are different interpretations of what that term means. Model #170 and Model #171 specifically define “limited benefit plan.” However, “limited benefit plan” has been interpreted to mean other types of products such as so-called “mini-meds” and in some cases, thought of as “short-term, limited-duration plans.”

Ms. Goff said the coordination of benefits process is very labor intensive. As such, with respect to products like hospital indemnity, accident-only and specified disease, except for possibly in some cases with respect to workers compensation, these plans do not coordinate even if there is some state law or rule that would permit such coordination.

Lucy Culp (Leukemia & Lymphoma Society—LLS) discussed the NAIC consumer representatives’ perspective on the products covered under Model #171. She said it should not be a surprise to anyone that consumer without access to employer-based health insurance coverage are faced with a complex mix of options to obtain such coverage on their own. She said some of these plans may offer high quality coverage and be very expensive while other plans may be less expensive and appear to offer high quality coverage for the types of services a consumer might assume a comprehensive health insurance plan would cover. She said this complexity hinders the ability of consumers to make informed decisions in purchasing such coverage.

Ms. Culp said many of the products covered under Model #171 on their face could look like comprehensive health insurance coverage to consumers. She said although some of the products covered under Model #171 do appear to be supplemental coverage, if they are packaged and offered in a certain way, these products also could appear to be comprehensive health insurance coverage. Ms. Culp said that prior to the enactment of the federal Affordable Care Act (ACA), products covered under Model #170 and Model #171 had a clearer place in the health insurance market as being supplemental products that consumers could use for a short time to bridge the time in between jobs or after graduating from college and obtaining a job with employer-based health insurance coverage. She explained that today, post-ACA enactment, consumers have more high-quality options to obtain health insurance coverage, such as obtaining such coverage through the ACA health insurance.
marketplaces and Medicaid expansion. She said the availability of these high-quality coverage options prompted the NAIC consumer representatives to urge the NAIC to review and revise Model #170 and Model #171 to address consumer confusion about these supplemental products, including the type of benefits they offer and their purpose in the marketplace. Ms. Culp highlighted the differences in requirements for ACA plans and, products Model #170 and Model #171 cover, non-ACA plans. She detailed the impact, particularly the out-of-pocket costs, of an individual undergoing lymphoma treatment who is covered under one of these non-ACA plans, a short-term, limited-duration (STLD) plan. She highlighted the differences in out-of-pocket costs for consumers enrolled in STLD plans for other diagnoses, such as lung cancer, as compared with ACA plans.

Ms. Culp also said STLD plans also on average have significantly lower loss ratios than ACA plans, which makes them highly profitable.

Sarah Lueck (Center on Budget and Policy Priorities—CBPP) said indemnity plans also raise concerns. She discussed some of the features of these plans that resemble traditional major medical health insurance plans that can confuse consumers, such as using “networks” of providers, the use of plan benefit schedules and using words such as “insurance” or “health plan” in marketing materials. Ms. Lueck said plans sold to employees can be just as problematic. She discussed the aggressive marketing of some of the products covered under Model #170 and Model #171 and consumer confusion. She also noted that even when information about these plans is disclosed, consumer testing shows that people do not understand the limits of some of these products, such as STLD plans. Ms. Lueck said the NAIC consumer representatives do not see the supplemental product market as one that everyone is working from the same set of information and is on a level playing field. There is a lot of confusion in this market making it difficult for consumers to make informed decisions.

Ms. Lueck pointed out a recent Georgetown University Health Policy Institute, Center on Health Insurance Reforms (CHIR) study “Misleading Marketing of Non-ACA Health Plans Continued During COVID-19 Special Enrollment Period.” She said the authors of this study created two sample applicants for a variety of different types of plans to test out what these applicants were being told and shown when searching for coverage. She said what the authors found through a number of telephone calls with brokers and agents and representatives of these plans was the lack of accurate information disclosed about a plan’s affordability, particularly as related to ACA marketplace coverage. She said that in some cases, these sample applicants were steered away from the ACA marketplace coverage even though these applicants had quite low incomes and were eligible for ACA plans at a very low cost, such as a bronze plan at $0 premium and a silver plan with reduced cost-sharing starting at $2 premium. Ms. Lueck said that in some cases, these sample applicants were offered alternative plans, such as STLD plans. She said that although some of these non-ACA plans are characterized as having really low premiums, even if that is the case for some consumers, given the changes in the marketplace, this is not true for everyone anymore. For the sample applicants in the study, these non-ACA plans, such as STLD plans, were expensive possibly $70 - $100 per month, which is not an insignificant cost. She said consumers, such as those like the sample applicants, can find quite affordable comprehensive coverage in the ACA marketplace, but they might not know it.

Ms. Lueck provided several key takeaways for the Subgroup to consider: 1) non-ACA plans covered by Model #171 often pose risks to consumers; 2) while some products, such as dental plans, are clearly not comprehensive coverage, many plans are structured in ways that blur the lines with comprehensive health insurance coverage; 3) too often, these plans are marketed in an aggressive, even predatory manner; and 4) this market may serve insurers and brokers and agents well, but it often does not serve consumers well.

Mr. Schallhorn asked Ms. Culp if some of the differences in out-of-pocket costs for STLD plans and ACA plans was due to assumptions related to preexisting conditions. Ms. Culp said she did not believe those differences reflected an assumption. She said what she believes the Milliman study assumed was that consumers would need services that were not covered under the STLD plan and as such, would be paying out-of-pocket for these services.

Mr. Petersen said he believes many of the NAIC consumer representatives brought to the Subgroup’s attention during this meeting will most likely be address through the work of the Improper Marketing of Health Insurance (D) Working Group. Mr. Swanson, co-chair of the Working Group, said the Working Group is meeting at the Fall National Meeting. He said the Working Group is in the process of developing its agenda for that meeting. J.P. Wieske (Health Benefits Institute—HBI) said that some of the issues the NAIC consumer representatives raised during their presentation are issues that the industry also is concerned about. He said some of the HBI’s members also have conducted secret shopping, found some issues and followed up with agents and brokers to address those issues. He said the HBI agrees that these plans are not comprehensive health insurance coverage and should not be marketed as such. Ms. Goff agreed with Mr. Wieske’s comments.

Ms. Arp asked Ms. Culp and Ms. Lueck if the recent federal rule under the federal No Surprises Act (NSA), which requires agents and brokers to disclose their commissions for STLD plans, will help to address some of the issues raised in their
presentation. Ms. Lueck said any type of disclosure is helpful if it leads to more understanding and provides more information to assist consumers in understanding the how STLD plans work. However, she does not believe there is any mystery about STLD plans given the high agent and broker commissions associated with this product, which seems to incentivize their sale. Ms. Culp said she disagreed slightly with Mr. Petersen’s comments that the Improper Marketing of Health Insurance (D) Working Group was the only NAIC group appropriate for some of the concerns raised in her presentation. She said particularly with respect to materials, including disclosures, provided to consumers about the products covered under Model #170 and Model #171 is important as well to address their concerns. Ms. Arp agreed. She said when the Subgroup begins its review of the provisions in Model #171 on disclosures, she anticipates a robust discussion of these provisions considering the issues that have been raised during these meeting and other Subgroup meetings. She said, however, that some issues most likely are not going to address the problems of bad actors in the market who intentionally try to confuse and mislead consumers about the some of the benefits associated with non-ACA plans versus ACA plans, but she believes the Subgroup can as part of its work in revising Model #171 make sure consumers know how these non-ACA products differ from ACA plans.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.
1. Continued Discussion of Products Regulated Under Model #171

Mr. Schallhorn said the purpose of this meeting is to allow questions from Subgroup members, interested state insurance regulators, and interested parties about the information provided during the Subgroup’s Sept. 20 meeting on: 1) the different types of products covered under the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171); 2) how they pay benefits; 3) what they are designed to do; 4) how they are marketed; and 5) how they are sold. During that meeting, the Subgroup also heard about the products Model #171 currently covers and, based on the revisions to the Supplementary and Short-Term Health Insurance Minimum Standards Model Act (#170) (formerly known as the Accident and Sickness Insurance Minimum Standards Model Act), which is the companion model law to Model #171, what products Model #171 will be revised to cover.

Recognizing that most of the supplemental benefit products subject to Model #171 are sold through the workplace, Ms. Arp asked about those products sold to individuals through associations. She asked why these products are sold through an association and, functionally, how it works. J.P. Wieske (Health Benefits Institute—HBI) explained that associations provide such benefits as a value add-on to their members. He said some associations also use these benefits as a way to attract members and an opportunity to provide these benefits on a less expensive basis than it would be if purchased in the individual market. He said that typically, the association purchases the benefit on behalf of its members, but in some cases, members may pay directly for the benefit as part of their membership or as an add-in to their health plan coverage. Cindy Goff (American Council of Life Insurers—ACLI) discussed examples of different associations that have approached some ACLI members, and those associations desire to provide these benefits at lower costs. She also said ACLI members have become more sophisticated in researching organizations to ensure an association has been in business for a significant enough time and not recently created solely for the purpose of offering insurance particularly due to the federal Affordable Care Act’s (ACA) provisions related to associations. Chris Petersen (Arbor Strategies LLC) explained that the Group Health Insurance Standards Model Act (#100) sets out many of the provisions Ms. Goff just discussed with respect to what it means to be a “true” association. Given this, Model #100 is the appropriate NAIC model, not Model #171, for determining what it means to be a “group,” how to define an “association” or “employer group,” and how an association or employer group can offer benefits, such as supplementary products. Mr. Wieske pointed out that Model #100 also includes provisions to ensure the association is indeed separate from an insurer and can make its own decisions independent of the insurer.

Ms. Arp asked about bundling supplemental benefit products. Ms. Goff said the ACLI has had a lot of discussions with the states about bundling and how a package of products is put together and marketed to consumers. She discussed two different ways such packaging can happen: 1) the consumers themselves select more than one product to address areas where they would like to mitigate their financial risk with respect to expenses not covered under their major medical plan; and 2) when an insurer puts together a “package” of products and markets them to consumers as though they are not distinct products with different and distinct roles to possibly lead the consumer to believe what is being offered is more comprehensive than it is or that these products are some kind of alternative to comprehensive major medical coverage. Ms. Goff said for the second method of bundling, she believes there are ways to address it. She said the Antifraud (D) Task Force recently established a new working group, the Improper Marketing of Health Insurance (D) Working Group, to discuss and consider different regulatory approaches to address this issue. Ms. Goff also noted that this issue of improper marketing of supplemental benefit plans goes to the issue of what is a minimum standards model and the purpose of such a model versus addressing inappropriate market behavior and ensuring state insurance regulators have the tools they need to address those issues as well. She said the ACLI has noticed that in some states, it appears they are looking to impose severe restrictions on what benefits can be included in these supplemental benefit products to prevent them from being inappropriately marketed to consumers. She said the ACLI believes that such an approach devalues these products with respect to the protections they offer to consumers to help pay costs not covered by their...
major medical insurance. Ms. Goff said the ACLI believes that instead of imposing severe restrictions on benefits, the focus should be on making sure consumers understand each product they are purchasing and its distinct function and benefits.

Mr. Wieske explained that some supplemental benefit products are very low dollar. He said that in such cases, it makes sense for a producer to bundle them together to be able to sell them. He explained that although these products are bundled as a package, the producer will sell them as distinct products. Mr. Wieske noted that such packaging is particularly the case for associations that want to be able to offer a menu of products, while also having the ability to offer them separately. Mr. Wieske said that in situations where supplemental benefit products are bundled to make them appear to be ACA-compliant products, he supports Ms. Goff’s comments. He said the HBI has taken action against producers who have engaged in such deceptive practices. The HBI believes that supplemental benefit products should not be developed, marketed, or sold as a replacement for major medical insurance.

Mr. Wieske also said that limiting the ability of producers to bundle products probably creates a bigger problem in the market because consumers want to buy certain products together. As such, producers are going to satisfy this desire by bundling products together from different insurers, which means insurers will most likely not be able to track such behavior. He said this is because the producer will sell each product individually, and given this, insurers will not be able to detect certain patterns of behavior and will be unable to take action to stop it. Mr. Wieske added that he believes prohibiting the bundling of products could result in an availability issue from a product perspective, an insurer perspective, and a consumer perspective. Mr. Petersen pointed out a few common product bundles, such as vision and dental insurance bundles. He explained that these products are commonly bundled together and offered to employers for their employees because many major medical policies do not include these benefits. Given this, Mr. Petersen suggested caution in using the term “bundling.” He also suggested that the bundling of supplemental benefit products is not really the core issue; the issue is how supplemental benefit products are presented to consumers, which he believes is an unfair trade practices issue addressed in the Unfair Trade Practices Act (#880). Mr. Petersen also pointed out the importance of not confusing “bundling” with the idea of combining two federal Health Insurance Portability and Accountability Act (HIPAA)-excepted benefits products. He said HIPAA and the NAIC minimum standards models—Model #170 and Model #171—contemplate the combining of these products.

Bonnie Burns (California Health Advocates—CHA) asked if there was a clear linkage between Model #171 and the other NAIC models discussed as vehicles for addressing the bundling and marketing issues. Mr. Petersen said he believes there is a stronger linkage between Model #171 and Model #100 because the current version Model #171 applies to the group market whereas prior versions of it only applied to the individual market. As such, for a group to be able to offer the products regulated under Model #171, the group must be a “permitted” group recognized by the state as provided in Model #100. Ms. Burns suggested that as the Subgroup discusses revisions to Model #171, it should add references to those NAIC models that might apply to a particular model section. Ms. Arp said that from a state insurance regulator perspective, state departments of insurance (DOIs) use the NAIC minimum standards models when reviewing form filings to determine whether the filing complies with the models’ coverage and disclosure and notice requirements. She said issues related to bundling and marketing would be within the scope of a DOI’s consumer affairs division or market conduct division, not its form filing division. She said that with respect to the “group” issue, the Nebraska DOI includes in its form review checklist provisions for the review of whether the group that is to offer the product is a “permitted” group under state law and regulations. Ms. Arp said she believes the NAIC minimum standards models are linked with other relevant NAIC models depending on who and what DOI division is reviewing the product at a particular point in time. Ms. Goff said that she believes over the last few years, there have been some gaps identified in regulatory authority to address certain marketing practices. She said she believes the new Improper Marketing of Health Insurance (D) Working Group will work to address those gaps, which could involve reviewing and revising several NAIC models.

Ms. Amman asked if supplemental benefit product plans can coordinate with other plans. Mr. Petersen said supplemental benefit product plans do not coordinate with other plans. These plans pay regardless of whether the consumer has other plans that would cover the same benefit. He said that except for dental and vision plans, the Coordination of Benefits Model Regulation (#120) prohibits such coordination to ensure the consumer gets the full benefit of the premium dollars paid from both plans. Mr. Petersen discussed the purpose and nature of supplemental benefit products and how they are marketed to help the consumer mitigate financial risk by paying costs other than medical care costs. Ms. Goff noted that disability income plans coordinate with workers’ compensation.

Ms. Arp asked for an explanation of calculating medical loss ratios (MLRs) for products, such as supplemental benefit and long-term care insurance (LTCI) products, that do not end after one year. Mr. Wieske explained that the MLRs in such situations are calculated over the course of a lifetime rather than the three-year loss ratio calculation for ACA plans. Ms. Goff noted that

© 2021 National Association of Insurance Commissioners
Lucy Culp (Leukemia & Lymphoma Society—LLS) asked Mr. Petersen about information he provided in his chart concerning the products currently regulated under Model #171 and those to be regulated under the revised Model #171. She asked how he determined that group short-term, limited-duration (STLD) plans are not to be regulated under the revised Model #171. Mr. Petersen said he believes group STLD plans do not exist because HIPAA provides that “individual” STLD plans are not individual health insurance. This means that these plans are not subject to HIPAA’s requirements for individual health insurance, such as guaranteed renewability. He said HIPAA provides no such exception for group STLD plans. He said he interprets this to mean that group STLD plans would be subject to certain requirements, such as guaranteed renewability and the ACA requirements, which is contrary to how STLD plans operate functionally. Ms. Arp said the Nebraska DOI reviews and approves group STLD plan forms. She explained the DOI’s rationale and process for the review and approval of such plans. The Subgroup discussed this issue and determined that STLD plans are a different kind of animal, not clearly individual market insurance and not clearly group market insurance, but they fall somewhere in between. Mr. Wieske said that with respect to STLD plans sold to individuals through an association, most state insurance regulators would consider those plans to be individual market insurance and subject to the requirements for the individual market. He pointed out a provision in Model #170, which permits a state to extend its jurisdiction to an STLD plan not delivered in the state, such as an STLD plan sold to an individual through an association. The same language is not provided for other products regulated by the NAIC minimum standards models. Mr. Petersen said language in Section 2A supports his conclusion that the NAIC minimum standards models do not apply to group STLD plans.

Jackson Williams (Dialysis Patients Citizens—DPC) asked Mr. Wieske about supplemental benefit product MLR trends and whether, as reflected in NAIC experience reports, the decline in MLR for these products over time is an actual trend. Mr. Wieske explained that he has not examined the underlying data for such findings. He said that given this, he cannot definitively state whether that assumption is true or not. He said that this is a snapshot in time and could reflect a higher number of new policies sold, enrollment numbers, or some other variable. He reiterated that MLRs for supplemental benefit products cannot be compared to MLRs for major medical policies.

Mr. Williams asked Mr. Wieske what information a consumer should have access to when shopping for STLD plans. Mr. Wieske said that from his perspective, it is important for the consumer to understand what the plan covers and does not cover, what the risks are, and time frames. Mr. Williams asked if consumers should be able to comparison shop for an STLD plan like they can for a mortgage or a credit card. Mr. Wieske said he believes consumers can currently comparison shop. He also noted that consumers have different needs and that STLD plans have some variation to meet those different needs. Mr. Wieske also said he believes that state insurance regulators should be looking at the information being provided to consumers and figure out if that information is intentionally confusing or misleading. Mr. Williams asked if consumers should have the ability to compare STLD plans on an apples-to-apples basis like they can for credit cards because of the federal Truth in Lending Act (TILA), which promotes the informed use of consumer credit by requiring disclosures about its terms and cost. Mr. Wieske also said that state insurance regulators should be looking at the information being provided to consumers and figure out if that information is intentionally confusing or misleading. Mr. Williams asked if consumers should have the ability to compare STLD plans on an apples-to-apples basis like they can for credit cards because of the federal Truth in Lending Act (TILA), which promotes the informed use of consumer credit by requiring disclosures about its terms and cost.

Mr. Williams said he has several questions for the ACLI. Mr. Schallhorn said the Subgroup would make time on its agenda for its next meeting for additional questions.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.

Oct 4 Minutes
The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met Sept. 20, 2021. The following Subgroup members participated: Laura Arp, Co-Chair (NE); Andy Schallhorn, Co-Chair (OK); Debra Judy (CO); Chris Struk (FL); Robert Wake (ME); Sherri Mortensen-Brown (MN); Cynthia Amman and Camille Anderson-Weddle (MO); Shari Miles and Kathleen Kellock (SC); Rachel Bowden (TX); Tanji J. Northrup (UT); Anna Van Fleet, Christine Menard-O’Neal, Mary Block, and Jamie Gile (VT); Ned Gaines (WA); and Jennifer Stegall and Nathan Houdek (WI).

1. **Heard Presentations on Products Regulated Under Model #171**

Ms. Arp said as discussed during its Aug. 23 meeting, the Subgroup will hear presentations during this meeting on: 1) the different types of products covered under the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act* (#171); 2) how they pay benefits; 3) what they are designed to do; 4) how they are marketed; and 5) how they are sold. She said the Subgroup will also hear about the products Model #171 currently covers, and based on the revisions to the *Supplementary and Short-Term Health Insurance Minimum Standards Model Act* (#170) (formerly known as the *Accident and Sickness Insurance Minimum Standards Model Act*), which is the companion model law to Model #171, what products Model #171 will be revised to cover.

Chris Petersen (Arbor Strategies LLC) provided an overview of the type of products that are subject to Model #171 based on the current version and what products will be subject to Model #171 after it is revised. He said the chart he developed identifies each of the products subject to the Model #171 requirements and whether the product is covered under Model #171 based on being offered in the individual market, the group market, or both. He said the biggest change as far as the products Model #171 currently regulates and will regulate after the revisions is the addition of individual short-term, limited-duration (STLD) plans. He said this product is not regulated in any NAIC model prior to revisions to Model #170, which added STLD plans. He explained that because of language in the federal Affordable Care Act (ACA), only individual STLD plans are covered under the models. Group STLD plans are considered comprehensive major medical coverage subject to the ACA’s requirements. Mr. Petersen said another product added is fixed indemnity plans. He said fixed indemnity is recognized as an excepted benefit under the federal Health Insurance Portability and Accountability Act of 1996 (HIPAA) and the ACA, but it was never included in Model #170 or Model #171, the minimum standards models. He said because STLD plans and fixed indemnity plans were never included, the Subgroup will have to develop minimum standards for them, such as minimum notice and disclosure requirements. He pointed out that for STLD plans only, the revisions to Model #170 allow for extraterritorial jurisdiction, which means a state can have its requirements apply to STLD plans issued outside of the state.

Mr. Petersen discussed the addition of group disability income protection products. He said when considering revisions related to these products, the Subgroup will have to keep in mind that they are establishing minimum standards because group disability income protection plans are very different from individual disability income protection plans. He explained that limited benefit vision plans and limited benefit dental plans were always included in the minimum standards models, but the definitions for these plans have been revised for consistency with the definitions of these products in HIPAA. He noted that the minimum standards models do not apply to group for these plans. He said the products he has not discussed, such as accident-only plans and specific disease plans, are products the minimum standards models currently cover and will continue to cover without much change. He said products that are considered comprehensive coverage and subject to the ACA’s requirements have been removed from the minimum standards models. He explained that because these coverages were in the models, the Subgroup will have to carefully review provisions in Model #171 that might relate to comprehensive coverage, but because they relate to comprehensive coverage, it might not make sense for supplemental coverage.

J.P. Wieske (Health Benefits Institute—HBI) provided a history of Model #170 and Model #171. He said Model #170 was developed as part of state health reform efforts in the late 1980s and early 1990s to set up a regulatory structure for non-major medical health insurance products. He said the initial focus was to set minimum standards for these products to assist consumers in understanding them prior to purchase. He said at the time the Subgroup began work on revising Model #170, work on revising network adequacy standards had just been completed after approximately two years and work on revisions to the *Health Carrier Prescription Drug Benefit Management Model Act* (#22) was ongoing. He said because of issues related to
STLD plans, fixed indemnity plans, and stakeholder requests to address those issues in an NAIC model, a decision was made to make revising the minimum standards models as the next priority project. He said the Subgroup moved quickly to complete the Model #170 revisions. He explained that one of the main issues in the Model #170 revisions, particularly with respect to state regulatory authority over STLD plans, was what provisions belong in Model #170 and what belongs in Model #171. He said the Subgroup had extensive discussions on STLD plans from both a product and regulatory perspective, which led the Subgroup to specifically decided to treat STLD plans differently in the minimum standards models than the other products covered under the models.

Mr. Wieske suggested that as the Subgroup works on the Model #171 revisions, it keep in mind the following with respect to the products covered under the model: 1) most supplemental products sold through the individual market are guaranteed renewable; 2) many products sold through an employer are issued on a guaranteed issued basis, which means they are not medically underwritten; 3) unlike major medical products, consumers do not necessarily access the benefits of these products each year; 4) the products typically provide payment to the insured person and not to a medical provider; 5) payments can be used for any expenses the insured person wishes to use them for, and these payments are not coordinated with the consumer’s major medical plan; and 6) the products are priced based on lifetime loss ratios. He said for some of these products, there is evidence that some consumers are buying them to use in conjunction with their high deductible health plans as one way to build up funds in their health savings accounts (HSAs) over time and then cancel the coverage. He explained that given rising deductibles and cost sharing in individual and employer-sponsored plans, the coverage provided by these products provides consumers with coverage for those cost-sharing amounts when they cannot afford it. However, he said the HBI strongly believes these products should not be developed, marketed, and sold as replacements for ACA coverage.

Cindy Goff (American Council of Life Insurers—ACLI) said in looking at the products Model #171 currently regulates and will be regulating following the revisions, as Mr. Petersen described, she would categorize those products as HIPAA-excepted benefits products and non-HIPAA-excepted benefits products. Most of the products subject to Model #171 are HIPAA-excepted benefits products. STLD plans are the only non-HIPAA-excepted benefits products.

Ms. Goff explained what HIPAA-excepted benefits are; the federal agencies that define how benefits qualify as HIPAA-excepted benefits for individual products and group products; and the primary regulator for such benefits, which are the states. Ms. Arp asked about the significance of being a HIPAA-excepted benefits. Ms. Goff said due to the ACA, one of the main benefits is products considered to be HIPAA-excepted benefits are not subject to the ACA’s requirements because these products are not intended to be a form of primary coverage. She also discussed the differences between the group market and individual market, such as who holds the policy, whether the product is noncancellable or guaranteed renewable, and whether the product is medically underwritten. She said some of these differences, particularly with respect to the individual market, support the importance of the model setting clear minimum standards to allow insurers to assess the risk of providing coverage from the beginning because the insurer is setting the premium rate at the outset that will be in place for decades for some individuals.

Ms. Goff discussed what is meant by the term “supplemental benefits,” explaining that industry and state insurance regulators have defined the term differently than HIPAA. Generally, “supplemental benefits” are considered financial products that are triggered by health events but are not expense-based and not specifically meant to replace income. She explained that disability income, as well as dental and vision coverage are often considered “supplemental” because they provide additional benefits not covered by major medical plans, but she noted that dental and vision coverage is often expense-based and uses provider networks. Given these differences, for the purposes of this discussion, she will not include them in her discussion of “supplemental benefits.”

Ms. Goff discussed the supplemental benefit product categories, which include accident-only, specified disease, and hospital indemnity or other fixed indemnity. She discussed the type of benefits they provide and other characteristics of these types of supplemental benefit products, noting that they are financial protection products that help pay costs not covered by medical insurance. She also discussed what these supplemental benefit products are not, including that: 1) they are not comprehensive medical coverage and not intended to be sold as such; 2) they do not pay directly for medical expenses or claims; 3) they cannot pay benefits on an expense-incurred basis; and 4) they are not mini-meds or other types of medical expense coverage eliminated under the ACA.

Ms. Goff said supplemental products are popular, and based on a 2020 survey, consumers are highly satisfied with their purchase and the services they received. She said the ACLI believes the survey reflects such high consumer satisfaction, which is typically not the case with other health insurance products when the product is sold properly and used as intended. She also
discussed the importance and value of supplemental products due to the fragility of household budgets, particularly given their low premiums.

Ms. Goff next discussed dental and vision insurance, explaining how they are sold; the typical benefits offered; how the benefits are provided, which is typically provider network-based; and other characteristics of these coverages. She next discussed disability income insurance. She explained that this type of coverage is used to protect income by replacing a portion of an individual’s salary when they must take off from work due to a serious illness or injury. This coverage can be short-term or long-term. Ms. Goff explained the characteristics of both types of coverages, including the typical benefits they provide.

Ms. Goff next discussed the only type of non-HIPAA-excepted benefits product in Model #171; i.e., STLD plans. She said this product does not neatly fit into any category. It sort of stands alone because it is defined in HIPAA as “not health insurance.” STLD plans are also not considered excepted benefits under HIPAA. Ms. Goff said the ACA does not mention STLD plans, and as such, it is exempt from most ACA requirements. She said STLD plans are meant to be temporary primary coverage for individuals in transition into or out of major medical coverage. She described the characteristics of STLD plans, such as the typical length of such coverage and that medical underwriting is permitted.

Ms. Arp said the Subgroup has reserved its Oct. 4 meeting to take questions from stakeholders about the information provided in these presentations. She asked stakeholders who have any questions and would like to speak during that meeting to let NAIC staff know.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.

Sept 20 Minutes
The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met Aug. 23, 2021. The following Subgroup members participated: Laura Arp, Co-Chair (NE); Andy Schallhorn, Co-Chair (OK); Chris Struk (FL); Frank Opelka (LA); Robert Wake (ME); Sherri Mortensen-Brown (MN); Cynthia Amman and Carrie Couch (MO); Kathleen Kellock (SC); Rachel Bowden (TX); Tanji J. Northrup (UT); Anna Van Fleet, Christine Menard-O’Neil, Mary Block, and Jamie Gile (VT); Ned Gaines (WA); and Jennifer Stegall and Nathan Houdek (WI).

1. Discussed its Next Meeting Agenda

Ms. Arp said prior to the meeting, she and Mr. Schallhorn discussed pausing the Subgroup’s discussions of revisions to the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171) to hold one or two meetings to educate everyone participating in the Subgroup discussions on: 1) the different types of products covered under Model #171; 2) how they pay benefits; 3) what they are designed to do; 4) how they are marketed; and 5) how they are sold. She said this discussion will be beneficial to everyone because it will provide a better understanding of the Subgroup’s work as it moves forward in its discussions about revisions to Model #171. She said such a discussion is needed, particularly due to the turnover of Subgroup members since the Subgroup last met in December 2019. She said Cindy Goff (American Council of Life Insurers—ACLI) volunteered to facilitate a presentation to cover these topics, including which of these products are more frequently sold, how they are designed, the most selected dollar amount of coverage and dollar amount of claims. Ms. Arp said she believes the types of products to be covered under the revised model fall into at least three different groups: 1) short-term, limited-duration (STLD) products; 2) dental and vision products, which are excepted benefit products under the Health Insurance Portability and Accountability Act of 1996 (HIPAA); and 3) supplemental products, such as accident-only policies, specified disease policies, and hospital indemnity policies. She said the goal of the presentation is for everyone to better understand what each of these groups of products are, what they do, and how they pay. She also said following this presentation, the Subgroup is open to hearing from other stakeholders, particularly consumer representatives, on their concerns with these products.

Ms. Arp also discussed the approach the Subgroup could take with respect to STLD products. She said there has been discussion of separating the STLD plan provisions from the other types of products covered under Model #171. She said she believes this approach has been discussed particularly with respect to Model #171’s consumer disclosure requirement provisions because due to the nature of STLD plans, they do not fit with the other types of products covered under Model #171. The Subgroup agreed. Ms. Arp also discussed other potential differences between STLD plans and the other types of products covered under Model #171, such as group versus individual coverage and guaranteed renewability requirements.

Ms. Arp also noted that the purpose of Model #171 is to set minimum standards for the types of products it covers. Ms. Goff agreed. She said the Subgroup needs to keep this purpose in mind as it considers revisions, and it should not include prescriptive provisions that could affect the ability of insurers, particularly for group coverage, to build on the model’s minimum standard provisions. If the Subgroup chooses to do so, it should offer innovative product designs and benefits.

Chris Petersen (Arbor Strategies LLC) said the Subgroup also needs to be cognizant of what Model #171 covers and what it should cover. He explained that technically, Model #171 currently covers individual major medical products, but because of the revisions to the Supplementary and Short-Term Health Insurance Minimum Standards Model Act (#170) (formerly known as the Accident and Sickness Insurance Minimum Standards Model Act), which is the companion model law to Model #171, the provisions related to individual major medical products in Model #171 need to be removed and other provisions revised for consistency with Model #170. He also noted that Model #171 does not cover STLD plans, but because the Subgroup agreed to add these products to Model #170, provisions related to these products will have to be added to Model #171. He also discussed other potential inconsistencies in the model’s current provisions involving dental and vision products and disability products. Ms. Arp asked about the possibility of creating a document to assist in the Subgroup’s discussion that would outline what products were covered in Model #171 prior to the Model #170 revisions and what products are to be covered in Model #171 after the Model #170 revisions. Mr. Petersen volunteered to create such a document.
Ms. Goff agreed that such a document would be useful. She also recalled the Subgroup’s discussions when revising Model #170 on whether to add STLD products and how to do it given the differences in these products from the other types of products covered under the models. She said she believes this is the reason why the Subgroup’s initial approach in revising Model #171 was to keep STLD plans separate from the other types of products.

Ms. Arp agreed with Ms. Goff’s comments. She said she envisions the Subgroup moving through Model #171; making revisions for the supplemental-type products; and considering, when appropriate, different provisions for STLD plans. She said if, at the end of its review, the Subgroup determines there are too many of these provisions, the Subgroup might have to reconsider this approach and develop a separate section for STLD plans. She said she knows the Subgroup will have to develop different provisions for consumer disclosures for STLD plans. J.P. Wieske (Health Benefits Institute—HBI) expressed support for Ms. Arp’s approach regarding STLD plans and the Subgroup’s plan to pause its work for one or two meetings to discuss the products covered under Model #171, including the different product designs and purposes.

After discussion, the Subgroup decided to hold its next meeting on Sept. 20. Ms. Arp also asked that if anyone has any materials they believe would be useful to the Subgroup as it begins its level-setting discussions, they should send them to NAIC staff for distribution prior to the Sept. 20 meeting.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.

Aug 23 Minutes
Accident and Sickness Insurance Minimum Standards (B) Subgroup
Virtual Meeting
August 9, 2021

The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met Aug. 9, 2021. The following Subgroup members participated: Laura Arp, Co-Chair (NE); Andy Schallhorn, Co-Chair (OK); Debra Judy (CO); Chris Struk (FL); Robert Wake (ME); Sherri Mortensen-Brown (MN); Amy Hoyt, Cynthia Amman, and Carrie Couch (MO); Rachel Bowden (TX); Heidi Clausen and Shelley Wiseman (UT); Anna Van Fleet, Emily Brown, Christine Menard-O’Neil, and Jamie Gile (VT); Jane Beyer (WA); and Nathan Houdek and Jennifer Stegall (WI).

1. Discussed Revisions to Model #171

The Subgroup continued its discussion of proposed revisions to the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171)* in relation to the guaranteed renewability and noncancellable requirements of most of the policies covered under Model #171. To address this issue, the Subgroup confirmed its intent to add language to Section 4—Effective Date.

The Subgroup next continued its discussion on whether to add language to Section 5A to address the issue of using language in the policy definitions in Section 5—Policy Definitions, such as “shall not be more restrictive” or “shall not be defined more restrictively than.” The Subgroup discussed Mr. Wake’s suggested language: “[e]xcept as provided in this regulation, to the extent these definitions are used in a policy or certificate, definitions used in a policy or certificate may vary from the definitions in this section, but not in a manner that restricts coverage.” The Subgroup discussed whether this language would in effect set a minimum floor for the policy definitions in Section 5 while also permitting insurers to provide more coverage to consumers if they choose to do so. The Subgroup discussed other language that could possibly require state departments of insurance (DOIs) to review policy definitions to determine whether an insurer’s changes to a policy definition are more favorable or less favorable to the consumer. After additional discussion, the Subgroup decided to accept Mr. Wake’s suggested language.

The Subgroup returned to its discussion of Section 5G and the Missouri DOI’s suggested revisions to the policy definition of “mental or nervous disorder.” The Subgroup discussed Mr. Wake suggested language: “[e]xcept as provided in this regulation, to the extent these definitions are used in a policy or certificate, definitions used in a policy or certificate may vary from the definitions in this section, but not in a manner that restricts coverage.” The Subgroup discussed whether this language should be a drafting note or substantive language. After additional discussion, the Subgroup agreed to accept the Missouri DOI’s suggested language and add a drafting note clarifying that insurers may use other terminology for this policy term. The Subgroup also agreed to add the words “or its successor” just in case the “Diagnostic and Statistical Manual of Mental Disorders (DSM)” is ever replaced with another source.

The Subgroup revisited its discussion of Section 5G and the Missouri DOI’s suggested revisions to the policy definition of “mental or nervous disorder.” The Subgroup discussed if “nervous” disorder is currently used, because Section 4A(14) of the *Supplementary and Short-Term Health Insurance Minimum Standards Model Act (#170)* (formerly known as the *Accident and Sickness Insurance Minimum Standards Model Act*), which is the companion model law to Model #171, refers to “mental or nervous disorder,” the Subgroup would have to use the same terminology in Section 5G. Mr. Wake suggested that the Subgroup consider adding language to Section 5G to clarify that insurers may use other terminology such as “mental health condition or substance use disorder.” The Subgroup discussed whether this language should be a drafting note or substantive language. After additional discussion, the Subgroup agreed to accept the Missouri DOI’s suggested language and add a drafting note clarifying that insurers can use other terminology for this policy term. The Subgroup also agreed to add the words “or its successor” just in case the “Diagnostic and Statistical Manual of Mental Disorders (DSM)” is ever replaced with another source.

The Subgroup next discussed the policy definition of “nurse” in Section 5H. The NAIC consumer representatives suggested adding “advance practice nurse.” Jolie H. Matthews (NAIC) said during its previous discussions, the Subgroup agreed to accept the NAIC consumer representatives’ suggested revision. J.P. Wieske (Health Benefits Institute—HBI) asked about adding advance practice nurses to this policy definition, given that insurers can use it in at least two ways—coverage determinations and qualifications to perform certain duties. He said it makes sense to add advance practice nurses to the policy definition, given that they have more authority, such as the authority to prescribe medications, than a registered nurse. He asked whether including advance practice nurses in this policy definition could somehow limit that authority. Anna Howard (American Cancer Society Cancer Action Network—ACS CAN) explained that the NAIC consumer representatives suggest adding advance practice nurses to the policy definition of “nurse” to ensure that depending on how insurers use this policy definition, given the broad scope of their practice, they are somehow excluded from being considered a “nurse” for the purposes of the policy
definition. Ms. Arp pointed out that Section 4A(14) of Model #170 requires Model #171 to include a policy definition of “physician,” which is in Section 5K. She asked if anyone believes that a reference to “advance practice nurses” should be added to the policy definition of “physician” in Section 5K instead of the policy definition of “nurse.” Mr. Wieske said he believes this could be a state-by-state scope of practice issue. Given this, he suggested that the Subgroup might want to consider adding a drafting note to Section 5H alerting states to this possible scope of practice issue. After additional discussion, the Subgroup agreed to accept the NAIC consumer representatives’ suggested revision and add the drafting note.

The Subgroup next discussed the policy definition of “one period of confinement” in Section 5I. Ms. Matthews explained the Subgroup’s previous discussions related to this term. She said those discussions included deleting the term and moving it to a substantive provision in Model #171 because the term is not used in Model #171. However, she noted that because this is a policy definition and not a regulatory definition, the Subgroup most likely would change its mind about removing the term from Section 5. She also said during the Subgroup’s previous discussions, the Subgroup sought clarification on what this term means and how it is used in a policy. Mr. Wieske said he believes the term is used in a number of ways depending on the type of policy. Bonnie Burns (California Health Advocates—CHA) explained that she has seen this term used in policies to define the distance between one period of confinement and another period of confinement to determine whether it is a benefit period for which benefits have been paid or a new benefit period. She asked for clarification about this policy definition and whether it is tied to an in-hospital stay. The Subgroup discussed the nuances of how this policy definition is used and applied in different types of policies. After additional discussion, the Subgroup decided to leave the policy definition of “one period of confinement” unchanged. Ms. Howard stated from a consumer perspective that the Subgroup should consider adding language related to this policy definition in the substantive provisions of Model #171, given the potential varying uses and applications of the definition depending on the type of policy. The Subgroup discussed Ms. Howard’s suggestion and decided that it is not necessary to have varying definitions for the term because the terms defined in Section 5 are a minimum standard and meant to be a common policy definition across all policies if that term is used in the policy, and it may not be changed in a manner that restricts coverage.

The Subgroup decided to begin its discussion of the policy definition of “partial disability” in Section 5J during its next meeting Aug. 23.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.

Aug 9 Minutes
The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met July 26, 2021. The following Subgroup members participated: Laura Arp, Co-Chair (NE); Andy Schallhorn, Co-Chair (OK); Debra Judy (CO); Chris Struk and Shannon Doheny (FL); Robert Wake (ME); Sherri Mortensen-Brown (MN); Amy Hoyt and Carrie Couch (MO); Rachel Bowden (TX); Tanji J. Northrup (UT); Anna Van Fleet, Emily Brown, Christine Menard-O’Neil, and Jamie Gile (VT); Ned Gaines (WA); and Nathan Houdek and Jennifer Stegall (WI).

1. **Discussed Revisions to Model #171**

The Subgroup continued its discussion of proposed revisions to the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171)* beginning with Section 5B. The Subgroup discussed the NAIC consumer representatives’ suggested revisions to Section 5B, which would add additional facility types, such as “assisted living facility” and “continued care retirement community.” Sarah Lueck (Center on Budget and Policy Priorities—CBPP) said the NAIC consumer representatives suggested this revision as an update to the existing language. The Subgroup discussed the suggested revision and whether it had preliminarily accepted the suggested revision during its prior discussions of this provision. Jolie H. Matthews (NAIC) said during its Sept. 16, 2019, meeting, the Subgroup decided to accept the NAIC consumer representatives’ and the Missouri Department of Insurance’s (DOI’s) suggested revisions to Section 5B. Based on this information, the Subgroup decided to again accept the suggested revisions.

The Subgroup next discussed Section 5C and the Washington DOI’s suggestion to delete it. Ms. Matthews said during its Oct. 7, 2019, meeting, the Subgroup accepted the suggestion to delete Section 5C. She said at the time, the Subgroup reasoned that a definition of “disability” was unnecessary because other terms in the model would better determine what a “disability” is, such as “partial disability,” “total disability,” and “residual disability.” However, she said the Subgroup agreed to revisit this decision, if necessary. The Subgroup discussed whether to accept its previous decision to delete Section 5C. During this discussion, Subgroup members said an additional reason for deleting Section 5C is to avoid any possible confusion with how some states use the term “disability” to refer to “accident and sickness insurance.” After additional discussion, the Subgroup decided to again delete Section 5C.

The Subgroup next discussed Section 5D. Ms. Matthews said during its Oct. 7, 2019, meeting the Subgroup decided to accept the Missouri DOI’s suggested revisions to Section 5D(2). The Subgroup also decided to revise the language in Section 5D(2)(c) to reflect current terminology by deleting “drug addicts or alcoholics” and replacing it with “individuals with a substance use disorder.” The Subgroup decided not to accept the NAIC consumer representatives’ suggested revisions. Ms. Matthews said the Subgroup deferred deciding on whether to add America’s Health Insurance Plans’ (AHIP’s) suggested language “facilities existing primarily to provide psychiatric services” to Section 5D(2). AHIP suggests this language because these types of facilities are not hospitals.

Chris Petersen (Arbor Strategies LLC) said the Subgroup’s discussion about removing obsolete language and replacing it with current terminology raises a larger issue the Subgroup needs to consider and address in some manner. He explained that most of the types of policies subject to Model #171 are guaranteed renewable and noncancelable. Because of this, the Subgroup needs to consider how to address the application of any revisions to Model #171 on these types of policies. Mr. Petersen suggested that the Subgroup consider adding language to Section 3—Applicability and Scope to apply any revisions to Model #171 to policies issued after the effective date of a state’s adoption of the revised model. The Subgroup discussed Mr. Petersen’s suggestion. The Subgroup also discussed generally how policies covered under Model #171 operate, considering their guaranteed renewability and noncancelable requirements, which the *Uniform Individual Accident and Sickness Policy Provision Law (#180)* addresses. After additional discussion, the Subgroup agreed to add language to Section 4—Effective Date to address the issue. Cindy Goff (American Council of Life Insurers—ACLI) volunteered to work with other stakeholders to provide language for the Subgroup’s consideration later.

The Subgroup returned to its discussion of the suggested revisions to Section 5D. Ms. Arp expressed concern with AHIP’s suggested revision because of the lack of clarity as to what is means by “psychiatric services,” which could include, for example, services related to Alzheimer’s disease. Mr. Petersen asked about the Subgroup’s previous discussions related to this suggested...
revision. He suggested that if the Subgroup has already discussed this and decided to accept it or reject it, then in accordance with the Subgroup’s previous agreement to not revisit settled decisions, the Subgroup should not revisit this suggested revision. Ms. Matthews said during its previous discussions of this suggested revision, the Subgroup deferred deciding. Mr. Petersen said given the Subgroup’s previous decision to defer deciding, AHIP will submit new language to address the Subgroup’s concerns for its consideration later.

The Subgroup next discussed Section 5E, the policy definition for “injury.” Ms. Matthews said during the Subgroup’s Oct. 28, 2019, meeting, the Subgroup agreed to delete “bodily injury” in Section 5E(1) because it was contradictory to other language in Section 5E and delete Section 5E(2). The Subgroup decided not to make any changes from its previous discussions on this provision.

Ms. Lueck asked for clarification on what Mr. Petersen meant by the four principles the Subgroup decided to accept with respect to its discussion of revisions to Model #171 and the revised Supplementary and Short-Term Health Insurance Minimum Standards Model Act (#170) (formerly known as the Accident and Sickness Insurance Minimum Standards Model Act), which is the companion model law to Model #171. Mr. Petersen explained that he believed the Subgroup had agreed to not revisit decisions made with respect to Model #170 in its discussions of revisions to Model #171. Ms. Lueck said she was unaware of any specific Subgroup discussions on this issue, and many of the issues the Subgroup discussed while revising Model #170 were deferred and to be addressed when the Subgroup revised Model #171. Mr. Petersen said in his opinion, if that was the case, it would not be considered revisiting the issue. Ms. Lueck suggested that the Subgroup rediscuss the so-called four principles so that everyone knows what they are, particularly if the Subgroup plans to follow them as it moves forward with its discussions of revisions to Model #171.

Mr. Petersen said he would recirculate his letter outlining the four principles. Ms. Arp said she recalls the Subgroup agreeing to the so-called four principles. J.P. Wieske (Health Benefits Institute—HBI) agreed with Ms. Arp. He said he believes nothing in the four principles is out of the ordinary. The agreed upon general guidelines suggest that the Subgroup should: 1) not reopen issues discussed and settled upon during its work revising Model #170; 2) acknowledge that Model #171 sets minimum standards; 3) not include topics not included in Model #170; and 4) acknowledge that the current supplemental market works and revise Model #171 in a manner to avoid market disruption. Ms. Arp said to date, the Subgroup’s discussions of the proposed revisions relate to what the Subgroup agreed to during its previous discussions in late 2019, as reflected in the NAIC staff working draft. Mr. Schallhorn agreed.

Ms. Arp said despite this agreement to not revisit previous decisions, if there are things that someone strongly feels are wrong or if it is a procedural issue, they should let the Subgroup know so it can decide whether it wants to discuss the issue or not. Ms. Lueck said she did not have any real issues with the Subgroup’s stance to not revisit issues, but given that this was discussed in late 2019, she believes the Subgroup should rediscuss the four principles so everyone knows what they are. Lucy Culp (Leukemia & Lymphoma Society) and Yosha Dotson (Georgians for a Healthy Future) agreed with Ms. Lueck’s comments.

The Subgroup next discussed Mr. Wake’s comments on Section 5F, the definition of “Medicare.” Mr. Wake said his comments on this provision relate to the Subgroup’s previous discussions and decision to create a new section in Model #171 for definitions of regulatory terms. The definition of “Medicare” looks like a regulatory definition, and if the Subgroup agrees, it should be included in this new section and removed from Section 5—Policy Definitions. The Subgroup agreed.

The Subgroup discussed Section 5G, the definition of “mental or nervous disorder.” The Subgroup discussed its previous discussions of this provision, which decided to revise the definition to state, “mental health condition or substance use disorder means any condition or disorder defined by categories listed in the most recent edition of the Diagnostic and Statistical Manual of Mental Disorders (DSM).” Mr. Petersen suggested that the proposed revision definition for this term reads more like a “regulatory” definition, not a “policy” definition, because the suggested language does not use the words “shall not be defined more restrictively than.” The Subgroup discussed his comments, including whether the revised language should refer to the most recent version of the DSM “at the time the policy is issued” to avoid making changes in the policy if the DSM is subsequently updated after policy issuance. The Subgroup also discussed this language to set a floor to allow insurers to be more expansive. Mr. Wieske said he did not believe it would be an issue if the language is not added, because he did not believe a revised DSM would require insurers to have to refile a policy because the coverage would not be changed. After additional discussion, the Subgroup agreed not to include the additional language.

Ms. Lueck asked if this definition, for the types of policies Model #171 applies to, is generally used to restrict coverage. Mr. Wieske said for disability income protection coverage, this definition would most likely be considered more expansive from a coverage viewpoint. He also pointed out that the NAIC consumer representatives’ suggested revision to this definition is also
rather broad; however, he said the suggested revision to reference the DSM was probably a cleaner way to define this term because it does not require an interpretation of what terms such as neurosis, psychoneurosis, or mental or emotional disease mean. Mr. Wake said this discussion suggests that the Subgroup might want to consider adding language to Section 5A stating, “[e]xcept as provided in this regulation, to the extent these definitions are used in a policy or certificate, definitions used in a policy or certificate may vary from the definitions in this section, but not in a manner that restricts coverage.” The Subgroup discussed the merits of including such language. The Subgroup decided to continue the discussion during its next meeting on Aug. 9.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.

July 26 Minutes
The ERISA (B) Working Group of the Regulatory Framework (B) Task Force met Oct. 8, 2021. The following Working Group members participated: Robert Wake, Chair (ME); William Rodgers (AL); Johanna Nagel (IA); Craig Van Aalst (KS); Victoria Bares (MN); Amy Hoyt (MO); Ted Hamby (NC); Stephanie Canter (NV); Laura Miller (OH); Landon Hubbart (OK); Jill Kruger (SD); Rachel Bowden (TX); Tyler Robbins (WA); and Richard Wicka (WI).

1. **Discussed Rutledge v. Pharmaceutical Care Management Association**

Mr. Wake said the purpose of the Working Group’s meeting is to discuss revising the *Health and Welfare Plans Under the Employee Retirement Income Security Act: Guidelines for State and Federal Regulation* (ERISA Handbook) to include a summary of the Supreme Court’s 2020 decision in the case of *Rutledge v. Pharmaceutical Care Management Association*, 141 S.Ct. 474 (2020). Mr. Wake said a preliminary draft of a summary to add to the ERISA Handbook was distributed prior to the meeting.

Mr. Wake said that the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup has a charge to develop a white paper on issues related to the state regulation of certain pharmacy benefit manager (PBM) business practices. He said the Working Group plans to focus on the case summary at this time and will wait for additional guidance from the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup before undertaking any additional analysis of the ERISA implications on other state PBM laws.

A number of state insurance regulators and interested parties expressed concern with the tone of the draft, stating that it did not match the tone in the rest of the ERISA Handbook and that the summary should focus more on the preemption analysis rather than opining on the particulars of PBMs.

Mr. Wake explained that the draft was intended to generate discussion, and he agreed that there needs to be substantial revisions to the substance and tone of the draft. He explained that the draft was developed for a continuing legal education class, so it needs to be modified to parallel the other case summaries in the ERISA Handbook. Ms. Arp said she found another Rutledge case summary by the NAIC that she thinks can be a starting point for the ERISA Handbook update. Ms. Arp, Mr. Wake, and Jennifer Cook (NAIC) agreed to work on a draft summary to expose for public comment.

Having no further business, the ERISA (B) Working Group adjourned.
The ERISA (B) Working Group of the Regulatory Framework (B) Task Force met July 30, 2021. The following Working Group members participated: Robert Wake, Chair (ME); Jennifer Li and Anthony L. Williams (AL); Jason Lapham (CO); Angela Burke Boston and Johanna Nagel (IA); Julie Holmes (KS); Victoria Bares (MN); Cynthia Amann and Amy Hoyt (MO); Ted Hamby (NC); Laura Arp and Martin Swanson (NE); Laura Miller (OH); Andrew Schallhorn (OK); David Bolduc (TX); Jaakob Sundberg (UT); Mandy Weeks-Green (WA); and Richard Wicka (WI).

1. Discussed Rutledge v. Pharmaceutical Care Management Association

Mr. Wake said the purpose of the Working Group’s meeting is to discuss addressing the Supreme Court’s 2020 decision in the case of Rutledge v. Pharmaceutical Care Management Association, 141 S.Ct. 474 (2020). He suggested, and the Working Group agreed, to include this case in the Health and Welfare Plans Under the Employee Retirement Income Security Act: Guidelines for State and Federal Regulation (ERISA Handbook) in the section summarizing seminal ERISA preemption cases. Mr. Wake said a preliminary draft of a summary to add to the ERISA Handbook has been developed. He asked state insurance regulators to email Jennifer Cook (NAIC) if they are interested in participating in a drafting group to develop a draft to circulate for public comment.

Mr. Wake said, in addition, the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup of the Regulatory Framework (B) Task Force has a charge to develop a white paper on issues related to the state regulation of certain pharmacy benefit manager (PBM) business practices. He said the Working Group has been identified to assist with addressing the ERISA preemption aspects of the Rutledge decision in the white paper. Ms. Arp said she would like the Working Group to explore the ERISA preemption implications of the Rutledge decision on other state laws, like laws that affect pricing. She said that there are state laws that are written to say “except to the extent they are preempted.” She said this raises questions about the application of such a law in light of the holding in Rutledge that the Arkansas pharmaceutical pricing law was not preempted. She suggested that the Working Group develop a list of factors that states need to consider in analyzing their state laws to determine whether the Rutledge decision has an impact and what that impact might be. She said it would be helpful to include the U.S. Department of Labor (DOL) in any discussions and get their feedback. Mr. Wake asked and Ms. Arp agreed to chair a drafting group to look at developing a “preemption road map” for states on this issue. Mr. Wake asked state insurance regulators interested in participating on this drafting group to email Ms. Cook.

Ali Khawar, who is the Acting Assistant Secretary for the Employee Benefits Security Administration (EBSA) at the U.S. Department of Labor (DOL), introduced himself to the Working Group. He explained that he has previously served in a variety of roles at the DOL, including as an EBSA investigator, in EBSA’s Office of Enforcement, as EBSA’s Chief of Staff in two administrations, and as a Counselor to the 26th Secretary of Labor, Thomas E. Perez. Mr. Khawar said he is looking forward to continuing the important collaborative relationship the DOL has established with the NAIC over the years. He said whether collaborating over regulations or enforcement matters, the ability to share best practices and tips on what states are seeing has been very valuable to the DOL. Mr. Wake agreed that the relationship the Working Group and the NAIC has enjoyed with the DOL over the years has been mutually beneficial, and he said that they look forward to continuing the relationship.

Having no further business, the ERISA (B) Working Group adjourned and reconvened in regulator-to-regulator session pursuant to paragraph 1 (potential or pending litigation or administrative proceedings), paragraph 2 (pending investigations), paragraph 3 (specific companies, entities or individuals), and paragraph 9 (any other subject required to be kept confidential) of the NAIC Policy Statement on Open Meetings.

July 30 Minutes
The MHPAEA (B) Working Group of the Regulatory Framework (B) Task Force met Aug. 5, 2021. The following Working Group members participated: Katie Dzurec, Chair (PA); Jane Beyer, Vice Chair (WA); Donna Lambert (AR); Mary Boatright, Leanne Henagan, Erin Klug, and Catherine O’Neil (AZ); Christopher Citko and Doris Walker (CA); Cara Cheever, Damion Hughes, and Debra Judy (CO); Kurt Swan (CT); Howard Liebers and Mary Beth Senkewicz (DC); Melissa Carter and Sarah Crittenden (GA); Cynthia Banks Radke, Andria Seip, and Sonya Sellmeyer (IA); Ryan Gillespie and Erica Weyhenmeyer (IL); Chris Hollenbeck, Julie Holmes, Brenda Johnson, Kenneth Scott, Barbara Torkelson, and Craig Van Aalst (KS); Mary Kwei, Theresa Morfe, and Natalie Nelson (MD); Sherri Mortensen-Brown (MN); Cheryl Allen-Bivens, Tracy Biehn, and Teresa Knowles (NC); Maureen Belanger and Michelle Heaton (NH); Ralph Boeckman, Chaneil McDevitt, Erin Porter, and Gale Simon (NJ); Diane Bilodeau, Paige Duhamel and Viara Ianakieva (NM); Todd Oberholtzer, Laura Miller, Molly Mottram, and Guy Self (OH); Cuc Nguyen (OK); Shari Miles (SC); Lisa Harmon, Candy Holbrook, and Jill Kruger (SD); Rachel Bowden, Valerie Brown, Debra Diaz-Lara, Katelyn Marak, Kenisha Schuster, and Matt Wall (TX); Carrie Backus, Heidi Clausen, Tanji J. Northrup, Jaakob Sundberg, and Shelley Wiseman (UT); Julie Blauvelt and James Young (VA); Diane Dambach and Darcy Paskey (WI); Joylynn Fix (WV); and Denise Burke and Mavis Earnshaw (WY).

1. **Heard Presentations from Health Care Providers on Mental Health Parity**

Ms. Dzurec said that the Special (EX) Committee on Race and Insurance has charged the MHPAEA (B) Working Group with researching disparities in mental health and substance use disorder parity and access to culturally competent care. She said state insurance regulators must incorporate equity and inclusion in their everyday work, appreciating the histories of discrimination, exclusion, incarceration, and the use of mental health as a weapon. She said past practices have skewed understanding and data sets and that history can make many people blind to inequities. She said the speakers could help state insurance regulators ask the right questions.

Dr. Edwin Chapman (addiction specialist internist) provided a profile of his patient population, showing they have disproportionate mental health, substance use, HIV, and hepatitis diagnoses. He said African-Americans represent only 5% of physicians and 2% of psychiatrists. He said different states and insurance companies allow different doses for medication-assisted treatment, so there is no consistent standard of care. He shared the limited availability of buprenorphine to Black and urban populations. He said there is confusion in standards for prescribing as they are interpreted by insurance companies, pointing out differences in standards from those allowed by the Substance Abuse and Mental Health Services Administration (SAMHSA). He said the No. 1 barrier to care is prior authorizations, followed by access to treatment, lack of integration, payment limits, same-day billing restrictions, and disconnects between the health care system and criminal justice system. Dr. Chapman said the complexity of his patients require integrated care delivery or coordinated care. He shared a hybrid model he developed to integrate primary care, mental health services, and community care for social determinants of health. He outlined how his system integrates care with the goals of reduced medical costs and non-medical costs. He compared the system costs of untreated patients, in-treatment patients who are not abstinent, and stable patients in treatment, with untreated patients costing the most. He said the American Society of Addiction Medicine (ASAM) recommends patient-centered treatment rather than standard fee-for-service evaluation and management billing. He said insurance company algorithms can be biased. He said among his patients alone, he has achieved $8 million in savings from the criminal justice system.

Ms. Beyer asked whether the ASAM treatment model has been adopted by payers. Dr. Chapman said adoption has been a problem in Washington, DC, and he encouraged state insurance regulators to contact the American Medical Association (AMA) to find out more about where it has been adopted. Ms. Duhamel asked whether Dr. Chapman has worked with commercial payers to remove restrictions on buprenorphine restrictions. Dr. Chapman said he has presented to the federal Centers for Medicare & Medicaid Services (CMS) with that goal.

Dr. Walter Wilson (HealthPoint Family Care) presented on challenges and recommendations in mental health equity. He defined behavioral health equity and identified barriers to equity. The barriers include ethnic/racial/demographic disparities, geographic disparities, psychosocial barriers, and insurance-related barriers. He said there is stigma associated with mental health care generally, but some research suggests it is a larger problem in minority communities. He said language barriers can be significant and that electronic medical records systems can lack the ability to print visit summaries in Spanish. He shared SAMHSA data showing that, among those with mental illness, patients from minority populations access treatment at lower...
rates than white people. He identified fragmented access as a barrier when patients can access one type of provider, but not others in their health system. He described the steps patients must navigate to access mental health services, from awareness of mental health itself to awareness of the resources available, resources for payment, service location, and quality. He recommended that state insurance regulators support insurers’ educational initiatives, require up-to-date provider directories, promote easy-to-use website information that meets populations’ health literacy, and use feedback from patients. He identified several reasons why providers may not join insurer networks and several recommendations for insurers to improve the provider experience.

Cheryl Fish-Parchman (Families USA) asked about inappropriate discharges from hospitals. Dr. Wilson said that in his experience, clinicians consider how many hospital days insurers will cover and that he has seen hospitals discharge patients who were not ready.

Having no further business, the MHPAEA (B) Working Group adjourned.

Aug 5 Meeting Minutes
SENIOR ISSUES (B) TASK FORCE

Senior Issues (B) Task Force Nov. 30, 2021, Minutes ....................................................................................................... 7-162

  Long-Term Care Insurance Model Update (B) Subgroup Oct. 13, 2021, Minutes (Attachment Two-A) .............. 7-174
The Senior Issues (B) Task Force met Nov. 30, 2021. The following Task Force members participated: Marlene Caride, Chair (NJ); Lori K. Wing-Heier, Vice Chair (AK); Jim L. Ridling represented by Steve Dozier (AL); Evan G. Daniels represented by Tyler McKinney (CA); Michael Conway represented by Peg Brown (CO); Andrew N. Mais represented by Paul Lombardo (CT); Karima M. Woods (DC); Trinidad Navarro represented by Susan Jennette (DE); David Altimair represented by Chris Struk (FL); John F. King represented by Matthew Padova (GA); Colin M. Hayashida represented by Kathleen Nakasone (HI); Doug Ommen represented by Andria Seip (IA); Dean L. Cameron represented by Weston Trexler (ID); Amy L. Beard represented by Rebecca Vaughan (IN); Vicki Schmidt represented by Craig VanAalst (KS); Sharon P. Clark represented by Stephanie McGaughey-Bowker (KY); James J. Donelon represented by Ron Henderson (LA); Gary D. Anderson represented by Kevin Beagan (MA); Kathleen A. Birrane represented by Joy Hatchette (MD); Eric A. Cioppa represented by Sherry Ingalls (ME); Anita G. Fox represented by Renee Campbell (MI); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers (MO); Troy Downing (MT); Mike Causey represented by Garlinda Taylor (NC); Jon Godfread represented by Chrystal Bartuska (ND); Eric Dunning and Laura Arp (NE); Chris Nicolopoulos represented by Roni Karnis (NH); Barbara D. Richardson (NV); Judith L. French represented by Tynesia Dorsey (OH); Glen Mulready represented by Mike Rhoads (OK); Andrew R. Stolfi represented by Gayle Woods (OR); Jessica K. Altman (PA); Larry D. Deiter represented by Jill Kruger (SD); Carter Lawrence represented by Brian Hoffmeister (TN); Cassie Brown represented by Chris Herrick (TX); Jonathan T. Pike (UT); Scott A. White represented by Bob Grissom (VA); Mike Kreidler represented by Molly Nollette (WA); Mark Afable represented by Jennifer Stegall (WI); and Allan L. McVey represented by Ellen Potter (WY). Also participating were: Sara Stanberry (IL); Kay Warrington (MS); Bogdanka Kurahovic (NM); Martin Wojcik (MO); Troy Downing (MT); Mike Causey represented by Garlinda Taylor (NC); Jon Godfread represented by Chrystal Bartuska (ND); Eric Dunning and Laura Arp (NE); Chris Nicolopoulos represented by Roni Karnis (NH); Barbara D. Richardson (NV); Judith L. French represented by Tynesia Dorsey (OH); Glen Mulready represented by Mike Rhoads (OK); Andrew R. Stolfi represented by Gayle Woods (OR); Jessica K. Altman (PA); Larry D. Deiter represented by Jill Kruger (SD); Carter Lawrence represented by Brian Hoffmeister (TN); Cassie Brown represented by Chris Herrick (TX); Jonathan T. Pike (UT); Scott A. White represented by Bob Grissom (VA); Mike Kreidler represented by Molly Nollette (WA); Mark Afable represented by Jennifer Stegall (WI); and Allan L. McVey represented by Ellen Potter (WY). Also participating were: Sara Stanberry (IL); Kay Warrington (MS); Bogdanka Kurahovic (NM); Martin Wojcik (MO); Patrick Smock (RI); Andrew Dvorine (SC); Isabelle Keiser (VT); and Mavis Earnshaw (WY).

1. **Adopted its Oct. 6 Minutes**

The Task Force met Oct. 6 and took the following action: 1) adopted its 2022 proposed charges; and 2) heard a presentation on the WA Cares Fund.

Ms. Karnis made a motion, seconded by Director Wing-Heier, to adopt the Task Force’s Oct. 6 minutes (Attachment One). The motion passed unanimously.

2. **Adopted the Report of the Long-Term Care Insurance Model Update (B) Subgroup**

The Long-Term Care Insurance Model Update (B) Subgroup met Nov. 3 and Oct. 13. During its Nov. 3 meeting, the Subgroup continued its cursory review of Section 7 through Section 12 of the *Long-Term Care Insurance Model Regulation* (#641). During its Oct. 13 meeting, the Subgroup began its cursory review Model #641, beginning with Section 1 through Section 6. The Subgroup plans to meet Dec. 1 to continue its cursory review of Section 13 through Section 19.

Director Wing-Heier made a motion, seconded by Ms. Kruger, to adopt the report of the Long-Term Care Insurance Model Update (B) Subgroup (Attachment Two). The motion passed unanimously.

3. **Discussed DME, Medicare Supplement, and Excess Charges**

Ms. Arp began the discussion by noting there appears to be a loophole being exploited by durable medical equipment (DME) suppliers. She said it may not be fraud, but it is certainly waste. She referred to the slide deck, pointing out that the slide refers to the same patient and the same DME provider for a nasal prothesis. She pointed out that the charges jumped from $4,850 to $91,274 in a span of five years.

Ms. Arp cited another example involving scooters and power wheelchairs. She said, for example, in 2019, Medicare was billed $43,485.10 for a power wheelchair and Medicare approved $4,702, leaving the insurer to pay the balance of $38,783.10. She cited another example where Medicare was billed $44,422.83 for a power wheelchair and Medicare approved $4,706.58, leaving the insurer to pay the balance of $39,716.25. She said in another example from 2021, Medicare was billed $10,841.04 for a hospital bed and Medicare approved a monthly rental charge only, which left the insurer to pay the balance after the approved charge of $10,767.18. She said a call was made on this claim, and the insurer was told that the scooter store billed for the cost of the bed, and they billed it again as not assigned, and they will bill Medicare the monthly rental of the bed. She
Ms. Arp said the Model Regulation to Implement the NAIC Medicare Supplement Insurance Minimum Standards Model Act (#651) states in the excess charges section, have coverage for either 80% or 100%, depending on the plan of excess charges, and it is not to exceed any charge limitation established by the Medicare program or state law. She said Plan F and Plan F High Deductible shall include 100% of the excess charges, and Plan G shall include 80% of the excess charges. She said the next step is to look at what limitations exist. She said in the relevant sections of the federal Social Security Act (SSA), a person is not liable for payment of amounts billed for the service in excess of the limiting charge. She said that is a kind of balance billing application. It then sends it to the federal Centers for Medicare & Medicaid Services (CMS) to send the Medicare card to the

Ms. Arp said if one looks back at the limitation on beneficiary liability in the SSA, it states, “In the case of a nonparticipating physician or nonparticipating supplier or other person (as defined in section 1395u(i)(2) of this title) who does not accept payment on an assignment-related basis for a physician’s service furnished with respect to an individual enrolled under this part, the following rules apply …” She said the rules are the limiting charge, and the insured is not liable for any difference, so it begs the question: If this 115% limitation is applicable to physician billing, why does it say “…nonparticipating physicians, or nonparticipating suppliers, or other persons”? Ms. Arp said providers are operating on the assumption that 115% only applies to physicians and that they are free to charge whatever they want.

Ms. Arp said there are options to address this. She said state laws could be changed. She said eight states have done this already. She said Medigap regulations could be changed. She said the other option is to provide some kind of interpretation or bulletin that explains that the term physician service can be read to include the physician service of writing the prescription for the DME for which the supplier fills, and that would make more sense with the limiting charge language that includes both nonparticipating physician and nonparticipating suppliers or other persons.

Commissioner Caride asked if there are any comments from Task Force members. Director Wing-Heier said she appreciates this being discussed and dislikes price gouging. She said when people take advantage of a loophole, it destroys the system. She said issues like this are the reasons consumers pay what they are paying. Commissioner Caride agreed.

Meghan Stringer (America's Health Insurance Plans—AHIP) presented her slides and said some of AHIP’s Medigap members brought this to her team’s attention. She said there are other DME items, other than scooters, that are subject to these excess charges, such as dental devices for sleep apnea and knee therapy devices. She said there is an issue with advertisements where the ads state if you have a Medigap plan, these items are no cost to the consumer. She said some of the carriers think there is misleading information in these advertisements. She said on the scooters in particular, the supplier website will indicate that standard parts are included, but items that one would think are standard, like wheels or batteries, are billed separately. She said AHIP’s members are seeing reports across the country in nearly every state. She said in some instances, if the Medigap plan tries to push back, the supplier then says it will balance bill the beneficiary, which cannot happen, so the plan eats the costs.

4. Heard a Federal Update

David Torian (NAIC) provided the Task Force with a federal update. He said funding for the State Health Insurance Assistance Program (SHIP) is operating under fiscal year (FY) 2021 levels, and SHIP funding is at $55 million. He said the U.S. House of Representatives (House) did pass its FY 2022 Labor, Health and Human Services, Education and Related Agencies funding bill on July 29, and it included an increase to SHIP to a level of $57,115,000. He said the U.S. Senate (Senate) has not acted on its appropriation bills. He said the U.S. Congress is looking at doing a short continuing resolution (CR) to keep the government funded through December.

Mr. Torian said the House passed the reconciliation bill on Nov. 19, which included language to provide for coverage of hearing aids under Medicare Part B for individuals with severe or profound hearing loss in one or both ears, once every five years and if furnished through a written order by a physician, qualified audiologist, hearing aid professional, physician assistant, nurse practitioner, or clinical nurse specialist qualified to write such order by the state. He said it is unclear when the Senate will consider this measure and if any of the hearing provisions may be changed.

Mr. Torian discussed an issue brought to the attention of the NAIC regarding delays with Medicare cards. He said the Social Security Administration (SSA) mails out (usually initiated by a phone call) the application and receives and processes the application. It then sends it to the federal Centers for Medicare & Medicaid Services (CMS) to send the Medicare card to the
enrollee. He said since many SSA field offices have been closed due to the pandemic, almost all applications are being mailed to seniors, and then they must mail the application and supporting materials back to the SSA. He said the CMS and the SSA have found that serious mail delays (three to four weeks for each mailing) have resulted in significant delays in the final application being received by the SSA. He said the mail delivery and the slow down at the U.S. Postal Service (USPS) seems to be the main issue. The CMS and the SSA are looking at ways to address this, but this may take some time to resolve. He said the NAIC continues to monitor the matter and is in communication with the SSA and the CMS.

Having no further business, the Senior Issues (B) Task Force adjourned.
The Senior Issues (B) Task Force met Oct. 6, 2021. The following Task Force members participated: Marlene Caride, Chair (NJ); Lori K. Wing-Heier, Vice Chair (AK); Jim L. Ridling represented by Anthony L. Williams (AL); Evan G. Daniels represented by Erin Klug (AZ); Ricardo Lara represented by Tyler McKinney (CA); Andrew N. Mais represented by Paul Lombardo (CT); Karima M. Woods represented by Michael Ross (DC); Trinidad Navarro represented by Fleur McKendell (DE); David Altmayer represented by Chris Struk (FL); John F. King represented by Teresa Winer (GA); Colin M. Hayashida represented by Kathleen Nakasone (HI); Doug Ommen represented by Andria Seip (IA); Dean L. Cameron represented by Weston Trexler (ID); Amy L. Beard represented by Rebecca Vaughan (IN); Vicki Schmidt represented by Shannon Lloyd (KS); Sharon P. Clark represented by Stephanie McGaughey-Bowker (KY); James J. Donelon represented by Ron Henderson (LA); Gary D. Anderson represented by Kevin Beagan (MA); Kathleen A. Birrane represented by Joy Hatchette (MD); Eric A. Cioppa represented by Sherry Ingalls (ME); Anita G. Fox represented by Renee Campbell (MI); Grace Arnold represented by Sherri Mortensen-Brown (MN); Chlora Lindley-Myers (MO); Troy Downing (MT); Mike Causey represented by Ted Hamby (NC); Jon Godfread represented by Yuri Venjohn (ND); Eric Dunning (NE); Chris Nicopolous represented by Roni Karnis (NH); Barbara D. Richardson represented by Jack Childress (NV); Judith L. French represented by Laura Miller (OH); Glen Mulready represented by Andrew Schallhorn (OK); Jessica K. Altman represented by Shannen Logue (PA); Carter Lawrence represented by Brian Hoffmeister (TN); Cassie Brown represented by Chris Herrick (TX); Jonathan T. Pike represented by Jaakob Sundberg (UT); Scott A. White represented by Bob Grissom (VA); Mike Kreidler represented by Molly Nollette (WA); Mark Afable (WI); and Allan L. McVey represented by Ellen Potter (WV). Also participating were: Eric Anderson (IL); Bogdanka Kurahovic (NM); Martin Wojcik (NY); Andrew Dvorine (SC); Mary Block (VT); and Mavis Earnshaw (WY).

1. **Adopted its 2022 Proposed Charges**

Director Wing-Heier raised last minute language proposed by Birny Birnbaum (Center for Economic Justice—CEJ) to be added to the 2022 Proposed Charges. The language Mr. Birnbaum proposed would add a subsection to the 2022 Proposed Charges that reads, “[c]onduct an examination of the effects of structural racism and the COVID-19 pandemic on access, affordability, and outcomes for older insurance consumers.”

Mr. Birnbaum said he notes that the mission of the Task Force is to consider policy issues on insurance issues affecting older Americans. He said two of the most prominent policy issues affecting the insurance industry today are the effects of structural racism and the pandemic on access, affordability, and outcomes for insurance consumers, particularly insurance consumers in communities of color. He said he does not see any mention of these policy issues in the charges, so he suggests either adding to existing charges or creating a new charge to examine the impacts of structural racism and the pandemic on the specific subject matter of the Task Force, namely the impacts on older insurance consumers.

Ms. Miller asked if structural racism and the COVID-19 pandemic in terms of the new charge are to be considered in conjunction with each other or separate issues. Mr. Birnbaum said the intent of the charge is that there are two separate policy issues for consideration on their impact on older insurance consumers, and there is likely to be some overlap given that the pandemic has disproportionately affected communities of color. Mr. Lombardo said he wanted to make sure the new language is placed in the proper location and spot.

Director Wing-Heier made a motion, seconded by Ms. Nollette, to add Mr. Birnbaum’s proposed added language to the 2022 Proposed Charges and label it as Subsection H. The motion passed unanimously.

Bonnie Burns (California Health Advocates—CHA) offered language to include complimentary language about the Task Force being a clearing house for Medicare Supplement (Medigap), as well as Medicare Advantage. She said the last sentence in Subsection B in the Task Force charges states, “[a]ssists the states and serve as a clearinghouse for information on Medicare Advantage plan activity.” She said there should be a similar line for Medigap.

Mr. Trexler said he did not see the need for such language, as Medicare Advantage and Medigap are different in structure. He said the states administer Medigap, whereas Medicare Advantage is run by the federal Centers for Medicare and Medicaid Services (CMS); therefore, coordination between the CMS and the Task Force is necessary. Peggy Camerino (United American
Insurance Company) said she agreed with Mr. Trexler, as the information on innovative benefits are already on the Task Force web page. Director Wing-Heier and Ms. Karnis also expressed that the 2022 Proposed Charges are sufficient without the additional language.

Ms. Mortensen-Brown made a motion, seconded by Director Wing-Heier, to adopt the 2022 proposed charges, as amended (Attachment One-A). The motion passed unanimously.

2. Heard a Presentation on the WA Cares Fund

Todd Dixon, Washington Deputy Commissioner for Consumer Protection, said the WA Cares Fund is struggling. He said the Washington Office of the Insurance Commissioner (WAOIC) is not part of the WA Cares Fund in terms of administration or implementation. He said the WAOIC is only involved because of the provision in the WA Cares Fund law that allows persons to be exempted from the law.

Mr. Dixon said the WA Cares Fund is run by the Aging and Long-Term Support Administration of the Washington State Department of Social and Health Services (DSHS). He said the WA Cares Fund is a universal long-term care (LTC) program. He said it is an earned benefit; i.e., only those who contribute are eligible. He said it is self-funded from worker contributions, reducing the need to raise taxes to pay for Medicaid Long-Term Services and Supports (LTSS) costs associated with the coming age wave. He said there is a lifetime maximum benefit of $36,500; contributions begin Jan. 1, 2022, and benefits begin Jan. 1, 2025.

Mr. Dixon said workers contribute 0.58% of their wages, and premiums go into a dedicated trust fund that can only be used for this program. He said if a person has private long-term care insurance (LTCI), that person can either keep it and use it to supplement the WA Cares Fund $36,500 benefit or apply to permanently withdraw from the WA Cares Fund Oct. 1, 2021, through Dec. 31, 2022. He said employers collect premiums from employee wages beginning Jan. 1, 2022. He said employers do not contribute to the WA Cares Fund. He said if an employee has LTCI and does not want additional coverage through the WA Cares Fund, the employee can opt out by applying through the Washington State Employment Security Department (ESD). He said employers do not process the opt-out applications; the ESD processes them. He said self-employed earners may opt into the WA Cares Fund through the ESD.

Mr. Dixon explained the vesting criteria for the WA Cares Fund. He said an individual must have earned their WA Cares Fund benefit by working and contributing: 1) at least 10 years at any point in their life without a break of five or more years; or 2) three of the last six years. They must also have worked and contributed at least 500 hours per year during those years. Mr. Dixon said to be eligible for benefits, the individual must require assistance with at least three activities of daily living (ADLs). He said the benefit is flexible; i.e., a person can: 1) spend up to $36,500 on a combination of services and supports; 2) choose how they want to use it; and 3) hire a home-care aide, pay a family member, make home modifications, etc.

Mr. Dixon said federal employees are not included, the self-employed can opt in beginning Jan. 1, 2022, and the tribes have the option to opt in at any time. He said there are circumstances where certain people may be unable to claim benefits. He said under the current statute, people who live in border states and work in Washington will pay in but cannot access benefits unless they reside in Washington when they need care. He said people who will retire before they permanently vest will be unable to claim if they need care beyond three years of retiring, and people who move out of state will not be able to access benefits unless they return. He said the LTSS Trust Commission Benefit Eligibility Workgroup is considering policy options to address these issues.

Mr. Dixon said the WAOIC is not an administering agency for the WA Cares Fund by statute. He said the WAOIC acts as a partner as the official regulator for LTCI in Washington and acts as a partner to the WA Cares Fund by providing consumer protection. He said the main involvement of the WAOIC involves those seeking exemptions. He said workers who have their own private LTCI may apply for an exemption, and exemptions are permanent. If an exemption is approved, the worker will not have premiums assessed, and they forfeit their right to the benefit for life. He said workers seeking an exemption must apply themselves through the ESD; employers cannot apply on behalf of an employee. He said policies must meet the definition for LTCI in law for an exemption. He said under Washington law, LTCI is an insurance policy, contract, or rider that provides coverage for at least 12 consecutive months to an insured person if they experience a debilitating prolonged illness or disability. He said employers who apply for an exemption must attest that they have purchased LTCI before Nov. 1, 2021, and must provide notification of exemption to all current and future employers, and the only acceptable notification is a copy of the employee’s approved exemption letter from the ESD.
3. **Discussed Other Matters**

Commissioner Caride asked if there are any other matters or issues to be raised before the Task Force. None were heard.

Having no further business, the Senior Issues (B) Task Force adjourned.

2022 Proposed Charges

SENIOR ISSUES (B) TASK FORCE

The mission of the Senior Issues (B) Task Force is to: 1) consider policy issues; 2) develop appropriate regulatory standards; and 3) revise, as necessary, the NAIC models, consumer guides, and training material on Medicare supplement insurance, long-term care insurance (LTCI), senior counseling programs, and other insurance issues that affect older Americans.

Ongoing Support of NAIC Programs, Products or Services

1. The Senior Issues (B) Task Force will:

   A. Develop appropriate regulatory standards and revisions, as necessary, to the NAIC models, consumer guides, and training material on Medicare supplement insurance, senior counseling programs, and other insurance issues that affect older Americans. Work with federal agencies to advance appropriate regulatory standards for Medicare supplement and other forms of health insurance applicable to older Americans. Review the Medicare Supplement Insurance Minimum Standards Model Act (#650) and the Model Regulation to Implement the NAIC Medicare Supplement Insurance Minimum Standards Model Act (#651) to determine if amendments are required based on changes to federal law. Work with the federal Centers for Medicare & Medicaid Services (CMS) to revise the annual joint publication, Choosing a Medigap Policy: A Guide to Health Insurance for People with Medicare.

   B. Monitor the Medicare Advantage and Medicare Part D marketplace. Assist the states, as necessary, with regulatory issues. Maintain a dialogue and coordinate with the CMS on regulatory issues, including solvency oversight of waived plans and agent misconduct. Assist the states and serve as a clearinghouse for information on Medicare Advantage plan activity.

   C. Provide the perspective of state insurance regulators to the U.S. Congress (Congress), as appropriate, and the CMS on insurance issues, including those concerning the effect and result of federal activity on the senior citizen health insurance marketplace and regulatory scheme. Review and monitor state and federal relations with respect to senior health care initiatives and other impacts on the states.

   D. Monitor developments concerning State Health Insurance Assistance Programs (SHIPs), including information on legislation affecting the funding of SHIPs. Assist the states with issues relating to SHIPs and support a strong partnership between SHIPs and the CMS. Provide the perspective of state insurance regulators to federal officials, as appropriate, on issues concerning SHIPs.

   E. Monitor, maintain, and review, in accordance with changes to Model #651, a record of state approvals of all Medicare supplement insurance new or innovative benefits for use by state insurance regulators and others. Review state-approved new or innovative benefits and consider whether to recommend that they be made part of standard benefit plan designs in Model #651.

   F. Develop appropriate regulatory standards and revisions, as necessary, to the NAIC models, consumer guides, and training material on LTCI, including the study and evaluation of evolving LTCI product design, rating, suitability, and other related factors. Review the existing Long-Term Care Insurance Model Act (#640), the Long-Term Care Insurance Model Regulation (#641), the Limited Long-Term Care Insurance Model Act (#642), and the Limited Long-Term Care Insurance Model Regulation (#643) to determine their flexibility to remain compatible with the evolving delivery of long-term care (LTC) services and the evolving LTCI marketplace. Work with federal agencies, as appropriate.

   G. Examine examples of health-related financial exploitation of seniors and work with other NAIC committees, task forces, and working groups on possible solutions.

   H. Examine the effects of structural racism and the COVID-19 pandemic on access, affordability, and outcomes for older insurance consumers.
2. The **Long-Term Care Insurance (LTCI) Model Update (B) Subgroup** will:
   A. Review and update Model #640 and Model #641 to determine their flexibility to remain compatible with the evolving delivery of LTC services and the evolving LTCI marketplace.
   B. Update Model #642 and Model #643 to correlate with Model #640 and Model #641.
   C. Consider recommendations referred from the Long-Term Care Insurance (EX) Task Force and/or its subgroups.

NAIC Support Staff: David Torian

W:\ National Meetings\2021\Fall\TF\SR\2022 Proposed Charges.docx
The Long-Term Care Insurance Model Update (B) Subgroup met Nov. 3, 2021. The following Subgroup members participated: Philip Gennace, Chair (NJ); Sarah Bailey (AK); Emily Smith (CA); Roni Karnis (NH); Jill Kruger (SD); Tomasz Serbinowski and Jaakob Sundberg (UT); Bob Grissom (VA); and MaryKay Schaefers (WA). Also participating were: Willard Smith (AL); Eric Unger (CO); Paul Lombardo (CT); Susan Jennette (DE); Teresa Winer (GA); Jason Asaeda (HI); Cynthia Banks Radke (IA); Kristen Finau (ID); Eric Anderson (IL); Mary Ann Williams (IN); Tate Flott (KS); Ron Kreiter (KY); Jeff Ji (MD); Sherry Ingalls (ME); Renee Campbell (MI); Fred Andersen (MN); Michelle Vickers (MO); Bob Williams (MS); Ashley Perez (MT); Ted Hamby (NC); Yuri Venjohn (ND); Bogdanka Kurahovic (NM); Jack Childress (NV); Martin Wojcik (NY); Tynesia Dorsey (OH); Cuc Nguyen (OK); Colette Hittner (OR); Jim Laverty (PA); Andrew Dvorine (SC); Vickie Trice (TN); Mary Block (VT); Julie Walsh (WI); and Mavis Earnshaw (WY).

1. **Adopted its Oct. 13 Minutes**

The Subgroup met Oct. 13 and heard presentations on the current long-term care insurance (LTCI) marketplace and what products are being seen, filed, and produced in the marketplace.

Ms. Kruger made a motion, seconded by Ms. Karnis, to adopt the Subgroup’s Oct. 13 minutes (Attachment Two-A). The motion passed unanimously.

2. **Discussed Comments Received on Sections 7–12 of Model #641**

Mr. Gennace asked Mr. Serbinowski to explain his comment to Section 7 of the Long-Term Care Insurance Model Regulation (#641). Mr. Serbinowski said additional guidance may be appropriate regarding the application of Section 7 to the long-term care (LTC) benefits provided through a policy or contract without specified premiums. He said when LTC benefits are provided through a universal life insurance policy, there is no required premium; and typically, by the time the policy enters the grace period, the premium required to continue the policy is prohibitive. He said at the time, life insurance and hybrid products were kind of an afterthought, but they are now a major piece of LTCI, and this may be more of an important issue than it was at the time. Bonnie Burns (California Health Advocates—CHA) said she is supportive of the comments. Birny Birnbaum (Center for Economic Justice—CEJ) said this is part of a broader set of issues as to what type of guidance is needed for hybrid products in general, and there is nothing really in the model that addresses that.

Mr. Gennace asked Ms. Burns to explain the NAIC Consumer Representatives’ comment on Section 7A(1). Ms. Burns said insurers should be required to send any changes in their contact information to the third party as well as an insured. She said there have been instances when there was a change in address for an insurer, and consequently, past due premiums and notices of an impaired policyholder were returned to the third party, as they were mailed to an outdated address. She said adding a confirmation notice to be sent to the current third party every two years would be helpful, and insurers should be required to notify policyholders of the right to change a third party for notification of a lapse in premium payment. She said there is no current requirement that an insurer periodically confirm the current contact information for the third party who is to be notified of a pending lapse, and she knows of instances where a third party has moved or died, or the notice went to an outdated or even wrong address. Mr. Birnbaum agreed with Ms. Burns and said there has been a lot of work done on plain language and user-friendly approaches to providing disclosures to consumers, and this example illustrates that there is a better way than simply calling it a notice of lapse or termination. He said the requirement to send first-class mail should be updated to include electronic delivery, particularly for the third party.

Mr. Gennace asked Ms. Burns to explain the NAIC Consumer Representatives’ comment on Sections 8A(2) and 8E. Ms. Burns said policyholders often do not see the language about premium increases buried in the paragraph about guaranteed renewability, and a notice of the right to increase premiums should be in a separate paragraph from guaranteed renewability. She said there also should be a requirement for a clear notice of waiver of premium, and the notice should describe any benefits covered by a premium waiver; a clear notice of the benefits not covered by a premium waiver; and a clear notice of how and when the premium waiver will be credited or refunded. She said policy language generally describes that premium payment will be owed when benefits are no longer payable but may not clearly describe how and when waived premiums will be credited.
or returned. She said generally, a premium waiver is described in one place in a policy, while the return or credit of the waived premium is described separately.

Mr. Birnbaum said there should be a glossary or a table of contents to help consumers navigate the model, and the definition of class, as discussed on the last call, should be included in this part as well. He said the history of the company’s rate increases, itemized and cumulative, should be included.

Mr. Gennace asked if this is something that has changed in the LTCI marketplace that would require or precipitate the need for these changes or something where the regulation could be improved. Ms. Burns said it is two-fold. She said these are experiences people have had with their policies, so improvements are needed; but going forward, it also illustrates how the marketplace needs to work better. Mr. Birnbaum said he agrees with Ms. Burns, the nature of the products have changed significantly, and significant advances have developed since the model was developed.

Ray Nelson (American Association of Health Insurance Plans—AHIP) said he understands Ms. Burns’ concerns about rating practices, and Section 9 added a lot of rating practices notices and disclosures for consumers that are beyond what is just in the policy. He said, as Mr. Birnbaum noted, there are a lot of disclosure requirements already, and most of them are regarding the sales process, so many of the concerns are addressed, and any changes should be looked at in total.

Mr. Gennace asked Ms. Burns to explain the NAIC Consumer Representatives’ comment on Section 9. Ms. Burns said life and annuity contracts that provide for LTC benefits have internal costs associated with the policy and the benefits paid by the policy, and there is no mention in this section of how those costs might change. She said, for instance, the cost of insurance charged in a policy might change, or the cost of LTCI might change, which could affect the earnings in a policy and the daily benefit amount paid for care, and while this is not a change in premium, changes in internal costs affect the benefit a policyholder will receive.

Mr. Serbinowski said it is not clear why in Section 9B(5)(a) the rate increase history is limited to 10 years when most prospective buyers will keep their policies for much longer than that. He said a cumulative rate increase for each policy form might be preferable to a long list of individual increases. He said for Section 9B(5)(d), one should consider if this provision allows some rate increases to not be reflected. He said if every company transferred business after the first increase, no company would be required to disclose more than one increase on a policy form.

Mr. Gennace asked Mr. Serbinowski to discuss his comments on Section 10. Mr. Serbinowski said one should consider adopting retention requirements for actuarial assumptions, similar to those in Section 10C of the Limited Long-Term Care Insurance Regulation (#643). He said it can create problems as to how much assumptions change and produce projections based upon prior filing assumptions. He said this is not a reason alone to open the model, but should the model be open for updating or editing, retention language would be a good addition.

Mr. Birnbaum said he had a comment on a part of Section 10. He said the section requires that insurers develop their best estimate of future claim costs under moderately adverse experience, then pad that estimate by at least 10%. He said the theory seems to be that insurers not only did not know what they were doing in the 1990s, but they have not learned anything given historically low interest rates, extensive lapse, and claims experiences. He said insurers are already using conservative values for estimating future claim costs, so it is unclear why this 10% padding is still needed, and there is no requirement for the insurers to return the excess profits resulting from the 10% padding. He said an insurer can raise rates of claimed costs that are worse than expected, but there is no requirement to lower rates of claim costs that are as good or better than expected before the 10% padding. He said Section 10 also provides for a margin greater than 10% if the company has less than credible experience to support its assumptions. He said eliminating this 10% margin is consistent with AHIP’s justification for limiting rate increase history to 10 years.

Mr. Serbinowski said he disagrees with Mr. Birnbaum. He said perhaps if rate stability does not work, the Subgroup could rethink the model altogether and think of a different way to do LTC, but if there is an expectation that the Subgroup wants an actuary to certify that the rates are expected to be good for the lifetime of the product, then the Subgroup wants to have a margin.

Mr. Nelson asked Mr. Birnbaum if he believes the 10% margin is in addition to the moderately adverse experience because one has to certify that the rates are sufficient under moderately adverse experience, and this moderately adverse experience has to be at least 10% of lifetime claims unless the company can justify reasons to have lower margins; therefore, the 10% margin is
not on top of the moderately adverse experience. Mr. Serbinowski and Mr. Gennace agrees with Mr. Nelson’s reading of that section.

Mr. Gennace asked Ms. Burns to discuss the comments on Section 11C(1). She said insurers have begun to ask questions about family health history as part of the application process, and that could lead to misinformation or mistaken information that could be used later to rescind coverage. She said insurers and others have access to information and data from many sources that could contain erroneous information or information and data that are different from what the policyholder entered on the application. She said, for instance, an applicant might know anecdotally about the cause of death of a family member, but that might be inconsistent with the medical cause of death listed on a death certificate. She said some older family members might conceal a health condition from other family members, leading to an erroneous response on an application.

Mr. Birnbaum agreed with Ms. Burns and said the insurer should be required to provide evidence as to why there may have been a denial of benefits and disclosure any third-party databases used in that decision. Mr. Gennace asked whether there have been cases of this happening where a policy is rescinded or if this is more of a general concern. Ms. Burns said she had been involved with cases where answers on the application were challenged, but the use of third-party databases is a new area, and she could see this happening more frequently.

Silvia Yee (Disability Rights Education and Defense Fund—DREDF) said there are cultural issues involved as well, especially with older relatives. She said in quite a few cultures, it is difficult to get information from relatives, especially older relatives, about how a family member may have died. She said she has experienced this personally, and in some cultures, how a death or serious illness has occurred or what occurred is just not spoken about. She said this could be a serious impact on certain groups of people.

Mr. Birnbaum said while the Fair Credit Reporting Act (FCRA) requires disclosures of sources, it does not cover third-party databases like social media; therefore, there is no opportunity for the consumer to address erroneous information found through these third-party databases.

Ms. Arp asked if big data should be part of this discussion. Mr. Birnbaum said in the last decade, insurers have been using third-party databases to not only obtain or verify information given by the consumer but to also speed up the application process. He said he raised this issue in this section, as it could hurt the consumer having a denial based upon information that is not true coming from these third-parry data sources. Ms. Arp asked if language in this section needs to be changed or if it is a matter of keeping an eye on denials and cancellations of coverage based upon the information insurers receive that was not available 20 or 30 years ago. Mr. Birnbaum said two things need to be addressed. He said the first is what it means to make an untrue statement that can result in a claim denial, and giving the consumer some examples of what an untrue statement would be that could cause a denial would be useful. He said the second is disclosure to a consumer that third-party sources are going to be used and providing the consumer with what those sources are in the event of a denial so that the consumer is on notice and can correct incorrect information found through a third-party data source.

Mr. Gennace asked Ms. Burns to discuss the comments on Section 12. Ms. Burns said the dollar amount of $25 should probably be increased, as a home health care benefit that provides $25 a day would be illusory based on costs today. She said in addition, the drafting note seems to conflict with the language in Section 12B. Mr. Nelson said industry has typically been against having a minimum dollar amount because there are occasions where a policyholder buys a second or third policy to add to the previous policy, and they are sometimes buying $25 worth to just add on. He said that would be the concern of putting in higher minimums, but the $25 figure is small. Ms. Yee agreed and said the language in Section 12B is outdated, as making a distinction between home health and nursing home care and the language in the section stating “at least one-half of one year’s coverage” is in conflict.

Mr. Gennace asked if Mr. Serbinowski wished to further clarify his comments from the last meeting on Section 6D. Mr. Sundberg said Mr. Serbinowski had to get off the call, but he said Mr. Serbinowski believes there is a need to specify what is meant by “continue” in Section 6D. He said the plain reading of the section suggests that there ought to be a conversion policy on the group policies, and most policies do not include one. He said the concern is not that there is no conversion policy, but whenever these policies are reviewed and a group policy is seen without a conversion policy, then it is objected to even though the group policy continues, so Mr. Serbinowski believes there needs to be some clarity about what it means to continue the policy.

Ms. Burns asked if there were not a conversion and that group policy continues, whether the certificate holder who is no longer part of the group would be in danger of having their certificate terminated if the group policy is terminated. Mr. Sundberg said
he has not dealt with enough group LTC to know, but he would be interested in a response from industry on this. Ms. Burns said it is her understanding that a conversion is required so that the person then has what constitutes an individual policy separate from whatever action the group policy takes later. Mr. Hamby agreed with Ms. Burns and said they would hold that continuation should be allowed for the individual person. Ms. Bailey said one of the things she has been seeing across all lines of business is portability, and it may be messy and not a good fit for LTC. She said the insurer creates a trust, and if the group policyholder terminates the plan, then they move the certificate holder to the portability trust and the portability certificate is issued to the consumer so that they can continue the same benefits that they previously had. Mr. Hamby said he has seen this arrangement as well.

Mr. Gennace said the next meeting will be Dec. 1, and the Subgroup will cover comments received on Section 13–19. He asked that comments be sent to David Torian (NAIC) by close of business on Nov. 23.

Having no further business, the Long-Term Care Insurance Model Update (B) Subgroup adjourned.
The Long-Term Care Insurance Model Update (B) Subgroup met Oct. 13, 2021. The following Subgroup members participated: Philip Gennace, Chair (NJ); Mayumi Gabor (AK); Tyler McKinney (CA); Roni Karnis (NH); Jill Kruger (SD); Tomasz Serbinowski (UT); and Elsie Andy (VA). Also participating were: William Rodgers (AL); Carroll Astin (AR); Erin Klug (AZ); Emily Smith (CA); Shirley Taylor (CO); Jared Kosky (CT); Susan Jennette (DE); Benjamin Ben (FL); Teresa Winzer (GA); Jason Asaeda (HI); Andria Seip (IA); Kathy McGill (ID); Eric Anderson (IL); Scott Shover (IN); Craig VanAalst (KS); Ron Kreiter (KY); Fern Thomas (MD); Sherry Ingalls (ME); Karen Dennis (MI); Fred Andersen (MN); Amy Hoyt (MO); Bob Williams (MS); Ashley Perez (MT); Ted Hamby (NC); Yuri Venjohn (ND); Bogdanka Kurahovic (NM); Sean Becker (NY); Tynesia Dorsey (OH); Cuc Nguyen (OK); Jim Laverty (PA); Andrew Dvorine (SC); Vickie Trice (TN); Barbara Snyder (TX); Mary Block (VT); Julie Walsh (WI); Dena Wildman (WV); and Mavis Earnshaw (WY).

1. **Adopted its July 15 Minutes**

The Subgroup met July 15 and heard presentations on the current long-term care insurance (LTCI) marketplace and what products are being seen, filed, and produced in the marketplace.

Ms. Kruger made a motion, seconded by Ms. Karnis, to adopt the Subgroup’s July 15 minutes (see NAIC Proceedings – Summer 2021, Senior Issues (B) Task Force, Attachment Two). The motion passed unanimously.

2. **Discussed Comments Received on Sections 1–6 of Model #641**

Mr. Gennace asked Jan Graeber (American Council of Life Insurers—ACLI) to discuss the ACLI’s comments on Sections 1–6 of the Long-Term Care Insurance Model Regulation (#641). Ms. Graeber said the ACLI believes the language currently contained in Sections 1–6 remains flexible and compatible with the current LTCI marketplace, and new language is unnecessary. She said as the Subgroup continues its review of the remaining sections of Model #641, the ACLI recognizes that changes needed to those sections could result in a need to reconsider their position regarding the opening of Sections 1–6.

Birny Birnbaum (Center for Economic Justice—CEJ) said Ms. Graeber should show evidence that Model #641 works and Sections 1–6 remain flexible and compatible with the current LTCI marketplace. Ms. Graeber said she has not seen anything in the marketplace being stifled by Sections 1–6. Mr. Serbinowski said it is difficult to prove a negative, and Sections 1–6 are mostly definitions.

Mr. Gennace asked if someone from California cares to explain their comment to Section 3. Ms. Smith said this section singles out one type of other product that may come within the scope of Model #641—disability income insurance with a benefit triggered by activities of daily living (ADLs)—but it does not address other types of products in the marketplace today that have triggers based on ADLs or confinement in a facility. She said inclusion or exclusion of these other products within the scope of Model #641 should be considered. Mr. Serbinowski said it would be helpful if the Subgroup could look at or see examples of these products that skate on the edge of being LTCI. Ms. Smith said she is unable to give specific examples at this time, but she could provide generic examples.

Mr. Gennace asked Bonnie Burns (California Health Advocates—CHA) to explain the NAIC Consumer Representatives’ comment on Section 3. Ms. Burns said this section singles out one type of other product that may come within the scope of Model #641—disability income insurance with a benefit triggered by activities of daily living (ADLs)—but it does not address other types of products in the marketplace today that have triggers based on ADLs or confinement in a facility. She said inclusion or exclusion of these other products within the scope of Model #641 should be considered. Mr. Serbinowski said it would be helpful if the Subgroup could look at or see examples of these products that skate on the edge of being LTCI. Ms. Smith said she is unable to give specific examples at this time, but she could provide generic examples.

Mr. Gennace asked Bonnie Burns (California Health Advocates—CHA) to explain the NAIC Consumer Representatives’ comment on Section 4. Ms. Burns said it is like California’s comment in that this section should be reviewed to determine if any part of it should apply to newer products that trigger benefits on ADLs and cognitive impairment, not just DI. Ms. Graeber said it would be helpful to see what these products are so products that are not really LTCI are not pulled in. Mr. Gennace said should Model #641 be opened for editing, the Subgroup can take a deeper look into these products.

Mr. Gennace asked Ms. Burns if the NAIC Consumer Representatives’ comment on Section 4 is like the previous section. Ms. Burns said it is similar, and she believes this section should be reviewed to determine if it covers newer products that provide benefits for long-term care (LTC) expenses.
Mr. Gennace asked Mr. Serbinowski to discuss his comment to Section 4B(1). Mr. Serbinowski said of the definition of the “exceptional increase,” it incorporates requirements that go beyond defining the term, and Utah would move the requirements outside of the section that defines the term. He said he merely is making an observation and has no real concern.

Mr. Gennace asked Mr. Serbinowski to discuss his comment to Section 4F. Mr. Serbinowski asked if there is a reason to require membership in a specific organization rather than maybe an actuary that is subject to the American Academy of Actuaries’ (Academy’s) “Qualification Standards.” He said the Academy does not recognize a status of “in good standing.” Ms. Snyder said a qualified actuary could be defined as an actuary and is a member of the Academy and qualified under its qualification standards. She said the Academy has a particular document that defines the standards to be met. Mr. Serbinowski said it might be more useful to have alternative language, and that could be addressed should Model #641 be opened.

Mr. Gennace asked Ms. Burns to discuss the comment received on Section 5. Ms. Burns said the section should be reviewed to consider definitions for reduced benefit options (RBOs). She said the phrase is used often in NAIC discussions, but there is no definition, and a definition should be included if it is being used in Model #641 and elsewhere. Mr. Serbinowski said RBOs is not the exact term used. He said the language requires that a policy offers the option to reduce benefits. He said RBOs may be used by the NAIC, but it is not in Model #641. Ms. Burns said if the term is being used, it should have a definition, and she suggested the definition used by J.P. Wieske (Horizon Government Affairs). Mr. Serbinowski said it is hard to determine whether a definition is needed just based on Sections 1–6 and how it relates to any parts of Model #641 with respect to the options to reduce benefits. He said while the term RBOs is not used in Model #641, should it be opened, a determination of whether a definition is needed can be decided.

Mr. Gennace asked Ms. Burns to discuss the comment on Section 5E. Ms. Burns said this section should be reviewed to consider changing the wording “safety awareness” to a more specific definition. She said it seems to be a very outdated term, and there must be a better way to describe it, so the definition should be revised. Ms. Karnis asked how changing the term safety awareness or using a different term would foster increased flexibility, as the goal of the Subgroup is to determine whether the language in Model #641 no longer remains flexible and compatible with the current LTCI marketplace. Ms. Burns said she did not know what “safety awareness” means. She said that terminology is more like a risk to oneself or others, but it does not make sense. Mr. Gennace said it seems like the issue is a matter of perhaps tightening up or increasing the clarity of the language, but he asked whether it is also a matter of just modernizing or if there is a need to address that as an improvement. Ms. Andy asked if this term could be a federally defined term, and if so, if it could even be adjusted. Ms. Burns said she is pretty sure it is not a federally defined term. Mr. Gennace asked Mr. Torian if he could find some history on the term “safety awareness.”

Mr. Gennace asked the Subgroup to look at Section 6, and he asked the NAIC Consumer Representatives to discuss their comment on Section 6A(4). Ms. Burns said the section refers to a “class” regarding rate increases, and there should be a definition of a class for the purpose of imposing a premium increase. Mr. Serbinowski said the Subgroup is not opposed to examining this, but defining class could be a very tricky issue. Mr. Gennace asked whether this has been an issue, there have been problems, or if it is inadequate in some way. He said he could see why it may need to be defined, but he asked if there have been issues or concerns from it not being defined. Mr. Birnbaum said this issue has been a source of litigation.

Ms. Burns said her comment may not have been totally clear, and she has concerns about guaranteed renewable even though the section in question states the use of a class basis. She said on the front page of all policies is a visible guaranteed renewable section, but the right to raise premiums is buried in the section. She said policyholders do not see that and do not know it is there from her experience in counseling consumers. She said there should be two separate paragraphs that pertain to the right to raise premiums and the guaranteed renewability. Ms. Graeber said the standard definition of guaranteed renewable, and it starts to get problematic once defining class. She said the class concept would be covered under a state’s anti-discrimination statutes because any kind of class that is developed must have an actuarial support for it. Ms. Burns said there are three entirely different issues at play. She said there is the language on guaranteed renewability; the language on the right to raise premiums, which is not clear to policyholders; and the language on what constitutes a class for the purposes of premium increases.

Mr. Birnbaum said an increase in premiums is based on class, and there should be some definition of class but also some requirement that the policy states what one’s class is. Mr. Serbinowski asked, supposing that there is one class and then there is an increase for some people by 0.5% and some others by 200%, if the definition would prevent that. He also asked, supposing that the class are policyholders who are males, age 57, lifetime benefits, 3% inflation, 90-day elimination period, preferred underwriting, and there are 17 persons at that moment in that class, if that is what is being sought. Mr. Birnbaum said what the insurance company has used to determine the rate is the class the consumer is in. He said the insurance company must identify
some rating class to issue a policy, so it should be made clear to the consumer what their class is. Mr. Serbinowski said the purpose of the term is to offer protection so a class cannot be people named Tomasz who speak Polish, because the narrower the class, the less protection exists.

Mr. Gennace asked Ms. Burns to discuss her comment on Section 6A(4) and level premium. Ms. Burns said level premium and the other terms discussed are confusing for consumers. She said consumers do not understand the terms and many times are unaware of what these terms mean for them. She said the term level premium needs more definition in the policy. She said all state insurance regulators encourage consumers to read their policies, but the main reason people do not read their policies is they do not understand what these terms mean.

Mr. Gennace summarized Mr. Serbinowski’s comment on Section 6B(2). Mr. Gennace said the section allows exclusions or limitations based on “mental or nervous disorders,” and it specifically disallows exclusion based on Alzheimer's disease. He said Mr. Serbinowski asked if there is a better definition since if someone Googles “nervous disorder,” the search comes up with “nervous system disorders” that include things like Parkinson's or stroke. Mr. Gennace said the term may be problematic and not exactly clear, and should Model #641 be opened, the Subgroup may want to redefine this section. Ms. Burns said the section does not include other dementias, and this definition needs work.

Mr. Gennace asked Ms. Burns to discuss the comment on Section 6B(4)(c). Ms. Burns said the section allows for an exclusion for conditions related to military service and discriminates against members of the military who may have been exposed to conditions that cause a disabling condition later in life. She said it is long past time to remove this discriminatory exclusion.

Mr. Gennace asked Ms. Burns to discuss the comment on Section 6B(8). Ms. Burns said the drafting note contains language that is specific and should be added to Section 6B(8). She said the specific language in the drafting note is “…if the claim would be approved but for the licensing issue, the claim must be approved.” Mr. Gennace said Mr. Serbinowski had a comment on Section 6B(8)(a) that the language “the state of policy issued” in the third line should be “the state of policy issue.” Mr. Gennace asked Ms. Burns to discuss the comment on Section 6B(9). Ms. Burns said it was merely to point out that if there are changes made to the Long-Term Care Insurance Model Act (#640) regarding extraterritoriality, then changes must be made to the Model #641.

Mr. Sundberg spoke on behalf of Mr. Serbinowski’s comment on Section 6D. He said the Subgroup should probably look at this section, as in practice, most group LTC policies do not have any formal “conversion” provision. He said the coverage under the same certificate continues when the person leaves the group or the group terminates as if the certificate was an individual policy, and the section should probably reflect what is happening in practice.

Ms. Graeber asked Mr. Sundberg if he means the conversion provision does not allow for a company to convert to an individual policy. Mr. Sundberg said if a person purchased a policy though their company and then retires, that person maintains the same policy. He said there is no real conversion from group to individual. He said they just maintain coverage with that same group. Ms. Graeber said some companies do that, and there may be instances where a conversion to an individual policy happens, but she asked if the current language would allow for both. Ray Nelson (TriPlus Services Inc.) said the language allows for either a conversion or a continuation. Ms. Graeber said she is not sure what sort of change is being envisioned for the language. She said there is not a lot of true group policies in the marketplace, but conversions exist. Mr. Sundberg said if there are conversions happening, then leaving the language as it is would not be an issue, but he said Mr. Serbinowski can clarify his comments at the next meeting.

Ms. Karnis said with an eye toward thinking about whether more flexibility is needed in Model #641 and whether adding something about portability in this section would be helpful. She said she does not know if that is practical, but perhaps getting some input from industry might be helpful. She said it may not be necessary if the majority of consumers remain on their former employers group policy, but it may be something to think about in terms of flexibility. Mr. Gennace said it could be helpful if Ms. Graeber or someone else from industry cares to provide some insight at the next meeting.

Having no further business, the Long-Term Care Insurance Model Update (B) Subgroup adjourned.
PROPERTY AND CASUALTY INSURANCE (C) COMMITTEE

Property and Casualty Insurance (C) Committee Dec. 15, 2021, Minutes ................................................................. 8-2

2022 Proposed Charges (Attachment Six) ................................................................................................................... 8-52
The Property and Casualty Insurance (C) Committee met in San Diego, CA, Dec. 15, 2021. The following Committee members participated: Vicki Schmidt, Chair (KS); Mike Chaney, Vice Chair (MS); Jim L. Ridling (AL); Ricardo Lara (CA); Andrew N. Mais and George Bradner (CT); Colin M. Hayashida (HI); Amy L. Beard (IN); James J. Donelon and Tom Travis (LA); Kathleen A. Birrane represented by Greg Derwart (MD); Grace Arnold and Julia Dreier (MN); Larry D. Deiter (SD); Tregenza A. Roach (VI); Michael S. Pieciak represented by Kevin Gaffney (VT); Mike Kreidler (WA); and Allan L. McVey (WV). Also participating were: Anoush Brangaccio (FL); and Don Beatty (VA).

1. **Adopted its Nov. 10 Minutes**

   Commissioner Mais made a motion, seconded by Commissioner McVey, to adopt the Committee’s Nov. 10 minutes (Attachment One). The motion passed unanimously.

2. **Adopted the Reports of its Task Forces and Working Groups**

   a. **Casualty Actuarial and Statistical (C) Task Force**

   Ms. Dreier reported that the Casualty Actuarial and Statistical (C) Task Force assisted the Blanks (E) Working Group in evaluating a proposal (2021-11BWG) submitted by the Center for Economic Justice (CEJ). The proposal was to add data reported on policy writings for private passenger auto (PPA) and homeowners insurance to the Property/Casualty (P/C) Annual and Quarterly Statements. Ms. Dreier said the Task Force never took a vote on whether to support the Blanks proposal; however, the Task Force sent state-by-state feedback on the proposal and sent the Statistical Data (C) Working Group’s research on how much earlier statistical agents could provide premium and exposure data similar to the Blanks proposal. The Blanks (E) Working Group ultimately rejected this Blanks proposal.

   Ms. Dreier said the Task Force was charged to evaluate whether P/C Appointed Actuaries were maintaining competence in years after passing exams. The Casualty Actuarial Society (CAS) conducted a study and found no issues with continuing education (CE) of Appointed Actuaries, so the Task Force deemed that charge completed with no further action regarding maintaining competence. With the charge complete, the Task Force will remove some temporary reporting requirements needed to conduct the CE study, which will be for 2023.

   Ms. Dreier said the Task Force also drafted a response letter to the American Academy of Actuaries’ (Academy’s) second exposure draft for U.S. qualification standards. The Academy has adopted these standards, and the Task Force is going to follow up with the Academy to discuss why some changes were not made to better align with state insurance regulators’ requirements for the P/C Appointed Actuaries. A proposed response in answer to the referral Project #2019-49: Retroactive Reinsurance Exception is now exposed for a 45-day public comment period ending Jan. 20, 2022.

   Ms. Dreier also said a regulatory review of random forest models has been exposed for a 60-day public comment period ending Feb. 4, 2022. The proposal takes the appendix of generalized linear model (GLM) information items from the adopted Regulatory Review of Predictive Models white paper and modifies it to apply to the review of random forest models. A proposed glossary of random forest model terminology was also exposed.

   b. **Surplus Lines (C) Task Force**

   Mr. Travis said the Surplus Lines (C) Task Force has been working on modernizing the Nonadmitted Insurance Model Act (#870). A drafting group was formed and has met four times since the Summer National Meeting, and it is hoping to have a draft for the Task Force in early 2022. The Task Force has also adopted revisions to the Trust Agreement for Alien Excess or Surplus Lines Insurers that update the trust language and allow for a more streamlined approach after an insurer has left the Quarterly Listing of Alien Insurers. The Task Force has also adopted changes to the Quarterly Listing of Alien Insurers that will allow state insurance regulators access to alien insurer contact information. In 2022, the Task Force is planning to make improvements and updates to the International Insurers Department (IID) Plan of Operation.
c. Title Insurance (C) Task Force

Ms. Brangaccio said the Title Insurance (C) Task Force met Oct. 19 to: 1) discuss proposed charges; 2) hear a presentation from Demotech on observed and reported impacts of defalcations and escrow theft on the title industry; and 3) hear a presentation from the American Land Title Association (ALTA) on its new forms of Commitment, Owner’s Policy, and Loan Policy, effective July 1. Ms. Brangaccio said the Task Force also met Nov. 16 to: 1) hear a presentation from AM Best on how the robust homeowners housing market has driven historic title industry performance and a presentation from ALTA on key changes to the homeowners policy of title insurance and ALTA endorsements; and 2) adopt its 2022 charges. She said revisions reflect removing outdated or completed charges and minor editorial changes for clarification of intent. She said late submissions by the CEJ were deferred and subsequently submitted to the Committee for consideration.

d. Workers’ Compensation (C) Task Force

Commissioner Schmidt said the Workers’ Compensation (C) Task Force has not met since the Summer National Meeting.

e. Cannabis Insurance (C) Working Group

Commissioner Lara said the Cannabis Insurance (C) Working Group met Oct. 21 to discuss the draft outline for an appendix to the Understanding the Market for Cannabis Insurance white paper. The appendix will provide an update on the regulatory issues related to insurance in the cannabis industry that have occurred since the white paper’s adoption in July 2019. The appendix is anticipated to be adopted by the 2022 Summer National Meeting. The Working Group also discussed its 2022 charges, including a recommendation to collaborate with the Producer Licensing (D) Task Force to study whether cannabis-related convictions in states where cannabis is legalized for medical and/or recreational use are preventing individuals from being licensed as an agent or broker.

Commissioner Lara said the Working Group met Dec. 1 to hear a presentation from the University of Colorado on emerging scientific issues in the cannabis space. The Working Group learned the landscape of legality and received information that shows commercial cannabis products are constantly changing, with minor tetrahydrocannabinol (THC)-like cannabinoids (such as Delta-8 and Delta-10) able to be synthesized from legal hemp, thereby creating new legal, science, and health-related questions. The Working Group heard a presentation from the Cannabis Regulators Association (CANNRA) on cannabis policy and regulation trends. The Working Group learned there is now a broader focus on how policy is made, with an increased focus and prioritization of social equity, restorative justice, and public health and safety issues. The Working Group discussed the potential for information from the Task Force and its related NAIC databases that can assist the Working Group in assessing whether equity concerns exist. Commissioner Lara said the drafting group met several times to develop the outline and begin drafting an appendix for the Understanding the Market for Cannabis Insurance white paper.

f. Catastrophe Insurance (C) Working Group

Commissioner Chaney said the Catastrophe Insurance (C) Working Group met jointly with the NAIC/Federal Emergency Management Agency (FEMA) (C) Advisory Group Dec. 12 to hear from David Maurstad (FEMA) on the implementation of the new National Flood Insurance Program (NFIP) rating methodology known as Risk Rating 2.0, which is meant to more accurately match individual rates with risk. Commissioner Chaney said state insurance regulators appreciate their partnership with FEMA, and FEMA staff have been available with training and other assistance in helping consumers understand the rollout of these new rates. The Working Group and Advisory Group also heard from Edie Lohmann (FEMA), who reviewed the FEMA regions, regional flood insurance specialists, and how FEMA can engage with state insurance regulators on outreach, education, and training; technical assistance; NFIP claims, underwriting, and coverage; pre- and post-disaster support; and public awareness events and activities.

Commissioner Chaney said the Working Group and Advisory Group heard an update regarding the NAIC Catastrophe Resource Center. This website has information about NAIC and state resources, and it has recently been updated to include FEMA regional information and FEMA contact information. Louisiana provided a report on Hurricane Ida, including the department’s response to the hurricane in assisting consumers and collecting claims data. Commissioner Chaney said an update was provided on a state survey that will help the Working Group in updating the Catastrophe Modeling Handbook. He said any states not yet completing the survey should reach out to the NAIC. The drafting group plans to meet in January to further discuss the survey and the drafting process. Commissioner Chaney said upcoming events involving FEMA include an NAIC/FEMA workshop for FEMA Region 6 tentatively planned for early 2022; an earthquake event to be hosted by the Missouri Department of Insurance (DOI) in May 2022; and the Cascadia Rising 2022 National Level Exercise.
g. Pet Insurance (C) Working Group

Mr. Beatty said the Pet Insurance (C) Working Group met three times to finalize edits to the Pet Insurance Model Act, with the Working Group adopting the model on Oct. 21. Following the adoption of the model, the Working Group met Dec. 1 to discuss the issue of the collection of pet insurance data, which arose as a topic of discussion during the development of the model. Because the only 2021 charge for the Working Group was the development of the model, the Working Group voted to ask the Committee to make the proper referrals to the Blanks (E) Working Group for the collection of data on the financial annual statement, as well as forwarding drafted referrals to the Market Analysis Procedures (D) Working Group to collect Market Conduct Annual Statement (MCAS) data and the Market Information Systems Research and Development (D) Working Group to collect complaint data.

h. Terrorism Insurance Implementation (C) Working Group

Commissioner Schmidt said the Terrorism Insurance Implementation (C) Working Group has not met since the Summer National Meeting.

i. Transparency and Readability of Consumer Information (C) Working Group

Mr. Bradner said the Transparency and Readability of Consumer Information (C) Working Group met Nov. 17 and has been working on best practices documents regarding disclosures for premium increases. These best practices documents include a disclosure document to be sent from insurers to consumers regarding premium increases (both capped and uncapped) and reasons for the premium increase; a rate/rule filing checklist that can be used by DOIs to ensure appropriate information is provided to the DOI regarding rate filings; and consumer education regarding ratemaking, rating factors, and premium discounts for both homeowners and auto insurance.

Mr. Bradner said the disclosure document and the rate/rule filing checklist will be exposed for 30 days before the Working Group votes on adoption. He also said the Working Group has a proposed charge to study and evaluate ways to engage DOI communication to more diverse populations, such as rural communities. He said the Working Group plans to begin discussing this topic in January.

Commissioner Chaney made a motion, seconded by Commissioner Mais, to adopt the following task force and working group reports: Casualty Actuarial and Statistical (C) Task Force; Surplus Lines (C) Task Force; Title Insurance (C) Task Force; Workers’ Compensation (C) Task Force; Cannabis Insurance (C) Working Group (Attachment Two); Catastrophe Insurance (C) Working Group (Attachment Three); Pet Insurance (C) Working Group (Attachment Four); Terrorism Insurance Implementation (C) Working Group; and Transparency and Readability of Consumer Information (C) Working Group (Attachment Five). The motion passed unanimously.

3. Heard Presentations Related to Auto Insurance Premium Refunds Resulting from the Pandemic

Commissioner Schmidt said the Consumer Federation of America (CFA) requested to speak about auto insurance premium refunds resulting from reduced driving due to the pandemic.

Doug Heller (CFA) said the CFA believes there was a duty to get more refunds to drivers over the past year and a half, and it is still not too late to do so. He said commissioners went to great lengths when the pandemic started to make sure the insurance market could function effectively, including granting premium payment extensions and cancellation moratoria. He said insurers were granted new means by which they could comply with a variety of statutory and regulatory requirements, and DOIs figured out how to work from home.

Mr. Heller said the CFA urged insurance departments to act to create a mandate and mechanism for insurers to return the excess premium they would collect as a result of the pandemic. He said insurers finally did give back premium, but it was not enough. He said insurance departments need to do more to prevent the excessive rates that data now documents. He said commissioners should revisit the question of pandemic premium refunds for drivers in their states and develop a plan for a systematic response should a similar situation happen in the future.

Mr. Heller said premiums were about the same in 2020 as they were in 2019 even with the premium refunds. He noted that incurred losses for 2020 fell dramatically. He said insurers claimed that severity has increased, but the volume of claims has fallen dramatically. The drop in auto claims led to a historically low industry-wide loss ratio for 2020. The 2020 loss ratio was
more than 10 points lower than the average over the prior four years. Mr. Heller said rate decreases did not come close to offsetting the excessive prices consumers were being charged.

Mr. Heller noted that insurers have been telling investors their profits increased in 2020. He said AM Best identified that $12.9 billion was given back to policyholders. State Farm paid more than $44 million in bonuses to its top executives in 2020, dramatically higher than prior years, and spent $400 million to buy a nonstandard insurer. Geico increased its auto insurance underwriting income by 128% over 2019. Progressive paid investors $2.6 billion in January 2021 through its largest ever annual dividend to shareholders. Allstate paid its largest dividend ever and spent $4 billion to acquire another insurer.

Mr. Heller said insurers are currently requesting rate hikes by saying claim histories from the pandemic should not apply. He said his research shows there is $29 billion that should still be returned from insurers' windfall profits. He said DOIs should consider conducting their own investigation and data call.

Rich Gibson (Academy) said the Academy will not weigh in on whether additional refunds are appropriate. He said rates are set on a prospective basis, estimating future costs. He said the pandemic added to the usual uncertainty. He noted that when insurers underestimate the needed rate, there is no recourse to recoup the shortfalls. Actuaries have practice and procedures for making these future cost estimates that are embodied in Actuarial Standards of Practice (ASOPs). Mr. Gibson noted that the Academy has published a paper titled Considerations for Handling Auto Insurance Data in the Era of COVID-19.

Mr. Gibson said the loss and loss adjustment expense ratio for 2020 was the best year over the last 10 years. He said generally, the auto insurance industry has not made an underwriting profit for auto liability for the nine years before 2020. These figures do not consider the investment income earned by the industry.

Mr. Gibson also noted that industry aggregate data and averages may not be the best way to judge the appropriateness of refunds. State insurance regulators and others should look at company specific and state specific data. Mr. Gibson said insurers should continue to monitor their individual results and adjust rates as appropriate.

David F. Snyder (American Property Casualty Insurance Association—APCIA) said the APCIA is releasing a comprehensive report titled U.S. Auto Insurance Market Still Struggling. He said insurers and state insurance regulators quickly moved in-person operations to virtual to better serve consumers. He said state insurance regulators offered flexibility to insurers who in turn offered flexibility to customers in areas such as grace periods for late payments and waiving delivery exclusions.

Mr. Snyder said insurers provided more than $14 billion in premium relief and credits, reflecting the sudden and dramatic downturn in driving activity and losses. As the pandemic continued, the APCIA warned against mandating more premiums reductions as traffic speeds increased, as did serious accidents and eventually miles driven. Mr. Snyder said fatalities in 2020 increased by 7.2% over 2019, and 2020 fatalities were the highest in the last 10 years. He also said the first half of 2021 has seen an 18.4% increase in fatalities over 2020. He said rising insured losses are being driven by the intersection of more dangerous driving behavior, return of mileage, and rapid inflation affecting the cost of products and services covered by auto insurance. He said rising claims costs reflect the cost to repair and replace motor vehicles being seen in increased inflation.

Mr. Snyder said loss ratios dropped dramatically in 2020 but recovered in the last half of 2020, and they are rising throughout 2021, thus offsetting the short-term gains from 2020. He said state insurance regulators should maintain the long-term stability and solvency of the insurance markets. He asked whether premiums should be lowered in the short term and raised when losses rise, moving toward a rating system where consumers would get refunds or surcharges every month. He said such a system does not provide stability and solvency. He urged cooperation between state insurance regulators and industry to ramp up highway safety measures and a recognition of the dramatic inflation in the cost of products and services covered by auto insurance. He said state insurance regulators should avoid the temptation to grant short-term relief if the reality of that has been overtaken by losses that have occurred since. He said a short-term approach would lead to instability and potential solvency issues.

Commissioner Lara said the APCIA indicated that insurers should not be mandated to provide premium reductions based on short-term fluctuations in losses. He said 2020 was not just a fluctuation, as it resulted in consumers overpaying premiums by billions of dollars. Mr. Snyder said losses went down but then climbed back up, and the industry is advocating for a long-term strategy. He said insurers should not bill consumers midterm when losses increase. He said the long-term trends differ from short-term trends. Commissioner Lara said 2020 should not be ignored. He said the industry does not say wildfire losses over the past few years in California are just an anomaly. He said the industry raises rates when they see losses increase, but they do not give back premium when losses decrease dramatically. Mr. Snyder said if there is a demand of refunds based on short-
term development, then there should be midterm increases when inflation takes over, but the industry believes in a long-term approach.

Commissioner Kreidler said insurers are keeping short-term gains to keep insurers above water. He said Washington received testimony from small businesses indicating their insurance was not covering business interruption, and those businesses could use help. He said state insurance regulators should be asking how much the auto insurance industry actually refunded. Mr. Snyder said insurance companies operate in the long term, factoring in losses and working with state insurance regulators to ensure solvency is not at risk.

Tony Cotto (National Association of Mutual Insurance Companies—NAMIC) said rates are prospective, complex, and take time to develop. He said rates are designed to adjust to behavioral and experience patterns over years. He said in early 2020, vehicle miles traveled decreased dramatically at the onset of temporary closures due to the pandemic, but by summer 2020, miles driven were back within 10% of 2019. He said in acknowledgement of the overall reduction and driving during spring 2020, insurers returned more than $14 billion in premium to consumers.

Mr. Cotto said anyone advocating for additional rebates for 2020 should also advocate for additional premium charges to consumers for the years from 2010 to 2019. He said the important discussion should be on the fact that most costs involved in providing auto insurance are driven by external forces outside the control of auto insurance. He said highways are seeing more distracted and impaired driving; vehicles are becoming much more expensive to repair, as auto parts and labor costs are skyrocketing; and insurers are seeing more expensive medical care and more extreme weather events.

Mr. Cotto said NAMIC supports consumer choice, data privacy, and sound underwriting. He said the industry wants to join state insurance regulators to find effective ways to combat riskier roads and higher prices.

Commissioner Lara asked if 2020 was an extraordinarily profitable year for insurance companies. Mr. Cotto said the cost of providing auto coverage is increasing. He said $14 billion in premium refunds was returned to consumers in 2020, but death rates rose even though miles driven fell. Commissioner Lara said it was a record profitable year in 2020 for auto insurers.

Commissioner Kreidler said the industry is saying there were unanticipated gains but then also unanticipated losses, so the industry wants to keep the money. He said the industry is fighting state insurance regulators in providing data about these issues. He said if insurers make unanticipated gains, they have a responsibility to their policyholders. He asked why NAMIC is resisting providing data to state insurance regulators. Mr. Cotto said NAMIC would be happy to speak with individual state departments.

Birny Birnbaum (CEJ) said the pandemic led to such reduced driving that claim payments declined by 20% from expected levels, and rates became excessive by over $40 billion in 2020. He said traditional actuarial ratemaking methods and traditional regulatory rate filing approaches were not suited to the problem. He said rates in effect at the beginning of March 2020 anticipated $175 billion of claims out of the expected $260 billion in premium. The reported claims in 2020 were about $35 billion, 20% less than expected. Mr. Birnbaum said after insurer relief, there is about a $30 billion windfall profit for the industry, which is about $125 per insured vehicle or 10% of total premium.

Mr. Birnbaum said any increase in claims severity in 2020 was dwarfed by the reduction in claim frequency. He said loss ratios have returned to normal in 2021, but insurers are not losing money. He said Progressive reported $3 billion in profits year-to-date (YTD). He also said insurers are seeking rate increases. The 20% reduction in claims was not offset by losses in 2021. Mr. Birnbaum said windfall profits were given to investors or management. He noted that insurer rate filings are claiming 2020 was an anomaly and should be ignored. He noted that the 2020 loss ratio was over 10 points lower than historical results. He said state insurance regulators should learn that more timely data collection is needed to better monitor the market and move to a monthly premium relief program during an emergency.

Erica Eversman (Automotive Education & Policy Institute—AEPI) said if there is no state insurance regulator requirement, insurers do as they see fit. She said the National Highway Traffic Safety Administration (NHTSA) does not collect the appropriate universe of data to determine what causes vehicle fatalities. She said obtaining prior claims information from auto insurers about whether a vehicle had been previously damaged and repaired would be valuable information. She said the industry should not use fatalities as justification for not refunding premiums to consumers. She said part of the reason the number of vehicle fatalities is growing is because insurers have increasing control over vehicle repairs in terms of dictating repair procedures. She said insurers should voluntarily provide the NHTSA with auto claims data.
4. **Adopted its 2022 Proposed Charges**

Jennifer Garder (NAIC) said the Committee’s 2022 proposed charges were posted and distributed on Nov. 19. She said the Committee received comments from the CEJ on Dec. 9. Leadership of the Casualty Actuarial and Statistical (C) Task Force and the Title Insurance (C) Task Force discussed those comments, and they are recommending two additional charges. For the Statistical Data (C) Working Group, a proposed third charge would read, “[i]implement the expedited reporting and publication of average auto and average homeowners premium portions of the annual Auto Insurance Database and Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance.”

For the Title Insurance (C) Task Force, a proposed fifth charge would read, “[r]eview current rate regulation practices.”

The Committee had no additional discussion on the two recommended revisions. Commissioner Lara made a motion, seconded by Mr. Travis, to adopt the Committee’s 2022 proposed charges with the two additions (Attachment Six).

5. **Heard a Report on Federal Activities**

Brooke Stringer (NAIC) said the federal Infrastructure Investment and Jobs Act has been signed into law and includes such items as $5 billion for FEMA flood mitigation and pre-disaster hazard mitigation grants, as well as a provision requiring that auto manufacturers install impaired-driving technology in new vehicles. She said the U.S. House of Representatives (House) passed a $1.7 trillion reconciliation bill in November that includes policy priorities on climate, jobs, and health care into one massive bill. This bill has not yet passed the U.S. Senate (Senate). The proposed bill forgives the NFIP’s $20 billion debt, provides funding for flood mapping and a means-tested affordability program, provides $145 million to FEMA for updating and enforcing hazard resistant codes and standards and grants to state and local governments, and provides $121 million to the U.S. Department of Labor’s (DOL’s) Office of Workers’ Compensation Programs (OWCP) for activities of the OWCP; but it does not include a specific reference to oversight of state workers’ compensation programs that were included in previous versions and raised concerns from the industry.

Ms. Stringer said the NFIP was extended as part of a short-term funding bill through Feb. 18, 2022. The NAIC continues to reiterate its support for a long-term reauthorization and urgent prompt action before the program expires. Ms. Stringer noted that there is a bipartisan/bicameral five-year reauthorization bill (S. 3128/H.R. 5082) from U.S. Sen. Bob Menendez (D-NJ), U.S. Sen. Bill Cassidy (R-LA), U.S. Congressman Frank Pallone (D-NJ), and U.S. Congressman Clay Higgins (R-LA). The NAIC does not have a position on this bill, but it does support U.S. Sen. Rick Scott (R-FL) and U.S. Rep. Kathy Castor’s (D-FL) bill, the Flood Insurance Consumer Choice Act of 2021 (S. 2915/H.R. 4669), which would clarify that a flood insurance policy purchased in the private market can count as “continuous coverage” under the terms of the NFIP, and policyholders could return to the NFIP without losing any previous subsidy.

Ms. Stringer said FEMA began implementing its new NFIP pricing methodology, Risk Rating 2.0, in October. She said a bipartisan group of coastal senators tried unsuccessfully to urge FEMA to postpone Risk Rating 2.0, warning about the impact of premium hikes, and introduced legislation to try to delay it. Risk Rating 2.0 will remain a key issue for NFIP reauthorization, particularly with phase two rolling out in April 2022.

Ms. Stringer reported that U.S. Congresswoman Carolyn Maloney (D-NY) reintroduced the Pandemic Risk Insurance Act of 2021 (PRIA) (H.R. 5823), which would establish a federal backstop for pandemic risk. PRIA would require that insurers make available in all their P/C insurance policies coverage for insured losses due to covered public health emergencies. The NAIC is monitoring this legislation.

Ms. Stringer said the U.S. Congress (Congress) has also focused on legislation regarding access to financial services for legitimate cannabis businesses, which has garnered bipartisan support. The House has passed the Secure and Fair Enforcement (SAFE) Banking Act (H.R. 1996/S. 910) several times, which would provide a safe harbor from violations of federal law for those engaged in the business of insurance participating in cannabis industry activity that is permissible under state law. There were recent efforts to add the bill to the annual defense authorization bill, but ultimately, they were not successful, as some Democrats wanted to include broader cannabis policy reforms. The NAIC supports the SAFE Banking Act, as well as the Clarifying Law Around Insurance of Marijuana (CLAIM) Act (S. 862), which ensures that legal marijuana and related businesses have access to comprehensive insurance coverage.

Ms. Stringer said NAIC staff received a Congressional inquiry regarding a problem one of their constituents had with renters insurance/military housing. NAIC staff previously circulated a news article to Committee members. There was a military family with a renters insurance policy that had a claim denied because the rented house was through a public-private venture and not “government controlled” as the policy specified. A Congressional office is exploring federal legislative solutions to prevent
this from happening in the future. Ms. Stringer said NAIC staff plan to reach out to industry to understand if it is common practice that a renters policy differentiates between government housing and private housing in terms of coverages on military bases.

Having no further business, the Property and Casualty Insurance (C) Committee adjourned.
The Property and Casualty Insurance (C) Committee met Nov. 10, 2021. The following Committee members participated: Vicki Schmidt, Chair (KS); Mike Chaney, Vice Chair (MS); Jim L. Ridling and Mark Fowler (AL); Ricardo Lara represented by Ken Allen (CA); Andrew N. Mais (CT); Colin M. Hayashida (HI); James J. Donelon represented by Warren Byrd (LA); Grace Arnold represented by Julia Dreier (MN); Larry D. Deiter (SD); and Mike Kreidler (WA). Also participating were: Matt Gendron (RI); and Don Beatty (VA).

1. **Adopted its Summer National Meeting Minutes**

Director Deiter made a motion, seconded by Commissioner Kreidler, to adopt the Committee’s Aug. 16 minutes (see *NAIC Proceedings – Summer 2021, Property and Casualty Insurance (C) Committee*). The motion passed unanimously.

2. **Adopted the Pet Insurance Model Act**

Mr. Beatty said after the Pet Insurance (C) Working Group released *A Regulator’s Guide to Pet Insurance*, it adopted a Request for NAIC Model Law Development on June 27, 2019, which was adopted by the Executive (EX) Committee and Plenary on Aug. 6, 2019. He said the Working Group held 24 open meetings to draft the model, with active participation from industry, consumer representatives, producers, and veterinarian groups. Mr. Beatty noted the model covers required definitions and disclosures, as well as regulations for policy conditions, sales practices for wellness programs, and producer training. He said the Working Group had extensive discussions on the following major issues: preexisting conditions, waiting periods, free-look periods, policy renewals, wellness programs, and licensing. While the Working Group did decide that this model was not the appropriate place to decide the type of license required to sell pet insurance, state insurance regulators wanted to make sure producers are trained on the specific features of pet insurance products before selling those products.

Mr. Beatty noted that the Working Group is aware that industry does have issues with the waiting periods and wellness programs language in the adopted version, but state insurance regulators thought this language was necessary to include in this model. He also said during the course of discussing the model, the Working Group has considered the need for specific data collection on the pet insurance line of business and would like to continue those discussions in order to craft referrals to the proper NAIC working groups.

Mr. Beatty said the Pet Insurance Model Act was initially adopted by the Pet Insurance (C) Working Group on Aug. 4, but after a review by the NAIC Legal Division, members of the Working Group suggested edits, and the Working Group requested the Committee allow further meetings of the Pet Insurance (C) Working Group to address these suggestions. The Working Group met Oct. 21, Oct. 7, and Sept.8. During these meetings, the Working Group considered the suggested changes from the NAIC Legal Division, as well as new suggested changes to the “Sales Practices for Wellness Programs” section and a new section titled “Insurance Producer Training.” Mr. Beatty said the NAIC Legal Division has further reviewed the model and made some small, non-substantive changes to the formatting of the model. These changes include moving the “Violations” section to the end of the model and reordering two subsections in Section 4 – Disclosures.

Cari Lee (North American Pet Health Insurance Association—NAPHIA) said NAPHIA appreciates the work of the Working Group but has two objections to the model. She said NAPHIA believes waiting periods should be allowed in order to prevent adverse selection. She said disclosures and an option to waive waiting periods should be sufficient, and without waiting periods, insurers may have to increase premiums. She also said NAPHIA objects to the language in the model related to wellness products. She said the Working Group earlier included language regarding the marketing and sales of wellness products, but later it adopted language that prohibits the marketing of non-insurance wellness products sold during the sale, solicitation, or negotiation of pet insurance. She said consumers want to purchase wellness plans at the same time as insurance.

Birny Birnbaum (Center for Economic Justice—CEJ) said he supports the Committee’s adoption of the model but would offer two additional comments. He supports a prohibition on waiting period provisions as industry has offered no credible rationale or evidence for issuing policies with both a preexisting condition clause and waiting periods that delay coverage. He said the broad and extensive waiting periods advocated for by industry will lead to consumer confusion and harm. Purchasers who buy...
pet insurance will expect to receive insurance coverage that begins when they pay the insurer and sign the policy contract. However, under NAPHIA’s proposal, consumers could actually purchase policies that provide no coverage until a future date, even though the insurer has already taken their premium dollars. He said the potential harm far outweighs any anti-fraud benefit that would be gained from instituting these broad waiting periods, particularly when the preexisting condition exclusion already offers the exact same protection. He noted that while the Working Group ultimately decided to permit a waiting period provision, that provision in the model law is more limited and far less open-ended than the industry proposal and includes some key consumer protections. He said the Working Group’s proposal strikes a reasonable balance between consumer and insurer concerns.

Mr. Birnbaum said that regarding wellness, the model appropriately eliminates the ability of insurers to arbitrage insurance versus non-insurance products. He also noted that significantly different approaches were taken in the recently adopted travel insurance model and the pet insurance model. He said both travel and pet insurance are hybrid insurance products with a combination of coverages from health insurance to property/casualty (P/C) insurance. Both are typically sold either online or through retailers, and both are often sold in connection with non-insurance services. He said the model laws for travel and pet insurance take significantly divergent approaches, such as the travel insurance model specifically addressing producer licensing and retailers and the pet insurance model prohibiting the marketing of non-insurance services at the same time as the sale of pet insurance. Mr. Birnbaum urged state insurance regulators to closely monitor insurer and producer behavior and consumer outcomes in these two markets to determine which approach better produces the outcomes sought by state insurance regulators, insurers, and consumers.

Commissioner Chaney asked whether there was separate continuing education training required for producers in the model. Mr. Gendron said a compromise was reached where the model does not have specific requirements of major line producers beyond their standard continuing education, but for limited lines producers, in states where that is allowed, the model requires 10 hours of continuing education.

Mr. Byrd made a motion, seconded by Mr. Allen, to adopt the Pet Insurance Model Act (Attachment One-A). The motion passed unanimously.

3. Discussed Other Matters

Commissioner Schmidt said the Committee’s 2022 proposed charges would be posted within the next week. She also noted that the Committee’s meeting at the Fall National Meeting will consist of presentations from various parties related to auto insurance refunds that were granted in response to reduced driving during the pandemic.

Having no further business, the Property and Casualty Insurance (C) Committee adjourned.

PET INSURANCE MODEL ACT

New Model
Adopted by the Pet Insurance (C) Working Group - 10/21/21
Adopted by the Property and Casualty Insurance (C) Committee - 11/10/21

Table of Contents

Section 1.  Short Title
Section 2.  Scope and Purpose
Section 3.  Definitions
Section 4.  Disclosures
Section 5.  Policy Conditions
Section 6.  Sales Practice for Wellness Programs
Section 7.  Insurance Producer Training
Section 8.  Regulations
Section 9.  Violations

Section 1.  Short Title

This Act shall be known as the “Pet Insurance Act.”

Section 2.  Scope and Purpose

A. The purpose of this Act is to promote the public welfare by creating a comprehensive legal framework within which Pet Insurance may be sold in this state.

B. The requirements of this Act shall apply to Pet Insurance policies that are issued to any resident of this state, and are sold, solicited, negotiated, or offered in this state, and policies or certificates that are delivered or issued for delivery in this state.

C. All other applicable provisions of this state’s insurance laws shall continue to apply to Pet Insurance except that the specific provisions of this Act shall supersede any general provisions of law that would otherwise be applicable to Pet Insurance.

Section 3.  Definitions

If a pet insurer uses any of the terms in this Act in a policy of pet insurance, the pet insurer shall use the definition of each of those terms as set forth herein and include the definition of the term(s) in the policy. The pet insurer shall also make the definition available through a clear and conspicuous link on the main page of the pet insurer or pet insurer’s program administrator’s website.

Nothing in this Act shall in any way prohibit or limit the types of exclusions pet insurers may use in their policies or require pet insurers to have any of the limitations or exclusions defined below.

As used in this Act:

A. “Chronic condition” means a condition that can be treated or managed, but not cured.

B. “Congenital anomaly or disorder” means a condition that is present from birth, whether inherited or caused by the environment, which may cause or contribute to illness or disease.

C. “Hereditary disorder” means an abnormality that is genetically transmitted from parent to offspring and may cause illness or disease.

D. “Pet insurance” means a property insurance policy that provides coverage for accidents and illnesses of pets.
E. “Preexisting condition” means any condition for which any of the following are true prior to the effective date of a pet insurance policy or during any waiting period:

(1) A veterinarian provided medical advice;
(2) The pet received previous treatment; or
(3) Based on information from verifiable sources, the pet had signs or symptoms directly related to the condition for which a claim is being made.

A condition for which coverage is afforded on a policy cannot be considered a preexisting condition on any renewal of the policy.

F. “Veterinarian” means an individual who holds a valid license to practice veterinary medicine from the appropriate licensing entity in the jurisdiction in which he or she practices.

G. “Veterinary expenses” means the costs associated with medical advice, diagnosis, care, or treatment provided by a veterinarian, including, but not limited to, the cost of drugs prescribed by a veterinarian.

H. “Waiting period” means the period of time specified in a pet insurance policy that is required to transpire before some or all of the coverage in the policy can begin. Waiting periods may not be applied to renewals of existing coverage.

I. “Renewal” means to issue and deliver at the end of an insurance policy period a policy which supersedes a policy previously issued and delivered by the same pet insurer or affiliated pet insurer and which provides types and limits of coverage substantially similar to those contained in the policy being superseded.

J. “Orthopedic” refers to conditions affecting the bones, skeletal muscle, cartilage, tendons, ligaments, and joints. It includes, but is not limited to, elbow dysplasia, hip dysplasia, intervertebral disc degeneration, patellar luxation, and ruptured cranial cruciate ligaments. It does not include cancers or metabolic, hemopoietic, or autoimmune diseases.

K. “Wellness program” means a subscription or reimbursement-based program that is separate from an insurance policy that provides goods and services to promote the general health, safety, or wellbeing of the pet. If any wellness program [insert language from state statute or regulation that defines the trigger for insurance contracts, which might include language such as: [undertakes to indemnify another], or [pays a specified amount upon determinable contingencies] or [provides coverage for a fortuitous event]], it is transacting in the business of insurance and is subject to the insurance code. This definition is not intended to classify a contract directly between a service provider and a pet owner that only involves the two parties as being “the business of insurance,” unless other indications of insurance also exist.

Section 4. Disclosures

A. A pet insurer transacting pet insurance shall disclose the following to consumers:

(1) If the policy excludes coverage due to any of the following:
   (a) A preexisting condition;
   (b) A hereditary disorder;
   (c) A congenital anomaly or disorder; or
   (d) A chronic condition.

(2) If the policy includes any other exclusions, the following statement: “Other exclusions may apply. Please refer to the exclusions section of the policy for more information.”

(3) Any policy provision that limits coverage through a waiting or affiliation period, a deductible, coinsurance, or an annual or lifetime policy limit.
Whether the pet insurer reduces coverage or increases premiums based on the insured’s claim history, the age of the covered pet or a change in the geographic location of the insured.

If the underwriting company differs from the brand name used to market and sell the product.

B. Right to Examine and Return the Policy.

(1) Unless the insured has filed a claim under the pet insurance policy, pet insurance applicants shall have the right to examine and return the policy, certificate or rider to the company or an agent/insurance producer of the company within fifteen (15) days of its receipt and to have the premium refunded if, after examination of the policy, certificate or rider, the applicant is not satisfied for any reason,

(2) Pet insurance policies, certificates and riders shall have a notice prominently printed on the first page or attached thereto including specific instructions to accomplish a return. The following free look statement or language substantially similar shall be included:

“You have 15 days from the day you receive this policy, certificate or rider to review it and return it to the company if you decide not to keep it. You do not have to tell the company why you are returning it. If you decide not to keep it, simply return it to the company at its administrative office or you may return it to the agent/insurance producer that you bought it from as long as you have not filed a claim. You must return it within 15 days of the day you first received it. The company will refund the full amount of any premium paid within 30 days after it receives the returned policy, certificate, or rider. The premium refund will be sent directly to the person who paid it. The policy, certificate or rider will be void as if it had never been issued.”

C. A pet insurer shall clearly disclose a summary description of the basis or formula on which the pet insurer determines claim payments under a pet insurance policy within the policy, prior to policy issuance and through a clear and conspicuous link on the main page of the pet insurer or pet insurer’s program administrator’s website.

D. A pet insurer that uses a benefit schedule to determine claim payment under a pet insurance policy shall do both of the following:

(1) Clearly disclose the applicable benefit schedule in the policy.

(2) Disclose all benefit schedules used by the pet insurer under its pet insurance policies through a clear and conspicuous link on the main page of the pet insurer or pet insurer’s program administrator’s website.

E. A pet insurer that determines claim payments under a pet insurance policy based on usual and customary fees, or any other reimbursement limitation based on prevailing veterinary service provider charges, shall do both of the following:

(1) Include a usual and customary fee limitation provision in the policy that clearly describes the pet insurer’s basis for determining usual and customary fees and how that basis is applied in calculating claim payments.

(2) Disclose the pet insurer’s basis for determining usual and customary fees through a clear and conspicuous link on the main page of the pet insurer or pet insurer’s program administrator’s website.

F. If any medical examination by a licensed veterinarian is required to effectuate coverage, the pet insurer shall clearly and conspicuously disclose the required aspects of the examination prior to purchase and disclose that examination documentation may result in a preexisting condition exclusion.

G. Waiting periods and the requirements applicable to them, must be clearly and prominently disclosed to consumers prior to the policy purchase.
H. The pet insurer shall include a summary of all policy provisions required in subsections (A) through (G), inclusive, in a separate document titled “Insurer Disclosure of Important Policy Provisions.”

I. The pet insurer shall post the “Insurer Disclosure of Important Policy Provisions” document required in subsection (H) through a clear and conspicuous link on the main page of the pet insurer or pet insurer’s program administrator’s website.

J. In connection with the issuance of a new pet insurance policy, the pet insurer shall provide the consumer with a copy of the “Insurer Disclosure of Important Policy Provisions” document required pursuant to subsection (H) in at least 12-point type when it delivers the policy.

K. At the time a pet insurance policy is issued or delivered to a policyholder, the pet insurer shall include a written disclosure with the following information, printed in 12-point boldface type:

   (1) The [insert state insurance department]’s mailing address, toll-free telephone number and website address.

   (2) The address and customer service telephone number of the pet insurer or the agent or broker of record.

   (3) If the policy was issued or delivered by an agent or broker, a statement advising the policyholder to contact the broker or agent for assistance.

L. The disclosures required in this section shall be in addition to any other disclosure requirements required by law or regulation.

Section 5. Policy Conditions

A. A pet insurer may issue policies that exclude coverage on the basis of one or more preexisting conditions with appropriate disclosure to the consumer. The pet insurer has the burden of proving that the preexisting condition exclusion applies to the condition for which a claim is being made.

B. A pet insurer may issue policies that impose waiting periods upon effectuation of the policy that do not exceed 30 days for illnesses or orthopedic conditions not resulting from an accident. Waiting periods for accidents are prohibited.

   (1) A pet insurer utilizing a waiting period permitted in Subsection 6B shall include a provision in its contract that allows the waiting periods to be waived upon completion of a medical examination. Pet insurers may require the examination to be conducted by a licensed veterinarian after the purchase of the policy.

      (a) A medical examination under Subsection 6B(1) shall be paid for by the policyholder, unless the policy specifies that the pet insurer will pay for the examination.

      (b) A pet insurer can specify elements to be included as part of the examination and require documentation thereof, provided the specifications do not unreasonably restrict a consumer’s ability to waive the waiting periods in section Subsection 6B.

   (2) Waiting periods and the requirements applicable to them, must be clearly and prominently disclosed to consumers prior to the policy purchase.

C. A pet insurer must not require a veterinary examination of the covered pet for the insured to have their policy renewed.

D. If a pet insurer includes any prescriptive, wellness, or non-insurance benefits in the policy form, then it is made part of the policy contract and must follow all applicable laws and regulations in the insurance code.

E. An insured’s eligibility to purchase a pet insurance policy must not be based on participation, or lack of participation, in a separate wellness program.
Section 6. Sales Practices for Wellness Programs

A. A pet insurer and/or producer shall not do the following:

(1) Market a wellness program as pet insurance;

(2) Market a wellness program during the sale, solicitation, or negotiation of pet insurance.

B. If a wellness program is sold by a pet insurer and/or producer:

(3) The purchase of the wellness program shall not be a requirement to the purchase of pet insurance.

(4) The costs of the wellness program shall be separate and identifiable from any pet insurance policy sold by a pet insurer and/or producer.

(5) The terms and conditions for the wellness program shall be separate from any pet insurance policy sold by a pet insurer and/or producer.

(6) The products or coverages available through the wellness program shall not duplicate products or coverages available through the pet insurance policy; and

(7) The advertising of the wellness program shall not be misleading and shall be in accordance with Subsection 7B of this Model.

(8) A pet insurer and/or producer shall clearly disclose the following to consumers, printed in 12-point boldface type:

(a) That wellness programs are not insurance.

(b) The address and customer service telephone number of the pet insurer or producer or broker of record.

(c) The [insert state insurance department]’s mailing address, toll-free telephone number, and website address.

C. Coverages included in the pet insurance policy contract described as “wellness” benefits are insurance.

Section 7. Insurance Producer Training

A. An insurance producer shall not sell, solicit, or negotiate a pet insurance product until after the producer is appropriately licensed and has completed the required training identified in subsection B of this Section.

B. Producer Training Requirements

(1) Training for Insurance Producers with a Major Lines License. Both the producer and the insurer shall ensure that its producers have been appropriately trained on the features of its products.

Drafting Note: The major line license referenced here is a reference to the Producer Licensing NAIC Model Act (#218). See Section 8E for the term “major line,” and Section 7A(1) through (6) for a listing of those major lines, or see the NAIC State Licensing Handbook, Chapter 9, Lines of Insurance, The Major Lines.

(2) Training for Limited Lines Producers

(a) A limited lines insurance producer shall not sell, solicit, or negotiate a pet insurance product until after the producer completes training courses approved by the department of insurance and provided by the department of insurance-approved education provider.

(b) The minimum length of the initial training required under this subsection shall be sufficient to qualify for at least ten (10) pre-licensing education or continuing education credit hours.
In addition to the training required in Paragraphs (a) and (b) of this subsection, a limited lines insurance producer who sells, solicits, or negotiates pet insurance shall complete ongoing training as set forth in paragraph (d).

The ongoing training required by this subsection shall be no less than four (4) continuing education credit hours prior to every license renewal.

The training required under this subsection may also qualify for a state’s pre-licensing education or continuing education credit hours in accordance with [insert reference to state law or regulations governing producer continuing education course approval].

Providers of pet insurance training that qualifies for pre-licensing or continuing education shall comply with the reporting requirements and shall issue certificates of completion in accordance with [insert reference to state law or regulations governing producer continuing education course approval].

The satisfaction of the training requirements of another state that are substantially similar to the provisions of this section shall be deemed to satisfy the training requirements of this subsection in this state.

The satisfaction of the components of the training requirements of any course or courses with components substantially similar to the provisions of this section shall be deemed to satisfy the training requirements of this subsection in this state.

An insurer shall verify that a producer has completed the pet insurance training courses required under this section before allowing the limited lines producer to sell, solicit or negotiate pet insurance for that insurer. An insurer may satisfy its responsibility under this paragraph by obtaining certificates of completion of the training course or obtaining reports provided by commissioner-sponsored database systems or vendors or from a reasonably reliable commercial database vendor that has a reporting arrangement with approved insurance education providers.

Drafting Note: A state department of insurance may separately authorize a limited line producer to sell, solicit, or negotiate pet insurance, not based on authority in this statute. See Uniform Licensing Standards section 37 (Non-Core Limited Lines) and Chapter 9 of the Producer Licensing Handbook.

C. The training required under this section shall include information on the following topics:

1. Preexisting conditions and waiting periods;
2. The differences between pet insurance and non-insurance wellness programs;
3. Hereditary disorders, congenital anomalies or disorders, and chronic conditions and how pet insurance policies interact with those conditions; and
4. Rating, underwriting, renewal, and other related administrative topics.

Section 8. Regulations

The commissioner may adopt reasonable rules and regulations, as are necessary to administer this part.

Section 9. Violations

Violations of this Act shall be subject to penalties pursuant to [insert state administrative code].
Cannabis Insurance (C) Working Group
Virtual Meeting (in lieu of meeting at the 2021 Fall National Meeting)
December 1, 2021

The Cannabis Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met Dec. 1, 2021. The following Working Group members participated: Ricardo Lara, Chair, represented by Melerie Michael and Camilo Pizarro (CA); Michael Conway, Vice Chair, represented by Peg Brown (CO); Austin Childs (AK); Jimmy Harris (AR); Angela King (DC); Christina Miller (DE); C.J. Metcalf (IL); Robert Barron (MD); Marlene Caride represented by Randall Currier (NJ); Gennady Stolyarov (NV); Ashley Scott (OK); Brian Fordham (OR); Elizabeth Kelleher Dwyer (RI); Karla Nuissl (VT); and Michael Walker (WA). Also participating was: Larry D. Deiter (SD).

1. **Adopted its Oct. 21 Minutes**

The Working Group met Oct. 21 and took the following action: 1) adopted its Summer National Meeting minutes; and 2) discussed the outline for the appendix to the *Understanding the Market for Cannabis Insurance* white paper; and 3) discussed its 2022 proposed charges.

Ms. Brown made a motion, seconded by Mr. Barron, to adopt the Working Group’s Oct. 21 (Attachment Two-A) minutes. The motion passed unanimously.

2. **Heard an Update on the Drafting of the *Understanding the Market for Cannabis Insurance* White Paper Appendix**

Ms. Michael said the Working Group reviewed the appendix outline during its last meeting on Oct. 16. The appendix will provide an update on the regulatory issues related to insurance in the cannabis industry that have occurred since the white paper’s adoption in July 2019. The appendix draws from information gained during the Working Group’s two-day hearing and the presentations received today. The drafting group met Nov. 10 to review the outline and assign the drafting of sections of the appendix to drafting participants. A draft of Section II c. *Cannabis Insurance Market Segments and Insurance Players* has been submitted for review from the drafting group. This section covers the impact from the lack of admitted insurers, seed to sale needs for each segment, and vertically integrated and niche players. The drafting group will meet again on Dec. 8 to review progress made on assigned sections.

Mr. Walker asked if drafts should be provided ahead of the Dec. 8 drafting meeting. Ms. Michael stated it would be preferred that drafts be sent to NAIC staff ahead of the meeting so they can be compiled and shared.

3. **Discussed the Potential to Collaborate with the Producer Licensing (D) Task Force**

Ms. Michael said she and Ms. Brown reached out on Nov. 18 to the co-chairs of the Producer Licensing (D) Task Force to gain their thoughts on potentially collaborating with the Working Group to study, in states where cannabis is legalized for medical and/or recreational use, whether cannabis-related convictions are preventing individuals from being licensed as an agent or broker. Superintendent Dwyer and Director Deiter stated they would review their database to see if they have information that they can share with the Working Group. Information and next steps will be shared with the Working Group once the data is received.

4. **Heard a Presentation from the University of Colorado on Emerging Scientific Issues in the Cannabis Space**

Cinnamon Bidwell (University of Colorado Boulder) stated the landscape of legality and products is constantly changing in the cannabis space, with minor tetrahydrocannabinol (THC)-like cannabinoids able to be synthesized from legal hemp. Despite that all but two states have adopted some form of legalized cannabis, federal prohibitions limit the scientific research that can contribute to these policy changes. Nearly all human work involving canvas administration has had to rely on government grown research grade cannabis, which bears little resemblance to products in the real world. Participants say it is dry and tasteless and, until very recently, came as rolled marijuana cigarettes. Testing was done with a controlled puffing procedure of the participants consuming the entire cannabis cigarette in 12 puffs over five minutes to regulate dose and timing. This is not consistent with the way people consume in cannabis in today’s world. It is difficult to draw conclusions from prior work because of these differences in product type and potency, as well as these administration procedures that happen in the lab.

© 2021 National Association of Insurance Commissioners
there are a couple of clear takeaways from the literature at this point. First, a wealth of lab research supports the fact that acute exposure to cannabis disrupts cognitive processing, resulting in cognitive impairment immediately after use. There may also be impacted mood and psychiatric functions for either short or long periods of time. Early and persistent use, especially prior to age, 16, worsens these cognitive and psychiatric effects. However, there is still almost no data on the impact of legal market cannabis on these same outcomes. There is a huge range of products available on the legal market that have never touched a research lab. The current body of evidence is the oversimplifications of cannabis. There is a huge diversity of reported effects from euphoria to paranoia and extreme anxiety. In addition, cannabis consists of a few primary cannabinoids and hundreds of minor cannabinoids and terpenes, many still being discovered. However, research studies primarily focus on the Delta component. There is also a huge variation in potency across strains. Different products have different levels of the major and minor cannabinoids, and each looks distinct. For these reasons, the study of cannabis is unlike the study of other drugs where one is pretty much focused on a dose dependent effect of a single pharmacological agent.

Delta-9, THC and cannabidiol (CBD) are present at the highest levels across most forms of cannabis. Each interacts differently with the human body. Delta-9 interacts with certain receptors in the brain and body to produce a drug reward and intoxication effect. They may also increase anxiety, have an inflammatory effect, and reduce pain. CBD has the opposite pharmacology, which means it may reduce anxiety and has stronger anti-inflammatory properties, but it is not intoxicating. Delta-8 is a minor cannabinoid that can be chemically characterized as a Delta-9 sibling. This chemical similarity means it may cause intoxication like Delta-9. As such, it is often referred to as a “light high.” Delta-8 exists in a legal gray area because it can be easily synthesized from hemp-derived CBD. Hemp-derived CBD became legal with the federal Agriculture Improvement Act of 2018. There are other minor cannabinoids that exist in the same legal limbo, such as Delta-10. Thus, the landscape of legal cannabis and the resulting market is constantly shifting. In particular, highly potent products are gaining market share. Federal prohibitions and discrepancy between federal and state law continue to create barriers to rigorous research on many of these new and emerging products.

There are three primary forms of cannabis: 1) flower; 2) edibles; and 3) concentrates. Sales of concentrates, which are highly potent, have risen substantially in Colorado and other states. Market names for concentrates include bubble, hash, and hash oil wax, and they typically come in a range of potencies. The low end for a concentrate is 65%, and the high-end is 95%. Concentrates are often consumed by “dabbing” or inhaling a small, but very potent, quantity of the drug. Correlational data suggests that these higher potency forms are likely to come with additional risks, such as a use disorder, mood problems, or psychiatric problems. Although research results are mixed, they suggest that concentrates and high potency products may increase risk over and above just very frequent use of cannabis. Although these products are widely available and used on state markets, there is no empirical or preclinical data on the impact of these highly potent forms due to federal illegality. As other states look to legalize recreational cannabis and federal policy changes are being considered, it is imperative that consumers and policymakers are well-informed about the health effects of these products.

Ms. Bidwell stated she created a regular rigorous, federally compliant research program that provides relevant research on the potential harms and benefits of commercially available cannabis products. Academic researchers who must be compliant with federal law are unable to bring these legal market forms into their laboratories. So instead, researchers at the University of Colorado Boulder worked closely with its administration to bring the lab to the people. This mobile pharmacology lab allows researchers to conduct observational cannabis research in a mobile environment. Participants self-administer legal market cannabis in their homes, and researcher then test them in the mobile lab before and after they use. The mobile lab is outfitted with the full range of assessments found in a typical laboratory setting. The goal of the project was to assess the acute effects of “dabbing” high potency forms of cannabis. Prior to this study, little was known about the acute effects of consuming concentrates. The study included 75 regular cannabis users who completed a comprehensive health assessment in the mobile lab. They were then randomly assigned to either a 70% or 90% concentrated oil that they would personally purchase from a partner dispensary with their own funds. Participants use their product as they naturally would in their home and then come to the mobile lab to collect data on intoxication and impairment.

Published research results show that THC levels peak immediately after use and then go down about an hour later. There were no blood level differences between the 70% and 90% concentrate groups. This suggests that individuals are maybe titrating up to a particular level of high regardless of potency or that participants are hitting an upper limit with very high potency products. The blood levels after a concentrated user are about three times higher than after a typical flower or bud use. Even the regular cannabis users before they use that day are not falling under the legal definition of intoxication. To establish impairment, the researchers took measures of subjective ratings of intoxication and objective measures of cognitive and psycho motor impairment after very high exposure. Despite the large differences in blood levels between the flower and concentrated users, the subjective impairment ratings were similar. This suggests that concentrated users develop a strong tolerance.
Objective tests of delayed memory recall also showed that concentrate users are more tolerant to the acutely, cognitively impaired effects of cannabis. It is complicated to establish if people are getting more intoxicated with higher potency concentrates. The subjective high and cognitive measures do not track with one another, potentially due to self-titrating or greater tolerance in regular users of concentrates. However, balance is the only function that gets worse immediately after use, but then it recovers quickly within the hour. This suggests that balance measures may not show the same tolerance effects and that measures of balance and motor control may be good candidates for acute use, even in very heavy users. This has huge relevance to public safety initiatives. There currently is not a valid biological or behavioral measure or breathalyzer that can allow officers to accurately detect recent cannabis use in drivers. Follow-up is needed on the possible long-term, clinical, and neurological consequences of chronically high THC exposure.

Mr. Currier asked for examples and citations of jurisdictions that use intoxication standards. Ms. Bidwell stated Colorado is among the states that uses them. The citation for this information is as follows:

Ms. Michael asked if CBD used for anti-inflammatory benefits has the same negative health risks as NSAIDS and if access to CBD is age restricted. Ms. Bidwell stated the risks with CBD are dose-dependent, and it could have similar risks in very high doses. CBD has been found to be helpful for treating childhood epilepsy and anxiety at certain doses. Age restrictions vary widely across states, mostly 18, 21 or no restrictions. However, they are likely not strongly enforced as states did not receive additional funding for enforcement around hemp legalization. Some states, such as Oregon, Michigan, and Nevada, are tightening their hemp policies to place the novel cannabinoids under cannabis regulations. However, it will likely take federal engagement to address online sales to minors. The FDA recently released a plan to collect data on hemp-derived products but has not taken regulatory action.

5. Heard a Presentation from CANNRA on Cannabis Policy and Regulation Trends

Gillian Schauer (Cannabis Regulators Association—CANNRA) said there is now a broader focus on how policy is made with increased parity in regulations across the use of cannabis. Social equity, restorative justice, and public health and safety are priorities. The patchwork in policy can present challenges to harmonization, particularly given how and when policy was made. There is a lag time of 12–24 months between when cannabis became legalized and when the marketplace was opened. Arizona holds the record for the quickest market opening at 12 months. There is currently a new wave of cannabis legalization coming across states. There is much more legislative policymaking than what occurred in 2018, when Vermont legalized adult-use without a marketplace. Illinois did the same in 2019. But in 2021, there have been four states legalized legislatively. This expansion allows for more discussion and more detailed statutes to evolve. Washington’s statute was 16 pages when it legalized cannabis in 2012. Now legislation around cannabis legalization is in the hundreds of pages with much detail. Although there is a benefit to having this detail in the front-end, it can also present challenges to harmonize down the road. In addition to seeing this change in how policies are made, there is also a broader policy focus than what occurred in the Cole Memorandum era shortly after Colorado and Washington legalized cannabis. The Cole Memorandum effectively said the U.S. Department of Justice (DOJ) would not challenge state authority as long as it followed certain public safety measures. It was rescinded under former President Donald Trump.

Currently, states have less fear of having federal agencies shutting everything down because of how many states have legalized cannabis. This has given states and policymakers the space to focus on the potential for federal engagement, social equity, public health, and consumer safety. There is also an increased desire to focus on getting more parity across cannabis regulations. So, states may have three entities regulated for cannabis—one for the operations, one for medical use, and one for adult use. There is a trend for a similar regulatory framework to be used because it is all from the same plant, and there have been some regulatory lines established.

In regard to the increased emphasis on equity and restorative justice, past criminalization of cannabis has not happened equally and has affected some communities much more than others. In the past, the focus has been on getting equity in the marketplace by ensuring diversity in licenses. Attention now is shifting to include automatic and easily obtainable expungements (having criminal records involving now legalized cannabis to be cleaned) and community reinvestment. Illinois and California have
been leaders in the community reinvestment areas, but some of the states that recently passed legislation have also focused on this. New York and New Jersey will be reinvesting in communities that have been disproportionately affected by the war on drugs in the past criminalization of cannabis. This focus includes job retraining, mental health, and substance abuse treatments in some states.

Youth prevention and consumer safety are two of the biggest areas being focused on with this increased emphasis on public health and safety. The amount of cannabis that can be held legally has increased in some states, which is of potential concern for public health and safety. Generally, states are legalizing 1 ounce of cannabis. Maine and Michigan have legalized 2.5 ounces, and New York just legalized 3 ounces. There has not been a shift in the types of products that are legal. However, there have been a few states (California, Michigan, and Washington) that have had restrictions that only allow shelf stable edibles. The primary reason for this is due to food inspection because cannabis is still a Schedule 1 substance federally. These restrictions lessen the complications in getting a federally funded food inspection program set up. The policy solution for the potential health impacts from concentrates that has been advocated for across a number of states in the last legislative session is to cap them. For example, in Vermont, a vape cartridge cannot have more than 60% in it. Connecticut will also have a cap. Vape cartridges will be potentially exempt from that cap. Homegrown cannabis is legal in many states with the exception of a few states. Illinois, New Jersey, and Washington do not allow homegrown cannabis for adult use. There is much concern about homegrown cannabis resulting in diversion. Additionally, homegrown products are not subjected to any regulatory oversight and, thus, are not tested for contaminants.

Packaging and labeling are also variables of concern for youth prevention, public health, and consumer safety. There has been increased focus, especially in medical-use states, on using plain, uniform, and opaque packaging like Canada. Studies of tobacco packaging demonstrate the package can have inherent appeal to youth and that plain packaging can greatly reduce this appeal. There is also discussion among standards organizations about implementing a universal symbol. There is some federal engagement around the challenges to making those changes in states. The inclusion of a poison center phone number, drug information, pertinent websites, and amount of THC are also beginning to be used in labeling. The level of THC is important for communicating with consumers about what the potential impairing properties are of the product they will consume. However, despite every adult-use state having a stature or regulation stating packaging should not appeal to children, they still exist. To help rectify this, these statutes and regulations should also state what packaging cannot include, such as cartoons and bright colors, to reduce the opportunity for interpretation. States that only allow plain or uniform packaging are not seeing packaging that appeal to children. On small packages, the challenge is getting the print large enough to be seen by consumers. Additionally, warning labels on cannabis products read similar to a legal disclaimer, which is not effective in communicating with consumers about the risks.

Advertising is another variable that has a lot of importance for educating consumers and for preventing youth consumption. States have increased their focus on audience restrictions by leveraging a provision that the alcohol industry developed to monitor its own advertising content and, thus, avoid federal engagement. However, under the alcohol industry’s interpretation, almost 30% of the viewership for an advertisement could be underage. Recently, there has been movement to close this age gap. Connecticut’s statute states that 90% or more of the audience has to be 21 years old or older. New Jersey uses a sliding scale of 80%-90% based on the type of advertising.

One of the challenges is in establishing what the legal age is for consumers of adult-use cannabis. An increasing number of states are banning advertising in or around transit, such as bus advertisements, and restricting advertisement content to what is included on packaging. For example, in some states, advertisements should not contain a pot leaf or a person consuming the product. States are also beginning to add warnings on advertisements. However, there still tends to be a lot of information in very small print. Social media advertisements on sites accessible to underage individuals are a challenge. It is important for states to focus on policy around social media for youth prevention.

In the wake of the lung injury from vaping outbreak, regulators took a much more careful look at product ingredients, devices used to vape, and processes in place for recalling products. This resulted in more regulatory authority over additives and ingredients to prevent future safety issues. A number of states have banned potentially harmful additives and focused on establishing a safety bar for other additives. Many states require the additive to be pharmaceutical grade or Federal Drug Administration (FDA) approved for the intended method of use. There has been more regulatory authority over vaping devices, especially in medical-use states. For example, there are provisions that deivses have temperature controls and heating elements made of certain materials. Ohio has a provision that liquids should not touch the coil to address findings that some devices can overheat, causing a change in structure and potential health risks. The batteries and coils can also leak heavy metals, causing a risk to consumer safety. Regulating vaping devices can be challenging because the devices are not just used for cannabis.
Broader oversight that includes other substances is needed so that there is a coordinated approach to tracking and tracing ingredients and quickly recalling if a safety risk arises. The lack of safety profiles on additives makes policymaking difficult.

Emerging policies on cannabis concentrates that place caps on concentrates (such as 60%) are likely creating unintended consequences. The safest products are the purest in terms of cannabinoids. Adding additives, such as to aerosolize a cannabis product, introduces substances not well-studied and, thus, raises potential consumer safety concerns.

Cannabis testing is done in third-party labs licensed by the state. There have been documented occurrences of lab shopping. To improve quality assurance, there has been an increase in states working towards setting up reference labs. This requires novel approaches because cannabis is still illegal at the federal level. Colorado was the first state to do this successfully. The approach to testing varies by state. Several groups, including CANNRA, are working on a method to increase standardization in this area. The removal of federal illegality would be helpful to getting better consistency across lab testing.

Where cannabis can be consumed is another important safety consideration. There is a trend towards states allowing on-site consumption or allowing cannabis consumption establishments. California and Illinois defer to local authorities, and Alaska, Colorado, Michigan, and Nevada have statewide licensing in this area. Studies show second-hand tobacco smoke is harmful. Although second-hand cannabis smoke in animals has been found to have some of the same effects, there is no human-level data to document the extent of it. Enforcement in this area can be challenging since it is hard to know if someone is smoking tobacco or cannabis. The policies that currently allow for more widespread public consumption of cannabis, particularly inside, may regress the gains from limiting second-hand tobacco smoke exposure. Future policy design protecting consumer safety from second-hand smoke is an important consideration.

Regulators are facing challenges related to novel cannabinoids from hemp. This includes not just Delta-8 and Delta-10, but acetate, which is derived in a lab environment. There is no human data on acetate, so humans are effectively the test subjects. In most states, hemp is not subject to the same packaging, labeling, testing, and other regulations as cannabis because it is regulated by a different entity. There are reports that the Delta-8 labeled products actually have high levels of Delta-9. The manufacturing process for these cannabinoids can also potentially leave unknown and untested byproducts. Additionally, many of these products are impairing, and they are widely available anywhere hemp products are sold and online where youth can easily order a product. Consumers may be purchasing these products thinking they are not impairing, like CBD. The Centers for Disease Control and Prevention (CDC) and Federal Drug Administration (FDA) have issued warnings on this based on reports from poison control, many requiring hospitalization.

CANNRA has posted a document on its website summarizing concerns and recommendations it proposes be considered with federal legalization. It recommends that a floor, rather than a ceiling, should be set. Additionally, states should be able to continue responding nimbly to issues without waiting for federal action. Protecting consumer safety and promoting equity should be priorities. Minimum standards are needed for lab testing for ingredients and additives. Federal engagement for packaging, labeling, and research would be helpful. Revenue generation from cannabis taxes at the federal level should focus on investment and research and data monitoring. Incentives to promote equity and revenue generation should be reserved for states. Finally, more coordination is needed between hemp and cannabis regulations.

Ms. Michael asked if states that legalized cannabis by legislation have had fewer challenges than others that did so by ballot measures with regards to labeling that is not attractive to minors. Ms. Schauer stated it remains to be seen what the markets will look like in many of the states that legalized legislatively because they just did so in the last session. There have been two different approaches. For instance, New York gave authority to their new Office of Cannabis Management but did not prescribe anything. Thus, the details of how the market will be regulated will come from rule-making versus statute. Conversely, Connecticut prescribed extensively in statute and will have rules overlay these to an extent. Consumer safety protections should be in statute. But other issues must be a balancing act because changes to legislation is cumbersome. The eastern states that just legalized cannabis have used new approaches.

Having no further business, the Cannabis Insurance (C) Working Group adjourned.

https://naiconline.sharepoint.com/w:/r/sites/NAICSupportStaffHub/Member%20Meetings/Fall%202021/Cmte/C/CannabisWG/Dec%201-Fall%20NM/11- CannabisWG.docx?d=wa1e044d0825346edb0482af04c096d59&csf=1&web=1&e=6cc3fG
The Cannabis Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met Oct. 21, 2021. The following Working Group members participated: Ricardo Lara, Chair, represented by Melerie Michael and Camilo Pizarro (CA); Michael Conway, Vice Chair, represented by Peg Brown and Bobbie Baca (CO); Jimmy Harris (AR); Christina Miller (DE); C.J. Metcalf and July Mottar (IL); Marlene Caride represented by Randall Currier (NJ); Gennady Stolyarov (NV); Cuc Nguyen (OK); Elizabeth Kelleher Dwyer (RI); Karla Nuissl (VT); and Michael Walker (WA).

1. **Adopted its May 27 and Summer National Meeting Minutes**

The Working Group met May 27 as well as July 19 and July 27 in lieu of the Summer National Meeting. During its May 27 meeting, the Working Group took the following action: 1) adopted its April 27 Minutes; 2) discussed sending a memo to the Government Relations (EX) Leadership Council recommending that it consider supporting the Secure and Fair Enforcement (SAFE) Banking Act of 2019 (H.R. 1996/S. 910) and the Clarifying Law Around Insurance of Marijuana (CLAIM) Act (H.R. 2068/S. 862); 3) discussed the draft agenda for its hearing on market barriers for cannabis insurance; and 4) discussed objectives for the appendix to the *Understanding the Market for Cannabis Insurance* white paper. During its July 19 and July 27 meetings, the Working Group held its hearing on market barriers for cannabis insurance.

Ms. Brown made a motion, seconded by Mr. Harris, to adopt the Working Group’s May 27 (Attachment Two-A1) and July 19 and July 27 (see NAIC Proceedings – Summer 2021, Property and Casualty Insurance (C) Committee, Attachment Two) minutes. The motion passed unanimously.

2. **Discussed the Draft Outline for the *Understanding the Market for Cannabis Insurance* White Paper Appendix**

Ms. Michael said the appendix to the *Understanding the Market for Cannabis Insurance* white paper will provide an update on the regulatory issues related to insurance in the cannabis industry that have occurred since the white paper’s adoption in July 2019. The working outline discussed on the drafting group’s first call on Sept. 22 parallels the agenda from the Working Group’s two-day hearing. It begins by summarizing the hearing and its findings. The outline then moves to providing an overview of the geographical expansion of states legalizing cannabis and the current federal bills. The cannabis business regulatory and licensing framework, market segments and players, insurance product availability, actual and perceived risks, policy forms, and product availability and affordability are discussed next. The barriers to coverage availability and affordability section will cover coverage obstacles, challenges, gaps, coverage risks, and alternative arrangements. The next steps section will discuss the role of the state insurance regulator in helping the admitted market evolve and emerging issues. The drafting group proposes adding additional research into public versus private sector implications, jurisdictional differences, and cannabidiol (CBD) issues to the appendix content. The current drafting members include California, Colorado, Oregon, and Washington.

Ms. Nuissl and Mr. Metcalf offered to join the drafting group to provide feedback and insights on the content.

Ms. Michael asked that feedback on the working outline or additional offers to join the drafting group be sent to NAIC staff.

3. **Discussed the Drafting Timeline for the *Understanding the Market for Cannabis Insurance* White Paper Appendix**

Ms. Michael said given the length of the appendix outline, the drafting should be completed by or before the 2022 Summer National Meeting. However, the target timeline is to complete the first draft in December, complete the final draft in January 2022, and adopt the appendix at the 2022 Spring National Meeting.

4. **Discussed its 2022 Proposed Charges**

Ms. Michael said the Working Group should request that the Property and Casualty Insurance (C) Committee remove the charge to “[c]ollect aggregated insurance availability and coverage gap information…to then publicly share in a released report by the end of 2021.” The Working Group decided at the beginning of 2021 that reliable data for this charge was not available.
Ms. Michael also recommended that the Working Group propose charges to develop an appendix by the 2022 Summer National Meeting and collaborate with the Producer Licensing (D) Task Force on equity concerns, which includes drafting a memo requesting that the Task Force look into potential related issues. Both of these are work products that the Working Group initiated in 2021 but will be continued into 2022.

Mr. Metcalf said he is comfortable with the 2022 proposed charges. Mr. Walker said he supports the additional charges and the timeline of drafting the appendix by the 2022 Summer National Meeting.

Ms. Brown made a motion, seconded by Mr. Metcalf, for a vote of consensus on requesting the Property and Casualty Insurance (C) Committee revision to the Working Group’s 2022 proposed charges. The motion passed unanimously.

5. **Discussed Other Matters**

Ms. Michael said the Working Group will be meeting on Dec. 13 at the Fall National Meeting in San Diego, CA.

Ms. Brown said she would send NAIC staff the agenda for the Business Insurance Cannabis Conference on Oct. 13–14, 2021, to share with the Working Group as it considers additional presenters to invite to the Fall National Meeting. The National Cannabis Industry Association (NCIA) and Cannabis Regulators Association (CANNRA) have had leadership changes that the Working Group may want to apprise itself of.

Having no further business, the Cannabis Insurance (C) Working Group adjourned.
Draft: 6/1/21

Cannabis Insurance (C) Working Group
Virtual Meeting
May 27, 2021

The Cannabis Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met May 27, 2021. The following Working Group members participated: Ricardo Lara, Chair, represented by Melerie Michael (CA); Michael Conway, Vice Chair, represented by Peg Brown (CO); Lori K. Wing-Heier represented by Austin Childs (AK); Jimmy Harris (AR); C.J. Metcalf (IL); Marlene Caride represented by Randall Currier (NJ); Gennady Stolyarov (NV); Andrew R. Stolfi represented by Jan Vitus (OR); John Lacek (PA); Elizabeth Kelleher Dwyer and Beth Vollucci (RI); Christina Rouleau (VT); and Michael Walker (WA). Also participating was: Sandra Darby (ME).

1. Adopted its April 27 Minutes

The Working Group met April 27 and took the following actions: 1) adopted its March 11 minutes; and 2) held a panel discussion on cannabis insurance-related legislation.

Ms. Brown made a motion, seconded by Mr. Lacek, to adopt the Working Group’s April 27 minutes (Attachment Two-A1a). The motion passed unanimously.

2. Discussed a Draft Memo to the Government Relations (EX) Leadership Council

Ms. Michael stated that the memo satisfies the Working Group’s first and second work plan items for 2021. It is important to note that this is a draft memo from the Working Group to the Government Relations (EX) Leadership Council, and it does not represent the NAIC’s position. All NAIC policy positions go through and are determined by the Leadership Council.

The Working Group is aiming to send the recommendations expeditiously to the Leadership Council. The memo is from the Working Group to the Leadership Council recommending that the Leadership Council consider supporting the Secure and Fair Enforcement (SAFE) Banking Act of 2019 (H.R. 1996/S. 910) and the Clarifying Law Around Insurance of Marijuana (CLAIM) Act (H.R. 2068/S. 862). These bills would help remove federal barriers for insurers to conduct business with any state legalized cannabis-related businesses, thereby helping to provide insurance coverage options for these commercial policyholders that will mitigate their business risks. These protections can improve insurance availability by supporting the growth of the cannabis business-related admitted market. Additionally, given that the Cole Memo randum was rescinded in 2018, the Working Group recommends to the Leadership Council that the NAIC support and advocate for the U.S. Department of Justice (DOJ) to release an updated memo or similar policy of discretionary enforcement. If legislation is not enacted this year, a newly issued memo or policy could provide some minimal level of assurance to insurers, leading to an increase in coverage provided in the admitted insurance market for cannabis businesses.

Mr. Walker asked whether this is an internal memo and if it is common to ask for interested parties to comment. Brooke Stringer (NAIC) stated that it is an internal memo, and although interested parties are being invited to comment on this memo, they are usually not invited to comment.

Lisa Brown (American Property Casualty Insurance Association—APCIA) recommended placing the SAFE Banking Act and the CLAIM Act paragraphs before the Cole Memorandum paragraph to indicate that those are a higher priority. Ms. Brown replied that reorganizing the paragraphs is not necessary since it is an internal memo, and the recommendations are clear.

Ms. Brown made a motion, seconded by Mr. Childs, to send the memo to the Leadership Council (Attachment Two-A1b). The motion passed unanimously.

3. Discussed a Draft Agenda for a Hearing on Market Barriers for Cannabis Insurance

Ms. Michael stated that the hearing is anticipated to be four to five hours in total, and it will be held virtually over multiple days in August. The hearing addresses the Working Group’s third work plan item for 2021. The Working Group felt that the hearing is important because the need and demand for cannabis insurance will only continue to increase as more states legalize cannabis. The hearing is aimed at providing the Working Group with feedback from insurers on what state insurance regulators can do to help remove the barriers insurers are experiencing in offering coverage.
The draft agenda includes four parts. The first section is to provide a foundation of understanding and an overview. It begins by having a legal expert, such as Ian Stewart (Wilson Elser) who presented at the Working Group’s panel discussion, review what states have legalized cannabis, the impact of increasing legalization by states, and federal regulations. It then progresses to having an organization like CANN-RA discuss the regulatory landscape. It concludes with a discussion on underwriting and risk. Potential speakers for this include someone from the Insurance Services Office (ISO) and an academic from East Carolina University. The second section focuses on insurance product availability, including identifying insurance needs, current offerings and gaps. Potential speakers include Summer Jenkins from the National Cannabis Industry Association (NCIA) and Cannasure, Keri Kish from the Wholesale & Specialty Insurance Association (WSIA), and possibly another speaker from an organization similar to the NCIA. The third section addresses barriers to offering coverage. It includes federal versus state legalization differences and interstate considerations, potentially presented by a legal expert like Mr. Stewart. It also includes discussion on crop insurance and reinsurance considerations. Potential presenter suggestions are needed on these. The fourth section includes a panel question and answer (Q&A) style discussion on what is on the horizon and how state insurance regulators can help. Potential panelists include Mr. Stewart, Ms. Jenkins, the Golden Bear General Counsel, and another admitted insurer. It also includes a discussion by the Working Group on how to collaborate better.

Ms. Brown stated that CANN-RA is a new organization that is somewhat similar to the NAIC. Its members are the state regulatory agencies overseeing cannabis in states that have legalized cannabis for medical and/or recreational use. The NCIA is a trade group of organizations involved in the cannabis industry.

David Kodama (Surplus Lines Association of California) asked if the hearing would be virtual, in-person or hybrid. Ms. Michael stated that the hearing would be virtual.

Ms. Darby asked when the hearing would be held. Ms. Michael stated that the hearing would be held in segments over multiple days in August, likely in connection with the NAIC Summer National Meeting.

Ms. Brown made a motion, seconded by Mr. Childs, to proceed with implementing the hearing agenda. The motion passed unanimously.

4. Discussed Objectives on an Appendix to the NAIC Understanding the Market for Cannabis Insurance White Paper

Ms. Michael stated that the Working Group adopted the NAIC Understanding the Market for Cannabis Insurance white paper in July 2019. The white paper explored regulatory issues related to insurance in the cannabis industry, including how insurance rates are set; legal and regulatory authority at the federal, state and local levels; cannabis operations; and best practices. Much has happened in this space since the white paper’s adoption in 2019. As such, the Working Group determined during its work plan discussion that it should consider updating the white paper through the addition of an appendix. Drafting sessions on the appendix will begin shortly after the hearing. Ms. Michael invited Working Group members to notify Anne Obersteadt (NAIC) at aobersteadt@naic.org by June 10 if they want to participate in the drafting group. The appendix objectives include providing an update on the legalization of cannabis and how the industry is being insured. They also include taking a closer look at hemp and crop insurance, directors’ and officers’ coverage, reinsurance requirements, and interstate transportation issues. Discussion on innovations and emerging products, barriers to the admitted market, and how state insurance regulators can assist in this area are also proposed topics.

Mr. Stolyarov asked for clarification on what the objectives represent. Ms. Michael stated that they represent the goals of what the appendix should include.

Having no further business, the Cannabis Insurance (C) Working Group adjourned.
Cannabis Insurance (C) Working Group
Virtual Meeting
April 27, 2021

The Cannabis Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met April 27, 2021. The following Working Group members participated: Ricardo Lara, Chair, represented by Melerie Michael (CA); Michael Conway, Vice Chair, represented by Peg Brown (CO); Lori K. Wing-Heier represented by Austin Childs (AK); Angel King (DC); Michael Gould (DE); C.J. Metcalf (IL); Marlene Caride represented by Randall Currier (NJ); Gennady Stolyarov and Mark Garratt (NV); Cuc Nguyen (OK); Andrew R. Stolfi represented by TK Keen (OR); Mike McKenney (PA); Elizabeth Kelleher Dwyer and Beth Vollucci (RI); Christina Rouleau (VT); and Michael Walker (WA).

1. Adopted its March 11 Minutes

The Working Group met March 11 and discussed its 2021 work plan.

Ms. Brown made a motion, seconded by Mr. McKenney, to adopt the Working Group’s March 11 minutes (see NAIC Proceedings – Spring 2021, Property and Casualty Insurance (C) Committee, Attachment One) with the correction to remove the extra “Brown” typo throughout the document. The motion passed unanimously.

2. Held a Panel Discussion on Cannabis Insurance-Related Legislation

Ian Stewart (Wilson Elser) stated that there is public support for broad legalization. Almost seven in 10 adults surveyed by Quinnipiac University in April said marijuana use should be legal, regardless of political party affiliation. A September Gallup poll found that 68% of people favored the legalization of marijuana, including majorities of most demographic subgroups. However, there is considerable variation in the level of support within each group, as men, younger adults, college graduates and wealthier households are more likely to favor legalization. An April Pew Research Center survey found support for legal marijuana for medical and recreational use at 60% and for medical use only at 31%. An April CBS poll found that most adults support legalizing the recreational use of marijuana in their states. 59% of respondents supported expunging the criminal records of those with past marijuana convictions. 54% of respondents felt that legalized marijuana has no effect on crime. However, 53% disagree that consuming openly is socially acceptable.

Thirty-five states have medical marijuana programs, and 15 states and Washington, DC permit adult use of cannabis. Every state except Idaho (legislation is currently pending) permits hemp cultivation under either the Agricultural Act of 2014 or the 2018 Farm Bill. For the 2021 growing season, five states (Arizona, New Jersey, Mississippi, Montana and South Dakota) will operate under the 2018 Farm Bill; 20 states will continue to operate under the Agricultural Act of 2014; and 23 states will operate under the ballot initiatives to legalize adult-use and medical marijuana. New York and New Mexico passed adult-use legislation in early April. Virginia will allow personal possession of small amounts of cannabis on July 1, with adult-use retail sales set to begin Jan 1, 2024. Adult-use legislation is currently being considered in Connecticut, Minnesota, Pennsylvania, Rhode Island and Wisconsin. Adult-use ballot initiatives in 2022 are expected in Arkansas, Florida, Missouri, Ohio and Oklahoma.

Under federal law, marijuana is still a Schedule I illegal substance. U.S. Senate Majority Leader Chuck Schumer (D-NY) has made marijuana reform a top priority. In April, the U.S. House of Representatives (House) passed the Secure and Fair Enforcement (SAFE) Banking Act of 2021. The SAFE Banking Act creates a “safe harbor” to protect federal depository institutions and credit unions from federal prosecution if they work with marijuana-related businesses and ancillary companies in legal states. The Clarifying Law Around Insurance of Marijuana (CLAIM) Act was reintroduced in mid-March to coincide with the reintroduction of the SAFE Banking Act. It will “create a safe harbor for insurers engaging in the business of insurance in connection with a cannabis-related legitimate business, and for other purposes.”

The Marijuana Opportunity Reinvestment and Expungement (MORE) Act of 2019 would decriminalize cannabis by descheduling cannabis from the Controlled Substances Act (CSA) and enacting various criminal and social justice reforms related to cannabis, including the expungement of prior marijuana-related convictions. U.S. Sen. Cory Booker (D-NJ), U.S. Sen. Ron Wyden (D-OR), and U.S. Senate Majority Leader Schumer (D-NY) will introduce new legislation (MORE 2.0) to legalize cannabis. The bill will propose some combination of decriminalizing cannabis, giving states more authority to independently regulate cannabis, and allowing states to import and export cannabis to or from neighboring states. However, passage is
There is political maneuvering right now at the federal level around the use of the terms “decriminalization” and “legalization.” Decriminalizing marijuana means that individuals possessing or using marijuana will be subject to lesser punishment, such as a criminal record and possible jail time. Legalization would mean that one may possess or use the drug according to the guidelines and limitations governing marijuana use. President Biden’s administration has communicated that it is in favor of re-scheduling, rather than de-scheduling, marijuana. This is the prescription drug model, and it is not consistent with either the additional or adult-use markets.

Unresolved issues include determining what federal agencies will regulate legalized marijuana if the U.S. Food and Drug Administration (FDA) will regulate some but not all cannabinoids and how state regulations and interstate commerce will be handled. Additionally, accurately measuring intoxication remains an issue affecting road and workplace safety. Hemp-derived cannabinoids, such as Delta-8 THC, are another concern. Delta-8 THC is an analogue of THC that contains neuroprotective properties that can increase appetite and reduce nausea, anxiety and pain. It produces some psychotropic effects that are less potent than Delta-9, the primary form of THC found in cannabis. Industry stakeholders disagree over if it is federally legal and whether it presents a market opportunity for hemp and cannabis businesses. There is also potential for toxic tort and environment exposures. It is currently an uninsured risk, and insurers are pivoting in a similar way as they did after the vape crises. There has not been much bodily injury product litigation yet because the long-term exposures are not yet fully known. However, the American College of Cardiology put out a warning to its members last year about the risks of vascular incidents, even in young people, who are exposed to high levels. Studies are showing epigenetic issues and other issues involving gender differences and age differences with marijuana. State insurance regulators should be aware of the possibility for large, potentially uninsured risk and exposure five or 10 years from now.

Mona Dooley (American Property Casualty Insurance Association—APCIA) and Jon Bergner (National Association of Mutual Insurance Companies—NAMIC) stated that despite state legalization and court decisions mandating medical marijuana reimbursement, cannabis is illegal at the federal level. Participating in any way opens insurers to federal criminal and civil liability (aiding and abetting under the CSA and the Racketeer Influenced and Corrupt Organizations Act [RICO]). For example, under RICO statute, a private citizen can bring a civil case against an illegal operation and all those involved, including the insurer. The 2018 Farm Bill legalized industrial hemp, defined as containing no more than 0.3% THC. The Final Rule published Jan. 19 raised the acceptable hemp THC level threshold from 0.5% to 1%. The challenge for insurers is differentiating between cannabis and hemp in underwriting. None of the past federal actions have resolved the conflict between state and federal law. Further, Executive Action by the president is not enough; legislation is needed.

The SAFE Banking Act provides legal safe harbor for banks providing services to cannabis-related legitimate businesses, but it does not apply to other financial services like insurance. The last U.S. Congress (Congress) worked to include insurance into the SAFE Banking Act, but the Committee’s success in doing so was not done well. The insurance industry helped to craft the CLAIM Act to provide standalone legislation to create a safe harbor for insurers engaging in business with cannabis-related businesses. The strategy was to add CLAIM Act language to the SAFE Banking Act when it was brought to the House floor. The SAFE Banking Act passed the House with CLAIM Act-based language. However, it was combined with “criminal justice reform” and collapsed under its own weight. The SAFE Banking Act was reintroduced in the House and Senate in March with insurance language and passed by the House on April 19. Conventional wisdom would indicate that the current political environment is favorable to passing cannabis-related legislation. However, this is tempered with the likely push for other provisions in Congress, which could lead to it again collapsing under its own weight.

The data is starting to come in showing that increased marijuana use affects public safety. A recent American Auto Association (AAA) Foundation for Traffic Safety survey found that an estimated 14.8 million drivers reported driving within one hour of using marijuana in the past 30 days, and nearly 70% of Americans in the same survey believe it is unlikely that a driver will be caught by the police while high on marijuana. Additionally, a 2018 Insurance Institute for Highway Safety (IIHS)/Highway Loss Data Institute (HLDI) study found that roadway crashes increased by approximately 6% in four states that legalized marijuana, as compared to neighboring states that have not legalized marijuana for recreational use. Driving under the influence of any drug, including marijuana, remains illegal in all 50 states and Washington, DC. However, there is no standard or reliable methodology to determine marijuana impairment. Regardless of whether one supports or opposes legalizing marijuana, most believe it is critical to prevent marijuana-impaired driving. An APCIA online national survey conducted on Sept. 6, 2019, found strong public support for the development of an impairment standard.

Federal restrictions on scientific research into marijuana’s effects has resulted in a lack of effort into the development of a meaningful impairment standard and related testing technology. The National Highway Traffic Safety

© 2021 National Association of Insurance Commissioners
Administration’s (NHTSA’s) 2017 Marijuana-Impaired Driving Report to Congress recommended continued research to enable the development of an impairment standard for driving under the influence of cannabis. Given the number of federal agencies involved, easing the restrictions on marijuana research involves several different Congressional committees, and efforts to date have not been successful. However, legislation advanced much farther in the last Congress, and the momentum continues to grow. The Drug Enforcement Administration (DEA) issued a final rule in December 2020, “Controls to Enhance the Cultivation of Marihuana for Research in the United States.” Sec. 3014 of the America’s Transportation Infrastructure Act of 2019 (H.R. 2 from 116th Congress) directs the U.S. Depart of Transportation (DOT) to coordinate with the U.S. Department of Justice (DOJ) and the U.S. Department of Health and Human Services (HHS) to produce a report and recommendations on how to allow for expanded research into marijuana impaired driving. The Medical Marijuana Research Act (H.R. 3797 from 116th Congress) would allow scientists to access cannabis from state legal dispensaries so that they can study products that are available to consumers in commercial markets. The Cannabidiol and Marihuana Research Expansion Act (S. 2032 from the 116th Congress) requires further study of marijuana impairment and provides safe harbor for universities conducting marijuana research.

Michael Correia (National Cannabis Industry Association—NCIA) stated that Congress is lagging in public support of cannabis-related legislative reform by six to 10 years. There is an ongoing debate on whether reform should be done incrementally or comprehensively, especially considering the large number of states that have passed cannabis-related legislation. Unfortunately, there is currently not enough republican support to pass comprehensive legislation. The SAFE Banking Act has passed the House, and it has a chance of passing the Senate with enough republican and moderate democrat support. The SAFE Banking Act is not a cannabis bill; it is a safe banking bill, which helps avoid all the controversies that arise with a cannabis reform bill. However, the MORE 2.0 bill is not likely to garner enough bipartisan support. Delta-8 will be a major policy issue, and the NCIA will be discussing it in its meeting tomorrow.

Ms. Brown asked what the support is for addressing the issue in incremental pieces. Mr. Correia stated that there is support for incremental reform; however, it is being held back by some of the left-leaning democrats who fear incremental reform will diminish the energy for comprehensive reform. He believes it is a better course to take incremental reform now and then focus on comprehensive reform. Mr. Bergner stated that he agrees and noted that the prior Congress boxed themselves in when they stated that it was unfair to help banks and insurers and not the average person. Ms. Dooley also concurred and added that there is the potential for a medical marijuana research bill to pass both sides of Congress if every democrat were to be in favor of it.

Mr. Gould asked the panelists via email after the Working Group call for their impressions of whether and how issues surrounding compensation insurance, particularly with respect to increased costs for employers, are having an impact on the support for political reform. He also asked what the political views are on the impact of broader reforms on premiums or, alternatively, of marijuana therapy on driving down claims costs and absences as compared to opioid therapy. Mr. Bergner stated that he does not believe workers’ compensation insurance or the issues surrounding it are having any impact on the political debate (outside of the underlying justification for insurance being included in SAFE Banking Act because carriers are being compelled to participate in legalized cannabis regimes in various states). ‘However, workers compensation carriers are looking at studies very closely and trying to understand whether cannabis is indeed a preferable alternative to opioids. While there is hope that this bears out, it is tempered with the understanding that there is not a lot of understanding about long-term cannabis use. Mr. Stewart stated that he agrees and noted that workers’ compensation is based on state law that varies widely from state to state and is affected very little at the federal level. He believes federal reform should facilitate further research on medical cannabis and the endocannabinoid system more generally.

Having no further business, the Cannabis Insurance (C) Working Group adjourned.
To: Government Relations (EX) Leadership Council

From: Members of the Cannabis Insurance (C) Working Group

Date: May 21, 2021

Re: Position Recommendation for the Cole Memo, SAFE Banking Act, and CLAIM Act

STATEMENT OF ISSUE:

Legalization of cannabis has been debated for decades. Cannabis was once prohibited nationwide; however, some states have passed laws legalizing the use of cannabis for either medical and/or recreational use. This creates an issue as cannabis is still illegal federally because it is listed as a prohibited substance on the federal Controlled Substance Act (CSA) 1. Since cannabis is listed under the CSA, three main federal criminal laws are triggered when individuals are engaging in transactions involving cannabis or proceeds from cannabis. The three criminal laws are as follows.

1. The federal Bank Secrecy Act (BSA) 2 which requires “financial institutions” to report to the Treasury Department any transactions over $5,000 that the institution knows, or has reason to know, involve assets derived from illegal sources;
2. The federal money laundering statute 3 which makes it a felony for any person to engage in a financial transaction that the individual knows involves the proceeds of an unlawful activity; and,
3. The federal unlicensed money transmitter statute 4 which states that it is a felony to engage in an unlicensed money transmitting business.

“Financial institution” is defined broadly and includes banks, credit unions, broker-dealers, insurance companies, pawnbrokers, travel agencies, and a host of other institutions that may come into contact with assets derived from illegal sources. 5 The federal laws create an obstacle for admitted market insurers to participate in providing coverage to cannabis-related businesses.

5 31 U.S.C. 5312(a)(2)

© 2021 National Association of Insurance Commissioners
Enforcement of the Federal Laws

Cole Memo: In August 2013, then U.S. Deputy Attorney General James Cole issued a memorandum that announced guidance to U.S. Department of Justice (DOJ) attorneys on the Obama administration’s priorities in the prosecution of cannabis-related federal crimes. The memo concluded that, with some exceptions, the federal government would exercise discretion in its enforcement determinations in jurisdictions that had implemented strong, effective regulatory and enforcement systems to control cultivation, distribution, sale, and possession of cannabis for industrial or recreational use. The memo indicated that the DOJ would not actively seek to prosecute cannabis transactions that are legal under state law. In February 2014, U.S. Deputy Attorney General James Cole issued another memo that further reinforced the 2013 enforcement priorities, specifically as they relate to the prosecution of marijuana-related financial crimes.

In January 2018, former Attorney General Jeff Sessions rescinded the Cole Memorandum by way of his own memorandum that emphasized the DOJ’s “well-established principles” with regard to the prosecution of cannabis crimes. This action left financial institutions that accept money from cannabis-related businesses potentially exposed to violations of federal law, including money laundering statutes. In 2019, Attorney General William Barr indicated he would not pursue cannabis businesses that are operating legally within their state jurisdiction. This declaration, however, does not provide insurers or other entities engaging with cannabis businesses any assurance that the forbearance extends to financial institutions.

Attorney General Merrick Garland was confirmed in March 2021. During his nomination hearing, Garland was asked about whether he would reinstate a Cole Memo and in response, Garland suggested a return to a Cole-like prioritization. Garland said he believes that with DOJ’s limited resources, it would not be a good use of limited resources to be pursuing prosecution in states that have legalized, and that are regulating the use of marijuana, either medically or otherwise. There has yet to be an official memo released. When the NAIC Cannabis Insurance (C) Working Group heard from a panel of experts from the insurance and cannabis industry on April 27, 2021, it was noted that it is likely an updated memo will come in 2021; however, experts from the panel also speculated that Attorney General Garland may be giving time to the Congress to pass legislation first. The experts also noted that while an updated memo would be appreciated, it will not provide the same protections as legislation since the memo will be subject to change in subsequent administrations.

Secure and Fair Enforcement (SAFE) Banking Act (H.R. 1996/S. 910): The SAFE Banking Act by Representative Perlmutter (D-CO) and Senator Merkley (D-OR) is one of two pending measures in Congress that would provide a “safe harbor” from violations of federal law for financial institutions, including insurers, that provide financial services to cannabis-related businesses that are permissible under state law. The House passed H.R. 1996 in April 2021 by a bipartisan vote of 321-101. The Senate companion bill, S. 910, has been introduced but has not yet been acted upon. In the last Congress, the

© 2021 National Association of Insurance Commissioners
SAFE Banking Act passed the House several times, but the Senate did not take it up. Some of the expert panelists that the Working Group heard from in April indicated that there was a desire to add other provisions to this bill essentially transforming it into a cannabis legalization bill, rather than a banking bill. The expert panel noted that if this bill remains a banking bill, there is a good chance that this bill could be taken up in the Senate and be signed into law. It is unclear, however, if the situation this year will be different. It has been stated that 2021 is a different climate given the change in the Administration and the Senate. It is important to note that Representative Perlmutter has actively sought the NAIC’s public support of his measure.

**Clarifying Law Around Insurance of Marijuana (CLAIM) Act (H.R. 2068/S. 862):** The CLAIM Act by Senator Menendez (D-NJ) and Representative Velazquez (D-NY) is broader than the SAFE Banking Act from an insurance perspective and would provide specific protections for those engaged in the business of insurance with policyholders that either directly or indirectly participate in cannabis industry activity that is permissible under state law. Members of the expert panel characterized the CLAIM Act as a bill largely introduced to use as leverage to include insurers within the SAFE Banking Act and to keep insurers as one of the included financial service industries. According to the experts on our panel, it is unlikely that this bill alone will move through the Congress.

**RECOMMENDATION FOR GRLC:**

Members of the Cannabis Insurance (C) Working Group recommend to the Government Relations (EX) Leadership Council (GRLC) that the GRLC membership issue letters in support and advocate for the passage of the SAFE Banking Act and CLAIM Act (Attachment A). The proposed bills will expand insurance coverage options for businesses and remove federal barriers for insurers to conduct business with cannabis-related businesses that are legal in their respective states. Since both bills may move through the legislative process, it is best to support both as they provide the protections to the insurance industry. With these protections, we can see an increase in the admitted market for insurance availability in relation to cannabis businesses.

Additionally, the members of the Cannabis Working Group recommend to GRLC that the NAIC support and advocate for the Department of Justice to release an updated memo or similar policy of discretionary enforcement. If legislation is not enacted this year, a newly-issued memo or policy could provide some minimal level of assurance to insurers, leading to an increase in coverage provided in the admitted insurance market for cannabis businesses.
The Catastrophe Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met Dec. 12, 2021, in joint session with the NAIC/FEMA (C) Advisory Group of the Catastrophe Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee. The following Working Group and Advisory Group members participated: Mike Chaney, Chair (MS); Katie Hegland (AK); Jimmy Harris (AR); Ken Allen (CA); George Bradner and Wanchin Chou (CT); Susanne Murphy (FL); Martha Im (HI); Doug Ommen (IA); Susan Berry (IL); Heather Droge (KS); Warren Byrd (LA); Joy Hatchette (MD); Jo LeDuc (MO); Tracy Biehn (NC); Tom Botsko (OH); TK Keen (OR); David Buono (PA); Megan Mihara (RI); Mark Worman (TX); Trey Hancock (TN); David Forte (WA); and Allan L. McVey (WV).

1. **Adopted the Catastrophe Insurance (C) Working Group’s Summer National Meeting Minutes**

Mr. Byrd made a motion, seconded by Mr. McVey to adopt the Catastrophe Insurance (C) Working Group’s July 22 minutes (see NAIC Proceedings – Summer 2021, Property and Casualty Insurance (C) Committee, Attachment Three). The motion passed unanimously.

2. **Adopted the NAIC/FEMA (C) Advisory Group’s Nov. 15 Minutes**

Ms. LeDuc made a motion, seconded by Commissioner Ommen, to adopt the NAIC/FEMA (C) Advisory Group’s Nov. 15 (Attachment Three-A) minutes. The motion passed unanimously.

3. **Heard a Report from FEMA on Risk Rating 2.0**

David Maurstad (FEMA) said more frequent and intense flooding events are occurring due to changing weather patterns. He said the Risk Rating 2.0 rating system is fair, equitable, and designed to adapt to the changing weather patterns.

The National Flood Insurance Program (NFIP) recognizes there are still concerns about Risk Rating 2.0. It is important to note that under the legacy NFIP pricing scheme, all policyholders have seen an average increase of 11% per year over the past number of years and would have continued to see increases year after year had Risk Rating 2.0 not been implemented. Risk Rating 2.0 takes an individual property’s unique flood risk into consideration.

With the use of advanced technological and mapping capabilities, Risk Rating 2.0 will provide a property’s true flood risk and equip property owners with the information they need to make informed decisions about mitigation actions. The new rating methodology has also exposed long-standing inequities in the pricing of flood insurance. Under the legacy rating system, people in lower value homes were paying more than they should have been paying, and people with higher value homes were paying less than they should have been paying. Risk Rating 2.0 will correct these inequities.

Two-thirds of the oldest Pre-Flood Insurance Rate Map (Pre-FIRM) homes have some of the highest flood insurance rates in the NFIP today. The implementation of Risk Rating 2.0 will correct this problem, and approximately one-fourth, or a little more than 1 million, of NFIP policyholders will see a decrease in their insurance costs. There will also be comparable premium increases for some policyholders. In the case of premium increases, a premium will not increase more than 18% per year.

The NFIP has taken a phased approach to the implementation of Risk Rating 2.0. Phase I began by allowing existing NFIP policyholders to take advantage of premium decreases on their renewal date, beginning Oct. 1. Additionally, new policies began being sold on Oct. 1. The premiums for new policies will no longer be subsidized by the NFIP, and the full-risk rate will be paid. Premiums will increase 18% per year until the full-risk rate has been achieved.

As of Dec. 5, the NFIP has sold more than 52,500 new policies under Risk Rating 2.0, and 4,800 NFIP policyholders have renewed their coverage. Under Risk Rating 2.0, 81% of renewals have seen a decrease in premium as compared to their prior NFIP premium, which reflects an average savings of $1,600 per year, or $139 per month. For those seeing a price increase, the increase is an average of $139 per year, or $13 per month, and the median cost for single-family homes with maximum coverage is $764.
Phase II of Risk Rating 2.0 will begin April 1, 2022. Under Phase II, all NFIP policies will be written under Risk Rating 2.0 on their renewal date. This phase will end on March 31, 2023, allowing policyholders extra time to prepare.

Risk Rating 2.0 includes the capability and tools to incorporate flood risk variables, such as multiple flood frequencies beyond the 1% annual chance events. These events include: 1) river overflow; 2) storm surge; 3) coastal erosion; and 4) heavy rainfall. Risk Rating 2.0 also takes a property’s characteristics into account, such as distance to a water source and the cost to rebuild.

Risk Rating 2.0 incorporates private sector data sets, catastrophe modeling, and evolving actuarial science. FEMA mapping in conjunction with NFIP policy and claims data is used in Risk Rating 2.0. Data obtained from the National Oceanic and Atmospheric Administration (NOAA), the United States Geological Survey (USGS), and the U.S. Army Corps of Engineers is also used, as well as additional third-party commercially available structural and replacement cost data.

The NFIP is upholding the statutory limits of 18% increases per year. Things that will not change with Risk Rating 2.0 include: 1) flood plain management; and 2) premium discounts for Pre-FIRM subsidized and newly mapped properties. Additionally, policyholders will still be able to transfer their rate discount to a new owner by assigning the flood insurance policy when the property ownership changes.

Discounts from 5% to 45% for policyholders in communities that participate in the Community Rating System (CRS) will continue. However, the discount will be applied uniformly to all policies throughout the participating community regardless of whether the structure is inside or outside the Special Flood Hazard Area (SFHA).

Mr. Maurstad said one misconception under the old rating system is that insurance rates are not subject to regular increases. He said rates increased every year for all policyholders prior to Risk Rating 2.0. Last year, the NFIP premiums increased by an average of 11.3%, which is approximately $8 per month.

Mr. Maurstad said under the new pricing structure, two-thirds of the policyholders will see a $0 to $10 per month increase in their flood insurance premiums. Seven percent of NFIP policyholders will see an increase of $10 to $20 per month. Four percent of the NFIP policyholders will see a $20 or more increase in their flood insurance premium per month. The $20 or more increases are for higher valued homes and homes in high-risk areas; this is also true under the NFIP legacy rating system.

Under the legacy rating system, 35,000 single-family policyholders have been seeing increases of more than $100 per month. The single-family homeowners in this group have an average replacement cost of $399,643. Under Risk Rating 2.0 only 3,246 single-family policyholders will see premium increases of more than $100 per month. However, the single-family homeowners in this group have a replacement cost value of more than $1 million. Currently, 3,000 single-family policyholders pay a premium between $12,000 and $45,000. Risk Rating 2.0 has an upper bound that limits cost on the highest end of the spectrum. Under Risk Rating 2.0, policyholders will pay no more than $12,125 for their policies.

Mr. Maurstad said stakeholders have weighed in on the impact that Risk Rating 2.0 will have on communities and policyholders. The National Association of Realtors (NAR), representing 1.4 million policyholders, backs the new pricing methodology and acknowledges that Risk Rating 2.0 will help ensure that NFIP policyholders pay premiums proportionate to their property’s risk.

Mr. Maurstad said affordability was an issue under the NFIP legacy rating system and will continue to be a concern under Risk Rating 2.0. He said the NFIP believes that the affordability framework released in 2018 will continue to be a valuable resource. President Joe Biden’s budget for fiscal year 2022 includes a legislative proposal, which, if approved, would establish a target means tested assistance program offering low- and moderate-income policyholders a graduated premium discount benefit. FEMA would implement the program so that the eligible low to moderate income policyholders see both the full-risk price and the means-tested assistance they receive so that they understand their full risk. The NFIP will continue to work with the administration’s team and the U.S. Congress on ways to reduce barriers to flood insurance and address mitigation options to achieve resiliencies for all communities.

Mr. Bradner asked how the gap can be fixed that many people fall into with not having the appropriate coverage, as it is important for consumers to know what their risk is. He said originally there was a scoring methodology to help people understand their risk and make an informed decision.
Mr. Maurstad said part of the unintended consequences originally associated with establishing the mandatory purchase area was that if a homeowner’s property was in that area, then they had flood risk and were required to buy flood insurance; if a homeowner’s property was outside that area, they had no risk and were not required to buy flood insurance. Risk Rating 2.0 recognizes a graduated risk throughout a community, and the pricing of the premium reflects this risk.

Mr. Maurstad reminded Working Group and Advisory Group members that the NFIP not only provided flood insurance, but also it was responsible for flood plain management, mitigation assistance grants, and flood risk mitigation. He said the NFIP is also making changes in the way it communicates flood risk. The NFIP is working with Congress through the reauthorization process on communication changes.

Mr. Maurstad said he believes Risk Rating 2.0 promotes mitigation in a different way than it has in the past. As people better understand their flood risk, especially those outside the high-risk area, homeowners will be encouraged to take mitigation actions to make their property safer and more resilient to flood events, to protect their property, and to protect their family from the devastating impacts of flood risk. Some areas will see less of an impact on premiums due to mitigation efforts.

Mr. Byrd said it was his understanding that an elevation certificate was no longer needed, but NFIP charts indicate first-floor elevation. He asked how this will be determined. Mr. Maurstad said the elevation certificate will no longer be required because the NFIP is getting first-floor data from a commercial vendor. He said if someone already has an elevation certificate, or if someone believes that an elevation certificate makes sense for them, the NFIP will use the information on their elevation certificate if it is to their benefit.

Mr. Byrd asked if there were any conditions on the transfer of flood insurance rate to a new homeowner if the property is sold. Mr. Maurstad said there were no conditions.

Mr. Chou asked about the catastrophe model evaluation process. Mr. Maurstad said the NFIP takes the catastrophe models and evaluates each individual model for its strengths and differences. Each model is evaluated against the known flood risk data. Mr. Maurstad said he will FEMA’s actuaries follow-up with more detailed information.

4. Heard a Report from FEMA on FEMA Structure and Regional Flood Insurance Specialists

Edith Lohmann (FEMA) said FEMA’s headquarters are in Washington, DC. However, there are 10 regional offices across the country broken down by state. There is at least one flood insurance specialist assigned to each FEMA region. Each of the regional offices acts as a liaison to FEMA headquarters and work in concert with the headquarters teams. The FEMA regional offices give FEMA the opportunity to have a local presence where they can customize and tailor their activities and outreach to their customers and partners in the various states.

Ms. Lohmann said regional flood insurance specialists work with consumers regarding questions and problems related to flood insurance. Flood insurance specialists also work with their partners, such as the NAIC and the departments of insurance (DOIs), as well as property owners, renters, real estate agents, lenders, appraisers, local insurance agents, surveyors, engineers, builders, or anyone else who is interested in flood insurance as a mitigation option to reduce disaster suffering.

Ms. Lohmann said flood insurance specialists are instrumental in assisting and facilitating the implementation of the NFIP’s program changes, such as Risk Rating 2.0, flood map changes, flood mitigation projects, or a new development that is being built in a particular community. Flood insurance specialists work closely with their federal, state, local, tribal partners, and DOIs.

Ms. Lohmann said flood insurance specialists do a lot of outreach and education and training. She said they also provide technical assistance to individuals or groups of consumers in public settings. Ms. Lohmann said flood insurance specialists can provide clarity on any types of claims, underwriting, or policy coverage questions or issues that arise. She said flood insurance specialists are available to provide support before, during, and after disasters. Ms. Lohmann said flood insurance specialists participate in public awareness events and all types of activities. She encouraged state insurance regulators to reach out to their regional flood insurance specialist.
5. **Received an Update on the NAIC Catastrophe Resource Center**

Jennifer Gardner (NAIC) showed the location of the Catastrophe Resource Center. She highlighted the catastrophe contact list and asked states that were not on this list to reach out to NAIC staff to provide this information. Ms. Gardner explained each of the tabs located on the page, as well as the information available.

6. **Heard an Update on Hurricane Ida**

Mr. Byrd said Hurricane Ida struck on the 16th anniversary of Hurricane Katrina. Hurricane Ida was close to being a Category 5 hurricane. He said AIR Worldwide’s original insured losses to onshore property were somewhere between $17 billion and $25 billion. These estimates include physical damage to residential, industrial, and commercial properties, as well as automobile losses. The estimates do not include flood damage and are based on the current higher material costs. AIR Worldwide estimates an additional cost to insurers of $2.5 billion to $5 billion for inland flood losses.

Karen Clark & Company (KCC) estimated insured losses to be nearly $18 billion, with only $40 million of these costs for losses in the Caribbean and the rest for losses in the U.S. These estimates include physical damage to residential, industrial, and commercial properties, as well as automobile losses.

Temporary adjusters were hired to help after the disaster, and Louisiana has issued or reinstated licenses to 14,625 adjusters to help in this effort. Four thousand three hundred and seventy-five of these licenses are for catastrophe adjuster registrations, which is not a full license, but an insurer can advise the state if it is bringing on additional catastrophe adjusters.

As of Nov. 15, Louisiana had a total of 116,112 actively licensed claims adjusters, which is an increase of approximately 12,000 adjusters in a two-and-a-half-month period. One thousand five hundred and eighty licenses per month are being issued.

Mr. Byrd said Commissioner James J. Donelon (LA) issued Emergency Rule 47 for the 25 parishes that were affected by Hurricane Ida. Emergency Rule 47 provided for the suspension of certain statutes related to all types of insurance and all types of insurers doing business in Louisiana. However, reinsurers were not included. The statutes suspended included: 1) inability to cancel; 2) inability to terminate; 3) non-renewal; and 4) non-reinstate. Emergency Rule 47 protected policyholders from cancellation for non-payment of premium until after the emergency rule expired on Oct. 24; insurance could also not be cancelled solely due to filing a claim because of Hurricane Ida.

Bulletin number 2021-07 was also issued to address the issue of the civil authority loss of use. This is typically in effect for a maximum of 14 days and allows for extra expenses. One insurer took the DOI to task on this and is awaiting a final judgement. Commissioner Donelon issued Directive 218, telling insurers to honor reasonable expenses incurred for evacuation.

Bulletin 2021-08 and Bulletin 2021-09 were also issued. These bulletins reminded insurers to be careful of how they adjusted claims with the policyholder, including to treat the policyholder with respect throughout the adjusting process. Louisiana has a policyholder Bill of Rights set forth in their insurance code, and the bulletins called attention to the bill of rights. The bill of rights requires an adjuster’s report to be given to the policyholder if the policyholder requests the report.

Louisiana has a provision in its law stating a claim is to be initiated in 14 days. However, if a catastrophe occurs that changes to 30 days, the commissioner can extend it an additional 30 more days. This was done in Emergency Rule 47 and was extended to 60 days. Hurricane Ida could not be used for cancellation and non-renewal and could not be used as a material change in a policyholder’s risk.

Mr. Byrd said Louisiana did allow insurers in first-party claims to deduct any unpaid premium when they adjusted the claim. He said they cautioned insurers that there are two statutes on the books in Louisiana that require insurers to pay any undisputed portion of a claim within 30 days from satisfactory proof of loss. The insurers were cautioned that they would be exposing themselves to time-and-a-half damages plus attorney fees if this time frame was not met.

Mr. Byrd said Louisiana issued a data call to insurers. This is referenced in Bulletin 2021-10. The first report is due in January 2022. As of Nov. 28, the total NFIP claims paid totaled $869 million. The highest number of claims were filed in Louisiana; Louisiana had 14,230 claims.
Mr. Byrd said complaints totaled 3,003. Most of the complaints encompassed: 1) adjusters not calling policyholders back; 2) changes in adjustment; and 3) not having any payment whatsoever for what the policyholder deemed to be undisputed portions of their claim.

7. Received a Report on the Update of the *Catastrophe Modeling Handbook*

Ms. Gardner said the Catastrophe Insurance (C) Working Group met virtually in November to discuss the directive it received from the Climate and Resiliency (EX) Task Force to update the *Catastrophe Modeling Handbook*. The Working Group directed NAIC staff to send a survey to all states to obtain information regarding how the current *Catastrophe Modeling Handbook* is being used and what needs to be updated. NAIC staff received responses from 20 states.

The survey results indicated the sections regarding “General Overview of Catastrophe Models,” “Model Input Provided by Company,” “Model Output,” and “Model Validation and Update” were all sections of the handbook that are helpful to state insurance regulators.

The survey additionally asked if a state used the questions included in the handbook regarding evaluation of models. These questions include items a state insurance regulator would ask of the catastrophe model vendor and of an insurer that was using the model. The responses showed that eight states use the questions currently. Eight states do not use the questions, and four states indicated they used some of the questions.

The survey also asked if it would be helpful to include questions specific to other perils and asked members to name the perils they would like to see included. The most common responses were for flood and wildfire followed by severe convective storm.

These results represent a small sample of the information received in the surveys. NAIC staff are analyzing the results and putting together a summary for the drafting group to consider as it works through the updates to the handbook.

Ms. Gardner said a few regulators offered to participate in a drafting group to review the survey responses and work on the handbook revisions. She said if anyone would like to join that drafting group, contact Aaron Brandenburg or Sara Robben. The first drafting group meeting will take place in January 2022.

8. Discussed Future Engagements with FEMA

The Advisory Group plans to work with FEMA on future events. These events include a FEMA meeting for FEMA Region 6. This event will be hosted by Oklahoma sometime in the first quarter of 2022. If any other regions would like to hold a similar event, please let Commissioner Glen Mulready (OK) know.

The Missouri DOI will be hosting an earthquake event May 23–May 25, 2022. This event will be held in St. Louis, MO.

The Advisory Group will hear an update regarding the Cascadia Rising 2022 national event during a future meeting.

Future topics for discussion and presentation include: 1) the NFIP CRS and how state insurance regulators can work with their communities in improving those CRS ratings; 2) the latest data on the private flood insurance market and the NFIP; and 3) a report from the National Insurance Crime Bureau (NICB) about the geospatial insurance consortium and how state insurance regulators might be able to use this technology during disasters.

Having no further business, the Catastrophe Insurance (C) Working Group and NAIC/FEMA (C) Advisory Group adjourned.
The NAIC/FEMA (C) Advisory Group of the Catastrophe Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met Nov. 15, 2021. The following Advisory Group members participated: Glen Mulready, Chair (OK); Carter Lawrence, Vice Chair (TN); Brian Powell (AL); Lucy Jabourian (CA); George Bradner (CT); Travis Grassel (IA); Sharil Sivertson (KS); Warren Byrd (LA); Joy Hatchette (MD); Jo LeDuc (MO); Beth Vollucci (RI); Maggie Dell (SD); and Matt Stoutenburg (WA).

1. **Heard an Update on Risk Rating 2.0 From FEMA**

David Maurstad (Federal Emergency Management Agency—FEMA) said FEMA began using the Risk Rating 2.0 rating system Oct. 1. Risk Rating 2.0 is equitable, easy to understand and designed to adapt to the increasing perils of the changing climate. Mr. Maurstad said equity in action was developed with the uniqueness of each state and locality in mind. The increasing of dramatic weather events calls for action.

Mr. Maurstad said FEMA has taken a phased approach to the implementation of Risk Rating 2.0. Phase I of Risk Rating 2.0 kicked off with existing National Flood Insurance Program (NFIP) policyholders being able to take advantage of decreases on their policy renewal date. The NFIP also began selling new flood insurance policies on Oct. 1. Risk Rating 2.0 requires new policyholders, for any structure type located across the community, to pay full risk rates. New policies are no longer subsidized or discounted under the NFIP.

Mr. Maurstad said some of the initial reactions the NFIP has seen regarding the Risk Rating 2.0 rollout include: 1) the NFIP sold more than 28,000 new flood policies as of Nov. 7; 2) more than 2,100 current policyholders have renewed their flood insurance policies; 3) 82% of the policyholders renewing their flood insurance policies have seen a decrease in their premium; 4) policyholders renewing their NFIP policy have seen an average savings of $1,500 per year; and 5) policyholders renewing their NFIP policies that are seeing an increase are seeing an average increase in premium of $125 per year. He said the NFIP believes Risk Rating 2.0 will help to close the insurance gap.

Mr. Maurstad said as of April 1, 2022, the NFIP will use Risk Rating 2.0 to rate existing NFIP policies. Risk Rating 2.0 uses a broader range of variables, such as multiple flood frequencies beyond the 1% annual chance event and including river overflow, coastal erosion, storm surge, and heavy rainfall. The Risk Rating 2.0 variables also include a property’s characteristics such as distance to a water source, elevation, and the cost to rebuild.

Mr. Maurstad said with improved technology, the NFIP can help people to understand a single property’s flood risk profile. He said the NFIP is using its years of investment in flood hazard information, incorporating private sector data sets, using catastrophe models, and evolving actuarial science. Data sets incorporated into the Risk Rating 2.0 methodology include: 1) NFIP mapping and claims data; 2) United States Geological Survey (USGS) data; 3) National Oceanic and Atmospheric Administration (NOAA) data; and 4) data from the U.S. Army Corps of Engineers. The NFIP also uses third-party commercial structural data and replacement cost data.

Mr. Maurstad said under FEMA’s legacy rating system, flood insurance rates were subject to regular annual increases. He said NFIP flood insurance policies saw an average increase of 11.3% last year; this is equivalent to approximately $8 per month. Mr. Maurstad said premiums will decrease for over 1 million or 23% of the NFIP policyholders under the Risk Rating 2.0 rating system. Some NFIP policyholders will see increases, which include: 1) 66% of the NFIP policyholders will see a $0 to $10 increase in their premiums; 2) 7% of the NFIP policyholders will see an increase of $10 to $20 in their premiums; and 3) 4% of the NFIP policyholders will see an increase of $20 or more in their monthly premiums.

Mr. Maurstad said three catastrophe models were licensed for use by the NFIP. These models include AIR, KatRisk, and CoreLogic. FEMA also developed two additional models based on government data.

Mr. Maurstad said the affordability of flood insurance was an issue under FEMA’s legacy rating model. He said the affordability framework FEMA delivered to the U.S. Congress in 2018 will continue to be a valuable resource as the discussion regarding affordability of flood insurance continues. There is currently a budget proposal which, if passed by Congress, would establish
a targeted means tested assistance program. The proposal would offer low to moderate income NFIP policyholders a graduated risk premium discount benefit.

Mr. Maurstad said there are things individuals and communities can do to lower flood insurance premiums. The NFIP offers incentives to policyholders who take actions to mitigate their flood threats. This includes premium discounts to people who elevate expensive items such as heating, ventilating, and air conditioning (HVAC) units, hot water heaters, etc. Communities can receive discounts for their policyholders by participating in the Community Rating System (CRS), as well as taking local actions that enhance flood protection.

Mr. Byrd said under the new infrastructure bill, there will be money available for levy improvements. He asked if FEMA would evaluate levy improvements under the Risk Rating 2.0 methodology if these improvements are made, so there would possibly be some decrease in flood insurance premiums. Mr. Maurstad said the NFIP is involving the analysis of levies in Risk Rating 2.0, more so than they were evaluated in the legacy rating methodology. Partial credits are allowed if a levy is providing partial protection, i.e., is not fully accredited but in the levy database. Levies that provide protection beyond the federal standard provide extra credit in the new pricing methodology. Mr. Maurstad said when there are changes in conditions, they will be reflected in the rates. He said FEMA will coordinate closely with the U.S. Army Corps of Engineers.

Mr. Bradner asked how Risk Rating 2.0 will reflect actuarially soundness. He said being actuarially sound may not be affordable and asked how rates are going to be reflective of the true risk of the exposure. Andy Neal (FEMA) said the NFIP’s legacy rating plan lacked the ability to reflect risk at a state level, much less a local or property-specific level. He said the glide path to full actuarial rates will help. Currently, the NFIP needs to collect 50% more premium for rates to be actuarially sound, and it will take more than 10 years for this to happen. Mr. Neal said most policyholders will be on an 18% glide path. He said policyholders getting decreases are getting them immediately. Therefore, the NFIP will be collecting less premium in year one than it has been collecting, so there is a slow trajectory. Mr. Neal said historical data is also used in conjunction with the models.

Commissioner Donelon asked if there are any plans in place for the residual market to provide for the people who do not have access to affordable flood insurance. Mr. Maurstad said under the legacy rating system, there were low-value homes that low-to-moderate income people lived in who were on a glide path that was beyond their full-risk. This is evident by the large reduction in premiums that many NFIP policyholders are seeing. The NFIP believes that Risk Rating 2.0 helps to relieve some of the affordability issue. Mr. Maurstad said the NFIP does not have a new program in the works for a residual market for their program. He believes one could already consider the NFIP a residual market.

Mr. Maurstad there are three things he believes can help close the insurance gap and make the NFIP sustainable. These items include product, price, and distribution. Currently, the NFIP has new policy forms that are going through the rulemaking process. Additionally, the Risk Rating 2.0 engine and application are easier for insurance agents to use, which should help with distribution.

Mr. Bradner said it was his understanding that Risk Rating 2.0 was going to weight the X zones according to a risk scale. He asked about the intent behind this weighting and asked if the NFIP was hoping that banks would begin looking at this factor and determining whether the property had a higher risk of loss based upon the weighting.

Mr. Neal said the NFIP elected not to use scores as part of the rating process. He said there is a more traditional plan with rating variables, territory factors, and various things that create a multiplicative rating model. Risk Rating 2.0 reflects a much fuller view of risk. The zones in the legacy rating system were based on a single scenario. Risk Rating 2.0 considers where a property sits outside the Special Flood Hazard Area (SFHA), as the resulting flooding can be very different based on the property’s location. The NFIP is hopeful that property owners will maintain their flood insurance policy by seeing their full risk.

Mr. Bradner said if property owners are in an X zone, most of the time they are told they are not required to purchase flood insurance and may never see their full-risk or what they would be required to pay for flood insurance. Mr. Maurstad said there is still the issue of how to get property owners to fully appreciate their flood risk, so there will be the need to continue looking for ways to get this message out. He said part of the process is getting agents and lenders to look at this differently from how flood risk has been looked at in the past.
2. **Heard About Risk Rating 2.0 Training Opportunities From FEMA**

Liana Kang (FEMA) said FEMA has a variety training programs in place for Risk Rating 2.0. FEMA offers a two-part “Key Fundamentals of Flood Insurance for Agents” training course for agents that is offered year-round. The course is not geared toward Risk Rating 2.0 but has been updated to reflect the new rating changes.

Ms. Kang said FEMA offers a “Risk Rating 2.0 – Equity in Action” webinar that is geared toward Risk Rating 2.0. This two-hour webinar provides the latest information on Risk Rating 2.0 and covers key topics including: 1) what is Risk Rating 2.0; 2) what led to the NFIP transformation; 3) what is changing and not changing in Risk Rating 2.0; and 4) the transition of current policies.

Ms. Kang said FEMA offers a “Webinar Wednesdays” training series that provides information on: 1) Risk Rating 2.0 fundamentals; 2) premium calculation; 3) mitigation credits; and 4) transition of policies and use cases. There are four sessions, each lasting approximately two hours. These sessions include a live question-and-answer (Q&A) forum.

Ms. Kang said FEMA additionally offers regionally led methodology workshops. This training is done as needed throughout the FEMA regions. The length of these trainings depends on the need of the stakeholders and can run from two hours to six hours. This training includes much of what is covered in “Webinar Wednesdays” but offers a more interactive experience with the instructor. Ms. Kang said Region 5 is providing some of these trainings in November and December.

3. **Heard About Joint Messaging Opportunities From FEMA**

Butch Kinerny (FEMA) said FEMA has done a lot of outreach in 2021. He said FEMA has worked with a lot of states on flood awareness weeks and is currently working on a digital engagement strategy. FEMA wants to ensure that when customers or stakeholders ask a question, they get a quick consistent and correct answer. Mr. Kinerny said FEMA is also improving its social media space and has kicked off a new LinkedIn space. Content is updated two or three times a week, and FEMA is open to sharing its information.

FEMA provides education through traditional earned media, which includes press releases, blogs, op-eds, and webinars. It also uses the following to educate consumers: its direct-to-consumer website (FloodSmart.gov); social media; paid search; paid digital marketing; out of home; broadcast; direct mail; digital radio; advocates, agents, and infomediaries; and updated publications and graphics.

FEMA conducts regional marketing campaigns, such as urban flooding, flood risks behind dams, hurricanes, agent outreach, flood after fire, and atmospheric rivers. Its marketing campaigns are pushed through ads for websites and apps if a particular event is occurring or likely to occur in an area, such as a hurricane, flooding, or storms. FEMA has also produced videos specific to various regions of the country.

Additionally, the *NFIP Desk Reference Guide for State Insurance Commissioners and Others* is going to be updated in the near future.

4. **Discussed Other Matters**

Commissioner Mulready said the Advisory Group members may want to facilitate training sessions in their regions. He said he would be interested in facilitating a training for FEMA Region 6 in Oklahoma. Commissioner Mulready asked any other members of the Advisory Group to let NAIC staff know if they are interested in facilitating a training session in their FEMA region.

Having no further business, the NAIC/FEMA (C) Advisory Group adjourned.
Pet Insurance (C) Working Group
E-Vote
December 8, 2021

The Pet Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee conducted an e-vote that concluded Dec. 8, 2021. The following Working Group members participated: Don Beatty, Chair (VA); Kendra Zoller, Vice Chair (CA); George Bradner (CT); Sheri Cullen (MA); Shirley Corbin (MD); Jo LeDuc (MO); Erin Summers (NV); Michael McKenney (PA); Matt Gendron (RI); and Kathy Stajduhar (UT).

1. **Adopted its Dec. 1 Minutes**

The Working Group considered adoption of its Dec. 1, 2021, meeting minutes. During its Dec. 1, 2021, meeting, the Working Group took the following action: 1) discussed data collection for pet insurance; 2) voted to move forward referrals to the Market Analysis Procedures (D) Working Group and the Market Information Systems Research and Development (D) Working Group; and 3) voted to ask the Property and Casualty Insurance (C) Committee to make the appropriate referrals to collect pet insurance data on the financial annual statement.

A majority of the Task Force members voted in favor of adopting the Task Force’s Dec. 1 minutes (Attachment Four-A). The motion passed unanimously.

Having no further business, the Pet Insurance (C) Working Group adjourned.

PetInsminE-vote
The Pet Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met Dec. 1, 2021. The following Working Group members participated: Don Beatty, Chair (VA); Kendra Zoller, Vice Chair (CA); Colin Corsetti (AK); Charles Hansberry (LA); Sheri Cullen (MA); Linas Glemza (MD); Jo LeDuc, Lockey Travis, and Marjorie Thompson (MO); Michael McKenney (PA); Matt Gendron and Beth Vollucci (RI); Kathy Stajduhar (UT); Jamie Gile and Anna Van Fleet (VT); and John Haworth (WA). Also participating were: Linda Grant (IN); Tate Flott and Brenda Johnson (KS); Brock Bubar (ME); Joseph Sullivan (MI); Chris Aufenthie (ND); Maggie Dell (SD); and Jody Ullman (WI).

1. **Adopted its Oct. 21 Minutes**

The Working Group met Oct. 21 and took the following action: 1) discussed language related to wellness plans and producer training in the draft Pet Insurance Model Act; and 2) adopted the Pet Insurance Model Act

Mr. Gendron made a motion, seconded by Ms. Zoller, to adopt the Working Group’s Oct. 21 minutes (Attachment Four-A1). The motion passed unanimously.

2. **Discussed Collection of Pet Insurance Data**

Mr. Beatty said the Working Group had previously discussed data collection for pet insurance in early 2020. He said the group had adopted a referral to the Market Conduct Annual Statement Blanks (D) Working Group, but it was determined that the referral should actually be sent to the Market Analysis Procedures (D) Working Group. He said this referral was to consider adding pet insurance as a line of business reported on the Market Conduct Annual Statement (MCAS). He said the Working Group also previously adopted a referral to the Market Information Systems Research and Development (D) Working Group to collect complaint data on pet insurance. Mr. Beatty said due to a large gap in meetings in 2020, the referrals were not sent at that time. He said if the Working Group still thinks it is necessary to collect this data, the referrals will be forwarded to the appropriate groups at this time.

Ms. Van Fleet said Vermont supports the referrals for data collection.

Birny Birnbaum (Center for Economic Justice—CEJ) said he is supportive of both referrals. He said the Market Analysis Procedures (D) Working Group has a specific set of procedures in order to consider a new line of business. Mr. Birnbaum said that while the Market Information Systems (MIS) data is public, the MCAS data that is collected is not public. He said he would like to see pet insurance data collected on the financial annual statement in order to have publicly available data. He said this will allow consumers to compare pet insurers.

Ms. LeDuc said the Market Information Systems Research and Development (D) Working Group had already considered adding a pet insurance complaint code. She said the Working Group should ensure that the complaint code has not already been added before sending the referral.

Mr. Gendron made a motion, seconded by Ms. Van Fleet, to move the proposals forward, with the understanding that the Market Information Systems Research and Development (D) Working Group referral should not move forward if the pet insurance complaint code already exists. The motion passed unanimously.

Mr. Beatty said the Working Group had previously discussed developing a supplement to the financial annual statement to collect pet insurance data. He said pet insurance data should be collected separately from the inland marine line of business because it is a growing line of business, and state insurance regulators should be able to see how much pet insurance business is being written.

Mr. Gendron said MCAS ratios are publicly available on dashboards. He asked if the MCAS data collection could also include premiums by state. Mr. Birnbaum said dashboards contain state aggregate information, not individual company information. He said the dashboards only include selected ratios and do not provide premium data, even if that data is collected. He said this MCAS data is also collected later in the year, whereas the financial annual statement data is collected in April.
Brendan Bridgeland (Center for Insurance Research—CIR) said data from the financial annual statement is vitally important for public users such as consumers and academics.

Ms. Van Fleet made a motion, seconded by Mr. Gendron, to ask the Property and Casualty Insurance (C) Committee to make the appropriate referrals to collect pet insurance data on the financial annual statement.

Having no further business, the Pet Insurance (C) Working Group adjourned.

PetInsWG_1201min
The Pet Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met Oct. 21, 2021. The following Working Group members participated: Don Beatty, Chair (VA); Kendra Zoller, Vice Chair, Tyler McKinney, and Charlene Ferguson (CA); Austin Childs (AK); Jimmy Harris (AR); George Bradner and Kristin Fabian (CT); Warren Byrd (LA); Sheri Cullen (MA); Shirley Corbin (MD); Jo LeDuc and Jeana Thomas (MO); Erin Summers (NV); David Forte, John Haworth, and Eric Slavich (WA). Also participating were: Linda Grant (IN); Brock Bubar and Sandra Darby (ME); Joseph Sullivan (MI); Christine Peters (MN); Cuc Nguyen (OK); Colette Hittner (OR); and Maggie Dell (SD).

1. **Adopted its Oct. 7 Minutes**

The Working Group met Oct. 7 to discuss language related to wellness plans and producer training in the draft Pet Insurance Model Act.

Mr. Byrd made a motion, seconded by Mr. Forte, to adopt the Working Group’s Oct. 7 minutes (Attachment Four-A1a). The motion passed unanimously.

2. **Discussed Comments on the Revised Draft Pet Insurance Model Act**

Mr. Beatty said during its Oct. 7 meeting, the Working Group discussed a proposal from California on revisions to the wellness programs language and a proposal from Rhode Island on adding language about producer training requirements. He said both proposals had been revised based on comments heard during that meeting.

Ms. Zoller said there were quite a few concerns about how to regulate not allowing the insurance policies and wellness programs to be advertised together. She said the language was changed to reflect that a “pet insurer shall not market a wellness program as pet insurance or during the transaction of pet insurance.” She said there was also issue with whether to use the term “coverage” or “product,” so language was changed to include both terms. Mr. Byrd asked if the language in Section 7A should be reworded to be clearer. He said he agrees with the purpose of the language but does not think it is reading the way the language is meant to be read. Mr. Gendron clarified that the goal of the language in Section 7A is to be read as two separate points.

Birny Birnbaum (Center for Economic Justice—CEJ) said insurance policies are sold with a wellness component built into the policy or added as an endorsement to the policy. He said the Working Group should consider adding language to clarify that the requirements in in Section 7A do not apply to insurance coverage, described as wellness benefits, that is included in the policy contract. Mr. McKenney agreed with the language that Mr. Birnbaum proposed.

Lisa Brown (American Property Casualty Insurance Association—APCIA) asked if the term “transaction” referred to the moment the policy was issued. She said the word could be interpreted as any time the insured used pet insurance after it is purchased. Ms. Zoller clarified that the marketing of the wellness products should be separate from the transaction of purchasing a pet insurance policy. Ms. Zoller said it may be best to instead use the term “sell, solicit, or negotiate.” Mr. Byrd agreed that it would be better to use “sell, solicit, or negotiate.”

Mr. Birnbaum asked if this language in Section 7A would prohibit an insurer from offering a wellness program for purchase until after an insurance policy has already been purchased. Ms. Zoller said that is the goal of the language.

Cari Lee (North American Pet Health Insurance Association—NAPHIA) asked if an insurer can sell a wellness program that is part of the insurance coverage. Ms. Birnbaum said this language would not apply to those policies and that the issue would be clarified by the additional language he submitted.

Ms. Zoller made a motion, seconded by Mr. Gendron, to adopt the changes to the wellness language in Section 3 and Section 7. The motion passed unanimously.
Mr. Gendron said the first provision in his proposed Section 9 – Insurance Producer Training says that a producer must be appropriately licensed and complete the required training before the sale, solicitation, or negotiation of pet insurance. He said the next provision applies to those producers with a major lines license and would require them to be appropriately trained on the features of the pet insurance product. He said this would be in-house training that would not require approval from the state insurance department but would be subject to market conduct examination. Mr. Gendron said the third provision deals with limited lines license holders. He said the original proposal required 10 credits at initial licensing and 10 credits of continuing education (CE) every two years. He said that after conversations with other states and producers, that requirement was changed to 10 credits at initial licensing and four credits of CE every two years. Mr. Gendron said the final part of his proposal outlines the required covered topics for in-house training and licensing education courses.

Mr. Byrd asked if the required credits are in addition to the requirements already in place. Mr. Gendron said this proposal does not add any credit requirements for major lines license holders. He said limited lines license holders do not currently have a required number of credits to obtain a license.

Ms. Zoller said she would like to add a provision to require a certificate of completion for the training for state insurance regulators to track the completed training. Mr. Gendron said he would expect the company to keep track of the course list and who was at the training, but he would not expect the producer to provide that information. Mr. Beatty said the insurer would keep track of this, and it would be checked during a market conduct exam.

Mr. Harris said he is concerned about placing CE requirements on a limited lines licensee, and he asked if there are other limited lines where there are continuous requirements. Mr. Gendron said there is a lot more to selling pet insurance than other limited lines products, and the CE requirements would make sense for this line of business.

Mr. Birnbaum said Section 9B(1)(i) should clarify that both the producer and the insurer shall ensure that the producer has been appropriately trained on the product. Mr. Gendron agreed that the subsection should read: “Both the producer and the insurer shall ensure that its producers have been appropriately trained on the features of its products.”

Isham Jones (American Veterinary Medical Association—AVMA) asked who would be providing the training on medical conditions. Mr. Gendron said for major lines license holders, the insurer would provide training on the specifics of pet insurance, and for limited lines license holders, the training would come from training providers that are required to register with the state department of insurance (DOI).

Wes Bissett (Independent Insurance Agents & Brokers of America—IIABA) said Section 8 – Regulations should be moved to the end of the model. He said in Section 9B(2)(iii), the term “limited lines” should be added before “insurance producer” for clarification.

Mr. Gendron made a motion, seconded by Mr. Byrd, to adopt Insurance Producer Training as Section 8 into the model, with the suggested edits in Section 8B(2)(iii) from Mr. Bissett and Section 8B(1)I from Mr. Birnbaum, and to move Regulations to Section 9. The motion passed unanimously.

3. Adopted the Pet Insurance Model Act

Mr. Gendron made a motion, seconded by Mr. McKenney, to adopt the Pet Insurance Model Act as drafted (see NAIC Proceedings – Fall 2021, Property and Casualty Insurance (C) Committee, Attachment One-A). The motion passed unanimously.

Having no further business, the Pet Insurance (C) Working Group adjourned.
The Pet Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met Oct. 7, 2021. The following Working Group members participated: Don Beatty, Chair, and Jessica Baggarley (VA); Kendra Zoller, Vice Chair (CA); Katie Hegland and Colin Corsetti (AK); Jimmy Harris (AR); Kristin Fabian (CT); Angela King (DC); Warren Byrd (LA); Sheri Cullen (MA); Shirley Corbin (MD); Cynthia Amann and Jo LeDuc (MO); Michael McKenney and Dennis Sloand (PA); Elizabeth Kelleher Dwyer, Matt Gendron, and Beth Vollucci (RI); Kathy Stajduhar (UT); Chris Antoine, Jamie Gile, and Anna Van Fleet (VT); and David Forte and John Haworth (WA). Also participating were: Michele Mackenzie (ID); Linda Grant (IN); Heather Droge (KS); Brock Bubar and Sandra Darby (ME); Sandra Anderson and Christine Peters (MN); Chris Aufenthie and Janelle Middlestead (ND); Maggie Dell (SD); Jody Ullman (WI); and JoAnne DeBella (WY).

1. Adopted its Sept. 8 Minutes

The Working Group met Sept. 8 to discuss language related to wellness plans in the draft Pet Insurance Model Act.

Mr. Forte made a motion, seconded by Mr. Byrd, to adopt the Working Group’s Sept. 8 minutes (Attachment Four-A1a1). The motion passed unanimously.

2. Discussed Comments on the Revised Draft Pet Insurance Model Act

Mr. Beatty said the Working Group received new comments from both state insurance regulators and industry since the last meeting.

Ms. Zoller said she submitted comments that address some changes to the language in Section 3—Definition and Section 7—Sales Practices for Wellness Programs. She said the changes include using the terms “shall and shall not” instead of “may,” removing blood tests from the activities covered under wellness programs in the definition, and using clear language that wellness programs should not be marketed with insurance products. Mr. Byrd said he agrees that there should be separation between the wellness products and insurance products, including separate billing and contract forms. Mr. McKenney said the term “products” in Section 7(4) should be changed to “coverages.” Mr. Forte agreed with this change. Birny Birnbaum (Center for Economic Justice—CEJ) said the term “products” should be used when talking about wellness programs, and the term “coverage” should be used when talking about insurance. Ms. Zoller agreed with this change.

Cari Lee (North American Pet Health Insurance Association—NAPHIA) asked whether products would be exempt from premium tax if wellness products are separated from the insurance policy. Mr. Forte said if wellness benefits are made a part of the insurance policy, then they are considered insurance. Ms. Lee asked for clarification of what separate marketing would be if the products are combined. Ms. Zoller agreed with Mr. Forte that if it is part of the policy, it is considered insurance, but currently some wellness plans that are sold as add-ons to an insurance policy do not make it clear to the consumer that the wellness program is not insurance. Ms. Lee asked for clarification on the types of policies being addressed by this language. Mr. Gendron said he knows of four companies that sell a wellness product that they do not consider to be insurance, but the way these products are sold looks like how other companies sell endorsements to their pet insurance policies for wellness, which would be considered insurance. Mr. Birnbaum asked how something could be considered insurance because it is included in the policy, but the same services are not considered insurance if they are sold separately. Mr. Beatty said if a wellness program is included in the insurance policy and has been appropriately filed and approved in a state, then state insurance regulators have jurisdiction over that product. He said the Working Group is trying to separate out those products from the ones not sold as insurance, making it clear to the consumer that those products are not insurance and would not provide coverage that they may expect.

Ms. Lee said proposed Section 7(C)(1) reads “pet insurance and wellness programs should not be advertised together to avoid consumer confusion.” She asked if the intention is to not allow those products to be sold on the same website. Ms. Zoller said the language is not preventing the products from being on the same website, but the products need to be clearly distinct. She said right now added on wellness products only have fine print indicating that it is not insurance. She said the websites should not allow customers to purchase an insurance policy with the wellness product already added on if that wellness product is not considered insurance and not a part of the policy. Ms. Lee said NAPHIA proposed that this should be addressed with clear
disclosures to the consumer. Mr. Birnbaum said he thinks the purpose of the language is that the purchase of a wellness program cannot be tied to the purchase of an insurance policy, and vice versa.

Mr. Forte said the purpose of the proposal is to change the language from permissive to restrictive and further clarify that pet insurance and wellness programs need to be clearly delineated as unique products, and they should not be contingent.

Mr. Forte said the adopted definition of wellness program says it is a subscription or reimbursement-based program that is separate from an insurance policy and provides services to promote general health, safety, and well-being. He said pet insurance policies are property policies, and anything that is for general health, safety, and well-being is not considered insurance and an insurable item.

Mr. Byrd asked where the differences are in how wellness programs are handled in health insurance as opposed to how they are handled in pet insurance. Mr. Birnbaum said consumers have come to understand that wellness programs are a part of health insurance policies. He said he does not see how consumers are supposed to know that wellness programs for pets would not be a part of the pet insurance policy. He said there has been a push in property/casualty (P/C) policies to include loss mitigation and resilience activities into the policies, and those activities are analogous to wellness programs in health insurance.

Mr. Beatty suggested that the proposal should be re-drafted after considering the comments made during the meeting and re-submitting them for viewing before the Working Group votes on adopting the new language.

Mr. Gendron said the Working Group previously discussed the issue of producer licensing and determined that the decision on what type of license was needed to sell pet insurance should not be made in this group. He said based on discussions in the Producer Licensing (D) Task Force, this Working Group would be the appropriate place to address what is required to obtain the license to sell pet insurance and what kind of training should be required to maintain that license. He said both the Long-Term Care Insurance Model Act (#640) and the Suitability in Annuity Transactions Model Regulation (#275) require initial training, and Model #640 requires ongoing training. He said because of the innovations in the industry that have been discussed in the Working Group’s meetings, it is a good idea to have ongoing training requirements in addition to the initial training requirements. He proposed requiring four credits of pet insurance specific training for those that hold a major lines license before they can market and sell pet insurance, plus four credits of training at license renewal. He proposed 10 credits of pet insurance specific training for those that hold a limited lines license, plus 10 credits of training at license renewal.

Mr. McKenney asked how the proposed training requirements compare to other lines of insurance. Mr. Gendron said he is not aware of specific training in other lines of business, but pet insurance is a unique coverage type because it is more like health insurance than other property lines of business. Mr. McKenney said he does not want to create requirements for producers that would cause pet insurance to only be sold direct.

Jack Chaskey (Westmont Associates) asked if the education requirements are additive or if they are intended to be part of the qualifying education requirements. Mr. Gendron said the intent of the proposal is that these requirements would not be additive. Mr. Byrd asked if these training requirements should be addressed in state code provisions or in the draft Pet Insurance Model Act. Mr. Gendron said the Producer Licensing Model Act (#218) sets standard training, but this provision would require four of those credits to be specifically focused on pet insurance education for anyone that is selling pet insurance. He said because this is a unique line of business and there is a lot of innovation in the pet insurance industry, it is important to require specific training. Superintendent Dwyer said continuing education (CE) is not currently tracked by subject matter. She said this is a good way to confirm that P/C producers that are selling pet insurance are staying informed on that subject. Mr. Birnbaum said he would support the proposal to address producers training in the draft Pet Insurance Model Act.

Mr. Beatty asked if NAPHIA would still recommend their proposed drafting note that addresses producer licensing requirements and compliance with the Uniform Licensing Standards.

Having no further business, the Pet Insurance (C) Working Group adjourned.
The Pet Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met Sept. 8, 2021. The following Working Group members participated: Don Beatty, Chair (VA); Kendra Zoller, Vice Chair (CA); Katie Hegland (AK); Jimmy Harris (AR); Angela King (DC); Warren Byrd (LA); Shirley Corbin (MD); LeeAnn Cox and Jo LeDuc (MO); Dennis Sloand (PA); Matt Gendron and Beth Vollucci (RI); Kathy Stajduhar (UT); Mary Block and Jamie Gile (VT); and David Forte, John Haworth, and Eric Slavich (WA). Also participating were: Lucretia Prince (DE); Linda Grant (IN); Heather Droge, Brenda Johnson, and Tate Flott (KS); Brock Bubar (ME); Joseph Sullivan (MI); Christine Peters (MN); Chris Aufenthie (ND); Maggie Dell (SD); and Jody Ullman (WI).

1. **Discussed the Definition of “Wellness Plans” in the Draft Pet Insurance Model Act**

Mr. Beatty said during its Aug. 4 meeting, the Working Group adopted the Pet Insurance Model Act. He said following that meeting, there were suggested edits to some elements of the model.

Mr. Beatty said the first suggested change was to remove the word “internet” and make “website” one word throughout the model. Mr. Gendron made a motion, seconded by Mr. Forte, to make this change throughout the model. The motion passed unanimously.

Mr. Beatty said the next suggested change was to make “preexisting” consistent throughout the model. He said the Working Group should decide whether to use “pre-existing” or “preexisting.” Mr. Gendron made a motion, seconded by Mr. Forte, to use “preexisting” throughout the model. The motion passed unanimously.

Mr. Beatty said the next suggested change was to insert language in Section 4–Disclosures, titled Right of Return, that addresses the free look period. Mr. Sloand said in the adopted version of the model, there was a statement indicating that a claim must have been paid in order to negate the free look period. Brendan Bridgegland (Center for Insurance Research—CIR) said he agrees with Mr. Sloand’s point. He said the substantive sections of the model should stay intact and these issues should not all be addressed in the disclosure section. Cari Lee (North American Pet Health Association—NAPHIA) said NAPHIA’s submitted comments suggest adding language to the Right of Return section that clarifies that a policy cannot be returned if the insured has filed a claim. Mr. Byrd said whether or not a claim has been paid, when an insured makes a claim, he or she is making a demand of the policy. Mr. Beatty said it is unlikely that an insured would make a claim under the policy and then try to return it. He said the paid language is not necessary. Mr. Gendron said it is unlikely that a claim would even be paid or denied within the first 15 days of the policy.

Mr. Gendron made a motion, seconded by Mr. Byrd, to add Section 4D–Right to Examine and Return the Policy, with the following language:

(1) Unless the insured has filed a claim under the pet insurance policy, pet insurance applicants shall have the right to examine and return the policy, certificate or rider to the company or an agent/insurance producer of the company within fifteen (15) days of its receipt and to have the premium refunded, after examination of the policy, certificate or rider, the applicant is not satisfied for any reason,

(2) Pet insurance policies, certificates and riders shall have a notice prominently printed on the first page or attached thereto including specific instructions to accomplish a return. The following free look statement or language substantially similar shall be included:

You have 15 days from the day you receive this policy, certificate or rider to review it and return it to the company if you decide not to keep it. You do not have to tell the company why you are returning it. If you decide not to keep it, simply return it to the company at its administrative office or you may return it to the agent/insurance producer that you bought it from as long as you have not filed a claim. You must return it within 15 days of the day you first received it. The company will refund the full amount of any premium paid within 30 days after it receives the returned policy, certificate or rider. The premium refund will be sent directly to the person who paid it. The policy, certificate or rider will be void as if it had never been issued.
The motion passed, with Pennsylvania voting against.

Mr. Beatty said the next suggested change is to remove repetitious language in Section 6(B)(4) and instead address this language in Section 4–Disclosures. Mr. Forte said this language should be moved to Section 4 because it does relate to a disclosure to the insured. Mr. Forte made a motion, seconded by Mr. Byrd to move the language in Section 6(B)(4) to Section 4. The motion passed unanimously.

Mr. Byrd said any mention of “insurer” in the model should be changes to “pet insurer” for clarification. Mr. Byrd made a motion, seconded by Mr. Forte, to change “insurer” to “pet insurer” throughout the model. The motion passed unanimously.

Mr. Beatty said the next suggested change was removing the reference to the Unfair Trade Practices Act (#880) and replacing it with a reference that each state can change to include its own unfair trade practice law. Mr. Byrd made a motion, seconded by Mr. Gendron, to adopt this change. The motion passed unanimously.

Mr. Beatty said the next suggested change was to change Section 4(E) to read: “An insurer shall clearly disclose a summary description of the basis or formula on which the insurer determines claim payments under a pet insurance policy within the policy itself, prior to policy issuance and through a clear and conspicuous link on the main page of the insurer or insurer’s program administrator’s website.” Mr. Gendron said he had never seen the word “itself” inserted after referring to a policy and said the change was not necessary.

Mr. Beatty said the next suggested change was to move the definition of “preexisting condition” from Section 3 to Section 4. Mr. Forte said the definitions guide the policy, and they should not only be a part of the disclosures. There was no motion to make this change.

Mr. Beatty said there were a few more suggestions of moving language from Section 6 to Section 4. There was no motion to make those changes.

Mr. Forte said the Working Group had previously voted that there should not be waiting periods for accidents. He said the current language in Section 6 is ambiguous if waiting periods for accidents are prohibited. Ms. Lee said that prohibiting waiting periods for accidents could allow for insurance fraud since a consumer could purchase and immediately use the insurance to cover his or her pet after an accident has already occurred. Mr. Forte said state insurance regulators do not want insurance fraud to occur. Mr. Bridgeland said that if the accident occurred before coverage, that would be considered a preexisting condition. Ms. Lee said the insurer would not know it is a preexisting condition if the consumer does not disclose the accident. Mr. Byrd said a waiting period of three days for accidents should mean that the policy is not effective until that waiting period is over. Ms. Lee said these policies have different waiting periods for different coverages, so only the accident coverage would not be effective during that period. Mr. Bridgeland said it is problematic to charge a consumer for a 365-day policy with only 362 days of coverage.

Mr. Forte made a motion, seconded by Mr. Gendron, to change the language in Section 6B to: “A pet insurer may issue policies that impose waiting periods upon effectuation of the policy that do not exceed 30 days for illnesses or orthopedic conditions not resulting from an accident. Waiting periods for accidents are prohibited.”

Ms. Zoller said state insurance regulators do not have authority over non-insurance products, and she said Section 7 and language relating to wellness programs should not be included in the model. Mr. Forte said the language says “by a licensed insurance entity” to refer to products sold by licensed pet insurers.

Having no further business, the Pet Insurance (C) Working Group adjourned.

W:\National Meetings\2021\Fall\Cmte\C\PetInsWG\PetInsWG_0908min.docx
The Transparency and Readability of Consumer Information (C) Working Group of the Property and Casualty Insurance (C) Committee met Nov. 17, 2021. The following Working Group members participated: Joy Hatchette, Chair (MD); Willard Smith (AL); Ken Allen (CA); Bobbie Baca (CO); Angela King (DC); Patrice Dziire, Julie Rachford, and Robert Rapp (IL); Heather Droge and Brenda Johnson (KS); Cynthia Amann, Jo LeDuc, and Jeana Thomas (MO); Kathy Shortt (NC); Chris Aufenthie (ND); Dave Buono and Shannen Logue (PA); Elizabeth Kelleher-Dwyer and Brett Bache (RI); Jennifer Ramcharan (TN); and Marianne Baker and Cassandra Enoch Brown (TX). Also participating were: Kate Kixmiller (IN); Renee Campbell (MI); Denise Lamy (NH); Tynesia Dorsey and Jana Jarrett (OH); Tricia Goldsmith and Glenda Villamar (OR); Marcia Violette (VT); Josh Martinsen and Manabu Mizushima (WA); Diane Dambach and Darcy Paskey (WI); and Kristi Alma Jose and Bill Cole (WY).

1. Adopted its Summer National Meeting Minutes

Ms. Droge made a motion, seconded by Mr. Aufenthie, to adopt the Working Group’s July 20 minutes (see NAIC Proceedings – Summer 2021, Property and Casualty Insurance (C) Committee, Attachment Five). The motion passed unanimously.

2. Adopted the Report of the Consumer Education Drafting Group

Ms. Hatchette said the work on the rate and rule filing checklist and the disclosures for premium increases for both capped and uncapped premium has been completed by their perspective drafting groups. She said Brenda J. Cude (University of Georgia) will do a readability review on the consumer language in the document. Ms. Hatchette said several states have indicated that they would like to start using these documents. She said once Ms. Cude has reviewed the documents, they will be sent out to the Working Group to vote on exposing the document. Once the document has been exposed for 30 days, the Working Group will consider adoption of the documents and will then send them to the Property and Casualty Insurance (C) Committee for consideration of adoption. The Working Group was in agreement.

Ms. Shortt said the consumer education drafting group was divided into three areas: 1) ratemaking; 2) rating factors; and 3) premium discounts. The ratemaking and premium discounts drafting for auto insurance has been completed. The rating factors drafting is nearing completion. Drafting groups will begin working on ratemaking and rating factors for homeowners’ insurance once the rating factors for auto insurance is complete. The drafting group working on homeowners’ discounts has started drafting this document. The drafting groups have been meeting every couple of weeks to complete the work.

Ms. Rachford made a motion, seconded by Mr. Buono, to adopt the report of the Consumer Education Drafting Group. The motion passed unanimously.

3. Heard a Presentation Regarding Disparities in Insurance Access

Ms. Hatchette said some of the Working Group members may have seen the report Disparities in Insurance Access: A Report Detailing Findings From a Survey of Grassroots Consumer Organizations. She said some states have begun to hold discussions regarding the information in this report to address this issue. Ms. Hatchette said Maryland has been discussing ways in which they can address the concerns and issues included in this report.

Ms. Cude said the information presented in the report is based on a survey the consumer representatives conducted earlier this year. She said the information she is presenting today is based on new data that has not yet been reported to anyone at the NAIC. Ms. Cude said the primary goal of the survey was to look at disparities and inequities in the insurance system; this was done in the lens of community organizations.

Ms. Cude said the survey respondents included 72 unique individuals who were leaders or senior employees of consumer organizations. Approximately half of the respondents of this survey worked in organizations that they defined as working statewide. Fifteen of the respondents worked nationally, and seven of the respondents said their primary work was in a specific city. The survey was intended to reach across a number of product lines, and although the majority of the respondents worked in health, they worked in other product lines too. The three areas most relevant to the Working Group include auto; property;
and flood, earthquake, or wind. Forty-four percent of the respondents’ constituents included all ethnic groups. However, there was a focus on Black or African American and Hispanic or Latino populations. The majority of respondents said their primary constituency served included racial and ethnic groups. However, there was representation in other groups as well, such as senior citizens, rural residents, veterans, etc.

Ms. Cude said the challenges of the constituents that the respondents’ organizations worked with include: 1) the belief that insurance products are unaffordable; 2) difficulty understanding coverage; 3) difficulty understanding costs; 4) the belief that available insurance products do not provide sufficient coverage; 5) the belief that insurance claims are not paid; 6) the belief that filing insurance claims is difficult; 7) difficulty in applying for insurance; 8) language barriers; 9) the belief that consumer education/information is not written or available for constituents; and 10) the belief that the state insurance department is not helpful. She said this Working Group might want to consider drafting consumer education pieces addressing understanding coverage and costs, reasons insurance claims are not paid, and education regarding the filing of insurance claims. Ms. Cude said about 20% of the respondents said that consumer education is not available and written for their constituents. While consumer education information is available, it is important to understand why the educational pieces are not making their way to the community organizations.

Ms. Cude said respondents were asked questions about state insurance department contact with the respondents’ constituents. The questions asked included asking if state insurance departments: 1) provide education about insurance; 2) increase awareness about insurance; 3) ask about opportunities to learn about respondents’ organizations; 4) discuss the department of insurance’s (DOI’s) services; and 5) ask about ways to hear about respondents’ constituents’ insurance issues. She said barely one-fourth of the respondents answered “yes” regarding education and increasing awareness about insurance. Ms. Cude said the consumer representatives believe the community organizations are saying it is a one-way conversation. She said less than 20% of the respondents said that the DOIs contacted or discussed the services offered by the DOI with their organizations. Only 17% of the respondents said that they had been asked about ways to learn about the constituents’ insurance issues.

Ms. Cude said recommendations relevant to the DOIs include: 1) developing more expansive partnership networks with community organizations, especially those serving low-income communities and communities of color; and 2) embracing active, ongoing engagement with community partners and developing relationships that go beyond passive information sharing. She said recommendations for the NAIC to consider include: 1) identifying, promoting, and replicating best practices across states; and 2) creating minimum community engagement standards.

Ms. Cude said there are large sections of states where there are not the types of community-based organizations that the Working Group has been discussing. She said smaller communities do have community-based organizations. However, these organizations are not always the typical traditional community-based organizations. Ms. Cude said community-based organizations in small, rural communities might be churches, a cooperative extension service, a public library, civic organizations, a Chamber of Commerce, or elected county officials.

Ms. Hatchette said when the report was released, they decided to reach out to the grassroots organizations in Maryland to see what they could do better. She said they reached out in a variety of ways, such as sending emails and making phone calls. Ms. Hatchette said they received responses from only 10% of those they contacted. She asked Ms. Cude for a good way to get these conversations started. Ms. Cude said many community organizations are understaffed and under-resourced, so they may not have time to respond without knowing why they are being contacted. She said this is where the standards about what it means to have and build community engagement come into play. Ms. Cude said it is important to think about and discuss ways to work with some of the community-based organizations. She said creating a best practices document that provides items that have worked for the various states would be valuable.

Ms. Ramcharan said the DOI sent employees to the rural areas that flooded in Tennessee following the flood event. She said they have found senior centers to be an excellent resource in rural communities. Ms. Ramcharan said the senior centers are usually open to the DOI visiting to talk with them and to provide materials and brochures.

Mr. Allen said the California DOI has a community relations and outreach branch. He said this group holds forums, roundtables, or outreach events virtually or in person in every county in California. Mr. Allen said they use community centers, businesses, chambers of commerce, and other nontraditional areas to try to get information out to consumers. He said he was going to share the report and information presented today with the community relations and outreach branch. Ms. Cude said this is helpful, as one of the first steps is to collect best practices.
Ms. Baker said Texas has a program for their coastal wind pool that does outreach to consumers. She said this program was created by statute. The program has one dedicated employee who spends a great deal of time attending meetings on the coast, attending city council meetings, and attending meetings at the libraries. Ms. Baker said this person also provides outreach when there is a storm, as well as fielding complaints. She said she would share this information with the Working Group.

Karrol Kitt (University of Texas at Austin) said that while communicating information following disasters is important, consumers also need information to help them with protecting their assets. Ms. Cude said once contact is made with the community-based organizations, it would be helpful to ask the organization what it needs to know to better serve its constituents. She said it might be a train-the-trainer model that works.

Bonnie Burns (California Health Advocates) said most people do not understand their insurance policy until they have to use it. She suggested that DOIs could teach people how to read policies of various types.

Having no further business, the Transparency and Readability of Consumer Information (C) Working Group adjourned.

1121 Transparency Minutes.docx
The mission of the Property and Casualty Insurance (C) Committee is to: 1) monitor and respond to problems associated with the products, delivery, and cost in the property/casualty (P/C) insurance market and the surplus lines market as they operate with respect to individual persons and businesses; 2) monitor and respond to problems associated with financial reporting matters for P/C insurers that are of interest to regulatory actuaries and analysts; and 3) monitor and respond to problems associated with the financial aspects of the surplus lines market.

Ongoing Support of NAIC Programs, Products or Services

1. The Property and Casualty Insurance (C) Committee will:
   A. Discuss issues arising and make recommendations with respect to advisory organization and insurer filings for personal and commercial lines, as needed. Report yearly.
   B. Monitor the activities of the Casualty Actuarial and Statistical (C) Task Force.
   C. Monitor the activities of the Surplus Lines (C) Task Force.
   D. Monitor the activities of the Title Insurance (C) Task Force.
   E. Monitor the activities of the Workers’ Compensation (C) Task Force.
   F. Provide an impartial forum for considering appeals of adverse decisions involving alien insurers delisted or rejected for listing to the Quarterly Listing of Alien Insurers. Appeal procedures are described in the International Insurers Department (IID) Plan of Operation.
   G. Monitor and review developments in case law and rehabilitation proceedings related to risk retention groups (RRGs). If warranted, make appropriate changes to the Risk Retention and Purchasing Group Handbook.
   H. Monitor the activities of the Federal Crop Insurance Corporation (FCIC) that affect state insurance regulators:
      1. Serve as a forum for discussing issues related to the interaction of federal crop insurance programs with state insurance regulation.
      3. Monitor the regulatory information exchanges between the FCIC and state insurance regulators, as well as the FCIC and the NAIC, and make recommendations for improvements or revisions, as needed.
   I. Report on the cyber insurance market, including data reported within the Cybersecurity Insurance and Identity Theft Coverage Supplement.
   J. Monitor regulatory issues that arise with the development of autonomous vehicles. Study and, if necessary, develop recommendations for changes needed to the state-based insurance regulatory framework.
   K. Provide a forum for discussing issues related to parametric insurance and consider the development of a white paper or regulatory guidance.

2. The Cannabis Insurance (C) Working Group will:
   A. Assess and periodically report on the status of federal legislation that would protect financial institutions from liability associated with providing services to cannabis businesses operating legally under state law.
   B. Encourage admitted insurers to ensure coverage adequacy in states where cannabis, including hemp, is legal.
   C. Provide insurance resources to stakeholders and keep up with new products and innovative ideas that may shape insurance in this space.
   D. Develop an appendix to the Understanding the Market for Cannabis Insurance white paper, providing updated information on cannabis-related insurance issues for adoption by the 2022 Summer National Meeting.
   E. Collaborate with the Producer Licensing (D) Task Force to study whether cannabis-related convictions in states where cannabis is legalized for medical and/or recreational use are preventing individuals from being licensed as an agent or broker.

3. The Catastrophe Insurance (C) Working Group will:
   A. Monitor and recommend measures to improve the availability and affordability of insurance and reinsurance related to catastrophe perils for personal and commercial lines.
B. Evaluate potential state, regional, and national programs to increase capacity for insurance and reinsurance related to catastrophe perils.

C. Monitor and assess proposals that address disaster insurance issues at the federal and state levels. Assess concentration-of-risk issues and whether a regulatory solution is needed.

D. Provide a forum for discussing issues and recommending solutions related to insuring for catastrophe risk, including terrorism, war, and natural disasters.

E. Consider revisions to the *Catastrophe Computer Modeling Handbook*.

F. Investigate and recommend ways the NAIC can assist states in responding to disasters by continuing to build the NAIC’s Catastrophe Resource Center for state insurance regulators to better prepare for disasters.

G. Continue to monitor the growth of the private flood insurance market and assess the actions taken by individual states to facilitate growth. Update the Considerations for Private Flood Insurance appendix to include new ways states are growing the private flood insurance market.

H. Study, in coordination with other NAIC task forces and working groups, earthquake matters of concern to state insurance regulators. Consider various innovative earthquake insurance coverage options aimed at improving take-up rates.

4. The **NAIC/Federal Emergency Management Agency (FEMA) (C) Working Group** will:
   A. Assist state insurance regulators in engaging and collaborating with FEMA on an ongoing basis by establishing a process for the oversight, prioritization, and reporting of disaster-related regional workshops and other exercises to improve disaster preparation and resilience.

5. The **Terrorism Insurance Implementation (C) Working Group** will:
   A. Coordinate the NAIC’s efforts to address insurance coverage for acts of terrorism. Work with the U.S. Department of the Treasury’s (Treasury Department’s) Terrorism Risk Insurance Program (TRIP) Office on matters of mutual concern. Discuss long-term solutions to address the risk of loss from acts of terrorism.
   B. Review and report on data collection related to insurance coverage for acts of terrorism.

6. The **Transparency and Readability of Consumer Information (C) Working Group** will:
   A. Facilitate consumers’ capacity to understand the content of insurance policies and assess differences in insurers’ policy forms.
   B. Assist other groups with drafting language included within consumer-facing documents.
   C. Complete the drafting of regulatory best practices that serve to inform consumers of the reasons for significant premium increases related to P/C insurance products.
   D. Update and develop web page and mobile content for *A Shopping Tool for Homeowners Insurance* and *A Shopping Tool for Automobile Insurance*.
   E. Study and evaluate ways to engage department of insurance (DOI) communication to more diverse populations, such as rural communities.

NAIC Support Staff: Aaron Brandenburg/Jennifer Gardner
Ongoing Support of NAIC Programs, Products or Services

1. The **Casualty Actuarial and Statistical (C) Task Force** will:
   A. Provide reserving, pricing, ratemaking, statistical, and other actuarial support to NAIC committees, task forces, and/or working groups. Propose changes to the appropriate work products (with the most common work products noted below) and present comments on proposals submitted by others relating to casualty actuarial and statistical matters. Monitor the activities, including the development of financial services regulations and statistical (including disaster) reporting, regarding casualty actuarial issues.
   1. Property and Casualty Insurance (C) Committee – ratemaking, reserving, or data issues.
   2. Blanks (E) Working Group – P/C annual financial statement, including Schedule P; P/C quarterly financial statement; P/C quarterly and annual financial statement instructions, including Statement of Actuarial Opinion (SAO) and Actuarial Opinion Summary Supplement.
   B. Monitor national casualty actuarial developments and consider regulatory implications.
   1. Casualty Actuarial Society (CAS) – Statements of Principles and *Syllabus of Basic Education*.
   3. Society of Actuaries (SOA) – general insurance track’s basic education.
   C. Facilitate discussion among state insurance regulators regarding rate filing issues of common interest across the states through the scheduling of regulator-only conference calls.
   D. Conduct the following predictive analytics work:
   1. Facilitate training and the sharing of expertise through predictive analytics webinars (Book Club).
   2. Review the completed work on artificial intelligence (AI) from other committee groups. Coordinate with the Innovation, Cybersecurity, and Technology (H) Committee on the tracking of new uses of AI, auditing algorithms, product development, and other emerging regulatory issues in as far as these issues contain a Task Force component.
   3. With NAIC staff assistance, discuss guidance for the regulatory review of tree-based models and generalized additive models (GAM) used in rate filings.
2. The **Actuarial Opinion (C) Working Group** will:
   
   A. Propose revisions to the following, as needed, especially to improve actuarial opinions, actuarial opinion summaries, and actuarial reports, as well as the regulatory analysis of these actuarial documents and loss and premium reserves:
      3. *Annual Statement Instructions—Property/Casualty.*
      4. Regulatory guidance to appointed actuaries and companies.
      5. Other financial blanks and instructions, as needed.

3. The **Statistical Data (C) Working Group** will:
   
   A. Consider updates and changes to the *Statistical Handbook of Data Available to Insurance Regulators.*
   
   B. Consider updates and developments, provide technical assistance, and oversee the production of the following reports and databases. Periodically evaluate the demand and utility versus the costs of production of each product.
      1. *Dwelling Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance.*
      2. *Auto Insurance Database.*
   
   C. Implement the expedited reporting and publication of average auto and average homeowners premium portions of the annual *Auto Insurance Database and Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance.*

2022 Proposed Charges

SURPLUS LINES (C) TASK FORCE

The mission of the Surplus Lines (C) Task Force is to: 1) monitor the surplus lines market and regulation, including the activity and financial condition of U.S. and alien surplus lines insurers by providing a forum for discussion of issues; and 2) develop or amend relevant NAIC model laws, regulations, and/or guidelines.

Ongoing Support of NAIC Programs, Products or Services

1. The Surplus Lines (C) Task Force will:
   A. Provide a forum for discussion of current and emerging surplus lines-related issues and topics of public policy and determine appropriate regulatory response and action.
   B. Review and analyze quantitative and qualitative data on U.S. domestic and alien surplus lines industry results and trends.
   C. Monitor federal legislation related to the surplus lines market and ensure all interested parties remain apprised.
   D. Develop or amend relevant NAIC model laws, regulations, and/or guidelines.
   E. Oversee the activities of the Surplus Lines (C) Working Group.

2. The Surplus Lines (C) Working Group will:
   A. Operate in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings and operate in open session when discussing surplus lines topics and policy issues, such as amendments to the International Insurers Department (IID) Plan of Operation.
   B. Maintain and draft new guidance within the IID Plan of Operation regarding standards for admittance and continued inclusion on the NAIC Quarterly Listing of Alien Insurers.
   C. Review and consider appropriate decisions regarding applications for admittance to the NAIC Quarterly Listing of Alien Insurers.
   D. Analyze renewal applications of alien surplus lines insurers on the NAIC Quarterly Listing of Alien Insurers and ensure solvency and compliance per the IID Plan of Operation guidelines for continued listing.
   E. Provide a forum for surplus lines-related discussion among jurisdictions.

NAIC Support Staff: Andy Daleo

2022 Proposed Charges

TITLE INSURANCE (C) TASK FORCE

The mission of the Title Insurance (C) Task Force is to study issues related to title insurers and title insurance producers.

Ongoing Support of NAIC Programs, Products or Services

1. The Title Insurance (C) Task Force will:
   A. Discuss and/or monitor issues and developments affecting the title insurance industry, and provide support and expertise to other NAIC committees, task forces, and/or working groups, or outside entities, as appropriate.
   B. Review and assist various regulatory bodies in combating fraudulent and/or unfair real estate settlement activities. Such efforts could include working with the Anti-Fraud (D) Task Force and other NAIC committees, task forces, and/or working groups to combat mortgage fraud and mitigating title agent defalcations through the promotion of closing protection letters (CPLs) and other remedies.
   C. Consult with the Consumer Financial Protection Bureau (CFPB) and other agencies responsible for information; education; and disclosure for mortgage lending, closing, and settlement services about the role of title insurance in the real estate transaction process.
   D. Evaluate CPLs to ensure compliance with state regulation and requirements, consumer protection offered and excluded, and potential alternatives for coverage.
   E. Review current rate regulation practices.

NAIC Support Staff: Anne Obersteadt

2022 Proposed Charges

WORKERS’ COMPENSATION (C) TASK FORCE

The mission of the Workers’ Compensation (C) Task Force is to study the nature and effectiveness of state approaches to workers’ compensation and related issues, including, but not limited to: 1) assigned risk plans; 2) safety in the workplace; 3) treatment of investment income in rating; 4) occupational disease; 5) cost containment; and 6) the relevance of adopted NAIC model laws, regulations, and/or guidelines pertaining to workers’ compensation.

Ongoing Support of NAIC Programs, Products or Services

1. The Workers’ Compensation (C) Task Force will:
   A. Oversee the activities of the NAIC/International Association of Industrial Accident Boards and Commissions (IAIABC) Joint (C) Working Group.
   B. Discuss issues with respect to advisory organizations, rating organizations, statistical agents, and insurance companies in the workers’ compensation arena.
   C. Monitor the movement of business from the standard markets to the assigned risk pools. Alert state insurance department representatives if the growth of assigned risk pools changes dramatically.
   D. Follow workers’ compensation issues regarding cannabis in coordination with the Cannabis Insurance (C) Working Group.
   E. Discuss workers’ compensation issues related to COVID-19.

2. The NAIC/IAIABC Joint (C) Working Group will:
   A. Study issues of mutual concern to state insurance regulators and the IAIABC. Review relevant IAIABC model laws and white papers and consider possible charges in light of the Working Group’s recommendations.

NAIC Support Staff: Sara Robben/Aaron Brandenburg

https://naiconline.sharepoint.com/:w:/r/sites/NAICSupportStaffHub/Meeting%20Meeting/Fall%202021/TF/WorkersComp/2022%20WCTF%20Charges.docx?d=wba7b249371b74ad6b12bb081b80e3483&csf=1&web=1&e=YnsF5x
The Casualty Actuarial and Statistical (C) Task Force met Dec. 7, 2021. The following Task Force members participated: Grace Arnold, Chair, represented by Phil Vigliaturo (MN); James J. Donelon, Vice Chair, represented by Nichole Torblaa (LA); Jim L. Ridling represented by Daniel Davis (AL) Evan G. Daniels represented by Tom Zuppan (AZ); Ricardo Lara represented by Lynne Wehmueller (CA); Michael Conway represented by Mitchell Bronson (CO); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by David Christhilf (DC); David Altsnaier represented by Greg Jaynes (FL); Colin M. Hayashida represented by Randy Jacobson (HI); Doug Ommen represented by Travis Grassel (IA); Dana Popish Severinghaus represented by Anthony Bredel and Judy Mottar (IL); Vicki Schmidt represented by Nicole Boyd (KS); Kathleen A. B rimane represented by Robert Baron and Walter Dabrowski (MD); Eric A. Cioppa represented by Sandra Darby (ME); Anita G. Fox represented by Kevin Dyke (MI); Chlora Lindley-Myers and Cynthia Amann and Julie Lederer (MO); Mike Causey represented by Kevin Conley and Arthur Schwartz (NC); Chris Nicolopoulous represented by Christian Citarella (NH); Russell Toal and Anna Krylova (NM); Judith L. French represented by Tom Botsko (OH); Glen Mulready represented by Andrew Schallhorn (OK); Andrew R. Stolfi represented by David Dahl (OR); Jessica K. Altman represented by Michael McKenney (PA); Cassie Brown represented by J’ne Byckovski and Miriam Fisk (TX); Michael S. Pieciak represented by Rosemary Raszka (VT); Mike Kreidler represented by Eric Slavich (VA); and Allan L. McVey represented by Juanita Wimmer (WV).

1. Adopted its Nov. 17, Nov. 9, Oct. 19, Oct. 12, Aug. 20, and Summer National Meeting Minutes

The Task Force met Nov. 9, Oct. 19, and Oct. 12 and held e-votes ending on Nov. 17 and Aug. 20. During its e-vote ending on Nov. 17, the Task Force adopted the Report on Profitability by Line by State (Profitability Report). During its Nov. 9 meeting, the Task Force took the following action: 1) adopted a decision to discontinue requiring continuing education (CE) categorization by Appointed Actuaries in 2023; and 2) adopted its 2022 proposed charges. During its Oct. 19 and Oct. 12 meetings, the Task Force took the following action: 1) adopted its Regulatory Guidance on Property and Casualty Statutory Statements of Actuarial Opinion, Actuarial Opinion Summaries, and Actuarial Reports for the Year 2021 (Regulatory Guidance); 2) adopted a response to the Blanks (E) Working Group regarding proposal 2021-11BWG; and 3) heard a report on the NAIC Rate Model Technical Reviews. During its e-vote ending on Oct. 24, the Task Force adopted a comment letter on the second exposure draft of the U.S. Qualification Standards to send to the American Academy of Actuaries (Academy).

The Task Force also met Oct. 19, Sept. 21, and Aug. 17 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss rate filing issues.

Mr. Chen made a motion, seconded by Mr. Botsko, to adopt the Task Force’s Nov. 17 (Attachment One), Nov. 9 (Attachment Two), Oct. 19 and Oct. 12 (Attachment Three), Aug. 20 (Attachment Four), and Aug. 10 (see NAIC Proceedings – Summer 2021, Casualty Actuarial and Statistical (C) Task Force) minutes. The motion passed unanimously.

2. Adopted the Report of the Actuarial Opinion (C) Working Group

Ms. Krylova said the Actuarial Opinion (C) Working Group met Sept. 23, Sept. 8, and Sept. 2 and adopted its Regulatory Guidance. Ms. Krylova said one of the key changes was to mention that the state insurance regulators expect to establish a deadline for the Appointed Actuary’s qualification documentation submission to the insurer’s Board of Directors in the 2022 Statement of Actuarial Opinion (SAO) Instructions.

Ms. Krylova made a motion, seconded by Mr. Botsko, to adopt the report of the Actuarial Opinion (C) Working Group, including its Sept. 23 (Attachment Five) and Sept. 8 and Sept. 2 (Attachment Six) minutes. The motion passed unanimously.

3. Adopted the Report of the Statistical Data (C) Working Group

Ms. Darby said the Statistical Data (EX) Working Group met in regulator-to-regulator sessions and took the following action: 1) researched the ability to collect and publish auto and home premium and exposures under an accelerated timeline; 2) adopted...
the Profitability Report; 3) adopted the *Competition Database Report* (Competition Report); and 4) adopted the *Auto Insurance Database Report* (Auto Report) to be considered by the Task Force before the end of December. Ms. Darby said the Working Group is continuing to work on the *Dwelling Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance Report* (Homeowners Report).

Ms. Darby made a motion, seconded by Mr. Chou, to adopt the report of the Statistical Data (C) Working Group. The motion passed unanimously.

4. **Exposed the Project #2019-49 Proposal**

Mr. Hay presented a proposal regarding the referred Project #2019-49: Retroactive Reinsurance Exception. His presentation included background information about Schedule P reporting and *Statement of Statutory Accounting Principles (SSAP) No. 62R—Property and Casualty Reinsurance*, discussion topics, a proposal, and alternative actions not proposed (Attachment Seven).

Ms. Darby made a motion, seconded by Mr. Chou, to expose a proposed answer to the referral Project #2019-49, as presented by a drafting group, for a 45-day public comment period ending Jan. 20, 2022.

5. **Exposed Random Forest Information Items and Glossary**

Sam Kloese (NAIC) presented background about random forest models (Attachment Eight) and requested feedback on the regulatory review of random forest models. He presented an exhibit of random forest information items, modeled from the appendix of generalized linear models (GLMs) information items in the *Regulatory Review of Predictive Models* white paper and a proposed glossary of random forest model terminology.

Mr. Dahl made a motion, seconded by Ms. Darby, to expose the NAIC staff’s proposed random forest information items and glossary (Attachment Nine) for a 60-day public comment period ending Jan. 20, 2022.

6. **Heard Presentations from Professional Actuarial Associations**

Dee Dee Mays (Academy) presented the activities of the Academy’s Casualty Practice Council, and Derek Freihaut (Academy) described the activities of the Committee on Property and Liability Financial Reporting (COPLFR) (Attachment Ten).

Brian Fannin (Casualty Actuarial Society—CAS) presented about CAS research activity (Attachment Eleven).

7. **Discussed Other Matters**

Mr. Vigliaturo said proposal 2021-11BWG was not adopted by the Blanks (E) Working Group. Given that result, he said he expects the Property and Casualty Insurance (C) Committee to charge the Statistical Data (C) Working Group with expediting the collection and publication of auto and home premium and exposure data from statistical agents.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.
The Casualty Actuarial and Statistical (C) Task Force conducted an e-vote that concluded Nov. 17, 2021. The following Task Force members participated: James J. Donelon, Vice Chair, represented by Nichole Torblaa (LA); Lori K. Wing-Heier represented by Tom Zuppan (AZ); Ricardo Lara represented by Lynne Wehmueller (CA); Michael Conway represented by Mitchell Bronson (CO); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by David Christhilf (DC); David Altmaier represented by Christina Huff (FL); Colin M. Hayashida represented by Kathleen Nakasone (HI); Doug Oommen represented by Travis Grassel (IA); Dana Popish Severinghaus represented by Judy Mottar (IL); Vicki Schmidt represented by Nicole Boyd (KS); Eric A. Cioppa represented by Sandra Darby (ME); Anita G. Fox represented by Kevin Dyke (MI); Chlora Lindley-Myers and Cynthia Amann (MO); Troy Downing represented by Mari Kindberg (MT); Chris Nicolopoulos represented by Christian Citarella (NH); Marlene Caride represented by Carl Sornson (NJ); Russell Toal and Anna Krylova (NM); Judith L. French represented by Tom Botsko (OH); Glen Mulready represented by Andrew Schallhorn (OK); Andrew R. Stolfi represented by David Dahl (OR); Raymond G. Farmer represented by Will Davis (SC); Cassie Brown represented by J’ne Byckovski (TX); Michael S. Pieciak represented by Rosemary Raszka (VT); Mike Kreidler represented by Eric Slavich (WA); and Allan L. McVey and Juanita Wimmer (WV).

1. **Adopted the Profitability Report**

The Task Force conducted an e-vote to consider adoption of the *Report on Profitability by Line by State* (Profitability Report). The motion passed unanimously.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.
The Casualty Actuarial and Statistical (C) Task Force met Nov. 9, 2021. The following Task Force members participated: Grace Arnold, Chair, represented by Phil Vigliaturo (MN); James J. Donelon, Vice Chair, represented by Nichole Torblaa (LA); Lori K. Wing-Heier represented by David Heppen (AK); Jim L. Ridling represented by Daniel J. Davis (AL); Ricardo Lara represented by Lynne Wehmuehler (CA); Michael Conway represented by Mitchell Bronson (CO); Andrew N. Mais represented by Wanchin Chou (CT); David Altmairer represented by Greg Jaynes (FL); Colin M. Hayashida represented by Randy Jacobson (HI); Doug Ommen represented by Travis Grassel (IA); Dana Popish Severinghaus represented by Reid McClintock (IL); Vicki Schmidt represented by Nicole Boyd (KS); Kathleen A. Bierman represented by Ron Coleman and Walter Dabrowski (MD); Eric A. Cioppa represented by Sandra Darby (ME); Anita G. Fox represented by Kevin Dyke (MI); Chlora Lindley-Myers represented by Julie Lederer (MO); Troy Downing represented by Mari Kindberg (MT); Mike Causey represented by Arthur Schwartz (NC); Chris Nicolopoulou represented by Christian Citarella (NH); Barbara D. Richardson represented by Gennady Stolyarov (NV); Judith L. French represented by Tom Botsko (OH); Glen Mulready represented by Andrew Schallhorn (OK); Andrew R. Stolfi represented by David Dahl (OR); Jessica K. Altman represented by Kevin Clark (PA); Raymond G. Farmer represented by Ryan Bailey (SC); Cassie Brown represented by J’ne Byckovski (TX); Michael S. Pieciak represented by Mary Richter (VT); and Mike Kreidler represented by Eric Slavich (WA).

1. **Received a Report from the Statistical Data (C) Working Group**

Ms. Darby said the Statistical Data (C) Working Group will be reviewing the *Competition Database Report*; the *Dwelling Fire, Homeowners Owner-Occupied*, and the *Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance Report* (Homeowners Report); and the *Auto Insurance Database Report* soon and will consider them for adoption prior to the Fall National Meeting.

Ms. Darby made a motion, seconded by Mr. Chou, to adopt the Statistical Data (C) Working Group’s report. The motion passed unanimously.

2. **Adopted a Decision Based on the CAS Study on Appointed Actuary CE**

Mr. Vigliaturo said the continuing education (CE) charge is to “work with the Casualty Actuarial Society (CAS) and the Society of Actuaries (SOA) to identify: 1) what types of learning property/casualty (P/C) Appointed Actuaries are using to meet CE requirements for specific qualification standards today; and 2) whether more specificity should be added to the P/C Appointed Actuaries’ CE requirements to ensure that CE is aligned with the educational needs for a P/C Appointed Actuary. He said this charge resulted from the Executive (EX) Committee’s Appointed Actuary Job Analysis project, was a recommendation from the NAIC’s consultant, and was adopted by the Property and Casualty Insurance (C) Committee as a charge for the Task Force. The Task Force started work on this charge by asking the CAS and SOA to collect data on Appointed Actuaries’ CE and requiring Appointed Actuaries to categorize their CE using specified categories. Mr. Vigliaturo said the first part of the charge was completed with the CAS’ report on Oct. 12. He said what remains of the charge is to determine if there is any reason to believe that Appointed Actuaries are not remaining competent and taking appropriate CE. No one expressed concerns with Appointed Actuaries’ CE selections.

Ms. Stolyarov made a motion, seconded by Mr. Schwartz, to discontinue requiring CE categorization and the reporting of CE to the CAS and SOA in the 2022 Statement of Actuarial Opinion instructions. The motion passed unanimously.

3. **Adopted its 2022 Proposed Charges**

Mr. Vigliaturo said the CE charge is eliminated for 2022 because of the action taken to discontinue CE categorization and reporting. Mr. Vigliaturo presented some proposed additions to the charges regarding predictive analytics work. The Task Force agreed to add two proposed predictive analytics charges with revised wording.

Ms. Lederer made a motion, seconded by Mr. Dyke, to adopt the Task Force’s 2022 proposed charges as amended (Attachment Two-A). The motion passed unanimously.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.
The mission of the Casualty Actuarial and Statistical (C) Task Force is to identify, investigate, and develop solutions to actuarial problems and statistical issues in the property/casualty (P/C) insurance industry. The Task Force’s goals are to assist state insurance regulators with maintaining the financial health of P/C insurers; ensuring that P/C insurance rates are not excessive, inadequate or unfairly discriminatory; and ensuring that appropriate data regarding P/C insurance markets are available.

Ongoing Support of NAIC Programs, Products, or Services

1. The Casualty Actuarial and Statistical (C) Task Force will:
   A. Provide reserving, pricing, ratemaking, statistical, and other actuarial support to NAIC committees, task forces and/or working groups. Propose changes to the appropriate work products (with the most common work products noted below) and present comments on proposals submitted by others relating to casualty actuarial and statistical matters. Monitor the activities, including the development of financial services regulations and statistical (including disaster) reporting, regarding casualty actuarial issues.
      1. Property and Casualty Insurance (C) Committee – ratemaking, reserving or data issues.
      2. Blanks (E) Working Group – P/C annual financial statement, including Schedule P; P/C quarterly financial statement; P/C quarterly and annual financial statement instructions, including Statement of Actuarial Opinion (SAO) and Actuarial Opinion Summary Supplement.
   B. Monitor national casualty actuarial developments and consider regulatory implications.
      1. Casualty Actuarial Society (CAS) – Statements of Principles and Syllabus of Basic Education.
      3. Society of Actuaries (SOA) – general insurance track’s basic education.
   C. Facilitate discussion among state insurance regulators regarding rate filing issues of common interest across the states through the scheduling of regulator-only conference calls.
   D. Conduct the following predictive analytics work:
      1. Facilitate training and the sharing of expertise through predictive analytics webinars (Book Club).
      2. Review the completed work on artificial intelligence (AI) from other Committee groups. Coordinate with the Innovation, Cybersecurity, and Technology (H) Committee on the tracking of new uses of AI, auditing algorithms, product development, and other emerging regulatory issues, in as far as these issues contain a Task Force component.
      3. With NAIC staff assistance, discuss guidance for regulatory review of tree-based models and generalized additive models (GAMs) used in rate filings.
2. The **Actuarial Opinion (C) Working Group** will:
   A. Propose revisions to the following, as needed, especially to improve actuarial opinions, actuarial opinion summaries, and actuarial reports, as well as the regulatory analysis of these actuarial documents and loss and premium reserves:
      3. *Annual Statement Instructions—Property/Casualty.*
      4. Regulatory guidance to appointed actuaries and companies.
      5. Other financial blanks and instructions, as needed.

3. The **Statistical Data (C) Working Group** will:
   A. Consider updates and changes to the *Statistical Handbook of Data Available to Insurance Regulators.*
   B. Consider updates and developments, provide technical assistance, and oversee the production of the following reports and databases. Periodically evaluate the demand and utility versus the costs of production of each product.
      1. *Dwelling Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance.*
      2. *Auto Insurance Database.*

NAIC Support Staff: Kris DeFrain/Jennifer Gardner/Libby Crews
The Casualty Actuarial and Statistical (C) Task Force met Oct. 12 and Oct. 19, 2021. The following Task Force members participated: Grace Arnold, Chair, represented by Phil Vigliaturo (MN); James J. Donelon, Vice Chair, represented by Nichole Torblaa (LA); Lori K. Wing-Heier represented by David Heppen (AK); Evan G. Daniels represented by Tom Zuppan (AZ); Ricardo Lara represented by Mitra Sanandajifar and Lynne Wehmuller (CA); Michael Conway represented by Mitchell Bronson (CO); Andrew N.Mais represented by Wanchin Chou (CT); Karima M. Woods represented by David Christhilf (DC); David Altmayer represented by Sandra Severinghaus and Judy Mottar (IL); Amy L. Altman represented by James DiSanto (PA); Raymond G. Farmer represented by Will Davis (SC); Cassie Brown represented by J’ne Byckowski and Miriam Fisk (TX); Michael S. Pieciak represented by Rosemary Raszk (VT); and Mike Kreidler represented by Eric Slavich (WA). Also participating was: Gordon Hay (NE).

1. **Adopted Regulatory Guidance and Received a Report from the Actuarial Opinion (C) Working Group**

Ms. Krylova said the Actuarial Opinion (C) Working Group met Sept. 2 and Sept. 8 to finalize the *Regulatory Guidance on Property and Casualty Statutory Statements of Actuarial Opinion, Actuarial Opinion Summaries, and Actuarial Reports for the Year 2021* (Regulatory Guidance). Substantive changes include Schedule P reconciliation and notification about a future expected change to create a deadline of submission of qualification documentation to the Board of Directors. The Working Group adopted the Regulatory Guidance via an e-vote on Sept. 23.

Ms. Krylova made a motion, seconded by Ms. Darby, to adopt the Actuarial Opinion (C) Working Group’s report, including the 2021 Regulatory Guidance *(see NAIC Proceedings – Fall 2021, Casualty Actuarial and Statistical (C) Task Force, Attachment Five-A)*. The motion passed unanimously.

2. **Received a Report from the Statistical Data (C) Working Group**

Ms. Darby said the Statistical Data (C) Working Group updated its *Report on Profitability by Line by State* (Profitability Report) and will consider it for adoption on Oct. 20. Data for auto and homeowners have been received.

The Working Group met Oct. 7 to: 1) adopt its Sept. 23 minutes; and 2) discuss the timeline for the data collection of NAIC reports.

Ms. Darby made a motion, seconded by Mr. Chou, to adopt the Statistical Data (C) Working Group’s report, including its Oct. 7 minutes (Attachment Three-A). The motion passed unanimously.

3. **Adopted a Response to the Blanks (E) Working Group Regarding Proposal 2021-11BWG**

Mr. Vigliaturo said proposal 2021-11BWG (Attachment Three-B) was submitted by Birny Birnbaum (Center for Economic Justice—CEJ), one of the NAIC consumer representatives, to the Blanks (E) Working Group earlier this year. The Task Force was asked for comments on the original proposal and responded, “CASTF is ready to provide guidance regarding the implementation of the Blanks proposal 2021-11BWG if that proposal moves forward. Furthermore, CASTF requests that Birny Birnbaum submit the most current up-to-date version of the proposal for further consideration and suggestions from CASTF.”

On July 22, the Working Group met and discussed a modified proposal. As noted in the July 22 letter from the Working Group, the Task Force is asked to review the modified proposal and comment. Mr. Vigliaturo said the question of whether the data would be useful for solvency reporting is a question being handled under the Financial Condition (E) Committee, so he...
suggested that the Task Force focus on three things: 1) whether the Task Force can get some data from statistical agents under similar timing as the annual statement reporting; 2) whether the data elements in the blanks proposal are defined appropriately; and 3) whether the Task Force wishes to support the proposal.

Ms. Darby reported that the Statistical Data (C) Working Group met Sept. 23 and Oct. 7 to discuss the charge from the Task Force to gather information on whether the timeline can be sped up on receipt of premium and exposure information from outside parties. NAIC staff asked submitting statistical agents and residual markets if their current timeline for submitting data could be sped up. NAIC staff also gathered data on what percentage of the total data each party was submitting.

The Working Group received varied responses from the submitting parties. Because statistical agents are not collecting data in the same way, they cannot provide the data to the NAIC on the same timeline. Additionally, statistical agents indicated that not only do they need to wait for company submissions, but they also need time for data quality checks and communication with companies for any data issues.

For the Dwelling Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance Report (Homeowners Report), in the year following the data year, the Working Group would be able to collect 32% of premium data by the end of May, 60% of premium data by the end of August, and 99% of premium data by the end of November. The Working Group initially believed California would still only be able to provide its data every other year, but it has since indicated that it would be able to use another data set to send in average premium data in June of the year following the data year. All data would still need to be aggregated by NAIC staff, making any output report available in December following the data year, at the earliest.

For the Auto Insurance Database Report (Auto Report), in the year following the data year, the Working Group would be able to collect 32% of premium data by the end of May, 49% of premium data by the end of August, and 91% of premium data by the end of November. Texas data, which makes up the remaining 9% of data, would not be provided until January of the next year. Again, all data would have to be aggregated and reviewed by NAIC staff before a report could be produced. The responses for the Auto Report are based only on the collection of premium and exposure data. Loss data cannot be provided on this same timeline.

Ms. Darby said the Working Group has fulfilled its charge as requested by the Task Force. The Working Group is open to continuing the discussion of data collection, including discussion on the data collection and submission process outlined in the Statistical Handbook, that may address the need for more timely data.

The Task Force discussion included the following: 1) statistical premium and exposure data would be increased by about 12 months; 2) both the statistical report speed increase and the annual statement proposal could be implemented; 3) an option would be to implement the financial statement proposal in the short term and speed up the statistical data in the longer term; 4) data would be useful to assess the impacts of sudden changes, such as COVID-19; 5) the quarterly part of the proposal would not be broken out by state and would not be useful; 6) a cost benefit analysis should be conducted; 7) 100-year events may be better handled using a data call rather than through annual reporting; 8) average premium could be misleading because the same data could support multiple explanations (e.g., moving policies between legal entities in a group); 9) companies may consider exposures by state to be competitive information and not want it to be in a public filing; 10) the data is company-by-company, whereas the statistical data is aggregated; 11) the exposure data would be useful for rate filings so data can be reconciled; 12) exposure data is an element not currently collected anywhere in the annual statement; 13) the proposal can be expanded to other lines of business over time; and 14) exposure basis by line of business has not been discussed by the Task Force.

Mr. Birnbaum said the Working Group should take a more holistic review of modernizing and re-engineering statistical reporting and not make changes one piece at a time. He said the financial statement approach is a less expensive plan and would be beneficial to consumer representatives, financial analysts, and academics. He added that the quarterly reports do not contain by state by line information; thus, this proposal did not include that by quarter. He said the blanks proposal is consistent with the NAIC State Ahead initiative to modernize regulatory processes. He reiterated that this data is financial data and completely consistent with the financial statement aim. He said the data would be available in four to five months; statistical data will not be available for at least 12 months.

Continuing the discussion on the Oct. 19 meeting, interested parties Ralph Blanchard (Travelers), Jonathan Rodgers (National Association of Mutual Insurance Companies—NAMIC), Rachel Underwood (Cincinnati Insurance Companies), and Angela Gleason (American Property Casualty Insurance Association—APCIA), voiced opposition to the blanks proposal. Mr.
Blanchard said the data is statistical; the three main financial reports are cash flow statements, income statements, and balance sheets. He said financial data has a dollar sign in front of it; calling it statistical data borders on dishonest. The cost of this proposal has not been calculated; it is usually cheaper to speed up an existing process than to create a new one. The financial systems are not set up to collect exposure data. Mr. Blanchard said there is a big difference between financial systems and statistical systems. He said it is not a trivial exercise for the companies to report this requested information on these financial statements. He added that there has been no specificity with how the data would be used. Mr. Rodgers said the chief concern is that the request is to add statistical-level data to the blanks. There will be several unintended consequences. NAMIC would like a clear explanation of how the data will be used. Mr. Rodgers said the statistical data can be collected a full year earlier through statistical agents, and that should be the way forward. The purpose of the blanks is to communicate financial information in a uniform format; this data is not financial. Mr. Rodgers said this proposal could lead to requesting more statistical data in the financial statements. He said companies share the concern of data reporting errors and the resulting amended financial statements; statistical agents do data quality checks. Audit issues would be material. Currently, reports are aggregated and produced annually; the data is being proposed to be by company and produced quarterly. State insurance regulators can request the information. Ms. Underwood said the proposal is to get industry-level, aggregate premium per exposure by state. The sponsor previously responded that if the data could be available sooner, this proposal would not be needed. The time to publish statistical data can be cut in half, and preliminary results could be published even earlier. She said this data does not change significantly, especially quarter-by-quarter. Statistical agents need two months to perform data quality checks, but this proposal is asking companies to have final reports in less than two months. Ms. Gleason agreed with previous comments, and she looks forward to understanding the reasons for the reporting and desired use. She said everyone likes data, but there are valid data security concerns. She said the Working Group proposed a method that is in line with State Ahead because it tried to modernize and propose a way forward.

Mr. Vigliaturo said preliminary state views were gathered by NAIC staff about how Task Force members proposed to respond to the Blanks (E) Working Group, asking whether to voice support, voice opposition, or remain neutral as a Task Force and the reasons each state would use to support their position. His plan was to see if there is a strong majority for any view and then propose a fitting motion. Unfortunately, the strawman vote with 20 Task Force states responding, does not give much direction because the votes are about evenly split between supporting and opposing the proposal. Mr. Vigliaturo suggested that the Task Force submit a state-by-state Task Force member survey response, but with final votes from states that may differ what was submitted on the survey. He asked the states to report to NAIC staff by Oct. 22.

Mr. Vigliaturo said states would be identified, and any comments made in the survey will be forwarded. Mr. Birnbaum said the statistical report is not a direct comparison to the blanks proposal because it is not company-by-company.

Mr. Chou made a motion, seconded by Ms. Darby, to respond to the Blanks (E) Working Group on Oct. 22 with the results of individual states’ survey responses and the Statistical Data (C) Working Group report about the potential to speed up premium and exposure statistical data collection and reporting. The motion passed unanimously.

4. Received a Report from the CAS on Appointed Actuary CE

Mr. Vigliaturo said the Executive (EX) Committee hired a consultant a few years ago to conduct a job analysis on the property/casualty (P/C) Appointed Actuary. One of the recommendations in the consultant’s report was to evaluate the continued competence of Appointed Actuaries after obtainment of credentials. With that charge given to the Task Force, the Task Force asked the Casualty Actuarial Society (CAS) and the Society of Actuaries (SOA) to collect data on Appointed Actuaries’ continuing education (CE) and required Appointed Actuaries to categorize their CE using the Task Force’s adopted categories. With those actions taken, what remains of the continued competence charge is to work with the CAS and the SOA to identify: 1) what types of learning P/C Appointed Actuaries are using to meet CE requirements for “Specific Qualification Standards” today; and 2) whether more specificity should be added to the P/C Appointed Actuaries’ CE requirements to ensure that CE is aligned with the educational needs for a P/C Appointed Actuary.

Ken Williams (CAS) described the written report submitted by the CAS (Attachment Three-C) in fulfillment of the Task Force’s first charge. He said the CAS reviewed over 100 members to evaluate CE compliance. A higher percentage of appointed actuaries participate in the process. There were 41 Appointed Actuaries and 37 used the required categorization. Mr. Williams said reserves and requirements were the highest number of hours, and reinsurance was the lowest; there were a lot of “other,” which is mostly COVID-19-related. He said the report shows the number of Appointed Actuaries who reported learning in a category and provided the average number of hours.
Mr. Vigliaturo said the aim is for the Task Force to: 1) discuss any concerns with the types of CE being taken by Appointed Actuaries; 2) decide whether there is a need to take any action to require that specific CE be taken by Appointed Actuaries; and 3) decide whether to continue to require the CE categorization or end this reporting requirement in the SAO instructions.

On its Oct. 19 call, the Task Force began discussion of the second part of the Task Force’s charge. Mr. Vigliaturo asked: 1) whether anyone has any concerns with the types of CE being taken by Appointed Actuaries; 2) whether it appears that Appointed Actuaries are taking relevant CE to continue to update skills; and 3) whether the Task Force has concerns that there is a need to take any further action, such as creating requirements for certain types of CE. He said if the Task Force has no concerns, then the question becomes whether to continue to require the CE categorization or end this reporting requirement in the 2022 SAO instructions. Mr. Schwartz said the categories originally adopted by the Task Force are excessive. He said he would want to make the categories fewer, the reporting simpler, and the process streamlined.

Ms. Lederer said before implementation of the CE categorization, she submitted a comment letter on this proposal and stated that she did not know what she would do with the resulting information. She said the reserving category is well represented, so perhaps actuaries find this topic to be important, or perhaps Appointed Actuaries are spending too much time on this category. She said it might be worth discussing not requiring the categorization in the future. Alternatively, she said state insurance regulators should discuss the findings and metrics that could lead to the decision to remove categorization requirements. Mr. Vigliaturo said he agrees that it was difficult to classify presentations because one presentation could contain multiple categories.

The Task Force will continue this discussion on its Nov. 9 call.

5. Received a Report on Project #2019-49

Mr. Hay said he drafted a response to the referral of Project #2019-49—Retroactive Reinsurance Exception, and he will have a final proposal for the Task Force for the meeting in December. His draft response includes two proposals regarding Statement of Statutory Accounting Principles (SSAP) No. 62R—Property and Casualty Reinsurance paragraph 36. First, add intercompany pooling agreements to the exceptions in SSAP No. 62R; second, modify the Schedule P instructions to require explanation for each of the steps in SSAP No. 62R paragraph 36 exceptions. Mr. Hay said the issues involve structured settlements, reinsurance commutations, innovations, runoff agreements, and affiliated reinsurance that qualify for prospective reinsurance accounting treatment.

Mr. Hay said he does not have proposed resolutions for at least two issues raised in the Statutory Accounting Principles (E) Working Group. Except for intercompany reporting, he does not see anything confusing in SSAP No. 62R for Schedule P presentations for members of the same group versus not in the same group. Also, the American Academy of Actuaries’ (Academy’s) Committee on Property and Liability Financial Reporting (COPLFR) observed variations in presentation to ambiguity in SSAP No. 62R. He said case studies did not validate this. Also, COPLFR thought better instructions and clarity would prevent distortions in the industry risk-based capital (RBC), but Mr. Hay also saw affiliated deals that on Schedule P would produce material sessions to entities outside the NAIC system. Therefore, improving instructions and adding clarity alone will not solve the problems.

Mr. Hay said he will seek input from Nebraska and the Catastrophe Risk (E) Subgroup, and he will collaborate with the Statutory Accounting Principles (E) Working Group.

6. Heard a Report on the NAIC Rate Model Reviews

Kris DeFrain (NAIC) presented three issues concerning rate model reviews by states and the NAIC. First, is a request for Task Force assistance about the regulatory review of tree-based models. The second issue is a professional and ethical question about how states should handle rate filings submitted by non-actuaries who are not subject to any professional standards. The third issue is to explain the NAIC tools available if states sign the NAIC Rate Review Support Services Agreement yet do not plan to ask the NAIC for a model review.

Most of the model reviews contain Generalized Linear Models (GLMs), and they are aligned with the Task Force’s Regulatory Review of Predictive Models white paper. Sam Kloese (NAIC) is taking the GLM information items and rankings of importance from the white paper’s appendix and modifying them via tracked changes for differences when reviewing a tree-based model. The Task Force will have to decide whether it wants to take the product forward for adoption or only use it as a reference for
discussion with the NAIC to ensure the NAIC is conducting reviews the way state insurance regulators need. Mr. Kloese will present the product on the Task Force’s Nov. 12 call.

Next is a professionalism issue. Some rate filings are being submitted by non-actuaries; thus, while still subject to law and regulation, the filings are most likely not subject to professional or ethical standards. Most states do not have any type of requirement for an actuary to prepare the filing or provide an expert opinion about the model. Ms. DeFrain said state insurance regulators are used to working with actuarial standards in place, and some requirements may need to be put in place to ensure the models are built in accordance with documentation, communication, ethical, and other requirements.

Last on the list is to discuss the Agreement, which 31 states have signed, and one more state is in the pipeline. While not all states need the NAIC rate review service, the Agreement also allows states access to the NAIC’s Shared Model Database and case studies. If one state finds that a company’s rate model has been reviewed by another state, the NAIC will conduct what is called a Comparison Report. NAIC staff will compare the filings between the two states, document any differences, track the objections made by the first state and answers received, and document the conclusions reached. If desired, the NAIC can also review any new issues. Ms. DeFrain added that the Agreement will place no burdens on the state, but if put in place now, it might be useful if state insurance regulators want to use the other NAIC services or have a short-term need to use the NAIC for model reviews after the loss of a key employee.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.
The Statistical Data (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force met Oct. 7, 2021. The following Working Group members participated: Sandra Darby, Chair (ME); Wanchin Chou, Vice Chair, and Qing He (CT); Daniel Davis (AL); David Christhilf (DC); John Sobhianian, Nichole Torbla, and Tom Travis (LA); Christian Citarella (NH); Tom Botsko (OH); Andrew Schallhorn and Landon Hubbart (OK); David Dahl (OR); and Brian Ryder and J’ne Byckovski (TX). Also participating were: Giovanni Muzzarelli (CA); Anthony Bredel (IL); Cynthia Amman (MO); Chris Aufenthie (ND); and Eric Lowe (VA).

1. **Adopted its Sept. 23 Minutes**

The Working Group met Sept. 23 to discuss the timeline for the data collection of NAIC reports.

Mr. Botsko made a motion, seconded by Mr. Citarella, to adopt the Working Group’s Sept. 23 minutes (Attachment Three-A1). The motion passed unanimously.

2. **Discussed the Timeline for the Data Collection of NAIC Reports**

Ms. Darby said during its last meeting, the Working Group discussed responses received from statistical agents and residual markets about their ability to submit the data for the Homeowners and Auto reports on a faster timeline. She said the responses were varied, and there was no consensus during the last meeting on how to respond to the request for information from the Casualty Actuarial and Statistical (C) Task Force. She said NAIC staff asked statistical agents if they would be able to provide only premium and exposure data on a faster timeline, and NAIC staff calculated the percentage of data that was being reported by each statistical agent or residual market.

Birny Birnbaum (Center for Economic Justice—CEJ) said the varied responses make it clear that the data cannot be collected on a faster timeline.

Ms. Darby said the California and Texas data, which would not be able to be reported early, makes up about 20% of the data for both the Homeowners and Auto reports. Laura Panesso (Insurance Services Office—ISO) said the ISO’s data could be provided in May, following the end of the data year.

Ralph Blanchard (Travelers) said if companies can send one statistical agent data by a certain date, they should be able to send another statistical agent by that same date. Mr. Birnbaum said it is not possible with the current statistical reporting framework. He said the ISO can produce summaries of data quickly because it receives transaction data on a quarterly basis that can be processed quickly. He said the Independent Statistical Service (ISS) and the National Independent Statistical Service (NISS) get annual reports that include not just premium data, but also claims data, and those reports are timed with a long enough lead time that the claims data are meaningful in relation to the premiums. He said even all the reporting entities were able to provide the data at the same time, there is still time needed for NAIC staff to combine all the data to produce a report.

Rachel Underwood (Cincinnati Financial) said in the Working Group’s response to the Task Force, it should include all the information gathered, instead of a simple yes or no response. She said the Task Force can then decide, based on all the information, if they can proceed with only a certain percentage of the data since not all the data can be provided in a sped up timeline. Mr. Birnbaum said while the Working Group should provide all the information collected, it should be able to give a yes or no answer to the question of whether the reporting timeline can be sped up given the current statistical methods of reporting. He said that answer, based on the information collected, would be no. Ms. Darby said all the information would be summarized and reported to the Task Force.

Mr. Citarella asked for clarification of the charge from the Task Force. Libby Crews (NAIC) said the motion made and adopted during the Aug. 10 meeting was to “gather information about whether the timeline can be sped up on receipt of premium and exposure information from outside parties.” Mr. Citarella said the Working Group has completed that investigation, and the response to the Task Force should be more detailed than a simple yes or no answer. Mr. Chou agreed that the information gathered by the Working Group should be summarized in the report to the Task Force.
Mr. Citarella made a motion, seconded by Mr. Chou, to provide the Task Force with a summary of the responses received from submitting statistical agents. The motion passed unanimously.

Having no further business, the Statistical Data (C) Working Group adjourned.

W:\National Meetings\2021\Fall\Cmte\C\PetInsWG\StatWG_1007min.docx
The Statistical Data (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force met Sept. 23, 2021. The following Working Group members participated: Sandra Darby, Chair (ME); Wanchin Chou, Vice Chair, George Bradner, and Qing He (CT); John Sobhanian (LA); Arthur Schwartz (NC); Christian Citarella (NH); Alexandra Vajda (NY); Andrew Schallhorn and Landon Hubbart (OK); Ying Liu (OR); and Ken Burton and J’ne Byckovski (TX). Also participating were: Luciano Gobbo (CA); Randy Jacobson (HI); Anthony Bredel (IL); and Eric Lowe (VA).

1. **Discussed the Timeline for the Data Collection of NAIC Reports**

Ms. Darby said that during the Aug. 10 meeting of the Casualty Actuarial and Statistical (C) Task Force, there was a request to the Statistical Data (C) Working Group to gather information on whether the timeline for data collection for the Dwelling Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner's Insurance (Homeowners Report) and Auto Insurance Database Report (Auto Report) reports can be sped up. She said NAIC staff requested that information from submitting statistical agents and residual markets. She said some of the responses indicated that certain statistical agents could provide data in late fall in the year following the data year. She said two big exceptions were the auto data provided by Texas and the homeowners data provided by California. Mr. Chou said even if Texas and California cannot report, the Working Group should still investigate the possibility of a faster timeline.

Birny Birnbaum (Center for Economic Justice—CEJ) said his proposal for data collection submitted to the Blanks (E) Working Group was the catalyst for this discussion. He said the responses from the statistical agents make it clear that his proposal for data collection is the most efficient method to get average premium data on these lines of business.

Mr. Chou said even if Texas and California cannot report, the Working Group should still investigate the possibility of a faster timeline. Mr. Birnbaum said the Insurance Services Office (ISO) indicated that it could speed up the reporting, but the Independent Statistical Service (ISS) indicated that it would not be able to provide its data until late in the year following the end of the data year. Al Burton (ISS) said companies report to the ISS annually in the summer of the next year following the end of the data year. He said submitted data is not necessarily ready to be used and needs to be quality checked. Mr. Birnbaum said the standard statistical reports that statistical agents collect from insurers have a tremendous amount of claims data and a greater level of detail than is requested in his proposal. He said his proposal is not intended to replace the information that is provided by the Homeowners Report and Auto Report. He said it should not take two years after the experience period for state insurance regulators to know what the average premiums are in their state.

Tip Tipton (Thrivent) said the main concern with Mr. Birnbaum’s proposal is that the financial annual statement is used by state insurance regulators for solvency purposes and financial reporting. He said bringing in this type of statistical data would be excessive and that it is not the appropriate place to gather this data.

Mr. Chou asked if the timeline could be sped up if the requested data was only for premiums and exposure, and not claims. Mr. Burton said when compiling the Texas data, the last of the data sources used typically becomes available 10–12 months after the end of the year. He said they would have a hard time shifting resources from other statutorily required reporting in order to complete this data request faster. Mr. Chou asked if the data source that delays Texas reporting could be improved. Mr. Burton said the data source has a statistical plan that has been approved by state insurance regulators in every state and that requesting a less detailed report to speed up the timeline would require the data source to file a new statistical plan with regulators.

Ralph Blanchard (Travelers Insurance) asked if there was a difference in the data quality scrubbing in the data being requested in Mr. Birnbaum’s proposal and the data submitted for the statistical reports. Stephen Clark (ISO) said it would be a challenge to achieve good data quality across the industry with the annual statement data. He said data quality is extremely important with the data that the ISO submits for the statistical reports. He said if there is a willingness to accept lesser data quality checks, it may be possible to accelerate the timeline. Mr. Burton (ISS) agreed that less rigorous data checks could speed up the timeline, but it would still depend on when they receive the data from companies. Mr. Birnbaum said the data reported in the annual statement would not be as granular as the data currently requested in the statistical reporting. He said statistical agents that...
receive transaction-level data are able to quality check their data much quicker. He said the data quality checks that go into the statistical reporting are much more time-consuming than the data in the annual statement because of its granularity.

Mr. Chou asked if Mr. Birnbaum’s annual statement proposal is adopted, is there a concern that average premium numbers derived from that data could be significantly different from the statistical reports that would be released two years later and if there could be misuse of those numbers. Mr. Birnbaum said he would not expect those numbers to be significantly different. He said data such as premium and exposures should be simple for companies to report on a statewide basis. He said he is not concerned with misuse because currently the statistical reports are two years behind, and the use of two-year-old average premium data would be more concerning.

Mr. Schwartz asked why it would take 10 months to report to submit data when companies should have the premium and exposure data shortly after the end of the year. He said the Working Group should spend time researching why certain companies cannot provide that data sooner and if there is a way to speed up the process. Ms. Darby asked if the data source for Texas could speed up their reporting if only premium and exposure data was collected. Mr. Burton said the earned exposure is what takes a long time to collect, and some larger companies are not able to submit that data quickly. He said it would require analysis to see if the report can be submitted without the earned exposure piece.

Mr. Bradner said the statistical data that is submitted to states involves an antiquated process that needs change and updating. Mr. Birnbaum said if all statistical agents were receiving transactional data, it would be much quicker to report that data. He said that type of reporting would require a rethinking of the statistical process. He said his proposal is not intended to do that and that it is a modest proposal to get specific information. Mr. Chou asked if the Working Group is fine with the current antiquated process of data collection or if they should investigate an alternative that would offer a more updated and technological approach. Ms. Darby agreed that the Working Group should continue to investigate the statistical reporting process and how it can be improved without losing data quality.

Ms. Darby said from the responses of the submitting statistical agents, she does not see a way to provide the data in its current form any faster. Mr. Citarella said his response to the request from the Casualty Actuarial and Statistical (C) Task Force would be that the Working Group would not recommend sacrificing completeness for speed.

Ms. Darby said the Working Group will hold another meeting to have a more in-depth discussion with the statistical agents about what information they would be able to provide and what can be done to speed up their processes.

Having no further business, the Statistical Data (C) Working Group adjourned.
Comments of the Center or Economic Justice

To the NAIC Casualty Actuarial and Statistical Task Force

Blanks Referral for Proposal 2021-11BWG

October 11, 2021

In response to the Blanks Working Group referral to CASTF, CEJ urge CASTF to recommend adoption of Blanks Proposal 2021-11BWG for the following reasons.

1. The addition of two data elements – written exposures and earned exposures – to the current reporting of written premium and earned premium for the private passenger auto and homeowners lines of business will provide useful and relevant information for regulators, policymakers and the public by providing some of the same information in current CASTF reports but two or more years earlier.

2. Contrary to industry claims, the additional data elements – and average premium calculations generated – will not be misleading to regulators, policymakers or the public.

3. The additional data elements complement CASTF’s statistical reports which provide more granular and additional data analysis.

4. The additional data elements are financial information suited to reporting through the annual and quarterly financial statements. By reporting through the financial statement infrastructure, the data will be comprehensive, uniform and timely.

5. There is no meaningful alternative – speeding up reporting by statistical agents and states to produce the same limited information is not feasible with the current statistical agent infrastructure.

Additional Issue More Relevant for Blanks Working Group consideration

7. There will be a non-material cost burden on insurers to report the additional data elements.
The addition of two data elements – written exposures and earned exposures – to the current reporting of written premium and earned premium for the private passenger auto and homeowners lines of business will provide useful and relevant information for regulators, policymakers and the public by providing some of the same information in current CASTF reports but two or more years earlier.

The NAIC and individual states have determined that average personal auto premium and average homeowners premium are relevant and useful information for regulators, policymakers and the public, as evidenced by the publication of these values in the Auto Insurance Database Report and the Dwelling, Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance Report.

For example, on page 3 of the 2021 Auto Insurance Database Report, the average expenditure calculation is shown as total personal auto written premium divided by liability written exposures. This calculation can be exactly replicated with the data reported pursuant to 2021-11BWG – nearly two years sooner than the publication of the Auto Insurance Database Report.

Similarly, the average premium in the Homeowners report is calculated by dividing written premium by written exposures. Written exposures are expressed as house-years. The report includes a table aggregating written exposures by homeowners owner-occupied and homeowners tenants and condo/co-op. The report calculates total average premium by dividing written premium by written exposures for homeowners owner-occupied policy forms and for tenant/condo/coop policy forms. 2021-11BWG allows exact replication of the tenant/condo/coop calculation while permitting an owner-occupied calculation limited to homeowners policy forms – nearly two years sooner than the publication of the Homeowners report.

If the publication of average premium for personal auto and residential property insurance is sufficiently relevant and important for the NAIC to publish these values, it is equally or more relevant and important to provide data permitting these calculations in a far more timely manner.

Contrary to industry claims, the additional data elements – and average premium calculations generated – will not be misleading to regulators, policymakers or the public.

Some have argued that average premium calculations developed from data reported pursuant to 2021-11BWG would be misleading or confusing to consumers. This argument is logically and factually incorrect.
First, if the potential calculations with data reported pursuant to 2021-11BWG replicate calculations in the CASTF reports, it simply can’t be argued that the average premium values are misleading. In fact, by making an average premium value available much closer to the experience period, the average premium calculations generated from data reported pursuant to 2021-11BWG are more relevant and less misleading than values reported two years after the experience period.

For example, the NAIC issued a press release on March 9, 2021 announcing the release of the Auto Insurance Database Report. The release stated, “The national average annual expense per insured vehicle was $1,190 in 2018, a 20.87% increase from 2014.” When newspapers pick up this story, there is no caveat that the data are two to three years old and may not reflect current conditions. Rather, the logical response from media and consumers is that this information is relevant and current. By permitting the calculation of average premium values two years earlier than the CASTF reports, 2021-11BWG will reduce confusion and the potential for policymakers and consumers to be misled.

Second, some have argued that the CASTF reports are not misleading or confusing because the reports provide more detail and explanation about the tables in the reports. The additional data detail is important and useful for some purposes, but the fact remains that NAIC and state insurance department press releases and media coverage focus on the top line numbers, not the detailed analyses. Stated differently, providing a report with more detail and commentary is no guarantee that the detailed data or commentary will be used or relied upon.

Third, if confusion or misconception are a concern, there is nothing to prevent the NAIC – or state insurance departments – from issuing a press release or brief report with any caveats or commentary shortly after the 2021-11BWG data are reported.

Fourth, denying the collection and reporting of the additional data elements in 2021-11BWG based on false claims about misleading and confusing policymakers and consumers is simply censorship based on the implicit assumption that only insurers and regulators know how to analyze and present insurers’ financial information. This implicit assumption is forcefully disproved by the presence of scores of rating agencies, financial market analysis and academics who analyze and interpret insurers’ financial information.

The additional data elements complement CASTF’s statistical reports which provide more granular and additional data analysis.

As noted above, the CASTF reports contain far more and more detailed data than would be reported pursuant to 2021-11BWG. Consequently, 2021-11BWG complements the CASTF reports in the same way that Fast Track data reports complement annual reports from statistical agents or that quarterly financial statements complement annual financial statements.
The additional data elements are financial information suited to reporting through the annual and quarterly financial statements – comprehensive, uniform

Industry has incorrectly argued that the two additional data elements in 2021-11BWG are statistical data and not financial data and, consequently, do not belong in the quarterly and annual financial statements.

As evidenced by the recent efforts by the Statistical Working Group to explore the potential for timelier reporting by statistical agents of premium and exposure data, the defining characteristic of statistical reports is the provision of claims experience matched to exposures. It is this matching that requires statistical agents to wait 15 months after the end of the experience period to collect claims experience associated with exposures from that experience period.

In contrast written and earned premium and written and earned exposures are financial information available immediately after the end of the experience period. To understand why this is the case, consider how insurers calculate the written and earned premium values reported in the annual and quarterly financial statements.

Insurers maintain a database of sales transactions – records of when a new or renewal policy was issued and the amount of premium associated with that policy. When the insurer calculates written premium for an experience period, the insurer sums the premium on policies issued during the period and nets out return premium for net written premium during the period. When the insurer calculates the earned premium for the period, the insurer calculates the portion of the policy term occurring during the experience period, multiples this fraction times the policy premium and sums these amounts.

The calculation of written exposures and earned exposures is identical to the calculation of written and earned premium with the exception that instead of summing premium, the calculation sums vehicles insured and homes insured, respectively, for personal auto and homeowners. No claims information is involved and the same financial records used to calculated written and earned premium are used to calculate written and earned exposures.

There is no meaningful alternative – speeding up reporting by statistical agents and states to produce the same limited information is not feasible with current statistical agent infrastructure for statistical agents and states representing well over 50% of the market.

The Statistical Working Group investigated whether the statistical agents could speed up the delivery of their annual reports, generally, or just the premium and exposure data elements, specifically. The result of this investigation was clearly no.
It is important to set the baseline against which to compare the various stat agents’ and states’ responses. Insurers are required to submit the annual financial statement by March 1 and April 1, respectively, for key schedule and exhibits and remaining schedules and exhibits. Quarterly financial statements are due 45 days following the end of the first three experience quarters. This means that the by line by state data for the annual statement in 2021-11BWG is available to regulators shortly after the submission data and to the public about 30-45 days after the submission date. So, the by state by line data in the annual statement portion of 2021-11BWG is available to the public by around May 15 (though some purchases obtain annual statement data in April) and the by line data in the quarterly statement portion of 2021-11BWG is available to the public by around June 30, September 30 and December 30, respectively for Q1, Q2 and Q3 quarterly statements.

The Statistical Working Group received responses 15 statistical agents. Of the three main statistical agents – ISO, NISS and ISS, only ISO stated an ability to provide an earlier report of premiums and exposures – in May. NISS and ISS, who account for about 50% of the personal auto and homeowners statistical reporting, are not able to speed up delivery. While some state entities reported the ability to speed up delivery, most indicated they could not, including California with 11-12% of the total market.

Putting aside the obvious problems with usefulness of a minority of countrywide experience, even if the speeded up reporting was limited to the statistical agents and states who could provide the premium and exposure data sooner than the current schedule (and not all could meet a May deadline for full year reporting), the NAIC would have to collect and compile the information, which would take additional time.

The use of the annual and quarterly financial statement reporting reflected in 2021-BWG represents an extremely efficient method of collecting comprehensive and complete data in a uniform and consistent fashion in a timely manner.

**By virtue of financial statement reporting, 2021-11BWG includes some data quality checks.**

The instructions for reporting included 2021-11BWG require that the earned premium and written premium values tie to other exhibits in the annual and quarterly financial statements. These are core financial data points that, themselves, are typically used to verify and reconcile other data reports. For example, the statistical agent AAIA, in its response to the Statistical Working Group, states, “As far as how soon AAIS could get this data to the NAIC, our initial assessment is that if we started on the reconciliation when we get the preliminary annual statement data in May we should be able to finalize data by September.”
Additional Issue More Relevant for Blanks Working Group consideration: There will be a non-material cost burden on insurers to report the additional data elements.

Some have raised the argument that reporting of data pursuant to 2021-11BWG will be costly for insurers, although this claim of cost burden has not been supported by any evidence or logical explanation. In fact, it is demonstrable that any additional cost to insurers will be non-material.

Recall the discussion above about how insurers track sales transactions and calculate written and earned premium for financial statement reporting. With access to the transaction data that permits calculating written and earned premium, the analogous calculations of written and earned exposures are minor additions. This ease of calculation is evidenced by the response of ISO to the Statistical Working Group inquiry. Insurers reporting to ISO report transaction-detail data – similar to the data records maintained by insurers. By virtue of having transaction data, indicated the ability to report the premium and exposure data shortly after receipt from insurers.

2021-11BWG does not require insurers to collect any new data elements nor even to calculate new data elements. It simply asks insurers to report written and earned exposures at the same time and in the same detail and written and earned premiums are reported in financial statements.
October 8, 2021

Memo to: NAIC Casualty and Statistical Task Force (CASTF)
From: Ken Williams – CAS Staff Actuary
RE: CAS review of appointed actuary CE logs for NAIC compliance

The National Association of Insurance Commissioners (NAIC) developed new requirements for appointed actuaries associated with signing actuarial opinions for 2020 NAIC annual statements. Among these new requirements is that those appointed actuaries must include additional information on the type of continuing education (CE) obtained to meet applicable qualification standards. The information requested is related to meet the Specific Requirements for appointed actuaries from the American Academy of Actuary’s Qualification Standards (USQS). As part of this requirement, the CAS has agreed to submit an annual report to the NAIC summarizing the results of their review of appointed actuary records as part of the CAS’s normal CE compliance process.

As part of their annual cycle, the CAS has completed a review of 41 continuing education logs from those who indicated that they are meeting the Specific requirements of the USQS. Of these 41 logs, 34 used the excel template developed by the SOA and CAS under the guidance of the NAIC. Four submitted their CE in another excel form, and three submitted PDF copies of their CE logs.

Of the 41, four logs did not include the documentation of the required new NAIC categories. For the remaining 37, the results of the analysis are as follows.

Members meeting the appointed actuary requirement had an average of 41.5 total CE hours, and an average of 29.4 hours meeting the specific CE requirement. The range for specific CE was from 15.6 hours to 70.2 hours. The specific qualification requirements include a minimum of 30 CE hours, of which 15 must meet the specific requirements.

In terms of the seven primary NAIC categories, the percentage of actuaries reporting at least some CE in that category, and their average CE hours were:

<table>
<thead>
<tr>
<th>Primary Category</th>
<th>% Reporting some CE in this Category</th>
<th>Average CE hours in this Category</th>
</tr>
</thead>
<tbody>
<tr>
<td>Law &amp; Regulation</td>
<td>51%</td>

Casualty Actuarial and Statistical (C) Task Force
E-Vote
August 20, 2021

The Casualty Actuarial and Statistical (C) Task Force conducted an e-vote that concluded Aug. 20, 2021. The following Task Force members participated: Grace Arnold, Chair, represented by Phil Vagliaturo (MN); James J. Donelon, Vice Chair, represented by Nichole Torblaa (LA); Jim L. Ridling represented by Daniel Davis (AL); Evan G. Daniels represented by Tom Zuppan (AZ); Ricardo Lara represented by Lynne Wehmueller (CA); Michael Conway represented by Mitchell Bronson (CO); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by David Christhilf (DC); David Altmaier represented by Sandra Starnes (FL); Colin M. Hayashida represented by Randy Jacobson (HI); Doug Ommen represented by Travis Grassel (IA); Dana Popish Severyinghaus represented by Judy Mottar (IL); Vicki Schmidt represented by Nicole Boyd (KS); Kathleen A. Birrane represented by Robert Baron (MD); Chlora Lindley-Myers and Cynthia Amann (MO); Mike Causey represented by Arthur Schwartz (NC); Barbara D. Richardson represented by Gennady Stolyarov (NV); Glen Mulready represented by Andrew Schallhorn (OK); Andrew R. Stolfi represented by David Dahl (OR); Doug Slape represented by Miriam Fisk (TX); Michael S. Pieciak represented by Rosemary Raszka (VT); and James A. Dodrill represented by Juanita Wimmer (WV).

1. **Adopted a Comment Letter on the U.S. Qualification Standards**

   The Task Force conducted an e-vote to consider adoption of a comment letter on the second exposure draft of the American Academy of Actuaries’ (Academy’s) *U.S. Qualification Standards* (Attachment Four-A) and send it to the Academy. The motion passed unanimously.

   Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.

Chair of the Casualty Actuarial and Statistical (C) Task Force  

SENT VIA EMAIL TO USQSComments@actuary.org

Re: Proposed revision of the Qualification Standards (including Continuing Education Requirements) for Actuaries Issuing Statements of Actuarial Opinion in the United States

To begin, the Casualty Actuarial and Statistical (C) Task Force (CASTF) would like to express its appreciation to the Academy for the thoughtful and reasonable ways in which the CASTF’s comments on the First Exposure Draft were reflected in the Second Exposure Draft. The following observations arose out of further discussions among CASTF members subsequent to their review of the Second Exposure Draft.

1. Section 2.1(a): It appears that, with the revisions in the Second Exposure Draft, there is no longer a membership requirement to be part of a U.S. or IAA professional actuarial organization. One must complete basic education and obtain one of the designations identified in Section 2.1(a), but then it appears there are no longer membership requirements once one has done so. On the other hand, the CASTF recognizes that footnote 2 in Section 1 of the U.S. Qualification Standards states that “The word ‘actuary’ as used herein means an actuary who is a member of any actuarial organization that requires its members to meet the USQS when practicing in the United States.” Therefore, the U.S. Qualification Standards are only binding upon members of actuarial organizations that require adherence to the U.S. Qualification Standards. This is, indeed, also the case today.

The CASTF considers it to be valuable for practicing actuaries in the U.S. to be members of an organization that agrees to require members to adhere to the Qualification Standards and be subject to professional counseling and discipline. It is hoped that insurers share this recognition of the value of actuarial designations and will not be disincentivized from supporting the membership dues for their employees who have become credentialed. Moreover, there are situations in which, to satisfy regulatory requirements, an actuary would need to be credentialed and remain a member of an actuarial organization. For example, the NAIC Annual Statement Instructions – Property/Casualty require an Appointed Actuary to have obtained and to maintain an Accepted Actuarial Designation, as defined therein. The CASTF brings this to the Academy’s
attention to underscore the continued importance of actuarial designations in fulfilling regulatory purposes such as issuing a Statement of Actuarial Opinion in connection with the NAIC Property/Casualty Annual Statement. Outside of those purposes, utilizing credentialed actuaries to comply with other regulatory requirements, such as providing support on rate filings, is also desirable and tends to improve the quality of an insurer’s work product. The CASTF would be interested in the Academy’s perspective regarding what kinds of incentives would remain for individuals who are subject only to the General Qualification Standard to maintain their actuarial designations subsequent to the revisions in the Second Exposure Draft.

2. **Section 2.1(d):** The CASTF previously stated that “it was reasonable and appropriate for the Academy to have removed the specific listing of current SOA specialty tracks (or the lack of specialty tracks in the CAS or ASPPA), since the absence of such references would be compatible with potential future additions or revisions to specialty tracks by the relevant actuarial societies without necessitating a revision to the Qualification Standards at each future time that such changes occur.” However, the CASTF would also like clarification from the Academy as to what requirements would apply, for example, to an actuary credentialed by the SOA who obtained his or her Fellowship in the SOA before the SOA established its General Insurance Track. Likewise, an analogous situation can be considered in an area such as life insurance, for which the CAS has not established any specialized education. Would a person who obtained his or her Fellowship in the CAS be eligible to practice in the life insurance area without passing any life-insurance-specific exams if all other requirements have been met?

It is stated that “if education relevant to the particular subject of the SAO was available when the actuary chose a specific area of practice and obtained their designation in that area of practice, the actuary must have completed such education.” It would appear that this would mean that, if at the time the actuary chose a specific area of practice, only one actuarial society offered specialized education in that area of practice, then this actuary would need to either have obtained that specialized education from that actuarial society, or else to have qualified pursuant to Section 4. Changes in Practice and Application. If this is the case, then the CASTF would request confirmation that the Academy interprets the Second Exposure Draft of the U.S. Qualification Standards in the same manner.

3. **Section 3.1.1.2:** Previously, the CASTF commented on Section 3.1.1.2 that “The addition of ‘the Society of Actuaries’ as one of the providers for relevant examinations for the Statement of Actuarial Opinion with regard to the NAIC Property and Casualty Annual Statement is important to achieve consistency with the recent revisions to the NAIC Statement of Actuarial Opinion Instructions. The revision proposed here by the Academy is therefore necessary and appropriate.”

However, the CASTF also considers it important to add a reference to the NAIC Statement of Actuarial Opinion (SAO) Instructions – Property/Casualty, since the revised Section 3.1.1.2 does not contain all of the NAIC requirements for signing an NAIC Property/Casualty Annual Statement SAO. The CASTF recognizes that there is a benefit to the Qualification Standards being more broadly worded than the NAIC Statement of Actuarial Opinion Instructions, since this would prevent a situation where the Qualification Standards would need to be amended every time the NAIC Statement of Actuarial Opinion Instructions would be amended. However, a revision
(shown in bold for this letter only) along the following lines would aid actuaries to understand there are additional qualification requirements placed upon Appointed Actuaries and also preserve the relevance of the Qualification Standards if the NAIC Statement of Actuarial Opinion Instructions are ever amended in the future:

“3.1.1.2 Statement of Actuarial Opinion, NAIC Property and Casualty Annual Statement — An actuary should successfully complete relevant examinations administered by the American Academy of Actuaries, the Casualty Actuarial Society, or the Society of Actuaries on the following topics: (a) policy forms and coverages, underwriting, and marketing, (b) principles of ratemaking, (c) statutory insurance accounting and expense analysis, (d) premium, loss, and expense reserves, and (e) reinsurance. Moreover, an actuary should meet all of the requirements to be a Qualified Actuary as set forth in the NAIC Statement of Actuarial Opinion Instructions – Property/Casualty.”

4. UNDER THE REVIEW: Referring to 2.1 d) 2; 2.1 d) 3; 2.1.1 b); and 3.2, It would be helpful if the phrase “under the review” could be clarified.

5. Appendix 1, Section III: While the CASTF recognizes that the Academy is not proposing to make any changes to Appendix 1 Section III – Application of U.S. Qualification Standards to Public Service Actuaries – the CASTF wishes to state for the record that there remains significant disagreement with Appendix 1 Section III among regulatory actuaries, both in regard to the existence of such an appendix as well as some of the specific activities enumerated therein as being SAOs. It remains the view of many regulatory actuaries that their authority as regulators derives from State law and may not be restricted by the standards of a private organization that is predominantly comprised of practitioners within the regulated industry. While the CASTF is supportive of many of the revisions proposed by the Academy within the U.S. Qualification Standards, the CASTF wishes to make this comment on Appendix 1 Section III to avoid the impression that absence of comment regarding this matter might signify any manner of implicit agreement. Further, CASTF prefers for this section to be deleted. By singling out the group of public service actuaries for a special set of standards, the general public may get the perception that public service actuaries are held to a different set of standards than all other actuaries.

If you have any questions, please contact Kris DeFrain (kdefrain@naic.org) at the NAIC.

Cc: Kris DeFrain (NAIC)
The Actuarial Opinion (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force conducted an e-vote that concluded Sept. 23, 2021. The following Working Group members participated: Anna Krylova, Chair (NM); Amy Waldhauer (CT); David Christhilf (DC); Judy Mottar (IL); Sandra Darby (ME); Gordon Hay (NE); Andrew Schallhorn (OK); and James DiSanto (PA).

1. **Adopted the 2021 Regulatory Guidance**

Having no further business, the Actuarial Opinion (C) Working Group adjourned.
REGULATORY GUIDANCE on Property and Casualty Statutory Statements of Actuarial Opinion, Actuarial Opinion Summaries, and Actuarial Reports for the Year 2021

Prepared by the NAIC Actuarial Opinion (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force

The NAIC Actuarial Opinion (C) Working Group (Working Group) of the Casualty Actuarial and Statistical (C) Task Force believes that the Statement of Actuarial Opinion (Actuarial Opinion), Actuarial Opinion Summary (AOS), and Actuarial Report are valuable tools in serving the regulatory mission of protecting consumers. This Regulatory Guidance document supplements the NAIC Annual Statement Instructions – Property/Casualty (Instructions) in an effort to provide clarity and timely guidance to companies and Appointed Actuaries regarding regulatory expectations on the Actuarial Opinion, AOS, and Actuarial Report.

An Appointed Actuary has a responsibility to know and understand both the Instructions and the expectations of state insurance regulators. One expectation of regulators clearly presented in the Instructions is that the Actuarial Opinion, AOS, and supporting Actuarial Report and workpapers be consistent with relevant Actuarial Standards of Practice (ASOPs).

2021 Editorial Change to the Instructions
As a result of the Casualty Actuarial Society’s rescinding of the Statement of Reserving Principles this year, editorial changes were made to the Instructions to remove the reference to “principles.” The Appointed Actuary should be aware of this as it would impact the wording in item b. in the Opinion paragraph.

There have been changes to the Instructions for 2018 and 2019. As a result of these changes, the Instructions now:

- Include a new definition for “Accident & Health (A&H) Long Duration Contracts” in order to draw a distinction between these contracts and the Property and Casualty (P&C) Long Duration Contracts whose unearned premium reserves are reported on Exhibit A, Items 7 and 8,
- Add a reference to SSAP No. 65 in the definition of P&C Long Duration Contracts,
- Include a new disclosure item on Exhibit B for net reserves associated with A&H Long Duration Contracts,
- State that the Actuarial Report should disclose all reserve amounts associated with A&H Long Duration Contracts, and
- State that the Actuarial Report and workpapers summarizing the asset adequacy testing of long-term care contracts must be in compliance with Actuarial Guideline LI – The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves (AG 51) of the Accounting Practices and Procedures Manual.
- Pursuant to efforts undertaken by the Task Force and the Executive (EX) Committee, the definition of “Qualified Actuary” is significantly revised and a new requirement called “qualification documentation” was added. These changes are described in this Regulatory Guidance document and additional guidance is offered to assist an Appointed Actuary in creating qualification documentation.

I. General comments

A. Reconciliation between documents

If there are any differences between the values reported in the Actuarial Opinion, AOS, Actuarial Report, and Annual Statement, the Working Group expects Appointed Actuaries to include an explanation for these differences in the appropriate document (Actuarial Opinion, AOS, or Actuarial Report). The use of a robust peer review process by the Appointed Actuary should reduce reporting errors and non-reconciling items.

One situation in which a legitimate difference might arise is in the case of non-tabular discounting: The direct and assumed loss reserves on line 3 of the Actuarial Opinion’s Exhibit A come from Schedule P, Part 1, which is gross of non-tabular discounting, while the Actuarial Report and AOS might present the direct and assumed loss reserves on a net of discounting basis.

B. Role of illustrative language in the Instructions

While the Instructions provide some illustrative language, the Working Group encourages Appointed Actuaries to use whatever language they believe is appropriate to clearly convey their opinion and the basis for that opinion. In forming their opinion, Appointed Actuaries should consider company-specific characteristics such as intercompany pooling arrangements; recent mergers or acquisitions; and significant changes in operations, product mix, or reinsurance arrangements.

C. Qualified Actuary definition

With the introduction of an additional educational track for property and casualty (P/C) actuaries, the NAIC needed to consider revisions to the definition of “Qualified Actuary.” Upon receiving advice from a consultant on the NAIC’s definition of a “Qualified Actuary,” the NAIC began a project to re-define a Qualified Actuary using objective criteria. Upon nomination by the Casualty Actuarial Society (CAS), Society of Actuaries (SOA), and the American Academy of Actuaries (Academy), many Appointed Actuaries and other subject matter experts volunteered to assist the NAIC. The NAIC’s P/C Appointed Actuary Job Analysis Project resulted in documentation of knowledge statements, or what an Appointed Actuary may need to know and do. The NAIC’s P/C Educational Standards and Assessment Project resulted in documentation of which elements in each knowledge statement should be included in basic education as a minimum standard, with the remaining elements achievable through experience or continuing education. Using the minimum educational standards, the NAIC and subject matter experts assessed the CAS and SOA syllabi and reading materials. TheCAS and SOA have made or agreed to make specific changes to their syllabi and/or reading materials to meet the standards. The revised syllabi and reference materials are required to be in place by Jan. 1, 2021.

As a result of these NAIC projects, the definition of “Qualified Actuary” was crafted to include basic education requirements and professionalism requirements (e.g. application of U.S. Qualification Standards, Code of Conduct, and ABCD). The definition of Qualified Actuary replaces the requirement to be “a member in good standing of the Casualty Actuarial Society” with a requirement to obtain and maintain an “Accepted Actuarial Designation.” An Accepted Actuarial Designation is one that was considered by the NAIC to meet the NAIC’s minimum educational standards for an Appointed Actuary. See the Instructions for the list of Accepted Actuarial Designations. It is important to note that some designations are accepted as meeting the basic education standards only if certain specific exams and/or tracks are successfully completed (with exceptions noted in the exam substitutions table of the Instructions). The NAIC process requires a recurring assessment of the “Qualified Actuary” definition every 5-10 years.

The NAIC does not intend to retroactively change requirements for Appointed Actuaries. If an actuary previously met the 2018 qualified actuary definition but lacks the specific exams and/or tracks under the new definition, the Instructions provide a list of acceptable substitutions.

D. Qualification documentation

The 2019 Instructions require the Appointed Actuary to provide “qualification documentation” to the Board of Directors upon initial appointment and annually thereafter. The documentation provided to the Board must be available to the
E. Replacement of an Appointed Actuary

The Instructions require two letters when the Board replaces an Appointed Actuary: one addressed from the insurer to the domiciliary commissioner, and one addressed from the former Appointed Actuary to the insurer. The insurer must provide both of these letters to the domiciliary commissioner.

The detailed steps are as follows:
1. Within 5 business days, the insurer shall notify its domiciliary insurance department that the former Appointed Actuary has been replaced.
2. Within 10 business days of the notification in step 1, the insurer shall provide the domiciliary commissioner with a letter stating whether in the 24 months preceding the replacement, there were disagreements with the former Appointed Actuary. The Instructions describe the types of disagreements required to be reported in the letter.
3. Within the same 10 business days referred to in step 2, the insurer shall, in writing, request that its former Appointed Actuary provide a letter addressed to the insurer stating whether the former Appointed Actuary agrees with the statements contained in the insurer’s letter referenced in step 2.
4. Within 10 business days of the request from the insurer described in step 3, the former Appointed Actuary shall provide a written response to the insurer.
5. The insurer shall provide the letter described in step 2 and the response from the former Appointed Actuary described in step 4 to the domiciliary commissioner.

Regarding the disagreements referenced in step 2 above, regulators understand that there may be disagreements between the Appointed Actuary and the insurer during the course of the Appointed Actuary’s analysis that are resolved by the time the Appointed Actuary concludes the analysis. For instance, the Appointed Actuary’s analysis may go through several iterations, and an insurer’s comments on the Appointed Actuary’s draft Actuarial Report may prompt the Appointed Actuary to make changes to the report. While regulators are interested in material disagreements regarding differences between the former Appointed Actuary’s final estimates and the insurer’s carried reserves, they do not expect notification on routine discussions that occur during the course of the Appointed Actuary’s work.

F. Reporting to the Board of Directors

The Appointed Actuary is required to report to the insurer’s Board every year, and the Instructions were amended in 2016 to require the Board’s minutes to specify the manner in which the Appointed Actuary presented the required information. This may be done in a form of the Appointed Actuary’s choosing, including, but not limited to, an executive summary or PowerPoint presentation. The Working Group strongly encourages the Appointed Actuary to present his or her analysis in person so that the risks and uncertainties that underlie the exposures and the significance of the Appointed Actuary’s findings can be adequately conveyed and discussed. Regardless of how the Appointed Actuary presents his or her conclusions, the Actuarial Report must be made available to the Board.

Management is limited to reporting single values on lines 1 and 3 of the Liabilities, Surplus, and Other Funds page of the balance sheet. However, actuarial estimates are uncertain by nature, and point estimates do not convey the variability in the projections. Therefore, the Board should be made aware of the Appointed Actuary’s opinion regarding the risk of material adverse deviation, the sources of risk, and what amount of adverse deviation the Appointed Actuary judges to be material.
Adopted by the Actuarial Opinion (C) Working Group: September 23, 2021

G. Requirements for pooled companies

Effective with the 2014 Instructions, requirements for companies that participate in intercompany pools are as follows:

For all intercompany pooling members:

- Text of the Actuarial Opinion should include the following:
  - Description of the pool
  - Identification of the lead company
  - A listing of all companies in the pool, their state of domicile, and their respective pooling percentages
- Exhibits A and B should represent the company’s share of the pool and should reconcile to the financial statement for that company

For intercompany pooling members with a 0% share of the pooled reserves:

- Text of the Actuarial Opinion should be similar to that of the lead company
- Exhibits A and B should reflect the 0% company’s values
  - Response to Exhibit B, Item 5 (materiality standard) should be $0
  - Response to Exhibit B, Item 6 (risk of material adverse deviation) should be “not applicable”
- Exhibits A and B of the lead company should be filed with the 0% company’s Actuarial Opinion
- Information in the AOS should be that of the lead company

Note the distinction between pooling with a 100% lead company with no retrocession and ceding 100% via a quota share reinsurance agreement. The regulator must approve these affiliate agreements as either an intercompany pooling arrangement or a quota share reinsurance agreement. The proper financial reporting is dependent on the approved filings, regardless of how company management regards its operating platform.

For intercompany pooling members with a greater than 0% share of the pooled reserves, regulators encourage the Appointed Actuary to display values in the AOS on a pooled (or consolidated) basis in addition to the statutory entity basis. This can be accomplished by displaying two tables of information.

H. Explanation of adverse development

1. Comments on unusual Insurance Regulatory Information System (IRIS) ratios in the Actuarial Opinion

   The Appointed Actuary is required to provide comments in the Actuarial Opinion on factors that led to unusual values for IRIS ratios 11, 12, or 13. The Working Group considers it insufficient to attribute unusual reserve development to “reserve strengthening” or “adverse development” and expects the Appointed Actuary to provide insight into the company-specific factors which caused the unusual value. Detailed documentation should be included in the Actuarial Report to support statements provided in the Actuarial Opinion.

2. Comments on persistent adverse development in the AOS

   The Appointed Actuary is required to comment on persistent adverse development in the AOS. Comments can reflect common questions that regulators have, such as:
   - Is development concentrated in one or two exposure segments, or is it broad across all segments?
   - How does development in the carried reserve compare to the change in the Appointed Actuary’s estimate?
   - Is development related to specific and identifiable situations that are unique to the company?
   - Does the development or the reasons for development differ depending on the individual calendar or accident years?
Adopted by the Actuarial Opinion (C) Working Group: September 23, 2021

I. Revisions

When a material error in the Actuarial Opinion or AOS is discovered by the Appointed Actuary, the company, the regulator, or any other party, regulators expect to receive a revised Actuarial Opinion or AOS.

Regardless of the reason for the change or refiling, the company should submit the revised Actuarial Opinion in hard copy to its domiciliary state and electronically to the NAIC. The company should submit the revised AOS in hard copy to the domiciliary state but should not submit the document to the NAIC.

A revised Actuarial Opinion or AOS should clearly state that it is an amended document, contain or accompany an explanation for the revision, and include the date of revision.

II. Comments on Actuarial Opinion and Actuarial Report

A. Review date

The illustrative language for the Scope paragraph includes “… and reviewed information provided to me through XXX date.” This is intended to capture the ASOP No. 36 requirement to disclose the date through which material information known to the Appointed Actuary is included in forming the reserve opinion (the review date), if it differs from the date the Actuarial Opinion is signed. When the Appointed Actuary is silent regarding the review date, this can indicate either that the review date is the same as the date the Actuarial Opinion is signed or that the Appointed Actuary overlooked this disclosure requirement. When the Appointed Actuary’s review date is the same as the date the Actuarial Opinion is signed, regulators suggest the Appointed Actuary clarify this in the Actuarial Opinion by including a phrase such as “… and reviewed information provided to me through the date of this opinion.”

B. Making use of another’s work

If the Appointed Actuary makes use of the work of another not within the Appointed Actuary’s control for a material portion of the reserves, the Instructions say that the Appointed Actuary must provide the following information in the Actuarial Opinion:

- The person’s name;
- The person’s affiliation;
- The person’s credential(s), if the person is an actuary; and
- A description of the type of analysis performed, if the person is not an actuary.

Furthermore, Section 4.2.f of ASOP No. 36 says that the actuary should disclose whether he or she reviewed the other’s underlying analysis and, if so, the extent of the review. Though this is not mentioned in the ASOP, the Working Group encourages the Appointed Actuary to consider discussing his or her conclusions from the review.

Section 3.7.2 of ASOP No. 36 describes items the actuary should consider when determining whether it is reasonable to make use of the work of another. One of these items is the amount of the reserves covered by the other’s analyses or opinions in comparison to the total reserves subject to the actuary’s opinion. The Working Group encourages the Appointed Actuary to disclose these items in the Actuarial Opinion by providing the dollar amount of the reserves covered by the other’s analyses or opinions and the percentage of the total reserves subject to the Appointed Actuary’s opinion that these other reserves represent.

C. Points A and B of the Opinion paragraph when opinion type is other than reasonable

Regulators encourage Appointed Actuaries to think about their responses to point A (meet the requirements of the insurance laws of the state) and point B (computed in accordance with accepted actuarial standards) of the Opinion paragraph when they issue an Actuarial Opinion of a type other than “Reasonable.”
D. Conclusions on a net versus a direct and assumed basis

Unless the Appointed Actuary states otherwise, regulators will assume that the Appointed Actuary’s conclusion on the type of opinion rendered, provided in points C and D of the Opinion paragraph, applies to both the net and the direct and assumed reserves. If the Appointed Actuary reaches different conclusions on the net versus the direct and assumed reserves, the Appointed Actuary should include narrative comments to describe the differences and clearly convey a complete opinion. The response to Exhibit B, Item 4 should reflect the Appointed Actuary’s opinion on the net reserves.

Similarly, the materiality standard in Exhibit B, Item 5 and the RMAD conclusion in Exhibit B, Item 6 should pertain to the net reserves. If the Appointed Actuary reaches a different conclusion on the risk of material adverse deviation in the net versus the direct and assumed reserves, the Appointed Actuary should include a Relevant Comments paragraph to address the differences. Regulators understand that a net versus a direct and assumed RMAD will have different meanings and, potentially, different materiality standards.

E. Unearned premium for P&C Long Duration Contracts

Exhibit A, Items 7 and 8 require disclosure of the unearned premium reserve for P&C Long Duration Contracts. The Instructions require the Appointed Actuary to include a point D in the Opinion paragraph regarding the reasonableness of the unearned premium reserve when these reserves are material.

The Working Group expects that the Appointed Actuary will include documentation in the Actuarial Report to support a conclusion on reasonableness whenever point D is included in the Actuarial Opinion. This documentation may include the three tests of SSAP No. 65 or other methods deemed appropriate by the Appointed Actuary to support his or her conclusion.

Regulators see many opinions where dollar amounts are included in Exhibit A, Items 7 and 8; some opinions include a Relevant Comments paragraph discussing these amounts and some do not. Regulators would prefer at a minimum that Appointed Actuaries include some discussion in Relevant Comments on these amounts including an explicit statement as to whether these amounts are material or immaterial.

F. Other premium reserve items

With regard to “Other Premium Reserve Items” in Exhibit A, Item 9, the Appointed Actuary should include an explanatory paragraph about these premium reserves in Relevant Comments and state whether the amounts are material or immaterial. If the amounts are material, and the Appointed Actuary states the amounts are reasonable in an Opinion paragraph, regulators would expect the actuarial documentation to support this conclusion in the Actuarial Report.

Typical items regulators see listed as “Other Premium Reserve Items” are Medical Professional Liability Death, Disability & Retirement (DD&R) unearned premium reserves (UPR) and Other Liability Claims DD&R UPR. Depending on the nature of these exposures, these items may be also listed on Exhibit B, Line 12.2 as claims made extended UPR.

G. The importance of Relevant Comments paragraphs

The Working Group considers the Relevant Comments paragraphs to be the most valuable information in the Actuarial Opinion. Relevant Comments help the regulator interpret the Actuarial Opinion and understand the Appointed Actuary’s reasoning and judgment. In addition to the required Relevant Comments, the Appointed Actuary should consider providing information on other material items such as reinsurance with affiliates, mergers or acquisitions, other premium reserves, and catastrophe risk.

H. Risk of Material Adverse Deviation

The Relevant Comments paragraphs on the Risk of Material Adverse Deviation (RMAD) are particularly useful to regulators. The first two RMAD comments below respond to questions that Appointed Actuaries have posed to regulators. The second two stem from regulators’ reviews of Actuarial Opinions.
1. **No company-specific risk factors** – The Appointed Actuary is asked to discuss company-specific risk factors regardless of the RMAD conclusion. If the Appointed Actuary does not believe that there are any company-specific risk factors, the Appointed Actuary should state that.

2. **Mitigating factors** – Regulators generally expect Appointed Actuaries to comment on significant company-specific risk factors that exist prior to the company’s application of controls or use of mitigation techniques. The company’s risk management behaviors may, however, affect the Appointed Actuary’s RMAD conclusion.

3. **Consideration of carried reserves, materiality standard, and reserve range when making RMAD conclusion** – When deciding whether RMAD exists, the Appointed Actuary should consider the materiality standard in relation to the range of reasonable estimates and the carried reserves. For example, RMAD should likely exist when the sum of the materiality standard plus the carried reserves is within the range of reasonable estimates. Regardless, the Appointed Actuary should support the conclusion of whether RMAD exists.

4. **Materiality standards for intercompany pool members** – With the exception of intercompany pooling members that retain a 0% share, each statutory entity is required to have a separate Actuarial Opinion with its own materiality standard. Where there are no unusual circumstances to consider, it may be acceptable to determine a standard for the entire pool and assign each member its proportionate share of the total. It is not appropriate to use the entire amount of the materiality threshold for the pool as the standard for each individual pool member.

I. **Regulators’ use of the Actuarial Report**

Regulators should be able to rely on the Actuarial Report as an alternative to developing their own independent estimates. A well-prepared and well-documented Actuarial Report that complies with ASOP No. 41 can provide a foundation for efficient reserve evaluation during a statutory financial examination. This expedites the examination process and may provide cost savings to the company.

1. **Schedule P reconciliation**

The Working Group acknowledges that myriad circumstances (such as mergers, acquisitions, changes in claim systems, and the use of underwriting year data in the analysis) may make it difficult for the Appointed Actuary to reconcile the analysis data to Schedule P. The Working Group encourages Appointed Actuaries to disclose reconciliation issues in the Actuarial Report. If the data cannot be reconciled, the Appointed Actuary should document the reasons.

The Working Group believes that:

- A summary reconciliation that combines all years and all lines is an insufficient demonstration of data integrity. A reconciliation should include enough detail to reflect the segmentation of exposures used in the reserve analysis, the accident years of loss activity and the methods used by the Appointed Actuary. While it is important that the Appointed Actuary is provided with complete and accurate data, reconciling the data *provided* to the Appointed Actuary to Schedule P is not sufficient to demonstrate that the data *used* by the Appointed Actuary reconciles to Schedule P. It is important for the Appointed Actuary to demonstrate that in the process of performing the actuarial analysis, data was neither created nor destroyed. This is commonly accomplished by showing a clear mapping from the Appointed Actuary’s analysis exhibits to the actuarial data shown in the Schedule P reconciliation.

- The Appointed Actuary should map the data groupings used in the analysis to Schedule P lines of business and should provide detailed reconciliations of the data at the finest level of segmentation that is possible and practical. The Working Group recognizes that the Appointed Actuary chooses the data segmentation for the analysis and that there is often not a direct correspondence between analysis segments and Schedule P lines of business.

- The Appointed Actuary should reconcile all data material to the analysis, including claim counts and earned premium if appropriate. If the Appointed Actuary chooses not to reconcile certain data elements used in the analysis, such as claim counts, a brief explanation should be included in the Actuarial Report to make it clear that these elements were not inadvertently overlooked.
Adopted by the Actuarial Opinion (C) Working Group: September 23, 2021

- Schedule P reconciliations are expected to be performed on both a Direct & Assumed basis and a Net of Reinsurance basis. If circumstances specific to the company lead the Appointed Actuary to perform the reconciliation on only one basis, the rationale for this decision should be explained in the Actuarial Report. Similarly, while the reconciliation of the loss-related elements, such as Defense & Cost Containment and Adjusting & Other expenses, is generally expected to be on the same level as used in the analysis underlying the Actuarial Opinion, the Appointed Actuary has the discretion to deviate as long as the rationale is explained in the Actuarial Report.
- The Instructions require that the Appointed Actuary include an explanation for any material differences in the Schedule P Reconciliation. When differences appear in the reconciliation but are viewed as immaterial by the Appointed Actuary, the Appointed Actuary should acknowledge the immateriality of the differences in the Actuarial Report in order to assure regulators that the Appointed Actuary is aware of the differences and has considered the potential impact of the differences on the analysis underlying the Actuarial Opinion.

The Working Group draws a distinction between two types of data checks:
- The Schedule P reconciliation performed by the Appointed Actuary. The purpose of this exercise is to show the user of the Actuarial Report that the data significant to the Appointed Actuary’s analysis ties to the data in Schedule P.
- Annual testing performed by independent CPAs to verify the completeness and accuracy of the data in Schedule P or the analysis data provided by the company to the Appointed Actuary.

One key difference is that independent CPAs generally apply auditing procedures to loss and loss adjustment expense activity that occurred in the current calendar year (for example, tests of payments on claims for all accident years that were paid during the current calendar year). Projection methodologies used by Appointed Actuaries, on the other hand, often use cumulative loss and loss adjustment expense data, which may render insufficient a testing of activity during the current calendar year alone.

Along similar lines, regulators encourage Appointed Actuaries to consider whether a reconciliation of incremental payments during the most recent calendar year for all accident/report years combined provides sufficient assurance of the integrity of the data used in the analysis, given that development factors are generally applied to cumulative paid losses by accident/report year.

2. Change in estimates

The Working Group expects the Appointed Actuary to discuss any significant change in the Appointed Actuary’s total estimates from the prior Actuarial Report. However, an explanation should also be included for any significant fluctuations within accident years or segments. When preparing the change-in-estimates exhibits, the Appointed Actuary should choose a level of granularity that provides meaningful comparisons between the prior and current year’s results.

3. Narrative

The narrative section of the Actuarial Report should clearly convey the significance of the Appointed Actuary’s findings and conclusions, the uncertainty in the estimates, and any differences between the Appointed Actuary’s estimates and the carried reserves.

4. Support for assumptions

Appointed Actuaries should support their assumptions. The use of phrases like “actuarial judgment,” either in the narrative comments or in exhibit footnotes, is not sufficient. A descriptive rationale is needed.

The selection of expected loss ratios could often benefit from expanded documentation. When making their selection, Appointed Actuaries should consider incorporating rate changes, frequency and severity trends, and other adjustments needed to on-level the historical information. Historical loss ratio indications have little value if items such as rate actions, tort reform, schedule rating adjustments, or program revisions have materially affected premium adequacy.
5. Support for roll forward analyses

The Working Group recognizes that the majority of the analysis supporting an Actuarial Opinion may be done with data received prior to year-end and “rolled forward” to year-end. By reviewing the Actuarial Report, the regulator should be able to clearly identify why the Appointed Actuary made changes in the ultimate loss selections and how those changes were incorporated into the final estimates. A summary of final selections without supporting documentation is not sufficient.

J. Exhibits A and B

1. “Data capture format”

The term “data capture format” in Exhibits A and B of the Instructions refers to an electronic submission of the data in a format usable for computer queries. This process allows for the population of an NAIC database that contains qualitative information and financial data. Appointed Actuaries should assist the company in accurately completing the electronic submission.

2. Scope of Exhibit B, Item 12

Exhibit B, Item 12 requests information on extended loss and unearned premium reserves for all property/casualty lines of business, not just medical professional liability. The Schedule P Interrogatories referenced in the parenthetical only address reserves associated with yet-to-be-issued extended reporting endorsements offered in the case of death, disability, or retirement of an individual insured under a medical professional liability claims-made policy.

3. Exhibit B, Item 13

The Working Group added disclosure item Exhibit B, Item 13 in 2018. This item requests information on reserves associated with “A&H Long Duration Contracts,” defined in the Instructions as “A&H contracts in which the contract term is greater than or equal to 13 months and contract reserves are required.”

This disclosure item was added for several reasons:

- **A desire by regulators to gain a greater understanding of property and casualty insurers’ exposure to A&H Long Duration Contracts.**
  - This guidance does not specify how P&C insurers should report the liabilities associated with A&H Long Duration Contracts on the annual statement. Through work performed on financial examinations, regulators have found that P&C insurers may include the liabilities in various line items of the Liabilities, Surplus and Other Funds page. SSAP No. 54R provides accounting guidance for insurers.
  - Regardless of where the amounts are reported on the annual statement, the materiality of the amounts, and whether the insurer is subject to AG 51, the Appointed Actuary should disclose the amounts associated with A&H Long Duration Contracts on Exhibit B, Item 13. The Appointed Actuary should provide commentary in a Relevant Comments paragraph in accordance with paragraph 6.C of the Instructions. The Appointed Actuary should also disclose all reserve amounts associated with A&H Long Duration Contracts in the Actuarial Report.

- **The adoption of AG 51 in 2017.** On August 9, 2017, the NAIC’s Executive (EX) Committee and Plenary adopted AG 51 requiring stand-alone asset adequacy analysis of long-term care (LTC) business. The text of AG 51 is included in the March 2019 edition of the NAIC’s Accounting Practices and Procedures Manual. The effective date of AG 51 was December 31, 2017, and it applies to companies with over 10,000 inforce lives covered by LTC insurance contracts as of the valuation date. The Instructions state that the Actuarial Report and workpapers summarizing the asset adequacy testing of LTC business must be in compliance with AG 51 requirements.

- **Recent adverse reserve development in LTC business.** Regulators expect Appointed Actuaries to disclose company-specific risk factors in the Actuarial Opinion. Given the recent adverse experience for LTC
Adopted by the Actuarial Opinion (C) Working Group: September 23, 2021

business, Appointed Actuaries should consider whether exposure to A&H Long Duration Contracts poses a risk factor for the company.

The Appointed Actuary is not asked to opine on the reasonableness of the reserves associated with A&H Long Duration Contracts except to the extent that the reserves are included within the amounts reported on Exhibit A of the Actuarial Opinion. For this reason, the Working Group intentionally excluded Items 13.3 and 13.4 from this sentence in paragraph 4 of the Instructions: “The Appointed Actuary should state that the items in the SCOPE, on which he or she is expressing an opinion, reflect Disclosure items 8 through 13.2 in Exhibit B.” Exhibit B, Item 13.1 asks the Appointed Actuary to disclose the reserves for A&H Long Duration Contracts that the company carries on the Losses line of the Liabilities, Surplus and Other Funds page. The Appointed Actuary is not asked to opine on the reasonableness of the reserves disclosed on Exhibit B, Item 13.1 in isolation, but these reserves are a subset of the amount included on Exhibit A, Item 1, and Exhibit A lists amounts with respect to which the Appointed Actuary is expressing an opinion. The same is true for Exhibit B, Item 13.2, whose reserves are a subset of the amount included on Exhibit A, Item 2.

A&H Long Duration Contracts are distinct from P&C Long Duration Contracts. There were no changes to the opinion requirements in 2018 regarding P&C Long Duration Contracts, but the Working Group added a reference to SSAP No. 65 in the definition of “P&C Long Duration Contracts” to clarify the difference between “A&H Long Duration Contracts” and “P&C Long Duration Contracts.” The newly-added mention of SSAP No. 65 in the Instructions is not intended to change the Appointed Actuary’s treatment of P&C Long Duration Contracts in the Actuarial Opinion or the underlying analysis, but insurers and Appointed Actuaries may refer to SSAP No. 65, paragraphs 21 through 33 for a description of the three tests, a description of the types of P&C contracts to which the tests apply, guidance on the minimum required reserves, and instructions on the Actuarial Opinion and Actuarial Report.
III. Comments on AOS

A. Confidentiality

The AOS is a confidential document and should be clearly labeled and identified prominently as such. The AOS is not submitted to the NAIC. The Working Group advises the Appointed Actuary to provide the AOS to company personnel separately from the Actuarial Opinion and to avoid attaching the related Actuarial Opinion to the AOS.

B. Different requirements by state

Not all states have enacted the NAIC Property and Casualty Actuarial Opinion Model Law (#745), which requires the AOS to be filed. Nevertheless, the Working Group recommends that the Appointed Actuary prepare the AOS regardless of the domiciliary state’s requirements, so that the AOS will be ready for submission should a foreign state – having the appropriate confidentiality safeguards – request it.

Most states provide the Annual Statement contact person with a checklist that addresses filing requirements. The Working Group advises the Appointed Actuary to work with the company to determine the requirements for its domiciliary state.

C. Format

The purpose of the AOS is to show a comparison between the company’s carried reserves and the Appointed Actuary’s estimates. Because the AOS is a synopsis of the conclusions drawn in the Actuarial Report, the content of the AOS should reflect the analysis performed by the Appointed Actuary. Therefore, all of the Appointed Actuary’s calculated estimates, including actuarial central estimates and ranges, are to be presented in the AOS consistent with estimates presented in the Actuarial Report.

The American Academy of Actuaries’ Committee on Property and Liability Financial Reporting provides illustrative examples in its annual practice note “Statements of Actuarial Opinion on Property and Casualty Loss Reserves” that show how the Appointed Actuary might choose to display the required information. These examples present the numerical data in an easy-to-read table format.

IV. Guidance on qualification documentation

The Instructions have been modified for 2019 to require the Appointed Actuary to document qualifications in what is called “qualification documentation.” The qualification documentation needs to be provided to the Board of Directors at initial appointment and annually thereafter.

The following provides guidance Appointed Actuaries may find useful in drafting qualification documentation. Appointed Actuaries should use professional judgment when preparing the documentation and need not use the sample wording or format provided below. As a general principle, Appointed Actuaries should provide enough detail within the documentation to demonstrate that they satisfy each component of the ‘Qualified Actuary’ definition. In crafting the qualification documentation it may be helpful to think about what is important for the Board of Directors to know about their Appointed Actuary’s qualifications, and to remember that documentation should be relevant to the subject of the Actuarial Opinion being issued.

A. Brief biographical information

- The Appointed Actuary may provide resume-type information.
- Information may include the following:
  - professional actuarial designation(s) and year(s) first attained
  - insurance or actuarial coursework or degrees;
  - actuarial employment history: company names, position title, years of employment, and relevant information regarding the type of work (e.g., reserving, ratemaking, ERM)
B. “Qualified Actuary” definition

The Appointed Actuary should provide a description of how the definition of “Qualified Actuary” in the Instructions is met or expected to be met (in the case of continuing education) for that year. The Appointed Actuary should provide information similar to the following. Items (i) through (iii) below correspond with items (i) through (iii) in the Qualified Actuary definition.

(i) “I meet the basic education, experience and continuing education requirements of the Specific Qualification Standards for Statements of Actuarial Opinion, NAIC Property and Casualty Annual Statement, as set forth in the Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States (U.S. Qualification Standards), promulgated by the American Academy of Actuaries (Academy). The following describes how I meet these requirements:

a. Basic education:”

[Option 1] “met through relevant examinations administered by the Casualty Actuarial Society;” or

[Option 2] “met through alternative basic education.” The Appointed Actuary should further review documentation necessary per section 3.1.2 of the U.S. Qualification Standards.

b. “Experience requirements: met through relevant experience as described below.”

• To describe the Appointed Actuary’s responsible experience relevant to the subject of the Actuarial Opinion, information may include specific actuarial experiences relevant to the company’s structure (e.g., insurer, reinsurer, RRG), lines of business, or special circumstances.
• Experiences may include education (through organized activities or readings) about specific types of company structures, lines of business, or special circumstances.

c. “Continuing education: met (or expected to be met) through a combination of [industry conferences; seminars (both in-person and webinar); online courses; committee work; self-study; etc.], on topics including _______ (provide a brief overview of the CE topics. For example, ‘trends in workers’ compensation’ or ‘standards of actuarial practice on reserving.’). A detailed log of my continuing education credit hours is available upon request.”

• Section 3.3 of the Specific Qualification Standards for Statements of Actuarial Opinion, NAIC Property and Casualty Annual Statement requires the Appointed Actuary to earn 15 hours of CE on topics mentioned in Section 3.1.1.2. The Appointed Actuary should consider providing expanded detail on the completion (or planned completion) of these hours in the CE documentation.

(ii) “I have obtained and maintain an Accepted Actuarial Designation.” One of the following statements may be made, depending on the Appointed Actuary’s exam track:

• “I am a Fellow of the CAS (FCAS) and my basic education includes credit for Exam 6 – Regulation and Financial Reporting (United States).”
• “I am an Associate of the CAS (ACAS) and my basic education includes credit for Exam 6 – Regulation and Financial Reporting United States) and Exam 7 – Estimation of Policy Liabilities, Insurance Company Valuation, and Enterprise Risk Management.”
• “I am a Fellow of the SOA (FSA) and my basic education includes completion of the general insurance track, including the following optional exams: the United States’ version of the Financial and Regulatory Environment Exam and the Advanced Topics in General Insurance Exam.”
Alternatively, if the actuary was evaluated by the Academy's Casualty Practice Council and determined to be a Qualified Actuary, the Appointed Actuary may note such and identify any restrictions or limitations, including those for lines of business and business activities.

(iii) “I am a member of [professional actuarial association] that requires adherence to the same Code of Professional Conduct promulgated by the Academy, requires adherence to the U.S. Qualification Standards, and participates in the Actuarial Board for Counseling and Discipline when its members are practicing in the U.S.”

C. CE logging procedure

The Casualty Actuarial and Statistical (C) Task Force continues to work with the CAS and SOA to identify types of learning that P/C Appointed Actuaries are using to meet continuing education (CE) requirements for ‘Specific Qualification Standards’ today and whether more specificity should be added to the P/C Appointed Actuaries' CE requirements to ensure CE is aligned with the educational needs for a P/C Appointed Actuary.

The Task Force has adopted a project plan that includes requirements for 1) categorization of CE in the Appointed Actuaries’ CE log and 2) CE log reviews by the CAS/SOA of a percentage of Appointed Actuaries. Starting with year-end 2020, Appointed Actuaries selected for review by the CAS or SOA must either use a specific logging format for their CE logs or add a column to one’s current log. Appointed actuaries are encouraged to categorize their CE throughout the year, since waiting until the review (if selected) may compromise the accuracy of categorization. While selected Appointed Actuaries will submit their individual logs, the CAS and SOA will only share aggregated information with the NAIC.

Please refer to the CAS and SOA for information on CE logging and submission instructions, CE categories, and categorization rules.

D. Proposed deadline for qualification documentation

The Working Group is considering establishing a deadline for the Appointed Actuary to submit its qualification documentation to the Board of Directors. The deadline is expected to be in the latter part of the year. If this revision is affirmed, it is expected to become effective for the 2022 Opinion, meaning that Appointed Actuaries should plan to provide their qualification documentation to the Board no later than the deadline to be announced in the 2022 Instructions.

V. COVID-19

COVID-19 and related economic events have had a significant impact on insurance liabilities for some lines of business. Furthermore, the effects of COVID-19 could extend to other aspects of the company’s operations and the claims process. The Appointed Actuary should consider the direct impacts to loss and unearned premium reserves, claims patterns and loss trends, collectability of reinsurance and/or premiums, exposure, etc., as well as indirect impacts such as claims handling delays and procedural changes resulting from public health orders. It is important for the Appointed Actuary to understand the company’s treatment of any changes stemming from COVID-19, for example premium refunds or rate reductions, in the annual financial statement. The impact of such financial reporting on assumptions and methods used in the actuarial analysis should be discussed within the Actuarial Report.

If the impact on reserves is significant, the actuary should make relevant comments on COVID-19 impacts and discuss the corresponding actuarial assumptions in the Statement of Actuarial Opinion. Otherwise, Appointed Actuaries are still strongly encouraged to mention their review of COVID-19 effects on the company in the Statement of Actuarial Opinion, to demonstrate that it has not been overlooked or disregarded.
Adopted by the Actuarial Opinion (C) Working Group: September 23, 2021

Actuaries may refer to the Statement of Actuarial Opinion Instructions, ASOPs, and Statutory Accounting Principles Working Group documents (particularly INT 20-08) for further instruction. The COVID-19 FAQ document, published by COPLFR and available on the American Academy of Actuaries website, can serve as an additional resource for practical consideration.
The Actuarial Opinion (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force met Sept. 2 and Sept. 8, 2021. The following Working Group members participated: Anna Krylova, Chair (NM); Miriam Fisk, Vice Chair (TX); Susan Andrews, Qing He, and Amy Waldhauer (CT); David Christhilf (DC); Chantel Long, Reid McClintock, and Judy Mottar (IL); Sandra Darby (ME); Gordon Hay (NE); Tom Botsko (OH); Andrew Schallhorn (OK); and James Di Santo (PA). Also participating were: Kevin Dyke (MI); and Arthur Schwartz (NC).

1. Discussed the 2021 Regulatory Guidance

Ms. Krylova led discussions on the draft *Regulatory Guidance on Property and Casualty Statutory Statements of Actuarial Opinion, Actuarial Opinion Summaries, and Actuarial Reports for the Year 2021* (Regulatory Guidance). She said she used comments submitted by Stephen J. Koca (Milliman) and Michelle L. Iarkowski (Risk & Regulatory Consulting LLC) to compile a list of issues (Attachment Six-A).

The Working Group agreed to make some changes to the Schedule P reconciliation section. Guidance will be added to say a reconciliation of the data provided to the actuary to Schedule P is not sufficient; rather, reconciliation of the data used by the actuary to Schedule P is needed. Additional guidance about documentation and explanations will also be added to the Schedule P reconciliation section.

In the continuing education (CE) logging procedure and the COVID-19 sections, the Working Group agreed to make some editorial changes.

The Working Group discussed potential guidance on whether the qualification documentation should be provided for each individual entity or whether it could be provided to the group. Ms. Krylova said this might not be an actuarial issue, but rather a financial issue to ask for feedback. Every annual statement is required to be accompanied by a statement from a Certified Public Accountant (CPA), so the Working Group might wish to replicate requirements of the CPA’s opinion as to whether it is done on a company or group basis. Ralph Blanchard (Travelers) said the Board of Directors is defined in the annual statement to include the designated board of directors, its equivalent, or an appropriate committee reporting to the Board. Kathleen C. Odomirok (American Academy of Actuaries—Academy) requested that the Statement of Actuarial Opinion (SAO) instructions be clear so actuaries will not have to wait for a financial reprimand. The Working Group will discuss the SAO instructions on a future call.

Mr. Schwartz asked if the historical instruction changes could be eliminated, acronyms could be revised, and the introductory paragraph could be revised. The Working Group discussed proposed changes and agreed to postpone further discussion until next year’s Regulatory Guidance is drafted.

Ms. Mottar suggested adding a paragraph about the Working Group’s future plan to potentially add a deadline for filing submission of qualification documentation to the Board. Ms. Krylova will add that information. The Working Group will hold an e-vote after receiving a final version of the Regulatory Guidance.

Having no further business, the Actuarial Opinion (C) Working Group adjourned.

<table>
<thead>
<tr>
<th>Issue/Comment</th>
<th>Response/Proposed Change</th>
</tr>
</thead>
<tbody>
<tr>
<td>(Stephen K) &quot;The Appointed Actuary should clearly demonstrate to a regulator or other user of the Actuarial Report how the actuarial data shown in the Schedule P reconciliation is aggregated from the liability groupings in the supporting actuarial analysis prior to reconciliation of that data to Schedule P.&quot; This sentence is applicable in the situation where the actuarial analysis groupings are more granular than Schedule P line of business groupings. The opposite situation is also possible where the actuarial analysis groupings are more broad. In the latter situation, is the expectation that the Appointed Actuary would a) disaggregate the data used in their analysis to match the individual Schedule P lines of business; b) aggregate the Schedule P data to match the groupings used in their analysis.</td>
<td>To be discussed.</td>
</tr>
<tr>
<td>(Stephen K) &quot;If the Appointed Actuary chooses not to reconcile certain data elements used in their analysis, such as claim counts or other commonly used data that regulators may expect to see, a brief explanation should be included in the Actuarial Report to make it clear that these elements were not inadvertently overlooked.&quot; Suggested addition to the above sentence (underlined). In addition, clarification of what is meant by “other commonly used data” would be helpful.</td>
<td>To be discussed.</td>
</tr>
<tr>
<td>(Stephen K) “Schedule P reconciliations may be performed on a Direct and Assumed basis, Net of Reinsurance basis, or both. Selecting the basis is left to the Appointed Actuary’s discretion, but the rationale for choosing one way over the other should be explained in the Actuarial Report.” My interpretation of the Instructions is that both Direct and Assumed basis and Net basis data are to be reconciled to Schedule P. This sentence implies there is an option and regulators do not expect to see both as long as the rationale is disclosed. Is it possible to provide examples of rationale that may be acceptable for doing the reconciliation only on a net basis, or only on a direct and assumed basis?</td>
<td>Suggested revision: “Schedule P reconciliations are expected to be performed on both a Direct &amp; Assumed basis and a Net of Reinsurance basis. If circumstances specific to the company lead the Appointed Actuary to perform the reconciliation on only one basis, the reasoning for this decision should be explained in the Actuarial Report.”</td>
</tr>
<tr>
<td>(Stephen K) “Schedule P reconciliations resulting in differences that are not minimal should be addressed in the Actuarial Report discussion, even if they are immaterial to the analysis, in order to assure regulators that the Appointed Actuary is aware of the differences and has sought an explanation for them.” I believe this sentence places more requirements on the Appointed Actuary than the Instructions state: “An explanation should be provided for any material differences.”</td>
<td>Suggested Revision: “The Instructions require that the Appointed Actuary include an explanation for any material differences in the Schedule P Reconciliation. When differences appear in the reconciliation but are viewed as immaterial by the Appointed Actuary, the Appointed Actuary should acknowledge the immateriality of the differences in the Actuarial Report in order to assure...&quot;</td>
</tr>
</tbody>
</table>
Can further clarification be provided for what "not minimal" means? Perhaps an example of a situation that would qualify?

regulators that the Appointed Actuary is aware of the differences and has considered the potential impact of the differences on the analysis underlying the Actuarial Opinion.”

(Michelle I)

The Instructions can’t be changed until 2022 to remove the reference to “principles” in this language:

The OPINION paragraph should include a sentence that at least covers the points listed in the following illustration:

“In my opinion, the amounts carried in Exhibit A on account of the items identified:

A. Meet the requirements of the insurance laws of (state of domicile).
B. Are computed in accordance with accepted actuarial standards and principles.
C. Make a reasonable provision for all unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements.”

So that means the 2021 Instructions are going to ask for the “and principles” language in item B – even though we know that the reserving principles were repealed and that they therefore won’t be in effect when actuaries sign their 2021 opinions. So the 2021 Instructions are asking the AA to make a statement that isn’t really true (which is why it would be changed in 2022...).

We’ve submitted a request to the Blanks WG to remove the reference to the principles in this paragraph. Since this change is an editorial one, they should be able to make it for the 2022 Instructions.
Schedule P Reporting for Retroactive Reinsurance Accounting Exceptions
CASTF response to SAPWG Ref 2019-49

December 7, 2021, Draft

- CASTF Subgroup
  - Gordon Hay, FCAS, MAAA, CPCU – Nebraska
  - Miriam Fisk, FCAS, FCAS, MAAA, ASA – Texas
  - Tom Botsko, ACAS – Ohio
- NAIC Staff
  - Robin Marcotte
  - Kris DeFran, FCAS, MAAA, CPCU

COPLFR’s May 2019 Letter to CASTF and SAPWG

- Asserted ambiguity in the accounting/reporting requirements for affiliated retroactive reinsurance agreements that meet the requirements for “Prospective Reinsurance Accounting” treatment
- Attributed materially different presentations in Schedule P by different companies to that ambiguity
- Recommended that this asserted ambiguity be addressed by improved clarity in SSAP 62R and the Annual Statement Instructions, “given that industry Schedule P is utilized for risk-based capital (RBC) purposes as well as other purposes”

SSAP 62R
P&C Reinsurance Accounting (SSAP 62R)

Deposit Accounting (paragraphs 49-51)
- Used when the agreement does not transfer risk
- Paragraph 51 requires retroactive reinsurance agreements involving a deposit in the insurer’s books not allow the deposit asset to be admitted

Retroactive Reinsurance Accounting (paragraphs 52-53)
- Deposits are not allowed in the insurer’s books
- Net premiums – Gross premium – Ceded premium
- Net loss and LAE – Gross loss and LAE – Ceded loss and LAE

Retrocession Reinsurance Accounting (paragraphs 54-55)
- Coding entity – loss and LAE reserves & schedules do not take credit for retroactive reinsurance
- Assuming entity – loss and LAE reserves & schedules exclude assumed retroactive reinsurance
- Balance sheet under-assuming
  - Amount of retroactive reinsurance failed (contra-liability) or assumed (liability)
  - Special surplus from retroactive reinsurance
- Assumed statement under the retroactive reinsurance gain/loss included under Other Income

Exceptions “accounted for as prospective reinsurance agreements unless otherwise provided” in SSAP 62R

- a. Structured settlement annuities
- b. Novations
- c. Commutations
- d. Intercompany reinsurance agreements with no surplus gain
- e. Property/casualty run-off agreements

36.a: Structured settlement annuities

Definition & Requirements
- Annuites for individual claims purchased to implement settlements of policy obligations

Accounting
- Accounting guidance is provided in SSAP 21R (Other Admitted Assets) and SSAP 65 (P&C Contracts)
- Not specified in SSAP 62R, other than being an exception to retroactive reinsurance accounting

36.b: Novations

Definition & Requirements
- Original insurer’s obligations are completely extinguished, resulting in no further exposure to loss arising on the business novated
- Parties are not affiliates (or if affiliates, that the transaction has the prior approval of the domiciliary regulators of the parties)
- The accounting for the original reinsurance agreement will not be altered from retroactive to prospective

Prospective Reinsurance Accounting
- SSAP 62R, paragraph 39
  - Original insurer reports amounts paid as reduction of written and earned premiums, and unearned premiums to the extent that premiums have not been earned
  - Novated loss and LAE reserves are written off through accounts, exhibits, and schedules in which they were originally recorded
  - Assuming insurer reports amounts received as written and earned premiums, and obligations assumed as incurred losses
36.c: Commutations

**Definition & Requirements**
- Complete and final settlement and discharge of all present and future obligations between the parties arising out of the (commuted portion of the) original agreement

**Accounting**
- SSAP 62R, paragraphs 94-97
- Commuted balances are written off through accounts, exhibits, and schedules in which they were originally recorded
- Any net gain or loss (to either party) is reported as underwriting income
- Ceding in the commuted agreement records cash received as negative paid loss

36.d: Intercompany reinsurance, without surplus gain

**Definition & Requirements**
- Companies are 100% owned by a common parent or ultimate controlling person.
- There is no surplus gain to the ceding entity as a result of the transaction.

**Prospective Reinsurance Accounting**
- *Note: This exception is the focus of the CORFR letter.*
- Explicitly "shall be accounted for as prospective reinsurance agreements"

37: Cession to an affiliate, with surplus gain

**Definition & Requirements**
- Companies are affiliated or under common control (as defined in Appendix A-446)
- Retroactive reinsurance results in surplus gain to the ceding entity (with or without risk transfer)

**Accounting**
- SSAP 62R, paragraph 37
- Requires *broad* version of deposit accounting
- Consideration paid is recorded as a deposit and reported as a non-admitted asset
- No deduction made from ceding entity’s loss and LAE reserves

36.e: Property/casualty run-off agreements

**Definition & Requirements**
- Can only cover liabilities relating to lines of business or specific market segments no longer actively marketed by the transferring entity
- Transferring entity remains primarily liable to the policyholder under the original contracts
- Agreements between affiliates or insurers under common control are not eligible for this exception
- Accounting treatment must be approved by the domiciliary regulators of the transferring entity and the assuming entity
- Cannot be cancelable by either party for any reason

**Accounting**
- SSAP 62R, paragraph 102-105
- Transferring entity records consideration paid to the assuming entity as a paid loss
- Assuming entity records consideration received as a negative paid loss
- Transferring entity records increase in ceded reinsurance receivable for the amount of the transferred reserve
- Assuming entity reports the business in the same lines of business and same level of detail as reported by the original insurer
Schedule P Instructions

**Note:** This is consistent with SSAP 62R, paragraph 34.

**Retroactive Reinsurance**

Retroactive reinsurance should not be reflected in Schedule P. The transferor in such an agreement must record, without recognition of the retroactive reinsurance, its loss and loss adjustment expense reserves on a gross basis on its balance sheet and in all schedules and exhibits. The transferee in such an agreement must exclude the retroactive reinsurance from its loss and loss expense reserves and from its schedules and exhibits.

**Premium and Losses**

Earned premium is on a calendar-year basis. Losses incurred should be assigned to the year in which the event occurred that triggered coverage under the contract. This may be a date of accident (occurrence policies), a date of report (claims-made policies), a policy issue date (tail policies), or a date of discovery (fidelity and surety).

**Intercompany Pooling**

If the reporting entity participates in a pooling agreement, show only its share of the business, not the total for all participants.

When changes to pooling agreements impact prior accident years, historical data values in Schedule P Parts, 1 through 6 should be restated based on the new pooling percentage. This should be done to present meaningful development patterns in Schedule P. When pooling changes only impact future accident years, no restatement of historical values should be made.

**Note:** This differs from SSAP 62R, paragraphs 36d and 37.
CASTF Discussion

Applying Retroactive Reinsurance Exception in Schedule P

- Schedule P Instructions are explicit for Intercompany Pooling Agreements, including when the agreement has a retroactive component
  - “When changes to pooling agreements impact prior accident years, historical data values in Schedule P Parts, 1 through 5 should be restated based on the new pooling percentage.”
- Schedule P Instructions provide no explicit guidance for any of the SSAP 62R, paragraph 36 exceptions
- Esp., paragraph 36d. LPT’s create Schedule P distortions
  - LPT ceded losses are reported by accident year
  - Schedule P Instructions state premium should be calendar year earned premium (not allocated to prior years)
  - Agree with COSUS that 8 GECO companies did allocate Cal Year 2014 ended LPT premium to current year despite instructions
  - Pooling P. 100% related loss ratios, and large related balances in most recent Acc Years, produced a very favorable-looking net loss ratio trend
  - Most have recorded LPT premium in current calendar year on Schedule P. Creditor’s result is almost favorable prior years’ development offset by high current Acc Year net loss ratio. Reinsurer’s result is abrupt advance prior years’ development offset by low current Acc Year net loss ratio.

Proposal: Clarify Schedule P Instructions for “prospective reporting exceptions”

- The Schedule P Instructions are silent regarding novations and paragraph 36d agreements, which both receive prospective accounting treatment.
- Schedule P Instructions should provide explicit guidance for the SSAP 62R, paragraph 36c and 36d exceptions.
- There will be distortions in Schedule P when applying prospective accounting to retroactive reinsurance.

Proposal

Add Schedule P reporting instructions for the exceptions listed in SSAP 62R, paragraph 36c and 36d.
Caveats

• Clarity in SSAP 62R and Schedule P Instructions should reduce but will not eliminate variations in Schedule P presentation or distortions to (industry) RBC.
  • Intentional variations observed in Schedule P presentation for paragraph 36d exceptions were due to states’ direction, not ambiguity in SSAP 62R.
  • Variations may be unintentional, particularly when the cedant and its domicile are not accustomed to prescribed accounting treatment for exceptions.
  • Paragraph 36d agreements have been used to cede material portfolios to an affiliate with the same ultimate owner, but outside the NAIC financial reporting system, where:
    • Subsequent development is omitted from the Industry Schedule P data
    • Retrocession may proceed without deferred surplus recognition

Other Possible Actions

• Related to SSAP 62R, paragraph 36d exceptions:
  • Stop prescribing prospective reinsurance accounting
  • Specify a method for allocation of premium to prior years instead of being reported in the current calendar year
  • Expand Schedule P interrogatories or Note 23 disclosures to provide more information about these agreements
  • Add a Schedule P line of business
  • Unacceptable option: Specify that the consideration paid is reported as loss (positive paid loss by cedant, negative paid loss by assuming entity) instead of premium
    • This is commutation accounting and is not consistent with prospective accounting, although it has been advocated by some companies.
  • Add Schedule P reporting instructions for the SSAP 62R, paragraph 36 exceptions that don’t receive prospective accounting treatment (Structured Settlements, Commutations, and qualifying Run-off agreements)
  • Discuss whether SSAP 62R, paragraph 37 is overly punitive
Introduction

- GLM's are industry standard
- The CASTF White Paper for Predictive Models is focused primarily on GLM's
- Some companies are experimenting with more sophisticated models
  - GAM - Similar to GLM's, but with non-parametric "smoothed" terms
  - Tree Based Models - Based on a collection of multiple decision trees
  - Neural Networks - Mostly for generating scores based on images
- The NAIC model review team has reviewed the above model types without CASTF guidance
- Today’s focus is on Random Forests (a type of Tree Based Model)

Tree Based Models

- Models that can be represented as a decision tree or a collection of decision trees
- Types of Tree Based Models
  - Single decision Tree
  - "Bagged" Trees
  - Random Forest
  - Gradient Boosting Machine (XGBoost)
- Supervised Model
  - There is still a target variable
    - Classification: Renew/Non-renew, Claim/No Claim, Fraud/No Fraud
    - Regression: Frequency, Severity, Pure Premium
- Today’s focus will be on Random Forest Models
Tree Based Model

- Single Decision Tree
- Easy to Understand
- Mimics how people make decisions
- Easily interpreted
- Classification returns a likelihood

Prior Claim?

Age < 20?

10%
8%
7%
3%

Tree Based Model

- Single Decision Tree
- Easy to Understand
- Mimics how people make decisions
- Easily interpreted
- Classification returns a likelihood

Prior Claim?

Age < 20?

10%
8%
7%
3%

Tree Based Model

- Terminology
  - Nodes
  - Root
  - Sub-Node
  - Parent/Child
  - Splitting
  - Branch
  - Sub-Tree

Prior Claim?

Age < 20?

$20  $16  $14  $6

$20  $16  $14  $6

$20  $16  $14  $6
**Bagged Trees**

- Most Tree-Based Models are an "ensemble" of models
- "Bagged" Trees are based on multiple trees
- "Bagged" comes from "bootstrap aggregated"
- Each tree is grown the same way
- The difference is each tree is based on a different bootstrap sample
- The same variables are considered in each tree
- Final prediction is the average of each tree’s prediction

**Random Forest**

- Random Forest
- Each tree is grown the same way
- The difference is each tree is based on a different bootstrap sample
- Additionally: Randomly chosen variables considered at each split
- Each tree is grown the same way
- Final prediction is the average of each tree’s prediction
- Advantages
  - Trees are substantially different
  - Each tree not based on the same sample
  - Each split not based on the same variables

**Example**

- 22 year old driver, no prior claims
- 5 year old vehicle, $15,000 vehicle
- ($10+$15)/2 = $12.5

**Interpretation gets difficult**

- Trees can get very deep
- There can be 100’s or 1,000’s of trees
- Many GLM statistical tests no longer apply
- There are many hyperparameters
- Selections may materially impact the model
- Selections should be checked for reasonability
Random Forest

- Hyperparameters
- Number of trees
- Criteria on which to split
- Bootstrap sample size (% of rows)
- When to stop splitting
- Max Tree Depth
- Minimum Node Size
- Max Leaf Nodes
- Random Variables for each split (# of columns)

Random Forest Challenges

- Interpretability
- Prone to Overfit
- Auditability

Challenges - Interpretability

- GLMs
  - Produce one set of model output
  - P-values provide a measure of statistical significance
  - Higher values can be prioritized for further review
  - Log-linear model coefficients are easy to understand
  - Beta < 0 is a discount, Beta > 0 is surcharge

- RFs
  - It is hard to digest the net impact of a collection of trees
  - Variable Importance Plots highlight which variables are relatively less important
  - Interpretability plots help understand the impact of a variable upon the model
Variable Triaging

- Variable Importance Plots
  - Provide a measure of which variables are relatively more important than others
  - Variables with low importance measures aren’t necessarily unimportant, but they might be
  - Further scrutiny may be appropriate for variables with a low importance measure
  - Similar to looking at variables with high p-values in a GLM
- Types of variable importance
  - Gain: improvement in prediction accuracy from feature
  - Cover: Number of observations influenced
  - Frequency: Number of times used to split data

Interpretability Plots

- Partial Dependence Plots
  - Computes the marginal effect of a given feature on the prediction
  - Fixes the value of the predictor variable of interest, calculating the model prediction for each observation using the fixed value
  - Repeat for all values of the predictor variable

- Accumulated Local Effects
  - Better option in the case of correlated features
  - Calculates and accumulates incremental changes in the feature effects
  - Shows the expected and centered effects of a feature, like a coefficient in a GLM

- Shapely Additive Explanations
  - How much that feature moves the prediction away from the overall average prediction.
  - Feature increases predicted value higher than average value.
  - Feature decreases predicted value lower than average value.
Challenges - Prone to Overfit

- Review Hyperparameters
  - Number of trees should be large enough, but no larger
  - Look at plot to minimize OOB/Test Error or Deviance
  - Bootstrap sample size (% of rows)
  - Rule of Thumb: Max depth of > 8 may be too high
- Tree Complexity
  - Minimum node size should be set high enough for reasonable credibility
- Look at plot to minimize OOB/Test Error or Deviance
- Other hyperparameters should be disclosed and briefly commented on
  - Minimum node size should be set high enough for reasonable credibility
- Random Variables tried for each split (# of columns)
- Criteria to split should match the model purpose (classification, regression)
- Review lift charts on test/holdout data

Challenges - Auditability

- **GLM's**
  - Indicated factors are reproducible if you have the coefficients and link function
  - Indicated factors can be stored in lookup tables
  - Auditing model predictions could easily be done, even for a large number of risks
- **RF's**
  - Complete documentation means diagrams or if statements representing every component tree
  - Sample calculations would include input variable values, each tree’s result, and the final result (average of the component trees)
  - A full audit of the logic would likely involve a significant amount of coding

Challenges - Auditability

- Random Forest Documentation
  - Exhibits could be made for spot checking against tree documentation
  - Input Predictors
  - Individual Tree Predictions
  - Overall Model Prediction (average)

Draft Random Forest Appendix For Discussion

- Sending out 2 versions
  - Track Changes: Highlights removed, changed, and added items to the GLM Appendix
  - Final: Updated with the tracked changes for easy reading
- Looking for feedback for future Random Forest reviews

<td>Request details of data sources, whether internal to the company or from external sources. For insurance experience (policy or claim), determine whether data are aggregated by calendar, accident, fiscal, or policy year and when it was last evaluated. For each data source, get a list of all data elements used as input to the model that came from that source. For insurance data, get a list all companies whose data is included in the datasets. Request details of any non-insurance data used (customer-provided or other), whether the data was collected by use of a questionnaire/checklist, whether data was voluntarily reported by the applicant, and whether any of the data is subject to the federal Fair Credit Reporting Act (FCRA). If the data is from an outside source, find out what steps were taken to verify the data was accurate, complete, and unbiased in terms of relevant and representative time frame, representative of potential exposures, and lacking in obvious correlation to protected classes. <strong>Note:</strong> Reviewing source details should not make a difference when the model is new or refreshed; refreshed models would report the prior version list with the incremental changes due to the refresh.</td>
</tr>
<tr>
<td>A.1.b</td>
<td>Reconcile aggregated insurance data underlying the model with available external insurance reports.</td>
<td>4</td>
<td>Accuracy of insurance data should be reviewed. It is assumed that the data in the insurer’s data banks is subject to routine internal company audits and reconciliation. “Aggregated data” is straight from the insurer’s data banks without further modification (i.e., not scrubbed or transformed for the purposes of modeling). In other words, the data would not have been specifically modified for the purpose of model building. The company should provide some form of reasonability check that the data makes sense when checked against other audited sources.</td>
</tr>

</tr>
<tr>
<td>---------</td>
<td>---------------------</td>
<td>---------------------------------------------</td>
<td>----------</td>
</tr>
<tr>
<td>A.1.c</td>
<td>Review the geographic scope and geographic exposure distribution of the raw data for relevance to the state where the model is filed.</td>
<td>2</td>
<td>Many models are developed using a countrywide or a regional dataset. The company should explain how the data used to build the model makes sense for a specific state. The regulator should inquire which states were included in the data underlying the model build, testing, and validation. The company should explain why any states were excluded from the countrywide data. The company should provide an explanation where the data came from geographically and that it is a good representation for a state; i.e., the distribution by state should not introduce a geographic bias. However, there could be a bias by peril or wind-resistant building codes. Evaluate whether the data is relevant to the loss potential for which it is being used. For example, verify that hurricane data is only used where hurricanes can occur. The company should provide a demonstration that the model fits well on the specific state or surrounding region.</td>
</tr>
<tr>
<td>2. Sub-Models</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>A.2.a</td>
<td>Consider the relevance of (i.e., whether there is bias) of overlapping data or variables used in the model and sub-models.</td>
<td>3</td>
<td>Check if the same variables/datasets were used in the model, a sub-model, or as stand-alone rating characteristics. Random Forest models handle redundant variables by splitting on only one of the variables within each component tree. By contrast, GLM’s struggle with redundant variables as they try to include redundant variables simultaneously. However, best actuarial practice is to keep models as parsimonious as possible and only include additional variables that contribute significant additional predictive power.</td>
</tr>
</tbody>
</table>
| A.2.b | Determine if the sub-model was previously approved (or accepted) by the regulatory agency. | 1 | If the sub-model was previously approved/accepted, that may reduce the extent of the sub-model’s review. If approved, obtain the tracking number(s) (e.g., state, SERFF) and verify when and if it was the same model currently under review.  
**Note:** A previous approval does not necessarily confer a guarantee of ongoing approval; e.g., when statutes and/or regulations have changed or if a model’s indications have been undermined by subsequent empirical experience. However, knowing whether a model has been previously approved can help focus the regulator’s efforts and determine whether the prior decision needs to be revisited. In some circumstances, direct dialogue with the vendor could be quicker and more useful. |

</thead>
<tbody>
<tr>
<td>A.2.c</td>
<td>Determine if the sub-model output was used as input to the Random Forest; obtain the vendor name, as well as the name and version of the sub-model.</td>
<td>1</td>
<td>To accelerate the review of the filing, it may be desirable to request (from the company), the name and contact information for a vendor representative. The company should provide the name of the third-party vendor and a contact in the event the regulator has questions. The “contact” can be an intermediary at the insurer (e.g., a filing specialist), who can place the regulator in direct contact with a subject-matter expert (SME) at the vendor. Examples of such sub-models include credit/financial scoring algorithms and household composite score models. Sub-models can be evaluated separately and in the same manner as the primary model under evaluation. A sub-model contact for additional information should be provided. Sub-model SMEs may need to be brought into the conversation with regulators (whether in-house or third-party sub-models are used).</td>
</tr>
<tr>
<td>A.2.d</td>
<td>If using catastrophe model output, identify the vendor and the model settings/assumptions used when the model was run.</td>
<td>1</td>
<td>To accelerate the review of the filing, get contact information for the SME that ran the model and an SME from the vendor. The “SME” can be an intermediary at the insurer (e.g., a filing specialist), who can place the regulator in direct contact with the appropriate SMEs at the insurer or model vendor. For example, it is important to know hurricane model settings for storm surge, demand surge, and long-term/short-term views.</td>
</tr>
<tr>
<td>A.2.e</td>
<td>Obtain an explanation of how catastrophe models are integrated into the model to ensure no double-counting.</td>
<td>1</td>
<td>If a weather-based sub-model is input to the Random Forest under review, loss data used to develop the model should not include loss experience associated with the weather-based sub-model. Doing so could cause distortions in the modeled results by double-counting such losses when determining relativities or loss loads in the filed rating plan. For example, redundant losses in the data may occur when non-hurricane wind losses are included in the data while also using a severe convective storm model in the actuarial indication. Such redundancy may also occur with the inclusion of fluvial or pluvial flood losses when using a flood model or inclusion of freeze losses when using a winter storm model.</td>
</tr>

<tr>
<td>A.2.f</td>
<td>If using output of any scoring algorithms, obtain a list of the variables used to determine the score and provide the source of the data used to calculate the score.</td>
<td>1</td>
<td>Any sub-model should be reviewed in the same manner as the primary model that uses the sub-model’s output as input. Depending on the result of item A.2.b, the importance of this item may be decreased.</td>
</tr>
<tr>
<td>A.3.a</td>
<td>Determine if premium, exposure, loss, or expense data were adjusted (e.g., on-leveled, developed, trended, adjusted for catastrophe experience, or capped). If so, how? Do the adjustments vary for different segments of the data? If so, identify the segments and how the data was adjusted.</td>
<td>2</td>
<td>The rating plan or indications underlying the rating plan may provide special treatment of large losses and non-modeled large loss events. If such treatments exist, the company should provide an explanation how they were handled. These treatments need to be identified and the company/regulator needs to determine whether model data needs to be adjusted. For example, should large bodily injury (BI) liability losses in the case of personal automobile insurance be excluded, or should large non-catastrophe wind/hail claims in home insurance be excluded from the model’s training, test and validation data? Look for anomalies in the data that should be addressed. For example, is there an extreme loss event in the data? If other processes were used to load rates for specific loss events, how is the impact of those losses considered? Examples of losses that can contribute to anomalies in the data are large losses or flood, hurricane, or severe convective storm losses for personal automobile comprehensive or home insurance. Premium should be brought to current rate level if the target variable is calculated with a premium metric, such as loss ratio. Premium can be brought to current rate level with the extension of exposures method or the parallelogram method. Note that the premium must be on-leveled at a granular variable level for each variable included in the new model if the parallelogram method is used. Statewide on-level factors by coverage are typically sufficient for statewide rate indication development but not sufficient for models that determine rates by variable level.</td>
</tr>
<tr>
<td>A.3.b</td>
<td>Identify adjustments that were made to aggregated data (e.g., transformations, binning and/or categorizations). If any, identify the name of the characteristic/variable and obtain a description of the adjustment.</td>
<td>1</td>
<td>Pre-modeling binning may be unnecessary in a random forest model. The tree model will naturally segment numerical values in the splitting process of the trees. However, if the insurer does bin variables before modeling, the reason should be understood.</td>
</tr>
</tbody>
</table>
Ask for aggregated data (one dataset of pre-adjusted/scrubbed data and one dataset of post-adjusted/scrubbed data) that allows the regulator to focus on the univariate distributions and compare raw data to adjusted/binned/transformed/etc. data.

This is most relevant for variables that have been “scrubbed” or adjusted.

Though most regulators may never ask for aggregated data and do not plan to rebuild any models, a regulator may ask for this aggregated data or subsets of it.

It would be useful to the regulator if the percentage of exposures and premium for missing information from the model data by category are provided. This data can be displayed in either graphical or tabular formats.

### B. BUILDING THE MODEL

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance to Regulator’s Review</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td><strong>1. High-Level Narrative for Building the Model</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>B.1.a</td>
<td>Identify the type of model underlying the rate filing (e.g., Random Forest, GLM,</td>
<td>1</td>
<td>It is important to understand if the model in question is a Random Forest and, therefore, these information elements are applicable; or if it is some other model type, in which case other reasonable review approaches may be considered. There should be an explanation of why the model (using the variables included in it) is appropriate for the line of business. If by-peril or by-coverage modeling is used, the explanation should be by-peril/by-coverage. <strong>Note:</strong> If the model is not a Random Forest, the information elements in this white paper may not apply in their entirety.</td>
</tr>
<tr>
<td></td>
<td>decision tree, Bayesian GLM, gradient-boosting machine, neural network, etc.)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>B.1.b</td>
<td>Identify the software used for model development. Obtain the name of the software</td>
<td>3</td>
<td>Changes in software from one model version to the next may explain if such changes, over time, contribute to changes in the modeled results. The company should provide the name of the third-party vendor and a “contact” in the event the regulator has questions. The “contact” can be an intermediary at the insurer (e.g., a filing specialist) who can place the regulator in direct contact with the appropriate SME at the vendor. Open-source software/programs used in model development should be identified by name and version the same as if from a vendor.</td>
</tr>
<tr>
<td></td>
<td>vendor/developer, software product, and a software version reference used in model</td>
<td></td>
<td></td>
</tr>
<tr>

<td>Level of Importance to Regulator’s Review</td>
<td>Comments</td>
</tr>
<tr>
<td>---------</td>
<td>---------------------</td>
<td>------------------------------------------</td>
<td>----------</td>
</tr>
<tr>
<td>B.1.c</td>
<td>Obtain a description how the available data was divided between model training, test, and/or validation datasets. The description should include an explanation why the selected approach was deemed most appropriate, whether the company made any further subdivisions of available data, and reasons for the subdivisions (e.g., a portion separated from training data to support testing of components during model building). Determine if the validation data was accessed before model training was completed and, if so, obtain an explanation of why that came to occur. Obtain a discussion of whether the model was rebuilt using all the data or if it was only based on the training data.</td>
<td>1</td>
<td>The reviewer should be aware that modelers may break their data into three or just two datasets. Although the term “training” is used with little ambiguity, “test” and “validation” are terms that are sometimes interchanged, or the word “validation” may not be used at all. The reviewer should note whether a company employed cross-validation techniques instead of a training/test/validation dataset approach. If cross-validation techniques were used, the reviewer should request a description of how cross-validation was done and confirm that the final model was not built on any particular subset of the data, but rather the full dataset. The discussion of training, test, and/or validation datasets is a separate discussion from the % of observations (rows of data) or % of features (columns of data) used within each tree. These splits are based on hyperparameters and are commented on in other sections.</td>
</tr>
<tr>
<td>B.1.d</td>
<td>Obtain a brief description of the development process, from initial concept to final model and filed rating plan.</td>
<td>1</td>
<td>The narrative should have the same scope as the filing.</td>
</tr>
<tr>
<td>B.1.e</td>
<td>Obtain a narrative on whether loss ratio, pure premium, or frequency/severity analyses were performed and, if separate frequency/severity modeling was performed, how pure premiums were determined.</td>
<td>1</td>
<td>A clear description of the target variable is key to understanding the purpose of the model. It may also prove useful to obtain a sample calculation of the target variable in Excel format, starting with the “raw” data for a policy, or a small sample of policies, depending on the complexity of the target variable calculation.</td>
</tr>
<tr>
<td>B.1.f</td>
<td>Identify the model’s target variable.</td>
<td>1</td>
<td>Candidate variables are the variables used as input to the modeling process. Certain variables may not end up used in the final model if none of the component trees of the model split on the variable. The narrative regarding the candidate variable selection process may address matters such as the criteria upon which variables were selected or omitted, identification of the number of preliminary variables considered in developing the model versus the number of variables that remained, and any statutory or regulatory limitations that were taken into account when making</td>
</tr>
<tr>
<td>B.1.g</td>
<td>Obtain a description of the candidate variable selection process prior to the model building.</td>
<td>1</td>
<td></td>
</tr>
</tbody>
</table>

© 2021 National Association of Insurance Commissioners
the decisions regarding candidate variable selection. The modeler should comment on the use of automated feature selection algorithms to choose candidate predictor variables and explain how potential overfitting that can arise from these techniques was addressed.
### B.1.h

In conjunction with variable selection, obtain a narrative on how the company determined the granularity of the rating variables during model development.

**Comments**

3. The narrative should include discussion of how credibility was considered in the process of determining the level of granularity of the variables selected. Minimum data volume constraints can be applied to a tree based model, such that the trees will not create a split that would result in terminal nodes with volume below a set amount. The modeler should comment on how the threshold was chosen.

### B.1.i

Determine if model input data was segmented in any way (e.g., by-coverage, by-peril, or by-form basis). If so, obtain a description of data segmentation and the reasons for data segmentation.

**Comments**

1. The regulator would use this to follow the logic of the modeling process.

### B.1.j

If adjustments to the model were made based on credibility considerations, obtain an explanation of the credibility considerations and how the adjustments were applied.

**Comments**

2. If there was no minimum data volume threshold applied to the trees, or if the threshold was very small, obtain an explanation of any post modeling adjustments the modeler made to address the credibility considerations and how the adjustments were applied.

## 2. Medium-Level Narrative for Building the Model

### B.2.a

At crucial points in model development, if selections were made among alternatives regarding model assumptions, techniques, or hyperparameters, obtain a narrative on the judgment used to make those selections.

**Comments**

2. Evaluate the addition or removal of variables and the model fitting. It is not necessary for the company to discuss each iteration of adding and subtracting variables, but the regulator should gain a general understanding of how these adjustments were done, including any statistical improvement measures relied upon.

### B.2.b

If post-model adjustments were made to the data and the model was rerun, obtain an explanation on the details and the rationale for those adjustments.
<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance to Regulator’s Review</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>B.2.d</td>
<td>Identify which distribution was used for the model (e.g., Regression based on Poisson, Gamma, Logistic, or Tweedie are common choices). Obtain an explanation of why the distribution was chosen. Certain distribution assumptions will involve numerical parameters, for example regression with a Tweedie assumed distribution will have a p power value. Obtain the specific numerical parameters associated with the distribution.</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td>B.2.e</td>
<td>Obtain a narrative on how the predictions from the component trees are combined to arrive at a final model prediction.</td>
<td>2</td>
<td>Tree based methods combine predictions from multiple component trees and aggregate them into a final prediction for each observation. Common methods for combining random forest model predictions include the arithmetic or geometric mean of all the component trees.</td>
</tr>
<tr>
<td>B.2.f</td>
<td>If there were data situations in which weights were used, obtain an explanation of how and why they were used.</td>
<td>3</td>
<td>Investigate whether identical records were combined to build the model.</td>
</tr>
<tr>
<td>New B.3.1</td>
<td>Obtain the number of component trees comprising the Random Forest model. Obtain a narrative on how this number was chosen.</td>
<td>1</td>
<td>Random Forest models should contain enough trees to reduce error to an acceptable level. Random forest models should balance this with the concept of parsimony. A model with fewer trees that achieves relatively similar reduction in error is preferable to a model with more trees. Checking the error on a test dataset or out of bag error for different numbers of trees</td>
</tr>
</tbody>
</table>
can reveal at what value the error on test data starts to level off.

Modelers might rely on early stopping rules within modeling software to arrive at the final number of trees. The narrative on the number of trees should discuss the stopping criterion, which defines what condition is met when the model stopped adding more trees.

| New B.3.2 | Obtain the sampling parameters that apply to both the percent of observations used in each component tree and the number of features tested for each split within each tree. Obtain a narrative on how the sampling parameters were selected. | 1 | Random forest models often sample both the observations (typically rows of modeling data) with replacement and sample the features (typically columns of modeling data) This means that each tree has a bootstrapped dataset.

The company should discuss the bagging fraction (aka sample size) applied to observations (typically rows of data). This is often expressed as a percent. For example: perhaps each tree is based on a bootstrapped sample which is 50% of the original dataset.

The company should discuss the number of features considered at each split. This is often expressed as an integer. A common choice for the number of features is equal to roughly the square root of the total number of candidate variables. For example: perhaps each split is based on 10 randomly selected features (typically columns of data) when there are 100 candidate variables. |

| New B.3.3 | Obtain the maximum depth that applies to the component trees in the model. Obtain a narrative on how this number was chosen. | 1 | The depth of a tree is the number of splits that are allowed to occur between the root node and the terminal nodes. This number can be set explicitly in modeling software or may be implicitly set if the company applies a splitting constraint, such as a minimum observations per node. Maximum tree depths of 8 or higher are considered extremely high. |

<td>Obtain a description how the model was tested for stability over time.</td>
<td>2</td>
<td>Evaluate the build/test/validation datasets for potential time-sensitive model distortions (e.g., a winter storm in year 3 of 5 can distort the model in both the testing and validation datasets). Obsolescence over time is a model risk (e.g., old data for a variable or a variable itself may no longer be relevant). If a model being introduced now is based on losses from years ago, the reviewer should be interested in knowing whether that model would be predictive in the proposed context. Validation using recent data from the proposed context might be requested. Obsolescence is a risk even for a new model based on recent and relevant loss data. The reviewer may want to inquire as to the following: What steps, if any, were taken during modeling to prevent or delay obsolescence? What controls exist to measure the rate of obsolescence? What is the plan and timeline for updating and ultimately replacing the model? The reviewer should also consider that as newer technologies enter the market (e.g., personal automobile) their impact may change claim activity over time (e.g., lower frequency of loss). So, it is not necessarily a bad thing that the results are not stable over time.</td>
</tr>

<td>Determine if two Gini coefficients were compared and obtain a narrative on the conclusion drawn from this comparison.</td>
<td>3</td>
<td>This information element requests a comparison of the Lorenz curve and Gini coefficient from the prior model to the Gini coefficient of proposed model. It is expected that there should be improvement in the Gini coefficient. A higher Gini coefficient indicates greater differentiation produced by the model and how well the model fits that data. This is relevant when one model is being updated or replaced. The regulator should expect to see improvement in the new class plan’s predictive ability. One example of a comparison might be sufficient. Note: This comparison is not applicable to initial model introduction. Reviewer can look to CAS monograph, “Generalized Linear Models for Insurance Rating.”</td>
</tr>
<tr>
<td>B.5.c</td>
<td>Determine if double-lift charts were analyzed and obtain a narrative on the conclusion drawn from this analysis.</td>
<td>3</td>
<td>One example of a comparison might be sufficient. <strong>Note</strong>: “Not applicable” is an acceptable response.</td>

<th>Level of Importance to Regulator’s Review</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. General Impact of Model on Rating Algorithm</td>
<td>In the actuarial memorandum or explanatory memorandum, for each model and sub-model (including external models), look for a narrative that explains each model and its role (i.e., how it was used) in the rating system.</td>
<td>1</td>
<td>The “role of the model” relates to how the model integrates into the rating plan as a whole and where the effects of the model are manifested within the various components of the rating plan. This is not intended as an overarching statement of the model’s goal, but rather a description of how specifically the model is used. This item is particularly important, if the role of the model cannot be immediately discerned by the reviewer from a quick review of the rate and/or rule pages. (Importance is dependent on state requirements and ease of identification by the first layer of review and escalation to the appropriate review staff.)</td>
</tr>
<tr>
<td>C.1.a</td>
<td>Obtain an explanation of how the model was used to adjust the filed rating algorithm.</td>
<td>1</td>
<td>The regulator should consider asking for an explanation of how the model was used to adjust the rating algorithm.</td>
</tr>
<tr>
<td>C.1.c</td>
<td>Obtain a complete list of characteristics/variables used in the proposed rating plan, including those used as input to the model (including sub-models and composite variables) and all other characteristics/variables (not input to the model) used to calculate a premium. For each characteristic/variable, determine if it is only input to the model, whether it is only a separate univariate rating characteristic, or whether it is both input to the model and a separate univariate rating characteristic. The list should include transparent descriptions (in plain language) of each listed characteristic/variable.</td>
<td>1</td>
<td>Examples of variables used as inputs to the model and used as separate univariate rating characteristics might be criteria used to determine a rating tier or household composite characteristic.</td>

</table>
| 2. Relevance of Variables and Relationship to Risk of Loss | C.2.a Obtain a narrative regarding how the characteristics/rating variables included in the filed rating plan relate to the risk of insurance loss (or expense) for the type of insurance product being priced. | 2 | The narrative should include a discussion of the relevance each characteristic/rating variable has on consumer behavior that would lead to a difference in risk of loss (or expense). The narrative should include a rational relationship to cost, and model visualization plots (such as partial dependence plots, accumulated local effects plots, or Shapley plots) should be consistent with the expected direction of the relationship. 
**Note:** This explanation would not be needed if the connection between variables and risk of loss (or expense) has already been illustrated. |
| 3. Comparison of Model Outputs to Current and Selected Rating Factors | C.3.b Obtain documentation and support for all calculations, judgments, or adjustments that connect the model’s indicated values to the selected rates filed in the rating plan. | 1 | The documentation should include explanations for the necessity of any such adjustments and each significant difference between the model’s indicated values and the selected values. This applies even to models that produce scores, tiers, or ranges of values for which indications can be derived. 
**Note:** This information is especially important if differences between model-indicated values and selected values are material and/or impact one consumer population more than another. |
| C.3.c For each characteristic/variable used as both input to the model (including sub-models and composite variables) and as a separate univariate rating characteristic, obtain a narrative regarding how each characteristic/variable was tempered or adjusted to account for possible overlap or redundancy in what the characteristic/variable measures. | 2 | The insurer should address this possibility or other considerations; e.g., tier placement models often use risk characteristics/variables that are also used elsewhere in the rating plan. 
One way to do this would be to model the loss ratios resulting from a process that already uses univariate rating variables. Then the model/composite variables would be attempting to explain the residuals. |

<tr>
<td>4. A</td>
<td>Determine what, if any, consideration was given to the credibility of the output data.</td>
<td>2</td>
<td>The regulator should determine at what level of granularity credibility is applied. If modeling was by-coverage, by-form, or by-peril, the company should explain how these were handled when there was not enough credible data by coverage, form, or peril model. The company should comment on the minimum data volume requirement at each node before splitting.</td>
</tr>
<tr>
<td>4. B</td>
<td>If the rating plan is less granular than the model, obtain an explanation of why.</td>
<td>2</td>
<td>This is applicable if the company had to combine modeled output in order to reduce the granularity of the rating plan.</td>
</tr>
<tr>
<td>4. C</td>
<td>If the rating plan is more granular than the model, obtain an explanation of why.</td>
<td>2</td>
<td>A more granular rating plan may imply that the company had to extrapolate certain rating treatments, especially at the tails of a distribution of attributes, in a manner not specified by the model indications. It may be necessary to extrapolate due to data availability or other considerations.</td>
</tr>
<tr>
<td>5.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>5. A</td>
<td>Obtain a narrative regarding adjustments made to model output (e.g., transformations, binning and/or categorizations). If adjustments were made, obtain the name of the characteristic/variable and a description of the adjustment.</td>
<td>2</td>
<td>If rating tiers or other intermediate rating categories are created from model output, the rate and/or rule pages should present these rating tiers or categories. The company should provide an explanation of how model output was translated into these rating tiers or intermediate rating categories.</td>
</tr>
<tr>
<td>6.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>6. A</td>
<td>Obtain aggregated state-specific, book-of-business-specific univariate historical experience data, separately for each year included in the model, consisting of loss ratio or pure premium relativities and the data underlying those calculations for each category of model output(s) proposed to be used within the rating plan. For each data element, obtain an explanation of whether it is raw or adjusted and, if the latter, obtain a detailed explanation for the adjustments.</td>
<td>4</td>
<td>For example, were losses developed/undeveloped, trended/untrended, capped/uncapped, etc.? Univariate indications should not necessarily be used to override more sophisticated multivariate indications. However, they do provide additional context and may serve as a useful reference.</td>

<tr>
<td>C.7.d</td>
<td>Obtain a rate disruption/dislocation analysis, demonstrating the distribution of percentage and/or dollar impacts on renewal business (created by rerating the current book of business) and sufficient information to explain the disruptions to individual consumers.</td>
<td>2</td>
<td>The analysis should include the largest dollar and percentage impacts arising from the filing, including the impacts arising specifically from the adoption of the model or changes to the model as they translate into the proposed rating plan. While the default request would typically be for the distribution/dislocation of impacts at the overall filing level, the regulator may need to delve into the more granular variable-specific effects of rate changes if there is concern about particular variables having extreme or disproportionate impacts, or significant impacts that have otherwise yet to be substantiated. See Appendix D for an example of a disruption analysis.</td>
</tr>
<tr>
<td>C.7.e</td>
<td>Obtain exposure distributions for the model’s output variables and show the effects of rate changes at granular and summary levels, including the overall impact on the book of business.</td>
<td>3</td>
<td>See Appendix D for an example of an exposure distribution.</td>
</tr>
<tr>
<td>C.7.f</td>
<td>Identify policy characteristics, used as input to a model or sub-model, that remain “static” over a policy’s lifetime versus those that will be updated periodically. Obtain a narrative on how the company handles policy characteristics that are listed as “static,” yet change over time.</td>
<td>3</td>
<td>Some examples of “static” policy characteristics are prior carrier tenure, prior carrier type, prior liability limits, claim history over past X years, or lapse of coverage. These are specific policy characteristics usually set at the time new business is written, used to create an insurance score or to place the business in a rating/underwriting tier, and often fixed for the life of the policy. The reviewer should be aware, and possibly concerned, how the company treats an insured over time when the insured’s risk profile based on “static” variables changes over time but the rate charged, based on a new business insurance score or tier assignment, no longer reflect the insured’s true and current risk profile. A few examples of “non-static” policy characteristics are age of driver, driving record, and credit information (FCRA-related). These are updated automatically by the company on a periodic basis, usually at renewal, with or without the policyholder explicitly informing the company.</td>
</tr>
<tr>

</tr>
<tr>
<td>---------</td>
<td>---------------------</td>
<td>------------------------------------------</td>
<td>----------</td>
</tr>
<tr>
<td>C.7.g</td>
<td>Obtain a means to calculate the rate charged a consumer.</td>
<td>3</td>
<td>The filed rating plan should contain enough information for a regulator to be able to validate policy premium. However, for a complex model or rating plan, a score or premium calculator via Excel or similar means would be ideal, but this could be elicited on a case-by-case basis. The ability to calculate the rate charged could allow the regulator to perform sensitivity testing when there are small changes to a risk characteristic/variable. <strong>Note:</strong> This information may be proprietary. For the rating plan, the rate order of calculation rule may be sufficient. However, it may not be feasible for a regulator to get all the input data necessary to reproduce a model’s output. Credit and telematics models are examples of model types where model output would be readily available, but the input data would not be readily available to the regulator.</td>
</tr>
<tr>
<td>C.7.h</td>
<td>In the filed rating plan, be aware of any non-insurance data used as input to the model (customer-provided or other). In order to respond to consumer inquiries, it may be necessary to inquire as to how consumers can verify their data and correct errors.</td>
<td>1</td>
<td>If the data is from a third-party source, the company should provide information on the source. Depending on the nature of the data, it may need to be documented with an overview of who owns it. The topic of consumer verification may also need to be addressed, including how consumers can verify their data and correct errors.</td>
</tr>

<td>9. Efficient and Effective Review of Rate Filing</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>C.9.a</td>
<td>Establish procedures to efficiently review rate filings and models contained therein.</td>
<td>1</td>
<td>“Speed to market” is an important competitive concept for insurers. Although the regulator needs to understand the rate filing before accepting the rate filing, the regulator should not request information that does not increase his/her understanding of the rate filing. The regulator should review the state’s rate filing review process and procedures to ensure that they are fair and efficient.</td>
</tr>
<tr>
<td>C.9.b</td>
<td>Be knowledgeable of state laws and regulations in order to determine if the proposed rating plan (and models) are compliant with state laws and/or regulations.</td>
<td>1</td>
<td>This is a primary duty of state insurance regulators. The regulator should be knowledgeable of state laws and regulations and apply them to a rate filing fairly and efficiently. The regulator should pay special attention to prohibitions of unfair discrimination.</td>
</tr>
<tr>
<td>C.9.c</td>
<td>Be knowledgeable of state laws and regulations in order to determine if any information contained in the rate filing (and models) should be treated as confidential.</td>
<td>1</td>
<td>The regulator should be knowledgeable of state laws and regulations regarding confidentiality of rate filing information and apply them to a rate filing fairly and efficiently. Confidentiality of proprietary information is key to innovation and competitive markets.</td>
</tr>
<tr>
<td>C.10.d</td>
<td>Obtain complete documentation of all component trees and how the individual predictions are aggregated together into a final prediction.</td>
<td>1</td>
<td>The company should provide either tree diagrams for each component tree or comprehensive if-else statements that would replicate the logic of the trees. The company should state how the individual component tree predictions are combined into a final prediction.</td>
</tr>
</tbody>
</table>
New Glossary Terms:

**Accumulated Local Effects Plots:** A type of interpretability plot. Accumulated Local Effects plots calculate smaller, incremental changes in the feature effects. ALE shows the expected and centered effects of a variable.

**Bagged Trees:** An ensemble of trees model where each tree is based on a “bootstrap aggregated” sample.

**Branch:** A connection on a decision tree between a parent node and a child node. A relationship based on a predictor variable is checked at each node, determining which branch applies.

**Candidate Variables:** The variables specified by the modeler to be used within the full model. The random variable selection by a random forest means that component trees might only use a subset of these variables in each tree.

**Child node:** The node below a parent node. The child node is the result of a split that occurs based on a predictor variable. The node above the child node, which is where the split occurred resulting in the creation of the child nodes, is called the parent node. There is 1 parent node for every child node. The root node is the only node which is not a child node.

**Component Tree:** An individual tree within an ensemble of trees based method such as random forest or gradient boosting machine.

**Deviance:** A measure of model fit. Deviance is based on the difference between the log-likelihood of the saturated model and the log-likelihood of the proposed model being evaluated. Smaller values of deviance demonstrate that a model’s predictions fit closer to actual. Deviance on training data will always decrease as model complexity increases.

**Hyperparameter:** A model hyperparameter is a model setting specified by the modeler that is external to the model and whose value cannot be estimated from data.

**Node:** A point on a decision tree. Nodes are either root nodes (the top node), leaf nodes (a terminal node at which point no further splitting occurs), or an internal node which appears in the middle of the tree while splitting is still taking place.

**Out-of-Bag Error:** Error calculated for observations based on the trees that did not include them in the set of training observations. Out-of-Bag Error is calculable when bootstrapping is used to generate different datasets for each component tree in an ensemble tree method.

**Parent node:** The node above a child node. The parent node is where a split occurs based on a predictor variable. The nodes below the parent node, which are a direct result of the parent node’s split, are called child nodes. There are typically 2 child nodes for every parent node. Terminal nodes can not be parent nodes.

**Partial Dependence Plots:** A type of interpretability plot. The partial dependence plot computes the marginal effect of a given variable on the prediction.

**Pruning:** The process of scaling back a tree to reduce it’s complexity. This results in trees with fewer branches and terminal nodes appearing higher on the tree. Pruning is more common on models built on
a single decision tree rather than on ensemble models such as random forests or Gradient Boosting Machines.

**Random Forest**: An ensemble of trees model where each tree is based on a bootstrap aggregated sample and each split is based on a random sample of the candidate variables.

**Root node**: The first (top) node in a decision tree. This node contains the entire set of data used by the tree as no splits have occurred yet.

**Shapley Additive Explanation Plots**: A type of interpretability plot. Shapley plots investigate the effect of including a variable in the model by the order in which it is added. The Shapley value represents the amount the variable of interest contributes to the prediction.

**Splitting**: The process of dividing a node into two or more sub-nodes, starting from the root node. Splitting occurs at every node up until the terminal (leaf) nodes when the stopping criterion is met.

**Stopping Criterion**: A criterion applied to the splitting process that informs the node when it is ineligible to split any further. Volume of data is often used as a stopping criterion, such that each leaf node is based on at least a pre-determined amount of data.

**Terminal Node**: An end node containing no child nodes, because the node has met the stopping criterion. The terminal node is associated with a prediction for one of the component trees. The terminal node is also known as a “leaf” node, the resulting endpoint of a decision tree.

**Tree Based Model**: Models that can be represented as a decision tree or a collection of decision trees.

**Tree Depth**: The maximum number of splits between the root node and a leaf node for a tree.

**Variable Importance**: A measure of how the variables (aka features) contribute to the overall model. There are multiple ways to measure variable importance.

SURPLUS LINES (E) TASK FORCE

Surplus Lines (C) Task Force Nov. 29, 2021, Minutes ................................................................. 8-154
Surplus Lines (C) Working Group Oct. 21, 2021, Minutes (Attachment One) .................................. 8-156
NAIC Standard Form Trust Agreement for Alien Excess or Surplus Lines Insurers (Attachment One-A) 8-157
Surplus Lines (C) Working Group Sept. 22, 2021, Minutes (Attachment Two) ................................. 8-171
Comment Letter (Attachment Two-A) ............................................................................................. 8-173
Andrea Best Comment Letter (Attachment Two-B) ........................................................................ 8-174
Proposed Friendly Amendment to Section 2.1 of the NAIC Standard Form Trust Agreement for Alien Excess or Surplus Lines Insurers (Attachment Three) ......................................................... 8-178
The Surplus Lines (C) Task Force met Nov. 29, 2021. The following Task Force members participated: James J. Donelon, Chair, Stewart Guerin and Tom Travis (LA); Larry D. Deiter, Vice Chair (SD); Lori K. Wing-Heier represented by Sian Ng-Ashcraft (AK); Jim L. Ridling represented by Jimmy Gunn (AL); Ricardo Lara represented by Libio Latimer (CA); Michael Conway represented by Rolf Kaumann (CO); Karima M. Woods represented by Robert Baron (MD); Troy Downing (MT); Mike Causey represented by Fred Fuller (NC); Russell Toal represented by Ursula Almada (NM); Barbara D. Richardson (NV); and Mike Kreidler represented by Jeff Baughman (WA); and Jeff Rude represented by Danie Capps (WY). Also participating was Robert Wake (ME).

1. **Adopted its Summer National Meeting Minutes**

Director Deiter made a motion, seconded by Mr. Baughman, to adopt the Task Force’s Aug. 5 minutes (see NAIC Proceedings – Fall 2021, Surplus Lines (C) Task Force). The motion passed unanimously.

2. **Adopted the Report of the Surplus Lines (C) Working Group**

Mr. Guerin reported that since the Summer National Meeting, the Surplus Lines (C) Working Group met Sept. 22 to address two administrative tasks. He stated that the Working Group discussed amendments to the NAIC Standard Form Trust Agreement for Alien Excess or Surplus Lines Insurers. Mr. Guerin stated that after discussion of several amendments, the Working Group re-exposed the document for a 14-day public comment period ending Oct. 6. The Working Group conducted an e-vote that concluded Oct. 21 to adopt the amendments to the NAIC Standard Form Trust Agreement for Alien Excess or Surplus Lines Insurers.

Mr. Kaumann made a motion, seconded by Mr. Fuller, to adopt the report of the Surplus Lines (C) Working Group, including its Oct. 21 (Attachment One) and Sept. 22 (Attachment Two) minutes. The motion passed unanimously.

Following the report, Robert Wake (ME) presented a few friendly amendments to the NAIC Standard Form Trust Agreement for Alien Excess or Surplus Lines Insurers.

Mr. Kaumann made a motion, seconded by Mr. Baughman, to adopt the amendments to the NAIC Standard Form Trust Agreement for Alien Excess or Surplus Lines Insurers (Attachment Three). The motion passed unanimously.

Mr. Guerin concluded that the second administrative task covered during the Working Group’s Sept. 22 meeting covered the adoption of modifications to the NAIC Quarterly Listing of Alien Insurers.

Commissioner Donelon addressed Mr. Guerin’s comments regarding Clark Fitz-Hugh (International Sureties Ltd.), who proposed the use of surety bonds as a means to fund collateral within the required trust funds that secure the solvency of insurers on the Quarterly Listing of Alien Insurers. Commissioner Donelon asked Mr. Fitz-Hugh to present his proposal. However, Mr. Fitz-Hugh was not in attendance. Commissioner Donelon asked for comments on the matter, and Director Deiter indicated that he has concerns with the use of surety bonds to fund the trusts as they are not admitted assets. Commissioner Donelon commented that his opinion aligns with Director Deiter. Mr. Latimer commented that California has a preference to maintain consistency between the surplus lines and reinsurance trust fund collateral requirements. Further, Mr. Latimer commented that there are concerns regarding the uncertainty regarding potential collectability. Mr. Wake commented that there are certain conditions that are necessary to fund a trust and a surety bond is not considered evergreen.

Director Deiter made a motion, seconded by Mr. Baughman, to table any further consideration regarding the use of surety bonds as a means to fund collateral within the required trust funds that secure the solvency of insurers on the Quarterly Listing of Alien Insurers. The motion passed unanimously.
3. Received an Update from the Model #870 Drafting Group

Mr. Travis said that the drafting group for the Nonadmitted Insurance Model Act (#870) consisted of various participants from Colorado, Illinois, Louisiana, Texas, and Washington. He indicated that since the Summer National Meeting, the drafting group met three times: Nov. 4, Oct. 20, and Sept. 28. He stated that the drafting group discussed specific sections of the Model #870 while working through a revision-marked version. He said that once the drafting group has made it through its initial review of the model, it will integrate comments received and reconvene in open session to cover the revised draft. He concluded by indicating that the drafting group anticipates presenting a draft of the model to the Task Force during the first quarter of 2022.

4. Heard an Update on Surplus Lines Industry Results

Andy Daleo said that at year-end 2020, the Quarterly Listing of Alien Insurers consisted of 87 Lloyd’s syndicates and 75 non-U.S. companies for a total of 162 entities, an increase of four entities over the prior year. He stated that in comparison, U.S. domestic surplus lines insurers totaled 297. He indicated that during 2020, non-U.S. based entities (syndicates and companies) collectively wrote $18.6 billion in direct U.S. surplus lines premiums, a 10.3% increase over the prior year. In comparison, domestic insurers wrote $47.5 billion in surplus lines premiums in 2020, a 17.9% increase from the prior year. Mr. Daleo stated that in 2020, non-U.S. insurer surplus lines premiums accounted for 28.1% of total U.S. surplus lines exposure, slightly lower than 29.5% in 2019 and 30.6% in 2018. He summarized that as of Dec. 31, 2020, the non-U.S. entities recorded an aggregate $21.1 billion in gross loss, loss adjustment expenses (LAEs), and incurred but not recorded (IBBR) reserves. He stated that as of June 30, 2021, the gross reserves were partially secured by nearly $5.2 billion in individual U.S. trust fund assets.

Mr. Daleo indicated that the U.S. nonadmitted market wrote $731 million in cyber direct premiums. In comparison, non-U.S. surplus lines insurers wrote $1.3 billion in cyber direct premiums written; 86% was written within the Lloyd’s market, with the majority written as stand-alone coverage opposed to within a package policy. He stated that there were approximately 600,000 nonadmitted U.S. and non-U.S. cyber policies in force, and 24,697 nonadmitted U.S. and non-U.S. claims were reported during 2020 with total direct loss payments of approximately $804 million.

Mr. Daleo said that 2020 was the first full year of private flood data collected. He indicated that the U.S. nonadmitted market wrote roughly $247 million in private flood direct premiums written. In comparison, non-U.S. surplus lines insurers wrote $847 million in private flood direct premiums written; 73% was written within the Lloyd’s market. He concluded that there were approximately 346,000 nonadmitted U.S. and non-U.S. private flood policies in force, with 6,474 claims reported during 2020 with total direct loss payments of approximately $143 million.

Having no further business, the Surplus Lines (C) Task Force adjourned.
The Surplus Lines (C) Working Group of the Surplus Lines (C) Task Force conducted an e-vote that concluded Oct. 21, 2021. The following Working Group members participated: Eli Snowbarger, Vice Chair (OK); David Phifer (AK); Michelle Lo (CA); Rolf Kaumann (CO); James A. McCarthy (MA); William Leach (NJ); Amy Garcia (TX); and Steve Drutz (WA).

1. **Adopted the NAIC Standard Form – Trust Agreement for Alien Excess or Surplus Lines Insurers**

The Working Group conducted an e-vote to consider adoption of the modifications to the NAIC Standard Form – Trust Agreement for Alien Excess or Surplus Lines Insurers (Attachment One-A). The motion passed with a majority of the members in favor of adoption.

Having no further business, the Surplus Lines (C) Working Group adjourned.
This Agreement, dated ________________, effective as of _________________ between ________________, organized and existing under the ___________________, its country of domicile and having its head office at ___________________________ (“Company”), and ________________, a (banking corporation/national banking association) organized and existing under the laws of _______________________ (“Trustee”); having its principal offices at ___________________________.

WITNESSETH:

WHEREAS the Company is engaged in the insurance business in its country of domicile and has or will have Policyholders in the United States (U.S.) of America as a result of writing insurance on an excess or surplus lines basis on risks therein; and

WHEREAS the Company desires to establish a trust fund in the United States U.S. as security for said Policyholders and Third-Party Claimants and to qualify as an eligible or approved excess or surplus lines insurer therein; and

WHEREAS, the Trustee is willing to act as Trustee of such trust fund; and

WHEREAS, the Trustee agrees to administer such trust fund principally from its office in the City of _____________________________ and the State of ________________.

NOW, THEREFORE, the Company has transferred to the Trustee cash in U.S. currency, Letters of Credit, Readily Marketable Securities, or any combination thereof, valued at a total of not less than the Trust Fund Minimum Amount as defined in Paragraph 2.7 of this Agreement on the date hereof, receipt of which the Trustee hereby acknowledges and agrees to hold in trust for the uses and on the conditions hereinafter set forth:

ARTICLE 1
DEFINITIONS

The following terms used herein shall, unless the context otherwise requires, have the following meanings:

1.1 “AMERICAN United StatesUNITED STATES U.S. POLICY” means any contract or policy of insurance issued or any agreement to insure made by the Company pursuant to the excess or surplus lines laws of any state, district, territory, commonwealth or possession of the United States U.S., in which the Company is not licensed to do an insurance business, provided that such Policies shall not include reinsurance or life insurance.

1.2 “CLAIM” means either or both of the following:

(a) a claim against the Company by a Policyholder, as defined in paragraph 1.9, or Third-Party Claimant for a loss under an American United States U.S. Policy excluding punitive or exemplary damages
awarded to or against a Policyholder and also excluding any extracontractual obligations not expressly covered by the American United States U.S. Policy ("Loss") or;

(b) a claim against the Company by a Policyholder for the return of unearned premium ("Unearned Premium") under an American United States U.S. Policy.

1.3 "DOMICILIARY COMMISSIONER" shall mean the Chief Regulatory Officer for Insurance in any state, territory, district, commonwealth or possession of the United States U.S. in which the Trust Fund is principally administered as identified on page one of this Agreement.

1.4 "EFFECTIVE DATE" shall mean the date as of which this Agreement is effective as specified on page one of this Agreement.

1.5 "IID" shall mean the International Insurers Department of the National Association of Insurance Commissioners ("NAIC").

1.6 "LETTER OF CREDIT" means a clean, unconditional, irrevocable Letter of Credit issued or confirmed by a Qualified United States U.S. Financial Institution.

1.7 "MATURED CLAIM" means a Claim which is enforceable against the Trust Fund as provided for in Paragraph 2.3 of this Agreement.

1.8 "NON-DOMICILIARY COMMISSIONER" shall mean the Chief Regulatory Officer for Insurance other than the Domiciliary Commissioner in any state, territory, district, commonwealth or possession of the United States U.S. in which the Company has Policyholders and who has provided the Trustee with written notice that he or she requires any notification required to be made to the Domiciliary Commissioner pursuant to this agreement.

1.9 "POLICYHOLDER" for the purposes of this Agreement, shall mean the holder of an American United States U.S. Policy that is a resident of or doing business in the United States U.S., and any other persons or associations who are assignees, pledgees, or mortgagees named therein.

1.10 "QUALIFIED UNITED STATES U.S. FINANCIAL INSTITUTION" means an institution that:

(a) Is organized and licensed or (or in the case of a U.S. branch office of a foreign banking organization, licensed) licensed under the laws of the United States U.S. or any state thereof; and,

— (b) — A national bank, state bank, or trust company which is adequately capitalized and qualified to accept securities as determined by the standards adopted by the U.S. banking regulators and regulated by state banking laws or a member of the Federal Reserve system; and

Is regulated, supervised and examined by U.S. federal or state authorities having regulatory authority over banks and trust companies; and

— (c) — Has been determined by the Securities Valuation Office of the NAIC as an acceptable financial institution; and

— (d) — Has been granted authority to operate with trust powers, if such qualified United States U.S. financial institution is to act as the fiduciary of the trust.
1.11 “READILY MARKETABLE SECURITIES” means debt or equity securities for which a public market exists and that is readily marketable on a regulated United States U.S. national security exchange, or principal regional security exchanges or those determined by the Securities Valuation Office of the NAIC to warrant an NAIC designation of 1 or 2.

1.12 “RECEIVER” shall mean for purposes of this Agreement, the Domiciliary Commissioner or such other person as may be appointed by a court of competent jurisdiction or designated by the statute of a state, territory, district, commonwealth or possession of the United States U.S. having jurisdiction over the conservation, rehabilitation or liquidation of the insurer.

1.13 “THIRD PARTY CLAIMANT” is one not a party to the insurance contract but having a final judgment against the Company for claims arising from an American United States U.S. Policy.

1.14 “TO TRANSMIT” or “TRANSMITTED” shall mean to send by telex, teletype, facsimile, modem or other similar means of electronic communication.

1.15 “TRUST FUND” or “TRUST” means the cash, readily marketable securities and letters of credit, or any combination thereof, in the actual and sole possession of the Trustee and held under the provisions of this Agreement.

1.16 “U.S. REPRESENTATIVE” shall mean the individual or firm designated by the Company or its successor in interest to act on behalf of the company.

**ARTICLE 2**

**THE TRUST**

2.1 **Duration of Trust Fund.** The Trust Fund shall be irrevocable and remain in full force and effect for a period of at least five years and may be until terminated following notification of intent to terminate the trust by the Company to the Trustee, the passage of a 90-day period from the receipt of notification to the trustee, and only upon the occurrence execution of any any of the following events:

(a) The passage of five (5) years from the date of written notice to the Trustee of the termination of the Trust. The Trustee and the NAIC IID and all Non-Domiciliary Commissioners receive from the Domiciliary Commissioner or from the Company written confirmation that the Domiciliary Commissioner has determined that all claims attributable to the period while the Company was eligible and listed on the NAIC Quarterly Listing of Alien Insurers have been satisfied and that no outstanding liabilities remain with respect to United States U.S. insurance policies in accordance with 2.14(a) of this Agreement. Insurers with exposure to “occurrence” policies are not eligible for this option.

(b) The expiration of a sixty (60) 90 days period after the Company has sent written notice to the Trustee and the NAIC IID by certified mail return receipt requested that it: (i) has become qualified and licensed insurer or eligible surplus lines insurer to conduct an insurance business in all States where it has direct insurance in force; or

   (cii) has entered into an assumption and assignment agreement transferring all liability with respect to all risks covered by this Trust Fund to an insurer licensed to do an insurance business in such states or an insurer listed by the IID assumption reinsurance agreement between the Company and an
accredited, certified, or reciprocal reinsurer(s), or an assumption reinsurance or assignment agreement between the Company and a U.S. authorized insurer(s) or accredited reinsurer eligible surplus lines insurer(s), or an insurer(s) currently approved on the Quarterly Listing of Alien Insurers, pursuant to which the claimant has a direct claim against the authorized or eligible insurer(s) or accredited reinsurer(s), provided, however, that any such assuming insurer or reinsurer shall have capital and surplus in excess of the minimum capital and surplus required for inclusion on the Quarterly Listing of Alien Insurers or (2) an insurer currently approved on the Quarterly Listing of Alien Insurers. Such written notice submitted to the Trustee by the Company shall include a list of all states in which the Company has American U.S. Policies in force as certified by the Company or U.S. representative.

The Trustee shall notify the IID and the Insurance Commissioners of said States in writing of its receipt of a notice as provided for in Subparagraphs (a), (b), or (c) of this paragraph within thirty (30) days of receipt of such notice from the Company.

2.2 **Priority of Payments Out of Trust Fund.** The Trust Fund shall be exclusively available first for the payment of all expenditures and fees under Paragraph 3.7 of this Agreement including legal fees and expenses actually incurred by or on behalf of the Trustee in connection with its administration, preservation or conservation of the Trust ("Trustee Priority Claims"); provided, however, that this amount shall not exceed $250,000 or 10% of the value of the Trust, whichever is less. Any amount in excess of the amount necessary to satisfy Trustee Priority Claims shall be available for the payment of Matured Claims, provided, however, that Losses shall always take priority over Unearned Premium in the payment of Claims so that the Trustee shall pay all Matured Claims for Losses in full prior to payment of any part of a Matured Claim for Unearned Premium. The Trustee shall pay a Matured Claim for Unearned Premium after receipt of a Claim for Losses which has not yet become a Matured Claim for any reason.

2.3 **When Claims Become Enforceable Against the Trust.** Subject to the payment of Trustee Priority Claims and to the priority of Losses over Unearned Premium, a Claim against the Company shall be enforceable against the Trust Fund when all of the following five conditions have been satisfied:

(a) The Policyholder or Third Party Claimant has obtained a judgment against the Company in any court of competent jurisdiction within the United States of America or has obtained a binding arbitration award in respect of the Company’s liability under an American U.S. Policy;

(b) Such judgment has become final in the sense that the particular litigation has been concluded, either through failure to appeal within the time permitted therefor or through final disposition of any appeal or appeals that may be taken, the word “appeal” being used herein to include any similar procedure for review permitted by applicable law;

(c) The service upon the Trustee of a certified copy of said judgment, together with such proof as to its finality as the Trustee may reasonably request;

(d) Certified written statements from the Policyholder, Third Party Claimant or their legal counsel stating, without qualification other than with respect to the passage of the time period described in Paragraph 2.3(e) hereof, that the Claim does not include exemplary or punitive damages, what part of the Claim, if any, is for Unearned Premium and that the Policyholder or Third Party Claimant has complied with all of the provisions set forth in Subparagraphs (a), (b), (c) and (d) of this paragraph; and
(e) The expiration of a period of thirty (30) days from the date of the service upon the Trustee of said certified copy of said judgment and all of said proofs without such judgment having been satisfied; provided, however, that in the event that the termination date of the Trust is less than thirty (30) days following such date of service, the expiration of the period of time equal to the amount of time left before the day before the termination date of the Trust.

A Claim which has satisfied each of the above five conditions shall be deemed to be a Matured Claim. The Trustee shall determine that the above conditions have been met on the basis of the evidence specified above and shall be held harmless in relying upon such evidence in its determination. Such determination shall be conclusive and binding upon all parties. Any Matured Claim shall, subject to Article 4, be paid by the Trustee by check mailed to the address of the Policyholder or Third Party Claimant solely out of the Trust Fund then in its actual and sole possession, without regard to the rights of any other Policyholder, unless the judgment shall be with respect to a Matured Claim for return of Unearned Premium in which case payment by the Trustee shall be made in accordance with the priorities stated above in Paragraph 2.2. The Trustee shall promptly notify the Company in writing of the receipt of a Claim which has been determined by the Trustee to meet conditions (a) through (d) of this paragraph and of the amount thereof. If a Matured Claim would, if paid, reduce the Trust Fund below the Trust Fund Minimum Amount as defined in Paragraph 2.7, or, if the Trustee has received notice that the Company is declared or deemed insolvent as set forth in Paragraph 4.1, then Article 4 shall govern the distribution of the Trust Fund. A Matured Claim which, if paid, would reduce the amount of the Trust Fund below the Trust Fund Minimum Amount shall only be paid in accordance with the provisions of Article 4 of this Agreement. The Trustee shall notify the IID, the Domiciliary Commissioner and the Non-Domiciliary Commissioner within ten (10) days of the Trustee’s receipt of any Matured Claim that would reduce the Trust Fund below the Trust Fund Minimum Amount as set forth in Paragraph 2.7. In determining whether payment of a Matured Claim would reduce the amount of the Trust Fund below the Trust Fund Minimum Amount, the Trustee shall rely upon the value of the Trust Fund as established at its most recent valuation as provided for in Paragraph 2.13 of this Agreement.

2.4 Limitations of Policyholder’s Source of Recovery. No Policyholder or Third Party Claimant shall have any right of any nature or description under this Agreement to seek to enforce a Claim or otherwise bring an action against the Trustee in respect of any assets of the Trustee or of any assets other than those in the Trust Fund. No Policyholder or Third Party Claimant, even after its Claim has become a Matured Claim, may require an accounting from the Trustee or inquire into the administration of the Trust, question any of the Trustee’s acts or omissions or otherwise enforce this Agreement, the sole right of such Policyholder or Third Party Claimant under this Agreement being to receive the amount of its Claim after it has become a Matured Claim from the assets then in the Trust Fund and available for such payment under this Agreement.

2.5 Sale of Trust Assets. Unless otherwise directed in writing by the Company, the Trustee shall retain the specific assets of the Trust Fund. Subject to the terms of this Agreement, at the time a Matured Claim becomes payable by the Trustee from the Trust Fund, payment shall be effected in accordance with the Company’s written instructions or, if no such instructions are received by the Trustee at least ten (10) days prior to the expiration of the time period set forth in Paragraph 2.3(e), then as follows: (i) first from any cash in the Trust Fund; (ii) then, from the proceeds of the sale by the Trustee of any or all of the Readily Marketable Securities or other investments (other than Letters of Credit) in the Trust Fund; (iii) then, any other assets or other property in the Trust Fund (other than the Letters of Credit); (iv) then, from drawings against any Letters of Credit. Subject only to the provisions set forth in the previous sentence, the Trustee in its sole discretion, may sell all or part of the Trust Fund, in any order it elects, needed to effect timely payment of any Matured Claims. The Trustee shall not be liable, except as provided by paragraph 3.11,
for any loss incurred in the sale of assets or for its selection of the assets to be sold, and shall only be
obligated to sell such assets at the market price then available to the Trustee.

2.6 Management of Trust Fund.
The responsibility for making investments of the Trust Fund shall, for the duration of the trust, repose
with the Company and unless and until otherwise directed by the Company in writing, the Trustee shall
not be required to take any action in regard to investments and property held in the Trust other than to
collect the interest and dividends or other sums payable thereon. Unless otherwise requested in writing by
the Company, and subject only to the provisions of Paragraph 2.5, the Trustee shall retain any and all
assets of the Trust held by it from time to time hereunder, notwithstanding that the same may not be
recognized as legal investments for trust funds under the laws of the state where the Trust Fund is
administered or other applicable law.

The Trustee shall deposit the assets of the Trust Fund, except to the extent the Trust Fund consists of
Letters of Credit, or any part thereof, in one or more such banks (which may include the Trustee) or trust
companies in the United States U.S. of America, or invest and reinvest the Trust Fund, except to the extent
the Trust Fund consists of Letters of Credit, or any part thereof, in any such stocks, bonds and securities
as the Company shall direct in writing, notwithstanding that such investments may not be recognized by
the laws of the state where the Trust Fund is administered or other applicable law as legal investments for
trust funds.

The Domiciliary Commissioner and the Chief Regulatory Officer for Insurance in any other state,
territory, district, commonwealth or possession of the United States U.S. where the Company is eligible
for excess or surplus lines shall have the right to review the assets in the trust to determine whether such
assets are acceptable.

Nothing herein contained is intended to relieve the Company from furnishing investments in the Trust
Fund of the quality required by the Surplus Lines or Excess Lines Laws of all states where the Trust Fund
is required as a condition of the Company’s eligibility. Each investment instruction from the Company
shall be a representation by the Company that the investments specified therein meet such conditions and
the conditions imposed by the definitions set forth in this Agreement. The Trustee shall also make or
change any deposits and sell and dispose of any negotiable assets of the Trust, other than Letters of Credit,
by and with the direction in writing of the Company. The Trustee shall be under no duty to give any
investment advice to any person in connection with the Trust Fund but shall always, provided the Trustee
itself shall have received actual notice thereof, notify the Company as to any rights to conversion,
subscription, voting or other rights pertaining to any investments held in the Trust Fund and of any default
in the payment of principal or interest. The Company shall have the full, unqualified right to vote and
execute consents and to exercise any and all proprietary rights, not inconsistent with this Trust Agreement,
with respect to any of the property forming a part of the Trust Fund. All interest, dividends and other
income resulting from the investment of the property in the Trust Fund (subject to the Company’s
obligation to maintain the Trust Fund Minimum Amount and to the Trustee’s interests provided herein)
shall be the property of the Company. To the extent the Company shall be entitled to receive such income,
Trustee shall collect and pay it to the Company, upon the Company’s written instructions, not more
frequently than monthly, provided, however, that the Trustee shall have no obligation with respect to the
payment of income by the issuer of any security.

2.7 Trust Fund Minimum Amount and Quality. The Company, either directly or through its U.S.
representative, shall provide the Trustee with written notice of the minimum amount which the Company
is required by law to maintain in the Trust Fund (“Trust Fund Minimum Amount”). The Company may
amend the Trust Fund Minimum Amount from time to time by providing the Trustee with advance written notice thereof. In no event, however, may the Trust Fund Minimum Amount be less than the amount determined by the funding provisions contained within Section V. B(i) of the IID Plan of Operation or its successor provision. The maintenance of the trust fund minimum amount shall continue until it is terminated per the provisions of 2.1 (a), (b), or (c).

If the Company is transacting business in California, the Trust Fund Minimum Amount must consist of cash or readily marketable securities acceptable to the California Insurance Commissioner which are authorized pursuant to Sections 1170 to 1182, inclusive, of the California Insurance Code, and are listed on a regulated United States national or principal regional security exchange, or letters of credit acceptable to the California Insurance Commissioner and issued by a qualified United States financial institution.

If the Company is not transacting business in California, the Trust Fund Minimum Amount must consist of cash, readily marketable securities or letters of credit issued by a qualified United States financial institution.

Trust fund amounts in excess of the Trust Fund Minimum Amount shall consist of cash, securities, letters of credit or investments of substantially the same character and quality as those which are eligible investments for the capital and statutory reserves of admitted insurers to write like kinds of insurance in the state where the trust is principally administered.

2.8 **Letters of Credit.** In the event that the assets of the Trust Fund consist in whole or in part of a Letter of Credit (which Letter of Credit may be issued by the Trustee or an affiliate in its commercial and not its trust capacity) and said Letter of Credit shall bear a termination date prior to any stated or noticed termination date of the Trust, shall be evergreen until the termination of the Trustee shall, in the absence of notice at least thirty (30) days in advance of any termination of the Letter of Credit that the Letter of Credit will be renewed or extended, draw down and convert such Letter of Credit to cash and hold the same as assets of the Trust Fund pursuant to the terms hereof.

2.9 **Contributions to the Trust Fund.** The Company may make further contributions to the Trust Fund from time to time which further contributions shall be subject to the terms and conditions hereof.

2.10 **Withdrawal of Excess Funds.** From time to time the Company may direct the Trustee in writing to pay over to the Company any funds in excess of the Trust Fund Minimum Amount set forth in Paragraph 2.7.

2.11 **Trustee’s Authority to Hold Investments.** Legal title to the assets of the trust shall be vested in the Trustee for the benefit of the Company’s American United States U.S. Policyholders and Third Party Claimants in accordance with the provisions of this Trust. Trustee may hold any investments or other assets thereunder in the name of a nominee. The term “hold” shall include Trustee’s authority to deposit any part or all of the aforesaid property, which consists of securities in registered or unregistered form, at a Federal Reserve Bank under federal book entry procedure, a depository trust company or other centralized securities depository system, whether now or hereafter organized (one or all herein called “CSDS”). All securities in registered form are to be registered in the name of a nominee of Trustee or CSDS.

2.12 **Assets of the Trust.** Trustee shall be under no duty or obligation to require the Company to make any transfers or payments of additional assets to the Trust and it shall be conclusively presumed that any and all such transfers or payments to Trustee have been properly made.
2.13 Trustee to Certify Trust Assets.
   (a) Whenever reasonably required by the Company, but not less often than annually and not more often than quarterly, Trustee shall prepare and submit to the Company a statement of the assets in the Trust and such other information as may be agreed upon between the Company and the Trustee.

   (b) Trustee shall promptly certify the existence of the trust fund and the assets and their market valuation on the effective date of this instrument and quarterly thereafter, to the IID and the Domiciliary Commissioner. Such notification shall be made within thirty (30) days after the effective date of the end of each calendar quarter.

In addition, Trustee shall certify the existence and most recent value of the Trust Fund whenever so directed by IID, the Company, its U.S. representative, the Domiciliary Commissioner or any Non-Domiciliary Commissioner. Whenever the Trustee in the performance of its duties thereunder shall be required to value the assets of the Trust Fund, it may employ an agent for such valuation and the Company shall reimburse Trustee for any costs or expenses of valuations performed either by the Trustee or such agent. In the absence of the filing in writing with the Trustee by the Company of exceptions to any such statement within sixty (60) days, approval of such statement shall be deemed to have been given; and in such case or upon written approval, the Trustee shall be released, relieved and discharged with respect to all matters set forth in such statement as though such account had been settled in a court of competent jurisdiction in a proceeding where all parties having a beneficial or regulatory interest in the Trust were parties.

2.14 Trustee’s Duties Upon Termination of Trust Fund.
   (a) In the event of termination in accordance with Paragraph 2.1 (a) through (c), the Company shall appoint either a qualified, certified public accountant or a qualified actuary with the consent of the Trustee, which consent shall not be unreasonably withheld, as auditor and an independent audit shall be made as of the date of such termination of the Trust Fund and the Company’s estimate of the outstanding liability, if any, of the Company for incurred and unpaid losses (both reported and unreported) and Unearned Premium on American United StatesU.S. Policies issued during the term of the Trust and up to and including the date of termination. The Company shall present to the Trustee such audit report together with a true and correct copy of the auditor’s practicing certificate or equivalent document issued by the authority governing the licensing or conduct of the auditor. If the auditor’s practicing certificate or equivalent document is unavailable, then the Trustee, upon the request of the Company, shall submit a request for the written approval of the auditor from the Domiciliary Commissioner. Approval of the auditor shall be deemed given if the Domiciliary Commissioner does not object to such auditor in writing to the Company and the trustee within 90 days from the date of delivery of such request. The auditor shall upon the completion of such audit, and from time to time thereafter, at the request of the Trustee, issue a report to the Trustee expressing an opinion on the amount of any such outstanding liability at the date of such termination or at such later date specified in such report. The Trustee shall be protected in acting or relying upon any report of said auditor and shall have the right to retain such assets in the Trust Fund as may be necessary, in the Trustee’s sole discretion, and the Trustee shall pay or cause to be paid therefrom the amount of any such Losses in the manner provided in Paragraph 2.3. Upon the termination of the Trust and the payment of any fees and expenses of the Trustee provided for thereunder due and owing, the Trustee shall transfer, pay over and deliver to the Company the income and principal of the Trust’s assets then in its actual and sole possession, or the balance thereof then remaining if Losses are to be paid according to the report of the auditor, and such payment, transfer and delivery shall constitute a full, final and sufficient release, discharge and acquittance to the Trustee in respect thereof.
b) No officer of the Trustee shall recognize the audit report of either a certified public accountant or a qualified actuary, nor accept any annual audited financial report if such officer has actual knowledge that such audit report was prepared in whole or in part by any natural person who: (i) has been convicted of fraud, bribery, a violation of the Racketeering, Influenced and Corrupt Organizations Act, 18 U.S.C. Sections 1961-1968, or any dishonest conduct or practices under federal or state law; (ii) has been found to have violated the insurance laws of any state with respect to any previous reports submitted in connection with the aftermath of a trust established for excess or surplus lines eligibility purposes; or (iii) has demonstrated a pattern or practice of failing to detect or disclose material information in previous reports filed.

2.15 [Optional at the choice of the Company and Trustee] Company May Waive Conditions for Claims Payments. With respect to assets in excess of the Trust Fund Minimum Amount as defined in Paragraph 2.7, the Company may approve the Trustee’s payment of any Claim by waiving any or all of the conditions specified in Subparagraphs (a) through (e) of Paragraph 2.3 and directing the Trustee in writing to pay such approved Claim out of the Trust Fund whereupon the Trustee shall forthwith satisfy said Claim out of the Trust Fund without (i) regard to the rights of any other Policyholder and any obligations other than the observance of the priorities of Paragraph 2.2 and of the exceptions set forth in the last subparagraph of Paragraph 2.3; (ii) inquiring into or ascertaining the validity of such Claim or the propriety of such direction; or (iii) seeing to the application of such payment. Nothing herein, however, should be construed to permit the Company to order, or the Trustee to make, payment pursuant to this section if the Trustee is in receipt of a notice of insolvency as referenced in Paragraph 4.2 or if such payment would reduce the trust fund below the Trust Fund Minimum Amount set forth in paragraph 2.7.

ARTICLE 3
THE TRUSTEE

3.1 Trustee’s Qualification. Trustee shall always meet the requirements of Subparagraphs (a),(b), (c)and (d) of Paragraph 1.10.

3.2 Trustee’s Duties and Liability. Trustee’s duties and responsibilities shall be governed by applicable law and the terms of this Agreement.

The Trustee shall not be liable for any loss to the Trust Fund other than losses caused by its own negligence or willful misconduct. The Company agrees to indemnify and hold harmless the Trustee from and against any and all claims, damages, losses or other payments of any nature whatsoever arising out of the Trustee’s performance or nonperformance thereunder, unless such claims, losses, damages or other payments arise as a result of the Trustee’s own negligence or willful misconduct.

3.3 Trustee May Rely on Certain Writings. The Trustee shall be entitled to rely upon, be protected, held harmless and deemed to have exercised reasonable due care, if the Trustee relies upon any writing believed by it in good faith to be genuine and to have been signed (whether facsimile or otherwise) or coded or purported to be signed or coded and transmitted, sent or delivered by the proper parties.

3.4 What Constitutes Conclusive Proof for Trustee. If the Trustee deems it necessary or desirable that a matter be proven prior to taking or omitting any action thereunder, such matter, unless other evidence in respect thereof be herein specifically prescribed, may be deemed to be conclusively proven by a statement purported to be executed in the name of the Company or by any of its agents or U.S. representatives designated by it as such in writing to the Trustee and delivered to the Trustee for any such action or omission on its faith thereof; but the Trustee, in its discretion, may instead accept or require such other or
additional evidence on the matter as it may deem reasonable, provided that in the event the effect of the action would be to terminate the Trust, the Trustee may rely only on a statement or certification of officers or agents of the Company duly authorized for this purpose.

3.5 What Constitutes Proper Execution for Trustee. Except as otherwise expressly provided in this Agreement, any writing to be furnished by the Company shall be sufficiently executed if signed in the Company’s name by such of its officers or other agents or U.S. representative as it may designate in writing to the Trustee, which designation shall continue in effect until changed by subsequent written notice received by the Trustee. With respect to the authority conferred on it, the Trustee may rely on any writing of any such officers or agents.

3.6 Trustee’s Reliance on Opinions of its Counsel. The Trustee may consult with counsel selected by it and may rely on said counsel’s opinion as complete authority in respect of any action taken or omitted by the Trustee in good faith in accordance with said opinion and the Trustee shall be deemed to have exercised reasonable due care in reliance thereon.

3.7 Trustee’s Fees and Expenses. The fees of the Trustee for administering the Trust shall be mutually agreed upon from time to time between the Company and the Trustee.

The fees and all expenses of Trustee, including its counsel fees and expenses and other disbursements incurred in administering, preserving or conserving the Trust, shall be, and the Company hereby irrevocably grants to Trustee, a first priority security interest in and a lien no greater than the lesser of: (i) $250,000 of the Trust Fund Minimum Amount as defined in Paragraph 2.7 of this Agreement or, (ii) 10% of the value of the Trust if the value falls below the Trust Fund Minimum Amount specified in Paragraph 2.7. Nothing herein shall limit the right of the Trustee to assert a priority claim in any amount against amounts in excess of the Trust Fund Minimum Amount pursuant to Paragraph 4.5. All amounts to which the Trustee is entitled by reason of this paragraph shall be Trustee Priority Claims for purposes of Paragraph 2.2. Nothing in this Agreement shall be construed as requiring that the Trustee’s fees and expenses be satisfied solely from the corpus of the Trust Fund.

3.8 Maintenance and Inspection of Trustee’s Records. The Trustee shall keep complete records of the administration of the Trust which may be examined at any time, with reasonable advance notice, by the Domiciliary Commissioner or any Non-Domiciliary Commissioner. Any persons duly authorized by the Company in writing may examine during normal business hours upon ten (10) days written notice to the Trustee. The Company agrees to reimburse the Trustee for any reasonable expenses incurred by the Trustee as a result of any such examination.

3.9 Trustee’s Resignation or Removal; Appointment of Successor. Notwithstanding Paragraph 2.1 hereof, the Trustee may resign at any time by sending its notice of resignation by notifying certified mail return receipt requested, to the Company’s last known address and to the Domiciliary Commissioner, all Non-Domiciliary Commissioners, and the IID to take effect on the date specified in such notice, but not less than sixty (60) days after the date of such mailing or personal delivery thereof if not mailed, unless the Company shall accept shorter notice as adequate. Trustee or any Successor Trustee may be removed by the Company by sending written notice of such removal by certified mail return receipt requested, to such the Trustee’s last known address and to the domiciliary Commissioner, all non-domiciliary Commissioners, and the IID, to take effect on the date specified in such notice but not less than sixty (60) days after the date of such notification mailing or personal delivery thereof if not mailed, unless Trustee accepts shorter notice as adequate; provided that no such removal shall become effective without Trustee’s
consent until all sums due to it thereunder for its fees and expenses including legal fees and expenses have been paid to it.

The Trust Fund shall be retained by the Trustee who is resigning or who has been removed until payment of its fees and expenses as provided in Paragraph 3.7 and its Successor Trustee has accepted its appointment, at which time the Trustee shall transfer, pay and deliver to the Successor Trustee the assets comprising the Trust Fund as they may be then constituted. If a Successor Trustee has not accepted appointment and the Trustee wishes to be relieved of responsibility thereunder, the Trustee may tender the Trust Fund assets to the Domiciliary Commissioner and, if the Domiciliary Commissioner declines to accept responsibility for Trust Fund assets, the Trustee may deposit the Trust Fund with a court of proper jurisdiction and with regard to such action shall be responsible only for giving notice to the Domiciliary Commissioner, all Non-Domiciliary Commissioners, the IID, the Company and such Policyholders which have notified the Trustee in writing that they have an actual or potential claim against the assets of the Trust Fund. When Funds are accepted by the Domiciliary Commissioner or paid into court, the Trustee’s sole remaining responsibility shall be to render a final accounting of the Trust. Copies of the required notice or resignation or removal required by this Paragraph shall also be sent communicated by certified mail, return receipt requested, to the IID, the domiciliary Commissioner, and all Non-Domiciliary Commissioners.

3.10 Trustee’s Assets. No provision of this Agreement shall require the Trustee to expend or risk its own funds or to otherwise incur any financial liability in the performance of any of its duties thereunder or in the exercise of its rights including, but not limited to, prosecuting, defending or otherwise enforcing any claims by or against the Trust Fund unless and until it has been indemnified for any fees and expenses likely to be incurred thereby.

3.11 Trustee’s Liability. The Trustee shall not be liable for any of its actions or omissions thereunder (including any actions taken in accordance with Article 4), except for its own negligence or willful misconduct. If the Trust Fund is funded, in whole or in part, by a letter of credit issued by the Trustee or by an affiliate of the Trustee, the failure of the Trustee to draw against the letter of credit in circumstances where such draw would be required by this Agreement shall be deemed to be negligence and/or willful misconduct for purposes of this paragraph.

ARTICLE 4
INSOLVENCY

4.1 Insolvency of Trust Fund. The Trust Fund shall be deemed insolvent upon the happening of the earlier of the following events:

(a) The Trustee actually receives written notice from the Company, the Company’s U.S. representative, the insurance regulatory authority in the Company’s jurisdiction of domicile, the domiciliary Commissioner, any Non-Domiciliary Commissioner or the IID, that the Company has been declared insolvent in its country of domicile; or

(b) The expiration of sixty (60) days after the value of the Trust Fund as shown by the most recent valuation of the Trust Fund as provided for in Paragraph 2.13 of this Agreement (i) was reduced below the Trust Fund Minimum Amount as specified in accordance with Paragraph 2.7 or (ii) would be so reduced by the payment of a Matured Claim, whichever of the events described in (i) and (ii) occurs first. If said minimum has been replenished within said sixty (60) day period by or on behalf of the Company to offset any such reduction, notice thereof shall be given by the Trustee to the IID as provided
below, and the insolvency shall be deemed cured. Promptly after such actual or anticipated reduction of the value of the Trust Fund, the Trustee shall send notice to the Company of the actual or anticipated reduction and a copy of such notice by certified mail return receipt requested, to the Domiciliary Commissioner, all Non-Domiciliary Commissioners, and the IID.

4.2 Notice of Insolvency.

(a) If declared insolvent in its country of domicile, the Company shall promptly (i) transmit send a written notice of this event and (ii) send a certified copy of such declaration by certified mail return receipt requested to the Company’s U.S. representative, the trustee, the domiciliary commissioner, all non-Domiciliary Commissioners and the IID.

(b) If the Trust Fund is deemed insolvent as defined in Paragraph 4.1, the Trustee shall promptly transmit send a written notice of this event by certified mail return receipt requested to the Company, its U.S. representative, the Domiciliary Commissioner, all Non-Domiciliary Commissioners and the IID.

4.3 Transfer of Trust Assets to Domiciliary Commissioner in Event of Insolvency. In the event that the Trust becomes insolvent as specified in Paragraph 4.1 and notwithstanding the provisions of this Article 4 or of any other provision in this Agreement, the Trustee shall comply with an order of the Domiciliary Commissioner or a U.S. court of competent jurisdiction directing the Trustee to transfer to the Domiciliary Commissioner or other designated Receiver all of the assets of the Trust Fund except those assets which are necessary to satisfy the Trustee’s Priority Claims as determined in Articles 2.2 and 3.7. The Domiciliary Commissioner or other designated Receiver shall distribute assets transferred from the Trust in compliance with applicable state law.

Compliance with such an order shall relieve the Trustee of all further duties, obligations and liabilities of any kind or description under this Agreement. Nothing in this paragraph shall be construed as relieving the Trustee of any liability under this Agreement for any acts or omissions which occurred prior to the date on which the Trustee transfers the assets of the Trust Fund to the domiciliary Commissioner.

4.4 One Year Waiting Period After Insolvency. Except in cases where Trust assets have been transferred to the Domiciliary Commissioner as provided for in paragraph 4.3 and unless otherwise ordered by a court of competent jurisdiction, no Claims, other than the Trustee’s Priority Claims, shall be paid out of the Trust Fund during the 12 month period (“Waiting Period”) commencing on the date the Trustee receives written notice that the Company was declared insolvent in its country of domicile as set forth in Paragraph 4.1(a) or the date the Trustee is required to transmit send a notice to the Company pursuant to Paragraph 4.1(b), unless the insolvency has been cured within the sixty (60) day period as provided for in Paragraph 4.1(b), whichever occurs first.

Matured Claims, whether arising prior to or during the Waiting Period, may be filed throughout said period by certified mail return receipt requested.

4.5 Final Distribution of Trust Fund Assets By Trustee. As soon as practicable after the end of the Waiting Period specified in Paragraph 4.4, the Trustee shall distribute the balance of the Trust Fund in accordance with state law.

Trustee Priority Claims shall first be paid out of any amount in the Trust Fund in excess of the Trust Fund Minimum Amount. The Trust Fund Minimum Amount and any amount in excess of the Trust Fund
Minimum Amount not needed to satisfy Trustee Priority Claims shall then be distributed among the claimants with Matured Claims.

Such prorated distribution shall be in the ratio which the value of each such Matured Claim bears to such balance.

Any assets remaining in the Trust Fund after all matured claims have been paid in full shall be used to satisfy any outstanding and unpaid Trustee Priority Claims.

Any remaining assets shall be transferred by the Trustee to the Company or its successor in interest.

In performing its duties thereunder the Trustee may retain any person to act on its behalf or assist it as it deems necessary and shall pay the necessary and reasonable compensation and expense of such person thereunder out of the Trust Fund.

ARTICLE 5
MISCELLANEOUS

5.1 Governing Law. This agreement shall be governed by, and construed and enforced in accordance with, the laws of the United States jurisdiction in which the Trust Fund is principally administered as specified on page one of this Agreement.

5.2 Survival of Prior Obligations. Commencing on the Effective Date, this Agreement shall be binding upon the parties hereto and their successors and assigns and shall supersede such prior agreements, except for continuing obligations created by any prior agreements between the parties on the subject matter hereof as to matters arising prior to the Effective Date.

5.3 Procedure to Be Followed in Amending this Agreement.

(a) All amendments to this Agreement shall be in writing and signed by the Company and the Trustee. The Trustee shall have discretion either to give or withhold its consent thereunder and its decision to give or withhold its consent shall be binding and conclusive upon all persons and parties, and in no event shall it incur any liability for any decision made by it thereunder in good faith.

(b) Notwithstanding the provisions of Paragraph (a) of this section, no amendment shall become effective without the IID’s prior written consent.

(c) The company shall give written notice of any proposed amendment to all Domiciliary and Non-Domiciliary Commissioners together with a copy of the proposed amendment. If no Non-Domiciliary Commissioner disapproves the proposed amendment within thirty (30) days of receipt of the notice, the amendment shall be effective on the date specified by the Domiciliary Commissioner.

5.4 Notice. The Company shall provide the Trustee with the names and mailing addresses of the manager of the IID, the Domiciliary Commissioner, all Non-Domiciliary Commissioners and the Company’s U.S. representative, and shall update this list from time to time as may be necessary to keep the information in the list current. In providing the Notices required under any provision of this Agreement, Trustee may rely upon this list and in doing so shall be protected, held harmless and deemed to have exercised all reasonable due care.
5.5 **Partial Invalidity Does Not Invalidate Entire Agreement.** If any provision of this Agreement is held invalid or unenforceable, the balance of this Agreement shall be construed and enforced as if such provision had not been inserted herein.

5.6 **Interpretation.** The use herein of one gender shall be deemed to include the other and the singular the plural, as the context may require.

5.7 **Headings and References.** The headings herein are for reference only and not for defining any provisions hereof. Reference to this Agreement shall include its amendments, if any. All articles, paragraphs and subparagraphs as well as their subdivisions and abbreviations cited herein refer to this Agreement and its amendments, if any.

5.8 **Counterparts.** This Agreement may be executed in any number of counterparts, each of which when signed by the Company and the Trustee, shall be deemed to be an original.

IN WITNESS WHEREOF, the Company and the Trustee have caused this Agreement to be duly executed and their corporate seals affixed hereto.

[Notarizations]
The Surplus Lines (C) Working Group of the Surplus Lines (C) Task Force met Sept. 22, 2021. The following Working Group members participated: Stewart Guerin, Chair (LA); Eli Snowbarger, Vice Chair (OK); David Phifer (AK); Michelle Lo (CA); Rolf Kaumann (CO); Robert Ballard (FL); Scott Sanders (GA); Marcy Savage (IL); James A. McCarthy (MA); Jose Joseph and Joana Lucashuk (NY); Amy Garcia (TX); and Steve Drutz (WA).

1. **Heard Comments on the Modifications to the Trust Agreement**

Mr. Guerin referenced call materials that included a re-draft of the NAIC Standard Form – Trust Agreement for Alien Excess or Surplus Lines Insurers (Trust Agreement) and several comment letters. He introduced the comment letter contributors, who were asked to summarize their comments.

Ms. Lo indicated that she has no objections to removing the California provision in Section 2.7 of the Trust Agreement since the removal would not affect the department’s authority established in its statutes. Mr. Guerin commented that the re-draft of the Trust Agreement reflects that deletion.

Ms. Lucashuk summarized several minor technical edits to the Trust Agreement that clarify and improve the consistency throughout the document. Mr. Guerin agreed with the edits proposed by Ms. Lucashuk and indicated that these edits were not yet reflected in the re-drafted Trust Agreement. He indicated that these edits would be reflected in the Trust Agreement when re-exposed.

Andrea T. Best (McDermott Will & Emery LLP—MWE) indicated that MWE is generally in favor of the proposal to eliminate the current five-year notice period for termination of the trust. She summarized several recommendations for the new language proposed to Section 2.1 of the Trust Agreement. First, she suggested clarifying the role of the Domiciliary Commissioner by removing the language that indicates the Domiciliary Commissioner determines outstanding U.S. liabilities, as it conflicts with the requirement in Section 2.14 that requires a qualified actuary or accountant to prepare an independent audit of any outstanding liabilities. Second, regarding the termination of a trust by the transfer of liabilities, she proposed expanding the list of transferees to include accredited reinsurers and U.S. surplus lines insurers. Lastly, she suggested that the occurrence policy language be eliminated, given that an independent auditor is required to confirm that there are no U.S. liabilities before a trust is terminated. Mr. Guerin indicated that all of Ms. Best’s comments have been incorporated in the re-draft of the Trust Agreement.

Mr. Kaumann made a motion, seconded by Ms. Lo, to incorporate all the comments (Attachment Two-A), including Ms. Lucashuk’s edits into the re-draft of the Trust Agreement, and solicit comments during an exposure period of 14 calendar days. The motion passed unanimously.

2. **Adopted Revisions to the Quarterly Listing of Alien Insurers**

Mr. Guerin summarized one comment received from Ms. Best regarding the Quarterly Listing of Alien Insurers to maintain a listing of trust banks and contacts. He commented that NAIC staff already maintain this listing for reference. Following no additional discussion, the chair requested a motion to adopt the Quarterly Listing of Alien Insurers as presented.

Mr. Phifer made a motion, seconded by Mr. Joseph, to adopt the revisions to the Quarterly Listing of Alien Insurers (Attachment Two-B). The motion passed unanimously.

3. **Discussed Other Matters**

Clark Fitz-Hugh (International Sureties) requested that the Working Group consider the potential use of surety bonds to fund the trust securing the writings of alien insurers on the Quarterly Listing of Alien Insurers. He summarized various reasons to support the inclusion of surety bonds, such as being rated by the same rating companies as banks and regulated by state insurance departments. He also indicated that surety bonds are designed to serve the same purpose as a letter of credit, and the wording of surety bonds and letter of credits match exactly. He further indicated that surety bonds were created to be an
alternative to banks, because they make the credit process easier and less onerous for applicants. He emphasized that surety bonds are used throughout the U.S. and guarantee various transactions from one party to another, such as payments of judgements, payment of construction loan defaults, and workers’ compensation claims. He suggested that the utilization of surety bonds as trust funding devices could be permitted on a limited use basis, perhaps to secure those insurers that require only a minimum trust fund balance.

Thomas M. Dawson (MWE) commented that he endorses the use of surety bonds on behalf of several of his clients. He also indicated that if the Working Group were to proceed with allowing surety bonds as a device to fund the trust, the Trust Agreement would need to be updated to accommodate the surety bond option.

Mr. Guerin suggested that the use of surety bonds as a trust funding device would be more appropriate for the Surplus Lines (C) Task Force, given it is a policy issue. Therefore, he proposed that he present this issue in his summary report to the Task Force during the next meeting.

Having no further business, the Surplus Lines (C) Working Group adjourned.
Hi Bree,

At the Working Group’s July 7th conference call, Thomas Dawson from McDermott Will & Emery raised an issue over the California Requirement paragraph within Section 2.7 of the NAIC Trust Agreement Form. That paragraph mandates the trust fund’s composition for insurers transacting (nonadmitted) business in California. Thomas indicated that the NRRA preempts the California Requirement; and the mandated composition of the trust fund should only apply to insurers who wish to be on the California’s LASLI list.

While waiting to see how he could establish the NRRA preemption case, we want to inform you that we wouldn’t have any issue removing the California Requirement paragraph from the NAIC Trust Agreement Form since the removal wouldn’t affect the authority we have in our statutes. California can continue to enforce the trust fund requirements at the initial LASLI application review stage and during the subsequent renewal periods.

Thank you for your consideration.

Regards,
Michelle

Bree Wilson  
National Association of Insurance Commissioners  
International Insurers Department  
1100 Walnut Street, Suite 1500  
Kansas City, Missouri 64106-2197  

6 August 2021  

Dear Ms. Wilson,  

We are writing with respect to the NAIC International Insurers Department’s (“IID”) proposed draft changes to the Standard Form Trust Agreement for Alien Excess or Surplus Lines Insurers (“SFTA”), and the proposed changes to the Quarterly Listing of Alien Insurers. As you know, we are privileged to represent twenty-five (25) insurers that currently appear on the Quarterly Listing. We are not writing on behalf of any particular client, and the views expressed below are our own. Further to our comments on the Surplus Lines Working Group call on July 7th, we are pleased to provide the following written comments on the proposed drafts.  

Surplus Lines Trust Agreement  

1. Trust termination  

We are in favour of the NAIC’s proposal to eliminate the current 5-year notice period for termination of the trust and the substitution of a 90-day notice period instead. Most of our comments on the SFTA concern the proposed new procedure for termination, specifically:  

a. Domiciliary regulator required to determine no outstanding U.S. liabilities  

Under Section 2.1 of the SFTA, it is proposed that the domiciliary regulator of the trust must determine that “all claims attributable to the period while the Company was eligible and listed on the NAIC Quarterly Listing of Alien Insurers have been satisfied and that no outstanding liabilities remain with respect to U.S. insurance policies.”  

It is not clear how this determination by the domiciliary regulator is intended to work with the requirement that currently appears in Section 2.14 of the SFTA, which requires a qualified actuary or accountant (acceptable to the trustee bank) to prepare an independent audit of any outstanding liabilities. Such audit opinion is currently submitted only to the trustee bank; the domiciliary commissioner of the trust typically has no involvement in termination of the trust other than to receive notice of termination. The proposed change of requiring the domiciliary commissioner to determine that no U.S. liabilities remain would mark a significant deviation from longstanding practice that has the potential to introduce considerable uncertainty and potential delay to the trust termination process.
To the best of our knowledge, the current process of requiring the insurer to obtain an independent audit opinion confirming no remaining surplus lines liabilities and submit the opinion to the trustee bank has worked smoothly over many years, and we are not aware of any claimants that have been disadvantaged by this process. Therefore our preference would be to retain the status quo and not introduce a requirement for the domiciliary regulator of the trust to determine that no U.S. liabilities remain.

b. Transferring liabilities to another insurer

We welcome the NAIC’s proposal to allow insurers to terminate the trust on 90 days’ notice not just by transferring liabilities to U.S. admitted insurers or other insurers on the Quarterly Listing, but also by transferring liabilities to an accredited reinsurer. This change would give insurers a wider variety of options to transfer their liabilities to other re/insurers that are subject to regulatory oversight and have assets in the U.S. for the benefit of U.S. policyholders.

We would suggest that the Working Group may also wish to consider allowing insurers to terminate their SFTA by transferring liabilities to U.S. surplus lines insurers. Currently, the SFTA only permits transfers to other alien surplus lines insurers on the Quarterly Listing, or to U.S. insurers that are admitted in all states. As you well know, U.S. surplus lines insurers are subject to regulatory oversight by their domestic state regulator and must submit the same statutory financial statements and are subject to the same minimum capital and solvency requirements as admitted insurers in their domiciliary state. It would seem to us that U.S. policyholders would be equally well protected if an insurer on the Quarterly Listing were to transfer its surplus lines liabilities to a U.S. surplus lines insurer, perhaps limited to those insurers that would meet the IID’s minimum capital and surplus standards.

c. Occurrence policies

It is proposed that the 90 days’ termination option described above would not be available to insurers that have written occurrence policies. Therefore, an insurer that wrote a single occurrence policy many years ago would be barred from terminating the trust forever, no matter how old the occurrence policy or how confident the company or a qualified actuary or auditor is that no policy liabilities remained.

If, under Section 2.14 an independent auditor must confirm that no U.S. liabilities remain before the trustee bank would be able to terminate the trust, then it would not appear to be necessary to bar all insurers that wrote occurrence policies from terminating their trusts. Therefore, we would be in favour of eliminating this proposed exception prohibiting termination of the trust for insurers that wrote occurrence policies.
d. Assumption reinsurance

Currently, insurers are permitted to terminate the trust by transferring liabilities to another licensed or NAIC-listed carrier via an “assumption and assignment agreement.” The draft SFTA would instead allow insurers to transfer liabilities via an “assumption reinsurance agreement.” As we noted on the July 7th Surplus Lines Working Group call, while this was a positive addition for those companies who wish to transfer liabilities by way of reinsurance, it would seem to eliminate the well-trodden path of terminating a trust by transferring liabilities to another NAIC-listed carrier using a mechanism such as a Part VII transfer under English law, which of course is not a reinsurance arrangement. We appreciate the NAIC agreeing with our comment on the call and we understand that the previous language permitting transfer of liabilities by way of an assumption and assignment agreement will be re-inserted, in addition to the new option of using assumption reinsurance.

2. Investments

Section 2.7 of the SFTA requires listed insurers “doing business” in California to abide by California’s rules with respect to permitted investments. This is a provision that has been in the SFTA since the early 1990’s. In our view such a state-specific provision (like any similar provision that would obligate compliance with state-specific investment rules) is now subject to challenge based on the provisions of the federal Nonadmitted and Reinsurance Reform Act (“NRRA”). The NRRA’s command that no state can deny surplus lines eligibility to an IID-listed insurer is undercut at the very least to the extent that any state’s local eligibility requirements, investment-related or otherwise, could be imposed on IID-listed carriers. We would suggest that this provision should be removed from the SFTA as it pertains to IID-listed insurers.

Should California or any other state wish to impose such investment requirements, or other financial/solvency-related requirements, upon insurers that choose to maintain or obtain a place on the state’s voluntary listing of surplus lines insurers (the LASLI for California), then states are free to do so through their own statutes, regulations, or application requirements for their voluntary lists. Indeed, California and New York have done just that by enacting statutes imposing higher minimum capital and surplus standards for surplus lines insurers appearing on their state lists.

Quarterly Listing

Finally, the NAIC has proposed to eliminate all financial information from the Quarterly Listing of Alien Insurers. Specifically, the trust fund minimum amount and balance, identity of the trustee bank, and the company’s total assets and surplus, will be deleted and only the country of domicile and US representative contact information will remain. We understand this is due to concerns that brokers and insureds might be using the information on the Quarterly Listing to choose one insurer over another, which of course has never been the intent of the list.
We note that the list of trustee banks and contact information for the banks has always been useful for new applicants for the Quarterly Listing, as well as insurers who might be looking to change their trustee bank. Not all banks are familiar with the SFTA and therefore it is helpful to know which ones have experience acting as trustees for other insurers. To that end, while we understand that the NAIC no longer wishes to publish this information, we would appreciate if the NAIC could privately maintain a list of the trustee banks and make it available upon request to new applicants or companies already on the IID List.

***

We are grateful to the NAIC and the Working Group for the opportunity to provide these comments. We would be pleased to discuss any of our comments at your convenience, and we thank you in advance for your kind consideration.

Yours sincerely,

Andrea T. Best

    Thomas M. Dawson, McDermott Will & Emery LLP
Proposed Friendly Amendment to 2.1, Updated November 3, 2021

2.1 Duration of Trust Fund. The Trust Fund shall be irrevocable and remain in full force and effect until terminated 90 days after notification by the Company to the Trustee and the IID of intent to terminate the trust, based upon any of the following grounds for termination:

(a) The Trustee and the NAIC IID have received written confirmation from the Company that all claims attributable to the period while the Company was eligible and listed on the NAIC Quarterly Listing of Alien Insurers have been satisfied and that no outstanding liabilities remain with respect to U.S. insurance policies, based on an independent audit conducted in the manner prescribed in 2.14(a) of this Agreement.

(b) The Company has become licensed to conduct insurance business in all States where it has direct insurance in force, or has redomesticated to a U.S. jurisdiction and is an eligible U.S. surplus lines insurer in all States where it has direct insurance in force and is not licensed; or

(c) An assumption reinsurance agreement has been executed by the Company and an accredited, certified, or reciprocal reinsurer(s), or an assumption reinsurance or assignment agreement has been executed by the Company and a U.S. authorized insurer(s) or eligible surplus lines insurer(s), or an insurer(s) currently approved on the Quarterly Listing of Alien Insurers, pursuant to which the claimant has a direct claim against the authorized or eligible insurer(s) or accredited reinsurer(s), provided, however, that any such assuming insurer or reinsurer shall have capital and surplus in excess of the minimum capital and surplus required for inclusion on the Quarterly Listing of Alien Insurers.
TITLE INSURANCE (C) TASK FORCE

Title Insurance (C) Task Force Nov. 16, 2021, Minutes .................................................................8-180
Title Insurance (C) Task Force Oct. 19, 2021, Minutes (Attachment One)........................................8-185
The Title Insurance (C) Task Force met Nov. 16, 2021. The following Task Force members participated: Judith L. French, Chair, represented by Michelle Brugh Rafeld (OH); David Altmaier, Vice Chair, represented by Anoush Brangaccio (FL); Lori K. Wing-Heier represented by Katie Hegland (AK); Peni Itula Sapini Teo represented by Elizabeth Perri (AS); Karima M. Woods represented by Angela King (DC); Colin M. Hayashida represented by Martha Im (HI); Vicki Schmidt represented by James Norman (KS); James J. Donelon represented by Warren Byrd (LA); Grace Arnold represented by Paul Hanson (MN); Chlora Lindley-Myers represented by Marjorie Thompson (MO); Troy Downing represented by Sharon Richetti (MT); Mike Causey represented by Timothy Johnson (NC); Marlene Caride represented by Randall Currier (NJ); Russell Toal and Mark Marquez (NM); Barbara D. Richardson (NV); Jessica K. Altman represented by Michael McKenney (PA); Larry D. Deiter represented by Maggie Dell (SD); Scott A. White represented by Mike Beavers (VA); and Michael S. Pieciak represented by Kevin Gaffney (VT). Also participating was: Michael Walker (WA).

1. **Adopted its Oct. 19 Minutes**

The Task Force met Oct. 19 and took the following action: 1) adopted its Summer National Meeting minutes; 2) discussed its 2022 proposed charges; 3) heard a presentation on Demotech’s *Regional Title Underwriter Escrow Theft and Defalcation Prevention Measures Report*; and 4) heard a presentation on the American Land Title Association’s (ALTA’s) new forms of Commitment, Owner’s Policy, and Loan Policy, effective July 1.

Mr. Byrd made a motion, seconded by Mr. McKenney, to adopt the Task Force’s Oct. 19 minutes (Attachment One). The motion passed unanimously.

2. **Adopted its 2022 Proposed Charges**

Ms. Rafeld stated that the Task Force vetted recommendations for its 2022 proposed charges during its Oct. 19 meeting. State insurance regulators and interested parties were asked to submit additional comments and suggestions to NAIC staff by Nov. 1. No additional comments were received. The Task Force exposed a redlined version of the 2022 proposed charges with all suggestions taken into consideration on Nov. 5, with comments due by Nov. 12. No additional comments were received.

The revisions to the 2022 proposed charges are as follows:

The **Title Insurance (C) Task Force** will:

1. **Discuss and/or monitor issues and developments occurring impacting in** the title insurance industry, and provide support and expertise to other NAIC committees, task forces and/or working groups, or outside entities, as appropriate.

2. **Review and assist various regulatory bodies in combating fraudulent and/or unfair real estate settlement activities.** Such efforts could include working with the Antifraud (D) Task Force and other NAIC committees, task forces and/or working groups to combat mortgage fraud and mitigating title agent defalcations through the promotion of closing protection letters (CPLs) and other remedies. **Report results at each national meeting.**

3. **Consult with the Consumer Financial Protection Bureau (CFPB) and other agencies responsible for information; education; and disclosure for mortgage lending, closing and settlement services about the role of title insurance in the real estate transaction process.**

4. **Consider the effectiveness of changes in financial reporting by title insurance companies, and identify further improvements and clarifications to blanks, instructions, Statement of Statutory Accounting Principles (SSAPs), solvency tools, and other matters, as necessary.** Coordinate efforts with the Statutory Accounting Principles (E) Working Group.

5. **Revise the Title Insurance Consumer Shopping Tool Template to include questions and answers about title insurance related fraud topics, including but not limited to, CPLs and wire fraud.**

6. **Evaluate the effectiveness of CPLs including but not limited to, intent, to ensure compliance with state regulation and requirements, consumer protections offered and excluded, and potential alternatives for coverage.**

7. **Explore short-term and long-term issues and solutions from the pandemic.**
The last sentence of the second charge was struck, as the Task Force does not work with other regulatory bodies or committees at a frequency where it would need to report at each meeting held. The fourth charge was removed, as it is an outdated charge that has been completed, and the need for similar work can still be done under the first charge if need be. The fifth charge was removed, as the Title Insurance Consumer Shopping Tool was updated to include information about wire fraud and adopted by the Property and Casualty Insurance (C) Committee during the Summer National Meeting. The seventh charge was removed, as the Task Force has sufficiently covered the impact the pandemic has had on the title industry this year. The remainder of the modifications were made in an effort to clarify the intent of the charge.

Birny Birnbaum (Center for Economic Justice—CEJ) stated that he would like the Task Force to add the following to its 2022 proposed charges: 1) review the effectiveness of current rate regulation practices to protect title insurance consumers from excessive rates and charges and, if needed, recommend needed changes in regulatory practices to protect consumers from excessive title insurance rates and charges; and 2) develop a model bulletin prohibiting the inclusion of pre-dispute mandatory arbitration provisions in title insurance policies. The first suggested charge has to do with addressing the excessive profit of the title insurance industry over the last several years. The second suggested charge involves title insurers’ inclusion of pre-dispute mandatory arbitration provisions in their policies. This has been found to be an unfair practice, but the title industry seems to be including them. Mr. Birnbaum stated that ALTA’s presentation slides include its policies’ mandatory arbitration provisions provided for under Condition 14, Arbitration (described under agenda item 4).

Peter Kochenburger (University of Connecticut School of Law) stated that since the NAIC approved the model bulletin prohibiting the use of pre-dispute mandatory arbitration clauses, the evidence demonstrating that these provisions are anti-consumer has only grown. He provided the link to the bulletin in the chat (https://content.naic.org/sites/default/files/inline-files/legal_bulletin_arb_clauses_choice_of_law_provisions_personal_lines_ins_bulletin.pdf).

Mr. Byrd stated that Louisiana has a provision that prevents having a provision in any policy contract that would take away the ability of a party to seek readress in the court. As such, Louisiana would likely not approve such language in the title insurance contract if it were submitted. He stated that he is curious if other states have the same prohibition and whether that may give some viability to Mr. Birnbaum’s discussion.

Mr. Beavers stated that he would like more time to review Mr. Birnbaum’s suggested additions to the 2022 proposed charges before voting on them.

Aaron Brandenburg (NAIC) stated that he would recommend that the Task Force adopt the 2022 proposed charges without the additional two charges suggested by Mr. Birnbaum. Mr. Birnbaum could then provide these suggested revisions in a comment letter following the Task Force’s exposure of its 2022 proposed charges under the Property and Casualty Insurance (C) Committee. This would keep the Fall National Meeting timeline intact for progressing adopted charges for 2022 from the task force level to the parent committee level.

Ms. Rafeld stated that Mr. Brandenburg’s suggestion is preferable, given the approaching holiday. She instructed the NAIC to distribute Mr. Birnbaum’s proposed addition to the 2022 proposed charges to the Task Force for consideration before the Property and Casualty Insurance (C) Committee meeting.

Mr. Byrd made a motion, seconded by Ms. Richetti, to adopt the Task Force’s 2022 proposed charges (see NAIC Proceedings – Fall 2021, Property and Casualty Insurance (C) Committee, Attachment Six). The motion passed unanimously.

3. Heard a Presentation on How the Robust Housing Market Drove Historic Title Industry Performance

Ann Modica and Kourtnie Beckwith (AM Best) provided an overview of how current economic factors, housing market trends, monetary policy, real estate trends and issues, and insurtech startups impacted U.S. title insurers’ performance.

The Best’s Market Segment Report, “Robust Housing Market Drives Historic Title Performance,” found that the title industry’s net income rose by 18% to $1.5 billion in 2020. Net underwriting income has improved in each of the last four years, including a substantial 39.6% year-over-year (YOO) increase in 2020 to $1.7 billion, largely due to premium growth. Additionally, the combined ratio of 90.6 in 2020 represented the ninth consecutive year the ratio has been below 100. This title industry’s strong performance reflects how economic and market conditions have helped title insurers thrive despite the upheaval caused by the pandemic. AM Best revised its market segment outlook for the title insurance industry to stable from negative in early 2021 because of the resilience shown by the industry. Despite the ongoing COVID-19 challenges, the real estate market rebounded strongly in the third quarter of 2020 and continues to show strong growth. Historically low interest rates, shifting demographics, and consumer demand for homes remain the main drivers underpinning the strong housing market in 2021. Title insurers’
continued strong results through the first three quarters of 2021 reflect the support of the housing market by extraordinary U.S. monetary policy.

Residential and commercial property refinancing have driven the increase in title insurance premium over the last several years, including thus far in 2021. A severe lack of housing inventory, particularly for more affordable housing, has been a major factor in driving up prices. Title premiums are expected to continue to grow since title premiums are charged as a percentage of home price value, and high demand for new and existing homes is driving more transactions at higher value. The smaller portion of title premium driven by low new home inventory relative to demand and home price appreciation remain the two main obstacles that prospective new homeowners and home title insurance customers must navigate. Additionally, as the economy recovers and inflation potentially becomes more of a concern, the Federal Reserve is expected to raise central bank rates as early as 2022.

The onset of COVID-19 has prompted a shift toward digital real estate transactions to meet the social distancing needs of buyers, lenders, and sellers. To date, 38 states have enacted some form of permanent remote online notarization (RON) law. Benefits of RON include: 1) closings for vacation homes or second homes in different states are more convenient; 2) homebuyers will not be limited to lenders that are close in proximity, which could increase competition through deals with more favorable terms; 3) online closings are significantly less expensive for lenders, without the need to produce significant amounts of paper documents; and 4) online closings can be scheduled and held quicker than in-person closings.

A handful of startups have entered the title insurance industry, focused on making the process of buying a policy easier, cheaper, and more transparent. Because title insurance is so expense-driven, digital transformations focused on lowering company expense ratios by reducing personnel costs and the costs of title searches would be particularly valuable. With digital or e-mortgages that centralize the real estate transaction for all stakeholders involved, integrating technological advances to augment the title insurance process can be vital to the future of the industry. Artificial intelligence (AI) and smartphone apps can shorten the time needed to perform title searches. Apps that connect the customer with title underwriters directly not only streamline the application process for the customer, but also lighten the related expense load for the insurer.

Ms. Rafeld asked if AM Best had looked at what the title industry would look like in the near future or next year with the potential for the housing boom to slow down.

Ms. Beckwith stated that it is anticipated that the housing market will remain consistent through 2022 but start to return to pre-pandemic levels in 2023.

Mr. Byrd asked if costs that are paid by the seller outside of what loss costs the insurance pays would be captured in the expense ratio.

Ms. Beckwith stated that the expense ratio would not reflect mitigation done prior to the policy’s issue to ensure a clean title. Steve Gottheim (ALTA) stated that if it is something captured at closing, it will not be captured in the expense ratio.

4. Heard a Presentation on Changes to ALTA’s Homeowners Policy and Endorsements

Mr. Gottheim, Mary Payne Thomas (Stewart Title), and Dan Buchanan (First American Title) provided an overview of key changes to the homeowners policy of title insurance and ALTA endorsements. These changes include:

Owner’s Information Sheet, Table of Contents, and Owner’s Coverage Statement
- The Owner’s Information Sheet and Table of Contents have been removed. The policy now begins with the statement that the policy is valid if issued electronically. This includes instruction for submitting a claim.
- Non-substantive revisions to improve readability and clarity were made to the Owner’s Coverage Statement. This includes the term “actual loss” being revised to “loss or damage.”

Covered Risks
- Covered Risk 6 (previously 5) no longer given post-policy effect.
- Covered Risk 7 (previously 6) no longer gives post-policy effect.
- Coverage for the enforcement of governmental police power has been expanded to include forfeiture, regulatory, and national security powers, and it incorporates the defined term “Enforcement Notice.”
- Coverage for surface damage arising from subsurface extraction has an expanded list of subsurface materials.
- The defined term “Discriminatory Covenant” is now used in Covered Risk 26, which provides coverage for any attempted enforcement.
• New Covered Risk for matters arising after Date of Policy but prior to recording of the deed.

New Exclusions from Coverage
• Exclusion 9: Any lien on Your Title for real estate taxes or assessments imposed or collected by a governmental authority that becomes due and payable after the Date of Policy. Exclusion 9 does not modify or limit the coverage provided under Coverage Risk 8a or 27.
• Exclusion 10: Any discrepancy in the quantity of the area, square footage, or acreage of the Land or of any improvement to the Land.

Condition 1, Definitions
• New defined terms: Amount of Insurance, Covenant, Date of Policy, Discriminatory Covenant, Enforcement Notice, Insured, Municipal, and State.
• As with the Owner’s Policy and Loan Policy, the definitions of “Land” and “Public Records” have been revised.

Condition 2, Continuation of Coverage
• Revisions were made to clarify the scope of continued coverage.
• Condition 2.a now includes the addition of continued coverage for a named Insured who acquires the Title of another Insured.

Condition 6, Contract of Indemnity, Determination, and Extent of Liability
• As with the Owner’s Policy and Loan Policy, the Homeowners Policy now includes a provision making clear that the policy is contract of indemnity and not an abstract or representation of the condition of the Title.
• The phrase “actual loss” has been replaced with a more precise measure of loss and provisions for determining the date on which the loss is calculated.
• As done in the Owner’s Policy and Loan Policy, the Amount of Insurance is now increased by 15%, rather than 10%, if we are unsuccessful in pursuing an effort to establish the Title as insured, and the policy now provides the Insured the ability to elect alternative dates for calculating loss.
• The Homeowners Policy includes rental reimbursement and relocation of personal property when a covered claim renders the property unusable. The distance for transportation of personal property has been increased from 25 miles to 50 miles.

Condition 12, Choice of Law and Choice of Forum
• This Condition uses the new defined term “State” and makes it clear that the state law and courts of the state where the property is located apply to the policy.

Condition 13, Class Action
• This Condition is based on the unique nature of each property and real estate transaction, and it prohibits class proceedings with respect to the policy.

Condition 14, Arbitration
• This policy now includes the same arbitration provision as the Owner’s Policy and Loan Policy, where arbitration must be a mutual decision where the Amount of Insurance is over $2 million. The prior version of the policy provided that either the Insured or the company could require binding arbitration (if permitted under state law).

Schedule B, Exceptions from Coverage
• The preamble to Schedule B now begins with a statement repudiating discriminatory covenants and deleting any from the documents referenced in Schedule B. This preamble uses the new defined term “Discriminatory Covenant.”

New Endorsements
• ALTA 34.1 is very similar to the existing ALTA 34 but designed to facilitate a more precise description of the insured risk.
• ALTA 47 Series endorsements were created to address the choice of law and related issues related to the U.S. Supreme Court decision in McGirt v. Oklahoma when using the “pre-2021” policies.

Revised Endorsements
• Thirty existing endorsements were revised as part of the 2021 forms package.
• Most of these revisions were to incorporate terms that are now defined within the new policy forms.
• Some endorsement revisions were to address the applicable law issues that might arise when property is within a Native American reservation.

Mr. Byrd asked if there are any thresholds to the discrepancy in quantity of the area square footage of acreage under Exclusion 10. He asked if it is the intent of the change to indicate that there is no treatment difference between there being a 50% or 2% difference in the acreage. He also asked if there is anything that would prevent the parties themselves from deciding whether to go to mediation or non-binding arbitration under Condition 14, Arbitration.

Mr. Buchanan stated that this is the intent. The legal description of the property and its boundaries are what is insured. There are a lot of old legal descriptions that say, “consisting of 20 acres more or less,” and the actual acreage or improvements to it are not verified. The exclusion was created for efficiency. Condition 14, Arbitration only addresses arbitration, not mediation. In general, most companies prefer mediation.

Ms. Rafeld asked if there had been any feedback from state insurance regulators since the new forms were rolled out in July of this year.

Mr. Buchanan stated that he is not aware of feedback received. First American Title has been spending a lot of time on reformatting and restructuring its forms, so it is just beginning of the form filing process. The California Land Title Association (CLTA) has filed the entire package in California, and it was all accepted for filing with no feedback.

Ms. Thomas stated that Stewart Title has had several form filings approved, and most of the feedback from states have been in the form of clarification questions. One jurisdiction had a question on the arbitration provision, which Stewart Title excludes prior to the filing for states that do not allow them.

Having no further business, the Title Insurance (C) Task Force adjourned.
Title Insurance (C) Task Force
Virtual Meeting
October 19, 2021

The Title Insurance (C) Task Force met Oct. 19, 2021. The following Task Force members participated: Judith L. French, Chair, represented by Michelle Brugh Rafeld (OH); David Altmaier, Vice Chair, represented by Anoush Brangaccio (FL); Lori K. Wing-Heier represented by Sian Ng-Ashcraft (AK); Karima M. Woods represented by Angela King (DC); Colin M. Hayashida represented by Paul Yuen (HI); James J. Donelon represented by Warren Byrd (LA); Grace Arnold represented by Paul Hanson (MN); Chlora Lindley-Myers represented by Marjorie Thompson (MO); Troy Downing (MT); Mike Causey represented by Timothy Johnson (NC); Marlene Caride represented by Randall Currier (NJ); Russell Toal and Mark Marquez (NM); Barbara D. Richardson represented by Maggie Dell (SD); Scott A. White represented by Kevin Gaffney (VT). Also participating were: Jennifer Welch (DE); and Michael Walker (WA).

1. Adopted its Summer National Meeting Minutes

The Task Force met July 13 and took the following action: 1) adopted its June 7 minutes; 2) adopted revisions to the Title Insurance Consumer Shopping Tool Template (Shopping Tool); and 3) heard a presentation on business email compromises.

Mr. Byrd made a motion, seconded by Mr. Currier, to adopt the Task Force’s July 13 minutes (see NAIC Proceedings – Summer 2021, Title Insurance (C) Task Force). The motion passed unanimously.

2. Discuss it 2022 Proposed Charges

Ms. Rafeld recommended removing the Task Force’s fourth charge to “consider the effectiveness of changes in financial reporting by title insurance companies, and identify further improvements and clarifications to blanks, instructions, Statement of Statutory Accounting Principles (SSAPs), solvency tools, and other matters, as necessary. Coordinate efforts with the Statutory Accounting Principles (E) Working Group.” This charge has been included in the list of charges for some time, as it was tied to work being done by the Title Insurance Financial Reporting (C) Working Group, which was disbanded once it completed this task. There are no requests for assistance at this time from the Statutory Accounting Principles (E) Working Group, and any future requests can be handled under the first charge. Ms. Rafeld also recommended removing the fifth charge to “revise the Title Insurance Consumer Shopping Tool Template to include questions and answers about title insurance-related fraud topics, including but not limited to, [closing protection letters] CPLs and wire fraud.” The Task Force updated the Shopping Tool to include information about wire fraud, and it was adopted by the Property and Casualty Insurance (C) Committee during the Summer National Meeting. In addition, based upon all the presentations held over the past year regarding the impact the pandemic has had on the title industry, Ms. Rafeld recommended removing the seventh charge to “explore short-term and long-term issues and solutions from the pandemic.” She stated that Ohio had a consumer from Florida contact them about just realizing his title insurance carrier had been liquidated more than a decade ago. Unfortunately, Ohio does not have a guaranty association, so there was nowhere for this consumer to turn. There may be the need for the Task Force to create some type of guideline or best practice stating that policyholders should be notified that they no longer have coverage in the rare case that an underwriter liquidates as well as what their next steps should be if they have a claim. The Task Force may want to also consider looking into whether guaranty associations should be a best practice.

Mr. Byrd stated his support for removing the fourth, fifth, and seventh charges. He stated that he would like to be educated on why some states do not have title guaranty associations.

Birny Birnbaum (Center for Economic Justice—CEJ) stated that the Life and Health Insurance Guaranty Association Model Act (§520) specifically excludes title insurance. He believes this is an important issue to look into. At the time of the financial crisis, one of the largest title insurers was failing and was ultimately purchased by another title insurer. Had it failed, it would have created significant problems for consumers and the banks who rely upon title insurance to protect their loans. The issue extends not just to informing the consumers, but lenders too. However, there have been failures covered by the Texas guaranty fund.

Steve Gottheim (American Land Title Association—ALTA) stated that the Task Force set up a Working Group at one time to look into guaranty funds. The financial difficulty of the title company that struggled during the financial crisis was due to some
of their investments, not its insurance. As stated previously, the insurance was purchased by another licensed insurer, which is common practice. ALTA can connect consumers inquiring about their liquidated insurer to where they need to make a claim or how they should request additional information on getting a new policy.

Aaron Day (Texas Land Title Association—TLTA) stated that Texas has a complex system, and its guaranty fund is completely consumer-funded. The underwriters front the immediate needs through assessments, and those assessments are recouped by the underwriter through a subsequent fee. There is also an independent board whose members are appointed by the Texas Department of Insurance (DOI) and consist of public members, industry members, and staff.

Ronald J. Blitenthal (Old Republic Title) stated that he would send NAIC staff a copy of the January 2013 minutes he has of the Task Force’s prior Working Group that looked into guaranty fund issues.

Ms. Rafeld asked that additional comments or revision suggestions for the Task Force’s 2022 proposed charges be emailed to NAIC staff. The Task Force will review comments to the proposed charges for potential adoption on its Nov. 16 call.

3. **Heard a Presentation on Demotech’s Regional Title Underwriter Escrow Theft and Defalcation Prevention Measures Report**

Joseph L. Petrelli Jr., Paul Osborne, and Douglas Powell (Demotech) discussed Demotech’s observed and reported impacts of defalcations and escrow theft on the title industry. Demotech requests title underwriters for which it assigns Financial Stability Ratings to submit information on their current agent review process, defalcation prevention procedures, and any other mitigation procedures. Each title underwriter is requested to submit a questionnaire, detailed summary, and any additional supporting documentation. Demotech recently released its latest aggregated results of 40 regional underwriters for 2020. The results are largely consistent with 2019, with only four defalcations for title underwriters writing 2.6 million policies that year. This indicates that the processes and procedures currently in place are mitigating defalcation activity.

Mr. Currier asked what the highest amount was on the summary results for 2020. Mr. Powell stated that the total amount was $817 million in 2020. In 2019, claims were $2 million for two claims. Given the number of transactions, the mitigation measures put in place by title insurers seem to be doing a good job.

4. **Heard a Presentation on ALTA’s New Policy Forms**

Mr. Gottheim, Mary Payne Thomas (Stewart Title), and Dan Buchanan (First American Title) provided an overview of ALTA’s new forms of Commitment, Owner’s Policy, and Loan Policy, effective July 1, 2021.

The changes align the updated language of the 2016 Commitment to the Policy Forms, moving some exceptions that became commonplace to the jacket as Exclusions. They also make punctuation and grammatical refinements, revise amendments based on how courts have treated the prior policy language and add language for some new coverages and exclusions for both the insured and insurer. More specifically, the changes include: 1) the coverages of the electronic policy/signature endorsement are now included in the Policy Jacket; 2) there is now clarification on the treatment of the Perishable Agricultural Commodities Act (PACA) exception; 3) the term “insured” is defined to allow coverage under the Owner’s Policy to continue when the Land is conveyed to an affiliate, even when money changes hands; 4) Remote Online Notarization (RON) is now part of the covered risk, as traditional in-person notarization is; 5) the “Enforcement Notice” term is introduced, defining a document that is a lien but governmental in nature; 6) the Loan Policy’s Covered Risk adds language to clarify and confirm for lenders that the coverage is for certain enumerated components of the Indebtedness; 6) Covered Risk on Mechanics Liens now confirms that the coverage relates to services and equipment in addition to labor and materials; 7) the new forms reference “voidable transfer” instead of “fraudulent transfer” to be consistent with the Uniform Voidable Transactions Act (UVTA); 8) the Transaction Identification Data is now formatted into Schedule A of the new policies for consistency; 9) standard exceptions to illegal covenants in Schedule B were created; and 10) a new Condition is added that gives an insured a choice of valuing a loss at either the date a notice of claim was received by the company or the date of a foreclosure sale. This addresses prior confusion created under the old policies’ lack of specificity on when a loss should be valued, which led to several legal disputes during the great recession.

Ms. Rafeld stated that the comparisons between the old and new policies on ALTA’s website are very helpful.

Mr. Currier stated that he believes it would be helpful if ALTA presented at a deeper level on changes to its endorsements during the Task Force’s Nov. 16 meeting. Ms. Rafeld stated that she would invite ALTA to present during the meeting. She
stated that the Task Force would also hear a presentation from AM Best on how the housing market has driven title industry performance.

Having no further business, the Title Insurance (C) Task Force adjourned.
WORKERS’ COMPENSATION (C) TASK FORCE

The Workers’ Compensation (C) Task Force did not meet at the Fall National Meeting.
MARKET REGULATION AND CONSUMER AFFAIRS (D) COMMITTEE

Market Regulation and Consumer Affairs (D) Committee Dec. 15, 2021, Minutes................................................................. 9-2
Policy In-Force Standardized Data Request (SDR) (Attachment One).......................................................................................... 9-6
Claims SDR (Attachment Two) ......................................................................................................................................................... 9-9
Chapter 24 of the Market Regulation Handbook (Attachment Three) ......................................................................................... 9-11
Chapter 25 of the Market Regulation Handbook (Attachment Four) ........................................................................................... 9-12
Report on Consumer Data Privacy Protections (Attachment Five) .............................................................................................. 9-51
Market Conduct Examination Guidelines (D) Working Group Nov. 4, 2021, Minutes (Attachment Six)......................... 9-75
Market Analysis Procedures (D) Working Group Nov. 18, 2021, Minutes (Attachment Seven)................................. 9-86
Market Conduct Annual Statement Blanks (D) Working Group Nov. 22, 2021, Minutes (Attachment Eight)........ 9-89
Privacy Protections (D) Working Group Dec. 11, 2021, Minutes (Attachment Nine) ......................................................... 9-91
Privacy Protections (D) Working Group Nov. 22, 2021, Minutes (Attachment Nine-A) ......................................................... 9-95
Privacy Protections (D) Working Group Oct. 25, 2021, Minutes (Attachment Nine-B) ............................................................... 9-102
Privacy Protections (D) Working Group Oct. 11, 2021, Minutes (Attachment Nine-C) ......................................................... 9-105
Privacy Protections (D) Working Group Sept. 27, 2021, Minutes (Attachment Nine-C1) ....................................................... 9-108
Privacy Protections (D) Working Group Aug. 30, 2021, Minutes (Attachment Nine-C3) ....................................................... 9-113
The Market Regulation and Consumer Affairs (D) Committee met in San Diego, CA, Dec. 15, 2021. The following Committee members participated: Barbara D. Richardson, Chair (NV); Sharon P. Clark, Vice Chair, represented by Ron Kreiter (KY); Alan McClain (AR); Evan G. Daniels (AZ); Trinidad Navarro (DE); Dana Popish Severinghaus (IL); Chlora Lindley-Myers (MO); Edward M. Deleon Guerrero (MP); Troy Downing represented by Bob Biskupiak (MT); Jon Godfread (ND); Carter Lawrence (TN); Jonathan T. Pike (UT); and Michael S. Pieciak represented by Kevin Gaffney (VT). Also participating were: Damion Hughes (CO); Cynthia Amann (MO); Larry D. Deiter (SD); Mike Kreidler and John Haworth (WA); and Rebecca Rebholz (WI).

1. **Adopted its Summer National Meeting Minutes**

   Commissioner Clark made a motion, seconded by Commissioner Godfread, to adopt the Committee’s Aug. 16 minutes (see *NAIC Proceedings – Summer 2021, Market Regulation and Consumer Affairs (D) Committee*). The motion passed unanimously.

2. **Adopted its 2022 Proposed Charges**

   Commissioner Richardson said the Committee’s charges were circulated to Committee members, interested state insurance regulators, and interested parties on Nov. 22 and posted on the NAIC website. Since Nov. 22, the Market Information Systems (D) Task Force held a conference call and was not able to finish its review of the report drafted by the Market Information Systems Research and Development (D) Working Group. Because of this, Commissioner Richardson said the Task Force held an e-vote and added back the 2021 charge to “[d]evelop recommendations for the incorporation of artificial intelligence (AI) abilities in NAIC Market Information Systems for use in market analysis. Complete by the 2022 Summer National Meeting.” The wording of the 2021 charge did not change, and only the completion date was changed to the 2022 Summer National Meeting.

   Commissioner Pike made a motion, seconded by Commissioner Lawrence, to adopt the Committee’s 2022 proposed charges (see *NAIC Proceedings – Fall 2021, Executive (EX) Committee and Plenary, Attachment Three*). The motion pass unanimously.

3. **Adopted Revisions to the Market Regulation Handbook**

   Commissioner Richardson said the next three agenda items are to consider adoption of a new title in-force standardized data request (SDR), a new title claims SDR, revisions to Chapter 24—Conducting the Health Examinations of the Market Regulation Handbook (Handbook), and revisions to Chapter 25—Conducting the Medicare Supplement Examination of the Handbook.

   Mr. Hughes said the Market Conduct Examination Guidelines (D) Working Group began discussing a new title insurance in-force policy SDR and a new title insurance claims SDR at its March 30 meeting. Comments were received on the draft SDRs from Colorado, Nebraska, Rhode Island, the Center for Economic Justice (CEJ), and the American Land Title Association (ALTA). The Working Group adopted changes to Chapter 24 to include the review of quality-of-care complaints for examination standard 4, which focuses on quality assessment and improvement. The Working Group adopted revisions to Chapter 25 to provide more specific cross-references to the Model Regulation to Implement the NAIC Medicare Supplement Insurance Minimum Standards Model Act (#651).

   Commissioner Godfread made a motion, seconded by Director Lindley-Myers, to adopt the new title in-force SDR (Attachment One), the new title claims SDR (Attachment Two), and revisions to Chapter 24 (Attachment Three) and Chapter 25 (Attachment Four) of the Handbook. The motion passed unanimously.

4. **Adopted its Task Force and Working Group Reports**

   Commissioner Richardson said the Privacy Protections (D) Working Group adopted a “Report on Consumer Data Privacy Protections,” and the adoption of the Task Force and Working Group reports will include the receipt of the “Report on Consumer Data Privacy Protections.”
a. **Antifraud (D) Task Force**

Commissioner Navarro said the Antifraud (D) Task Force met Nov. 12 and adopted its Oct. 27 and Summer National Meeting minutes. The Antifraud Education Enhancement (D) Working Group worked with NAIC staff on an investigator safety training webinar delivered on Dec. 2. The Antifraud Technology (D) Working Group identified subject matter experts (SMEs) to continue working on an Antifraud Plan template to potentially be used by insurance companies. Commissioner Navarro said another draft will be circulated in the first quarter of 2022. He said the Improper Marketing of Health Insurance (D) Working Group continued to meet monthly in regulator-to-regulator session. The Working Group held its first open meeting on Dec. 11, which included hearing presentations from the Alliance of Health Care Sharing Ministries, America’s Health Insurance Plans (AHIP), and Out2Enroll regarding their efforts to fight against the improper marketing of health insurance.

b. **Market Information Systems (D) Task Force**

Commissioner Kreidler said the Market Information Systems (D) Task Force met Nov. 23 and adopted the report of the Market Information Systems Research and Development (D) Working Group. The Working Group continues to monitor and oversee the prioritization of the Uniform System Enhancement Requests (USERs). It is also in the process of completing the 2021 Market Information Systems (MIS) data analysis metrics.

Commissioner Kreidler said most of the Task Force meeting was dedicated to consideration of the Working Group’s recommendations regarding incorporation of artificial intelligence (AI) abilities in NAIC MIS. The recommendations of the Working Group were in fulfillment of the Task Force’s charge to develop these recommendations. There were five recommendations in the report: 1) evaluate currently available market analysis data and assess its quality; 2) adopt a more rigorously statistical approach to identify the predictive power of market scoring systems and integrate data into a single overall analysis; 3) incorporate promising AI modes of analyses, as well as traditional statistical modeling; 4) assess ways AI can improve the efficiency of qualitative analysis and facilitate pattern recognition across larger volumes of textual evidence; and 5) explore potential data sources suitable for AI techniques. Consumer representatives were generally supportive of the recommendation and suggested a new charge to begin exploring the types of data needed to implement more robust statistical methods, including AI. Commissioner Kreidler said some Task Force members were concerned that there was no NAIC staff feedback on the cost and time required to implement the recommendations and prioritize competing priorities. Additionally, there was concern of overlap with the charges being considered for the new Innovation, Cybersecurity, and Technology (H) Committee. Commissioner Kreidler said the Task Force did not vote on the recommendations and will have further discussions in 2022.

c. **Producer Licensing (D) Task Force**

Director Deiter said the Producer Licensing (D) Task Force met Nov. 29. He said the Producer Licensing Uniformity (D) Working Group provided the Task Force with the results of its survey regarding what the Working Group members recommend as the appropriate producer licensing standard for pet insurance. Seven Working Group members suggested that the current Uniform Licensing Standards, which treats pet insurance as a non-core limited line is the appropriate licensing standard, seven Working Group members suggested that the major lines of authority of property/casualty (P/C) should be required, one Working Group member suggested that pet insurance should become a core limited line, and one Working Group suggested that a license for any major line of authority should be required. Since the survey was completed prior to the Property and Casualty Insurance (C) Committee adopting the Pet Insurance Model Act, which includes a training requirement for insurance producers who want to sell, solicit, or negotiate Pet Insurance, Director Deiter said the Task Force will review this issue in more detail after the NAIC members consider adoption of the Pet Insurance Model Act.

Director Deiter said he Task Force discussed the draft procedures for amending the NAIC Producer Licensing Applications, which are being developed to ensure that the consideration of changes to the uniform applications support the NAIC members’ goal of providing stable, uniform applications and encourage the use of electronic technology for licensing. The Task Force will circulate a revised draft, and it plans to consider adoption of the procedures during the first quarter of 2022. Once the procedures are adopted, Director Deiter said the Task Force will review the proposed amendments to the Producer Licensing Applications, which the Task Force and the Committee adopted in 2018. The Executive (EX) Committee and Plenary did not consider adoption of these amendments, and the amendments will be reviewed within the framework of the adopted procedures.

Director Deiter said the Task Force received comments from the American Council of Life Insurers (ACLI) on diversity, equity, and inclusion (DE&I), and its request for the Task Force to provide further consideration on how the 1033 waiver process and the presence of unnecessary pre-licensing education mandates may be unnecessary barriers to individuals seeking an insurance producer license.
In response to the referral from the Special (EX) Committee on Race and Insurance, Director Deiter said the Task Force discussed the elimination of cultural bias in producer licensing examinations, which included a review of preliminary feedback from two examination vendors on their internal training and industry standards for examination fairness. The Task Force is still seeking input from another examination vendor and will compile the responses in a report to the Special Committee.

Director Deiter said the Task Force received a report from the National Insurance Producer Registry (NIPR) Board of Directors. October marked the 25th anniversary for NIPR, and NIPR is on track to have its highest transaction volume and revenue year with a forecast of processing more than $1 billion in fees for state insurance departments. NIPR continues to implement the contact change request application for business entities and recently implemented a chat feature for customers.

Finally, the Task Force discussed how states could address errors or misstatements on producer licensing applications, which were completed by third-party authorized submitters.

d. **Market Conduct Examination Guidelines (D) Working Group**

Mr. Hughes said the Market Conduct Examination Guidelines (D) Working Group met Nov. 4, Oct. 7, and Sept. 2. He said the Working Group adopted a new title in-force SDR, a new title claims SDR, and revisions to Chapters 24 and 25 of the Handbook. He said the Working Group discussed revisions to Chapter 21—Conducting the Property and Casualty Examination regarding provisions from the Real Property Lender-Placed Insurance Model Act (#631) and Chapter 20—General Examination Standards regarding provisions in the Insurance Holding Company System Regulatory Act (#440). He said the Working Group received updates from state SMEs reviewing the following models potentially affecting the Handbook: Suitability in Annuity Transactions Model Regulation (#275), Corporate Governance Annual Disclosure Model Act (#305), and Corporate Governance Annual Disclosure Model Regulation (#306). He said the Working Group received some additional background from Tim Mullen (NAIC) on the Working Group’s charge regarding group supervision of market conduct risks.

Mr. Hughes said the Working Group has been asked to coordinate with the Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group to update the mental health parity-related chapter of the Handbook to ensure it reflects the current mental health parity compliance requirements set forth in federal guidance enacted in December 2020. He said the two working groups would be addressing this issue in 2022.

e. **Market Analysis Procedures (D) Working Group**

Mr. Haworth said the Market Analysis Procedures (D) Working Group met Nov. 18 and continued its discussion of the market analysis training needs of state insurance regulators. He said the Working Group is developing standard scorecard ratios in response to the Committee’s adoption of the Short-Term Limited-Duration (STLD) and Travel Insurance Market Conduct Annual Statement (MCAS) blanks. He said draft ratios have been developed for both lines of business, and the Working Group should have the final draft ready by the 2022 Spring National Meeting. He said the Working Group began a discussion about the current market analysis tools that may be eliminated in the NAIC’s i-Site+. Many of the tools are being replaced with enhanced tools being developed as part of the State Ahead project to develop self-service dashboards. Mr. Haworth said the Working Group will provide its expertise to the Market Information Systems Research and Development (D) Working Group regarding the final decision to replace these tools. Finally, the Working Group discussed the definitions of “surrender” and “replacement” for the purposes of the Annuity MCAS Data Call and Definitions. A clarification will be drafted for the Frequently Asked Questions (FAQ) document.

f. **Market Conduct Annual Statement Blanks (D) Working Group**

Ms. Rebholz said the Market Conduct Annual Statement Blanks (D) Working Group met Nov. 22 and exposed two changes to the current Homeowner and Auto MCAS blanks. The Working Group exposed revisions to the definition of “lawsuit” and the placement of the lawsuit data elements in the MCAS blanks. Ms. Rebholz said this will allow for the distinction between claims-related lawsuits and non-claims-related lawsuits. The Working Group also exposed an interrogatory question for capturing information on third-party vendors who provide data and algorithms used in the digital claims process. Ms. Rebholz said the Working Group will consider adoption of these changes in the first quarter of 2022. She said the Working Group received an update on the Life MCAS draft edits for accelerated underwriting (AU) as the Working Group continues to coordinate the development of a definition for AU with the definition that will be adopted by the Accelerated Underwriting (A) Working Group. She said the Working Group’s “Other Health” SMEs will be led by Mary Kay Rodriguez (WI).
g. Privacy Protections (D) Working Group

Ms. Amann said the Working Group met Dec. 11, Nov. 22, Oct. 25, Oct. 11, Sept. 27, Sept. 13, and Aug. 30. During its Aug. 30 meeting, the Working Group heard an update on state privacy legislation and California Proposition 24 and circulated the first exposure draft of the privacy policy statement with comments of interested parties incorporated into the draft. Ms. Amann said the Working Group changed the policy statement to a report so as not to infer the Working Group was making statements on behalf of the NAIC members.

During the Sept. 13 meeting, Ms. Amann said the Working Group discussed the consumer right to opt-out of data sharing and reviewed the comments of AHIP, the Blue Cross Blue Shield Association (BCBSA), and the Coalition of Health Companies. She said the use of the term right was used for ease of language, and the term right should be considered as an area for future discussion. During the Sept. 27 meeting, Ms. Amann said the Working Group continued its discussion regarding a consumer’s right to opt-out of information sharing and reviewed the nine principles for consumer data privacy in insurance submitted by Harry Ting (Health Consumer Advocate).

During the Oct. 11 meeting, Ms. Amann said the Working Group received an update on state privacy legislation and discussed a consumer’s right to correct information. During the Oct. 25 meeting, she said the Working Group reviewed a data privacy legislation chart and a consumer’s right to delete information. During the Nov. 22 meeting, she said the Working Group heard an update on state privacy legislation and discussed a consumer’s right to data portability, a consumer’s right to restrict the use of data, and consumer ownership of data. She said the Working Group also reviewed the final exposure draft of the privacy report. Ms. Amann said the Working Group met Dec. 11 and restated that the term right should be considered an area for future consideration, and the policy statement was changed to be a Working Group report to eliminate any reference the Working Group was making to a statement on behalf of the NAIC members. She concluded her report and requested that the Committee receive the Working Group’s final exposure “Report on Consumer Data Privacy,” which includes the following: 1) a summary of consumer privacy protections provided by the Health Information Privacy Model Act (#55), the NAIC Insurance Information and Privacy Protection Model Act (#670), and the Privacy of Consumer Financial and Health Information Regulation (#672); 2) a summary of the General Data Protection Regulation (GDPR) and recently adopted state consumer privacy protection laws; 3) a summary of the Working Group’s discussion on data transparency, consumer control of data, consumer access to data, data accuracy, and data ownership and portability; and 4) a recommendation that Model #670 and Model #672 be revised to modernize their applicability to the current technology-based insurance market. Commissioner Godfread said the report is a significant undertaking and a significant step forward for these discussions.

Commissioner Godfread made a motion, seconded by Commissioner Lawrence, to adopt the following reports, including the receipt but not the adoption of the “Report on Consumer Data Privacy Protections” (Attachment Five): 1) Antifraud (D) Task Force; 2) Market Information Systems (D) Task Force; 3) Producer Licensing (D) Task Force; 4) Market Conduct Examination Guidelines (D) Working Group (Attachment Six); 5) Market Analysis Procedures (D) Working Group (Attachment Seven); 6) Market Conduct Annual Statement Blanks (D) Working Group (Attachment Eight); and 8) Privacy Protections (D) Working Group (Attachment Nine). The motion passed unanimously.

5. Discussed Other Matters

Birny Birnbaum (CEJ) said he was not recognized prior to the adoption of charges and would like to propose two charges for the Committee to consider. The first is for the Committee to review the use of dark patterns, which prompt consumers to purchase products they did not want and disclose personal information. Mr. Birnbaum said state insurance regulators must understand how dark patterns work and how the rapid deployment of digital interfaces is transforming how consumers and insurers interact. He urged the Committee to adopt a charge to explore the use of manipulative and deceptive practices in digital insurance interfaces, including applications and disclosures (dark patterns), and he recommend any changes needed in training for market regulation staff and any changes needed in regulatory guidance to insurers. Mr. Birnbaum said when the Market Conduct Annual Statement effort was launched as a pilot project over 15 years ago, state insurance regulators opted to use market conduct examination authority to facilitate the data collection. The result was that individual MCAS submissions were treated as confidential. Mr. Birnbaum said there is no reason why individual company MCAS data is confidential, but there are good reasons to make the submissions public information. He suggested that the Committee adopt a charge to explore benefits and costs of public access to individual company MCAS submissions and methods of MCAS data collection that would permit public access.

Having no further business, the Market Regulation and Consumer Affairs (D) Committee adjourned.
POLICY IN FORCE STANDARDIZED DATA REQUEST
Title Line of Business

Contents: This file should be downloaded from the company system(s) and contain one record for each title policy issued in [applicable state] at any time during the examination period.

For any fields where there are multiple entries, please repeat field as necessary.

Uses: Data will be used to determine if the company follows appropriate procedures with respect to the issuance and/or underwriting of title policies in [applicable state] within the scope of the examination.

- Cross-reference with the claims data file to validate the completeness of the in force file; and
- Cross-reference to state(s) licensing information to ensure proper agent licensure.

STANDARDS
QUALITY ASSESSMENT AND IMPROVEMENT

<table>
<thead>
<tr>
<th>Standard 4</th>
</tr>
</thead>
<tbody>
<tr>
<td>The health carrier reports to the appropriate licensing authority any persistent pattern of problematic care provided by a provider that is sufficient to cause the health carrier to terminate or suspend contractual arrangements with the provider.</td>
</tr>
</tbody>
</table>

Apply to: All health carriers with managed care plans

Priority: Essential

Documents to Be Reviewed

- Applicable statutes, rules and regulations
- Quality assessment and improvement policies and procedures
- Reports made to the licensing authority
- Terminated and suspended provider contract files
- Quality of Care complaints

Others Reviewed

- __________________________
- __________________________

NAIC Model References

*Quality Assessment and Improvement Model Act (#71), Section 5*
*Health Maintenance Organization Model Act (#430)*

Review Procedures and Criteria

Determine that policies and procedures address reporting requirements.

Ascertain whether applicable terminated and suspended contract files reflect compliance with reporting requirements. Examiners should note that some terminated and suspended contracts will involve issues that are not necessary to report.
A. Operations/Management

1. Purpose

The Operations/Management portion of the examination is designed to provide a view of what the entity is and how it operates. Normally, it is not based on sampling techniques; it is more concerned with structure. This review is not intended to duplicate financial examination review, but is important in providing the market conduct examiner with an understanding of the examined entity. Many troubled insurance companies have become so because management has not been structured to recognize and address the problems that can arise in the insurance industry. In addition to the general categories, examiners should also review Section J Provider Credentialing (Medicare Select carriers only) of this chapter.

a. Provider Credentialing

Examiners should determine that a Medicare Select carrier has established documented verification programs to ensure that participating health care professionals meet minimum specific professional qualifications, both initially and on an ongoing basis.

Additional introductory material is located in Chapter 20—General Examination Standards.
STANDARDS
OPERATIONS/MANAGEMENT

Standard 1
The Medicare Select carrier’s plan of operation complies with applicable statutes, rules and regulations.

Apply to: All Medicare Select carriers

### NAIC Model References

*Model Regulation to Implement the NAIC Medicare Supplement Insurance Minimum Standards Model Act (#651), Section 9.2 and 22*

### Review Procedures and Criteria

Ascertain that the reporting Medicare supplement policies form has been filed with the insurance commissioner.

Review policy and certificate records to ascertain whether multiple sales of policies or certificates to individual enrollees have been made.

Review the reporting Medicare supplement policies form and compare with multiple sales findings during the examination to ensure that the entity has accurately reported multiple sales.

Verify plans after Jan. 1, 2020 are in compliance with Section 9.2 of Model # 651.

Verify the Benefit Chart of Medicare Supplement Plans Sold on or after Jan. 1, 2020 is correct pursuant to Model #651.

Verify the information provided by the carrier on Plan F or High Deductible F is correct pursuant to Model #651, for plans issued on or after Jan. 1, 2020.

Verify the information provided by the carrier on Plan G or High Deductible G is correct pursuant to Model #651, for plans issued on or after Jan. 1, 2020.

**NAIC Model References**

*Model Regulation to Implement the NAIC Medicare Supplement Insurance Minimum Standards Model Act (#651), Section 16*

**Review Procedures and Criteria**

Review procedures, producer compensation agreements and producer manuals to ascertain whether the entity’s standards for producer compensation are in compliance with applicable statutes, rules and regulations concerning replacement sales.
B. Complaint Handling

Use the standards for this business area that are listed in Chapter 20—General Examination Standards.

C. Marketing and Sales

1. Purpose

The marketing and sales portion of the examination is designed to evaluate the representations made by the entity about its product(s). Typically, it is not based on sampling techniques, but sampling may be used as a review tool. The areas to be considered in this kind of review include all documented, verbal and electronic advertising and sales materials. The entity’s website that informs about Medicare supplement availability and/or benefits, would be considered advertising and should be reviewed for accuracy.

2. Techniques

This area of review should include all advertising and sales material, including Internet advertising, and all producer sales training materials to determine compliance with applicable statutes, rules and regulations. Information from other jurisdictions may be reviewed, if appropriate. The examiner may contact policyholders, producers and others to verify the accuracy of the information provided or to obtain additional information. The examiner should be familiar with outlines of coverage and replacement regulations. Policyholder records are a good source for detection of multiple issues of Medicare supplement policies. Suitability should be considered in reviewing the entity’s sales and marketing practices.

The entity must have procedures in place to establish and at all times maintain a system of control over the content, form and method of dissemination of its advertisements. All advertisements maintained by, or for, and authorized by the entity are the responsibility of the entity.

The same statutes, rules and regulations (such as the Unfair Trade Practices Act (#880)) that apply to conventional advertising also apply to Internet advertising. When the examiner is reviewing an entity’s Internet advertisements, it is important to also review the safeguards implemented by the entity.

All advertisements are required to be truthful and not misleading in fact or by implication. The form and content of an advertisement of a policy shall be sufficiently clear to avoid deception. The advertisement must not have the capacity or tendency to mislead or deceive. Whether an advertisement has the capacity or tendency to mislead or deceive must be determined when reviewing the overall impression that the advertisement reasonably may be expected to create upon a person of average education or intelligence with the segment of the public to which the advertisement is directed.

Ensure that the entity actively offers all its Medicare supplement products to eligible individuals. The company should not engage in marketing practices such as discriminatory commission levels or references to health conditions that discourage individuals with less favorable risk characteristics from seeking or obtaining coverage.

Determine whether producer training materials require the producer to report all sales of Medicare supplement policies and/or certificates.

Ascertain that the entity has procedures for distributing to producers and other company personnel any bulletins issued by state or federal regulators.
Ensure that the entity prohibits the sale of Medicare supplement policies or certificates to people enrolled in a Medicare Advantage or private fee-for-service plans.

Ensure that the entity prohibits the sale of a Medicare supplement policy/certificate to an individual already covered under such a policy, unless the new policy/certificate is a replacement policy/certificate.

Ensure that producer commission schedules do not encourage replacement sales or sales of more than one Medicare supplement policy/certificate to an individual, or discourage eligible individuals with unfavorable risk characteristics.

Ensure that the entity offers to all eligible individuals all the Medicare supplement products it sells.

Determine whether individuals in the state have been eligible for guaranteed issue (was previously hyphenated, changed to guaranteed issue without a hyphen) because of termination of Medicare business by managed care organizations, and review company practices with respect to eligible individuals.

Determine whether individuals in the state have been eligible for guaranteed issue for other situations as described in NAIC Model References Model Regulation to Implement the NAIC Medicare Supplement Insurance Minimum Standards Model Act (#651), Section 12.

Review entity communications to company personnel, producers and applicants about open enrollment and guaranteed-issue rights.

3. Tests and Standards

The marketing and sales review includes, but is not limited to, the following standards addressing various aspects of the marketing and sales function. The sequence of the standards listed here does not indicate the priority of the standard.
STANDARDS  
MARKETING AND SALES

<table>
<thead>
<tr>
<th>Standard 1</th>

- ____ Replacement register
- ____ Underwriting guidelines and files
- ____ Replacement comparison forms (if external replacement)
- ____ Applicable statutes, rules and regulations

**Others Reviewed**

- ____ _________________________________________
- ____ _________________________________________

**NAIC Model References**

*Model Regulation to Implement the NAIC Medicare Supplement Insurance Minimum Standards Model Act (#651)*

**Review Procedures and Criteria**

Review replacement register to see if it is cross-indexed by producer and entity to determine if the entity has been targeted for replacements by a producer (internal or external).

Ensure that the application or other form asks whether the policy or certificate is intended to replace or add to any coverage currently in force.

Ensure that the application or other form asks all the questions required by state law to be asked.

Determine if the entity permits multiple sales of Medicare supplement policies to the same person.

Using a random selection of policyholders, have the entity run a policyholder/certificateholder history to identify the number of policies or certificates sold to those individuals.

Determine if underwriting guidelines place limitations on multiple sales; i.e. limits on coverage, determination of suitability, detection of predatory sales practices, etc.

Ensure that the entity, when determining whether a sale involves replacement, furnishes to the applicant prior to policy/certificate issue, or at the time of issue in the case of a direct response sale, the required notice concerning replacement of Medicare supplement coverage, obtains the signatures required by state law, and maintains one copy of the signed notice on file.

© 2021 National Association of Insurance Commissioners

© 2021 National Association of Insurance Commissioners
Determine whether marketing materials encourage multiple issues of policies, for example, use of existing policyholder/certificateholder list for additional sales of similar products to those held, birth date solicitations, scare tactics, etc.

Determine if negative enrollment practices are permitted and used.

Determine if the entity has a system to discourage “over-insurance,” as defined in the entity’s underwriting requirements, of policyholders/certificateholders.

Determine whether individuals in the state have been eligible for guaranteed issue (was previously hyphenated, changed to guaranteed issue without a hyphen) because of terminations of Medicare business by managed care organizations, and review entity practices with respect to eligible individuals.

Review entity communications to company personnel, producers and applicants about open enrollment and guaranteed-issue rights.

Determine that the regulated entity, upon replacement, does not impose any waiting periods, elimination periods or probationary periods in their replacement policies unless the replaced individual had not satisfied their six-month (six month was previously unhyphenated), preexisting condition period under their prior coverage.

NAIC Model References

NAIC Model Rules Governing Advertisements of Medicare Supplement Insurance with Interpretive Guidelines (#660), Sections 6 and 7
Unfair Trade Practices Act (#880)

Review Procedures and Criteria

Ensure that advertisements do not contain words or phrases such as “all,” “full,” “complete,” “comprehensive,” “unlimited,” “up to,” “as high as,” “this policy pays all that Medicare doesn’t” or similar words or phrases in a manner that exaggerates any benefit beyond the terms of the policy.

Advertisements that are invitations to contract should:

• Disclose exceptions, reductions and limitations affecting the basic provisions of the policy;
• If a preexisting conditions limitation applies, ask a question immediately above the signature line concerning the applicant’s understanding of the limitation; and
• Disclose renewability, modification, cancellability, termination, losses covered and premium changes due to age or other reasons in a manner that does not minimize or obscure the qualifying conditions.

Ensure that if the policy is not guaranteed issue (was previously hyphenated, changed to guaranteed issue without a hyphen) or if a preexisting conditions limitation applies, the advertisement does not state or imply that health history will not affect the issuance of the policy or payment of a claim under the policy.
Ensure that provisions that are negative in nature, such as a preexisting conditions limitation, are presented in a negative light and that if the advertisement is an invitation to contract, the term “preexisting conditions limitation,” if used, is defined.

Ensure that advertisements do not state or imply that claim settlements are “liberal” or “generous,” or words of similar import, and do not mislead by quoting unusual claims that may have been paid.
## Standards for Marketing and Sales

### Standard 9

**Testimonials comply with applicable statutes, rules and regulations.**

| Apply to: | All Medicare supplement products |
| Priority: | Essential |

### Documents to be Reviewed

NAIC Model Rules Governing Advertisements of Medicare Supplement Insurance with Interpretive Guidelines (#660), Section 11
Unfair Trade Practices Act (#880)

Review Procedures and Criteria

Ensure that advertisements do not imply that the entity is licensed in jurisdictions other than that in which it is licensed.

Ensure that advertisements do not imply that the entity’s products are approved, endorsed, (comma inserted after endorsed,) or accredited, or connected with any governmental entity.
D. Producer Licensing

Use the standards for this business area that are listed in Chapter 20—General Examination Standards.

E. Policyholder Service

Use the standards for this business area that are listed in Chapter 20—General Examination Standards.

F. Underwriting and Rating

Use the standards for this business area that are listed in Chapter 20—General Examination Standards.

G. Claims

Use the standards for this business area that are listed in Chapter 20—General Examination Standards.

H. Grievance Procedures

1. Purpose

The grievance procedures portion of the examination is designed to evaluate how well the Medicare Select carrier handles grievances.

A “grievance” means dissatisfaction in writing with the administration, claims practices or provision of services concerning an issuer of a Medicare Select product or network provider.

Note that these definitions may not include all documented communications that the company tracks as “complaints” under the definition of complaint.

The examiner should review the company procedures for processing grievances. Specific problem areas may necessitate an overall review of a particular segment of the company’s operation.

2. Techniques

A review of grievance procedures should incorporate consumer and provider appeals, consumer direct grievances to the company and those grievances filed with the insurance department. The company should reconcile the company grievance register with a list of grievances from the insurance department. A random sample of grievances and appeals should be selected for review from the company’s grievance register.

The company’s documented grievance procedures should be reviewed. Determine how those procedures are communicated to plan members within membership materials and upon receipt of appeals and grievances.

The examiner should review the frequency of similar grievances and be aware of any pattern of specific types of grievance. Should the type of grievance noted be cause for unusual concern, specific measures should be instituted to investigate other areas of a company’s operation. This may include modifying the scope of examination to examine specific company behavior.

Others Reviewed

- _____ ___________________________________________________________________________
- _____ ___________________________________________________________________________

NAIC Model References

*Model Regulation to Implement the NAIC Medicare Supplement Insurance Minimum Standards Model Act (#651), Section 10*

Review Procedures and Criteria

The examiner should determine whether the entity has procedures in place for recording and reporting grievances to the insurance commissioner.

The examiner should ensure that the entity has reported on an annual basis and in the format prescribed by the insurance commissioner, the number of grievances filed in the previous year and a summary of the subject, nature and resolution of such grievances.
I. Network Adequacy

1. Purpose

The network adequacy portion of the examination is designed to ensure that companies offering Medicare Select plans maintain service networks that are sufficient to ensure that all services are accessible without unreasonable delay. The standards require companies to ensure the adequacy, accessibility and quality of health care services offered through their service networks.

The areas to be considered in this kind of review include the company’s plan of operation and measures used by the company to analyze network sufficiency, contracts with participating providers and intermediaries, and ongoing oversight and assessment of access issues.

2. Techniques

To evaluate network adequacy standards, it is necessary for examiners to request from the company a statement or map that reasonably describes the service area. Additional items for review include a list and description by specialty of network providers and facilities. The examiner should determine whether the company has conducted studies to measure waiting times for appointments and other studies that measure the sufficiency and adequacy of the network. The examiner should also determine how the company arranges for covered services that cannot be provided within the network. Examiners should request the carrier’s documented selection standards for providers and review the plan of operation. Using the list of providers and facilities, examiners should request a sample of specific provider contracts. The review of provider contracts should include an evaluation of compliance with filing requirements and adherence to patient-protection requirements. In addition to direct contracts with providers and facilities, examiners should review the documented guidelines and contractual requirements established for intermediary contracts. Availability of emergency care facilities and procedures should be evaluated. Examiners should obtain verification that accurate provider directories are provided upon enrollment, are updated and dispersed periodically, and that the company has filed its updated list of network providers with the insurance commissioner on a quarterly basis. Another area for review includes grievances related to provider access issues.

3. Tests and Standards

The network adequacy review includes, but is not limited to, the following standards related to the adequacy of the health carrier’s provider network. The sequence of the standards listed here does not indicate priority of the standard.
Standard I
The company demonstrates, using reasonable criteria, that it maintains a network that is sufficient in number and types of providers to ensure that all services to enrollees will be accessible without unreasonable delay.

Apply to: All Medicare Select carriers

Priority: Essential

Documents to be Reviewed

NAIC Model References

*Health Benefit Plan Network Access and Adequacy Model Act (#74), Section 5*
*Model Regulation to Implement the NAIC Medicare Supplement Insurance Minimum Standards Model Act (#651), Section 10*

Review Procedures and Criteria

Reasonable criteria include, but are not limited to:
- Ratios of providers (primary care providers and specialty providers) to enrollees;
- Geographic accessibility, as measured by the reasonable proximity of participating providers to the business or personal residence of enrollees;
- Waiting times for appointments;
- Hours of operation; and
• Volume of technological and specialty services available to serve the needs of enrollees requiring technologically advanced or specialty care.

The company develops and complies with documented policies and procedures specifying when the company will pay for out-of-area and out-of-network services that are covered by the policy, or as are required by state law. In any case where the company is required to cover services and it has an insufficient number or type of participating providers to provide a covered benefit, the company shall ensure that the enrollee obtains the covered benefit at no greater cost than if the benefit were obtained from participating providers or (comma removed after providers) shall make other arrangements acceptable to the insurance commissioner.

The company establishes and maintains adequate arrangements to ensure reasonable proximity of participating providers to the business or personal residences of enrollees. In determining whether a company has complied with this provision, the insurance commissioner shall give due consideration to the relative availability of health care providers in the enrollees’ service area.

The company demonstrates that it monitors, on an ongoing basis, its providers, provider groups and intermediaries with which it contracts to ensure the ability, clinical capacity, financial capability and legal authority, including applicable licensure requirements, to furnish all contracted benefits to enrollees. There are standards pertinent to provider licensing in Section J. Provider Credentialing of this chapter.

The company complies with all applicable provisions of state law not expressly covered by any other of these standards.

_____ Credentialing and re-credentialing documentation
_____ Internet directory
_____ Applicable statutes, rules and regulations

Others Reviewed

_____ _________________________________________

_____ _________________________________________

NAIC Model References

Model Regulation to Implement the NAIC Medicare Supplement Insurance Minimum Standards Model Act (#651), Section 10

Review Procedures and Criteria

Request information regarding the carrier’s frequency of updates to the provider directory.

Verify that the company is providing directory updates to enrollees and to the insurance commissioner at the frequency required by state law.

Review how provider data is maintained. If the provider directory is not produced from the same system(s) that handles the administration functions, determine if the data is maintained consistently between systems.

If the provider directory is made available on the carriers’ website, verify that a paper version can be requested, as an option, by the enrollee.
J. Provider Credentialing

1. Purpose

The provider credentialing portion of the examination is designed to ensure that companies offering Medicare Select plans have verification programs to ensure that participating health care professionals meet minimum specific standards of professional qualification.

The areas to be considered in this kind of review include the company’s documented credentialing and re-credentialing policies and procedures, the scope and timeliness of verifications, the role of health professionals in ensuring accuracy and the oversight of any delegated verification functions.

2. Techniques

Prior to reviewing records for specific providers, examiners should request all documented credentialing procedures from the company. Examiners should determine the composition of the carrier’s credentialing committee. Examiners should use the company’s provider directory to select a sample of specific provider credential files, drawing from a variety of provider types and facilities. For each provider selected, the examiner should request:

   a. The provider application;
   b. Credentialing verification materials, including materials obtained through primary and secondary sources;
   c. Updates to credentialing information; and
   d. Copies of correspondence to providers that relates to the credentialing process.

Examiners should determine how the credentialing committee permits providers to correct information and provide additional information for reconsideration. In the event the credentialing process is subcontracted, examiners should determine whether the contracting entity is following applicable standards.

3. Tests and Standards

The provider credentialing review includes, but is not limited to, the following standards related to the adequacy of the health carrier’s provider credentialing and contracting processes. The sequence of the standards listed here does not indicate priority of the standard.
STANDARDS
PROVIDER CREDENTIALING

NAIC Model References

Health Care Professional Credentialing Verification Model Act (#70), Section 5

Review Procedures and Criteria

The company establishes documented policies and procedures for credentialing and re-credentialing of all health care professionals with whom the company contracts and applies those standards consistently.

The company ensures that the carrier’s medical director or other designated health care professional has the responsibility for, and participates in, the health care professional credentialing verification process.

The company establishes a credentialing verification committee consisting of licensed physicians and other health care professionals to review credentialing verification information and supporting documents in order to make decisions regarding credentialing verification.

The company makes all application and credentialing verification policies and procedures available for review by the applying health care professional upon written request.

The company keeps confidential all information obtained in the credentialing verification process, except as otherwise provided by state law.

The company retains all records and documents relating to a health care professional’s credentialing verification process for at least the number of years required by state law.
The company’s policies and procedures for credentialing and re-credentialing of providers are in compliance with state law.
K. Quality Assessment and Improvement

1. Purpose

The quality assessment portion of the examination is designed to ensure that companies offering Medicare Select plans have quality assessment programs in place that enable the company to evaluate, maintain and, when required by state law, improve the quality of health care services provided to enrollees. For Medicare Select plans that limit access to health care services to a closed network, the standards also require a quality improvement program with specific goals and strategies for measuring progress toward those goals.

The areas to be considered in this kind of review include the company’s documented quality assessment and improvement policies and procedures, annual certifications, reporting of disciplined providers, communications with members about the program and oversight of delegated quality-related functions.

2. Techniques

In some jurisdictions, the quality assessment and improvement function may be monitored jointly by the Department of Insurance and Department of Health (or similar agency). To evaluate quality assessment and improvement activities, examiners should request information relative to the composition of the quality assessment and improvement committee. Examiners should also determine frequency of quality assessment and improvement meetings. To obtain an accurate assessment of a company’s quality assessment and improvement program, it is advisable to review quality assessment and improvement committee meeting minutes for all meetings conducted during the examination period. Ascertain whether the quality assessment program reasonably encompasses all aspects of the covered health care services. Determine whether the carrier has obtained certification from a nationally recognized accreditation entity. Determine which standards will be met by virtue of the certification process. Examiners should evaluate the process by which quality assessment and improvement information and directives are communicated to network providers. Review procedures such as peer review, for including network providers in the quality assessment and improvement process. Ascertain whether outcome-based goals and objectives are being monitored and met.

3. Tests and Standards

The quality assessment and improvement review includes, but is not limited to, the following standards related to the assessment and improvement activities conducted by the health carrier. The sequence of the standards listed here does not indicate priority of the standard.

**Review Procedures and Criteria**

The company develops a quality assessment program and procedures to ensure effective corporate oversight of the program.

The company develops and maintains the infrastructure and disclosure systems necessary to measure the quality of health care services provided to enrollees on a regular basis and appropriate to the types of plans offered by the company.

The company establishes a system designed to assess the quality of health care provided to enrollees. The system includes systematic collection, analysis and reporting of relevant data in accordance with statutory and regulatory requirements.

The company communicates findings in a timely manner to applicable regulatory agencies, providers and consumers as provided for by state law.
The company appoints a chief medical officer or clinical director to have primary responsibility for the quality assessment activities carried out by, or on behalf of, the company (Quality Assessment and Improvement Model Act (#71), Section 7).

The chief medical officer or clinical director approves the documented quality assessment program, periodically reviews and revises the program documents and acts to ensure ongoing appropriateness. Not less than semi-annually, the chief medical officer or clinical director reviews reports of quality assessment activities (Quality Assessment and Improvement Model Act (#71), Section 7).

The company has an appropriate documented policy to ensure the confidentiality of an enrollee’s health information used in the company’s quality assessment programs (Quality Assessment and Improvement Model Act (#71), Section 9).

The company complies with all applicable provisions of state law not expressly covered by any other of these standards.

*Quality Assessment and Improvement Model Act (#71)*

Review Procedures and Criteria

The company develops a quality improvement program and procedures to ensure effective corporate oversight of the program (*Quality Assessment and Improvement Model Act (#71), Section 7*).

The company develops and maintains the infrastructure and disclosure systems necessary to measure, on a regular basis, the quality of health care services provided to covered persons and appropriate to the types of plans offered by the company.

The company establishes a system designed to improve the quality and outcomes of health care provided to enrollees. The system includes systematic collection, analysis and reporting of relevant data in accordance with statutory and regulatory requirements (*Quality Assessment and Improvement Model Act (#71), Section 6C*).
The company has a documented quality improvement plan that includes:

- A statement of the objectives, lines of authority and accountability, evaluation tools, data collection responsibilities, performance improvement activities and annual effectiveness review of the program;
- Intent to analyze processes and outcomes of care to discern the causes of variation;
- Identification of the targeted diagnoses and treatments to be reviewed each year;
- Methods to analyze quality, including collection and analysis of information on:
  - Over- or under-utilization of services;
  - Evaluation of courses of treatment and outcome of care; and
  - Collection and analysis of information specific to an enrollee or provider gathered from multiple sources and documentation of both the satisfaction and grievances of the enrollee(s);
- A method to compare program findings with past performance and internal goals and external standards;
- Methods for:
  - Measuring the performance of participating providers;
  - Conducting peer review activities to identify practices that do not meet the company’s standards;
  - Taking action to correct deficiencies;
  - Monitoring participating providers to determine whether they have implemented corrective action; and
  - Taking appropriate action when they have not;
- A plan to utilize treatment protocols and practice parameters developed with clinical input and using evaluations described above or acquired treatment protocols and providing participating providers with sufficient information about the protocols to meet the standards; and
- Evaluating access to care for covered persons according to the state’s standards, and a strategy for integrating public health goals with services offered under the plan, including a description of good faith efforts to communicate with public health agencies.

The company establishes an internal system to identify practices that result in improved health care outcomes, identify problematic utilization patterns, identify those providers that may be responsible for either exemplary or problematic patterns and foster an environment of continuous quality improvement (Quality Assessment and Improvement Model Act (#71), Section 6A).

The company ensures that participating providers have the opportunity to participate in developing, implementing and evaluating the quality improvement system (Quality Assessment and Improvement Model Act (#71), Section 6D).

The company provides enrollees with the opportunity to comment on the quality improvement process (Quality Assessment and Improvement Model Act (#71), Section 6E).

The company uses the findings generated by the system to work on a continuing basis with participating providers and other staff to improve the health care delivered to enrollees (Quality Assessment and Improvement Model Act (#71), Section 6B).

The company appoints a chief medical officer or clinical director to have primary responsibility for the quality improvement activities carried out by, or on behalf of, the health carrier (Quality Assessment and Improvement Model Act (#71), Section 7).

The chief medical officer or clinical director approves the documented quality improvement program, periodically reviews and revises the program document and acts to ensure ongoing appropriateness. Not less than semi-annually, the chief medical officer or clinical director reviews reports of quality assessment activities (Quality Assessment and Improvement Model Act (#71), Section 7).

The company has an appropriate documented policy to ensure the confidentiality of an enrollee’s health information used in the company’s quality improvement programs (Quality Assessment and Improvement Model Act (#71), Section 9).
The company complies with all applicable provisions of state law not expressly covered by any other of these standards.

Appendix A: Report on Consumer Data Privacy Protections Page 13
I. Introduction

The Privacy Protections (D) Working Group was appointed in 2019 to review state insurance privacy protections regarding the collection, use, and disclosure of information gathered in connection with insurance transactions and make recommended changes, as needed, to NAIC models addressing privacy protection. This work included the review of an insurer’s use of data collected from a consumer and data supplied to an insurer by a third-party vendor. Rather than focusing on revisions to NAIC models, the main deliverables for 2021 were to set forth a Report on the minimum consumer privacy protections that are appropriate for the business of insurance, after taking into consideration the consumer privacy protections that already exist under applicable state and federal laws.

The Working Group discussed how best to balance the need for information by those conducting the business of insurance and the consumer’s need for fairness in insurance information practices, rights of insurers to use data for legitimate business purposes with consumers’ rights to control what data is used and how it is used. The following privacy protections for consumers were discussed: (1) the right to opt out of data sharing, (2) the right to limit data sharing unless the consumer opts in, (3) the right to correct information, (4) the right to delete information, (5) the right of data portability, (6) the right to restrict the use of data, (7) the right of data ownership, (8) the right of notice, and (9) the right of nondiscrimination and/or non-retaliation.

As a reminder, opting in is not a way the consumer can protect their privacy – it is a way a consumer can waive a privacy protection. The Working Group intended to consolidate (1) and (2) above as a single “right to restrict data sharing, on either an opt-out or an opt-in basis,” however, since these issues were discussed extensively as separate “rights” that for purposes of this Report the issues are being listed separately.

The Working Group received comments from the ACLI, AHIP, APCIA, BCBSA, the Coalition of Health Insurers, NAMIC, MLA, and NAIC consumer representatives Birny Birnbaum, Brenda Cude, Karrol Kitt, and Harry Ting.

II. Overview of Issue

Consumer awareness and regulatory concerns about the use of consumer data by a variety of commercial, financial, and technology companies are increasing. This has led to the adoption of the General Data Protection Regulation (GDPR) in the E.U. and the California Consumer Privacy Act (CCPA) and other state data privacy protection laws in the U.S. Though data privacy concerns extend beyond the insurance sector, the increasing use of data and the passage of these new laws is causing the insurance industry and consumer groups alike to compel Congress to enact federal privacy legislation.

While federal legislative efforts are currently stalled due to other legislative priorities and differing perspectives from consumers and industry on the best path forward, it is likely that Congress will begin focusing on the issue again soon. The current pause provides state insurance regulators an
opportunity to update state privacy protections consistent with the current insurance business environment and potentially forestall or mitigate the impacts of any preemptive federal legislation. State policymakers have also responded to the privacy debate with varying legislative proposals to provide consumers with greater transparency and control over the use of personal information, with California, Virginia, and Colorado being the most recent examples. These comprehensive state data privacy laws each have either entity-level or data-level exemptions for entities subject to or information collected pursuant to the federal Gramm-Leach-Bliley Act (GLBA) and/or the privacy regulations adopted under the Health Insurance Portability and Accountability Act (HIPAA).

III. Summary of Consumer Privacy Protections Provided by NAIC Model Laws

The NAIC has three model laws governing data privacy: Health Information Privacy Model Act (Model #55); NAIC Insurance Information and Privacy Protection Model Act (#670) and Privacy of Consumer Financial and Health Information Regulation (#672), each of which is based upon or influenced by federal privacy laws. The NAIC’s Model #670 contains many of the consumer rights found in these comprehensive state laws, which can be traced back to the Fair Credit Reporting Act (FCRA), and Model #672 is based, in large part, on GLBA and the HIPAA regulations. Generally, insurers and other entities licensed by state departments of insurance have certain exemptions from are carved out of more comprehensive state laws of general applicability. Because of thee exemptions, insurance regulators must be aware when new protections are added to laws applicable to other businesses, especially when these laws address new technologies and ways consumer information is collected and shared, so that comparable protection can be added, as necessary, to the laws governing the insurance industry. Of note, GLBA and HIPAA each set a federal floor for the entities within their scope, upon which states can build. This is what the NAIC did in drafting the Health Information Privacy Model Act (Model #55) and the Privacy of Consumer Financial and Health Information Regulation (Model #672). GLBA applies to the entire insurance industry while HIPAA applies to the health insurance sector and those that collect or use Protected Health Information (PHI).

A. NAIC Insurance Information and Privacy Protection Model Act (Model #670)

The NAIC adopted the NAIC Insurance Information and Privacy Protection Model Act (#670) in 1980 following federal enactment of the Fair Credit Reporting Act in 1970 and the Federal Privacy Act in 1974. This model act establishes standards for the collection, use and disclosure of information gathered in connection with insurance transactions by insurance companies, insurance producers and insurance support organizations.

A key aspect of this model is that it establishes a regulatory framework for consumers to: (1) ascertain what information is being or has been collected about them in connection with insurance transactions; (2) obtain access to such information for the purpose of verifying or disputing its
accuracy; (3) limit the disclosure of information collected in connection with insurance transactions; and (4) obtain the reasons for any adverse underwriting decision.

This regulatory framework is facilitated through a requirement that insurers or agents provide a written notice to all applicants and policyholders regarding the insurer’s information practices. The notice must address the following: (1) whether personal information may be collected from persons other than the individual or individuals seeking insurance coverage; (2) the types of personal information that may be collected, the types of sources and investigative techniques that may be used to collect such information; (3) the types of disclosures allowed under the law; (4) a description of the rights established under the law; and (5) notice that information obtained from a report prepared by an insurance support organization may be retained by the insurance support organization and disclosed to other persons.

Of note, the model prohibits disclosure of any personal information about an individual collected or received in connection with an insurance transaction without the individual’s written authorization, subject to limited exceptions. However, some categories of information may be disclosed for marketing purposes if the consumer “has been given an opportunity to indicate that he or she does not want personal information disclosed for marketing purposes and has given no indication that he or she does not want the information disclosed.” Model #670 also provides consumers with the right to request that an insurer provide access to recorded personal information, disclose the identity of the third parties to whom the insurance company disclosed information (if recorded); disclose the source of collected information (if available); and provide procedures by which the consumer may request correction, amendment, or deletion of recorded personal information.

Seventeen (17) states have adopted Model #670: AZ, CA, CT, GA, HI, IL, KS, MA, ME, MN, MT, NV, NJ, NC, OH, OR, and VA.

B. NAIC Health Information Privacy Model Act (Model #55)

The NAIC adopted the Health Information Privacy Model Act (Model #55) following federal adoption of the privacy regulations authorized by the Health Insurance Portability and Accountability Act of 1996 (HIPAA).

This model sets standards to protect health information from unauthorized collection, use and disclosure by requiring insurance companies to establish procedures for the treatment of all health information by all insurance carriers. The drafters of Model #55 believed it was important that the same rules apply to all lines of insurance, since health insurance carriers are not the only ones that use health information to transact business. For example, health information is necessary for life insurance underwriting, and often essential to property and casualty insurers in settling workers’ compensation claims and personal injury liability claims. Reinsurers also use protected health information write reinsurance.

© 2021 National Association of Insurance Commissioners
The model requires carriers to develop and implement written policies, standards, and procedures for the management of health information, including to guard against the unauthorized collection, use or disclosure of protected health information. It provides consumers with the right to access their protected health information and amend any inaccuracies. The model also requires insurers to obtain written authorization (“opt-in”) before collecting, using, or disclosing protected health information, except when performing limited activities.

Many of the provisions found in Model #55 were later incorporated into the Privacy of Consumer Financial and Health Information Regulation (Model #672).

The following 11 jurisdictions have adopted legislation related to Model #55: CA, CO, DE, KY, LA, ME, MO, ND, RI, SD, TX.

C. NAIC Privacy of Consumer Financial and Health Information Regulation (Model #672)

The NAIC adopted the Privacy of Consumer Financial and Health Information Model Regulation (Model #672) in 2000. The model regulation was drafted to implement the requirements set forth in Title V of GLBA. GLBA imposed privacy and security standards on financial institutions, defined to include insurers and other insurance licensees, and directed state insurance commissioners to adopt certain data privacy and data security regulations. The provisions governing protection of financial information are based on privacy regulations promulgated by federal banking agencies. This model also contains provisions governing protection of health information that were taken directly from Model #55 and from the HIPAA Privacy Rule promulgated by the U.S. Department of Health and Human Services (HHS).

The model regulation provides protection for non-public financial and personal health information about consumers held by insurance companies, agents, and other entities engaged in insurance activities. In general, the model regulation requires insurers to: (1) notify consumers about their privacy policies; (2) give consumers the opportunity to opt-out of prohibit the sharing of their protected non-public financial information with non-affiliated third parties; and (3) obtain affirmative consent from consumers before sharing protected non-public personal health information with any other parties, affiliates, and non-affiliates.

The key difference between the treatment of financial information and health information is that insurers must give consumers the right to “opt out” of the disclosure or sharing of their financial information but insurers must obtain explicit authorization from the consumer (“opt-in”) before sharing health information. Every jurisdiction has a version of this model regulation, although nineteen (19) jurisdictions have only adopted the provisions regarding financial information and not the provisions regarding health information for purposes not within an exemption. Some jurisdictions that have adopted Model #670 have adopted additional provisions from Model #672 by bulletin rather than regulation.
IV. Summary of Health Insurance Portability and Accountability Act (HIPAA)

In 1996, Congress passed the Health Insurance Portability and Accountability Act (HIPAA), which, among other things, authorized the U.S. HHS Department of Health and Human Services to promulgate regulations governing consumer privacy protections. The HIPAA Privacy Rule was finalized in 2000. The rule applies to health plans and health care providers, restricting the permitted uses and disclosure of protected health information. HIPAA preempts state law only to the extent that a covered entity or business associate would find it impossible to comply with both the state and federal requirements.

HIPAA provides individuals the right to (1) access and amend their protected health information, (2) the right to request the restriction of uses and disclosures of protected health information, and (3) the right to receive an accounting of disclosures made to other entities.

A covered entity must obtain the individual’s written authorization for any use or disclosure of protected health information that is not for treatment, payment or health care operations or otherwise permitted or required by the law. A covered entity is also required to provide notice of its privacy practices.

V. Summary of General Data Protection Regulation (GDPR)

The GDPR became effective in May 2018 and applies to U.S. companies based on whether or not they process data from citizens of the E.U. or are processing data within the E.U. and provided that they have a sufficient nexus with the E.U. over the internet. This law requires companies (referred to as data “controllers”) to obtain explicit consent from consumers to collect their data (“opt in”) along with an explanation of how the data will be used. It also contains standards for safeguarding the data collected. Under the GDPR, a consumer has the following rights: (1) to receive information about the processing of personal data; (2) to obtain access to that personal data; (3) to request that incorrect, inaccurate or incomplete personal data be corrected; (4) to request that personal data be erased when it is no longer needed or if processing it is unlawful; (5) to object to the processing of personal data for marketing purposes or on grounds relating to a consumer’s particular situation; (6) to request the restriction of the processing of personal data in specific cases; (7) to receive personal data in a machine-readable format and the ability to transmit it to another controller, if technically feasible (“data portability”); and (8) to request that decisions based solely on automated processing concerning the consumer or significantly affecting the consumer and based on a consumer’s personal data, are made by human beings or to challenge a decision.

For further clarification - the GDPR does not, necessarily, apply to a company simply because it collects data from citizens of the EU over the internet. Specifically, the company must actively market its products and services to those in the EU. It is a factual determination. For example, routinely shipping goods to the EU, utilizing the French language on the website (in addition to
English) and setting a website up to accept euros would likely result in the GDPR applying to a given company.

VI. Summary of Recently Adopted Consumer Privacy Protection Laws

A. California Consumer Privacy Act (CCPA) and California Privacy Rights Act (CPRA)

In 2018, California became the first U.S. state to adopt a comprehensive privacy law, applicable beyond the insurance industry, imposing broad obligations on businesses to provide consumers with transparency and control of their personal data. The California Consumer Privacy Act (CCPA) became effective in 2020. Since it was adopted, it was amended by the California Privacy Rights Act (CPRA), which becomes effective January 1, 2023. Additionally, the California Attorney General promulgated implementing regulations in 2020.

Scope

The CCPA, as amended by the CPRA (California law) applies to companies doing business in California that collect or process consumers’ personal information and meet one of the following thresholds: (1) has annual gross revenue in excess of $25,000,000 in the preceding calendar year; (2) annually buys, sells, or shares the personal information of 100,000 or more consumers or households; or (3) derives 50% or more of its annual revenue from selling or sharing consumers’ personal information.

Exemptions

The law does not apply to personal information collected, processed, sold, or disclosed pursuant to the federal Gramm-Leach-Bliley Act (GLBA), and its implementing regulations. It also does not apply to protected health information that is governed by the privacy, security, and breach notification rules issued by the U.S. Department of Health and Human Services (HHS). Furthermore, this law contains an entity-level exemption for HIPAA-covered entities or business associates governed by the privacy, security, and breach notification rules issued by HHS.

Consumer Rights

California law provides consumers with the following rights subject to certain limitations: (1) to request deletion of any personal information;\(^1\) (2) to correct inaccurate personal information, taking into account the nature of the personal information and the purposes of the processing of the information; (3) to know about and access the personal information being collected by requesting that the business disclose: the categories and specific pieces of personal information collected, the categories of sources the information was collected from, the business purpose for collecting the information, the categories of third parties with whom the information is shared, and

---

\(^1\) And even when information is “deleted,” the CCPA right to deletion allows the business to “maintain a confidential record of deletion requests solely for the purpose of preventing the personal information of a consumer who has submitted a deletion request from being sold, for compliance with laws or for other purposes.”
the specific pieces of personal information that was shared; (4) to request the personal information provided by the consumer in a format that is easily understandable, and to the extent technically feasible, in a structured, commonly used, machine-readable format that may also be transmitted to another entity at the consumer’s request without hindrance; (5) to know what personal information is sold or shared and to whom; (6) to opt out of the sale or sharing of personal information; (7) to limit the use and disclosure of sensitive personal information aside from permissible enumerated purposes; and (7) to not be retaliated against for requesting to opt out or exercise other rights under the law.

Business Obligations

The law imposes the following obligations on all covered businesses: (1) prohibits retaining a consumer’s personal information for longer than reasonably necessary for the disclosed purpose; (2) requires implementing reasonable security procedures and practices; (3) requires notice of the following: collection of personal information, including sensitive personal information, retention of information, right to opt out of sale and sharing, and financial incentives; (4) prohibits using sensitive personal information outside of enumerated purposes when a consumer has requested not to use or disclose such data.

Enforcement

The CPRA amends the CCPA by placing administrative enforcement authority with the California Privacy Protection Agency, a new state agency created by the CPRA. Under the CPRA, the California Attorney General retains authority for seeking injunctions and civil penalties. Additionally, if personal information is breached, the consumer can pursue a private civil action against the company.

B. Colorado Privacy Act (CPA)

Scope

The Colorado Privacy Act (CPA) takes effect on July 1, 2023. Subject to certain limitations this law applies to entities that conduct business in Colorado or produce or deliver commercial products or services intentionally targeted to residents of Colorado and satisfy one of the following thresholds: (1) controls or processes the personal data of 100,000 or more consumers in a year; or (2) derives revenue or receives a discount on the price of goods or services from the sale of personal data and processes or controls the personal data of 25,000 or more consumers. The law defines “controllers” as those that “determine the purposes for and means of processing personal data” and defines “processors” as those that “process data on behalf of a controller.”
Exemptions

The law contains data-based exemptions (rather than entity-level exemptions) for protected health information collected, processed, or stored by HIPAA-covered entities and their business associates, and information and documents created by a HIPAA-covered entity for purposes of complying with HIPAA and its implementing regulations. Additionally, the law contains an exemption for any personal data collected, processed, sold, or disclosed pursuant to the Gramm-Leach-Bliley Act (GLBA), and implementing regulations, if such collection, processing, sale, or disclosure is in compliance with that law.

Consumer Rights

The CPA provides consumers with the following rights: (1) to opt out of targeted advertising, sale of personal data, and profiling; (2) to confirm whether a controller is processing the consumer’s personal data and the right to access such data; (3) to correct inaccuracies in personal data; (4) to delete personal data; and (5) to obtain the personal data in a portable and readily usable format that allows the consumer to transmit the data to another entity.

Business Obligations

The CPA imposes affirmative obligations on controllers, including the following: (1) provide consumers with an accessible, clear, and meaningful privacy notice; (2) specify the express purposes for which personal data are collected and processed; (3) collection of personal data must be adequate, relevant and limited to what is reasonably necessary in relation to the specified purposes; (4) not process personal data for purposes that are not reasonably necessary to or compatible with the specified purposes, without obtaining consent from the consumer; (5) take reasonable measures to secure personal data; (6) not process personal data in violation of any law that prohibits unlawful discrimination; and (7) not process a consumer’s sensitive data without first obtaining the consumer’s consent. Additionally, controllers are required to enter into contracts with data processors, referencing the responsibilities under the CPA and controllers must conduct a data protection assessment prior to any processing activities that have a heightened risk of harm to consumers.

Enforcement

The CPA does not contain a private right of action but does provide the state attorney general and district attorneys authority to take action against entities for violations.

C. Virginia Consumer Data Protection Act (CDPA)

Scope

The Virginia Consumer Data Protection Act (CDPA) becomes effective January 1, 2023. Subject to certain limitations, this law applies to entities that conduct business in Virginia or produce products or services targeted to Virginia residents when they control or process personal data of at least 100,000 consumers or control or process personal data of at least 25,000 consumers and also derive over 50% of gross revenue from the sale of personal data.
Exemptions

The law contains entity-level exemptions for those subject to GLBA and HIPAA. It specifically exempts financial institutions and data subject to GLBA, and covered entities or business associates governed by the privacy, security, and breach notification rules issued by the U.S. HHS Department of Health and Human Services. It also exempts protected health information under HIPAA.

Consumer Rights

The CDPA provides consumers with the following rights: (1) to confirm whether or not a controller is processing the consumer’s personal data and if so, to provide the right to access such personal data; (2) to correct inaccuracies in the consumer’s personal data, taking into account the nature of the personal data and the purposes of processing of the consumer’s personal data; (3) to delete personal data provided by or obtained about the consumer; (4) to obtain a copy of the consumer’s personal data in a portable and readily usable format that allows the consumer to transmit the data to another controller; and (5) to opt out of the processing of the personal data for purposes of targeted advertising, sale of personal data, and profiling.

Business Obligations

Under the law, controllers have the responsibility to do the following: (1) limit the collection of personal data to what is adequate, relevant, and reasonably necessary in relation to the purposes for which such data is processed; (2) not process personal data without consumer consent for purposes that are neither reasonably necessary to nor compatible with the disclosed purposes for which such personal data is processed; (3) establish, implement, and maintain reasonable data security practices to protect personal data; (4) not process personal data in violation of any laws that prohibit unlawful discrimination against consumers and not discriminate against consumers exercising their rights under this law; and (5) not process sensitive data concerning a consumer without obtaining the consumer’s consent. In addition, controllers must provide consumers with a reasonably accessible, clear, and meaningful privacy notice. Processing activities undertaken by a processor on behalf of a controller must be governed by a data processing agreement. Controllers also must conduct data protection assessments that evaluate the risks associated with processing activities.

Enforcement

Similar to the Colorado law, the Virginia law does not contain a private right of action but does provide the state attorney general authority to pursue action against entities for violations.

VII. Summary of Working Group Discussions of Selected Key Points

The Working Group began discussions December 8, 2019, during the Fall National Meeting with the following minimum consumer privacy protections being considered as appropriate for the
business of insurance. These rights were based on the Working Group’s proposed 2020 charges and are included in the Working Group's initial 2019 Work Plan:

1. the right to receive notice of an insurer’s privacy policies and practices;
2. the right to limit an insurer’s disclosure of personal data;
3. the right to have access to personal data used by an insurer;
4. the right to request the correction or amendment of personal data used by an insurer;
5. the right of data ownership; and
6. the right of data portability.

An example of the other types of issues the Working Group will need to discuss includes clarifying the specific circumstances for when a “right” does exist. Is it really a “right to request” as contained in the California law? Or is it merely a right to delete inaccurate information like FCRA? Or is it a right to request deletion of inaccurate information as described in Model #670?

Eventually the Working Group decided on nine (9) categories to study. In addition to the six above, the Working Group added (7) the right of data ownership, (8) the right of notice, and (9) the right of nondiscrimination and/or non-retaliation.

The Work Plan also stated that the Working Group discussions would focus on data privacy (and not data security) and identify areas within existing NAIC models and state requirements where consumer data privacy protections might need to be enhanced due to changes in technology. In her December 8 presentation, Jennifer McAdam (NAIC) outlined existing privacy provisions in NAIC models and state insurance laws. She said the difference between data privacy and data security is that data privacy is about how data is being collected and used by businesses; while data security is about how data that a business has already collected, has in its possession, and is stored and protected from unauthorized access. She said the two are often conflated and there are some laws that address both – for example, the GDPR.

Furthermore, as many comments have noted, the two issues overlap because a breach of security often results in a loss of privacy. Ms. McAdam said the CCPA is an example of a data privacy law that governs how businesses collect and use consumer data; the rights consumers have to know how that data is being used; the rights consumers have to challenge the accuracy of the data; and how it is being used. Data privacy laws are focused on legal protections for data and consumer rights: In comparison, data security laws, such as the NAIC’s Insurance Data Security Model Act (#668), require operational and technological protections sufficient to ensure that the legal protections are meaningful. Ms. McAdam explained that Model #668 governs how businesses protect the data once it has been collected as well as what businesses need to do if those protections fail as the result of a data breach or other cybersecurity event.

The Working Group operated under these distinctions.

State insurance regulators were concerned about the consumer data that insurers were already presenting in rate filings that had ballooned up to thousands of pages of different data points being
gathered by insurers on consumers. Regulators have also seen an increased reliance on third-party risk scores that aggregate consumer information in order to make determinations and conclusions about consumer information. Regulators noted that insurers have a responsibility to ensure that the third parties used are following state laws and complying with the state’s standards for accuracy and fairness. In addition to providing disclosure of the third parties used by insurers when consumers request it, insurers are required to report how the information was gathered; where it was drawn from (e.g., web traffic, geolocation data, social media, etc.); and why the company thinks it needs to use those particular data points.

Industry asked the Working Group to consider: 1) workability by allowing for various exemptions for operational and other reasons that acknowledge vital business purposes for insurers to collect, use, and disclose information. For example, Article IV of the NAIC Model #672 was developed to implement the GLBA, and the exceptions embedded into Section 13 of Model #672 are instructive as to the types of operational functions that need to be preserved and facilitated; 2) exclusivity by avoiding dual regulation, so insurers are not simultaneously subject to potentially inconsistent or conflicting interpretations by more than one regulator; 3) clarity by asking that care be taken to consider how best to dovetail new requirements with existing models/laws/regulations; consulting other resources and educating legislators on how privacy bill language impacts the insurance industry, including the legal requirements to retain and use certain data, as well as data mandates; 4) an effective date that allows advance time (like the two to five years that was afforded under the GDPR) for insurers to be ready for implementation, to avoid having piecemeal revisions like the CCPA and the GDPR, as well as a roll-out period with different dates for different provisions within that time frame as a more measured approach to undertake such a significant endeavor.

Consumer Representatives asked the Working Group to consider that: 1) data vendors are scraping personal consumer information from public sources to produce consumer profiles, scores, and other tools for insurers. The data vendor products, while assembled from public information, raise concerns over consumers’ digital rights and privacy; 2) many data vendors and many types of personal consumer information are not subject to FCRA consumer protections. In turn, many of the types of data and algorithms used by insurers are not subject to either FCRA consumer protections (even though they are the functional equivalent of a consumer report) or the NAIC model law/regulation protections; 3) it is unclear whether the NAIC models cover the new types of data being generated by consumers as part of, or related to, insurance transactions. For example, consumers are producing large volumes of data through telematics programs from devices collecting personal consumer data in the vehicle or home or through wearable devices; 4) there are several organizations working on consumer digital rights (such as the Center for Digital Democracy, the Electronic Privacy Information Center, the Electronic Frontier Foundation, the Public Knowledge-Privacy Rights Clearinghouse, the Public Citizen, the U.S. Public Interest Research Group, and the World Privacy Forum) from whom input and presentations at Working Group meetings could be solicited; and 5) if consumer disclosures are to be used, that disclosure
should be a compliance or enforcement tool that would be created using consumer focus testing and established best practices for the creation of such consumer disclosures.

The COVID-19 pandemic slowed the Working Group’s discussions in 2020, however, discussions continued through seven virtual meetings and two regulator-only meetings of subject matter experts as areas of concentration were being narrowed leading to the Working Group receiving additional guidance from its parent committee.

In April 2021, the Working Group’s discussions were redirected to six consumer data privacy rights or types of consumer data privacy protections based on the specific examples identified in item 1.c. of the NAIC Member Adopted Strategy for Consumer Data Privacy Protections received through its parent Committee, the Market Regulation and Consumer Affairs (D) Committee. The Working Group’s task was to comment on the following consumer privacy rights concerning consumers’ personal information as a basis for a privacy protection framework for the insurance industry (not just health insurance):

1. Right to opt out of data sharing;
2. Right to limit data sharing unless the consumer opts in;
3. Right to correct information;
4. Right to delete information;
5. Right to data portability;
6. Right to restrict the use of data.

Consequently, the Working Group was also tasked with analyzing or determining how insurers were protecting these rights – either to comply with state or federal statutory or regulatory requirements, on their own initiative or through the adoption of voluntary standards. In 2021, the Working Group met ten times and the regulator only subject matter experts met nine times.

Prior to the 2021 Summer National Meeting, the Working Group focused on discussion of, and input on, the following key points from regulators, industry, and consumers for each of the six consumer privacy data rights noted above: definitions; examples; consumer risk/impact; current state and federal laws/rules; insurer/licensee impact; actions necessary/insurer obligations to minimize consumer harm; and recommendations. Suggestions that separate privacy requirements be established for each line of business were discussed, but there was consensus that this did not seem to be feasible, as different consumer data privacy requirements across lines of business would limit both consumer protections and understanding.

It was noted during Working Group discussions that insurers are increasingly utilizing third party vendors as sources of data collection and that such vendors may not be subject to regulation by state insurance departments. Regulators stated that the insurers they regulate bear the responsibility for compliance with state insurance privacy requirements. Insurers felt they could not be held responsible because they did not know how such vendors collected or used consumer data and had no way to control the vendors’ business activities. Regulators and consumer representatives...
expressed different opinions indicating that insurers’ contracts with such vendors could and should be written to require vendors and insurers maintain compliance with insurance regulations regarding consumer data privacy.

During the 2021 Summer National Meeting, NAIC members further recommended that the Working Group's discussion be expanded to include the issue of consumer data ownership.

Working Group discussions revealed that state insurance regulators and consumer representatives believe consumers own the data that is collected and used by the insurance industry to market, sell, and issue insurance policies. It was felt that the type of data collected (name, age, date of birth, height, weight, income, physical condition, personal habits, etc.) describes who a person is and distinguishes one person from another by its very nature. When a consumer shares their data with an insurance company, it is with the understanding that the consumer is letting the company borrow it for a time to determine what insurance rates and insurance coverage the consumer needs. The consumer is not giving up their data to an insurer so it can be sold or given to other organizations from whom the consumer is not seeking insurance coverage, or any other product. Consumer representatives indicated that this practice had happened when they did an online search for insurance rates on health plans. As a result, the consumer representative received hundreds of cold calls from companies selling products other than insurance. When the consumer representative asked with whom the insurance company shared his data, the company sent him a list of 1,700 companies – none of which sold insurance. [Trades ask to delete this portion or to make clear that it is opinion and being reported by consumer group but not verified. I do not agree with deleting.]

The Report in Appendix A is designed to be the foundation for the minimum consumer data privacy protections that are appropriate for the business of insurance to be applied to the NAIC models as revisions. It is intended to kick start the next step in creating revisions by defining the parameters of the existing consumer data privacy rights; by suggesting definitions and by showing examples of consumer risks impact. Further discussion is necessary, however, to clarify consumer data privacy rights that may not be fully protected in federal laws or fully covered under NAIC Model laws, and to decide how to provide appropriate protections.

VIII. Conclusion and Recommendations

Months of detailed discussions with regulator, industry, and consumer stakeholders, and the comments they have submitted, have led the Working Group to determine that the NAIC Insurance Information and Privacy Protection Model Act (Model #670) and the Privacy of Consumer Financial and Health Information Regulation (Model #672) have in the past provided an effective regulatory framework for consumer privacy protections to oversee and enforce consumer data privacy as required by state and federal statutes and regulation. However, these models were adopted by the NAIC 20 and 40 years ago, respectively; with only 17 jurisdictions adopting Model #670.
However, in consideration of the many business developments and technological improvements that have occurred in recent years, as well as the rate of increase in the use of new technologies (AI, machine learning, accelerated underwriting, rating algorithms, etc.), and big data by insurers, the Working Group recommends additional considerations of the ways that Models #55, #670 and #672 could be amended to ensure that regulators and legislators can continue to have a robust menu of options to provide consumer data privacy protections essential to meet the consumer data privacy challenges presented by the public use of technology and data by insurers in today’s business environment.

As a reminder, the standards established in these models, while not only being between 20 and 40 years old, are considered to be a ‘floor,’ they are basic requirements, and these requirements are not to be considered a ‘ceiling’ that limits future NAIC initiatives. As business practices and technological developments have progressed so too must the consumer, the industry and the regulator.

It is clear that with the proliferation of data and the use of such data by licensed entities, that insurance regulation needs to modernize to protect the consumer of unintended consequences of the use ownership and security of such data. It is the intention of this Working Group to recommend that either the NAIC models be reopened and revised, or a new Model Law be created concerning the 9 categories listed in this Report, including a focus on data ownership, data rights and data protections. The work product going forward can use the GDPR as a possible template, along with other recently enacted state laws, while keeping in mind federal laws that already protect consumers’ data. Emphasis will be given to data transparency, customer control, customer access, data accuracy, and data ownership and portability as explained in Appendix A.

Subsequent to systemic and transparent decisions relating to Appendix A discussions and adoption of any model law changes, the Working Group also recommends the NAIC’s *Market Regulation Handbook* and the NAIC’s *IT Examiners’ Handbook* be updated, as necessary, to provide guidance to state insurance regulators so they can verify insurers’ compliance with the state’s regulatory framework for consumer privacy protections.
Appendix A

National Association of Insurance Commissioners
Report on Consumer Data Privacy Protections

By adhering to the same/similar intent behind the drafting of the NAIC’s Principles on Artificial Intelligence, this Report also requests that all “… insurance companies and all persons or entities facilitating the business of insurance that play an active role” in the protection of and usage of consumer data … promote, consider, monitor and uphold the principles as described in this Report.

This Report is intended to be a high-level report of the discussions and research conducted by the Privacy Protections (D) Working Group. The focus of our work was determining the minimum consumer data protections that are appropriate for the business of insurance. Once determinations were made, the Working Group discussed whether or not the current model laws are sufficient in order to continue protecting consumers and providing regulatory oversight, are revisions needed or does the Working Group need to draft a new model. This Report can be viewed as being similar to the Ai Principles in that it provides insight to regulatory expectations and serves as an outline for actions to be discussed taken going forward.

This Report only provides research information guidance to the Regulator and does not carry the weight of law or impose any legal liability. This guidance only can serve serves to inform state insurance departments and insurance companies of intended recommendations designed to address improvements needed for data privacy protections and to highlight issues needing further discussion.

Appendix B contains a list of resources relied upon during the pendency of this Working Group.

Because the business operations of insurance companies are dependent upon the collection and use of personal information and data, state insurance regulators have long understood the need to balance an insurance company’s need to collect consumer information and data with the consumer’s right to understand limit the collection and use of this data.

The NAIC adopted the Insurance Information and Privacy Protection Model Act (Model #670) in 1980 to establish standards for the collection, use and disclosure of information gathered in connection with insurance transactions. A key aspect of this model is that it establishes a regulatory framework for consumers to (1) ascertain what information is being or has been collected about them in connection with insurance transactions; (2) obtain access to such information for the purpose of verifying or disputing its accuracy; (3) limit the disclosure of information collected in connection with insurance transactions; and (4) obtain the reasons for any adverse underwriting decision. This regulatory framework is facilitated through a requirement that insurers or agents provide a written notice to all applicants and policyholders regarding the insurer’s information practices.
The NAIC adopted the *Privacy of Consumer Financial and Health Information Model Regulation* (Model #672) in 2000. The model regulation was drafted to implement the requirements set forth in Title V of the federal *Gramm-Leach-Bliley Act* (P.L. 106-102) of 1999 (GLBA). GLBA imposed privacy and security standards on financial institutions and directed state insurance commissioners to adopt certain data privacy and data security regulations. The model also contains provisions governing protection of health information that were taken directly from the *Health Insurance Portability and Accountability Act* (HIPAA) Privacy Rule promulgated by HHS. The NAIC model regulation requires insurers to: (1) notify consumers about their privacy policies; (2) give consumers the opportunity to prohibit opt-out of the sharing of their protected non-public financial information with non-affiliated third parties; and (3) obtain affirmative consent from consumers before sharing protected non-public personal health information with any other parties, affiliates, and non-affiliates. The key difference between the treatment of financial information and health information is that insurers must give consumers the right (with limited exceptions) to “opt out” of the disclosure or sharing of their non-public financial information to third-parties for the third party’s own business use, but insurers must get explicit authorization (“opt in”) before sharing health information absent an applicable exception.

This *Report* addresses consumer data privacy protections of (1) transparency; (2) consumer control; (3) consumer access; (4) data accuracy; and (5) data ownership and portability. The *Report* intentionally excludes standards for data security and standards for the investigation and notification to an insurance commissioner of a licensed insurance entity’s cybersecurity event, which since these issues are the subject of separate model laws and interpretive guidance.

The following definitions are used for the purposes of this policy statement.

A. “Adverse Decision” means declination of insurance coverage, termination of insurance coverage, charging a higher rate for insurance coverage, or denying a claim.

B. “Consumer” means an individual who is seeking to obtain, obtaining, or have obtained a product or service from an insurer. For example, an individual who has submitted an application for insurance is a consumer of the company to which he or she has applied, as is an individual whose policy with the company has expired.

C. “Customer” means a consumer with whom an insurer has an on-going relationship.

For purposes of this Report, customers are a subset of consumers, so there is no reason to reference “customer or consumer.”

D. “Licensee” means any insurer, producer, or other person licensed or required to be licensed, or authorized or required to be authorized, or registered or required to be registered pursuant to a state insurance law.

For purposes of this Report, what is defined above in (D) is a “regulated entity,” however, the models have been using the term “licensee” so this Report will continue to use the more familiar terminology.

E. “Personal Information” means any individually identifiable information or data gathered in
connection with an insurance transaction from which judgments can be made about an 
individual’s character, habits, avocations, finances, occupation, general reputation, credit, 
health, or any other personal characteristics. Personal information includes:

1. “Non-Public Personal Information,” which means information that a consumer provides to 
a licensee to obtain an insurance product or service (like income, credit history, name and address); information about a consumer a licensee has as a result of a transaction involving 
an insurance product or service (like premium payment history, how much a life insurance policy is worth, and the value of personal property insured); and all other information about 
a consumer that a licensee uses in connection with providing a product or service to a consumer.

2. “Non-public personal health information,” which means any information that identifies a 
consumer in some way, and includes information about a consumer’s health, including past 
and present physical and mental health, details about health care, and payment for health care.

I. Transparency [Trades have a lot of comments; see ACLI pt 19]

It is recommended that a licensee should provide a clear and conspicuous notice to consumers 
that accurately reflects its privacy policies and practices when it first requests personal 
information about the consumer from the consumer or a third party.

It is recommended that a licensee should also provide a periodic notice of its privacy policies 
and practices to customers when substantive changes have occurred not less than annually during 
the continuation of the customer relationship.

If a licensee makes an adverse decision based on information/data that was not supplied by the 
consumer, it is recommended that the licensee should provide the consumer with the specific 
reasons for the adverse decision. [Note: this standard is already a requirement – for 
declinations/nonrenewals the consumer is to be given the reason in such detail as to not require 
the need for further inquiry. Use Cons Rep example?]

**Going forward the WG types of issues to understand - would ensure all definitions, such as 
“on-going relationship,” consumer and customer are [copasetic]; company business operations 
are considered, record retention practices are understood, what happens to personal data/info 
when a person applies for but decides to not purchase a policy; when they cancel the policy; 
ensure the findings from the gap analysis have been addressed.

II. Consumer Control [Trades – change to Consumer Preference Default Mechanism]

It is recommended that licensees should, at a minimum, provide consumers the opportunity to
prohibit limit the sharing of their non-public personal information with third parties, except for specific purposes required or specifically permitted by law. (Opt-Out)

It is recommended that A licensees should obtain affirmative consent from consumers before sharing non-public personal health information with any other entity, including its affiliates and non-affiliates. (Opt-In)

III. Consumer Access

It is recommended that Any consumer should have the right ability to submit a request to a licensee to obtain access to his/her personal information used by the licensee in its operations. Upon request, within a specified period of time, the licensee should within 30 business days provides a copy of the consumer’s personal information, an explanation on how the personal information was used (i.e., rating, underwriting, claims), and provides the source of the personal information. If personal information is in coded form, the licensee should would be expected to provide an accurate translation in plain language.

IV. Data Accuracy

It is recommended that Within a specified period of time, 30 business days after receiving a written request from a consumer to correct, amend, or delete personal information used by the licensee in its operations, within its possession the licensee should will either make the requested correction, amendment, or deletion or notify the consumer of its refusal to do so, the reasons for the refusal, and the consumer’s right to file a statement of dispute setting forth what the consumer thinks is the correct information and the reasons for disagreeing with the licensee.

If the licensee corrects, amends, or deletes personal information, the licensee should notify any person or entity that has received the prior personal information within a specified period of time the last 7 years. If the licensee does not correct, amend, or delete the disputed personal information, the licensee should notify any person or entity that has received the prior personal information within a specified period of time the last 7 years of the consumer’s statement of dispute.

V. Data Ownership and Portability

A consumer customer should have the right to request a copy of his/her personal information that he/she has provided to the licensee for use in the licensee’s operations. A licensee should provide a consumer customer a copy of his/her personal information within a specified period of time.
business days of the request. Examples of this type of personal information include telematics data and “Internet of Things” (“IoT”) data.

[Pull information from minutes pertaining to category of data ownership, post Summer Nat’l Mtg]

**Office of Research Integrity {ORI} within the DHHS - Data Ownership.** Data ownership refers to both the possession of and responsibility for information. The control of information includes not just the ability to access, create, modify, package, derive benefit from, sell or remove data, but also the right to assign these access privileges to others.

Scofield (1998) suggest replacing the term ‘ownership’ with ‘stewardship’, “because it implies a broader responsibility where the user must consider the consequences of making changes over ‘his’ data.”

**National Institute of Standards and Technology (NIST) – Information owner** – An official with statutory or operational authority for specified information and responsibility for establishing the controls for its generation, collection, processing, dissemination, and disposal.

Data ownership formalizes the role of data owners and establishes accountability, assigning responsibility for managing data from creation to consumption. It puts rules and processes in place to ensure that the right people define usage directives, set quality standards, and consistently resolve data issues.

- Are there other points in the CO, VA, or Calif. laws that we want to include here?

Four NAIC Models were reviewed:
1. NAIC Health Information Privacy Model Act #55
2. NAIC Insurance Data Security Model Act #668
3. NAIC Insurance Information and Privacy Protection Model Act #670
4. NAIC Privacy of Consumer Financial and Health Information Regulation #672

State Laws reviewed:
1. California Consumer Privacy Act (CCPA)
2. California Privacy Rights Act (CPRA)
3. Colorado Privacy Act (CPA)
4. Virginia Consumer Data Protection Act (CDPA)

Federal Laws reviewed:
1. Health Insurance Portability and Accountability Act (HIPAA)
2. Gramm-Leach-Bliley Act (GLBA)
3. Federal Credit Reporting Act (FCRA)

Reviewed the European Union’s General Data Protection Regulation (GDPR)

Drafts (All with Privacy Policy Statement in their titles) were exposed and posted for comment on:
1. April 28, 2021
2. July 1, 2021
3. August 26, 2021

The Final Exposure Draft Report (which included the Privacy Policy Statement as Appendix A) was exposed and posted for comment on November 18, 2021.

Rpt Privacy Protections Received D Cmte
The Market Conduct Examination Guidelines (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met Nov. 4, 2021. The following Working Group members participated: Damion Hughes, Chair, and Eleanor Coe and Dennis Newman (CO); Erica Weyhenmeyer, Vice Chair (IL); Chris Erwin, Teri Ann Mecca, and Crystal Phelps (AR); Sarah Borunda and Catherine O’Neil (AZ); Steve DeAngelis (CT); Patrice Garnette (DC); Susan Jennette and Frank Pyle (DE); Elizabeth Nunes (GA); Daniel Mathis (IA); Lori Cunningham and Ron Kreiter (KY); Jill Huisken and Isaac Kane (MI); Paul Hanson (MN); Cynthia Amann, Jo LeDuc, and Win Nickens (MO); Tracy Biehn (NC); Edwin Pugsley (NH); Ralph Boeckman (NJ); Joel Bengo (NM); Hermoliva Abejar (NV); Sylvia Lawson and Sharon Ma (NY); Rodney Beetch (OH); Landon Hubbard (OK); Sandra Emanuel and Ana K. Pace (OR); Gary Jones and Crystal Welsh (PA); Brett Bache, Jack Broccoli, Segun Daramola, and Brian Werbeloff (RI); Matthew Tarpley (TX); Andrea Baytop, Julie Fairbanks, and Bryan Wachter (VA); Mary Block and Karla Nuissl (VT); Jeanette Plitt (WA); and Barbara Belling, Diane Dambach, Mary Kay Rodriguez, and Jody Ullman (WI).

1. **Heard Opening Remarks**

Mr. Hughes welcomed Pennsylvania to the Working Group, represented by Gary Jones and Crystal Welsh.

2. **Adopted its Oct. 7 Minutes**

The Working Group met Oct. 7 and took the following action: 1) adopted its Sept. 2 minutes; 2) discussed a revised draft Chapter 25—Conducting the Medicare Supplement Examination for inclusion in the *Market Regulation Handbook* (Handbook); 3) discussed a revised draft Chapter 24—Conducting the Health Examination for inclusion in the Handbook; and 3) received and discussed verbal updates from state insurance regulator volunteers who reviewed models with the potential to affect the examination standards of the Handbook. The models discussed included the *Real Property Lender-Placed Insurance Model Act* (#631), the *Insurance Holding Company System Regulatory Act* (#440), the *Corporate Governance Annual Disclosure Model Act* (#305), the *Corporate Governance Annual Disclosure Model Regulation* (#306), and the *Suitability in Annuity Transactions Model Regulation* (#275).

Mr. Pyle made a motion, seconded by Mr. Boeckman, to adopt the Working Group’s Oct. 7 minutes (Attachment Six-A). The motion passed unanimously.

3. **Adopted a Revised Draft Chapter 25 for Inclusion in the Handbook**

Mr. Hughes said the draft chapter, which had been circulated on Sept. 27, had been initially discussed during the Working Group’s Oct. 7 meeting, and no comments had been received on the draft chapter. Ms. Rodriguez said she had reviewed the *Model Regulation to Implement the NAIC Medicare Supplement Insurance Minimum Standards Model Act* (#651), and she provided suggested revisions in track changes for the Working Group’s review. She recommended changing all occurrences of the word “written” to “documented,” as “documented” would appear to be more relevant based upon the current business environment in 2021. She added references to Model #651 where appropriate in the exam standards of Chapter 25, and she suggested other revisions, including, but not limited to, network adequacy exam standards 1 and 7, as well as the marketing and sales section of the chapter. Ms. Rodriguez asked that a change be made to the “Documents to be Reviewed” section in Standard 1 of the “Network Adequacy” section of the chapter; she recommended changing “Provider/enrollee location by ZIP code” to “Provider/enrollee location reports by geographic location.”

Ms. Plitt made a motion, seconded by Ms. Weyhenmeyer, to adopt the draft Chapter 25 (see *NAIC Proceedings – Fall 2021, Market Regulation and Consumer Affairs (D) Committee, Attachment Four*), with the inclusion of the revision recommended by Ms. Rodriguez to Network Adequacy Standard 1. The motion passed unanimously.
4. **Adopted a Revised Draft Chapter 20—Conducting the Health Examination for Inclusion in the Handbook**

Mr. Hughes said the draft chapter, which had been circulated on Sept. 30, had been initially discussed during the Working Group’s Oct. 7 meeting, and no comments had been received on the draft chapter. Mr. Hughes said that Darcy Paskey (WI) had submitted the draft for the Working Group’s consideration. As Ms. Paskey was not able to be at the meeting, Ms. Damback spoke on her behalf. Ms. Damback said that Ms. Paskey had reviewed the *Health Maintenance Organization Model Act (#430)* and recommended one revision: adding “Quality of care complaints” to the Documents to be Reviewed in Quality Assessment and Improvement Standard 4.

Ms. Damback said that Ms. Paskey had also proposed that since the *Health Carrier Grievance Procedure Model Act (#72)* includes experimental and investigational treatment in the definition of “adverse determination,” the definitions section of both Model #430 and the *Health Carrier External Review Model Act (#75)* should be revised, for the sake of consistency, to include experimental and investigational treatment in the definition of adverse determination. Mr. Hughes said revisions to NAIC models would be beyond the scope of the Working Group. However, he said this issue could be brought to the attention of the appropriate working group(s) for future consideration. Ms. Damback said that upon further review of the chapter, Ms. Paskey determined there was no need at this time to create a new marketing and sales examination standard regarding contract requirements.

Ms. Weyhenmeyer made a motion, seconded by Ms. Phelps, to adopt the revision Ms. Paskey suggested to draft Chapter 24 (see *NAIC Proceedings – Fall 2021, Market Regulation and Consumer Affairs (D) Committee, Attachment Three*). The motion passed unanimously.

5. **Discussed Draft Revisions to Chapter 21—Conducting the Property and Casualty Examination, Oct. 27 Draft**

Mr. Hughes said the draft chapter, which was circulated on Oct. 27, had been provided by Sharon Shipp (DC) for the Working Group’s consideration. Mr. Hughes said that Ms. Shipp had reviewed the recently adopted Model #631 and had recommended revisions to various areas of the chapter. As Ms. Shipp was not able to be at the meeting, Ms. Garnette provided an overview of the revisions:

- Adding “certificate of insurance” to the “Documents to be Reviewed” section of Marketing and Sales Standard 1 and a reference to Model #631 in the NAIC Model References of that examination standard.
- Adding “Documentation showing regulated entity’s separate rates for mortgage servicer obtained lender-placed insurance versus voluntary insurance on real estate owned property” to the “Documents to be Reviewed” section of Underwriting and Rating Standard 4 and a reference to Model #631 in the NAIC Model References of that examination standard.
- Adding “Applicable reports filed with the commissioner (e.g., required reporting for insurers with at least $100,000 in direct written premium for lender-placed insurance, required rate filing for insurers with an annual loss ratio of less than 35% in any lender-placed program for two consecutive years)” to Underwriting and Rating Standard 6 and a reference to Model #631 in the NAIC Model References of that examination standard, as well as revising the first paragraph of the Review Procedures and Criteria to read: “Losses under each policy should be clearly and accurately maintained at the regulated entity, so that paid amounts, reserves, deductibles, and any excess amounts paid to the mortgagor can be easily reviewed. The sample data should be compared to the unit statistical reports to verify accuracy of reporting of the following items: ...”
- Revising Underwriting and Rating Standard 8 to read: “Underwriting, rating, and classification are based on adequate information developed at or near inception of the coverage rather than before the effective date of the insurance, near the expiration of a claim, or following a claim”; adding a reference to Model #631 in the NAIC Model References of that examination standard; and revising the first paragraph of the Review Procedures and Criteria to read: “Decisions should be based on information that reasonably should have been developed at the inception of the policy or during initial underwriting and not, through audit or other means, before the policy went into effect or after the policy has expired.”
- Adding “Books and records containing compensation, contingent commissions, profit sharing, and other payments dependent on profitability or loss ratios” and “Third-party agreements for outsourced services” to the “Documents to be Reviewed” section of Underwriting and Rating Standard 13 and a reference to Model #631 in the NAIC Model References of that examination standard.
Lisa Brown (American Property Casualty Insurance Association—APCIA) said that in Underwriting and Rating Standard 6 of the draft chapter, the applicability of the examination standard should be revised in scope to not be limited only to workers’ compensation examinations. She also suggested that language be added to Ms. Shipp’s proposed new language to mirror the provisions of Section 9G Filing, Approval and Withdrawal of Forms and Rates of Model #631, for the purpose of carving out lender-placed flood insurance. Mr. Hughes requested that comments on the draft be provided to Ms. Wallace by the comments due date of Nov. 27. Ms. Brown said that she will submit her comments to the Working Group by that time.

6. Discussed Draft Revisions to Chapter 20, Oct. 27 Draft

Mr. Hughes said the draft chapter, which was also circulated on Oct. 27, had been provided by Ron Kreiter (KY) for the Working Group’s consideration. Mr. Hughes said that Mr. Kreiter had reviewed Model #440 and had recommended revisions to various areas of the chapter.

Mr. Kreiter recommended adding a reference to Model #440 to Operations/Management Standard 1 and new review procedures/criteria: 1) determine if the NAIC Liquidity Stress Test (LST) Framework needs to be used for a specified data year; 2) determine if there is a holding company system in place and if so, whether there should be a group capital calculation request from the U.S. Federal Reserve or whether a lead state commissioner should require a group capital calculation for U.S. operations of any non-U.S.-based insurance holding company system; and 3) determine if the confidentiality of any group capital contribution or group capital ratio is maintained and if the confidentiality of the LST results and supporting disclosure are maintained, which includes any Federal Reserve Board filings and information.

Mr. Kreiter also recommended adding a reference to Model #440 in Marketing and Sales Standard 1, and new review procedures/criteria. For the review of group capital calculation, resulting group capital ratio and liquidity stress test:

- Review the making, publishing, disseminating, circulating, or placing before the public, or causing directly or indirectly to be made, published, disseminated, circulated, or placed before the public in a newspaper, magazine or other publication, or in the form of a notice, circular, pamphlet, letter, or poster, or over any radio or television station or any electronic means of communication available to the public, or in any other way as an advertisement, announcement, or statement containing a representation or statement with regard to the group capital calculation, group capital ratio, the liquidity stress test results, or supporting disclosures for the liquidity stress test of any insurer or any insurer group, or of any component derived in the calculation by any insurer, broker, or other person engaged in any manner in the insurance business because it would be misleading and is therefore prohibited; and
- Review if any materially false statement with respect to the group capital calculation, resulting group capital ratio, an inappropriate comparison of any amount to an insurer’s or insurance group’s group capital calculation or resulting group capital ratio, liquidity stress test result, supporting disclosures for the liquidity stress test, or an inappropriate comparison of any amount to an insurer’s or insurance group’s liquidity stress test result or supporting disclosures is published in any written publication and if the insurer is able to demonstrate to the commissioner with substantial proof the falsity of such statement or the inappropriateness, as the case may be, then the insurer may publish announcements in a written publication if the sole purpose of the announcement is to rebut the materially false statement.

Mr. Hughes requested that comments on the draft be provided to Ms. Wallace by the comments due date of Nov. 27.

7. Received Updates from State Insurance Regulator Volunteers Reviewing Models Potentially Affecting the Handbook

Mr. Hughes said various state insurance regulator volunteers have been reviewing adopted models that have the potential to affect the examination standards of the Handbook. The purpose of each state insurance regulator’s review was to see whether any revisions need to be made to the Handbook regarding the specific model they volunteered to review.

Mr. Hughes said Mr. Werbeloff volunteered to review an initial draft of revisions to Chapter 23—Conducting the Life and Annuity Examination of the Handbook; the draft incorporated changes relating to the revisions adopted in February 2020 to Model #275. Mr. Hughes said the draft has not yet been circulated, as he wished to have state insurance regulator volunteers review the draft to see whether it was acceptable for presentation to the Working Group “as is” or if further revisions are needed prior to exposure.
Mr. Werbeloff said that he had received feedback from Mr. Pyle regarding some minor changes to the draft. Mr. Werbeloff said he will be emailing all of the insurance regulator volunteers who have reviewed the draft to see if the draft can be considered final and ready for exposure at the Working Group or if more revisions need to be made. Mr. Werbeloff said that he will provide a few paragraphs that will accompany the draft when it is eventually presented to the Working Group.

Mr. Hughes said that Ms. Amann is continuing to review Model #305 and Model #306. Ms. Amann said the models set forth expectations for a company board of directors and management and expectations regarding what a company entity is supposed to be doing regarding its enterprise risk management.

Ms. Amann said rather than inserting corporate governance methodology into numerous exam standards in the Handbook, alternatively, a new subsection could be added to Chapter 20 regarding what financial analysts are looking for when they perform a corporate governance review, and such a section could also provide guidance to a market conduct examiner or a market analyst on what information they can review that was obtained by financial analysts. Ms. Amann said that such information can be used in conducting a market conduct exam, in market exam planning, or when performing a Level 2 analysis.

Ms. Amann said that during the course of a market conduct exam, if a problematic issue is identified, it can theoretically be backtracked to where weak oversight or lack of internal controls were found in a corporate governance review. Ms. Amann said that information can be combined with found errors and that a more comprehensive correction action plan can be developed for the company that is the subject of an exam.

Ms. Abejar said it would be helpful to create guidance in the Handbook for market conduct examiners on how to use information that financial analysts obtain in a company’s Own Risk and Solvency Assessment (ORSA) and information that financial examiners obtain in a company’s Exhibit M. Ms. Abejar said that market conduct examiners can obtain a lot of information about the direction of a company and its strategy by reviewing information obtained by financial analysts and financial examiners. Ms. Plitt said that in Washington, financial examiners and financial analysts perform corporate governance reviews; these reviews are not typically performed by market conduct examiners. However, that notwithstanding, she said it would be beneficial to market conduct examiners to include guidance in the Handbook addressing where market conduct examiners can look for and how to interpret the findings of corporate governance reviews performed by state insurance department financial examiners and financial analysts. Ms. Plitt said it is beneficial for market conduct examiners to know how to read financial examination reports.

Ms. Nunes said in the Financial Condition Examiners Handbook, part of the Exam Planning Memo guidance includes paragraphs such as “Did the analyst do preliminary analytics….” If a market conduct examiner can obtain such analytics from a financial analyst, then a market conduct examiner would not have to duplicate the task of performing such analytics. Ms. Nunes, therefore, suggested that it may be enough to insert a short guidance in the Handbook, directing the market conduct examiner to the individual financial regulators performing corporate governance reviews.

Mr. Hughes reminded Ms. Amann and the Working Group that the Working Group’s charge is to discuss the role of market conduct examiners in reviewing insurers’ corporate governance as outlined in the corporate governance-related models (Model #305 and Model #306) and not to develop examination standards/examiner guidance at this point in time. Mr. Hughes asked Ms. Amann to provide him with a summary of how Exhibit M compares to market conduct examination standards, and he said that any drafts that might arise out of this charge would go before the entire Working Group, not a subset of regulators. Mr. Hughes said another issue for the Working Group to consider is whether corporate governance methodology would be better served or have a more logical place in exam planning or market analysis (e.g., Level 2 analysis) rather than in market conduct.

8. Received an Update on the Working Group’s Group Supervision Charge

Tim Mullen (NAIC) provided background regarding the Working Group’s charge to: “Discuss the effectiveness of a group’s supervision of market conduct risks, and develop examination procedural guidance, as necessary.” Mr. Mullen said former Nebraska Director of Insurance Bruce Ramge, who was the long-term chair of the Working Group at the time the charge was added to the Working Group’s 2021 charges, was also involved in the NAIC financial regulatory sector. Mr. Mullen said the purpose of adding the charge in 2021 was to start a conversation/discussion at the Working Group to see if there are any concepts in financial regulation that might be applicable to market conduct regulation. Mr. Mullen said there is no intent in the charge for market conduct regulators to duplicate financial efforts; the purpose of the charge is to promote discussion regarding the issue at the Working Group to see if any of the activities that are performed in group supervision by financial regulators can be leveraged by market conduct regulators.
Mr. Mullen said that while the “windows and walls” approach where financial regulators have the ability or “windows” to scrutinize group activity across a group holding company and “walls” to protect the capital of the insurer may not exactly translate to market conduct, issues for the Working Group to consider with regard to this charge are: 1) whether market conduct regulators benefit from looking at the Group Profile Summary (GPS) that is completed on the financial side, as well as the structure of the business operations of a holding company (e.g., the organizational structure of business segments, the insurance entities within the group holding company, the jurisdictions in which each is licensed, etc.); 2) whether market regulators would consider reviewing all entities within a group holding company, especially as it pertains to the use of data and technology platforms, since if a problematic issue is found by market regulators in one particular entity in a holding group, is there a need to take a look at all entities within that holding group (provided they are using the same technologies and platforms) to see if the problematic issue exists in other entities within the holding company and, therefore, needs to be addressed in a market conduct examination; and 3) whether there is a need, based upon the Working Group’s discussion of these two issues, to develop specific market conduct procedures regarding an assessment of the activities of a group holding company.

9. Discussed Other Matters

Mr. Hughes said one of the Working Group’s charges is to develop uniform market conduct procedural guidance (e.g., a library or depository of electronic documents such as exam call letters, exam templates, etc.). To address this charge, he said he had asked during its Oct. 7 meeting that Working Group members and interested state insurance regulators provide additional ideas for uniform guidance that could be included in an electronic library of resources for state insurance regulators. Ms. Amann said that at the time of the 2004 Market Conduct Examiners Handbook, she thought there was a collection of templates (exam planning materials, interrogatories, exam announcements) that were collected from the then members of the Market Regulation and Consumer Affairs (D) Committee. Mr. Hughes asked that state insurance regulators email him additional feedback regarding this charge by Nov. 27.

Mr. Hughes said due to the timing of the holidays and the 2021 Fall National Meeting, the next Working Group meeting will occur in early 2022, and a notice of the meeting will be distributed by NAIC staff. Mr. Hughes thanked the members of the Working Group for their contributions in 2021, specifically the regulator subject matter experts (SMEs) who volunteered to review models and provide exposure drafts in 2021 for the Working Group’s review.

Having no further business, the Market Conduct Examination Guidelines (D) Working Group adjourned.

11.04.docx
The Market Conduct Examination Guidelines (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met Oct. 7, 2021. The following Working Group members participated: Damion Hughes, Chair, and Eleanor Coe (CO); Erica Weyhenmeyer, Vice Chair (IL); Teri Ann Mecca and Crystal Phelps (AR); Sarah Borunda (AZ); Kurt Swan (CT); Patrice Garnette and Sharon Shipp (DC); Susan Jenette and Frank Pyle (DE); Elizabeth Nunes (GA); Lori Cunningham and Ron Kreiter (KY); Mary Lou Moran (MA); Jill Huisken and Isaac Kane (MI); Cynthia Amann, Stewart Freilich, Jo LeDuc, and Win Nickens (MO); Tracy Biehn and Teresa Knowles (NC); Maureen Belanger (NH); Mary Lou Moran (MA); Jill Huisken and Isaac Kane (MI); Cynthia Amann, Stewart Freilich, Jo LeDuc, and Win Nickens (MO); Tracy Biehn and Teresa Knowles (NC); Maureen Belanger (NH); Erin Porter (NJ); Joel Bengo and Leatrice Geckler (NM); Hermoliva Abejar (NV); Sylvia Lawson and Sharon Ma (NY); Rodney Beech (OH); Landon Hubhart and Shelly Scott (OK); Sandra Emanuel, Brian Fordham, Colette Hittner, and Ana K. Pace (OR); Katie Dzurec (PA); Brett Bache, Jack Broccoli, Matt Gendron, Segun Daramola, and Brian Werbeloff (RI); Matthew Tarpley (TX); Julie Fairbanks and Bryan Wachter (VA); Mary Block and Christina Rouleau (VT); Jeanette Plitt (WA); Diane Dambach, Darcy Paskey, and Mary Kay Rodriguez (WI).

1. Heard Opening Remarks

Mr. Hughes welcomed Georgia to the Working Group, represented by Ms. Nunes and Scott Sanders.

2. Adopted its Sept. 2 Minutes

The Working Group met Sept. 2 and took the following action: 1) adopted a Title in-force standardized data request (SDR) and a Title claims SDR for inclusion in the reference documents of the Market Regulation Handbook (Handbook); and 2) received and discussed verbal updates from state insurance regulator volunteers who reviewed models with the potential to affect the examination standards of the Handbook. The models discussed included the Unfair Trade Practices Act (#880), the Insurance Holding Company System Regulatory Act (#440), the Corporate Governance Annual Disclosure Model Act (#305), the Corporate Governance Annual Disclosure Model Regulation (#306), the Suitability in Annuity Transactions Model Act (#275), the Health Maintenance Organization Model Act (#430), and the Model Regulation to Implement the NAIC Medicare Supplement Insurance Minimum Standards Model Act (#651).

Ms. Weyhenmeyer made a motion, seconded by Mr. Pyle, to adopt the Working Group’s Sept. 2 minutes (Attachment Six-A1). The motion passed unanimously.

3. Discussed a New Draft Chapter 25—Conducting the Medicare Supplement Examination for Inclusion in the Handbook

Mr. Hughes said the draft chapter, which was circulated on Sept. 27, was provided by Ms. Rodriguez for the Working Group’s consideration. Ms. Rodriguez said she reviewed Model #651, and she provided suggested revisions in track changes for the Working Group’s review. She recommended changing all occurrences of the word “written” to “documented,” as “documented” would appear to be more relevant based upon the current business environment in 2021. She mentioned that the terms “policyholder,” “enrollee,” etc. are used interchangeably throughout Chapter 25, and she recommended that a decision be made on which term should be used within the chapter, and perhaps the entire Handbook. She added references to Model #651 where appropriate, in the exam standards of Chapter 25, and she suggested other revisions, including, but not limited to, network adequacy exam standards 1 and 7, as well as the marketing and sales section of the chapter. Mr. Hughes said no comments had yet been received on the draft chapter, and he asked that comments on the draft be submitted by Oct. 28.

4. Discussed a New Draft Chapter 20—Conducting the Health Examination for Inclusion in the Handbook

Mr. Hughes said the draft chapter, which was circulated on Sept. 30, was provided by Ms. Paskey for the Working Group’s consideration. Ms. Paskey said she reviewed Model #430, and she provided a suggested revision to the quality assessment and improvement examination standard 4, adding a new category of documents—quality of care complaints—to the documents to be reviewed section of the exam standard. She recommended the creation of an additional marketing and sales examination standard to address contract requirements, which are referenced in Section 8 of Model #430. She said she reviewed the grievances and external review examination standards in the chapter, and she noted that the definition of adverse determination...
in Model #430 and the Uniform Health Carrier External Review Model Act (#75) does not include experimental and investigational treatment, whereas the Health Carrier Grievance Procedure Model Act (#72) includes experimental and investigational treatment in the definition of adverse determination. She proposed that the definitions section of Model #430 and Model #75 be revised, for the sake of consistency, to include experimental and investigational treatment in the definition of adverse determination. Mr. Hughes said revisions to NAIC models would be beyond the scope of the Working Group; however, this issue could be brought to the attention of the appropriate working group for future consideration. He asked Ms. Paskey to provide suggested language for a new marketing and sales standard regarding contract requirements. Ms. Paskey said she would be able to draft this language for the Working Group’s review. Mr. Hughes said no comments had yet been received on the draft chapter, and he asked that comments on the draft be submitted by Oct. 30.

5. Received Updates from State Insurance Regulator Volunteers Reviewing Models Potentially Affecting the Handbook

Mr. Hughes said various state insurance regulator volunteers have been reviewing adopted models that have the potential to affect the examination standards of the Handbook. The purpose of each state insurance regulator’s review was to see whether any revisions need to be made to the Handbook regarding the specific model they volunteered to review.

Ms. Shipp, who reviewed the Real Property Lender-Placed Insurance Model Act (#631), recommended that updates be made to Chapter 21—Conducting the Property and Casualty Examination of the Handbook regarding the model. She said Section 4—Term of Insurance Policy; Section 5—Calculation of Coverage and Payment of Premiums; Section 6—Prohibited Practices; Section 8—Evidence of Coverage; and Section 9—Filing, Approval and Withdrawal of Forms and Rates all contained provisions that should be incorporated into various sections of Chapter 21. Mr. Hughes asked Ms. Shipp to provide her suggested revisions to the chapter. Ms. Shipp said she would be submitting these for the Working Group’s consideration on an upcoming call.

Mr. Kreiter reviewed Model #440, which was amended in 2020. He said he drafted and provided Mr. Hughes and Ms. Weyhenmeyer with revisions incorporating provisions from Model #440 into Operations and Management Standard 1 and Marketing and Sales Standard 1 of Chapter 20—General Examination Standards of the Handbook. Mr. Hughes said this would be exposed for Working Group consideration and discussed on an upcoming call.

Mr. Hughes said Mr. Werbeloff volunteered to review an initial draft of revisions to Chapter 23—Conducting the Life and Annuity Examination of the Handbook; the draft incorporated changes relating to the revisions adopted in February 2020 to Model #275. The draft Mr. Werbeloff reviewed was created by the former Nebraska Department of Insurance (DOI) Director, Bruce R. Ramge, in 2020 as a “first draft,” and the draft had not yet been circulated, as Mr. Hughes wished to have state insurance regulator volunteers review the draft to see whether it was acceptable for presentation to the Working Group as is or if further revisions would be needed prior to exposure.

Mr. Werbeloff said the revisions proposed by Director Ramge would have removed some of the relevant content of the chapter. Mr. Werbeloff said he created a redline to: 1) incorporate the former director’s suggested revisions; and 2) reincorporate the content in the chapter that should be retained. He indicated that Mr. Gendron, Steve DeAngelis (CT), and Mr. Swan were all part of the review of the redlined draft, and he asked Mr. Hughes to solicit one or more additional volunteers to review the draft before forwarding it to the Working Group for its review and consideration. Mr. Pyle volunteered to review the draft.

Ms. Amann said she is continuing to review Model #305 and Model #306. She indicated that there are six categories of review in Exhibit M, each of which have multi-part questions, and these categories appear to overlap somewhat with Market Analysis Level 1 and Level 2 review questions. She said she is continuing to review the models, specifically Exhibit M regarding potential application to market conduct examinations review criteria and how corporate governance review could be included in the procedural guidance in the Handbook. Ms. Abejar added that if market regulators are examining a foreign company, they should be able to talk to the domestic financial analyst of the state of domicile. Mr. Hughes said the Working Group will continue to discuss this issue on future open Working Group calls.

6. Discussed Other Matters

Mr. Hughes said the Market Analysis Procedures (D) Working Group adopted revisions in early 2021 to chapters of the Handbook related to market analysis—Chapters 6, 7, 8 and 9—and the chapters went before the Market Regulation and Consumer Affairs (D) Committee for consideration of adoption at the Spring National Meeting. Mr. Hughes said Petra Wallace (NAIC) is reviewing the language of the Spring National Meeting minutes to see if the chapters can be directly placed in the
2022 Handbook or if, when they were adopted by the Market Regulation and Consumer Affairs (D) Committee, the Committee indicates that the Working Group needs to vet the chapters again before being incorporated into the 2022 Handbook.

Mr. Hughes said one of the Working Group’s charges is to develop uniform market conduct procedural guidance (e.g., a library or depository of electronic documents such as exam call letters, exam templates, etc.) and he asked that Working Group members and interested state insurance regulators provide additional ideas for uniform guidance that could be included in an electronic library of resources for state insurance regulators for this charge. Ms. Abejar suggested that for new examiners, there should be a repository of market risks and how to identify them. Mr. Hughes asked that state insurance regulators email him additional feedback regarding this charge so that this can be discussed during the next Working Group meeting.

Mr. Hughes said the Working Group’s charge relating to group supervision of market conduct risk is being reviewed by NAIC Market Regulation staff and Financial Regulatory Services staff. After that review concludes, it will be discussed during a future Working Group meeting.

Mr. Hughes added that while examination guidelines and/or standards in the Handbook are only based upon adopted NAIC models, the Working Group monitors other working groups and NAIC initiatives relating to ongoing work on models that have the potential to affect the examination guidelines in the Handbook, and there may be updates on these at future Working Group calls (e.g., updates on the work of the Big Data and Artificial Intelligence (EX) Working Group, the Long-Term Care Insurance Model Update (B) Subgroup, and the Accelerated Underwriting (A) Working Group) as they become available.

Mr. Hughes said the next Working Group call is scheduled to occur Nov. 4, and a notice of the call will be distributed by NAIC staff.

Having no further business, the Market Conduct Examination Guidelines (D) Working Group adjourned.

W:\National Meetings\2021\Fall\Cmte\D\MCEG\10-07.docx
The Market Conduct Examination Guidelines (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met Sept. 2, 2021. The following Working Group members participated: Damion Hughes, Chair, Eleanor Coe, Neil A. Derr, and Dennis Newman (CO); Erica Weyhenmeyer, Vice Chair (IL); Mel Heaps and Gwen McClendon (AR); Sarah Borunda (AZ); Euclid Ritchens and Kurt Swan (CT); Patrice Garnette (DC); Frank Pyle (DE); Daniel Mathis (IA); Ron Kreiter and Sandra Stumbo (KY); Mary Lou Moran (MA); Jill Huiskens and Isaac Kane (MI); Paul Hanson (MN); Cynthia Amann, Jo LeDuc, and Win Nickens (MO); Tracy Biehn and Teresa Knowles (NC); Maureen Belanger and Edwin Pugsley (NH); Ralph Boeckman (NJ); Joel Bengo and Myra L. Morris (NM); Hermoliva Abejar and Barbara D. Richardson (NV); Sylvia Lawson and Sharon Ma (NY); Rodney Beetch and Jana Jarrett (OH); Landon Hubbard and Shelly Scott (OK); Brian Fordham (OR); Gary Jones and Crystal Welsh (PA); Brett Bache, Segun Daramola, and Brian Werbeloff (RI); Matthew Tarpley (TX); Andrea Baytop, Julie Fairbanks, and Bryan Wachtler (VA); Mary Block and Christina Rouleau (VT); John Haworth and Jeanette Plitt (WA); Barbara Belling, Diane Dambach, Darcy Paskey, Mark Prodoehl, Rebecca Rebholz, and Mary Kay Rodriguez (WI); and Desiree Mauller (WV). Also participating was: Reva Vandevoorde (NE).

1. **Heard Opening Remarks**

Mr. Hughes welcomed Rhode Island to the Working Group, represented by Mr. Gendron and Mr. Bache.

2. **Adopted New Draft Title SDRs for Inclusion in the Reference Documents of the Market Regulation Handbook**

Mr. Hughes said the Title In Force and Title Claims Standardized Data Requests (SDRs) were first circulated on March 23, and comments were received in April 2021 on the SDRs from Colorado, Nebraska, Rhode Island, the American Land Title Association (ALTA), and the Center for Economic Justice (CEJ). He said the comments were discussed on the June 10 call. At that call, the Title Insurance SDR regulator-only subject matter experts (SMEs) were asked to reconvene to review the comments received, make revisions where needed to the SDRs, and submit the SDRs to the Working Group as revised exposure drafts for discussion at the next scheduled Working Group call. Mr. Hughes said no additional comments were received on the drafts.

Mr. Hughes said revised SDRs were circulated on Aug. 26; they both contain redline revisions to various fields and field descriptions, and several fields were rearranged, predominantly in the Title Claims SDR, to improve the flow of the fields within the SDR. Mr. Newman, who is a member of the SMEs who made the revisions, said the SMEs took all comments received into consideration, and the SDRs were fleshed out to capture additional information needed when conducting a title examination. The SDRs were also made more user friendly to more logically align with the title examination process.

Ron Blitenthal (Old Republic National Title Insurance Company) asked that language be added to both SDRs to indicate that not all fields are required data elements that may be requested by a state insurance examiner and fields may be changed, or removed by examiners, as deemed applicable. Mr. Hanson said SDRs are designed to be a template that examiners use as a starting point for fields to consider when conducting a title examination, and not every field may be requested by an examiner.

Mr. Hughes verified with Petra Wallace (NAIC) that information addressing how state insurance regulators use SDRs in the market conduct examination process is incorporated into Chapter 15—Standardized Data Requests of the Market Regulation Handbook, and no changes were made to the SDRs regarding Mr. Blitenthal’s comment.

Biny Birnbaum (CEJ) asked that a reference to “direct issue” be added to the Title In Force SDR to address direct issue, where a title policy is issued directly by a title insurer and there is no title agent involved. The Working Group did not make this change, and Mr. Birnbaum withdrew his suggestion. He said all data elements requested in both SDRs are necessary for a market conduct examiner to perform an effective review of title transactions, and examiners using the SDRs should have a reasonable expectation that a regulated entity receiving the SDRs can provide the data elements requested in the SDR.

Mr. Blitenthal asked that the Claim Status field in the Title Claims SDR be revised to include additional language so that it also captures claims in instances where a title insurance company has fixed a title defect—i.e., where the title issue was resolved by the title insurer—and the title insurer was able to clear the title without payment. Mr. Newman suggested that a new code “T”
with the description “title cleared” be added to the Claim Status field description in the Title Claims SDR to address Mr. Blitenthal’s comment.

Ms. Plitt made a motion, seconded by Ms. Weyhenmeyer, to adopt the Title In Force SDR (see NAIC Proceedings – Fall 2021, Market Regulation and Consumer Affairs (D) Committee, Attachment One) and the Title Claims SDR (see NAIC Proceedings – Fall 2021, Market Regulation and Consumer Affairs (D) Committee, Attachment Two) with that change. The motion passed unanimously.

3. Received Updates from State Insurance Regulator Volunteers Reviewing Models Potentially Affecting the Market Regulation Handbook

Mr. Hughes said various state insurance regulator volunteers reviewed models amended in 2020 and other recent model activity identified in Working Group calls earlier this year. The purpose of each state insurance regulator’s review was to see whether any revisions need to be made to the Market Regulation Handbook (Handbook) regarding the specific model they were asked to review. Ms. Weyhenmeyer reviewed the recently amended Unfair Trade Practices Act (#880). She indicated that the updates to the model adopted in early 2021 expanded on the definition of anti-rebating, and after a review of Chapter 20—General Examination Standards of the Handbook, she felt that changes to the Handbook would not be necessary. Mr. Birnbaum said in the revised model, there is language added indicating that if certain value-added services are provided, then certain criteria would need to be met. He recommended that revisions to the Handbook would need to occur. Ms. Weyhenmeyer asked Mr. Birnbaum to submit suggested revisions, and the Working Group can discuss how to proceed regarding Model #880 during a future meeting.

Mr. Kreiter reviewed the Insurance Holding Company System Regulatory Act (#440), which was amended in 2020. He said he reviewed the background regarding the adoption of the 2020 amendments, and he found that there are still open-ended questions among the states regarding the model. He said there is language in the model that could be placed within Standard 1 of Chapter 20 of the Handbook, and he is still reviewing the model for additional applicable updates to the Handbook.

Ms. Amann reviewed the Corporate Governance Annual Disclosure Model Act (#305) and the Corporate Governance Annual Disclosure Model Regulation (#306) and provided her perspective of how the concepts within the models may affect market regulation oversight of regulated entities and her recommended next steps. She said the models were adopted in November 2014, and while neither model prescribes governance standards, they do require the reporting of what an insurer is currently doing in certain critical risk areas. Ms. Amann said, like Mr. Kreiter’s review and comment, there are several NAIC financial-related working groups that are still sorting out procedures regarding corporate governance.

Ms. Amann said the areas in corporate governance that would likely pertain to market conduct examiners include compliance functions, internal auditing, and the market conduct decision process. She said she is working on cross referencing the examination standards/review criteria in the Handbook against Exhibit M review criteria. She said while new examination standards may not arise out of her review, there are new review criteria that could be developed. Mr. Hughes said the Working Group will continue to discuss this issue on future open Working Group calls.

Mr. Hughes said Mr. Werbeloff volunteered to review an initial draft of revisions to Chapter 23—Conducting the Life and Annuity Examination of the Handbook; the draft incorporated changes relating to the revisions adopted in February 2020 to the Suitability in Annuity Transactions Model Regulation (#275). The draft that Mr. Werbeloff reviewed was created by the former Nebraska Department of Insurance (DOI) Director, Bruce R. Ramge, in 2020 as a “first draft,” and the draft had not yet been circulated, as Mr. Hughes wished to have state insurance regulator volunteers review the draft to see whether it was acceptable for presentation to the Working Group as is or if further revisions would be needed prior to exposure. Mr. Werbeloff said the draft Director Ramge created was a good initial draft. Mr. Werbeloff said he was not sure that the examination standards that Director Ramge drafted would replace existing examination standards in the chapter or if they would be incorporated as additional examination standards. Mr. Werbeloff indicated that a further review would be necessary to ascertain what language should be kept; if additional review criteria should be developed; and if duplicative review criteria exists, in which case, that language should be removed from the draft. He indicated that he would continue to review the draft regarding these three areas, and Mr. Swan volunteered to assist Mr. Werbeloff with this project.

Ms. Paskey reviewed the Health Maintenance Organization Model Act (#430), which was amended in 2020. She indicated that minor revisions to Chapter 24—Conducting the Health Examination of the Handbook should be made by adding review criteria regarding contract requirements, adding content regarding quality-of-care complaints, and making updates to the grievance and
external review sections regarding adverse determinations and experimental and investigational treatment determinations. She also indicated that references to Model #430 should be added throughout the chapter, where applicable. Mr. Hughes asked Ms. Paskey to create a redlined version of Chapter 24 for the Working Group to review at its next scheduled call.

Ms. Rodriguez reviewed the *Model Regulation to Implement the NAIC Medicare Supplement Insurance Minimum Standards Model Act* (#651), which was amended in 2020. She recommended multiple grammatical changes to Chapter 25—Conducting the Medicare Supplement Examination of the Handbook, such as changing “written” to “documented,” as the term “documented” appears to be more relevant in 2021. She noted that the terms in Chapter 25 such as “company,” “carrier,” “entity,” etc., are used interchangeably throughout the chapter, and she recommended that a decision be made on which term is appropriate to use in the chapter and perhaps throughout the entire Handbook. She noted that the terms “policyholder,” “enrollee,” etc., are also used interchangeably in the chapter, and a decision should also be made regarding that usage in the chapter, as well as in the entire Handbook. She recommended that changes be made to Section C—Marketing and Sales and Examination Standards 1 and 17 in the Network Adequacy section of the chapter. She also indicated that references to Model #651 should be added throughout the chapter, where applicable. Mr. Hughes asked Ms. Rodriguez to create a redlined version for the Working Group to review at its next call.

4. **Discussed Other Matters**

Mr. Hughes said the next Working Group meeting is scheduled to occur Oct. 7, and a notice of the meeting will be distributed by NAIC staff.

Having no further business, the Market Conduct Examination Guidelines (D) Working Group adjourned.
The Market Analysis Procedures (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met Nov. 18, 2021. The following Working Group members participated: John Haworth, Chair (WA); Rebecca Rebholz, Vice Chair (WI); Crystal Phelps (AR); Sarah Borunda (AZ); Don McKinley (CA); Damion Hughes (CO); Steve DeAngelis (CT); Susan Jennette (DE); Scott Woods (FL); Erica Weyhenmeyer (IL); Tate Flott (KS); Sandra Stumbo (KY); Mary Lou Moran (MA); Dawna Kokosinski (MD); Connie Mayette (ME); Jill Huisken (MI); Cynthia Amann, Teresa Kroll, and Jo LeDuc (MO); Paul Hanson (MN); David Dachs (MT); Reva Vandevoorde (NE); Maureen Belanger (NH); Erin Porter (NJ); Joel Bengo (NM); Hermoliva Abejar (NV); Guy Self (OH); Landon Hubbart (OK); Jeffrey Arnold (PA); Matt Gendron (RI); Shelley Wiseman (UT); Will Felvey (VA); Isabelle Turpin Keiser (VT); and Theresa Miller (WV). Also participating were: October Nickel (ID); Shane Quinlan (NC); Tony Dorschner (SD); and Stacie Parker (TX).

1. **Adopted its Summer National Meeting Minutes**

Mr. Flott made a motion, seconded by Ms. Rebholz, to adopt the Working Group’s July 1 minutes (see NAIC Proceedings – Summer 2021, Market Regulation and Consumer Affairs (D) Committee, Attachment Four). The motion passed unanimously.

2. **Discussed Market Analysis Training**

Mr. Haworth said comments and suggestions have been sent in by interested state insurance regulators and compiled. He said the suggestions can be divided into three types: 1) training methods; 2) training topics; and 3) discussion.

Mr. Haworth said the training method suggestions for how training can be delivered include: 1) more virtual sessions; 2) recorded sessions that are available on demand; 3) tutorials; 4) the use of outside vendors; and 5) leveraging and adapting what is already available through the NAIC. He noted that these suggestions are not mutually exclusive. For example, any training that is provided can be presented both virtually and in person and also be recorded at the same time.

Mr. Haworth said training topic suggestions include: 1) Market Analysis Review System (MARS), Level 1, and Level 2 training; 2) MCAS ratios and the identification of outliers; 3) the use of Tableau and other visualization tools; and 4) general training for new analysts and smaller departments.

Mr. Haworth said the ideas labeled as discussion do not fit neatly into the other two categories. He said they include: 1) the creation of monthly market analyst groups to discuss analysis techniques; and 2) a suggestion to reorganize i-Site+ to put all market conduct tools on one page.

Mr. Haworth said he and Ms. Rebholz will review these ideas with NAIC staff support to come up with some ideas for implementing the suggestions and begin moving forward with enhanced training for market analysts. He said he will report back to the Working Group.

Mr. Hughes said a training course could start with an overview of the tools in i-Site+ and then drill down into the individual tools. Mr. Dorschner noted that the NAIC’s Market Analysis Techniques – Online course provides a lot of insight.

3. **Discussed Standard MCAS Ratios for Travel Insurance MCAS and STLD Insurance MCAS**

Mr. Haworth said the Market Conduct Annual Statement Blanks (D) Working Group adopted the travel and short-term, limited-duration (STLD) MCAS blanks earlier in 2021. He noted that after a new MCAS blank is adopted, it is the responsibility of the Market Analysis Procedures (D) Working Group to develop and adopt scorecard ratios for the new blanks. He said the scorecard ratios are the ratios that are publicly made available on the MCAS web page, usually on a state-wide basis, so no individual company ratios are identifiable. He said that typically there are less than 10 ratios that are identified for publication on the MCAS scorecard page for a line of business, but the Working Group can adopt more ratios if it makes sense to do so.

Mr. Haworth said that to begin the discussion of which ratios to adopt for the travel and STLD blanks, NAIC staff support drafted a list of possible ratios for both lines of business. He said the draft ratios are only suggestions. The Working Group can
adopt all of them or just some of them. He said the Working Group could also come up with different ratios or different ways of calculating the ratios. He said the draft’s main purpose is just to begin the discussion.

Mr. Haworth said there are six proposed ratios for the travel line of business. He said the ratios closely follow the ratios already used on the homeowners and auto MCAS lines of business. These ratios are for the entire blank and are not broken down by coverage type. He noted that if it makes sense to have any particular ratios broken out by coverage type, that also can be considered.

Mr. Haworth said there are 16 potential ratios proposed for the STLD line of business. He said that is a lot of ratios, but this is merely a list of suggestions, and not all of them need to be adopted. He said the ratios closely track with the health MCAS line of business but focus more on the issues or concerns with STLD, such as the percentage of policies sold through associations not situated in the state.

Ms. LeDuc said the proposed travel ratio 3, “Percentage of Claims Paid Beyond 30 Days,” included the data element for “claims paid under 30 days” in both the numerator and the denominator. Randy Helder (NAIC) said that would be an error and should only be included in the denominator. He said he would edit that.

Ms. LeDuc asked why ratio 4, “Cancellations by Insured to Total Cancellations and Expirations,” used total cancellations in the denominator. She said cancellations are normally compared to policies issued. Mr. Helder said policies issued was not a data element in the travel blank, and policies in-force at the beginning or policies in-force at the end of the reporting period would miss a number of policies since travel policies are usually written for a period less than a year.

Ms. LeDuc asked what the ratio would tell the analyst. Mr. Helder said he thinks that a high percentage on this ratio compared to other companies may indicate a problem with the product or service that is causing the consumer to cancel with more frequency. Birny Birnbaum (Center for Economic Justice—CEJ) said ratio 4 has no purpose since most, if not all, cancellations will be by the consumer. He said the ratio would be near 100% for all companies. Mr. Helder noted that the denominator includes not just cancellations but also all policies that expired, so the ratio would usually be below 100%. He said the expirations were included in the denominator to capture all policies that were in-force at some point in the year.

Mr. Birnbaum said it is important to publish ratio information by coverage part. He also suggested publishing the premium information that will be reported on the travel MCAS blank since there is no other source for travel insurance premium information.

Mr. Hughes said that for the STLD MCAS ratio, it would be helpful to have a ratio comparing the number of claim denials for preexisting conditions to the total number denials for any reason. He said this ratio may indicate the consumer did not understand that coverage was not compliant with the federal Affordable Care Act (ACA) and was only STLD.

Ms. Rebholz suggested forming two subject matter expert (SME) groups to hone the ratios and bring them back to the Working Group. Mr. Haworth agreed that was a good idea. Ms. LeDuc and Ms. Weyhenmeyer volunteered to be on the SME groups. Mr. Haworth asked anyone who is interested in being on one or both groups to let Mr. Helder know. He said that comments can also be sent to Mr. Helder.

4. Discussed Market Analysis Tools

Mr. Haworth said the current i-Site+ market analysis tools and data elements will be affected by the creation of improved tools and dashboards. He said one of the projects in the NAIC’s State Ahead strategic plan is to create Tableau dashboards to replace current i-Site market regulation tools and applications. He said NAIC staff prepared a list of market information system tools that are in line for elimination because they will become obsolete once the new dashboards are completed. He said it would be inefficient to dedicate resources to maintaining two tools that do essentially the same job. Mr. Haworth said that during the creation of the Tableau dashboards, it became clear that some of the current tools in i-Site+ are not being used very often and two of the reports—the MCAS Line Report and the Market Analysis Profile (MAP) Demographics—are included on the list.

Mr. Haworth said the Working Group is not making the decision on the elimination of these tools. He said that will be the task of the Market Information Systems Research and Development (D) Working Group, which will be reviewing the same list. He said that since the Market Analysis Procedures (D) Working Group is responsible for the market analysis that relies heavily on these tools, he thinks it is important that the Working Group have an opportunity to review and make any suggestions or recommendations about the list.
Ms. LeDuc said she is supportive of using visualization in market analysis, but she cautioned against just importing the current data and replicating the tools in Tableau. She said the current reports have data elements that have not been found to be useful and some data elements that should be added. She said it would be useful to take the opportunity to improve the data being presented.

Mr. Quinlan asked if the underlying data that support the new tools would be available for download to the market analyst. He said that there are instances where multiple Tableau dashboards need to be opened to obtain the same data available in one i-Site+ tool. Teresa Cooper (NAIC) said the Market Analysis Prioritization Tools (MAPT) is not going away at this time. She said the data will be available for download, and the Enterprise Data Platform teams are working on improving the way ad hoc querying is done. She also encouraged the state insurance regulators to provide advice and feedback on the tools being developed.

Mr. Quinlan noted that some of the Tableau reports can be difficult to work with, such as the plots of all the data of companies for one data element. All the representative points of data are congested. Kyle Lichtenberger (NAIC) said he is working on making the dashboards intuitive and noted that choosing a company on the report will highlight the dots representing the company for each year. He said he is happy to work with the state insurance regulators to explain and improve the dashboards.

Ms. Nickel said she appreciates Ms. LeDuc’s advocacy for visualization, but she would still like to have the data presented as it is presented in the MAPT and not always in a visualization. Ms. Nickel said downloadable options for the data need to be made available also. Ms. LeDuc said that in Missouri, they will download the data and merge it with internal data, so they still need access to the data.

Mr. Haworth asked that comments on the market analysis tools be sent to Mr. Helder by Dec. 10.

5. Discussed Other Matters

Ms. Parker asked the Working Group for clarification on the MCAS reporting of multiyear guaranteed annuities (MYGA) that have a term of three or five years. She said that at the end of the term, the owner of the MYGA has the option to purchase a new contract using the cash value from the previous contract. She said Texas thinks this should be reported as an internal replacement and a surrender of the old contract. She said she sent this question to the Market Analysis Bulletin Board, and a few states responded in agreement with Texas that the transaction is a surrender of the original contract. She wanted to know if anyone else on the Working Group had thoughts about this. She also asked if there should be some clarifications of the data call and definitions.

Ms. Nickel said she responded to the bulletin board question and agrees that there needs to be a clarification in the definitions of “replacement” and “surrender.” Ms. Parker says that the writers of MYGAs may get identified as outliers because they write the short-term products and would report more replacements and surrenders, even if there are no surrender fees. Ms. Nickel suggested new data elements may be necessary for this product. She said she has reached out to companies that seem to be outliers and determined everything is alright, but it takes time to do that. Mr. Flott and Mr. Gendron agreed that new data elements may be appropriate. Mr. Gendron said this also happens with safe harbor sales, and he said he encourages companies to put explanations in the interrogatories if they think their numbers inaccurately identify them as an outlier.

Ms. Nickel said that on the property/casualty (P/C) side, there are also carriers that continually misreport their claims data. She asked if that should continue to be allowed or if the carriers should have their feet held to the fire on this issue.

Mr. Haworth asked for comments to be sent to Mr. Helder by Dec. 10.

Having no further business, the Market Analysis Procedures (D) Working Group adjourned.

MAPWG 2021 Fall National Meeting Minutes
The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met Nov. 22, 2021. The following Working Group members participated: Rebecca Rebholz, Chair (WI); Tate Flott, Vice Chair (KS); Sarah Borunda (AZ); Janice Davis (FL); Erica Weyhenmeyer (IL); Lori Cunningham (KY); Mary Lou Moran (MA); Salama Karim-Camara (MD); Jill Huiskens (MI); Jo LeDuc (MO); Reva Vandevoorde (NE); Leatrice Geckler (NM); Glynda Daniels (SC); Maggie Dell (SD); Shelli Isiminger (TN); Shelley Wiseman (UT); and John Haworth (WA).

1. **Adopted its July 28 Minutes**

The Working Group met July 28 and took the following action: 1) adopted its June 30 minutes; 2) received an update on the life Market Conduct Annual Statement (MCAS) draft edits for accelerated underwriting (AU); 3) received an update on the Other Health Drafting Group; 4) discussed the lawsuit definitions and placement of the lawsuit data elements for the homeowners and private passenger auto (PPA) MCAS; and 5) requested submission of suggested edits to existing MCAS blanks and data call and definitions.

Mr. Haworth made a motion, seconded by Mr. Flott, to adopt the Working Group’s July 28 minutes (see NAIC Proceedings – Summer 2021, Market Regulation and Consumer Affairs (D) Committee, Attachment Five). The motion passed unanimously.

2. **Received an Update on the Life MCAS Draft Edits for AU**

Ms. Rebholz stated that earlier this year, the Accelerated Underwriting (A) Working Group worked to add AU data elements to the life MCAS reporting, but the Working Group decided it would be best to wait for the Accelerated Underwriting (A) Working Group to adopt a definition of AU for the sake of consistency between the two working groups. She stated that the Accelerated Underwriting (A) Working Group has exposed a draft document for a public comment period ending Dec. 3, which will be discussed during the Working Group’s Dec. 6 meeting. Ms. Rebholz stated that once the Accelerated Underwriting (A) Working Group adopts its definition of AU, then the Market Conduct Annual Statement Blanks (D) Working Group can continue its work to add AU data elements and definitions to the life MCAS.

Rikki Pelta (American Council of Life Insurers—ACLI) asked if the list of subject matter expert (SME) group volunteers that participated previously would be contacted for additional information. Teresa Cooper (NAIC) stated they would be contacted and that anyone else who would like to join the SME group should let her know so they can be added.

3. **Received an Update on the Other Health Drafting Group**

Randy Helder (NAIC) stated the Other Health Drafting Group has not met recently. Mr. Helder stated the new chair of this Drafting Group is Mary Kay Rodriguez (WI), and the people that previously participated in the blank discussions for the short-term, limited-duration insurance (STLDI) would be contacted about meeting soon. He stated that anyone else who would like to join the Drafting Group should contact him.

4. **Received a Proposal from the SME Group on Lawsuit Definitions and Placement of the Lawsuit Data Elements for the Homeowners and PPA MCAS**

Ms. Rebholz stated that this proposal is part of the meeting materials and that a comment period is open, so no decisions need to be made today as the proposal will be considered at a later meeting. She stated Ms. Weyhenmeyer led the SME group discussions.

Ms. Weyhenmeyer stated the SME group worked to provide a proposal that simplifies the lawsuit reporting and its definition as much as possible. She stated the SME group proposes the following for the homeowners and PPA MCAS lawsuit reporting: 1) removing the lawsuit data elements from the claims reporting section; 2) creating a new reporting section for the lawsuit data elements; 3) reporting the lawsuit data elements by claims coverage type as has been done in the past; 4) adding reporting for “non-claim-related lawsuits”; and 5) updates to the definition of “lawsuits” to accommodate the new
reporting structure. Ms. Weyhenmeyer stated the proposed definition is similar to the definition used for other MCAS lines of business, which was done for consistency. She stated a few of the simplifications to the definition could be made to the definition in other lines of business if the Working Group finds that it would be useful. She stated that additionally noted while preparing items for this meeting is the need to add an interrogatory to capture comments for the newly added lawsuit section, which is not an item showing in the meeting materials. She stated this would need to be added because the definition of “class-action lawsuits” requires an explanatory note.

Ms. Nichols asked that everyone review the draft proposal and provide any comments to Ms. Cooper by Dec. 17.

5. Received a Proposal from the SME Group on Reporting of the Digital Claims Interrogatory Question

Ms. Rebholz stated that this proposal is included in the meeting materials and that there is a comment period open for the digital claims interrogatory question proposal, so a decision does not need to be made today as it will be considered in a later meeting.

Ms. Weyhenmeyer stated that during the Working Group’s June 30 meeting, it was voted to include an interrogatory to capture third-party vendors providing third-party data and algorithms used in the digital claims process. She stated the wording approved during that meeting included “and for each vendor, identify the vendor’s specific role in the digital claims process” to address concern of whether a third-party vendor is being used appropriately. The SME group was tasked to revisit this interrogatory and make a recommendation of how third-party vendor data would be reported. She stated that in this proposal, the requirement to identify vendor roles is removed, allowing for the single element capture of names of third-party vendors, similar to the capture of names of managing general agents (MGAs) and third-party administrators (TPAs).

Ms. Rebholz asked that any comments on the digital claims interrogatory question proposal be provided to Ms. Cooper by Dec. 17.

6. Discussed Other Matters

Ms. Rebholz stated she and Mr. Flott would not be the chair and vice chair of this Working Group in 2022.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.
The Privacy Protections (D) Working Group met in San Diego, CA, Dec. 11, 2021. The following Working Group members participated: Cynthia Amann, Chair (MO); Ron Kreiter, Vice Chair (KY); Damon Diederich (CA); Erica Weyhenmeyer (IL); LeAnn Crow (KS); T.J. Patton (MN); Molly Plummer (MT); Jon Godfread, Chris Aufenthie, and Johnny Palsgraaf (ND); Martin Swanson (NE); Teresa Green (OK); Raven Collins (OR); Gary Jones (PA); and Don Beatty (VA). Also participating were Lori K. Wing-Heier (AK); Doug Ommen (IA); Robert Wake (ME); Chlora Lindley-Myers (MO); and Barbara D. Richardson (NV).

1. Adopted its Nov. 22, Oct. 25, and Oct. 11 Minutes

Ms. Amann said the Working Group met Nov. 22, Oct. 25, and Oct. 11.

During its Nov. 22 meeting, the Working Group took the following action: 1) heard an update on state privacy legislation; 2) received comments on the right to data portability and the right to restrict the use of data in the privacy policy statement exposure draft; 3) walked through the final exposure draft of the privacy report to the Market Regulation and Consumer Affairs (D) Committee on the privacy policy statement and the right to consumer ownership of data; and 4) discussed comments on the right to restrict the use of data; the right of portability; and the right of consumer data ownership from the Coalition of Health Insurers, America’s Health Insurance Plans (AHIP), the Blue Cross Blue Shield Association (BCBSA), the Independent Insurance Agents & Brokers Association (IIABA), the National Association of Mutual Insurance Companies (NAMIC), the American Council of Life Insurers (ACL), and NAIC consumer representatives: Birny Birnbaum (Center for Economic Justice—CEJ), Harry Ting (Healthcare Consumer Advocate), Karrol Kitt (University of Texas at Austin), Bonnie Burns (California Health Advocates), and Erica Eversman (Automotive Education & Policy Institute—AEPI).

During its Oct. 25 meeting, the Working Group took the following action: 1) reviewed an update to the Abbreviated Data Privacy Legislation Chart and the State Privacy Law Comparison Chart; and 2) received comments on the right to delete information from the ACLI, Ms. Kitt, and the Coalition of Health Insurers.

The Working Group also met Oct. 11 and took the following action: 1) adopted its Aug. 30, Sept. 13, and Sept. 25 minutes; 2) heard an update on State Privacy Legislation; and 3) received comments on the right to correct information from the ACLI, Dr. Ting, and the Coalition of Health Insurers.

Mr. Kreiter made a motion, seconded by Mr. Diederich, to adopt the Working Group’s Nov. 22 (Attachment Nine-A), Oct. 25 (Attachment Nine-B), and Oct. 11 (Attachment Nine-C) minutes. The motion passed unanimously.

2. Received Comments on the Final Exposure Draft of its Report on Consumer Data Privacy Protections

Ms. Amann said the Working Group received written comments and suggested edits from the ACLI; AHIP; the American Property Casualty Insurance Association (APCIA); the BCBSA; the IIABA; the Medical Professional Liability Association (MPLA); NAMIC; the Non-Health (Life and Property/Casualty [P/C]) Joint Trades; the Coalition of Health Insurers; and NAIC consumer representatives: Brenda J. Cude (University of Georgia), Ms. Kitt, and Dr. Ting. Ms. Amann said each organization will have two minutes to summarize their additional comments, as these issues have already been discussed during one of the 10 Working Group meetings this year. However, to clear up any continued confusion about the duties and activities of this Working Group, she said she and the vice chair would like to take a few minutes to give their comments and submit Appendix B as a new attachment first. She said the Working Group’s 2021 adopted charges are to:

Review state insurance privacy protections regarding the collection, use, and disclosure of information gathered in connection with insurance transactions, and make recommended changes, as needed, to certain NAIC models, such as the NAIC Insurance Information and Privacy Protection Model Act (#670) and the Privacy of Consumer Financial and Health Information Regulation (#672).
Ms. Amann said the Working Group was given the following clarification by the Market Regulation and Consumer Affairs (D) Committee on behalf of NAIC members (which was discussed by the Working Group at that time and many times in subsequent meetings and has been posted to the Working Group’s webpage since March 29).

**NAIC Member-Adopted Strategy for Consumer Data Privacy Protections:**

1. Charge the Market Regulation and Consumer Affairs (D) Committee with:
   a. Summarizing consumer data privacy protections found in existing NAIC models: *Health Information Privacy Model Act* (#55), *NAIC Insurance Information and Privacy Protection Model Act* (#670), *Privacy of Consumer Financial and Health Information Regulation* (#672).
   b. Identifying notice requirements of states, the European Union’s (EU’s) General Data Protection Regulation (GDPR), and the California Consumer Privacy Act (CCPA) and how insurers may be subject to these requirements.
   c. Identifying corresponding consumer rights that attach to notice requirements, such as:
      - The right to opt-out of data sharing.
      - The right to correct or delete information.
      - The right of data portability.
      - The right to restrict the use of data.
      - How insurers may be subject to these requirements.
   d. Setting forth a policy statement on the minimum consumer data privacy protections that are appropriate for the business of insurance.
   e. Delivering a report on items a. – d. above by the 2021 NAIC Fall National Meeting.

2. In 2022, engage with State Attorneys General (AGs), the U.S. (Congress), and federal regulatory agencies on state and federal data privacy laws to minimize preemption provisions and maximize state insurance regulatory authority.

3. Reappoint the Privacy Protections (D) Working Group to revise NAIC models, as necessary, to incorporate minimum consumer data privacy protections that are appropriate for the business of insurance. Complete by the NAIC 2022 Fall National Meeting.

Ms. Amann said the Working Group has been transparent about its actions, discussing any issues brought before it, indicating that regulator-only subject matter experts (SMEs) were meeting periodically (eight times) to determine format and processing issues, as necessary, while the Working Group was holding its discussions during a series of 10 open meetings in 2021. She said there has been a lot of discussion about whether the word “right” should be used when discussing consumer privacy issues; however, that is the term used by NAIC membership to the Market Regulation and Consumer Affairs (D) Committee in its privacy strategy to the Working Group. She said the Working Group clarified that it would not be interpreted to be an absolute right, but it should be a functional right that would serve to help protect consumers’ privacy and the protection of consumer data as it is used within insurance markets. She said companies have expressed concerns that the term “privacy policy statement” appeared suddenly, and they had no opportunity to review or comment on it or on the report to the Market Regulation and Consumer Affairs (D) Committee; however, the term “privacy policy statement” has been used since the Working Group’s first meeting this year in March. She said exposure documents using the name “privacy policy statement” have been posted to the Working Group’s web page multiple times and remain there to this day. She said each of the exposure documents had been discussed in detail, as evidenced in the minutes of these meetings. She said the format may have changed, but the content has not, other than to be tweaked as further discussions are warranted. She said the latest version of the privacy policy statement is included in the Working Group’s report to its parent committee.

Ms. Amann said the draft of the privacy report to the Market Regulation and Consumer Affairs (D) Committee was exposed Nov. 18 for a two-week public comment period that ended Dec. 2. She said an extended exposure period was not necessary because the Working Group had already discussed these issues previously. She said the exposure draft report does not recommend copying the GDPR, nor any existing state law; however, it does include the federal, state, and international legislative issues discussed and key discussion points that were selected to give those reading it from a much higher viewpoint an idea of the breadth of the discussions because to include all of them would have made the report unmanageable at over 100 pages. She asked those present to note that the report also includes the right to consumer data ownership added by NAIC members at the NAIC Summer National Meeting in Columbus, OH; Appendix A – the privacy policy statement with “NAIC” removed from the title and the title changed to Working Group Report; and Appendix B – a list of meetings and resources reviewed by the Working Group this year. She said the Working Group would like to leave those present with the fact that the exposure draft before them is simply a report of a working group to its parent committee of its activities and work on its charges.
throughout the year. She said the report is not a model act or law, a white paper, or a bulletin or legal recommendation of any sort; but it is a recommendation by a Working Group that revisions are needed to Model #670 and Model #672, as they are outdated and need to be revised to accommodate the existing technology used in insurance solicitation and implementation today. She said the Working Group would not know its fate for 2022, as charges have not yet been adopted by the two possible committees that might do privacy protections. Mr. Kreiter said he agrees with everything the chair said, and he wanted to emphasize that the Working Group is transparent about its meetings, including those of regulator-only SMEs who discussed format, procedures, and processes to move the Working Group forward. He said neither the Working Group nor the SMEs had any secret meetings.

Chris Petersen (Arbor Strategies LLC), speaking on behalf of the Coalition of Health Insurers, said some suggested guidelines for future changes to NAIC privacy models would be to focus on revising Model #672 because most states have adopted it, whereas most states have not adopted Model #670 and the wording in it is outdated. He recommended continued use of opt-in for health with no caveat to prevent sharing “under law” (e.g., in fraud detection, prevention, and enforcement situations) because market conduct examinations would require authorization. He said this language already exists in Model #672 due to the opt-out requirements of the Gramm-Leach-Bliley Act (GLBA), so that would be a good place to start.

Ms. Kitt said industry has lots of new products and it is past time to modernize NAIC privacy models. She said consumer representatives support opt-in for all lines of insurance rather than opt-out, as the responsibility for ensuring the privacy of consumer data should be on the companies rather than the consumer, who has little to no understanding of insurance products, let alone the collection and use of their data during the marketing, sales, underwriting, and claims process. She said the amount of data and personal information collected by insurers and their third-party affiliates has expanded greatly, so it is now a monumental task to reign its use and the degree of sharing that occurs without the consumer’s knowledge, consent, or approval. She said insurers must be held accountable for the data received from third-party affiliates and how it is to be used. She said she is disappointed that the Working Group is using the report and NAIC models as a basement statement. She said there needs to be a balance of the insurer’s use with the consumer’s need, and the consumer needs to be given a greater amount of leverage. She said the last paragraph of the report discusses the ongoing relationship of insurer and consumer to mean that such a relationship exists for as long as the consumer has a policy. She wondered if that would still be true if the consumer does not take a policy or cancels that policy after a time. She said specific reasons should be given to consumers for adverse selection; rather than an insurer saying the consumer’s credit score is too low, the insurer should say the consumer’s score of 585 does not meet the acceptable score of 650 set by the insurer. She said new products in the market today warrant new privacy rules. Mr. Birnbaum said the term “rights” needs to be replaced with the phrase “need for fairness” throughout the report, as it would be a more accurate description of the intent of revisions to consumer privacy notice and disclosure requirements.

Bob Ridgeway (AHIP) said the NAIC will move forward with revisions to Model #672 as recommended by the Working Group, and AHIP members support this approach. He agreed that the nine categories rather than rights need to be part of the discussion as the models are revised in the future. Wesley Bissett (IIABA) said the NAIC was ahead of the curve in privacy in the past because it used principle-based requirements that were not technology specific. He said revisions should be considered only where there are gaps or potential for consumer harm using a cost/benefit analysis, and everyone should understand that this report is a high-level overview or the big picture, if you will, of the consumer data privacy discussion. Kristin Abbott (ACLI) and Shelby Schoonesee (ACLI) said they agree with their colleagues representing the other industry trades; however, they reiterated that the current models had sufficient consumer privacy requirements already, given that no consumer complaints have been received about data privacy.

Ms. Amann said Dr. Ting was unable to present to the Working Group due to a conflict with another meeting, but said she wants to invite those assembled to see and hear his presentation on consumer privacy during the NAIC/Consumer Liaison Committee meeting on Dec. 13.

3. **Adopted the Final Exposure Draft of its Report on Consumer Data Privacy Protections**

Ms. Amann said the Working Group would ensure that protection standards articulated in the NAIC *Market Regulation Examination Standard Handbook* would be addressed by the Working Group in its discussions going forward should the Working Group be reestablished by the Innovation, Cybersecurity, and Technology (H) Committee or the Market Regulation and Consumer Affairs (D) Committee in 2022. Mr. Diederich said he supports the Working Group report, especially in the current environment where pocket computers are tracking consumer data digitally and the pandemic has changed how we live such that nothing is surprising nor earth shattering any more. Mr. Wake said Model #672 is the vehicle that should be used,
and it is outdated, including the opt-in for health insurance with its exceptions to broad principles. Ms. Amann said the Working Group would keep and use the comments received when reviewing models in the future, as well as 2021 business practices.

Mr. Diederich made a motion, seconded by Mr. Kreiter, to adopt the final exposure draft of the Privacy Protections (D) Working Group Report on Consumer Data Privacy Protections with edits agreed to by Working Group members, interested state insurance regulators, and interested parties (see NAIC Proceedings – Fall 2021, Market Regulation and Consumer Affairs (D) Committee, Attachment Five). The motion passed by a majority with one abstention. The report is adopted and will be presented to the Market Regulation and Consumer Affairs (D) Committee for its acceptance during its Dec. 15 meeting.

Having no further business, the Privacy Protections (D) Working Group adjourned.
Privacy Protections (D) Working Group
Virtual Meeting
November 22, 2021

The Privacy Protections (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met Nov. 22, 2021. The following Working Group members participated: Cynthia Amann, Chair (MO); Ron Kreiter, Vice Chair (KY); Damon Diederich and Sam Singh (CA); Erica Weyhenmeyer (IL); LeAnn Crow, Tate Flott, and Shannon Lloyd (KS); T.J. Patton (MN); Molly Plummer (MT); Chris Aufenthie and Janelle Middlestead (ND); Gary Jones (PA); and Katie Johnson and Don Beatty (VA). Also participating were: Kurt Swan (CT); Jan Davis (FL); Robert A. Wake (ME); Marjorie Thompson (MO); and Shelley Wiseman (UT).

1. Received a Legislative Update from NAIC Staff

Brooke Stringer (NAIC) said legislation had been drafted on both sides of the aisle, but there is nothing substantive yet.

Jennifer McAdam (NAIC) said there had been no activity as state legislatures will not meet again until Feb. 2022. However, she said most states will begin preparations in December and January.

2. Received Comments on Segment Five and Segment Six of the Privacy Policy Statement Exposure Draft

Ms. Amann said written comments were received on Segment Five—The Right to Data Portability and Segment Six—The Right to Restrict the Use of Data from the American Council of Life Insurers (ACLI) and on Segment Five from the Coalition of Health Carriers. She said comments received by the deadline are posted to the Working Group’s web page. Ms. Amann said comments received after the deadline would be posted soon. She said all comments received would be considered by the Working Group for incorporation into the exposure draft as it goes through the segments to complete its charges. She said the discussion at this meeting would be on comments received on Segment Five and Segment Six.

Kristin Abbott (ACLI) said her comments are on behalf of Shelby Schoensee (ACLI) as well. Ms. Abbott said ACLI members support a consumer’s right to request a copy of certain personal identifiable information (PII) and to provide that requested information in a usable format requested by the consumer, if technically feasible. She said given the lack of demand or any direct practical benefit to consumers, ACLI members were concerned with the cost and significant security risks in trying to accommodate such requests. Ms. Abbott asked that the Working Group consider the unintended and disruptive consequences of offering consumers an indefinite, absolute right to restrict all uses of their personal information or only to certain uses specified by the consumer. She said ACLI members appreciate the work the Working Group is doing and look forward to continuing this conversation in relation to the latest exposure draft. Ms. Amann said she appreciates the comments made and that she is picking up some of the more consistent thoughts from various interested parties, so she asked interested parties not to think that their comments have been ignored. She said everyone’s comments will be in the draft eventually. However, some may not show up until version two or seven or 12. Karrol Kitt (The University of Texas at Austin) asked Ms. Abbott if she was referring to the fact that there is little demand for the portability of consumer data or if there is little benefit. She asked if the ACLI could substantiate how consumer demand is related to consumer knowledge. Ms. Kitt said since there is no historical data collection, there needs to be a new understanding and new disclosures to build consumer knowledge as it relates to such consumer data privacy issues due to the new technical insurance environment.

Ms. Amann said the existing models did not contemplate the current environment, so the models need to be revised, but to what extent and whether revised disclosures are the answer has yet to be determined. She said historically consumers have not been aware or knowledgeable about such issues. However, she said this will be a major focus for the Working Group in 2022. Birny Birnbaum (Center for Economic Justice—CEJ) said consumers are seen as commodities by industry; those insurers can get to purchase or use their products by limiting consumers’ choices via algorithms. However, he said to consumer advocates, consumers are persons who need to know what choices are available to them. Mr. Birnbaum said consumers should have access to their own health information like they have access to their financial information so they can share either with those the consumer chooses.

Chris Petersen (Arbor Strategies LLC), speaking on behalf of the Coalition of Health Carriers, asked how federal Health Insurance Portability Accessibility Act (HIPAA) requirements would allow insurers to share a consumer’s data as it is specifically prohibited. He said the individual consumers would have to request their own data and then share it with other...
entities themselves. He said financial institutions could share consumers’ information with their consent. Mr. Petersen said there are different sets of rules for financial and health concerns. He said the Working Group takes a term and treats it differently from the way it is generally known (e.g., within the General Data Protection Regulation [GDPR]). Mr. Petersen said the Working Group should not use the term “portability” as it is defined in the GDPR, but rather the Working Group needs to define “portability” differently or use the term “access.” He said the Working Group should also look at the NAIC Insurance Information and Privacy Protection Model Act (#670) and HIPAA. Mr. Birnbaum said that would be inappropriate because the GDPR allows entities to destroy data. Mr. Wake said HIPAA mandated a data standardization regime. Mr. Diederich said insurers need to disclose this information via authorizations. Mr. Petersen said the term “portability” is not used in the insurance industry. Ms. Schoensee said that this is a complicated issue but that all participants have the same goal, which is to find a balance between insurers and consumers. She said there needs to be additional, meaningful, and thoughtful consideration before the Working Group can move on to an exposure draft. Ms. Amann said there will be more robust discussions and definitions to come and while the Working Group is revising the NAIC models in 2022. She said the Working Group welcomes everyone’s input as it develops a succinct draft of revisions needed. Wes Bissett (Independent Insurance Agents & Brokers of America—IIABA) asked when data ownership and potential public policies were added to the rights discussed by the Working Group. Ms. Amann said the Working Group has noted during almost every meeting that right is being used with a lowercase “r” to reflect that it is not an absolute right, but more like a category for discussion. She said the right of consumer data ownership was informally added to the Working Group’s discussions during the Innovation and Technology (EX) Task Force at the Summer National Meeting.

Mr. Bissett said he appreciates the review of privacy laws, but he is concerned with the policy statement in Appendix A. He said the privacy policy statement in Appendix A was not discussed previously within the Working Group meetings. Mr. Bissett said he is concerned that in the paper, it refers to a right of data ownership as though it is some sort of already existing inalienable right. He said there are references to it sort of being a minimum consumer privacy protection that should apply in the business of insurance. So, Mr. Bissett said asked, “Has the Working Group already made the decision, so we are now at the point where there ought to be a requirement related to data portability? What is going to happen next? Is it that the existing models will be revised so that they reflect the existence of this?” Ms. Amann said that is not the case. She said the right of data ownership was not included when the Working Group started down the road on their charges. However, at the Summer National Meeting, the Working Group was given the authority to add data ownership as one of the rights being reviewed. Ms. Amann said the Working Group is talking about rights with a lowercase “r” and not as in an inalienable right as Mr. Bissett mentioned. She said data ownership is an issue that will be fought over going forward. She said the Working Group has not made a definitive statement on it but rather put it in as a placeholder to be discussed more in the future. Mr. Bissett said maybe the paper needs to make clearer that these are potential public policy outcomes that are being discussed, that they are all on the table, and that no decisions have been made yet. He said the suggestion or implication appeared to be in the paper right now and that the Working Group appeared to have concluded that if there is not a right to something like data portability, then there ought to be such a right, and that the models were going to be revised to provide those rights.

Ms. Amann said if that is what people are seeing, the Working Group need to correct it because that is not the intention. She said the Working Group has identified certain rights, but the Working Group has not made any decisions about all consumers needing to have these 10 topics or rights. Ms. Amann said these rights are areas of concern that state insurance regulators and consumer representatives have pertaining to the privacy of consumer data, so the Working Group does not want to get hung up on the word “right” at this time. She said it is a way to say that these are top eight or 10 topics pertaining to privacy and privacy protections that the Working Group wanted to address. Lois E. Alexander (NAIC) reminded everyone that the Working Group received the strategic initiative from NAIC members in April regarding privacy wherein the members identified these issues as “rights,” so the Working Group has used that term because it is the term used by NAIC members in their directive passed on through the parent committee. Mr. Bissett said the term is still a source of ongoing confusion. He said even if one looks at these as potential requirements that would apply to industry, some industry folks at least wonder where these came from. Mr. Bissett said in the paper, there is a reference that insurance licensees should provide a periodic notice of its privacy policies and practices not less than annually. He said he does not remember the meeting where that was discussed, or if there was a vote taken on that, which flies in the face of what state and federal regulators have done in recent years on that.

Ms. Amann said going forward, these are the types of issues that may warrant regulatory requirement, regulatory input, or some sort of oversight because of the impact upon the consumer. So, she said while it is not the intent of this report, those types of issues could become the topics for discussion going forward. However, she said the Working Group is not there right now and is not making any kind of regulatory requirements in this policy statement. Ms. Amann said if language comes across that way, the Working Group can make some refinements to it for clarification. She said that she appreciates the comments and said sometimes the only way one can tell if something that was written hit the mark is to say it out loud and to hear others give an
impression of how they are taking it. Ms. Alexander said to clarify, what is in the paper that Mr. Bissett is talking about is just a summary of discussions of selected topic; it is not cast in stone.

Mr. Bissett said his chief concern and that of others in the industry is with Appendix A, which seems to be almost like a mini model law of its own or a series of recommendations. He said that is where he saw the recommendation that there ought to be no less than an annual privacy notice requirement and it talks about a specific timing of 30 days. He said this seems to be a specific public policy requirement or recommendation that has not been talked about. Mr. Bissett said perhaps there should be further conversation about whether there needs to be access to and obligations put on licensees or certain types of licensees. He said it seems like the hand is being put on the scale with specific recommendations that are being made in the appendix and based on this assumption, industry’s recommendation at this point would be to remove Appendix A altogether or at least to continue discussions. Ms. Amann said an undercurrent to the whole issue is that Model #672 long at 77 pages, so it needs a great deal of streamlining to make clear what is expected, what someone can or cannot request, and what someone can or cannot do. She said one of the problems with the whole privacy issue is that there are a lot of requirements already and maybe the requirements are not stated as clearly as possible. Or, she said maybe consumers do not act as they should with how business do. She said one of the problems with the whole privacy issue is that there are a lot of requirements already and maybe the requirements are not stated as clearly as possible. Or, she said maybe consumers do not act as they should with how business has evolved now as compared to when these models were initially drafted. Mr. Bissett said he thinks it would be a helpful tool for industry, regulators, and policymakers if a state is interested in a particular issue, that the provision of a model law where that is addressed would link up issues as to how these issues are addressed in other NAIC models.

Mr. Birnbaum said the charge to the Working Group is to review problems in protections and make recommended changes as needed to certain models. He said what Mr. Bissett is saying is that the Working Group should remove any recommendations. However, if the Working Group did that, it would not be carrying out its charge. He said the Working Group is making recommendations. It is not making law, and that is exactly what the Working Group is charged with doing. Mr. Bissett said those recommendations had not been discussed. Mr. Birnbaum said the recommendations had been discussed in this Working Group. Mr. Wake said one thing Mr. Bissett might be trying to say is that some of the existing provisions should be removed or streamlined because the things Mr. Bissett was concerned about are taken straight out of existing models. Mr. Wake said it might be fair to say that as the Working Group considers how to strengthen the models, it might also look at what the models are currently doing that could be done better in some other form next year.

Mr. Diederich said much of what is in the policy statement can be found in the existing models, such as the 30-day requirement for disclosure. Mr. Birnbaum said the Working Group is following its charges by making draft recommendations. Mr. Wake said the issues Mr. Bissett has concerns with are already in the models.

Mr. Petersen said the insurance trades, property/casualty (P/C), life, and health met prior to this Working Group meeting to discuss the exposure draft, and they have technical concerns about the definition of “portability” in the paper not being that most commonly used; about opt in being described as an authorization when generally it is used in a state as getting permission to use information for marketing purposes; and that discussions seem to have been occurring in private. He said many of his comments, such as a safe harbor for insurers subject to HIPAA, have been presented in several meetings, but they have not been discussed during any of these meetings. However, he felt the report and policy statement included items that had not been discussed in open meetings. Ms. Amann said there is nothing nefarious going on and that a lot of the writing of the paper was simply to move it along to get an issue put on paper so that the Working Group can make it clear to the Executive (EX) Committee, as well as to the Market Regulation and Consumer Affairs (D) Committee that the Working Group believes that these were chosen as they rise to the level of needing to be addressed better than they are currently in Model #670 and the Privacy of Consumer Financial and Health Information Regulation (#672). She said the Working Group believes that these issues merit attention going forward and that at a minimum, Model #670 and Model #672 need to be updated. She said as far as anything being in the appendix that is trying to set requirements, the Working Group will make sure that it does not. Its sole intention is to draw the reader’s attention to areas that the Working Group has concerns with, which is why it is in an appendix, where it reads better when compared to the rest of the paper. She said the technical concerns are a problem because certain terms are used interchangeably, which has also been a problem for other Working Groups working on similar issues. Ms. Amann said they are terms of art, so people who know that read the document a certain way and others who read it interchangeably do not see the distinction, so the Working Group will be mindful of that. She said the Working Group needs to be mindful that it does not use terms incorrectly. Ms. Amann said she does not know if it would increase anyone’s comfort level but asked if the reader who has been involved would agree that the Working Group could do that as a minimum. Ms. Amann said the Working Group talked about the safe harbor issue during one meeting, but the Working Group is not ready to go down that road yet because it is not 100% on changes that it believes are needed. She said the Working Group welcomes comments from everyone on the paper to make sure that it is being read correctly.

Mr. Wake said he is surprised to hear that there was a recommendation on portability in the paper, so he looked at the paper
again and found that portability data is mentioned. He said portability is one of the issues the Working Group recommended be addressed, but in the appendix, the only recommendation regarding portability is the right of access to one’s personal information. Mr. Wake said two-thirds of the states do not have Model #670. He said he imagines that many companies provide the access voluntarily, even in the states that do not mandate it, so that is not really a groundbreaking recommendation in that area. Going beyond that, he said the Working Group needs to think carefully about what the right should be in terms of what opt in means. Mr. Wake said opt in means something affirmative is needed from the consumer before it can be done. In terms of use, it generally does mean disclosure, so he said Mr. Petersen is not wrong, but neither is the paper.

Bob Ridgeway (Blue Cross Blue and Shield Association—BCBSA) asked if the Working Group could move on to the exposure draft. He said Mr. Petersen is correct in that the Working Group had discussed some of the things he wanted to say today and so far, he supports the comments and observations Mr. Petersen made. Mr. Ridgeway said he wants to do some level setting to find out if he is right or not. On Page 13 of the policy statement, there is a paragraph that says, “This policy statement serves the purpose of informing licensed insurance entities, consumers, etc., on what the current models support as the minimum consumer data privacy protections.” Mr. Ridgeway said he believes that the core of that sentence is that this is a level-setting document. He said this is where the Working Group is now and that he is not reading it to say any of the issues there are necessarily for further discussion or comment or objection. Mr. Ridgeway said it looks as if it says this is just what is in the models now, what is supported as far as their models, and that is the status quo. He said he is also hearing that this is not the end of the Working Group’s tasks, but that the Working Group intends to go on from here and begin to do the true gap analysis that it has discussed during open meetings for a long time, identify specific gaps, and figure out how best to address those gaps as a policy matter. Mr. Ridgeway asked if that is roughly where the paper is now and where the Working Group would be going from here.

Ms. Amann said “yes.” She also recognized that there are many nuances to every word used in the paper. Ms. Amann said she is not trying to minimize anyone’s concerns, but the paper is about bringing to light certain issues that consumers are having and that state insurance regulators are having where the Working Group believes improvements are needed. She said all this paper is doing is noting the status quo as of right now. Ms. Amann said the intent is not to have the paper say there is no regulatory requirement, but rather that improvements are needed.

Mr. Ridgeway said that is helpful and that he hopes it is to others participating in the meeting. He also said he agrees with Mr. Birnbaum that the Working Group would probably do better going forward to change the verbiage about this “rights” and instead refer to them as potential issues. Ms. Amann said as Ms. Alexander mentioned, “right” was the term given to the Working Group by NAIC membership through the Market Regulation and Consumer Affairs (D) Committee. She said she appreciates the willingness of the Working Group to have the discussion about whether each issue needs to be a right or if it needs to be called something else. Mr. Wake said the Committee also gave the Working Group the charge to a draft a policy statement, and he said that given the state of the deliberations over the last several months, it does not seem right to make any ringing policy statement that goes beyond here are the policies that have been expressed as recommendations to the states and its existing model laws.

Angela Gleason (American Property Casualty Insurance Association—APCIA) said she thinks everyone’s concern is with Appendix A and where it is going. Ms. Gleason said she understands that some of it is a statement of existing law, but that the existing laws are complex, so to boil that down into a sentence or two causes a lot of concern. She said all these models are complex, and yet California and Virginia have been able to balance consumer rights and businesses’ ability to do business. Ms. Gleason said this issue necessitates some complexity as the concern is that it is hard to boil this down in terms of identifying something as an expectation that there might be a right for the consumer’s protection, but there are other pieces that go around that protection. She said that is where industry is coming from, so they appreciate this conversation and will provide some edits that may be more than technical, though.

Mr. Birnbaum said what he hears industry saying is that they want this Working Group to make a variety of policy decisions on behalf of the consumer and that they want those policy decisions to be essentially what industry believes that the policy should be. He said that what the Working Group’s charge was is to explore the issues, identify the issues, ask what has been done, and ask what still needs to be done. Mr. Birnbaum said when this policy statement and report go to the parent committee, whether that is the new Innovation, Technology, and Cybersecurity (H) Committee or the Market Regulation and Consumer Affairs (D) Committee, that is where a lot of those policy decisions are going to be made and from where the specific guidance to the Working Group is going to come. So, he said the issues that industry is looking at, such as going line by line through these models, will come later, but first some guidance is needed as to what the Working Group is trying to accomplish. Mr. Birnbaum said he thinks industry is putting the cart before the horse by asking the Working Group to do a lot of stuff when it has been asked to come up with some policy issues first for its parent committee to consider. He said the Working Group is
hearing from industry that the Working Group needs to identify problems that industry somehow has not recognized, or is not willing to recognize, and that the Working Group has been looking at that these issues from the beginning. Now industry wants the Working Group to basically throw everything out and start over again. Mr. Birnbaum said what the Working Group is seeing is an industry strategy to basically slow or delay this process of getting a policy paper in front of the policymakers to decide. He said the consumer representatives strongly object to that tactic.

Mr. Ridgeway said he finds Mr. Birnbaum’s comments offensive. Mr. Birnbaum said what he finds offensive is industry’s portrayal that this Working Group has not identified what the problems are or what the concerns are and that it should start from the beginning again.

Ms. Gleason said that she is not saying the Working Group should start from the beginning; she is saying she does not necessarily understand an example of where the problem is because industry is not getting complaints from consumers. She said she understands that this issue been pushed back on industry by saying maybe consumers do not know what to complain about or who to complain to, but she said she had not heard anything other than identifying what the issues are. Ms. Gleason said each side is showing their position, and the Working Group has not had a conversation about it until now. She said she understands that is another step, but she is not in any way telling this Working Group to start over. Ms. Gleason said she is just asking for some understanding because industry does not understand what the issues are.

Ms. Amann said that she can see where this misunderstanding could have happened because the Working Group started down a certain road with the templates for each of the rights under which it was going to try to give a little bit more detail. She said the decision was made to do the policy statement because consumer representatives brought their information and wanted to give the Working Group assistance on this issue. With many other points of view, Ms. Amann said the intent was that the policy statement would be a good road map to follow when the Working Group moved into the modifications of the models. She said the Working Group has concluded that Model #670 and Model #672 need fixing, so that is where the Working Group is going. Ms. Amann said the Working Group will report this recommendation to the Market Regulation and Consumer Affairs (D) Committee at the Fall National Meeting in this format with any necessary corrections addressed. She said if there is something in the report or policy statement that makes it sound like there is a conclusion or that there is a regulatory recommendation, that is not the intent right now. Ms. Amann said the report will not have the 15 examples per right that the Working Group initially started collecting because the report and policy statement are at a much higher level.

Bonnie Burns (California Health Advocates) said this is a new area for her and that she would like to weigh in with total support of Mr. Birnbaum’s position. She said one of the things that she had not heard discussed during this meeting that she is concerned about is what companies do with the data that they have, whether companies tailor information sent to consumers based on the data that they have, or whether companies withhold some of the information. Based on the data that companies have, Ms. Burns said she has concerns about how the data is used beyond what Mr. Birnbaum and the rest of the Working Group and industry have been talking about. Ms. Amann said she knows that is one of the charges for the Innovation, Technology, and Cybersecurity (H) Committee for 2022 is to delve into more of the data collection, data usage, and all that interplay. She said to the extent that consumer data, privacy protection, and that overlap, the Working Group will address that going forward, but for purposes of the paper for this policy statement, the Working Group just has a short little instruction to fulfill. Ms. Burns said she can tell everyone from her own experience that consumers know there is a lot of data held by companies, but they have no idea what that data is or how they can do anything about it. She said knowledge about how what data companies have or how they use it is not available to consumers, so the fact that consumers have not submitted a lot of complaints is not surprising. Mr. Petersen said Ms. Burns is suggesting that other than the notices that companies send out on a regular basis on health insurance, that companies also tell people that they have this information and how they use it. He said this way, the right to access would be that consumers have the right to change it, which is what he has heard consumer representatives say. Mr. Petersen said the context is what more the Working Group can do other than inform people through notices that were prescribed in those notices by law. Ms. Burns said for one thing, those consumer notices had not been tested because consumers do not understand them and do not realize what they are supposed to do with them. Mr. Petersen said the federal government dictates the language companies must use in the required notices. Harry Ting (Health Care Consumer Advocate) asked if the health information collected on consumers is gathered using cookies. If so, he asked if cookies and other data scanning online software is covered by HIPPA because if it is not, then consumers generally do not understand that it is being collected and that it could be harmful. Mr. Ting said it is important that consumers be able to observe what data cookies and online scanning are obtaining if that is being used. Mr. Petersen asked Mr. Ting if this question is about who is collecting that information because some of the examples that have been used during this meeting are not about health insurance carriers collecting the data. Mr. Ting said that is exactly why he asked because such notices are probably not required for health insurance carriers. Mr. Petersen said to the extent that consumers go online and use some sort of research system to try to find health insurance coverage, one could be making their personal data available to outside third parties, which may not even be covered by insurance laws. Mr. Ting said
the insurers should be held responsible if they are working with certain organizations to obtain data. Then insurers should make the consumer data privacy notice a requirement of the organizations that they are getting the data from. He said he understands that enforcement might be difficult, but that could be part of a requirement that would be added to the regulation.

Ms. Amann said those would be the types of issues the Working Group would have to flush out next year when looking at Model #670 and Model #672 because she guarantees that the models did not include the word “cookies” or any of the InsurTech terms or practices. She said to the extent that the Working Group wants to ensure that the models are applicable to InsurTech, the Working Group would have to include any licensed third-party administrator (TPA) or other entity to ensure that those models overtly state who is covered and who is not, which will take a great deal of drafting. Mr. Ridgeway said if the consumer hit the covered entity or health insurer, each has information on a consumer and shares that with some other entity, then they must issue a notice to the consumer. He said they can only do so if that other entity becomes what is known as a business associate, and they sign documents binding themselves to basically the same requirements that HIPPA imposes on the health insurer. Mr. Ridgeway said on the other hand, if this is somebody who reveals information on the Internet or somehow an individual who does that is one of the Working Group’s concerns, that at least has increasingly been when data becomes easily transferable by the consumer from one entity to the other. The consumers probably do not have much recollection or realization that when they are turning their information loose on the Internet, it is gone, there is no telling who is going to get it, and there is no way consumers can pull it back out.

Mr. Ting said he is a volunteer Senior Health Insurance Information Program (SHIIP) counselor, so he counsels people dealing with Medicare. He said he had an individual last month who was covered by a Medicare supplement policy that she had been under for 10 years. He said she was happy with it, but she got a cold call from an agent who wanted to switch her to a different plan. She told the agent that she was not interested. Without her knowledge, she got a letter from the insurance company that she had previously saying that effective next month, she would no longer be on their plan. Mr. Ting said he had to call Medicare to find out what happened. Mr. Ting said he found out that this person had her information and switched the policy by sharing her data without notice or her agreement. So, he said there are situations where people are unethically doing this, but when he talks to individuals and he thinks they are understanding, it is not clear whether they are covered by HIPAA because companies are using this data inappropriately and harming innocent people. Mr. Ting said that is an example of something where he would like to see that there are adequate rules that should help to protect seniors and other vulnerable populations against situations where those kinds of unethical practices occur. Mr. Ridgeway said this type of situation is covered under agent licensing laws. He said if the agent who did that was, in fact, a licensed agent and has not been reported to his or her state insurance regulator, the agent should be. Ms. Amann said this is a good conversation to have going forward so that the Working Group can ensure that if it does need to refer something to another Working Group, it can. She said she welcomes having examples brought up if it helps identify a gap.
