Cate Paolino (National Association of Mutual Insurance Companies—NAMIC) said she had a few items, and they probably run more to the procedural for now. She said the email that accompanied the exposure draft had requested feedback to find minor edits. She said so many things come to mind because there is so much to look at that her comments may be more substantial than minor edits. Ms. Amann said to look at the policy statement as a road map with placeholders where areas to be discussed reside, and then provide comments in the form of bullet points (in the interest of time) marking areas of concern or where something may need to be added. She asked that they not be read as written, but more as a thought put out in front of the parent committee to let it know that are many issues that need to be reviewed. Ms. Amann said it is a higher level than a white paper would be because a white paper does eventually come to conclusions, so this is more of a good recommendation or a good area for the Working Group to delve into further. She said she recognizes the Working Group will go through the Model #670 and Model #672 line by line, but she does want the Working Group to have a better idea now of the areas that need consumer protection or regulatory oversight of company practices because to make sure that the models are as succinct as they can be. Ms. Amann said that the Working Group does want to just wordsmith it, but rather wants to change them to reflect actual practices that are occurring. She said the Working Group should think of it as a little bit more than an outline, but a lot less than a white paper.

Ms. Paolino asked whether there might be any flexibility regarding the deadline. Ms. Amann said the Working Group must be able to get comments in, compile them into some sort of format, then work with Ms. Alexander to draft something into the report. Ms. Amann said while she is not opposed to another day or two, the Working Group needs the comments quickly. She said they do not have to be formal—just bullet points or a simple statement. That was one of the initial reasons to back up and start over with a more high-level approach, so the Working Group could give everyone an idea of where it is going and what areas it feels have the most need for consumer protection or the most need for regulatory responsibility.

Erica Eversman (Automotive Association) said consumers do not seem to have any problems entering personal or intimate data
online into Twitter or Facebook. However, as it relates to consumers not knowing or consumers not making comments, complaints, or concerns about data collection or their access to data, she reiterated what Ms. Burns and Mr. Ting were saying in that the consumers she deals with have absolutely no idea how insurance operates. She said they do not know how insurance decisions are determined, how their premiums are determined, or that there are departments of insurance (DOIs) to whom they can reach out for help. Ms. Eversman said consumers do not know how any of this works, so they would never have any idea that they could make a complaint or request information about themselves from their insurer. Ms. Abbott said she would like to echo the concerns raised by industry representatives today and that ACLI members have many similar concerns, especially in relation to the appendix, and that they really appreciate the clarification. Randi Chapman (BCBSA) said she wants to echo the comments that her colleagues across the industry trades have made and to thank all of them for speaking up. She also said she appreciates the additional clarity provided during this meeting. She asked if it is possible to extend the comment deadline to Dec. 6. Ms. Amann said she will discuss this with the Working Group vice chair and NAIC staff and will send an email with a decision about timing for comments.

Mr. Ting suggested an edit on Appendix A. He said right now, it is a policy statement on consumer data privacy protections. If it were changed to a policy statement on consumer data privacy protection issues, that might clarify one thing and then in the paragraph or two where different subject areas were introduced, the Working Group could say that these are areas that have been identified for examination to see if there are any improvements needed. Mr. Birnbaum asked if the principals for artificial intelligence (AI) represent an example of a policy statement by the NAIC. Ms. Amann said “yes.” Mr. Ting said his research on personal information ownership indicates there is a broad consensus across the board that there is no established legal basis for saying that anyone has full ownership of the data that the Working Group is talking about. He said there are certain circumstances where that data can be used, even if the person does not want it to be used, such as where there are legal issues involving fraud or other types of issues if there are national security issues and so forth, so his sense is that basically there is no legal basis to say that anyone has full ownership or full control over the data. He said what that really means is the Working Group needs to look at each of the issues as it is evolving. How is such data being used? What kind of data can people collect? What kind of data can people share? How can they share it? Mr. Ting said that is really the basis on which the Working Group must look at data ownership rather than saying that someone owns it entirely.

Ms. Amann said she will discuss this with Mr. Kreiter and Ms. Alexander. Then she will get an email out with some reminders. She said the intent is to receive comments by Dec. 2 because the Working Group has a national meeting to get ready for. She said another document that was done at a high level was the paper on accelerated underwriting, and it touches on some of these issues—at least tangentially. So, that is another document to read to get thoughts on where state insurance regulators are coming from that the Working Group hopes to get moved up at the Fall National Meeting.

Ms. Amann said at the Fall National Meeting, the Working Group will discuss comments received by Dec. 2 on the final exposure draft of the report to the Market Regulation and Consumer Affairs (D) Committee. She reminded the Working Group members that they need to register for the Fall National Meeting to participate and that those attending the Working Group meeting virtually will be able to participate by audio only. Ms. Amann said there will not be cameras, but the sound is usually good, so they can hear everybody speak.

Having no further business, the Privacy Protections (D) Working Group adjourned.
The Privacy Protections (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met Oct. 25, 2021. The following Working Group members participated: Ron Kreiter, Vice Chair (KY); Sam Singh (CA); Erica Weyhenmeyer (IL); LeAnn Crow (KS); Chris Aufenthie (ND); Teresa Green (OK); Scott D. Martin (OR); and Gary Jones (PA).

1. Received a Legislative Update from NAIC Staff

Brooke Stringer (NAIC) said as mentioned during its Oct. 11 meeting, the Working Group is starting to see an uptick in federal interest on data privacy again. She said the U.S. Senate Committee on Commerce, Science, and Transportation held a series of hearings on protecting consumer privacy. Ms. Stringer said Committee Chair Maria Cantwell supports a comprehensive federal privacy law that provides clear protections for consumers, articulates specific limits and obligations of companies, and grants the Federal Trade Commission (FTC) the resources and explicit authority necessary to enforce the new law; however, specifics about preemption and private right of action are still unresolved. She said since the U.S. Congress has not moved substantially on data privacy, the FTC is considering writing rules to strengthen online privacy protections to circumvent the congressional logjams. Ms. Stringer said the rules under consideration could impose significant new obligations on businesses across the economy related to how they handle consumer data. She said the FTC released a report to Congress in September that highlighted its priorities for future data security and privacy protection efforts and urged Congress to allocate more resources to the agency so it could expand its data security and privacy protections efforts. Ms. Stringer said the link to the FTC report is: [https://www.ftc.gov/system/files/documents/reports/ftc-report-congress-privacy-security/report_to_congress_on_privacy_and_data_security_2021.pdf](https://www.ftc.gov/system/files/documents/reports/ftc-report-congress-privacy-security/report_to_congress_on_privacy_and_data_security_2021.pdf).

Going forward, Ms. Stringer said the FTC intends to focus its data security and privacy protection efforts on four key initiatives:
1) integrating competition concerns;
2) advancing remedies;
3) focusing on digital platforms; and
4) expanding the understanding of algorithms.
Ms. Stringer said the FTC will develop a greater understanding of algorithms, as well as the consumer protection and competitive risks they may pose. She said the FTC will also provide more in-depth guidance for businesses on using algorithms and artificial intelligence (AI) fairly and equitably. In particular, she said the FTC would like to understand the ways that algorithms may create racial bias and work to prevent such uses of algorithms.
Ms. Stringer said the FTC will also act to encourage companies to comply with its previously issued recommendation that companies “test their algorithms, both at the outset and periodically thereafter, to make sure it doesn’t create a disparate impact on a protected class.”

2. Received Comments on Segment Four of the Exposure Draft

Mr. Kreiter said written comments were received on Segment Four from the American Council of Life Insurers (ACLI) and NAIC consumer representative Karrol Kitt (The University of Texas at Austin). He said comments received by the deadline are posted to the Working Group’s web page. Mr. Kreiter said comments received after the deadline would be posted soon. He said all comments received would be considered by the Working Group for incorporation into the exposure draft as it goes through the segments to complete its charges. Mr. Kreiter said the discussion at this meeting would be on comments received on Segment Four—the right to delete data.

Shelby Schoensee (ACLI) said on behalf of herself and Kristin Abbott (ACLI), this week recognizes consumers’ legitimate interest in requesting deletion of personal information. She said the ACLI is committed to maintaining the integrity of the information used to provide products and services to consumers. Ms. Schoensee said the NAIC Insurance Information and Privacy Protection Model Act (#670) currently provides consumers with robust rights to correct, amend, or delete personal information while still recognizing that insurance companies may deny those requests when retention is legally, or practically, required. She said that exceptions to the right to deletion should be clear to consumers so they understand that maintaining data regarding consumers’ contracts may include many decades and that such data may become subject to litigation for years in the future. Ms. Schoensee said the ACLI supports the approach of existing frameworks, which acknowledge those realities and provide appropriate exceptions. She said the need for insurers to retain customer and personal information in order to comply with such rules, administer policies, and pay claims is critical. Ms. Schoensee said the ACLI supports reasonable laws and regulations and giving consumers the ability to request deletion. She said the ACLI also believes that the necessary exceptions
should be clear and consistent for consumers. She said the ACLI recommends that existing models and several already-enacted state privacy laws should be relied upon in developing a comprehensive list of exceptions.

Ms. Kitt said individual consumers need to have access to the information that is being collected on them so they can make any corrections that may be needed if something is misstated. She said she is also a strong supporter of the consumer’s right to be forgotten—that is, to have any data collected on them to not be held indefinitely by companies. Ms. Kitt said once the use for the data has been completed, such as for underwriting new coverage or paying a claim, then the consumer should have the right to request that the data in question be considered forgotten by the company. She said the data should be held in a private section apart from that available for current use. While in this holding area, she said the data should not be sold, reviewed, or accessed for any other purpose. Once the relationship with the insurer ceases to exist due to a policy cancellation or change to another carrier, the data should be deleted completely, unless it needs to be held for legal purposes. In any case, the data should not be actively used by the company for any purpose once the relationship ends.

Chris Petersen (Arbor Strategies LLC), speaking on behalf of the Coalition of Health Carriers, said Ms. Kitt, Bonnie Burns (California Healthcare Advocates), and Birny Birnbaum (Center for Economic Justice—CEJ) have raised some additional consumer rights and issues that have not yet been addressed by this Working Group. He said they are correct in that some of these rights assume a right to access. Mr. Petersen said he was under the impression that the Working Group identified six of the more contentious issues or the six issues that are not uniform. He said the right to receive a privacy notice is a statutory right that it is not in this discussion, but he did not think the Working Group was talking about getting rid of that. He asked if the six rights in this framework paper were supposed to be the only rights given, the most contentious, or something else. Mr. Petersen said Arbor Strategies’ recommendation is for the right to delete to be included with the right to correct as it is included that way in the models and other legislation currently. However, he said that it should not be an absolute right as he had previously stated. Mr. Petersen said no action had been taken by the Working Group on his recommendations or on those of other interested parties. He said that there needs to be clear definitions developed for each of these rights as they are rather vague currently. He also recommended that the Privacy of Consumer Financial and Health Information Regulation (#672) be the focus of this group as it already includes privacy notice and consent disclosure requirements, as well as the federal Health Insurance Portability Accessibility Act (HIPAA).

Ms. Burns said she wanted to reinforce what Ms. Kitt said about some of the contacts that she has with consumers. She said that she does a lot of research online that involves health insurance in one form or another and that she consistently gets advertising for all kinds of health products from agents and agencies selling insurance even though she has blockers on her browser.

Mr. Birnbaum said the requirements for companies maintaining data for purposes unrelated to an ongoing business relationship should be distinguished from companies maintaining data and using it for ongoing business purposes. He said it is fine for a company to maintain a consumer’s data if a company no longer has an active ongoing relationship with the consumer and is maintaining data to comply with either data maintenance requirements or other requirements, but he said it is another thing to use the data that the company is maintaining. Mr. Birnbaum said compliance with the law should not be seen as an open opportunity to continue to use those data for purposes for which the consumer has not agreed. He said the other two points would be the right to delete presumes that a customer has knowledge of the data collected by an insurer and how it is used. However, massive amounts of data are collected by insurers that do not require consent by the consumer, such as research collection, and the uses of most data are obscure to most consumers. Mr. Birnbaum said any consumer right to delete data must require that the consumer has knowledge about the data that is being collected and how it is being used. He said the right to delete also presumes that there is a usable and responsive mechanism that exists for consumers to perform such deletion. Mr. Birnbaum said deletion mechanisms can be completely defeated by overly expansive terms and conditions of online agreements or by overly expansive or obscure privacy policies. So, he said that he mentioned all of this so that the right to delete is not viewed as something that is set off by itself, but that it is tightly integrated with all of the other consumer data requirements and consumer privacy protections.

Following up on a couple of Mr. Petersen’s comments, Mr. Birnbaum said with health insurance being subject to HIPPA, it has more responsibilities than property/casualty (P/C) insurers and even life insurance. He said what may be a required notice for health insurers or requirement for health insurance is not necessarily the same requirement for life insurance, or for P/C insurers. Mr. Birnbaum said the right to a notice and a consent to collect and use tends to be limited by the federal Fair Credit Reporting Act, which does not apply to a lot of the new sorts of data that insurers are now collecting. He said when talking about opt in or opt out, the presumption is that there is an opportunity for consent disclosure and consent that does not necessarily exist. Mr. Birnbaum said it certainly does not exist on the property category side for things like social media or web browsing data that are not subject to the requirements of credit reporting yet. He said the Working Group needs to think about
the current models in light of the new types of data that are available and the limitations of existing frameworks to reach some new types of data.

**Mr. Kreiter** said **Mr. Birnbaum** is correct that some of the items Ms. Stringer presented on the federal level are going to filter down to things that the Working Group will need to consider.

**Cate Paolino (National Association of Mutual Insurance Companies—NAMIC)** said as the Working Group goes through the rights, some of them have begun to blend together. For example, some of the things the Working Group is talking about may ultimately not relate to deletion, such as things that need to be done for maintaining information for regulatory purposes or for compliance purposes. Things that are spelled out in Model #670 and listed in NAMIC’s letter may change when the facts of case litigation occur years later. She said this is less about the deletion of the record and more about something other than that. To reiterate, Ms. Paolino said Model #670 contains many of the provisions and a reasonable way to frame up the right to deletion in terms of how it dovetails with some of the other things.

**Mr. Kreiter** said the Working Group was tasked with analyzing and determining how these six privacy rights are being protected. He said because of the change in certain federal statutes, the Working Group is trying to work on shifting ground. However, he said the Working Group will continue accepting comments and obtaining ideas to determine if the Working Group can develop a report of recommendations to the Market Regulation and Consumer Affairs (D) Committee that the Working Group can agreed upon. When Mr. Petersen asked when the report or determinations would be made, Mr. Kreiter said he did not have an exact date, but said he thinks it would be coming together soon so a final draft of the report could be exposed for a public comment period and edits prior to the Fall National Meeting. He asked Lois E. Alexander (NAIC) if that was her understanding. Ms. Alexander said that the Working Group had been charged with analyzing federal and state legislation, as well as the current NAIC models. She said the six rights that were handed down by the members to the Working Group as a privacy strategy also needed to be reviewed. Ms. Alexander said the Working Group was charged with making recommendations regarding possible revisions to the existing models or the creation of a new model if necessary. She said these recommendations, as Mr. Kreiter noted, will be presented with the Working Group’s report with its privacy policy statement to the Market Regulation and Consumer Affairs (D) Committee at the Fall National Meeting. When Mr. Petersen asked if those recommendations would be considered and voted on in a public meeting, Ms. Alexander said they would. Mr. Petersen said the Working Group had not discussed any of the issues yet. However, Ms. Alexander said the Working Group has been discussing these issues since December 2019, when the initial work plan was introduced. Since that time, the public discussions have been ongoing, with everyone having an opportunity to discuss other pertinent aspects of consumer data privacy rights as they were developed. She said the Working Group has not discussed the last privacy rights yet and that the Working Group will come up with a report.

Mr. Kreiter said during its next meeting on Nov. 8, the Working Group will discuss comments received by Oct. 25 on Segment Five—the right of data portability, as addressed in Pages 39–46.

Having no further business, the Privacy Protections (D) Working Group adjourned.
The Privacy Protections (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met Oct. 11, 2021. The following Working Group members participated: Cynthia Amann, Chair (MO); Ron Kreiter, Vice Chair (KY); Damon Diederich (CA); LeAnn Crow (KS); Chris Aufenthie (ND); Teresa Green (OK); and Don Beatty (VA). Also participating were: Giovanni Muzzarelli (CA); Scott Woods (FL); Tate Flott and Brenda Johnson (KS); Robert Wake (ME); Jo LeDuc (MO); Hermoliva Abejar (NV); Mary Block (VT); Barbara Belling, Darcy Paskey, and Mark Prodoehl (WI).

1. Adopted its Sept. 27, Sept. 13, and Aug. 30 Minutes

Ms. Amann said the Working Group met Sept. 27, Sept. 13, and Aug. 30 and took the following action: 1) adopted its July 12 minutes; 2) heard an update from the NAIC Summer National Meeting; 3) heard updates on federal and state legislative activity by NAIC Legal staff; 4) heard an update on California Proposition 24 by Mr. Diederich; 5) exposed the first exposure draft of the Privacy Policy Statement; 6) received additional comments from a consumer perspective by NAIC consumer representative Harry Ting (Health Consumer Advocate); and 7) received comments on Segment One – Right to Opt-Out of Data Privacy and Segment Two – Right to Opt-In to Data Privacy from the American Council of Life Insurers (ACLI), the Coalition of Health Carriers, the American Property Casualty Insurance Association (APCIA), the Medical Professional Liability (MPL) Association, and NAIC consumer representatives Brenda J. Cude (University of Georgia) and Karrol Kitt (University of Texas at Austin).

Mr. Kreiter made a motion, seconded by Mr. Beatty, to adopt the Working Group’s Sept. 27 (Attachment Nine-C1), Sept. 13 (Attachment Nine-C2), and Aug. 30 (Attachment Nine-C3) minutes. The motion passed unanimously.

2. Received a Legislative Update from NAIC Staff

Brooke Stringer (NAIC) said activity in the privacy arena was picking up with the U.S. Senate Committee on Commerce, Science, and Transportation having hearings with a former Federal Trade Commission (FTC) official testifying on behalf of the effort. She said Chairwoman Maria Cantwell (D-WA) was also pushing for the creation and funding of a new privacy and data enforcement agency. She said a recent Wall Street Journal article distributed to Working Group members and interested state insurance regulators indicated that the FTC has been supportive of privacy regulation by states as well. Ms. Stringer said a group of democratic senators had also called upon the FTC to begin rulemaking with ranking member Senator Roger Wicker (R-MS) wanting the U.S. Congress (Congress) to do it instead to avoid business confusion and strengthen online privacy disclosures. Ms. Amann asked if any drafting had begun. Ms. Stringer said there had been some proposals, but no compromise ones yet. She also said the Senate Committee on Commerce, Science, and Transportation wants to find a consensus.

Jennifer McAdam (NAIC) said there had also been some state legislative activity with work on regulations for the California Consumer Privacy Act (CCPA) currently and the California Consumer Rights Act (CCRA) later; passage by Colorado and Virginia as well as the Uniform Laws Commission (ULC); legislation pending in Ohio; and House Bill 2968 proposed in Oklahoma on computer data. She said state legislatures will meet next in February 2022; however, she said most states will begin preparations in December 2021 and January 2022. She said updated state legislative charts would be posted soon.

3. Received Comments on Segment Three of the Exposure Draft

Ms. Amann said written comments were received on Segment Three from the ACLI, the Coalition of Health Carriers, and Dr. Ting. She said comments received by the deadline are posted to the Working Group’s web page. She said comments received after the deadline would be posted soon. She said all comments received would be considered by the Working Group for incorporation into the exposure draft as it goes through the segments to complete its charges. She said the discussion at this meeting would be on comments received on Segment Three – Right to Request Correction of Data, as addressed in pages 32–36.

Kristin Abbott (ACLI) said her comments are on behalf of Shelby Schoensee (ACLI) as well. Ms. Abbott said ACLI members support the reasonable ability for consumers to request that inaccurate personal information be amended or corrected and
challenge such requests based upon the nature, source, or use of the information. She said this important consumer protection principle is one the insurance industry has long supported under existing laws and regulations that remain highly relevant today, such as the **NAIC Insurance Information and Privacy Protection Model Act (#670)**, the Fair Credit Reporting Act (FCRA), and the Health Insurance Portability and Accountability Act of 1996’s (HIPAA’s) Right to Request an Amendment of Protected Health Information. She said these same principles should also apply to newer forms and sources of personal information because insurers understand the critical importance of data integrity and that it be kept accurate and up to date where necessary and as soon as reasonably possible, subject to certain conditions and verification. She said ACLI members share the Working Group’s commitment to consumer protection but request that the Working Group keep in mind the importance of context as recommendations are considered. She said it is one thing for an insurer to agree to update out-of-date contact information such as a mailing address, email address, or telephone number, or a change in name or demographic status. She said it is another thing for an insurance customer or claimant to request an alteration or change in personal information collected and relied upon for risk evaluation and decision-making regarding underwriting, the extent of coverage, or claims. She asked the Working Group to consider the underwriting process and where information is obtained directly from the individual or from third parties. She said in instances where the information is obtained from an individual, it is important to allow for a correction or amendment when information is validated as having been incorrectly transcribed or otherwise inputted into an insurance company’s underwriting process. She said in instances where information is obtained from a third party, such as their attending physician, an insurance company is not the appropriate entity to make a correction to the underlying information. She said those documents are controlled by the physician, and correction and/or amendment requests should be directed to the physician rather than the insurer. She said if the physician does not make such a change, then Model #670 contemplates adding a statement to the policy file indicating this dispute. She also said new technologies, including artificial intelligence (AI) or AI-enabled systems are revolutionizing and benefitting nearly all aspects of society and the economy. She said given the significant ethical and technical challenges and risks that extend far beyond the U.S. insurance industry and continue to challenge many stakeholders, the ACLI hopes that the Working Group will avoid prematurely making overly prescriptive recommendations regarding the Right to Correct Personal Information that deviate from the existing privacy laws and regulations that insurers continue to abide by. Ms. Schoensee asked if consumers are positive as to their rights to information and/or correction.

Chris Petersen (Arbor Strategies LLC), speaking on behalf of the Coalition of Health Carriers, said use of the phrase, “the right to request” is inaccurate because what should be discussed is the process on how to exercise a request and what companies need to do, which is already covered in Model #670 and HIPAA. He said the Coalition of Health Carriers would like more precise definitions to be used, such as those included in its comment letter. He said word processing is needed, not regulation. He said the issue is data security versus data privacy, which is about the uses and disclosure of information. He said good data security means all data is locked up. He said record retention is generally set by state statute. He said consumers should never have an absolute right to correct data. He said much of the data used must be kept for criminal investigations and similar legally required situations, so consumers should be able to request data but not the right to correct it, which is stated in Model #670, HIPAA, and the FCRA. He said consumers should want the source of the inaccurate data to fix whatever is incorrect, not the insurance companies. Angela Gleason (APCIA) said she agrees with the ACLI and the Coalition of Health Carriers because they have the best interests of consumers in mind, but it seems consumers would like sources to correct data for all requesters. Cate Paolino (National Association of Mutual Insurance Companies—NAMIC) said there are two primary themes: 1) the nature of roles and relationships that industry helps consumers navigate as fiduciaries; and 2) the importance of details, which should be meaningful; therefore, she recommends that no significant changes or revisions to the models are needed, nor is any new model.

Ms. Abejar said the right to delete should adhere to statutory retention requirements. Dr. Ting said companies need to minimize the data collected to only what is absolutely necessary to provide the insurance coverage purchased so there would be less data for companies to control. He also said personal data should never be sold. He said data breaches occur even at organizations with tight security because data can be locked up, but it can also be hacked, so he would support deleting consumer data as soon as the underwriting decision has been made.

Birny Birnbaum (Center for Economic Justice—CEJ) said Dr. Ting is talking about data that is no longer needed while Mr. Peterson is talking about record retention. Ms. Kitt said the timeline for record retention varies by state, type, and purpose. Mr. Birnbaum said life insurers have to keep data longer due to the nature of their business. Ms. Kitt said such data should be put into a silent area like a black box so it can be pulled if it is needed, but it should also prevent the company’s marketing unit from seeing it. Mr. Wake said it is a privacy issue, except for specified purposes. Mr. Birnbaum said regarding the right to correct, he opposes the ACLI and the Coalition of Health Carriers’ position because it would mean that consumers would have the responsibility to track down and correct any inaccurate data. He said insurers should have to correct it, and they should have to refer consumers to third-party users to make such changes. He said consumers should have an absolute right to view, access, correct, and delete their data regardless of what the FCRA and HIPAA say. He said the requirement to investigate is
anti-consumer when referring to a third party. He also said the key under HIPAA is that the industry is saying they have no responsibility over their third-party affiliates’ data. He said the FCRA dispute model directs consumers to go to the furnisher of information to research and correct the data, as well as correct the credit reporting agencies.

Ms. Amann said she is hesitant to set a timeline for the completion of changes to the models, but she is okay with setting best practices for companies that indicate how long a company needs to keep underwriting information used for declination. When asked if there is a need to keep it at all, she said state market conduct examiners would need to be able to document the reason for a company’s declination during a market conduct examination many years after the declination occurs. Mr. Wake said there is a legal requirement to lock data for examinations, audits, arbitrations, litigation, record retention, and dispute situations. He said we have the technology to do so. Ms. Amann said the model would have to include this expectation. She said an FCRA requirement is that a letter of protest from a consumer must be kept by the insurer, and it must be sent with any future requests for data. She said she would put various parameters of these issues about the business practices of insurers in writing, and she would put forth data to correct but not change for edits but not comments.

Ms. Amann said during the next call on Oct. 25, the Working Group will discuss comments received by Oct. 18 on Segment Four – Right to Correct Information, as addressed in pages 36–39. She said the following schedule was posted to the web page:

- Comments received by Nov. 1 on Segment Five – Right of Data Portability, as addressed in pages 39–46, would be discussed at the Nov. 8 meeting.
- Comments received by Nov. 15 on Segment Six – Right to Restrict the Use of Data, as addressed in pages 46–50, would be discussed at the Nov. 22 meeting.

Having no further business, the Privacy Protections (D) Working Group adjourned.
The Privacy Protections (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met Sept. 27, 2021. The following Working Group members participated: Cynthia Amann, Chair (MO); Ron Kreiter, Vice Chair (KY); Damon Diederich (CA); Chris Aufenthie (ND); Martin Swanson (NE); Gary Jones (PA); and Don Beatty (VA).

1. Received Comments on Segment Two of the Exposure Draft

Ms. Amann said written comments were received on Segment Two from the American Council of Life Insurers (ACLI); the Coalition of Health Carriers; the American Property Casualty Insurance Association (APCIA); the Medical Professional Liability Association (MPLA); and NAIC consumer representative, Harry Ting (Health Consumer Advocate). She said comments received by the deadline are posted to the Working Group’s web page. She said comments received after the deadline would be posted soon. She said all comments received would be considered by the Working Group for incorporation into the exposure draft as it goes through the segments to complete its charges. She said the discussion at this meeting would be on comments received on Segment Two – the right to opt in to data sharing, as addressed in Pages 29–32.

Shelby Schoensee (ACLI) said her comments are on behalf of Kristin Abbott (ACLI) as well. Ms. Schoensee said certain situations regarding opt-in need to balance current laws with risk-based review. She said the consumer initiates transactions so it opts in under the **NAIC Insurance Information and Privacy Protection Model Act** (#670) and the **Privacy of Consumer Financial and Health Information Regulation** (#672) under the Gramm-Leach-Bliley Act (GLBA). She said there should not be just one choice for all situations, but it should be flexible, such that opt-out should be maintained in accordance with the GLBA.

Bob Ridgeway (America’s Health Insurance Plans—AHIP) said the Coalition of Health Carriers covered its comments. Chris Petersen (Arbor Strategies LLC), speaking on behalf of the Coalition of Health Carriers, objected to the use of the word “right” when used with opt-in/opt-out because it refers to the ability to place restrictions on data use, whereas the GLBA under Model #672 just refers to nonaffiliates and applies to joint marketing only. He suggested that the definition of opt-in/opt-out be tightened up going forward.

Angela Gleason (APCIA) said the exposure document lumped opt-in and opt-out together. She said a balanced, risk-based approach like that created in the past should be used, and what applies to the technology industry does not apply to the insurance industry. She said applying that type of privacy requirement could perpetuate fraud and hinder underwriting.

Dr. Ting said included with his comments was the Bessemer Venture Partners report on data privacy engineering. He said this report encouraged companies: 1) to not sell or share data unless the consumer consents to it, but it also indicated that most consumers would consent; 2) to allow the consumer’s choice; 3) that internet disclosure or privacy notice should not be allowed, as most consumers do not understand what happens once cookies are allowed; and 4) to allow opt-out through future or prospective data, not for retrospective data. He said regarding the right to opt out: 1) a notice should be provided; 2) there should be a method for tracking; 3) companies should take steps to ensure that consumers know what has been shared, with whom, for what purpose, and how it will be used, much like the California Consumer Privacy Act (CCPA) does. He said there are cases where Health Insurance Portability and Accountability Act of 1996 (HIPAA) rules should go beyond what HIPAA requires because his personal experience as a secret shopper has shown that his personal data that was gathered by a health insurance lead generator resulted in the sharing of that data with 1,722 companies that had nothing to do with insurance.

Mr. Aufenthie asked Dr. Ting what parts of his personal data were shared or sold following his secret shopper experience. Dr. Ting said because he lives in California, the CCPA made it possible for him to obtain information about the companies that received his data and how those companies were using it. He said during an online search for individual health insurance that took him three rounds of inquiries before he was even allowed to get to any type of health insurance plan, the company asked for his name, address, health conditions, health status, age, and income. He said his information was sold but only to companies he would be completely comfortable with receiving his information. He said some of the companies on the list as having received his data were companies that sold windows and pet food, from whom he received lots of calls and emails trying to sell their products to him. He said lead generators pay lots of money to get listed at the top of search results, so those companies
must sell consumers’ data to accomplish that listing. He said companies have a choice of who they work with, so they should not be using companies that sell data.

Birny Birnbaum (Center for Economic Justice—CEJ) said there is a need for balance; consumer consent should be required for any action and be limited to only that which is necessary. He said industry should understand just how limited a consumer’s understanding of privacy really is, and there should be best practices like those in the CCPA. He said telematic companies that harvest data from phones, geo, and vocations also sell marketing programs based on the telematics being collected. He said he is sure that consumers do not know this is being done, and they have not consented to their data being shared or sold, so it is unreasonable for consumers to be knowledgeable or responsible for their own data privacy decisions. However, he said he disagrees with opt-in because the notices are too long, and the consumer does not understand what all the wording means. Mr. Petersen said such notices are required to attain a Flesch score of a high school level reader. Erica Eversman (Automotive Education & Policy Institute—AEPI) said consumer understanding does not have the level necessary. She said most readers are at a fourth- or fifth-grade level, as evidenced by a 1992 survey by the federal government, which indicated most readers were at a sixth-grade level.

Mr. Diederich said it is hard to know what companies will do, but he asked if allowing a consumer to opt in for marketing would help. Dr. Ting said yes, that is an appropriate approach. He suggested that the Working Group give examples in the privacy policy statement of how it would be used; otherwise, the default should be to not allow the sharing or selling of consumer data at all. Mr. Diederich asked if some type of nondiscrimination or nonretaliation disclosure needs to exist. Dr. Ting said yes, if limited to need certain information, but only if it were limited to what is really needed. Ms. Eversman said the concept is good, but her experience with lawyers is that it is impossible to obtain retaliatory evidence that leads to prosecution. Peter Kochenburger (University of Connecticut School of Law) said people do not read them, so the federal government puts most personal information as opt-in because opt-out pretty much guarantees that consumers will not do it. Mr. Diederich said opt-in should not hinder sales or legal compliance. He asked if, given state insurance regulator concerns, consumers should have to opt in for companies to share data for marketing to external parties.

Mr. Petersen said HIPAA does not allow the sharing of non-personal health information (PHI) data, but it has a safe harbor for sharing PHI. He also said HIPAA has a more stringent definition of PHI. Ms. Gleason said opt-in has spots to opt out of marketing.

Ms. Amann said this type of information is sort of in the exposure document, but it needs to be streamlined because people just click through privacy notices and disclosures; but insurance is not retail, so it needs to be considered more carefully. She said the selling of information is the crux of the problem, and the question is if there is a doable fix, perhaps some overt statement that a consumer cannot be retaliated against for their refusal to opt in. Brenda J. Cude (University of Georgia) said consumers need a reason to read a disclosure. She said consumers feel they have no power because they cannot get service without agreeing, so there is no real or perceived need to read any notices or disclosures.

Ms. Amann said during the next call on Oct. 11, the Working Group will discuss comments received by Oct. 4 on Segment Three – the right to correct information, as addressed in Pages 32–36, would be discussed at the Oct. 11 meeting.

She said:

- Comments received by Oct. 18 on Segment Four – the right to delete information, as addressed in pages 36–39, would be discussed at the Oct. 25 meeting.
- Comments received by Nov. 1 on Segment Five – the right of data portability, as addressed in pages 39–46, would be discussed at the Nov. 8 meeting.
- Comments received by Nov. 15 on Segment Six – the right to restrict the use of data, as addressed in pages 46–50, would be discussed at the Nov. 22 meeting.

Ms. Amann said this schedule had been posted to the web page.

Ms. Amann said the next Working Group meeting is scheduled for Oct. 11.

Having no further business, the Privacy Protections (D) Working Group adjourned.
The Privacy Protections (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met Sept. 13, 2021. The following Working Group members participated: Cynthia Amann, Chair (MO); Ron Kreiter, Vice Chair (KY); Damon Diederich (CA); and Chris Aufenthie (ND). Also participating was: Robert Wake (ME).

1. Announced a Format Change to the Privacy Policy Statement Exposure Draft

On behalf of Ms. Amann, Lois E. Alexander (NAIC) announced a format change to the privacy policy statement exposure draft. She said the first exposure draft incorporated all comments received into one large document. Since all materials have been vetted by the Working Group in prior meetings, Ms. Alexander said the Working Group would separate comments into appendices to make the exposure document more manageable for discussion in future meetings.

2. Received Comments on Segment One of the Exposure Draft

Ms. Amann said comments were received on Segment One from the American Council of Life Insurers (ACLI); the Coalition of Health Carriers; and NAIC consumer representatives, Karrol Kitt (University of Texas at Austin) and Brenda J. Cude (University of Georgia). She said comments received by the deadline are posted to the Working Group’s web page. She extended the Working Group’s apologies to Ms. Kitt because her comments were received by the deadline but had not yet been posted. She said comments received after the deadline would be posted soon. She said all comments received would be considered by the Working Group for incorporation into the exposure draft as the Working Group goes through the segments to complete its charges. She said the discussion at this meeting would be on comments received on Segment One – the right to opt out of data sharing, as addressed in Pages 5–29.

Chris Petersen (Arbor Strategies LLC), speaking on behalf of the Coalition of Health Carriers, said the definition used for the opting out of data sharing should be defined in a way that industry, state insurance regulators, and consumers can have a serious discussion on it. He said he defined the exposure draft simply says that individuals should be able to control their data, which would mean that the definition would apply to several of the possible potential rights in the document. He recommended that the Working Group use the very specific definition of “opt out” that is used in the Privacy of Consumer Financial and Health Information Regulation (#672), which is based on the Gramm-Leach-Bliley Act (GLBA) and is the most recent privacy model that has been adopted in most states. He said if that definition is used, it will help guide the rest of the discussion as the Working Group goes into more detail regarding what that right is as well as how it is used. He said when consumers receive an opt-out notice now, it is referring to the right as set forth in Model #672, so that is the definition that should be used if the Working Group is going to talk about whether it should be changed, modified, or eliminated. He said the recommendation is overly broad in that it says consumers should be afforded a comprehensive right to control the use of all their personal information for purposes related or unrelated to the insurance transaction, which goes beyond the GLBA because it recommends an unfettered right to controlling one’s own information. He said in Model #672, there are restrictions, exceptions, and disclosures in nonpublic personal information for service providers, servicing agreements and marketing agreements. He said companies must comply with state record retention requirements and other laws indicating how companies can use and disclose information. He said consumers would not be notified, nor would they have any way of knowing if a law enforcement agency demanded their information. He said if an insurance department requires consumer information, companies have their operations and the rights in the Health Insurance Portability and Accountability Act of 1996 (HIPPA), which includes the right to request, but federal law still gives companies the ability to say yes or no if we must disclose the information. Therefore, he said this recommendation would be contrary to, and would probably be preempted by, HIPPA. He said the recommendation must be much more. He said HIPAA should not be disrupted because we do not want to get preempted by federal law. He said health care insurers should have a HIPAA safe harbor that is currently in Model #672, and that should be retained because something that might work for a technology company would not necessarily work for a health insurer. He said the health insurance industry must maintain records for future claims, issues, and future health care operations, so the Working Group cannot confuse technology with health care.

Mr. Diederich said the exposure draft reflects several of the concerns that have just been identified because it has a discussion that the right to opt out should not be construed to interfere with the transaction for which the information has been gathered;
i.e., it should not hinder legal compliance. He said the Working Group is very much in agreement on those points about a HIPAA exemption, as existing HIPAA regulations basically permit regulation that is not in conflict with HIPAA. He said there is no requirement that any privacy right’s regime necessarily follow all the contours of HIPAA, so long as it is not in conflict with them. HIPAA would allow a model, which affords additional privacy rights beyond HIPAA, so long as it does not conflict with existing mandates. Mr. Petersen said that is correct, and it would also be wise to allow additional protections, so long as one could operate the HIPAA privacy rule. He said if an individual had the unfettered right to say, “you cannot share my information with anyone,” which is sort of what the recommendation suggests that it would hamper the implementation of the HIPAA privacy rule, because health insurers have things they are mandated to do under that rule, and this would contradict those. He said he believes that is why we must be careful that it works within the confines of HIPAA. Mr. Diederich said he is very much in agreement with that.

Ms. Kitt said the Working Group cannot do the opt-out because it is so important, but for the last 15 years, it has had opt-in with health and she knows opt-in is the next topic. However, with all these problems, if they just did an opt-in, they would not have all these opt-out issues. Companies would not be able to sell a consumer’s data, but the amount of revenue that brings in for companies is not known. Ms. Kitt said interested parties said consumers benefit from opt-in as well as from opt-out, but she does not see a benefit for consumers that currently have the opt-out, because consumers must do extra work to protect themselves and why should they have to protect themselves from a cost. She said to begin with, opting in for a benefit that makes sense, but not having to opt out for one because it is sort of two negatives does not make sense. She said speaking as a consumer, privacy is very important, and she does not know what insurance personnel do if consumers opt out. She said consumers let their information be shared, but so much of the sharing of information is not appropriate. She asked why life insurance or health insurance need to know about her homeowners’ coverage, or auto coverage, yet they get all this access. She said her comments are mostly negative stating again that my support is for the opt-in and to forget about this opt-out.

Kristin Abbott (American Council of Life Insurers—ACLI) asked if the Working Group could include in the privacy policy statement the initial thoughts on the opt-out provisions that it submitted last week. She said the ACLI intended to provide further feedback throughout the process. She said the ACLI supports a balanced opt-out approach, taking into consideration consumer rights and companies’ needs to collect and share information for normal business practices.

Randi Chapman (Blue Cross Blue Shield Association—BCBSA) said the BCBSA’s comments were submitted with the Coalition of Health Insurers. She said Mr. Petersen’s status covered several points that they have in common, but she wanted to reiterate the BCBSA’s request that the Working Group consider preserving the HIPAA compliance exemption because the carve out established in Model #672 and the federal laws alike have created consistency in terms of compliance with consumers and industry knowing what to expect, and there are robust requirements under HIPAA.

Binry Birnbaum (Center for Economic Justice—CEJ) said the CEJ hopes that the activities under the Working Group will, in fact, go beyond current law. He said current law is truly outdated in terms of a privacy framework to protect consumers in an era of surveillance capitalism to go beyond both an opting in and an opting out approach. He said it assumes certain things; i.e., that consumers will have disclosure of the information that is being collected about them and what that means in an understandable way. Therefore, instead of presenting the types of information that may be collected, it would include how the information is being used and how it might be used as opposed to similar general concepts that do not mean much to the consumer. Mr. Birnbaum wanted to emphasize the whole aspect that now it assumes consumers have enough knowledge to make informed and rational decisions, and that may have been a reasonable assumption 20 years ago. He said a passive reasonable assumption today is to give consumers the amount of data that is collected, with and without consumers consent. For example, there may be a lot of information that insurers get from public sources to speed the underwriting process, which they then combine with information they had gotten from the consumer or through their insurance process. Then something is done to combine information based on some opt-in the consumer has made about their personal information, thinking that it is going to be dealt with in insurance practices.

Harry Ting (Health Consumer Advocate) said when he spoke last week about his nine principals for the privacy of consumer data regarding the transactions that consumers have with insurance companies, the insurance company should only collect the data that it needs. He said for that transaction, there is no reason for them to collect other data; and if we do that, then the opt-in, to opt-out discussion becomes somewhat unnecessary if companies only collect what they need. Of course, they would need to prove that that is the data they need. However, Dr. Ting said that is the approach that should be taken, and there is no reason for them to collect other data. He said that is what he would like to suggest. When talking about the six categories, he said these primarily put the burden on the consumer to take measures to protect the privacy of their data, while it seems that the companies themselves have much more information and understanding of what is being collected and how it is being used. He said there
should be greater emphasis on putting requirements on companies, as opposed to putting so much burden on the consumers. He said the document he sent to be shared with the Working Group members talks about data privacy engineering, and it explains in their research that most companies collect much more data than they need. He said it is something that has developed because memory costs are so low that companies collect whatever they can, so many of the companies are collecting much more than they need.

Mr. Wake said he would agree that more precision is needed, but being precise includes talking about it. The definitions of “opt out” and “opt in” are very simple, and they are not going to change over time. Mr. Wake said opt out means what the company has the right to do. He said we can be made a little more precise, but the definition of opt out is something that the company has the right to do. He said unless the consumer explicitly gets permission and what needs to be worked on is not those definitions, except perhaps phrasing them a little more elegantly, what needs to be worked on is what things should be subject to an opt-in regime, what should not be subject to an opt-out ratio, and what things the consumer should have no control over. Mr. Diederich said this understanding is consistent with what a lot of the Working Group understands those terms to mean as well. Mr. Petersen said that is not how the document defines it though.

Ms. Amann said during the next call on Sept. 27, the Working Group will discuss comments received by Sept. 20 on Segment Two – the right to opt in to data sharing, as addressed in Pages 29–32. She said comments received by Oct. 4 on Segment Three – the right to correct information, as addressed in Pages 32–36, would be discussed at the Oct. 11 meeting; comments received by Oct. 18 on Segment Four – the right to delete information, as addressed in Pages 36–39, would be discussed at the Oct. 25 meeting; comments received by Nov. 1 on Segment Five – the right of data portability, as addressed in Pages 39–46, would be discussed at the Nov. 8 meeting; and comments received by Nov. 15 on Segment Six – the right to restrict the use of data, as addressed in Pages 46–50, would be discussed at the Nov. 22 meeting. She said this schedule has been posted to the web page.

Ms. Amann said the next Working Group meeting is scheduled for Sept. 27.

Having no further business, the Privacy Protections (D) Working Group adjourned.
The Privacy Protections (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met Aug. 30, 2021. The following Working Group members participated: Cynthia Amann, Chair (MO); Ron Kreiter, Vice Chair (KY); Damon Diederich (CA); LeAnn Crow (KS); T.J. Patton (MN); Chris Aufenthie (ND); Martin Swanson (NE); Teresa Green (OK); Tricia Goldsmith for Raven Collins (OR); Paul Towsen for Gary Jones (PA); and Katie Johnson (VA). Also participating were: Rick Cruz (MN); and Don Beatty (VA).

1. **Adopted its July 12 Minutes**

The Working Group adopted its July 12 minutes as amended with the revision requested by Karrol Kitt (University of Texas at Austin) to change the phrase “credit card” to “debit card.” Mr. Kreiter made a motion, seconded by Mr. Swanson, to adopt the Working Group’s July 12 minutes (see NAIC Proceedings – Summer 2021, Market Regulation and Consumer Affairs (D) Committee, Attachment Six). The motion passed unanimously.

2. **Heard an Update from the Summer National Meeting**

Ms. Amann said consumer data privacy was one of the discussion topics during the Summer National Meeting in Columbus, OH. She said the Innovation and Technology (EX) Task Force discussed the ownership of consumer data prior to the update she gave to the Task Force on the activities of the Working Group. She said the discussion about the ownership of consumer data continued during her report to the Market Regulation and Consumer Affairs (D) Committee, which is the parent committee of the Working Group. She said there was also a discussion about possibly creating a new lettered committee that would be known as the (H) committee to oversee cybersecurity issues. However, she said the appointment of a new lettered committee and the assignment of the consumer data ownership issue as a charge were both delayed for further consideration and determination at a future date. She said the Working Group was praised for its work to date and encouraged to complete its charges as written by the assigned due date, even if it required an acceleration of its meeting schedule. Chris Petersen (Arbor Strategies LLC) said data ownership was last discussed following the most recent update to the *Privacy of Consumer Financial and Health Information Regulation (#670)*, which he said he would find and share with the Working Group. Ms. Amann said there was a discussion of data ownership along with some definitions for consideration by the Working Group in the National Institute of Standards and Technology (NIST).

3. **Heard an Update on State Privacy Legislation by NAIC Legal Staff**

Jennifer McAdam (NAIC) said many consumer privacy rights can be traced back to federal implementation of the Fair Credit Reporting Act (FCRA), to which the *NAIC Insurance Information and Privacy Protection Model Act (#670)* is most similar. She said each year since the FCRA was adopted, states have introduced similar legislation; and she noted that updated state legislation charts are posted to the Working Group’s web page under the documents tab. She said since California was the first, and seemed to be the most comprehensive thus far, it is also included under the documents tab within one of the two gap analysis comparison charts completed by the NAIC Legal team: 1) the Model #670 to the California Consumer Privacy Act (CCPA) Privacy Comparison; and 2) the Gramm-Leach-Bliley Act (GLBA) to the Health Insurance Portability and Accountability Act of 1996 (HIPAA) Privacy Comparison. She said trial lawyers supported a private right of action in the California bill, but industry opposed this position. She said the FCRA presumed compliance with the law when the entity is subject to HIPPA and other federal laws. She said some of the bills have gone even further than the California Consumer Protection Act (CCPA) to look more like the General Data Protection Regulation (GDPR). She said there was not much to report regarding movement on state privacy legislation, as most of the bills proposed were not adopted. However, she said Colorado and Virginia were the exceptions, as both passed consumer privacy legislation in 2021. She said the Virginia bill goes into effect Jan. 1, 2023; applies to companies doing business in Virginia or marketing to Virginia residents; and gives consumers the right to access, correct, delete, and opt out of the sale and processing for targeted advertising purposes. She said the Virginia bill is like the CCPA in some areas but like the GDPR in others. She said it also has no private right of action, so enforcement is under the state Attorney General. She said the Colorado bill goes into effect July 1, 2023. She said the Colorado bill is not as stringent as the California bill, but that it is more stringent than the Virginia bill in that the Colorado bill gives the Attorney General’s office the right to establish regulations. She said Ohio has pending legislation that is not as extensive as California, Colorado, or Virginia. She said it has no private right of action, but it has a safe harbor for industry. She said the
Uniform Law Commission (ULC) recently adopted a uniform personal data protection act that may be finding its way into state legislation. She said legal will continue to follow state data privacy legislation as a few states will still be having legislative sessions that run through the end of the year.

4. **Heard an Update on California Proposition 24**

Mr. Diederich, California’s Acting Privacy Officer, said Proposition 24 is a follow-up to the CCPA that was developed to counter proposed legislation that was perceived to weaken the CCPA by adding some protection rights to data subjects. He said when it becomes effective Jan. 1, 2023, it will add some additional data rights and protections for consumers. He said the bigger differences are a limitation on the collection and use of personal information to certain categories and specific uses, which are disclosed to the data subject at the time of collection. He said there is a requirement for specific disclosures relating to sensitive personal information as defined in the proposition and for retention periods for each category of personal information. He said it must be reasonably necessary and proportionate with respect to the purpose of data collection that are disclosed to the consumer. He said businesses selling or disclosing personal information are required to sign a legal contract with any recipients of that data, such that the recipient would adhere to these set disclosure limitations on data use in terms of the proposition generally. He said there is a requirement for the adoption of security procedures, so the right to limit use and the disclosure of personal information is a major addition, and a major set of rights, which are provided on top of the CCPA. He said this grants a consumer the right to instruct businesses to limit user disclosure of sensible, sensitive, personal information to perform services expected by the average consumer requesting those types of services. He said sensible, sensitive, personal information includes social security numbers; driver's licenses; passports; financial account information; account log ins; geo locations; ethnic origin; religious or philosophical beliefs; union membership; contents of mail, email, or text messages; genetic data; health information; and information about your sex life or sexual orientation. He said to the extent that businesses disclose a consumer’s sensible personal information to third-party users, companies are required to provide notice to the consumer of that disclosure to the third-party user and give the consumer notice of the right to limit disclosure to that user. He said there is also an existing right of non-retaliation that could be considered as a consumer right of non-discrimination. He said there is new protection to employees, job applicants, and independent contractors of the business; a clarification that the non-discrimination provisions do not prohibit loyalty or other rewards programs; an expanded right of deletion and correction of inaccurate information; a clarification for businesses disclosing personal information after informing recipients; and a clarification that information third parties and vendors. He said there is a requirement for a web-based registration of request to exercise privacy rights; and for any information disclosed, the consumer must be provided with a commonly used machine-readable format that is readily understandable and that applies to the insurance industry. Ms. Amann asked if there had been a lot of opposition to the proposition or if it is just working its way through the process. Mr. Diederich said California is still in the rule-making phase, so it is too soon to tell.

5. **Exposed the First Working Group Exposure Draft of the Privacy Policy Statement with Comments Incorporated**

Ms. Amann said the next item on the agenda is to walk through the exposure draft of the privacy policy statement that was distributed Aug. 26. She said the document begins with the Working Group’s 2021 charges and the work plan it has followed since the first Working Group meeting in November 2019. She said following an initial delay due to the pandemic, the six consumer data privacy protections identified as gaps per the analysis in the work plan were discussed by the Working Group during meetings in November 2020 and March, May, June, and July 2021. She said Page 1 of the exposure draft listed the rights identified in the NAIC Member-Adopted Strategy for Consumer Data Privacy Protections received through the Market Regulation and Consumer Affairs (D) Committee as:

1. The right to opt out of data sharing.
2. The right to opt in to data sharing.
3. The right to correct information.
4. The right to delete information.
5. The right of data portability.
6. The right to restrict the use of data.

Ms. Amann said a format template with separate outline sections for each of these six consumer categories has been posted, presented, and discussed at Working Group meetings. She said 18 sets of comments received from members, state insurance regulators, and interested parties were copied and pasted into the format template without labels, and in no order, for each of these rights. She said Pages 2 and 3 list the states that have adopted Model #670, Model # 672, and the Insurance Data Security Model Law (#668). She said the consumer privacy protections addressed in each of these models are also noted. She said Pages 3 and 4 include a review of privacy rights in the GDPR and the CCPA. She said Pages 4 and 5 review state privacy legislation.
Links to comparison charts identify gaps in current state and federal laws and rules between the GLBA and HIPAA, as well as between Model #670 and the CCPA. Ms. Amann also said since this material had already been vetted by the Working Group in prior meetings, the Working Group was asking members, interested parties, and interested state insurance regulators to review the combined material and submit comments in the following manner as the Working Group proceeded to meet on a bi-weekly basis going forward:

- Segment One: The right to opt out of data sharing, as addressed in Pages 5–29 by Sept. 7, to be discussed during the Sept. 13 Working Group meeting.
- Segment Two: The right to opt in to data sharing, as addressed in Pages 29–32 by Sept. 20, to be discussed during the Sept. 27 Working Group meeting.
- Segment Three: The right to correct information, as addressed in Pages 32–36 by Oct. 4, to be discussed during the Oct. 11 Working Group meeting.
- Segment Four: The right to delete information, as addressed in Pages 36–39 by Oct. 18, to be discussed during the Oct. 25 Working Group meeting.
- Segment Five: The right of data portability, as addressed in Pages 39–46 by Nov. 1, to be discussed during the Nov. 8 Working Group meeting.
- Segment Six: The right to restrict the use of data, as addressed in Pages 46–50 by Nov. 15, to be discussed during the Nov. 22 Working Group meeting.

Ms. Amann said this schedule would be posted to the Working Group’s web page. She said comments could be submitted on the entire draft, any part of the draft, or any of the segments at any time. She said comments received and discussed would be incorporated into the exposure draft, as needed, to complete the Working Group’s charges.

Shelby Schoensee (American Council of Life Insurers—ACLI) said she and Kristen Abbott (ACLI) want to thank the chair and the Working Group for the exposure document. She said the document was very helpful; it was clear how much work went into it and how many years of history were involved. She wanted to confirm that the exposure document was a draft that included historical considerations, input received from interested parties and state insurance regulators, and recommendations introduced and discussed at the end of the document and at the end of each section as the Working Group moves through its discussions during the accelerated meetings. She said it sounds like the Working Group was hoping to get more input on the exposure document throughout those meetings, and at the end of the process, the Working Group would make sure that the recommendations flow from the revised document. Ms. Amann confirmed this was the plan. Ms. Schoensee said the ACLI just wants to make sure that it could communicate that effectively to its members to get constructive feedback to the Working Group throughout the process. She said ACLI members were excited to work on the privacy policy statement. Ms. Amann said comments submitted do not have to be formal, but they can just be bullet points of items to discuss, as the Working Group is more interested in getting a good flow of discussion going than it is about the formality of comments.

6. Received Additional Comments from a Consumer Perspective of Data Privacy

Harry Ting (Health Consumer Advocate) said the nine principles he formulated were based upon review of the meeting materials and privacy materials used in the real world. He said he hoped the principles would help the Working Group when evaluating consumer data privacy models. He said he took a different perspective from that encompassed in the six categories identified by the Working Group as rights. For the right to delete, he said his principles would mandate the deletion of certain personal information when it is no longer needed rather than provide a right to delete that a consumer would have to request to activate. He said only insurance-related businesses that need unpublished personal consumer data to complete insurance transactions should be allowed to collect such data. He said lead generating companies that only collect such data to sell it should not be allowed to collect the data, especially when the data is being sold to other businesses that do not meet this criterion. He said he ran across this type of lead generating company last year when he was doing some secret shopping for health insurance online and logged in to search on health insurance. He learned that the company was sharing his information with over 1,700 different companies when he was given a link to the companies that had been given his data. He said most had nothing to do with health or any other insurance. He said insurers and related parties should only keep data for as long as it is needed for the transaction or to meet regulatory requirements; when that data is not needed anymore, it should be deleted. He said businesses should not transfer or sell data to other business entities, whether they are related or not. He said if such a transfer or sale is not essential for the insurance transaction, it should be the consumer's choice whether to be contacted and provided with that information and only if the consumer wants information on the services or products that she or he did not request. He said the fifth principle ensures the accuracy of data that has a material impact on the consumer's purchase or receipt of services because it ensures the consumer can verify whether the data being used is correct, as we all know errors in data can
Brenda J. Cude (University of Georgia) said she is not representing any other consumer representatives, and these are her own thoughts after going through the exposure document a couple of times over the weekend. She said she wants to talk briefly about some reactions to what is in the exposure document about opting in and opting out, consumer notices, and the right to delete information. She reminded everyone how difficult it is for consumers to understand the implications of that choice. She said if she were to have the option to opt out, she assumed that it would only be for sharing or selling data to third parties. She said consumers do not know the difference between company affiliates and third parties. Consumers also do not know what the costs and benefits to them are of sharing or not sharing because there is no research. Dr. Cude guessed that most consumers would have a default position. Either they would always opt out based on principle, or they would never opt out, probably because they do not know how a choice to opt out could limit their opportunities to work with a company. Dr. Cude said she does not know what the implication of this is, but it is a very difficult choice for consumers. She said whether a consumer chooses to opt in or opt out is not a decision consumers can make given the incomplete information one has. As it stands now, the other point she wanted to make about this is that, while we probably all see the HIPPA language as something very different than what would apply to car insurance, consumers do not necessarily think of it that way. To them, insurance is insurance; so why should there be one standard for one type of insurance (TOI) and a different standard for another TOI. However, even as Dr. Cude was saying this, she realized she was not saying the standards should apply exactly, but maybe the framework should apply. Therefore, if the default is that consumers opt out of data sharing for any purpose not linked to treatment, payment, or health care operations, or as otherwise required by law, she asked if there might be a parallel for other TOIs that we opt out of. Dr. Cude said she also was struck by what seemed to be industry arguments at the end; therefore, it would be too difficult to implement an opt-out standard. She said the health insurance industry has obviously figured it out, and there might be a lot of protocols from the consumer reporting industry that could be transferred to insurance (e.g., how a consumer would verify the identity of an individual who is requesting their own credit).

Dr. Cude reminded the Working Group to resolve the issue of consumer notices by utilizing research guided by professionals with expertise about notices or modifications regarding their use by consumers, but she does not think state insurance regulators have the legal authority to change them. If they do, she said she would like to see that same research-driven approach because she believes a conversation about sample clauses has value. She asked the Working Group to remember that its key strengths are listening and being heard and sample language is helpful to industry; however, it is also helpful to consumers if it provides consistency to consumer communications. She said sample language needs to continue to be used and should be adopted widely so it benefits consumers as well as industry. She said there is some conversation about consumer use of electronic sources; and while she agrees that much has changed in the intervening years since the NAIC first started talking about this, she also agrees with the value of just-in-time communications that are likely to be delivered electronically. However, she does not want the Working Group to forget that not all consumers have the option to receive information electronically, and some consumers just prefer not to. She said she wants to make sure that the Working Group keeps that in mind and allows, or maybe even requires, that consumers have the choice to continue to receive paper copies. She said if the Working Group goes in the direction of allowing electronic delivery, she does not know why that should be available to consumers only after they become policyholders. She said the option should be posted to the website for consumers to consider as they select an insurance company. She said she spent some time thinking about what it means in the context of insurance to have the right to delete...
Ms. Amann said this portability discussion is helpful, and the example that comes to mind on the commercial side is when a consumer gets a loss run form that can be taken from carrier to carrier. She said the Working Group would make sure to have some good examples of what portability means in the context of consumer data privacy protections. Biriny Birnbaum (Center for Economic Justice—CEJ) thanked Dr. Ting for the principles that he set out, and he asked whether those principles were informed by any principles that were developed by consumer or privacy organizations like the World Privacy Forum (WPF), the Electronic Frontier Foundation (EFF), or the CEJ or if he relied on any other parties to develop those principles. Dr. Ting said the nine principles were purely his own reactions to reading about the materials that were submitted to the Working Group and thinking about his own personal values about the use of personal data. Therefore, he said it is not based upon any other sources.

Mr. Petersen said what is viewed as portability in the exposure document is an issue that needs to be resolved. He said portability in the health insurance world is the ability to go from one insurance company to another with no new pre-authorization, even though the term is just used but has not been defined. He said it would be helpful if everyone discussing it in this Working Group were using the same definition for portability. He said Dr. Cude referred to not knowing what retention was, but that she had probably read some materials on it. He said retention is different than authorizing an insurance company to transfer a consumer’s information over to another for either underwriting or claims processing. He said that is a totally different sort of transfer of information that is done for completely different reasons. He said the company transfers the information so it can be used to underwrite or pay a claim while keeping it in the company’s records. Ms. Amann said for the purpose of the exposure draft, a succinct definition will need to be developed, or perhaps it must be determined that portability may not be the best term to use. However, she said this has been a good conversation because it helps to clarify that it is not only about portability from the health perspective, but from a consumer’s general perspective, who has collected all necessary information that the consumer now wants to share with various insurers with a request for a quote. The consumer does not want to fill out 18 different forms to get those quotes. Dr. Cude said it relates to who owns the data, with the concept being it is my own personal data, and I should have access to it. Mr. Diederich said portability is seen as a subset of the right of access because access is the overarching right. He said it is information about you personally and you have a right to access it, which means portability would mean how that data is given to you. It should be in an easily machine-readable format that is understandable because consumers like it that way. Mr. Diederich said the right of access is what the Working Group is trying to define, and portability refers to certain aspects of that right. Ms. Amann said that is how she had always understood portability, but it is good to know that it needs some work. She said the Working Group wants to be clear about its intention, which is to not be specific by line of business, while recognizing that health has a great deal of guidance through HIPAA and other provisions. Mr. Petersen said that is a good reminder that the health insurance industry is heavily regulated by the HIPAA privacy rule, and that rule preempts state law. He said he believed people were leaning towards an exemption if the company complies with HIPAA, and he believed it might be easier if companies have that exemption because then the Working Group could make rules that are not as complicated for the rest of the industry, while leaving health insurers to tackle the extensive HIPAA privacy role to which they are already subjected.

Angela Gleason (American Property Casualty Insurance Association—APCIA) said the APCIA’s comments and observations include high level examples about how the restrictions and requirements for data align with the relationships of the parties and the products, as well as how that works together. She said the APCIA did not like use of the word “right” in discussions, but it looks forward to working through discussions about that during the Working Group process. Ms. Amann asked everyone to remember that the Working Group was instructed to focus on the six consumer rights and use them to provide recommendations along with the basis for the recommendations for consideration by the Market Regulation and Consumer Affairs (D) Committee. She also asked the Working Group to recognize that the recommendation would not be the conclusion, but there would still be model work to do in 2022. She said once the Committee has blessed the definitions and recommendations, the Working Group would pick up where it left off with revisions to Model #670 and Model #672 if that ends up being the will of the group, or it will develop a new model if so directed. Therefore, she said there would still be plenty of opportunities to
comment on whatever is concluded or recommended going forward. Wes Bissett (Independent Insurance Agents and Brokers of America—IIABA) asked if the Working Group’s goal is that the deliverable to the parent committee by the end of the year will essentially be plain language recommendations on these six issues, and not necessarily proposed statutory or regulatory language that would effectuate whatever outcomes the Working Group recommends. Ms. Amann said when Model #670 and Model #672 were last revised, several items were identified as outdated from a business or technology perspective, but the Working Group did not want to spend a lot of time wordsmithing the function or right. Lois E. Alexander (NAIC) said the expectation is that the deliverable will be the privacy policy statement with a comprehensive report about what was discussed, as well as the reasons why the Working Group supports the recommendations given. She said the report will not be just a paragraph with Working Group recommendations because that is something that could be done any time. She said the reason why the Working Group is going through this entire process is to get feedback from all stakeholders so a comprehensive report could be formulated for the parent company. Mr. Bissett said that explanation helps because stakeholders have struggled to understand the purpose of the privacy policy statement and how to respond to it, but it sounds like the privacy policy statement is ultimately the center of gravity for recommendations on the six issues or rights on which stakeholders can focus their efforts. Ms. Amann said Working Group discussions going forward will be used to tweak the privacy policy statement and recommendations report based on the better understanding and clarification obtained through consensus on the document. She said the document is long and it will probably get a little longer, but due to an ambitious schedule, she recognized that everybody would not be able to make conference calls as frequently as they are scheduled. However, she asked stakeholders who have questions or comments to submit, but who are unable to make the call, to please let Ms. Alexander or himself know, and they would be glad to raise the points on your behalf. She said if anyone misses a call and has questions, to please reach out and call either of them as they are always glad to bring anybody up to speed on what was discussed, as well as how or why a decision was made. Ms. Amann said the next Working Group meeting is scheduled for Sept. 13.

Having no further business, the Privacy Protections (D) Working Group adjourned.
The Antifraud (D) Task Force met Nov. 12, 2021. The following Task Force members participated: Trinidad Navarro, Chair (DE); Judith L. French, Vice Chair, represented by Michelle Brugh Rafeld (OH); Alan McClain represented by Crystal Phelps and Paul Keller (AR); Evan G. Daniels represented by Paul Hill (AZ); Ricardo Lara represented by Shawn Conner (CA); Andrew N. Mais represented by Kurt Swan (CT); Karima M. Woods represented by Michael Press (DC); Doug Ommen represented by Benjamin Olejnik (IA); Dean L. Cameron represented by Kyle Cammack (ID); Vicki Schmidt represented by Tate Flott (KS); Sharon P. Clark represented by Juan Garrett (KY); James J. Donelon represented by Matthew Stewart (LA); Anita G. Fox represented Michele Riddering (MI); Grace Arnold represented by Chris Ness and Devin Chapman (MN); Chlora Lindley-Myers represented by Carrie Couch and Jeana Thomas (MO); Mike Chaney represented by John Hornback (MS); Troy Downing and Troy Smith (MT); Mike Causey represented by Angela Hatchell, Della Shepherd and Tracy Biehn (NC); Jon Godfread represented by Dale Pittman and Jennifer Middlestead (ND); Eric Dunning represented by Martin Swanson (NE); Chris Nicolopoulos represented by Edwin Pugsley and Heather Silverstein (NH); Glen Mulready represented by Rick Wagnon (OK); Andrew R. Stolfi represented by Dorothy Bean (OR); Raymond G. Farmer represented by Gwen Fuller McGriff (SC); Jonathan T. Pike represented by Armand Glick (UT); Scott A. White represented by Mike Beavers (VA); and Allan L. McVey represented by Greg Elam (WV). Also participating was: John Haworth (WA).

1. **Adopted its Oct. 27 and Summer National Meeting Minutes**

   The Task Force met Oct. 27 and took the following action: 1) adopted its 2022 proposed charges.

   Mr. Swan made a motion, seconded by Mr. Stewart, to adopt the Task Force’s Oct. 27 (Attachment One) and July 26 (*see NAIC Proceedings – Summer 2021, Antifraud (D) Task Force*) minutes. The motion passed unanimously.

2. **Received an Update from the Antifraud Education Enhancement (D) Working Group**

   Ms. Rafeld said the Working Group is currently in the process of setting up webinars for the state fraud directors and staff. The first is the annual investigator safety webinar, which will be offered in December. Ms. Rafeld said the webinar is consistently being updated, and she encourage everyone to attend even if they have already due to the new information being added. Ms. Rafeld said the next webinar that is being worked on is an open-source webinar series. She said in 2019 at the Insurance Fraud Management (IFM) Conference, Michele Stuart (JAG Investigations) provided training, and the Working Group is looking to host this in a segmented portion with two to three sessions. Ms. Rafeld said the Working Group is always looking for new training topics, and she encouraged state insurance regulators or industry representatives to send in topics to the NAIC.

   Ms. Rafeld said moving forward, the Working Group will continue to monitor emerging issues for new fraud schemes and provide the necessary training to assist with education on the various types of insurance fraud.

3. **Received an Update from the Antifraud Technology (D) Working Group**

   Mr. Glick said the Working Group has continued to work on the creation of an Antifraud Plan Repository. Mr. Glick said the Working Group has previously reviewed the antifraud plan guideline in 2020. He said the Working Group created a subject matter expert (SME) group to develop an antifraud template and workflow. Mr. Glick said the SME group is finalizing its work on this project and expects to have it finalized by end of year. Mr. Glick said the final draft will be presented to the Working Group for its consideration and then will refer it to the Task Force for review.

4. **Received an Update from the Improper Marketing of Health Insurance (D) Working Group**

   Mr. Pyle said the Working Group has continued increase the size of its Working Group members and is currently at 15 members. He said the Working Group has continued to meet monthly in regulator-to-regulator session. Mr. Pyle said the Working Group has had participation from federal agencies including the Federal Bureau of Investigations (FBI), the U.S. Department of Labor (DOL), and the federal Centers for Medicare & Medicaid Services (CMS). Mr. Pyle said due to the discussions during these meetings and the added support from these federal agencies, the Working Group has been able to act on some of the bad actors that are improperly marketing health insurance.
Mr. Pyle said the Working Group will continue meet monthly in regulator-to-regulator session, but it is working to hold open meetings as well. Mr. Pyle said the Working Group will hold its first open meeting on at the Fall National Meeting, to hear presentations from the Alliance of Health Care Sharing Ministries, America’s Health Insurance Plans (AHIP), and the NAIC consumer representatives on the efforts they are making to fight against the improper marketing of health insurance. Mr. Pyle said the Working Group plans to meet next on Dec. 2 in regulator-to-regulator session.

5. **Heard a Report from the Coalition**

Matthew Smith (Coalition Against Insurance Fraud) said the Coalition will be on the keynote address kicking off the Global Insurance Fraud Summit. He said during the Summit, the Coalition will be releasing the first ever study completed on the globalization of insurance fraud. The data has been complied in Denmark over the last couple of months. Mr. Smith said the Coalition has closed its study, which is completed every two years on the state of insurance fraud technology, reviewing how insurers are using technology to identify fraud. Mr. Smith said this data can also be used to see areas of weaknesses, what the concerns are, and what needs to improve. He said the Coalition will be releasing that study and a joint presentation with Statistical Analysis Systems (SAS). Mr Smith said SAS is the Coalition’s partner in Washington, DC. He said the study will also be presented at the Coalition’s annual meeting on Dec. 7 and will then be available, starting Dec. 8, on its website.

Mr. Smith said the Coalition’s annual meeting will take place Dec. 6–7 in Washington, DC. He said at this time, they have 130 people registered to attend. Mr. Smith said during this meeting, they will discuss towing fraud and staged automobile accidents in addition to looking into 2022. He said they will be presenting the Prosecutor of Year Award and the 2021 Fraudster Hall of Shame. Mr. Smith said they will be updating their bylaws, encouraging other associations and companies around the world to join the Coalition.

Mr. Smith said the Coalition’s amicus program or friend of the court judicial program has two new briefs. The first is in the Supreme Court for Colorado dealing with individual insurance company employees being named as defendants in bad faith claims. Mr. Smith said the second is in New Jersey with a case of Liberty Mutual vs. Tech-Dan. The Coalition has filed a brief concerning whether if someone is found culpable for civil damages for committing insurance fraud, there should be joint liability where the damages can be collected against any one of them.

Ms. Smith said as the Coalition looks toward 2022, it is compiling a list of 22 legislative priorities, which will be adopted at the upcoming annual meeting. He said the Coalition has partnered with California to get criminal statute passed. Mr. Smith encourages states to reach out to the Coalition for assistance with getting new laws passed.

Ms. Rafeld said she would encourage other state fraud directors to get involved with the Coalition and use the numerous resources they have available. Commissioner Navarro said he agrees with her comments and encourages states to use the Coalition and each other to work toward the same goal of fighting against insurance fraud.

Having no further business, the Antifraud (D) Task Force adjourned.

*AFTF 11.12.21 Minutes*
The Antifraud (D) Task Force conducted an e-vote that concluded Oct. 27, 2021. The following Task Force members participated: Trinidad Navarro, Chair, represented by Frank Pyle (DE); Tynesia Dorsey, Vice Chair, represented by Michelle Brugh Rafeld (OH); Lori K. Wing-Heier represented by Alex Romero (AK); Evan G. Daniels represented by Paul Hill (AZ); Ricardo Lara represented by George Mueller (CA); Michael Conway represented by Damion Hughes (CO); Andrew N. Mais (CT); Karima M. Woods represented by Brian Bressman (DC); Sharon P. Clark (KY); James J. Donelon represented by Matthew Stewart (LA); Kathleen A. Birrane represented by James Wright (MD); Grace Arnold represented by Michael Marben (MN); Chlora Lindley-Myers represented by Carrie Couch (MO); Mike Chaney represented by John Hornback (MS); Mike Causey represented by Tracy Biehn (NC); Jon Godfread represented by Dale Pittman (ND); Eric Dunning represented by Martin Swanson (NE); Chris Nicolopoulos represented by Heather Silverstein (NH); Marlene Caride represented by Richard Besser (NJ); Russel Toal (NM); Tanji J. Northrup represented by Armand Glick (UT); Scott A. White represented by Mike Beavers (VA); and Allan L. McVey (WV).

1. **Adopted its 2022 Proposed Charges**

The Task Force considered adoption of its 2022 proposed charges. Its 2022 proposed charges remain consistent with 2021, except for the change to the Antifraud Technology (D) Working Group charge to work with the NAIC to develop an Antifraud Plan Repository to be used by insurers to create and store an electronic fraud plan for distribution among the states/jurisdictions.

A majority of the Task Force members voted in favor of adopting its 2022 proposed charges (see *NAIC Proceedings – Fall 2021, Executive (EX) Committee and Plenary, Attachment Three*). The motion passed unanimously.

Having no further business, the Antifraud (D) Task Force adjourned.
MARKET INFORMATION SYSTEMS (D) TASK FORCE

Market Information Systems (D) Task Force Nov. 23, 2021, Minutes.................................................................9-124
Artificial Intelligence (AI) Subject Matter Expert (SME) Recommendations (Attachment Two)..............................9-128
The Market Information Systems (D) Task Force met Nov. 23, 2021. The following Task Force members participated: Mike Kreidler, Chair (WA); Chlora Lindley-Myers, Vice Chair, and Brent Kabler (MO); Evan G. Daniels represented by Maria Ailor (AZ); Ricardo Lara represented by Pam O’Connell (CA); Michael Conway represented by Damion Hughes (CO); Andrew N. Mais represented by Kurt Swan (CT); Trinidad Navarro represented by Frank Pyle (DE); Doug Ommen represented by Kim Cross (IA); Dana Popish Severinghaus represented by Erica Weyhenmeyer (IL); Vicki Schmidt represented by Tate Flott (KS); James J. Donelon represented by Jeff Zewe (LA); Troy Downing represented by Troy Smith (MT); Marlene Caride represented by Ralph Boeckman (NJ); Judith L. French represented by Rodney Beetch (OH); Cassie Brown represented by Rachel Cloyd (TX); Mark Afable represented by Rebecca Rebholz (WI); and James A. Dodrill represented by Jeannie Tincher (WV).

1. **Adopted its Oct. 29 and Summer National Meeting Minutes**

Commissioner Kreidler said the Task Force conducted an e-vote that concluded Oct. 29 to adopt its 2022 proposed charges.

Ms. Rebholz made a motion, seconded by Ms. O’Connell, to adopt the Task Force’s Oct. 29 minutes (Attachment One). The motion passed unanimously.

Director Lindley-Myers made a motion, seconded by Mr. Flott, to adopt the Task Force’s July 28 minutes (see NAIC Proceedings – Summer 2021, Market Information Systems (D) Task Force). The motion passed unanimously.

Mr. Kabler said the Working Group met Nov. 5 and Oct. 15 in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings. During these meetings, the Working Group reviewed the progress of the implementation of the Market Information Systems (MIS) Metric Report recommendations and methods to improve metric result reporting and data quality. He emphasized the metric report is not a scorecard on how states are using the MIS and is not meant to indicate that any state is doing anything wrong. He said the metric report is simply a tool to identify consistency, timeliness, and accuracy concerns. He said there may be good reasons that a metric may be moving in a positive or negative direction, but the report does not capture those reasons. He said the purpose of the report is to allow states to identify concerns and address them, if necessary. Mr. Kabler noted there was one error in the metric report that needs to be corrected. He said the comparison of the counts of market conduct examinations in the Insurance Department Resources Report (IDRR) and the Market Actions Tracking System (MATS) are incorrect, and NAIC staff are trying to determine the correct numbers.

Mr. Kabler said the Working Group approved two new Uniform System Enhancement Request (USER) forms. The first USER form is to create a Personalized Information Capture System (PICS) event for Market Conduct Annual Statement (MCAS) waiver and extension requests that will allow users to specify they want to receive regular reminders of waivers and extensions not acted upon. The second USER form is to create a telehealth code in the Complaint Database System (CDS).

Mr. Kabler said the Working Group adopted the artificial intelligence (AI) subject matter expert (SME) group’s recommendations (Attachment Two).

Mr. Flott made a motion, seconded by Ms. O’Connell, to adopt the Market Information Systems Research and Development (D) Working Group report. The motion passed unanimously.

3. **Considered AI Recommendations**

Commissioner Kreidler said one of the Task Force’s charges for 2021 was to develop recommendations for the incorporation of AI abilities in the NAIC MIS. The Task Force tasked the Market Information Systems Research and Development (D) Working Group to conduct the research and draft recommendations by the Fall National Meeting.
Commissioner Kreidler said the report was distributed to the Task Force and interested parties on Oct. 20 and posted to the Task Force web page at the same time. He said if the report is adopted, it will be forwarded it to the Market Regulation and Consumer Affairs (D) Committee in completion of the Task Force’s charge.

Mr. Kabler said that as background, he is skeptical of AI techniques. He said he was trained in classical statistical methods. He noted that AI was not developed in the statistics departments of universities, but in the computer sciences. He said he kept an open mind during the Working Group’s research, and he sees potential in AI that should be investigated.

Mr. Kabler said the report recommends moving ahead slowly in the consideration of incorporating AI in the NAIC MIS because there are issues with the data in the MIS. He said the first recommendation of the report is to analyze the data in the MIS to ensure the data collected from companies is accurate. He noted definitional and reporting issues in the MCAS as an example of potentially inaccurate data. He said AI techniques require more data than is currently being collected. He said the report recommends moving slowly into incorporating AI and that after analyzing the data needs and accuracy, analysts should incorporate more traditional statistical methodologies first. He said this would be a multiyear process requiring lots of resources from the states.

Commissioner Kreidler said there is reason to be cautious, and the report outlines a good plan for moving forward.

Ms. Cloyd said the report recommends a slow approach, but AI is a fast-moving field and the state insurance regulators will be outpaced. Ms. Cloyd said the report does not include NAIC feedback on the current MIS capabilities and the costs, resources, time required, and competing priorities.

Ms. Cloyd also said NAIC membership is forming the Innovation, Cybersecurity and Technology (H) Committee. She noted the report and the recommendations overlap with the charge to the Big Data and Artificial Intelligence (EX) Working Group to “assess data needs and required tools for state insurance regulators to appropriately monitor the marketplace, and evaluate the use of big data and intelligent algorithms, including AI in underwriting, rating, claims and marketing practices.” She said it should be determined whether this Task Force or the (H) Committee should be exploring the incorporation of AI in MIS. Commissioner Kreidler acknowledged there is a question as to which committee this charge belongs to, but he said any consideration of AI in MIS would involve the Task Force. He said he was afraid these considerations may fall through the cracks if the Task Force did not do this exploratory work.

Ms. Cloyd asked if these recommendations should be a narrow and well-defined proof-of-concept including an analysis of costs and benefits rather than being as broad as it is. Mr. Kabler said a proof-of-concept is a good idea. He said the financial regulatory department at the NAIC investigated this, and it was not clear that traditional statistical techniques were inferior to AI techniques for predicting insolvencies.

Andrew Pauley (National Association of Mutual Insurance Companies—NAMIC) said recommendations on incorporating AI in the NAIC MIS is premature given that the NAIC is not finished with its work of implementing regulation of the insurance industry regarding AI, machine learning (ML), and predictive analytics. He said this may lead to redundancies and the need to revisit many concepts later. He said it is still not clear that using AI will be superior to current analytical methods. He said NAMIC supports some of the recommendations of the report, such as analyzing the data currently in the MIS regarding the data’s quality and then re-evaluating the analytical tools. He said NAMIC is concerned with the collection of transactional-level data if it is not necessary to perform regulatory activities. He said this could subject sensitive, proprietary data to cyber risk and confidentiality breaches.

Birny Birnbaum (Center for Economic Justice—CEJ) noted the inconsistency in the statements from Texas and NAMIC that AI is moving swiftly, but the work of the Task Force regarding AI should slow down. He said the Market Analysis Procedures (D) Working Group and the Task Force are already doing the work of the first two recommendations in the report to assess the quality of the MIS data and analysis techniques, so no cost benefit analysis is necessary for those recommendations. The work would be the same, but more targeted. Mr. Birnbaum said some of the other recommendations should be made into charges for the Task Force or the Market Analysis Procedures (D) Working Group.

Mr. Birnbaum said he disagreed that there is a stark contrast between AI and classic statistical analyses. He said they can be used in conjunction. He did, however, agree that to be most effective, AI needs a large amount of data. He said it is understandable that financial state insurance regulators would not find AI particularly useful for predicting financial insolvencies since there are not many instances of insolvency to begin with, so any regression analysis would not be helpful. Mr. Birnbaum suggested a charge related to the fifth recommendation to begin exploring the types of data needed to implement more robust statistical methods including AI. He said this would not be expensive to do since it is merely a charge to explore
what type of data is needed. Ms. Cloyd said the Task Force should first determine what its end goal is before exploring data needs. The Task Force needs to determine if AI is feasible within the existing systems. She said to fulfill any charge will take time and resources, and the NAIC should provide feedback on the time and cost prior to the creation of a charge. Mr. Birnbaum said the purpose is clear—it is to improve market analysis and focus regulatory resources. The charge would be to determine the types of data needed to enable the use of robust statistical methods, including AI. He said the NAIC is ready and willing to assist and have the capabilities. He said the charge would not be a large resource commitment and would only be continuing what the Task Force and the Market Analysis Procedures (D) Working Group are already doing, but in a more focused way. Ms. Cloyd said she did not say the NAIC was not willing or capable but was only asking for written feedback on the costs and resources. Mr. Birnbaum said the Task Force needs the charge to keep learning about AI, its capabilities, and the data type needs.

Commissioner Kreidler asked for additional comments and said the discussion will continue during the Task Force’s next meeting.

Having no further business, the Market Information Systems (D) Task Force adjourned.

MISTF 2021 Fall National Meeting Minutes
The Market Information Systems (D) Task Force conducted an e-vote that concluded Oct. 29, 2021. The following Task Force members participated: Mike Kreidler, Chair (WA); Chlora Lindley-Myers, Vice-Chair (MO); Lori K. Wing-Heier (AK); Peni Itula Sapini Teo (AS); Evan G. Daniels (AZ); Ricardo Lara (CA); Michael Conway (CO); Andrew N. Mais (CT); Trinidad Navarro (DE); Doug Ommen (IA); Dana Popish-Severinghaus (IL); Vicki Schmidt (KS); James J. Donelon (LA); Grace Arnold (MN); Troy Downing (MT); Marlene Caride (NJ); Russell Toal (NM); Barbara D. Richardson (NV); Judith L. French (OH); Glen Mulready (OK); Andrew R. Stolfi (OR); Cassie Brown (TX); Michael S. Pieciak (VT); Mark Afable (WI); and Allan L. McVey (WV).

1. **Adopted its 2022 Proposed Charges**

   The Task Force considered adoption of its 2022 proposed charges. The Task Force’s 2022 proposed charges remain consistent with 2021, except for the removal of the charge to make recommendations for the incorporation of artificial intelligence (AI) abilities in the NAIC market information systems.

   A majority of the Task Force members voted in favor of adopting its 2022 proposed charges (see *NAIC Proceedings – Fall 2021, Executive (EX) Committee and Plenary, Attachment Three*).

   Having no further business, the Market Information Systems (D) Task Force adjourned.
Executive Summary

This report fulfills the Market Information Systems Research and Development (D) Working Group charge to evaluate the potential benefits of artificial intelligence (AI) in relation to market analysis. After careful consideration, the Working Group concluded that there may be possible benefits to improve analysis techniques. Several caveats are discussed as well. AI may not be suitable for data currently available to state insurance regulators. In addition, some of the techniques perform complex data mining operations, which can produce results that lack a clear interpretation. Lastly, AI techniques are designed for, and many require, very large datasets. As such, AI should be contemplated in the context of a long-range plan, beginning with repairing known issues with existing data, and employing more rigorous traditional statistical techniques to assess predictive accuracy of analytical tools. Subsequently, state insurance regulators can consider the acquisition of data appropriate to AI.

Introduction

In early 2021, the Market Information Systems Research and Development (D) Working Group received a charge from the Market Information Systems (D) Task Force to explore possible applications of artificial intelligence (AI) methods in market analysis. An early difficulty encountered by the Working Group is that the term “AI” itself has a variety of contested meanings. In addition, private sector entities have adopted the term as a marketing concept and inappropriately apply the label to products simply as a selling point. As such, the term has come to acquire a variety of meanings and is an “essentially contested concept.”

At its most general level, the term “AI” implies machine capacities that mimic or are analogous to processes of human reasoning and learning and entail some degree of machine autonomy in which learning occurs without significant human intervention. Beyond this general description, the Working Group did not feel that an attempt to define the term more strictly would be fruitful. Rather, the term is employed simply as a shorthand reference for a collection of various techniques that algorithmically seek patterns in data that are predictive of some future outcome. Common methods include machine learning, neural networks, and decision tree analysis. These processes are often contrasted to the traditional hypothetical-deductive methods of model specification associated with classical statistics. However, there does not appear to be a bright line of demarcation so that a particular technique can be firmly fixed within either category.

In addition, the Working Group focuses on what is commonly called “narrow AI,” in which machine algorithms are employed for narrowly defined and limited tasks. More advanced systems, called

---

1 The term “essentially contested concept” was coined by W.B. Gallie in the seminal presentation to the Aristotelian Society in 1956.
“general AI,” possess generalized autonomous problem-solving capacities that are comparable to the processes of the human brain, and they are able to adapt to novel situations or information (Macnish et al., 2019).

It is important to emphasize the ways in which AI modeling techniques contrast to the standard scientific model employed in classical or traditional statistics:

**Classical Statistics:** Method of hypothetical-deductive reasoning in which hypotheses are clearly and narrowly specified prior to data testing, often with a prior understanding of the underlying causal nature of the relationships between variables. **Purpose:** To further causal understanding.

**AI:** Often employs a type of “data mining” in which a machine pattern-seeking algorithm is released “into the wild” to identify possible correlations between variables that may be predictive of some independent variable. Hypotheses are not specified prior to data analysis, and the algorithm may very well identify correlations that would not have occurred to an analyst and whose causal relationship is constructed post-hoc (to the degree that AI users are concerned with causality at all). **Purpose:** Predict future outcomes or events.

The difference between these two approaches is not trivial, and significant disagreements about the advantages and disadvantages of AI remain. It is of note that AI did not emerge principally from university statistics departments, but rather from the field of computer science. Many statisticians remain skeptical of the techniques and have offered up a variety of caveats for their use. For example, recently the American Statistical Society (ASA) reacted to the “reproducibility crisis” afflicting some disciplines that have discovered, with much consternation, that a large volume of published works could not be replicated. The concern was that increasingly less rigorous statistical methods departing from the hypothetical-deductive approach were becoming more prominent in a variety of fields, undermining confidence on research findings. Remarkings on departures from a rigorous hypothetical-deductive approach with “data mining” and like methods in which pattern seeking is largely ceded from a researcher to a machine, the ASA warned about improper inferences that might result from such techniques. The ASA centered its discussion on the p-value, related to the probability that some observed relationship occurred by chance along. A low p-value is often employed to minimize the probability that chance relationships will be misinterpreted as a relationship that is a meaningful, non-random outcome:

“Conducting multiple analyses of the data and reporting only those [analyses] with certain p-values...renders the reported p-values essentially uninterpretable. Cherry-picking promising findings, also known by such terms as data dredging, significant chasing, significance questions, selective inference and a ‘p-hacking’ leads to a spurious excess of statistically significant results...and should be vigorously avoided” (Wasserstein & Lazar, 2016).

To translate the ASA’s statement into more easily understood and less technical terms, the ASA is warning against false positives in which an analysis produces random or chance correlations between items that are not meaningfully related—that is, where a chance relationship is mistaken for a true causal relationship. That AI largely jettisons causal understanding as its primary goal (to the degree that causality is a concern at all) increases the probability that statistical results may be uninterpretable in any meaningful sense. This is clearly evinced by the increasing debate among state insurance...
Adopted by the Market Information Systems Research and Development (D) Working Group, Oct. 14, 2021

regulators and insurers regarding the meaning of statistical relationships appearing in predictive models that lack intuitive or, in many cases, even plausible explanations. See Appendix A for further discussion of the ASA statement.

The discussion above is not intended to sway state insurance regulators one way or the other with respect to AI. The purpose is simply to proffer some caveats shared by many statisticians. A final caveat is the AI techniques were developed to analyze very large data sets consisting of millions of records and possibly thousands or tens of thousands of variables. It is said to have an advantage in that algorithms can perform a large volume of analyses across different constellations of variables in a way that would be highly impractical employing traditional (and manual) model building. For small data sets, such as the limited data currently available to market analysts, it is unclear whether the expense associated with developing AI techniques can be justified, nor whether AI is at all superior to traditional model building methods. This is not an unimportant point and is discussed in more depth elsewhere in this recommendation.

Current Status of Market Analysis

Quantitative market analysis relies on just a handful of data sources:

**The Complaint Database System (CDS):** The NAIC compiles complaints against insurers received by state insurance regulators. Thus, each state has access to a national-level database. Complaint indices are “normalized” by expressing the volume of complaints to premium, compared with the overall industry total.

**The Regulatory Information Retrieval System (RIRS):** Regulatory actions in relation to insurance entities are captured in the RIRS database. Actions range from intervention in financially troubled entities to violations of producers and insurance carriers. Each record identifies the cause of the action, as well as any orders, fines, or restitution amounts. The RIRS database is currently being substantially revised to capture significantly more detail.

**The Market Actions Tracking System (MATS):** The MATS database captures information pertaining to market conduct exams, as well as actions short of exams. Data captured include area of scrutiny (claims, underwriting, etc.) and the outcome of the market action (order, fine, etc.). By matching MATS actions with RIRS, additional detail about the nature of the violation can be assessed.

**The Market Conduct Annual Statement (MCAS):** The MCAS was developed to capture data with the primary purpose of assessing an insurer’s market performance and identify potential market irregularities. The data focus primarily on claims handling and underwriting, and data are scrutinized with respect to claims processing times and denials, nonrenewal and cancellation practices, and overall turnover in a book of business. Data are captured by line and coverage. To date, MCAS data are collected for life and annuities, private automobile, homeowners, health (both on and off the federally facilitated marketplace [FFM]), long-term care (LTC), lender-placed insurance, disability income, and private flood.
Miscellaneous Data Sources: Some financial data has been incorporated into market information systems. Insurers that are under financial stress, or that rapidly expand into or contract out of a line of business, or that exhibit high defense or other adjudication costs, may be subjected to additional analysis. While financial indicators are only indirect or proxy measures of potential market issues, and by themselves may have no clear market-based interpretation, interpretation within the context of a host of other indicators may be reflective of the present of a market-relevant issue.

The NAIC, in conjunction with state insurance regulators, has developed a broad scope “market score” that incorporates much of the data referenced above, which is made available to regulators via the Market Analysis Prioritization Tool (MAPT). One such data are “normalized” by the premium volume and scope of company operations as necessary. For example, several RIRS-based ratios express the volume of RIRS actions in relation to premium volume, the number of states in which they have significant premium, and a composite ratio that incorporates both premium and scope. Each ratio is given a score, and their contribution to the overall score weighted according to their perceived predictive relevance. For example, financial ratios are accorded significantly less weight than complaints, as their relationship to market misconduct is considered more speculative and indirect.

An important caveat is that predictive analytics is not well developed in market regulation. The ratios employed in the Market Analysis Review System (MARS) have not been subjected to rigorous statistical tests that demonstrate their analytic utility. While some work has been performed in this regard, such work is significantly hampered by a dearth of appropriate data. For example, future RIRS actions are often employed as the dependent variable (the outcome of interest to be predicted). However, this presents all manner of statistical challenges. While it is certainly reasonable to use prior outcomes (past RIRS actions) to predict future outcomes (the RIRS actions to be predicted), employing RIRS actions as both dependent and independent variable introduces significant complexities in the interpretation of any observed relationship between the two. One can imagine, for example, that the use of RIRS actions in market analysis invites greater scrutiny to a given insurer, and that in turn generates future regulatory actions precisely because the company received additional scrutiny. Companies that have no “prior offenses” fail to attract regulatory scrutiny, so that any infractions may escape regulatory action for precisely that reason. This problem is certainly not insurmountable, but it must be explicitly recognized in any model building exercise, whether with AI or with more conventional statistical techniques.

In general, the paucity of rich data sources has significantly hampered the adoption of more rigorous analytical techniques. To return to RIRS, these data are not rich sources of detailed information. Schematics are not well designed “from the ground up.” Essential data are missing, such as line of business.

Any consideration of AI or any other analytical techniques must necessarily view the utility of such techniques within the context of available data. Regardless of the validity of a technique in general, it will have limited utility if data are themselves limited. Any recommendation to employ such methods must therefore at the same time recommend a thorough review of available data.

Importantly, results of quantitative analysis are always treated as merely suggestive and tentative and are regarded as at most a precursor to more qualitative analysis. It currently is employed to prioritize...
entities that may merit additional scrutiny and to narrow focus on a much more limited subset of companies out of a larger pool of companies. It therefore primarily prioritizes limited regulatory resources.

State insurance regulators avail themselves of the formal analytical processes adopted by the NAIC. Quantitative or “baseline” analysis identifies entities with anomalous indicators that significantly depart for industry-wide values. A “level 1” analysis may be pursued, in which an analyst devotes additional scrutiny to such things as complaint trends, common reasons complaints are lodged against an insurer, similarities in RIRS actions, etc. If concern still remains (or additional concerns are identified) subsequent to level 1 analysis, a structured level 2 analysis may be performed. A level 2 analysis requires a much greater commitment of time and resources. For example, rather than just manually reviewing complaint data to identify patterns, an analyst may manually review actual complaint documentation to garner a more detailed understanding of the nature of complaints.

As a preliminary to the following discussion, AI/statistical analysis may have two primary functions within the context of the current market analysis structure:

1. More accurately identify companies that merit the additional expenditure of resources necessary to perform the more labor-intensive level 1 and level 2 analyses. Analysis processes that more efficiently identify problem companies for this purpose are by definition more effective and more effectively target resources by avoiding “false positives” (for lack of a better word).

2. Potentially, AI methods could assume many of the functions that are currently performed manually. For example, many of the pattern-seeking analysis performed by analysts in a level 1 review could conceivably be more efficient if automated. Potentially, AI could identify patterns that might elude a human analysis. A very advanced level of AI could perhaps assume complex analysis involved with manually reviewing complaint files and documents. However, while the possibility is raised here, it is not further pursued. That level of AI suitable for tasks may not even exist as yet, or if it does, it may be so specialized that it may not be available to state insurance regulators. Even if available, the likely enormous costs themselves would render them highly impractical.

Whether such AI exists, is available at a practical cost, and can actually out-perform more conventional analyses are questions that the Market Information Systems Research and Development (D) Working Group is simply unable to satisfactorily address. The Working Group merely suggests initially limiting the scope of ambitions to a few methods that are commonly, if not universally, recognized as AI, such as machine learning or neural networks. More expansive or ambitious efforts may result in a fruitless search for “unobtainium.”

Given very large data sets, well beyond what is currently available to market analysts, AI may have clear advantages to more conventional approaches. The slow, methodical, hypothetical-deductive

---

2 A tongue-in-cheek term originating among engineers in the 1950s. It is defined by Wikipedia as “… any hypothetical, fictional, or impossible material, but it can also mean a tangible but extremely rare, costly, or reasonably unobtainable material. Less commonly, it can refer to a device with desirable engineering properties for an application, but which are exceedingly difficult or impossible to achieve.”
approach that forms the core of conventional statistics may have advantages in terms of generating valid causal conclusions. However, AI may have certain advantages with respect to confronting the enormity of modern data. As AI is well-suited to performing much more expansive analysis and pattern-seeking routines over vast quantities of data, it may well identify predictive patterns that would have escaped conventional analysis or that are counterintuitive such that some hypotheses may never have occurred to an analyst employing a standard hypothetical-deductive approach. However, there are distinct disadvantages as well, and they are shared by other approaches often termed “data mining.” The fact is that patterns may lack an intuitive meaning, and the manner in which such patterns are identified and render interpretation may be unclear. Additionally, patterns may generate numerous “false positives,” apparent patterns or correlations that are purely random and possess no meaning or any real predictive power whatsoever. This is not fatal for AI techniques, but it introduces much in the way of caveats and requires significant remedial measures to be employed. This problem is so significant that it merits a much fuller discussion in a separate section below.

The Work of Market Information Systems Research and Development (D) Working Group

The Working Group solicited input from various parties. Two parties delivered presentations to the Working Group:

1. On June 16, 2021, the Working Group discussed a presentation regarding AI methods currently being explored by NAIC staff to predict which insurers are likely to experience financial stress, including insolvency. Beginning in January 2021, an outside consulting group was retained to develop both AI as well as more traditional statistical techniques to construct predictive models of insolvency risk. The efforts are ongoing at the time of writing. Presenters believed the methods were promising and could significantly advance financial risk surveillance. Among AI and statistical models explored were decision tree analysis, generalized linear models (GLMs), and logistic regression.

2. During the Working Group’s June 21, 2021, meeting, Birny Birnbaum (Center for Economic Justice—CEJ) encouraged the Working Group to adopt a long-term perspective and develop a multiyear plan to explore AI techniques that might be beneficial to market analysis. He also indicated that state insurance regulators have to date failed to acquire granular transactional data that could be exploited by AI methods to afford a much more robust surveillance system to reduce consumer harm to the extent possible.

After the meeting, the Working Group convened a subject-matter expert (SME) group with the intent of creating a draft recommendation to be submitted to the Working Group.

Recommendations

The Working Group recommends developing a long-range plan, in a sequence of five steps.

1. **Existing Market Analysis Data**
   As noted above, market analysis suffers from a paucity of detailed data. Some movement in expanding data and remedying deficiencies was made with a complete redesign of the RIRS data, which will facilitate analysis of factors related to an entity sanctioned by state insurance regulators. If
implemented, RIRS will also capture much more detailed data related to the specific misconduct that garnered a regulatory response. The RIRS proposal is currently under discussion with the Market Information Systems (D) Task Force, to which Working Group reports.

The remainder of available data also suffers from significant deficiencies. Insurers employ a variety of definitions to produce MCAS data. Even such a fundamental concept as a “claim” is reported differently by different insurers, making market-wide analysis challenging. For example, the MCAS defines a claim in the conventional sense of “a demand for payment.” Investigation by the Missouri Department of Commerce & Insurance (DCI) has determined that the definition is interpreted in wildly divergent ways across the industry that simply makes meaningful comparison impossible and renders key market indicators or ratios largely meaningless. Some insurers set up a claim on a coverage that is reasonably related to the facts of the incident as relayed by a claimant. Other insurers set up all possible coverages on a policy as a claim in their internal systems regardless of whether those coverages might be reasonably implicated in a claim. As might be imagined, those carriers have significantly higher ratios of claims closed without payment. This and other issues remain with the MCAS and significantly impair market analysis.

**Recommendation 1:** Survey currently available market analysis data, and identify substantive deficiencies based on the nature and substance of the data elements collected. Ensure that all data are consistently reported across insurers to the degree practical and ensure adherence to definitions of data elements.

**II. Existing Methods of Market Analysis**

Current quantitate methods of market analysis are large based on ad hoc and intuitive understanding of how data indicators might be related to market misconduct. For example, one of the earliest indicators developed are complaints received by state insurance regulators regarding insurers. It is probably not unreasonable to interrogate complaint data to identify trends over time, as well as just overall complaint volume, to attempt to identify potential problems in a market. Similar indices consider the volume of RIRS actions, as well as the gravity of infractions in terms of potential consumer harm. It is the opinion of many state insurance regulators that such indicators possess a rational relationship to market misconduct and are relevant to identify market actors that might benefit from a heightened level of regulatory scrutiny.

While the Working Group agrees with the rationale behind such market indicators, analytical tools have not to date been subjected to more rigorous statistical methods to clearly identify the predictive power and assess their relative importance or weight. For example, the MAPT, maintained by the NAIC and available to state insurance regulators, employs overall insurer scores based on various indicators. However, the weight of these indicators employed in the score were assigned by state insurance regulators based on experience, as well as assessment of whether a likely relationship have a clear rational meaning. For example, complaint ratios are weighted significantly more heavily than things like financial indicators. The Working Group believes subjecting the scoring system to rigorous statistical analysis could yield significant benefits in identifying problem market actors.
Recommendation 2: In conjunction with recommendation 1 (assess data quality), state insurance regulators should adopt a much more rigorously statistical approach to identify the predictive power of market scoring systems, assess how each variable should be weighted in terms of its unique contribution to productiveness, and drop those that lack analytic utility. In addition, effort should be made to integrate data into a single overall analysis. For example, the MAPT does not incorporate MCAS data, which is typically subject to a separate analysis. The Working Group believes that a “piecemeal” approach is likely less effective than a more integrated approach.

It is noted that the current state of data will likely prove limiting and that such efforts may not make much progress until additional data are made available (such as the proposed revisions to the RIRS data, currently subject to NAIC discussion).

III. Available Approaches: Exploring AI

In addition to more traditional statistical tools, such as various types of regression models and correlation analyses, AI may offer additional benefits. Some commercial statistical packages have incorporated AI methods. The statistics package SAS, which is widely used in both the private and public sectors, makes some AI techniques available in its standard statistical module. In addition, SAS has developed a module called Enterprise Miner, which incorporates both data mining and some lower-level AI routines. (For those familiar with the terms, it performs such things as decision-tree analysis, neural networks, and like forms of analyses). Other modules make machine learning available—a potentially powerful type of analysis that modifies prior predictive algorithms as new data become available.

Recommendation 3: In undertaking recommendation 2, incorporate various promising AI modes of analyses, as well as traditional statistical modeling. Constantly assess the precision of model outcomes relative to objectives such as identifying potential market issues.

IV. Qualitative Analysis

The current model of market analysis incorporates a multistage hierarchical structure. First, quantitative analysis such as that produced by the MAPT identifies potential market problems and narrows focus to entities that appear to exhibit potential areas of regulatory concern. Having narrowed down the focus of analysis to a much more limited pool of candidates, market analysts in the states engage in more manual or qualitative analysis of additional information sources. For example, an analyst may review a selection of complaint files to identify additional patterns of market behavior to better understand their nature and substance.

SAS is markets in “modules,” each consisting of a different suite of capabilities that can be tailored to a user’s need. For example, “base SAS” provides standard data handling programs. A “statistics module” provides a wide-ranging set of analytical routines.
Adopted by the Market Information Systems Research and Development (D) Working Group, Oct. 14, 2021

As noted above, AI techniques such as text analysis could potentially expand such exercises and improve the identification of concerning patterns at a deeper level, as well as assess ways to improve the efficiency of other qualitative tasks.

**Recommendation 4:** Assess ways AI can improve both the efficiency of qualitative analysis and facilitate pattern recognition across larger volumes of textual evidence, including most especially complaints, but perhaps other textual sources. For example, the “level 1” analysis formalized in NAIC market system may include a review of the “management discussion and analysis” of the financial annual statement.

V. Longer-Range Planning

As noted above, data mining and AI techniques were developed primarily as tools to analyze large volumes of data. For data past a certain magnitude, including especially those containing many hundreds or even thousands of variables, the traditional hypothetical-deductive cornerstone that is the cornerstone of traditional statistical inference may be ill-suited as well as cost-prohibitive in terms of time and resources. If the purpose is solely prediction as opposed to causal understanding, AI can fine-tune predictive algorithms by testing relationships that may be unlikely to occur to a statistician employing causal modeling.

Currently, such large volumes of data are unavailable to market analysts, though they could potentially be obtained. More granular data pertaining to claims, underwriting, and other areas of company operations are routinely collected via the “standard data requests” adopted as a supplement to the Market Regulation Handbook and commonly employed in market conduct exams.

However, AI and data mining can churn up counterintuitive statistical relationships that defy ready interpretation. In addition, it is likely to detect proxy relationships that are not understood. Proxy relationships, in which a third variable is substituted for an underlying variable of interest, are often employed in statistical models. This is often due to the accessibility or cost of obtaining data of the actual causal variable of interest. However, when employed in traditional statistical analysis, the nature of the relationship between the proxy variable and the actual variable of interest is generally well understood. This is not true of AI techniques that employ or resemble data mining.

The techniques are also likely to generate some number of purely chance relationship, where a correlation is generated by random chance. Inferential statistics seek to minimize mistaking a chance relationship for a meaningful association. Typically, the use of a p-value requirement of 0.05 or less limits the probability of accepting a random relationship to no more than 5% of occurrences. However, a 5% threshold means that over time, false, or chance relationships will be misinterpreted of a true correlation.

This fact is not fatal for the use of AI in market analysis, but it does represent a strong caveat for those employing the techniques, at least those that share elements with data mining. Careful interpretations of p-values should recognize an increased possibility of false positives. Observed relationships should be assessed and validated over time to ensure correlations are stable. In addition, once relationships
are identified via AI and found useful, standard statistical models should also be employed to test whether different techniques yield superior predictive power. Additional discussion of caveats is presented in the appendix.

That said, there is much potential of AI in market analysis, assuming that additional, more granular, data are available. As noted, such techniques are most suited for large datasets whose very size would make a standard statistical approach impractical just given the sheer number of possible correlations available for testing.

**Recommendation 5:** Systematically explore potential data sources suitable for AI techniques, with an eye for discovering patterns and relationships in relation to some well-defined outcome one is attempting to predict. This may be identifying entities that may merit additional regulatory scrutiny in a way that is currently done by the less sophisticated methods employed in the MAPT or with the MCAS. Larger volumes of data, such as the standard data requests, can be subjected to AI to identify problematic claims handling, underwriting, and other insurer practices.

**Summary of Recommendations**

**Recommendation 1:** Survey currently available market analysis data, and identify substantive deficiencies based on the nature and substance of the data elements collected. Ensure that all data are consistently reported across insurers to the degree practical, and ensure adherence to definitions of data elements.

**Recommendation 2:** In conjunction with recommendation 1 (assess data quality), state insurance regulators should adopt a much more rigorously statistical approach to identify the predictive power of market scoring systems, assess how each variable should be weighted in terms of its unique contribution to productiveness, and drop those that lack analytic utility. In addition, effort should be made to integrate data into a single overall analysis. For example, the MAPT does not incorporate MCAS data, which is typically subject to a separate analysis. The Working Group believes that a “piecemeal” approach is likely less effective than a more integrated approach.

**Recommendation 3:** In undertaking recommendation 2, incorporate various promising AI modes of analyses, as well as traditional statistical modeling. Constantly assess the precision of model outcomes relative to objectives, such as identifying potential market issues.

**Recommendation 4:** Assess ways AI can improve both the efficiency of qualitative analysis and facilitate pattern recognition across larger volumes of textual evidence, including most especially complaints, but perhaps other textual sources. For example, the “level 1” analysis formalized in NAIC market system may include a review of the “management discussion and analysis” of the financial annual statement.

**Recommendation 5:** Systematically explore potential data sources suitable for AI techniques, with an eye for discovering patterns and relationships in relation to some well-defined outcome one is attempting to predict. This may be identifying entities that may merit additional regulatory scrutiny in
a way that is currently done by the less sophisticated methods employed in the MAPT or with the MCAS. Larger volumes of data, such as the standard data requests, can be subjected to AI to identify problematic claims handling, underwriting, and other insurer practices.
Appendix: Caveats

Recently, some fields of scientific inquiry have experienced much consternation and hand-wringing due to the so-called “replicability crisis” resulting from the realization that many studies published in top-tier journals could not be replicated. In 2015, Open Science Collaboration published research into the replicability of psychological studies. Of the 100 studies that were subjected to testing, replications yielded statistically significant results in only 36% compared to 97% of the original publications (Open Science Collaboration, 2015). Similar reproducibility issues were found in other fields.

Attention was directed at quantitative methods, particularly those made possible by modern computing power. Researchers can run countless variations of models, including multiple different variables, cross-effects, and other tweaks, until they eventually produce positive or statistically significant results. The inevitable outcome of the lack of rigor of such methods is that many chance correlations will be mistaken for meaningful relationships.

Think of it this way. The probability of obtaining all heads from 10 flips of a fair coin is 1/1024. So, if a researcher actually performed the experiment 1,024 times and obtained 10 heads at least once, it would obviously be improper to infer that the coin was a two-headed coin. Without knowledge of the total number of trials, one might reject the “null hypothesis” that the coin is fair, and results would be “statistically significant” with a p-value of (1/1,024) = 0.00098, well below the 0.05 maximum threshold to establish statistical significance. But the true p-value can only be calculated with knowledge of the total number of trials prior to obtaining the recorded result, such that the true p-value is well above the maximum threshold.

There are no allegations of willful misconduct so much as careless and sloppy methods, producing much introspection about how statistics methods are taught to scientists at colleges and universities. The problem is so significant that the following year, the American Statistical Association (ASA) released a statement regarding misuse of p-values and practices known as “p hacking” or “data dredging.” A letter from the ASA is reprinted below, with a link to the full statement (used with permission).

Really, this is a warning for state insurance regulators not to adopt a casual attitude about apparent relationships turned up by the methods. When such methods are employed, modelers should be on constant guard against mechanical interpretations of model outputs. It is important to fully understand what is going on in the “black box” of an AI algorithm, the results of all statistical tests performed, and the totality of processes generating final results.

A high number of false positives that prompt regulatory follow-up can risk draining away regulatory resources going down blind allies.
AMERICAN STATISTICAL ASSOCIATION RELEASES STATEMENT ON STATISTICAL SIGNIFICANCE AND P-VALUES

Provides Principles to Improve the Conduct and Interpretation of Quantitative Science

March 7, 2016

The American Statistical Association (ASA) has released a “Statement on Statistical Significance and P-Values” with six principles underlying the proper use and interpretation of the p-value. The ASA releases this guidance on p-values to improve the conduct and interpretation of quantitative science and inform the growing emphasis on reproducibility of science research. The statement also notes that the increased quantification of scientific research and a proliferation of large, complex data sets has expanded the scope for statistics and the importance of appropriately chosen techniques, properly conducted analyses, and correct interpretation.

Good statistical practice is an essential component of good scientific practice, the statement observes, and such practice “emphasizes principles of good study design and conduct, a variety of numerical and graphical summaries of data, understanding of the phenomenon under study, interpretation of results in context, complete reporting and proper logical and quantitative understanding of what data summaries mean.”

“The p-value was never intended to be a substitute for scientific reasoning,” said Ron Wasserstein, the ASA’s executive director. “Well-reasoned statistical arguments contain much more than the value of a single number and whether that number exceeds an arbitrary threshold. The ASA statement is intended to steer research into a ‘post p<0.05 era.’”

“Over time it appears the p-value has become a gatekeeper for whether work is publishable, at least in some fields,” said Jessica Utts, ASA president. “This apparent editorial bias leads to the ‘file-drawer effect,’ in which research with statistically significant outcomes are much more likely to get published, while other work that might well be just as important scientifically is never seen in print. It also leads to practices called by such names as ‘p-hacking’ and ‘data dredging’ that emphasize the search for small p-values over other statistical and scientific reasoning.”

The statement’s six principles, many of which address misconceptions and misuse of the p-value, are the following:

1. **P-values can indicate how incompatible the data are with a specified statistical model.**

2. **P-values do not measure the probability that the studied hypothesis is true, or the probability that the data were produced by random chance alone.**

3. **Scientific conclusions and business or policy decisions should not be based only on whether a p-value passes a specific threshold.**
4. Proper inference requires full reporting and transparency.

5. A p-value, or statistical significance, does not measure the size of an effect or the importance of a result.

6. By itself, a p-value does not provide a good measure of evidence regarding a model or hypothesis.

The statement has short paragraphs elaborating on each principle.

In light of misuses of and misconceptions concerning p-values, the statement notes that statisticians often supplement or even replace p-values with other approaches. These include methods “that emphasize estimation over testing such as confidence, credibility, or prediction intervals; Bayesian methods; alternative measures of evidence such as likelihood ratios or Bayes factors; and other approaches such as decision-theoretic modeling and false discovery rates.”

“The contents of the ASA statement and the reasoning behind it are not new—statisticians and other scientists have been writing on the topic for decades,” Utts said. “But this is the first time that the community of statisticians, as represented by the ASA Board of Directors, has issued a statement to address these issues.”

“The issues involved in statistical inference are difficult because inference itself is challenging,” Wasserstein said. He noted that more than a dozen discussion papers are being published in the ASA journal The American Statistician with the statement to provide more perspective on this broad and complex topic. “What we hope will follow is a broad discussion across the scientific community that leads to a more nuanced approach to interpreting, communicating, and using the results of statistical methods in research.”

About the American Statistical Association

The ASA is the world’s largest community of statisticians and the oldest continuously operating professional science society in the United States. Its members serve in industry, government and academia in more than 90 countries, advancing research and promoting sound statistical practice to inform public policy and improve human welfare. For additional information, please visit the ASA website at www.amstat.org.

The Producer Licensing (D) Task Force met Nov. 29, 2021. The following Task Force members participated: Elizabeth Kelleher Dwyer, Co-Chair (RI); Larry D. Deiter, Co-Chair (SD); Jim L. Ridling represented by Jimmy Gunn (AL); Alan McClain represented by Peggy Dunlap (AR); Ricardo Lara represented by Charlene Ferguson (CA); Michael Conway represented by Steven Giampaolo (CO); Doug Ommen represented by Andria Seip (IA); Vicki Schmidt represented by Monica Richmeier (KS); Sharon P. Clark (KY); James J. Donelon represented by Lorie Gasior (LA); Judith L. French represented by Tynesia Dorsey (OH); Jessica K. Altman represented by Katelin Hunt and Adriane Force (PA); and Jeff Rude represented by Bryan Stevens (WY). Also participating were: Rachel Chester (RI) and Maggie Dell (SD).

1. **Adopted its Oct. 29 and Summer National Meeting Minutes**

The Task Force conducted an e-vote that concluded on Oct. 29 to adopt its 2022 proposed charges.

Commissioner Clark made a motion, seconded by Ms. Ferguson, to adopt the Task Force’s Oct. 29 (Attachment One) and Aug. 4 (see NAIC Proceedings – Summer 2021, Producer Licensing (D) Task Force) minutes. The motion passed unanimously.

2. **Adopted the Report of the Producer Licensing Uniformity (D) Working Group**

Ms. Chester said the Producer Licensing Uniformity (D) Working Group met Nov. 3 and Oct. 6 and reviewed the results of its survey addressing the appropriate producer licensing standard for individuals to sell, solicit, and negotiate pet insurance. Seven states responded to the survey that the current uniform licensing standard for pet insurance is the correct policy direction; seven states responded that the major lines of authority of Property/Casualty (P/C) should be required; one state responded that pet insurance should become a core limited line; and one state responded that a license for any major line of authority should be required.

Superintendent Dwyer said the survey was done prior to the Property and Casualty Insurance (C) Committee adopting the Pet Insurance Model Act, which includes a training requirement for insurance producers who want to sell, solicit, or negotiate pet insurance. Ms. Ferguson questioned whether an additional survey is needed or if there should be updates made to the NAIC’s Producer Licensing Model Act (Attachment Two). Superintendent Dwyer suggested that the Task Force review the Pet Insurance Model Act after the Executive (EX) Committee and Plenary consider adoption of the model.

Mr. Baughman made a motion, seconded by Ms. Ferguson, to adopt the report of the Producer Licensing Uniformity (D) Working Group, including its Nov. 3 (Attachment Two) and Oct. 6 (Attachment Three) minutes. The motion passed unanimously.

3. **Adopted the Report of the Uniform Education (D) Working Group**

Ms. Dell said the Uniform Education (D) Working Group has not held an open conference call since the NAIC Summer National Meeting but is working on a survey regarding state requirements for the approval of continuing education (CE) course instructors. The Working Group is beginning its review of the survey results.

Mr. Baughman made a motion, seconded by Ms. Ferguson, to adopt the report of the Uniform Education (D) Working Group. The motion passed unanimously.

4. **Discussed Procedures for Amending NAIC Uniform Producer Licensing Applications**

Director Deiter said the draft procedures are being developed to ensure the consideration of changes to the uniform applications support the NAIC members’ goal of providing stable applications and encouraging the use of electronic technology for licensing. He said the initial draft procedures were dated Nov. 4, 2020. The Task Force solicited comments on the draft, and in response to those comments, the procedures were revised with a new draft date of June 10. The Task Force discussed the draft
during its Aug. 4 call and requested written comments after the call. Texas, Virginia, and the National Association of Professional Insurance Agents (PIA) submitted comments.

Mr. Tozer said the procedures indicate that there will be an e-mail distributed to request changes to the NAIC Uniform Producer Licensing Applications, and he asked whether the notice will be distributed to interested parties. He also asked if the form to request changes to the NAIC Uniform Producer Licensing Applications has been developed. He also inquired as to who will initially review a request to amend the NAIC Uniform Producer Licensing Applications. Lauren Pachman (PIA) said there is some overlap of the PIA comments with Virginia’s comments, and the PIA comments focus on more technical changes to clarify the intent of certain sections of the procedures.

Director Deiter said he and Superintendent Dwyer would work with NAIC staff to review the comments and circulate a revised draft for consideration.

5. Received Comments from the ACLI on Diversity and Inclusion

David Leifer (American Council of Life Insurers—ACLI) said diversity and inclusion is a priority for the ACLI membership. He suggested that best practices on 1033 waiver request required because of the Violent Crime Control and Law Enforcement Act of 1994s would be helpful. He said state mandates for specific hours of pre-licensing education can be a barrier to entry into the insurance industry. He said the ACLI supports processes that ensure people are qualified to be insurance producers, but prior work of the NAIC does not reflect a higher pass rate for licensing applicants in states that require pre-licensing education. He said the ACLI continues to support the use of remote examinations because this provides greater access to people seeking a producer license. Jim Hodges (National Alliance of Life Companies—NALC) said the NALC supports the elimination of mandatory pre-licensing education. Superintendent Dwyer said the Task Force would continue to review this issue.

Mr. Baughman said Washington requires pre-licensing education but may eliminate this requirement. He said this could decrease exam pass rates. Superintendent Dwyer said Rhode Island did not experience a decrease in exam pass rates after the elimination of required pre-licensing education. She said one reason Rhode Island eliminated required pre-licensing education is because experienced insurance producers who left the insurance industry were required to complete pre-licensing education if they returned to the insurance industry. Commissioner Richardson said Nevada experienced a change in exam pass rates after eliminating mandatory pre-licensing requirements but did notice more applicants with criminal background issues. Superintendent Dwyer said Rhode Island, similar to Pennsylvania, has a process where prospective applicants can request an informal review of their background prior to taking an examination.

6. Discussed the Elimination of Cultural Bias in Producer Licensing Exams

Superintendent Dwyer said the Task Force received a charge from the Special (EX) Committee on Race and Insurance to discuss the elimination of cultural bias in producer licensing exams. She said the Center for Insurance Policy and Research (CIPR) is conducting some research on the number and location of producers by company compared to demographics in the area.

Superintendent Dwyer said she and Director Deiter requested the three producer licensing examination vendors to provide information, and two exam vendors responded. One exam vendor said all content development staff participate in training on the Content and Editorial Policy, which is grounded in the following statements of principle: 1) respect human rights and strive to create content that is free from discrimination and is anti-bias; 2) develop content that embeds our commitments to diversity, equity, and inclusion (DE&I); 3) provide support for learning that is based on evidence and facts; and 4) create content that is ethical and adheres to legal requirements. The exam vendor also said all subject matter experts (SMEs) are trained to be mindful of these principles during test development meetings. After SME review, all items undergo an editorial review, during which items are reviewed for sensitivity and bias by a designated editor. The vendor also said they encourage their clients to nominate SMEs from diverse backgrounds, and they are always looking for SMEs from diverse backgrounds to participate in the test development process.

Superintendent Dwyer said the other exam vendor reported that their test development is guided by industry standards for Fairness (American Education Research Association [AERA], American Psychological Association [APA], National Council on Measurement in Education [NCME], Standards for Educational and Psychological Testing, Ch. 3, 2014). This includes the following components of the process:

- Item Writer Training: During the item authoring process, item writers are instructed to avoid language, stereotypes, and scenarios that might introduce bias in the assessment.
• Item Sensitivity Review: All test questions are reviewed by SMEs during the content validation process. During this phase, SMEs are trained and instructed to identify and eliminate language, stereotypes, and scenarios that could be construed to imply bias with respect to gender, race/ethnicity, or culture. Test items that are identified as such are either changed to eliminate potential bias or are dropped.

• Diversity in the Composition of SMEs: To the extent possible, item writing and review panels are intended to be diverse with respect to demographic group membership, along with other important characteristics (e.g., experience, area of practice, geographic location, work setting).

Superintendent Dwyer asked if there is more detail the Task Force would like to receive. She said she would follow up with the exam vendor that did not respond and compile the responses in a report to the Special (EX) Committee on Race and Insurance.

7. Received a Report from the NIPR Board of Directors

Director Deiter said he serves as the president of the 2021 National Insurance Producer Registry (NIPR) Board of Directors, and October marked the 25th anniversary for NIPR. NIPR was created as a unique public-private partnership (PPP) between the NAIC and the insurance industry to build a uniform producer licensing system to deliver a cost-effective, streamlined process. Director Deiter said NIPR is on track to have its highest transaction volume and revenue year, and it is forecasting more than $1 billion in fees moved to the state departments of insurance (DOIs). He said NIPR continues to implement the contact change request application for business entities. To date, NIPR has 28 states in production and has processed more than 7,300 transactions on behalf of those states. Kentucky is scheduled to be implemented on Dec. 10 and Kansas in January 2022. Director Deiter said NIPR recently implemented a chat feature, which gives NIPR’s customers another route for assistance with licensing questions. From January to October, NIPR’s customer service department handled over 162,000 calls, more than 70,000 emails, and 20,000 chats. NIPR is also on track to complete its transition to the cloud before the end of the year, which will enhance NIPR’s ability to provide services to the states and insurance industry.

8. Discussed Other Matters

Superintendent Dwyer said the Task Force will continue to monitor pass rates for in-person and remote exams and continue to work with exam vendors to receive updates.

Superintendent Dwyer said she and Director Deiter were approached by the leadership of the Cannabis Insurance (C) Working Group, who would like to collaborate with the Task Force to study whether cannabis-related convictions are preventing individuals from being licensed as an agent or broker in states where cannabis is legalized for medical and/or recreational use. She said she and Director Deiter would be providing more detail on this request at the next Task Force call.

Mr. Tozer said Virginia and other states routinely receive applications with errors or misstatements completed by authorized third-party submitters, and he would like for the Task Force or Producer Licensing Uniformity (D) Working Group to discuss this issue and develop a national solution. He suggested that authorized submitters who have multiple violations could be barred from acting as authorized submitters, or additional communication could be made to producer applicants that they will be penalized for incorrect information provided. Ms. Ferguson said California said the NAIC Uniform Producer Licensing Applications could include an attestation that the authorized third-party submitter has communicated with the applicant regarding the answers being submitted. Superintendent Dwyer said the Task Force could issue a statement to authorized third-party submitters informing them that they are responsible for confirming answers with the applicant. Director Deiter said South Dakota rarely has issues with authorized submitters and can take the necessary regulatory action if issues arise. Superintendent Dwyer suggested that the Working Group could review this issue.

Ms. Ferguson asked about the status of the NAIC Uniform Producer Licensing Applications amendments the Task Force adopted in 2018. Superintendent Dwyer said the Executive (EX) Committee and Plenary did not consider adoption of these amendments, and the Task Force needs to review the amendments. Director Deiter suggested that the Task Force review the amendments after it adopts the new procedures for amending the NAIC Uniform Producer Licensing Applications. Ms. Ferguson suggested that the Producer Licensing Uniformity (D) Working Group review the amendments from 2018 because this would help inform the state licensing directors on what amendments would move forward and whether additional requests for new amendments should be submitted. Superintendent Dwyer said the proposed amendments from 2018 should be reviewed in the first quarter of 2022, and any additional requests for amendments could be submitted toward the end of 2022.

Having no further business, the Producer Licensing (D) Task Force adjourned.

ProdLic Min 11.29.21
The Producer Licensing (D) Task Force conducted an e-vote that concluded Oct. 29, 2021. The following Task Force members participated: Elizabeth Kelleher Dwyer, Co-Chair (RI); Larry D. Deiter, Co-Chair (SD); Lori K. Wing-Heier (AK); Jim L. Ridling represented by Jimmy Gunn (AL); Ricardo Lara represented by Charlene Ferguson (CA); Trinidad Navarro represented by Robin David (DE); David Altmaier represented Matt Tamplin (FL); Dean L. Cameron represented by Lisa Tordjman (ID); Sharon P. Clark (KY); Grace Arnold represented by Peter Brickwedde (MN); Mike Causey represented by Angela Hatchell (NC); Eric Dunning (NE); Chris Nicolopoulos represented by Christie Rice (NH); Russell Toal (NM); Barbara D. Richardson represented by Stephanie McGee (NV); Judith L. French represented by Tynesia Dorsey (OH); Glen Mulready represented by Erin Wainner (OK); Jessica K. Altman represented Adriane Force (PA); Jonathan T. Pike represented by Randy Overstreet (UT); Scott A. White represented by Mike Beavers and Richard Tozer (VA); Mike Kreidler represented by Jeff Baughman (WA); Mark Afable represented by Rebecca Rebholz (WI); Allan L. McVey (WV); and Jeff Rude represented by Bryan Stevens (WY).

1. **Adopted its 2022 Proposed Charges**

   The Task Force considered adoption of its 2022 proposed charges, which remained consistent with its 2021 charges.

   The following 2021 charges were deleted from the 2022 proposed charges:

   - Finalize the white paper on the role of chatbots and artificial intelligence (AI) in the distribution of insurance and the regulatory supervision of these technologies by the 2021 Spring National Meeting.
   - Draft procedures for amending the NAIC’s uniform producer licensing applications and uniform appointment form to ensure consistency with the NAIC membership’s goal of maintaining uniform and stable applications that encourage the efficient use of electronic technology.

   The discussion on role of chatbots and AI will be incorporated into the work of the Innovation and Technology (EX) Task Force or the new Innovation, Cybersecurity, and Technology (H) Committee, which may be appointed in 2022. The charge regarding the development of procedures for amending the NAIC uniform producer licensing applications was deleted due to the anticipated completion of this charge in 2021.

   The following new charges were added to the 2022 proposed charges:

   - Coordinate with the Special (EX) Committee on Race and Insurance on referrals affecting insurance producers.
   - Discuss how criminal convictions may affect producer licensing applicants, and review the NAIC’s *Guidelines for State Insurance Regulators to the Violent Crime Control and Law Enforcement Act of 1994* to create a more simplified and consistent approach in how states review 1033 waiver requests.

   A majority of the Task Force members voted in favor of adopting its 2022 proposed charges (see *NAIC Proceedings – Fall 2021, Executive (EX) Committee and Plenary, Attachment Three*).

   Having no further business, the Producer Licensing (D) Task Force adjourned.
The Producer Licensing Uniformity (D) Working Group of the Producer Licensing (D) Task Force met Nov. 3, 2021. The following Working Group members participated: Rachel Chester, Chair, Elizabeth Kelleher Dwyer, and Matt Gendron (RI); Courtney Khodabakhsh, Vice Chair (OK); Crystal Phelps, Peggy Dunlap, and Teri Ann Mecca (AR); Charlene Ferguson (CA); Matt Guy (FL); Lisa Tordjman (ID); Lorelei Brilliante and Shelley Taylor-Barnes (MD); Karin Gyger and Michele Riddering (MI); Kevin Schlautman (NE); Victoria Baca (NM); Hermoliva Abejar and Stephanie Kerry (NV); Karen Vourvopoulos (OH); Maggie Dell (SD); Mike Beavers and Richard Tozer (VA); Jeff Baughman (WA); Melody Esquivel (WI); and Bryan Stevens (WY).

1. Discussed the Pet Insurance Licensing Standards

Ms. Chester said the Working Group’s last conference call took place on Oct. 6. She said the Working Group discussed the status of reviewing the pet insurance licensing standards in order to determine a recommendation for changes that should be made. She said the Working Group will pick up where it left off, discussing the pet insurance licensing standards. She said the direction from the Producer Licensing (D) Task Force was to review the current pet insurance licensing standards and provide a recommendation on whether changes should be made. She said the Working Group members were notified that the materials can be found on the Working Group’s web page. These materials include a discussion document that summarizes the work that has been completed in addition to the status of the pet insurance licensing standards.

Ms. Chester said the survey had four options: 1) confirm that current uniform licensing standards for pet insurance is the correct policy direction; 2) recommend that pet insurance become a core limited line all states shall adopt; 3) recommend that the major lines of authority of property/casualty (P/C) be required to sell pet insurance; and 4) recommend that a full license with any major line of authority be required to sell pet insurance. She said seven states voted to confirm that current uniform licensing standards for pet insurance is the correct policy direction; seven states voted to recommend that the major lines of authority of P/C be required to sell pet insurance; one state voted to recommend that pet insurance become a core limited line all states shall adopt; and one state voted to recommend that a full license with any major line of authority be required to sell pet insurance. She said the results show that there is a draw with how the states are voting on what to do with the pet insurance licensing standards. She said prior to the survey being sent out, the Working Group members, interested state insurance regulators, and interested parties were solicited for any comments; that resulted in a survey being distributed. The Working Group discussed confirming each option from the survey and agreed that the information compiled should be sent up to the Task Force for it to determine the direction.

Birny Birnbaum (Centers for Economic Justice—CEJ) said his recommendation at this point would be to take everything the Working Group has done and send it to the Task Force for it to determine what should be done. He said the Working Group has fulfilled its task on collecting the necessary information.

Ms. Chester said she agrees that the best course of action would be to take the information that the Working Group has compiled and send it to the Task Force.

Mr. Stevens made a motion, seconded by Ms. Khodabakhsh, to take the pet insurance licensing standards survey results and present them to the Task Force. The motion passed unanimously.

Having no further business, the Producer Licensing Uniformity (D) Working Group adjourned.

PLUWG Minutes 11.3.21
Producer Licensing Uniformity (D) Working Group
Virtual Meeting
October 6, 2021

The following Working Group members participated: Rachel Chester, Chair, Elizabeth Kelleher Dwyer, and Matt Gendron (RI); Courtney Khodabakhsh, Vice Chair, and Landon Hubbart (OK); Crystal Phelps, Peggy Dunlap, and Teri Ann Mecca (AR); Charlene Ferguson, Dianne Cooper, Troy Dickinson, and Tyler McKinney (CA); Matt Guy (FL); Lisa Tordjman (ID); Lorelei Brilliante and Shelley Taylor-Barnes (MD); Karin Gyger and Michele Riddering (MI); Kevin Schlautman (NE); Victoria Baca (NM); Hermoliva Abejar and Stephanie Kerry (NV); Karen Vourvopoulos, Holly Stran, and Patty Black (OH); Maggie Dell (SD); Mike Beavers and Richard Tozer (VA); Jeff Baughman (WA); and Melody Esquivel and Rebecca Rebholz (WI). Also participating was: Bryan Stevens (WY).

1. Discussed the Pet Insurance Licensing Standards

Ms. Chester said with Chris Murray departed from the Alaska Department of Insurance (DOI), she has been asked to step in as the new chair of the Working Group. She said the Working Group will pick up where it stopped last, discussing the pet insurance licensing standards. She said the direction from the Producer Licensing (D) Task Force was to review the current pet insurance licensing standards and provide a recommendation on whether changes should be made. She said notice was sent out notifying everyone that the materials can be found on the Working Group web page. These materials include a discussion document that summarizes the work that has been completed in addition to the status of the pet insurance licensing standards.

Ms. Chester said the Working Group’s task is not to discuss the pet insurance product but to focus on licensing related to pet insurance. She said as a quick recap to bring everyone up to speed, the Working Group discussions thus far concerning pet insurance began in 2010, and they were picked back up in 2017 by the Task Force. Industry trades came forward and expressed some concerns with the direction pet insurance was moving specific to the licensing standards. The Task Force has discussed pet insurance, but it did not have enough information about the product to make an informed decision. The Task Force asked the Property and Casualty Insurance (C) Committee to look at pet insurance. The Committee formed a Pet Insurance (C) Working Group, which has been working on this topic. The Pet Insurance (C) Working Group created a white paper on pet insurance, which was referred to the Task Force. The Pet Insurance (C) Working Group is also working towards the creation of a model law for pet insurance, which will deal with consumer protection and aspects related to policy. Ms. Chester said the Pet Insurance (C) Working Group web page has the exposure drafts and any comments submitted.

Ms. Chester said the comments submitted from Superintendent Dwyer offers a fourth option for the Working Group to review. She said this provides four different options for the Working Group to determine as the best option. The options are: 1) confirm that current uniform licensing standards for pet insurance is the correct policy direction; 2) recommend that pet insurance become a core limited line all states shall adopt; 3) recommend that the major lines of authority of property/casualty (P/C) be required to sell pet insurance; and 4) recommend that a full license with any major line of authority is required to sell pet insurance.

Mr. Baughman said in Washington, pet insurance is filed under property line of authority, and requirements and training would need to match what they currently have in place not to cause additional issues within the state. Mr. Guy said Florida would be in the same situation; if it would follow along with its current business rules, there would not be an issue. Ms. Ferguson said California would agree. She said even though it is pet health insurance, it deals with a broker agent that would need to go through training to sell this type of insurance (TOI).

Mr. Tozer said Virginia covers this line under P/C. He said Virginia has thousands of P/C licenses, and it would be a difficult process to determine which of them only hold the P/C to sell pet insurance only.

Mr. Gendron said the Pet Insurance (C) Working Group is working to complete a model law. He said it is important to recognize that pet insurance is different than a homeowner or other type of property license, and it covers the maintenance of your pet and not the value. He said it is more of an accident and wellness of the property, but it does not operate the same as basic property insurance.
Mr. Gendron said the creation of the model act tries to define what the rules are going to be for pet insurance, and there will be standard cancellation provisions that apply, which will not be defined in the model law, but it will be determined on that type of line of business in your state.

Cari Lee (Steptoe & Johnson LLP) said the problem is pet insurance is sold online, and most of the agents selling pet insurance are only selling that product. She said the North American Pet Health Insurance Association (NAPHIA) is working to get the correct training for these individuals. She said the easiest way to do this would be to make this a core limited line.

Briny Birnbaum (Center for Economic Justice—CEJ) said it sounds as though state insurance regulators are asking which of the existing licensing “boxes” this fits into. He said the hurdle is this is something new, and it does not fit into one specific structure. He said the questions arise concerning the type of consumer protection necessary. This is a complex product, and it is more complicated than the traditional limited lines. Mr. Birnbaum said structure needs to be in place to protect consumers, including the type of training needed. He said the CEJ would support Superintendent Dwyer’s recommendation for the fourth option to “recommend that a full license with any major line of authority be required to sell pet insurance” if it is paired with relevant training.

Ms. Chester said it is important for the Working Group to recognize that a substantive training product is a function of market conduct and not specifically licensing.

Mr. Stevens said several good points have been made for pet insurance; however, changing this to a core limited line would be much more difficult to get widespread adoption. He said a specific training requirement for pet insurance may satisfy a lot of the state and industry concerns.

Ms. Lee said NAPHIA would agree with Wyoming; however, if an agent only sells pet insurance and is required to go through all the P/C licensing requirements, it would be beyond the scope of pet insurance. Mr. Stevens said Wyoming would be in support of training, and it believes training would be the key item to take away that is considered necessary for pet insurance.

Mr. Birnbaum said the logical extension of any requirement becoming a burden is not a legitimate concern, and an argument could be made that any regulation or requirement could be removed that would set the lowest possible premiums; however, that would not be a legitimate argument to reflect consumer protection. He said he would agree with necessary training, but he would object to the characterization of getting a license having no value to a seller of pet insurance.

Mr. Gendron said in Rhode Island, there is 5–15% of the P/C exam questions, which cover the general responsibility/subject matter question. Mr. Birnbaum said there are four states that deem this line important to make it a limited line. He said to make this a core limited line, it would take several states to agree and a vote, which would make it a difficult process.

Ms. Chester said the Working Group’s goal is to review the current pet insurance licensing standards and provide a recommendation based on the options presented. She said a survey will be sent out to the Working Group members to collect votes on the preference of each member state. She said all responses are due by Oct. 29 so the Working Group can discuss the results of the survey and finalize the recommendation to the Task Force.

Having no further business, the Producer Licensing Uniformity (D) Working Group adjourned.

Request from the Center for Economic Justice (CEJ) (Attachment Eleven) .................................................. 10-593
The Financial Condition (E) Committee met in San Diego, CA, Dec. 13, 2021. The following Committee members participated: Scott A. White, Chair (VA); Michael Conway, Vice Chair, (CO); Dana Popish Severinghaus represented by Kevin Fry and Susan Berry (IL); Amy L. Beard represented by Roy Eft (IN); Eric A. Cioppa, Robert Wake and Vanessa Sullivan (ME); Chlora Lindley-Myers and John Rehagen (MO); Mike Chaney represented by Vanessa Miller (MS); Marlene Caride represented by David Wolf (NJ); Russell Toal represented by My Chi To (NY); Judith L. French (OH); Raymond G. Farmer (SC); Cassie Brown represented by Doug Slape and Jamie Walker (TX); Mark Afable and Amy Malm (WI); and Jeff Rude (WY).

1. Adopted its Nov. 19 and Summer National Meeting Minutes

Commissioner White said the Committee met Nov. 19 and took the following action: 1) adopted a response to the Financial Regulation and Accreditation Standards (F) Committee related to captive insurers; 2) received a response from the Valuation Analysis (E) Working Group chair related to a specific recommendation from the recent Financial Sector Assessment Program (FSAP); 3) received a memorandum from the Capital Adequacy (E) Task Force chair with respect to a new charge for a new Risk-Based Capital (RBC) Investment Risk and Evaluation (E) Working Group; and 4) adopted the Committee’s 2022 proposed charges.

Commissioner Conway made a motion, seconded by Commissioner Rude, to adopt the Committee’s Nov. 19 (Attachment One) and Aug. 14 (see NAIC Proceedings – Summer 2021, Financial Condition (E) Committee) minutes. The motion passed unanimously.

2. Adopted the Reports of its Task Forces and Working Groups

Commissioner White stated that the Committee usually takes one motion to adopt the Committee’s task force and working group reports that are considered technical, noncontroversial, and not significant by NAIC standards—i.e., they do not include model laws, model regulations, model guidelines, or items considered to be controversial. He reminded Committee members that subsequent to the Committee’s adoption of its votes, all the technical items included within the reports adopted will be sent to the NAIC members for review shortly after the conclusion of the Fall National Meeting as part of the Financial Condition (E) Committee Technical Changes report. Pursuant to the Technical Changes report process previously adopted by the NAIC Plenary, the members will have 10 days to comment. Otherwise, the technical changes will be considered adopted by the NAIC and effective immediately. With respect to the task force and working group reports, Commissioner White asked the Committee: 1) whether there were any items that should be discussed further before being considered for adoption and sent to the members for consideration as part of the Financial Condition (E) Committee Technical Changes report; and 2) whether there were other issues not up for adoption that are currently being considered by task forces or working groups reporting to this Committee that require further discussion. The response to both questions was no.

In addition to presenting the reports for possible adoption, Commissioner White also noted that the Financial Analysis (E) Working Group met Dec. 11, Nov. 3, and Oct. 13 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss letter responses and financial results. Additionally, the Valuation Analysis (E) Working Group met Nov. 30, Nov. 10, Sept. 27, and July 26 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss valuation items related to specific companies.

Mr. Rehagen made a motion, seconded by Commissioner Conway, to adopt the following task force and working group reports: Accounting Practices and Procedures (E) Task Force; Capital Adequacy (E) Task Force; Examination Oversight (E) Task Force; Financial Stability (E) Task Force; Receivership and Insolvency (E) Task Force; Reinsurance (E) Task Force; Risk Retention Group (E) Task Force; Valuation of Securities (E) Task Force; Group Capital Calculation (E) Working Group (Attachment Two); Group Solvency Issues (E) Working Group (Attachment Three); Mutual Recognition of Jurisdictions (E) Working Group (Attachment Four); NAIC/American Institute of Certified Public Accountants (AICPA) (E) Working Group (Attachment Five); National Treatment and Coordination (E) Working Group (Attachment Six); Restructuring Mechanisms (E) Working Group (Attachment Seven); and Risk-Focused Surveillance (E) Working Group (Attachment Eight). The motion passed.
3. **Adopted the Process for Evaluating Jurisdictions that Recognize and Accept the GCC**

Mr. Wake reminded the Committee that in late 2020, the NAIC adopted revisions to the *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450). These revisions implemented group capital calculation (GCC) filing requirements for insurance groups at the level of the ultimate controlling person. They also incorporate the requirements for a group-wide capital calculation as addressed under the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (EU Covered Agreement) and the “Bilateral Agreement Between the United States of America and the United Kingdom on Prudential Measures Regarding Insurance and Reinsurance” (UK Covered Agreement).

Mr. Wake stated that Section 4L(2) of Model #440 provides two ways a non-U.S. jurisdiction may meet the standards for its insurance groups to be exempted from the GCC: 1) if the jurisdiction has been determined to be a reciprocal jurisdiction for purposes of credit for reinsurance; and 2) if the jurisdiction has otherwise been determined to recognize and accept the GCC by procedures specified in regulation. The Mutual Recognition of Jurisdictions (E) Working Group was charged by the Financial Condition Committee with creating a process to determine whether other jurisdictions “recognize and accept” the NAIC GCC. Mr. Wake noted that during the drafting process, the GCC Recognize and Accept Process was exposed for a public comment period on July 21 and on Sept. 22, and the Working Group believed that all comments received were appropriately addressed. Additionally, NAIC staff communicated with staff from the Federal Insurance Office (FIO) during the drafting process. The Working Group incorporated some minor revisions that were suggested by the FIO into the Nov. 8 draft, which the Working Group unanimously adopted on Nov. 18.

Mr. Wake made a motion, seconded by Director Farmer, to adopt the *Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation* (GCC) (Attachment Nine). The motion passed unanimously.

4. **Adopted the ReFAWG Process for Passporting Certified and Reciprocal Jurisdiction Reinsurers**

Mr. Rehagen said that the ReFAWG Review Process for Passporting Certified and Reciprocal Jurisdiction Reinsurers was created to aid in the implementation of the 2019 revisions to the *Credit for Reinsurance Model Law* (#785) and *Credit for Reinsurance Model Regulation* (#786). Under this process, the Reinsurance Financial Analysis (E) Working Group will assist the states in reviewing reinsurers to determine whether they have met the requirements to be recognized as a certified reinsurer and/or a reciprocal jurisdiction reinsurer. He noted that the Working Group normally meets in regulator-to-regulator session, but state insurance regulators, U.S. ceding insurers, and other interested parties all believed that it was important to have a public process to provide specific guidance with respect to the review of reciprocal jurisdiction reinsurers.

Mr. Rehagen said that during the drafting process, the *ReFAWG Process for Passporting Certified and Reciprocal Jurisdiction Reinsurers* was exposed for a public comment period on June 17 and again on Sept. 17. The comments received were discussed by the Task Force at the Summer National Meeting and by the Working Group on Aug. 25 in regulator-to-regulator session. He stated the Task Forces believed that all comments received were appropriately addressed. He noted that NAIC staff communicated with staff from the FIO during the drafting process. He stated that non-substantive revisions suggested by the FIO were incorporated into the final draft, which was exposed on Nov. 11 for a 21-day public comment period, and no comments were received. He stated that the *ReFAWG Process for Passporting Certified and Reciprocal Jurisdiction Reinsurers* was then unanimously adopted by the Reinsurance (E) Task Force earlier in the day.

Mr. Rehagen made a motion, seconded by Mr. Eft, to adopt the *ReFAWG Process for Passporting Certified and Reciprocal Jurisdiction Reinsurers* (Attachment Ten). The motion passed unanimously.

5. **Discussed Other Matters**

a. **Request from the CEJ**

Commissioner White indicated he had a couple of matters he wanted to bring to the attention of the members of the Committee. Specifically, he noted that a couple of days before the Fall National Meeting, he and Commissioner Conway received a letter from the Center for Economic Justice (CEJ) (Attachment Eleven). He summarized the key points to the letter, including that Birny Birnbaum (CEJ) was asking the Committee to undertake work already at the Special (EX) Committee on Race and Insurance. He noted that the specific request made was for the 2022 charges be expanded to look at the impact of insurer investments on communities of color. Commissioner White noted this appeared to be part of a larger effort on Mr. Birnbaum’s part to take some of the work that is currently being conducted at the Special Committee and place it instead in those committees that have subject matter expertise.
Commissioner White noted that without getting into the merits of that approach, he did want to share a few thoughts about the proposal itself, which is to have this Committee look into the impacts of insurer investments on communities of color. First, he said he spoke with members of his staff, NAIC staff, and some members of the Committee to think about the merits of this recommendation. He noted that the comments he heard were similar from everyone he spoke with. He stated the biggest question both in his mind and those he spoke with was whether it is something that makes sense for the Financial Condition (E) Committee to look at. He noted that the purpose of the Committee is solvency oversight, first and foremost, and this request does not touch on issues of solvency. He stated another issue is what this would look like and how this would be accomplished. For example, what metrics the Committee would use to determine whether there is a material impact? Assuming the Committee could develop metrics, is it possible that it might adversely affect the Committee’s primary goal of solvency protection? Commissioner White noted there are questions about whether this analysis could be done using just Schedule D data for bonds and stocks.

Commissioner White said that these were just a few of the examples of thinking as he reviewed the request. He stated he does not want to rule out the possibility that at some point, the Committee would be tasked with looking at the issue. Commissioner White noted, however, that having just looked at this for the first time just before the Fall National Meeting, and given the unusual nature of the request given it does not deal with solvency protection, he is not comfortable with suggesting the charge be added at this time. He noted that he suspects several other members of the Committee were hearing about this request for the first time. He stated that the work being requested, addressing issues of disparity based on race, are being undertaken at the Special Committee, and in his opinion, until the Committee receives direction from that Committee or from the officers, it seems appropriate for those discussions to continue to occur at that Committee instead. Support for Commissioner White’s reaction and recommendation was provided by Commissioner Conway, Director Lindley-Myers and Superintendent Cioppa. No other members disagreed with Commissioner White.

b. RBC Methodology for Structured Securities and Other ABS

Commissioner White reminded the Committee of one of its deliverables from the last year dealing with revised risk-based capital (RBC) bond factors for life insurers. He described how that adoption was the completion of a multiyear endeavor that resulted in the big change where the Committee went from six NAIC designations to basically 20 different levels within those six designations, thereby reducing the “cliffs” that could exist between the factors before. He also noted how the changes also incorporated more recent bond performance, with the result that some factors went up and some went down. He noted that while the American Academy of Actuaries (Academy) did most of the work on that project, Moody’s did a parallel analysis of the bond factors, and it was their recommended changes that were ultimately adopted by the Committee. Commissioner White said that the reason he is bringing this up is to remind the Committee of that work and also, more specifically, the work done by Moody’s, which was characterized as Phase I in what it envisioned to be a two-part project. This second phase of the project would address the need to differentiate capital charges for asset classes, including structured securities and other asset-backed securities (ABS).

Commissioner White explained that he would like the Committee to consider the possibility of moving forward on the second phase of this project, whether it be Moody’s or some other vendor. He noted how his support for this idea at this time was driven by the fact that the Committee has been engaged in the past two years and longer, which is a focus on this sustained low interest rate environment and the impact it has had on the industry, particularly the life industry. He described how state insurance regulators are aware that insurers’ investment strategies and asset allocations are increasingly in search of higher-yielding investments. For example, a shift away from senior corporate debt holdings towards structured securities and other ABS, in particular collateralized loan obligations (CLOs). These investments tend to offer a more attractive yield and may provide some relative regulatory capital advantages to more traditional asset types, such as fixed-rate corporate bonds. He noted the concern that this creates incentives for insurers to invest in higher-yielding and riskier assets, such as certain structured credit instruments, where risk is inconsistent with capital charges.

Commissioner White said that the idea was for the Committee to examine whether the RBC charges for insurer investment concentrations are appropriately calibrated to safeguard insurers against losses in these types of investments. He said the next steps would include having the NAIC hire a consultant to provide the resources the Committee needs to address this issue. He proposed using the same model for this project as was used for variable annuities and mortgage guaranty insurers, where most of the funding comes from the industry. He stated he was hopeful that since the American Council of Life Insurers (ACLI) supported the Moody’s work, the NAIC can get enough members of the life industry to help fund the second phase of this analysis. He noted that during the Committee’s Nov. 19 meeting, a discussion led by Tom Botsco resulted in the creation of the new Risk-Based Capital (RBC) Investment Risk and Evaluation (E) Working Group. He suggested that the new Working Group take on this project and make it an immediate priority. He also suggested that the new Working Group make it another immediate priority to put the necessary structural changes in place for RBC, and because those are due soon, that a joint meeting
of the new Working Group and the Committee occur in early January to get that work started. He suggested joint meetings with that new Working Group so that the Committee can be informed about the work occurring and provide any direction needed.

Having no further business, the Financial Condition (E) Committee adjourned.

December 13 E min.docx
Financial Condition (E) Committee
Virtual Meeting
November 19, 2021

The Financial Condition (E) Committee met Nov. 19, 2021. The following Committee members participated: Scott A. White, Chair (VA); Michael Conway, Vice Chair, (CO); Dana Popish Severingham represented by Kevin Fry (IL); Amy L. Beard represented by Roy Eft (IN); Eric A. Cioppa (ME); Chlora Lindley-Myers and John Rehagen (MO); Mike Chaney represented by David Browning (MS); Marlene Caride (NJ); Russell Toal represented by Leatrice Geckler (NM); Adrienne A. Harris represented by My Chi To (NY); Judith L. French and Tom Botsko (OH); Raymond G. Farmer (SC); Cassie Brown represented by Doug Slape (TX); Mark Afable (WI); and Jeff Rude represented by Linda Johnson (WY).

1. **Adopted a Response to the Financial Regulation and Accreditation Standards and Accreditation (F) Committee**

Commissioner White described how the Committee had received a referral from the Financial Standards and Accreditation (F) Committee subsequent to the Spring National Meeting. He said the Financial Standards and Accreditation (F) Committee was reviewing the preamble to its manual and updating it for changes as a result of changes to a new NAIC model regulation on reinsurance. He said a question was raised whether some of the other aspects of the preamble needed to be updated. Commissioner White described how there had been a placeholder in that preamble for years for variable annuities and long-term care (LTC), pending potential changes to the standards for those lines of business. He stated that the referral specifically asked for an update on the actual usage of such captives, which he indicated he sent directly to the Financial Analysis (E) Working Group since obtaining that type of information would involve gathering specific company information from domestic states. He said the Committee received a response from that Working Group and met Oct. 14 in regulator-to-regulator session as questions regarding specific companies were expected to be raised. He stated the Committee prepared a response back to the Financial Standards and Accreditation (F) Committee, included in the materials, which captured what he and his staff think is appropriate.

Commissioner Conway made a motion, seconded by Superintendent Cioppa, to adopt the proposed response (Attachment One-A). The motion passed unanimously.

2. **Received a Response to the FSAP Recommendation**

Commissioner White stated the second agenda item was a follow-up to the report issued by the International Monetary Fund (IMF) related to the Financial Sector Assessment Program (FSAP) report from 2020. He stated that one of the recommendations dealt with actuarial resources. He stated that Mike Boerner (TX), chair of the Valuation Analysis (E) Working Group, sent a letter to the Committee (Attachment One-B) describing the actuarial support that group currently receives from the NAIC. Commissioner White noted that it was his understanding that the NAIC has added seven actuaries to its staff to help with principle-based reserving (PBR). Commissioner White described how he believes the letter seems to indicate appreciation for the resources provided thus far, but it also implies that if more resources are needed, the Valuation Analysis (E) Working Group will let those within the NAIC leadership know that such additional resources are also needed. He noted no action was needed on the letter other than just suggesting the Committee members stay attuned to the ongoing implementation of PBR.

3. **Discussed a Memorandum From the Capital Adequacy (E) Task Force**

Commissioner White said that an issue was brought up during the Committee’s Oct. 14 regulator-to-regulator meeting. He stated during that meeting, a request was made for the Committee to provide assurances that the Statutory Accounting Principles (E) Working Group, Valuation of Securities (E) Task Force, and Capital Adequacy (E) Task Force are coordinating their work on the current work with *Statement of Statutory Accounting Principles (SSAP) No. 43—Loan-Backed and Structured Securities*.

Mr. Botsko summarized his request (Attachment One-C) to the Committee. The request includes a new working group to evaluate proposed changes to the risk-based capital (RBC) formula. He discussed some of the primary reasons for the new group including describing how RBC was a minimum standard and that the NAIC needs to find a balance between the detail of reporting and the appropriateness of a risk charge. He described how the group would be a formal group, which he stated he believes was important to provide transparency and documentation for important considerations. He noted the working group would also evaluate other investment charges for the appropriateness and accuracy given some of the factors had not been updated since their development in the early 1990s. He also described an informal affiliated RBC drafting group and how he believes a number of changes could be made related to that work to improve some consistency in these areas of RBC. He noted...
he sees the group as having a more holistic view, and it will be important for the group to stay current with new investment products, as well as international approaches.

Commissioner White asked Mr. Botsko if the coordination with the Statutory Accounting Principles (E) Working Group would continue. Ms. To stated her support for the work and the charge.

Director French made a motion, seconded by Commissioner Afable, to incorporate the proposed charge included in the letter into the Committee’s 2022 proposed charges. The motion passed unanimously.

4. **Adopt its 2022 Proposed Charges**

Commissioner White noted that the Committee had previously exposed its 2022 proposed changes for a 30-day public comment period and received no comments.

Commissioner Conway made a motion, seconded by Ms. Geckler, to adopt its 2022 proposed charges (Attachment One-D), including the charge included in the previous agenda item. The motion passed unanimously.

Having no further business, the Financial Condition (E) Committee adjourned.

*Attachment One-Nov 19 E min.docx*
MEMORANDUM

TO: Superintendent Elizabeth Kelleher Dwyer, Chair of the Financial Regulation Standards and Accreditation (F) Committee

FROM: Commissioner Scott A. White, Chair of the Financial Condition (E) Committee

DATE: Nov. 19, 2021

RE: Use of Captives to Reinsure Variable Annuity and Long-Term Care Business

I received your April 14 memo requesting information on the extent the referenced captives are used, any trends on the use of the captives, reasons for such trends, and any relevant updates on work done in the areas of variable annuities and long-term care insurance (LTCI). Upon receiving your memo, I referred your request to the Financial Analysis (E) Working Group. Since the Working Group ultimately collected the information on the use of captives by surveying domestic states using the states’ confidentiality standards, the Working Group’s response memo will be submitted to the Financial Regulation Standards and Accreditation (F) Committee as a separate regulator-only document. However, for the purposes of this memo, I would note that one of the key takeaways from the Working Group is that the current impact to the risk-based capital (RBC) of the domestic insurers utilizing these captives is minimal.

I would also like to provide you with updates on work done on variable annuities and LTCI. In 2018, the Financial Condition (E) Committee adopted a revised framework for variable annuities, which became effective Jan. 1, 2020. The changes were specifically designed to remove the non-economic volatility within the previous framework, therefore removing the major reason for the use of captives for variable annuities. The Committee believes it is an appropriate time to remove the to be determined (TBD) effective date in the Accreditation Preamble and replace it with a reference to VM-21, Requirements for Principle-Based Reserves for Variable Annuities.

For LTCI, the Financial Condition (E) Committee has not developed any new standards that could be used to justify the removal of the TBD status. Although the impact of the use of captives for LTCI still appears to be minimal, the Committee recommends that this aspect of the Accreditation Preamble be retained and that the Financial Regulation Standards and Accreditation (F) Committee continue to monitor the use of captives for LTCI.

In summary, the Financial Condition (E) Committee recommends a replacement of the TBD in the Accreditation Preamble for variable annuities with VM-21 and retaining the TBD for LTCI.
MEMORANDUM

TO: Commissioner Marlene Caride, Chair of the NAIC Life Insurance and Annuities (A) Committee
Commissioner Scott A. White, Chair of the NAIC Financial Condition (E) Committee

FROM: Mike Boerner, Chair of the NAIC Life Actuarial (E) Task Force and Valuation Analysis (E) Working Group

DATE: Oct. 8, 2021

RE: Financial Sector Assessment Program (FSAP) Recommendation

In late 2020, the International Monetary Fund (IMF) completed its technical note as part of its assessment of U.S. insurance supervision in connection with its FSAP. The IMF made a number of recommendations in completing its technical note, one of which relates to life insurance reserving. Specifically, the following recommendation was made:

*The NAIC and state insurance regulators should significantly expand their in-house supervisory actuarial capability to supervise principle-based reserving (PBR) effectively. Consider the formation of a shared center of expertise in addition to the NAIC resources already available to the Valuation Analysis (E) Working Group.*

A reference is made in the recommendation to existing NAIC resources available to the Valuation Analysis (E) Working Group, which has been appropriately built up by the NAIC since the adoption of PBR. To date, these NAIC resources have been quite valuable in helping both the Working Group and the Life Actuarial (A) Task Force meet state insurance regulators’ needs. As chair of both groups, I can personally attest to both the Working Group and Task Force’s appreciation for the assistance provided by these NAIC resources. While more resources for such efforts would certainly always be appreciated, we believe the resources provided to date, along with the use of consultants for very specific projects, have collectively met the needs of state insurance regulators within those groups, and we support the prudent approach taken by the NAIC thus far in meeting our needs.

I appreciate the intent of the IMF consideration, and to the extent that our need for resources becomes more pronounced, we stand prepared to initiate the NAIC protocol for requesting those resources. Please let me know if you have any questions.
MEMORANDUM

TO: Scott A. White (VA), Chair of the Financial Condition (E) Committee
    Michael Conway (CO), Vice Chair of the Financial Condition (E) Committee

FROM: Tom Botsko (OH), Chair of the Capital Adequacy (E) Task Force

DATE: Nov. 1, 2021

RE: Request for a New Working Group

In recent years, there have been a significant number of investment-focused proposals that have been received by the Financial Condition (E) Committee or initiated or received by one of its task forces or working groups. Regardless of which group initially vets the proposal, these proposals may have risk-based capital (RBC) impacts, and in many of these proposals, the RBC impact is the driving force. The Capital Adequacy (E) Task Force, along with the RBC working groups, are requesting a new working group be formed to review these investment-related proposals that affect many different areas of the annual statement and financial reporting. When necessary, other groups will be contacted for their expertise. This new working group (RBC Investment Risk and Evaluation (E) Working Group) would be charged with performing a comprehensive review of the RBC investment framework for all business types, which could include: 1) identifying and acknowledging uses that extend beyond the purpose of the Risk-Based Capital (RBC) for Insurers Model Act (#312); 2) assessing the impact and effectiveness of potential changes in contributing to the identification of weakly capitalized companies (i.e., those companies at action level); and 3) documenting the modifications made over time to the formulas, including, but not limited to an analysis of the costs in:

- Study and development.
- Implementation (internal and external).
- Assimilation.
- Verification.
- Analysis and review of the desired change to the RBC formulas and facilitate the appropriate allocation of resources.

This request recognizes the Committee’s recent request for the chairs, vice chairs, and supporting NAIC staff of the Capital Adequacy (E) Task Force, Statutory Accounting Principles (E) Working Group, and Valuation of Securities (E) Task Force to meet on a routine basis to discuss topics pertaining to the bond project that have cross-functional implications. While those meetings may be informative to our pursuit, this is a more holistic endeavor to review appropriate NAIC consideration not limited to one investment area but with a focus on process to maximize efficiency in achieving the NAIC’s collective goals.

Since the inception of the RBC formulas in the early 1990s, many of the risk factors have not been evaluated/updated for the appropriateness of the initial risk charge.
We believe that having a regularly scheduled analysis of these investment risk charges is necessary to maintain accuracy of the formula and to stay current with economic conditions. We also understand that the Insurance Core Principles (ICPs) speak to the periodic review of the solvency framework. This proposed working group would work in parallel with these principles to review and maintain appropriate RBC charges.

One other important aspect of this working group would be to maintain documentation of the analysis and the background of the charge. At various times, the RBC working groups have reached out to the original members of the group that created the RBC formulas to better understand the thought process/reasons for some of the original charges.

As the insurance environment evolves both domestically and internationally, it is imperative that our organization stays current. The development of group capital within the NAIC is an indicator that our organization needs to maintain appropriate and current methodology.

Thank you for taking the time to review this request. We are available to discuss this with you at your convenience.

Please contact Jane Barr, NAIC staff support for the Capital Adequacy (E) Task Force, at jbarr@naic.org with any questions.

Cc: Dan Daveline; Eva Yeung; Crystal Brown; Dave Fleming; Julie Gann
FINANCIAL CONDITION (E) COMMITTEE

The mission of the Financial Condition (E) Committee is to be the central forum and coordinator of solvency-related considerations of the NAIC relating to accounting practices and procedures; blanks; valuation of securities; financial analysis and solvency; multistate examinations and examiner and analysis training; and issues concerning insurer insolvencies and insolvency guarantees. In addition, the Committee interacts with the technical task forces.

Ongoing Support of NAIC Programs, Products or Services

1. The Financial Condition (E) Committee will:
   B. Appoint and oversee the activities of the following: Accounting Practices and Procedures (E) Task Force; Capital Adequacy (E) Task Force; Examination Oversight (E) Task Force; Receivership and Insolvency (E) Task Force; Reinsurance (E) Task Force; Risk Retention Group (E) Task Force; and Valuation of Securities (E) Task Force.
   C. Oversee a process to address financial issues that may compromise the consistency and uniformity of the U.S. solvency framework, referring valuation and other issues to the appropriate committees as needed.
   D. Use the Risk-Focused Surveillance (E) Working Group to address specific industry concerns regarding regulatory redundancy, and review any issues industry subsequently escalates to the Committee.

2. The Financial Analysis (E) Working Group will:
   A. Analyze nationally significant insurers and groups that exhibit characteristics of trending toward or being financially troubled; determine if appropriate action is being taken.
   B. Interact with domiciliary regulators and lead states to assist and advise as to what might be the most appropriate regulatory strategies, methods, and action(s).
   C. Support, encourage, promote, and coordinate multistate efforts in addressing solvency problems, including identifying adverse industry trends.
   D. Increase information-sharing and coordination between state insurance regulators and federal authorities, including through representation of state insurance regulators in national bodies with responsibilities for system-wide oversight.

3. The Group Capital Calculation (E) Working Group will:
   A. Continually review and monitor the effectiveness of the group capital calculation (GCC), and consider revisions, as necessary, to maintain the effectiveness of its objective under the U.S. solvency system.
   B. Develop regulatory guidance related to the GCC. Complete by the 2021 Summer National Meeting.
   C. Liaise, as necessary, with the International Insurance Relations (G) Committee on international group capital developments, and consider input from participation of U.S. state insurance regulators in the International Association of Insurance Supervisors (IAIS) monitoring process.

4. The Group Solvency Issues (E) Working Group will:
   A. Continue to develop potential enhancements to the current regulatory solvency system as it relates to group solvency-related issues.
   B. Critically review and provide input and drafting to the IAIS, Insurance Groups Working Group or on other IAIS material dealing with group supervision issues.
   C. Continually review and monitor the effectiveness of the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450), and consider revisions, as necessary, to maintain effective oversight of insurance groups.
   D. Assess the IAIS Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame), and make recommendations on its implementation in a manner appropriate for the U.S.
5. The Own Risk and Solvency Assessment (ORSA) Implementation (E) Subgroup of the Group Solvency Issues (E) Working Group will:
   A. Continue to provide and enhance an enterprise risk management (ERM) education program for state insurance regulators in support of the ORSA implementation.
   B. Continually review and monitor the effectiveness of the Risk Management and Own Risk and Solvency Assessment Model Act (#505) and its corresponding NAIC Own Risk and Solvency Assessment (ORSA) Guidance Manual; consider revisions as necessary.

6. The Mortgage Guaranty Insurance (E) Working Group will:
   A. Develop changes to the Mortgage Guaranty Insurance Model Act (#630) and other areas of the solvency regulation of mortgage guaranty insurers, including, but not limited to, revisions to Statement of Statutory Accounting Principles (SSAP) No. 58—Mortgage Guaranty Insurance, and develop an extensive mortgage guaranty supplemental filing. Finalize Model #630 by the 2021 Spring National Meeting.

7. The Mutual Recognition of Jurisdictions (E) Working Group will:
   A. Develop a process for evaluating jurisdictions and jurisdictions and maintain a listing of jurisdictions that meets the NAIC requirements for recognizing and accepting the NAIC Group Capital Calculation (GCC).
   B. Maintain the NAIC List of Qualified Jurisdictions and the NAIC List of Reciprocal Jurisdictions in accordance with the Process for Evaluating Qualified and Reciprocal Jurisdictions.

8. The NAIC/American Institute of Certified Public Accountants (AICPA) (E) Working Group will:
   A. Continually review the Annual Financial Reporting Model Regulation (#205) and its corresponding implementation guide; revise as appropriate.
   B. Address financial solvency issues by working with the AICPA and responding to AICPA exposure drafts.
   C. Monitor the federal Sarbanes-Oxley (SOX) Act of 2002, as well as rules and regulations promulgated by the U.S. Securities and Exchange Commission (SEC), the Public Company Accounting Oversight Board (PCAOB), and other financial services regulatory entities.
   D. Review annually the premium threshold amount included in Section 16 of Model #205, with the general intent that those insurers subject to the Section 16 requirements would capture at least approximately 90% of industry premium and/or in response to any future regulatory or market developments.

9. The National Treatment and Coordination (E) Working Group will:
   A. Increase utilization and implementation of the Company Licensing Best Practices Handbook.
   B. Encourage synergies between corporate changes/amendments and rate and form filing review and approval to improve efficiency.
   C. Continue to monitor the usage and make necessary enhancements to the Form A Database.
   D. Maintain educational courses in the existing NAIC Insurance Regulator Professional Designation Program for company licensing regulators.
   E. Make necessary enhancements to promote electronic submission of all company licensing applications.

10. The Restructuring Mechanisms (E) Working Group will:
    A. Evaluate and prepare a white paper that:
        1. Addresses the perceived need for restructuring statutes and the issues those statutes are designed to remedy. Also, consider alternatives that insurers are currently employing to achieve similar results.
        2. Summarizes the existing state restructuring statutes.
        3. Addresses the legal issues posed by an order of a court (or approval by an insurance department) in one state affecting the policyholders of other states.
        4. Considers the impact that a restructuring might have on guaranty associations and policyholders that had guaranty fund protection prior to the restructuring. Complete by the 2021 Summer National Meeting.
    B. Identifies and addresses the legal issues associated with restructuring using a protected cell. Complete by the 2021 Summer National Meeting.
    C. Consider requesting approval from the Executive (EX) Committee on developing changes to specific NAIC models as a result of findings from the development of the white paper. Complete by the 2021 Summer National Meeting.
11. The Long-Term Care Insurance Restructuring (E) Subgroup of the Restructuring Mechanisms (E) Working Group will:
   A. Identify and assess potential legal and regulatory issues arising from a corporate transaction that would seek to legally separate certain long-term care (LTC) policies from the general account of the issuing insurer. Report on the Subgroup’s consideration of the issue, including a recommendation as to merits of an existing regulatory framework (e.g., Insurance Business Transfers state statutes) or a new regulatory framework, as contemplated by Workstream #2 of the Long-Term Care Insurance (EX) Task Force.

12. The Restructuring Mechanisms (E) Subgroup of the Restructuring Mechanisms (E) Working Group will:
   A. Develop best practices to be used in considering the approval of proposed restructuring transactions, including, among other things, the expected level of reserves and capital expected after the transfer, along with the adequacy of long-term liquidity needs. Also, develop best practices to be used in monitoring the companies after the transaction is completed. Once completed, recommend to the Financial Regulation Standards and Accreditation (F) Committee for its consideration. Complete by the 2021 Summer National Meeting.
   B. Consider the need to make changes to the RBC formula to better assess the minimum surplus requirements for companies in runoff. Complete by the 2021 Fall National Meeting.
   C. Review the various restructuring mechanisms and develop, if deemed needed, protected cell accounting and reporting requirements for referring to the Statutory Accounting Principles (E) Working Group. Complete by the 2021 Fall National Meeting.

13. The Risk-Focused Surveillance (E) Working Group will:
   A. Continually review the effectiveness of risk-focused surveillance, and develop enhancements to processes as necessary.
   B. Continually review regulatory redundancy issues identified by interested parties, and provide recommendations to other NAIC committee groups to address as needed.
   C. Oversee and monitor the Peer Review Program to encourage consistent and effective risk-focused surveillance processes.
   D. Continually maintain and update standardized job descriptions/requirements and salary range recommendations for common solvency monitoring positions to assist insurance departments in attracting and maintaining suitable staff.

14. The Valuation Analysis (E) Working Group will:
   A. Respond to states in a confidential forum regarding questions and issues arising during the course of annual principle-based reserving (PBR) reviews or PBR examination, and which also may include consideration of asset adequacy analysis questions and issues.
   B. Work with NAIC resources to assist in prioritizing and responding to issues and questions regarding PBR and asset adequacy analysis, including actuarial guidelines or other requirements making use of or relating to PBR, such as Actuarial Guideline XXXVIII—The Application of the Valuation of Life Insurance Policies Model Regulation (AG 38), Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued Under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (AG 48), and the Term and Universal Life Insurance Reserve Financing Model Regulation (#787).
   C. Develop and implement a plan with NAIC resources to identify outliers/concerns regarding PBR/asset adequacy analysis.
   D. Refer questions/issues, as appropriate, to the Life Actuarial (A) Task Force that may require consideration of changes/interpretations to be provided in the Valuation Manual.
   E. Assist NAIC resources in the development of a standard asset/liability model portfolio used to calibrate company PBR models.
   F. Make referrals, as appropriate, to the Financial Analysis (E) Working Group.
   G. Perform other work to carry out the Valuation Analysis (E) Working Group procedures.

NAIC Support Staff: Dan Daveline/Julie Gann/Bruce Jenson
2022 Proposed Charges

ACCOUNTING PRACTICES AND PROCEDURES (E) TASK FORCE

The mission of the Accounting Practices and Procedures (E) Task Force is to identify, investigate and develop solutions to accounting problems with the ultimate goal of guiding insurers in properly accounting for various aspects of their operations; modify the Accounting Practices and Procedures Manual (AP&P Manual) to reflect changes necessitated by Task Force action; and study innovative insurer accounting practices that affect the ability of state insurance regulators to determine the true financial condition of insurers.

Ongoing Support of NAIC Programs, Products or Services

1. The Accounting Practices and Procedures (E) Task Force will:

2. The Blanks (E) Working Group will:
   A. Consider improvements and revisions to the various annual/quarterly statement blanks to:
      1. Conform these blanks to changes made in other areas of the NAIC to promote uniformity in reporting of financial information by insurers.
      2. Develop reporting formats for other entities subject to the jurisdiction of state insurance departments.
      3. Conform the various NAIC blanks and instructions to adopted NAIC policy.
      4. Oversee the development of additional reporting formats within the existing annual financial statements as needs are identified.
   B. Continue to monitor state filing checklists to maintain current filing requirements.
   C. Continue to monitor and improve the quality of financial data filed by insurance companies by recommending improved or additional language for the Annual Statement Instructions.
   D. Continue to monitor and review all proposals necessary for the implementation of statutory accounting guidance to ensure proper implementation of any action taken by the Accounting Practices and Procedures (E) Task Force affecting annual financial statements and/or instructions.
   E. Continue to coordinate with other task forces of the NAIC to ensure proper implementation of reporting and instructions changes as proposed by these taskforces.
   F. Coordinate with the Life Actuarial (A) Task Force to use any special reports developed and avoid duplication of reporting.
   G. Review requests for investment schedule blanks and instructions changes in connection with the work being performed by the Capital Adequacy (E) Task Force and its working groups.
   H. Review changes requested by the Valuation of Securities (E) Task Force relating to its work on other invested assets reporting for technical consistency within the investment reporting schedules and instructions.

3. The Statutory Accounting Principles (E) Working Group will:
   A. Maintain codified statutory accounting principles by providing periodic updates to the guidance that address new statutory issues and new generally accepted accounting principles (GAAP) pronouncements. Provide authoritative responses to questions of application and clarifications for existing statutory accounting principles. Report all actions and provide updates to the Accounting Practices and Procedures (E) Task Force.
   B. At the discretion of the Working Group chair, develop comments on exposed GAAP and International Financial Reporting Standards (IFRS) pronouncements affecting financial accounting and reporting. Any comments are subject to review and approval by the chairs of the Accounting Practices and Procedures (E) Task Force and the Financial Condition (E) Committee.
   C. Coordinate with the Life Actuarial (A) Task Force on changes to the AP&P Manual related to the Valuation Manual VM-A, Requirements, and VM-C, Actuarial Guidelines, as well as other Valuation Manual requirements. This process will include the receipt of periodic reports on changes to the Valuation Manual on items that require coordination.
ACCOUNTING PRACTICES AND PROCEDURES (E) TASK FORCE (continued)

C.D. Obtain, analyze and review information on permitted practices, prescribed practices or other accounting treatments suggesting that issues or trends occurring within the industry may compromise the consistency and uniformity of statutory accounting, including, but not limited to, activities conducted by insurers for which there is currently no statutory accounting guidance or where the states have prescribed statutory accounting that differs from the guidance issued by the NAIC. Use this information to consider possible changes to statutory accounting.

NAIC Support Staff: Robin Marcotte
The mission of the Capital Adequacy (E) Task Force is to evaluate and recommend appropriate refinements to capital requirements for all types of insurers.

Ongoing Support of NAIC Programs, Products or Services

1. The Capital Adequacy (E) Task Force will:
   A. Evaluate emerging “risk” issues for referral to the risk-based capital (RBC) working groups/subgroups for certain issues involving more than one RBC formula. Monitor emerging and existing risks relative to their consistent or divergent treatment in the three RBC formulas.
   B. Review and evaluate company submissions for the schedule and corresponding adjustment to total adjusted capital (TAC).
   C. Evaluate relevant historical data and apply defined statistical safety levels over appropriate time horizons in developing recommendations for revisions to the current asset risk structure and factors in each of the RBC formulas.

2. The Health Risk-Based Capital (E) Working Group, Life Risk-Based Capital (E) Working Group, and Property and Casualty Risk-Based Capital (E) Working Group will:
   A. Evaluate refinements to the existing NAIC RBC formulas implemented in the prior year. Forward the final version of the structure of the current year life and fraternal, property/casualty (P/C), and health RBC formulas to the Financial Condition (E) Committee by June.
   B. Consider improvements and revisions to the various RBC blanks to: 1) conform the RBC blanks to changes made in other areas of the NAIC to promote uniformity; and 2) oversee the development of additional reporting formats within the existing RBC blanks as needs are identified. Any proposal that affects the RBC structure must be adopted no later than April 30 in the year of the change, and adopted changes will be forwarded to the Financial Condition (E) Committee by the next scheduled meeting or conference call. Any adoptions made to the annual financial statement blanks or statutory accounting principles that affect an RBC change adopted by April 30 and results in an amended change may be considered by July 30 for those exceptions where the Capital Adequacy (E) Task Force votes to pursue by super-majority (two-thirds) consent of members present no later than June 30 for the current reporting year.
   C. Monitor changes in accounting and reporting requirements resulting from the adoption and continuing maintenance of the revised Accounting Practices and Procedures Manual (AP&P Manual) to ensure that model laws, publications, formulas, analysis tools, etc., supported by the Task Force continue to meet regulatory objectives.
   D. Review the effectiveness of the NAIC’s RBC policies and procedures as they affect the accuracy, audit ability, timeliness of reporting access to RBC results and comparability between the RBC formulas. Report on data quality problems in the prior year RBC filings at the summer and fall national meetings.

3. The Longevity Risk (E/A) Subgroup, a joint subgroup of the Life Risk-Based Capital (E) Working Group and the Life Actuarial (A) Task Force, will:
   A. Provide recommendations for the appropriate treatment of longevity risk transfers by the new longevity factors.

4. The Variable Annuities Capital and Reserve (E/A) Subgroup, a joint subgroup of the Life Risk-Based Capital (E) Working Group and the Life Actuarial (A) Task Force, will:
   A. Monitor the impact of the changes to the variable annuities reserve framework and RBC calculation, and determine if additional revisions need to be made.
   B. Develop and recommend appropriate changes including those to improve accuracy and clarity of variable annuity (VA) capital and reserve requirements.

5. The Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group will:
   A. Recalculate the premium risk factors on an ex-catastrophe basis, if needed.
   B. Continue to update the U.S. and non-U.S. catastrophe event list.
   C. Continue to evaluate the need for exemption criteria for insurers with minimal risk.
D. Evaluate the RBC results inclusive of a catastrophe risk charge.
E. Refine instructions for the catastrophe risk charge.

CAPITAL ADEQUACY (E) TASK FORCE (continued)

F. Continue to evaluate any necessary refinements to the catastrophe risk formula.
G. Evaluate other catastrophe risks for possible inclusion in the charge.

6. The Risk-Based Capital (RBC) Investment Risk and Evaluation (E) Working Group will:
   A. Perform a comprehensive review of the RBC investment framework for all business types, which could include:
      1. Identifying and acknowledging uses that extend beyond the purpose of the Risk-Based Capital (RBC) for Insurers Model Act (#312).
      2. Assessing the impact and effectiveness of potential changes in contributing to the identification of weakly capitalized companies; i.e., those companies at action level.
      3. Documenting the modifications made over time to the formulas, including, but not limited to, an analysis of the costs in study and development, implementation (internal and external), assimilation, verification, analysis, and review of the desired change to the RBC formulas and facilitating the appropriate allocation of resources.

NAIC Support Staff: Jane Barr
EXAMINATION OVERSIGHT (E) TASK FORCE

The mission of the Examination Oversight (E) Task Force is to monitor, develop and implement tools for the risk-focused surveillance process. For financial examinations and analysis, this includes maintenance of the Financial Condition Examiners Handbook and the Financial Analysis Handbook to provide guidance to examiners and analysts using a risk-focused approach to solvency regulation and to encourage effective communication and coordination between examiners, analysts and other regulators. In addition, the mission of the Task Force is to: monitor and refine regulatory tools of the risk-focused surveillance process, including Financial Analysis Solvency Tools (FAST) such as company profiles and the FAST ratio scoring system; oversee financial examiner and analyst use of electronic software tools; monitor the progress of coordination efforts among the states in conducting examinations and the sharing of information necessary to solvency monitoring; establish procedures for the flow of information between the states about troubled companies; maintain an effective approach to the review of information technology (IT) general controls; and monitor the timeliness of financial examinations.

Ongoing Support of NAIC Programs, Products or Services

1. The Examination Oversight (E) Task Force will:
   A. Accomplish its mission using the following groups:
      5. Information Technology (IT) Examination (E) Working Group.

2. The Electronic Workpaper (E) Working Group will:
   A. Monitor and support the state insurance departments in using electronic workpaper software tools to conduct and document solvency monitoring activities.
   B. Provide ongoing oversight to the transition of electronic workpaper work to the TeamMate+ application NAIC’s Electronic Workpaper Hosting Project.
   C. Monitor state insurance regulator use of TeamMate+ to proactively identify best practices and improvements to the application, as necessary. Develop a framework to meet the long-term hosting and software needs of state insurance regulators in using electronic workpapers to conduct and document solvency monitoring activities. Ensure that solutions developed consider various state insurance regulator uses, as appropriate.

3. The Financial Analysis Solvency Tools (E) Working Group will:
   A. Provide ongoing maintenance and enhancements to the Financial Analysis Handbook and related applications for changes to the NAIC annual/quarterly financial statement blanks, as well as enhancements developed to assist in the risk-focused analysis and monitoring of the financial condition of insurance companies and groups. Monitor the coordination of analysis activities of holding company groups, and coordinate and analyze input received from other state regulators.
   B. Provide ongoing development maintenance and enhancements to the automated financial solvency tools developed to assist in conducting risk-focused analysis and monitoring the financial condition of insurance companies and groups. Prioritize and perform analysis to ensure that the tools remain reliable and accurate.
   C. Coordinate with the Financial Examiners Handbook (E) Technical Group and the Risk-Focused Surveillance (E) Working Group, as appropriate, to develop and maintain guidance in order to provide effective solvency monitoring.
   D. Adjust the Financial Analysis Handbook and current financial analysis solvency tools for life insurance companies based on any recommendations as requested from the Life Actuarial (A) Task Force to incorporate principle-based reserving (PBR) changes.
EXAMINATION OVERSIGHT (E) TASK FORCE (continued)

4. The Financial Examiners Coordination (E) Working Group will:
   A. Develop enhancements that encourage the coordination of examination activities regarding holding company groups.
   B. Promote coordination by assisting and advising domiciliary regulators and exam coordinating states as to what might be the most appropriate regulatory strategies, methods and actions regarding financial examinations of holding company groups.
   C. Facilitate communication among regulators regarding common practices and issues arising from coordinating examination efforts.
   D. Provide ongoing maintenance and enhancements to the Financial Examination Electronic Tracking System (FEETS).

5. The Financial Examiners Handbook (E) Technical Group will:
   A. Continually review the Financial Condition Examiners Handbook and revise, as appropriate.
   B. Coordinate with the Risk-Focused Surveillance (E) Working Group to monitor the implementation of the risk-assessment process by developing additional guidance and exhibits within the Financial Condition Examiners Handbook, including consideration of potential redundancies affected by the examination process, corporate governance and other guidance as needed to assist examiners in completing financial condition examinations.
   C. Coordinate with the Financial Analysis Solvency Tools (E) Working Group and the Risk-Focused Surveillance (E) Working Group, as appropriate, to develop and maintain guidance in order to provide effective solvency monitoring.
   D. Coordinate with the IT Examination (E) Working Group and the Financial Examiners Coordination (E) Working Group to maintain specialized areas of guidance within the Financial Condition Examiners Handbook related to the charges of these specific working groups.
   E. Adjust the Financial Condition Examiners Handbook based upon any recommendations as requested from the Life Actuarial (A) Task Force to incorporate PBR changes.

6. The Information Technology (IT) Examination (E) Working Group will:
   A. Continually review and revise, as needed, the “General Information Technology Review” and “Exhibit C—Evaluation of Controls in Information Systems” sections of the Financial Condition Examiners Handbook.
   B. Monitor cybersecurity trends, including emerging and/or ongoing vulnerabilities, and develop guidance within the Financial Condition Examiners Handbook or other tools, if deemed necessary, to support IT examiners.

NAIC Support Staff: Bailey Henning
2022 Proposed Charges

FINANCIAL STABILITY (E) TASK FORCE

The mission of the Financial Stability (E) Task Force is to consider issues concerning domestic or global financial stability as they pertain to the role of state insurance regulators.

Ongoing Support of NAIC Program, Products or Services

1. The Financial Stability (E) Task Force will:

   A. Consider issues concerning domestic and global financial stability as they pertain to the role of state insurance regulators and make recommendations to the International Insurance Relations (G) Committee, the Government Relations (EX) Leadership Council and/or the Executive (EX) Committee, as appropriate.

      1. Analyze existing post-financial crisis regulatory reforms for their application in identifying macroeconomic trends, including identifying possible areas of improvement or gaps, and propose to the Financial Condition (E) Committee or other relevant committee enhancements and/or additions to further improve the ability of state insurance regulators and the industry to address macroprudential impacts; consult with such committees on implementation, as needed.

   B. Consider state insurance regulators’ input to national and international discussions on macroeconomic vulnerabilities affecting the insurance sector.

      1. Monitor international macroprudential activities at forums like the International Association of Insurance Supervisors (IAIS).
      2. Implement the Macroprudential Initiative (MPI) domestically, which includes enhancements to the U.S. regulatory toolkit as part of the State Ahead initiative.

   C. Serve as a forum to coordinate state insurance regulators’ perspectives on a wide variety of issues arising from the designation of a U.S. insurance group as “systemically important” and “internationally active” both pre- and post-designation, including:

      1. Where appropriate, develop policy recommendations and/or guidance regarding the role, responsibilities and activities of state insurance regulators in the context of consolidated supervision resulting from designation.
      2. Analyze proposed rules by the federal agencies that relate to financial stability.
      3. Analyze proposed policy measures regarding supervisory standards for global systemically important insurers (G-SIIs) and internationally active insurance groups (IAIGs).
      4. Develop comment letters on such analysis for further consideration by the International Insurance Relations (G) Committee, the Government Relations (EX) Leadership Council, and/or the Executive (EX) Committee, as appropriate.

2. The Macroprudential (E) Working Group will:

   A. Oversee the implementation and maintenance of the liquidity stress testing framework for 2020 data as well as future iterations.

   B. Assist with the remaining MPI projects related to counterparty disclosures and capital stress testing as needed.

   C. Continue to develop and administer data collection tools as needed, leveraging existing data where feasible, to provide the Financial Stability (E) Task Force with meaningful macroprudential information regarding how the insurance sector is navigating the prevailing market conditions.

   D. Oversee the development, implementation, and maintenance process for a new Macroprudential Risk Assessment system (i.e., policies, procedures, and tools) to enhance regulators’ ability to monitor industry trends from a macroprudential perspective.

   E. Oversee the documentation of the NAIC’s macroprudential policies, procedures, and tools.

   F. Provide the Task Force with proposed responses to IAIS and other international initiatives as needed.

NAIC Support Staff: Todd Sells/Tim Nauheimer
The mission of the Receivership and Insolvency (E) Task Force is to be administrative and substantive as it relates to issues concerning insurer insolvencies and insolvency guarantees. Such duties include, without limitation: 1) monitoring the effectiveness and performance of state administration of receiverships and the state guaranty fund system; 2) coordinating cooperation and communication among regulators, receivers and guaranty funds; 3) monitoring ongoing receiverships and reporting on such receiverships to NAIC members; 4) developing and providing educational and training programs in the area of insurer insolvencies and insolvency guarantees to regulators, professionals and consumers; 5) developing and monitoring relevant model laws, guidelines and products; and 6) providing resources for regulators and professionals to promote efficient operations of receiverships and guaranty funds.

Ongoing Support of NAIC Programs, Products or Services

1. The Receivership and Insolvency (E) Task Force will:
   A. Monitor and promote efficient operations of insurance receiverships and guaranty associations.
   B. Monitor and promote state adoption of insurance receivership and guaranty association model acts and regulations, and monitor other legislation related to insurance receiverships and guaranty associations.
   C. Provide input and comments to the International Association of Insurance Supervisors (IAIS), the Financial Stability Board (FSB) or other related groups on issues regarding international resolution authority.
   D. Monitor, review and provide input on federal rulemaking and studies related to insurance receiverships.
   F. Monitor the work of other NAIC committees, task forces and working groups to identify and address any issues that affect receivership law and/or regulatory guidance.
   G. Perform additional work as directed by the Financial Condition (E) Committee and/or received through referral by other groups.

2. The Receiver’s Handbook (E) Subgroup of the Receivership and Insolvency (E) Task Force will:
   A. Review the Receiver's Handbook to identify areas where information is outdated, updates are required, or additional guidance is needed. Based on this review, draft and propose recommended edits to the Receiver’s Handbook. Complete by the 2022 Fall National Meeting.

2.3. The Receivership Financial Analysis (E) Working Group will:
   A. Monitor receiverships involving nationally significant insurers/groups to support, encourage, promote and coordinate multistate efforts in addressing problems.
   B. Interact with the Financial Analysis (E) Working Group, domiciliary regulators, and lead states to assist and advise as to what might be the most appropriate regulatory strategies, methods and/or action(s) regarding potential or pending receiverships.

3. The Receivership Law (E) Working Group will:
   A. Review and provide recommendations on any issues identified that may affect states’ receivership and guaranty association laws (e.g., any issues that arise as a result of market conditions; insurer insolencies; federal rulemaking and studies; international resolution initiatives; or as a result of the work performed by or referred from other NAIC committees, task forces and/or working groups).
   B. Discuss significant cases that may impact the administration of receiverships.

1. Complete work as assigned from the Receivership and Insolvency (E) Task Force to address recommendations from the Financial Stability (E) Task Force’s Macroprudential Initiative (MPI) referral:
   A. Complete work related to qualified financial contracts (QFCs), including: 1) explore if bridge institutions could be implemented under regulatory oversight pre-receivership to address an early termination of QFCs and, if
appropriate, develop applicable guidance; 2) develop enhancements to the Receiver's Handbook guidance on QFCs; and 3) identify related pre-receivership considerations related to QFCs and, if necessary, make referrals to other relevant groups to enhance pre-receivership planning, examination and analysis guidance.

B. Review and provide recommendations for remedies to ensure the continuity of essential services and functions to an insurer in receivership by affiliated entities, including non-regulated entities. Among other solutions, this will encompass a review of the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450) to provide proposed revisions to address the continuation of essential services through affiliated intercompany agreements in a receivership.

C. Consult with and/or make referrals to other NAIC working groups, as deemed necessary, as the topic relates to affiliated intercompany agreements and pre-receivership considerations. Complete by the 2021 Fall National Meeting.

— The Receiver's Handbook (E) Subgroup of the Receivership and Insolvency (E) Task Force will:

   A. Review the Receiver's Handbook to identify areas where information is outdated, updates are required, or additional guidance is needed. Based on this review, draft and propose recommended edits to the Receiver's Handbook. Complete by the 2022 Fall National Meeting.

NAIC Support Staff: Jane Koenigsman
2022 Proposed Charges

REINSURANCE (E) TASK FORCE

The mission of the Reinsurance (E) Task Force is to monitor and coordinate activities and areas of interest that overlap to some extent the charges of other NAIC groups—specifically, the International Insurance Relations (G) Committee.

Ongoing Support of NAIC Programs, Products or Services

1. The Reinsurance (E) Task Force will:
   A. Provide a forum for the consideration of reinsurance-related issues of public policy.
   C. Monitor the implementation of the 2011, 2016 and 2019 revisions to the Credit for Reinsurance Model Law (#785); and the 2011 and 2019 revisions to the Credit for Reinsurance Model Regulation (#786) and the Term and Universal Life Insurance Reserve Financing Model Regulation (#787).
   D. Communicate and coordinate with the Federal Insurance Office (FIO), other federal authorities, and international regulators and authorities on matters pertaining to reinsurance.
   E. Consider any other issues related to the revised Model #785, Model #786 and Model #787.
   F. Monitor the development of international principles, standards and guidance with respect to reinsurance. This includes, but is not limited to, monitoring the activities of various groups within the International Association of Insurance Supervisors (IAIS), including the Reinsurance and Other Forms of Risk Transfer Subcommittee, the Reinsurance Mutual Recognition Subgroup and the Reinsurance Transparency Group.
   G. Consider the impact of reinsurance-related federal legislation, including, but not limited to, the federal Nonadmitted and Reinsurance Reform Act (NRRA) and the Federal Insurance Office Act, and coordinate any appropriate NAIC action.
   H. Continue to monitor the impact of reinsurance-related international agreements, including the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (EU Covered Agreement) and the “Bilateral Agreement Between the United States of America and the United Kingdom on Prudential Measures Regarding Insurance and Reinsurance” (UK Covered Agreement).

2. The Reinsurance Financial Analysis (E) Working Group will:
   A. Operate in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings and operate in open session when discussing certified reinsurance topics and policy issues, such as amendments to the Uniform Application for Certified Reinsurers.
   B. Provide advisory support and assistance to states in the review of reinsurance collateral reduction applications. Such a process with respect to the review of applications for reinsurance collateral reduction and qualified jurisdictions should strengthen state regulation and prevent regulatory arbitrage.
   C. Provide a forum for discussion among NAIC jurisdictions of reinsurance issues related to specific companies, entities, or individuals.
   D. Support, encourage, promote, and coordinate multistate efforts in addressing issues related to certified reinsurers, including, but not limited to, multistate recognition of certified reinsurers.
   E. Provide analytical expertise and support to the states with respect to certified reinsurers and applicants for certification.
   F. Provide advisory support with respect to issues related to the determination of qualified jurisdictions.
   G. Ensure the public passporting website remains current.
   H. For reinsurers domiciled in Reciprocal Jurisdictions, determine the best and most effective approaches for the financial solvency surveillance to assist the states in their work to protect the interests of policyholders.

NAIC Support Staff: Jake Stultz/Dan Schelp
2022 Proposed Charges

RISK RETENTION GROUP (E) TASK FORCE

The mission of the Risk Retention Group (E) Task Force is to stay apprised of the work of other NAIC groups as it relates to financial solvency regulation and the NAIC Financial Regulation Standards and Accreditation Program. The Task Force may make referrals to the Financial Regulation Standards and Accreditation (F) Committee and/or other NAIC groups, as deemed appropriate.

Ongoing Support of NAIC Programs, Products or Services

1. The Risk Retention Group (E) Task Force will:
   A. Monitor and evaluate the work of other NAIC committees, task forces and working groups related to risk retention groups (RRGs). Specifically, if any of these actions affect the NAIC Financial Regulation and Accreditation Standards Program, assess whether and/or how the changes should apply to RRGs and their affiliates.
   B. Monitor and analyze federal actions, including any U.S. Government Accountability Office (GAO) reports. Consider any action necessary as a result of federal activity.
   C. Monitor the impacts of recent tools and resources made available to domiciliary and non-domiciliary state insurance regulators pertaining to RRGs. Consider whether additional action is necessary, including educational opportunities, updating resources and further clarifications.

NAIC Support Staff: Becky Meyer/Sara Franson
2022 Proposed Charges

VALUATION OF SECURITIES (E) TASK FORCE

The mission of the Valuation of Securities (E) Task Force is to provide regulatory leadership and expertise to establish and maintain all aspects of the NAIC’s credit assessment process for insurer-owned securities, as well as produce insightful and actionable research and analysis regarding insurer investments.

Ongoing Support of NAIC Programs, Products or Services

1. The Valuation of Securities (E) Task Force will:
   A. Review and monitor the operations of the NAIC Securities Valuation Office (SVO) and the NAIC Structured Securities Group (SSG) to ensure they continue to reflect regulatory objectives.
   B. Maintain and revise the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) to provide solutions to investment-related regulatory issues for existing or anticipated investments.
   C. Monitor changes in accounting and reporting requirements resulting from the continuing maintenance of the Accounting Practices and Procedures Manual (AP&P Manual), as well as financial statement blanks and instructions, to ensure that the P&P Manual continues to reflect regulatory needs and objectives.
   D. Consider whether improvements should be suggested to the measurement, reporting and evaluation of invested assets by the NAIC as the result of: 1) newly identified types of invested assets; 2) newly identified investment risks within existing invested asset types; or 3) elevated concerns regarding previously identified investment risks.
   E. Identify potential improvements to the credit filing process, including formats and electronic system enhancements.
   F. Provide effective direction to the NAIC’s mortgage-backed securities modeling firms and consultants.
   G. Coordinate with other NAIC working groups and task forces—including, but not limited to, the Capital Adequacy (E) Task Force, the Statutory Accounting Principles (E) Working Group and the Blanks (E) Working Group—to formulate recommendations and to make referrals to such other NAIC regulator groups to ensure expertise relative to investments, or the purpose and objective of guidance in the P&P Manual, is reflective in the guidance of such other groups and that the expertise of such other NAIC regulatory groups and the objectives of their guidance is reflected in the P&P Manual.
   H. Identify potential improvements to the filing exempt process (the use of credit rating provider ratings to determine an NAIC designation) to ensure greater consistency, uniformity and appropriateness to achieve the NAIC’s financial solvency objectives.
   I. Implement policies to oversee the NAIC’s staff administration of rating agency ratings used in NAIC processes, including staff’s discretion over the applicability of their use in its administration of filing exemption.

NAIC Support Staff: Charles Therriault
The Group Capital Calculation (E) Working Group of the Financial Condition (E) Committee met Nov. 22, 2021. The following Working Group members participated: John Rehagen, Chair (MO); Kathy Belfi, Vice Chair (CT); Susan Bernard (CA); Philip Barlow (DC); Ray Spudeck (FL); Carrie Mears (IA); Susan Berry (IL); Roy Eft (IN); Christopher Joyce (MA); Judy Weaver (MI); Kathleen Orth (MN); Jackie Obusek (NC); David Wolf (NJ); Bob Kasinow (NY); Dale Bruggeman and Tim Biler (OH); Greg Lathrop (OR); Melissa Greiner (PA); Trey Hancock (TN); Jamie Walker (TX); and Doug Stolte and David Smith (VA).

1. **Adopted its Nov. 8, Sept 13, and Summer National Meeting Minutes**

The Working Group met Nov. 8 and Sept. 13 and took the following action: 1) exposed a staff memorandum that includes possible group capital calculation (GCC) modifications for a public comment period ending Dec. 23; 2) exposed until some clarifying changes to the GCC instructions that were previously provided to the Working Group and the public as part of the GCC Trial Implementation for a public comment period ending Dec. 8; 3) discussed comments on maintenance documents and proposed revisions; 4) discussed comments on a draft referral to the Capital Adequacy (E) Task Force; 5) adopted recommended changes to the *Financial Analysis Handbook* that incorporate guidance on using the GCC and subsequently distributed it to the Financial Analysis Solvency Tools (E) Working Group.

Ms. Belfi made a motion, seconded by Mr. Eft, to adopt the Working Group’s Nov. 8 (Attachment Two-A), Sept. 13 (Attachment Two-B), and July 26 (see *NAIC Proceedings – Summer 2021, Financial Condition (E) Committee, Attachment Two*) minutes. The motion passed unanimously.

2. **Discussed Results of the GCC Trial Implementation**

Ned Tyrrell (NAIC) provided a summary of the GCC Trial Implementation (Attachment Two-C). He emphasized that the summary was focused on those particular data points that might be helpful in the Working Group’s decisions on whether to make modifications to the template and instructions as they relate to issues identified during its Nov. 8 meeting. He noted that the summary includes data that has been anonymized, which is important in making sure a reader of the information can understand the data but unable to determine a specific company’s results. He described the different groupings used through the presentation, including by ownership type or sector, where composite represents an insurance that has a mixture of life and property/casualty (P/C) business. Mr. Tyrrell described the graphs used to provide the distribution of data, including the points used to provide averages and percentiles. He noted that the summary slides are all at the level of 200% of authorized control level risk-based capital (RBC). He also noted the large dominance of U.S. insurance business in most of the participants. Additionally, Mr. Tyrrell noted the relative low number of insurers that are affected by the debt limits, the other debt category and even the stress test, which was extreme and was intended to test the sensitivity of the debt limits.

Mr. Tyrrell discussed the data on non-risk jurisdictions, noting there as well that few of the insurers were affected by these types of insurers within their groups under both the Trial Implication use of 100% charge on the book value, or essentially a zeroing out of available and required capital, or the Nov. 8 meeting proposal of a 50% charge on the book value of such entities. He also discussed how the senior debt reported in the slides represented the allowable senior debt in the companies’ specific GCC calculations. Finally, he discussed the current proposal discussed during the Working Group’s Nov. 8 meeting that suggests the charge for asset managers be changed to the capital requirement from their regulator and just showed how the issue may be material to some of the insurers just from a simple standpoint of the size of such operations in the makeup of the group, but that it is less material for other volunteers. He noted that additional data would be needed to dig into the impact more specifically.

Dave Neve (Global Atlantic) asked about the difference between the GCC ratios on slide 6 and slide 10. Mr. Tyrrell noted it was a good catch to see the differences, and he said the reason is because one is weighted (slide 10) while the other (slide 6) is not. More specifically, on slide 10, the ratio is calculated by adding up the available capital and the required capital, and the available capital is divided by the requirement capital. Mr. Neve also asked about the impact of scalars. Mr. Tyrrell noted this was looked at but not included in the summary since there is currently not a decision before the Working Group on the matter. He described that with the excess scalar method, for most volunteers it actually does not make much of a difference. He noted,
however, that the results are consistent with the intent, which is to capture the difference between those systems with less reserve conservatism versus more reserve conservatism.

3. **Discussed Other Matters**

Mr. Rehagen reminded the participants of the Working Group’s two current exposures and that his intent is meet in early January to consider comments from those two exposures.

Having no further business, the Group Capital Calculation (E) Working Group adjourned.

Attachment Two-A-11-8-21 Meeting Minutes (1).docx
The Group Capital Calculation (E) Working Group of the Financial Condition (E) Committee met Nov. 8, 2021. The following Working Group members participated: John Rehagen, Chair (MO); Kathy Belfi, Vice Chair (CT); Kim Hudson (CA); Philip Barlow (DC); Ray Spudeck (FL); Carrie Mears (IA); Susan Berry (IL); Christopher Joyce (MA); Judy Weaver and Steve Mayhew (MI); Jackie Obusek (NC); Justin Schrader (NE); David Wolf (NJ); Bob Kasinow (NY); Dale Bruggeman and Tim Biler (OH); Greg Lathrop (OR); Melissa Greiner and Kimberly Rankin (PA); Trey Hancock (TN); Amy Garcia (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI).

1. **Discussed and Exposed a Staff Memorandum on Possible GCC Modifications**

Mr. Rehagen stated that the first two agenda items were related to the extent the Working Group wants to make any changes to the group capital calculation (GCC) before the template and instructions are effective for 2022. He described that the principle behind agenda item two was to make sure members of the industry have plenty of time to prepare for any changes made in the same year as the changes are effective. He described more specifically how agenda item two requires GCC template changes to be exposed by Jan. 31 of the effective year and then adopted by April 30, and that GCC instruction changes need to be exposed by April 30 and adopted by June 30. He said that the proposed maintenance procedures included in agenda item two had yet to be adopted. Therefore, he said perhaps the Working Group could be more lenient on some of those deadlines this year, but he wants to stick to the spirit of the dates in that agenda item. He stated the Working Group would come back to those dates in the next agenda item but wanted Working Group members to be aware of those before he asked NAIC staff to summarize each of the items in its staff memorandum (Attachment Two-A1). He asked that as NAIC staff summarize the items, Working Group members keep in mind his desire to expose the memorandum for 45 days, and then for the Working Group to meet in early January to discuss comments received.

Dan Daveline (NAIC) summarized each of the proposals in the staff memorandum. As it relates to the proposed change for foreign insurers, Mr. Wolf asked for an example of a jurisdiction that would not have a risk-based regime. Mr. Daveline responded that Barbados was one such example. Ned Tyrrell (NAIC) added some additional context for Mr. Wolf. He said that a non-risk-based regime could include, for example, a jurisdiction where it is simply a minimum capital requirement in dollars, such as $5 million, that does not go up or down based upon the amount of business written. He stated that Barbados was not quite this insensitive, but that it may not consider the type of business written or the type of assets owned. Mr. Wolf stated his appreciation for the example and stated he is still favoring a 100% factor on the book value of the entity because that is what they have at risk in that country. However, he said that he is not opposed to it being exposed and getting different viewpoints.

Michael DeBois (MassMutual) clarified that the life risk-based capital (RBC) formula actually requires a zero value for the carrying value of foreign insurers and, therefore, is excluded from both the numerator and denominator of the RBC. Mr. Daveline agreed with the statement from Mr. DeBois, indicating he was simply shortcutting for comparative purposes. Mr. Spudeck asked about the materiality of this issue, as well as the materiality of the issue dealing with other debt. Mr. Daveline and Mr. Tyrrell noted this was a good question and said that while neither are generally material to the industry as a whole based upon the trial implementation, it is more material to a small number of companies but not significant even in those cases. It was noted that during a future meeting, aggregate results from the trial implementation would be presented, which may be helpful in supplementing this response. Mr. Spudeck whether in those situations where its more material, would it show up in the financial analysis. Mr. Daveline responded that he believed spike in other debt likely would show up in the GCC analytics, but he does not believe the same could be said about the foreign insurer question. Mr. Tyrell responded he would look more closely at the data on both questions. With respect to the issue raised within the memorandum on modifying the reporting of some entities in Schedule 1, Ms. Belfi said she appreciates the issue being raised as they had seen some inconsistency in reporting, and they were struggling with the issue as well.

The Working Group agreed to expose the NAIC staff memorandum for a 45-day public comment period ending Dec. 23.

Mr. Rehagen also noted that included in the materials was the latest instructions that already included changes for items that were changed during the trial implementation. He noted all of those changes were intended to be clarifying.
The Working Group agreed to expose the instructions for a 30-day public comment period ending Dec. 8.

2. **Discussed Comments on Maintenance Documents and Proposed Revisions**

Mr. Rehagen discussed how the Working Group had previously exposed proposed documents that collectively provide the GCC with the same type of maintenance process as exists in RBC, including the change proposal forms, and the timeline he mentioned earlier in the meeting. He noted that the Working Group received one comment letter (Attachment Two-A2) from the American Council of Life Insurers (ACLI). Mr. Rehagen said NAIC staff tried to add language into a revised document to recognize the ACLI’s point, but at the same time, give the Working Group some flexibility. He asked if the ACLI could comment on whether it finds the changes proposed responsive to their concerns. Mariana Gomez-Vock (ACLI) stated that while her members have not had a chance to review and discuss the changes, she had, and she believes they could support the changes. She stated her appreciation for the Working Group and NAIC staff’s efforts to incorporate feedback from stakeholders around the potential need for more time on more complex issues. Mr. Rehagen asked the Working Group if it would like to adopt the revised procedures today or come back to it after the Working Group has received comments on the first exposure of the Working Group from earlier in the meeting. Ms. Belfi stated she would like to wait. Mr. Rehagen stated he does not believe there is a rush. Therefore, the Working Group will revisit the revised procedures during a future meeting.

3. **Considered Comments on a Draft RBC Referral**

Mr. Rehagen discussed how the Working Group had previously exposed a “draft” memorandum from the Working Group to the Capital Adequacy (E) Task Force. The memorandum highlighted some of the differences between the GCC and RBC. Mr. Rehagen reminded everyone that the Working Group discussion definitely emphasized that whether RBC made such changes was really up to those particular RBC groups. He noted the Working Group received comments on that memorandum and wanted to give each of those parties an opportunity to speak to their comment letters (Attachment Two-A3). Before doing so, he noted that he is open to having some discussions with the Task Force in the future, maybe just to explain why the GCC was constructed the way it was. He added that he suspects the Working Group may hear some of the same on why RBC was constructed the way it was. He stated the timing of such conversations may not be immediate but rather based upon the current priorities that both groups have. He asked the ACLI to summarize its letter. Ms. Gomez-Vock emphasized the ACLI’s support for the work, but also emphasized the GCC should reflect existing RBC and accounting rules. She said to the extent that the GCC causes those existing rules to be rethought, they should be done so under the existing processes in place at those groups.

Mr. Rehagen directed the Working Group to the comments received (Attachment Two-A4) on the Working Group’s previously re-exposed Financial Analysis Handbook guidance, as well as a revised draft of the same where NAIC staff modified the re-exposed guidance to address any comments that did not change the original intent. Tom Finnell, speaking on behalf of the interested party group consisting of the American Association of Health Insurance Plans (AHIP), the American Council of Life Insurers (ACLI), American Insurance Group, Anthem, Blue Cross and Blue Shield Association (BCBSA), Metropolitan Life Insurance Company, and UnitedHealth Group, stated their support for the revised guidance. He discussed how the group had provided some fairly significant comments during the Working Group’s first exposure, which they believe were needed to ensure that the guidance was consistent with the original purpose of the GCC. Mr. Finnell said those comments had been incorporated into the re-exposed version, so they have no further comments.

Mark Sagat (Liberty Mutual) said Liberty Mutual supports the current version and would recommend adoption. Chuck Feinen (State Farm) said State Farm has no further comments at this time. Jeff Martin (UnitedHealth Group) stated his appreciation for the Working Group’s incorporation of most of UnitedHealth Group’s edits into the revised guidance that it believes should improve the clarity and readability of the document. He did note that there was one reference on Page 169 of the materials that UnitedHealth Group believes required some action. Mr. Daveline acknowledged the comment was legitimate and could be resolved by either updating the cross reference to the other section of the Financial Analysis Handbook or by removal of the sentence. He indicated he would work with the NAIC staff support for the Financial Analysis Handbook to get it resolved before the document is distributed to the Financial Solvency Analysis Tools (E) Working Group.

Ms. Mears noted one other change on Page 172 and described how the section refers to guidance that is within an international consideration section, which she believes would apply to all groups. Mr. Daveline and Mr. Rehagen agreed that the guidance could pertain to all groups. Ms. Mears suggested renaming that international section to make it more generic to all holding companies.
Mr. Hudson made a motion, seconded by Ms. Mears, to adopt the revised GCC Financial Analysis Handbook guidance (see NAIC Proceedings – Fall 2021, Examination Oversight (E) Task Force, Attachment Two-D and Attachment Two-E) and send to the Financial Analysis Solvency Tools (E) Working Group for its consideration. The motion passed unanimously.

5. **Discussed Other Matters**

Mr. Rehagen stated that he expects the Working Group to meet in the coming weeks to receive a presentation from Mr. Tyrrell on the GCC trial implementation results.

Having no further business, the Group Capital Calculation (E) Working Group adjourned.

File 1a-11-8-21 Meeting Minutes.docx
MEMORANDUM

TO: Group Capital Calculation (E) Working Group
FROM: Dan Daveline, Ned Tyrrell, and Jane Ren
DATE: Nov. 8, 2021
RE: Staff Proposed Changes as a Result of Trial Implementation

While the 2019 GCC Field Test was invaluable in finalizing major changes to the GCC Template and Instructions before implementation, the 2021 Trial Implementation allowed preparers and reviewers of the GCC to focus more on the nuances of the GCC. As expected, a number of changes to the instructions were suggested during the completion of the template based upon comments and feedback from preparers, which the Working Group has been made aware of with each new release of the same during the trial period. Such changes are included in today’s materials, and we request the Working Group to expose these updated instructions with these modifications. The purpose of this memorandum however is to highlight more material changes, or potentially material changes to the extent the Working Group agrees with the staff recommendation. The following summarizes such changes.

Due to the fact that in accordance with draft procedures for the Working Group, template changes need to be adopted earlier in the year before instructional changes, we have listed those that require template changes first so they can be prioritized in discussions.

Template Changes

1. **Eliminate Stress Scenario**: While some Working Group members may want to consider adding informational stresses to the GCC in the future, the current sentiment among the Working Group seems to suggest that should only be considered after the GCC is fully implemented. Based upon that, it seems appropriate to remove the current stress from the template and the instructions.

2. **Debt Allowance**: One of the reasons the industry proposed the idea of including stress testing in the GCC for the Trial Implementation was to understand the sensitivity of the debt allowance after an economic downturn, therefore addressing its procyclicality. While it’s true that a 30% decline in the capital of a group can impact the debt allowance of the GCC in certain situations, thereby reducing the GCC ratio, NAIC staff does not believe this is a sufficient cause for increasing the debt allowance. As a reminder, the debt allowance is a proxy for the amount of subordinated capital embedded within the GCC and we believe the current allowance approximates this proxy well. A number of volunteers participating in the Trial Implementation suggested the 30% decline was generally not a very reasonable stress given past performance of the industry during previous financial crisis (e.g., 2008/2009 great
recession). However, some of those volunteers pointed to monetary policy during a financial crisis which actually encourages entities of all industries to increase debt as a means to push back against the negative impact. They pointed to the industry’s issuance of debt immediately after COVID and suggested the GCC should not go against these policies. NAIC staff does not disagree in principle, and would suggest a better way to address these points is through a simple annual 10% cap that enables the debt allowance to increase 10% from the prior year, but only during a period where the Federal Reserve has taken a public position of reducing the cost of borrowing through reducing interest rates either by lowering the Federal Funds rates or by purchasing debt instruments (additional if applicable). However, the 10% increase must be reversed once the Federal Reserve has taken action to reverse its trend (e.g., increase rates or reduce purchasing debt instruments). Perhaps this could be formally implemented only upon issuance of “guidance” by the Working Group that is posted to the Website. The details of whether this is appropriate and how it should be considered for adoption should first be determined by the Working Group. NAIC Staff would welcome proposed changes to the GCC instructions and template that could achieve this type of approach or any other similar approach that reduces the perceived procyclicality of the GCC limitation in this area.

3. **Eliminate Sensitivity Test Related to “Other Debt”** – We recognize that some members of the industry continue to believe that the debt allowance should include “other debt” beyond “senior debt” and “hybrid debt”. However, NAIC staff continues to believe that the approach already adopted by the Working Group to have an individual limit for each of those items (30% and 15% respectively) and the overall cap of those two is appropriate for the previous points made regarding how the debt allowance is a proxy for subordinated capital already within the insurance companies. With the previous consideration about adding an additional 10% annual change meeting the criteria, we further support no change to allow other debt. This should be further deliberated by the Working Group before taking action on this issue and input from interested parties may assist the Working Group in such a deliberation.

4. **Non-Risk Sensitive Foreign Jurisdictions** - One recommendation that has already been made by NAIC staff and regulators during the Trial Implementation is a different approach related to non-risk sensitive foreign jurisdictions. In summary, these are jurisdictions whose capital requirements are not responsive to the magnitude and/or nature of an insurer’s risk profile. During the Trial Implementation, a conservative approach was used on this matter, and the template included a capital charge equivalent to 100% of the carrying value of the non-U.S. insurer, which is similar in the life RBC formula today. However, to be clear, since 2010, the life formula has required companies to use a zero value for foreign affiliates statutory carry value is excluded from both total adjusted capital (the numerator) and RBC (the denominator) of the RBC ratio. This was done to level the playing field between stock and mutual insurers on the basis that most stock insurers where such entities are owned by a sister non-insurance holding company rather than the U.S. life insurance company.
NAIC staff suggestion during the Trial implementation was that groups with such entities consider using a lower factor, such as 50% of the carrying value, and be given the option to calculate the insurers capital requirement using RBC (with reasonable simplifications/estimates) if that is preferred to the 50% carrying value. At this point we have included this option in the revised instructions pending approval with exposure of such a substitute.

5. **Schedule 1 Related Questions/Considerations** The last item actually includes a number of separate questions or considerations, but they are all related to Schedule 1 and its purpose. More specifically, from the onset, the regulators have always stated they would like a way to make sure that the GCC includes all of the entities included in Schedule Y. Said differently, as drafted today, the Schedule 1 requires all entities to be listed in the Schedule Y, thereby providing that starting point the regulators requested. However, the instructions do provide one exception, and that is for Schedule A and BA entities, since those entities are already reflected in the RBC, and they don’t result in double counting of capital. Instead, these entities are listed in the Q&A tab, thereby having the effect of keeping the Schedule 1 cleaner, but still allowing a way for the regulator to reconcile back to the Schedule Y if they chose to do so. The question is whether similar exceptions in Schedule 1 should be provided for other entities. This would be for simplicity and to allow the regulator to focus on the entities more easily in the group on that matter. NAIC staff welcomes input on these considerations. The following presents such types of entities to the Working Group in a way to see if they would like a different approach:

a. **Other entities included in the RBC** The GCC does not require non-insurance/non-financial entities to be destacked, but they are required to be included in Schedule 1 and certain limited information included in the Inventory. The question is whether a listing of these entities could be included in the Q&A similar to the Schedule A and BA entities. The idea being that would keep the Schedule 1 cleaner, but for anyone wanting to reconcile back to the Schedule 1, they could do so with the listings in the Q&A. The NAIC raises this issue in case the current approach results in confusion by the preparer, or even for the reviewer since the inventory does not include any calculated capital amounts for these entities.

b. **Consideration of Entities “Not material” or “Excluded” from the GCC ratio** The GCC currently requires the group to list out its entities on Schedule 1, then mark each as either “Included” or “Excluded” for the purpose of calculating the GCC ratio. Specifically, for those that do not meet the GCC definition of material, the entity can “Exclude” them, however they have to be marked as such. The regulator then reviews the same listing and determines for themselves if each entity should be “Included” or “Excluded”. It’s likely that in the majority of situations, once a regulator determines an entity may be “Excluded” from the ratio, that they will likely be excluded in the future. This is based upon the fact that the general reason for exclusion tends to be driven by the nature of the entity and its risks, and not its size.
However, to clarify, not all entities that are once approved to be excluded always will be, and for that reason there will be a continued need for the GCC to provide information that allows the regulator to decide whether they can be excluded. The question is whether such information could be different than what is provided in Schedule 1, and, if so, whether perhaps such information could be reported elsewhere (e.g., Q&A tab). This would reduce the number of entities on Schedule 1 and perhaps help the regulator to focus on material entities in that schedule. The NAIC raises this issue for two reasons; 1) whether a different approach would allow for a more efficient review of the GCC by the regulator; 2) whether the current approach results in confusion by the preparer.

i. **Sensitivity Analysis** There is currently a sensitivity analysis related to “Excluded” entities to help the regulator understand the impact of the excluded entities on the GCC. The question is whether this should be removed. To the extent these excluded entities were no longer included in the Schedule 1 and Inventory, this sensitivity analysis could not be calculated, again, suggesting the need for some type of information to still be captured elsewhere in the GCC.

### Instruction Only Changes

6. **Asset Managers** – The GCC currently considers asset managers as financial entities, and therefore subject to a factor of either 2.5%, 5.0%, or 10% of 3-year average revenue (same as other financial entities) based upon the material risk principles defined in Section II of the instructions. Some members of the industry have suggested that asset managers should instead utilize the regulatory capital standards imposed by the Financial Industry Regulatory Authority (FINRA). NAIC staff have always believed that while the base GCC requirements should generally remain the same as the principles under which they have been developed by the Working Group, it’s only natural that it evolves over time to carve out new factors for specific industry’s where a different factor can be supported. As it relates to the current GCC, this would include either specific financial entities having a different factor than those noted above, or potentially even for non-insurance/non-financial industries, a different factor than is used for all other non-insurance/non-financial entities. Additionally, perhaps more specific to the point, one of the GCC principles is that it defers to the specific capital requirements of the regulator of the entity, which in this case may include FINRA to the extent they have specific capital requirements. NAIC staff attempted to gather information on such requirements through the review of FINRA 15c3-1, but it was unclear how such capital requirements practically work as they seem to be more principle-based. NAIC Staff would recommend the Working Group consider such a request, but only upon deliverance of documentation, including examples, that enable the regulators to understand. This does not need to be a full presentation to the Working Group unless the members indicate such is
needed but could instead be full documentation and time for the Working Group to ask questions.

Re: Comments on NAIC Group Capital Calculation (GCC) Procedures

Dear Mr. Rehagen:

The American Council of Life Insurers appreciates the opportunity to comment on the Proposed Group Capital Calculation (“GCC”) Procedures (hereafter the “GCC Process”). We appreciate the significant and thoughtful work that has gone into the GCC framework and the NAIC’s ongoing commitment to developing a GCC that is fit-for-purpose.

ACLI is generally supportive of establishing a clear procedure for amending the GCC template and instructions, however, we are concerned that the proposed 30-day exposure period for additions or amendments, may be sufficient for routine maintenance, but may not provide regulators, consumer representatives and the industry enough time to fully evaluate or provide meaningful feedback on GCC amendments that impact fundamental elements of the GCC, are complex or may have a significant impact on a group’s GCC results.1 For example, should the GCC amendment process be identical for both annual scalar maintenance and the adoption of a scalar methodology? We believe that there may be circumstances when the nature of the proposed amendment/addition to the GCC will merit additional vetting prior to adoption, and a longer minimum exposure period, than what is currently provided in the current exposure.

We respectfully recommend that the Working Group consider adopting an approach to GCC amendments that differentiates between additions or changes that are (1) routine annual updates or technical corrections or clarifications; and (2) those that fall outside of the bucket of “routine annual updates or technical corrections” and may impact a fundamental element of the GCC, are particularly complex, or impactful to GCC results. The Working Group could consider developing two parallel tracks for GCC amendments. One track could allow routine annual updates and technical corrections or clarifications to be exposed and adopted after a 30-day exposure, while all other amendments or additions would be subject to greater rigor and opportunity for review.

1 As we note later in our letter, a GCC amendment may not impact GCC results on the aggregate, across the industry or line of business, but it could significantly impact a particular group’s GCC ratio. We would consider both scenarios as “impactful.”

American Council of Life Insurers | 101 Constitution Ave. NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 94 percent of industry assets in the United States.

acli.com
ACLI comment letter on the GCC Amendment Process
09/24/2021

We believe that this topic merits further collaboration and conversation among Working Group members and stakeholders to identify and define the type of amendments or additions that would fall into the second bucket (e.g., issues that are connected to a fundamental element of the GCC or especially complex or impactful). Below, we have preliminarily identified several changes to the GCC amendments that we believe may fall into the category requiring a more rigorous process for adoption:

- **Scalar methodology.** It is likely that the GCC’s ultimate scalar methodology will likely be incorporated into the GCC as an amendment to the template and instructions. Scalar methodology – as opposed to routine updates to existing scalars – is an illustrative example of the type of an amendment that should necessitate greater analysis and exposure than what is currently provided in the proposed GCC Process. Scalars are a fundamental feature of an aggregation method, like the GCC and they will be relatively complex. We believe the adoption of a scalar methodology should require a longer exposure period than what is contemplated as the acceptable minimum in the exposed GCC Process. Scalars are a foundational element of any aggregation method, and they are highly complex. Any proposed scalar methodology change or addition should require careful vetting, and potentially a charge from the parent committee. We recognize that routine scalar maintenance may not require an elevated level of scrutiny and in most cases, could be conducted under the proposed GCC amendment process.

- **Senior/hybrid debt limit.** The cap on the amount of senior or hybrid debt that counts towards available capital is another complex and meaningful area in the GCC that we believe will necessitate a more robust process than the exposure provides.

- **Treatment of non-insurance entities.** Because the treatment of non-insurance entities is a fundamental element of a group capital calculation, we believe that non-technical corrections or clarifications to the treatment of non-insurance entities would benefit from additional review and analysis prior to exposure and adoption.

These examples are not exhaustive – indeed, we encourage the Working Group to consider where and how to draw the line between routine updates and technical amendments, and the type of amendments that may warrant a more rigorous exposure period and analysis.

We wish to raise an additional concern that we believe weighs in favor of having a longer minimum exposure period, and that is the fact that the GCC will apply to a large universe of heterogeneous groups of varying sizes and business models. It is possible that a change that may appear negligible to one type of group – or even most groups – may have a much greater impact on another type of group. The true impact of proposed amendments may not be immediately apparent unless, and until, the larger universe of affected groups are afforded the opportunity to

---

2 We understand that once the scalar methodology has been adopted, the NAIC will need to perform regular scalar maintenance. In general, we would differentiate between scalar methodologies and scalar maintenance. The adoption of scalar methodologies would require robust engagement with stakeholders prior to adoption. However, it is likely that scalar maintenance may, in some cases, be a technical update as data sets are updated. Whether scalar maintenance is a routine technical update may depend on the methodology selected.

3 The Academy reported that scalars had an inverse relationship between simplicity and validity – the simpler the scalar, the less accurate it is. See Aggregating Regulatory Capital Requirements Across Jurisdictions: Theoretical and Practical Considerations (Executive Summary), American Academy of Actuaries Research Paper 2021, No. 1, available at https://www.actuary.org/sites/default/files/2021-04/Scalars.ExecSummary.pdf.
ACLI comment letter on the GCC Amendment Process
09/24/2021

evaluate it and provide feedback on its impact. We encourage the Working Group to keep this in mind as they evaluate the proposed GCC amendment process.

In addition, we encourage the Working Group to consider if the proposed GCC Process would benefit from adding language or steps that would increase the level of review or consensus required before a GCC addition or amendment is formally approved for exposure. One way to do that could be to require some form of collective action or consensus of the Working Group or a charge from the parent committee prior to the exposure of certain amendments or additions to the GCC. This additional step may also enhance the stability of the GCC.

Conclusion

Thank you for the opportunity to provide these comments. As always, we would be happy to discuss them with you or your staff at your convenience.

Regards,

Re: Comments on the NAIC Group Capital Calculation Working Group’s exposed referral to the Capital Adequacy (“E”) Task Force (“CADTF”)

Dear Mr. Rehagen:

The American Council of Life Insurers (“ACLI”) appreciates the opportunity to comment on the Proposed Group Capital Calculation (“GCC”) Procedures. We appreciate the significant and thoughtful work that the Working Group has exercised throughout the development of the GCC.

ACLI agrees that it is desirable to align the GCC, RBC and broader statutory accounting frameworks, where appropriate. In general, the GCC should reflect existing RBC and statutory accounting rules, rather than re-writing them. If the implementation of the GCC causes regulators, the NAIC, or other stakeholders to rethink existing RBC and statutory accounting treatment/rules, then we would expect that regulators would respect and use the existing RBC and accounting governance process to propose potential changes to those regulatory frameworks. Once alignment between the frameworks is achieved, we would expect that the GCC would, where relevant, pull inputs from statutory financial statements and RBC calculations, with CADTF consistency across RBC formulas.

Thank you for the opportunity to comment. We look forward to continuing to support the efforts of the Working Group and staff as work continues on other GCC elements, like scalar methodology. As always, we would be happy to discuss our comments, or any other issue, with you or your staff at your convenience.

Regards,

Mariana Gomez-Vock

Re: Proposed Referral to the Capital Adequacy (E) Task Force

Dear Mr. Rehagen:

The American Property Casualty Insurance Association (APCIA) appreciates the opportunity to comment on the Group Capital Calculation (E) Working Group’s proposed draft referral to the Capital Adequacy (E) Task Force regarding potential changes to the various risk-based capital (RBC) formulas for the treatment of insurance company subsidiaries and financial entities. APCIA is the primary national trade association for home, auto, and business insurers. APCIA promotes and protects the viability of private competition for the benefit of consumers and insurers, with a legacy dating back 150 years. APCIA members represent all sizes, structures, and regions—protecting families, communities, and businesses in the U.S. and across the globe.

APCIA broadly agrees with the goal of aligning factors for the GCC with the comparable charges in the RBC formulas, and we agree that the GCC and RBC should treat similar assets similarly. However, we believe it would be premature at this time to consider changing RBC charges to make them consistent with the GCC factors for subsidiary non-U.S. insurance companies and other financial subsidiaries. We are concerned that reconciling differences in the way these subsidiaries are treated in the P/C, life, and health RBC formulas would make this task unpracticable at this time.

Instead, over the first years of the GCC’s implementation, APCIA recommends that the Group Capital Calculation (E) Working Group work together with the Capital Adequacy (E) Task Force and its working groups to study how the GCC and RBC can best be aligned. This can involve consideration, for example, of whether to move certain entities out of covariance in RBC formulas to make treatment of those entities more aligned with the GCC’s. In addition, the GCC introduced a new high/medium/low-risk concept for the capital charges for some financial affiliates, and further study will allow more time to collect data and refine guidance concerning how these new differentiated charges are applied. Finally, we believe further study is warranted to assess the relevant differences in the P/C, life, and health RBC formulas and the reasoning for those differences, because this analysis will better inform the decision of how the GCC and RBC can best be aligned.

APCIA appreciates the Working Group’s efforts to begin consideration of aligning the GCC and RBC, and we look forward to a continuing dialogue as this process continues.
Please contact us if you have any questions, and we look forward to discussing our comments with you and the Working Group.

Sincerely,

Stephen W. Broadie

October 29, 2021

Dan Daveline, Director, Financial Regulatory Services, NAIC
By e-mail at: ddaveline@naic.org

Mr. Daveline:

This submission is on behalf of a group of eight interested parties (IP Group) and in response to the September 14, 2021, re-exposure by the Group Capital Calculation (E) Working Group (GCCWG). The re-exposure relates to proposed guidance about the Group Capital Calculation (GCC) that has been drafted for inclusion in the NAIC’s Financial Analysis Handbook (FAH) for eventual use by financial analysts of state insurance departments.

As you know, the IP Group provided many comments and marked text suggestions to the initial exposure of revisions to the FAH text through our written submission of July 31, 2021. Those comments and suggestions were intended to help clarify the text, and in some cases to address concerns of the IP group about how analysts might use the GCC or interpret GCC results inappropriately.

The IP Group is very grateful to now see that many of the comments and suggestions it submitted on July 31, 2021, have apparently been accepted by the GCCWG as seen in the text of the re-exposure. Consequently, as a group, we are more comfortable that the re-exposure text fairly portrays the GCC and how it should be appropriately used and interpreted by regulatory analysts.

Moreover, we would like to express our satisfaction with the level of engagement that we have enjoyed with NAIC staff and the GCCWG, the way in which the GCCWG’s deliberative and exposure processes were handled, and that we were provided ample time to consider the proposals and to comment in a thoughtful manner.

With that, and as the IP Group, we have no further comments on the re-exposure. We understand that some of the undersigned members of the IP Group may separately provide additional comments intended to clarify certain portions of the FAH text so as to further improve its clarity and readability for the benefit of analysts. We encourage you to consider their comments in the same thoughtful manner as was afforded comments submitted earlier by the IP Group as a whole.

Sincerely, and on behalf of the IP Group:

America’s Health Insurance Plans – Bob Ridgeway
American Council of Life Insurers – Mariana Gomez
American International Group, Inc. – Marty Hansen
American Property Casualty Insurance Association – Steve Broadie
Anthem, Inc. – Doug Wright
Blue Cross and Blue Shield Association – Joseph Zolecki
MetLife Inc. – Martin Mair
UnitedHealth Group – Jeff Martin

Re: Draft Group Capital Calculation Regulatory Guidance and Analyst Reference Guide

Dear Mr. Daveline:

Liberty Mutual Insurance Company (hereinafter “Liberty Mutual”) appreciates the opportunity to comment on the Draft Group Capital Calculation Regulatory Guidance and Analyst Reference Guide. As you are aware, Liberty Mutual has been a strong supporter of the NAIC’s Group Capital Calculation (“GCC”) and supports the fundamental goal of enhancing group wide supervision, including the GCC provisions that will allow for assessment of capital adequacy of an entire group.

To that end, Liberty Mutual endorses the current version of the proposed guidance to be added to the Financial Analysis Handbook. The draft guidance is fully consistent with the NAIC’s overall goal that the GCC be used as an additional analytical tool for regulators to conduct group-wide analysis. Liberty Mutual particularly appreciates the inclusion of language throughout the proposal that makes clear the GCC was not designed to be a trigger for regulatory action.¹

Liberty Mutual also supports the draft guidance’s emphasis that the mitigation of potential issues regarding an insurance group’s GCC should be taken largely at the insurance company legal entity level, which is where regulatory capital is primarily located in an insurance group and where state insurance regulators have the most authority. Liberty Mutual also believe that the technical components of the draft guidance are prudent and that the five Procedural Steps,

¹ See, e.g., Draft Group Capital Calculation Regulatory Guidance at 2 (“Analysts should be mindful that any stated threshold in the following procedures is for analysis purposes only and DOES NOT constitute a trigger for regulatory action”).
October 29, 2021
Page -2-

subparts of those Steps, and the various Benchmarks associated with each step are reasonable and logical. Further, the proposal’s provisions that clarify that these technical components should not be used as a checklist, but rather as a guide that properly aligns the GCC with existing insurance supervisory measures, is appropriate and consistent with the underlying rationale of the GCC as analytical tool.

In conclusion, we urge the NAIC to move promptly to adopt this version of the draft guidance so that states may begin implementing the GCC promptly and effectively. Should you have any questions, I’d be happy to discuss them with you.

Sincerely,

Mark J. Sagat

Attention: Mr. Dan Daveline

RE: NAIC Regulatory Guidance for GCC and Analyst Reference Guidance for the GCC exposed the Group Capital Calculation (E) Working Group

Mr. Rehagan:

State Farm Mutual® Automobile Insurance Company and its affiliates ("State Farm"), appreciate the opportunity to submit these comments concerning the exposed draft of the NAIC Regulatory Guidance for GCC and Analyst Reference Guidance for the GCC via the Group Capital Calculation (E) Working Group (the “Working Group”). State Farm has been providing comments throughout the creation of the aggregation-based method of calculating capital for insurance groups under the National Association of Insurance Commissioners ("NAIC") and U.S. Federal Reserve Notice of Proposed Rulemaking under a similar process.

State Farm appreciates the edits to address most of our previous stated concerns with both the Regulatory Guidance for GCC (Regulatory Guidance) and Analyst Reference Guidance for the GCC (Analyst Reference) documents. Additionally, State Farm wants to express the openness and discussion on these topics with Mr. Daveline and all of his efforts on this project. However, there are few more areas of clarification or concerns within the documents that are discussed below and in that attached documents with comments.

The focus of State Farm’s comments and concerns are around the documents’ expression of group capital, group action and group risk. As expressed previously, the construct of “group” does not have legal entity status and as such does not hold, generate or distribute capital. Furthermore, the risk is faced by the legal entities that make up the group. As a result, the GCC is not calculating the “total available capital” for the group but is calculating the aggregated capital held by the legal entities that make up the group with capital still held by the individual...
legal entities. As noted previously the aggregation-based method of calculating capital for insurance groups or the GCC recognizes that the capital is legally owned by the individual entities that are being aggregated by utilizing the regulatory capital regime when one is available to establish the entity’s capital for the purposes of aggregating. The application of the GCC does not change underlying legal process that the entities operate under or change the legal obligations of the individual entity.

Finally, State Farm is still concerned that the Regulatory Guidance and Analyst Reference documents are not recognizing the “walls” in place in insurance regulations as well as the applicable non-insurance laws of the United States or the existing body of insurer regulatory financial surveillance by not fully recognizing the limitations of risk obligation transference among members of a group, particularly those that are insurers and not acknowledging that surplus held by an insurer in a group is not readily available by any other member in the group. In fact, the maintenance of the walls aspect of the current regulatory scheme would be aided by the GCC process by identifying the entities within the group that are identified as holding or generating risk which then the regulators could monitor transactions of the regulated insurance entities with the at risk entity to ensure that the risk is not somehow transferred or transferred in manner that inappropriately places risk on the regulated insurer.

Hopefully this provides the basis for the background of the comments provided in the draft Regulatory Guidance and Analyst Reference that are enclosed.

Thank you for your time and consideration in this project and to our comments. If there are any questions concerning the comments, please contact me.

Sincerely,

Chuck Feinen
State Farm Mutual Automobile Insurance Company

Enclosures
Review of the Group Capital Calculation

Consideration of the Insurance Holding Company System Structure

As the lead state begins to review the annual Group Capital Calculation filing for a particular group, it is important for the lead state to do so with consideration of the existing knowledge of both the organizational structure of the group, including changes in the structure from year to year, but more importantly the overall activities of each of the entities in the group which otherwise have the potential to transmit material risk to the insurers within the group. While the GCC will provide additional quantitative information on the entities in the group; the actual activities of the entities are also important in determining the scope of application of the GCC. The lead state is responsible for determining if any of the entities in the holding company structure should be excluded from the calculation, and therefore a smaller “scope of application” for the entities included in the GCC ratio. The filing includes a column for the group to propose what should be excluded as well as an additional column for the final determination made by the lead state. In general, the determination of scope of the application is suggested by the group but made in consultation and agreement with the lead state. This exercise should be undertaken in a manner that yields a clearly documented rationale for excluding entities or subgroups of the larger group. The Group Capital Calculation Instructions describes the basis for making this determination and the calculation itself is structured to facilitate this determination, with the inclusion in Schedule 1 of the calculation of financial data for all entities within the holding company. Similar to exclusion from the calculation itself is review of data for cases in which subgroups are completely excluded from the larger group, particularly with regard to Schedule 1; the rationale for the exclusion(s) should be provided in the GPS. The concept is that this Schedule 1 data should be utilized by the lead state in conjunction with its existing knowledge of the group and its activities (obtained from the Schedule Y, ORSA, Forms B/C, Form F, the non-insurance grid, etc.), and therefore likely material risks, to make this determination. To the extent the entities included in Schedule 1 differ from the analyst’s knowledge of the Group, further discussion and follow-up should be held with the group.

In the initial year(s) of a GCC filing, to help the analyst get comfortable with the Inventory and Schedule 1 process, consider the following:

- Gather appropriate background information for your group(s) (e.g., Group Profile Summary, ORSA, RBC Reports, Schedule Y). (Consider adding a review of the most recent financial examination(s) of the insurance entities within the group.)
- Determine that all Schedule Y entities are listed in schedule 1 or - in the schedule BA list in the other information tab or that an entity’s omission is understood / explained.
- Evaluate requests for exclusion of non-insurance/ non-financial entities w/o material risk to determine if you agree with exclusion.
- Confirm that all insurers and financial entities are de-stacked in the inventory tab.
- Determine if grouping has been properly applied.
- Evaluate level of risk assigned by filer to financial entities w/o regulatory capital requirements.
- Test check that the numbers reported in Schedule 1 and Inventory Tab look reasonable, especially for the insurers. A sample check should be sufficient.

The holding company structure and activities should also be utilized by the lead state in determining how to understand the GCC ratio. More specifically, information on structure can impact the flow of capital used by the group to make decisions on how to utilize resources among entities within the holding company structure. Therefore, understanding the following can assist in evaluating the flow of resources:

- Domestic insurance operations
- International insurance operations
- Banking or other financial services operations subject to regulatory capital requirements
• Financial and non-financial operations not subject to regulatory capital requirements*
  
  *The GCC instructions provide examples of financial versus non-financial entities in this category. All financial entities should be included in the scope of application of the GCC. However, there can be a broad array of entities that could be considered financial. The lead state should document the rationale for cases in which it concludes that an entity that may be financial in nature cannot be classified in the group’s GCC filing as “non-financial” and thus excluded from the scope of the group of the GCC.

  The GCC is intended to be used as an input into the GPS. The expectation is that the GCC summary section will help to document a high-level summary of the analyst’s take away of the GCC, as well as the Strategic branded risk. The manner in which the analyst determines what else should be documented beyond the GCC Summary and the Strategic branded risk should be based upon the following steps, since these steps contemplate the previously mentioned concept that the existing evaluation of the financial condition should be used in evaluating the depth of review of the GCC.

  In as much as the GCC is a new analytical tool for use by regulators and that it will take a number of years before there is both (1) sufficient data for any given group to provide the trend identification ultimately anticipated for the GCC, and (2) experience by regulators with its use. Analysts should be mindful that any stated threshold in the following procedures is for analysis purposes only and DOES NOT constitute a trigger for regulatory action. Rather, the stated threshold should be used as an opportunity for an analyst to understand issues and concerns that may be emerging and address them with the group, if needed. Nonetheless, the following procedure steps provide analysis with a framework to consider the GCC results in conjunction with other data and tools at their disposal, and to begin to gain and benefit from experience in utilizing the GCC as a new analytical tool.

  • Procedure Step 1 suggests that a review of the components of the GCC is appropriate when the GCC ratio is trending downward.

  • When Procedure Step 1 identifies the need to look further, Procedure Step 2 suggests from a high level determining the drivers of any decreases in the total calculated available capital pursuant to the GCC. While there are numerous benefits of the GCC over consolidated approaches, the ability to drill down on the drivers is one of the more significant and is consistent with the states approach to not just looking at capital, but to the drivers of capital issues.

  • When Procedure Step 1 identifies the need to look further, Procedure Step 3 suggests from a high level determining the driver of any increases in operating leverage, which is typically what drives insurance capital requirements up, be it asset risk/leverage or writings leverage. Similar to drivers of capital decreases, the GCC has detailed information on financial figures and ratios that can be used to isolate the issues.

  • When either Procedure Step 2 or Step 3 identify the need to understand better, Procedure Step 4 is similar in that it too utilizes detailed information on capital allocation patterns used by the group over time that are necessary for the analyst to understand if there are any future negative trends in the GCC.

  • When Procedure Steps 2, 3 and 4 identify the need to understand better, Procedure Steps 5, depending upon the analysis performed in previous Steps, is similar to legal entity analysis, where there is likely a benefit for the evaluation need to request determine what steps the group/company is already taking or plans to take in order to address the issues they feel are appropriate, if any. The analyst should also consider the Risk Based Capital position(s) of the insurance entity in the group to help in the evaluation of the issues identified. The guidance provided in these procedures is not intended to be exhaustive, but rather should give the analyst a starting point in better understanding the various issues.

  • If the analyst determines after completing any of the above procedures (steps), that no further work is deemed necessary to fully document their understanding of the material risks of the group observable from the GCC (as well as the required information to be included in all GPS from the GCC), this should be documented by the analyst in any workpapers deemed appropriate by the state and include the general
reason, therefore, In making this determination, it should be reiterated these procedures are not intended to be used in a checklist manner and judgment based upon and existing understanding of the group and existing information on the group obtained from the Form F, ORSA, or any other source is certainly part of that decision.

**Procedure Step 1 - Understand the Adequacy of Group Capital**

1. Determine if the group capital position presents a risk to the group and its insurance subsidiaries based upon its recent trends and/or current measures in the GCC ratio.

<table>
<thead>
<tr>
<th>Branded Risk</th>
<th>Benchmark</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Has there been a decrease in the GCC ratio over last two or more years? If “yes”, determine the cause(s) of the decline.</td>
<td>ST</td>
</tr>
<tr>
<td>b. Has there been a decrease in the GCC Total Calculated Available Capital from prior year? If “yes”, determine the cause(s) of the decline.</td>
<td>ST</td>
</tr>
<tr>
<td>c.</td>
<td></td>
</tr>
<tr>
<td>d. Has there been a negative trend in the GCC ratio over the past five years suggesting an overall pattern of declining capital?</td>
<td>ST</td>
</tr>
</tbody>
</table>

If the answer to any of the above questions is “yes”, it is obvious that either the negative trend is caused by something such as the allowable debt, a change in a corporate tax rate, or some other non-indicator of negative trends, note as such but do not proceed to step 2. In addition, if it is obvious that the negative trend is clearly driven from one entity in the group, understand the cause and document as such but do not proceed to step 2. However, in all other cases if the answer to any of the above questions is “yes”, the analyst should proceed with procedure step 2, understanding decreases in total calculated available capital and/or procedure step 3, understanding increases in leverage to determine the cause(s) of the negative trends.
### Procedures Step 2 - Understand Decreases in Total Available Capital

2. Determine the source(s) of decreases in the GCC ratio or the GCC Total Available Capital

Recognizing that not all declines in capital ratios are necessarily "negative", i.e., they may be the result of sound capital management and ERM to more efficiently utilize capital, approved changes in the scope of application, or changes in underlying authority requirements, the intent of step 2 (and step 3) is to determine the actual source of the negative issues. In most cases, this equates to pinpointing the legal entity(ies) driving any negative trends. However, unless obvious from the information obtained in step 2, the analyst should proceed to step 5, using an understanding of items in Procedure Step 4, to understand more fully the actions the group, or the legal entity(ies) driving the negative trends already being taken or planned to be taken by the group to address the issues identified in step 2 that the group believes is needed. However, the analyst may already have a deep understanding of any such plans, and as a result, in some cases, it is possible that no further follow-up with the group will be necessary and that the lead state should simply update the GPS to be certain the main understanding of the issues is known to all of the regulators utilizing the GPS.

<td>ST, OP</td>
</tr>
<tr>
<td>n.</td>
<td>If due to a decrease connected to a regulated insurance entity, the analyst should review the Risk-based Capital (RBC) to determine if the decrease triggers regulatory action and if not, the analyst should note this information in the GPS.</td>
<td>—</td>
</tr>
</tbody>
</table>

**Commented [CP1]:** With the understanding that RBC is not definitive and there is more information to review and consider, the RBC is part of the “windows and walls” approach to the solvency regulation information concerning the regulated insurance entity should be included in GPS.
trends. Step 3; however, is focused on the issues that impact the risk being evaluated measured in the GCC. In most cases that risk is from the insurers and either from the asset side or from the liability side where in both cases there has been an increase in such risk that has not been offset by a corresponding or equal increase in capital. In general, this is referred to as operating leverage, where this risk can manifest itself either through increased insurance writings (e.g., the ratio of premiums to capital or liabilities to capital), or through increased assets that also carry risk. The expectation is that other regulated entities also have capital requirements that increase as these different types of risks increase, similar to how the NAIC RBC considers different types of products and assets that carry more risk. However, it is possible to have increased leverage outside of the insurance companies through for example increased exposure, which can manifest itself through increased liabilities or through increased assets. However, similar to other items noted in this document, such increases do not necessary represent negative trends, rather simply things the analyst may need to further understand the drivers of such. In most cases, this equates to pinpointing the legal entity(ies) driving any negative trends. Similar to step 2, using an understanding of items in Procedure Step 4, to understand more fully the actions the group, or the legal entity(ies) driving the negative trends already being taken or planned to be taken by the group to address the issues identified in step 2 that the group believes is needed.

decide in riskier assets to mitigate the otherwise likely increase in market and credit risk.

g. If due to a decrease connected to a regulated insurance entity, the analyst should review the Risk-Based Capital (RBC) to determine if the decrease triggers regulatory action and if not, the analyst should note this information in the GPS.

Unless obvious from the information obtained in step 3, the analyst should proceed to step 5, using understanding of items in Procedure 4, to understand more fully the actions being taken by the group, or the legal entity(ies) or planned to be taken by the group or planned to be taken by the group to address the issues that the group believes is needed, if any. However, in some cases, it is possible that no further follow up with the group will be necessary, and that the lead state should simply update the GPS to be certain issues are known to all of the regulators utilizing the GPS.

Procedure Step 4: Understand the Capital Allocation Patterns

4. Determine the capital allocation patterns to determine if some entities may put pressure on other legal entities.

Steps 2 and 3 are critical in understanding the issues faced by the group and in identifying the source of negative trends; and while additional follow up with the group is expected, before proceeding to Step 5, the lead state should understand the historical capital allocation patterns taken by the group or the likely future needed capital allocation patterns that may be needed by the group if negative trends continue. The GCC includes data on historical capital allocation patterns (e.g., contributed capital received/paid or dividends received/paid), which help to illustrate which entities have historically needed more capital and which entities have capital that they have provided other entities in the group in the past. While these patterns do not necessarily repeat themselves from one period to the next, there is often consistency in terms of entities that need capital or have excess capital, which may or may not be driven by losses, or by a change in strategy (e.g., increased writings at one company over another) by the group. These trends can also assist in discussions with the group about where capital may come from as a result of a future unexpected material event. Where similar information is also disclosed in Form F, the detail in the GCC may confirm what is already known by the analyst in this area and in some cases may provide greater detail.

<tr>
<td>b. Using this data, as well as any recent information on net losses, or likely expected funding, determine if there may be an impact on the capital available to the insurance entities (either through the likelihood of higher dividends or through less capital being available for infusions and to fund future possible losses from other entities in the group and potentially become troubled themselves, regardless of the current capital in excess of RBC requirements)</td>
<td>OP, ST</td>
<td>N/A</td>
</tr>
</tbody>
</table>
Procedure Step 5 - Consider the Need for Company Discussions for Reductions in Risk

5. Determine the group’s plans for addressing source(s) of any meaningful decreases in the GCC ratio or total calculated available capital. Please note, in some cases, the plan may be as simple as actions designed by the group to reverse a single negative trend.

Steps 5 is designed to assist in understanding the group’s plans for addressing any meaningful decreases in the GCC ratio or total available capital that are not otherwise already planned by the group (i.e., that are not the results of capital management so as to efficiently utilize capital while still maintaining sufficient levels for Enterprise Risk Management needs). The specific plans of the group may or may not fully address all the issues but to the extent the group believes they have addressed what is needed, ultimately what is most important is that such information and the regulators plan for evaluating and monitoring the situation is known to the other regulators. There is a multitude of possibilities, and this guidance is not intended to address all of those. This includes the multitude of possibilities by the group and its legal entities and the ultimate results. This also includes the multitude of possibilities to be taken by the legal entity regulators of the legal entities, including the fact that in some cases some regulators may choose to put their legal entity into some type of supervision, conservation, or some other form of receivership which, by necessity and intent, would presumably be done based upon existing legal entity authority since there is no authority provided under the GCC and not the group’s GCC. Similar to other areas, where similar information is also disclosed in Form F, further information may already be known in this area.
### V1.H. Group-Wide Supervision — Group Capital Calculation (Lead State) Procedures

</tbody>
</table>
Purpose of the Group Capital Calculation (GCC) in Holding Company Analysis

The following information is intended to provide background and context concerning the issues/considerations for analysts when utilizing the NAIC Group Capital Calculation (GCC) for an insurance holding company group (hereafter referred to as “group”) completing the GCC where required. The GCC is a “tool” to quantitatively understand the group’s capital and the mathematically calculated risks within. The GCC framework is built on the RBC model; however, while the RBC has triggers with states’ laws to make formal actions as a capital requirement, the GCC is not designed with that purpose and is instead designed as an analytical tool.

Background Information

In 2008, the NAIC Solvency Modernization Initiative (SMI) began to consider whether there were any lessons learned from the financial crisis that would cause the solvency framework to be modified. The NAIC determined that changes should be made in the area of group supervision, starting with the new annual requirement for the Lead State of each group operating in the U.S. to complete a written holding company analysis. Since that time, other changes to state laws have been made to further enhance group supervision (e.g., Form F, ORSA, and Corporate Governance reporting). All of these new tools are inputs into the previously mentioned holding company analysis, which is now summarized into a consistent tool used by all states that is known as the Group Profile Summary (GPS).

Benefits of the GCC & Methods to Achieve Them

The Group Capital Calculation Instructions describes the background, intent, and calculation for the GCC in detail. As stated in the Group Capital Calculation Instructions, the GCC and related reporting provides more transparency about a group’s structure and related risks to insurance regulators and makes those risks more identifiable and more easily quantified. In this regard, this tool is intended to assist regulators in better understanding the risks that the non-insurance entities may pose to the group and ultimately regulated insurance entities. How capital is distributed across an entire group, and whether and to what degree insurance companies’ capital may be put at risk from the operations of non-insurance entities, potentially undermining the insurance company’s financial condition and/or placing upward pressure on the insurers in the group. An analyst is not expected to understand non-insurance industries represented within the group but is expected to understand through this calculation if a non-regulated entity could place pressure on or provide relief to a regulated entity.

The manner in which the GCC achieves some of these benefits or points varies. For example, with regard to understanding how capital is distributed across an entire group, this can be seen in two ways. One, is by viewing the tab titled “Input 4-Analytics” in the display of the “Ratio of Actual to Required Capital”. Two is by viewing the same tab and in the display of “Required Capital” in a separate column. The degree of subsidization can also be seen in the “Input 4-Analytics” tab, with the display of the columns as follows: 1) Capital Contributions Received/(Paid); 2) Net Income. While one year of information can show this exists, most will not be seen until after further years of the GCC are reported within the template. Once at least five years of data are displayed in this "Input 4-Analytics" tab, it will allow the analyst to better understand the financial condition of the group as a whole as well as the risks posed by non-insurance entities in the group. Of course, such conclusions can only be made once the analyst sees the data and understands from the group what is occurring that is leading to such figures.
Recognizing that legal entity supervision and related tools (e.g., RBC) is the primary means to address inadequate capital, the GCC may provide an additional early warning signal to regulators regarding risks or activities of non-insurers within the group that may pose material risk to the insurance operations. This early warning signal can be seen with the trending of the financial information in the “Input 4-Analytics” tab as well as through the application of sensitivity analysis in the Input 5 Tab and inclusion of other relevant information in the Input 6 Tab. However, the analyst should also understand that other “qualitative tools”, such as the Form F, are capable of also providing early warning signals if properly reported by the group. In addition, since most holding company systems may have a larger percentage of their operations in the insurance businesses, the insurance trends for the U.S. insurers in the group should already be known and made available to the lead-state by the legal entity regulator of the insurer(s). However, in the context of added policyholder protection, this may largely come into play with respect to the added quantitative data from non-insurers.

The GCC is an additional reporting requirement but with important confidentiality protections built into the legal authority to require such reporting. State insurance regulators already have broad authority to take action when an insurer is financially distressed, and the GCC is designed to provide regulators with further insights to allow them to make informed decisions on both the need for action, and the type of action to take as to a regulated insurance entity. That said, the GCC and its related provisions in the NAIC’s Model Holding Company Act and corresponding regulation are not designed or otherwise intended for regulators to take regulatory action based on the reported level of a group’s GCC. Regulators will use other existing tools and authorities to take action, primarily at the legal entity level.

While the new information from the GCC may offer new insights, it is equally important to understand that it will be up to the analyst to work with the insurance group to actually understand what is leading to the figures reported in the GCC, and from that perspective, especially in the early years of the GCC, it will require learning by both the analyst and the group to really be able to utilize the GCC in a manner as suggested in these introductory paragraphs.

Other Considerations When Considering Such Benefits

Unforeseen events and economic conditions (e.g., pandemic, recession, etc.) may also create stresses on a group, reinforcing the value of the quantitative data included in the GCC. Some stresses are similar to those experienced during the financial crisis and others are more unique. However, because the GCC is based upon a methodology that gets its inputs from individual legal entities, the capital calculated for each legal entity certainly can only capture the allowed capital resources of the legal entities in the group. While such an aggregation-based methodology is an appropriate group-level capital measure, until experience is gained with the GCC, it is not known as to how the GCC will behave in response to business cycles and various risk events, in part because it only recognizes limited diversification benefits among entities in the group except for the diversification embedded in existing entity specific regulatory capital requirements. And while the GCC is not meant to be used in a way that compares groups to each other, it is also true that it is unknown how it will behave across groups, peers and even sectors. This is true because of its limited diversification benefit, the differences between group types (mutual v. stock holding company), grouping of entities, and scope of entities included in the calculation. It is also true because application of jurisdictional accounting principles and use of scalars could have an impact on this as well via the foreign insurer profile of the group. The quantitative data collected in the GCC will evolve as state insurance regulators and, groups increase their understanding of the impact on available capital and calculated capital.

Commented [CF1]: Regulatory action should be on the legal entity level.

Commented [CF2]: How are these terms defined? Is “available capital” the same as total available calculated capital done under the GCC process? If so, what is “calculated capital”?
The following guidance on the GCC is intended to be utilized in a manner that allows the GCC to enhance group-wide financial analysis and to be used as an additional input into the GPS. The GCC provides the quantification of risk within the group and when combined with the information from the ORSA on the amount of capital needed to run the company’s current business model, puts the regulator in a much better position to understand the available capital and calculated capital within a group, as well as the financial condition of the group. Both are complimentary tools to each other. The ORSA provides management’s internal approach to capital management and an understanding of the economics of the group. The GCC provides a standard model that can better enable the analyst to understand where the entire group stands with respect to existing legal entity requirements as well as broad measures of risk for non-insurers. Analysts should be mindful of the differences between the ORSA and the GCC. For example, in the case of a group with predominantly U.S. operations, the GCC will largely be based on the standard model/RBC of the U.S. subsidiaries. However, the ORSA is not constrained by a standard model and will reflect management’s internal approach to capital management and may utilize or benefit from an economic capital model, other internal models, stress testing and other means. As a result, while the GCC is an additional input into the GPS, it may provide data and signals that don’t align with the risk measures within the ORSA.

Overall Theme of Remaining Guidance

The previous information describes the purpose for considering the GCC within the context of the states holding company analysis and corresponding GPS. In general, the remainder of this guidance provides more depth to the specific information included in the GPS; provides the analyst with a basic understanding of the GCC including why the entities included within the GCC may be a subset of those entities that are within the holding company structure; whether the trends within the GCC suggests questions should be raised with the group’s management to understand; whether the underlying data suggests trends exist that should likewise suggest questions should be raised with the group or with the respective legal entity’s supervisor; whether the information in the GCC filing is generally aligned with other information available to the analyst, and if not, why not, and whether that evidences other questions or concerns that should be addressed, or how they may already have been resolved. Notably, the purpose of the GCC is NOT to trigger regulatory action. Thus, even though the GCC is intended as a group-wide measure and provides insights as to capital adequacy and risks across the group, any regulatory action would have to result from other information made available to the regulator and based on legislative authority.

Utilization of the Group Capital Calculation in the Lead State’s Responsibilities

The lead state is responsible for completing the holding company analysis and documenting a summary of that analysis in the GPS. The depth and frequency of the holding company analysis will depend on the characteristics (i.e., sophistication, complexity, financial strength) of the insurance holding company (group) system (or parts thereof), and the existing or potential issues and problems found during review of the insurance holding company filings.

Similarly, in the analysis of the GCC, the depth of the review in the “five-step process” and specific inquiries will vary based on each group’s unique and situation. For example, in some groups, very little if any work (inquiries of the group) will be done after the first step due to generally positive trends of the ratio over time. While in other groups, the analyst may need to proceed through each of the five steps. Exactly how the analyst proceeds through the guidance will be dictated by a multitude of factors and requires judgement and as a result, the steps...
and sub procedures should not be used as checklist, but rather as a guide in how to utilize the GCC to increase the analysts understanding of the group.

GCC Construction That Also Impact its Utilization and Review

Some decision points may be addressed prior to the submission of a GCC template. These include: the scope of application (e.g., whether segments of the holding company system (group) should be excluded for financial conglomerates); whether a limited filing will be allowed (as permitted in Model Law #440 and Model Regulation #450); and whether subgroup reporting (as defined in the GCC instructions) of a foreign insurance group will be required. In general, the analytics provided by the GCC will be similar for all entities included in the template. (See the Primer on the Group Capital Calculation Formula) at the end of this section to better understand these points.

These factors are also a consideration in determining the depth of the analysis of the GCC and subsequent correspondence with the group. Refer to chapter VI.B. Roles and Responsibilities of Group-wide Supervisor/Lead State for details on responsibilities for completing the GPS.

The utilization of the GCC can be summarized as an additional input into the GPS. More specifically, once the analyst completes their review of the GCC, and trend of the ratio, a summary should be incorporated into the GPS to help support the assessment of strategic risk.

Documentation of Review of the GCC in the Group Profile Summary (GPS)

The purpose of these procedures is to document the GCC into the GPS. The following provides an example of a GCC Summary that represents the minimum expected input of the GCC into the GPS, with new information reported within the Strategic branded risk classification. The other purpose of this section is to determine if more follow-up with the group should be performed and, if so, to assess the information obtained from that additional review. The following is intended to assist in documenting the analysts’ understanding of the group’s GCC in the GPS.
Group Capital Calculation (GCC) Summary

Summarize your assessment of the GCC both quantitatively and qualitatively, including any such items as may not be applicable to a branded risk category. For example, it may be appropriate to indicate “The review of the group’s GCC indicated the scope of the application is consistent with the lead state’s determination” and if possible, to summarize succinctly, the general scope of the GCC. For example, “the GCC includes all U.S. and Bermuda operations, but excludes ABC non-insurance operations in South American countries”. It may also be appropriate to identify key drivers of risks for the group within the GCC that are discussed later in the branded risk categories, as those risks may be related to, and supplement existing risk assessments derived from holding company analysis or they may be new risks that warrant further review. “The group’s GCC of 201% in the current year was impacted by a decline in Total Calculated Available Capital of X which is related to group’s non-insurance operations in Bermuda and as well as the negative impact of market risks in the U.S. insurance legal entity ratio components, which based on further analysis has resulted from the recent financial market volatility”.

Branded Risk Assessment

Strategic: The group’s Group Capital Calculation is assessed as low and stable and is a positive consideration in the overall assessment of strategic risk. The GCC has generally been reasonable and consistent over the past five years as illustrated in the following table. Additionally, refer to the GCC Summary for further details.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

GCC Summary and Strategic Branded Risk Documentation:
The above information documented in a summary section of the GPS and into the strategic branded risk classification is expected to be the primary type of information that is always documented into the GPS. The GCC provides a capital measurement of the group and, consistent with the branded risk categories, should be reported in the strategic risk section. Similar to how RBC for an individual insurance company entity is helpful in allowing the analyst to better understand other potential issues given capital represents a relative measure of cushion for adverse risks, the GCC and inclusion herein helps regulators to understand the same, relative to a group. While the GCC is not a capital requirement, with specified ladders of intervention, each of the insurance legal entity figures are relative to individual company requirements, and therefore the GCC along with these procedures can provide a relative measure of risks against such minimum capital levels of the insurers.

Other Branded Risk Documentation:
To the extent the ratio is trending negatively, or total calculated available capital was decreasing, the analyst may choose to include more information in the strategic branded risk section of the GPS that summarizes any key drivers of such findings if they did not fall into one of the branded risk categories. Those drivers of the change would likely be documented in other specific branded risk categories, for example Pricing/Underwriting if driven by group-wide weak insurance underwriting, or reserving if the group-wide drivers were reserve deficiencies, etc. References to other branded risk categories may also be appropriate. However, this may not always occur or be possible for the analyst to pinpoint given the multitude of risks within any insurer’s regulatory capital requirement formulas. This guidance is simply meant to suggest that if the GCC does in fact appear to show
particular trends that are noteworthy on specific risks, further documentation into that (applicable) branded risk may be appropriate.

A determination for when documentation of risks from the GCC into other branded risk categories may be appropriate is driven by both the question of whether any of the thresholds in Procedures 1 were met, and the rest of the GCC information as described in Procedures 2-4. The GCC Summary is intended to be high-level, therefore other more detailed observations from reviewing the GCC should generally not be documented into the GPS unless they are specifically insightful, add to a high-level understanding of the group’s financial condition, or are specific to a branded risk category as stated.

Other Considerations:
In addition to the broad guidance provided herein on the documentation of the GCC into the GPS, the analyst should also understand the following more general points that could impact the GCC result for a particular group. Judgement is required when considering these points:

- If the group has a significant amount of business in legal entities that are domiciled in jurisdictions whose capital regime is based on market-based valuations, the GCC will inherently be more volatile (as compared to a pure U.S.-based group for which RBC and statutory valuations are the norm).
- Similarly, a group may have legal entities that are solely based in jurisdictions that utilize a standard model for capital requirements or have entities in jurisdictions where the use of internal models has been approved. All else being equal, the manner in which capital measures quantify requirements and behave over time will differ to some extent between the two. Also, a change from a standard method to one based on internal models for a key subsidiary will likely produce a noticeable change in the GCC that is not reflective of changes in the entity’s underlying business.
- The GCC provides a means for analysts to identify non-insurance operations outside of the insurance group and to determine the extent of risk they may pose to the insurers within the group. However, in doing so, analysts should understand that findings from review of Forms B, D and F might be equally valuable in these situations.
- When understanding capital requirements for non-insurer financial entities that are not subject to regulatory capital requirements, consideration should be given to the appropriateness of the GCC’s capital charge for a specific entity’s financial operations (e.g., an entity conducting large volume or size of complex transactions but with little net revenue or equity).
- When understanding capital requirements for non-insurer / non-financial entities, consideration should be given to the appropriateness of the level of risk assigned to specific entities.

Detailed Observation Documentation:
More detailed observations shall be documented separately from the GPS and in a form not dictated by this handbook. As in all holding company analysis, the level of documentation is determined by the lead state insurance department and is dependent on the characteristics and complexity of the group and its risks. These detailed observations generally need to only note those that are indicative of drivers of trends and/or actions being taken by the group to mitigate risks. In some cases, these points can be easily summarized into the GPS. In other cases they are too detailed and should be documented instead within a separate document not dictated in form by this handbook. The analysts are not expected, nor should they spend time documenting subtle changes within either the GCC or individual company movements that either do not create a trend at the group
level or identify a growing weakness in the group. However, judgment is required to make this determination. For example, a 10% (not point change) decrease in an RBC ratio of one of the smaller insurers within the group generally would not be documented. By contrast, a 10% decrease (not point change) in an RBC ratio in one of the larger insurers in the group that causes, either alone or jointly with other insurers, a 10% decrease in the GCC should be noted. However, it should be understood also that this 10% threshold is not intended to be used as a “bright-line.” In fact it is possible the 10% is not necessarily indicative of any negative trends at all. This could be the case when for example there was a change in the regulatory capital requirement. Therefore, again, judgement is required in making these determinations and this, as well as other thresholds used in this guidance are not meant to be bright lines. As the GCC is used more, both by the individual analyst, and by the various states, using judgement around these thresholds are expected to become easier as the judgement is informed with experience.

Specific Procedures for Completing Review and Understanding of the GCC

The following procedures should be used by the analyst in their review and documentation of results of the GCC. However, if the analyst determines after completing any of the above procedures (steps), that no further work is deemed necessary to fully document the material risks of the group observable from the GCC (as well as the required information to be included in the GPS from the GCC), this should be documented by the analyst in any workpapers deemed appropriate by the state and the general reasons supporting that conclusion. In making this determination, it should be reiterated these procedures are not intended to be used in a checklist manner and judgement based upon existing information on the group obtained from the Form F, ORSA, or any other source is certainly part of that decision.

Procedures Step 1

The purpose of procedures step 1 is to assess the GCC level, and to identify the drivers of any changes in the GCC. In order to summarize and document that overall assessment in the GPS and its strategic risk category, which is the minimum expected input of the GCC into the GPS. However, the analyst should understand that in the early years of the GCC, limited amount of prior year(s) comparative data will be available, therefore requiring more judgement in determining if or where further analysis is warranted. Such judgement may need to be based upon various factors, including but not limited to other known information regarding the applicable group obtained from other sources (e.g., ORSA, Form F, Form B, etc.).

Procedure 1 is also intended to help the analyst determine if more follow-up review work should be performed. However, if the answer to any of the questions in 1 is “yes”, the analyst should proceed with step 2, understanding decreases in total available capital and/or step 3, understanding increases in leverage to determine the cause(s) of the negative trends. In the example provided above, the trends are positive with no decreases in the base ratio except in PY1; presumably the analyst may have performed some level of inquiry to the holding company to understand the driver of the drop.

Procedures Step 2a-2m

Unlike step 1, the intent of step 2 (and 3) is to determine the actual source of the negative issues and where they should be documented in the GPS. Procedure 2a is specifically focused on identifying the category of legal entities (and subsequently the individual legal entities) that might be driving the issues by looking at the ratio of actual-to-required capital for the legal entity insurers over the available years reported. The following sample of a table from the GCC calculation completed by the group from the data in Schedule 1 can be helpful in determining the source of the issues.

Procedure 2b recognizes that the GCC does allow some debt to be included in capital up to a predetermined limit and can drive the overall GCC ratio. The following sample table taken from the GCC calculation using the data in Schedule 1 can be helpful in making this determination. Cases where debt is issued to address risk-driven reductions in the GCC ratio may not offset those reductions. This data metric may not be available in the case of a “limited filing”.

<table>
<thead>

</table>

Procedure 2d is focused on requesting more specific information from the legal entity regulator or the group to better identify the source of the issue(s). Procedures 2e-2l simply contemplates that if the source of the issues can be identified into one of the branded risk categories, it should be documented in the detailed workpapers and into the appropriate branded risk category of the GPS. However, it is recognized that the source of issues may be in multiple branded risk categories, in which case documentation of each of the sources into the detailed...
workpapers is still appropriate. However, documentation into one of the single branded risk categories of the
GPS is only appropriate if that risk category is a material driver of the negative trends. Procedure 2m is intended
to identify if the source of the issues is related to non-insurance operations. The GCC is intended to provide for
more consistent analysis of risks to on the insurer that may originate from non-insurance entities within the
holding company system.

Procedures Step 3a-3f
Procedure 3a is specifically focused on identifying the category of legal entities (and subsequently the individual
legal entities) that might be driving the issues by looking at indicators of leverage, e.g., leverage ratios, where
this risk may manifest itself either though increased writings or exposure, or through increased balances relative
to capital and surplus. The following sample of a table from the GCC calculation using the data in Schedule 1 can
be helpful in determining the source of the issues.

Procedure 3b is more forward looking by suggesting the analyst look at the same leverage ratios used in 3a to determine if the trends might continue and lead to further decreases in the GCC ratio. Procedure 3c simply requests the analyst use the leverage information to target questions to the group to better identify the drivers. Procedure 3d-3f are all questions designed to help the analyst consider whether the changes in leverage will lead to greater underwriting risk, reserving risk, or market and credit risk. Procedures 3d-3f provide general inquiries for additional information for the analyst. However, these inquiries may also appropriately provide a basis for the analyst to hold conversations with the group on the same topics to understand how the group views these topics and how the group is managing and monitoring these risks. For groups filing an ORSA, see also documentation within the ORSA report for additional information on the identified risks and the group’s monitoring of risks, as well as consistency of the discussion with management and management’s observations in the ORSA Summary report.

**Procedures Step 4a-4b.** Procedure 4a is intended to help the lead state understand the historical capital allocation patterns or the likely future needed capital allocation patterns by simply documenting in the detail analysis workpapers. This includes, for example, noting that there is consistency in the entities generating net income and distributing it further through the group, and in some cases may require distribution through other insurers, which in the US often requires approval if considered extraordinary. Procedure 4a is intended to utilize that knowledge, along with other planned actions of the group, to understand whether problems with repaying debt or other obligations in the group could occur. The intent is to be in a better position for discussions with the group on where the group may deem capital come from to support future expected activity or future unexpected material events. The following sample of tables from the GCC calculation using data in Schedule 1 can be helpful in determining the source of the issues.

Commented [CF5]: There are several capital transactions among affiliates that require prior notice filings with the regulators that do not require to be considered extraordinary before regulatory review. Support ending after approval.

Procedures Step 5a-5h. Procedures 5a-5h are designed for those uncommon situations where the group believes they need to reduce risk because raising capital may be unlikely (see appendix for further discussion on that topic). In performing this procedure, the analyst should understand that Procedure 5e (Step 2 [Evaluating Decreases in Total Capital]) and Procedure 5f (Step 3 [Evaluating Increases in Operating Leverage]) have already been considered, and therefore concluded that either capital is decreasing, or operating leverage is increasing. As such, after considering information that may already be available to the regulator on the business plan, Procedure 5b is largely focused on better understanding directly from the group the drivers of the apparent negative trends. The analyst should understand that some of these trends may have already been known, through for example the ORSA review and discussions by the lead state of the ORSA. In fact, the key takeaways may already be documented in the GPS and therefore the remaining procedures in this section may be irrelevant and could be skipped if recently considered and understood. In addition, such trends from Procedure Steps 2 and 3 may suggest no additional understanding is necessary. It is for this reason - the first procedure is focused on the group’s existing business plan as it is - possible these trends may have been expected. Further, Procedure
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

5a is based on the belief that reducing risk by the group may have been previously incorporated into the group’s latest business plan, which may have been obtained from the Annual Form F Filing.

Procedure 5b on the other hand contemplates that the manner to address any unexpected negative trends may not have been incorporated into the latest business plan and thus further contemplates that the analyst speaks with the group or identified regulated insurer causing the negative trend to understand how the group intends to address the issue. However, it should be recognized that some trends may appear to be “negative”, e.g., a decline in the reported GCC, may actually be the result of a conscience determination by the group to more efficiently deploy capital yet remaining at sufficient levels from an ERM perspective. This procedure is not meant to suggest action must be taken by a regulator, rather to understand whether a trend is in fact “negative” or not, and if so, what the group has already decided or plans on doing to address the issue. Some of what the group is currently doing may already be known by the lead state, either through the ORSA, the Form F, or a periodic meeting with the group that some states conduct annually. Rather, the procedure provides an opportunity for the analyst to ensure they understand the drivers and what if anything the group is already doing to address the underlying issues that the group thinks is appropriate. To be clear, increases in operating leverage are often planned, and often come with expected future actions by the group, such as capital injections or future transactions that may reduce risk. Meanwhile, decreases in capital sometimes are not expected, and may not result in immediate action, if any, but it is possible that it may lead the group to contemplate future actions to take. Therefore, these discussions would allow these potential actions to be better understood by the analyst and documented.

Procedure 5c contemplates assessing if the group, while recognizing that any action must be done by a legal entity within the group, has the ability and resources to either reduce its risks or to raise additional capital. See the section below for further Considerations of the Group’s Capacity to Raise Capital. This procedure is not intended to suggest the analyst has the capacity to make this determination on their own, but rather to question the reasonableness of the possibility. Further, the GCC and related provisions in the NAIC’s Model Holding Company Act and corresponding regulation are not designed or otherwise intended for regulators to take regulatory action based on the reported level of a group’s GCC; regulators will use other existing tools and authorities to take action, primarily at the legal entity level.

Procedure 5d contemplates that the group or legal entity may believe no action is necessary because it believes current capital is adequate to meet its business plan and is more likely to be the case when the company experienced a one-time reduction of capital is experienced as opposed to a growth in leverage that may continue. Procedure 5e is for the rare situation where the legal entity insurers have been strained or face impending pressure contemplated within NAIC Model 385—Model Regulation to Define Standards and Commissioner’s Authority for Companies Deemed to be in Hazardous Financial Condition that would suggest one or more of the insurers may be in a hazardous financial condition. Procedure 5f is designed to suggest the analyst bring the collective supervisors of the legal entity insurers together for a supervisory college to fully understand what is occurring and the identified legal entity’s group’s plans for addressing the underlying issues. Procedure 5g is an extension of Procedure 5f as it contemplates the regulators discussing whether the proposed actions from the legal entity group are adequate. This action could represent something either informally done before an insurer is in a regulatory action level, or formally once an insurer is in a regulatory action level. Procedure 5h is similar to the other actions contemplated within a supervisory college or, for example, to address a troubled insurance company under Accreditation requirements regarding communication with other states.
Additional Procedures – Business Plans

While there is a multitude of possibilities which are beyond the scope of this guidance to address, the following provides some of the related issues that may be helpful to the analyst to consider (See also section 6 regarding the analyst’s consideration of the structure of the group and capital infusion issues).

**Group’s Business Plan:**

Planning Process:
- Consider subcategories of changes including:
  - Overall potential changes in investment strategy
  - Overall potential changes in underwriting strategy or existing concentrations
  - Overall impact on financing matters (e.g., debt, requirements, etc.)
  - Overall impact on derivatives to mitigate economic conditions
  - Overall changes in governance or risk management procedures
  - Increased ceded reinsurance transactions (common approach to reducing risk/increasing surplus):
    - Details regarding the revised strategy
    - Specifics on types of coverage such as assumption reinsurance, loss portfolio transfers
    - Transfer of risk considerations

**Variances to Projections:**
- Consider the group’s history of explanations regarding variances in projected financial results and the insurer’s actual results. If analysts determine the goals of the business plan are not attainable and/or projections are unreasonable, a revised business plan may be requested.
- Identify any internal or external issues not considered in the plan that may affect future financial results. Examples of such issues include the following: 1) the existence of competitors to limit future sales levels; 2) recent state legislation restricting the company’s product designs; or 3) the loss of key marketing personnel.

**Evaluating a Business Plan:**
VI.H. Group-Wide Supervision — Group Capital Calculation (Lead State)

Analysts should consider further detail where necessary in evaluating the proposed revised business plan, but also monitor, on a periodic basis, the insurer’s progress in achieving the initiatives included in the group’s plan. Assuming that the analyst has determined that a decline in the GCC is to be considered a “negative event”, i.e., it was not the result of capital management and planning to more efficiently utilize capital while staying within sound levelsould lead to ERM objectives, the goal of the plan would then be to address the improvement of the underlying causes that led to the issues and an improvement in subsequent GCC ratio results. Detail considerations for improving the plan may include the following (where considered inadequate):

- Trending comparative measures of targeted risk exposures including (where applicable):
  - Asset mix by detailed types
  - Credit risk by detailed types
  - Business writings/rotios by detailed product

- Impacts on financing items:
  - Projected cash flow movements for ongoing principal and interest payments on debt
  - Impact on debt interest coverage ratio, other debt covenants, rating agency ratings
  - Discussion of impact on parental guarantees and/or capital maintenance agreements
  - Expected source and form of liquidity should guarantees be called upon

- Impact of reasonable possible stress scenarios

- How the legal entities capital will be maintained at required levels

Consultation with Other Regulators

- Consult with members of the supervisory college (if applicable) or other domestic states for input in evaluating the revised business plan

**Considerations of Group’s Capacity to Raise Capital**

The following is designed simply as a reminder of considerations the lead state would contemplate when discussing the group system response to the issues identified in this section. More specifically, in most situations a group will first consider ways to reduce risk. In limited situations, it may consider trying to raise additional capital. While this is typically not an option for a group that is currently not performing as it anticipated, in some situations alternative sources of capital may be raised if the holders of the new capital are given rights that are attractive to the holder. In addition, in some cases the group may have the ability to issue other forms of capital (e.g., debt), which can be used to inject into the insurance subsidiaries. While these facts are not unique to the utilization of the group capital calculation, they are worth a reminder along with relevant other related details.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

**New Equity Considerations**

**Public Holding Company**
While no two groups are the same, issuing public stock may be limited for the reasons previously identified. In addition, regulators are reminded that a public holding company may be obligated to pay dividends in order to maintain expectations of their shareholders, making the reduction of risk a more viable action under the circumstances.

**Private Holding Company**
While no two groups are alike, a private company has some of the same characteristics as a public company in terms of owners’ expectations, but usually such expectations differ from a public company, and it may be more feasible for a private company given their access to specific individuals that may have a higher interest in higher capital rights.

**Mutual Insurance Company**
A mutual insurer is limited in terms of its access to capital because it cannot issue new stock but can issue surplus notes.

**Mutual Holding Company**
Because mutual holding companies have characteristics of both public companies and mutual companies, there are implications of how such a structure affects its operations.

**Non-profit Health Company**
Insurers that are non-profits are generally charitable organizations and it is not uncommon that some types of insurers, particularly those that provide health insurance, to have some history as a non-profit. It may be helpful to understand these types of dynamics when considering a group structure.

**Fraternal Associations**
Regulators often find similarities between a fraternal benefit society and a mutual insurer because both can be limited in terms of their ability to raise additional funds but can issue surplus notes. If allowed within state law and the charter, the fraternal could assess members or adjust members policy values.

**Reciprocal Exchanges**
Regulators often find similarities between reciprocal exchanges and fraternal benefit societies and mutual insurers because they can be limited in terms of their ability to raise additional funds. Although this is a general consideration for the regulator when evaluating the group system, there is generally much more that must be understood before coming to this conclusion because in some cases, the reciprocal may be able to assess policies that can serve a similar purpose as raising capital.

**New Debt Considerations**
Through discussions with the group, understand the potential impact of any new debt on the group system, including specifically the extent of future additional reliance on the insurance operations and whether those insurers have the capacity for such. Also consider an updated review of the following:
- Total debt service requirements.
- Revenue streams expected to be utilized to service the debt.
- Any new guarantees for the benefit of affiliates.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

- Any new pledge assets for the benefit of affiliates.
- Any new contingent liabilities on behalf of its affiliates.

**International Holding Company Considerations**

**International Holding Company Structure**

This section is applicable only to those international groups that are required to complete the GCC, which may be relatively few considering many international holding companies have a non-US groupwide supervisor and are exempt from the GCC. Those foreign groups that are required to complete the GCC will generally file a “subgroup” GCC that included entities that are part of the group’s U.S. operations. In those situations, the analysts should understand the structure to determine if it has any impact on this analysis. For example, a German-based holding company may have advisory boards established to communicate with U.S. regulators. Analysts should direct any regulatory concerns to the appropriate organization contact to ensure a prompt reply or resolution if the insurance regulator is not responding.

**Capital / Operational Commitment to U.S. Operations**

Some foreign holding companies may consider their U.S. enterprises non-core and consequently show weaker commitment to their ongoing business operations or financial support. In recent years, after sustaining continued losses from U.S. subsidiaries, several prominent foreign holding companies decided to cease their U.S. operations and liquidate their assets. Analysts should be aware of a holding company’s stated commitment to ensure the continued stability of U.S. operations. This commitment may include a written or verbal parental guarantee.
Primer on the Group Capital Calculation Formula

The National Association of Insurance Commissioners (NAIC) began development of the Group Capital Calculation (GCC) in late 2015 following extensive deliberation on potential measurement models and methodologies. The GCC uses a bottom-up aggregation approach, accounting for all available capital/financial resources, and the required regulatory capital based on the measurement of assets and liabilities of the various corporate entities, including insurers, financial and non-financial businesses.

The GCC Aggregation Methodology
As illustrated in the sample tables above, the proposed GCC is an aggregation or grouping of the available financial resources and calculated required capital of all legal entities in an insurance group that potentially pose material risk to the insurers in the group. The GCC allows some discretion in determining what entities under common control but outside of the defined Insurance Group may be excluded from the scope of application in the GCC. When reviewing a group’s choice of entities to be excluded from application of the GCC, the following points should be considered:

- The regulatory evaluation should be based on the criteria for material risk (e.g., structural separation; no history of cross subsidies, or other criteria as defined in the GCC instructions).
- Group requests for reducing the scope of application of the base GCC should be based on supporting information and rationale provided by the Group.
- Information on excluded entities should be made available upon request by the analyst.

The GCC includes the following types of entities and sets forth the general approach of calculated capital toward each:

U.S. Insurers – The available capital of U.S. domiciled insurers is determined by statutory accounting principles (SAP) as defined by state law and the NAIC Accounting Practices and Procedures Manual, which defines assets, liabilities, and in-tum net available capital/financial resources, sometimes referred to as policyholder surplus. The calculated capital for these insurers is subject to state law that requires these insurers to maintain minimum capital based on the applicable NAIC Risk-Based Capital formula at 200% x Authorized Control Level.

Non-U.S. Insurers – Similar to the available capital and calculated required capital of U.S. insurers, the available and calculated capital of non-U.S. insurers is determined by reference to the home jurisdiction’s basis of accounting and capital requirements converted to U.S. dollars. While most non-U.S. jurisdictions do not possess the same level of industry specific technical guidance, as included in the NAIC Accounting Practices and Procedures Manual, all jurisdictions have established accounting standards that insurers are required to follow to determine available capital/financial resources. In some cases, this represents local Generally Accepted Accounting Principles (GAAP), which may or may not be consistent with International Financial Reporting Standards (IFRS).

DRAFTING NOTE: While the GCC utilizes the available capital and home jurisdictions’ capital requirement, for jurisdictions where data is available, the use of appropriate scalars is currently being explored to produce more comparable measures for risk which can be aggregated into the group-wide measure. One such scaling methodology is included as part of sensitivity Analysis in the GCC template. That scalar methodology uses aggregated data from the U.S. and other jurisdictions at first intervention level to recognize that (for example),
state regulators often have much higher reserve requirements that are required to be carried as required capital in other jurisdictions. For jurisdictions where the data is not available, the full jurisdictional requirement at first intervention level is used.

U.S. Insurers Not Subject to RBC – Some types of U.S. insurers are not subject to an RBC formula (e.g., Financial Guaranty Insurers, Title Insurers). For these entities, the available capital/financial resources are determined by reference to state law and the NAIC Accounting Practices and Procedures Manual. However, since an RBC formula does not exist, calculated capital is determined by reference to the state minimum capital requirements set out in state law (or 300% of reserves for Title insurers). For U.S. captive insurers, available capital is determined based upon the states accounting requirements, but the calculated capital is required to be calculated using the applicable RBC formula even if RBC does not apply to that entity in their state of domicile.

Banking or Other Financial Service Operations Subject to Regulatory Capital Requirements – Non-insurers such as banks are subject to their own regulatory valuation methods (typically GAAP with tiering of available capital) and their own regulatory capital requirements (e.g., OCC, Federal Reserve, FDIC, or other requirements for banks). These regulatory values are used for the GCC.

Financial and non-financial operations not subject to regulatory capital requirements – in general, financial entities (as defined in the GCC instructions) are subject to a higher capital charge in the GCC than the non-financial entities. However, the GCC does require available capital/financial resources and calculated capital to be gathered for all such entities that pose a material risk to insurers. In both cases the GCC will utilize the valuation used by such legal entities (typically U.S. GAAP) and a calculated capital based upon a risk factor. There are two important exceptions:

- All entities within the defined insurance group (definition included in GCC Instructions) must be included
- All financial entities (definition included in GCC Instructions) must be included
- The level of risk (low / medium / high) and associated capital calculation assigned to a financial entity will be selected by the group and evaluated by the lead State reviewer
- Non-financial entities that are subsidiaries of U.S. insurers, foreign insurers, or banks where a capital charge for the non-financial entity is included in the regulated Parent’s capital formula will remain with the Parent and will not be inventoried. Regulators already have access to the financials of these entities if needed (if causing unrealized losses within the insurer).

Eliminations
The GCC uses an aggregation and elimination approach, where each of the above legal entities’ available capital/financial resources and calculated capital are combined, then eliminations are utilized to prevent any double counting of available capital/financial resources or calculated capital. The following example illustrates the use of eliminations for both available capital/financial resources and calculated capital. However, in practice the GCC only requires the foreign insurers and other financial entities owned by an insurance company to be “de-stacked” so if AA Holding Company was a U.S. insurer (e.g., AA Insurance Company) the capital required and calculated capital for DD Insurance Agency as a nonfinancial entity would remain in the values of AA Insurance Company and not be de-stacked.
In the above example, available capital/financial resources are referred to as available regulatory capital (ARC) and total authorized capital (TAC) and minimum calculated capital is referred to as minimal regulatory capital (MRC) and authorized control level (ACL2). The GCC will allow non-insurance / non-financial entities owned by RBC filers in the group to remain within the available capital and regulatory capital, so no eliminations are required for these entities. As shown, since AA Holding Company owns each of the other business entities in the organizational chart, $58 million (which is the amount of available capital/financial resources in the subsidiaries of AA) is eliminated from the TAC column since accounting methods include those as an asset on AA Insurance Company’s balance sheet. Also, the GCC includes capital calculations for AA Holding Company and DD Insurance Agency as part of the MRC in addition to the regulatory capital already included for the insurance subsidiaries. The MRC of the subsidiaries is eliminated from the parent’s (AA Holding Company) calculated capital. Therefore, in this example $4.81 million of calculated capital is eliminated from the MRC. Finally, the MRC of U.S. insurance subsidiary is multiplied by 2 in order to reflect Company Action Level (CAL) RBC as required in the GCC.

1 Terminology used in RBC for available capital/financial resources
2 Terminology used in RBC for calculated regulatory capital
Debt - It is important to note that the available capital used in deriving the GCC recognizes a portion of the group’s senior and hybrid debt as capital. This allowance recognizes that debt that is not already recognized as available capital/financial resources under all known accounting principles (SAP, U.S. GAAP or IFRS) may have some value to the group under the U.S. insurance regulatory requirements where such is dividend down to the insurance companies and where extraordinary dividends must be approved by the state. Qualifying debt along with limitations thereon is described in the GCC instructions as is the calculation for the additional available capital. In addition to looking at the group’s debt leverage overall consideration should be given to how the allowance for additional capital from debt interacts with changes in available capital and capital requirements from year to year. The impact of procyclical changes in the allowance for debt as capital should be assessed.

Other information included in the GCC
The GCC includes selected financial information (net income, premiums, liabilities, debt, etc.) that are captured in Schedule 1 and in the “Analytics” tabs of the GCC that are meant to be used to help isolate potential strengths and weaknesses of the group and more specifically where such exist among the entities in the group. Some important information related to other features in the GCC also should be considered and are discussed below. Schedule 1, a simplified version of the Inventory Tab, and most analytics are required in the case of a “limited filing”. However, data is not required for the capital instruments, sensitivity analysis and other information tabs in a limited filing.

Grouping - The GCC separately allows certain financial entities (e.g., asset managers) and non-financial entities included in the GCC to have their values and capital calculation combined (grouped) for more efficient reporting and analysis. Although the GCC instructions set parameters for such grouping, the general expectation is that regulators will work with each applicable GCC filer in determining where grouping is and is not appropriate outside of what is allowed within the GCC instructions. Grouping should be viewed in context of materiality. A single entity conducting a given activity may not be material, but when all entities conducting the same activity are combined, they can be material.

Excluded entities - The GCC provides two mechanisms for the exclusion of non-financial entities in Schedule 1 and in the Inventory Tab at the discretion of the lead state. State regulators should consider whether any of the information collected in the GCC template in support of, is collected for an entity or group of similar entities that would otherwise be excluded from the GCC ratio calculation. Regulators should separately monitor increases in the level of activity of an “excluded” entity or group of similar entities for purposes of materiality and potential subsequent inclusion in the GCC.

Sensitivity analysis - A tab devoted to individual sensitivity analysis is included in the GCC. These informational items provide the regulator with impact of discretion in excluding listed entities and alternative perspectives on risk charges for non-financial entities and foreign insurers. Monitoring of these items can help the regulator identify areas where the GCC may be improved, or capital calculations adjusted in the future. One item included in the sensitivity analysis is a “sensitivity test” that increases the overall calibration of the calculated capital in the GCC from its normal 200% x ACL RBC calibration to 300% x ACL RBC.

Accounting Adjustments - The impact of accounting adjustments and related detailed information is collected in the GCC template in the Inventory Tab and in the Other Information Tab respectively. Such adjustments can be material during the de-stacking process. For example, a consolidated holding company may include GAAP values for entities that would otherwise be valued under regulatory accounting rules (e.g., Statutory Accounting Principles - SAP) on a stand-alone basis. When the regulated entity is de-stacked the difference between the GAAP values and SAP values will be removed from the group's available capital. These "lost" values can result in a material reduction in the inventoried available capital compared to consolidated available capital. Understanding
the impact and the components of this adjustment can help the regulator when considering the impact of issuing new debt or when evaluating the allowance for debt as capital calculated in the GCC template.

**Intangible Assets** – Acquisitions, mergers and reorganization often can create significant intangible assets at a holding company level or possibly at an operating company (other than a regulated entity) level. The GCC template collects information on intangible assets held by inventoried entities in the Other Information Tab. The available capital associated with the value of entities whose assets are materially comprised of intangible assets should be evaluated in the context of fungible resources and in assessing the adequacy of the capital calculation assessed on such entities.

**Dividend pass-thru (gross view of dividends)** – Schedule 1D collects information on dividends paid and received within the group. It also includes a column that indicates whether dividends were declared but not yet paid, as well as cases where dividends received where retained or “passed thru” to another affiliate or paid out in dividends to shareholders. This information will assist the regulator in evaluating the movement of capital within the group to fund strategic insurance and non-insurance operations or activities (e.g., expansion of activities) or to fund entity specific capital shortfalls. It also provides a window to capital leaving the group (e.g., debt repayment, stock repurchase, or dividends to shareholders).

**Considerations When Exempting Insurers**

As stated elsewhere within this guidance, the GCC and its related provisions in the NAICs Model Holding Company Act and corresponding regulation are not designed or otherwise intended for regulators to take regulatory action based on the reported level of a group’s GCC. Rather, the GCC is intended to be a tool to better understand the risks of the group, mostly through the trending of the financial information in the “Input 4-Analytics” tab. However, specific to the provisions of the NAICs Model Holding Company Act and corresponding regulation, the Group Capital Calculation (E) Working Group did believe that the GCC might be more helpful for some groups and not as much for others when it developed criteria within the Act and the regulation for exemptions. On this point, the Working Group believed that in general the GCC would be more helpful for those groups that had 1) non-U.S. insurers within the group; 2) a bank within the group, or 3) a more material degree of non-insurers. Specific to the point regarding non-U.S. insurers or banks, the GCC is based upon the premise that the most relevant measure of capital is the actual legal entity requirements of capital from the applicable regulator. On this point, the required capital, as well as the trending of information on these particular legal entities might be the most valuable, particularly if the relative operations and assets of these entities compared to the U.S. RBC filers is material. Similarly, while the calculated capital on the non-insurance entities may not be as relevant as either required capital on regulated insurers or banks, if the relative operations and assets of non-insurers to US RBC filers is material, the GCC may provide greater value to such types of groups.

To these points, the NAICs Model Holding Company Act and corresponding regulation contain possible exemptions for groups that have less than $1 billion in premium and that do not possess these types of situations. The possible exemptions exist after the GCC has been filed once. The general consideration in developing the requirement in the model that the GCC must first be filed once for all groups, was that without seeing the completed GCC, it may be difficult for the lead-state to determine if the GCC has no value or is at least cost beneficial to require filing. However, it should also be understood that these three criteria of non-U.S. insurer, bank, or non-material non-insurers are not the only situations where the GCC would be valuable to the lead-state. As a reminder, all states are required to assess the sufficiency of capital within the holding company structure and that prior to the GCC, this was done by states using various methods (e.g., debt to equity ratios, interest coverage ratios, existing RBC ratios and relative size of insurance). The GCC is expected to enhance a state’s ability to make this assessment more easily, even if it is only used as a general gauge as its intended. Therefore, in deciding if a group should be exempted, the lead-state will need to consider a number of factors, including how easily it can make this assessment without the GCC, again, only as a general gauge. For small groups where the U.S. RBC operations and
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) – Analyst Reference Guide

assets are much larger than the non-insurance operations, it is likely the GCC would provide a smaller degree of value and exempting from the GCC may be appropriate. However, the analyst should also consider the fact that the simpler the holding company structure, the more easily the GCC can be completed. Specifically, given all of the data included in the GCC is existing data and therefore readily available to the company, a smaller and simple structured group should be able to accumulate into the GCC template in a short period of time. Also worth considering is that if such operations are contained within a number of different U.S. insurers where it is difficult to determine the degree of double counting of capital, the GCC may provide more value. To be clear, these are not the only situations where the GCC might be helpful even with a relatively small group. This is because the value may come from figures the GCC requires that the state may have otherwise not been aware of. Specifically, the GCC may identify non-RBC filers who may be experiencing some level of financial difficulties. This possible identification of information the lead-state was not otherwise aware of is the primary reason the Working Group suggested the GCC be filed once before deciding on whether a group should be exempted. While the NAIC Accreditation program may not require a state to have such authority to have the GCC filed once before exempting, this background information provided herein is intended to encourage the state to consider such possibilities before deciding on exempting a group, particularly since it may be difficult to stop an exemption in a given year once it’s provided. In summary, as with everything else described in this documentation, the GCC requires judgement on behalf of the analyst and the lead-state which is based upon multiple factors including the existing knowledge of the group. This fact is no different when considering whether a group should be exempt.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) Procedures

Review of the Group Capital Calculation

Consideration of the Insurance Holding Company System Structure

As the lead state begins to review the annual Group Capital Calculation filing for a particular group, it is important for the lead state to do so with consideration of the existing knowledge of both the organizational structure of the group, including changes in the structure from year to year, but more importantly the overall activities of each of the entities in the group which otherwise have the potential to transmit material risk to the insurers within the group. While the GCC will provide additional quantitative information on the entities in the group, the actual activities of the entities are also important in determining the scope of application of the GCC. The lead state is responsible for determining if any of the entities in the holding company structure should be excluded from the calculation, resulting in and therefore a smaller “scope of application” for the entities included in the GCC ratio. The filing includes a column for the group to propose what should be excluded as well as an additional column for the final determination made by the lead state. In general, the determination of scope of the application is suggested by the group but made in consultation and agreement with the lead state. This exercise should be undertaken in a manner that yields a clearly documented rationale for excluding entities or subgroups of the larger group. The Group Capital Calculation Instructions describes the basis for making this determination and the calculation itself is structured to facilitate this determination, with the inclusion in Schedule 1 of the calculation of financial data for all entities within the holding company. Similar to exclusion from the calculation itself is review of data for cases in which subgroups are completely excluded from the larger group, particularly with regard to Schedule 1; the rationale for the exclusion(s) should be provided in the GPS. The concept is that this Schedule 1 data should be utilized by the lead state in conjunction with its existing knowledge of the group and its activities (obtained from the Schedule Y, ORSA, Forms B/C, Form F, the non-insurance grid, etc.), and therefore likely material risks, to make this determination. To the extent the entities included in Schedule 1 differ from the analyst’s knowledge of the Group, further discussion and follow-up should be held with the group.

In the initial year(s) of a GCC filing, to help the analyst get comfortable with the Inventory and Schedule 1 process, consider the following:

- Gather appropriate background information for your group(s) (e.g., Group Profile Summary, ORSA, RBC Reports, Schedule Y)
- Determine that all Schedule Y entities are listed in schedule 1 or in the schedule BA list in the other information tab or that an entity’s omission is understood / explained
- Evaluate requests for exclusion of non-insurance/ non-financial entities with/without material risk to determine if you agree with exclusion.
- Confirm that all insurers and financial entities are de-stacked in the inventory tab.
- Determine if grouping has been properly applied.
- Evaluate the level of risk assigned by the filer to financial entities with/without regulatory capital requirements.
- Check that the numbers reported in Schedule 1 and Inventory Tab look reasonable, especially for the insurers. A sample check should be sufficient.

The holding company structure and activities should also be utilized by the lead state in determining how to understand the GCC ratio. More specifically, information on structure can help in understanding impact used by the group to make decisions on how to utilize resources among entities within the holding company structure. Therefore, understanding the following can assist in evaluating the flow of capital resources:

- Domestic insurance operations
- International insurance operations
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) Procedures

- Banking or other financial services operations subject to regulatory capital requirements
- Financial and non-financial operations not subject to regulatory capital requirements*

*The GCC instructions provide examples of financial versus non-financial entities in this category. All financial entities should be included in the scope of application of the GCC. However, there can be a broad array of entities that could be considered financial. The lead state should document the rationale for cases in which it concludes that an entity that may be financial in nature can nonetheless be classified in the group’s GCC filing as “non-financial” and thus excluded from the scope of the group in the GCC.

The GCC is intended to be used as an input into the GPS. The expectation is that the GCC summary section will help to document a high-level summary of the analyst’s take away of the GCC, as well as the Strategic branded risk. The manner in which the analyst determines what else should be documented beyond the GCC Summary and the Strategic branded risk should be based upon the following steps, since these steps contemplate the previously mentioned concept that the existing evaluation of the financial condition should be used in evaluating the depth of review of the GCC.

In as much as the GCC is a new analytical tool for use by regulators, and that it will take a number of years before there is both (1) sufficient data for any given group to provide the trend identification ultimately anticipated for the GCC; and (2) experience by regulators with its use. Analysts should be mindful that any stated threshold in the following procedures is for analysis purposes only and DOES NOT constitute a trigger for regulatory action. Rather, the stated threshold should be used as an opportunity for an analyst to understand issues and concerns that may be emerging and address them with the group, if needed. Nonetheless, the following procedure steps provide analysts with a framework to consider the GCC results in conjunction with other data and tools at their disposal, and to begin to gain and benefit from experience in utilizing the GCC as a new analytical tool.

- Procedure Step 1 suggests that a review of the components of the GCC is appropriate when the GCC ratio is trending downward.

- When Procedure Step 1 identifies the need to look further, Procedure Step 2 suggests from a high level determining, at a high level, the drivers of any decreases in the total available capital in the GCC. While there are numerous benefits of the GCC over consolidated approaches, the ability to drill down on the drivers is one of the more significant and is consistent with the states’ approach to not just looking at capital, but to the drivers of capital issues.

- When Procedure Step 1 identifies the need to look further, Procedure Step 3 suggests from a high level determining, at a high level, the drivers of any increases in operating leverage, which is typically what drives insurance capital requirements up, be it asset risk/leverage or writings leverage. Similar to drivers of capital decreases, the GCC has detailed information on financial figures and ratios that can be used to isolate the issues.

- When either Procedure Step 2 or Step 3 identify the need to understand the situation better, Procedure Step 4 is similar in that it too utilizes detailed information on capital allocation patterns used by the group over time that are necessary for the analyst to understand if there are any future negative trends in the GCC.

- When Procedure Steps 2, 3 and 4 together identify the need to understand the situation better, Procedure Steps 5, depending upon the analysis performed in previous Steps, is similar to legal entity analysis, where there is likely a need to determine what steps the group/company is already taking or plans to take in order to address any the issues that they perceive are appropriate.

- The guidance provided in these procedures is not intended to be exhaustive, but rather should give the analyst a starting point in better understanding the various issues.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) Procedures

- If the analyst determines after completing any of the above procedures (steps), that no further work is deemed necessary to fully document their understanding of the material risks of the group observable from the GCC (as well as the required information to be included in all GPS from the GCC), the rationale for this determination should be documented by the analyst in any workpapers deemed appropriate by the state and include the general reason, therefore. In making this determination, it should be reiterated these procedures are not intended to be used in a checklist manner and judgment based upon and existing understanding of the group and existing information on the group obtained from the Form F, ORSA, or any other source is certainly part of that decision.

Procedure Step 1-Understand the Adequacy of Group Capital

1. Determine if the group capital position presents a risk to the group and its insurance subsidiaries based upon its recent trends and/or current measures in the GCC ratio.

<table>
<thead>
<tr>
<th>Branded Risk</th>
<th>Benchmark</th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>ST</td>
</tr>
<tr>
<td>a. Has there been a decrease in the GCC ratio over last two or more years? If “yes”, determine the cause(s) of the decline.</td>
<td>ST a. &lt;-10% (this is not a point change)</td>
</tr>
<tr>
<td>b. Has there been a decrease in the GCC Total Available Capital from prior year? If “yes”, determine the cause(s) of the decline.</td>
<td>ST &lt;-10%</td>
</tr>
<tr>
<td>c.</td>
<td>ST N/A</td>
</tr>
<tr>
<td>d. Has there been a negative trend in the GCC ratio over the past five years suggesting an overall pattern of declining capital?</td>
<td>ST N/A</td>
</tr>
</tbody>
</table>

If the answer to any of the above questions is “yes”, but it is obvious that either the negative trend is caused by something such as a restriction on the allowable debt, or a change in a corporate tax rate, or some other factor external to the group’s operations not indicator of negative trends, note as such but do not proceed to step 2. In addition, if it is obvious that the negative trend is clearly driven from one entity in the group, understand the cause and document as such but do not proceed to step 2. However, in all other cases if the answer to any of the above questions is “yes”, the analyst should proceed with procedure step 2, understanding decreases in total available capital and/or procedure step 3, understanding increases in leverage to determine the cause(s) of the negative trends.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) Procedures

Procedures Step 2-Understand Decreases in Total Available Capital

2. Determine the source(s) of decreases in the GCC ratio or the GCC Total Available Capital

Recognizing that not all declines in capital ratios are necessarily “negative”, i.e., they may be the result of sound capital management and ERM to more efficiently utilize capital, approved changes in the scope of application, or changes in underlying authority requirements, the intent of step 2 (and step 3) is to determine the actual source of the negative issues. In most cases, this equates to pinpointing the legal entity(ies) driving any negative trends. However, unless obvious from the information obtained in step 2, the analyst should proceed to steps 4 and 5, using an understanding of items in Procedure Step 4, to understand more fully the actions the group, or the legal entity(ies) driving the negative trends, are already being taking or planned to be taken by the group to address the issues identified in step 2, if that is not already clear from the information obtained in step 2 that the group believes is needed. However, the analyst may already have a deep understanding of any such plans, and as a result, in some cases, it is possible that no further follow-up with the group will be necessary and that the lead state should simply update the GPS to be certain the main understanding of the issues is known to all of the regulators utilizing the GPS.

</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Procedure Step 3-Understand Increases in Operating Leverage

3. Determine the source(s) of any decreases in the GCC ratio due to increases in leverage

Like step 2, the intent of step 3 is to determine the actual source of the negative issues. The difference between step 3 and step 2 is simply the types of issues. Step 2 is focused on issues that have resulted in negative capital
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) Procedures

trends. Step 3, however, is focused on the issues that impact the risk being measured in the GCC. In most cases that risk is from the insurers and either from the asset side or from the liability side where in both cases there has been an increase in such risk that has not been offset by a corresponding or equal increase in capital. In general, this is referred to as operating leverage, where this risk can manifest itself either through increased insurance writings (e.g., the ratio of premiums to capital or liabilities to capital), or through increased assets that also carry risk. The expectation is that other regulated entities also have capital requirements that increase as these different types of risks increase, similar to how the NAIC RBC considers different types of products and assets that carry more risk. However, it is also possible to have increased leverage outside of the insurance companies and other regulated entities through for example increased exposure, which can manifest itself through increased liabilities or through increased assets. However, similar to other items noted in this document, such increases do not necessarily represent negative trends, rather simply things the analyst should need to further understand the drivers of such changes. In most cases, this equates to pinpointing the legal entity(ies) driving any negative trends. Similar to step 2, using an understanding of items in Procedure Step 4, to understand more fully the actions the group, or the legal entity(ies) driving the negative trends already being taken or planned to be taken by the group to address the issues identified in step 2 that the group believes is needed.

</tr>
</tbody>
</table>
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) Procedures

| decrease in riskier assets to mitigate the otherwise likely increase in market and credit risk. |

Unless obvious from the information obtained in step 3, the analyst should proceed to steps 4 and 5, using understanding of items in Procedure 4, to understand more fully the actions being taken by the group, or the legal entity(ies) driving the negative trend, are already being or planned to be taken by the group to address the issues identified in step 3, if that is not already clear from the information obtained in step 3 that the group believes is needed. However, in some cases, it is possible that no further follow up with the group will be necessary, and that the lead state should simply update the GPS to be certain issues are known to all of the regulators utilizing the GPS [BJR14].

Procedure Step 4 - Understand the Capital Allocation Patterns

4. Determine the capital allocation patterns to determine if some entities may put pressure on other legal entities.

Steps 2 and 3 are critical in understanding the issues faced by the group and in identifying the source of negative trends; and while additional follow up with the group is expected, before proceeding to Step 5, the lead state should understand the historical capital allocation patterns within the group and the likely future needed capital allocation patterns that may be needed by the group if negative trends continue. The GCC includes data on historical capital allocation patterns (e.g., contributed capital received/paid or dividends received/paid), which help to illustrate which entities have historically needed more capital and which entities have capital that they have provided other entities in the past [JKM15]. While these patterns do not necessarily repeat themselves from one period to the next, there is often consistency in terms of entities that need capital or have excess capital, which may or may not be driven by losses, or by a change in strategy (e.g., increased writings at one company over another) by the group. These trends can also assist in conversations with the group about where capital may come from as a result of a future unexpected material event. Where similar information is also disclosed in Form F, the detail in the GCC may confirm what is already known by the analyst in this area and in some cases may provide greater detail.

</tr>
<tr>
<td>b. Using this data, as well as any recent information on net losses, or likely expected funding, determine if there may be an impact on the capital available to the insurance entities (either through the likelihood of higher dividends or through less capital being available for infusions) and to fund future possible losses from other entities in the group and potentially become troubled themselves, regardless of the current capital in excess of RBC requirements [BJR16].</td>
<td>OP, ST</td>
</tr>
</tbody>
</table>
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) Procedures

Procedure Step 5-Consider the Need for Company Discussions for Reductions in Risk

5. Determine the group’s plans for addressing source(s) of any meaningful decreases in the GCC ratio or total available capital. Please note, in some cases, the plan may be as simple as actions designed by the group to reverse a single negative trend.

Steps 5 is designed to assist in understanding the group’s plans for addressing any meaningful decreases in the GCC ratio or total available capital that were not intended otherwise already planned by the group (i.e., that are not the results of capital management so as to efficiently utilize capital while still maintaining sufficient levels for Enterprise Risk Management needs). The specific plans of the group may or may not fully address all the issues but to the extent the group believes they have addressed what is needed, ultimately what is most important is that such information and the regulators plan for evaluating and monitoring the situation is known to the other regulators. There is a multitude of possibilities, and this guidance is not intended to address all of those. This includes the multitude of possibilities actions by the group and its legal entities and the ultimate results. This also includes the multitude of possibilities actions to be taken by the legal entity regulators of the individual legal entities, which may including the fact that in some cases some regulators may choosing to put their legal entity into some type of supervision, conservation, or some other form of receivership (which, by necessity and intent, would presumably be done based upon existing legal entity authority and not the group’s GCC). Similar to other areas, where similar information is also disclosed in Form F, further information may already be known in this area.

VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

Purpose of the Group Capital Calculation (GCC) in Holding Company Analysis

The following information is intended to provide background and context concerning the issues/considerations for analysts when utilizing the NAIC Group Capital Calculation (GCC) for an insurance holding company group (hereafter referred to as “group”) completing the GCC where required. The GCC is a “tool” to quantitatively understand the group’s capital and the mathematically calculated risks within the group. The GCC framework is built on the RBC model; however, while the RBC, as a capital requirement, has triggers in with states’ laws to take formal actions as a capital requirement, the GCC is not designed for that purpose and is instead designed as an analytical tool.

Background Information

In 2008, the NAIC Solvency Modernization Initiative (SMI) began to consider whether there were any lessons learned from the financial crisis that would cause the solvency framework to be modified. The NAIC determined that changes should be made in the area of group supervision, starting with the new annual requirement for the Lead State of each group operating in the U.S. to complete a written holding company analysis. Since that time, other changes to state laws have been made to further enhance group supervision (e.g., Form F, ORSA, and Corporate Governance reporting). All of these new tools are inputs into the previously mentioned holding company analysis, which is now summarized into a consistent tool used by all states that is known as the Group Profile Summary (GPS).

Benefits of the GCC & Methods to Achieve Them

The Group Capital Calculation Instructions describes the background, intent, and calculation for the GCC in detail. As stated in the Group Capital Calculation Instructions, the GCC and related reporting provides more transparency about a group’s structure and related risks to insurance regulators and makes those risks more identifiable and more easily quantified. In this regard, this tool is intended to assist regulators in better understanding the risks that the non-insurance entities may pose to the group, how capital is distributed across an entire group, and whether and to what degree insurance companies’ capital may be put at risk from the operations of non-insurance entities, potentially undermining the insurance company’s financial condition and/or placing upward pressure on the insurers in the group. An analyst is not expected to understand non-insurance industries represented within the group but is expected to understand through this calculation if a non-regulated entity could place pressure on or provide relief to a regulated entity.

The manner in which the GCC achieves some of these intentions/benefits or points varies. For example, with regard to understanding how capital is distributed across an entire group, this can be seen in two ways. One is by viewing the Tab titled “Input 4-Analytics” for the display of the “Ratio of Actual to Required Capital”. The other two is by viewing the same Tab for and in the display of “Required Capital” in a separate column. The degree of capital movements can also be seen in the “Input 4-Analytics” tab, with the display of the columns as follows: 1) Capital Contributions Received/(Paid); 2) Net Income. While one year of information can provide insight on how this exists, a better understanding will be obtainablemost will not be seen until after further years of the GCC are reported within the template. Once at least five years of data are displayed in this “Input 4-Analytics” tab, it will allow the analyst to better understand the financial condition of the group as a whole as well as the risks posed by non-insurance entities in the group. Of course, such conclusions can only be made once the analyst sees the data and understands from the group what is occurring that is leading to such figures.
Recognizing that legal entity supervision and related tools (e.g., RBC) are the primary means to address inadequate capital, the GCC may provide an additional early warning signal to regulators regarding risks or activities of non-insurers within the group that may pose material risk to the insurance operations. This early warning signal can be seen with the trending of the financial information in the “Input 4-Analytics” tab as well as through the application of sensitivity analysis in the Input 5 Tab and inclusion of other relevant information in the Input 6 Tab. However, the analyst should also understand that other “qualitative tools,” such as the Form F, are capable of also providing early warning signals if properly reported by the group. In addition, since most holding company systems may have a larger percentage of their operations in the insurance businesses, the insurance trends for the U.S. insurers in the group should already be known and made available to the lead-state by the legal entity regulator(s) of the insurer(s). However, in the context of added policyholder protection, this may largely come into play with respect to the added quantitative data about non-insurers.

The GCC is an additional reporting requirement but with important confidentiality protections built into the legal authority to require such reporting. State insurance regulators already have broad authority to take action when an insurer is financially distressed, and the GCC is designed to provide regulators with further insights to allow them to make informed decisions on both the need for action, and the type of action to take. That said, the GCC and its related provisions in the NAIC’s Model Holding Company Act and corresponding regulation are not designed or otherwise intended for regulators to take regulatory action based on the reported level of a group’s GCC. Regulators will use other existing tools and authorities to take action, primarily at the legal entity level.

While the new information from the GCC may offer new insights, it is equally important to understand that it will be up to the analyst to work with the insurance group to actually understand what is leading to the figures reported in the GCC, and from that perspective, especially in the early years of the GCC, it will require learning by both the analyst and the group to really be able to utilize the GCC in a manner as suggested in these introductory paragraphs.

Other Considerations When Considering Such Benefits

Unforeseen events and economic conditions (e.g., pandemic, recession, etc.) may also create stresses on a group, reinforcing the value of the quantitative data included in the GCC. Some stresses are similar to those experienced during the financial crisis and others are more unique. However, because the GCC is based upon a methodology that gets its inputs from individual legal entities, the capital calculated for each legal entity certainly can only capture the allowed capital resources of the legal entities in the group. While such an aggregation-based methodology is an appropriate group-level capital measure, until experience is gained with the GCC, it is not known as to how the GCC will behave in response to business cycles and various risk events, in part because it only recognizes limited diversification benefits among entities in the group except for the diversification embedded in existing entity specific regulatory capital requirements. And while the GCC is not meant to be used in a way that compares groups to each other, it is also true that it is unknown how it will behave across groups, peers and even sectors. This is true because of its limited diversification benefit, the differences between group types (mutual v. stock holding company), grouping of entities, and scope of entities included in the calculation. It is also true because application of jurisdictional accounting principles and use of scalars could have an impact on this as well via the foreign insurer profile of the group. The quantitative data collected in the GCC will evolve as state insurance regulators and groups increase their understanding of the impact on available capital and calculated capital.
The following guidance on the GCC is intended to be utilized in a manner that allows the GCC to enhance group-wide financial analysis and to be used as an additional input into the GPS. The GCC provides the quantification of risk within the group and when combined with the information from the ORSA on the amount of capital needed to run the company's current business model, puts the regulator in a much better position to understand the available capital and calculated capital within a group, as well as the financial condition of the group. Both are complementary tools to each other. The ORSA provides management's internal approach to capital management and an understanding of the economics of the group. The GCC provides a standard model that can better enable the analyst to understand where the entire group stands with respect to existing legal entity requirements as well as broad measures of risk for non-insurers. Analysts should be mindful of the differences between the ORSA and the GCC. For example, in the case of a group with predominantly U.S. operations, the GCC will largely be based on the standard model/RBC of the U.S. subsidiaries. However, the ORSA is not constrained by a standard model and will reflect management’s internal approach to capital management and may utilize or benefit from an economic capital model, other internal models, stress testing and other means. As a result, while the GCC is an additional input into the GPS, it may provide data and signals that don’t align with the risk measures within the ORSA.

Overall Theme of Remaining Guidance

The previous information describes the purpose for considering the GCC within the context of the state’s holding company analysis and corresponding GPS. In general, the remainder of this guidance provides more depth to the specific information to be included in the GPS, and provides the analyst with a basic understanding of the GCC including: why the entities included within the GCC may be a subset of those entities that are within the holding company structure; whether the trends within the GCC suggests questions should be raised with the group’s management to understand; whether the underlying data suggests trends exist that should likewise suggests questions should be raised with the group or with the respective legal entity’s supervisor; whether the information in the GCC filing is generally aligned with other information available to the analyst, and if not, why not, and whether that evidences other questions or concerns that should be addressed, or how they may already have been resolved. Notably, the purpose of the GCC is NOT to trigger regulatory action. Thus, even though the GCC is intended as a group-wide measure and provides insights as to capital adequacy and risks across the group, any regulatory action would have to result from other information made available to the regulator and based on legislative authority.

Utilization of the Group Capital Calculation in the Lead State’s Responsibilities

The lead state is responsible for completing the holding company analysis and documenting a summary of that analysis in the GPS. The depth and frequency of the holding company analysis will depend on the characteristics (i.e., sophistication, complexity, financial strength) of the insurance holding company (group) system (or parts thereof), and the existing or potential issues and problems found during review of the insurance holding company filings.

Similarly, in the analysis of the GCC, the depth of the review in the “five-step process” and specific inquiries will vary based on each group’s unique situation. For example, in some groups, very little if any work (inquiries of the group) will be done after the first step due to generally positive trends of the ratio over time. While in other groups, the analyst may need to proceed through each of the five steps. Exactly how the analyst proceeds through the guidance will be dictated by a multitude of factors and requires judgment and as a result, the steps
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

and sub-procedures should not be used as checklist, but rather as a guide in how to utilize the GCC to increase the analyst’s understanding of the group.

GCC Construction That Also Impact its Utilization and Review

Some decision points may be addressed prior to the submission of a GCC template. These include: the scope of application (e.g., whether segments of the holding company system (group) should be excluded for financial conglomerates); whether a limited filing will be allowed (as permitted in Model Law #440 and Model Regulation #450); and whether subgroup reporting (as defined in the GCC instructions) of a foreign insurance group will be required. In general, the analytics provided by the GCC will be similar for all entities included in the template. (See the Primer on the Group Capital Calculation Formula) at the end of this section to better understand these points.

These factors are also a consideration in determining the depth of the analysis of the GCC and subsequent correspondence with the group. Refer to chapter VI.B. Roles and Responsibilities of Group-wide Supervisor/Lead State for details on responsibilities for completing the GPS.

The utilization of the GCC can be summarized as an additional input into the GPS. More specifically, once the analyst completes their review of the GCC and trend of the ratio, a summary should be incorporated into the GPS to help support the assessment of strategic risk.

Documentation of Review of the GCC in the Group Profile Summary (GPS)

The purpose of these procedures is to explain how to document the GCC into the GPS. The following provides an example of a GCC Summary that represents the minimum expected input of the GCC into the GPS, with new information reported within the Strategic branded risk classification. The other purpose of this section is to determine if more follow-up with the group should be performed and, if so, to assess the information obtained from that additional review. The following is intended to assist in documenting the analyst’s understanding of the group’s GCC in the GPS.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

Group Capital Calculation (GCC) Summary

Summarize your assessment of the GCC both quantitatively and qualitatively, including any such items as may not be applicable to a branded risk category. For example, it may be appropriate to indicate “The review of the group’s GCC indicated the scope of the application is consistent with the lead state’s determination” and if possible, to summarize succinctly, the general scope of the GCC. For example, “the GCC includes all U.S. and Bermuda operations, but excludes ABC non-insurance operations in South American countries”. It may also be appropriate to identify key drivers of risks for the group within the GCC that are discussed later in the branded risk categories, as those risks may be related to, and supplement existing risk assessments derived from holding company analysis or are they may be new risks that warrant further review. “The group’s GCC of 201% in the current year was impacted by a decline in Total Available Capital of $X which is related to group’s non-insurance operations in Bermuda and as well as the negative impact of market risks in the U.S. insurance legal entity ratio components, which based on further analysis has resulted from the recent financial market volatility”.

Branded Risk Assessment

Strategic: The group’s Group Capital Calculation is assessed as low risk and stable and is a positive consideration in the overall assessment of strategic risk. The GCC has generally been reasonable and consistent over the past five years as illustrated in the following table. Additionally, refer to the GCC Summary for further details.

GCC Summary and Strategic Branded Risk Documentation:
The above information documented in a summary section of the GPS and into the strategic branded risk classification is expected to be the primary type of information that is always documented into the GPS. The GCC provides a capital measurement of the group and, consistent with the branded risk categories, should be reported in the strategic risk section. Similar to how RBC for an individual insurance company is helpful in allowing the analyst to better understand other potential issues, given capital represents a relative measure of cushion for adverse risks, the GCC (and its inclusion in the GPS) helps regulators to understand the same, relative to a group. While the GCC is not a capital requirement, with specified ladders of intervention, each of the insurance legal entity figures are relative to individual company requirements, and therefore the GCC can provide a relative measure of risks in terms of the against such minimum capital levels of the insurers.

Other Branded Risk Documentation:
To the extent the ratio is trending negatively, or available capital is decreasing, the analyst may choose to include more information in the strategic branded risk section of the GPS that summarizes any key drivers of such findings if they did not fall into one of the branded risk categories. Those drivers of the change might be documented in other specific branded risk categories, for example Pricing/Underwriting if driven by group-wide weak insurance underwriting, or reserving if the group-wide drivers were reserve deficiencies, etc. References to other branded risk categories may also be appropriate. However, this may not always occur or be possible for the analyst to pinpoint given the multitude of risks within any insurer’s regulatory capital requirement formulas. This guidance is simply meant to suggest that if the GCC does in fact appear to
show particular trends that are noteworthy on specific risks, further documentation into that (applicable) branded risk may be appropriate.

A determination for when documentation of risks from the GCC into other branded risk categories may be appropriate is driven by both the question of whether any of the thresholds in Procedures 1 were met, and by the rest of the GCC information as described in Procedures 2-4. The GCC Summary is intended to be high-level, therefore other more detailed observations from reviewing the GCC should generally not be documented into the GPS unless they are specifically insightful, add to a high-level understanding of the group’s financial condition, or are specific to a branded risk category as stated.

Other Considerations:
In addition to the broad guidance provided herein on the documentation of the GCC into the GPS, the analyst should also understand the following more general points that could impact the GCC result for a particular group. Judgement is required when considering these points:

- If the group has a significant amount of business in legal entities that are domiciled in jurisdictions whose capital regime is based on market-based valuations, the GCC will inherently be more volatile (as compared to a pure U.S.-based group for which RBC and statutory valuations are the norm).
- Similarly, a group may solely have legal entities that are solely based in jurisdictions that utilize a standard model for capital requirements or have entities in jurisdictions where the use of internal models has been approved. All else being equal, the manner in which capital measures quantify requirements and behave over time will differ to some extent between the two. Also, a change from a standard method to one based on internal models for a key subsidiary will likely produce a noticeable change in the GCC that is not reflective of changes in the entity’s underlying business.
- The GCC provides a means for analysts to identify non-insurance operations outside of the insurance group and to determine the extent of risk they may pose to the insurers within the group. However, in doing so, analysts should understand that findings from review of Forms B, D and F might be equally valuable in these situations.
- When understanding capital requirements for non-insurer financial entities that are not subject to regulatory capital requirements, consideration should be given to the appropriateness of the GCC’s capital charge for a specific entity’s financial operations (e.g., an entity conducting a large volume or size large dollar amount of complex transactions but with little net revenue or equity).
- When understanding capital requirements for non-insurer / non-financial entities, consideration should be given to the appropriateness of the level of risk assigned to specific entities.

Detailed Observation Documentation:
More detailed observations shall be documented separately from the GPS and in a form not dictated by this handbook. As in all holding company analysis, the level of documentation is determined by the lead state insurance department and is dependent on the characteristics and complexity of the group and its risks. These detailed observations generally need to only note those that are indicative of drivers of trends and/or actions being taken by the group to mitigate risks. In some cases, these points can be easily summarized into the GPS. In other cases they are too detailed and should be documented instead within a separate document not dictated in form by this handbook. The analysts are not expected, nor should they spend time documenting either subtle changes within either the GCC or individual company movements that either do not create a trend at the
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

group level or identify a growing weakness in the group. However, judgment is required to make this determination. For example, a 10% (not point change) decrease in an RBC ratio of one of the smaller insurers within the group generally would not be documented. By contrast, a 10% decrease (not point change) in an RBC ratio in one of the larger insurers in the group that causes, either alone or jointly with other insurers, a 10% decrease in the GCC should be noted. However, it should be understood also that this 10% threshold is not intended to be a "bright-line." In fact it is possible the 10% is not necessarily indicative of any negative trends at all. This could be the case when for example there was a change in the regulatory capital requirement. Therefore, again, judgment is required in making these determinations and this, as well as other thresholds used in this guidance, are not meant to be bright lines. As the GCC is used more, both by the individual analyst, and by the various states, using judgment around these thresholds is expected to become easier as the judgement is informed by experience.

Specific Procedures for Completing Review and Understanding of the GCC

The following procedures should be used by the analyst in their review and documentation of results of the GCC. However, if the analyst determines after completing any of the above procedures (steps), that no further work is deemed necessary to fully document the material risks of the group observable from the GCC (as well as the required information to be included in the GPS from the GCC), this should be documented by the analyst in any workpapers deemed appropriate by the state along with the general reasons supporting that conclusion. In making this determination, it should be reiterated these procedures are not intended to be used in a checklist manner and judgement based upon existing information on the group obtained from the Form F, ORSA, or any other source is certainly part of that decision. 

Procedures Step 1
The purpose of procedures 1 is to assess the GCC level, and to identify the drivers of any changes in the GCC, in order to summarize and to document that overall assessment in the GPS and its strategic risk category, which is the minimum expected input of the GCC into the GPS. However, the analyst should understand that in the early years of the GCC, a limited amount of prior year(s) comparative data will be available, therefore requiring more judgement in determining if or where further analysis is warranted. Such judgement may need to be based upon various factors, including but not limited to other known information regarding the applicable group obtained from other sources (e.g., ORSA, Form F, Form B, etc.).

Procedure 1 is also intended to help the analyst determine if more follow-up review work should be performed. However, if the answer to any of the questions in 1 is "yes", the analyst should proceed with step 2, understanding decreases in total available capital and/or step 3, understanding increases in leverage to determine the cause(s) of the negative trends. In the example provided above, the trends are positive with no decreases in the base ratio except in PY1; presumably the analyst may have performed some level of inquiry to the holding company to understand the driver of the drop.

Procedures Step 2a-2m
Unlike step 1, the intent of step 2 (and 3) is to determine the actual source of the negative issues and where they should be documented in the GPS. Procedure 2a is specifically focused on identifying the category of legal entities (and subsequently the individual legal entities) that might be driving the issues by looking at the ratio of actual-to-required capital for the legal entity insurers over the available years reported. The following sample of a table from the GCC calculation completed by the group from the data in Schedule 1 can be helpful in determining the source of the issues.

Procedure 2b recognizes that the GCC does allow some debt to be included in capital up to a predetermined limit and can drive the overall GCC ratio. The following sample table taken from the GCC calculation using the data in Schedule 1 can be helpful in making this determination. Cases where debt is issued to address risk-driven reductions in the GCC ratio may not offset those reductions. This data metric may not be available in the case of a “limited filing”.

### Debt/Equity Table Template Groupings

Procedure 2c recognizes that profitability is generally one of the biggest drivers of changes in capital and utilizing the following table from the GCC can assist in identifying if there are entities reporting net losses that may be driving the decreases in capital. The following table taken from the GCC using the data in Schedule 1 can be helpful in determining the source of the issues.

Procedure 2d is focused on requesting more specific information from the legal entity regulator or the group to better identify the source of the issue(s). Procedures 2e-2l simply contemplates that if the source of the issues can be identified into one of the branded risk categories, it should be documented in the detailed workpapers and into the appropriate branded risk category of the GPS. However, it is recognized that the source of issues may be in multiple branded risk categories, in which case documentation of each of the sources into the detailed workpapers...
workpapers is still appropriate. However, documentation into one of the single branded risk categories of the GPS is only appropriate if that risk category is a material driver of the negative trends. Procedure 2m is intended to identify if the source of the issues is related to non-insurance operations. The GCC is intended to provide for more consistent analysis of risks to the insurer that may originate from non-insurance entities within the holding company system.

**Procedures Step 3a-3f**

Procedure 3a is specifically focused on identifying the category of legal entities (and subsequently the individual legal entities) that might be driving the issues by looking at indicators of leverage, e.g., leverage ratios, where this risk may manifest itself either through increased writings or exposure, or through increased balances relative to capital and surplus. The following sample of a table from the GCC calculation using the data in Schedule 1 can be helpful in determining the source of the issues.

Procedure 3b is more forward-looking by suggesting the analyst look at the same leverage ratios used in 3a to determine if the trends might continue and lead to further decreases in the GCC ratio. Procedure 3c simply requests the analyst use the leverage information to target questions to the group to better identify the drivers. Procedures 3d-3f are all questions designed to help the analyst consider whether the changes in leverage will lead to greater underwriting risk, reserving risk, or market and credit risk. Procedures 3d-3f provide general inquiries for additional information for the analyst. However, these inquiries may also appropriately provide a basis for the analyst to hold conversations with the group on the same topics to understand how the group views these topics and how the group is managing and monitoring these risks. For groups filing an ORSA, see also documentation within the ORSA report for additional information on the identified risks and the group’s monitoring of risks, as well as consistency of the discussion with management and management’s observations in the ORSA Summary report.

Procedures Step 4a-4b. Procedure 4a is intended to help the lead state understand the historical capital allocation patterns or the likely future needed capital allocation patterns by simply documenting those in the detail analysis workpapers. This includes, for example, noting that there is consistency in the entities generating net income and distributing it further through the group, and in some cases may require distribution through other insurers, which in the US often requires approval if considered extraordinary. Procedure 4b is intended to utilize that knowledge, along with other planned actions of the group, to understand whether problems with repaying debt or other obligations in the group could occur. The intent is to be in a better position for discussions with the group on where the group may expect capital to come from to support future expected activity or future unexpected material events. The following sample of tables from the GCC calculation using data in Schedule 1 can be helpful in determining the source of the issues.
Procedures Step 5a-5h. Procedures 5a-5h are designed for those uncommon situations where the group believes they need to reduce risk because raising capital may be unlikely [see appendix for further discussion on that topic]. In performing this procedure, the analyst should understand that Procedure step 2 (Evaluating Decreases in Total Capital) and Procedure step 3 (Evaluating Increases in Operating Leverage) will have already been performed to determine whether capital is decreasing, or operating leverage is increasing. As such, after considering information that may already be available to the regulator on the business plan, Procedure 5b is largely focused on better understanding directly from the group the group’s reaction to the apparent negative trends. The analyst should understand that some of these trends may have already been known, through for example the ORSA review and discussions of the ORSA by the lead state of the ORSA. In fact, the key takeaways may already be documented in the GPS and therefore the remaining procedures in this section may be irrelevant and could be skipped if recently considered and understood. In addition, such trends from Procedure Steps 2 and 3 may suggest no additional information is necessary. It is for this reason that the first procedure is focused on the group’s...
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

existing business plan as it is possible these trends may have been expected. Further, Procedure 5a is based on
the belief that reducing risk by the group may have been previously incorporated into the group’s latest business
plan, which may have been obtained from the Annual Form F Filing.

Procedure 5b on the other hand contemplates that the manner to address any unexpected negative trends may
not have been incorporated into the latest business plan and thus further contemplates that the analyst speaks
with the group to understand how the group intends to address the issue. However, it should be recognized that
some trends that may appear to be “negative”, e.g., a decline in the reported GCC, may actually be the result of
a conscious decision by the group to more efficiently deploy capital while yet remaining at sufficient levels from an ERM perspective. This procedure is not meant to suggest action must be taken by a regulator, but rather to help the analyst understand whether a trend is in fact “negative” or not, and if so, what the group has already decided or plans to do to address the issue. Some of what the group is currently doing may already be known by the lead state, either through the ORSA, the Form F, or a periodic meeting with the group that some states conduct annually. Rather, the procedure provides an opportunity for the analyst to ensure they understand the drivers and what if anything the group is already doing to address the underlying issues that the group thinks is appropriate. To be clear, increases in operating leverage are often planned, and often come with -expected future actions by the group, such as capital injections or future transactions that may reduce risk. Meanwhile, decreases in capital sometimes are not expected, and may not result in immediate action, if any, but it is possible that they may lead the group to contemplate future actions to take. Therefore, these discussions would allow these potential actions to be better understood by the analyst and documented.

Procedure 5c contemplates assessing if the group has the ability and resources to either reduce its risks or to
raise additional capital. See the section below for further Considerations of the Group’s Capacity to Raise Capital.
This procedure is not intended to suggest the analyst has the capacity to make this determination on their own,
but rather to question the reasonableness of the possibility. Further, the GCC and related provisions in the NAIC’s
Model Holding Company Act and corresponding regulation are not designed or otherwise intended for
regulators to take regulatory action based on the reported level of a group’s GCC; regulators will use other
existing tools and authorities to take action, primarily at the legal entity level.

Procedure 5d contemplates that the group may believe no action is necessary because it believes current capital
is adequate to meet its business plan, which is more likely to be the case when the company experienced a one-time reduction of capital as opposed to a growth in leverage that may continue. Procedure 5e is for the rare situation where the legal entity insurers have been strained or face impending pressure contemplated within NAIC Model 385–Model Regulation to Define Standards and Commissioner’s Authority for Companies Deemed to be in Hazardous Financial Condition that would suggest one or more of the insurers may be in a hazardous financial condition. Procedure 5f is designed to suggest the analyst bring the collective supervisors of the legal entity insurers together for a supervisory college to fully understand what is occurring and the group’s plans for addressing the underlying issues. Procedure 5g is an extension of Procedure 5f as it contemplates the regulators discussing whether the proposed actions from the group are adequate. This action could represent something either informally done before an insurer is in a regulatory action level, or formally once an insurer is in a regulatory action level. Procedure 5h is similar to the other actions contemplated within a supervisory college or, for example, to address a troubled insurance company under Accreditation requirements regarding communication with other states.
## Additional Procedures – Business Plans

While there is a multitude of possibilities which are beyond the scope of this guidance to address, the following provides some of the related issues that may be helpful to the analyst to consider. (See also section 6 regarding the analyst’s consideration of the structure of the group and capital infusion issues.).

**Group’s Business Plan:**

**Planning Process:**
- Understand the Group’s system’s overall planning process (e.g., who is involved, how frequently it occurs, etc.) and how the overall initiatives are determined
- Understand the group’s estimate of the impact of the proposed actions on financial results
- Review the plan’s assumptions for reasonableness. Consider the likelihood of variations in the assumptions and the resulting impact on the future financial results
  - Consider subcategories of changes including:
    - Overall potential changes in investment strategy
    - Overall potential changes in underwriting strategy or risk concentrations
    - Overall impact on financing matters (e.g., debt, requirements, etc.)
    - Overall impact on derivatives to mitigate economic conditions
    - Overall changes in governance or risk management procedures
    - Increased ceded reinsurance transactions (common approach to reducing risk/increasing surplus):
      - Details regarding the revised strategy
      - Specifics on types of coverage such as assumption reinsurance, loss portfolio transfers
      - Transfer of risk considerations

**Variances to Projections:**
- Consider the group’s history of explanations regarding variances in projected financial results and the insurer’s actual results. If analysts determine the goals of the business plan are not attainable and/or projections are unreasonable, a revised business plan may be requested.
- Identify any internal or external issues not considered in the plan that may affect future financial results. Examples of such issues include the following: 1) the existence of competitors to limit future sales levels; 2) recent state legislation restricting the company’s product designs; or 3) the loss of key marketing personnel.

**Evaluating a Business Plan:**
Analysts should consider further detail where necessary in evaluating the proposed revised business plan but also monitor, on a periodic basis, the insurer’s progress in achieving the initiatives included in the group’s plan. Assuming that the analyst has determined that a decline in the GCC is to be considered a negative event, i.e., it was not the result of capital management and planning to more efficiently utilize capital while staying within sound levels to achieve ERM objectives, the goal of the plan would then be to address the improvement of the underlying causes that led to the issues and an improvement in subsequent GCC ratio results. Detail considerations for improving the plan may include the following (where considered inadequate):

- Trending comparative measures of targeted risk exposures including (where applicable):
  - Asset mix by detailed types
  - Credit risk by detailed types
  - Business writings/ratios by detailed product
- Impacts on financing items:
  - Projected cash flow movements for ongoing principal and interest payments on debt
  - Impact on debt interest coverage ratio, other debt covenants, rating agency ratings
  - Discussion of impact on parental guarantees and/or capital maintenance agreements
  - Expected source and form of liquidity should guarantees be called upon
- Impact of reasonable possible stress scenarios
- How the individual legal entities’ capital will be maintained at required levels

Consultation with Other Regulators
- Consult with members of the supervisory college (if applicable) or other domestic states for input in evaluating the revised business plan

Considerations of Group’s Capacity to Raise Capital

The following is designed simply as a reminder of considerations the lead state would contemplate when discussing the group system response to the issues identified in this section. More specifically, in most situations a group will first consider ways to reduce risk. In limited situations, it may consider trying to raise additional capital. While this is typically not an option for a group that is currently not performing as anticipated, in some situations alternative sources of capital may be raised if the holders of the newly issued equity securities capital are given rights that are attractive to the holder. In addition, in some cases the group may have the ability to issue other forms of capital (e.g., debt), which can be used to inject into the insurance subsidiaries. While these facts are not unique to the utilization of the group capital calculation, they are worth a reminder along with relevant other related details.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

New Equity Considerations

Public Holding Company
While no two groups are the same, issuing public stock may be limited for the reasons previously identified. In addition, regulators are reminded that a public holding company may be obligated to pay dividends in order to maintain expectations of their shareholders, making the reduction of risk a more viable action under the circumstances.

Private Holding Company
While no two groups are alike, a private company has some of the same characteristics as a public company in terms of owners’ expectations, but usually such expectations differ from those for a public company, and it may be more feasible for a private company given its access to specific individuals that may have a higher interest in additional capital rights.

Mutual Insurance Company
A mutual insurer is limited in terms of its access to capital because it cannot issue new stock, but however, it can issue surplus notes.

Mutual Holding Company
Because mutual holding companies have characteristics of both public companies and mutual companies, there are implications of how such a structure affects its operations.

Non-profit Health Company
Insurers that are non-profits are generally charitable organizations and it is not uncommon for that some types of insurers, particularly those that provide health insurance, to have some history as a non-profit. It may be helpful to understand these types of dynamics when considering a group structure.

Fraternal Associations
Regulators often find similarities between a fraternal benefit society and a mutual insurer because both can be limited in terms of their ability to raise additional funds but can issue surplus notes. If allowed within state law and the charter, the fraternal could assess members or adjust members policy values.

Reciprocal Exchanges
Regulators often find similarities between reciprocal exchanges and fraternal benefit societies and mutual insurers because they can be limited in terms of their ability to raise additional funds. Although this is a general consideration for the regulator when evaluating the group system, there is generally much more that must be understood before coming to this conclusion because in some cases, the reciprocal may be able to assess policies that can serve a similar purpose as raising capital.

New Debt Considerations
Through discussions with the group, understand the potential impact of any new debt on the group system, including specifically the extent of future additional reliance on the insurance operations and whether those insurers have the capacity for such. Also consider an updated review of the following:

- Total debt service requirements.
- Revenue streams expected to be utilized to service the debt.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

- Any new guarantees for the benefit of affiliates.
- Any new pledge of assets for the benefit of affiliates.
- Any new contingent liabilities on behalf of its affiliates.

International Holding Company Considerations

International Holding Company Structure
This section is applicable only to those international groups that are required to complete the GCC, which may be relatively few considering many international holding companies have a non-US groupwide supervisor and are exempt from the GCC. Those foreign groups that are required to complete the GCC will generally file a “subgroup” GCC that included entities that are part of the group’s U.S. operations. In those situations, the analysts should understand the structure to determine if it has any impact on this analysis. For example, a German-based holding company may have advisory boards established to communicate with U.S. regulators. Analysts should direct any regulatory concerns to the appropriate organizational contact to ensure a prompt reply or resolution if the insurance regulator is not responding.

Capital / Operational Commitment to U.S. Operations
Some foreign holding companies may consider their U.S. enterprises non-core and consequently show weaker commitment to their ongoing business operations or financial support. In recent years, after sustaining continued losses from U.S. subsidiaries, several prominent foreign holding companies decided to cease their U.S. operations and liquidate their assets. Analysts should be aware of a holding company’s stated commitment to ensure the continued stability of U.S. operations. This commitment may include a written or verbal parental guarantee.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

Primer on the Group Capital Calculation Formula
The National Association of Insurance Commissioners (NAIC) began development of the Group Capital Calculation (GCC) in late 2015 following extensive deliberation on potential measurement models and methodologies. The GCC uses a bottom-up aggregation approach, accounting for all available capital/financial resources, and the required regulatory capital based on the measurement of assets and liabilities of the various corporate entities, including insurers, other financial entities, and non-financial businesses.

The GCC Aggregation Methodology
As illustrated in the sample tables above, the proposed GCC is an aggregation or grouping of the available financial resources and calculated required capital of all legal entities in an insurance group that could potentially pose material risk to the insurers in the group. The GCC allows some discretion in determining what entities under common control but outside of the defined Insurance Group may be excluded from the scope of application in the GCC. When reviewing a group’s choice of entities to be excluded from application of the GCC, the following points should be considered:

- The regulatory evaluation should be based on the criteria for material risk (e.g., structural separation, no history of cross subsidies, or other criteria as defined in the GCC instructions).
- Group requests for reducing the scope of application of the base GCC should be based on supporting information and a rationale provided by the Group.
- Information on excluded entities should be made available upon request from the analyst.

The GCC includes the following types of entities (listed with sets forth the general approach of calculated capital toward each):

U.S. Insurers – The available capital of U.S. domiciled insurers is determined by statutory accounting principles (SAP) as defined by state law and the NAIC Accounting Practices and Procedures Manual, which defines assets, liabilities, and net available capital/financial resources, sometimes referred to as policyholder surplus. The calculated capital for these insurers is subject to state law that requires these insurers to maintain minimum capital based on the applicable NAIC Risk-Based Capital formula at 200% x Authorized Control Level.

Non-U.S. insurers – Similar to the available capital and calculated required capital of U.S. insurers, the available and calculated capital of non-U.S. insurers is determined by reference to the home jurisdiction’s basis of accounting and capital requirements converted to U.S. dollars. While most non-U.S. jurisdictions do not possess the same level of industry specific technical guidance as included in the NAIC Accounting Practices and Procedures Manual, all jurisdictions have established accounting standards that insurers are required to follow to determine available capital/financial resources. In some cases, this represents local Generally Accepted Accounting Principles (GAAP), which may or may not be consistent with International Financial Reporting Standards (IFRS).

DRAFTING NOTE: While the GCC utilizes the available capital and home jurisdictions’ capital requirement, for jurisdictions where data is available, the use of appropriate scalars is currently being explored to produce more comparable measures for risk which can be aggregated into the group-wide measure. One such scaling methodology is included as part of a sensitivity analysis in the GCC template. That scalar methodology uses aggregated data from the U.S. and other jurisdictions at the first intervention level to recognize that (for
example), state regulators often have much higher reserve requirements, incorporating amounts that are required to be carried as required capital in other jurisdictions. For jurisdictions where the data is not available, the full jurisdictional requirement at the first intervention level is used.

U.S. Insurers Not Subject to RBC – Some types of U.S. insurers are not subject to an RBC formula (e.g., Financial Guaranty Insurers, Title Insurers). For these entities, the available capital/financial resources are determined by reference to state law and the NAIC Accounting Practices and Procedures Manual. However, since an RBC formula does not exist, calculated capital is determined by reference to the state minimum capital requirements set out in state law (or 300% of reserves for Title insurers). For U.S. captive insurers, available capital is determined based upon the states accounting requirements, but the calculated capital is required to be calculated using the applicable RBC formula even if RBC does not apply to that entity in its state of domicile.

Banking or Other Financial Service Operations Subject to Regulatory Capital Requirements – Non-insurers such as banks are subject to their own regulatory valuation methods (typically GAAP with tiering of available capital) and their own regulatory capital requirements (e.g., OCC, Federal Reserve, FDIC, or other requirements for banks). These regulatory values are used for the GCC.

Financial and non-financial operations not subject to regulatory capital requirements – In general, financial entities (as defined in the GCC Instructions) are subject to a higher capital charge in the GCC than the non-financial entities. However, the GCC does require available capital/financial resources and calculated capital to be gathered for all such entities that pose a material risk to insurers. In both cases the GCC will utilize the valuation used by such legal entities (typically U.S. GAAP) and a calculated capital based upon a risk factor. There are two important exceptions:

- All entities within the defined insurance group (definition included in GCC Instructions) must be included
- All financial entities (definition included in GCC Instructions) must be included
- The level of risk (low / medium / high) and associated capital calculation assigned to a financial entity will be selected by the group and evaluated by the lead-state reviewer
- Non-financial entities that are subsidiaries of U.S. insurers, foreign insurers, or banks where a capital charge for the non-financial entity is included in the regulated Parent’s capital formula will remain with the Parent and will not be inventoried. Regulators already have access to the financials of these entities if needed (if causing unrealized losses within the insurer).

Eliminations
The GCC uses an aggregation and elimination approach, where each of the above legal entities’ available capital/financial resources and calculated capital are combined, then eliminations are utilized to prevent any double counting of available capital/financial resources or calculated capital. The following example illustrates the use of eliminations for both available capital/financial resources and calculated capital. However, in practice the GCC only requires the foreign insurers and other financial entities owned by an insurance company to be “de-stacked” so if AA Holding Company was a U.S. insurer (e.g., AA Insurance Company) the capital required and calculated capital for DD Insurance Agency as a nonfinancial entity would remain in the values of AA Insurance Company and not be de-stacked.

2. Amount of Calculated Capital for Subs as follows: (3.0M + 1.6M + 0.21M)

In the above example, available capital/financial resources are referred to as available regulatory capital (ARC) and total authorized capital (TAC) and minimum calculated capital is referred to as minimal regulatory capital (MRC) and authorized control level (ACL). The GCC will allow non-insurance / non-financial entities owned by RBC filers in the group to remain within the available capital and calculated regulatory capital of the parent, so no eliminations are required for these entities. As shown, since AA Holding Company owns each of the other business entities in the organizational chart, $38 million (which is the amount of available capital/financial resources in the subsidiaries of AA) is eliminated from the TAC column since accounting methods include those as an asset on AA Insurance Company’s balance sheet. Also, the GCC includes capital calculations for AA Holding Company and DD Insurance Agency as part of the MRC in addition to the regulatory capital already included for the insurance subsidiaries. The MRC of the subsidiaries is eliminated from the parent’s (AA Holding Company) calculated capital. Therefore, in this example $4.81 million of calculated capital is eliminated from the MRC. Finally, the MRC of U.S. insurance subsidiary is multiplied by 2 in order to reflect Company Action Level (CAL) RBC as required in the GCC.

1. Terminology used in RBC for available capital/financial resources
2. Terminology used in RBC for calculated regulatory capital
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) – Analyst Reference Guide

Debt-It is important to note that the available capital used in deriving the GCC recognizes a portion of the group’s senior and hybrid debt as capital. This allowance recognizes that debt that is not already recognized as available capital/financial resources under all known accounting principles (SAP, U.S. GAAP or IFRS) may have some value to the group under the U.S. insurance regulatory requirements where debt proceeds are contributed such as dividend down to the insurance companies and where extraordinary dividends must be approved by the state. Qualifying debt along with limitations thereon are described in the GCC instructions as is the calculation for the additional available capital. In addition to looking at the group’s debt leverage, overall consideration should be given to how the allowance for additional capital from debt interacts with changes in available capital and capital requirements from year to year. The impact of procyclical changes in the allowance for debt as capital should be assessed.

Other Information Included in the GCC
The GCC includes selected financial information (net income, premiums, liabilities, debt, etc.) that are captured in Schedule 1 and in the “Analytics” tabs of the GCC, which is meant to be used to help isolate potential strengths and weaknesses of the group and more specifically where such exist among the entities in the group. Some important information related to other features in the GCC also should be considered and are discussed below. Schedule 1, a simplified version of the Inventory Tab, and most analytics are required in the case of a “limited filing”. However, data is not required for the capital instruments, sensitivity analysis and other information tabs in a limited filing.

Grouping - The GCC separately allows certain financial entities (e.g., asset managers) and non-financial entities included in the GCC to have their values and capital calculation combined (grouped) for more efficient reporting and analysis. Although the GCC instructions set parameters for such grouping, the general expectation is that regulators will work with each applicable GCC filer in determining where grouping is and is not appropriate outside of what is allowed within the GCC Instructions. Grouping should be viewed in the context of materiality. A single entity conducting a given activity may not be material, but when all entities conducting the same activity are combined, they may be material.

Excluded entities – The GCC provides two mechanisms for the exclusion of non-financial entities in Schedule 1 and in the Inventory Tab at the discretion of the lead state. State regulators should consider whether any of the information collected in the GCC template in support of, should be collected for an entity or group of similar entities that would otherwise be excluded from the GCC ratio calculation. Regulators should separately monitor increases in the level of activity of an “excluded” entity or group of similar entities for purposes of materiality and potential subsequent inclusion in the GCC.

Sensitivity analysis – A tab devoted to sensitivity analysis is included in the GCC. These informational items provide the regulator with impact of discretion in excluding listed entities and alternative perspectives on risk charges for non-financial entities and foreign insurers. Monitoring of these items can help the regulator identify areas where the GCC may be improved, or capital calculations adjusted in the future. One item included in the sensitivity analysis is a “sensitivity test” that increases the overall calibration of the calculated capital in the GCC from its normal 200% x ACL RBC calibration to 300% x ACL RBC.

Accounting Adjustments - The impact of accounting adjustments and related detailed information is collected in the GCC template in the Inventory Tab and in the Other Information Tab respectively. Such adjustments can be material during the de-stacking process. For example, a consolidated holding company may include GAAP values for entities that would otherwise be valued under regulatory accounting rules (e.g., Statutory Accounting Principles - SAP) on a stand-alone basis. When the regulated entity is de-stacked the difference between the GAAP
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) – Analyst Reference Guide

values and SAP values will be removed from the group’s available capital. These “lost” values can result in a material reduction in the inventoried available capital compared to consolidated available capital. Understanding the impact and the components of this adjustment can help the regulator when considering the impact of issuing new debt or when evaluating the allowance for debt as capital calculated in the GCC template.

Intangible Assets – Acquisitions, mergers and reorganization often can create significant intangible assets at a holding company level or possibly at an operating company (other than a regulated entity) level. The GCC template collects information on intangible assets held by inventoried entities in the Other Information Tab. The available capital associated with the value of entities whose assets are materially comprised of intangible assets should be evaluated in the context of fungible resources and in assessing the adequacy of the capital calculation assessed on such entities.

Dividend pass-through (gross view of dividends) – Schedule 1D collects information on dividends paid and received within the group. It also includes a column that indicates whether dividends were declared but not yet paid, as well as cases where dividends received were retained or “passed through” to another affiliate or paid out in dividends to shareholders. This information will assist the regulator in evaluating the movement of capital within the group to fund strategic insurance and non-insurance operations or activities (e.g., expansion of activities) or to fund entity specific capital shortfalls. It also provides a window to capital leaving the group (e.g., debt repayment, stock repurchase, or dividends to shareholders).

Considerations When Exempting Groups

As stated elsewhere within this guidance, the GCC and its related provisions in the NAICs Model Holding Company Act and corresponding regulation are not designed or otherwise intended for regulators to take regulatory action based on the reported level of a group’s GCC. Rather, the GCC is intended to be a tool to better understand the risks of the group, mostly through the trending of the financial information in the “Input 4-Analytics” tab. However, specific to the provisions of the NAICs Model Holding Company Act and corresponding regulation, the Group Capital Calculation (E) Working Group did believe that the GCC might be more helpful for some groups and not as much for others when it developed criteria within the Act and the regulation for exemptions. On this point, the Working Group believed that in general the GCC would be more helpful for those groups that had 1) non-U.S. insurers within the group; 2) a bank within the group, or 3) a more material degree of non-insurers. Specific to the point regarding non-U.S. insurers or banks, the GCC is based upon the premise that the most relevant measure of capital is the actual legal entity requirements of capital from the applicable regulator. On this point, the required capital, as well as the trending of information on these particular legal entities might be the most valuable, particularly if the relative operations and assets of these entities compared to the U.S. RBC filers is material. Similarly, while the calculated capital on the non-insurance entities may not be as relevant as either required capital on regulated insurers or banks, if the relative operations and assets of non-insurers relative to those of US RBC filers are material, the GCC may provide greater value to such types of groups.

To these points, the NAICs Model Holding Company Act and corresponding regulation contain possible exemptions for groups that have less than $1 billion in premium and that do not possess any of the three characteristics just described. These possible exemptions exist after the GCC has been filed once, because the general consideration in developing the requirement in the model that the GCC must first be filed once for all groups, was that without seeing the completed GCC at least once for a group, it may be difficult for the lead-state to determine if the GCC has no value or is at least cost beneficial to require filing. However, it should also be understood that these three criteria of non-U.S. insurer, bank, or non-material non-insurers are not the only situations where the GCC would be valuable to the lead-state. As a reminder, all states are required to assess the sufficiency of capital within the holding company structure, and that prior to the GCC, this was done by states using various methods (e.g., debt to equity ratios, interest coverage ratios, existing RBC ratios and relative size of insurance). The GCC is expected to enhance a state’s ability to make this assessment more easily, even if it is only
used as a general gauge as its intended. Therefore, in deciding if a group should be exempted, the lead-state will need to consider a number of factors, including how easily it can make this assessment without the GCC, again, only as a general gauge. For small groups where the U.S. RBC operations and assets are much larger than the non-insurance operations, it is likely the GCC would provide a smaller degree of value and exempting such groups from the GCC may be appropriate. However, the analyst should also consider the fact that the simpler the holding company structure, the more easily the GCC can be completed. Specifically, given all of the data included in the GCC is existing data and therefore readily available to the company, a smaller and simpler structured group should be able to accumulate into the GCC template in a short period of time. Also worth considering is that if such operations are contained within a number of different U.S. insurers where it is difficult to determine the degree of double counting of capital, the GCC may provide more value. To be clear, these are not the only situations where the GCC might be helpful even with a relatively small group. This is because the value may come from figures the GCC requires that the state may have otherwise not been aware of. Specifically, the GCC may identify non-RBC filers who may be experiencing some level of financial difficulties. This possible identification of information the lead-state was not otherwise aware of is the primary reason the Working Group suggested the GCC be filed once before deciding on whether a group should be exempted. While the NAIC Accreditation program may not require a state to have such authority to have the GCC filed once before exempting, this background information provided herein is intended to encourage the state to consider such possibilities before deciding on exempting a group, particularly since it may be difficult to stop an exemption in a given year once it’s provided. In summary, as with everything else described in this documentation, the GCC requires judgement on behalf of the analyst and the lead-state which is based upon multiple factors including the lead-state’s existing knowledge of the group. This fact is no different. The same applies when considering whether a group should be exempt.
The Group Capital Calculation (E) Working Group of the Financial Condition (E) Committee conducted an e-vote that concluded Sept. 13, 2021. The following Working Group members participated: John Rehagen, Chair (MO); Kathy Belfi, Vice Chair (CT); Susan Bernard (CA); Philip Barlow (DC); Ray Spudeck (FL); Carrie Mears (IA); Kevin Fry (IL); Roy Eft (IN); Judy Weaver (MI); Kathleen Orth (MN); Jackie Obusek (NC); Justin Schrader (NE); David Wolf (NJ); Bob Kasinow (NY); Dale Bruggeman (OH); Greg Lathrop (OR); Melissa Greiner (PA); Jamie Walker (TX); and Amy Malm (WI).

As a result of receiving comments (Attachment Two-B1) on proposed changes to the *Financial Analysis Handbook* to address the group capital calculation (GCC), NAIC staff were directed to make modifications to the proposed guidance to address those comments provided they were consistent with the original intent of the guidance. After providing the Working Group members with revised guidance as directed, a majority of the members voted in favor of re-exposing the guidance for a 45-day public comment period ending Oct. 29.

Having no further business, the Group Capital Calculation (E) Working Group adjourned

*Attachment Two-B1-9-13-21 E-Vote Minutes.docx*
Review of the Group Capital Calculation

Consideration of the Insurance Holding Company System Structure

As the lead state begins to review the annual Group Capital Calculation filing for a particular group, it’s important for the lead state to do so with consideration of the existing knowledge of the organizational structure of the group, including changes in the structure from year to year, but more importantly the overall activities of each of the entities in the group which otherwise have the potential to transmit material risk to the insurers within the group. While the GCC will provide additional quantitative information on the entities in the group; the actual activities of the entities are also important in determining the scope of application of the GCC. Specific to that point, the lead state is responsible for determining if any of the entities in the holding company structure should be excluded from the calculation. The filing includes a column for the group to propose what should be excluded as well as an additional column for the final determination made by the lead state. In general, the determination of scope of the application is suggested by the group but made in consultation and agreement with the lead state. This exercise should be undertaken in a manner that yields a clearly documented rationale for excluding entities or subgroups of the larger group. The Group Capital Calculation Instructions describes the basis for making this determination and the calculation itself is structured to facilitate this determination, with the inclusion in Schedule 1 of the calculation financial data of all entities within the holding company. Similar to exclusion from the calculation itself is data for cases in which subgroups of the larger group are completely excluded from the group, particularly with regard to Schedule 1: the rationale for the exclusion(s) should be provided in the GPS. The concept is that this Schedule 1 data should be utilized by the lead state in conjunction with their existing knowledge of the group and its activities (obtained from the Schedule Y, ORSA, Forms B/C, Form F, the non-insurance grid, etc.), and therefore likely material risks, to make this determination. To the extent the entities included in Schedule 1 differ from the analyst’s knowledge of the Group, further discussion and follow-up should be done with the group.

In the initial year(s) of a GCC filing, to help the analyst get comfortable with the Inventory and Schedule 1 process, consider the following:

- Gather appropriate background information for your group(s) (e.g. Group Profile Summary, ORSA, RBC Reports, Schedule Y)
- Determine that all Schedule Y entities are listed in schedule 1 or in the Schedule BA list in the other information tab or that an entity’s omission is understood/explained
- Evaluate requests for exclusion of non-insurance/non-financial entities w/o material risk to determine if you agree with exclusion.
- Confirm that all insurers and financial entities are de-stacked in the inventory tab.
- Determine if grouping has been properly applied.
- Evaluate level of risk assigned by filler to financial entities w/o regulatory capital requirements.
- Test check that the numbers reported in Schedule 1 and Inventory Tab look reasonable, especially for the insurers. A simple check should be sufficient.
- Review the impact of the stress scenario (Stress Inputs and Stress Summary Tabs) and narrative (if provided in Other Information Tab)

The holding company structure and activities should also be utilized by the lead state in determining how to understand the GCC ratio. More specifically, information on structure can impact the flow of capital and resources among entities within the holding company structure. Therefore, understanding the following can assist in evaluating the flow of resources:

- Domestic insurance operations
- International insurance operations
• Banking or other financial services operations subject to regulatory capital requirements
• Financial and non-financial operations not subject to regulatory capital requirements*

*The GCC instructions provide examples of financial versus non-financial entities in this category. All financial entities should be included in the scope of application of the GCC. However, there can be a broad array of entities that could be considered financial. The lead-state should document the rationale for cases in which it concludes that a “financial” entity should be excluded.

The GCC is intended to be used as an input into the GPS. The expectation is that the GCC summary section is used to document a high-level summary of the analyst’s take away of the GCC, as well as the Strategic branded risk, since that is the area where capital measurement is reported. The manner in which the analyst determines what else should be documented beyond the GCC Summary and the Strategic branded risk should be based upon the following steps, since these steps contemplate the previously mentioned concept that the existing evaluation of the financial condition should be used in evaluating the depth of review of the GCC. From a high level, the following summarized the different steps that can be taken:

• Procedure Step 1 suggests that a review of the components of the GCC (identified in Procedures 2-5) is appropriate when either the GCC ratio is below a predefined suggested threshold of 150% (equivalent to an RBC of 300%) since that is the same threshold used in the sensitivity analysis in the GCC Template, or the GCC ratio is trending materially downward.

• When Procedure Step 1 identifies the need to look further, Procedure Step 2 suggests from a high level determining the driver of any decreases in the total available capital in the GCC. While there are numerous benefits of the GCC over consolidated approaches, the ability to drill down on the drivers is one of the more significant and is consistent with the states approach to not just looking at capital, but to the drivers of capital issues.

• When Procedure Step 1 identifies the need to look further, Procedure Step 3 suggests from a high level determining the driver of any increases in operating leverage, which is typically what drives insurance capital requirements up, be it asset risk/leverage or writings leverage. Similar to drivers of capital decreases, the GCC has detailed information on financial figures and ratios that can be used to isolate the issues.

• When Procedure Steps 2 and 3 identify the need to understand better, Procedure Step 4 is similar in that it too utilizes detailed information on capital allocation patterns that are necessary to understand if there are negative trends in the GCC since these can become important if there are any issues that might require further distribution of capital across the entities.

• When Procedure Steps 2, 3 and 4 identify the need to understand better, Procedure Steps 5: Depending upon the analysis performed in previous Steps, similar to legal entity analysis, there is likely a need to determine what steps the company is taking or plans to take to address the issues seen in the analysis of the GCC. The guidance provided in these procedures is not intended to be exhaustive, but rather should give the analyst a starting point in better evaluating the various issues.

If the analyst determines after completing any of the above procedures (steps), that no further work is deemed necessary to fully document the material risks of the group observable from the GCC (as well as the required information to be included in all GPS from the GCC), this should be documented by the analyst in any workpapers deemed appropriate by the state and include the general reason therefore. In making this determination, it should be reiterated these procedures are not intended to be used in a checklist manner and judgement based upon existing information on the group obtained from the Form F, ORSA, or any other source is certainly part of that judgement decision.
Procedure Step 1-Evaluate the Adequacy of Group Capital

1. Determine if the group capital position presents a risk to the group and its insurance subsidiaries based upon its recent trends and/or current measures in the GCC ratio.

<td>d. If the GCC &lt;150%, has there been a change from prior year? If so, determine the cause(s) of the change. If the GCC was &lt;150% in the prior years also, consider more carefully the causes.</td>
<td>ST</td>
</tr>
<tr>
<td>e. Has there been a negative trend in the GCC ratio over the past five years suggesting an overall pattern of declining capital?</td>
<td>ST</td>
</tr>
</tbody>
</table>

If the answer to any of the above questions is "yes", the analyst should proceed with procedure step 2, evaluating decreases in total available capital and/or procedure step 2, evaluating increases in leverage to determine the cause(s) of the negative trends.
Procedures Step 2—Understand Decreases in Total Available Capital
2. Determine the source(s) of decreases in the GCC ratio or the GCC Total Available Capital

Unlike step 1, the intent of the step 2 (and 3) is to determine the actual source of the negative issues. However, unless obvious from the information obtained in step 2, the analyst should proceed to step 5 using understanding of items in Procedure Step 4, to understand more fully the actions being taken by the group to address the issues identified in step 2. However, in some cases, it’s possible that no further follow-up with the group will be necessary and that the lead state should simply update the GPS to be certain the main understanding of the issues are known to all of the regulators utilizing the GPS.

</tr>
</tbody>
</table>

### Procedure Step 3 - Understand Increases in Operating Leverage

3. Determine the source(s) of any decreases in the GCC ratio due to increases in leverage

Like step 2, the intent of the step 3 is to determine the actual source of the negative issues. The difference between step 3 and step 2 is simply the types of issues. Step 2 is focused on issues that have resulted in negative capital trends. Step 3; however, is focused on the issues that impact the risk being measured in the GCC. In most cases that risk is either from the asset side or from the liability side where in both cases there has been an increase in such risk that has not been offset by a corresponding or equal increase in capital. In general, this is referred to as operating leverage, where this risk can manifest itself either through increased writings or exposure (e.g., the ratio of premiums to capital or liabilities to capital), or through increased assets that also carry risk. The expectation is that other regulated entities also have capital requirements that increase as the different types of risks increase, similar to how the NAIC RBC considers different types of products and assets that carry more risk.
a. Review the GCC ratio from each of the reported entities and compare it to the same ratio from the prior year. Determine which entities may have led to the negative trends based upon corresponding increases in leverage.

<table>
<thead>
<tr>
<th>Branded Risk</th>
<th>Benchmark</th>
</tr>

<thead>
<tr>
<th>Branded Risk</th>
<th>Benchmark</th>
</tr>
</thead>
<tbody>
<tr>
<td>MK, CR, RV, ST, OP, RP</td>
<td>&lt;10%</td>
</tr>
</tbody>
</table>

c. For each of the reported entities showing a meaningful decrease in the GCC due to an increase in operating leverage, request information that identifies the issues by inquiring first from the legal entity regulator or the group itself (e.g., non-insurance company), if applicable.

<table>
<thead>
<tr>
<th>Branded Risk</th>
<th>Benchmark</th>
</tr>
</thead>
<tbody>
<tr>
<td>MK, CR, RV, ST, OP, RP</td>
<td>N/A</td>
</tr>
</tbody>
</table>

d. If operating leverage has increased, consider if growth may have resulted from underpriced products or a change in underwriting. Specifically inquire to determine if pricing was reduced to increase sales, or whether the growth is in new product lines or new geographic focus where the group may not have expertise. When considering pricing being modified, include those products that the price is adjusted through crediting rates.

<table>

<th>Benchmark</th>
</tr>
</thead>
<tbody>
<tr>
<td>CR, MK</td>
<td>N/A</td>
</tr>
</tbody>
</table>

Unless obvious from the information obtained in step 3, the analyst should proceed to step 5 using understanding of items in Procedure Step 4, to understand more fully the actions being taken by the group to address the issues identified in step 3. However, in some cases, it’s possible that no further follow up with the group will be necessary, and that the lead state should simply update the GPS to be certain the main understanding of the issues are known to all of the regulators utilizing the GPS.

**Procedure Step 4-Understand the Capital Allocation Patterns**

4. Determine the capital allocation patterns to determine if some entities may put pressure on other legal entities.

Steps 2 and 3 are critical in understanding the issues faced by the group and in identifying the source of negative trends; and while additional follow up with the group is expected, before proceeding to Step 5, the lead state should understand the historical capital allocation patterns or the likely future needed capital allocation patterns.
The GCC includes data on historical capital allocation patterns (e.g., contributed capital received/paid or dividends received/paid), which help to illustrate which entities need capital and which entities have capital that can be provided. While these patterns do not necessarily repeat themselves from one period to the next, there is often consistency in terms of entities that need capital or have excess capital, which may or may not be driven by losses, but rather a change in strategy (e.g., increased writings at one company over another). These trends can also assist in discussions with the group on where capital may come from as a result of a future unexpected material event. Where similar information is also disclosed in Form F, the detail in the GCC may confirm what is already known in this area and in some cases may provide greater detail.

<table>
<thead>
<tr>
<th>Procedure Step 5-Consider the Need for Company Discussions for Reductions in Risk</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>Branded Risk</td>
</tr>
<tr>
<td>ST</td>
</tr>
<tr>
<td>b. Using this data, as well as any recent information on net losses, or likely expected funding, determine if it’s possible any of the insurance companies will be required to fund future possible losses from other entities in the group and potentially become troubled themselves, regardless of the current capital in excess of RBC requirements.</td>
</tr>
<tr>
<td>OP, ST</td>
</tr>
</tbody>
</table>

Steps 5 is designed to assist a review of the insurance company’s plans for addressing any meaningful decreases in the GCC ratio or total available capital. The specific plans of the group may or may not fully address all the issues but ultimately what is most important is that such information and the regulators plan for evaluating and monitoring the situation is known to the other regulators. There is a multitude of possibilities and this guidance is not intended to address all of those, including the fact that in some cases some regulators may choose to put their legal entity into some type of supervision, conservation or some other form of receivership. Similar to other areas, where similar information is also disclosed in Form F, further information may already be known in this area.

</table>
Purpose of the Group Capital Calculation (GCC) in Holding Company Analysis

The following information is intended to provide background and context of the issues/considerations for analysts when utilizing the NAIC Group Capital Calculation (GCC) for an insurance holding company (hereafter referred to as “group”) completing the GCC where required. The GCC is a “tool” to quantitatively understand the group’s capital and the mathematically calculated risks within. The GCC framework is built on the RBC model; however, while the RBC has triggers with states’ laws to make formal actions as a capital requirement, the GCC is not designed as a regulatory tool in that manner.

Background Information

Beginning in 2008, the NAIC Solvency Modernization Initiative (SMI) began to consider whether there were any lessons learned from the financial crisis that would cause the solvency framework to be modified. The NAIC determined that changes should be made in the area of group supervision, starting with the new annual requirement for the Lead State of each group operating within the U.S. to complete a written holding company analysis. Since that time, other changes to state laws have been made to further enhance group supervision (e.g. Form F, ORSA, and Corporate Governance reporting). All of these new tools are inputs into the previously mentioned holding company analysis, which is now summarized into a consistent tool used by all states in what is known as the Group Profile Summary (GPS).

Benefits of the GCC & Methods for Achieving

The Group Capital Calculation Instructions describes the background, intent, and calculation for the GCC in detail. As stated in the Group Capital Calculation Instructions, the GCC and related reporting provides more transparency of an insurance group’s structure and related risks to insurance regulators and makes those risks more identifiable and more easily quantified. In this regard, this tool is intended to assist regulators in holistically understanding the financial condition of non-insurance entities, how capital is distributed across an entire group, and whether and to what degree insurance companies’ capital may be put at risk from the operations of non-insurance entities, potentially undermining the insurance company’s financial condition and/or placing upward pressure on premiums to the detriment of insurance policyholders. An analyst is not asked to understand any non-insurance industries represented within the group, but to understand through this calculation if a non-regulated entity could place pressure on or provide relief to a regulated entity.

The manner in which the GCC achieves some of these benefits varies. For example, with regard to understanding how capital is distributed across an entire group can be seen in two ways, both by viewing the Tab titled “Input 4-Analytics” as follows: 1) the display of the “Ratio of Actual to Required Capital”, 2) display of “Required Capital” in a separate column. The degree of subsidization can also be seen in the “Input 4-Analytics” tab, with the display of the columns as follows: 1) Capital Contributions Received/(Paid); 2) Net Income. While certainly one year of information can show this exists, most of this benefit will not be seen until after further years of the GCC are reported within the template. Once five years of data are displayed in this “Input 4-Analytics” tab, it will allow the analyst to better understand the financial condition of the group as a whole as well as the non-insurance entities. Of course, such conclusions can only be made once the analyst can both see such data as well as understand from the group what is occurring that is leading to such figures.

This calculation provides an additional early warning signal to regulators so they can begin working with a company to resolve any concerns in a manner that will ensure that policyholders will be protected. This early
VI.H. Group-Wide Supervision — Group Capital Calculation (Lead State)

warning signal can be seen with the trending of the financial information in the "Input 4-Analytics" tab as well as through the application of sensitivity analysis in the Input 5 Tab and inclusion of other relevant information in the Input 6 Tab. However, the analyst should also understand that other "qualitative tools" such as the Form F, are capable of also providing early warning signals if properly reported by the group. In addition, since most holding company systems may have a larger percentage of their operations in the insurance businesses, the insurance trends for the U.S. insurers in the group should already be known and made available to the lead-state by the legal entity regulator. However, in the context of added policyholder protection, this largely comes into play with respect to the added quantitative data on non-insurers.

The GCC is an additional reporting requirement but with important confidentiality protections built into the legal authority to require such reporting. State insurance regulators already have broad authority to take action when an insurer is financially distressed, and the GCC is designed to provide regulators with further insights to allow them to make informed decisions on both the need for action, and the type of action to take. While the new information from the GCC may offer new insights, its equally important to understand that it will be up to the analyst to work with the insurance group to actually understand what is leading to the figures reported in the GCC, and from that perspective, especially in the early years of the GCC, it will require learning by both the analyst and the group to really be able to utilize the GCC in a manner as suggested in these introductory paragraphs.

Other Considerations When Considering Such Benefits

Recent events and economic conditions [i.e., pandemic, recession, etc.] can create stresses on a group, reinforcing the value of the quantitative data included in the GCC. Some stresses are similar to those experienced during the financial crisis and others are more unique. However, because the GCC is based upon a methodology that gets its inputs from individual legal entities, the capital calculated for each legal entity certainly can only capture the allowed capital resources of the legal entities in the group. While such an aggregation-based methodology is an appropriate group-level capital measure, until experience is gained with the GCC, it is not known as to how the GCC will behave in response to business cycles and various risk events, given in part because it only recognizes limited diversification benefits among entities in the group except for the diversification embedded in existing entity specific regulatory capital requirements. And while the GCC is not meant to be used in a way that compares groups to each other, it’s also true that it is unknown how it will behave across groups, peers and even sectors. This is true both because of its limited diversification benefit, the differences between group types (mutual v. stock holding company), grouping of entities, and scope of entities included in the calculation. But also because application of jurisdictional accounting principles and use of scalars could have an impact on this as well via the foreign insurer profile of the group. The quantitative data collected in the GCC will evolve as state insurance regulators and insurance groups increase their understanding of the impact on available capital and calculated capital.

The following guidance on the GCC is intended to be utilized in a manner that allows the GCC to enhance group-wide financial analysis and to be used as an additional input into the GPS. The GCC provides the quantification of risk within the group and when combined with the information from the ORSA on the amount of capital needed to run the company’s current business model, puts the regulator in a much better position to understand the available capital and calculated capital within a group, as well as the financial condition of the group. Both are complimentary tools to each other, with the ORSA providing management’s internal approach to capital management, and beneficial in understanding the economics of the group, the GCC provides a standard model
that can better enable the analyst to understand where the entire group stands with respect to existing legal entity requirements as well as broad measures of risk for non-insurers.

**Utilization of the Group Capital Calculation in the Lead State’s Responsibilities**

The lead state is responsible for completing the holding company analysis and documenting a summary of that analysis in the GPS. The depth and frequency of the holding company analysis will depend on the characteristics (i.e., sophistication, complexity, financial strength) of the insurance holding company (group) system (or parts thereof), and the existing or potential issues and problems found during review of the insurance holding company filings.

The analysis of the GCC will be used in a similar fashion under this guidance since it provides the depth of the review in the “five-step process” that will vary by group and situations. For example, in some groups, very little if any work (inquiries of the group) will be done after the first step due to a generally strong GCC figure and generally positive trends of the ratio over time; while in other groups, the analyst may need to proceed through each of the five steps. Exactly how the analyst proceeds through the guidance will be dictated by a multitude of factors and requires judgement.

**GCC Construction That Also Impact its Utilization and Review**

Some decision points may be addressed prior to the submission of a GCC template. These include: the scope of application (e.g. whether segments of the holding company system should be excluded for financial conglomerates); whether a limited filing will be allowed (as permitted in Model Law #440 and Model Regulation #450); and whether subgroup reporting (as defined in the GCC instructions) of a foreign insurance group will be required. In general, the analytics provided by the GCC will be similar for all entities included in the template. See the end of this section (Primer on the Group Capital Calculation Formula) to better understand these points. These facts are also a consideration in determining the depth of the analysis of the GCC and subsequent correspondence with the group. Refer to chapter VI.B Roles and Responsibilities of Group-wide Supervisor/Lead State for details on responsibilities for completing the GPS.

The utilization of the GCC can be summarized as an additional input into the GPS. More specifically, once the analyst completes their review of the GCC, the overall ratio, the trend of the ratio, a summary should be incorporated into the GPS to help support the assessment of strategic risk.

**Documentation of Review of the GCC in the Group Profile Summary (GPS)**

The purpose of procedures is to document the GCC into the GPS. The following provides an example of a GCC Summary that represents the minimum expected input of the GCC into the GPS, with additional information also reported within the Strategic branded risk classification. The other purpose of this section is to determine if more follow-up should be performed and, if so, to assess the results of that additional review. The following is intended to assist in understanding summary documentation of the GCC to be included in the GPS.
Group Capital Calculation (GCC) Summary

Summarize your assessment of the GCC both quantitatively and qualitatively, including any such items as may not be applicable to a branded risk category. For example, it may be appropriate to indicate "The review of the group’s GCC indicated the scope of the application is consistent with the lead state’s determination" and if possible to summarize succinctly, the general scope of the GCC. For example, "the GCC includes all U.S. and Bermuda operations, but excludes ABC non-insurance operations in South American countries". It may also be appropriate to identify key drivers of risks for the group within the GCC that are discussed later in the branded risk categories, as those risks may be related to and supplement existing risk assessments derived from holding company analysis or they may be new risks that warrant further review. “The group’s GCC of 201% in the current year was impacted by a decline in Total Available Capital of $X which is related to group’s non-insurance operations in Bermuda and as well as the negative impact of market risks in the U.S. insurance legal entity ratio components, which based on further analysis has resulted from the recent financial market volatility”.

Branded Risk Assessment

Strategic: The group’s Group Capital Calculation is assessed as low and stable, and is a positive consideration in the overall assessment of strategic risk. The GCC has generally been reasonable and consistent over the past five years as illustrated in the following table. Additionally, refer to the GCC Summary for further details.

GCC Summary and Strategic Branded Risk Documentation:

The above information documented in a summary section of the GPS and into the Strategic branded risk is expected to be the primary type of information that is always documented into the GPS since the GCC does provide a capital measurement of the group and, consistent with the branded risk categories, should be reported in the strategic risk section. Similar to how RBC for individual insurance company is helpful in allowing the analyst to better evaluate other potential issues given capital represents a relative measure of cushion for adverse risks, the GCC and inclusion herein helps regulators to understand the same relative to a group. While the GCC is not a capital requirement, with specified ladders of intervention, each of the insurance legal entity figures are relative to individual company requirements, and therefore the GCC can provide a relative measure of risks against such minimum capital levels of the insurers.

Other Branded Risk Documentation:

To the extent the ratio was trending negatively, or available capital was decreasing, the analyst may choose to include more information in the strategic section of the GPS that summarizes any key drivers of such if they did not fall into one of the branded risk categories. Those drivers of the change would likely be documented in other specific branded risk categories, for example Pricing/Underwriting if driven by group-wide weak insurance underwriting, or Reserving if the group-wide drivers were reserve deficiencies, etc. References to other branded risk categories may also be appropriate. However, practically speaking, this may not always occur or be possible for the analyst to pinpoint given the multitude of risks within any insurers regulatory capital requirement formulas. This guidance is simply meant to suggest that if the GCC does in fact appear to show particular trends...
that are noteworthy on specific risks such as the underwriting branded risk, further documentation into that (applicable) branded risk may be appropriate.

A determination for when documentation of risks from the GCC into other branded risk categories may be appropriate is driven by both the question of whether any of the thresholds in Procedures 1a-1e were met, and the information obtained from the rest of the GCC information as described in Procedures 2-4. The GCC Summary is intended to be high-level, therefore other more detailed observations from reviewing the GCC should generally not be documented into the GPS unless they are specifically insightful, add to a high-level understanding of the group’s financial condition, as shown in the example above, or are specific to a branded risk category as stated.

Other Considerations:
In addition to the broad guidance provided herein on the documentation of the GCC into the GPS, the analyst should also understand the following more general points that could impact the GCC result for a particular group: 

- If the group has a significant amount of business in legal entities that are domiciled in jurisdictions whose capital regime is based on market-based valuations, the GCC will inherently be more volatile (as compared to a pure U.S.-based group for which RBC and statutory valuations are the norm).
- Similarly, a group may have legal entities that are solely based in jurisdictions that utilize a standard model for capital requirements or have entities in jurisdictions where the use of internal models has been approved. All else being equal, the manner in which capital measures quantity requirements and behave over time will differ to some extent between the two. Also, a change from a standard method to one based on internal models for a key subsidiary will likely produce a noticeable change in the GCC that is not reflective of changes in the entity’s underlying business.
- The GCC provides a means for analysts to identify non-insurance operations outside of the insurance group and to determine the extent of risk they may pose to the insurers within the group. However, in doing so, analysts should understand that findings from review of Forms B, D and F might be equally valuable in these situations.
- When understanding capital requirements for non-insurer financial entities that are not subject to regulatory capital requirements, consideration should be given to the appropriateness of the GCC’s capital charge for a specific entity’s financial operations (e.g., an entity conducting large volume or size of complex transactions but with little net revenue or equity).
- When evaluating capital requirements for non-insurer / non-financial entities, consideration should be given to the appropriateness of the level of risk assigned to specific entities.

Detailed Observation Documentation:
More detailed observations shall be documented separately from the GPS and in a form not dictated by this handbook. As in all holding company analysis, the level of documentation is determined by the state insurance department and is dependent on the characteristics and complexity of the group and its risks. These detailed observations generally need to only note observations that are indicative of drivers of trends and/or actions being taken by the group to mitigate risks. In some cases, these points can be easily summarized into the GPS, in other cases they are too detailed and should be documented instead within the separate document not dictated in form by this handbook. The analysts are not expected, nor should they spend time documenting

© 2021 National Association of Insurance Commissioners
subtle changes within either the GCC or individual company movements that either do not create a trend at the group level or identify a growing weakness in the group. However, judgment is required to make this determination. For example, a 10% decrease in an RBC ratio of one of the smaller insurers within the group generally would not be documented, although a 10% decrease in an RBC ratio in one of the larger insurers in the group that causes, or jointly with other insurers, causes a 10% decrease in the GCC should be noted. However, it should be understood also that this 10% threshold is not intended to be used as a “bright-line”, and in fact it’s possible the 10% is not necessarily indicative of any negative trends at all. This could be the case when, for example, there was a change in the regulatory capital requirement. Therefore, again, judgement is required in making these determinations and this, as well as other thresholds used in this guidance, are not meant to be bright-lines. As the GCC is used more, both by the individual analyst, as well as all of the states, using judgement around these thresholds are expected to become easier.

**Specific Procedures for Completing Review and Understanding of the GCC**

It should be understood that if the analyst determines after completing any of the above procedures (steps), that no further work is deemed necessary to fully document the material risks of the group observable from the GCC (as well as the required information to be included in all GPS from the GCC), this should be documented by the analyst in any workpapers deemed appropriate by the state and the general reasons therefore. In making this determination, it should be reiterated these procedures are not intended to be used in a checklist manner and judgement based upon existing information on the group obtained from the Form F, ORSA, or any other source is certainly part of that judgement decision.

**Procedures Step 1a-1e**

The purpose of procedures 1a-1e is to assess the GCC level, and to identify the drivers of any changes in the GCC, in order to summarize and to document that overall assessment in the GPS and its strategic risk category, which is the minimum expected input of the GCC into the GPS. However, the analyst should understand that in the early years of the GCC, limited amount of prior year(s) comparative data will be available, therefore requiring more judgement in determining if or where further analysis is warranted. Such judgement may need to be based upon various factors, including but not limited to other known information regarding the applicable group obtained from other sources (e.g. ORSA, Form F, Form B, etc).

Procedure 1 is also intended to help the analyst determine if more follow-up review work should be performed. However, if the answer to any of the questions in 1a-1e is “yes”, the analyst should proceed with step 2, understanding decreases in total available capital and/or step 3, understanding increases in leverage to determine the cause(s) of the negative trends. In the example provided above, the ratio is above 150%, which suggests further review may not be necessary. In addition, the trends are positive with no decreases in the base ratio and the only year below the 150% benchmark being in PY1 where presumably the analyst may have performed some level of inquiry to the holding company to understand the driver of the drop. Even then, the drop was below the Handbook’s predefined threshold of 10% and may not have been necessary.

**Procedures step 2a-2m**

Unlike step 1, the intent of the step 2 (and 3) is to determine the actual source of the negative issues and where to document them in the GPS. Procedure 2a is specifically focused on identifying the category of legal entities (and subsequently the individual legal entities) that might be driving the issues by looking at the ratio of actual-to-required capital for the legal entity insurers over the available years reported. The following sample of a table from the GCC calculation completed by the group from the data in Schedule 1 can be helpful in determining the source of the issues.
Procedure 2b recognizes that the GCC does allow some debt to be included in capital up to a predetermined limit and can drive the overall GCC ratio. The following sample table taken from the GCC calculation using the data in Schedule 1 can be helpful in making this determination. Cases where debt is issued to address risk driven reductions in the GCC ratio, may not offset those reductions. This data metric may not be available in the case of a "limited filing".

Procedure 2c recognizes that profitability is generally one of the biggest drivers of changes in capital and utilizing the following table from the GCC can assist in identifying if there are entities reporting net losses that may be driving the decreases in capital. The following table taken from the GCC using the data in Schedule 1 can be helpful in determining the source of the issues.

If the source of the issues is the insurers, the following sample from a table from the GCC using the data in Schedule 1 can be helpful in determining the source of the issues among the insurers.

Procedure 2d is focused on requesting more specific information from the legal entity regulator or the group to better identify the source of the issue(s). Procedures 2e-2i simply contemplates that if the source of the issues can be identified into one of the branded risk categories, to document as such in the detailed workpapers and into that the appropriate category of the GPS. However, it’s recognized that the source of issues may be in
multiple branded risk categories, in which case, documentation of each of the sources into the detailed workpapers is still appropriate. However, documentation into one of the single branded risk classifications of the GPS is only appropriate if that risk category is a material driver of the negative trends. Procedure 2m is intended to identify if the source of the issues is related to non-insurance operations. The GCC is intended to provide for more consistent analysis of risks to the insurer that may originate from non-insurance entities within the holding company system.

Procedures Step 3a-3f

Procedure 3a is specifically focused on identifying the category of legal entities (and subsequently the individual legal entities) that might be driving the issues by looking at the leverage ratios. The following sample of a table from the GCC calculation using the data in Schedule 1 can be helpful in determining the source of the issues.

Procedure 3b is more forward looking by suggesting the analyst look at the same leverage ratios used in 3a to determine if the trends might continue and lead to further decreases in the GCC ratio. Procedure 3c simply requests the analyst use the leverage information to target questions to the group to better identify the drivers. Procedure 3d-3f are all questions designed to help the analyst consider whether the changes in leverage will lead to greater underwriting risk, reserving risk, or market and credit risk. Procedures 3d-3f provide general inquiries for additional information for the analyst, however, these inquiries may also appropriately provide a basis for the analyst to enter conversations with the group on the same topics to understand how the group views these topics and how the group is managing and monitoring these risks. For groups filing an ORSA, see also documentation within the ORSA report for additional information on the identified risks and the group’s monitoring of risks, as well as consistency of the discussion with management and managements observations in the ORSA Summary report.

 Procedures Step 4a-4b. Procedure 4a is intended to help the lead state understand the historical capital allocation patterns or the likely future needed capital allocation patterns by simply documenting in the detail analysis workpapers. This includes, for example, noting that there is consistency in the entities generating net income and distributing it further through the group, and in some cases may require distribution through other insurers, which in the US often requires approval if considered extraordinary. Procedure 4a is intended to utilize that knowledge, along with other planned actions of the group, to understand whether problems with repaying debt or other obligations in the group could occur. The intent is to be in a better position for discussions with the group on where capital may come, to support future expected activity or future unexpected material events. The following sample of tables from the GCC calculation using data in Schedule 1 can be helpful in determining the source of the issues.

Procedures Step 5a-5h. Procedures 5a-5h are designed for those rare situations where the group has a need to reduce risk given the alternative of raising capital may be unlikely (see appendix for further discussion on this topic). In performing this procedure, the analyst should understand that procedure Step 2 (Evaluating Decreases in Total Capital) and Procedure Step 3 (Evaluating Increases in Operating Leverage) have already been considered, and therefore concluded that either capital is decreasing or operating leverage is increasing. As such, after considering information that may already be available to the regulator on the business plan, Procedure 5b is largely focused on better understanding directly from the group the drivers of the apparent negative trends. The analyst should understand that some of these trends may have already been known, through for example the ORSA, and discussions by the lead state regarding such takeaways from such ORSA discussions. In fact, if already known, the key takeaways may already be documented in the GPS and therefore the remaining procedures in this section may be irrelevant and could be skipped if recently already considered and evaluated. In addition, to be sure, such trends from Procedure Step 2 and 3 may not suggest anything more needs to be done, in fact that is why the first procedure is focused on an existing business plan since its possible these trends may have been expected. In fact, Procedure 5a is based upon the belief that reducing risk by the group may have
already been incorporated into the group’s latest business plan, which may have already been obtained from the Annual Form F Filing.

Procedure 5b contemplates that the manner to address any negative trends may not have already been incorporated into the latest business plan and simply contemplates the analyst speaks with the group to understand how the group intends to address the issue. The existence of this procedure is not meant to suggest action must be taken by any regulator, rather to understand what the group is already doing to address the issue. To be sure, some of what the group is already doing may already be known by the lead state, either through the ORSA, the Form F, or a periodic meeting with the group that some states conduct annually with all groups. Rather, the procedure provides an opportunity for the analyst to make sure they understand the drivers and what if anything the group is doing to address. To be clear, increases in operating leverage are often planned, and often come with them expected future actions by the group, such as capital injections or future transactions that may reduce risk. Therefore, these discussions would allow these actions to be completely documented and understood. Meanwhile, decreases in capital sometimes are not expected, and may not result in immediate action, if any, but it’s possible that it may lead the group to take future actions, or contemplate future possible actions. Therefore, these discussions would allow these potential actions to be completely documented and understood.

Procedure 5c contemplates assessing if the group has the ability and resources to either reduce its risks or to raise additional capital. See the section below for further Considerations of the Group’s Capacity to Raise Capital. This procedure is not intended to suggest the analyst has the capacity to make this determination on their own, but rather to question the reasonableness of the possibility. Procedure 5d contemplates that the group may believe no action is necessary because it believes current capital is adequate to meet its business plan and is more likely to be the case when the company experienced a one-time reduction of capital as opposed to a growth in leverage that may continue. Procedure 5e is for the rare situation where the legal entity insurers have been strained enough or face impending pressure contemplated within NAIC Model 385—Model Regulation to Define Standards and Commissioner’s Authority for Companies Deemed to be in Hazardous Financial Condition that would suggest one or more of the insurers may be in a hazardous financial condition. Procedure 5f is designed to suggest the analyst bring the collective supervisors of the legal entity insurers together for a supervisory college to fully understand what is occurring and the group’s plans for addressing the issues it is facing. Procedure 5g is an extension of Procedure 5f as it contemplates the regulators discussing whether they believe the proposed actions from the group are adequate. This action could represent something either informally done before an insurer is in a regulatory action level, or formally once an insurer is in a regulatory action level. Procedure 5h is similar to the other actions contemplated within a supervisory college or, for example, to address a troubled insurance company under Accreditation requirements regarding communication with other states.

Additional Procedures – Business Plans

While there is a multitude of possibilities and this guidance is not intended to address all of those, the following provides some summary of related issues that may be helpful to the analyst (See also section 6 to consider the structure of the group and capital infusion issues).

<table>
<thead>
<tr>
<th>Group’s Business Plan:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Planning Process:</td>
</tr>
</tbody>
</table>

**VI. Group-wide Supervision – Group Capital Calculation (Lead State)**

**Financial Analysis Handbook**

2022 Annual / 2023 Quarterly
**VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)**

- Group system’s overall planning process (e.g., who is involved, how frequently it occurs, etc.) and how the overall initiatives are determined
- Understand the group’s estimate of the impact of the proposed actions on financial results
- Review the plan’s assumptions for reasonableness. Consider the likelihood of variations in the assumptions and the resulting impact on the future financial results
  - Consider subcategories of changes including:
    - Overall potential changes in investment strategy
    - Overall potential changes in underwriting strategy or existing concentrations
    - Overall impact on financing matters (e.g. debt, requirements, etc.)
    - Overall impact on derivatives to mitigate economic conditions
    - Overall changes in governance or risk management procedures
    - Increased ceded reinsurance transactions (common approach to reducing risk/increasing surplus):
      - Details regarding the revised strategy
      - Specifics on types of coverage such as assumption reinsurance, loss portfolio transfers
      - Transfer of risk considerations

**Variance to Projections:**

- Consider the group’s history of explanations regarding variances in projected financial results and the insurer’s actual results. If analysts determine the goals of the business plan are not attainable and/or projections are unreasonable, a revised business plan may be requested;
- Identify any internal or external problems not considered in the plan that may affect future financial results. Examples of such problems include the following: 1) the existence of competitors to limit future sales levels; 2) recent state legislation restricting the company’s product designs; or 3) the loss of key marketing personnel.

**Evaluating a Business Plan:**

Analysts should consider further detail when necessary in evaluating the proposed revised business plan but also monitor, on a periodic basis, the insurer’s progress in achieving the initiatives included in the group’s plan. The goal of any plan is the improvement of the underlying causes that led to the issues and an improvement in subsequent GCC base ratio results. Detail considerations for improving the plan may include the following (where considered inadequate):

- Trending comparative measures of targeted risk exposures including (where applicable):
  - Asset mix by detailed types
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

- Credit risk by detailed types
- Business writings/risks by detailed product

- Impacts on financing items:
  - Projected cash flow movements for ongoing principal and interest payments on debt
  - Impact on debt interest coverage ratio, other debt covenants, rating agency ratings
  - Discussion of impact on parental guarantees and/or capital maintenance agreements
  - Expected source and form of liquidity should guarantees be called upon

- Impact of reasonable possible stress scenarios
- How the legal entities capital will be maintained at required levels

Consultation with Other Regulators

- Consult with members of the supervisory college (if applicable) or other domestic states for input in evaluating the revised business plan

Considerations of Group’s Capacity to Raise Capital

The following is designed simply as a reminder of considerations the lead-state would contemplate when discussing the group system response to the issues identified in this section. More specifically, in most situations a group will first consider ways to reduce risk but in limited situations they may consider trying to raise additional capital. While this is typically not an option for a group that is currently not performing as it anticipated, in some situations alternative sources of capital can be raised if the holders of the new capital are given rights that are attractive to the holder. In addition, in some cases the group may have the ability to issue other forms of capital (e.g., debt), which can be used to inject into the insurance subsidiaries. While these facts are not unique to the utilization of the group capital calculation, they are worth a reminder along with relevant other related details.

New Equity Considerations

Public Holding Company

While no two groups are the same, issuing public stock may be limited for the reasons previously identified. In addition, regulators are reminded that a public holding company may be obligated to pay dividends in order to maintain expectations of their shareholders, making the reduction of risk a more viable action under the circumstances.

Private Holding Company

While no two groups are alike, a private company has some of the same characteristics as a public company in terms of owners’ expectations, but usually such expectations differ from a public company and it may be more
feasible for a private company given their access to specific individuals that may have a higher interest in higher capital rights.

**Mutual Insurance Company**
A mutual insurer is limited in terms of its access to capital because it cannot issue new stock, but can issue surplus notes.

**Mutual Holding Company**
Because mutual holding companies have characteristics of both public companies and mutual companies, there are implications of how such a structure affects its operations.

**Non-profit Health Company**
Insurers that are non-profits are generally charitable organizations and it is not uncommon that some types of insurers, particularly those that provide health insurance, to have some history as a non-profit. It may be helpful to understand these types of dynamics when considering a group structure.

**Fraternal Associations**
Regulators often find similarities between a fraternal benefit society and a mutual insurer because both can be limited in terms of their ability to raise additional funds, but can issue surplus notes. If allowed within state law and the charter, the fraternal could assess members or adjust member policy values.

**Reciprocal Exchanges**
Regulators often find similarities between reciprocal exchanges and fraternal benefit societies and mutual insurers because they can be limited in terms of their ability to raise additional funds. Although this is a general consideration for the regulator when evaluating the group system, there is generally much more that must be understood before coming to this conclusion because in some cases, the reciprocal may be able to assess policies that can serve a similar purpose as raising capital.

**New Debt Considerations**
Through discussions with the group, understand the potential impact of any new debt on the group system, including specifically the extent of future additional reliance on the insurance operations and whether those insurers have the capacity for such. Consider also an updated review on the following:
- Total debt service requirements.
- Revenue streams expected to be utilized to service the debt.
- Any new guarantees for the benefit of affiliates.
- Any new pledge assets for the benefit of affiliates.
- Any new contingent liabilities on behalf of its affiliates

**International Holding Company Considerations**

**International Holding Company Structure**
This section is applicable only to those international groups that are required to complete the GCC, which may be relatively small considering many international holding companies have a non-US groupwide supervisor and
are exempt from the GCC. Those foreign groups that are required to complete the GCC will generally file a “subgroup” GCC that included entities that are part of the group's U.S. operations. In those situations, the analysts should understand the structure to determine if it has any impact on this analysis. For example, a German-based holding company may have advisory boards established to communicate with U.S. regulators. Analysts should direct any regulatory concerns to the appropriate organization contact to ensure a prompt reply or resolution if the insurance regulator is not responding.

**Capital / Operational Commitment to U.S. Operations**

Some foreign holding companies may consider their U.S. enterprises non-core and consequently show weaker commitment to their ongoing business operations or financial support. In recent years, after sustaining continued losses from U.S. subsidiaries, several prominent foreign holding companies decided to cease their U.S. operations and liquidate their assets. Analysts should be aware of a holding company's stated commitment to ensure the continued stability of U.S. operations. This commitment may include a written or verbal parental guarantee.
Primer on the Group Capital Calculation Formula

The National Association of Insurance Commissioners (NAIC) began development of the Group Capital Calculation (GCC) in late 2015 following extensive deliberation on potential measurement models and methodologies. The GCC uses a bottom-up aggregation approach, accounting for all available capital/financial resources, and the required regulatory capital based on the measurement of assets and liabilities of the various corporate entities, including insurers, financial and non-financial businesses.

The GCC Aggregation Methodology
As illustrated in the sample tables above, the proposed GCC is an aggregation or grouping of the available financial resources and calculated required capital of all legal entities in an insurance group that potentially pose material risk to the insurers in the group. The GCC allows some discretion in determining what entities under common control but outside of the defined Insurance Group may be excluded from the scope of application in the GCC. When reviewing a group’s choice of entities to be excluded from application of the GCC, the following points should be considered:

- The regulatory evaluation should be based on the criteria for material risk (e.g. structural separation; no history of cross subsidies, or other criteria as defined in the GCC instructions);
- Group requests for reducing the scope of application of the base GCC should be based on supporting information and rationale provided by the Group;
- Information on excluded entities should be made available upon request by the analyst.

The GCC includes the following types of entities and sets forth the general approach of calculated capital toward each.

U.S. Insurers – The available capital of U.S. domiciled insurers is determined by statutory accounting principles (SAP) as defined by state law and the NAIC Accounting Practices and Procedures Manual, which defines assets, liabilities, and in-turn the available capital/financial resources, sometimes referred to as policyholder surplus. The calculated capital for these insurers is subject to state laws that require these insurers to maintain minimum capital based on the applicable NAIC Risk-Based Capital formula at 200% x Authorized Control Level (Trend Test level).

Non-U.S. insurers – Similar to the available capital and calculated required capital of U.S. insurers, the available and calculated capital of non-U.S. insurers is determined by reference to the home jurisdiction’s basis of accounting and capital requirements converted to U.S. dollars. While most non-U.S. jurisdictions do not possess the same level of industry-specific technical guidance, as included in the NAIC Accounting Practices and Procedures Manual, all jurisdictions have established accounting standards that insurers are required to follow to determine available capital/financial resources. In some cases, this represents local Generally Accepted Accounting Principles (GAAP), which may or may not be consistent with International Financial Reporting Standards (IFRS).

DRAFTING NOTE: While the GCC utilizes the available capital and home jurisdictions’ capital requirement, for jurisdictions where data is available, appropriate scalars are currently being explored to produce comparable measures for risk which can be aggregated into the group-wide measure. One such scaling methodology is included as part of sensitivity Analysis in the GCC template. That scalar methodology uses aggregated data from
the U.S. and other jurisdictions at first intervention level to recognize that (for example), state regulators often have much higher reserve requirements that are required to be carried as required capital in other jurisdictions. For jurisdictions where the data is not available, the full jurisdictional requirement at first intervention level we used.

**U.S. Insurers Not Subject to RBC** – Some types of U.S. insurers are not subject to an RBC formula (e.g., Financial Guaranty Insurers, Title Insurers). For these entities, the available capital/financial resources is determined by reference to state law and the NAIC Accounting Practices and Procedures Manual. However, since an RBC formula does not exist, calculated capital is determined by reference to the state minimum capital requirements set out in state law (or 300% of reserves for Title insurers). For U.S. captive insurers, available capital is determined based upon the states accounting requirements, but the calculated capital is required to be calculated using the applicable RBC formula even if RBC does not apply to that entity in their state of domicile.

**Banking or Other Financial Service Operations Subject to Regulatory Capital Requirements** – Non-insurers such as banks are subject to their own regulatory valuation methods (typically GAAP with tiering of available capital) and their own regulatory capital requirements (e.g., OCC, Federal Reserve, FDIC or other requirements for banks). These regulatory values are used for the GCC.

**Financial and non-financial operations not subject to regulatory capital requirements** – In general, financial entities (as defined in the GCC Instructions) are subject to a higher capital charge in the GCC than the non-financial entities. However, the GCC does require available capital/financial resources and calculated capital to be gathered for all such entities that pose a material risk to insurers. In both cases the GCC will utilize the valuation used by such legal entities (typically U.S. GAAP) and a calculated capital based upon a risk factor. There are two important exceptions:

- All entities within the defined insurance group (definition included in GCC Instructions) must be included
- All financial entities (definition included in GCC Instructions) must be included
- The level of risk (low / medium / high) and associated capital calculation assigned to a financial entity will be selected by the group and evaluated by the lead-State reviewer
- Non-financial entities that are subsidiaries of U.S. insurers, foreign insurers or banks where a capital charge for the non-financial entity is included in the regulated Parent’s capital formula will remain with the Parent and will not be inventoried. Regulators already have access to the financials of these entities if needed (if causing unrealized losses within the insurer).

**Eliminations**

The GCC uses an aggregation and elimination approach, where each of the above legal entities’ available capital/financial resources and calculated capital are combined, then eliminations are utilized to prevent any double counting of available capital/financial resources or calculated capital. The following example illustrates the use of eliminations for both available capital/financial resources and calculated capital. However, in practice the GCC only requires the foreign insurers and other financial entities owned by an insurance company to be “de-stacked” so if AA Holding Company was a U.S. insurer (e.g. AA Insurance Company) the capital required and calculated capital for DD Insurance Agency as a nonfinancial entity would remain in the values of AA Insurance Company and not be de-stacked.

In the above example, available capital/financial resources are referred to as available regulatory capital (ARC) and total authorized capital (TAC) and minimum calculated capital is referred to as minimal regulatory capital (MRC) and authorized control level (ACL2). The GCC will allow non-insurance / non-financial entities owned by RBC filers in the group to remain within the available capital and regulatory capital so no eliminations are required for these entities. As shown, since AA Holding Company owns each of the other business entities in the organizational chart, $38 million (which is the amount of available capital/financial resources in the subsidiaries of AA) is eliminated from the TAC column since accounting methods include those as an asset on AA Insurance Company’s balance sheet. Also, the GCC includes capital calculations for AA Holding Company and DD Insurance Agency as part of the MRC in addition to the regulatory capital already included for the insurance subsidiaries. The MRC of the subsidiaries is eliminated from the parent’s (AA-Holding Company) calculated capital. Therefore, in this example $4.81 million of calculated capital is eliminated from the MRC. Finally, the MRC of U.S. insurance subsidiaries is multiplied by 2 in order to reflect Company Action Level (CAL) RBC as required in the GCC.

---

1. Terminology used in RBC for available capital/financial resources
2. Terminology used in RBC for calculated regulatory capital
Debt - It is important to note that the available capital used in deriving the GCC recognizes a portion of the group's senior and hybrid debt as capital. This allowance recognizes that debt that is not already recognized as available capital/financial resources under all known accounting principles (SAP, U.S. GAAP or IFRS) may have some value to the group under the U.S. insurance regulatory requirements where such is dividend down to the insurance companies and where extraordinary dividends must be approved by the state. Qualifying debt along with limitations thereon is described in the GCC instructions as is the calculation for the additional available capital. In addition to looking at the group's debt leverage overall consideration should be given to how the allowance for additional capital from debt interacts with changes in available capital and capital requirements from year to year. The impact of pro-cyclical changes in the allowance for debt as capital should be assessed.

Other Information Included in the GCC
The GCC includes selected financial information (net income, premiums, liabilities, debt, etc.) that are captured in Schedule 1 and in the “Analytics” tabs of the GCC that are meant to be used to help isolate potential strengths and weaknesses of the group and more specifically where such exist among the entities in the group. Some important information related to other features in the GCC also should be considered and are discussed below. Schedule 1, a simplified version of the Inventory Tab, and most analytics are required in the case of a “limited filing”. However, data is not required for the capital instruments, sensitivity analysis and other information tabs in a limited filing.

Grouping - The GCC separately allows certain financial entities (e.g. asset managers) and non-financial entities included in the GCC to have their values and capital calculation combined (grouped) for more efficient reporting and analysis. Although the GCC instructions set parameters for such grouping, the general expectation is that regulators will work with each applicable GCC filer in determining where grouping is and is not appropriate outside of what is allowed within the GCC instructions. Grouping should be viewed in context of materiality. A single entity conducting a given activity may not be material, but when all entities conducting the same activity are combined, they can be material.

Excluded entities - The GCC provides two mechanisms for the exclusion of non-financial entities in Schedule 1 and in the Inventory Tab at the discretion of the lead state. State regulators should consider whether any of the information collected in the GCC template in support of, is collected for an entity or group of similar entities that would otherwise be excluded from the GCC ratio calculation. Regulators should separately monitor increases in the level of activity of an “excluded” entity or group of similar entities for purposes of materiality and potential subsequent inclusion in the GCC.

Sensitivity analysis - A tab devoted to individual sensitivity analysis is included in the GCC. These informational items provide the regulator with impact of discretion in excluding listed entities and alternative perspectives on risk charges for non-financial entities and foreign insurers. Monitoring of these items can help the regulator identify areas where the GCC may be improved or capital calculations adjusted in the future. A sensitivity analysis increases the overall calibration of the capital requirements in the GCC from its normal 200% x ACL RBC calibration to 300% x ACL. This should be used as an initial benchmark to conduct further analytical review. No other cushion should be applied.

Accounting Adjustments - The impact of accounting adjustments and related detailed information is collected in the GCC template in the Inventory Tab and in the Other Information Tab respectively. Such adjustments can be material during the de-stacking process. For example, a consolidated holding company may include GAAP values for entities that would otherwise be valued under regulatory accounting rules (e.g., Statutory Accounting Principles - SAP) on a stand-alone basis. When the regulated entity is de-stacked the difference between the GAAP values and SAP values will be removed from the group’s available capital. These “lost” values can result in a
material reduction in the inventoried available capital compared to consolidated available capital. Understanding the impact and the components of this adjustment can help the regulator when considering the impact of issuing new debt or when evaluating the allowance for debt as capital calculated in the GCC template.

**Intangible Assets** — Acquisitions, mergers and reorganization often can create significant intangible assets at a holding company level or possibly at an operating company (other than a regulated entity) level. The GCC template collects information on intangible assets held by inventoried entities in the Other Information Tab. The available capital associated with the value of entities whose assets are materially comprised of intangible assets should be evaluated in the context of fungible resources and in assessing the adequacy of the capital calculation assessed on such entities.

**Dividend pass-thru (gross view of dividends)** — Schedule 1D collects information on dividends paid and received within the group. It also includes a column that indicates whether dividends were declared but not yet paid, as well as cases where dividends received where retained or "passed thru" to another affiliate or paid out in dividends to shareholders. This information will assist the regulator in evaluating the movement of capital within the group to fund strategic insurance and non-insurance operations or activities (e.g. expansion of activities) or to fund entity specific capital shortfalls. It also provides a window to capital leaving the group (e.g. debt repayment, stock repurchase, or dividends to shareholders).

Attention: Mr. Dan Daveline

RE: NAIC Regulatory Guidance for GCC and Analyst Reference Guidance for the GCC exposed the Group Capital Calculation (E) Working Group

Mr. Rehagan:

State Farm Mutual® Automobile Insurance Company and its affiliates ("State Farm"), appreciate the opportunity to submit these comments concerning the exposed draft of the NAIC Regulatory Guidance for GCC and Analyst Reference Guidance for the GCC via the Group Capital Calculation (E) Working Group (the “Working Group”). State Farm has been providing comments throughout the creation of the aggregation-based method of calculating capital for insurance groups under the National Association of Insurance Commissioners (“NAIC”) and U.S. Federal Reserve Notice of Proposed Rulemaking under a similar process.

State Farm is concerned with both the Regulatory Guidance for GCC (Regulatory Guidance) and Analyst Reference Guidance for the GCC (Analyst Reference) as both documents wrongly assume or infer that the GCC somehow creates group capital, establishes an amount or ratio that must be maintained by a group and that issues identified in an entity in a group is automatically risk attributable to another individual regulated insurer in the same group.

The aggregation-based method of calculating capital for insurance groups or the GCC recognizes that the capital is legally owned by the individual entities that are being aggregated by utilizing the regulatory capital regime when one is available to establish the entity’s capital for the purposes of aggregating. The application of the GCC does not change underlying legal process that the entities operate under or change the legal obligations of the individual entity. There are several statements made in the both documents that need further clarification to understand the
extent of the statement. For example, the Regulatory Guidance entitles Procedure Step 1 as “Evaluate the Adequacy of Group Capital” and asks for a determination to be made of whether “…the group capital position presents a risk to the group and its insurance subsidiaries based upon its recent trends and/or current measures in the GCC ratio”. This assumes that capital is fungible among the group and risk is freely transferable among the entities of a group which is contrary to established law. However, these issues are somewhat recognized in the Analyst Reference on page 4 in the last sentence of the GCC Summary and Strategic Branded Risk Documentation section provides “[w]hile the GCC is not a capital requirement, with specified ladders of intervention…” which is legally accurate and State Farm’s understanding. However, to further the wrong assumption that capital and risk is freely transferable under Procedure Step 5 of the Regulatory Guidance the following statement is made:

Depending upon the analysis performed in Steps 1-4, similar to legal entity analysis, there is likely a need to determine what steps the company is taking or plans to take to address the issues seen in the analysis of the GCC.

While it is not clear which entity is being referenced by the use of “company” but the “issues” presumably derive from the GCC ratio changing and the reasons for that change identified via Procedure Steps 1-4. The company is then to provide steps or plans to bring the GCC ratio back to some previously established position. All of which infers there is a GCC ratio being required or a level of group capital both legally not established and runs contrary to the regulatory scheme underlying and prior to the application of the GCC contrary to law and statements made in several documents concerning the GCC.

We should not lose sight of how the GCC sits on top of years of regulatory financial surveillance tools already developed and at the disposal of the domestic state regulator and/or lead state regulator. These tools are both qualitative and quantitative and already provide insight to both the individual insurers financial health as well as risks that may impact that individual insurer deriving from being a member of the group as well as other laws in the United States. An individual insurer is regulated through many different requirements, including but not limited to, the filing of annual and quarterly financial statements; audited by a certified independent accountant; risk based capital requirements with specific regulator intervention points; holding company requirements regulating the individual insurer’s ability to enter into affiliate transactions; regulation around the type of admitted assets that can be used to meet the individual insurers surplus needs as required; state based rating laws that require the insurer to set premium rates for the obligation of its policy that are not excessive, unfairly discriminatory, or inadequate; and no less than every five years an extensive financial examination of the insurer is conducted by its domestic state regulator. In addition to the individual insurance entity regulatory scheme and in addition to the GCC, and somewhat similar, there are other group level regulatory requirements, such as Form F and the Own Risk Surveillance Assessment (ORSA) that provide regulatory tools to evaluate aggregated risk at a group level.

Finally, State Farm is concerned that the Regulatory Guidance and Analyst Reference is not recognizing the “walls” in place in insurance regulations as well as the applicable non-insurance
laws of the United States or the existing body of insurer regulatory financial surveillance by not fully recognizing the limitations of risk obligation transference among members of a group, particularly those that are insurers and not acknowledging that surplus held by an insurer in a group is not readily available by any other member in the group. In fact, the maintenance of the walls aspect of the current regulatory scheme would be aided by the GCC process by identifying the entities within the group that are identified as holding or generating risk which then the regulators could monitor transactions of the regulated insurance entities with the at risk entity to ensure that the risk is not somehow transferred or transferred in manner that inappropriately places risk on the regulated insurer.

This provides the basis for the background of the comments provided in the draft Regulatory Guidance and Analyst Reference that are enclosed.

Thank you for your time and consideration in this project and to our comments. If there are any questions concerning the comments, please contact me.

Sincerely,

Chuck Feinen
State Farm Mutual Automobile Insurance Company
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) Procedures

Review of the Group Capital Calculation

Consideration of the Insurance Holding Company System Structure

As the lead state begins to review the annual Group Capital Calculation filing for a particular group, it’s important for the lead state to do so with consideration of the existing knowledge of the organizational structure of the group, including changes in the structure from year to year, but more importantly the overall activities of each of the entities in the group which otherwise have the potential to transmit material risk to the insurers within the group. While the GCC will provide additional quantitative information on the entities in the group; the actual activities of the entities are also important in determining the scope of application of the GCC. Specific to that point, the lead state is responsible for determining if any of the entities in the holding company structure should be excluded from the calculation. The filing includes a column for the group to propose what should be excluded as well as an additional column for the final determination made by the lead state. In general, the determination of scope of the application is suggested by the group but made in consultation and agreement with the lead state. This exercise should be undertaken in a manner that yields a clearly documented rationale for excluding entities or subgroups of the larger group. The Group Capital Calculation Instructions describes the basis for making this determination and the calculation itself is structured to facilitate this determination, with the inclusion in Schedule 1 of the calculation financial data of all entities within the holding company. Similar to exclusion from the calculation itself is data for cases in which subgroups of the larger group are completely excluded from the group, particularly with regard to Schedule 1; the rationale for the exclusion(s) should be provided in the GPS. The concept is that this Schedule 1 data should be utilized by the lead state in conjunction with their existing knowledge of the group and its activities (obtained from the Schedule Y, ORSA, Forms B/C, Form F, the non-insurance grid, etc.), and therefore likely material risks, to make this determination. To the extent the entities included in Schedule 1 differ from the analyst’s knowledge of the Group, further discussion and follow-up should be with the group.

The holding company structure and activities should also be utilized by the lead state in determining how to evaluate the GCC ratio. More specifically, information on structure can impact the flow of capital and resources among entities within the holding company structure. Therefore, understanding the following can assist in evaluating the flow of resources:

- Domestic insurance operations
- International insurance operations
- Banking or other financial services operations subject to regulatory capital requirements
- Financial and non-financial operations not subject to regulatory capital requirements*

*The GCC instructions provide examples of financial versus non-financial entities in this category. All financial entities should be included in the scope of application of the GCC. However, there can be a broad array of entities that could be considered financial. The lead-state should document the rationale for cases in which it concludes that a “financial” entity should be excluded.

While the GCC is intended to be used as an input into the GPS, where the expectation is that the GCC summary section is used to document a high-level summary of the analysts take away of the GCC, as well as the Strategic branded risk, since that is the area where capital measurement is reported. The manner in which the analyst determines what else should be documented beyond the GCC Summary and the Strategic branded risk should be based upon the following steps, since these steps contemplate the previously mentioned concept that the existing evaluation of the financial condition should be used in evaluating the depth of review of the GCC. From a high level, the following steps suggest in

- Procedure Step 1 suggests that a review of the components of the GCC is appropriate when either the GCC ratio is trending downward or the GCC ratio is below a predefined suggested threshold of 150% (equivalent to an RBC of 300% since that is the same threshold used in the sensitivity analysis in the GCC Template.
Summary of Comments on Outline of Holding Company
Analysis Framework
Page: 1

Number: 1  Author: Chuck Feinen  Date: 7/26/2021 1:24:00 PM
What are the potential avenues that material risk could be transferred between affiliates? Presumably any legitimate transfer of material risk would be in the form of a Holding Company filing, D-1. The original emphasis of the GCC was the evaluation of non-insurance entities within a group to provide an additional evaluation tool for regulators that are regulating the individual insurance entities. The statement of "potential to transmit material risk to the insurers" is elevating GCC beyond the original purpose and inferring that both capital and risk is freely transferable among the entities in the group which is simply not the regulatory or legal structure.

If the concern is that a non-regulated entity with identified risk could transfer that risk rather than attempting to regulate the non-regulated entity through the GCC, regulators should work to maintain the wall between the entities so that there are no transactions entered into or continue that would allow for that risk to be transferred.

Number: 2  Author: Chuck Feinen  Date: 7/26/2021 1:51:00 PM
If this sentence is stating that part of the determination to exclude an affiliate from the GCC based on the likely transfer of material risks, how is this to be determined?

Number: 3  Author: Chuck Feinen  Date: 7/28/2021 10:20:00 AM
There isn't a free "flow of capital" in the U.S., the characterization asserts a free moving, fungible capital but the creation and flow of capital is regulated requiring such transactions among insurance affiliates to be fair.

Number: 4  Author: Chuck Feinen  Date: 7/26/2021 2:01:00 PM
How is "Strategic branded risk" defined?
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) Procedures

- Procedure Step 2 suggests from a high level determining the drivers of any decreases in the total available capital in the GCC. While there are numerous benefits of the GCC over consolidated approaches, the ability to drill down on the drivers is one of the more significant and is consistent with the state’s approach to not just looking at capital, but to the drivers of capital issues.

- Procedure Step 3 suggests from a high level determining the driver of any increases in operating leverage, which is typically what drives insurance capital requirements up, be it asset risk/leverage or writings leverage. Similar to drivers of capital decreases, the GCC has detailed information on financial figures and ratios that can be used to isolate the issues.

- Procedure Step 4 is similar in that it too utilizes detailed information on capital allocation patterns that are necessary to understand if there are negative trends in the GCC since these can become important if there are any issues that might require further distribution of capital across the entities.

- Procedure Steps 5: Depending upon the analysis performed in Steps 1-4, similar to the legal entity analysis, there is likely a need to determine what steps the company is taking or plans to take to address the issues seen in the analysis of the GCC. The guidance provided in these procedures is not intended to be exhaustive, but rather should give the analyst a starting point in better evaluating the various issues.

- If the analyst determines after completing any of the above procedures (steps), that no further work is deemed necessary to fully document the material risks of the group observable from the GCC (as well as the required information to be included in all GPS from the GCC), this should be documented by the analyst in any workpapers deemed appropriate by the state and include the general reason therefore. In making this determination, it should be reiterated these procedures are not intended to be used in a checklist manner and judgment based upon existing information on the group obtained from the Form F, ORSA, or any other source is certainly part of that judgment decision.

Procedure Step 1-Evaluate the Adequacy of Group Capital

1. Determine if the group capital position presents a risk to the group and its insurance subsidiaries based upon its recent trends and/or current measures in the GCC ratio.

<table>
<thead>
<tr>
<th>Branded Risk</th>
<th>Benchmark</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Is the GCC &lt;150%? If “yes”, determine the most significant risk factors causing the result.</td>
<td>ST</td>
</tr>
<tr>
<td>b. Has there been a decrease in the GCC ratio over last two years? If “yes”, determine the cause(s) of the decline.</td>
<td>ST</td>
</tr>
<tr>
<td>c. Has there been a decrease in the GCC Total Available Capital from prior year? If “yes”, determine the cause(s) of the decline.</td>
<td>ST</td>
</tr>
<tr>
<td>d. If the GCC &lt;150%, has there been a change from prior year? If so, determine the cause(s) of the change. If the GCC was &lt;150% in the prior years also, consider more carefully the causes.</td>
<td>ST</td>
</tr>
</tbody>
</table>
What is meant by further distribution of capital across entities in this sentence? Who’s capital is being distributed?

What is meant by “company” in this paragraph? If the individual insurance entities are not triggering intervention under RBC what authority does the regulator have to require action and what authority would there be to require a non-insurance to take action?

This assumes a risk that does not exist. There’s no group capital, the GCC does not create group capital and an insurer’s capital is not freely available for a non-insurance entity.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) Procedures

| e. Has there been a negative trend in the GCC ratio over the past five years suggesting an overall pattern of declining capital? | ST | N/A |

If the answer to any of the above questions is “yes”, the analyst should proceed with procedure step 2, evaluating decreases in total available capital and/or procedure step C, evaluating increases in leverage to determine the cause(s) of the negative trends.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) Procedures

Procedures Step 2-Evaluate Decreases in Total Available Capital

2. Determine the source(s) of decreases in the GCC ratio or the GCC Total Available Capital

Unlike step 1, the intent of the step 2 (and 3) is to determine the actual source of the negative issues. However, unless obvious from the information obtained in step 2, the analyst should proceed to step 5 to understand more fully the actions being taken by the group to address the issues identified in step 2. However, in some cases, it’s possible that no further follow-up with the group will be necessary and that the lead state should simply update the GPS to be certain the main understanding of the issues are known to all of the regulators utilizing the GPS.

h. If due to strategic issues such as planned growth, planned decline in writings or changes in the investment strategy, utilize the business plan from the Form F to better understand the anticipated changes and how the actual changes compare. Understanding the variance from the business plan is important in assessing the ongoing risk either in projected future profitability or in some cases the investments.

| ST, PR/UW, OP | N/A |

i. If due to negative reputational issues, understand the issues more closely, whether potential ongoing changes in stock prices or financial strength ratings that may further impact market perception, or what the group is doing to address the potential future impact be it sales projections or access to the capital markets.

| RP | N/A |

j. If due to credit losses, understand the current and future concentration in credit risks, be it investments, reinsurance or other source of credit losses.

| CR, MK | N/A |

k. If due to operational issues, such as extremely large catastrophe events, IT or cybersecurity events or relationships, understand the current and prospective impact.

| OP, ST | N/A |

l. If due to legal losses, understand the underlying issues and degree of potential future legal losses.

| LG | N/A |

m. If due to non-insurance reported entities in the group, understand the relationship of the non-insurance operations to the insurance entities and the potential impact to the insurance operations (i.e. intercompany agreements, services, capital needs, etc.).

| ST, OP | N/A |

Procedure Step 3—Evaluate Increases in Operating Leverage

3. Determine the source(s) of any decreases in the GCC ratio due to increases in leverage

Like step 2, the intent of the step 3 is to determine the actual source of the negative issues. The difference between step 3 and step 2 is simply the types of issues. Step 2 is focused on issues that have resulted in negative capital trends. Step 3; however, is focused on the issues that impact the risk being measured in the GCC. In most cases that risk is either from the asset side or from the liability side where in both cases there has been an increase in such risk that has not been offset by a corresponding or equal increase in capital. In general, this is referred to as operating leverage, where this risk can manifest itself either through increased writings or exposure (e.g., the ratio of premiums to capital or liabilities to capital), or through increased assets that also carry risk. The expectation is that other regulated entities also have capital requirements that increase as these different types of risks increase, similar to how the NAIC RBC considers different types of products and assets that carry more risk.

<td>If operating leverage has increased, obtain current information on the asset mix to be certain that there is a corresponding decrease in riskier assets to mitigate the otherwise likely increase in market and credit risk.</td>
<td>CR, MK</td>
<td>N/A</td>
</tr>
</tbody>
</table>

Unless obvious from the information obtained in step 3, the analyst should proceed to step 5 to understand more fully the actions being taken by the group to address the issues identified in step 3. However, in some cases, it's possible that no further follow up with the group will be necessary, and that the lead state should simply update the GPS to be certain the main understanding of the issues are known to all of the regulators utilizing the GPS.

**Procedure Step 4-Evaluate the Capital Allocation Patterns**

4. **Determine the capital allocation patterns to determine if some entities may put pressure on other legal entities.**

Steps 2 and 3 are critical in understanding the issues faced by the group and in identifying the source of negative trends; and while additional follow up with the group is expected, before proceeding to Step 5, the lead state should understand the historical capital allocation patterns or the likely future needed capital allocation patterns. The GCC includes data on historical capital allocation patterns (e.g., contributed capital received/paid or dividends received/paid), which help to illustrate which entities need capital and which entities have capital that can be provided. While these patterns do not necessarily repeat themselves from one period to the next, there is often consistency in terms of entities that need capital or have excess capital, which may or may not be driven by losses, but rather a change in strategy (e.g., increased writings at one company over another). These trends can also assist in discussions with the group on where capital may come from as a result of a future unexpected material event.
Just insurance products?

This seems to be inferring from the phrase “entities have capital that can be provided” that the regulators can force capitalization among affiliates. Is this intended to say that parent level holding companies are to volunteer to reshuffle capital among subsidiaries? There is a whole insurance regulatory scheme and legal system that needs to be contemplated.

Same comment as above
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State) Procedures

Where similar information is also disclosed in Form F, the detail in the GCC may confirm what is already known in this area and in some cases may provide greater detail.

Procedure Step 5 - Consider the Need for Reductions in Risk

5. **Determine the group’s plans for addressing source(s) of any meaningful decreases in the GCC ratio or total available capital. Please note, in some cases, the plan may be as simple as actions designed to reverse a single negative trend.**

Steps 5 is designed to assist a review of the insurance company’s plans for addressing any meaningful decreases in the GCC ratio or total available capital. The specific plans of the group may or may not fully address all the issues but ultimately what is most important is that such information and the regulators plan for evaluating and monitoring the situation is known to the other regulators. There is a multitude of possibilities and this guidance is not intended to address all of those, including the fact that in some cases some regulators may choose to put their legal entity into some type of supervision, conservation or some other form of receivership. Similar to other areas, where similar information is also disclosed in Form F, further information may already be known in this area.
Further explanation is needed to understand what is meant by “future possible losses and “required to fund future possible losses”. Is the obligation to fund the future possible loss already existing? If the obligation to fund a future loss already exists, wouldn’t it already be included in RBC?

Which insurance company? How is any insurance company required to address the total calculated capital derived from the GCC.

Based on the GCC? If the insurance entity is meeting RBC under what authority?

 Capital is not fungible, risk is not transferable, legal insurance entities RBC triggers the authority of intervention how does the GCC create the authority?

 If the regulated insurer is meeting its RBC how would the Hazardous Financial Condition aspect get triggered?

 How is "legal entity regulator" defined?
Purpose of the Group Capital Calculation (GCC) in Holding Company Analysis

The following information is intended to provide background and context of the issues/considerations for analysts when utilizing the NAIC Group Capital Calculation (GCC) for an insurance holding company (hereafter referred to as “group”) completing the GCC where required.

Background Information

Beginning in 2008, the NAIC Solvency Modernization Initiative (SMI) began to consider whether there were any lessons learned from the financial crisis that would cause the solvency framework to be modified. The NAIC determined that changes should be made to the group supervision framework in the area of group supervision, starting with the new annual requirement for the Lead State of each group operating in the U.S. to complete a written holding company analysis. Since that time, other changes to state laws have been made to further enhance group supervision (e.g. Form F, ORSA, and Corporate Governance reporting). All of these new tools are inputs into the previously mentioned holding company analysis, which is now summarized into a consistent tool used by all states in what is known as the Group Profile Summary (GPS).

Benefits of the GCC & Methods for Achieving

The Group Capital Calculation Instructions describes the background, intent, and calculation for the GCC in detail. As stated in the Group Capital Calculation Instructions, the GCC and related reporting provides more transparency of an insurance group’s structure and related risks to insurance regulators and makes those risks more identifiable and more easily quantified. In this regard, the tool is intended to assist regulators in holistically understanding the financial condition of non-insurance entities, how capital is distributed across an entire group, and whether and to what degree insurance companies’ capital may be put at risk from the operations of non-insurance entities, potentially undermining the insurance company’s financial condition and/or placing upward pressure on premiums to the detriment of insurance policyholders.

The manner in which the GCC achieves some of these benefits varies. For example, with regard to understanding how capital is distributed across an entire group can be seen in two ways, both by viewing the Tab titled “Input 4-Analytics” as follows: 1) the display of the “Ratio of Actual to Required Capital”; 2) display of “Required Capital” in a separate column. The degree of subsidization can also be seen in the “Input 4-Analytics” tab, with the display of the columns as follows: 1) Capital Contributions Received/(Paid); 2) Net Income. While certainly one year of information can show this exists, most of this benefit will not be seen until after further years of the GCC are reported within the template. Once five years of data are displayed in this “Input 4-Analytics” tab, it will allow the analyst to better understand the financial condition of the group as a whole as well as the non-insurance entities. Of course, such conclusions can only be made once the analyst can both see such data as well as understand from the group what is occurring that is leading to such figures.

This calculation provides an additional early warning signal to regulators so they can begin working with a company to resolve any concerns in a manner that will ensure that policyholders will be protected. This early warning signal can be seen with the trending of the financial information in the “Input 4-Analytics” tab as well as through the application of sensitivity analysis in the Input 5 Tab and inclusion of other relevant information in the Input 6 Tab. However, the analyst should also understand that other “qualitative tools” such as the Form F, are capable of also providing early warning signals if properly reported by the group. In addition, since most holding company systems may have a larger percentage of their operations in the insurance businesses, the
Summary of Comments on Outline of Holding Company Analysis Framework

Page: 1

What is meant by "company" in this sentence?
insurance trends for the U.S. insurers in the group should already be known and made available to the lead-state by the legal entity regulator. However, in the context of added policyholder protection, this largely comes into play with respect to the added quantitative data on non-insurers.

The GCC is an additional reporting requirement but with important confidentiality protections built into the legal authority to require such reporting. State insurance regulators already have broad authority to take action when an insurer is financially distressed, and the GCC is designed to provide regulators with further insights to allow them to make informed decisions on both the need for action, and the type of action to take. While the new information from the GCC may offer new insights, it’s equally important to understand that it will be up to the analyst to work with the insurance group to actually understand what is leading to the figures reported in the GCC, and from that perspective, especially in the early years of the GCC, it will require learning by both the analyst and the group to really be able to utilize the GCC in a manner as suggested in these introductory paragraphs.

Other Considerations When Considering Such Benefits

Recent events and economic conditions (i.e., pandemic, recession, etc.) can create stresses on a group, reinforcing the value of the quantitative data included in the GCC. Some stresses are similar to those experienced during the financial crisis and others are more unique. However, because the GCC is based upon a methodology that gets its inputs from individual legal entities, the capital calculated for each legal entity certainly can only capture the allowed capital resources of the legal entities in the group. While such an aggregation-based methodology is an appropriate group-level capital measure, until experience is gained with the GCC, it is not known as to how the GCC will behave in response to business cycles and various risk events, given in part because it only recognizes limited diversification benefits among entities in the group except for the diversification embedded in existing entity specific regulatory capital requirements. And while the GCC is not meant to be used in a way that compares groups to each other, it’s also true that its unknown how it will behave across groups, peers and even sectors. This is true both because of its limited diversification benefit, the differences between group types (mutual v. stock holding company), grouping of entities, and scope of entities included in the calculation. But also because application of jurisdictional accounting principles and use of scalars could have an impact on this as well via the foreign insurer profile of the group. The quantitative data collected in the GCC will evolve as state insurance regulators and insurance groups increase their understanding of the impact on available capital and calculated capital.

The following guidance on the GCC is intended to be utilized in a manner that allows the GCC to enhance group-wide financial analysis and to be used as an additional input into the GPS. The GCC provides the quantification of risk within the group and when combined with the information from the ORSA on the amount of capital needed to run the company’s current business model, puts the regulator in a much better position to understand the available capital and calculated capital within a group, as well as the financial condition of the group. Both are complimentary tools to each other, with the ORSA providing management’s internal approach to capital management, and beneficial in understanding the economics of the group, the GCC provides a standard model that can better enable the analyst to understand where the entire group stands with respect to existing legal entity requirements as well as broad measures of risk for non-insurers.
What is meant by "legal entity regulator"?

It should be made clear that the authority is limited to the individual insurance entity.

Not sure how a group would need to do anything based on the GCC.

The nature and availability of capital is not changing nor is the authority given to the state regulator who as identified above is only authorized to regulate the individual legal insurance entity.

How is "company" defined?

Not sure a comment is needed here but the acknowledgment of the differentiation is good.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

Utilization of the Group Capital Calculation in the Lead State’s Responsibilities

The lead state is responsible for completing the holding company analysis and documenting a summary of that analysis in the GPS. The depth and frequency of the holding company analysis will depend on the characteristics (i.e., sophistication, complexity, financial strength) of the insurance holding company (group) system (or parts thereof), and the existing or potential issues and problems found during review of the insurance holding company filings.

It can be summarized that the analysis of the GCC will be used in a similar fashion under this guidance since it provides the depth of the review in the “five-step process” will vary by group and situations where for example in some groups, very little if any work (inquiries of the group) will be done after the first step due to a generally strong GCC figure and generally positive trends of the ratio over time, while in other groups, the analyst may need to proceed through each of the five steps. Exactly how the analyst proceeds through the guidance will be dictated by a multitude of factors and requires judgement.

GCC Construction That Also Impact its Utilization and Review

Some decision points may be addressed prior to the submission of a GCC template. These include: the scope of application (e.g. whether segments of the holding company system should be excluded for financial conglomerates); whether a limited filing will be allowed (as permitted in Model Law #440 and Model Regulation #450); and whether subgroup reporting (as defined in the GCC instructions) of a foreign insurance group will be required. In general, the analytics provided by the GCC will be similar for all entities included in the template. See the end of this section (Primer on the Group Capital Calculation Formula) to better understand these points. These facts are also a consideration in determining the depth of the analysis of the GCC and subsequent correspondence with the group. Refer to chapter VI.B. Roles and Responsibilities of Group-wide Supervisor/Lead State for details on responsibilities for completing the GPS.

The utilization of the GCC can be summarized as an additional input into the GPS. More specifically, once the analyst completes their review of the GCC, the overall ratio, the trend of the ratio, a summary should be incorporated into the GPS to help support the assessment of strategic risk.

Documentation of Review of the GCC in the Group Profile Summary (GPS)

The purpose of procedures is to document the GCC into the GPS. The following provides an example of a GCC Summary that represents the minimum expected input of the GCC into the GPS, with additional information also reported within the Strategic branded risk classification. The other purpose of this section is to determine if more follow-up should be performed and, if so, to assess the results of that additional review. The following is intended to assist in understanding summary documentation of the GCC to be included in the GPS.

VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

Group Capital Calculation (GCC) Summary
Summarize your assessment of the GCC both quantitatively and qualitatively, including any such items as may not be applicable to a branded risk category. For example, it may be appropriate to indicate “The review of the group’s GCC indicated the scope of the application is consistent with the lead state’s determination” and if possible to summarize succinctly, the general scope of the GCC. For example, “the GCC includes all U.S. and Bermuda operations, but excludes ABC non-insurance operations in South American countries”. It may also be appropriate to identify key drivers of risks for the group within the GCC that are discussed later in the branded risk categories, as those risks may be related to and supplement existing risk assessments derived from holding company analysis or they may be new risks that warrant further review. “The group’s GCC of 201% in the current year was impacted by a decline in Total Available Capital of $X which is related to group’s non-insurance operations in Bermuda and as well as the negative impact of market risks in the U.S. insurance legal entity ratio components, which based on further analysis has resulted from the recent financial market volatility”.

Branded Risk Assessment

Strategic: The group’s Group Capital Calculation is assessed as low and stable, and is a positive consideration in the overall assessment of strategic risk. The GCC has generally been strong and consistent over the past five years as illustrated in the following table. Additionally, refer to the GCC Summary for further details.

GCC Summary and Strategic Branded Risk Documentation:
The above information documented in a summary section of the GPS and into the Strategic branded risk is expected to be the primary type of information that is always documented into the GPS since the GCC does provide a capital measurement of the group and consistent with the branded risk categories, should be reported in the strategic risk section. Similar to how RBC for individual insurance company is helpful in allowing the analyst to better evaluate other potential issues given capital represents a relative measure of cushion for adverse risks, the GCC and inclusion herein helps regulators to understand the same relative to a group. While the GCC is not a capital requirement, with specified ladders of intervention, each of the insurance legal entity figures are relative to individual company requirements, and therefore the GCC can provide a relative measure of strength against such minimum capital levels of the insurers.

Other Branded Risk Documentation:
To the extent the ratio was trending negatively, or available capital was decreasing, the analyst may choose to include more information in the strategic section of the GPS that summarizes any key drivers of such if they did not fall into one of the branded risk categories. Those drivers of the change would likely be documented in other specific branded risk categories, for example Pricing/Underwriting if driven by weak insurance underwriting, or Reserving if the drivers were reserve deficiencies, etc. References to other branded risk categories may also be appropriate. However, practically speaking, this may not always occur or be possible for the analyst to pinpoint given the multitude of risks within any insurers regulatory capital requirement formulas. This guidance is simply meant to suggest that if the GCC does in fact appear to show particular trends that are noteworthy on specific

  While the first portion of this sentence is spot on I am not tracking how GCC is a relative measure of strength against such minimum capital levels. This sounds like source of strength under the Federal Reserve but that is not how it works for insurance entities.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

risks such as the underwriting branded risk, further documentation into that (applicable) branded risk may be appropriate.

A determination for when documentation of risks from the GCC into other branded risk categories may be appropriate is driven by both the question of whether any of the thresholds in Procedures 1a-1e were met, and the information obtained from the rest of the GCC information as described in Procedures 2-4. The GCC Summary is intended to be high-level, therefore other more detailed observations from reviewing the GCC should generally not be documented into the GPS unless they are specifically insightful, add to a high-level understanding of the group’s financial condition, as shown in the example above, or are specific to a branded risk category as stated.

Other Considerations:
In addition to the broad guidance provided herein on the documentation of the GCC into the GPS, the analyst should also understand the following more general points that could impact the GCC result for a particular group, judgement is required when considering these points:

- If the group has a significant amount of business in legal entities that are domiciled in jurisdictions whose capital regime is based on market-based valuations, the GCC will inherently be more volatile (as compared to a pure U.S.-based group for which RBC and statutory valuations are the norm).
- Similarly, a group may have legal entities that are solely based in jurisdictions that utilize a standard model for capital requirements or have entities in jurisdictions where the use of internal models has been approved. All else being equal, the manner in which capital measures quantify requirements and behave over time will differ to some extent between the two. Also, a change from a standard method to one based on internal models for a key subsidiary will likely produce a noticeable change in the GCC that is not reflective of changes in the entity’s underlying business.
- The GCC provides a means for analysts to identify non-insurance operations outside of the insurance group and to determine the extent of risk they may pose to the insures within the group. However, in doing so, analysts should understand that findings from review of Forms B, D and F might be equally valuable in these situations.
- When evaluating capital requirements for non-insurer financial entities that are not subject to regulatory capital requirements, consideration should be given to the appropriateness of the GCC’s capital charge for a specific entity’s financial operations (e.g. an entity conducting large volume or size of complex transactions but with little net revenue or equity).
- When evaluating capital requirements for non-insurer / non-financial entities consideration should be given to the appropriateness of the level of risk assigned to specific entities.

Detailed Observation Documentation:
More detailed observations shall be documented separately from the GPS and in a form not dictated by the NAIC. As in all holding company analysis, the level of documentation is determined by the state insurance department and is dependent on the characteristics and complexity of the group and its risks. These detailed observations generally need to only note observations that are indicative of drivers of trends and/or actions being taken by the group to mitigate risks. In some cases, these points can be easily summarized into the GPS, in other cases they are too detailed and should be documented instead within the separate document not dictated in form by the NAIC. The analysts are not expected, nor should they spend time documenting subtle
If there are no capital requirements for a non-insurer financial entity, what are the capital requirements being evaluated?

Same as above. Could this really mean the capital charge under the GCC and not requirement?
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

changes within either the GCC or individual company movements that either do not create a trend at the group level or identify a growing weakness in the group. However, judgment is required to make this determination. For example, a 10% decrease in an RBC ratio of one of the smaller insurers within the group generally would not be documented, although a 10% decrease in an RBC ratio in one of the larger insurers in the group that causes, or jointly with other insurers, causes a 10% decrease in the GCC should be noted. However, it should be understood also that this 10% threshold is not intended to be a used as a “bright-line”, and in fact it’s possible the 10% is not necessarily indicative of any negative trends at all. This could be the case when for example there was a change in the regulatory capital requirement. Therefore, again, judgement is required in making these determinations and this, as well as other thresholds used in this guidance are not meant to be bright-lines. As the GCC is used more, both by the individual analyst, as well as all of the states, using judgement around these threshold are expected to become easier.

Specific Procedures for Completing Analysis of the GCC

It should be understood that if the analyst determines after completing any of the above procedures (steps), that no further work is deemed necessary to fully document the material risks of the group observable from the GCC (as well as the required information to be included in all GPS from the GCC), this should be documented by the analyst in any workpapers deemed appropriate by the state and the general reasons therefore. In making this determination, it should be reiterated these procedures are not intended to be used in a checklist manner and judgement based upon existing information on the group obtained from the Form F, ORSA, or any other source is certainly part of that judgement decision.

Procedures Step 1a-1e

The purpose of procedures 1a-1e is to assess the GCC level and to identify the drivers of any changes in the GCC, in order to summarize and to document that overall assessment in the GPS and its strategic risk category, which is the minimum expected input of the GCC into the GPS. However, the analyst should understand that in the early years of the GCC, limited amount of prior year(s) comparative data will be available, therefore requiring more judgement in determining where further analysis is warranted. Such judgement may need to be based upon various factors, including but not limited to other known information regarding the applicable group obtained from other sources (e.g. ORSA, Form F, Form B, etc).

Procedure 1 is also intended to help the analyst determine if more follow-up analysis work should be performed. However, if the answer to any of the questions in 1a-1e is “yes”, the analyst should proceed with step 2, evaluating decreases in total available capital and/or step 3, evaluating increases in leverage to determine the cause(s) of the negative trends. In the example provided above, the ratio is above 150%, which suggests further review may not be necessary. In addition, the trends are positive with no decreases in the base ratio and the only year below the 150% benchmark being in PY1 where presumably the analyst may have performed some level of inquiry to the holding company to understand the driver of the drop. Even then the drop was below the Handbook’s predefined threshold of 10% and may not have been necessary.

Procedures Step 2a-2m

Unlike step 1, the intent of the step 2 (and 3) is to determine the actual source of the negative issues and where to document them in the GPS. Procedure 2a is specifically focused on identifying the category of legal entities (and subsequently the individual legal entities) that might be driving the issues by looking at the ratio of actual-to-required capital for the legal entity insurers over the available years reported. The following sample of a table from the GCC calculation completed by the group from the data in Schedule 1 can be helpful in determining the source of the issues.

Procedure 2b recognizes that the GCC does allow some debt to be included in capital up to a predetermined limit and can drive the overall GCC ratio. The following sample table taken from the GCC calculation using the data in Schedule 1 can be helpful in making this determination. Cases where debt is issued to address risk driven reductions in the GCC ratio, may not offset those reductions. This data metric may not be available in the case of a “limited filing”.

#### Debt/Equity Table

Procedure 2c recognizes that profitability is generally one of the biggest drivers of changes in capital and utilizing the following table from the GCC can assist in identifying if there are entities reporting net losses that may be driving the decreases in capital. The following table taken from the GCC using the data in Schedule 1 can be helpful in determining the source of the issues.

Procedure 2d is focused on requesting more specific information from the legal entity regulator or the group to better identify the source of the issue(s). Procedures 2e-2l simply contemplates that if the source of the issues can be identified into one of the branded risk categories, to document as such in the detailed workpapers and into the appropriate category of the GPS. However, it’s recognized that the source of issues may be in
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

multiple branded risk categories, in which case documentation of each of the sources into the detailed workpapers is still appropriate. However, documentation into one of the single branded risk classifications of the GPS is only appropriate if that risk category is a material driver of the negative trends. Procedure 2m is intended to identify if the source of the issues is related to non-insurance operations. The GCC is intended to provide for more consistent analysis of risks to the insurer that may originate from non-insurance entities within the holding company system.

Procedures Step 3a-3f

Procedure 3a is specifically focused on identifying the category of legal entities (and subsequently the individual legal entities) that might be driving the issues by looking at the leverage ratios. The following sample of a table from the GCC calculation using the data in Schedule 1 can be helpful in determining the source of the issues.

Procedure 3b is more forward looking by suggesting the analyst look at the same leverage ratios used in 3a to determine if the trends might continue and lead to further decreases in the GCC ratio. Procedure 3c simply requests the analyst use the leverage information to target questions to the group to better identify the drivers. Procedure 3d-3f are all questions designed to help the analyst consider whether the changes in leverage will lead to greater underwriting risk, asserting risk, or market and credit risk. Procedures 3d-3f provide general inquiries for additional information for the analysis, however, these inquiries may also appropriately provide a basis for the analyst to enter conversations with the group on the same topics to understand how the group views these topics and how the group is managing and monitoring these risks. For groups filing an ORSA, see also documentation within the ORSA report for additional information on the identified risks and the group’s monitoring of risks, as well as consistency of the discussion with management and management’s observations in the ORSA Summary report.

Procedures Step 4a-4b. Procedure 4a is intended to help the lead state understand the historical capital allocation patterns or the likely future needed capital allocation patterns by simply documenting in the detail analysis workpapers. This includes, for example, noting that there is consistency in the entities generating net income and distributing it further through the group, and in some cases may require distribution through other insurers, which in the US often requires approval if considered extraordinary. Procedure 4a is intended to utilize that knowledge, along with other planned actions of the group, to understand whether problems with repaying debt or other obligations in the group could occur. The intent is to be in a better position for discussions with the group on where capital may come from to support future expected activity or future unexpected material events. The following sample of tables from the GCC calculation using data in Schedule 1 can be helpful in determining the source of the issues.

Procedures Step 5a-5h. Procedures 5a-5h are designed for those rare situations where the group has a need to reduce risk given the alternative of raising capital may be unlikely (see appendix for further discussion on that topic). In performing this procedure, it should be understood that procedure 2 (Evaluating Decreases in Total Capital) and Procedure 3 (Evaluating Increases in Operating Leverage) have already been considered, and therefore it has been concluded that either capital is decreasing or operating leverage is increasing. As such, after considering information that may already be available to the regulator on the business plan, Procedure 5b is largely focused on better understanding directly from the group the drivers of the apparent negative trends. It should be understood that some of these trends may have already been known, through for example the ORSA, and discussions by the lead state regarding such takeaways from such ORSA discussions. In fact, if already known, the key takeaways may already be documented in the GPS and therefore the remaining procedures in this section may be irrelevant and could be skipped if recently already considered and evaluated. In addition, to be sure, such trends from Procedure 2 and 3 may not suggest anything more needs to be done, in fact that is why the first procedure is focused on an existing business plan since its possible these trends may have been expected. In fact, Procedure 5a is based upon the belief that reducing risk by the group may have already been
A group has no capital requirements as stated on page 4 of this document so why would a group be required to reduce risk?
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

incorporated into the group’s latest business plan, which may have already been obtained from the Annual Form F Filing.

Procedure 5b on the other hand contemplates that the manner to address any negative trends may not have already been incorporated into the latest business plan and simply contemplates the analyst speaks with the group to understand how the group intends to address the issue. The existence of this procedure is not meant to suggest action must be taken by any regulator, rather to understand what the group is already doing to address the issue. To be sure, some of what the group is already doing may already be known by the lead state, either through the ORSA, the Form F, or a periodic meeting with the group that some states conduct annually with all groups. Rather, the procedure provides an opportunity for the analyst to make sure they understand the drivers and what if anything the group is doing to address. To be clear, increases in operating leverage are often planned, and often come with them expected future actions by the group, such as capital injections or future transactions that may reduce risk. Therefore, these discussions would allow these actions to be completely documented and understood. Meanwhile, decreases in capital sometimes are not expected, and may not result in immediate action if any, but it’s possible that it may lead to the group to take future actions, or contemplate future possible actions. Therefore, these discussions would allow these potential actions to be completely documented and understood.

Procedure 5c contemplates assessing if the group has the ability and resources to either reduce its risks or to raise additional capital. See the section below for further Considerations of the Group’s Capacity to Raise Capital. This procedure is not intended to suggest the analyst has the capacity to make this determination on their own, but rather to question the reasonableness of the possibility. Procedure 5d contemplates that the group may believe no action is necessary because it believes current capital is adequate to meet its business plan and is more likely to be the case when the company experienced a one-time reduction of capital as opposed to a growth in leverage that may continue. Procedure 5c is for the rare situation where the legal entity insurers have been strained enough or face impending pressure contemplated within NAIC Model 385—Model Regulation to Define Standards and Commissioner’s Authority for Companies Deemed to be in Hazardous Financial Condition that would suggest one or more of the insurers may be in a hazardous financial condition. Procedure 5f is designed to suggest the analyst bring the collective supervisors of the legal entity insurers together for a supervisory college to fully understand what is occurring and the group’s plans for addressing the issues it is facing. Procedure E6 is an extension of Procedure E5 as it contemplates the regulators discussing whether they believe the proposed actions from the group are adequate. This action could represent something either informally done before an insurer is in a regulatory action level, or formally once an insurer is in a regulatory action level. Procedure E7 is similar to the other actions contemplated within a supervisory college or, for example, to address a troubled insurance company under Accreditation requirements regarding communication with other states.

Additional Procedures – Business Plans

While there is a multitude of possibilities and this guidance is not intended to address all of those, the following provides some summary of related issues that may be helpful to the analyst (See also section 6 to consider the structure of the group and capital infusion issues).

**Group’s Business Plan:**

**Planning Process:**
<table>

VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

- Group system’s overall planning process (e.g., who is involved, how frequently it occurs, etc.) and how the overall initiatives are determined
- Understand the group’s estimate of the impact of the proposed actions on financial results
- Review the plan’s assumptions for reasonableness. Consider the likelihood of variations in the assumptions and the resulting impact on the future financial results
  - Consider subcategories of changes including:
    - Overall potential changes in investment strategy
    - Overall potential changes in underwriting strategy or existing concentrations
    - Overall impact on financing matters (e.g., debt, requirements, etc.)
    - Overall impact on derivatives to mitigate economic conditions
    - Overall changes in governance or risk management procedures
    - Increased ceded reinsurance transactions (common approach to reducing risk/increasing surplus):
      - Details regarding the revised strategy
      - Specifics on types of coverage such as assumption reinsurance, loss portfolio transfers
      - Transfer of risk considerations

Variance to Projections:

- Consider the group’s history of explanations regarding variances in projected financial results and the insurer’s actual results. If analysts determine the goals of the business plan are not attainable and/or projections are unreasonable, a revised business plan may be requested;
- Identify any internal or external problems not considered in the plan that may affect future financial results. Examples of such problems include the following: 1) the existence of competitors to limit future sales levels; 2) recent state legislation restricting the company’s product designs; or 3) the loss of key marketing personnel.

Evaluating a Business Plan:

Analysts should consider further detail where necessary in evaluating the proposed revised business plan but also monitor, on a periodic basis, the insurer’s progress in achieving the initiatives included in the group’s plan. The goal of any plan is the improvement of the underlying causes that led to the issues and an improvement in subsequent GCC base ratio results. Detail considerations for improving the plan may include the following (where considered inadequate):

- Trending comparative measures of targeted risk exposures including (where applicable):
  - Asset mix by detailed types
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

- Credit risk by detailed types
- Business writings/ratios by detailed product

**Impacts on financing items:**
- Projected cash flow movements for ongoing principal and interest payments on debt
- Impact on debt interest coverage ratio, other debt covenants, rating agency ratings
- Discussion of impact on parental guarantees and/or capital maintenance agreements
- Expected source and form of liquidity should guarantees be called upon

**Impact of reasonable possible stress scenarios**

**How the legal entities capital will be maintained at required levels**

Consultation with Other Regulators
- Consult with members of the supervisory college (if applicable) or other domestic states for input in evaluating the revised business plan

**Considerations of Group’s Capacity to Raise Capital**

The following is designed simply as a reminder of considerations the lead-state would contemplate when discussing the group system response to the issues identified in this section. More specifically, in most situations a group will first consider ways to reduce risk but in limited situations they may consider trying to raise additional capital. While this is typically not an option for a group that is currently not performing as it anticipated, in some situations alternative sources of capital can be raised if the holders of the new capital are given rights that are attractive to the holder. In addition, in some cases the group may have the ability to issue other forms of capital (e.g., debt), which can be used to inject into the insurance subsidiaries. While these facts are not unique to the utilization of the group capital calculation, they are worth a reminder along with relevant other related details.

**New Equity Considerations**

**Public Holding Company**
While no two groups are the same, issuing public stock may be limited for the reasons previously identified. In addition, regulators are reminded that a public holding company may be obligated to pay dividends in order to maintain expectations of their shareholders, making the reduction of risk a more viable action under the circumstances.

**Private Holding Company**
While no two groups are alike, a private company has some of the same characteristics as a public company in terms of owners’ expectations, but usually such expectations differ from a public company and it may be more
<table>

</tr>
</tbody>
</table>
feasible for a private company given their access to specific individuals that may have a higher interest in higher capital rights.

**Mutual Insurance Company**
A mutual insurer is limited in terms of its access to capital because it cannot issue new stock.

**Mutual Holding Company**
Because mutual holding companies have characteristics of both public companies and mutual companies, there are implications of how such a structure affects its operations.

**Non-profit Health Company**
Insurers that are non-profits are generally charitable organizations and it is not uncommon that some types of insurers, particularly those that provide health insurance, to have some history as a non-profit. It may be helpful to understand these types of dynamics when considering a group structure.

**Fraternal Associations**
Regulators often find similarities between a fraternal benefit society and a mutual insurer because both can be limited in terms of their ability to raise additional funds.

**Reciprocal Exchanges**
Regulators often find similarities between reciprocal exchanges and fraternal benefit societies and mutual insurers because they can be limited in terms of their ability to raise additional funds. Although this is a general consideration for the regulator when evaluating the group system, there is generally much more that must be understood before coming to this conclusion because in some cases, the reciprocal may be able to assess policies that can serve a similar purpose as raising capital.

**New Debt Considerations**
Through discussions with the group, understand the potential impact of any new debt on the group system, including specifically the extent of future additional reliance on the insurance operations and whether those insurers have the capacity for such. Consider also an updated review on the following:
- Total debt service requirements.
- Revenue streams expected to be utilized to service the debt.
- Any new guarantees for the benefit of affiliates.
- Any new pledge assets for the benefit of affiliates.
- Any new contingent liabilities on behalf of its affiliates

**International Holding Company Considerations**
This section is applicable only to those international groups that are required to complete the GCC, which may be relatively small considering many international holding companies have a non-US groupwide supervisor and are exempt from the GCC. Those foreign groups that are required to complete the GCC will generally file a “subgroup” GCC that included entities that are part of the group’s U.S. operations. In those situations, the
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

Analysts should understand the structure to determine if it has any impact on this analysis. For example, a German-based holding company may have advisory boards established to communicate with U.S. regulators. Analysts should direct any regulatory concerns to the appropriate organization contact to ensure a prompt reply or resolution if the insurance regulator is not responding.

**Capital / Operational Commitment to U.S. Operations**

Some foreign holding companies may consider their U.S. enterprises non-core and consequently show weaker commitment to their ongoing business operations or financial support. In recent years, after sustaining continued losses from U.S. subsidiaries, several prominent foreign holding companies decided to cease their U.S. operations and liquidate their assets. Analysts should be aware of a holding company’s stated commitment to ensure the continued stability of U.S. operations. This commitment may include a written or verbal parental guarantee.
Primer on the Group Capital Calculation Formula

The National Association of Insurance Commissioners (NAIC) began development of the Group Capital Calculation (GCC) in late 2015 following extensive deliberation on potential measurement models and methodologies. The GCC uses a bottom-up aggregation approach, accounting for all available capital/financial resources, and the required regulatory capital based on the measurement of assets and liabilities of the various corporate entities, including insurers, financial and non-financial businesses.

The GCC Aggregation Methodology

As illustrated in the sample tables above, the proposed GCC is an aggregation or grouping of the available financial resources and calculated required capital of all legal entities in an insurance group that potentially pose material risk to the insurers in the group. The GCC allows some discretion in determining what entities under common control but outside of the defined Insurance Group may be excluded from the scope of application in the GCC. When reviewing a group’s choice of entities to be excluded from application of the GCC, the following points should be considered:

- The regulatory evaluation should be based on the criteria for material risk (e.g. structural separation; no history of cross subsidies, or other criteria as defined in the GCC instructions);
- Group requests for reducing the scope of application of the base GCC should be based on supporting information and rationale provided by the Group;
- Information on excluded entities should be made available upon request by the analyst.

The GCC includes the following types of entities and sets forth the general approach of calculated capital toward each.

U.S. Insurers – The available capital of U.S. domiciled insurers is determined by statutory accounting principles (SAP) as defined by state law and the NAIC Accounting Practices and Procedures Manual, which defines assets, liabilities, and in-turn net available capital/financial resources, sometimes referred to as policyholder surplus. The calculated capital for these insurers is subject to state law that requires these insurers to maintain minimum capital based on the applicable NAIC Risk-Based Capital formula at 200% x Authorized Control Level (Trend Test level).

Non-U.S. insurers – Similar to the available capital and calculated required capital of U.S. insurers, the available and calculated capital of non-U.S. insurers is determined by reference to the home jurisdiction’s basis of accounting and capital requirements converted to U.S. dollars. While most non-U.S. jurisdictions do not possess the same level of industry specific technical guidance, as included in the NAIC Accounting Practices and Procedures Manual, all jurisdictions have established accounting standards that insurers are required to follow to determine available capital/financial resources. In some cases, this represents local Generally Accepted Accounting Principles (GAAP), which may or may not be consistent with International Financial Reporting Standards (IFRS).

DRAFTING NOTE: While the GCC utilizes the available capital and home jurisdictions’ capital requirement, for jurisdictions where data is available appropriate scalars are currently being explored to produce comparable measures for risk which can be aggregated into the group-wide measure. One such scaling methodology is included as part of sensitivity Analysis in the GCC template. That scalar methodology uses aggregated data from
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

the U.S. and other jurisdictions at first intervention level to recognize that (for example), state regulators often have much higher reserve requirements that are required to be carried as required capital in other jurisdictions. For jurisdictions where the data is not available, the full jurisdictional requirement at first intervention level is used.

**U.S. Insurers Not Subject to RBC** – Some types of U.S. insurers are not subject to an RBC formula (e.g., Financial Guaranty Insurers, Title Insurers). For these entities, the available capital/financial resources is determined by reference to state law and the NAIC Accounting Practices and Procedures Manual. However, since an RBC formula does not exist, calculated capital is determined by reference to the state minimum capital requirements set out in state law (or 300% of reserves for Title insurers). For U.S. captive insurers, available capital is determined based upon the states accounting requirements, but the calculated capital is required to be calculated using the applicable RBC formula even if RBC does not apply to that entity in their state of domicile.

**Banking or Other Financial Service Operations Subject to Regulatory Capital Requirements** – Non-insurers such as banks are subject to their own regulatory valuation methods (typically GAAP with tiering of available capital) and their own regulatory capital requirements (e.g. OCC, Federal Reserve, FDIC or other requirements for banks). These regulatory values are used for the GCC.

**Financial and non-financial operations not subject to regulatory capital requirements** – In general, financial entities (as defined in the GCC Instructions) are subject to a higher capital charge in the GCC than the non-financial entities. However, the GCC does require available capital/financial resources and calculated capital to be gathered for all such entities that pose a material risk to insurers. In both cases the GCC will utilize the valuation used by such legal entities (typically U.S. GAAP) and a calculated capital based upon a risk factor. There are two important exceptions:

- All entities within the defined insurance group (definition included in GCC Instructions) must be included
- All financial entities (definition included in GCC Instructions) must be included
- The level of risk (low / medium / high) and associated capital calculation assigned to a financial entity will be selected by the group and evaluated by the lead-State reviewer
- Non-financial entities that are subsidiaries of U.S. insurers, foreign insurers or banks where a capital charge for the non-financial entity is included in the regulated Parent’s capital formula will remain with the Parent and will not be inventoried. Regulators already have access to the financials of these entities if needed (if causing unrealized losses within the insurer).

**Eliminations**

The GCC uses an aggregation and elimination approach, where each of the above legal entities’ available capital/financial resources and calculated capital are combined, then eliminations are utilized to prevent any double counting of available capital/financial resources or calculated capital. The following example illustrates the use of eliminations for both available capital/financial resources and calculated capital. However, in practice the GCC only requires the foreign insurers and other financial entities owned by an insurance company to be “de-stacked” so if AA Holding Company was a U.S. insurer (e.g. AA Insurance Company) the capital required and calculated capital for DD Insurance Agency as a nonfinancial entity would remain in the values of AA Insurance Company and not be de-stacked.

In the above example, available capital/financial resources are referred to as available regulatory capital (ARC) and total authorized capital (TAC\(^1\)) and minimum calculated capital is referred to as minimal regulatory capital (MRC) and authorized control level (ACL\(^2\)). The GCC will allow non-insurance / non-financial entities owned by RBC filers in the group to remain within the available capital and regulatory capital so no eliminations are required for these entities. As shown, since AA Holding Company owns each of the other business entities in the organizational chart, $38 million (which is the amount of available capital/financial resources in the subsidiaries of AA) is eliminated from the TAC column since accounting methods include those as an asset on AA Insurance Company’s balance sheet. Also, the GCC includes capital calculations for AA Holding Company and DD Insurance Agency as part of the MRC in addition to the regulatory capital already included for the insurance subsidiaries. The MRC of the subsidiaries is eliminated from the parent’s (AA Holding Company) calculated capital. Therefore, in this example $4.81 million of calculated capital is eliminated from the MRC. Finally, the MRC of U.S. insurance subsidiary is multiplied by 2 in order to reflect Company Action Level (CAL) RBC as required in the GCC.

---

1. Terminology used in RBC for available capital/financial resources
2. Terminology used in RBC for calculated regulatory capital
Debt: It is important to note that the available capital used in deriving the GCC recognizes a portion of the group’s senior and hybrid debt as capital. This allowance recognizes that debt that is not already recognized as available capital/financial resources under all known accounting principles (SAP, U.S. GAAP or IFRS) may have some value to the group under the U.S. insurance regulatory requirements where such is dividend down to the insurance companies and where extraordinary dividends must be approved by the state. Qualifying debt along with limitations thereon is described in the GCC instructions as is the calculation for the additional available capital. In addition to looking at the group’s debt leverage overall consideration should be given to how the allowance for additional capital from debt interacts with changes in available capital and capital requirements from year to year. The impact of procyclical changes in the allowance for debt as capital should be assessed.

Other Information Included in the GCC
The GCC includes selected financial information (net income, premiums, liabilities, debt, etc.) that are captured in Schedule 1 and in the “Analytics” tabs of the GCC that are meant to be used to help isolate potential strengths and weaknesses of the group and more specifically where such exist among the entities in the group. Some important information related to other features in the GCC also should be considered and are discussed below. Schedule 1, a simplified version of the Inventory Tab, and most analytics are required in the case of a “limited filing”. However, data is not required for the capital instruments, sensitivity analysis and other information tabs in a limited filing.

Grouping - The GCC separately allows certain financial entities (e.g. asset managers) and non-financial entities included in the GCC to have their values and capital calculation combined (grouped) for more efficient reporting and analysis. Although the GCC instructions set parameters for such grouping, the general expectation is that regulators will work with each applicable GCC filer in determining where grouping is and is not appropriate outside of what is allowed within the GCC Instructions. Grouping should be viewed in context of materiality. A single entity conducting a given activity may not be material, but when all entities conducting the same activity are combined, they can be material.

Excluded entities – The GCC provides two mechanisms for the exclusion of non-financial entities in Schedule 1 and in the Inventory Tab at the discretion of the lead state. State regulators should consider whether any of the information collected in the GCC template in support of, is collected for an entity or group of similar entities that would otherwise be excluded from the GCC ratio calculation. Regulators should separately monitor increases in the level of activity of an “excluded” entity or group of similar entities for purposes of materiality and potential subsequent inclusion in the GCC.

Sensitivity analysis – A tab devoted to individual sensitivity analysis is included in the GCC. These informational items provide the regulator with impact of discretion in excluding listed entities and alternative perspectives on risk charges for non-financial entities and foreign insurers. Monitoring of these items can help the regulator identify areas where the GCC may be improved or capital calculations adjusted in the future. A sensitivity analysis increases the overall calibration of the capital requirements in the GCC from its normal 200% x ACL RBC calibration to 300% x ACL. This should be used as an initial benchmark to conduct further analytical review. No other cushion should be applied.

Accounting Adjustments - The impact of accounting adjustments and related detailed information is collected in the GCC template in the Inventory Tab and in the Other Information Tab respectively. Such adjustments can be material during the de-stacking process. For example, a consolidated holding company may include GAAP values for entities that would otherwise be valued under regulatory accounting rules (e.g., Statutory Accounting Principles - SAP) on a stand-alone basis. When the regulated entity is de-stacked the difference between the GAAP values and SAP values will be removed from the group’s available capital. These “lost” values can result in a
material reduction in the inventoried available capital compared to consolidated available capital. Understanding the impact and the components of this adjustment can help the regulator when considering the impact of issuing new debt or when evaluating the allowance for debt as capital calculated in the GCC template.

Intangible Assets – Acquisitions, mergers and reorganization often can create significant intangible assets at a holding company level or possibly at an operating company (other than a regulated entity) level. The GCC template collects information on intangible assets held by inventoried entities in the Other Information Tab. The available capital associated with the value of entities whose assets are materially comprised of intangible assets should be evaluated in the context of fungible resources and in assessing the adequacy of the capital calculation assessed on such entities.

Dividend pass-thru (gross view of dividends) – Schedule 1D collects information on dividends paid and received within the group. It also includes a column that indicates whether dividends were declared but not yet paid, as well as cases where dividends received where retained or “passed thru” to another affiliate or paid out in dividends to shareholders. This information will assist the regulator in evaluating the movement of capital within the group to fund strategic insurance and non-insurance operations or activities (e.g. expansion of activities) or to fund entity specific capital shortfalls. It also provides a window to capital leaving the group (e.g. debt repayment, stock repurchase, or dividends to shareholders).
July 31, 2021

Dan Daveline, Director, Financial Regulatory Services, NAIC
By e-mail at: ddaveline@naic.org

Mr. Daveline:

This submission is on behalf of a group of seven interested parties (IP Group) and in response to a May 18, 2021 exposure by the Group Capital Calculation (E) Working Group (GCCWG) and by the Financial Analysis Solvency Tools (E) Working Group (FASTWG). The exposure relates to proposed guidance about the Group Capital Calculation (GCC) that has been drafted for inclusion in the NAIC’s Financial Analysis Handbook (FAH) for eventual use by financial analysts of state insurance departments.

First, the IP Group appreciates the opportunity to engage with you and with members of the GCCWG and FASTWG on this important matter. The GCC is the outcome of a significant effort that has been underway at the NAIC since 2015. Each of the individual organizations that comprise the IP Group have been actively engaged with the GCCWG and NAIC staff over that period to assure that the GCC is appropriate for the state-based insurance regulatory regime and the insurance market in the United States.

In addition to the GCC itself as a metric, it will be critical that the way it will be analyzed and used by state insurance departments is consistent with the GCC’s intended purpose, design, and related measures that are now incorporated into the NAIC’s model Insurance Holding Company System Regulatory Act (#440) and corresponding model Insurance Holding Company System Model Regulation (#450). It is with that important goal in mind that the IP Group has focused its efforts to provide you and working group members with feedback on the subject exposure.

As you are aware, the IP Group had the opportunity to review an earlier draft of the proposed FAH changes and to respond to your request that it determine if the draft guidance was consistent with the IP Group’s understanding of the intended use of the GCC. The IP Group shared its comments with you in an e-mail and attachment that was submitted on May 17, 2021, noting some inconsistencies between the draft guidance and the IP Group’s understanding of the GCC or of its intended use, as well as other concerns involving the following areas described herein:

- Calibration of the GCC and the FAH threshold for more in-depth analysis
- Representations about the benefits that analysts may realize from use of the GCC
- The five-step approach to determining the extent of the analysis
- A suggested “exit ramp” to include in the five-step approach
- The process to finalize and adopt the proposed text
- Clarity of text
In many respects, the comments herein, and as reflected in marked text changes in the attachments (Attachment A – Analyst Reference Guide; and Attachment B – FAH Guidance), are aligned with our prior comments submitted on May 17. Accordingly, the topics covered in the prior letter help to frame the IP Group’s current comments, noting where changes have been made to alleviate our prior concerns if such is the case.

The undersigned members of the IP Group hope that you will find these findings and recommendations to be constructive and look forward to discussing them with you and GCCWG/FASTWG members.

Sincerely, and on behalf of the IP Group:

America’s Health Insurance Plans – Bob Ridgeway
American Council of Life Insurers – Mariana Gomez

Findings and Recommendations of the IP Group  
Submission of July 31, 2021

Calibration of the GCC and the FAH threshold for more in-depth analysis

We observe that the FAH draft uses 150% GCC as a benchmark, below which the 5-step process advances into deeper inquiries and analysis of the group’s situation. Further, references in the FAH text link the 150% to the RBC trend test and/or the GCC sensitivity test. In that regard, we have the following concerns and recommendations:

1. The FAH includes a benchmark that is intended to help analysts determine whether additional degrees of analysis are needed. While the stated benchmark may appear similar to the measures used in the trend or sensitivity tests, those measures were determined for very different purposes than the GCC and are each calibrated differently. The RBC trend test is a measure (in addition to other action levels in the RBC model act) that can result in regulatory action at the legal entity level. The sensitivity test helps GCCWG members assess the impact of the change in calibration (300% to 200% of ACL RBC) that was made to the GCC in October 2020. The GCC on the other hand is an analytical tool designed to provide regulators with more insight into risks in a group. Linking the GCC benchmark to the RBC trend test – while also referencing the GCC sensitivity test – will give rise to the same confusion and other concerns that were noted in the fall of 2020. Therefore, any proposed benchmark value must align with the GCC ratio’s basis of calibration and reflect the Working Group’s decision to adopt as a basis for the GCC calibration 200% ACL RBC, which is reflected in the October 30, 2020 meeting minutes, along with the Chair’s instruction to update the FAH accordingly. We also recommend that the FAH strike references to the sensitivity test to avoid confusion.

2. We are not aware of any quantitative analysis that was performed to determine an appropriate benchmark level for the GCC. It appears that the use of 150% in the current draft of the FAH was a judgment call or an attempt to mirror the RBC capital adequacy assessment in the FAH. Meanwhile, the current trial implementation process is about to enter its analysis phase. We have also recommended that the FAH guidance as to how a proposed GCC benchmark would be used to trigger additional in-depth analysis be subjected to a similar trial or further quantitative analysis by lead states in parallel with the submission of data by trial implementation participants, before any GCC thresholds are adopted in the FAH. The first filings of GCC data are not expected until 2023 based on year-end 2022 data, so there is no pressing need to establish a particular benchmark in the meantime. The additional two years of filings will provide meaningful data to inform any proposed benchmarks. Incorporating GCC results from those filings will give regulators a greater understanding of the distribution of GCC results across a

---

1 The RBC trend test is calibrated at 100% ACL RBC, the GCC ratio is calibrated at 200% ACL RBC, the GCC sensitivity “test” is calibrated at 300% ACL RBC.
2 A 300% GCC sensitivity analysis ratio is not the same as a 300% RBC trend test because they are each calibrated using different denominators (300% ACL vs. 100% ACL).
greater number of insurance groups than those that are involved in the current implementation trial.

Going forward, experience with annual filings made beyond the trial and initial implementation will provide additional feedback and any benchmark should be periodically assessed to assure that it remains at an appropriate level. Given the need for further evaluation of GCC results – including the degree to which GCC results compare to underlying RBC amounts given that, currently, there are some differences in their respective underlying risk calculations/requirements -- we recommend that a GCC benchmark not be established pending further analysis of actual GCC results. If a GCC benchmark is included in the exposed FAH, the text should clearly note that the benchmark is a placeholder, pending further analysis. We suggest that the GCCWG and NAIC staff avail themselves of the additional information that will be forthcoming in the near future through the trial and initial implementation to evaluate proposed benchmarks – including whether one is necessary for the GCC and, if so, to form the basis for a more informed determination of the benchmark.

Consequently, the IP recommends including the following in the proposed guidance, as shown in marked text on page 1-2 of the Regulatory Guidance (Attachment B):

Procedure Step 1 suggests that a review of the components of the GCC is appropriate when either the GCC ratio is trending downward or the GCC ratio is below an initial suggested threshold. Analysts should be mindful at all times that any stated threshold is for analysis purposes only and does not constitute a trigger for regulatory action (nor is such a trigger provided at any GCC level in the provisions of the Model Holding Company Act and Model Holding Company Regulation. Further, they should be mindful that the respective calibration levels differ between the GCC and RBC. When a threshold is provided, it should be viewed as an opportunity for an analyst to understand issues and concerns that may be emerging and address them with the group, if needed.

Finally, as experience in gained with the GCC and with these analysis procedures, the threshold for analytical purposes will be revisited periodically and remains subject to change.

In addition to that change, the IP’s redlined documents include corresponding edits to make each description of Step 1 consistent with the text above.

Representations about the benefits that analysts may realize from use of the GCC

As reported to you in our prior submission of May 17, 2021, the IP Group believes that in various passages of the proposed text, the benefits that regulatory financial analysts may receive from use of the GCC are overstated. Some of the draft text seems to put more credence in the GCC as a metric than is believed to be appropriate without the benefit of actual experience over at least a couple of annual reporting cycles.

The IP Group provided examples of areas where the text could be more fully descriptive or caveated in order to articulate the GCC in a more appropriate context. In the current draft exposure, we note that some of the examples that the IP previously provided have now been incorporated in the text, and we appreciate that. However, the IP Group continues to believe that other passages can be improved with additional context so that analysts can better understand not just the purported benefits of the GCC, but also the various factors that, if not adequately considered as well, may lead to inappropriate
conclusions. Therefore, the IP Group has included in the attachments marked text changes intended to address other concerns raised in its prior letter, including the following:

- The metrics used for analysis (e.g., 10% change or “trend”) may need to be updated based on experience working with the GCC over time.
- A decline in the GCC could be due, at least in part, to a change in regulatory capital requirements of one or more legal entities within the group and would not necessarily represent a “negative” development.
- The draft language states: “While there are numerous benefits of the GCC over consolidated approaches, the ability to drill down on the drivers is one of the more significant and is consistent with the states approach to not just looking at capital, but to the drivers of capital issues.” The IP Group has included this recommended text as well for additional context: “While the mechanics of the GCC approach will introduce some opportunities for analysis, potential limitations do exist depending on the extent of de-stacking and grouping of entities in the GCC template. While the data will provide a “road map” of sorts as to the location of capital and risks within the group, the level of detail will vary by group. Thus, the GCC will provide a quantifiable means to decomposing group components for analysis, but qualitative considerations by the analyst will be necessary as well, the extent and nature of which will inherently vary by group. Again, this highlights the need to assure that analysts consider information from other analytical tools, not just the GCC in isolation.”

The five-step approach to determining the extent of the analysis

The proposed five-step process is a somewhat simplistic approach, and the IP Group sees the benefit in terms of providing a consistent approach and methodology for analysts to use, as well as for accreditation review teams to independently assess that documented procedures have been followed. The IP Group also is of the view that the approach is generally consistent with the stated intent of the GCC as an analytical tool, and that it is appropriate to “dig deeper” in certain cases for further analysis.

The IP Group’s May 17, 2021 letter expressed some concern that the approach may appear in some instances to cross over from analysis and into regulatory action. Upon further consideration, the approach seems reasonable if it is viewed in the broader context of a regulatory tool that is not intended to serve as a prescribed capital requirement that would trigger regulatory action, rather as an analytical tool; the GCC should be considered along with various inputs from the totality of sources and tools available to the analyst and that any such conclusions (e.g., regarding the need to reduce risk and/or raise capital) would be based holistically in an overall context.

With that in mind, the IP Group has included at the outset of Attachment A the following marked text:

The purpose of including the GCC in the lead state’s holding company analysis is to provide the analyst’s understanding and rationale for the scope of application of the GCC (which entities within the holding company structure are included in the GCC calculation); whether the level of the GCC or recent trends evidence concerns that should be addressed with the group’s management; whether the supporting schedules of underlying legal entity data show indications of concern that should similarly be addressed with the group or with the respective legal entity’s supervisor; and whether such information which is presented in the GCC filing is generally
aligned with other information available to the analyst, and if not, why not, and whether that
evidences other questions or concerns that should be addressed, or how they may already have
been resolved.

Notably, the purpose of the GCC is not to trigger regulatory action. The GCC-related provisions
in the Model Holding Company Act and the Model Holding Company Regulation do not provide
for such a trigger; the GCC thus is not actionable in and of itself. Any regulatory action would
have to result from other information available to the regulator and based on existing legislated
authority. Thus, even though the GCC is intended as a group-wide measure and provides insights
as to capital adequacy and risks across the group, state insurance regulatory authority to take
action remains largely focused at the legal entity level.

The insertion of the above text also serves to describe the “Purpose of the Group Capital Calculation
(GCC) in Holding Company Analysis.” While that is the heading of the subject section of the document,
absent the inclusion of the above text a “purpose” does not otherwise appear to be articulated in the
document.

A suggested “exit ramp” to include in the five-step approach

Again, the five-step process provides a means to incrementally “dive deeper” into further areas of
analysis. The IP Group would however like some clarity as to whether all the steps necessarily have to be
completed; for example, if the analyst has completed the step 1 analysis and there is no indication of
concerns, there would seem to be no need to perform step 2 (and, by extension, other steps). With that
in mind, the IP Group suggests that the guidance also provide indicators that would lead to an
appropriate “exit ramp” from those detailed levels. In other words, if a deeper dive results in additional
findings that enable the analyst to conclude that initial concerns are unwarranted, then the analysis
process should “reset” at the next higher level.

The process to finalize and adopt the proposed text

The IP Group has some questions and potential concerns about the process to finalize and adopt the
proposed guidance. With a 2021 data collection and trial implementation exercise set to commence this
spring, an opportunity arises for participating lead states to test the proposed FAH guidance as they
review data submissions from volunteer groups. The IP Group encourages lead states to do so, not just
to test the proposed procedures solely in the context of the GCC, but also in the broader context of how
well inputs from other analytical tools (ORSAs, Enterprise Risk Reports, etc.) can inform the GCC (or vice
versa) to yield a more comprehensive analysis.

Moreover, many existing analytical tools are applied at the legal entity level, whereas the GCC gives an
aggregated view of the group but also eliminates intracompany investments and balances, has
allowances for qualifying debt as capital, and incorporates capital resources and capital charges from
regulated and non-regulated entities outside the insurance group. Thus, how the GCC will relate to the
RBC of underlying insurance legal entities (e.g., of the flagship insurer in the group) will depend on a
number of factors which will vary from one group to the next. Gaining an understanding of that
relationship will take time and experience and can inform further modifications to the FAH text that
could be useful to analysts.
Feedback from testing the proposed FAH guidance can then be used to improve its text with respect to the five-step process and integration of processes and findings with other analytical tools. While the current proposed text is a good start and instructive as a proof of concept, the IP Group believes that it should not be considered final until it has also been subjected to trials and testing by lead state analysts.

The IP Group would also like to better understand whether, and if so, through what process, the FAH guidance will consider the work of certain international workstreams at the NAIC (or vice versa). For example, the E.U.-U.S. Covered Agreement has already influenced to some extent the timing of completion and adoption of the GCC by the NAIC, and the timing of its proposed implementation by lead states of U.S.-based groups that are engaged in cross-border business in the E.U. Another example involves the comparability of the Aggregation Method with the IAIS Insurance Capital Standard, and what that may imply about the GCC and how it will be used by lead states.

Clarity of text

In the IP Group’s previous submission, it was noted that draft text would benefit from a thorough editing process to improve its clarity and readability. In this current submission, the IP Group has made numerous marked text changes in both attachments, in order to improve clarity; incorporate the matters described above; incorporate additional items that also stem from our prior comments; and to adjust the text where we have come across passages that appear to deviate from our understanding of the intended use of the GCC.
Purpose of the Group Capital Calculation (GCC) in Holding Company Analysis

The purpose of including the GCC in the lead state’s holding company analysis is to provide the analyst’s understanding and rationale for the scope of application of the GCC (which entities within the holding company structure are included in the GCC calculation), whether the level of the GCC or recent trends evidence concerns that should be addressed with the group’s management; whether the supporting schedules of underlying legal entity data show indications of concern that should similarly be addressed with the group or with the respective legal entity’s supervisor; and whether such information which is presented in the GCC filing is generally aligned with other information available to the analyst, and if not, why not, and whether that evidence other questions or concerns that should be addressed, or how they may already have been resolved.

Notably, the purpose of the GCC is not to trigger regulatory action. The GCC-related provisions in the Model Holding Company Act and the Model Holding Company Regulation do not provide for such a trigger; the GCC thus is not actionable in and of itself. Any regulatory action would have to result from other information available to the regulator and based on existing legislated authority. Thus, even though the GCC is intended as a group-wide measure and provides insights as to capital adequacy and risks across the group, state insurance regulatory authority to take action remains largely focused at the legal entity level.

The following information is intended to provide background and context for concerns when utilizing the NAIC Group Capital Calculation (GCC) for an insurance holding company group (hereafter referred to as “group”) completing the GCC where required.

Background Information

Beginning in 2008, the NAIC Solvency Modernization Initiative (SMI) began to consider whether there were any lessons learned from the financial crisis that would cause the solvency framework to be modified. The NAIC determined that changes should be made to the group supervision framework in the area of group supervision, starting with the new annual requirement for the Lead State of each group operating in the U.S. to complete a written holding company analysis. Since that time, other changes to state laws have been made to further enhance group supervision (e.g., Form F, ORSA, and Corporate Governance reporting). All of these new tools are inputs into the previously mentioned holding company analysis, which is now summarized into a consistent tool used by all states known as the Group Profile Summary (GPS).

Benefits of the GCC & Methods for Achieving Them

The Group Capital Calculation Instructions describes the background, intent, and calculation for the GCC in detail. As stated in the Group Capital Calculation Instructions, the GCC and related reporting provides more transparency of an insurance group’s structure and related risks to insurance regulators and makes those risks more identifiable and more easily quantified. In this regard, the tool is intended to assist regulators in holistically better understanding the financial condition of risks that non-insurance entities may pose to the group, how capital is distributed across an entire group, and whether and to what degree insurance companies’ capital may be at risk from the operations of non-insurance entities, potentially undermining the insurance company’s financial condition and placing upward pressure on premiums to the detriment of insurance policyholders.

The manner in which the GCC achieves some of these benefits varies. For example, with regard to understanding how capital is distributed across an entire group, this can be seen in two ways. One is by viewing the Tab titled “Input4-Analytics” as follows: 1) the display of the “Ratio of Actual to Required Capital”; 2)
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

The display of “Required Capital” in a separate column. The degree of subsidization can also be seen in the “Input 4-Analytics” tab, with the display of the columns as follows: 1) Capital Contributions Received/(Paid); 2) Net Income. While certainly one year of information can show this exists, most analyst benefit will not be seen until after further years of the GCC are reported within the template. Once at least five years of data are displayed in this “Input 4-Analytics” tab, it will allow the analyst to better understand the financial condition of the group as a whole as well as the risks posed by non-insurance entities in the group. Of course, such conclusions can only be made once the analyst can both see the columns as well as understand what is occurring that is leading to such figures.

Recognizing that legal entity supervision and related tools (e.g., RBC) is the primary means to address concerns about policyholder protection, the GCC may provide additional early warning signals to regulators so they can begin working with a company to resolve any concerns in a manner that will ensure regarding risks or activities of non-insurers within the group that policyholders will be protected. This early warning signal can be seen with the trending of the financial information in the “Input 4-Analytics” tab as well as through the application of sensitivity analysis in the Input 5 Tab and inclusion of other relevant information in the Input 6 Tab. However, the analyst should also understand that other “qualitative tools,” such as the Form F, are capable of also providing early warning signals if properly reported by the group. In addition, since most holding company systems may have a larger percentage of their operations in the insurance businesses, the...
insurance trends for the U.S. insurers in the group should already be known and made available to the lead-state by the legal entity regulator or by the domestic state regulator of the insurer(s). However, in the context of added policyholder protection, this may largely come into play with respect to the added quantitative data on non-insurers.

The GCC is an additional reporting requirement but with important confidentiality protections built into the legal authority to require such reporting. State insurance regulators already have broad authority to take action when an insurer is financially distressed, and the GCC is designed to provide regulators with further insights to allow them to make informed decisions on both the need for action, and the type of action to take. That said, the GCC and the related provisions in the NAIC’s Model Holding Company Act and corresponding regulation are not designed or otherwise intended for regulators to take regulatory action based on the reported level of a group’s GCC. Regulators will use other existing tools and authorities to take action, primarily at the legal entity level.

While the new information from the GCC may offer new insights, it is equally important to understand that it will be up to the analyst to work with the insurance group to actually understand what is leading to the figures reported in the GCC, and from that perspective, especially in the early years of the GCC, it will require learning by both the analyst and the group to really be able to utilize the GCC in a manner as suggested in these introductory paragraphs.

**Other Considerations When Considering Such Benefits**

Recent unforeseen events and economic conditions (i.e., like the recent pandemic, recession, etc.) can also create stresses on a group, reinforcing the value of the quantitative data included in the GCC. Some stresses are similar to those experienced during the financial crisis and others are more unique. However, because the GCC is based upon a methodology that gets its inputs from individual legal entities, the capital calculated for each legal entity certainly can only capture the allowed capital resources of the legal entities in the group. While such an aggregation-based methodology is an appropriate group-level capital measure, until experience is gained with the GCC, it is not known as to how the GCC will behave in response to business cycles and various risk events, given in part because it only recognizes limited diversification benefits among entities in the group except for the diversification embedded in existing entity specific regulatory capital requirements. And while the GCC is not meant to be used in a way that compares groups to each other, it also true that unknown how it will behave across groups, peers and even sectors. This is true because of its limited diversification benefit, the differences between group types (mutual v. stock holding company), grouping of entities, and scope of entities included in the calculation.

The following guidance on the GCC is intended to be utilized in a manner that allows the GCC to enhance group-wide financial analysis and to be used as an additional input into the GPS. The GCC provides the quantification of risk within the group and when combined with the information from the ORSA on the amount of capital needed to run the company’s current business model, puts the regulator in a much better position to understand the available capital and calculated capital within a group, as well as the financial condition of the group. Both are complimentary tools to each other, with the ORSA providing management’s internal approach to capital management, and beneficial in understanding of the economics of the group. The GCC provides a standard model that can better enable the analyst to understand where the entire group stands with respect
That said, analysts should be mindful of the differences between regimes and in the insights that can be gained by various tools. For example, in the case of a group with predominantly U.S. operations, the GCC will largely be based on the standard model/RBC of the U.S. subsidiaries. However, the ORSA is not constrained by a standard model; rather, the ORSA reflects management’s internal approach to capital management, and may utilize or benefit from economic capital models, other internal models, stress testing and other means. As a result, while the GCC is an additional input to the ORSA, it may provide data and signals that do not align with the risk measures within the ORSA.
Utilization of the Group Capital Calculation in the Lead State’s Responsibilities

The lead state is responsible for completing the holding company analysis and documenting a summary of that analysis in the GPS. The depth and frequency of the holding company analysis will depend on the characteristics (i.e., sophistication, complexity, financial strength) of the insurance holding company (group) system (or parts thereof), and the existing or potential issues and problems found during review of the insurance holding company filings.

It can be summarized that Similarly, in the analysis of the GCC will be used in a similar fashion under this guidance since it provides the depth of the review in the “five-step process” and specific inquiries will vary by group and situations where the GCC is based on each group’s unique situation. For example, in some groups, very little if any work (inquiries of the group) will be done after the first step due to a generally strong GCC figure and generally positive trends of the ratio over time. While in other groups, the analyst may need to proceed through each of the five steps. Exactly how the analyst proceeds through the guidance will be dictated by a multitude of factors and requires judgement.

GCC Construction That Also Impact its Utilization and Review

Some decision points may be addressed prior to the submission of a GCC template. These include: the scope of application (e.g., whether segments of the holding company system (group) should be excluded for financial conglomerates); whether a limited filing will be allowed (as permitted in Model Law #440 and Model Regulation #450); and whether subgroup reporting (as defined in the GCC instructions) of a foreign insurance group will be required. In general, the analytics provided by the GCC will be similar for all entities included in the template. (See the end of this section (Primer on the Group Capital Calculation Formula) to better understand these points.) These factors are also a consideration in determining the depth of the analysis of the GCC and subsequent correspondence with the group. Refer to chapter VI.B. Roles and Responsibilities of Group-wide Supervisor/Lead State for details on responsibilities for completing the GPS.

The utilization of the GCC can be summarized as an additional input into the GPS. More specifically, once the analyst completes their review of the GCC, the overall ratio, the trend of the ratio, a summary should be incorporated into the GPS to help support the assessment of strategic risk.

Documentation of Review of the GCC in the Group Profile Summary (GPS)

The purpose of procedures is to document the GCC into the GPS. The following provides an example of a GCC Summary that represents the minimum expected input of the GCC into the GPS, with additional information also reported within the Strategic branded risk classification. The other purpose of this section is to determine if more follow-up should be performed and, if so, to assess the results of that additional review. The following is intended to assist in documenting the analysts’ understanding summary documentation of the group’s GCC to be included in the GPS.
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

Group Capital Calculation (GCC) Summary

Summarize your assessment of the GCC both quantitatively and qualitatively, including any such items as may not be applicable to a branded risk category. For example, it may be appropriate to indicate “The review of the group’s GCC indicated the scope of the application is consistent with the lead state’s determination,” and if possible to summarize succinctly, the general scope of the GCC. For example, “the GCC includes all U.S. and Bermuda operations, but excludes ABC non-insurance operations in South American countries.” It may also be appropriate to identify key drivers of risks for the group within the GCC that are discussed later in the branded risk categories, as those risks may be related to and supplement existing risk assessments derived from holding company analysis or they may be new risks that warrant further review. The group’s GCC of 201% in the current year was impacted by a decline in...
Group Capital Calculation (GCC) Summary

Summarize your assessment of the GCC both quantitatively and qualitatively, including any such items that may not be applicable to a branded risk category. For example, it may be appropriate to indicate "The review of the group’s GCC indicated the scope of the application is consistent with the lead state’s determination" and, if possible, to summarize succinctly, the general scope of the GCC. For example, "the GCC includes all U.S. and Bermuda operations, but excludes ABC non-insurance operations in South American countries". It may also be appropriate to identify key drivers of risks for the group within the GCC that are discussed later in the branded risk categories. Those risks may be related to and supplement existing risk assessments derived from holding company analysis or they may be new risks that warrant further review. "The group’s GCC ratio of 201% in the current year was impacted by a decline in Total Available Capital of SX which is related to group’s non-insurance operations in Bermuda and as well as the negative impact of market risks in the U.S. Insurance legal entity ratio components, which based on further analysis has resulted from the recent financial market volatility".

Branded Risk Assessment

Strategic: The group’s Group Capital Calculation is assessed as low and stable, and is a positive consideration in the overall assessment of strategic risk. The GCC has generally been strong and consistent over the past five years as illustrated in the following table. Additionally, refer to the GCC Summary for further details.

<table>

GCC Summary and Strategic Branded Risk Documentation:

The above information documented in a summary section of the GPS and into the Strategic branded risk classification is expected to be the primary type of information that is always documented into the GPS. Since the GCC provides a capital measurement of the group and, consistent with the branded risk categories, should be reported in the strategic risk section. Similar to how RBC for an individual insurance company entity is helpful in allowing the analyst to better evaluate other potential issues given capital represents a relative measure of cushion for adverse risks, the GCC and inclusion herein helps regulators to understand the same relative to a group. While the GCC is not a capital requirement, with specified ladders of intervention, each of the insurance legal entity figures are relative to individual company requirements, and therefore the GCC can provide a relative measure of strength against such minimum capital levels of the insurers.

Other Branded Risk Documentation:

To the extent the ratio was trending negatively, or available capital was decreasing, the analyst may choose to include more information in the strategic branded risk section of the GPS that summarizes any key drivers of such findings if they did not fall into one of the branded risk categories. Those drivers of the change would likely be documented in other specific branded risk categories, for example Pricing/Underwriting if driven by weak...
insurance underwriting, or Reserving if the drivers were reserve deficiencies, etc. References to other branded risk categories may also be appropriate. However, *practically speaking*, this may not always occur or be possible for the analyst to pinpoint given the multitude of risks within any *insurer’s* regulatory capital requirement formulas. This guidance is simply meant to suggest that if the GCC does in fact appear to show particular trends that are noteworthy on specific risks such as the underwriting branded risk.
risks, further documentation into that (applicable) branded risk may be appropriate.

A determination for when documentation of risks from the GCC into other branded risk categories may be appropriate is driven by both the question of whether any of the thresholds in Procedures 1a-1e were met, and the information obtained from the rest of the GCC information as described in Procedures 2-4. The GCC Summary is intended to be high-level, therefore other more detailed observations from reviewing the GCC should generally not be documented into the GPS unless they are specifically insightful, add to a high-level understanding of the group’s financial condition, as shown in the example above, or are specific to a branded risk category as stated.

Other Considerations:

In addition to the broad guidance provided herein on the documentation of the GCC into the GPS, the analyst should also understand the following more general points that could impact the GCC result for a particular group, judgement. Judgement is required when considering these points:

- If the group has a significant amount of business in legal entities that are domiciled in jurisdictions whose capital regime is based on market-based valuations, the GCC will inherently be more volatile (as compared to a pure U.S.-based group for which RBC and statutory valuations are the norm).
- Similarly, a group may have legal entities that are solely based in jurisdictions that utilize a standard model for capital requirements or have entities in jurisdictions where the use of internal models has been approved. All else being equal, the manner in which capital measures quantify requirements and behave over time will differ to some extent between the two. Also, a change from a standard method to one based on internal models for a key subsidiary will likely produce a noticeable change in the GCC that is not reflective of changes in the entity’s underlying business.
- The GCC provides a means for analysts to identify non-insurance operations outside of the insurance group and to determine the extent of risk they may pose to the insures within the group. However, in doing so, analysts should understand that findings from review of Forms B, D and F might be equally valuable in these situations.
- When evaluating capital requirements for non-insurer financial entities that are not subject to regulatory capital requirements, consideration should be given to the appropriateness of the GCC’s capital charge for a specific entity’s financial operations (e.g., an entity conducting large volume or size of complex transactions but with little net revenue or equity).
- When evaluating capital requirements for non-insurer / non-financial entities, consideration should be given to the appropriateness of the level of risk assigned to specific entities.

Detailed Observation Documentation:

More detailed observations shall be documented separately from the GPS and in a form not dictated by the NAIC. As in all holding company analysis, the level of documentation is determined by the lead state insurance department and is dependent on the characteristics and complexity of the group and its risks. These detailed observations generally need to only note observations that are indicative of drivers of trends and/or actions being taken by the group to mitigate risks. In some cases, these points can be easily summarized into the GPS, in other cases, they are too detailed and should be documented instead within the separate document not dictated in form by the NAIC. The analysts are not expected, nor should they spend time documenting
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

© 2021 National Association of Insurance Commissioners
changes within either the GCC or individual company movements that either do not create a trend at the group level or identify a growing weakness in the group. However, judgment is required to make this determination.

For example, a 10% decrease in an RBC ratio of one of the smaller insurers within the group generally would not be documented, although, by contrast, a 10% decrease in an RBC ratio in one of the larger insurers in the group that causes either alone or jointly with other insurers, causes a 10% decrease in the GCC should be noted. However, it should be understood also that this 10% threshold is not intended to be a used as a "bright-line", and in fact, it is possible the 10% is not necessarily indicative of any negative trends at all. This could be the case when for example there was a change in the regulatory capital requirement. Therefore, again, judgement is required in making these determinations and this, as well as other thresholds used in this guidance are not meant to be bright-lines. As the GCC is used more, both by the individual analyst, as well as all of and by the various states, using the use of judgement around these threshold are expected to become easier, as it will be better informed by experience.

Specific Procedures for Completing Analysis of the GCC.

Specific Procedures for Completing Analysis of the GCC.

It should be understood that The following procedures should be used by the analyst in their review and documentation of results of the GCC. However, if the analyst determines after completing any of the above procedures (steps), that no further work is deemed necessary to fully document the material risks of the group observable from the GCC (as well as the required information to be included in the GPS from the GCC), this should be documented by the analyst in any workpapers deemed appropriate by the state and the general reasons for supporting that conclusion. In making this determination, it should be reiterated these procedures are not intended to be used in a checklist manner and judgement based upon existing information on the group obtained from the Form F, ORSA, or any other source is certainly part of that judgement decision.

Procedures Step 1a-1e

The purpose of procedures 1a-1e is to assess the GCC level and to identify the drivers of any changes in the GCC, in order to summarize and to document that overall assessment in the GPS and its strategic risk category, which is the minimum expected input of the GCC into the GPS. However, the analyst should understand that in the early years of the GCC, limited amounts of prior year(s) comparative data will be available, therefore requiring more judgement in determining where further analysis is warranted. Such judgement may need to be based upon various factors, including but not limited to other known information regarding the applicable group obtained from other sources (e.g., ORSA, Form F, Form B, etc.).

Procedure 1 is also intended to help the analyst determine if more follow-up analysis work should be performed. However, if the answer to any of the questions in 1a-1e is "yes", the analyst should proceed with step 2, evaluating decreases in total available capital, and/or step 3, evaluating increases in leverage to determine the cause(s) of the negative trends. In the example provided above, the GCC ratio is above this handbook’s GCC benchmark [value to be determined], further review may be necessary. If above 150%, which suggests further review may not be necessary. In addition, the trends are positive with no decreases in the base ratio and the only year below the 150% suggested benchmark being in PY1 where presumably the analyst may have performed some level of inquiry to the holding company to understand the driver of the drop. Even then the drop was below the Handbook’s predefined threshold of 10% and may not have been necessary.

Procedures Step 2a-2m

Unlike step 1, the intent of step 2a-2m is to determine the actual source of the negative issues and where to document them. They should be documented in the GPS. Procedure 2a is specifically focused on identifying the category of legal entities (and subsequently the individual legal entities) that might be driving the issues by

Procedure 2b recognizes that the GCC does allow some debt to be included in capital up to a predetermined limit and can drive the overall GCC ratio. The following sample table taken from the GCC calculation using the data in Schedule 1 can be helpful in making this determination. Cases where debt is issued to address risk-driven reductions in the GCC ratio, may not offset those reductions. This data metric may not be available in the case of a “limited filing”.

Procedure 2d is focused on requesting more specific information from the legal entity regulator or the group to better identify the source of the issue(s). Procedures 2e-2l simply contemplates that if the source of the issues
can be identified into one of the branded risk categories, to document as such it should be documented in the detailed workpapers and into that the appropriate branded risk category of the GPS. However, if it is recognized that the source of issues may be in multiple branded risk categories, in which case documentation of each of the sources into the detailed workpapers is still appropriate. However, documentation into one of the single branded risk classifications of the GPS is only appropriate if that risk category is a material driver of the negative trends. Procedure 2m is intended to identify if the source of the issues is related to non-insurance operations. The GCC is intended to provide for more consistent analysis of risks to the insurer that may originate from non-insurance entities within the holding company system.

Procedures Step 3a-3f

Procedure 3a is specifically focused on identifying the category of legal entities (and subsequently the individual legal entities) that might be driving the issues by looking at the leverage ratio indicators of leverage, e.g., leverage, where this risk may manifest itself either through increased writings or exposure, or through increased balances relative to capital and surplus. The following sample of a table from the GCC calculation using the data in Schedule 1 can be helpful in determining the source of the issues.

VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

Procedure 3b is more forward looking by suggesting the analyst look at the same leverage ratios used in 3a to determine if the trends might continue and lead to further decreases in the GCC ratio. Procedure 3c simply requests the analyst use the leverage information to target questions to the group to better identify the drivers. Procedure 3d-3f are all questions designed to help the analyst consider whether the changes in leverage will lead to greater underwriting risk, reserving risk, or market and credit risk. Procedures 3d-3f provide general inquiries for additional information for the analysis, however these inquiries may also appropriately provide a basis for the analyst to enter into conversations with the group on the same topics to understand how the group views these topics and how the group is managing and monitoring these risks. For groups filing an ORSA, see also documentation within the ORSA report for additional information on the identified risks and the group’s monitoring of risks, as well as consistency of the discussion with management and management’s observations in the ORSA Summary report.

Procedures Step 4a-4b. Procedure 4a is intended to help the lead state understand the historical capital allocation patterns or the likely future needed capital allocation patterns by simply documenting in the detail analysis workpapers. This includes, for example, noting that there is consistency in the entities generating net income and distributing it further through the group, and in some cases may require distribution through other insurers, which in the US often requires approval if considered extraordinary. Procedure 4a is intended to utilize that knowledge, along with other planned actions of the group, to understand whether problems with repaying debt or other obligations in the group could occur. The intent is to be in a better position for discussions with the group on where capital may come from to support future expected activity or future unexpected material events. The following sample of tables from the GCC calculation using data in Schedule 1 can be helpful in determining the source of the issues.

### Procedures Step 5a-5h

Procedures 5a-5h are designed for those rare/uncommon situations where the group has a need to reduce risk given the alternative of raising capital may be unlikely (see appendix for further discussion on that topic). In performing this procedure, it should be understood that Procedure 2 (Evaluating Decreases in Total Capital) and Procedure 3 (Evaluating Increases in Operating Leverage) have already been considered, and therefore it has been concluded that either capital is decreasing, or operating leverage is increasing. As such, after considering information that may already be available to the regulator on the business plan, Procedure 5b is largely focused on better understanding directly from the group the drivers of the apparent negative trends. It should be understood that some of these trends may have already been known, through for example the ORSA review and discussions by the lead state regarding such takeaways from such ORSA discussions of the ORSA. In fact, if already known, the key takeaways may already be documented in the GPS and therefore the remaining procedures in this section may be irrelevant and could be skipped if recently already considered and evaluated. In addition, to be sure, such trends from Procedure 2 and 3 may not suggest anything more needs to be done, in fact that no additional evaluation is why necessary. It is for this reason the first procedure is focused on an existing business plan since it is possible these trends may have been expected. In fact, Procedure 5a is based upon the belief that reducing risk by the group may have already been incorporated into the group’s latest business plan, which may have already been obtained from the Annual Form F Filing.

previously incorporated into the group’s latest business plan, which may have been obtained from the Annual Form F Filing.

Procedure 5b on the other hand contemplates that the manner to address any unexpected negative trends may not have already been incorporated into the latest business plan and simply further contemplates that the analyst speaks with the group to understand how the group intends to address the issue. The existence of negative trends that may appear to be “negative”, e.g., a decline in the reported GCC, may actually be the result of a conscious determination by the group to more efficiently deploy capital yet remaining at sufficient levels from an ERM perspective. Thus, this procedure is not meant to suggest action must be taken by any regulator, rather to understand whether a trend is in fact “negative” or not, and if so, what the group is already doing to address the issue. To be sure, some of what the group is currently doing may already be known by the lead state, either through the ORSA, the Form F, or a periodic meeting with the group that some states conduct annually with all groups. Rather, the procedure provides an opportunity for the analyst to make sure they understand the drivers and what, if anything, the group is doing to address the underlying issues. To be clear, increases in operating leverage are often planned, and often come with expected future actions by the group, such as capital injections or future transactions, that may reduce risk. Therefore, these discussions would allow these actions to be completely documented and understood. Meanwhile, decreases in capital sometimes are not expected, and may not result in immediate action if any, but it is possible that it may lead the group to take future actions, or contemplate future possible actions to take. Therefore, these discussions would allow these potential actions to be completely understood by the analyst and documented.

Procedure 5c contemplates assessing if the group has the ability and resources to either reduce its risks or to raise additional capital. See the section below for further Considerations of the Group’s Capacity to Raise Capital. This procedure is not intended to suggest the analyst has the capacity to make this determination on their own, but rather to question the reasonableness of the possibility. Further, the GCC and the related provisions in the NAIC’s Model Holding Company Act and corresponding regulation are not designed or otherwise intended for regulators to take regulatory action based on the reported level of a group’s GCC; regulators will use other existing tools and authorities to take action, primarily at the legal entity level.

Procedure 5d contemplates that the group may believe no action is necessary because it believes current capital is adequate to meet its business plan and is more likely to be the case when the company experienced a one-time reduction of capital as opposed to a growth in leverage that may continue. Procedure 5f is for the rare situation where the legal entity insurers have been strained or face impending pressure contemplated within NAIC Model 385–Model Regulation to Define Standards and Commissioner’s Authority for Companies Deemed to be in Hazardous Financial Condition that would suggest one or more of the insurers may be in a hazardous financial condition. Procedure 5f is designed to suggest the analyst bring the collective supervisors of the legal entity insurers together for a supervisory college to fully understand what is occurring and the group’s plans for addressing the underlying issues it is facing. Procedure 6f is an extension of Procedure 5f as it contemplates the regulators discussing whether they believe the proposed actions from the group are adequate. This action could represent something either informally done before an insurer is in a regulatory action level, or formally once an insurer is in a regulatory action level. Procedure 7f is similar to the other actions contemplated within a supervisory college or, for example, to address a troubled insurance company under Accreditation requirements regarding communication with other states.

Additional Procedures – Business Plans
While there is a multitude of possibilities and which are beyond the scope of this guidance, it is not intended to address all of those. The following provides some summary of the related issues that may be helpful to the analyst to consider (see also section 6 for consideration of the structure of the group and capital infusion issues).

Group’s Business Plan:
Planning Process:
VI.H. Group-Wide Supervision – Group Capital Calculation (Lead State)

**Group’s Business Plan:**

**Planning Process:**
- Group system’s overall planning process (e.g., who is involved, how frequently it occurs, etc.) and how the overall initiatives are determined
- Understand the group’s estimate of the impact of the proposed actions on financial results
- Review the plan’s assumptions for reasonableness. Consider the likelihood of variations in the assumptions and the resulting impact on the future financial results
- Consider subcategories of changes including:
  - Overall potential changes in investment strategy
  - Overall potential changes in underwriting strategy or existing concentrations
  - Overall impact on financing matters (e.g., debt, requirements, etc.)
  - Overall impact on derivatives to mitigate economic conditions
  - Overall changes in governance or risk management procedures
  - Increased ceded reinsurance transactions (common approach to reducing risk/increasing surplus):
    - Details regarding the revised strategy
    - Specifics on types of coverage such as assumption reinsurance, loss portfolio transfers.
  - Transfer of risk considerations

**Variances to Projections:**
- Consider the group’s history of explanations regarding variances in projected financial results and the insurer’s actual results. If analysts determine the goals of the business plan are not attainable and/or projections are unreasonable, a revised business plan may be requested.
- Identify any internal or external problems not considered in the plan that may affect future financial results. Examples of such problems include the following: 1) the existence of competitors to limit future sales levels; 2) recent state legislation restricting the company’s product designs; or 3) the loss of key marketing personnel.
Evaluating a Business Plan:

Analysts should consider further detail where necessary in evaluating the proposed revised business plan but also monitor, on a periodic basis, the insurer’s progress in achieving the initiatives included in the group’s plan. The goal of any plan is assuming that the analyst has determined that a decline in the GCC is to be considered a “negative” event, i.e., it was not the result of capital management and planning to more efficiently utilize capital while staying within sound levels to achieve ERM objectives, the goal of the plan would then be to address the improvement of the underlying causes that led to the issues and an improvement in subsequent GCC base ratio results. Detail considerations for improving the plan may include the following (where considered inadequate):

- Trending comparative measures of targeted risk exposures including (where applicable):
  - Asset mix by detailed types
Consultation with Other Regulators

- Consult with members of the supervisory college (if applicable) or other domestic states for input in evaluating the revised business plan

Considerations of Group’s Capacity to Raise Capital

The following is designed simply as a reminder of considerations the lead state would contemplate when discussing the group system response to the issues identified in this section. More specifically, in most situations a group will first consider ways to reduce risk but in limited situations they may consider trying to raise additional capital. While this is typically not an option for a group that is currently not performing as it anticipated, in some situations alternative sources of capital may be raised if the holders of the new capital are given rights that are attractive to the holder. In addition, in some cases the group may have the ability to issue other forms of capital (e.g., debt), which can be used to inject into the insurance subsidiaries. While these facts are not unique to the utilization of the group capital calculation, they are worth a reminder along with relevant other related details.

New Equity Considerations

Public Holding Company
While no two groups are the same, issuing public stock may be limited for the reasons previously identified. In addition, regulators are reminded that a public holding company may be obligated to pay dividends in order to maintain expectations of their shareholders, making the reduction of risk a more viable action under the circumstances.

Private Holding Company
While no two groups are alike, a private company has some of the same characteristics as a public company in
terms of owners’ expectations, but usually such expectations differ from a public company and it may be more feasible for a private company given their access to specific individuals that may have a higher interest in higher capital rights.
feasible for a private company given its access to specific individuals that may have a higher interest in higher capital rights.

Mutual Insurance Company
A mutual insurer is limited in terms of its access to capital because it cannot issue new stock.

Mutual Holding Company
Because mutual holding companies have characteristics of both public companies and mutual companies, there are implications of how such a structure affects its operations.

Non-profit Health Company
Insurers that are non-profits are generally charitable organizations and it is not uncommon that some types of insurers, particularly those that provide health insurance, to have some history as a non-profit. It may be helpful to understand these types of dynamics when considering a group structure.

Fraternal Associations
Regulators often find similarities between a fraternal benefit society and a mutual insurer because both can be limited in terms of their ability to raise additional funds.

Reciprocal Exchanges
Regulators often find similarities between reciprocal exchanges and fraternal benefit societies and mutual insurers because they can be limited in terms of their ability to raise additional funds. Although this is a general consideration for the regulator when evaluating the group system, there is generally much more that must be understood before coming to this conclusion because in some cases, the reciprocal may be able to assess policies that can serve a similar purpose as raising capital.

New Debt Considerations
Through discussions with the group, understand the potential impact of any new debt on the group system, including specifically the extent of future additional reliance on the insurance operations and whether those insurers have the capacity for such. Consider also an updated review of:

- Total debt service requirements.
- Revenue streams expected to be utilized to service the debt.
- Any new guarantees for the benefit of affiliates.
- Any new pledge assets for the benefit of affiliates.
- Any new contingent liabilities on behalf of its affiliates

International Holding Company Considerations

International Holding Company Structure
This section is applicable only to those international groups that are required to complete the GCC, which may be relatively small considering many international holding companies have a non-US groupwide supervisor and are exempt from the GCC. Those foreign groups that are required to complete the GCC will generally file a “subgroup” GCC that included entities that are part of the group’s U.S. operations in those situations, the-
analysts should understand the structure to determine if it has any impact on this analysis. For example, a German-based holding company may have advisory boards established to communicate with U.S. regulators. Analysts should direct any regulatory concerns to the appropriate organization contact to ensure a prompt reply or resolution if the insurance regulator is not responding.

**Capital / Operational Commitment to U.S. Operations**

Some foreign holding companies may consider their U.S. enterprises non-core and consequently show weaker commitment to their ongoing business operations or financial support. In recent years, after sustaining continued losses from U.S. subsidiaries, several prominent foreign holding companies decided to cease their U.S. operations and liquidate their assets. Analysts should be aware of a holding company’s stated commitment to ensure the continued stability of U.S. operations. This commitment may include a written or verbal parental guarantee.
Primer on the Group Capital Calculation Formula

The National Association of Insurance Commissioners (NAIC) began development of the Group Capital Calculation (GCC) in late 2015 following extensive deliberation on potential measurement models and methodologies. The GCC uses a bottom-up aggregation approach, accounting for all available capital/financial resources, and the required regulatory capital based on the measurement of assets and liabilities of the various corporate entities, including insurers, financial and non-financial businesses.

The GCC Aggregation Methodology

As illustrated in the sample tables above, the proposed GCC is an aggregation or grouping of the available financial resources and calculated required capital of all legal entities in an insurance group that potentially pose material risk to the insurers in the group. The GCC allows some discretion in determining what entities under common control but outside of the defined Insurance Group may be excluded from the scope of application in the GCC. When reviewing a group’s choice of entities to be excluded from application of the GCC, the following points should be considered:

- The regulatory evaluation should be based on the criteria for material risk (e.g., structural separation; no history of cross subsidies, or other criteria as defined in the GCC instructions);
- Group requests for reducing the scope of application of the base GCC should be based on supporting information and rationale provided by the Group;
- Information on excluded entities should be made available upon request by the analyst.

The GCC includes the following types of entities and sets forth the general approach of calculated capital toward each:

U.S. Insurers - The available capital of U.S. domiciled insurers is determined by statutory accounting principles (SAP) as defined by state law and the NAIC Accounting Practices and Procedures Manual, which defines assets, liabilities, and in-turn net available capital/financial resources, sometimes referred to as policyholder surplus. The calculated capital for these insurers is subject to state law that requires these insurers to maintain minimum capital based on the applicable NAIC Risk-Based Capital formula at 200% x Authorized Control Level.

Non-U.S. insurers – Similar to the available capital and calculated required capital of U.S. insurers, the available and calculated capital of non-U.S. insurers is determined by reference to the home jurisdiction’s basis of accounting and capital requirements converted to U.S. dollars. While most non-U.S. jurisdictions do not possess the same level of industry specific technical guidance, as included in the NAIC Accounting Practices and Procedures Manual, all jurisdictions have established accounting standards that insurers are required to follow to determine available capital/financial resources. In some cases, this represents local Generally Accepted Accounting Principles (GAAP), which may or may not be consistent with International Financial Reporting Standards (IFRS).

DRAFTING NOTE: While the GCC utilizes the available capital and home jurisdictions’ capital requirement, for jurisdictions where data is available, the use of appropriate scalars are currently being explored to produce more comparable measures for risk which can be aggregated into the group-wide measure. One such scaling
methodology is included as part of sensitivity Analysis in the GCC template. That scalar methodology uses aggregated data from.
the U.S. and other jurisdictions at first intervention level to recognize that (for example), state regulators often have much higher reserve requirements that are required to be carried as required capital in other jurisdictions. For jurisdictions where the data is not available, the full jurisdictional requirement at first intervention level was used.

U.S. Insurers Not Subject to RBC – Some types of U.S. insurers are not subject to an RBC formula (e.g., Financial Guaranty Insurers, Title Insurers). For these entities, the available capital/financial resources is determined by reference to state law and the NAIC Accounting Practices and Procedures Manual. However, since an RBC formula does not exist, calculated capital is determined by reference to the state minimum capital requirements set out in state law (or 300% of reserves for Title insurers). For U.S. captive insurers, available capital is determined based upon the states accounting requirements, but the calculated capital is required to be calculated using the applicable RBC formula even if RBC does not apply to that entity in their state of domicile.

Banking or Other Financial Service Operations Subject to Regulatory Capital Requirements – Non-insurers such as banks are subject to their own regulatory valuation methods (typically GAAP with tiering of available capital) and their own regulatory capital requirements (e.g., OCC, Federal Reserve, FDIC, or other requirements for banks). These regulatory values are used for the GCC.

Financial and non-financial operations not subject to regulatory capital requirements – In general, financial entities (as defined in the GCC Instructions) are subject to a higher capital charge in the GCC than the non-financial entities. However, the GCC does require available capital/financial resources and calculated capital to be gathered for all such entities that pose a material risk to insurers. In both cases the GCC will utilize the valuation used by such legal entities (typically U.S. GAAP) and a calculated capital based upon a risk factor. There are two important exceptions:

- All entities within the defined insurance group (definition included in GCC Instructions) must be included.
- Non-financial entities that are subsidiaries of U.S. insurers, foreign insurers, or banks where a capital charge for the non-financial entity is included in the regulated Parent’s capital formula will remain with the Parent and will not be inventoried. Regulators already have access to the financials of these entities if needed (if causing unrealized losses within the insurer).

Eliminations

The GCC uses an aggregation and elimination approach, where each of the above legal entities’ available capital/financial resources and calculated capital are combined, then eliminations are utilized to prevent any double counting of available capital/financial resources or calculated capital. The following example illustrates the use of eliminations for both available capital/financial resources and calculated capital. However, in practice the GCC only requires the foreign insurers and other financial entities owned by an insurance company to be "de-stacked" so if AA Holding Company was a U.S. insurer (e.g., AA Insurance Company) the capital required and calculated capital for DD Insurance Agency as a nonfinancial entity would remain in the values of AA Insurance Company and not be de-stacked.

1. For non-RBC filers this is regulatory available capital (ARC).
2. Terminology used in RBC for calculated regulatory capital.
3. Terminology used in RBC for available capital/financial resources.

In the above example, available capital/financial resources are referred to as available regulatory capital (ARC) and total authorized capital (TAC1), and minimum calculated capital is referred to as minimal regulatory capital (MRC) and authorized control level (ACL2). The GCC will allow non-insurance/non-financial entities owned by RBC filers to remain within the available capital and regulatory capital so no eliminations are required for these entities. As shown, since AA Holding Company owns each of the other business entities in the organizational chart, $38 million (which is the amount of available capital/financial resources in the subsidiaries of AA) is eliminated from the TAC column since accounting methods include those as an asset on AA Insurance Company’s balance sheet. Also, the GCC includes capital calculations for AA Holding Company and DD Insurance Agency as part of the MRC in addition to the regulatory capital already included for the insurance subsidiaries. The MRC of the subsidiaries is eliminated from the parent’s (AA Holding Company) calculated capital. Therefore, in this example $4.81 million of calculated capital is eliminated from the MRC. Finally, the MRC of U.S. insurance subsidiary is multiplied by 2 in order to reflect Company Action Level (CAL) RBC as required in the GCC.
Debt—It is important to note that the available capital used in deriving the GCC recognizes a portion of the group’s senior and hybrid debt as capital. This allowance recognizes that debt that is not already recognized as available capital/financial resources under all known accounting principles (SAP, U.S. GAAP or IFRS) may have some value to the group under the U.S. insurance regulatory requirements where such is dividend down to the insurance companies and where extraordinary dividends must be approved by the state. Qualifying debt along with limitations thereon is described in the GCC instructions as is the calculation for the additional available capital. In addition to looking at the group’s debt leverage overall consideration should be given to how the allowance for additional capital from debt interacts with changes in available capital and capital requirements from year to year. The impact of procyclical changes in the allowance for debt as capital should be assessed.

Other Information Included in the GCC
The GCC includes selected financial information (net income, premiums, liabilities, debt, etc.) that are captured in Schedule 1 and in the “Analytics” tabs of the GCC that are meant to be used to help isolate potential strengths and weaknesses of the group and more specifically where such exist among the entities in the group. Some important information related to other features in the GCC also should be considered and are discussed below. Schedule 1, a simplified version of the Inventory Tab, and most analytics are required in the case of a “limited filing”. However, data is not required for the capital instruments, sensitivity analysis and other information tabs in a limited filing.

Grouping—The GCC separately allows certain financial entities (e.g., asset managers) and non-financial entities included in the GCC to have their values and capital calculation combined (grouped) for more efficient reporting and analysis. Although the GCC instructions set parameters for such grouping, the general expectation is that regulators will work with each applicable GCC filer in determining where grouping is and is not appropriate outside of what is allowed within the GCC Instructions. Grouping should be viewed in context of materiality. A single entity conducting a given activity may not be material, but when all entities conducting the same activity are combined, they can be material.

Excluded entities—The GCC provides two mechanisms for the exclusion of non-financial entities in Schedule 1 and in the Inventory Tab at the discretion of the lead state. State regulators should consider whether any of the information collected in the GCC template in support of, is collected for an entity or group of similar entities that would otherwise be excluded from the GCC ratio calculation. Regulators should separately monitor increases in the level of activity of an “excluded” entity or group of similar entities for purposes of materiality and potential subsequent inclusion in the GCC.

Sensitivity analysis—A tab devoted to individual sensitivity analysis is included in the GCC. These informational items provide the regulator with impact of discretion in excluding listed entities and alternative perspectives on risk charges for non-financial entities and foreign insurers. Monitoring of these items can help the regulator identify areas where the GCC may be improved, or capital calculations adjusted in the future. One item included in the GCC sensitivity analysis is a “sensitivity test” that increases the overall calibration of the calculated capital requirements in the GCC from its normal 200% x ACL RBC calibration to 300% x ACL RBC. This should be used as an initial benchmark to conduct further analytical review. No other exclusions should be applied.

Accounting Adjustments—The impact of accounting adjustments and related detailed information is collected in the GCC template in the Inventory Tab and in the Other Information Tab respectively. Such adjustments can be material during the de-stacking process. For example, a consolidated holding company may include GAAP values for entities that would otherwise be valued under regulatory accounting rules (e.g., Statutory Accounting Principles - SAP) on a stand-alone basis. When the regulated entity is de-stacked the difference between the GAAP values and SAP values will be removed from the group’s available capital. These “lost” values can result in a...
material reduction in the inventoried available capital compared to consolidated available capital. Understanding the impact and the components of this adjustment can help the regulator when considering the impact of issuing new debt or when evaluating the allowance for debt as capital calculated in the GCC template.

Intangible Assets – Acquisitions, mergers and reorganization often create significant intangible assets at a holding company level or possibly at an operating company (other than a regulated entity) level. The GCC template collects information on intangible assets held by inventoried entities in the Other Information Tab. The available capital associated with the value of entities whose assets are materially comprised of intangible assets should be evaluated in the context of fungible resources and in assessing the adequacy of the capital calculation assessed on such entities.

Dividend pass-thru (gross view of dividends) – Schedule 1D collects information on dividends paid and received within the group. It also includes a column that indicates whether dividends were declared but not yet paid, as well as cases where dividends received where retained or “passed thru” to another affiliate or paid out in dividends to shareholders. This information will assist the regulator in evaluating the movement of capital within the group to fund strategic insurance and non-insurance operations or activities (e.g., expansion of activities) or to fund entity specific capital shortfalls. It also provides a window to capital leaving the group (e.g., debt repayment, stock repurchase, or dividends to shareholders).
Review of the Group Capital Calculation

Consideration of the Insurance Holding Company System Structure

As the lead state begins to review the annual Group Capital Calculation filing for a particular group, it is important for the lead state to do so with consideration of the existing knowledge of both the organizational structure of the group, including changes in the structure from year to year, but more importantly the overall activities of each of the entities in the group which otherwise have the potential to transmit material risk to the insurers within the group. While the GCC will provide additional quantitative information on the entities in the group; the actual activities of the entities are also important in determining the scope of application of the GCC. Specific to that point, the lead state is responsible for determining if any of the entities in the holding company structure should be excluded from the calculation. The filing includes a column for the group to propose what should be excluded as well as an additional column for the final determination made by the lead state. In general, the determination of scope of the application is suggested by the group but made in consultation and agreement with the lead state. This exercise should be undertaken in a manner that yields a clearly documented rationale for excluding entities or subgroups of the larger group. The Group Capital Calculation Instructions describes the basis for making this determination and the calculation itself is structured to facilitate this determination, with the inclusion in Schedule 1 of the calculation of financial data for all entities within the holding company. Similar to exclusion from the calculation itself is review of data for cases in which subgroups of the larger group are completely excluded from the larger group, particularly with regard to Schedule 1; the rationale for the exclusion(s) should be provided in the GPS. The concept is that this Schedule 1 data should be utilized by the lead state in conjunction with their existing knowledge of the group and its activities (obtained from the Schedule Y, ORSA, Forms B/C, Form F, the non-insurance grid, etc.), and therefore likely material risks, to make this determination. To the extent the entities included in Schedule 1 differ from the analyst’s knowledge of the Group, further discussion and follow-up should be held with the group.

The holding company structure and activities should also be utilized by the lead state in determining how to evaluate the GCC ratio. More specifically, information on structure can impact the flow of capital and resources among entities within the holding company structure. Therefore, understanding the following can assist in evaluating the flow of resources:

- Domestic insurance operations
- International insurance operations
- Banking or other financial services operations subject to regulatory capital requirements
- Financial and non-financial operations not subject to regulatory capital requirements*

*The GCC instructions provide examples of financial versus non-financial entities in this category. All financial entities should be included in the scope of application of the GCC. However, there can be a broad array of entities that could be considered financial. The lead state should document the rationale for cases in which it concludes that an entity should be classified in the group’s GCC filing as “non-financial” and thus excluded, from the scope of the GCC.

While the GCC is intended to be used as an input into the GPS, the expectation is that the GCC summary section will document a high-level summary of the analyst’s take away of the GCC, as well as the Strategic branded risk, since that is the area where capital measurement is reported. The manner in which the analyst determines what else should be documented beyond the GCC Summary and the Strategic branded risk should be based upon the following steps, since these steps contemplate the previously mentioned concept that the existing evaluation of the financial condition should be used in evaluating the depth of review of the GCC. From a high level, the following steps suggest:

- Document the information from the GCC Summary section.
- Review the material risk identified in the GCC.
- Assess the impact of the material risk on the financial condition of the insurer.
- Determine the depth of review required for the material risk.
- Document the results of the depth of review in the Strategic branded risk section.
Inasmuch as the GCC is a new analytical tool for use by regulators and that it will take a number of years before there is both (1) sufficient data to prove for trends and (2) experience by regulators with its use, it is thus recognized that the specific measures (levels of GCC, degree of change in the GCC, what constitutes a trend, etc) may, over time, need to be revised. Nonetheless, the following procedures provide analysts with a framework to consider GCC results in conjunction with other data and tools at their disposal, and to begin to gain and benefit from experience in utilizing the GCC as a new analytical tool.

- Procedure Step 1 suggests that a review of the components of the GCC is appropriate when either the GCC ratio is trending downward or the GCC ratio is below an initial suggested threshold. Analysts should be mindful at all times that any stated threshold is for analysis purposes only and does not constitute a trigger for regulatory action (nor is such a trigger provided at any GCC level in the provisions of the Model Holding Company Act and Model Holding Company Regulation). Further, they should be mindful that the respective calibration levels differ between the GCC and RBC. When a threshold is provided, it should be viewed as an opportunity for an analyst to understand issues and concerns that may be emerging and address them with the group, if needed. Finally, as experience in gained with the GCC and with these analysis procedures, the threshold for analytical purposes will be revisited periodically and remains subject to change.

- Procedure Step 2 suggests from a high level determining the drivers of any decreases in the total available capital in the GCC. While there are numerous benefits of the GCC over consolidated approaches, the ability to drill down on the drivers is one of the most significant and is consistent with the states’ approach to not just looking at capital, but to the drivers of capital issues. While the mechanics of the GCC approach will introduce some opportunities for analysis, potential limitations do exist depending on the extent of de-stacking and grouping of entities in the GCC template. While the data will provide a “road map” of sorts as to the location of capital and risks within the group, the level of detail will vary by group. Thus, the GCC will provide a quantifiable means to decomposing group components for analysis, but qualitative considerations by the analyst will be necessary as well, the extent and nature of which will inherently vary by group. Furthermore, legal entity data that is the result of “destacking” for purposes of the GCC template may result in anomalous amounts are trends, e.g., potentially showing materially reduced equity due to the destacking of a subsidiary which is then separately listed in the template. The process to analyze data in the template should provide for potentially anomalous observations at the legal entity level which are the result of the destacking process, and not an indication of potentially negative developments or trends. Again, this highlights the need to assure that analysts consider information from other analytical tools, not just the GCC in isolation.

- Procedure Step 3 suggests from a high level determining the driver of any increases in operating leverage, which is typically what drives insurance capital requirements up, be it asset risk/leverage or writings leverage. Similar to drivers of capital decreases, the GCC has detailed information on financial figures and ratios that can be used to isolate the issues.

- Procedure Step 4 is similar in that it too utilizes detailed information on capital allocation patterns that are necessary to understand if there are negative trends in the GCC since these can become important if there are any issues that might require further distribution of capital across the entities.

- Procedure Steps 5: Depending upon the analysis performed in Steps 1-4, similar to legal entity analysis, there is likely a need to determine what steps the company is taking or plans to take to address the issues seen in the analysis of the GCC. The guidance provided in these procedures is not intended to be exhaustive, but rather should give the analyst a starting point in better evaluating the various issues.

- If the analyst determines after completing any of the above procedures (steps), that no further work is deemed necessary to fully document the material risks of the group observable from the GCC (as well as the required information to be included in all GPS from the GCC), this should be documented by the analyst in any workpapers deemed appropriate by the state and include the general reason therefore. In making this
determination, it should be reiterated these procedures are not intended to be used in a checklist manner, and judgement based upon existing information on the group obtained from the Form F, ORSA, or any other source is certainly part of that judgement decision.

### Procedure Step 1 - Evaluate the Adequacy of Group Capital

1. **Determine if the group capital position may present a risk to the group and its insurance subsidiaries based upon its recent trends and/or current measures in the GCC ratio.**

<table>
<thead>
<tr>
<th>Branded Risk</th>
<th>Benchmark</th>
</tr>
</thead>
<tbody>
<tr>
<td>ST</td>
<td>&lt;150%</td>
</tr>
</tbody>
</table>

- **a.** Has there been an increase in the GCC ratio over last two years? If "yes", determine the cause(s) of the increase.
  - ST <10%

- **b.** Has there been an increase in the GCC Total Available Capital from prior year? If "yes", determine the cause(s) of the increase.
  - ST <10%

- **c.** If the GCC <150%, has there been a change from prior year? If so, determine the cause(s) of the change. If the GCC was <150% in the prior years also, consider more carefully the causes.
  - ST >10 pts or <10 pts

- **d.** Has there been a negative trend in the GCC ratio over the past five years suggesting an overall pattern of declining capital?
  - ST N/A

If the answer to any of the above questions is “yes”, the analyst should proceed with procedure step 2, evaluating decreases in total available capital and/or procedure step C3, evaluating increases in leverage to determine the cause(s) of the negative trends.

### Procedures Step 2 - Evaluate Decreases in Total Available Capital

2. **Determine the source(s) of decreases in the GCC ratio or the GCC Total Available Capital.**

<table>
<thead>
<tr>
<th>Branded Risk</th>
<th>Benchmark</th>
</tr>
</thead>
<tbody>
<tr>
<td>ST</td>
<td>&lt;150%</td>
</tr>
</tbody>
</table>

- **a.** Has there been a decrease in the GCC ratio over last two years? If "yes", determine the cause(s) of the decline.
  - ST <10%

- **b.** Has there been a decrease in the GCC Total Available Capital from prior year? If "yes", determine the cause(s) of the decline.
  - ST <10%

- **c.** Has there been a decrease in the GCC ratio in the last three years from the prior year? If the GCC <150%, has there been a change from prior year? If so, determine the cause(s) of the change. If the GCC was <150% in the prior years also, consider more carefully the causes.
  - ST >10 pts or <10 pts

- **d.** Has there been a negative trend in the GCC ratio over the past three years suggesting an overall pattern of declining capital?
  - ST N/A

Recognizing that not all declines in capital ratios are necessarily "negative", i.e., they may be the result of sound capital management and ERM to more efficiently utilize capital, approved changes in the scope of application, or changes in underlying regulatory requirements, the intent of step 2 (and step 3) is to determine the actual source of the negative issues. However, unless obvious from the information obtained in step 2, the analyst should proceed to step 5 to understand more fully the actions being taken by the group to address the issues identified in step 2. However, in some cases, it is possible that no further follow-up with the group will be necessary and that the lead state should simply update the GPS to be certain the main understanding of the issues are known to all of the regulators utilizing the GPS.
<table>

<th>N/A</th>
</tr>
</thead>
</table>

5. If due to non-insurance reported entities in the group, understand the relationship of the non-insurance operations to the insurance entities and the potential impact to the insurance operations (i.e. intercompany agreements, services, capital needs, etc.).

<table>
<thead>
<tr>
<th>ST, OP</th>
<th>N/A</th>
</tr>
</thead>
</table>

Procedure Step 3-Evaluate Increases in Operating Leverage.

3. Determine the source(s) of any decreases in the GCC ratio due to increases in leverage

Like step 2, the intent of step 3 is to determine the actual source of the negative issues. The difference between step 3 and step 2 is simply the types of issues. Step 2 is focused on issues that have resulted in negative capital trends. Step 3, however, is focused on the issues that impact the risk being measured in the GCC. In most cases, risk that is either from the asset side or from the liability side where in both cases there has been an increase in such risk that has not been offset by a corresponding or equal increase in capital. In general, this is referred to as operating leverage, where this risk can manifest itself either through increased writings or exposure (e.g., the ratio of premiums to capital or liabilities to capital), or through increased assets that also carry risk. The expectation is that other regulated entities also have capital requirements that increase as these different types of risks increase, similar to how the NAIC RBC considers different types of products and assets that carry more risk.

<table>
<thead>
<tr>
<th>Procedure Step 3</th>
<th>Branded Risk</th>
<th>Benchmark</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Review the levels of operating leverage for ratio of available capital to calculated capital from each of the reported entities in the GCC as well as and compare to the same ratio for the prior years as reported in the GCC to determine if there are particular year. Determine which entities showing signs of increasing operating leverage which may lead to future decreases in the GCC ratio or total available capital have led to the negative trends, based upon corresponding increases in leverage.</td>
<td>MK, CR, RV, ST, OP, RP</td>
<td>≤10%</td>
</tr>
</tbody>
</table>

Commented (TF1): Should clarify here, and in other tables, whether this is the change in the reported GCC or the change in leverage (and if the latter, how that is to be measured).
b. Review the levels of operating leverage for each of the reported entities in the GCC as well as the same for the prior years as reported in the GCC to determine if there are particular entities showing signs of increasing operating leverage which may lead to future decreases in the GCC ratio or total available capital.

| MK, CR, RV, ST, OP, RP | < -10% |

b. For each of the reported entities showing a meaningful decrease in the GCC due to an increase in operating leverage, request information that identifies the issues by inquiring first from the legal entity regulator or the group itself (e.g., non-insurance company), if applicable.

| MK, CR, RV, ST, OP, RP | N/A |

c. If operating leverage has increased, consider if growth may have resulted from underpriced products or a change in underwriting. Determine if pricing was reduced to increase sales, or whether the growth is in new product lines or new geographic focus where the group may not have expertise. When considering pricing being modified, include those products for which the price is adjusted through crediting rates.

| PR/UW, OP, ST | N/A |

d. If operating leverage has increased, consider if reserving risk has also increased, through potential underpricing that ultimately manifests itself in reserve adjustments. To do so, obtain current profitability information on the products leading to the increased leverage.

| RV | N/A |

e. If operating leverage has increased, obtain current information on the asset mix to be certain that there is a corresponding decrease in riskier assets to mitigate the otherwise likely increase in market and credit risk.

| CR, MK | N/A |

Unless obvious from the information obtained in step 3, the analyst should proceed to step 5 to understand more fully the actions being taken by the group to address the issues identified in step 3. However, in some cases, it is possible that no further follow up with the group will be necessary, and that the lead state should simply update the GPS to be certain the main understanding of the issues are known to all of the regulators utilizing the GPS.

4. Determine the capital allocation patterns to determine if some entities may put pressure on other legal entities.

Steps 2 and 3 are critical in understanding the issues faced by the group and in identifying the source of negative trends; and while additional follow up with the group is expected, before proceeding to Step 5, the lead state should understand the historical capital allocation patterns or the likely future needed capital allocation patterns. The GCC includes data on historical capital allocation patterns (e.g., contributed capital received/paid or dividends received/paid), which help to illustrate which entities need capital and which entities have capital that can be provided. While these patterns do not necessarily repeat themselves from one period to the next, there is often consistency in terms of entities that need capital or have excess capital, which may or may not be driven by losses, but rather by a change in strategy (e.g., increased writings at one company over another). These trends can also assist in discussions with the group about where capital may come from as a result of a future unexpected material event.
Where similar information is also disclosed in Form F, the detail in the GCC may confirm what is already known in this area and in some cases may provide greater detail.

<table>
<thead>
<tr>
<th>Branded Risk</th>
<th>Benchmark</th>
</tr>
</thead>
<tbody>
<tr>
<td>ST</td>
<td>N/A</td>
</tr>
</tbody>
</table>

**Procedure Step 5—Consider the Need for Reductions in Risk.**

5. Determine the group’s plans for addressing source(s) of any meaningful decreases in the GCC ratio or total available capital. Please note, in some cases, the plan may be as simple as actions designed to reverse a single negative trend.

Steps 5 is designed to assist a review of the insurance company’s plans for addressing any meaningful decreases in the GCC ratio or total available capital. The specific plans of the group may, or may not fully address all the issues but ultimately what is most important is that such information and the regulators plan for evaluating and monitoring the situation is known to the other regulators. There is a multitude of possibilities, and this guidance is not intended to address all of those, including the fact that in some cases, some regulators may choose to put their legal entity into some type of supervision, conservation or some other form of receivership. Similar to other areas, where similar information is also disclosed in Form F, further information may already be known in this area.

Steps 5 is designed to assist a review of the insurance group’s plans for addressing any meaningful decreases in the GCC ratio or total available capital that are not otherwise planned (i.e., that are not the results of capital management so as to efficiently utilize capital while still maintaining sufficient levels for Enterprise Risk Management needs). The specific plans of the group may, or may not fully address all the issues but ultimately what is most important is that such information and the regulator’s plan for evaluating and monitoring the situation is known to the other regulators. There is a multitude of possibilities and this guidance is not intended to address all of those, including the fact that in some cases, some regulators may choose to put their legal entity into supervision, conservation or some other form of receivership (which, by necessity and intent, would presumably be done based on the legal entity’s RBC and other tools and authority at the legal entity level—not the group’s GCC). Similar to other areas, where similar information is also disclosed in Form F, further information may already be known in this area.

<table>

Mr. John Rehagen, Chair
NAIC Group Capital Calculation Working Group
Via e-mail: ddaveline@naic.org

Dear Mr. Rehagen,

The American Council of Life Insurers appreciates the opportunity to comment on the NAIC Group Capital Calculation (GCC) Working Group’s (the Working Group) proposed revisions to the Financial Analysis Handbook (FAH). We appreciate the significant and thoughtful work being done by the NAIC on throughout the GCC project and the Working Group’s receptivity to discussing our members’ views on various elements of the framework.

While we are largely supportive of themes conveyed in the feedback provided by the Interested Party group, there a few topics we feel warranted additional detail provided in a distinct ACLI response:

- The proposed threshold of 150%, which we believe is inconsistent with the Working Group’s decision to use 200% ACL RBC as the calibration level for the GCC;
- The timeliness of establishing a GCC threshold before further analysis of GCC results are completed.

1. The proposed threshold of 150%, based on the “sensitivity analysis” test, is inconsistent with the Working Group’s decision to use 200% ACL RBC as the calibration level for the GCC and should be revised.

The FAH includes a GCC threshold, below which a regulator may conduct a more in-depth analysis of the group. According to text in both the exposed documents, the GCC sensitivity analysis test, which is calibrated at 300%, is the threshold regulators should use as their benchmark to determine if additional analysis is warranted. This decision is inconsistent with the Working Group’s decision in October 2020: following multiple rounds of consultation on the GCC instructions and template, the Working Group endorsed a decision to use 200% ACL RBC as the calibration level and to include a “sensitivity analysis” tab that calculated a GCC ratio using a 300% ACL RBC calibration. The minutes of the October 30 Working Group meeting document the agreement, as well as instruction from the Chair to NAIC staff to update the draft FAH to reflect the decision. We believe the FAH must be revised to align it with this pivotal decision.

Mariana Gomez-Vock
Vice President & Deputy, Policy Development
Marianagomez-vock@acli.com | 202 624 2313
ACLI members continue to strongly support the decision the Working Group made in October and believe introducing a disconnect between the reported GCC and approved template and the FAH would create the same concerns and challenges we voiced in the fall. We have appended two comment letters, for reference, that explain why it would have been highly problematic to calibrate the GCC to 300%. Our concerns have not changed, so we are appending the letters in lieu of repeating them in this letter.

2. It is premature to establish a GCC threshold until further analysis of GCC results is completed.

Additionally, we fully support the IP group’s call for the Working Group and NAIC to undertake additional analysis and evaluation of GCC results prior to identifying a specific threshold in the FAH. There is no immediate need to immediately establish a threshold, given the GCC’s intent to serve as a tool that provides regulators with enhanced transparency into the risk within a group rather than a standard that triggers supervisory action or requirements for insurers. In the interim period, in lieu of a pre-defined, hard-wired GCC threshold, the FAH could instead advise analysts to focus on downward trends – the analyst could consider performing the additional steps when a GCC ratio is trending downward over several years or if it has experienced a material decline in the current year. Alternatively, the FAH could use 100% GCC as a placeholder in Step 1, at least until more data is analyzed.

Regardless of whether there is a predetermined threshold value in Step 1, we encourage the Working Group to consider whether additional analytical steps should be added to Step 1 of the GCC. For example:

- **Step 1X** – If the GCC ratio is trending downward over multiple years or has experienced a material decline in the current year, determine which entities may have led to the negative trends.
- **Step 1Y** – If the GCC ratio is trending downward over multiple years or has experienced a material decline in the current year and the change in the GCC is not driven from a legal entity, but rather the change in allowable debt, note as such.

These steps would help the analyst quickly identify false positives and focus the in-depth analysis of available and required capital (i.e., steps 2 and 3) on entities that are the major source[s] of the GCC change or trend. This would preserve limited regulatory resources by allowing the analyst to quickly zero-in on the cause of the declining GCC. In some cases, like the example below, the change may have resulted from a relatively benign cause. For example, consider how a benign corporate tax change might impact a GCC ratio:

1. Regulators notice that an insurance group, **Alpha Group**, has a significant one-year drop in group solvency.
2. Rather than doing an analysis of all entities within **Alpha Group**, regulators follow Step 1X and identify that **Alpha Group’s** declining group solvency trend is due entirely to **Alpha Japan**. So, the analysis now focuses on **Alpha Japan** to identify the cause of the decline.
3. The regulator discovers that the change in **Alpha Japan’s** solvency levels is due to a change in Japan’s corporate tax rate.
4. The analyst could validate this effect by looking at the group solvency impact of another US group with a material Japanese subsidiary.
Conclusion

As such, the ACLI recommends striking all references to 300% and 150% until further analytical work is completed. If a threshold must be referenced in the FAH, we recommend using 100% GCC as a temporary placeholder. We also recommend consideration of adding one or two more group-wide inquiries in Step 1 that could help focus the additional, in-depth analysis (Steps 2 and 3), on areas of concern and potentially eliminate false positives in GCC results.

Thank you for your consideration of our comments. As always, we would be happy to discuss them with you or your staff at your convenience.

Regards,

Mariana Gomez-Vock
Dear Commissioner Altmaier,

The North American CRO Council (CRO Council) is a professional association of Chief Risk Officers (CROs) from leading insurers based in the United States, Canada, and Bermuda. Member CROs currently represent 32 of the largest Life and Property and Casualty (P&C) insurers in North America. The CRO Council seeks to develop and promote leading practices in risk management throughout the insurance industry and provide thought leadership and direction on the advancement of risk-based solvency and liquidity assessments.

The CRO Council supports the NAIC’s decision to leverage existing solvency frameworks as the basis for its GCC framework. By leveraging existing solvency frameworks, the GCC will benefit from their proven ability to capture the unique risks across various lines of insurance and jurisdictional market specificities. More broadly, leveraging existing solvency frameworks will ensure continuity across existing supervisory tools, including those that are of greatest import to the CRO community.

Notwithstanding its basis in existing jurisdictional capital regimes, the GCC is an innovative – and therefore unprecedented – metric for assessing an insurance group’s capital position. As CROs, we believe it is essential for any group capital metric to be designed and implemented in a manner that coherently assesses the interactive components of the underlying methodology, as well as the metric’s quantitative impact and behavior across scenarios.

We recognize that the NAIC has been working diligently to finalize the GCC in advance of important international milestones in the recognition of US modalities for assessing risks at the group level. We commend the NAIC for both its high degree of transparency in developing the GCC methodology, as well as the care and deliberation it’s taken in evaluating each of the component methodological issues. At this juncture, there are, rightly, several open issues that the NAIC is still considering, including treatment of senior debt, scalars, and calibration. As we approach a critical stage in the finalization of the GCC methodology, it is vital to ensure that the ongoing resolution of these and other methodology issues are also evaluated and tested collectively, to ensure that GCC provides a coherent and meaningful group measure.

In this vein, the CRO Council is concerned with the proposal to introduce a new regulatory tool for analyzing an insurer’s capital adequacy and risks by calibrating the GCC at a level that is inconsistent with existing regulatory and industry practices even if a group’s GCC would remain

Appendix

Commissioner David Altmaier, Chair
NAIC Group Capital Calculation Working Group
National Association of Insurance Commissioners
[via-email: LFelice@naic.org]

October 20, 2020

Re: Comments on Proposed Group Capital Calculation (GCC) Instructions

Dear Commissioner Altmaier,

The North American CRO Council (CRO Council) is a professional association of Chief Risk Officers (CROs) from leading insurers based in the United States, Canada, and Bermuda. Member CROs currently represent 32 of the largest Life and Property and Casualty (P&C) insurers in North America. The CRO Council seeks to develop and promote leading practices in risk management throughout the insurance industry and provide thought leadership and direction on the advancement of risk-based solvency and liquidity assessments.

The CRO Council supports the NAIC’s decision to leverage existing solvency frameworks as the basis for its GCC framework. By leveraging existing solvency frameworks, the GCC will benefit from their proven ability to capture the unique risks across various lines of insurance and jurisdictional market specificities. More broadly, leveraging existing solvency frameworks will ensure continuity across existing supervisory tools, including those that are of greatest import to the CRO community.

Notwithstanding its basis in existing jurisdictional capital regimes, the GCC is an innovative – and therefore unprecedented – metric for assessing an insurance group’s capital position. As CROs, we believe it is essential for any group capital metric to be designed and implemented in a manner that coherently assesses the interactive components of the underlying methodology, as well as the metric’s quantitative impact and behavior across scenarios.

We recognize that the NAIC has been working diligently to finalize the GCC in advance of important international milestones in the recognition of US modalities for assessing risks at the group level. We commend the NAIC for both its high degree of transparency in developing the GCC methodology, as well as the care and deliberation it’s taken in evaluating each of the component methodological issues. At this juncture, there are, rightly, several open issues that the NAIC is still considering, including treatment of senior debt, scalars, and calibration. As we approach a critical stage in the finalization of the GCC methodology, it is vital to ensure that the ongoing resolution of these and other methodology issues are also evaluated and tested collectively, to ensure that GCC provides a coherent and meaningful group measure.

In this vein, the CRO Council is concerned with the proposal to introduce a new regulatory tool for analyzing an insurer’s capital adequacy and risks by calibrating the GCC at a level that is inconsistent with existing regulatory and industry practices even if a group’s GCC would remain
confidential. We believe that, rather than better enabling the GCC to provide insight into risks, such a move would create risks. For example:

- It could undermine the market’s perception of the solvency levels insurers are subject to at the entity level and stakeholders would be left to decipher why state regulators feel the need to assess risk at the group level in a manner than is different than the system they have developed for supervising the same risks at the entity level. Given the increased prominence of group capital assessments since the great financial crisis, we believe the GCC will receive broad interest and uptake by the stakeholder community and in turn, the disconnect will become a point of focus.

- Even though the GCC will serve as an analytical tool and results will remain confidential, introducing a new calibration level could undermine the market’s perception of the capital adequacy of the sector. Stakeholders may interpret the move to increase the level of required capital regulators focus on for assessing capital adequacy and risks at the group level as an effort to promote more prudent capital levels across the sector, despite no change in the economics of the risks they are exposed to. This in turn could give rise to an unlevel playing field and arbitrage between insurers that are subject to the GCC, and the related heightened capital expectations it could create, and those that are not.

- It could result in misinterpretations. Stakeholders would be forced to learn a new scale for assessing risks despite no change in the underlying risk exposures.

When it comes to supervisory assessments of risks, regulatory clarity is vital for policyholders and the insurers that are subject to the assessment and tools. Actions that create uncertainty should be avoided unless they are anchored to a strong risk-based rationale. Thus, we strongly encourage the NAIC to calibrate the GCC at a level that is consistent with existing regulatory and industry tools and conventions.

The issue of calibration is inextricably linked with other facets of the GCC’s overarching design and methodology, including the development of scalars. The treatment of scalars is, appropriately, the subject of ongoing in-depth study. By contrast, the choice of a target calibration - a decision with potentially more significant consequences than scalars – is being decided in fairly short order and with substantially less consideration of its interplay with the rest of the GCC framework or potential unintended consequences that may arise.

In addition, we note that the current debt limit structure could cause the GCC ratio to be more volatile than RBC ratios in recessionary environments. During times of stress, when solvency capital declines, the amount of admissible debt is expected to be reduced using the current guidelines. This would lead to a larger reduction in available capital in the GCC than under an RBC assessment and consequently a larger decline in the GCC ratio. Furthermore, the GCC debt limits would disincentivize insurers to raise capital through debt issuances during times of stress because only a fraction of the debt would be treated as capital under the GCC. We believe the heightened volatility and potential influence on capital management during times of stress are unintended consequences that should be remediated by raising the debt admissibility limits.
Finally, the CRO Council recommends that the NAIC perform additional voluntary GCC data calls and coherent analysis of its final methodological decisions prior to adopting and implementing a final version in late 2021. This work, which should include consideration of the framework’s ability to deliver appropriate risk insights during stress events, would help to ensure the final product is fit for purpose and credible to end users.

Sincerely,

Chair of North American CRO Council
October 15, 2020

Re: Comments on Group Capital Calculation Working Group’s GCC Instructions Document

Dear Commissioner Altmaier:

Our Coalition ("we"), which consists of American International Group, Inc., Global Atlantic Financial Group, Hannover Life Reassurance Company of America, Liberty Mutual Insurance Group, MetLife, Inc., Principal Financial Group, Protective Life Corporation, Prudential Financial, Inc., Reinsurance Group of America, Incorporated, Transatlantic Reinsurance Company, thank the Group Capital Calculation Working Group ("Working Group") for the opportunity to provide input on key elements of the GCC. We strongly support the development of the Group Capital Calculation ("GCC") as a tool to enhance state regulators’ ability to protect policyholders and insurance markets. We also strongly support the Working Group’s decision to "build on existing legal entity capital requirements where they exist rather than developing replacement / additional standards." As the Working Group has rightfully noted, such an approach strikes an ideal balance of "satisfying regulatory needs while at the same time having the advantages of being less burdensome and costly to regulators and industry and respecting other jurisdictions' existing capital regimes."

During the public call the Working Group held on September 29, you noted that development of the first iteration of the GCC is approaching the “fatal flaws” stage. With the fatal flaws stage on the horizon, our Coalition felt the need to collectively express the following shared perspectives:

- We view the proposal to “calibrate the GCC” using 300% Authorized Control Level ("ACL") Risk Based Capital ("RBC") – i.e., to use 300% ACL RBC as the denominator of the ratio – as a fatal flaw.

- We believe 2021 should serve as a period of study and analysis to ensure the various design elements come together in a coherent manner and enable the GCC to accomplish its objective of providing state regulators a "panoramic, transparent view of the interconnectedness, business activities, and underlying capital support for an insurance group."

**Calibration of the GCC**

We believe the GCC should be calibrated using 200% ACL RBC in order to adhere to the considerations the Working Group has advised are guiding its efforts – i.e. develop a tool that provides state regulators greater insight into insurance groups in a manner that leverages and respects existing capital frameworks and practices and is less burdensome and costly. Calibrating the GCC at 300% ACL RBC would be inconsistent with longstanding industry norms for reporting and discussing solvency which use 200% ACL RBC. Further, it would also be inconsistent with state regulatory requirements for reporting and assessing capital adequacy and risks. State regulatory requirements for solvency reporting are based on 100% ACL RBC (i.e., what is filed in the Annual Statement).

Establishing an entirely new basis for reporting insurer solvency will create confusion and burden:

- Reporting processes (internal and external) would need to adapt to accommodate the inconsistency;
significant stakeholder education would be necessary to mitigate the confusion created by inconsistent reporting basis between entity and group level ratios, between companies that are and are not subject to the GCC, etc.;

- Market forces could lead to the establishment of 300% ACL RBC as a new basis for reporting and assessing the financial strength of insurers, and in doing so, impact existing capital management practices and expectations;

- It would create confusion over how state regulators assess and take action for solvency purposes – the ladders of intervention are anchored to 100% ACL RBC, and

- It would create a wider inconsistency between the aggregation based group capital framework developed by state regulators and the Federal Reserve Board.

More broadly, we do not believe the proposal to use 300% ACL RBC for calibration purposes would strengthen the ability of the GCC, or is necessary, to accomplish its objective of delivering state regulators transparency into insurance groups and protecting policyholders. Rather, we believe this decision would serve to undermine the time-tested practices of state regulators and the industry.

During the public call the Working Group held on September 29, NAIC staff had shared potential justifications for calibrating the GCC at 300% ACL RBC, which were mostly related to international considerations rather than the ability of the tool to accomplish its regulatory objective. In the annex to this letter, we provide our perspectives on these justifications.

**Using 2021 as a period of study and analysis**

While development of the GCC has been informed by a generous amount of public consultation and dialogue, quantitative study has been relatively limited (2 baseline exercises and 1 field test). In addition, consideration of the various design decisions has not been performed on the framework as a whole. We believe these factors raise the importance of using 2021 to perform a holistic review of the framework that is approved later this year to ensure the various design elements come together in a coherent manner and allow it to accomplish its regulatory objective. We believe this review should also include consideration of how the framework would perform in times of stress and any potential unintended consequences it could give rise to, including the potential for the proposed debt limit structure to create procyclicality. Following this analysis, the Working Group, in consultation with the industry, should implement any modifications determined to be necessary before approving a final version of the GCC.
We again thank the Working Group for seeking stakeholder input on key elements of the GCC and would welcome the opportunity to discuss the information included in this response should the Working Group or NAIC staff engaged in the GCC project wish to do so.

Sincerely,

American International Group, Inc.

Perspectives on NAIC Staff Comments on GCC Calibration

During the public call the Working Group held on September 29, NAIC staff had shared a few potential justifications for calibrating the GCC at 300% ACL RBC, which were mostly related to international considerations rather than the ability of the tool to accomplish its regulatory objective. Below we offer our perspectives on why we believe the NAIC justifications are not sufficient or appropriate grounds for calibrating the GCC at 300% ACL RBC.

- Calibrating to 300% ACL RBC would reinforce that the GCC is an analytical tool rather than a standard or requirement

    
    **Coalition Perspective**

    We support the intent to reinforce the point that the GCC is an analytical tool as opposed to a standard however, we do not believe establishing a distinct calibration level is an effective or appropriate means for doing so and further that the point would be lost on most stakeholders. Rather than serving to reinforce the “tool versus standard” point, we believe establishing a new basis for solvency reporting in the U.S. would only serve as a source of confusion over how state based insurance supervision works by adding further complexity to the system. We believe framing of the GCC as a tool should be explicit in the GCC Instructions, the guidance to be included in the Financial Analysis Handbook, and other communications by the NAIC and state regulators.

- 300% ACL RBC has been used as a reference point in the Credit for Reinsurance Models and the Covered Agreements with the EU and UK

    
    **Coalition Perspective**

    The Credit for Reinsurance Models and Covered Agreements establish a relationship between supervisory intervention points in different jurisdictions – specifically that the ability to apply the Trend Test at 300% ACL RBC, and subsequent actions that could be taken, aligns with the supervisor actions that may be pursued at 100% Solvency Capital Requirement (“SCR”) under Solvency II or 200% Solvency Margin Ratio (“SMR”) for Japan, etc. While these initiatives established relationships between intervention levels, they do not call for, or warrant, establishing a distinct calibration level for the GCC. Rather, we believe the initiatives reinforce the existing ladders of intervention approach that guides how state regulators assess insurer solvency and is anchored to a 100% ACL RBC calibration. As noted above, we believe establishing a distinct calibration basis for the GCC would only serve as a source of confusion over how state based insurance supervision works by adding further complexity system – including the inconsistency introduced between the GCC the Credit for Reinsurance Models and Covered Agreements.

    More broadly, we believe it may be appropriate to consider the relationships the Credit for Reinsurance Models and Covered Agreements established when establishing scalars between the respective regimes that are encompassed by the various agreements.

- 300% ACL calibration may help with efforts to advance the Aggregation Method (“AM”) at the global level

    
    **Coalition Perspective**

    We fully support the effort to advance the Aggregation Method at the global level and believe that, as the world’s largest insurance market, the International Association of Insurance Supervisors (IAIS) must recognize and accept the U.S. state based approach to assessing group capital adequacy. While the GCC and AM are related, we believe
they must be developed separately given differences in how they will be applied and their different time horizons for development.

Decisions on the design of the GCC should be guided by the objective of making sure it is appropriate for the U.S. market and will meet the needs of U.S. stakeholders – regulators, policyholders, insurers, etc. Where they exist, the time-tested frameworks and practices state regulators and U.S. insurers employ should serve as the foundation of the GCC. Deviations from these practices should be avoided unless there is a clear and objective rationale for how an alternative approach will better enable the GCC to provide state regulators insight into risks within insurance groups and protect policyholders. We believe it would be inappropriate to base GCC design decisions – especially for core elements – on what “could” help advance AM comparability discussions:

- Catering the design of the GCC to appease the views of foreign jurisdictions could result in a framework that does not best suit the U.S. insurance market; and
- There are no assurances that decisions made today regarding the design of the GCC will secure support for the AM from non-U.S. IAIS members, many of whom continue to be skeptical of the AM.

The design of the GCC should inform the NAIC’s work on the AM, which will continue after adoption and implementation of the GCC. Given that the AM is intended to serve as a framework that jurisdictions around the world could embrace, we recognize that collaboration and negotiations with these markets could result in a final AM that includes some differences from the GCC. However, the scope of such differences is impossible to predict at present and therefore consideration of the extent to which they would require tweaks to how the GCC has been implemented should be deferred until there is more clarity and certainty.

More broadly, it is important to reiterate that while items such as the Covered Agreements and Credit for Reinsurance Models have established relationships between intervention levels, they do not call for, or warrant, establishing a distinct calibration level for the GCC or AM. With respect to assessing comparability of the AM to the alternative approaches, the focus should be the ability of the tool to provide decision-useful insight into risks and protect policyholders as opposed to attempting to quantitatively align results to flawed benchmarks such as best efforts field test ratios or the intervention level assigned to the Market Adjusted Valuation (MAV) approach.
Notes on Charts

- Slides provide a summary of GCC results and analysis related to issues under consideration by GCCWG.
- See Attachment A for Nov 8 working group call.
- Results grouped into two types of business: "P&C and Composite" and "Life and Health".
- "Composite" means insurer that writes both life and p&c.
- Results grouped into two ownership models: Stock and Mutual.
- One fraternal company is grouped with mutual.
- Individual results are presented on anonymized basis: Group A, Group B, etc.
- Anonymized means that "Group A" is not same on every chart.
- Figures are in $'000s.

High Level Results (Business Type)

- Chart shows GCC ratios by type of business. Note that there is overlap between the groupings. The GCC is calibrated at 200% of Authorized Control Level.
- Narrower and lower range of ratios among P&C/Composite volunteers than Life/Health volunteers.
- Narrower range of ratios among mutuals than stock companies.
- Note: above averages are unweighted (i.e. a straight average of each individual company’s GCC ratio).

Business Type (Breakdown by $ amount)

- Chart shows GCC available capital in $'000s
- Excludes Holding Company and Capital instruments

Business Type (% Breakdown)

- Chart shows % of available capital excluding Holding Company and Capital instruments.

© 2021 National Association of Insurance Commissioners
Analysis Related to Proposed GCC Modifications

Stress & Debt Allowance

- To investigate calculation of limit for debt, Trial GCC included a stress scenario based on 30% decline in available capital. Proposal is to remove this stress and keep current debt allowance.
- Chart shows weighted average GCC ratios by business type pre-stress and post-stress (both with and without impact on debt limit).
- Six groups had instruments go above the debt limit as a result of a stress. Of those one was pre-stress, debt allowance.

Other Debt (Breakdown)

- Subject to limits and criteria, the GCC has an allowance for Senior and Hybrid Debt instruments.
- A sensitivity test related to "Other Debt" was included in the Trial Implementation proposal and is removed.
- Chart shows anonymized results for the 16 volunteer groups with reported capital instruments.
- 'Other Debt' makes up a significant portion of capital instruments for 2 of the 16 groups.

Other Debt (As % AC)

- Chart shows ratios of amount of each instrument type to available capital, relative to available capital.
- In no case are 'Other' instruments material relative to available capital.
Non-Risk (Capital Ratios)

- Chart compares GCC ratios under two different treatments of Non-Risk sensitive foreign entities for the 10 groups with exposure to such entities.
- Current GCC treatment for non-risk foreign based entities is to set calculated capital equal to 100% of available capital.
- An alternative treatment with 50% of AC has been proposed. This leads to a max decrease in capital ratio of 51%.

Non-Risk (Breakdown)

- Chart shows breakdown of insurance entity exposure by volunteer shows that most volunteers are predominantly exposed to US entities. Foreign exposure is predominantly in risk sensitive entities (Risk on chart).
- Ten groups have exposure to foreign Non-risk sensitive entities. The exposure is significant for two. In both cases, the bulk of the exposure is in Barbados. (Note lettering is different from prior slide).

Asset Mgmt (Breakdown)

- Proposal is to replace the current capital treatment for asset managers with a 3-year average revenue-based regulatory capital standard imposed by FINRA.
- Chart above shows breakdown of the portion of available capital for financial entities by type of financial entity for the 19 volunteers with relevant exposure.

Asset Mgmt (Ratios)

- While capital amounts under FINRA standard were not part of GCC reporting, above chart of GCC calculated with and without Asset Management entities should give sense of the materiality.
- Same letters as next slide but only including groups with Asset Mgmt entities.
The Group Solvency Issues (E) Working Group of the Financial Condition (E) Committee met Nov. 30, 2021. The following Working Group members participated: Justin Schrader, Chair (NE); Jamie Walker, Vice Chair (TX); Kim Hudson and Susan Bernard (CA); Kathy Belfi (CT); Charles Santana (DE); Virginia Christy (FL); Kevin Clark (IA); Cindy Andersen, Susan Berry, and Eric Moser (IL); John Turchi (MA); Judy Weaver (MI); Debbie Doggett, Shannon Schmeeger, and John Rehagen (MO); Margot Small (NY); Dale Bruggeman and Tim Biler (OH); Kimberly Rankin and Melissa Greiner (PA); Doug Stolte (VA); and Amy Malm (WI).

1. **Adopted its Summer National Meeting Minutes**

Ms. Walker made a motion, seconded by Ms. Weaver, to adopt the Working Group’s Aug. 4 minutes (see NAIC Proceedings – Summer 2021, Financial Condition (E) Committee, Attachment Three). The motion passed unanimously.

2. **Discussed Comments Received on Proposed Revisions to the Financial Analysis Handbook**

Mr. Schrader stated that the second agenda item for the call is to discuss the comments received during the recent re-exposure of proposed revisions to the Financial Analysis Handbook (Handbook) to incorporate elements of the International Association of Insurance Supervisors’ (IAIS’) Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) deemed appropriate for the U.S. system of solvency regulation. After the Working Group received and discussed comments received on the initial exposure of Handbook revisions during its Aug. 4 meeting, the Financial Analysis Drafting Group updated the guidance in response to the comments received. The updates were summarized in a comment matrix provided along with an updated draft of Handbook guidance that was exposed for a 30-day public comment period ending Oct. 9. As a result of the exposure, comment letters were received from the American Council of Life Insurers (ACLI) and the American Property Casualty Insurance Association (APCIA).

Robert Neill (ACLI) provided an overview of the ACLI comments, which included concerns related to language referencing the IAIS’ insurance capital standard (ICS) in the updated draft, as well as references to various IAIS materials in the updated draft. He stated that while language related to both items was improved in the updated draft, the ACLI continues to be concerned about language indicating that the ICS “may assist supervisors in ongoing risk assessment,” given the many flaws and limitations that have been identified and discussed regarding the appropriateness of the reference ICS formula for use in the U.S.

Mr. Schrader stated that while he understands the concerns, he feels it is important to provide some background information on the ICS and cross-references to IAIS source material in the Handbook to assist analysts that may need to gain an understanding of international standards in these areas, even if they are not being fully implemented in the U.S. Ms. Weaver stated her agreement and emphasized the importance of using the Handbook as an educational tool for staff.

Bruce Jenson (NAIC) stated that language indicating that the reference that ICS could be used for risk assessment purposes was intended for removal from the updated draft, as analysts are being encouraged to utilize group capital calculation (GCC) and Own Risk and Solvency Assessment (ORSA) information for the purposes of group capital risk assessment. As such, the language highlighted by the ACLI represents a drafting oversight. After some additional discussion, the Working Group agreed to remove all language indicating that reference ICS reporting could be used for risk assessment purposes.

Tom Finnell (APCIA) provided an overview of the APCIA comments, many of which recognized and thanked the drafting group for addressing its prior comments. He stated that there appears to be one area where the drafting group missed removing a direct reference to ComFrame, which was the intent of the updated draft. Mr. Schrader stated that he agrees that this was a drafting oversight, and he encouraged NAIC staff to remove the direct reference to ComFrame from the Handbook guidance.

Mr. Finnell stated that the guidance around the possibility of requesting group wide ORSA or Corporate Governance Annual Disclosures has the potential to exceed regulatory authority, and the APCIA letter suggested the addition of language used in another area of the Handbook to caution state insurance regulators in this area. Ms. Belfi stated that she is not in favor of adding
this language, as she feels state insurance regulator authority over internationally active insurance groups (IAIGs) is clear in this area. Mr. Rehagen stated his agreement, and he indicated that the suggested language could discourage analysts from gathering the information necessary to conduct an adequate assessment in these areas.

Mr. Finnell stated that while the Working Group’s agreement to remove language related to using the ICS in risk assessment is appreciated, the APCIA letter recommends additional language to make the overall U.S. position on the ICS clearer in the Handbook. Mr. Schrader stated that he is not in favor of adding disclaimer-type language on the reference ICS to the Handbook, as the ICS continues to be a work in progress. However, he stated that he would be in favor of adding language into the Handbook stating that state insurance regulators support the development of an aggregation method as an outcome-equivalent approach for the implementation of the ICS. Mr. Rehagen and Ms. Walker both stated their support for this language, and NAIC staff were asked to include it in the updated draft.

Mr. Finnell stated that the last item he would like to highlight from the comment letter is the importance of adequate confidentiality protections around any information-sharing tools and portals being used by state insurance regulators to share company information with international regulators. Mr. Schrader agreed that this is an important topic, and state insurance regulators should continue to exercise caution in this area.

3. Received an Update on Other Drafting Efforts

Mr. Schrader stated that two other volunteer drafting groups have been meeting to develop proposed revisions to the NAIC’s Financial Condition Examiners Handbook and ORSA Guidance Manual to incorporate ComFrame elements, as deemed appropriate, for the U.S. system of insurance regulation.

Bailey Henning (NAIC) provided an update on the status of the ComFrame Examination Drafting Group, which has held two meetings so far and has a goal to complete its initial drafting efforts in the first quarter of 2022. Elisabetta Russo (NAIC) provided an update on the status of the ComFrame ORSA Drafting Group, which has met three times and conducted a survey of IAIG Lead States to gather information on the format of ORSA Summary Reports being received from IAIGs. The drafting group also plans to complete its initial drafting efforts in the first quarter of 2022.

4. Received an Update on IAIS Activities

Mr. Schrader stated that the IAIS recently adopted a revised Application Paper on Supervisory Colleges, which was updated to reflect developments in IAIS supervisory material, including revisions to Insurance Core Principle (ICP) 3 – Information Sharing and Confidentiality Requirements and ICP 25 – Supervisory Cooperation and Coordination. He encouraged state insurance regulators and interested parties to review the updated paper to gain an understanding of recommended practices in facilitating effective supervisory college sessions.

Having no further business, the Group Solvency Issues (E) Working Group adjourned.

GSIWG Minutes
The Mutual Recognition of Jurisdictions (E) Working Group of the Financial Condition (E) Committee met Nov. 18, 2021. The following Working Group members participated: Robert Wake, Chair (ME); Monica Macaluso, Vice Chair (CA); Kathy Belfi (CT); Virginia Christy (FL); Scott Sanders (GA); Tom Travis (LA); Shelley Woods (MO); Lindsay Crawford (NE); John Tirado (NJ); Michael Campanelli (NY); and Amy Garcia (TX).

1. Adopted the Yearly Due Diligence Reviews of the Qualified Jurisdictions and Reciprocal Jurisdictions

Mr. Wake stated that the Process for Evaluating Qualified and Reciprocal Jurisdictions (QJ/RJ Process) provides a process for re-evaluating both qualified jurisdictions and reciprocal jurisdictions after their initial review and noted that this information is detailed in a memorandum from NAIC staff dated Nov. 8, 2021 (Attachment Four-A). Mr. Wake stated that prior to the 2019 revisions to the QJ/RJ Process, all qualified jurisdictions were to be reviewed fully every five years. He noted that the document was updated in 2019 with the process to be ongoing and continuous, where NAIC staff provide an annual update to the Working Group that verifies that there have not been any changes to the laws, regulations, or administrative processes of the jurisdictions that would potentially affect their status.

Jake Stultz (NAIC) stated that to conduct the review, NAIC staff searched for any publicly available information that would potentially affect the jurisdictions’ status as a qualified jurisdiction or as a reciprocal jurisdiction. He stated that much of the same documentation was used in the initial review and the 2019 full re-review of the jurisdictions. He stated that NAIC staff searched for any publicly available information about any changes to existing insurance and reinsurance laws and regulations in the jurisdictions. NAIC staff verified whether a new Financial Sector Assessment Program (FSAP) Report prepared by the International Monetary Fund (IMF), or any other externally produced documentation, was available, including the Technical Note on Insurance Sector Supervision, and if there was any other publicly available information regarding the laws, regulations, administrative practices, and procedures applicable to the reinsurance supervisory system. He stated that this search also included any documents from ratings agencies and any other public information that was deemed to be relevant.

Mr. Stultz stated that NAIC staff did not engage directly with the qualified jurisdictions or reciprocal jurisdictions and relied solely on publicly available information. He noted that NAIC staff consulted with the Federal Insurance Office (FIO) and United States Trade Representative (USTR).

Mr. Stultz stated that NAIC staff concluded that the reinsurance supervisory systems of the seven qualified jurisdictions (i.e., Bermuda, France, Germany, Ireland, Japan, Switzerland, and the United Kingdom [UK]) continue to achieve a level of effectiveness in financial solvency regulation that is acceptable for purposes of reinsurance collateral reduction, that their demonstrated practices and procedures with respect to reinsurance supervision continue to be consistent with their respective reinsurance supervisory systems, and that their laws and practices satisfy the criteria required of qualified jurisdictions as set forth in the Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786). NAIC staff made similar findings with respect to the three reciprocal jurisdictions that are not subject to an in-force covered agreement (i.e., Bermuda, Japan, and Switzerland). He stated that NAIC staff recommend that these jurisdictions continue to qualify for inclusion on the NAIC List of Qualified Jurisdictions and the NAIC List of Reciprocal Jurisdictions.

Mr. Travis made a motion, seconded by Ms. Crawford, to confirm the status of Bermuda, France, Germany, Ireland, Japan, Switzerland, and the UK as qualified jurisdictions and Bermuda, Japan, and Switzerland as reciprocal jurisdictions. The motion passed unanimously.

2. Adopted the GCC Process

Mr. Wake stated that during 2020, the NAIC adopted revisions to the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation With Reporting Forms and Instructions (#450), which implemented group capital calculation (GCC) filing requirements for insurance groups at the level of the ultimate controlling person and incorporate the requirements for a group-wide capital calculation as addressed under the “Bilateral Agreement Between the United States of America and the United Kingdom on Prudential Measures Regarding Insurance and Reinsurance”
(UK Covered Agreement) and the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (EU Covered Agreement).

Mr. Wake stated that Section 4L(2) of Model #440 provides two ways a non-U.S. jurisdiction may meet the standards for its insurance groups to be exempted from the GCC. The first is if the jurisdiction has been determined to be a reciprocal jurisdiction for purposes of credit for reinsurance, and the second is if the jurisdiction has otherwise been determined to recognize and accept the GCC by procedures specified in regulation. He noted that the Working Group was charged with creating a process to determine whether other jurisdictions “recognize and accept” the NAIC GCC.

Mr. Wake stated that the Working Group originally exposed a draft of the Process for Evaluating Jurisdictions That Recognize and Accept the Group Capital Calculation (GCC Process) for a public comment period on July 21 and received a public comment letter from a U.S. coalition of companies (Attachment Four-B) and an informal comment from a non-U.S. insurance supervisor. The Working Group then met Sept. 22 in regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings, regarding international regulatory matters. Mr. Wake said the Working Group released a revised draft of the GCC Process for a 21-day public comment period on Sept. 22 (Attachment Four-C) and noted that one comment letter was received (Attachment Four-D). Mr. Wake stated that after exposing the Sept. 22 draft, NAIC staff held discussions with representatives of the FIO, and because of the discussions, NAIC staff revised the GCC Process in a draft dated Nov. 8 that was included with the meeting materials.

Dan Schelp (NAIC) stated that the revisions contained in both the Nov. 8 and Sept. 22 drafts are primarily stylistic in nature and non-substantive. He noted that most of the revisions found in the Sept. 22 draft were based on the U.S. coalition of companies comment letter. He noted that the Sept. 22 draft added a section for the review of evaluation materials, which is consistent with the QJ/RJ Process. He added that a revision to paragraph 12 addressed the informal comment received from a non-U.S. supervisor regarding the use of memorandum of understanding (MOU); specifically, it will not be necessary for a non-U.S. jurisdiction to enter into multiple MOUs with jurisdictions where its company does business in multiple states. He stated that the jurisdiction will only be required to enter into one MOU with a single state that has agreed to serve as a single point of contact for multiple lead states in this process. He noted that this concept is comparable to that used under the processes for certified reinsurers and qualified jurisdictions.

Mr. Schelp stated that the Nov. 8 draft addressed issues discussed with the FIO. He stated that the revisions in paragraph 3 are an acknowledgment that unlike the reinsurance collateral provisions, states are not required to comply with the group capital provisions of the covered agreements and that revisions to paragraph 9 and paragraph 10 are an acknowledgement that both the FIO and the USTR have an interest in the evaluation of reciprocal jurisdictions, and that the Working Group will consult with the FIO and the USTR in these circumstances.

Mr. Schelp stated that the comment letter from Swiss Re suggested that the GCC Process, QJ/RJ Process, and possibly the new ReFAWG Review Process for Passporting Certified and Reciprocal Jurisdiction Reinsurers (ReFAWG Process) should all become Part B accreditation standards. Mr. Schelp stated that he had contacted NAIC staff support for the the Financial Regulation Standards and Accreditation (F) Committee and added that making these processes accreditation standards would be unusual, but it is something that can be discussed.

Mr. Schelp stated that it is the recommendation of NAIC staff that the Working Group adopt the Nov. 8 draft of the GCC Process. He noted that once it has been approved by the Working Group, it would then go to the Financial Condition (E) Committee and NAIC Executive (EX) Committee and Plenary for final adoption at the Fall National meeting.

Ms. Macaluso made a motion, seconded by Mr. Travis, to adopt the Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation, dated Nov. 8 (Attachment Four-E). The motion passed unanimously.

3. Provided an Update on the Republic of Korea Application to Become a Qualified Jurisdiction

Mr. Wake stated that on May 27, the Working Group approved a recommendation for the Republic of Korea to become a qualified jurisdiction. He noted that this recommendation was exposed publicly by the Reinsurance (E) Task Force on June 3. As a result of the exposure, the Task Force was notified about an ongoing issue with data localization requirements in the Republic of Korea, which must be remediated before the process can move forward. Mr. Wake stated that the Task Force referred this issue back to the Working Group at the Summer National Meeting.
Mr. Wake stated that NAIC staff and a small group of state insurance regulators have held meetings with both the Republic of Korea Financial Services Commission (FSC) and Financial Supervisory Service (FSS), as well as with U.S. insurance trade groups, to better understand the issues and to help move this process forward. He noted that no action had yet been taken and that further updates will be provided to the Working Group when more is known.

Having no further business, the Mutual Recognition of Jurisdictions (E) Working Group adjourned.
TO: Robert Wake, Chair of the Mutual Recognition of Jurisdictions (E) Working Group

FROM: NAIC Staff

RE: Yearly Due Diligence Review of Qualified Jurisdictions & Reciprocal Jurisdictions

DATE: November 8, 2021

---

**Executive Summary & Recommendation**

The Mutual Recognition of Jurisdictions (E) Working Group will perform a yearly review of Qualified Jurisdictions to determine whether there have been any significant changes over the prior year that might affect their status as Qualified Jurisdictions. The Working Group will also perform a yearly review with respect to non-Covered Agreement Reciprocal Jurisdictions. NAIC staff has performed a due diligence review of these jurisdictions, and has the following recommendations to the Working Group:

1. The following Qualified Jurisdictions shall retain their status on the *NAIC List of Qualified Jurisdictions*:

   - Bermuda, Bermuda Monetary Authority (BMA)
   - France, Autorité de Contrôle Prudentiel et de Résolution (ACPR)
   - Germany, Federal Financial Supervisory Authority (BaFin)
   - Ireland, Central Bank of Ireland (Central Bank)
   - Japan, Financial Services Agency (FSA)
   - Switzerland, Financial Market Supervisory Authority (FINMA)
   - United Kingdom, Prudential Regulation Authority of the Bank of England (PRA)

2. The following non-Covered Agreement Reciprocal Jurisdictions shall retain their status on the *NAIC List of Reciprocal Jurisdictions*:

   - Bermuda, Bermuda Monetary Authority (BMA)
   - Japan, Financial Services Agency (FSA)
   - Switzerland, Financial Market Supervisory Authority (FINMA)

**Process for Evaluation after Initial Approval**

The afore-described jurisdictions were originally evaluated and placed on the *NAIC List of Qualified Jurisdictions* effective January 1, 2015, and were later re-evaluated effective January 1, 2020. Four of them are entitled to Reciprocal Jurisdiction status by virtue of in-force Covered Agreements. The other three Reciprocal Jurisdictions were evaluated and placed on the *NAIC List of Reciprocal Jurisdictions* effective January 1, 2020. Part III, Section 12 of the *Process for Evaluating Qualified and Reciprocal Jurisdictions*
("Process"), which was amended by the NAIC on August 17, 2021, provides a process for evaluating both Qualified and Reciprocal Jurisdictions after their initial approval:

The process for determining whether a non-U.S. jurisdiction is a Qualified Jurisdiction is ongoing and subject to periodic review. The Mutual Recognition of Jurisdictions (E) Working Group will perform a yearly review of Qualified Jurisdictions to determine whether there have been any significant changes over the prior year that might affect their status as Qualified Jurisdictions. This yearly review shall follow such abbreviated process as may be determined by the Mutual Recognition of Jurisdictions (E) Working Group to be appropriate. It shall include a review of the jurisdiction’s status as a Reciprocal Jurisdiction if the jurisdiction has been recognized by the NAIC as a Reciprocal Jurisdiction through the process established in paragraph 13 [i.e., Qualified Jurisdictions that are not subject to an in-force covered agreement and are not accredited U.S. jurisdictions].

The yearly review shall follow such abbreviated process as may be determined by the Working Group to be appropriate. For this review, NAIC staff searched for any publicly available information that would potentially impact the jurisdictions’ status as a Qualified Jurisdiction or as a Reciprocal Jurisdiction. This evaluation relied on much of the same documentation as was used in the initial review of the jurisdictions, as detailed in Part III, Section 2 of the Process. NAIC staff searched for any publicly available information about any changes to existing insurance and reinsurance laws and regulations in the jurisdictions. Next, NAIC staff verified whether a new Financial Sector Assessment Program (FSAP) Report prepared by the International Monetary Fund (IMF), or any other externally produced documentation was available, including the Technical Note on Insurance Sector Supervision, and any other publicly available information regarding the laws, regulations, practices and procedures applicable to the reinsurance supervisory system. This search also included any documents from ratings agencies and any other public information that was deemed to be relevant.

During this process, NAIC staff did not engage directly with the Qualified Jurisdictions or Reciprocal Jurisdictions and relied solely on publicly available information. Additionally, NAIC staff included any information received (if any had been received) directly from regulators, interested parties or impacted insurance companies that could potentially impact the status of the Qualified Jurisdictions or Reciprocal Jurisdictions. NAIC staff also consulted with the Federal Insurance Office and United States Trade Representative.

**NAIC Staff Findings**

Upon review of the available information, NAIC staff has reached the conclusion that the reinsurance supervisory systems of the 7 Qualified Jurisdictions continue to achieve a level of effectiveness in financial solvency regulation that is acceptable for purposes of reinsurance collateral reduction, that their demonstrated practices and procedures with respect to reinsurance supervision continue to be consistent with their respective reinsurance supervisory systems, and that their laws and practices satisfy the criteria required of Qualified Jurisdictions as set forth in the Credit for Reinsurance Models. NAIC staff made similar findings with respect to the 3 Reciprocal Jurisdictions that are not subject to an in-force Covered Agreement.

Therefore, it is the recommendation of NAIC staff that these jurisdictions continue to qualify for inclusion on the **NAIC List of Qualified Jurisdictions** and the **NAIC List of Reciprocal Jurisdictions**.
August 20, 2021

Re: Comments on the Draft Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation

Dear Mr. Wake:

The undersigned U.S. based insurance groups appreciate the opportunity to comment on the Draft Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation (Draft Process). We support the Draft Process and believe it provides a fair, transparent, and efficient process for evaluating jurisdictions that is consistent with the Model Insurance Holding Company System Regulatory Act and Regulation.

We offer the following suggested changes that we believe will clarify the Draft Process:

1. The Draft Process does not include a section on “review of the evaluation materials”, which is included in the NAIC’s Process for Evaluating Qualified and Reciprocal Jurisdictions. We believe a streamlined section providing for the use of consultants as appropriate and making them subject to confidentiality should be included in the Draft Process.

2. In Section 5 (“Other Jurisdictions that Recognize and Accept”), we believe all of the criteria in subparagraphs (a) through (d) must be met in order for a non-U.S. jurisdiction to be deemed to “recognize and accept” the GCC. To clarify the intent, we recommend the following edit to the Section 5 lead paragraph:

“5. Other Jurisdictions that Recognize and Accept. In addition, because most of the requirements for Reciprocal Jurisdiction status are not relevant to group capital and group supervision, Section 4L(2)(d) of Model #440 provides an alternative pathway for the exemption. The ultimate controlling person of an insurance holding company system whose non-U.S. group-wide supervisor is not in a Reciprocal Jurisdiction is exempted from filing the GCC as long as the jurisdiction of its group-wide supervisor “recognizes and accepts” the GCC, as specified by the commissioner in regulation. Section 21D of Model #450 provides that a non-U.S. jurisdiction is considered to “recognize and accept” the GCC if it satisfies all of the following criteria: ”.

3. Section 8.(d) includes the following:

“Once the Working Group has finally adopted the Summary of Findings and Determination in open session after opportunity for public comment, it will submit the summary of its findings and its recommendation to the Financial Condition (E) Committee at an open meeting. Upon approval by the Committee, the summary and recommendation will be submitted to the Executive (EX) Committee and Plenary, as well as to the Federal Insurance Office (FIO),
United States Trade Representative (USTR) and other relevant federal authorities for consultation purposes.”

We recommend that the highlighted text be revised to state, “for informational purposes,” as the NAIC will have executed its work and made a determination by this point of the evaluation.

4. Section 10: The last sentence before the sub-parts seems to be incomplete. We suggest adding the highlighted text as follows: “The process outlined in this Paragraph will also apply to a jurisdiction that is a Reciprocal Jurisdiction by virtue of a covered agreement, if the Mutual Recognition of Jurisdictions (E) Working Group has determined that a case-by-case review of the jurisdiction is warranted.”

5. Section 13

   o The Draft Process should clarify how the steps under Sections 8, 9, and 10 apply in the case of assessing whether a Recognize and Accepts jurisdiction requires subgroup reporting.

   o Also, it appears that the List will indicate whether a Recognize and Accepts jurisdiction requires subgroup reporting with a "yes" / "no" type approach, but it would be helpful if the process was explicit on how this information will be presented.

6. Similar to the second comment above on Section 13, Section C of the Appendix should clarify how a determination on subgroup reciprocity will be presented on the List (e.g., a “yes” / “no” type approach).

7. Section 14(c): We request that the Working Group amend this section to clarify that it will also give due consideration to any notice provided by the U.S.-based insurance group’s lead state commissioner. We suggest this section be amended as follows: “The Mutual Recognition of Jurisdictions (E) Working Group will also give due consideration to any notice from a U.S.-based insurance group or its lead state commissioner that the group has been required to perform a group capital calculation, at either the group-wide or subgroup level, in a jurisdiction on the “Recognize and Accept” List.”

Thank you for the opportunity to provide these comments. We would be happy to discuss these recommendations.

Sincerely,

Berkshire Hathaway Group of insurance companies
Liberty Mutual Insurance Group
MetLife, Inc.
Odyssey Reinsurance Company
Prudential Financial, Inc.
Reinsurance Group of America, Incorporated
The Travelers Companies, Inc.
Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation

Mutual Recognition of Jurisdictions (E) Working Group
Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation

1. **Group Capital Calculation.** On December 9, 2020, the NAIC adopted revisions to the NAIC Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). These revisions implement the Group Capital Calculation (GCC) filing requirements for insurance groups at the level of the ultimate controlling person for the purposes of evaluating solvency at the group level. The revisions specifically provide that the requirement to file the NAIC’s GCC applies to U.S.-based groups, while a group headquartered outside the U.S. is exempt from the GCC (subject to limited exceptions) if its group-wide supervisor “recognizes and accepts” the GCC for U.S. groups doing business in that jurisdiction. Likewise, a U.S. group subject to a group capital calculation specified by the Federal Reserve Board is exempt from the GCC. This process codifies the concepts of mutual recognition and one group/one group-wide supervisor.

2. **NAIC Listing Process.** Section 4L(2) of Model #440 provides two ways a non-U.S. jurisdiction may meet the standards for its insurance groups to be exempt from the GCC:

   (a) If the jurisdiction has been determined to be a Reciprocal Jurisdiction for purposes of credit for reinsurance, which includes a requirement that the jurisdiction “recognizes the U.S. state regulatory approach to group supervision and group capital”; or

   (b) If the jurisdiction has otherwise been determined to recognize and accept the GCC by procedures specified in regulation.

Jurisdictions meeting either of these criteria will be referred to informally as “‘Recognize and Accept’ Jurisdictions.” Sections 21D and 21E of Model #450 provide a general framework for how the process to identify “Recognize and Accept” Jurisdictions will work and specifically contemplates the development of a list of such jurisdictions through the NAIC Committee Process. The purpose of this document is to provide a documented evaluation process for creating and maintaining this list of jurisdictions that recognize and accept the GCC.

3. **Covered Agreements.** The GCC and the “recognize and accept” process are intended to comply with the requirements under the “Bilateral Agreement Between the United States of

---

1 Under Section 4L(2)(e) of Model #440, if the worldwide insurance operations of a non-U.S. group are exempt from the GCC, the group’s U.S. Lead State Commissioner may nevertheless require a GCC that is limited to the group’s U.S. operations if: “after any necessary consultation with other supervisors or officials, it is deemed appropriate by the lead state commissioner for prudential oversight and solvency monitoring purposes or for ensuring the competitiveness of the insurance marketplace.” A group’s exemption is also contingent on the group providing sufficient information to the lead state, directly or through the group-wide supervisor, sufficient to enable the lead state to comply with the group supervision approach set forth in the NAIC Financial Analysis Handbook.

2 Model #440. § 4L(2)(c).
America and the European Union on Prudential Measures Regarding Insurance and Reinsurance”, which was signed on September 22, 2017. On December 18, 2018, a similar Covered Agreement was signed with the United Kingdom (UK) (collectively “Covered Agreements”). The Covered Agreements require the elimination of reinsurance collateral requirements for certain reinsurers licensed and domiciled in participating jurisdictions, and limit the worldwide application of prudential group insurance measures on insurance groups based in participating jurisdictions. Specifically, the Covered Agreements provide that U.S. insurers and reinsurers can operate in the EU and UK without subjecting the U.S. parent to the host jurisdiction’s group-level governance, solvency and capital, and reporting requirements, and also provide the same protections for EU and UK insurers and reinsurers operating in the U.S. However, the Covered Agreements only exempt U.S., EU and UK insurance groups from each other’s worldwide group capital requirements if the home supervisor performs worldwide group capital assessments on its own insurance groups and has the authority to impose preventive and corrective measures.

4. Reciprocal Jurisdictions. In response to the Covered Agreements, the NAIC also amended the Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) to provide that jurisdictions that are subject to in-force covered agreements are considered to be “Reciprocal Jurisdictions,” and large, financially strong reinsurers that are based in those jurisdictions are not required to post reinsurance collateral. In addition, a “Qualified Jurisdiction” under Section 2E of Model #785 may become a Reciprocal Jurisdiction if, among other requirements, it “recognizes the U.S. state regulatory approach to group supervision and group capital.” By the terms of the Covered Agreements, insurance groups based in EU Member States and the UK are entitled to exemption from the extraterritorial application of the U.S. GCC, and Section 4L(2)(c) of Model #440 recognizes that other Reciprocal Jurisdictions, which have made the same commitment, are entitled to the same treatment.

5. Other Jurisdictions that Recognize and Accept. In addition, because most of the requirements for Reciprocal Jurisdiction status are not relevant to group capital and group supervision, Section 4L(2)(d) of Model #440 provides an alternative pathway for the exemption. The ultimate controlling person of an insurance holding company system whose non-U.S. group-wide supervisor is not in a Reciprocal Jurisdiction is exempted from filing the GCC as long as the jurisdiction of its group-wide supervisor “recognizes and accepts” the GCC, as specified by the commissioner in regulation. Section 21D of Model #450 provides that a non-U.S. jurisdiction is considered to “recognize and accept” the GCC if it satisfies all of the following criteria:

(a) The non-U.S. jurisdiction recognizes the U.S. state regulatory approach to group supervision and group capital, by providing confirmation by a competent regulatory authority, in such jurisdiction, that insurers and insurance groups whose lead state is
accredited by the NAIC under the NAIC Accreditation Program shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, by the lead state and will not be subject to group supervision, including worldwide group governance, solvency and capital, and reporting, at the level of the worldwide parent undertaking of the insurance or reinsurance group by the non-U.S. jurisdiction;

(b) Where no U.S. insurance groups operate in the non-U.S. jurisdiction, that non-U.S. jurisdiction indicates formally in writing to the lead state with a copy to the International Association of Insurance Supervisors that the group capital calculation is an acceptable international capital standard. This will serve as the documentation otherwise required in Section 21D(1)(a);

(c) The non-U.S. jurisdiction provides confirmation by a competent regulatory authority in such jurisdiction that information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to the lead state commissioner in accordance with a memorandum of understanding or similar document between the commissioner and such jurisdiction, including but not limited to the International Association of Insurance Supervisors Multilateral Memorandum of Understanding or other multilateral memoranda of understanding coordinated by the NAIC. The commissioner shall determine, in consultation with the NAIC Committee Process, if the requirements of the information sharing agreements are in force;

(d) Notwithstanding these exemptions, Section 4L(2)(e) of Model #440 provides that a lead state commissioner shall require the group capital calculation for U.S. operations of any non-U.S. based insurance holding company system from a Reciprocal Jurisdiction or “Recognize and Accept” Jurisdiction where, after any necessary consultation with other supervisors or officials, it is deemed appropriate by the commissioner for prudential oversight and solvency monitoring purposes or for ensuring the competitiveness of the insurance marketplace. Section 21E(1) of Model #450 then provides that to assist with a determination under Section 4L(2)(e) of Model #440, the list will also identify whether a jurisdiction that is exempted under either Sections 4L(2)(c) or 4L(2)(d) requires a group capital filing for any U.S.-based insurance group’s operations in that non-U.S. jurisdiction.

6. Mutual Recognition of Jurisdictions (E) Working Group. On March 8, 2021, the Financial Condition (E) Committee repositioned the Qualified Jurisdiction (E) Working Group to report directly to the Committee and revised the name of the group to the Mutual Recognition of Jurisdictions (E) Working Group. The Working Group received the additional charge of developing a process for evaluating jurisdictions that meet the NAIC requirements for recognizing and accepting the GCC (“Process for Evaluating Jurisdictions that Recognize and
Accept the Group Capital Calculation,” or “Recognize and Accept” Process). A separate process exists for evaluating Qualified and Reciprocal Jurisdictions (“Process for Evaluating Qualified and Reciprocal Jurisdictions”), and it is intended that the “Recognize and Accept” Process will closely mirror this process. The Committee charged this Working Group with developing and implementing the “Recognize and Accept” Process due to this Working Group’s experience and expertise in evaluating the insurance regulatory systems of non-U.S. jurisdictions and their recognition of U.S. group-wide supervision.

7. List of Jurisdictions that Recognize and Accept the GCC. The Mutual Recognition of Jurisdictions (E) Working Group will evaluate non-U.S. jurisdictions in accordance with this “Recognize and Accept” Process. A list of “Recognize and Accept” Jurisdictions is published through the NAIC committee process (“NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation”; “Recognize and Accept’ List”; or “List”). The creation of the List does not constitute a delegation of regulatory authority to the NAIC. Although a state must consider this List under Section 21E(3) of Model #450 in its determination of whether a non-U.S. insurance group is exempt from filing an annual GCC, the List is not binding and the ultimate authority to designate a “Recognize and Accept” Jurisdiction resides solely in each state.

(a) The List will include all Reciprocal Jurisdictions that recognize the U.S. state regulatory approach to group supervision and group capital. [See discussion in paragraph 9.]

(b) The evaluation of non-U.S. jurisdictions that are non-Reciprocal Jurisdictions as “Recognize and Accept” Jurisdictions will be conducted in accordance with the provisions of Section 4L(2) of Model #440 and Section 21 of Model #450, and any other relevant guidance developed by the NAIC. [See discussion in paragraphs 10 and 11.]

(c) As specified in Section 21E(1) of Model #450, the List will also identify which “Recognize and Accept” Jurisdictions require a group capital filing for a U.S.-based insurance group’s operations in that jurisdiction. [See discussion of Subgroup Capital Calculation in paragraph 13.]

(d) Upon final inclusion of a jurisdiction on the List, any confidential documents reviewed by the Mutual Recognition of Jurisdictions (E) Working Group in its evaluation of the jurisdiction will be made available to individual U.S. state insurance regulators upon request and confirmation that the information contained therein will remain confidential. The NAIC will maintain the List on its public website and in other appropriate NAIC publications.
If a non-US group’s lead state exempts the group from the GCC, and the group-wide supervisor is based in a jurisdiction that is not on the “Recognize and Accept” List, the state must thoroughly document the justification for the exemption.

8. Procedure for Evaluation of Non-U.S. Jurisdictions. In undertaking the evaluation of a non-U.S. Jurisdiction for inclusion on the “Recognize and Accept” List, the Mutual Recognition of Jurisdictions (E) Working Group shall utilize similar processes and procedures to those outlined in the Process for Evaluating Qualified and Reciprocal Jurisdictions. Specifically, the Working Group will undertake the following procedure in making its evaluation:

(a) Initiation of Evaluation. Formal notification of the Mutual Recognition of Jurisdictions (E) Working Group’s intent to initiate the evaluation process will be sent by the NAIC to the supervisory authority in the jurisdiction selected. The process of evaluation and all related documentation are private and confidential matters between the NAIC and the applicant jurisdiction, unless otherwise provided in this document. Upon receipt of confirmation by a competent regulatory authority of the non-U.S. jurisdiction, the Mutual Recognition of Jurisdictions (E) Working Group:

i. Will direct NAIC staff and/or outside consultants with the appropriate knowledge, experience and expertise to review the materials received from the jurisdiction. Upon completing its review of the evaluation materials, the internal reviewer(s) will report initial findings to the Mutual Recognition of Jurisdictions (E) Working Group, including any significant issues or concerns identified. This report will be included as part of the official documentation of the evaluation. Copies of the initial findings may also be made available to the Federal Insurance Office (FIO) and other relevant federal authorities subject to appropriate confidentiality and information-sharing agreements being in place.

ii. Will issue public notice on the NAIC website inviting public comments with respect to consideration of the jurisdiction as a “Recognize and Accept” Jurisdiction.

iii. Will consider public comments from state regulators, U.S. insurance groups, and any other interested parties.

iv. May review other public materials deemed relevant to making a determination.

v. Will invite each non-U.S. jurisdiction, or its designee, to provide any additional information it deems relevant to making a determination.

vi. Relevant U.S. state and federal authorities will be notified of the Mutual
Recognition of Jurisdictions (E) Working Group’s decision to evaluate a jurisdiction.

(b) Preliminary Evaluation Report. NAIC staff will prepare a Preliminary Evaluation Report for review by the Mutual Recognition of Jurisdictions (E) Working Group. The report will contain a recommendation as to whether the NAIC should recognize the jurisdiction as a “Recognize and Accept” Jurisdiction. Upon review by the Working Group, the results of the Preliminary Evaluation Report will be immediately communicated in written form to the supervisory authority of the jurisdiction under review. At that time, a copy of the Preliminary Evaluation Report will also be shared with the Group Capital Calculation (E) Working Group in regulator-to-regulator session. The Group Capital Calculation (E) Working Group will also be kept advised of any new developments in the evaluation of this jurisdiction.

(c) Final Evaluation Report. Upon receipt of the Preliminary Evaluation Report, the supervisory authority will have an opportunity to respond to the initial findings and determination. The Mutual Recognition of Jurisdictions (E) Working Group will consider any response, and will proceed to prepare its Final Evaluation Report. The Working Group will consider the Final Evaluation Report for approval in regulator-to-regulator session.

(d) Summary of Findings and Determination. Upon approval of the Final Evaluation Report, the Mutual Recognition of Jurisdictions (E) Working Group will issue a public statement and a summary of its findings with respect to its determination. At this time, the Working Group will release the Summary of Findings and Determination for public comment. Once the Working Group has finally adopted the Summary of Findings and Determination in open session after opportunity for public comment, it will submit the summary of its findings and its recommendation to the Financial Condition (E) Committee at an open meeting. Upon approval by the Committee, the summary and recommendation will be submitted to the Executive (EX) Committee and Plenary, as well as to the Federal Insurance Office (FIO), United States Trade Representative (USTR) and other relevant federal authorities for consultation/informational purposes. Upon approval as a “Recognize and Accept” Jurisdiction by the Executive (EX) Committee and Plenary, the jurisdiction will be added to the NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation.

9. Evaluation of Reciprocal Jurisdictions. Under Section 4L(2)(c) of Model #440, Reciprocal Jurisdictions that recognize the U.S. state regulatory approach to group supervision and group capital are exempt from the GCC. Because a “recognize and accept” evaluation by the Mutual Recognition of Jurisdictions (E) Working Group is already part of the Reciprocal Jurisdiction
review process, all Reciprocal Jurisdictions designated by the NAIC through that review process are also automatically designated as “Recognize and Accept” Jurisdictions. Likewise, in accordance with the terms of the EU and UK Covered Agreements, all EU States and the UK are automatically designated “Recognize and Accept” Jurisdictions. If there is a material change to the terms of either Covered Agreement, or the United States enters into a new covered agreement with one or more non-U.S. jurisdictions, the Mutual Recognition of Jurisdictions (E) Working Group will rely upon its review and evaluation of the applicable covered agreement, in consultation with FIO and USTR, to determine whether automatic “Recognize and Accept” status is appropriate, or whether it is necessary to conduct a case-by-case review of the jurisdiction or jurisdictions in accordance with Paragraph 10 below.

Under Section 21D(1)(a) of Model #450, a non-Reciprocal Jurisdiction, in which a U.S. insurance group has operations, that recognizes the U.S. state regulatory approach to group supervision and group capital may be included on the NAIC “Recognize and Accept” List. The Mutual Recognition of Jurisdictions (E) Working Group may rely on written confirmation by a competent regulatory authority in that jurisdiction that insurers and insurance groups whose lead state is accredited by the NAIC under the NAIC Accreditation Program shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, by the lead state and will not be subject to group supervision, including worldwide group governance, solvency and capital, and reporting, at the level of the worldwide parent undertaking of the insurance or reinsurance group by the non-U.S. jurisdiction. The process outlined in this Paragraph will also apply to a jurisdiction that is a Reciprocal Jurisdiction by virtue of a covered agreement, if the Mutual Recognition of Jurisdictions (E) Working Group has determined that a case-by-case review of the jurisdiction is warranted.

(a) The Mutual Recognition of Jurisdictions (E) Working Group will perform a due diligence review of available public and confidential documents to confirm that to the best of its determination the representations in the written confirmation are true and accurate.

(b) The jurisdiction must also have an acceptable Memorandum of Understanding to be included on the “Recognize and Accept” List, as described in paragraph 12 of this Process.

(c) NAIC staff will work with the Mutual Recognition of Jurisdictions (E) Working Group and the applicant jurisdiction to prepare an acceptable confirmation letter for this purpose. The NAIC will publish a form letter in the Appendix: Letter Templates that a competent regulatory authority of a non-U.S. jurisdiction may use to provide confirmation pursuant to Section 21D(1)(a), Section 21D(1)(b) and 21D(2) of Model...
#450 as well as a template letter that any “Recognize and Accept” Jurisdiction, including a Reciprocal Jurisdiction, may use to provide confirmation, pursuant to Section 21(E)(1) of Model #450, as to whether or not it requires a group capital filing for any U.S. based insurance group’s operations. NAIC Staff will work with the jurisdiction to modify these forms if necessary for a particular jurisdiction.

Because the GCC embraces and encourages the concepts of mutual recognition and one group/one group-wide supervisor, a non-U.S. jurisdiction may be included on the “Recognize and Accept” List, enabling its insurance groups to do business in the U.S. without being subject to U.S group-wide supervision, even if no U.S. groups operate in that jurisdiction. Under Section 21D(1)(b) of Model #450, such a jurisdiction must document its recognition and acceptance by indicating formally in writing to the lead state of each of its insurance groups doing business in the U.S., with a copy to the International Association of Insurance Supervisors (IAIS), that the GCC is an acceptable international capital standard. The Mutual Recognition of Jurisdictions (E) Working Group may rely on written confirmation by a competent regulatory authority in that jurisdiction.

(a) The Mutual Recognition of Jurisdictions (E) Working Group will perform a due diligence review of available public and confidential documents to confirm that, to the best of its determination, the representations in the written confirmation are true and accurate.

(b) The jurisdiction must also have an acceptable Memorandum of Understanding to be included on the “Recognize and Accept” List, as described in paragraph 12 of this Process.

(c) NAIC staff will work with the Mutual Recognition of Jurisdictions (E) Working Group and the applicant jurisdiction to prepare an acceptable confirmation letter for this purpose.

12. Memorandum of Understanding.
Section 21D(2) of Model #450 requires a non-Reciprocal Jurisdiction that “recognizes and accepts” the GCC to provide confirmation by a competent regulatory authority that information regarding insurers, and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to the lead state commissioner of any U.S.-based insurance group doing business in that jurisdiction. Acceptable MOUs include, but are not limited to, the International Association of Insurance Supervisors Multilateral Memorandum of Understanding (“IAIS MMoU”) or other multilateral memoranda of understanding coordinated by the NAIC. The Mutual Recognition of Jurisdictions (E) Working Group will review such memoranda of understanding and include
an opinion in the Summary of Findings and Determination as to whether the jurisdiction has met this condition to be included on the “Recognize and Accept” List.

(a) The lead state will act as a conduit for information between the “Recognize and Accept” Jurisdiction and other states that have an insurer from that jurisdiction, and will share information with these states consistent with the terms governing the further sharing of information included in the applicable MOU, and pursuant to the NAIC Master Information Sharing and Confidentiality Agreement. The jurisdiction must also confirm in writing that it is willing to permit this lead state to act as the contact for purposes of obtaining information concerning all insurers within the group.

(b) If a jurisdiction has not been approved by the IAIS as a signatory to the MMoU, it must either (1) enter into an MOU with the lead state, or (2) enter into an MOU with a state that has agreed to serve as a single point of contact for multiple lead states, similar to the procedure for sharing information under the Process for Evaluating Qualified and Reciprocal Jurisdictions. The MOU will provide for appropriate confidentiality safeguards with respect to the information shared among the jurisdictions.

(c) The same requirements and procedures will apply to a Reciprocal Jurisdiction that is subject to a case-by-case “recognize and accept” review, unless the necessary information-sharing procedures are already specified in the applicable covered agreement.

13. Prudential Oversight and Solvency Monitoring. Section 4L(2)(e) of Model #440 directs a lead state commissioner to require the group capital calculation for U.S. operations of any non-U.S. based insurance holding company system based in a “Recognize and Accept” Jurisdiction if, after any necessary consultation with other supervisors or officials, the commissioner deems such a “subgroup” calculation to be appropriate for prudential oversight and solvency monitoring purposes or for ensuring the competitiveness of the insurance marketplace. Section 21E(1) of Model #450 provides that to assist with such a determination, the “Recognize and Accept” List will also identify whether a listed jurisdiction requires a subgroup group capital filing for any U.S.-based insurance group’s operations, and a discussion and findings on this review will be included in the Preliminary Evaluation Report, Final Evaluation Report and Summary of Findings and Determination. If the Working Group has evidence indicating that a jurisdiction requires a subgroup group capital filing for any U.S.-based insurance group’s operations in that jurisdiction, it will attempt to obtain written
confirmation of the existence and scope of any such requirement from a competent regulatory authority in any such jurisdiction, but it is recognized that such a confirmation is not an essential element of the Working Group’s determination. The NAIC will identify such jurisdictions on the “Recognize and Accept” List, and may include an explanatory note in cases where a simple “Yes” or “No” response does not adequately describe the jurisdiction’s requirements. States may rely on this List when making determinations under Section 4L(2)(e) of Model #440.

14. Process for Periodic Evaluation. The process for determining whether a non-U.S. jurisdiction is a “Recognize and Accept” Jurisdiction is ongoing and subject to periodic review. The Mutual Recognition of Jurisdictions (E) Working Group will perform a yearly review of the NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation to determine whether there have been any significant changes over the prior year that might affect inclusion on the List. This yearly review shall follow such abbreviated process as may be determined by the Working Group to be appropriate.

(a) Upon determination by a lead state commissioner that a non-U.S. jurisdiction no longer meets one or more of the requirements to “recognize and accept” the GCC, the lead state commissioner may provide a recommendation to the Working Group that the jurisdiction be removed from the “Recognize and Accept” List. Upon review and after consultation with the “Recognize and Accept” Jurisdiction, the Working Group may remove the jurisdiction from the List, which must then be confirmed by the Financial Condition (E) Committee and the NAIC Executive (EX) Committee and Plenary.

(b) Upon determination by a lead state commissioner that a non-U.S. jurisdiction requires a group capital filing for any U.S. based insurance group’s operations in that non-U.S. jurisdiction, the lead state commissioner may provide a recommendation to the Working Group that the non-U.S. jurisdiction be identified as such on the “Recognize and Accept” List. Upon receipt of any such notice, the Mutual Recognition of Jurisdictions (E) Working Group will also consider whether it is necessary to re-evaluate the jurisdiction’s “Recognize and Accept” status.

(c) The Mutual Recognition of Jurisdictions (E) Working Group will also give due consideration to any notice from a U.S.-based insurance group that it has been required to perform a group capital calculation, at either the group-wide or subgroup level, in a jurisdiction on the “Recognize and Accept” List.

(d) If a jurisdiction referred for re-evaluation under this Paragraph is a Reciprocal Jurisdiction, the Mutual Recognition of Jurisdictions (E) Working Group shall
conduct a concurrent review of the jurisdiction’s continuing status as a Reciprocal Jurisdiction, or, in the case of a jurisdiction entitled to that status by virtue of a covered agreement, shall refer the matter to the Reinsurance (E) Task Force for further discussion and communication with appropriate federal and/or international authorities, in accordance with the *Process for Evaluating Qualified and Reciprocal Jurisdictions*.

**Appendix: Letter Templates**

Paragraph 10(c) of the *Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation* provides that the NAIC will publish a form letter that a competent regulatory authority of a non-U.S. jurisdiction that is not a Reciprocal Jurisdiction may use to provide confirmation pursuant to Section 21(D)(1)(a), Section 21(D)(1)(b) and 21(D)(2) of the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450)*, as well as a template letter that any “Recognize and Accept” Jurisdiction, including a Reciprocal Jurisdiction, may use to provide confirmation, pursuant to Section 21(E)(1) of Model #450, as to whether or not it requires a group capital filing for any U.S. based insurance group’s operations. The following template letters are designed to satisfy these requirements:

**A. Jurisdictions with U.S. Insurance Group Operations.** In order to satisfy the requirements of Sections 21D(1)(a) and 21D(2) of Model #450, the competent regulatory authority of a non-U.S. Jurisdiction in which U.S. insurance groups operate shall provide the NAIC with a written letter, confirming, as follows:

As the competent regulatory authority for [non-U.S. Jurisdiction], I hereby confirm to the National Association of Insurance Commissioners (NAIC) and the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories the following:

- [Non-U.S. Jurisdiction] recognizes the U.S. state regulatory approach to group supervision and group capital, and confirms that that insurers and insurance groups whose lead state is accredited by the NAIC under the NAIC Accreditation Program shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, by the lead state and will not be subject to group supervision, including worldwide group governance, solvency and capital, and reporting, at the level of the worldwide parent undertaking of the insurance or reinsurance group by the non-U.S. jurisdiction;

- Information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to a lead state commissioner in accordance with a memorandum of understanding or similar document between the commissioner and
[non-U.S. Jurisdiction], including but not limited to the International Association of Insurance Supervisors Multilateral Memorandum of Understanding or other multilateral memoranda of understanding coordinated by the NAIC.

- [Non-U.S. Jurisdiction] will immediately notify the NAIC upon any changes to the assurances provided in this letter.

**B. Jurisdictions with No U.S. Insurance Group Operations.** In order to satisfy the requirements of Sections 21D(1)(b) and 21D(2) of Model #450, the competent regulatory authority of a non-U.S. Jurisdiction in which no U.S. insurance groups operate shall provide the NAIC with a written letter, confirming, as follows:

As the competent regulatory authority and lead insurance regulatory supervisor for [non-U.S. Jurisdiction], I hereby confirm to the National Association of Insurance Commissioners (NAIC) and the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories, with a copy to the International Association of Insurance Supervisors (IAIS), the following:

- [Non-U.S. Jurisdiction] recognizes the Group Capital Calculation as defined under Section 4L(2) of the NAIC Insurance Holding Company System Regulatory Act (#440) as an acceptable international capital standard.

- Information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to a lead state commissioner in accordance with a memorandum of understanding or similar document between the commissioner and [non-U.S. Jurisdiction], including but not limited to the International Association of Insurance Supervisors Multilateral Memorandum of Understanding or other multilateral memoranda of understanding coordinated by the NAIC.

- [Non-U.S. Jurisdiction] will immediately notify the NAIC upon any changes to the assurances provided in this letter.

**C. Jurisdictions with Subgroup Capital Requirements.** Paragraph 13 of the *Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation* provides that the Mutual Recognition of Jurisdictions (E) Working Group will attempt to obtain written confirmation from a competent regulatory authority in any jurisdiction where the Working Group has evidence indicating that the jurisdiction requires a subgroup group capital filing for any U.S. based insurance group’s operations in that jurisdiction. The NAIC will identify such jurisdictions on the “Recognize and Accept” List, and will provide an explanation and discussion on such determination in its Summary of Findings and Determination. States may rely on this List when making determinations under Section 4L(2)(e) of Model #440.

Re: NAIC Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation Exposure Draft

Thank you for the opportunity to comment on the NAIC’s Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation. Swiss Re believes the process as outlined accurately reflects the requirements contained in the Insurance Holding Company System Models and pertinent provisions in the Credit for Reinsurance Models defining Qualified and Reciprocal Jurisdictions.

The certified reinsurer experience has demonstrated that day-to-day practices do not always align with written processes. Differences among the states in interpretation and implementation of the processes surrounding the evaluation of jurisdictions and reinsurers can frustrate both the international cooperation and financial solvency regulation goals of the NAIC and the states.

Therefore, we recommend that the Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation, the Process for Evaluating Qualified and Reciprocal Jurisdictions, and the checklists for certified and reciprocal jurisdiction reinsurers be added to the NAIC Accreditation Program. Specifically, adherence to these policies should be evaluated by the NAIC accreditation review team as part of the Part B standards – Regulatory Practices and Procedures. Because the purpose of Part B of the accreditation program is to identify base-line regulatory practices and procedures required to supplement and support enforcement of states’ financial solvency laws in order for the states to attain substantial compliance with the core standards established in Part A, and Part A contains both the holding company and credit for reinsurance models, the accreditation program is the ideal mechanism to guide regulatory best practices in this area.

Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation

Mutual Recognition of Jurisdictions (E) Working Group
Process for Evaluating Jurisdictions that Recognize and Accept
the Group Capital Calculation

1. **Group Capital Calculation.** On December 9, 2020, the NAIC adopted revisions to the NAIC Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). These revisions implement the Group Capital Calculation (GCC) filing requirements for insurance groups at the level of the ultimate controlling person for the purposes of evaluating solvency at the group level. The revisions specifically provide that the requirement to file the NAIC’s GCC applies to U.S.-based groups, while a group headquartered outside the U.S. is exempt from the GCC (subject to limited exceptions)\(^1\) if its group-wide supervisor “recognizes and accepts” the GCC for U.S. groups doing business in that jurisdiction. Likewise, a U.S. group subject to a group capital calculation specified by the Federal Reserve Board is exempt from the GCC. This process codifies the concepts of mutual recognition and one group/one group-wide supervisor.

2. **NAIC Listing Process.** Section 4L(2) of Model #440 provides two ways a non-U.S. jurisdiction may meet the standards for its insurance groups to be exempt from the GCC:

   (a) If the jurisdiction has been determined to be a Reciprocal Jurisdiction for purposes of credit for reinsurance, which includes a requirement that the jurisdiction “recognizes the U.S. state regulatory approach to group supervision and group capital”;\(^2\) or

   (b) If the jurisdiction has otherwise been determined to recognize and accept the GCC by procedures specified in regulation.

Jurisdictions meeting either of these criteria will be referred to informally as “‘Recognize and Accept’ Jurisdictions.” Sections 21D and 21E of Model #450 provide a general framework for how the process to identify “Recognize and Accept” Jurisdictions will work and specifically contemplates the development of a list of such jurisdictions through the NAIC Committee Process. The purpose of this document is to provide a documented evaluation process for creating and maintaining this list of jurisdictions that recognize and accept the GCC.

3. **Covered Agreements.** The GCC and the “recognize and accept” process are intended to comply with the requirements under the “Bilateral Agreement Between the United States of

---

\(^1\) Under Section 4L(2)(e) of Model #440, if the worldwide insurance operations of a non-U.S. group are exempt from the GCC, the group’s U.S. Lead State Commissioner may nevertheless require a GCC that is limited to the group’s U.S. operations if: “after any necessary consultation with other supervisors or officials, it is deemed appropriate by the lead state commissioner for prudential oversight and solvency monitoring purposes or for ensuring the competitiveness of the insurance marketplace.” A group’s exemption is also contingent on the group providing sufficient information to the lead state, directly or through the group-wide supervisor, sufficient to enable the lead state to comply with the group supervision approach set forth in the NAIC Financial Analysis Handbook.

\(^2\) Model #440. § 4L(2)(c).
“America and the European Union on Prudential Measures Regarding Insurance and Reinsurance,” which was signed on September 22, 2017. On December 18, 2018, a similar Covered Agreement was signed with the United Kingdom (UK) (collectively “Covered Agreements”). The Covered Agreements require, inter alia, the elimination of reinsurance collateral requirements for certain reinsurers licensed and domiciled in participating jurisdictions, and limit the worldwide application of prudential group insurance measures on insurance groups based in participating jurisdictions. Specifically, in relevant part, the Covered Agreements provide that U.S. insurers and reinsurers can operate in the EU and UK without subjecting the U.S. parent to the host jurisdiction’s group-level governance, solvency and capital, and reporting requirements, and also provide the same protections for EU and UK insurers and reinsurers operating in the U.S. However, the Covered Agreements only exempt U.S., EU and UK insurance groups from each other’s worldwide group capital requirements if the home supervisor performs worldwide group capital assessments on its own insurance groups and has the authority to impose preventive and corrective measures.

4. Reciprocal Jurisdictions. In response to the Covered Agreements, the NAIC also amended the Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) to provide that jurisdictions that are subject to in-force covered agreements are considered to be “Reciprocal Jurisdictions,” and large, financially strong reinsurers that are based in those jurisdictions are not required to post reinsurance collateral. In addition, a “Qualified Jurisdiction” under Section 2E of Model #785 may become a Reciprocal Jurisdiction if, among other requirements, it “recognizes the U.S. state regulatory approach to group supervision and group capital.” By the terms of the Covered Agreements, insurance groups based in EU Member States and the UK are entitled to exemption from the extraterritorial application of the U.S. GCC, and Section 4L(2)(c) of Model #440 recognizes that other Reciprocal Jurisdictions, which have made the same commitment, are entitled to the same treatment.

5. Other Jurisdictions that Recognize and Accept. In addition, because most of the requirements for Reciprocal Jurisdiction status are not relevant to group capital and group supervision, Section 4L(2)(d) of Model #440 provides an alternative pathway for the exemption. The ultimate controlling person of an insurance holding company system whose non-U.S. group-wide supervisor is not in a Reciprocal Jurisdiction is exempted from filing the GCC as long as the jurisdiction of its group-wide supervisor “recognizes and accepts” the GCC, as specified by the commissioner in regulation. Section 21D of Model #450 provides that a non-U.S. jurisdiction is considered to “recognize and accept” the GCC if it satisfies all of the following criteria:

(a) The non-U.S. jurisdiction recognizes the U.S. state regulatory approach to group supervision and group capital, by providing confirmation by a competent regulatory authority, in such jurisdiction, that insurers and insurance groups whose lead state is
accredited by the NAIC under the NAIC Accreditation Program shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, by the lead state and will not be subject to group supervision, including worldwide group governance, solvency and capital, and reporting, at the level of the worldwide parent undertaking of the insurance or reinsurance group by the non-U.S. jurisdiction;

(b) Where no U.S. insurance groups operate in the non-U.S. jurisdiction, that non-U.S. jurisdiction indicates formally in writing to the lead state with a copy to the International Association of Insurance Supervisors that the group capital calculation is an acceptable international capital standard. This will serve as the documentation otherwise required in Section 21D(1)(a);

(c) The non-U.S. jurisdiction provides confirmation by a competent regulatory authority in such jurisdiction that information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to the lead state commissioner in accordance with a memorandum of understanding or similar document between the commissioner and such jurisdiction, including but not limited to the International Association of Insurance Supervisors Multilateral Memorandum of Understanding or other multilateral memoranda of understanding coordinated by the NAIC. The commissioner shall determine, in consultation with the NAIC Committee Process, if the requirements of the information sharing agreements are in force;

(d) Notwithstanding these exemptions, Section 4L(2)(e) of Model #440 provides that a lead state commissioner shall require the group capital calculation for U.S. operations of any non-U.S. based insurance holding company system from a Reciprocal Jurisdiction or “Recognize and Accept” Jurisdiction where, after any necessary consultation with other supervisors or officials, it is deemed appropriate by the commissioner for prudential oversight and solvency monitoring purposes or for ensuring the competitiveness of the insurance marketplace. Section 21E(1) of Model #450 then provides that to assist with a determination under Section 4L(2)(e) of Model #440, the list will also identify whether a jurisdiction that is exempted under either Sections 4L(2)(c) or 4L(2)(d) requires a group capital filing for any U.S.-based insurance group’s operations in that non-U.S. jurisdiction.

6. Mutual Recognition of Jurisdictions (E) Working Group. On March 8, 2021, the Financial Condition (E) Committee repositioned the Qualified Jurisdiction (E) Working Group to report directly to the Committee and revised the name of the group to the Mutual Recognition of Jurisdictions (E) Working Group. The Working Group received the additional charge of developing a process for evaluating jurisdictions that meet the NAIC requirements for recognizing and accepting the GCC (“Process for Evaluating Jurisdictions that Recognize and
Accept the Group Capital Calculation,” or “Recognize and Accept” Process). A separate process exists for evaluating Qualified and Reciprocal Jurisdictions (“Process for Evaluating Qualified and Reciprocal Jurisdictions”), and it is intended that the “Recognize and Accept” Process will closely mirror this process. The Committee charged this Working Group with developing and implementing the “Recognize and Accept” Process due to this Working Group’s experience and expertise in evaluating the insurance regulatory systems of non-U.S. jurisdictions and their recognition of U.S. group-wide supervision.

7. List of Jurisdictions that Recognize and Accept the GCC. The Mutual Recognition of Jurisdictions (E) Working Group will evaluate non-U.S. jurisdictions in accordance with this “Recognize and Accept” Process. A list of “Recognize and Accept” Jurisdictions is published through the NAIC committee process (“NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation”; “Recognize and Accept’ List”; or “List”). The creation of the List does not constitute a delegation of regulatory authority to the NAIC. Although a state must consider this List under Section 21E(3) of Model #450 in its determination of whether a non-U.S. insurance group is exempt from filing an annual GCC, the List is not binding and the ultimate authority to designate a “Recognize and Accept” Jurisdiction resides solely in each state.

(a) The List will include all Reciprocal Jurisdictions that recognize the U.S. state regulatory approach to group supervision and group capital. [See discussion in paragraph 9.]

(b) The evaluation of non-U.S. jurisdictions that are non-Reciprocal Jurisdictions as “Recognize and Accept” Jurisdictions will be conducted in accordance with the provisions of Section 4L(2) of Model #440 and Section 21 of Model #450, and any other relevant guidance developed by the NAIC. [see discussion in paragraphs 10 and 11.]

(c) As specified in Section 21E(1) of Model #450, the List will also identify which “Recognize and Accept” Jurisdictions require a group capital filing for a U.S.-based insurance group’s operations in that jurisdiction. [See discussion of Subgroup Capital Calculation in paragraph 13.]

(d) Upon final inclusion of a jurisdiction on the List, any confidential documents reviewed by the Mutual Recognition of Jurisdictions (E) Working Group in its evaluation of the jurisdiction will be made available to individual U.S. state insurance regulators upon request and confirmation that the information contained therein will remain confidential. The NAIC will maintain the List on its public website and in other appropriate NAIC publications.
(e) If a non-US group’s lead state exempts the group from the GCC, and the group-wide supervisor is based in a jurisdiction that is not on the “Recognize and Accept” List, the state must thoroughly document the justification for the exemption.

8. Procedure for Evaluation of Non-U.S. Jurisdictions. In undertaking the evaluation of a non-U.S. Jurisdiction for inclusion on the “Recognize and Accept” List, the Mutual Recognition of Jurisdictions (E) Working Group shall utilize similar processes and procedures to those outlined in the Process for Evaluating Qualified and Reciprocal Jurisdictions. Specifically, the Working Group will undertake the following procedure in making its evaluation:

(a) Initiation of Evaluation. Formal notification of the Mutual Recognition of Jurisdictions (E) Working Group’s intent to initiate the evaluation process will be sent by the NAIC to the supervisory authority in the jurisdiction selected. The process of evaluation and all related documentation are private and confidential matters between the NAIC and the applicant jurisdiction, unless otherwise provided in this document. Upon receipt of confirmation by a competent regulatory authority of the non-U.S. jurisdiction, the Mutual Recognition of Jurisdictions (E) Working Group:

i. Will direct NAIC staff and/or outside consultants with the appropriate knowledge, experience and expertise to review the materials received from the jurisdiction. Upon completing its review of the evaluation materials, the internal reviewer(s) will report initial findings to the Mutual Recognition of Jurisdictions (E) Working Group, including any significant issues or concerns identified. This report will be included as part of the official documentation of the evaluation. Copies of the initial findings may also be made available to the Federal Insurance Office (FIO) and other relevant federal authorities subject to appropriate confidentiality and information-sharing agreements being in place.

ii. Will issue public notice on the NAIC website inviting public comments with respect to consideration of the jurisdiction as a “Recognize and Accept” Jurisdiction.

iii. Will consider public comments from state regulators, U.S. insurance groups, and any other interested parties.

iv. May review other public materials deemed relevant to making a determination.

v. Will invite each non-U.S. jurisdiction, or its designee, to provide any additional information it deems relevant to making a determination.

vi. Relevant U.S. state and federal authorities will be notified of the Mutual
Recognition of Jurisdictions (E) Working Group’s decision to evaluate a jurisdiction.

(b) **Preliminary Evaluation Report.** NAIC staff will prepare a Preliminary Evaluation Report for review by the Mutual Recognition of Jurisdictions (E) Working Group. The report will contain a recommendation as to whether the NAIC should recognize the jurisdiction as a “Recognize and Accept” Jurisdiction. Upon review by the Working Group, the results of the Preliminary Evaluation Report will be immediately communicated in written form to the supervisory authority of the jurisdiction under review. At that time, a copy of the Preliminary Evaluation Report will also be shared with the Group Capital Calculation (E) Working Group in regulator-to-regulator session. The Group Capital Calculation (E) Working Group will also be kept advised of any new developments in the evaluation of this jurisdiction.

(c) **Final Evaluation Report.** Upon receipt of the Preliminary Evaluation Report, the supervisory authority will have an opportunity to respond to the initial findings and determination. The Mutual Recognition of Jurisdictions (E) Working Group will consider any response, and will proceed to prepare its Final Evaluation Report. The Working Group will consider the Final Evaluation Report for approval in regulator-to-regulator session.

(d) **Summary of Findings and Determination.** Upon approval of the Final Evaluation Report, the Mutual Recognition of Jurisdictions (E) Working Group will issue a public statement and a summary of its findings with respect to its determination. At this time, the Working Group will release the Summary of Findings and Determination for public comment. Once the Working Group has finally adopted the Summary of Findings and Determination in open session after opportunity for public comment, it will submit the summary of its findings and its recommendation to the Financial Condition (E) Committee at an open meeting. Upon approval by the Committee, the summary and recommendation will be submitted to the Executive (EX) Committee and Plenary, as well as to the Federal Insurance Office (FIO), United States Trade Representative (USTR) and other relevant federal authorities for informational purposes. Upon approval as a “Recognize and Accept” Jurisdiction by the Executive (EX) Committee and Plenary, the jurisdiction will be added to the NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation.

9. **Evaluation of Reciprocal Jurisdictions.** Under Section 4L(2)(c) of Model #440, Reciprocal Jurisdictions that recognize the U.S. state regulatory approach to group supervision and group capital are exempt from the GCC. Because a “recognize and accept” evaluation by the Mutual Recognition of Jurisdictions (E) Working Group is already part of the Reciprocal Jurisdiction review process, all Reciprocal Jurisdictions designated by the NAIC through that review
process are also automatically designated as “Recognize and Accept” Jurisdictions. Likewise, in accordance with the terms of the EU and UK Covered Agreements, all EU Member States and the UK are automatically designated “Recognize and Accept” Jurisdictions. If there is a material change to the terms of either Covered Agreement, or the United States enters into a new covered agreement with one or more non-U.S. jurisdictions, the Mutual Recognition of Jurisdictions (E) Working Group will rely upon its review and evaluation of the applicable covered agreement, in consultation with FIO and USTR, to determine whether automatic “Recognize and Accept” status is appropriate, or whether it is necessary to conduct a case-by-case review of the jurisdiction or jurisdictions in accordance with Paragraph 10 below. If there is a material change to the terms of the U.S.-EU or U.S.-UK Covered Agreement, or if the United States enters into a new covered agreement with one or more non-U.S. jurisdictions, the Mutual Recognition of Jurisdictions (E) Working Group will consider, and will consult with FIO and USTR regarding, whether and how the applicability of the procedures in this document may apply.

Under Section 21D(1)(a) of Model #450, a non-Reciprocal Jurisdiction, in which a U.S. insurance group has operations, that recognizes the U.S. state regulatory approach to group supervision and group capital may be included on the NAIC “Recognize and Accept” List. The Mutual Recognition of Jurisdictions (E) Working Group may rely on written confirmation by a competent regulatory authority in that jurisdiction that insurers and insurance groups whose lead state is accredited by the NAIC under the NAIC Accreditation Program shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, by the lead state and will not be subject to group supervision, including worldwide group governance, solvency and capital, and reporting, at the level of the worldwide parent undertaking of the insurance or reinsurance group by the non-U.S. jurisdiction. The process outlined in this Paragraph will also apply to a jurisdiction that is a Reciprocal Jurisdiction by virtue of a covered agreement, if the Mutual Recognition of Jurisdictions (E) Working Group has determined that a case-by-case review of the jurisdiction is warranted.

(a) The Mutual Recognition of Jurisdictions (E) Working Group will perform a due diligence review of available public and confidential documents to confirm that to the best of its determination the representations in the written confirmation are true and accurate.

(b) The jurisdiction must also have an acceptable Memorandum of Understanding to be included on the “Recognize and Accept” List, as described in paragraph 12 of this Process.

(c) NAIC staff will work with the Mutual Recognition of Jurisdictions (E) Working Group
and the applicant jurisdiction to prepare an acceptable confirmation letter for this purpose. The NAIC will publish a form letter in the Appendix: Letter Templates that a competent regulatory authority of a non-U.S. jurisdiction may use to provide confirmation pursuant to Section 21D(1)(a), Section 21D(1)(b) and 21D(2) of Model #450 as well as a template letter that any “Recognize and Accept” Jurisdiction, including a Reciprocal Jurisdiction, may use to provide confirmation, pursuant to Section 21E(1) of Model #450, as to whether or not it requires a group capital filing for any U.S. based insurance group’s operations. NAIC Staff will work with the jurisdiction to modify these forms if necessary for a particular jurisdiction.

11. Evaluation of Non-Reciprocal Jurisdictions with No U.S. Insurance Group Operations. Because the GCC embraces and encourages the concepts of mutual recognition and one group/one group-wide supervisor, a non-U.S. jurisdiction may be included on the “Recognize and Accept” List, enabling its insurance groups to do business in the U.S. without being subject to U.S group-wide supervision, even if no U.S. groups operate in that jurisdiction. Under Section 21D(1)(b) of Model #450, such a jurisdiction must document its recognition and acceptance by indicating formally in writing to the lead state of each of its insurance groups doing business in the U.S., with a copy to the International Association of Insurance Supervisors (IAIS), that the GCC is an acceptable international capital standard. The Mutual Recognition of Jurisdictions (E) Working Group may rely on written confirmation by a competent regulatory authority in that jurisdiction.

(a) The Mutual Recognition of Jurisdictions (E) Working Group will perform a due diligence review of available public and confidential documents to confirm that, to the best of its determination, the representations in the written confirmation are true and accurate.

(b) The jurisdiction must also have an acceptable Memorandum of Understanding to be included on the “Recognize and Accept” List, as described in paragraph 12 of this Process.

(c) NAIC staff will work with the Mutual Recognition of Jurisdictions (E) Working Group and the applicant jurisdiction to prepare an acceptable confirmation letter for this purpose.

12. Memorandum of Understanding. Section 21D(2) of Model #450 requires a non-Reciprocal Jurisdiction that “recognizes and accepts” the GCC to provide confirmation by a competent regulatory authority that information regarding insurers, and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to the lead state commissioner of any U.S.-based insurance group doing business in that jurisdiction, in accordance with a memorandum of understanding or similar document between the commissioner and the jurisdiction.
Acceptable MOUs include, but are not limited to, the International Association of Insurance Supervisors Multilateral Memorandum of Understanding (“IAIS MMoU”) or other multilateral memoranda of understanding coordinated by the NAIC. The Mutual Recognition of Jurisdictions (E) Working Group will review such memoranda of understanding and include an opinion in the Summary of Findings and Determination as to whether the jurisdiction has met this condition to be included on the “Recognize and Accept” List.

(a) The lead state will act as a conduit for information between the “Recognize and Accept” Jurisdiction and other states that have an insurer from that jurisdiction, and will share information with these states consistent with the terms governing the further sharing of information included in the applicable MOU, and pursuant to the NAIC Master Information Sharing and Confidentiality Agreement. The jurisdiction must also confirm in writing that it is willing to permit this lead state to act as the contact for purposes of sharing information concerning all insurers within the group.

(b) If a jurisdiction has not been approved by the IAIS as a signatory to the MMoU, it must either (1) enter into an MOU with the lead state, or (2) enter into an MOU with a state that has agreed to serve as a single point of contact for multiple lead states, similar to the procedure for sharing information under the Process for Evaluating Qualified and Reciprocal Jurisdictions. The MOU must also provide for appropriate confidentiality safeguards with respect to the information shared among the jurisdictions.

(c) The same requirements and procedures will apply to a Reciprocal Jurisdiction that is subject to a case-by-case “recognize and accept” review, unless the necessary information-sharing procedures are already specified in the applicable covered agreement.

13. **Prudential Oversight and Solvency Monitoring.** Section 4L(2)(e) of Model #440 directs a lead state commissioner to require the group capital calculation for U.S. operations of any non-U.S. based insurance holding company system based in a “Recognize and Accept” Jurisdiction if, after any necessary consultation with other supervisors or officials, the commissioner deems such a “subgroup” calculation to be appropriate for prudential oversight and solvency monitoring purposes or for ensuring the competitiveness of the insurance marketplace. Section 21E(1) of Model #450 provides that to assist with such a determination, the “Recognize and Accept” List will also identify whether a listed jurisdiction requires a group capital filing for any U.S. based insurance group’s operations in that jurisdiction. As part of Paragraph 8, Procedure for Evaluation of Non-U.S. Jurisdiction, the Mutual Recognition of Jurisdictions (E) Working Group will perform a due diligence review of available public and confidential documents to confirm whether or not any “Recognize and Accept” Jurisdiction requires a subgroup group capital filing for a U.S.-based insurance group’s operations, and a discussion and findings on this review will be included in the Preliminary Evaluation Report, Final
Evaluation Report and Summary of Findings and Determination. If the Working Group has evidence indicating that a jurisdiction requires a subgroup group capital filing for any U.S.-based insurance group’s operations in that jurisdiction, it will attempt to obtain written confirmation of the existence and scope of any such requirement from a competent regulatory authority in that jurisdiction, but it is recognized that such a confirmation is not an essential element of the Working Group’s determination. The NAIC will identify such jurisdictions on the “Recognize and Accept” List, and may include an explanatory note in cases where a simple “Yes” or “No” response does not adequately describe the jurisdiction’s requirements. States may rely on this List when making determinations under Section 4L(2)(e) of Model #440.

14. Process for Periodic Evaluation. The process for determining whether a non-U.S. jurisdiction is a “Recognize and Accept” Jurisdiction is ongoing and subject to periodic review. The Mutual Recognition of Jurisdictions (E) Working Group will perform a yearly review of the NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation to determine whether there have been any significant changes over the prior year that might affect inclusion on the List. This yearly review shall follow such abbreviated process as may be determined by the Working Group to be appropriate.

(a) Upon determination by a lead state commissioner that a non-U.S. jurisdiction no longer meets one or more of the requirements to “recognize and accept” the GCC, the lead state commissioner may provide a recommendation to the Working Group that the jurisdiction be removed from the “Recognize and Accept” List. Upon review and after consultation with the “Recognize and Accept” Jurisdiction, the Working Group may remove the jurisdiction from the List, which must then be confirmed by the Financial Condition (E) Committee and the NAIC Executive (EX) Committee and Plenary.

(b) Upon determination by a lead state commissioner that a non-U.S. jurisdiction requires a group capital filing for any U.S. based insurance group’s operations in a non-U.S. jurisdiction, the lead state commissioner may provide a recommendation to the Working Group that the non-U.S. jurisdiction be identified as such on the “Recognize and Accept” List. Upon receipt of any such notice, the Mutual Recognition of Jurisdictions (E) Working Group will also consider whether it is necessary to re-evaluate the jurisdiction’s “Recognize and Accept” status.

(c) The Mutual Recognition of Jurisdictions (E) Working Group will also give due consideration to any notice from a U.S.-based insurance group that it has been required to perform a group capital calculation, at either the group-wide or subgroup level, in a jurisdiction on the “Recognize and Accept” List.
(d) If a jurisdiction referred for re-evaluation under this Paragraph is a Reciprocal Jurisdiction, the Mutual Recognition of Jurisdictions (E) Working Group shall conduct a concurrent review of the jurisdiction’s continuing status as a Reciprocal Jurisdiction, or, in the case of a jurisdiction entitled to that status by virtue of a covered agreement, shall refer the matter to the Reinsurance (E) Task Force for further discussion and communication with appropriate federal and/or international authorities, in accordance with the Process for Evaluating Qualified and Reciprocal Jurisdictions.

Appendix: Letter Templates

Paragraph 10(c) of the Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation provides that the NAIC will publish a form letter that a competent regulatory authority of a non-U.S. jurisdiction that is not a Reciprocal Jurisdiction may use to provide confirmation pursuant to Section 21(D)(1)(a), Section 21(D)(1)(b) and 21(D)(2) of the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450), as well as a template letter that any “Recognize and Accept” Jurisdiction, including a Reciprocal Jurisdiction, may use to provide confirmation, pursuant to Section 21(E)(1) of Model #450, as to whether or not it requires a group capital filing for any U.S. based insurance group’s operations. The following template letters are designed to satisfy these requirements:

A. Jurisdictions with U.S. Insurance Group Operations. In order to satisfy the requirements of Sections 21D(1)(a) and 21D(2) of Model #450, the competent regulatory authority of a non-U.S. Jurisdiction in which U.S. insurance groups operate shall provide the NAIC with a written letter, confirming, as follows:

As the competent regulatory authority for [non-U.S. Jurisdiction], I hereby confirm to the National Association of Insurance Commissioners (NAIC) and the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories the following:

- [Non-U.S. Jurisdiction] recognizes the U.S. state regulatory approach to group supervision and group capital, and confirms that insurers and insurance groups whose lead state is accredited by the NAIC under the NAIC Accreditation Program shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, by the lead state and will not be subject to group supervision, including worldwide group governance, solvency and capital, and reporting, at the level of the worldwide parent undertaking of the insurance or reinsurance group by the non-U.S. jurisdiction;
• Information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to a lead state commissioner in accordance with a memorandum of understanding or similar document between the commissioner and [non-U.S. Jurisdiction], including but not limited to the International Association of Insurance Supervisors Multilateral Memorandum of Understanding or other multilateral memoranda of understanding coordinated by the NAIC.

• [Non-U.S. Jurisdiction] will immediately notify the NAIC upon any changes to the assurances provided in this letter.

B. Jurisdictions with No U.S. Insurance Group Operations. In order to satisfy the requirements of Sections 21D(1)(b) and 21D(2) of Model #450, the competent regulatory authority of a non-U.S. Jurisdiction in which no U.S. insurance groups operate shall provide the NAIC with a written letter, confirming, as follows:

As the competent regulatory authority and lead insurance regulatory supervisor for [non-U.S. Jurisdiction], I hereby confirm to the National Association of Insurance Commissioners (NAIC) and the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories, with a copy to the International Association of Insurance Supervisors (IAIS), the following:

• [Non-U.S. Jurisdiction] recognizes the Group Capital Calculation as defined under Section 4L(2) of the NAIC Insurance Holding Company System Regulatory Act (#440) as an acceptable international capital standard.

• Information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to a lead state commissioner in accordance with a memorandum of understanding or similar document between the commissioner and [non-U.S. Jurisdiction], including but not limited to the International Association of Insurance Supervisors Multilateral Memorandum of Understanding or other multilateral memoranda of understanding coordinated by the NAIC.

• [Non-U.S. Jurisdiction] will immediately notify the NAIC upon any changes to the assurances provided in this letter.

C. Jurisdictions with Subgroup Capital Requirements. Paragraph 13 of the Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation provides that the Mutual Recognition of Jurisdictions (E) Working Group will attempt to obtain written confirmation from a competent regulatory authority in any jurisdiction where the Working Group has evidence indicating that the jurisdiction requires a subgroup group capital filing for any U.S. based insurance group’s operations in that jurisdiction. The NAIC will identify such
jurisdictions on the “Recognize and Accept” List, and will provide an explanation and discussion on such determination in its Summary of Findings and Determination. States may rely on this List when making determinations under Section 4L(2)(e) of Model #440.
The NAIC/AICPA (E) Working Group of the Financial Condition (E) Committee met Sept. 13, 2021. The following Working Group members participated: Doug Stolte, Chair (VA); Laura Clements (CA); Rylynn Brown (DE); Kevin Clark (IA); Judy Weaver (MI); Shannon Schmoeger (MO); Lindsay Crawford (NE); Doug Bartlett (NH); Dale Bruggeman (OH); Melissa Greiner and Kimberly Rankin (PA); Johanna Nickelson (SD); and Weimei Ye (UT).

1. **Discussed the Model #205 Premium Threshold**

   Mr. Stolte said the Working Group is responsible for reviewing the $500 million annual premium threshold contained within the *Annual Financial Reporting Model Regulation (#205)* on an annual basis. Bruce Jenson (NAIC) gave an update on the results of the annual review, noting that as of Dec. 31, 2020, 92.6% of all direct written premiums and 94.1% of all gross written premiums would be subject to internal control reporting requirements. Mr. Stolte noted that these results were within the Working Group’s expectations, and no action to adjust the threshold was deemed necessary at this time.

2. **Heard an Update on Recent Auditing Pronouncements**

   Jean Connolly (PricewaterhouseCoopers—PwC) provided an overview of recent auditing pronouncements affecting statutory audit reports. She stated that the AICPA Auditing Standards Board issued *Statement on Auditing Standards (SAS) No. 139—Amendments to AU-C Sections 800, 805, and 810 to Incorporate Auditor Reporting Changes From SAS No. 134*, which incorporates the new auditor reporting language in SAS No. 134—*Auditor Reporting and Amendments; Including Amendments Addressing Disclosures in the Audit of Financial Statements* for statements prepared following special purpose frameworks. The changes are intended to enhance the communicative value and relevance of the auditor’s report and to be more consistent with the standards of the International Auditing and Assurance Standards Board (IAASB) and recent updates to Public Company Accounting Oversight Board (PCAOB) standards. The original effective date was deferred a year for the pandemic and is now effective for periods ending on or after Dec. 15, 2021.

   Ms. Connolly stated that the call materials provided an example of the revised auditor report drafted by the AICPA (Attachment Five-A). The application of SAS No. 139 results in changes to the format and enhanced information added to the auditor report. The opinion section of the report is now required to be presented first, followed by a section outlining the basis for the opinion. This section will not include a statement that the auditor is required to be independent of the entity and meet the auditor’s other ethical responsibilities, in accordance with the relevant ethical requirements relating to the audit.

   In addition, Ms. Connolly stated that the revised report includes enhanced auditor reporting relating to the company’s ability to continue as a going concern, including a description of the respective responsibilities of management when required by the applicable financial reporting framework, and the auditor for going concern considerations. The revised report also includes an expanded description of the auditor’s responsibilities, including the auditor’s responsibilities relating to professional judgment and professional skepticism, and the auditor’s communications with those charged with governance. Ms. Connolly stated that the auditors' responsibilities have not changed under SAS No. 139, but auditors will now be required to communicate those responsibilities in more detail.

   Ms. Connolly stated that the example report included in the materials is a general use report, but some certified public accountant (CPA) firms issue restricted use reports for insurance company statutory financial statements. These reports will look very similar to the example provided, except there will be no opinion on conformity with U.S. generally accepted accounting principles (GAAP), and the financial statements may not be suitable for purposes other than for use by the state insurance regulator.

   In addition to the SAS No. 139 changes, Ms. Connolly noted that other new auditing standards have recently been adopted; i.e., *SAS No. 142—Audit Evidence, SAS No. 143—Auditing Accounting Estimates and Related Disclosures*, and SAS No. 144—*Amendments to AU-C Sections 501, 540, and 620 Related to the Use of Specialists and the Use of Pricing Information Obtained From External Information Sources*. However, they will not be applied until audits as of Dec. 31, 2022, or Dec. 31, 2023.

   Mr. Stolte thanked Ms. Connolly for her overview of the new standards.

© 2021 National Association of Insurance Commissioners
3. **Heard an Update on the Results of 2020 Reserve Data Training**

Mr. Stolte said the next agenda item is to hear an update on the results and takeaways from a joint project between the NAIC and the AICPA on reserve data training for state insurance regulators that was conducted in 2020. Mr. Jenson stated that AICPA firm representatives prepared and presented two different two-hour webinars on testing the completeness and accuracy of underlying loss reserve data to financial regulators in September 2020. More than 300 regulators participated in each session, with the training being very well received and highly rated. Mr. Jenson stated that NAIC staff have since been working to incorporate lessons learned from the training into the development of updated guidance for the NAIC’s *Financial Condition Examiners Handbook* (Handbook).

Bailey Henning (NAIC) stated that proposed revisions to the Handbook include the development of additional procedures for inclusion in the reserving and underwriting repositories, with an emphasis on additional analytical procedures and communication with the examination actuary in determining the testing to be performed in this area. She stated that the proposed revisions will be presented to the Financial Examiners Handbook (E) Technical Group on its next call before being exposed for a public comment period.

Mr. Stolte thanked the AICPA firm representatives for preparing and presenting the training, and he encouraged Working Group members to follow the efforts of the Technical Group on this project.

4. **Discussed Other Matters**

Mr. Stolte stated that earlier this year, the Working Group conducted an e-vote to adopt updates to the NAIC’s *Model Audit Rule Implementation Guide* (Implementation Guide) to encourage audit firms to provide information on the engagement partner in the annual “Communication of Internal Control Related Matters Noted in an Audit” letter. The intent behind collecting information on the engagement partner in this letter is to assist state insurance regulators in monitoring compliance with auditor qualifications and rotation requirements. Mr. Stolte stated that this information will be expected to be included in internal control letters filed in support of the Dec. 31, 2021, annual audit period, so he encouraged states to ensure that their domestic insurers and external auditors are aware of this new expectation. He stated that the updated guidance has been included in the Implementation Guide available on the NAIC website, and it will also be included in the printed version of the NAIC’s *Accounting Practices and Procedures Manual* (AP&P Manual) next year. In addition, he stated that the new guidance has been incorporated into the AICPA’s Insurance Audit Guides and its internal control letter templates.

Having no further business, the NAIC/AICPA (E) Working Group adjourned.

AICPA Update – September 2021

Revised Auditors Reports

Statement on Auditing Standards (SAS) No. 139, Amendments to AU-C Sections 800, 805, and 810 to Incorporate Auditor Reporting Changes From SAS No. 134, was issued in March 2020 by the AICPA Auditing Standards Board (ASB). The effective date had been deferred a year for the pandemic and is now effective for periods ending on or after December 15, 2021 (effective for 2021 audits).

SAS No. 139 updates the form and content of auditors’ reports addressed in the AU-C 800 series to be more consistent with the standards of the International Auditing and Assurance Standards Board and recent updates to PCAOB standards.

Below is an illustrative example of an auditor’s report on statutory financial statements intended for general use in accordance with the new GAAS requirements (similar revisions are required for restricted use reports):

Independent Auditor’s Report

[Appropriate Addressee]

Report on the Audit of the Financial Statements

Opinions

We have audited the statutory financial statements of ABC Insurance Company, which comprise the statutory statements of admitted assets, liabilities, and surplus of ABC Insurance Company as of December 31, 20X2 and 20X1, and the related statutory statements of income and changes in surplus, and cash flows for the years then ended, and the related notes to the financial statements.

Unmodified Opinion on Regulatory Basis of Accounting

In our opinion, the accompanying financial statements present fairly, in all material respects, the admitted assets, liabilities, and surplus of ABC Insurance Company as of December 31, 20X2 and 20X1, and the results of its operations and its cash flows thereof for the years then ended in accordance with the basis of accounting described in Note X.

Adverse Opinion on U.S. Generally Accepted Accounting Principles

In our opinion, because of the significance of the matter discussed in the Basis for Adverse Opinion on U.S. Generally Accepted Accounting Principles section of our report, the financial statements do not present fairly, in accordance with accounting principles generally accepted in the United States of America, the financial position of ABC Insurance Company as of December 31, 20X2 and 20X1, or the results of its operations or its cash flows thereof for the years then ended.

Basis for Opinions

We conducted our audit in accordance with auditing standards generally accepted in the United States of America (GAAS). Our responsibilities under those standards are further described in the Auditor’s
Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of ABC Insurance Company, and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audit. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinions.

Basis for Adverse Opinion on U.S. Generally Accepted Accounting Principles

As described in Note X of the financial statements, the financial statements are prepared using accounting practices prescribed or permitted by the Insurance Department of the State of [State of domicile], which is a basis of accounting other than accounting principles generally accepted in the United States of America. The effects on the financial statements of the variances between these statutory accounting practices described in Note X and accounting principles generally accepted in the United States of America, although not reasonably determinable, are presumed to be material and pervasive.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with the accounting practices prescribed or permitted by the Insurance Department of the State of [State of domicile]. Management is also responsible for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about ABC Insurance Company’s ability to continue as a going concern for one year after the date that the financial statements are issued.

Auditor’s Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor’s report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements.

In performing an audit in accordance with GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of ABC Insurance Company’s internal control. Accordingly, no such opinion is expressed.
• Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.

• Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about ABC Insurance Company’s ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

[Signature of the auditor’s firm]

[Auditor’s city and state]

[Date of the auditor’s report]

As a comparison below is a similar illustrative example of an auditor’s report on statutory financial statements intended for general use in accordance with the GAAS requirements prior to adoption of SAS No. 139:

Independent Auditor’s Report

[Appropriate Addressee]

Report on the Financial Statements

We have audited the accompanying statutory financial statements of ABC Insurance Company, which comprise the statutory statements of admitted assets, liabilities, and surplus of ABC Insurance Company as of December 31, 20X2 and 20X1, and the related statutory statements of income and changes in surplus, and cash flow for the years then ended, and the related notes to the financial statements.

Management’s Responsibility for the Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with the accounting practices prescribed or permitted by the Insurance Department of the State of [State of domicile]. Management is also responsible for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditor’s Responsibility

Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor’s judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making
those risk assessments, the auditor considers internal control relevant to the entity’s preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity’s internal control. Accordingly, we express no such opinion. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinions.

Basis for Adverse Opinion on U.S. Generally Accepted Accounting Principles

As described in Note X to the financial statements, the ABC Insurance Company prepared these financial statements using accounting practices prescribed or permitted by the Insurance Department of the State of [State of domicile], which is a basis of accounting other than accounting principles generally accepted in the United States of America.

The effects on the financial statements of the variances between these statutory accounting practices and accounting principles generally accepted in the United States of America, although not reasonably determinable, are presumed to be material.

Adverse Opinion on U.S. Generally Accepted Accounting Principles

In our opinion, because of the significance of the matter discussed in the "Basis for Adverse Opinion on U.S. Generally Accepted Accounting Principles" paragraph, the financial statements referred to above do not present fairly, in accordance with accounting principles generally accepted in the United States of America, the financial position of ABC Insurance Company as of December 31, 20X2 and 20X1, or the results of its operations or its cash flows thereof for the year then ended.

Opinion on Regulatory Basis of Accounting

In our opinion, the financial statements referred to above present fairly, in all material respects, the admitted assets, liabilities, and surplus of ABC Insurance Company as of December 31, 20X2 and 20X1, and the results of its operations and its cash flows for the years then ended, on the basis of accounting described in Note X.

[Auditor’s signature]

[Auditor’s city and state]

[Date of the auditor’s report]

New Statements on Auditing Standards:

- **SAS No. 144, Amendments to AU-C Sections 501, 540, and 620 Related to the Use of Specialists and the Use of Pricing Information Obtained From External Information Sources**, is effective for audits of financial statements for periods ending on or after June 15, 2023. Early implementation is permitted.

The amendments include revisions to various application paragraphs in AU-C section 620 to enhance the guidance related to using the work of an auditor’s specialist.
• **SAS No. 143, Auditing Accounting Estimates and Related Disclosures**, is effective for audits of financial statements for periods ending on or after Dec. 15, 2023.

SAS No. 143 addresses the auditor’s responsibilities relating to accounting estimates, including fair value accounting estimates, and related disclosures in an audit of financial statements. This standard enables auditors to appropriately address the increasingly complex scenarios that arise from new accounting standards that include estimates.

• **SAS No. 142, Audit Evidence**, is effective for periods ending on or after December 15, 2022.

SAS No. 142 explains what constitutes audit evidence in an audit of financial statements and sets out attributes of information that are considered by the auditor when evaluating information to be used as audit evidence. Taking these attributes into account assists the auditor in maintaining professional skepticism.

The revisions to SAS No. 142 address the evolving nature of transacting business as well as the evolution of audit services. Issues addressed include use of emerging technologies and techniques by both preparers and auditors, the application of professional skepticism, the expanding use of external information sources to provide audit evidence, and more broadly, the relevance and reliability of audit evidence.
The National Treatment and Coordination (E) Working Group of the Financial Condition (E) Committee met Dec. 1, 2021. The following Working Group members participated: Debbie Doggett, Co-Chair (MO); Linda Johnson, Co-Chair (WY); Cindy Hathaway (CO); Alan Sundell (CT); Carolyn Morgan and Alison Sterett (FL); Stewart Guerin and Mike Boutwell (LA); Kari Leonard (MT); Cameron Piatt (OH); Greg Lathrop (OR); Karen Feather and Kimberly Rankin (PA); Amy Garcia (TX); Jay Sueoka (UT); Ron Pastuch (WA); and Amy Malm (WI). Also participating were: Kim Cross (IA); and Kristin Hynes (MI).

1. **Adopted its Sept. 29 Minutes**

Ms. Johnson said the Working Group met Sept. 29 and took the following action; 1) discussed its 2022 proposed charges; 2) adopted proposal 2021-06 (Request for Disclaimer); 3) received a referral from the Financial Analysis (E) Working Group; 4) discussed Form A guidance on shell company acquisitions; and 5) discussed non-domiciliary state notifications of dissolution or mergers. She asked if there were any corrections or edits to the Sept, 29 minutes.

Ms. Malm made a motion, seconded by Mr. Sueoka, to adopt the Working Group’s Sept. 29 minutes (Attachment Six-A).

2. **Exposed Proposal 2021-07 (Application Instructions regarding Company Responses)**

Ms. Sterett said that during an informal meeting of state insurance regulators, she asked if states had procedures in place on a specific time frame, did they wait for a company’s response to a pending application. Most states agreed that 30 days was ample time to wait for a response from the company before they considered the application closed and notified the company. Specific wording was drafted for the application instructions.

Ms. Johnson said that proposal 2021-07 will be exposed for a 45-day public comment period ending Jan. 14, 2022.

3. **Exposed Proposal 2021-08 (Voluntary Dissolution Best Practices)**

Ms. Johnson said that the purpose of the voluntary dissolution in the *Company Licensing Best Practices Handbook* (Best Practices) was due to a recent discussion by state insurance regulators who were not aware that this form and instructions were available. The Best Practices provides guidance for those states that do not have practices in place. She suggested that the Working Group consider exposing the Best Practices now or the Working Group can wait until the electronic application is developed. Mr. Boutwell asked what the status of the electronic application was. Jane Barr (NAIC) said that the project should begin early next year, with the release of the domestic applications beginning third quarter to the end of the year for the corporate amendments. She added that this proposal only inserts instructions for the voluntary dissolution application, because it was never included when the form was created six years ago. Once all the application are in electronic format, the Working Group will consider revising the entire document to include the review of electronic submissions.

Ms. Johnson said that Wyoming does not have many voluntary dissolutions. Mr. Boutwell said that Louisiana may have had three in 30 years and did not have a burning need. Ms. Barr said that this proposal is inserting this application in the Best Practices. She said instructions and forms have been posted on the Uniform Certification of Authority Application (UCAA) website for several years. Ms. Rankin thought it would be beneficial to at least put something in the Best Practices to bring attention to the form for those states that might not know it is available.

Mr. Lathrop said that Oregon built their own procedures because they did not know there were instructions and forms already in existence, although they have all been single state insurers. Ms. Hynes said that she has seen where companies have surrendered their certificate of authority in their domestic states and are just now coming to the foreign states to withdraw. She added that in the previous company licensing regulator forum call several states had voiced the same concern. She said for an application that is not used frequently, the Best Practices would be an appropriate reminder to the states. Ms. Malm said that Wisconsin experienced the same issue this past summer, where the domestic state allowed the company to dissolve, and Wisconsin was waiting for a filing and was not aware the company dissolved.
Hearing no objections, the Working Group agreed to expose proposal 2021-08 for a 45-day public comment period ending Jan. 14, 2022.

4. Discussed Shell Acquisitions

Ms. Doggett said the purpose of this guidance was due primarily to companies being purchased out of receivership or liquidation with the assets/license being separated from the liabilities. She said that most licensing regulators may not be the ones reviewing the Form A, but the licensing staff would be reviewing the transactions after it comes out of receivership. Ms. Garcia said that Texas has received two companies being purchased at a receivership, and both filed a Form A just like any other acquisition. Once the receivership has court approval of the sale, the application process is like any other Form A. Ms. Malm said that Wisconsin has a company being purchased out of rehabilitation that will also follow the Form A process. Ms. Doggett said that the proposal provides instructions for the domestic state but agreed that instruction for the non-domestic state may be beneficial. She added that there are considerations to be made with the separation of assets and liabilities and whether the company code stays with the assets versus the corporate existence. Mr. Boutwell asked if this fell under the purview of company licensing or receiverships/uniform liquidation proceedings or perhaps a joint effort between the two areas. Ms. Doggett agreed. Ms. Cross said the guidance may add more confusion. Ms. Barr clarified that the purpose of the guidance is to provide some consistency between states on the sale of a liquidated company’s assets and ensure that the NAIC company code remain with the assets for historical purposes and license reinstatement purposes with foreign states. She said she also checked the Receiver’s Handbook for Insurance Company Insolvencies (Receiver’s Handbook) and found no additional guidance. Ms. Cross said that Iowa has a statutory process for companies in liquidation versus a company that does run-off of the liabilities and is selling the licenses.

Ms. Doggett asked if it is easier to reinstate a license if the company code remains with the assets. Ms. Barr reminded the Working Group of an acquisition from several years ago that the Working Group oversaw because the assets were sold and the code remained with the liabilities. Before the foreign licenses were reinstated, the company changed its name, and it caused a lot of confusion with the non-domestic states when they did not recognize the company name or company code. This past summer, several of these transactions were taking place, and NAIC staff thought that there should be a process in place to provide consistency and avoid confusion with the states when they receive their filings for these transactions. Ms. Feather said that it is also confusing with a company has been liquidated and then the same company codes are reactivated. She added that this may be the way of the future, when liquidators are trying to find value in any of the assets by selling the licenses. Ms. Cross agreed. She added that Iowa added a statute to their liquidation process that enables the court to essentially cleanse the shells and to sell without the liabilities. She said she believes that many states may have this statute. Mr. Boutwell said that in the 1990s Louisiana, had done this quite often. He added that it is difficult to set a standard when it is determined by the courts. He said Louisiana looks at the application in its entirety, and justification for lifting the suspension depends on circumstances of how it happened, money going in or out, new players involved, lines of business being written, etc. Ms. Doggett said that before moving forward, the Working Group should discuss with the receivership groups to encourage consistency. She said she believes in keeping the NAIC company code with the organizational existence of the company so that the foreign states can reactivate the licenses if approved. Mr. Piatt said that for a company that had an order against it before it went into receivership, the order does not go away when a company comes out of receivership, unless it specially asks to have the order removed. Ohio has a specific process for the removal of an order. Mr. Piatt said that he would like to know how the Receiver’s Handbook (E) Subgroup would handle that. Ms. Feather concurred. She said keeping the NAIC company code is beneficial to the liquidators. Therefore, they should have a process in place, and the licensing side should treat these like any other Form A.

Ms. Doggett asked Ms. Barr to set up a meeting with the Receivership (E) Working Group for further discussion.

5. Discussed Other Matters

Ms. Barr said that the next phase of the primary and redomestication application is to discuss and determine the electronic process. She asked any state that would like to participate on the electronic workflow discussion to contact her, and she will forward the meeting notice for the ad hoc discussion on Dec. 13. She also added that this time last year, a statewide survey was distributed asking for state-specific requirements, and three states did not respond. All state-specific requirements will be added to the electronic application. Any requirement received after the start of the project will have to be added sometime later as an enhancement once the application is in production.

The next Working Group meeting is tentatively set for January 2022.

Having no further business, the National Treatment and Coordination (E) Working Group adjourned.
The National Treatment and Coordination (E) Working Group of the Financial Condition (E) Committee met Sept. 29, 2021. The following Working Group members participated: Debbie Doggett, Co-Chair (MO); Linda Johnson, Co-Chair (WY); Joan Nakano and William Mitchell (CT); Alisa Pritchard (DE); Carolyn Morgan (FL); Stewart Guerin and Mike Boutwell (LA); Kari Leonard (MT); Cameron Piatt (OH); Karen Feather (PA); Amy Garcia (TX); Jay Sueoka (UT); Ron Pastuch (WA); and Amy Malm (WI). Also participating were: Kim Cross (IA); and Kristin Hynes (MI).

1. Discussed its 2022 Draft Charges

Ms. Doggett stated that the draft 2022 charges will be adopted by the Financial Condition (E) Committee. She asked if there were any modifications or changes. Hearing none, the charges will be adopted by the Committee.

2. Adopted Proposal 2021-06 (Request for Disclaimer)

Ms. Johnson said the request for disclaimer proposal (Form 9) was exposed for a 45-day public comment period ending Sept. 24, and no comments were received. The purpose of this proposal is to provide a uniform option for individuals requesting a disclaimer for affiliation or control of the applicant company when a biographical affidavit is required to be filed with the department of insurance (DOI).

Ms. Doggett suggested clarifying language regarding item 3, “material relationship,” by adding a parenthetical, “(including but not limited to any contracts between the person and the subject or any affiliate of the person and the subject).”

Ms. Cross asked about the intent of Form 9 and whether it is just a starting point and in no way limits the state from requesting additional information. Ms. Johnson concurred that this is just a uniform process to initiate the request and in no way precludes the state from requesting additional information.

Mr. Piatt made a motion, seconded by Mr. Pastuch, to adopt proposal 2021-06 (Attachment Six-A1) with suggested wording as a friendly amendment with no additional exposure period. The motion passed unanimously.

Ms. Johnson noted that the proposal’s effective date will coincide with the release of the new electronic applications.

3. Received a Referral from the Financial Analysis (E) Working Group

Ms. Johnson summarized the referral; it is requesting an addition to the Form A database to inform state insurance regulators regarding when private equity firms are acquiring ownership of an insurer and to assist in maintaining a record of private equity-owned insurers. She said the referral includes specific guidance regarding the information that should be obtained.

Ms. Johnson suggested that this referral be sent to the Form A Database Ad Hoc Group as part of the rewrite project. An alternative would be to let the National Treatment and Coordination (E) Working Group discuss this first before referring it to the ad hoc group. Mr. Piatt asked if private equity is a defined term or subject to interpretation. Ms. Doggett concurred that private equity could be subject to interpretation; although, she noted that the referral includes a suggested definition of private equity as “an alternative form of private financing, typically away from public markets, in which funds and/or investors directly invest in companies or engage in buyouts of such companies. Private equity firms can typically be classified as venture capital, mezzanine, private credit, and leveraged buyout (LBO) funds, and they are generally structured as partnerships with several limited partner investors. The companies they invest in may be deemed portfolio companies, which may include insurance companies. The companies may also be held on the firm's balance sheet as a strategic investment.” She added that this definition is what the ad hoc group should focus on. Ms. Johnson asked any DOI that has experts in private equity or investment specialists who would be interested in assisting the ad hoc group with the rewrite to contact Jane Barr (NAIC). Ms. Cross said she and Iowa’s investment specialist would be interested in assisting.

Hearing no objections, the referral will be sent to the Form A Database Ad Hoc Group for incorporation into the new electronic application.
4. Discussed Form A Guidance or an FAQ Document

Ms. Doggett said Form A guidance was discussed during a regulator-only forum call when discussing shell company acquisitions, including companies that have gone into liquidation and are sold separate from the liabilities. Since there was no interest in forming an ad hoc drafting group to develop guidance or a frequently asked questions (FAQ) document, the Working Group can continue discussion. Ms. Doggett said procedures should be developed not only with the Form A process, but also with retaining the NAIC company code, even if the name and organizational structure may change post-acquisition. She said this guidance should also include companies in liquidation and companies that may have their licenses suspended and revoked so acquiring parties know what application forms should be provided to the state for each scenario. She also said the Receivership Financial Analysis (E) Working Group should also be involved with this development or at least provide its input.

5. Discussed Non-Domiciliary State Notification of Dissolution or Mergers

Ms. Hynes summarized her email by stating that over the past few years, there have been situations that arose with the timing of notifications when a company has been dissolved are provided after the fact. A specific example is when a life company dissolved and its liabilities were transferred to a fraternal company, which raised questions about whether notifications were required, if they were sent to Michigan policyholders, and what impact that might have on guaranty fund coverage for policies originally written by a life insurance company. Ms. Hynes said a more recent example includes a situation where a licensed company was going to surrender its certificate of authority and transfer its liabilities to a company not licensed in Michigan. Michigan code is very specific regarding the transfer of liabilities. Ms. Hynes asked if there was a way to have notifications go out in advance of a dissolution to avoid last minute filings to the states where the company is licensed. Mr. Piatt said Ohio has also experienced similar situations. Ohio has a surrender process, but when the company notified the state, it was already dissolved, so it causes difficulties to have a licensed entity that does not exist.

Ms. Johnson asked if states are aware of Forms 16 and 17 on the Uniform Certificate of Authority Application (UCAA) website regarding the statement of voluntary dissolution and withdrawal, respectively. Form 16 is filed in paper with the domiciliary state tracking the state’s license status in non-domestic states to help the domiciliary state determine how outstanding liabilities are handled in foreign states. Ms. Johnson asked if states are utilizing Form 16 or requiring this form. She said with the implementation of the electronic applications for domestic companies, it will be easier to track and provide notifications to the foreign states. Ms. Doggett said because this is a paper filing now, it would be an easy fix to add an additional column to identify which state received a Form 17 filing. She added that it may be an educational notice to the states that may not be aware that these forms are available to the company to use and file. Ms. Johnson asked if a state survey should be sent asking how each state handles dissolutions. Ms. Hynes said the states she has had conversations with are not on this call, so state-wide notification may be beneficial. Mr. Piatt thought maybe it is the companies that should be educated, so they know what they should file and when those filings should be submitted; it becomes an issue when fees are due to the non-domestic state, even if the company dissolved in its domiciliary state without filing in the foreign state first. He added that the domiciliary state also did not notify the foreign states of this dissolution; if the company would have filed Form 16, the domestic state would see that no notifications/filings were filed with the foreign states and there would be outstanding liabilities. Ms. Doggett agreed that it is an educational issue for both the states and industry. Ms. Johnson suggested that a state chart for dissolution requirements be added to the UCAA website. Crystal Brown (NAIC) said there is a state chart regarding Form 17 requirements for withdrawal/surrender of the certificate of authority in the foreign states. She also said she would talk with Ms. Barr about whether a survey or any additions to the existing state chart would be helpful. Ms. Johnson added that this issue can be followed up on during a call in November. Ms. Feather asked if there could be an educational course provided by the NAIC on the process for when an insurance company ends. She said she recently replaced Cressinda Bybee, who retired after 35 years of service, and would like some training on this process. Ms. Brown said the Working Group has developed two online courses, and if they want, NAIC staff can move forward with additional online courses in the future.

The next Working Group meeting is tentatively set for November.

Having no further business, the National Treatment and Coordination (E) Working Group adjourned.

DESCRIPTION OF CHANGE(S)
A uniform template to be used when requesting disclaimer of affiliation or control for UCAA filings where a biographical affidavit is required. NAIC staff suggest identifying this form as Form 9.

REASON OR JUSTIFICATION FOR CHANGE **
State responses from a recent survey indicated the need for a uniform template for disclaimer requests.

Additional Staff Comments:

** This section must be completed on all forms. Revised 01-2019
Request for Disclaimer of Affiliation or Control of An Individual

Applicant Company Name:________________________________________________________

Group Code (If Applicable): ______

Name:
Title/Position:
1. Provide the number of authorized, issued, and outstanding voting securities of the subject.
2. Provide the number and percentage of shares of the subject's voting securities, which are held of record or known to be beneficially owned, and the number of shares concerning which there is a right to acquire, directly or indirectly.
3. Provide all material relationships and bases for affiliation between the subject and the person whose control is denied and all affiliates of such person.
4. Provide an explanation stating why the person should not be considered to control the subject.

I hereby certify, under penalty of perjury, that all of the information, including the attachments, submitted in this request for disclaimer is true and complete. I am aware that submitting false information or omitting pertinent or material information in connection with this request for disclaimer is grounds for license discipline or other administrative action and may subject me or the Applicant Company, or both, to civil or criminal penalties.

I acknowledge that I am familiar with the insurance laws and regulations of said state, accept the Constitution of such state, in which the Applicant Company is licensed or to which the Applicant Company is applying for licensure.

My Commission Expires

UCAA Form 9
The Restructuring Mechanisms (E) Working Group of the Financial Condition (E) Committee met Dec. 6, 2021. The following Working Group members participated: Elizabeth Kelleher Dwyer, Co-Chair (RI); Glen Mulready, Co-Chair (OK); Jared Kosky (CT); Kevin Fry and Shannon Whalen (IL); Judy Weaver (MI); Fred Andersen (MN); John Rehagen (MO); Lindsay Crawford (NE); My Chi To and Bob Kasinow (NY); Melissa Greiner and Kimberly Rankin (PA); Daniel Morris (SC); Amy Garcia (TX); David Provost (VT); Scott A. White and Thomas J. Sanford (VA); Steve Drutz (WA); and Amy Malm and Richard Wicka (WI). Also participating was: Robert Wake (ME).

1. Considered Written Comments Received on the Co-Chair Exposed Draft White Paper

Superintendent Dwyer described the development and release of the co-chair draft white paper as distributed for the meeting. She stated the purpose of the meeting is to listen to a summary of the comments received (Attachment Seven-A).

   a. NWCRA

Gerald Chiddick (National Workers Compensation Reinsurance Association—NWCRA) stated his organization’s comments are primarily focused on the role the association plays in the residual markets and the need for the association to be notified in advance of any proposed transactions. He said ultimately a failure to notify the association could result in unpaid obligations. Mr. Chiddick referenced his comments and noted he is prepared to answer any questions members had on the comments. The comments emphasize the need for a regulator to be certain that the review process has specifically identified what residual market obligations may be affected by the proposed restructuring, which can be done through outreach to the National Workers Compensation Reinsurance Pooling (NWCRP) mechanism. The insurer should be able to provide information on the existence of such obligations, and the regulator can ascertain with the NWCRP that the reported obligations are accurately stated. The regulator can then ascertain that they are included in the transaction and that those are transferred, both legally and administratively, to the transferee.

   b. NOLHGA and NCIGF

Barbara Cox (National Conference of Insurance Guaranty Funds—NCIGF) stated their comments are neither in favor of nor opposed to the restructuring mechanisms in the white paper, but their concern is continuation of guaranty fund coverage. She stated one request they had was that change to the NAIC guaranty fund model be taken up as soon as possible, for which they had developed specific language changes. Superintendent Dwyer indicated she would check with NAIC staff and the process to determine what the next steps would be. Bill O’Sullivan (National Organization of Life and Health Insurance Guaranty Associations—NOLHGA) stated his only additional comment was the process for assuring coverage was different for life and health insurers and that the comment letter has specific discussion on that topic. Both Ms. Cox and Mr. O’Sullivan stated their appreciation for recognizing within the white paper the importance of ensuring that the guaranty fund association/fund protection a policyholder would have had prior to a restructuring transaction is preserved when the transaction is consummated. They noted that they propose specific changes to the draft white paper to help clarify differences between systems and lines of businesses.

   c. Protucket

Robert A. Romano (Locke Lord), representing Protucket Insurance Company, discussed their extensive experience with United Kingdom (UK) Financial Services and Markets Act 2000 (FSMA) Part VII transactions and encouraged the Working Group to act on their recommendations as quickly as possible. The written comments provided a listing of a significant number of items for the NAIC to complete in order to pave the way for these transactions to occur. This includes, but is not limited to, financial standards to apply to such transactions, considering intra-group versus third-party transactions, supplemental tools, reformulation of risk-based capital (RBC), study of distinctions by line of business, guaranty association coverage, application of assumption reinsurance laws, and the addition of accounting for protected cells into the white paper.
d. Joint Parties

Douglas Wheeler (New York Life Insurance Company) summarized the joint comments from New York Life Insurance Company, Western & Southern Financial Group, Northwestern Mutual, and Massachusetts Mutual Life Insurance Company (MassMutual) (joint parties). Those comments highlighted that in a situation that substitutes a new insurer for the client’s chosen insurer, without consent, is a significant event that needs to be approached with great respect and with the best interests of policyholders in mind. The comments also emphasized their belief that national accreditation standards must be developed that substantially incorporate at a minimum the UK Part VII robust regulatory and court review process. Also discussed was the need for the white paper to discuss the potential adverse consequences to policyholders of the long duration of products. Finally, the comments urge the white paper to specifically state that long-term care insurance (LTCI) should not be eligible for a corporate division or insurance business transfer (IBT).

e. Swiss Re

Matthew Wulf (Swiss Reinsurance Company—Swiss Re) stated Swiss Re’s support for a white paper that can serve as a first step as a basis for continuing discussions about the issues and that the NAIC develop any guidance necessary to meet solvency and consumer protection objectives. He suggested the use of ad hoc groups to help bring the resources needed to complete the NAIC’s work. His comments also identified a number of specific matters related to financial standards, guaranty funds, statutory minimum requirements, and licensure.

f. ACLI

Wayne Mehlman (American Council of Life Insurers—ACLI) summarized the comments of the ACLI. The comments were focused on the principles of the ACLI that they believe are an important guardrail before a corporate division transaction or IBT transaction can be approved by a state insurance regulator. The comments also included a number of suggestions and edits. Commissioner Mulready asked for clarification on the principle that expects solvency from the transferring party. Mr. Mehlman responded the ACLI believes it would otherwise lead to problems. Superintendent Dwyer questioned if what was meant was that no insolvency should be created as a result of the transaction. Mr. Mehlman responded affirmatively.

g. Commissioner White

Commissioner White stated his appreciation for the co-chairs’ draft in identifying all of the important issues. He stated they had some recent experience with a transaction, which was the basis for some of their comments. Mr. Sanford summarized the comments, including that a request for the white paper to include a discussion of anti-notation statues since they will influence different sections in the white paper. Commissioner White summarized some of the provisions on Virginia’s anti-notation statutes and the effect they have on the white paper. He said more than 10 states with such laws are affected by such laws, and he discussed how laws would interact with each other. Mr. Kosky asked if the Virginia law was specific to IBTs. Mr. Sanford indicated their guidance was specific to IBTs now but how the general principles would apply to other restructuring transactions. Commissioner Mulready asked if the Virginia law was specific to reinsurance transactions only. Mr. Sanford responded that it is broader and applies to all notations.

h. Enstar

James Mills (Enstar) noted how two transactions had now been approved specific to IBTs and noted how the National Council of Insurance Legislators (NCOIL) had created a model law for both IBTs and corporate divisions, therefore emphasizing the need for guidance to be developed. The Enstar comments are focused on two key issues: 1) differentiating between active runoff management insurers, active insurers that also hold business in runoff, and companies that have transitioned from active insuring to managing their own runoff; and 2) the importance of state licensing on companies looking to aggregate runoff business into a single company. The request was made to take these issues up in the future.

i. PwC

Luann Petrellis (PricewaterhouseCoopers—PwC) summarized her comments, which emphasize how a recent transaction in Illinois provides a good illustration of how restructuring tools can be successfully implemented. She acknowledged that each transaction is unique but highlighted many of the positive steps taken by Illinois and the involved company, which provide an example of a robust process that can be used to enable the balance of all stakeholders’ needs when considering these transactions.
transactions. The comment letter details those steps taken by Illinois and the company and can be used as best practices for similar transactions.

j. Mr. Wake

Mr. Wake described how he had submitted comments, some of which are in the form of specific edits to the paper, while others are in the form of specific suggestions or questions. He noted he believes the questions suggested more work was left to be done but that presumably the work could proceed and answer the questions simultaneously.

k. Mr. Rehagen

Mr. Rehagen noted some high-level comments, including some expressed concerns with the overall inability of the white paper to be as balanced as possible. He noted in particular the area of guaranty fund coverage, where he hoped the paper would be revised, and in the area of assumption reinsurance, where he is particularly concerned with the sentence that implied allowing the courts to determine the outcome, especially in the area of personal coverages, where those laws are designed to give consumers choices. He noted that generally speaking, the white paper seemed to downplay the significance of these issues, which was something he believes needs to be raised and worked through before states started approving such transactions.

l. California Health Advocates

Bonnie Burns (California Health Advocates) expressed concern with the section dealing with LTCI. She noted that section was small and should be expanded. She said she believes it would require detailed standards. Superintendent Dwyer responded that her laws do not allow an IBT of LTCI. Commissioner Mulready responded that his state is not entertaining any such transactions. Mr. Wake noted that it is something to think about, if only because it takes just one state to make it a reality. Ms. Burns noted that she was told as a regulator years ago that if the law does not prohibit it, it can be done.

Having no further business, the Restructuring Mechanisms (E) Working Group adjourned.

Section 1: Overview of IBT and Corporate Division Laws and Mechanics

A. Introduction

Insurance is a business that sells a promise to pay upon the occurrence of a future event. Policyholders may submit claims many years into the future on covered losses incurred during the policy period requiring insurers to record a liability for these incurred but not-reported claims. As such, it is nearly impossible for an insurer to decide to discontinue writing a certain line of business and pay off all its legal obligations to its policyholders- because there are almost always unknown potential future policyholder obligations that have not yet been reported. Policies previously written on a line of business that is no longer being written creates a block of business that may no longer be the focus of the insurer’s business model and left to slowly run off. For some insurance companies, runoff business1 remains embedded with the core business without the ability to segregate the runoff business. There are even runoff specialists that have developed within the insurance industry that specialize in handling these old blocks of business.

Until recently, U.S. insurance companies wanting to restructure their liabilities had been limited to sale, reinsurance/loss portfolio transfers for individual policy novations. Other than individual policy novation, these solutions do not provide finality as the ultimate liability remains with the original insurer. The only way to transfer a block of business with finality is an individual policy novation. However, the current process of novating individual policies is considered by the industry to be inconsistent among the states, cumbersome, time-consuming, and expensive. The industry suggests that in many instances it will be impossible to obtain positive consent to a novation from all policyholders, especially on older books of business where policyholders are difficult to locate.

The NAIC has addressed aspects of this issue in the following two previous white papers. In 1997, the Liability-Based Restructuring Working Group of the NAIC Financial Condition (EX4) Subcommittee issued a paper titled “Liability-Based Restructuring White Paper.” (See Attachment 1.) The white paper focused on the efforts by property and casualty insurers attempting to wall off “material exposures to asbestos, pollution and health hazard (APH) claims and other long-tail liabilities”2 from current insurer operations. The white paper achieves this focus by inclusion of various section on related topics as well as multiple appendices. In 2009, the Restructuring Mechanisms for Troubled Companies Subgroup of the Financial Condition (E) Committee issued a white paper titled “Alternative Mechanisms for Troubled Companies.” (See Attachment 2.) The white paper focuses on troubled companies although it also addresses the statutory restructuring mechanisms available in the United States (“US”) at that time. This white paper similar to the 1997 white paper, also includes a number of sections on related topics as well as multiple appendices.

1 For purposes of this paper “runoff business” is defined as a block of insurance business that is no longer being actively written by an insurance company and no premiums are being collected, except where required to in accordance with contractual or regulatory obligations, and where the existing or assumed group of insurance policies or contracts are managed through their termination. This definition was developed based on comments received by the Restructuring Mechanism Subgroup from both regulators and industry interested parties; however, this definition has not yet been adopted by the subgroup.

Over the past few years, states have begun enacting statutes which provide opportunities for restructuring of insurance companies with finality. The purpose of this white paper is to update the 1997 and 2009 white papers and provide explanation of these new statutory processes. These processes can be broken down into two categories generally referred to as insurance business transfer (“IBT”) and corporate division (“CD”). Several states, including Arkansas, Oklahoma, Rhode Island, and Vermont, have enacted IBT statues while other states such as Arizona, Connecticut, Illinois, Iowa, Arkansas, Pennsylvania, and Michigan have enacted CD statutes. The stated intent of all these statutes is to enable insurers to take advantage of the statutory process in order to enhance their ongoing operations.

This white paper will discuss and explore these laws within the US and identify the various regulatory and legal issues involving IBT and CD legislation. This white paper is not intended to establish an official position by the NAIC regarding IBTs or CDs. The authors suggest that each state and its various regulatory authorities should make their own determinations on how best to proceed within their respective jurisdictions. In addition, this paper is not intended to address every situation a company may encounter and leaves possible situations to each insurer as well as the review and approval of all applicable regulatory authorities. Because the robust procedures used in the United Kingdom (“UK”) are seen as a means to utilize IBT in the US, the procedures are discussed in Section 2 of this white paper.

A separate workstream was created to develop financial standards appropriate in US to evaluate IBT and CD transactions. Some stakeholders question whether, even with robust standards, adequate consumer protections would exist when IBTs and CDs are utilized. Therefore, this white paper includes a discussion of a UK case which discussed consumer protection issues.

This is a constantly changing area with states adding and amending statutory provisions and considering new and unique transactions on a continuous basis. Therefore, the factual statements in this whitepaper should be considered a “point in time” discussion.

B. Purposes

During the course of the Restructuring Mechanisms (E) Working Group’s (“Working Group”) discussions, stakeholders identified a number of potential purposes for restructuring transactions. Testimony indicated that reinsurers and insurers were looking for new solutions that provide legal and economic finality to runoff insurance risks to improve the efficient allocation of capital and management resources to runoff and on-going insurance operations. Efficiencies that are obtained through restructuring transactions include the segregation and transfer of runoff books of business with the intent to free up capital, better allocate specialized management resources currently being occupied with the oversight of disparate discontinued and on-going businesses and rationalize and facilitate the runoff of discontinued lines of business. Experience outside the US, including in the UK, has shown that prudent allocation of reserves and management of runoff books of business reduces volatility and improves capital efficiency with benefits for reinsureds and policyholders of both runoff and on-going books of business. Furthermore, runoff experts bring focused expertise to managing runoffs compared to on-going enterprises. The focus of an on-going enterprise is the continual generation of increased premium growth. Runoff business can be both a distraction to management’s focus as well as redirect regulatory focus away from the insurer’s on-going business. The isolation of such business from on-going business enhances the visibility of those runoff operations as well as the supervision of runoff operations, by both regulators and the insurer.
Advocates of these restructuring mechanisms argue that efficiencies resulting from the segregation and specialized management of disparate books of business result in transferring insurers releasing resources and allowing these insurers to better focus on improving current operations. Transferring insurers can better focus on core areas, leading ultimately to better service for current and future policyholders and better service for runoff policyholders. In many cases, the runoff business consists of long-tail lines, such as mass tort, asbestos, environmental and general liability risks. These long-tail lines tie up financial and management resources which are out of proportion compared to the size or importance of the runoff book within the insurer.

As described in the 1997 white paper, restructuring of insurers can be initiated for several reasons that provide value to the insurer. These reasons include restructuring for credit rating, solvency, more effective claims management, need to raise capital and a desire to exit a line of business. With respect to capital and earnings volatility, the 1997 white paper explained that restructuring could allow liabilities to be separated thereby creating the ability to dedicate surplus to support restructured operations, eliminating the drag on earnings in its on-going operations and avoiding further commitment of capital for pre-existing liabilities. One restructuring expert indicated there were three primary reasons that an insurer may choose to restructure: (1) regulatory, capital and earnings volatility; (2) finality of economic transfer; and 3) operational efficiencies.

Of note, restructuring mechanisms may also be beneficial for purposes of credit ratings. Credit ratings are often looked at in terms of capital volatility. Credit rating agencies may take a more favorable view of an insurer that has been able to isolate a particular risk which may be more volatile and subject to further reserve development. However, rating agencies also consider the strength of the insurance group when issuing insurance financial strength ratings, which can negate the credit rating benefit that may be found in restructuring. Ratings are critical for insurers that are writing new business in which the rating has value to potential new customers. While insurance groups use different strategies, it is common that some insurers within a particular insurance group are more critical to the ongoing success of the insurance group as a whole. It is therefore not uncommon for rating agencies to recognize this fact and provide separate ratings for individual insurers within an insurance group. While these considerations can lessen the value of restructuring for credit rating in some instances, insurance groups do still choose to restructure for credit rating purposes.

C. Regulatory Concerns with Restructuring Plans

While restructuring may provide value to the insurer, regulators are concerned that restructuring does not create new resources from which claims can be paid. Restructuring should not be utilized to allow insurers to escape these liabilities or separate claims in a manner that could provide less capital than is needed to satisfy the insurer’s obligation. Restructuring plans that place solvency at risk or threaten consumer benefits will be faced with challenges from regulators. However, when regulators are shown that the restructuring plan benefits both the insurer and the insured, then the regulator may be willing to

3 David Scasbrook (Swiss Re America Holding Corporation) as stated during the April 6, 2019 meeting of the Restructuring Mechanisms (E) Working Group.
Section 2: History of Restructuring in the United Kingdom

A. Part VII Transfers and Solvent Schemes of Arrangement in the United Kingdom

Part VII transfers require a “scheme report.” This report is required under the independent expert report under US IBT laws, however, because the word “scheme” is not used.

because has a different has negative context connotations in the US, the word “scheme” is not used American English. Under section 109(2) of FSMA, an independent expert the scheme report may only be made by an independent expert person who:

(a) appearing to the PRA to have the skills necessary to enable him to make a proper report; and

(b) is nominated or approved by the PRA.

The independent expert making the report to be a neutral person, who:

(a) is independent, that is any direct or indirect interest or connection he, or his employer, has or has had in either the transferor or transferee should not be such as to prejudice his status in the eyes of the court; and

(b) has relevant knowledge, both practical and theoretical, and experience of the types of insurance business transacted by the transferor and transferee.

The PRA may only nominate or approve an independent expert appointment after consultation with the FCA. An independent expert report must accompany an application to the court to approve the Part VII transfer plan. The independent expert report must comply with the applicable rules on expert evidence and contain the specific information set forth in the statute.

The purpose of the independent expert report is to inform the court. The independent expert, therefore, likely has a duty to the court. Further, policyholders, reinsurers, regulators, and others affected by the Part VII transfer will be relying on the independent expert report. For these reasons, a detailed report is necessary. The amount of detail that it is appropriate to include will depend on the complexity of the transfer, the materiality of each factor and the circumstances surrounding each factor.

During the Working Group’s discussion of the Part VII transfers, consumer representatives raised the UK court’s decision in *In re Prudential v and Rothesay* which imposed several limitations on Part VII transfers. On August 16, 2019, the High Court of Justice issued an opinion rejecting a Part VII transfer between Prudential Assurance Company Limited and Rothesay Life PLC. This Part VII plan was the subject of a four-day hearing in which each insurer was represented by counsel, the PRA and FCA appeared, and a number of policyholders appeared in person. The Court noted that both the PRA and the FCA each produced reports regarding the plan, and both stated that they did not object. The independent expert filed a detailed report that ultimately did not reject the plan either.

The applicant received approximately 7,300 responses from policyholders in response to the approximately 258,000 policyholder packets that were sent out. Of those, about 1,000 were characterized as an objection. The main objection to the plan was that these consumers specifically selected the transferring insurer as their provider. These consumers argued that they should not have their annuity

---

8 As noted by Birny Birnbaum (Center for Economic Justice—CEJ) during the Dec 8, 2019 Meeting of the Restructuring Mechanisms (E) Working Group. Note this was overturned by *The Prudential Assurance Company Limited v. Rothesay Life PLC [2020] EWCA Civ 1626*. 

© 2021 National Association of Insurance Commissioners
transferred against their will to a smaller insurer with a very different history and reputation just to further the commercial and financial purposes of the transferor.

This decision was appealed and ultimately overturned. The UK Court of Appeals\(^9\) found that the lower court incorrectly exercised its authority finding amongst other things, that the judge was wrong to give weight to (i) the different capital management policies of both insurers; and (ii) the objections of a small subset of policyholders.

In so holding, the Court of Appeals stated:

(1) The Court below was wrong to decide that both the independent expert and PRA were not justified in looking at the solvency metrics at a specific date to support their conclusions.

(2) The Court below was wrong to find a material disparity in the parent company structure since the parent companies could never be required to provide support to their subsidiaries’ capital.

(3) The Court below should not have accorded any weight to the fact that the policyholders had chosen Prudential based on its long-established reputation, age, and venerability nor to the fact that they had reasonably assumed that Prudential would be their annuity provider throughout its lengthy term.\(^10\)

Despite this set of complex UK decisions, the Part VII transfer continues to be used in the UK and watched closely by the US regulators and stakeholders.

B. Differences between Part VII and Solvent Schemes of Arrangements

Solvent schemes of arrangement are another method of restructuring that exists within the UK. These are primarily designed as a procedure that can allow all liabilities to be settled for an insurer. In doing so, it can achieve many of the objectives set out in this white paper. However, unlike the Part VII transfer, the policies are subject to a court ordered termination instead of transferred. While such an arrangement may provide some of the same features as a Part VII transfer, the solvent scheme does not continue the coverage with a new insurer the way a Part VII transfer does. Other differences may exist in law, but are not deemed to be relevant to this is the most significant for purposes of this specific white paper.

Section 3: Survey of US Restructuring Statutes and Regulations

Various states have enacted corporate restructuring statutes or regulations. Some type of restructuring law generally following the UK structure, began with Rhode Island was the first state to take

---

\(^9\) Prudential Assurance Company Ltd and Rothesay Life Plc, Re, England and Wales Court of Appeal (Civil Division)(Dec. 2, 2020).

\(^10\) Id. at Page 6 of Appeal Nos: A2/2019/2407 and 2409 Case No: 1236/5/7/15
this approach, in 2002 adopting a statute in 2002 titled Voluntary Restructuring of Solvent Insurers\textsuperscript{11} patterned after Solvent Schemes of Arrangements. This type of Rhode Island refers to this process as Commutation Plan.\textsuperscript{12} It differs from the UK\textsuperscript{13} Solvent Scheme in a number of areas including an enhanced role for the regulator, designating the independent expert as a consultant to the regulator and limiting the process to commercial property and casualty risks. One commutation plan was adjudicated by the Rhode Island court in 2011 and withstood a constitutional challenge. The written decision in that case addressed many of the issues raised with restructuring plans generally.\textsuperscript{14} Commutation Plans continue to be available under RI law.

Although Commutation Plans continue to be available under Rhode Island law, Rhode Island updated its law in ??? to provide an additional option. In 2015 Rhode Island adopted an Insurance Business Transfer Plan\textsuperscript{15} regulation.\textsuperscript{16} These are similar to the Part VII transfers, but a Again, in contrast to the UK, the Rhode Island regulation provides an enhanced role for the regulator, designates the independent expert as a consultant to the regulator and limits the process to commercial property and casualty risks. The RI regulation provides for notice at the time the plan is filed with the regulator and an ability to comment at that time. If the regulator, after a thorough review of the Plan and comments receives continues to believe that it meets the statutory requirement have been met, it will authorize the Plan to be filed with the Court. The Court will require notice to policyholders and hearings to allow all comments and objections to be considered. A Rhode Island domestic insurer has been formed specifically to undertake IBTs, but a plan has not yet been filed with the regulator.

In 2013, Vermont adopted the Legacy Insurance Management Act (“LIMA”\textsuperscript{17}). LIMA is limited to surplus lines risks and reinsurance, involves department approval but not court approval and allows policyholders to opt-out of the plan. As of this date, no transactions have been completed under LIMA.

In 2018, Oklahoma adopted the Insurance Business Transfer Act\textsuperscript{18} modeled after UK’s Part IV regulation with a few significant differences. The differences include no restriction on the type of insurance nor restrictions on the age of the business. Oklahoma law provides for both insurers to nominate a potential independent expert with the Insurance Commissioner appointing one or another if he or she is not satisfied with the nominations. The independent expert report is submitted with the IBT application to the Oklahoma Insurance Department which approves the IBT plan to be submitted to the court upon satisfactory showing that statutory standards are met. The court requires notice and opportunity to be heard prior to court approval of implementation of the plan. As of this writing, Oklahoma has completed two IBTs in October 2020 and September 2021, involving a Rhode Island and Wisconsin insurer respectively, which are described below. Neither of the plans were challenged in the state court proceedings.

In 2021, Arkansas adopted the Insurance Business Transfer Act\textsuperscript{19} which is based on the Oklahoma and Rhode Island statutes. The key differences are: the assuming insurer must be licensed in each line of business in each state where the transferring insurer is licensed unless an exception is be made for an

extraordinary circumstance; specific factors are provided in the Arkansas IBT law that the Commissioner must consider before approving the IBT including the impact on contract holders and reinsurers in addition to policyholders; additional guidance on what would be a material adverse impact; specific guidance for proposed long-term care IBTs and additional requirements for the expert opinion report.

And we need more about CDs here...

The National Council of Insurance Legislators has promulgated a model IBT law modeled after the Oklahoma IBT statutes, as well as a model CD law. A number of states have adopted CD statutes, whether specific to insurance or based on the state’s general power over corporations. Those states include Arizona, Connecticut, Illinois, Iowa, Michigan, Arkansas, and Pennsylvania. All of these statutes allow for corporate restructures. As discussed in more detail below, Pennsylvania and Illinois have each completed CD transactions.

A. Similarities and Differences between Statutes

Rhode Island’s IBT law permits transfers of property and casualty commercial blocks of business that have been closed for at least 60 months. In contrast, Oklahoma and Arkansas IBT laws permit transfers of both open and closed books of business and are not limited in the line of business that can be transferred. All three states require approval by a court and no material adverse impact on affected policyholders. The approval of the ceding and assuming insurer’s domestic insurance regulator is also required. All states require an expert report that contains an opinion on the likely effects of the transfer on policyholders. The approval of the ceding and assuming insurer’s domestic insurance regulator is also required. All three states require approval by a court and no material adverse impact on affected transfers of both open and closed books of business and are not limited in the line of business that can be transferred. In contrast, Oklahoma and Arkansas IBT laws permit transfers of property and casualty commercial blocks of business that have been closed for at least 60 months. In contrast, Oklahoma and Arkansas IBT laws permit transfers of both open and closed books of business and are not limited in the line of business that can be transferred. All three states require approval by a court and no material adverse impact on affected policyholders. The approval of the ceding and assuming insurer’s domestic insurance regulator is also required. All states require an expert report that contains an opinion on the likely effects of the transfer on policyholders.

As noted above, several states have also enacted CD laws, rules, and regulations. While differences exist between IBTs and CDs, there are also many similarities between the two mechanisms: they require a regulatory review of the effect on policyholders, they have balance sheet considerations, and they are a way to separate runoff books of business from an insurer.

The Illinois’ Domestic Stock Company Division Law requires disclosure of the allocation of assets and liabilities among companies. Although not statutorily required, the Illinois Department of Insurance Director has committed to providing an opportunity to comment at a public hearing. The standard in the Illinois statute is that the plan must be approved by the Director unless at least one of the following characteristics exist:

1. Policyholder/shareholder interests are not protected;
2. Each insurer would not be eligible to receive a license in the state;
3. Insurers are not protected;
4. Insurers are not protected; and
5. Insurers would not be eligible to receive a license in the state.

The introduction to IBTs ought to be followed by a description of CDs that operate at a similar level, and then the comparison between IBTs and CDs, which is probably where the NCOIL Model goes. It can be included in the comparison with existing state law.

Commented [RAW18]: This doesn’t really fit here. The introduction to IBTs ought to be followed by a description of CDs that operates at a similar level, and then the comparison between IBTs and CDs, which is probably where the NCOIL Model goes. It can be included in the comparison with existing state law.

Commented [RAW19]: Some of the material below needs to go above – there should be an introduction to the CD concept at about the same level of detail as the introduction to the IBT concept.

Commented [RAW20]: As written, Director must find all 5 in order to disapprove. Hope that’s not what the law says.

(3) division violates the Uniform Fraudulent Transfer Act;

(4) division is made for the purpose of hindering, delaying, or defrauding other creditors;

(5) any of the companies is insolvent after the division is complete.

The Connecticut CD statute creates something legally distinct from a merger, consolidation, dissolution, or formation. The resulting insurers are deemed legal successors to the dividing insurer, and any of the assets or obligations allocated are done as a result of succession and not by direct or indirect transfer. The plan must include among other things (1) the name of the domestic dividing insurer; (2) the names of the resulting insurers; (3) proposed corporate by-laws for new insurers; (4) manner for allocating liabilities and reasonable description of policies; (5) other liabilities and capital and surplus to be allocated, including the manner by which each reinsurance contract is allocated; and (6) all other terms and conditions. Connecticut requires approval by the board of directors, stockholders, and other owners before being considered by the Department of Insurance. The plan is then discussed with the Department which will determine whether the liabilities and policies are clearly defined and identifiable and whether the assumptions are conservative based upon actuarial findings. Connecticut law does not require an independent expert or a communication strategy as part of the application, but the Department of Insurance has stated that it will require certain notifications related to a hearing (e.g., newspaper or print publications). Connecticut does not require notice of hearing however the insurance commissioner may require a hearing if in the public interest. Similar to Illinois law, the insurance commissioner must approve a plan of division unless he or she finds that (1) the interest of any policyholder or interest holder would not be adequately protected or (2) the division constitutes a fraudulent transfer. The division itself must be effectuated within 90 days of the filing.

The Pennsylvania CD statute was enacted in 1990 and is the subject of discussion in the NAIC 1997 white paper on Liability-Based Restructuring, attached to this paper as an appendix. The statute upon which the transaction discussed in the 1997 white paper is based is not specific to insurance. The law is brief with only four paragraphs—requiring the plan to be submitted in writing, reasonable notice and opportunity for a hearing, investigations and supplemental studies and approval through an order from the Department and subject to judicial review. The associated procedural regulations essentially are those that exist under the states’ equivalent of the NAIC Insurance Holding Company System Regulatory Act (Model 440).

While the Rhode Island, Oklahoma and Arkansas laws have approval processes that are similar to UK Part VII transfers, there are differences between the three statutes. Rhode Island permits transfers of mature (at least 60 months) closed commercial property and casualty books of business or non-life reinsurance but no other lines of business. Oklahoma does not have similar restrictions and specifically allows property and casualty, life, and health lines of business. Oklahoma and Arkansas do not require the book of business to be closed.

While the CD laws enacted to date all require regulatory review of the effect on policyholders, balance sheet considerations and other operational requirements, the most significant differences that exist

---

32 15 PA. CONS. STAT. §§ 361 et seq.
in CD laws are not among themselves, but rather in comparison to the IBT statutes. This is because the CD statutes do not require approval by a court or the same level of notification to policyholders. In addition, while CD states reserve the right to hire their own external expert—similar to a Form A (Change in Control), these states may perform their review based upon their own internal experts.

B. Transactions Completed to Date

One of the earliest transactions completed under these types of laws occurred in Pennsylvania in 1995, when the Pennsylvania Insurance Department approved a division of the Cigna Corporation, which is commonly referred to as the “Brandywine transaction,” after the name of one of the resulting insurers. This transaction is discussed in more detail within Appendix 1 of the 1997 Liability-Based Restructuring White Paper, which is Appendix 1 and relates to Cigna, where more information is available. During the Working Group’s discussions in 2019, the Pennsylvania Insurance Department, which is captured in the following paragraph.

The Brandywine transaction was subject to an insurance department review, which included an actuarial review, a review of the financial information by a consultant and participation by other states that had an interest to understand how the plan would be restructured. There were four actuarial firms that opined on the transaction as well as two opinions from investment banks, one contracted by the insurer and another contracted by the Department. Issues regarding guaranty coverage were not addressed, but it did require Pennsylvania policyholders to be covered by the Pennsylvania fund. Confidentiality was applied to any examination document prepared in the process, actuarial reports, and questions and comments, but insurer responses were made available to the public. The transaction was a large commercial transaction and immaterial to the policyholders, therefore reducing some of the concerns that may have otherwise existed.

In 2011, GTE Re completed a commutation plan in Rhode Island. The plan was approved by the Rhode Island court and the insured was ordered dissolved after all insureds had been paid full value for their policies. The GTE Re Plan was objected to, on a theoretical basis, and the Providence County Superior Court issued a decision on a contract/issue.

In 2020, the District Court of Oklahoma County approved Providence Washington Insurance Company’s (“PWIC”), a Rhode Island domestic insurer, to Sentry Insurance a Mutual Company (“Sentry”), a Wisconsin-based insurer, to submit its IBT Plan to the District Court of Oklahoma County for

Commented [RAW24]: Why was it immaterial to policyholders? Do we mean immaterial to consumers? But what about claimants? What ultimately happened to Brandywine. A quick Google search turns up this from 2005:

Allstate Insurance Company, American International Group Inc., Chubb & Son and St. Paul Travelers are challenging the proposed sale of three of its asbestos and environmental run-off subsidiaries by ACE Limited to Randall & Quilter Investment Holdings of Great Britain. The insurers have asked Commissioner Diane Koken and the Pennsylvania Department of Insurance to closely examine the proposed transaction.

On Jan. 6, ACE announced that it planned to sell its ACE American Reinsurance Company, Brandywine Reinsurance Co. (UK) Ltd. and Brandywine Reinsurance Company S.A.-N.V. to Randall & Quilter. It also said it would take $279 million in after tax reserve charges on Brandywine, and another $19 million relating to the ACE Westchester Speciality unit. Century Indemnity Company, an indirect, wholly owned subsidiary of ACE, is also involved. The saks require the approval of the Pennsylvania department and the U.K. Financial Services Authority.

ACE acquired the companies as part of the acquisition of INA from Cigna in 1999. They subsequently were found to have large exposures to asbestos and environmental claims, and have become a liability for the ACE Group.

The protesting insurers fear that the sale to the U.K.-based Randall & Quilter could weaken the security relied on by policyholders and other insurance companies. They question whether, if asbestos and environmental claims continue to require increases in reserves, Randall & Quilter would have the funds needed. If the transaction is not approved, ACE’s affiliates would remain liable for such continuing obligations.

The insurers’ petition further suggests that the sale is an attempt to shift a share of Century’s run-off liabilities onto British firms outside of U.S. regulatory authorities. The insurers said ACE is trying to “place more distance between itself and the legal obligations of its subsidiaries” and to avoid Pennsylvania’s “continuing scrutiny, moral pressure and directives.”
This IBT transfers a block of reinsurance business underwritten by Sentry to National Legacy Insurance Company, an insurer domiciled in Oklahoma and a subsidiary of Randall & Quilter Investment Holdings Ltd (NLIC). The Sentry transfer was approved by the Court in August of 2021.

Illinois completed a transaction under their CD statute in early 2020. The transaction was a transfer of risks with distinct characteristics into a single insurer within a holding company structure. All the transfers originated and ended within the same holding company. The Illinois Department of Insurance has indicated that it will issue a detailed regulation as experience develops with CD plans proposed and completed under the statute.

Section 4: Impact of IBTs and CDs to Personal Lines

A. Guaranty Association Issues

An important issue for corporate restructuring is the availability of guaranty association coverage in the event of the insolvency of the restructured insurer. In order to uphold the stated declaration that prevent restructuring should not result in materially adversely affecting consumers, it is essential to ensure that guaranty association coverage should not be reduced or eliminated by the restructuring. Each state guaranty association is a separate entity governed by the laws of that state, and those statutes will determine association coverage. Although most states pattern their laws after the NAIC model law, there could potentially be different results concerning guaranty association coverage depending on where the insured resides.

The Working Group received input from both the National Organization of Life and Health Insurance Guaranty Associations ("NOLHGA") and the National Conference of Insurance Guaranty Funds ("NCIGF"). NOLHGA described how the concerns for insurance consumers of personal lines business is particularly pronounced.

NOLHGA indicated that for there to be guaranty association coverage in the event of an insurer insolvency, there are three conditions that must be present. Those conditions are:

1. The consumer seeking protection must be an eligible person under the statute; typically, this is achieved by being a resident of a state who has a guaranty association;
2. The product must be a covered policy; and
3. The failed insurer for which protection is being sought must be a member insurer of the guaranty association of the state where the policyholder resides. To be a member insurer, the insurer must be licensed in that state or have been licensed in the state.

In most states, coverage can also be provided for an “orphan” policyholder of the insurer, who was eligible for protection when the original policy was issued but the policyholder has since moved to a state that where the insurer is not a guaranty association member. Those policies are covered under the state in which the insolvent insurer is domiciled. However, this provision is designed to plug the gap in those rare situations. Orphan coverage was not designed to provide coverage to all policyholders regardless of domicile, only to plug the one specific gap in coverage that has been identified. As such, none of the resulting insurer in an IBT or CD would not otherwise meet the requirements for guarantee association coverage, it is unlikely that the “orphan” policyholder clause would help. If there are gaps in coverage, or coverage is uncertain, legislative action is necessary in each affected state in order to protect policyholders and third-party claimants. These issues can be addressed in legislative and regulatory manners including maintaining a certificate of authority in each state, so the insurer is a guaranty association member insurer in each state. However, if an insurer is unwilling or unable to meet such requirements it could impede the ability to complete a restructure.

NCIGF and NOLHGA have both taken the position that where there was guaranty association coverage before the IBT or CD, any regulation or law should ensure that there is coverage after the IBT or CD. An IBT or CD should not reduce, eliminate or in any way impact guaranty association coverage. An CD or IBT should not create, expand, or in any way impact coverage. NCIGF suggested that possible technical gaps may exist in states that have adopted the NAIC Property & Casualty Guaranty Association Model Act.

One interpretation of the NAIC Property and Casualty Insurance Guaranty Association Model Act (Model # 540) which is based on the definitions of “Covered Claim,” “Member Insurer,” “Insolvent Insurer,” and “Assumed Claim Transaction,” an orphan policyholder could not be covered by the state guaranty association. Consequently, there is a concern that no guarantee association coverage would be provided if policies are transferred to a nonmember insurer. Many statutes require that the policy be issued by the now-insolvent insurer and that it must have been licensed either at the time of issue or when the insured event occurred. These limitations, however, are designed to avoid coverage being provided when the policy at issue did not “contribute” to the association, which would not exist in the case of an insolvency that was not a member at the time the policy was issued.

Fulfilling this intent may require guaranty association statutes to be amended in each of the states where the original insurer was a member of a guaranty association before the transaction becomes final. NCIGF indicated that it had created a subcommittee to address this issue and oversee a coordinated, national effort to enact the necessary changes in each state. Further discussion of this subcommittee’s work is discussed in the Recommendations section below. It should be noted that the same membership and timing issues that are raised by IBTs could also be raised in the case of any other policy novation, including the assumption reinsurance transactions discussed below.

B. Assumption Reinsurance

Existing assumption reinsurance statutes exist to provide policyholder disclosures and rights for rejection of a proposed novation of their policy. These statutes are primarily designed for the benefit of individual policyholders with regard to personal lines coverages, whether for automobile, homeowners, life insurance or long-term care insurance, in situations where the solvency of the insurer might be at risk. There are currently ten states that have enacted the NAIC Assumption Reinsurance Model Act.  

The Assumption Reinsurance Model Act was drafted by state insurance regulators and initially adopted by the NAIC on December 5, 1993. The effect of an assumption reinsurance transaction is to relieve the transferring insurer of all related insurance obligations and to make the assuming insurer directly liable to the policyholder for the transferred risks. Under these statutes, individual policyholders receive a notice of transfer and may reject or accept the transfer. If the policyholder does not respond, the policyholder is deemed to have given implied consent, and the novation of the contract will be effective. When a new agreement replaces an existing agreement, a novation has occurred. There is no judicial involvement under the Assumption Reinsurance Model Act.

Some stakeholders have questioned whether the existence of rights under the Assumption Reinsurance Model Act implicitly prohibit an IBT or a CD. The argument is that the existence of the assumption reinsurance statute prohibits other statutory restructuring mechanisms without the policyholder’s express individual consent. Other stakeholders have suggested that these statutes coexist with restructuring mechanisms since the restructuring statutes are not addressing individual novations of policies. The argument is that the restructuring statutes address transfers of books of business not individual novation of policies and, therefore, are completely separate from assumption reinsurance statutes.

This is not an issue that can be resolved in this white paper. The issue has not yet been addressed by any court nor raised in the proceedings on restructurings. Therefore, while it is raised here for informational purposes, resolution of the issue is left unanswered for now and for the courts to determine in the future.

C. Separate Issues in Long-Term Care

Long-tail liabilities are naturally subject to greater reserve uncertainty and may impact the regulator’s willingness to consider the restructuring of certain lines of business. During the Working Group’s discussion, it was noted by a number of regulators that restructuring of certain lines of business, such as long-term care, could be problematic since the specific line of business has presented significant challenges in determining appropriate reserving and capital required to support the business. The Working Group acknowledges that, regardless of whether some state laws would permit it, use of a corporate restructuring mechanism in certain lines, such as long-term care, is likely to be subject to a great deal of opposition. Even where permitted, it could be subject to higher capital requirements for the insurers involved.

15 Assumption Reinsurance Model Act NAIC Model #803 (Adopted by Colorado, Georgia, Kansas, Maine, Missouri, Nebraska, North Carolina, Oregon, Rhode Island, and Vermont)
The nature circumstances of long-term care policyholders will make restructuring challenging especially with a transfer to a completely new insurer in a new holding company system. Long-term care policyholders are individuals who may find it much more challenging to assert their rights in a court proceeding than a corporate entity would. Furthermore, if the block of business has been in runoff for a substantial period of time, the policyholders will be aging and many will be disabled. This fact, along with the traditional inability of insurers to properly estimate future liabilities in this line of business, makes it a line of business that likely is not appropriate for restructuring mechanisms. This conclusion, however, could be refuted if the appropriate plan addresses these issues and provides benefit to the policyholders.

Section 5: Legal Impacts of IBT and CD Laws

A. How Other Jurisdictions Might Analyze IBT or CD Decisions from Other States

As previously discussed by others, a restructuring mechanism in one state will not provide finality unless the decision is recognized by other jurisdictions. The US Constitution includes the Full Faith and Credit Clause as well as the Privileges and Immunities Clause (also referred to as the doctrine of Comity) in Article IV. These clauses create methods of extending the effect of a restructuring mechanism beyond the state that issued the judgment and giving that state’s judgment effect in all other states in which the insurer does business.

Thus, the Privileges and Immunities Clause or the Full Faith and Credit Clause are two methods stemming from the US Constitution that provide for recognition of court orders from other states. We will briefly touch on both concepts but leave these non-core insurance topics to others to discuss in more depth.

The policyholder challenging the decision must first identify the property of which they are being deprived. Assuming the resulting insurer is sufficiently capitalized, a policyholder who has been reallocated to the resulting insurer, but alleges no additional harm, may have difficulty identifying the property interest of which they have been deprived. The determination on full faith and credit will likely rely upon the issues raised and considered in the Court of the domestic state.

The issue is not likely to be ripe until an insolvency occurs with the assuming insurer. At that point, if the assuming insurer is insolvent and the original insurer is still financially sound, will a court give full faith and credit to the approval of the IBT or CD? This is an open question that is unlikely to be resolved until the specific factual scenario presents itself to the courts. The fact that this issue exists makes it even more important that only transactions with the greatest chance for success be subject to corporate restructuring process.

Comity is typically understood to be a courtesy provided between jurisdictions, not necessarily as a right but rather out of deference and good will. As such, comity might not require in this context that a

33 The same analysis does not apply to jurisdictions outside the United States and is not addressed in this white paper.
state honor the decision of another state. This is an analysis to be conducted by the individual jurisdictions.

B. Impact of UK Part VII Transactions in the US

Although there has been limited experience in the US courts in approving commutations and IBTs, some US courts have had opportunities to review these types of issues because US insurers have been involved with UK-based commutations or transfers. Since the 2000 and 2005 revisions to UK laws, solvent schemes and Part VII transfers have been employed much more frequently in the UK. This has led to more frequent reviews by US courts of the underlying UK transactions. Some of the impact in the US is felt in bankruptcy courts, which often are implicated because US policyholders obtain coverage from UK-based insurers on a regular basis, while others involve non-bankruptcy situations, such as when a policyholder wants to submit a claim for payment but no longer has coverage.

There are several interesting cases that provide some guidance on these issues. Narragansett Electric Co. v. American Home Assurance Co. is one such case. In Narragansett Electric Co., the court reviewed claims by a London-based insurer, Equitas, that the plaintiff had sued the wrong insurer on a claim that was alleged to have occurred more than sixty years earlier. Equitas had assumed a block of business from Lloyd’s of London in a Part VII transfer, but argued that it had not assumed the obligations at issue. As the court summarized, “Equitas’s motion to dismiss raises the question whether this [Part VII] transfer of insurance obligations from Lloyd’s to Equitas is effective and enforceable under U.S. law.”

First, the court decided that it was sitting in diversity jurisdiction and that the appropriate substantive law to apply was English. Next, the court discussed a prior District Court case where another Part VII transfer was discussed at length and not recognized as a foreign bankruptcy proceeding. In reaching a conclusion to reject the request for dismissal, the court relied on a letter sent by Equitas to US policyholders notifying them that Equitas was assuming the obligations of the original insurer. The court found that regardless of whether the Part VII had any effect the latter sent to US policyholders raised sufficient basis to let the suit continue. Equitas attempted to argue that the Part VII transfer did not state that it would become effective in the US, rather that it was only effective in certain countries of Europe. Nevertheless, the utility company alleged that it had not relied on the English High Court Order executing the Part VII transfer, but rather relied on the notice letter it received as the evidence of obligation by the new named insurer.

Air & Liquid System Corp. v. Allianz Insurance Co., dealt with a discovery dispute as to whether a policyholder impacted by a Part VII transfer could later have access to the information that went into a

UK’s independent expert’s report.48 Ultimately, the special master in the District Court allowed discovery to proceed with a deposition of the expert. Allianz-Insurance Co. is an example of one way that Part VII transfers can be used to add complication to an insurance coverage dispute, embroiling all involved in later litigation. Allianz-Insurance Co. also shows how the approval of such a transfer, even though well vetted originally, can later come under scrutiny in unintended or unforeseen locations.

Allianz-Insurance Co. concerned involved a dispute over liabilities incurred by General Star, which wrote policies for excess coverage outside the US for only three years, 1998–2000, and then was put into runoff and ceased writing new policies. By 2010, it had substantially wound down its business and decided to transfer its policies to a new insurer via a Part VII transfer. Both General Star (the transferor) and the transferee taking over the policies shared an ultimate parent company—Berkshire Hathaway.49 At issue here was whether the expert who opined on the Part VII transfer had properly included one particular US-based insured, Howden North America (“Howden”), and all three policies it had purchased from General Star. That insurance contract had been for excess coverage, and Howden had informed General Star of 13,500 potential asbestos related claims that were likely to exceed the initial layers of insurance, making it likely that the General Star excess policy would be required to pay out claims. The real issue in Allianz-Insurance Co. seemed to be that the post-Part VII transferee insurer was put into voluntary liquidation days after the Part VII transfer concluded, leading to questions about whether and how the independent expert had valued Howden’s potential asbestos claims.

In re Board of Directors of Hopewell International Insurance Ltd. involved a New York bankruptcy judge analyzed a solvent scheme of arrangement that occurred in Bermuda, and applied Bermuda law, rather than the requested Minnesota law.40 The court determined that, given the location of the petitioner’s assets, Respondents had failed to object to the solvent scheme as proposed when they had been provided notice, and that petitioner had been subjected to a foreign proceeding, it had jurisdiction. As such, the court enjoined the respondent from taking action against petitioner based on the underlying action.41 The court in Hopewell also recognized the Bermuda solvent scheme as one qualifying as a foreign proceeding under US Bankruptcy Code.42

Section 6: Recommendations

A. Financial Standards Developed by Subgroup

As reflected in this whitepaper, these restructuring mechanisms depend considerably upon the specific plan being proposed. Currently, each state with relevant statutes is being presented with plans for

49 Id. at *12. This interrelated nature is not unusual and is referred to as an intra-company-group transaction.
51 Written by the then-Chief United States bankruptcy judge in the Southern District of New York, Tina Brozman, this decision detailed relevant history behind the Bermuda schemes of arrangement, including the different methods available to companies. One arrangement involved a cut-off scheme, developed in 1995, in which companies have no more than five years to submit additional claims prior to a bar date. This scheme greatly reduced the time for a run-off to wind down its business.
52 Citing to 11 U.S.C. § 101(23)(2012). The court applied a standard that “a foreign proceeding is a foreign judicial or administrative process whose end is to liquidate the foreign estate, adjust its debts or effectuate its reorganization.” Id. at 49 (internal quotations omitted).
evaluation with no standard set of criteria under which to judge the financial underpinnings of the plan. The Working Group believes that trust in these mechanisms, and protection of the policyholders who will be impacted by them, demands a standard set of financial principles under which to judge the transaction. Accordingly, the Working Group created a subgroup to specifically address these financial issues.

The Restructuring Mechanism Subgroup ("Subgroup") has been charged with the following initial work related to this White Paper:

Develop best practices to be used in considering the approval of proposed restructuring transactions, including, among other things, the expected level of reserves and capital expected after the transfer along with the adequacy of long-term liquidity needs. Also develop best practices to be used in monitoring the companies after the transaction is completed. Once completed, recommend to the Financial Regulation Standards and Accreditation (F) Committee for its consideration. Complete by the 2021 Summer National Meeting. 31

Members of the Subgroup have studied and acknowledge that the UK Part VII procedures, and have concluded that they set forth robust processes and that setting similar requirements should be applied to established for IBTs and CDs.

As of the date of this paper, the charge related to best practices has not been completed. The Subgroup will continue its work with the goal of developing financial best practices. Those practices will be exposed for comment and discussion before referral to other groups.

B. Guaranty Association Issues

As discussed above, when these restructuring mechanisms are applied to personal lines serious issues arise over the continuation of guaranty association coverage. A number of states—Connecticut, California, and Oklahoma—have enacted statutory solutions to these issues. In addition, NCIGF has provided proposed statutory language. The Working Group would suggest that these issues, and the potential solutions, be referred to the Receivership Task Force for consideration to include language in the Guaranty Association Model Act.

Inclusion in the model, of course, only provides a roadmap for a state. The Working Group, therefore, suggests that, once appropriate language has been drafted, a serious effort be undertaken to obtain changes to the statutes in the various states to address this issue. Until that is accomplished, regulators should very carefully consider how plans presented address the guaranty association issues to assure that consumers are not harmed by the transaction.

C. Statutory Minimums

During the Working Group hearing, stakeholders made a number of suggestions as to provisions which should be required to be included in IBT and CD statutes. Those include:

Commented [RAW43]: Is this important?

Commented [RAW45]: This looks like a placeholder. Has the Subgroup concluded that there are no gaps or room for improvement? What about the refinements noted earlier in some US laws?

Commented [RAW46]: This should go first. Reading the two paragraphs together, it sounds like it's saying "So far, what they've concluded is that the best practices should include, but not be limited to, standards similar to the guardrails imposed by UK law for Part VII transfers."

Commented [RAW47]: Any chance we'll know more about best practices before this paper is finalized? It seems like a really important ingredient in an effective white paper.

Commented [RAW48]: How does this differ from best practices? If the intent is a two-tier recommendation, that's awkward. "A good system will do X, but any system had better at least do Y." Furthermore, if there's going to be a two-tier system, the "best" should be more robust and detailed than the "minimum," and we have the opposite here.

31 Charges were adopted by the Financial Condition (E) Committee Oct. 27, 2020 (see NAIC Fall National Meeting Minutes for the Financial Condition (E) Committee-Attachment Two).
(1) Requirement of court approval must be required for all restructuring mechanisms. Currently the IBT statutes (except for Vermont) require court approval, but the CD statutes generally do not.

(2) Requirement of the use of an independent expert to assist the state in both IBT and CD transactions, even though none of the states require this independent expert assistance for a CD.

(3) Requirement of a notice to stakeholders, a public hearing, robust regulatory process, and an opportunity to submit written comments are necessary for all policyholders, reinsurers, and guaranty associations.

None of the restructuring mechanisms are based on an NAIC model. While the Rhode Island, Oklahoma and Arkansas statutes are similar and are based on the Part VII processes in the UK, all CD processes are different and drafted by the legislatures of the respective states which enacted the statutes. Each of these recommendations is designed to address possible impairment of the financial position of the policyholders of the companies involved in the IBT and CD. As some commenters indicated, each of these suggestions would be beneficial in some transactions. Other transactions, however, may not need all of these provisions. For example, an intra holding company transaction may not need full faith and credit.

While independent experts can be of value, the mere fact that someone is employed by an insurance department does not mean that their skill set is not sufficient for certain transactions. Depending upon the transaction, department staff with a deep understanding of the insurer might provide more protection for consumers than a newly hired individual without a history with the insurer. Thus far, none of the transactions have been undertaken without a robust regulatory process; however, there would be concern from other regulators if this quality of regulatory process was not in place.

D. Impact of Licensing Statutes

Insurers formed for the purpose of effectuating restructuring mechanisms may, in the right transactions, provide value to consumers in the efficient management of runoff liabilities. However, these newly formed companies have difficulty getting licensed in the various states either because of “seasoning” issues or because a state may be hesitant to grant a license to a company that is not writing ongoing business so the state may be hesitant to grant a license. There are two possible outcomes, neither of them desirable. Either the restructuring fails to go forward, even though it is in the public interest, or the resulting or transferee company operates without a license, creating gaps in guaranty association coverage and lack of license can provide a lack of regulatory control over the company’s ongoing operations which can lead open the door to actions which that harm consumers. The Working Group, therefore, recommends that the appropriate committee look at licensing standards for runoff companies that states may wish to adopt.

I. SCOPE

In general, restructurings can be effected through various forms and occur for different reasons: a parent company may divest itself of insurance operations by walling off and trying to sell certain operations, or making material changes to pooling arrangements in a way that, in effect, results in a corporate restructuring. Similarly, an insurance organization may spin-off some of its operations, possibly taking a private company public, may separate commercial and personal lines operations, or may create an off-shore entity to which problematic liabilities and/or assets are transferred due to favorable regulatory and tax environments. The most common specific examples of restructuring during the past several years have been liability-based restructurings (LBRs) of insurance operations into discontinued and on-going operations, primarily because of material exposures to asbestos, pollution and health hazard (APH) claims and other long-tail liabilities. Policyholders, insurers, regulators and guaranty funds have expressed concerns about these transactions. Descriptions of some recent restructurings are summarized in Appendix 1.

Conceptually, an LBR is an extraordinary transaction, or series of transactions, in which one or more affiliated insurance companies wholly or partially, isolate their existing insurance obligations from their on-going insurance operations. The notion of isolation is one of substantive change that creates a legal separation, such that policyholders and other creditors holding the isolated existing insurance obligations have limited or no financial recourse for their direct satisfaction against the on-going insurance operations. The concept of an LBR does not, in the absence of such isolation, include restructurings to achieve capital allocation or business-mix decisions, such as changes in pooling percentages, changes of the primary insurance writer or the separation of on-going insurance operations from other on-going insurance operations.

The purpose of this paper is to identify and discuss regulatory, legal and public policy issues surrounding such LBRs of multistate property/casualty companies and their affiliates. Single-state insurers and their affiliates may undertake similar LBRs and many of the issues contained herein may apply; individual states may choose to utilize this paper as a resource in those transactions. While restructurings of life and health companies are known to have occurred, such transactions may present different issues and considerations and therefore are excluded from discussion in this paper.

This paper is not intended to establish a position either for or against LBRs since each case must be evaluated on its own merits by the regulatory authority. Furthermore, this paper is not intended to address every insurance company merger, acquisition, divestiture, withdrawal from one or more lines of business or states, or other corporate transaction which impacts a company’s obligation to its policyholders or its ability to meet those obligations. These are typically addressed under other applicable statutes or regulations.

II. BUSINESS REASONS

A. Rating Considerations

One of the major considerations in recent LBRs has been the insurer’s desire to maintain or obtain favorable financial and other rating designations from the private rating agencies. Ratings play a major role in determining whether an insurer can remain competitive in its target market and may
affect its ability to attract new capital. Insurers that have been subject to earnings drag due to the adverse development of APH or other liabilities may be faced with rating downgrades. By separating problem liabilities from on-going operations, the insurer may improve or maintain its rating. In turn, this may allow the insurer to more effectively take advantage of business opportunities, potentially achieve higher returns on its capital, and become more attractive to the financial markets.

B. Solvency Issues

Through an assessment of its APH or other liability exposures, an insurer may realize that recognition of probable ultimate liabilities in these areas will have a material impact on its financial condition. By separating these liabilities from the on-going operations, the insurer can dedicate surplus to support the restructured operations and eliminate the drag on earnings in its on-going operations and avoid further commitment of capital for pre-existing liabilities.

It should be recognized that an LBR, by itself, does not create resources from which claims can be paid. Accurately establishing adequate reserves to meet probable ultimate liabilities may eliminate the drag on earnings. If the establishment of such reserves materially weakens the insurer’s financial condition, it is unlikely that it will be able to dedicate appropriate surplus to support both the restructured and on-going operations without additional capital. In these circumstances, if additional capital is not forthcoming, the regulatory authority should take appropriate action.

C. Other

Other reasons an insurer may consider restructuring include, but are not limited to, the need to raise capital or a desire to exit a line of business. In some cases, restructuring may be considered as a method to exit the insurance business or to camouflage financial and other problems.

III. ADVANTAGES AND DISADVANTAGES

LBRs may result in a more effective use of existing capital, a more competitive on-going insurance operation, more effective claims management, better management of ultimate liabilities related to problematic lines of business, and improvement of the availability and affordability of insurance coverage. In addition, an LBR may result in the attraction of additional capital and the enhancement of shareholder value.

On the other hand, underfunded LBRs may reduce the likelihood certain policyholder claims will be paid by the insurer. In addition, LBRs may be difficult to structure equitably due to the uncertainty associated with estimating APH liabilities, may pose questions related to policyholder participation and guaranty fund coverage in the event a restructured entity fails, and may have a negative impact on the public trust in the property and casualty insurance industry and the effectiveness of insurance regulation.

Each LBR will present certain advantages and disadvantages. An advantage to future policyholders (availability and affordability) may arise from a disadvantage to existing and prior policyholders (reduced likelihood of having their claims paid). The regulatory process requires that these advantages and disadvantages be assessed in light of applicable law and the impact upon policyholders. A pre-approval checklist is attached at Appendix 2.
IV. FINANCIAL SOLVENCY ISSUES

A. General Solvency Considerations

Regardless of the nature of an LBR, a key responsibility of the regulatory authority in assessing whether to approve the transaction will be to analyze financial solvency issues. The regulatory authority must determine whether the resulting structure will have sufficient assets, both as to quality and duration, to meet policyholder and other creditor obligations. To make this determination, the regulatory authority will need to assess reserve adequacy, collectibility of reinsurance balances, and the value and liquidity of assets. Before formulating a conclusion based on these assessments, the regulatory authority should also consider the adequacy of capital and surplus levels and whether financial support is available from the parent company or other affiliates.

The restructuring insurer should provide the regulatory authority a detailed analysis of business and operational aspects of the LBR, including a detailed business plan, historical, current and pro-forma financial statements, and a description of the transaction’s tax consequences. The financial information provided should include a balance sheet of the insurer as if the restructuring plan were approved, and schedules detailing assets and liabilities to be reallocated as a part of the restructuring plan. Any special charges or write-downs that will be made as a result of the LBR should also be specifically identified. The detailed business plan should also include a discussion of how the LBR will impact obligations to policyholders and other creditors. In addition, a statement should be provided describing the consequences if the LBR is not approved.

The regulatory authority should consider the engagement of experts to provide opinions about the impact on obligations to policyholders and other creditors, solvency, and the financial condition of the companies affected by the LBR, both immediately before and after restructurings.

B. Reserve Adequacy

Determining a reasonable estimate for liabilities will be a key part of the regulatory review process. Long-tail liabilities, especially those related to APH exposure, are most difficult to estimate. Although it is acknowledged that there is a high degree of uncertainty related to estimation of APH reserves, some regulatory authorities have concluded that sufficient information and actuarial methodologies exist to assess and estimate these exposures. The regulatory authority should consider taking the following actions to thoroughly review the adequacy of reserve estimates:

First, the regulatory authority should engage a qualified actuarial firm to: a) review methodologies used by the insurer to estimate reserves; b) review the insurer’s economic approach to funding the run-off liabilities, including reserve discounting, if any; c) determine whether the claims unit is adequately staffed with qualified professionals and that its approach to settling claims is consistent with industry “best practices”; d) opine on the adequacy of reserves on a gross and net of reinsurance basis, by accident year and line of business; and e) review the funding of the discount and the adequacy of reserves net of the discount, if reserve discounting will be permitted. Second, if liabilities include material exposures to APH liabilities, consideration should be given to performing a “ground-up” review of reserves to estimate known and incurred but not reported (IBNR) reserves. This review should include the evaluation of all known liabilities on a case-by-case, policy-by-policy basis, including IBNR reserves.
Third, the regulatory authority should consider requiring the development of a cash flow model stress test to evaluate the adequacy of assets, including reinsurance, to fund the liabilities. The ultimate liabilities, payment patterns and cash flow assumptions should be included in thereview. The stress test should consider varying loss payment patterns and investment yields.

C. Reinsurance

1. Collectibility of Reinsurance Balances

The success of an LBR may depend, in large part, on the LBR’s effect upon existing reinsurance agreements and the collectibility of reinsurance balances stemming from those agreements. Depending on the materiality of these balances, the regulatory authority should consider requiring an independent analysis of reinsurance recoverables including: a) a review of the process used to monitor, collect, and settle outstanding reinsurance recoverables; b) an analysis of existing and projected reinsurance balances, including the expected timing of cash flows; c) an analysis of the quality and financial condition of the reinsurers and prospects for recovery; d) a detailed description of write-offs or required reserves based on the independent analysis taken as a whole; e) disclosure of material disputes related to reinsurance balances and the potential impact of resolving those disputes; and f) a discussion of the impact of the LBR on the collectibility of the reinsurance balances.

The regulatory authority may also consider requiring a legal analysis of the effect a liquidation or rehabilitation proceeding involving the restructured entity would have on the timing and amounts of reinsurance recoverables and the legal rights of reinsurers to claim offsets against such recoveries.

2. Reinsurance Coverage

LBRs may include reinsurance stop loss or excess of loss coverage as an integral part of the transaction. These treaties are often complex and may require the regulatory authority to retain qualified experts to ensure that coverage is adequate, and that the treaty will perform as anticipated. The treaty may be analyzed to determine how it will operate, how the reinsurance premium will be calculated and how it will be paid, and whether the quality and financial condition of the reinsurer(s) is adequate. The regulatory authority should determine whether the amount of coverage provided by the treaty, in combination with other resources, is sufficient to meet the obligations of the restructured entity.

In addition to a stop loss or excess of loss treaty, the LBR may involve new or amended quota-share or pooling agreements within the group. The regulatory authority should review the agreements and supporting documentation to understand the movement of business and to determine the financial impact of the changes on the run-off and on-going companies. The regulatory authority should also consider reviewing existing reinsurance programs to determine that provisions are consistent with other information provided and that adequate coverage exists for on-going operations.
D. Liquidity and Value of Assets

Although proper estimation of liabilities is critical to the success of an LBR, equally as important is the assessment of whether existing assets and future cash flow are sufficient to fund the liabilities.

Much of the work related to determining whether there is a proper matching can be achieved through an appropriate stress testing process. The asset assumptions used in the stress test should be evaluated by the regulatory authority, especially if assets have high volatility, liquidity uncertainties, material valuation issues or lack diversification.

Consideration should be given to obtaining current appraisals for any material real estate or mortgage holdings; and obtaining independent investment expertise to value limited partnerships, certain privately traded investments, highly volatile collateralized mortgage obligations, structured securities, and any other asset for which the regulatory authority has concerns about the carrying value.

The regulatory authority should also consider reviewing assumptions as to investment yield and determine how the reallocation of assets might impact historical yields. This review will be the key determination of allowable discount rates and the spreads to be required between investment yield and reserve discount.

Should the asset analysis indicate there are problems related to asset matching, the regulatory authority may consider requiring: a) reallocation of problem assets to other parts of the organizational structure that are financially capable of absorbing the additional risk; b) parental guarantee of investment yields; c) collateralized parental guarantee of asset valuation; and d) disposition of assets prior to transaction approval.

E. Capital and Surplus Adequacy

One of the most difficult aspects of reviewing an LBR is determining what level of capital and surplus is adequate. In general, standard provisions of the NAIC’s Risk-Based Capital (RBC) For Insurers Model Act (the Model Act) should apply.

Unlike an ongoing insurance company, run-off entities do not compete for new or renewal business. There may be other differences in the risk profile of run-off entities that could indicate the need for reassessment of the applicability of the Model Act in individual circumstances. The reserve, underwriting, and investment factors generating the majority of required RBC were developed to measure risks retained by a run-off entity. The Model Act makes specific provision for exempting a property and casualty insurer from actions to be taken at the Mandatory Control Level if that insurer is writing no business and is running-off its existing business. Under such circumstances the insurer may be allowed to continue its run-off operations with the regulatory authority’s oversight.

Other factors to consider in determining the adequacy of capital and surplus levels include...
volatility and uncertainty related to reserve estimates, the quality of assets, and the degree of parental and affiliated support.

F. Support From Parents and Other Affiliates

As discussed in previous sections, support from parents or affiliates may play an integral part in the LBR and may be a significant factor in whether the transaction is approved. The regulatory authority should consider analyzing the change in organizational structure resulting from the LBR, placing special emphasis on the extent to which the resulting corporate structures have common ownership, overlapping management, substantial reinsurance arrangements, and on-going business ties. If the financial and marketing futures of the corporate structures are materially tied together, it may be less likely that any part of the organization will be abandoned.

If one of the resulting insurer structures is perceived to be weaker than another, the parent may show its intention of continued support through issuance of “cut-through” provisions for the benefit of policyholders of the “weaker” entity. These provisions give policyholders the legal right to file a claim against the entity issuing the cut-through should the insurer liable under the insurance contract (policy) be unable to meet its obligations. (Note: Some states have enacted laws prohibiting cut-through transactions.)

Stop loss and excess of loss reinsurance transactions have been discussed earlier in this report. The importance of these transactions, especially if with affiliated entities, should not be minimized. These transactions are often used to provide a cushion for the uncertainties related to asset and liability assumptions and can often be structured to strengthen the transaction. The regulatory authority should determine whether parental or affiliated support is available should the collectibility of reinsurance balances deteriorate.

The parent or affiliates should be encouraged to provide financial and managerial support to all entities. This support lends credibility to the LBR and provides an additional layer of security to policyholders.

V. LEGAL AND PUBLIC POLICY ISSUES

A. Applicable Laws

LBRs may implicate, directly or indirectly, a number of laws in the state of domicile including both general corporate statutes and insurance code provisions. A thorough review of all potentially applicable laws is necessary to fully understand the requirements and potential ramifications of an LBR. To the extent changes to an insurer’s corporate structure affect relationships with policyholders in other states, the laws of those jurisdictions may apply. Following is an overview of the principal laws that may need to be considered by the regulatory authority with regard to an LBR.

1. General Corporation Statutes

Corporate organization is governed by each state’s corporation law. Many states have
enacted the Revised Model Business Corporation Act (RMBCA)\(^1\) or a similar law. In most states, the corporation law applies to insurers, unless stated otherwise. The state insurance codes supplement the corporate law with additional or different requirements for insurers.\(^2\)

The general corporation law addresses the existence and internal governance of the corporation. Corporation laws set forth minimum requirements and procedures to be adhered to in connection with extraordinary transactions affecting corporate existence and structure such as reorganizations, mergers, exchanges, divisions,\(^3\) disposal of assets and dissolutions. Such extraordinary transactions may require the approval of shareholders in addition to that of the board of directors.

### a. Mergers and Consolidations

State law governs consolidation and mergers of insurers. The procedures and requirements regarding changes to the corporate structure of an insurer are usually the same as those for other corporate entities. Insurers may be subject to more regulatory scrutiny than general business corporations. A merger occurs when one corporation absorbs the other and the identity of the absorbed corporation disappears. In consolidation, the separate corporate entities disappear and a new corporate entity emerges.

Statutes governing consolidations or mergers, for the most part, require that notice be given to all stockholders or members. Mergers or consolidations of stock insurers do not require the approval of policyholders but do require approval by the regulatory authority. Mergers or consolidations of mutual insurers must be approved by both the policyholders and the regulatory authority.

### b. Divisions

Division statutes have recently been enacted by two jurisdictions. These statutes permit the division of a single corporation into two or more resulting corporations. In a division, assets and liabilities are allocated among the resulting corporations. An LBR that includes a division may also include other transactions such as changes to a pooling agreement that may require regulatory review in other jurisdictions.

#### a. Insurance Holding Company Act\(^4\)

---

\(^1\) As of 1996, 22 states have enacted the current version of the RMBCA or substantially similar laws.

\(^2\) Neb.Rev.Stat. § 44-301 (Reissue 1993) states in pertinent part: "...[T]he Nebraska Business Corporation Act except as otherwise provided... shall apply to all domestic incorporated insurance companies so far as the Act is applicable or pertinent to and not in conflict with other provisions of the law relating to such companies."

\(^4\) The Insurance Holding Company System Regulatory Act (Holding Company Act) adopted by the NAIC is enacted in some form in 48 states.
Certain aspects of an LBR may be subject to the Holding Company Act even though the act does not explicitly address LBRs. An LBR may be subject to review by the regulatory authority under the Holding Company Act if the insurer is a member of an insurance holding company system. For example, if an LBR results in a change of control of a domestic insurer, the transaction must be pre-approved by the regulatory authority in accordance with certain stated criteria. In addition, the Holding Company Act governs transactions between the domestic insurer and other members of the insurance holding company system even if there is no change in control. Some of these transactions trigger advance notification to the regulatory authority depending upon the nature and extent of the transaction. All of these transactions must be on terms that are fair and reasonable. An LBR will probably be subject to these requirements of the Holding Company Act if intercompany agreements such as management agreements, reinsurance agreements or tax allocation agreements are affected.

Finally, the Holding Company Act also governs dividends or distributions by a domestic insurer. For example, if an extraordinary dividend or distribution is part of an LBR, the prior approval of the regulatory authority may be required.

b. Examination Law

All states have examination statutes that provide the authority and responsibility to conduct examinations of insurers to determine their financial condition and compliance with insurance laws and regulations. This authority includes targeted examinations triggered by a wide array of events such as deteriorating financial condition, risk-based capital results, financial analysis results, financial ratios and LBRs. Generally, a periodic examination of insurers is contemplated; however, the regulatory authority may also conduct an examination as often as deemed appropriate. The regulatory authority has the discretion within statutory confines to determine the scheduling, nature and scope of an examination. The regulatory authority is also granted examination powers under the Holding Company Act.

Generally, the regulatory authority may retain attorneys, appraisers, actuaries, certified public accountants, loss-reserve specialists, investment bankers or other professionals and specialists at the cost of the insurer being examined. Given the extraordinary nature and complexity of LBRs, it is essential that the regulatory

---

5 Control is presumed to exist with the power to vote 10% or more of the voting securities of an insurer.

6 Regulatory jurisdiction under the NAIC Insurance Holding Company System Regulatory Act is of domestic insurers, but some states assert jurisdiction over non-domestic insurers on the basis of the insurer being “commercially domiciled” in that jurisdiction due to the volume of business. See CAL. INS. CODE § 1215.4 (1993).

7 The NAIC Insurance Holding Company System Regulatory Act at Section 5A. Similar authority as to insurers that are not a part of an insurance holding company system can be found in the Disclosure of Material Transactions Model Act adopted by the NAIC.

8 Id. at Section 5B.

9 The Model Law on Examinations adopted by the NAIC has been enacted in 41 states, see Section 3A.

10 The NAIC Insurance Holding Company System Regulatory Act at Section 6A.

11 The NAIC Model Law on Examination at Section 4D.
authority have the ability to contract for the services of all experts and specialists deemed necessary and to assess such costs to the insurer.

The examination statutes generally provide for the confidentiality of all workpapers, recorded information and documents obtained by, or disclosed to, the regulatory authority in the course of an examination and that these materials may not be made public, subject to some limited exceptions. The examination authority under the Holding Company Act contains a similar provision regarding confidentiality of examination materials. These confidentiality provisions are necessary for the regulatory authority to conduct a thorough examination. The examination statutes provide the regulatory authority an important tool to evaluate LBRs, but the examination law prevents the regulatory authority from disclosing examination documents that might be of interest to policyholders. (See § 5(B)(4)).

c. Other Laws

Other insurance regulatory laws that may need to be considered regarding an LBR relate to the orderly withdrawal from insurance business in the state,13 demutualization, or redomestication14 of the insurer to another state. Issues regarding guaranty fund coverage and assumption reinsurance requirements deserve special consideration and are discussed in separate sections of this paper. Other insurance laws and regulations may need to be considered in connection with an LBR. Therefore, it is important to evaluate all the ramifications of an LBR and the component steps and transactions necessary to achieve the LBR. This may involve regulatory issues not identified in this paper.

B. Due Process

What do the concepts of due process and equal protection mean in the context of the review of an LBR by the regulatory authority? The requirements of due process and equal protection are triggered by action of the state through its authorized governmental agencies. The concept of due process includes both procedural and substantive aspects. Procedural due process concerns the right of interested parties to notice and the opportunity to be heard. Substantive due process requires that government action be based on legislation that is within the scope of legislative authority and reasonably related to the purpose of the legislation. Not every proposed LBR will affect private interests to the extent that the requirements of due process and equal protection will be applicable.

The regulatory authority should consider the persons whose interests are affected by a proposed LBR and who is entitled to notice and the opportunity to be heard. The regulatory authority should consider whether a public hearing concerning the LBR is required or should be held.15 The regulatory authority should consider whether interested parties should be allowed to present evidence, call witnesses and cross-examine the witnesses of other parties. The regulatory authority should consider whether policyholder consent is necessary.

---

12 Id. at Section 5F (Six of the 41 states that have enacted the Model Law have not adopted the section on confidentiality).
14 The Redomestication Model Bill adopted by the NAIC is enacted in 37 states.
15 The United States Supreme Court has held that due process of law does not require a hearing in every case of government action. See 16A Am.Jur.2d 1054, citing Boddie v. Connecticut, 401 U.S. 371 (1971).
The regulatory authority should consider the information that should be disclosed and to whom disclosure should be made. The regulatory authority should consider the persons that may be aggrieved by its decision. These questions may well have their answers in general (i.e., non-insurance) administrative and state and federal constitutional law. If not, local law may govern policyholder relationships and rights. Finally, the regulatory authority should consider whether the action to be taken is reasonable under all the attendant circumstances.

C. Assumption Reinsurance

Corporate restructurings may be subject to the assumption reinsurance transactions statutes. The Assumption Reinsurance Model Act was drafted by state insurance regulators and adopted by the NAIC Dec. 5, 1993. The model act establishes notice and disclosure requirements intended to protect consumers’ rights in an assumption reinsurance transaction. Under these statutes, insurers must seek prior approval from the regulatory authority for a transfer of business as well as notify all policyholders affected by the transfer. Policyholders must be informed that they have the right to reject the transfer.

An assumption reinsurance agreement is any contract that both transfers insurance obligations and is intended to effect a novation of the transferred contract of insurance with the result that the assuming insurer becomes directly liable to the policyholders of the transferring insurer and the transferring insurer’s insurance obligations and/or risks under the contracts are extinguished. If the laws of the domiciliary states of both the transferring and assuming insurer contain provisions substantially similar to the model act, the assumption reinsurance transaction is subject to prior approval by both states’ regulatory authorities. If no substantially similar requirements exist, the transaction is subject to the prior approval of the regulatory authorities of the states in which affected policyholders reside. Policyholders receive a notice of transfer by mail and may reject or accept the transfer. If the policyholder does not respond, the policyholder will be deemed to have given implied consent and the novation of the contract will be effected.

The effect of an assumption reinsurance transaction is to relieve the transferring insurer of all related insurance obligations and to make the assuming insurer directly liable to the policyholder for the transferred risks. In addition, a domiciliary regulatory authority has the necessary discretion to effect a transfer and novation if an insurer is in hazardous financial condition and the transfer of its insurance contracts would be in the best interests of the policyholders. These statutes may also come into play if an insurer transfers business through bulk reinsurance or a contract of bulk reinsurance. Bulk reinsurance or a contract of bulk reinsurance is an agreement whereby one insurer cedes by an assumption reinsurance agreement a certain percentage of its business to another insurer. The transaction must be filed with and approved by the regulatory authority of the insurer’s state of domicile.

D. Policyholder Consent

When a new agreement replaces an existing agreement, a novation has occurred. Because the

---

16 See, e.g., Black’s Law Dictionary 1064 (6th ed. 1990) which defines “novation” as, in part: “A type of substituted contract that has the effect of adding a party, either as obligor or obligee, who was not a party to the original duty. Substitution of a new contract, debt, or
Assumption Reinsurance Model Act specifically states that it is intended to provide for the regulation of assumption reinsurance transactions as novations of contracts,17 general rules of contract law apply to any disputes arising under the assumption reinsurance agreements.

Many courts have found that the type of implied consent required by the Assumption Reinsurance Model Act is legally sufficient. For example, in State Dept. of Public Welfare v. Central Standard Life Ins. Co.,18 the Supreme Court of Wisconsin found implied consent to an assumption agreement where the policyholder retained the original policy, was silent after receiving a certificate of assumption and subsequently paid 15 premiums to the assuming insurer.

Furthermore, in Sawyer v. Sunset Mutual Life Insurance Co.,19 the Supreme Court of California held that when an insured’s beneficiaries sued the insurer that had assumed the insured’s life insurance policy, “the bringing of suit is sufficient evidence of assent on the part of respondents to said agreement and undertaking.”

However, other courts have required express consent by the policyholder to an assumption reinsurance transaction. For example, in Security Benefit Life Ins. Co. v. Federal Deposit Insurance Corp.,20 the U.S. District Court for the District of Kansas found that where a series of assumption reinsurance agreements was executed, the agreements were not enforceable without proof that the policyholder or at least one of its successors in interest consented to the novation. Acquiescence to the transaction did not constitute policyholder consent to the assumption reinsurance transaction.

In Travelers Indemnity Company v. Gillespie,21 the Supreme Court of California stated that even when an insurer obtained reinsurance and assumption agreements pursuant to the state’s withdrawal statute, policyholder consent to the transaction was still required.

In Prucha v. Guarantee Reserve Life Ins. Co.,22 the policyholder wrote to his insurer and said he did not consent to the transfer of his policy to another insurer through an assumption reinsurance agreement, but he paid premiums to the new company. The Court of Appeal of Florida, Third District, found that the policyholder’s payment of premiums did not constitute implied consent to the novation because the policyholder had no opportunity to consent and his premium payments were merely an effort to protect his investment.

E. Rights of Other Interested Parties

What persons have an interest in a proposed LBR in addition to policyholders and insurance regulators in non-domiciliary states? Guaranty funds have an interest in the approval of LBRs because they may be called upon to step in and pay claims if the restructured entity is subsequently

found to be insolvent. Third parties having pending claims against an insured of the restructuring insurer may also be interested persons. Other interested persons, depending upon the circumstances in each case, may include reinsurers, ceding insurers, general creditors, shareholders, if the restructuring insurer is a stock company, and the public.

The regulatory authority should consider the type of notice to be given to interested persons. The regulatory authority should also consider whether certain persons should be afforded the opportunity to intervene in the proceedings concerning an LBR. Finally, the regulatory authority must consider the fiscal impact of giving notice to a large number of interested persons and the participation of those persons in the approval process.

F. Disclosure of Information

In an LBR the regulatory authority should consider the extent to which financial information about the insurer involved must be disclosed to interested persons or the public. Applicable state laws may require the regulatory authority to disclose certain information. However, most of the states have enacted laws that provide for maintaining the confidentiality of sensitive information acquired by the regulatory authority during an examination of an insurer or in the course of certain other regulatory activities. Use of the examination law to evaluate an LBR may prevent the regulatory authority from disclosing materials that the regulatory authority would prefer to release to interested persons or the public.

The regulatory authority should determine whether disclosure requirements or confidentiality provisions are applicable to the review of an LBR. In the absence of explicit statutory guidance, the regulatory authority should balance due process considerations and the public’s right to know with the need to protect sensitive or proprietary information.

G. Guaranty Fund Coverage

An important issue for the regulatory authority with regard to an LBR is the availability of guaranty fund coverage in the event of the insolvency of the restructured insurer. From the viewpoint of the insurance consumer, absent express consent, guaranty fund coverage should not be reduced or eliminated by an LBR.

1. Overview of Guaranty Fund System

Each state has a guaranty fund, created by statute, to provide a safety net for policyholders and third party liability claimants in the event of the insolvency of an insurer writing property and liability lines of insurance. Although the majority of state guaranty fund statutes are based upon the NAIC Post-Assessment Property and Liability Insurance Guaranty Association Model Act, there are variations from state to state that should be taken into account by the regulatory authority when reviewing a proposed LBR. First, the lines of business covered may differ. Also, the amount of coverage provided per claim varies. Although the Model Act and many state statutes provide for payment of covered claims of up to $300,000, some state laws provide more or less coverage. Several states have enacted net worth provisions that exclude from coverage the claims of persons whose net worth
exceeds a certain benchmark, the rationale being that such persons are sophisticated purchasers and can afford to absorb some loss.\textsuperscript{23}

Since each state guaranty fund is a separate entity, each fund makes its own determination with respect to coverage. Therefore, potentially, the guaranty funds in some states may determine that claims arising from the policies of the restructured insurer are covered, while other guaranty funds may reach a different conclusion.

Finally, although the regulatory authority reviewing an LBR should consider the potential availability of guaranty fund coverage as one of many factors in deciding whether to approve the LBR, it is important to note that the existence of guaranty fund coverage can only be conclusively determined if and when the insurer becomes insolvent.

2. The Availability of Guaranty Fund Coverage May Depend Upon the Form of Restructuring

Whether guaranty fund coverage is available to policyholders, claimants, and creditors of an insurer involved in an LBR may depend upon the form of the restructuring. The regulatory authority should determine the effect of an LBR on the availability of guaranty fund coverage in the event the restructured insurer subsequently becomes insolvent. Issues to be considered include:

a. Whether an unlicensed insurer is involved in the LBR;

b. Whether the restructured insurer that could become insolvent is the insurer that issued the policy;

c. Whether the restructured insurer that could become insolvent was the insurer at the time the insured event occurred;

d. Whether the guaranty fund coverage in other states varies from the coverage available in the regulatory authority’s jurisdiction.

3. Conclusion

Guaranty fund coverage and the provisions for triggering the guaranty fund vary by state. Regulators involved in the approval of an LBR should determine the effect of the LBR on the availability of guaranty fund coverage for policyholders in the event the restructured insurer subsequently becomes insolvent. If it is concluded that an LBR places the availability of guaranty fund coverage in serious question, the structure of the proposed transaction or questionable component should be modified before approval.

VI. ON-GOING REGULATORY OVERSIGHT

\textsuperscript{23} It might be questioned whether such exclusions are appropriate if policies are transferred to a restructured entity without the insured’s consent.
A. General

The responsibility of the regulatory authority does not end with the approval of an LBR. Subsequent to the completion of the transaction there will be one or more insurers with obligations to policyholders and other creditors. These insurers will continue to require regulatory oversight. Because of the existence of obligations to policyholders and other creditors, the insurance laws of the state of domicile should continue to apply to the restructured insurer. However, the LBR may also result in the need for additional regulatory oversight. As an LBR can take many forms, the exact nature of the oversight is dependent on the risks created by an individual restructuring. To the extent that these risks can be identified prior to the approval of the LBR, the regulatory authority should consider incorporating any additional regulatory requirements in the order approving the transaction.

This section assumes that the restructured insurer remains domiciled in the United States. If this is not the case, most of this section will not apply, as the regulatory authorities approving the transaction will no longer have jurisdiction over the restructured insurer. This should be considered prior to approving the LBR.

In the end, any LBR will be judged on the reorganized insurer’s ability to meet its obligations to policyholders and other creditors. If approved, the regulatory authority has the responsibility to identify new risks created by the LBR, and institute appropriate regulatory safe-guards to help ensure that all obligations to policyholders and other creditors will be met. An outline of a program for on-going regulatory oversight is attached at Appendix 3.

B. Oversight

One of the primary areas of concern regarding a restructured insurer is the availability of sufficient resources to meet all of its obligations to policyholders and other creditors. Although the restructured insurer would still be subject to the domiciliary state’s examination law, additional oversight may be required to help mitigate additional risks created by the LBR. For instance, if a dedicated pool of assets is created to meet obligations to policyholders the regulatory authority should consider additional oversight measures designed to ensure the assets will be available to pay policyholder claims. See Appendix 3 for examples of conditions and requirements for on-going regulatory oversight of an LBR.

One of the factors that will be analyzed prior to approving an LBR is future corporate affiliations. In cases where there are continuing affiliations, the regulatory authority’s oversight would most likely include monitoring compliance with agreements between the resulting insurers. For example, the regulatory authority should consider on-going evaluations of statutory compliance with any capital maintenance agreement, and review of management or administrative agreements or other inter-company agreements or transactions. In addition, the regulatory authority should review compliance with the requirements set forth in the order approving the LBR.

Where there is common management and/or ownership of on-going and run-off operations of a restructured insurer, the regulatory authority needs to be aware of any potential conflicts of interest between the two entities. This may lead to inappropriate influence by the on-going entity of the run-off entity’s operations. For example, it might be in the interest of the on-going entity for the run-off
entity to settle claims of current on-going entity customers on a preferential basis. This could have the effect of jeopardizing whether the run-off entity will have sufficient assets to settle other policyholders claims. A similar conflict exists if there is a block of policies whose obligations revert to the on-going entity upon the insolvency of the run-off entity. If such conflicts exist the regulatory authority should consider an examination of the claim settlement patterns of the run-off entity as part of its regular examination process.

If an LBR results in one or more insurers that have no on-going operations, the regulatory authority should consider requiring regulatory approval before the run-off entity can begin or resume on-going operations. Prior to approving the reactivation of operations, the regulatory authority should consider the financial and operational resources available to the restructured insurer, and be able to determine that such a reactivation will not place existing policyholders at any additional risk.

The regulatory authority should evaluate residual market obligations before approval of an LBR. Consideration should be given to requiring that these types of obligations be assumed by the on-going entity.

VII. CONCLUSIONS AND RECOMMENDATIONS

The Liability-Based Restructuring Working Group concludes and recommends as follows:

- LBRs present both advantages and disadvantages, and therefore, LBRs should not be prohibited per se, but each should be evaluated on its own merits by the regulatory authority.

- LBRs are extraordinary transactions that vary widely in form, method and circumstances, and therefore, a “one size fits all” stand alone model law approach is not recommended at this time. Insurance regulatory authorities must have adequate statutory authority with sufficient flexibility and discretion to respond to the situation presented. The Working Group believes that existing regulatory authority is generally adequate, but recommends that the Post-Assessment Property and Liability Insurance Guaranty Association Model Act, the Assumption Reinsurance Model Act, and the Insurance Holding Company System Regulatory Act be revisited to consider whether amendments may be appropriate in light of LBRs.\(^{24}\)

- An LBR should be subject to approval or disapproval by the domestic regulatory authority(ies) on the basis of a comprehensive and thorough review. The regulatory authority should have the ability to engage all experts necessary to assist in the review at the expense of the LBR applicant.

- The LBR applicant has the burden of justifying the LBR to the regulatory authority. There regulatory authority should not approve a proposed LBR if the transaction is likely to jeopardize the financial stability of the insurers, prejudice the interests of policyholders or be unfair or unreasonable to policyholders. An LBR is not an acceptable alternative to appropriate regulatory action, such as the rehabilitation or

\(^{24}\) More specifically: the working group recommends that: (1) the NAIC review its Post-Assessment Property and Liability Insurance Guaranty Association Model Act to consider whether the definitions of “covered claim” and “insolvent insurer” should be amended to make it clear that coverage continues when there has been a division; (2) that the Assumption Reinsurance Model Act be reviewed to consider whether to clarify that a division transaction is subject to all the requirements of that Act; and (3) that the Insurance Holding Company System Regulatory Act be reviewed to consider whether any of the filing requirements should be amended in order to more fully address LBR transactions.
liquidation of insurers in hazardous financial condition, unless the hazardous financial condition is corrected in association with the LBR.

- If the effect of the LBR is intended to extinguish an insurer’s obligation to its policyholders, consent of the policyholders should be required. Such transactions result in a novation or have the same effect on policyholders as a novation and therefore should satisfy the procedural and legal requirements of a novation. States should consider adopting the Assumption Reinsurance Model Act or other legislation that will safeguard the interests of policyholders.25

- Public confidence in insurance and the integrity of the regulatory process requires that regulatory authorities strive to respond to LBRs as consistently as possible. Consideration should be given to developing a standardized regulatory review process through filing requirements, guidelines, protocols and best practices. The Pre-approval Checklist, Appendix 2, and On-going Regulation Oversight, Appendix 3, are examples of such regulatory guidelines.

- Interstate cooperation and communication are especially important. LBRs are likely to trigger the regulatory jurisdiction of more than one state and will be of interest to all states where affected policyholders reside. The domiciliary state of the parent or largest insurer involved in the LBR should coordinate activities among the states having jurisdiction over some aspect of the LBR, make basic information available to non-domiciliary states and respond to specific inquiries from non-domiciliary states as necessary.

- Policyholders should have an opportunity for direct participation in the LBR approval process. At a minimum, this should include notice to policyholders of the proposed LBR with an explanation of the LBR and its effect on policyholders, meaningful access to information about the LBR, and a public hearing that affords policyholders an opportunity to be heard. Meaningful access to information necessarily requires that policyholders be given access to information that may be sensitive and proprietary. The competing interests of the policyholders and the insurer in this regard should be balanced with appropriate measures such as protective orders or confidentiality agreements to allow policyholders access to such information while protecting the insurer’s interests, in accordance with applicable public information laws.

- The review of all financial aspects of a proposed LBR culminate in a determination of the adequacy of capital and surplus. It should be demonstrated that each insurer in the group will have adequate capital and surplus to support its own liabilities and plan of operation. The capital facilities at the holding company level also should be reviewed for adequacy should a member of the group require additional capital infusions, guarantees or other support measures.

- A key regulatory consideration in evaluating an LBR is whether there will be an on-going parental or affiliate involvement with the restructured insurer after the completion of the LBR. This involvement may take many forms, including, but not limited to, overlapping management, capital and surplus guarantees, reinsurance agreements, cut-through provisions and investment yield guarantees. The form and extent of the involvement or support will depend on the structure of the LBR and the entities involved.

- Material exposures to asbestos, pollution and health hazard claims (APH) have been the motivating factor in recent noteworthy LBRs. The Working Group recommends that the NAIC request that the

25 Arizona recently enacted Title 20, chapter 4, article 1, section 20-736 which requires policyholder consent or approval by the Director of Insurance of transfer or assignment of an insurer’s direct obligations under insurance contracts covering Arizona residents.
Casualty Actuarial (Technical) Task Force consider documenting and evaluating the analytical techniques in use to estimate such long-tail exposures.

- The major LBRs that have generated concern and raised issues are a fairly recent development. The nature of future LBRs and their frequency remains to be seen. The NAIC should consider monitoring the evolution of these transactions in order to determine whether additional regulatory responses are necessary.
Case Studies

Cigna Corporation Property and Casualty Division

An intercompany reinsurance pooling arrangement existed between a substantial portion of the property and casualty insurance companies of Cigna Corporation. The lead company in the pool was the Insurance Company of North America (INA), a Pennsylvania-domiciled insurer.

For some years the pool’s loss reserves experienced adverse development mainly from its 1986 and prior general liability policies which included APH and other long-tail liabilities. During 1994, A.M. Best downgraded the rating of the companies within the pool to B++. After a mini-restructuring in 1994 that created two separate intercompany reinsurance pooling arrangements, A.M. Best gave the pools two separate ratings, one being A- with developing implications, the other a B+ with negative implications.

To alleviate A.M. Best’s and market concerns over the operations of Cigna, a second restructuring proposal was submitted to the Pennsylvania Insurance Department in October 1995. The restructuring plan called for the use of the Pennsylvania Business Corporation Law’s division statute to divide INA into two companies. The two companies resulting from the division would be controlled by two separate holding companies. Simultaneously with the division, Cigna would amend its two pooling arrangements. The effect would be that the one resulting insurer, CCI (which would then be merged into Century Indemnity), would receive the 1986 and prior liabilities along with certain assets and be placed in run-off. The other resulting insurer, INA, would receive the remaining liabilities and assets, continue to write business and enter into a new intercompany reinsurance pooling arrangement with a substantial portion of the Cigna companies (active companies). As part of the restructuring, a capital infusion of $500 million was contributed by Cigna Corporation to Century Indemnity. In addition, the active companies supported Century Indemnity through an $800 million excess of loss reinsurance agreement and a $50 million dividend retention fund.

The Pennsylvania Insurance Commissioner approved the division and changes to the intercompany reinsurance pooling arrangements. Seven other states, Texas, Ohio, Indiana, Illinois, California, New Jersey and Connecticut, approved changes in the intercompany reinsurance pooling arrangements and a change of control of certain insurers. The reorganization became effective on Dec. 31, 1995.

Restructuring of the Crum and Forster Group

Prior to the 1993 restructuring, the Crum and Forster Group, ultimately owned by Xerox Corporation, included 21 property and casualty insurance companies, five of which directly participated in an inter-affiliate pool. The lead company of the pool was United States Fire, which, along with affiliates Westchester Fire and Constitution Reinsurance, was domiciled in New York. International Insurance Company was the sole Illinois domestic participant in the inter-affiliate pool. International Surplus Lines, an Illinois domestic, ceded 100% of its business to International Insurance Company, so it was an indirect participant in the pool.

Following a preliminary restructuring in 1990 which included exiting from the standard personal lines market and other market-related action to improve on-going operational results, Xerox announced plans to...
exit the financial services business. During the latter part of 1992, in preparation for the LBR, the group greatly strengthened loss reserves, after having suffered significant losses from Hurricanes Andrew and Iniki. Although the LBR was intended to enhance the salability of the insurance operations, an immediate goal was to realign the business into stand-alone company groups. Each group was to be dedicated to a particular purpose with greater management accountability and better focus.

The initial step of the LBR was to de-pool the group’s operations. Seven separate operating groups were created: (1) Constitution Reinsurance – treaty and facultative reinsurance; (2) Coregis – professional liability, public entity and other property and casualty programs; (3) Crum & Forster Insurance – commercial property and casualty insurance through a select network of independent agents; (4) Industrial Indemnity – workers’ compensation coverage and services; (5) The Resolution Group – reinsurance collection services and management of run-off businesses; (6) Viking – non-standard personal auto; and (7) Westchester Specialty Group – umbrella, excess casualty and specialty property business. To this end, various assumptive and indemnity reinsurance contracts were executed among the affiliates, and a stop loss contract was entered with Ridge Re, an affiliated reinsurer funded by the group’s direct parent, Xerox Financial Services. Additional capital constituting $235 million in cash and $100 million in notes was contributed to the group.

The LBR received approval in the 15 states in which the 21 property and casualty insurance companies were domiciled. The primary states were New York, Illinois, California, and New Jersey. Initial discussions with the states began during the first part of 1993, and approval from all states was received by September 7 of that year. Regulators granted approvals to Form A exemptions, restatement of unassigned funds/quasi-reorganization, various reinsurance agreements, the merger of International Surplus Lines into International Insurance Company, various service agreements, and assumption certificates.

**ITT Corporation**

In 1992, the Connecticut Insurance Department approved a series of transactions through which ITT Corporation restructured its insurance business into discontinued and on-going operations. Effective Sept. 30, 1992, First State Insurance Company (FSIC) redomesticated from Delaware to Connecticut. Ownership of FSIC and its Connecticut domiciled subsidiaries, New England Insurance Company and New England Reinsurance Company, collectively referred to as the First State Companies, was transferred from Hartford Fire Insurance Company (HFIC) to ITT Corporation through an extraordinary dividend. Since Connecticut was domicile to FSIC and its subsidiaries, no other state was required to approve the transaction. All approvals were made pursuant to Connecticut’s holding company act and notification was made to all states requiring notice regarding the discontinuation of writing new and renewal business.

**The Home Insurance Group**

Prior to mid-1995, the Home Insurance Company and five of its seven property/casualty insurance subsidiaries operated under a pooling agreement for the writing of commercial business. Following several years of losses, the Home’s upstream parents, Home Holdings, Inc. and Trygg Hansa AB, entered into an agreement in principle in December 1994 with the Zurich Insurance Group to sell the Home Companies. The agreement virtually put the Home and its subsidiaries into run-off. The issues surrounding the acquisition and related transactions involved adequacy and funding of reserves, including asbestos and environmental, reinsurance, mergers and redomestications, and placement of renewal business. In addition, Home Holdings, Inc. had outstanding public shareholders and public bondholders.
New Hampshire, the domiciliary regulatory authority for the Home Insurance Company, coordinated a multistate review. Provisions of the modified agreement included a guaranteed investment rate of 7.5%, excess of loss reinsurance coverage of up to $1.3 billion, deferral of servicing fees over cost, policyholder access to a Zurich company for new and renewal business, renewal fees paid by Zurich to fund interest on public debt, and the buyout of Home Holdings’ publicly held capital stock. The states of New Hampshire, New York, New Jersey, Illinois, Indiana, California, and Texas participated in approving all or part of the transaction, and all insurance subsidiaries except U.S. International Reinsurance Company were eventually merged into the Home Insurance Company in run-off. New Hampshire has maintained continual regulatory oversight since the transaction was approved in June 1995.
APPENDIX 2

Pre-Approval Checklist

Following is a list of information and data that, if not included in the original filing, should be requested by the regulatory authority and considered in the review of an insurer’s proposed LBR. This list should be used as general guidance and is not intended to be all inclusive. An LBR may be effected through various forms. The regulatory authority may find it necessary to request additional information, dependent upon the complexity of the proposal, the level of regulatory oversight warranted and other circumstances specific to the proposal or the insurer.

1. Narrative
   A general written summary of the proposed LBR, explaining:
   a. Reasons for undertaking the LBR;
   b. All steps necessary to accomplish the LBR, including legal and regulatory requirements and the timetable for completing such requirements;
   c. The effect of the LBR on the insurer’s financial condition;
   d. The effect of the LBR on the insurer’s policyholders;
   e. The consequences if the LBR is not approved.

2. Business Plan
   a. On-going Operations
      i. A listing of the insurer’s major markets/products.
      ii. A description of the insurer’s strategy covering major markets/products and customers and the critical success factors for achieving these strategies.
      iii. A description of the insurer’s competitive positioning for each of its major markets/products and a discussion of growth potential, profit potential and trends for each.
      iv. Identification and a discussion of the significant trends in the insurer’s major markets/products, e.g., demographic changes, alternative markets, distribution methods, etc.
      v. Identification of the largest risk exposures of the insurer, e.g., financial market volatility, environmental exposures, geographic distribution, etc.
      vi. A description of the major business risks of the insurer, e.g., sales practices, data integrity, service delivery, technology, customer satisfaction, etc.
   b. Run-off Operations
      i. A description of all plans regarding any run-off operations.
3. Financial Information
   a. Historical financial statements, including the most recently filed annual and quarterly statutory statements.
   b. Financial statements (in a spreadsheet format) detailing the accounting of the proposed LBR including:
      i. Schedules detailing assets and liabilities to be reallocated as part of the LBR.
      ii. An accounting of any special charges, reevaluations, or write-downs to be made as part of the LBR.
   c. Pro-forma financial statements of the insurer(s) as if the LBR were approved including an explanation of the underlying assumptions.
   d. Financial projections for three years (assuming the LBR is approved) for both the run-off and on-going entities and an explanation of the assumptions upon which the projections are based.
   e. A description of any tax consequences of the LBR.

4. Analysis of Reserves
   Retain qualified independent actuarial experts.
   a. The actuarial expert should perform a “ground-up” actuarial review of case and incurred but not reported reserves for asbestos, pollution, health hazard and other long-tail claims.
   b. The actuarial expert should also opine on:
      i. Methodologies used by the insurer to estimate reserves.
      ii. The adequacy of reserves on a gross and net of reinsurance basis.
      iii. The adequacy of the expertise of the insurer’s claims unit.
      iv. The insurer’s economic approach to funding the run-off liabilities, including cash flow model stress tests.
      v. If reserve discounting is permitted, funding of the discount and the adequacy of reserves net of discount.

5. Analysis of Reinsurance
   a. An analysis of reinsurance recoverables by a qualified expert including:
      i. A review of the process used to monitor, collect and settle outstanding reinsurance recoverables.
      ii. An analysis of existing and projected reinsurance balances including the expected timing of cash flows.
      iii. An analysis of the quality and financial condition of the reinsurers and prospects.
Attachment One

for recovery,
iv. A detailed description of write-offs or required reserves based on the independent analysis taken as a whole.
v. Disclosure of material disputes related to reinsurance balances and the potential impact of resolving those disputes.
vi. A discussion of the impact of the LBR on the collectibility of reinsurance balances.
b. A legal analysis of the effect that a rehabilitation or liquidation proceeding involving the restructured entity would have on the timing and amounts of reinsurance recoverables and on the legal rights of the reinsurers to claim setoffs against such recoveries.
c. If reinsurance stop loss or excess of loss coverage is an integral part of the transaction, a copy of such agreement and a written opinion from a qualified expert as to:
i. The adequacy of coverage;
ii. The ability of the treaty to perform as anticipated and be unaffected by delinquency proceedings;
iii. The practical operation of the treaty;
iv. The timing and method of payment of reinsurance premium;
v. The financial condition of reinsurers;
vi. The sufficiency of coverage and other resources.
d. A discussion of existing or proposed reinsurance programs, whether with affiliates or other reinsurers, to assist the regulatory authority in determining that provisions are consistent with other information provided and that adequate coverage exists for both on-going and run-off operations.
e. Any proposed amended, cancelled, or new pooling agreements, including explanations of significant differences before and after the restructuring, flowcharts to demonstrate the proposed movement of business, and the anticipated financial impact upon the affected companies.

6. Analysis of Liabilities Other Than Reserves
An analysis of material liabilities other than reserves, including a discussion about any reallocations or dispositions as part of the LBR, especially as they relate to reinsurance agreements and inter-company cost and tax-sharing agreements. The analysis should include all non-reserve related accruals and outstanding debt line items found on the Property/Casualty Annual Statement (page 3) for liabilities, including write-ins.

7. Analysis of Assets
An analysis should be performed to determine if existing assets and future cash flows are sufficient to fund liabilities. This analysis should include:
a. Disclosure of assumptions regarding the assets of the insurer(s) involved in the LBR,
especially those assets with high volatility, liquidity uncertainties, material valuation issues, or representing a material percentage of the invested asset portfolio.

b. Current appraisals of any material real estate or mortgage holdings, independent valuation of limited partnerships, certain privately traded investments, highly volatile collateralized mortgage obligations, structured securities, and any other assets of concern.

c. A list of assumptions used by the insurer(s) as to investment yield, and disclosure of the effect that the reallocation of assets will have on historical investment yields.

d. If the asset analysis performed by the insurer indicates a potential asset/liability matching problem, documentation that the insurer plans to take action such as:
   i. Reallocation of problem assets to other parts of the organizational structure that are financially capable of absorbing the additional risk.
   ii. Securing a parental guarantee of investment yield.
   iii. Securing a parental guarantee of asset valuation or a parental agreement to substitute the insurer’s assets.
   iv. Disposing of assets prior to approval of the LBR.

8. Parental Support
   a. The plan should provide for the provision of financial and managerial support by the parent company to all entities.
   b. The plan should provide for a commitment of parental support to run-off operations in the event of:
      i. Inadequacy of reserves;
      ii. Asset deterioration;
      iii. Deterioration in the collectibility of reinsurance recoverables.

9. Organizational Impact
   a. The plan should affirm that the restructured entity was either licensed or an approved surplus lines carrier in all jurisdictions in which it wrote business, and will be licensed in all jurisdictions where it takes on business as a result of the restructuring.
   b. Analysis of the change in organizational structure resulting from the transaction. Areas to emphasize include:
      i. Ownership of the resulting corporate structures;
      ii. relation between management of the resulting entities;
      iii. Substantial reinsurance arrangements between resulting entities;
      iv. Other on-going business ties between the resulting entities.

10. Analysis of Issues Affecting Policyholders
a. Consider whether to require that “cut-through” provisions be put in place for policyholders of the weaker entity.
b. Obtain a legal opinion that policyholders of restructured entities will not lose guaranty fund coverage as a result of the LBR.
c. Hold discussions with affected guaranty funds and National Conference of Insurance Guaranty Funds (NCIGF) regarding any coverage issues.
d. Consider whether to require that a mechanism be put in place to obtain policyholder consent regarding any novations.
APPENDIX 3
ON-GOING REGULATORY OVERSIGHT

The following are examples of conditions and requirements for on-going regulatory oversight of an LBR.

- **Reporting**
  - Require periodic operating reports.
  - Require financial statements and management reports more frequently than required by statute.
  - Require periodic reports on certain losses, including payments.
  - Require financial projections annually.
  - Require reports on actual results compared to plans.

- **Balance Sheet Discipline**
  - Require recurring actuarial reviews of reserves. This requirement could include departmental approval of the actuarial firm selected and the scope of the review.
  - Require periodic independent reviews of reinsurance recoverables.
  - Establish guidelines for future investments of inactive operations.
  - Limit discounting of reserves as allowed by law, so long as investment earnings continue to support the rate of discount.

- **Specific Transactions**
  - Prohibit dividends by inactive operations without prior approval.
  - Prohibit dividends by active operations for a set period of time.
  - Require creation of a dividend “sinking fund,” with contributions from inactive operations requiring regulatory approval and payments to be made from the principal amount. The fund would be maintained in a separate account and could not be terminated without prior written approval from the regulatory authority.
  - Require intercompany balances with the inactive operations be settled within 90 days of each quarter.
  - Require prior approval of affiliated transactions between inactive and active operations.
  - Require prior approval for inactive operations to establish security deposits with any
other jurisdictions except to the extent required by law.

- **Communications**
  - Require notice to all known policyholders and claimants affected by the transaction.
  - Require a written response to any inquiry regarding the LBR.

- **General Monitoring**
  - Require on-site monitoring facilities.
  - Require right to notice of and right to attend all Board of Directors meetings.
Alternative Mechanisms for Troubled Companies

An NAIC White Paper

February 2010

Created by the
NAIC Restructuring Mechanisms for Troubled Companies Subgroup
of the Financial Condition (E) Committee

Drafting Note: This white paper is limited to situations where the legal entity is in a financially troubled condition that could potentially lead to an insolvency in the foreseeable future. It will not consider situations where the insurer is merely inconvenienced by a particular book of business.

I. INTRODUCTION

A. BACKGROUND/PURPOSE

State insurance regulators have well-developed receivership statutes, practices, and procedures to handle impaired and insolvent insurers. These statutes, practices, and procedures serve, first and foremost, the goal of consumer protection. They are a critical and essential part of the Regulatory Solvency Framework. However, given improvements in regard to the early detection of financially troubled insurers and insureds’ requirements for A-rated coverage, a new landscape has emerged with a growing number of troubled insurers seeking to engage in mechanisms of run-off or restructuring as an alternative to being placed in traditional receivership proceedings. For example, as of mid-year 2008 alone, there were approximately 129 active insurers in voluntary run-off domiciled in the United States with over $36 billion in claims in progress. As a result of a changing landscape and the fact that the NAIC has little formal documentation available to regulators dealing with alternative mechanisms for winding-down troubled companies, the Receivership and Insolvency (E) Task Force during 2007 began drafting charges to undertake a study of alternative mechanisms and relative best practices. These charges were presented to the Financial Condition (E) Committee during the 2007 NAIC Winter National Meeting. The Committee members supported the charges, but felt the topic of active troubled insurers required the expertise and perspective of regulators involved in the active solvency monitoring process, as well as receivership process. Thus, a Restructuring Mechanisms for Troubled Insurers Subgroup was formed directly under the Committee with regulators representing both perspectives. The Subgroup’s 2008 adopted charges were as follows:

- Undertake a study of alternative mechanisms, such as solvent schemes of arrangement, solvent run-offs, and Part VII portfolio transfers (a transfer leaving no recourse to original contractual obligor/insurer) and any other similar mechanisms to gain an understanding of:
  - How these mechanisms are utilized and implemented.
  - The potential effect on claims of domestic companies, including the consideration of preferential treatment within current laws.
  - How alien insurers (including off-shore reinsurers) who have utilized these mechanisms might affect the solvency of domestic companies.
  - Best practices for state insurance departments to consider if utilizing similar mechanisms in the United States and/or interacting with aliens who have implemented these mechanisms.

The study is documented in the form of this NAIC white paper. Additionally, the study was limited to situations where the legal entity was in a financially troubled condition that could have potentially led to insolvency in the foreseeable future. The Subgroup did not consider situations where the insurer was merely inconvenienced by a particular book of business or wished to exit the insurance business for reasons unrelated to solvency.

B. AUTHORITY & APPLICABILITY

The information in this white paper is meant to provide guidance to state insurance regulators and be an advisory resource. It discusses approaches and concepts that are available within and outside the United States in order to assist regulators with assessing possible alternatives for handling troubled insurers. Mechanisms discussed in this white paper may not be available or applicable in all jurisdictions due to differences in statutes, regulations, and implementing tools and resources, as well
as changing market conditions. In fact, statutes and regulations that define the authority and duties of regulators may require, or provide for, specific procedures to be implemented in certain circumstances. In addition, although this white paper was intended to generally apply to all risk-assuming entities that are subject to the authority of the insurance department, the majority of the Subgroup's discussion was focused on property/casualty insurance companies. Due to their unique characteristics, the mechanisms mentioned in this white paper, may not be appropriate in the context of life, health, or other personal lines of insurance for which guaranty association protections are available, or for certain types of specialized risk-assuming entities (e.g., health maintenance organizations, syndicates, risk retention groups, chartered purchasing groups, chartered self-insured groups or pools, captives, insurance exchanges, etc.). Lastly, an appropriate mechanism for a particular troubled insurer will also depend on the specific circumstances of the situation.

C. OTHER CONSIDERATIONS

As state insurance regulators consider the relative advantages and disadvantages of these alternative mechanisms, they should do so in the context of the overall policy objectives behind each alternative. Different policy objectives will inevitably lead to very different results. The current system that utilizes liquidation and provides for guaranty fund protection for certain policyholder claims reflects a legislative policy that places the rights of policyholders and claimants above the interests of other creditors of the insolvent company. While these laws may vary somewhat from state to state, they share several key features. The interests of policyholders and claimants are granted priority over claims brought by other insurers, the government, and general creditors. The laws seek to preserve, to the greatest possible extent, the insurance protection that the policyholder believed he/she was getting when he/she purchased his/her policy from the now-insolvent insurer. The law treats all similarly situated claimants in the same manner, thereby prohibiting preferential treatment for certain favored individuals or entities. Finally, they preserve, in some meaningful form, the right of judicial review. These elements form the foundation of the existing system that exhibits a clear legislative choice to place the interests of consumers above the interests of investors and large institutions that are better equipped to withstand the losses resulting from insurer insolvency.
II. GENERAL ADVANTAGES AND DISADVANTAGES FOR UTILIZING ALTERNATIVE MECHANISMS FOR TROUBLED COMPANIES

A. ADVANTAGES

- Alternative mechanisms can be useful tools for a troubled insurer’s management and regulators, potentially leading to a quicker resolution than a traditional receivership.
- Alternative mechanisms typically allow for continuous claims payments, or at least orderly claims processing and partial claims payments without interruption.
- Alternative mechanisms can cost less than receiverships, thus resulting with maximum dollars paid out to policyholders/claimants.
- Alternative mechanisms may allow greater flexibility to achieve commercially acceptable results, such as freeing up capital.

B. DISADVANTAGES

- The inherent risk for consumer and claimant issues increases, requiring stronger regulatory monitoring and controls for protection. For some alternative mechanisms, there is no guarantee that appropriate fairness will take place.
- Alternative mechanisms for troubled insurers might become a tool for solvent carriers to transfer value away from policyholders.
- As to reinsurance, restructuring might affect the value of the future reinsurance claim or offset rights, arbitration rights, and reinsurance collateral.
- The cost of efficiency or company enticements may come at the expense of policyholders or insureds.
- Difficult decisions arise with a troubled insurer that is not clearly solvent or insolvent, and significant ramifications could follow with certain choices.
- Companies may seek to continue run-off or restructuring activities even after it becomes clear that the company is hopelessly insolvent, resulting in preferential payments made at the expense of outstanding claims.
- Compensation incentives may restrict future claims-paying ability.
- Voluntary restructuring schemes may deny policyholders and consumers the substantive and procedural safeguards otherwise available for their protection in court-supervised receivership proceedings.
- Run-off and restructuring schemes may be used to circumvent state priority and preference rules in order to discount claims at the expense of policyholders and other claimants. They may also be used to circumvent other consumer protection laws, including state receivership and guaranty association laws as well as commutation and assumption transfer laws.
- May allow the company to terminate coverage and extinguish liabilities over the objections of policyholders and other creditors by majority cram-down vote.
- Run-offs and restructuring schemes may result in substantially reduced payments to policyholders. State receivership laws typically require a showing that a rehabilitation plan is fair and equitable, complies with priority rules, and provides no less favorable treatment of claims than would occur in liquidation. Run-offs and alternative mechanisms, such as
those addressed herein, may have the ability to sidestep these equitable standards and permit broad discretion in discounting claim values. In fact, the success of a plan may be dependent on the ability to impose deep discounts on claims, and there may be no rules or mandatory standards in place to protect policyholders or claimants.

- There is a risk that similarly situated creditors will be treated differently or that they will receive payments that are less than they would receive in an insolvency proceeding.
- Alternative mechanisms adopted in any given state may not be enforceable across state lines, leaving the company at risk of further exposure, litigation, and ongoing collection activity that may disrupt efforts to implement a restructuring plan.
- Alternative mechanisms are not appropriate for compromising the claims of consumer policyholders due to lack of sophistication and the existence of extensive consumer protections built into insolvency laws.
- In the absence of strong regulatory involvement, there is a risk that policyholders and creditors will not receive adequate or accurate information on which to base their decisions.
- The interests of management may not be the same as the interests of policyholders and creditors.
III. TYPES OF ALTERNATIVE MECHANISMS FOR TROUBLED COMPANIES

MECHANISMS AVAILABLE TO INSURERS WITHIN THE UNITED STATES AND RELATED TERRITORIES

A. RUN-OFF OF TROUBLED INSURER

1. DESCRIPTION

A troubled company run-off is usually a voluntary course of action where the insurer ceases writing new business on all lines of business, but continues collecting premiums and paying claims as they come due on existing business. Due to state cancellation laws, the insurer may be required to renew business, which can be particularly challenging for insurers running-off personal lines risks. The insurer may seek to run-off business in the traditional sense—paying claims in full in the ordinary course of business—or management of the insurer might seek to end or limit their exposure on insurance business before policy terms expire by utilizing reinsurance, assumption transfers, negotiated settlements, and/or voluntary policy commutations. These transactions should not have a negative impact on policyholders, as close regulatory monitoring is normally maintained throughout the process. The goal is to completely close operations while remaining solvent.

In order to succeed in run-off, assets and income must be maintained at sufficient levels to cover the remaining claims and administrative costs of handling those claims. However, solvent run-offs may have little revenue other than investment income, and run-offs may develop into insolvencies that could require receivership proceedings—for example, if the insurer is unable to collect reinsurance, makes errors in estimating recoverable assets, experiences a decline in asset values and investment income, and/or encounters other cash flow issues at any point in the process.

Although run-off mechanisms can generally be applied to property/casualty, life, health, title, or fraternal insurers, it is of general consensus that personal lines should not be included in any commutation plan incorporated as a component of any run-off plan.

a. STATUTORY BASIS FOR SUPERVISED RUN-OFF PLANS

Run-off of a troubled company may be subject to regulatory supervision under applicable state law. (See, e.g., NAIC Risk-Based Capital (RBC) For Insurers Model Act, Section 6.B(2).) Regulatory supervision of a troubled company run-off may be triggered in order to enhance the regulatory oversight and monitoring of the financial performance, consumer protections, and market conduct related to implementation of the run-off plan. Enhanced regulatory oversight may include increased financial and regulatory reporting requirements, regulatory approval of transactions and claim settlement practices, and on-site regulatory supervision. Supervision of the run-off plan is conducted in order to ensure that policyholders, consumers, and other creditors fare no worse under the run-off plan than in receivership.

For example, the Illinois Insurance Code, based on the NAIC Model Act, provides the Illinois Director of Insurance with a discretionary alternative mechanism for handling troubled property and casualty companies and health organizations whose RBC Reports indicate a mandatory control level event. Section 35A-30(c) of the Illinois Insurance Code, 215 ILCS 5/35A-30(c), provides:
In the case of a mandatory control level event with respect to a property and casualty insurer, the Director shall take the actions necessary to place the insurer in receivership under Article XIII or, in the case of an insurer that is writing no business and that is running-off its existing business, may allow the insurer to continue its run-off under the supervision of the Director. (Emphasis added)

A mandatory control level event is defined under the statute as an RBC Report that indicates that the insurer’s total adjusted capital is less than its mandatory control level RBC. Under this statutory mechanism, if there is a mandatory control level event at a company that has ceased writing new business and the company is engaged in a voluntary run-off, the Director has the discretion to either seek a receivership order or to allow the company to continue its run-off under the Director’s supervision.69 In order to persuade the Director to exercise the supervised run-off option, the company must prepare and present a comprehensive run-off plan, including financial projections, that establishes that the plan is viable, that there is a high probability that the run-off can be conducted without putting policyholders at greater risk, and that all claim obligations will be satisfied.

The specific content of the run-off plan may vary depending upon the nature of the business being run-off and the financial circumstances of the troubled company. (See a sample outline for a run-off plan at VII. Appendix C.) However, the primary goals of the plan should include and achieve consumer protection, satisfaction of all policyholder obligations, and the maintenance of positive surplus and sufficient liquidity. Typically, the components of such a plan would include substantial cost-cutting measures, commutations of reinsurance agreements, collection of outstanding premium, recovery of statutory deposits, policy buy-backs, novations, and claim settlements.70 A key element of such a plan would be a discussion of the benefits to the policyholders of a run-off rather than a receivership, including the impact of any state guaranty fund or guaranty association coverage.

The nature and scope of the Director’s supervision may be delineated in a comprehensive corrective order, which would include and reference such things as the run-off plan, periodic reporting requirements, on-site monitoring, procedures relating to the approval of transactions, claim settlement practices, and other related matters. The corrective order, which may be amended from time to time, would likely be confidential under state law. Because the company is involved in a supervised run-off, it may be appropriate to negotiate certain adjustments (e.g., discount reserves, allow prepaid expenses, remove schedule F penalty) to its statutory financial statements, but, as adjusted, the financial statements should still comply with Generally Accepted Accounting Principles. Any such adjustments should be based upon credible forecasts and other available information.

---

69 Section 35A-30(d), 215 ILCS 5/35A-30(d), of the Illinois Insurance Code provides the Director with a similar supervised run-off option with respect to troubled health organizations.

70 In 2005, the Illinois voidable preference statute was amended to provide that in the case of a company involved in a supervised run-off, a transaction involving transfer of cash or other assets by the company (buy-back, settlements, etc.) that was approved by the Director in writing cannot later be found to constitute a voidable transfer, 215 ILCS 5/204 (m)(C). This provision provides policyholders and other parties to buy-back, novation, commutation and other approved transactions with protection from the voidable preference statute in the event that the company ultimately goes into liquidation. In the absence of this protection, policyholders and others may be reluctant to enter into such transactions.
2. ADVANTAGES/DISADVANTAGES

ADVANTAGES

• Voluntary run-offs may enable commercial parties to achieve commercially acceptable results in arm’s-length transactions that reflect customary market practice.
• Timely defense and payment of policyholder claims in full not otherwise always covered by guaranty funds or associations.
• Potentially more favorable environment for the negotiation of disengagement transactions and commutations with reinsurers.
• Continuity of management information systems.
• Some business entities may be willing to acquire insurance companies in run-off and inject additional capital or reduce overhead expense. This consolidation and management expertise could provide some efficiency for regulators in regard to their monitoring processes.
• Typically involve commutations and other solutions reflective of the consent of the contracting parties.
• Strategic decisions can be made quickly and efficiently working with appropriate state regulators.

DISADVANTAGES

• Preferential treatment issues might arise when dealing with business-to-business structures, if both large and small policyholders exist, as deals tend to focus on settling with large carriers first. In addition, more complicated commutations may be structured in the run-off plan to be handled last.
• Preferential payments may arise with respect to creditors whose priority of payment in the event of liquidation would be classified below that of policyholder and consumer claims.
• Policyholders and consumers may be compelled to accept less than the fair value of their claims.
• Potential negative impact of adverse claim development.
• Attempts to commute or settle with policyholders (complete policy buy-backs) can result in reinsurers resisting payment.
• To the extent the estate assets are reduced by paying claims earlier, the estate assets remaining to pay remaining policyholder and guaranty association claims will be reduced, costing the industry more.
• Larger insureds may have better leverage to negotiate better settlements.
• Absent regulatory oversight—there is no guarantee that settlements will be at consistent or even fair levels.
• The absence of court oversight and mandatory rules and standards (such as priority rules and rehabilitation plan standards) increases the likelihood that policyholder claims will be sharply discounted and that bargained-for benefits and protections will be lost.
• Guaranty funds may be disadvantaged in a subsequent receivership if non-guaranteed creditors were paid more than the ultimate distribution from the receivership.
B. NEW YORK REGULATION 141

1. DESCRIPTION

In 1989, at the request of the New York Superintendent of Insurance, the New York Legislature enacted New York Insurance Law § 1321. Section 1321 authorized the Superintendent to permit an impaired or insolvent New York domestic insurer (or an impaired or insolvent United States branch of an alien insurer entered through New York) to commute reinsurance agreements to eliminate the company’s impairment or insolvency.

Until the Legislature enacted NYIL § 1321, commutation agreements with troubled New York domestic insurers were subject to challenge as potential preferences pursuant to the Insurance Law’s voidable transfer provisions. When the Legislature enacted Section 1321, it extended the voidable transfer period from four to 12 months (NYIL § 7425(a)). The Legislature also amended the insurance law to provide that commutation agreements executed pursuant to NYIL § 1321 “shall not be voidable as a preference” (NYIL §7425(d)).

Section 1321 required that any commutation proposed under the new statute be approved by the Superintendent “in accordance with standards prescribed by regulation.” In 1990, the acting New York Superintendent promulgated Regulation 141 (Regulation No. 141, Commutation of Reinsurance Agreements, N.Y. Compo Codes R. & Regs. tit. 11, Section 128 (1989) (11 NYCRR Section 128)). Regulation 141 sets out the “applicable standards that the superintendent will use in determining whether such commutations entered … will be approved.”

Regulation 141 applies to all New York-domiciled insurers (and U.S. branches) “other than a life insurance company” as defined in NYIL § 107(a)(2). However, the regulation excludes impaired or insolvent life insurers and solvent insurers. The Regulation sets out how a troubled insurer may propose and implement a Regulation 141 plan. Among other things, the Regulation’s procedures add the requirement that any company seeking the benefits of Regulation 141 must stipulate that the troubled insurer will consent to an order of rehabilitation or liquidation if its proposed commutation plan does not restore policyholder surplus to the required minimum amounts (or such surplus as the Superintendent deems adequate).

The troubled insurer must provide the New York Department with a draft commutation agreement and a proposed commutation offer that will be extended to “each and every ceding insurer to which the impaired or insolvent insurer has obligations.” The reinsurer must also provide a balance sheet showing both the insurer’s impairment or insolvency as determined by the Superintendent and a pro forma balance sheet reflecting the troubled company’s financial condition subsequent to the plan’s implementations.

The proposed commutation offer must include an offer to pay a percentage of the cedent’s losses. The impaired insurer must advise its cedents that the commutation offer remains subject to the Superintendent’s determination that the total of all accepted commutation offers has restored policyholder surplus either to a statutory minimum or an amount that the Superintendent deems adequate.

Regulation 141 requires that offers to commute assumed reinsurance obligations be made to “each and every ceding insurer to which the impaired insurer or insolvent insurer has obligations.” The Regulation broadly defines the term “obligations” to include paid losses, loss reserves, incurred but not reported (IBNR), all loss adjusting expenses (paid, case, and IBNR), reserves for unearned premiums, and “any
other balances due under the reinsurance agreements.” The terms of all proposed commutation agreements must be the same.

For example, the same discount must be offered to each cedent—e.g., 90% of paid losses, 60% of case reserves, and 30% of IBNR. No cedent may be favored with different discounts. Discounts for different lines of business may be proposed, but these discounts must be “reasonable, actuarially sound, and supported by documents justifying such a variance.” To date, none of the Regulation 141 plans approved by New York Superintendents of Insurance has incorporated different discounts by line of business.

Any proposed Regulation 141 plan submitted to the Superintendent must include an exhibit setting forth the obligations due each cedent to which the troubled company has obligations and the consideration (commutation offer) to be paid each cedent. Within 10 days of the plan’s approval, the troubled company must deliver its proposed commutation agreements to its cedents. No cedent may be compelled to commute its “obligations.” The terms of the proposed commutations and the amount offered “shall not be subject to negotiation.” Each cedent makes its own determination with respect to whether the cedent wishes to accept the proposed commutation or refuse to commute and run the risk that the Regulation 141 plan will not succeed.

The results of an approved plan must be returned to the Superintendent within a period specified by the Superintendent. The plan results must include: copies of all executed commutation agreements; copies of all rejected commutation agreements; “correspondence pertaining to all … offers made to the ceding insurers”; a pro forma balance sheet showing the effect of the accepted/rejected offers; any other components of the plan to restore surplus to policyholders; and copies of any agreements that modify, commute, or assign any retrocession agreements.

If the Superintendent determines that the proposed commutation agreements and any other plan components sufficiently restore policyholder surplus, the commutation agreements take effect. The Superintendent may specify, when he or she approves the Regulation 141 plan, that cedents that agree to commute be paid within so many business days.

If the Superintendent determines that surplus has been restored, the Superintendent may proceed against the troubled company armed with the company’s stipulation consenting to entry of any order of rehabilitation or liquidation.

The primary procedural safeguards for an approved Regulation 141 plan include: the state regulator’s full discretion to accept, reject, or modify any proposed plan; explicit requirements that the same commutation terms be offered to every ceding company whose obligations appear on the troubled company’s books and records; the absence of any “cram down” provisions that would allow the Superintendent to approve the commutation of a cedent’s contracts over a cedent’s objections; time-frames for the submission of a plan and payment of agreed commutation amounts within days after the plan’s results have been approved; and provisions calling for the preservation and production of all communications between the troubled company and its cedents.

In addition, and as previously noted, the commutation agreements executed pursuant to an approved Regulation 141 plan will not take effect “unless … the plan shall eliminate the insurer’s impairment or insolvency” and restore surplus to policyholders to levels required under the insurance law or an amount that the Superintendent deems “is adequate in relation to the insurer’s outstanding liabilities or financial needs.”
Although the troubled company’s directors must consent to an order of rehabilitation or liquidation if the company’s surplus has not been restored to the required minimum, the Superintendent need not consider any plan proposed pursuant to Regulation 141 “in lieu of taking any other action” against the company. This gives the Superintendent full discretion to decide whether to allow the troubled company to propose a plan or to take other action against the company, including supervision, rehabilitation, or liquidation.

Thus far, three professional reinsurers have successfully implemented New York Superintendent-approved commutation plans pursuant to Regulation 141: 1) Rochdale Insurance Company; 2) Paladin Reinsurance Company; and 3) Constellation Reinsurance Company. In addition, the Insurance Company of the State of New York (INSCORP) obtained the Superintendent’s approval for a Regulation 141 plan and submitted its commutation plan results to the Superintendent. However, as a result of the continued adverse development, INSCORP’s policyholder surplus could not be improved to an acceptable level, and INSCORP was placed in rehabilitation.

2. ADVANTAGES/DISADVANTAGES

ADVANTAGES

• No cedent can be outvoted and compelled to accept a commutation offer.
• All communications to and from the ceding insurer must be preserved and provided to the regulator.
• Although the regulation was designed for professional reinsurers, the plan also works if the troubled insurer is engaged in assumed reinsurance and also wrote direct business.
• No court approval is required.
• The plan must show how the proposed commutations will affect its retrocessional program, thus reducing the risk that the commutation plan will bind or negatively affect retrocessionaires.
• The Superintendent has ultimate oversight, flexibility, and control, to the extent that the Superintendent may approve, disapprove, or modify a plan, and the Superintendent may also review all the communications exchanged relating to the offer to ensure that no unfair offsets were arranged or that offers to commute did not otherwise favor or disfavor particular cedents.
• Regulation 141 also allows for other components to be added to the plan to restore policyholder surplus, including surplus notes and capital contributions.

DISADVANTAGES

• As an offer under this regulation is based on the assuming reinsurer’s books at a given date, discrepancies between the ceding and assuming insurers’ books are likely to occur.
• Timing could become problematic if the regulator does not enforce strict deadlines regarding the consideration and execution of offers.
• Regulation 141 does not require an audited balance sheet to confirm the extent of the troubled insurer’s financial condition.
• Many subjective considerations must be used by the troubled insurer to determine in advance what percentage of approval is needed for the plan to work.
C. RHODE ISLAND STATUTE AND REGULATION FOR VOLUNTARY RESTRUCTURING OF SOLVENT INSURERS

1. DESCRIPTION

Rhode Island’s Title 27, Chapter 14.571 provides for voluntary restructuring of solvent insurers. The statute was intended to provide an alternative to a traditional run-off by bringing “solvent schemes of arrangement” (which are discussed further in the next section) to the United States. It allows solvent companies that are in run-off to reach a court-ordered (and department of insurance supervised) agreement with all of its creditors in order to accelerate completion of the run-off, bringing certainty of payment to creditors and reducing administrative costs often associated with lengthy run-offs.

The statute sets forth a structure for court-ordered review, approval and implementation of what the statute refers to as a “commutation plan.” The process may only be utilized by reinsurers and commercial property and casualty insurers domiciled in Rhode Island and in run-off (R.I. Gen. Laws § 27-14.5-1(6)). In addition, the insurer must be solvent and adequately reserved in accordance with all applicable Rhode Island statutes and regulations, as well as in compliance with all other department solvency standards.

A company considering the process must first prepare and submit their proposed commutation plan to the insurance department for review (Insurance Regulation 68(4)(a)(i)). A commutation plan is very broadly defined as a plan for extinguishing the outstanding liabilities of a commercial run-off insurer. After the plan is reviewed by the department and all issues are resolved, the company may apply to the court for an order agreeing to classes of creditors and calling for a meeting of creditors (R.I. Gen. Laws §§ 27-14.5-3 and 27-14.5-4(b)(1)). At this point, the company is required to give notice of the application and proposed commutation plan to all parties pursuant to fairly broad requirements set forth in the statute. (See Insurance Regulation 68(4)(a)(iii)).

All creditors and interested parties (such as Guaranty Funds) are granted full access to the plan and all information related to the plan. Both creditors and interested parties are given an opportunity to file comments or objections to the plan with the court (R.I. Gen. Laws § 27-14.5-4(b)(3)). Ultimately, all creditors must be given an opportunity to vote on the commutation plan, and approval of the plan requires consent of at least i) 50% of each class of creditors, and ii) the holders of 75% in value of the liabilities owed to each class of creditors (R.I. Gen. Laws § 27-14.5-4(b)(4)). However, it is important to note that only the claims of creditors present or voting through proxy at the meeting of the creditors are counted toward determining whether the requisite majorities have been achieved. (See Insurance Regulation 68(4)(c)(i)).

Upon approval of the commutation plan by the creditors, the company must petition the court to enter an order confirming the approval and allowing implementation of the plan (R.I. Gen. Laws § 27-14.5-4(c)(1)). The implementation order must enjoin all litigation in all jurisdictions between the applicant and creditors, as well as release the applicant of all obligations to its creditors upon payment.
of the amounts specified in the plan (R.I. Gen. Laws § 27-14.5-4(c)(2)). The court may only issue an implementation order if it determines that implementation of the commutation plan would not materially adversely affect either the interests of objecting creditors or the interests of assumption policyholders (R.I. Gen. Laws § 27-14.5(c)(1)(ii)). The court does have a responsibility to ensure that all policyholders and creditors have been treated fairly. Once the implementation order is entered, distribution to creditors may begin.

After implementation and upon completion of the commutation plan, the court can issue an order of discharge or dissolution. As a result of this order, the company is either i) dissolved or ii) discharged from the proceeding without any liabilities. At this point, any residual assets are distributed to the company owners (R.I. Gen. Laws § 27-14.5-4(d)).

One of the key aspects of the process is that the court’s implementation order releases the insurer from all obligations to its creditors upon payment of the amounts specified in the commutation plan. This brings about a court-ordered finality to the run-off that would not be possible utilizing traditional run-off options. To this end, the order actually binds the insurer and all of its creditors and owners, whether or not a particular creditor or owner is affected by the plan or has accepted the plan, or whether or not the creditor or owner ultimately receives money under the plan. The order is also binding whether or not creditors had actual notice (R.I. Gen. Laws § 27-14.5-3(b)).

It is also important to note that because the restructuring mechanism provided for by the statute would not be appropriate or practical for companies with a large number of small creditors with very diverse interests, the statute is restricted to use by reinsurers and commercial property and casualty insurers. It includes express limitations on the lines of business that can be included in a commutation plan, and specifically excludes all life insurance, workers’ compensation and personal lines (See R.I. Gen. Laws § 27-14.5-1(21)). However, in cases where a company does have excluded lines, the statute provides for a bifurcated process for disposing of all lines of business within the context of the run-off scheme. Commercial lines would be included in the commutation plan, and, if possible, excluded lines would be transferred to an eligible insurer through court-ordered and department-sanctioned assumption reinsurance (See R.I. Gen. Laws § 27-14.5-1(6) and R.I. Gen. Laws § 27-14.5-4(d)(2)(ii)).

Again, the process is available only to solvent companies—the theory being that the restructuring would permit all liabilities to be paid in full.

The definition of “Commercial Run-off Insurer” under the statute was expanded by amendment in 2007 to include companies newly formed or re-activated under Rhode Island law solely for the purpose of accepting transferred business for restructuring pursuant to the statute (See R.I. Gen. Laws § 27-14.5-1(6)). The purpose of this amendment was to expand the population of insurers that might qualify for the process. The amendment permits an insurer to transfer some or all of its commercial liabilities (a very controversial process) to a newly formed run-off entity for the sole purpose of implementing a commutation plan pursuant to the statute. The original insurer would be allowed to continue writing business with no further obligations under the transferred policies. Any such transfer would require prior approval of the department.

Since the statute’s enactment in 2002, no insurer has availed itself of the statute, and no other U.S. state has adopted a similar law.
2. ADVANTAGES/DISADVANTAGES

ADVANTAGES
• Might provide a better solution for policyholders and investors than traditional run-off options (creditor democracy).
• Provides certainty of payment to creditors of present and future claims.
• Avoidance of a lengthy run-off with the associated ongoing administrative costs, adverse claim development and deteriorating reinsurance collections.
• Provides certainty of payment by reinsurers.
• Accelerated release of capital to shareholders at the conclusion of the process, allowing for more efficient deployment of capital to non-run-off operations.
• Such mechanisms might attract capital to the industry, as the availability of a reasonable exit mechanism for these companies will create an active market for investment in run-off companies.

DISADVANTAGES
• Permits an insurer to terminate coverage and extinguish liabilities over the objections of policyholders and creditors who are in the minority.
• Creditors are bound by the plan whether they had notice or not, and only those present or voting through proxy are counted toward establishing the requisite majority, which may create incentives to manipulate notice (though the department and court could take steps to prevent such manipulation).
• Although the process is limited to solvent insurers and the intent therefore is that full value will be paid to all creditors, there are no guarantees that all policyholders will receive full value, or even present value for their claims (especially those with IBNR claims).
• There is no reference to segregating and preserving reserve assets for excluded lines, or any explanation as to how policies and claims would be administered and paid during the interim period prior to completion of the plan.
• Questions concerning the enforceability of any such plan across state lines may leave companies exposed to further risk, litigation and disruption or termination of a plan—i.e., even if the Rhode Island court did approve the plan, it is possible that policyholder or claimant actions could arise in other states’ courts, (or perhaps federal courts), resulting in enforcement and implementation issues for the company attempting the restructuring.73
• Although the Rhode Island plan is available only to commercial insurers and reinsurers in run-off, the plan is not exclusively limited to “troubled” companies; thus, any commercial run-off insurer could conceivably use this mechanism to cease operations and eliminate ongoing claims payment liability.
• Despite the fact that there is significant statutorily delineated regulatory guidance included in the Rhode Island framework (unlike UK solvent schemes), parties may view Rhode Island’s “commutation plan” statute as simply a domestic version of the UK’s solvent schemes and attribute all of the disadvantages associated with UK-like solvent schemes of arrangements (listed below in D-2) to the Rhode Island system.
• Because the Rhode Island statute allows for the formation or reactivation of a domestic company and the transfer of assets and liabilities to that company, certain parties view this as allowing a “ring-fence” of assets, unfairly shielding assets from creditors.

MECHANISMS AVAILABLE TO INSURERS OUTSIDE THE UNITED STATES AND RELATED TERRITORIES

D. UK-LIKE SOLVENT SCHEMES OF ARRANGEMENTS

1. DESCRIPTION

A scheme of arrangement is essentially a statutory compromise or arrangement between a company and its creditors. The process is allowed under Part 26 of the United Kingdom Companies Act 2006 that requires majority creditor approval representing at least 75% in value of obligations; confirmation by the UK Financial Service Authority (FSA) of no objections; and court sanction. If approved, the process will bind all creditors, but does not necessarily bind reinsurers. The process has evolved over the years and includes a process for insolvent and solvent insurers.

The FSA maintains a very active role in reviewing the schemes with a review document containing approximately 30 questions. In July 2007, the FSA issued a process guide related to decisions made with schemes that included the following:

- Stresses that the scheme must comply with principles for businesses (e.g., treating policyholders fairly and communicating in clear terms).
- Established an FSA schemes review committee.
- Stated that the run-off should be at least five years old.
- Distinguishes between individual retail and small commercial policyholders, large commercial policyholders and other risk carriers.
- Distinguishes between insolvent risk carrier, marginally solvent risk carrier and substantially solvent risk carrier.
- In case of substantially solvent risk carrier, the FSA is likely to object to a scheme unless the risk carrier offers benefits designed to ensure that policyholders are not in a worse position than in a solvent run-off.
- Provides for a role of policyholder advocate.
- The FSA may not object to a scheme, even if it fails to satisfy the criteria stipulated, if the risk carrier can demonstrate that the scheme treats policyholders fairly (e.g., through suitable additional benefits for policyholders and/or safeguards for dissenting procedures).

As of September 2008, there have been approximately 174 solvent schemes of UK non-life business. However, in every instance when policyholders have mounted serious opposition, the UK courts have ruled in the policyholders’ favor. In particular, objecting policyholders have successfully challenged the British Aviation Insurance Co. Ltd. (BAIC), Willis Faber Underwriting Management (WFUM) and Scottish Lion solvent schemes in the UK courts. These are the only solvent schemes involving direct policyholder coverage that have been challenged to date, and all three have resulted in the court rulings favorable to the policyholders. To date, no UK court has agreed to sanction a solvent scheme involving direct coverage (as opposed to reinsurance) in the face of a policyholder legal challenge to the scheme.

Claims being paid can include IBNR, and most schemes have the ability to pay for IBNR based on estimation methodology. Additionally, schemes will allow a creditor’s methodology to be used, if reasonable.
Chapter 15 of the U.S. Bankruptcy Code may be used to assist with a scheme of arrangement in the United States. The effect is to grant a U.S. bankruptcy court authority to enforce the scheme and protect the company’s assets from creditors. However, although no UK solvent scheme has yet been challenged under Chapter 15 of the U.S. Bankruptcy Code, there is a possibility that such challenges may arise, and the U.S. bankruptcy courts could reject solvent schemes.

2. ADVANTAGES/DISADVANTAGES

ADVANTAGES
- Some advocates state that solvent scheme mechanisms, in particular, have proven to be very effective in the UK and other jurisdictions to permit closure of companies that have reduced their liabilities to fairly minimal levels and that can reasonably estimate their future liabilities.
- Such mechanisms might attract capital to the industry, as the availability of a reasonable exit mechanism from these companies will create an active market for investment in run-off companies.
- Companies using UK schemes of arrangements have statistically improved their net asset position by approximately 5%.
- Some insurers have made payments to creditors at or near 100%.
- Schemes may allow a creditor’s claim estimation methodology to be used, if reasonable.

DISADVANTAGES
- Schemes may undermine the value of insurance contracts by not honoring contractual obligations.
- Lost coverage may hurt policyholders at the expense of American citizens and the economy.
- Schemes could pose a formidable collective action problem.
- Schemes could undermine the reliability of insurance institutions.
- Schemes may allow for the reduction or cancellation of contractual obligations outside the scope of the current receivership system by not adhering to the statutory priority of distribution rules. Under such a scheme, a troubled company could force certain policyholders to commute (or buy-back) mutually agreed-upon insurance coverage despite their objections.
- The use of terms “debtor” and “creditor” used in the restructuring arena may tactically create a new environment for insurance where risk transfer is not necessarily part of the product purchased.
- Enforceability across state lines.
- Schemes could be used by companies to simply reorganize their corporate structure to move reinsurance operations unencumbered by old claims under a different name.
- In its latest proposal, the Reinsurance (E) Task Force had a provision where an insurer engaging in solvent schemes would not be allowed to take a reduction of collateral.
- Chapter 15 is a relatively new provision of the Bankruptcy Code with relatively little case law to support it, thus leaving the ability for judges’ discretion and leeway in its application.
- Schemes can involve reinsurers, where the reinsurance contract with an insurance company is negatively affected.
- Schemes could provide an opportunity for solvent insurers to avoid insurance and reinsurance obligations and return the risk to insureds of ceding companies who purchased...
Attachment Two

the coverage in good faith.

- Schemes force creditors to trade insurance coverage for payments based on estimations of future claims that are inexact and possibly unfair.
- The individuals chosen to adjudicate claims under a scheme may lack expertise in the necessary legal issues.
- There is no oversight of solicitation by the company of scheme acceptances. Thus, some accepting creditors may have already achieved favorable settlements, while dissenting creditors are left to litigate their claims in an unfavorable forum.
- Schemes do not allow dissenting policyholders to opt out of the scheme.
- Schemes do not ensure continuation of coverage.
- Schemes do not include a safety net of guaranty association protection.
- Schemes do not allow a policyholder to seek judicial review of its claims against the insurer.

E. PART VII PORTFOLIO TRANSFERS

1. DESCRIPTION

Part VII of the Financial Services and Markets Act 2000 (FSMA) allows for a transfer of insurance business under a statutory and court process. The transfer allows a reinsurer to move all or certain of its reinsurance business (assets and liabilities) to another reinsurer without the consent of each and every policyholder but with the sanction of the UK High Court. The main statutory requirements are: 1) policyholder notification; 2) a report by an independent expert; 3) UK High Court approval; and 4) no objection by the FSA or other regulators and interested parties, including policyholders.

The court is involved in the process with the directions hearing, which is when court will grant leave to proceed. The court is also involved in the hearing to sanction the transfer (or final hearing). The relevant legislation and requirements can be found in VII. Appendix D4.

The transferee must be an insurance company established in a European Economic Area (EEA) state. However, the transferor can be authorized in the UK, an EEA branch of a UK firm, a UK branch of an EEA firm, an EEA firm with no UK branch, or a non-EEA that is permitted to carry on business in the UK.

Per the FSA Web site, the following are reasons why reinsurance firms undertake Part VII transfers:
- Rationalization—combine similar business from two or more subsidiaries, putting all into a single regulated entity.
- Efficiency—transfer business between third parties, separating old liabilities in run-off from new business, putting each into separate firms.
- Capital reduction—transfer business to a new firm and extract any surplus shareholders’ funds.
- Exit—transfer business such as employers’ liability that cannot be schemed.

The legal effect of a Part VII transfer is a statutory unilateral novation of the affected contracts of insurance or reinsurance, including any rights attaching to those contracts.

The two primary aspects for the protection of affected parties are as follows: 1) the independent expert’s report, which needs only to consider the effect on policyholders; and 2) the court is required
to be satisfied that the transfer as a whole is fair as between the interests of different classes of persons affected by the transfer.

Per the FSA Web site, the FSA and the court are concerned whether a policyholder, employee, or other interested person or any group of them will be adversely affected by the scheme. This is primarily a matter of actuarial and regulatory judgment involving a comparison of the security and reasonable expectations of policyholders without the scheme with what would be the result if the scheme were implemented. The court will pay close attention to any views expressed by the FSA regarding whether individual policyholders or groups of policyholders may be adversely affected, though this does not necessarily mean that the transfer is to be rejected by the court.

The key question is whether the transfer as a whole is fair as between the interests of the different classes of persons affected. However, it is not the function of the court to produce what, in its view, is the best possible scheme. With regard to different transfers, the court may deem all fair, but it is the company’s directors’ choice to select the transfer to pursue. Under the same principle, the details of the scheme are not a matter for the court, provided that the scheme as a whole is found to be fair. Thus, the court will not amend the scheme, because individual provisions could be improved upon.

Overall, a loss portfolio transfer is a means of transferring outstanding net or gross legal liability from one insurer to another insurer. It has been viewed as a form of retrospective reinsurance. The transfers must be sanctioned by the court, and are subject to review and opinion by an independent expert that is approved by the FSA. Notice of the proposed transfer is usually required to be sent to all policyholders of the parties unless the court decides otherwise. A detailed report must also be provided setting out all the details and the independent expert’s opinion. The FSA and any party who feels adversely affected by the transfer can make representation to the court for consideration.

The FSA is also required to assess a number of aspects (e.g., whether policyholders will be worse off moving from one place to another, or if there is any potential risk posed by the transfer). Rating agency ratings or the effect on ratings could be a component as part of the FSA’s considerations, as well as other regulatory bodies.

There have been over 100 Part 7 transfers, and the majority dealt with internal reorganization within holding groups. Over 50% were performed in the life industry. Very few Part 7 transfers have seen business go from a company to a third party; however, they are becoming increasingly popular. The receiving company’s motives for entering into these arrangements may stem from tax advantages to potential profits based on one’s claims handling experience.
The foregoing tables compare schemes of arrangement and Part 7 transfers with analogous mechanisms available under U.S. law. While it appears that the mechanisms are similar in many respects, in practice they have proven to be quite different. Under UK schemes of arrangement, policyholders have been forced to accept payouts based on estimations of their claims so that equity holders can recapture the capital of the company. Under UK Part 7 transfers, policyholders have been forced to accept the credit of another insurer in order to permit the insurer from whom they bought the policy to exit business and recapture its capital. Current U.S. practice, with the possible exception of the Rhode Island statute, would not enable these results. Policyholders are only required to accept payment based on estimation in the U.S. where the company is insolvent and shareholders will not receive a return of their capital. Also, under current U.S. practice, policy transfers to a new insurer are not made involuntarily except where there is an insolvency of the transferor. While UK regimes certainly have safeguards in the form of voting (in the case of schemes) and court review (in the case of schemes and Part 7 transfers), the ultimate risk is left on the policyholder.

2. ADVANTAGES/DISADVANTAGES

ADVANTAGES

- Permits more efficient management of transferred books of business, allows dedicated capital and focused solutions to be applied to run-off liabilities, and promotes efficient use of capital for ongoing business.
- Options can be explored to strengthen policyholder protections and reach regulator approval, such as altering deductibles, strengthening reserves, obtaining reinsurance, and other arrangements to share the risk.
- Might attract new capital to insurance businesses insofar as it can be invested directly in run-off liabilities, and strengthens ongoing companies by permitting the separation of those
Attachment Two

liabilities.

- Can reduce risk of exposure.
- A recent amended UK rule introduces a simpler alternative where no court sanction is required for pure reinsurance business transfers if all the policyholders affected by the transfer consent to the proposal.
- Substantial regulatory oversight is required.

**DISADVANTAGES**

- Could transfer obligations from the entity the creditor dealt with: to one that is completely unknown; to one with whom the creditor would have never willingly chosen to deal; from a differing country subject to different regulation; and to a less secure debtor.
- A Part VII-like transfer to an alien reinsurer from a U.S. domestic reinsurer may cause the primary insurer to lose its credit for reinsurance.
- Very difficult to quantify trapped capital in these scenarios.
- Problems could arise for a ceding company, if the Part VII transfer goes to a reinsurer with a lower rating, because the rating agency could lower the ceding company’s rating.
- Could present unique accounting and reporting anomalies on both a statutory and GAAP basis.
- The regulator is not required to publicly explain its decision-making process.
IV. OBSERVATIONS AND CONSIDERATIONS BEFORE USING ALTERNATIVE MECHANISMS

A. EXISTING STATUTORY AUTHORITY AND REQUIREMENTS

1. STATE RECEIVERSHIP/GUARANTY FUND LAWS

Delinquency proceedings (receiverships) are instituted against an insurance company by an insurance department for the purpose of conserving, rehabilitating, or liquidating an insurance company. All require a court order, and the domiciliary state court will take jurisdiction over matters involving the resulting receivership estate. The court’s role is to ensure transparency and due process and to be an independent arbiter of any disputes that may arise. The nature, timing, and extent of regulatory action in any given troubled insurer situation depend on the circumstances of the particular situation.

The U.S. Constitution in Article I, Section 10 states that “No state shall … pass any … law impairing the obligation of contracts.” However, during certain delinquency proceedings, states may, on rare exceptions, impair contracts, but only where there is a legitimate public purpose behind the law.

It should be noted that the language in the rehabilitation statutes for most states is very broad and provides that anything that will restructure, revitalize, or reform the insurer can be proposed in a plan.

2. PRIORITY DISTRIBUTION STATUTES/PREFERENTIAL TREATMENT

One of the key consumer protections in the existing state delinquency proceedings are the priority distribution statutes that require payment of policyholder-level claims before the payment of any other claimants, including non-policy claims of the United States government, claims of other insurers and reinsurers, and general creditors. These same priority distribution statutes also require members of the same class or group of creditors to be treated similarly. The priority distribution statutes ensure that the needs of consumers, who might not be sophisticated in insurance matters, are placed ahead of non-policyholder level claimants and that everyone with the same level or type of claim is treated the same.

If assets are not sufficient to cover the remaining claims and administrative costs of an insurer using one of the alternative mechanisms, then all claims paid prior to that point have been given a preference at the expense of the claims to be paid in the future. As a result, the receiver could be statutorily required to attempt to recover these preferential payments.

B. CONSUMER PROTECTIONS AND PUBLIC POLICY CONSIDERATIONS

In order to ensure some baseline of protections for policyholders and consumers, there are certain core principles that regulators should strive to maintain with any alternative mechanism for troubled insurers. The first among these, a requirement that the company honor its contractual obligations to policyholders, is considered the primary and overriding principle. This first principle translates into no impairment of policy benefits and claims without the express, informed, voluntary consent of the policyholder. The others are corollary principles, all supporting that primary goal of honoring contractual obligations to policyholders. Any alternative mechanism for run-off or restructuring of a troubled insurance company’s obligations should strive to establish parameters consistent with these principles.
Core Principles:

1. **Honor Contractual Obligations to Policyholders.** Alternative mechanisms should not be a way for an insurance company to sidestep its contractual obligations to policyholders. There should be no involuntary restructuring of policies or impairment of policy benefits or claims permitted outside of receivership. This would preclude any changes to policies, or reductions to policy claims or benefits, without the express, informed, voluntary consent of individual policyholders. Accordingly, there should be no cram-down approval of a mechanism by majority vote over the objection of policyholders; no involuntary transfer of risk back to policyholders through forced commutation of claims or otherwise; and no cancellation, termination, or non-renewal of coverage, except as permitted under the express terms of the policy. In short, every policyholder should be entitled to continue coverage and to receive all policy benefits for the full term of their policy.

2. **Meaningful Notice and Information Sharing.** This contemplates accurate, consistent, and timely notice and disclosures to all policyholders, creditors, and guaranty associations of meaningful information (including financial information, status plans, and any proposed assumption reinsurance or other significant transactions) at inception and on an established schedule thereafter. Disclosures should also identify creditors (at least below the policy level) in order to permit some meaningful, organized discussion among creditors.

3. **Adherence to Priority Scheme.** Alternative mechanisms should require adherence to statutory liquidation priority schemes. They should not provide a mechanism for circumventing the distribution priority to benefit the company, its shareholders, employees, other stakeholders, or specific groups of policyholders at the expense of other classes of policyholders. Controls on preferences and the outflow of assets are needed, and will require regular ongoing review. The company and/or equity shareholders should not be permitted to retain assets unless all claims having priority, as measured under state liquidation laws, have been satisfied in full.

4. **Coherent, Comprehensive Financial Planning.** Any alternative mechanism should be based on a fully developed and comprehensive financial plan that includes complete and meaningful financial data, and projections based on reasonable and realistic financial assumptions. There should be full disclosure and transparency in financial planning, monitoring, and reporting as a condition to approval of any such plan and throughout implementation. In addition, any such mechanism should provide a global solution addressing all in-force policies and pending policy claims. There should be no ring-fencing or piecemeal disposition of assets and liabilities that may result in unequal treatment of policyholder claims, and give rise to preference and priority concerns. Moreover, the fairness and reasonableness of any mechanism cannot be reasonably assessed on a transaction-by-transaction basis without consideration of the overall impact on other policyholders and creditors.

5. **Procedural Safeguards.** Any alternative mechanism should provide substantive procedural safeguards, including clear standards for disclosure, reporting, and external review; appropriate and timely notice; access to information and the opportunity for informed participation for all stakeholders; court and/or regulatory approval for all significant actions to be taken; and meaningful compliance monitoring and reporting.
V. OBSERVATIONS AND CONSIDERATIONS WHEN USING ALTERNATIVE MECHANISMS

C. EXISTING STATUTORY AUTHORITY AND REQUIREMENTS

1. USE OF PERMITTED PRACTICES

There have been situations where an insurer would be able to maintain operations for 20 years, but to date, since liabilities barely exceed assets based on NAIC accounting practices and procedures, the insurer is nearly or technically insolvent. A carefully thought-out permitted practice could allow a troubled insurer time to dramatically restructure in order to provide better results for consumers in terms of timely claims payments.

2. MODIFICATIONS TO EXISTING STATUTORY AUTHORITY

In some circumstances, state insurance regulators may want to consider modifying laws and regulations to provide for a more favorable environment for certain alternative mechanisms. For example, the Illinois Division of Insurance strongly supported the General Assembly’s adoption of 215 ILCS 5/204 in the Illinois Insurance Code’s provision on Prohibited and Voidable Transfers and Liens to protect transfers made during the Division’s supervision of a solvent run-off. The language reads as follows:

m) The Director as rehabilitator, liquidator, or conservator may not avoid a transfer under this Section to the extent that the transfer was: ***

(C) In the case of a transfer by a company where the Director has determined that an event described in Section 35A-25 [215 ILCS 5/35A-25] or 35A-30 [215 ILCS 5/35A-30] has occurred, specifically approved by the Director in writing pursuant to this subsection, whether or not the company is in receivership under this Article. Upon approval by the Director, such a transfer cannot later be found to constitute a prohibited or voidable transfer based solely upon a deviation from the statutory payment priorities established by law for any subsequent receivership.

D. SURVEILLANCE MONITORING BY STATE INSURANCE REGULATOR

State insurance regulators need to consider whether the state has appropriate expertise on staff or whether the state needs to hire outside consultants of particular functions, such as claims assessment, reserves, reinsurance, etc. Please refer to the Troubled Insurance Company Handbook for a description of competency and skills of personnel assigned to conduct surveillance on troubled insurers.

1. SUPERVISION ORDERS/CONSENT AGREEMENTS/LETTER OF UNDERSTANDING

Regulators may want to consider various methods to articulate the regulator’s expectations with an alternative mechanism, as well as the possible recourse that may occur with the insurer as a result of certain actions or behaviors. Such communication methods can be informal, such as a letter of understanding with the insurer, or formal, such as voluntary consent agreement or a confidential supervision order.
If a supervision order is taken under the commissioner’s administrative provisions, the insurer’s management will generally remain in place subject to restrictions in the supervision order and the direction of the supervisor. The supervision can be voluntary or involuntary and confidential or public. Confidential supervisions are becoming more infrequent, as disclosures of such regulatory actions have become more necessary under federal law for insurers within publicly traded groups. Some states may require court approval, as well.

2. **FINANCIAL REPORTING/ANALYSIS/EXAMINATION**

All active insurers that are not in liquidation proceedings should be filing quarterly financial statements to the NAIC Financial Data Repository to provide regulators, policyholders, creditors, and claimants meaningful information. Enhanced monitoring, such as monthly financial statements and claims/exposure reports, should also be considered.

All states should conduct analysis and examination practices in compliance with Part B of the Financial Regulation Standards and Accreditation Program.

3. **COMMUNICATIONS**

As a result of utilizing various alternative mechanisms, regulators should attempt to coordinate the situation and supervisory plan with other affected insurance departments/jurisdictions, other regulatory agencies, and guaranty associations. Coordination may be useful to avoid actions that may be counterproductive. Interdepartmental and intradepartmental communication is also important to ensure that key departmental officials possess all relevant information to permit decisions to be made on a timely basis.

E. **BENEFITS, RISKS AND CONTROLS: FOR U.S. CLAIMANTS/POLICYHOLDERS WHEN A NON-U.S. INSURER OR REINSURER RESTRUCTURES**

1. **INTRODUCTION**

This section considers the impact upon U.S. policyholders and creditors of the restructuring of non-U.S. insurers and reinsurers. It will not consider the impact upon U.S. policyholders and creditors of the restructured U.S. branch of a non-U.S. insurer, because that will be governed largely by familiar U.S. laws and procedures. However, it should be noted that the extent to which the U.S. branch may realize economic support from its non-U.S. parent and/or affiliates is likely to be governed primarily by the laws of the jurisdiction(s) in which the latter are domiciled.

What this section examines is the possible impact on U.S. policyholders and creditors of the restructuring of a non-U.S. insurer or reinsurer outside the U.S. The restructuring of a non-U.S. insurer or reinsurer may be governed simultaneously by the laws of several jurisdictions. For example, as Solvency II becomes the norm in the European Union, an insurer or reinsurer doing business in many member jurisdictions may be subject to their various laws to varying degrees. However, the jurisdiction in which the parent is domiciled (or the group supervisor, if different) may be particularly influential even over the fate of subsidiaries in other jurisdictions. The continued evolution of group supervision as an integral part of Solvency II is likely to enhance the influence of the parent’s domicile. Less predictable will be the management of the restructuring of insurers doing business simultaneously in EU and non-EU jurisdictions. There remains a wide disparity in the core principles underlying insurance regulatory
systems throughout the world—some attributable to the pace of economic development, others to fundamental cultural differences, and still others to specific national public policies.

This section endeavors to identify the key considerations that should be evaluated from the perspective of U.S. policyholders and creditors when their non-U.S. insurer or reinsurer is restructured. It seeks also to provide a sampling of illustrations of how those considerations might evolve in specific circumstances. Pre-purchase evaluation of how these considerations are addressed in a particular jurisdiction may enable the astute policyholder to avoid purchasing coverage that is apparently reliable but for which there is little effective protection upon restructuring.

2. POTENTIAL ADVANTAGES AND RISKS OF RESTRUCTURING MECHANISMS

In many non-U.S. jurisdictions, mechanisms are available for the restructuring of insurers and reinsurers short of formal rehabilitation or liquidation proceedings. A distinction should be drawn between restructuring in the face of potential insolvency (the focus of this paper) and restructuring as a business strategy not in response to immediate solvency concerns. In the latter case, there is little justification for compromising policyholder interests, and regulatory schemes typically do not permit that result. It is in the face of a potential insolvency that restructuring can present a meaningful dilemma.

On the one hand, restructuring mechanisms can be advantageous when compared to rehabilitation or liquidation proceedings in three key respects:

a. Such mechanisms typically offer at least a realistic prospect of a faster resolution of the underlying financial challenge.

b. Often, these mechanisms are cheaper and therefore consume fewer scarce resources in the implementation of the process itself.

c. Often these mechanisms serve to preserve coverage that might otherwise have to be terminated in the context of formal proceedings.

On the other hand, there can be some serious drawbacks in these alternative schemes. The next subsection considers key factors in more detail. However, the principal concerns that may arise in the context of these alternatives include:

a. Reduced regulatory and judicial oversight resulting in diminished policyholder protection.

b. Greater likelihood that policyholder interests will be compromised for the sake of other constituencies, such as owners, managers, and other creditors.

c. The probability that policyholders will have less influence in the process and a diminished ability to protect themselves from potentially adverse outcomes.

3. KEY CONSIDERATIONS

In the U.S., state insurance regulators are accustomed to the fundamental principle that the interests of policyholders (used here as including insureds), especially consumers, should take precedence over
those of unsecured non-policyholder creditors. This principle is not mandated in non-insurer bankruptcies in the U.S. and may not have the same importance in non-U.S. jurisdictions. It is helpful to identify the likely principal interests of policyholders (including insureds), as they may be affected in insurer restructuring.

In addition, this subsection will identify key considerations for reinsureds and creditors when a non-U.S. reinsurance restructures. The treatment of reinsureds is the primary consideration; however, a proper restructuring plan will keep tax authorities and other creditors informed as well. While the nature of the reinsured/reinsurer (sometimes referred to as cedent/assuming company) relationship invokes many of the same key considerations—because typically reinsureds are sophisticated business entities rather than individual consumers—slight differences may arise.

a. **Right of Payment**

Not surprisingly, the principal interest of policyholders is likely to be assurance that claims (perhaps including those for return of unearned premium) will be paid promptly and in full. With the arguable exception of continuation of coverage, it is likely that policyholders’ other interests (discussed below) are derivative of and ancillary to payment concerns.

The ability to obtain full payment of claims may turn on many factors, only some of which may be attributable to the nature of the proceeding. For example, the debtor’s financial condition will always be a key consideration, regardless of the nature of the proceeding. The nature of the claim will also be an important consideration. For example, policyholders making claims based on IBNR must rely on actuarial estimates, which can vary widely. Such policyholders face a risk that any payment under a restructuring plan would be insufficient to meet future liabilities. This section does not address such considerations, which—however important—are unrelated to the nature of the proceeding or the regulatory or supervisory scheme under which it operates.

b. **Continuation of Coverage**

Under a variety of circumstances, it may be difficult for a policyholder to find acceptable coverage to replace that provided by the restructuring insurer. In the U.S., this interest is typically given more weight in the insurance rather than reinsurance context, and in the case of life accident and health insurance rather than in the context of property and casualty insurance.

c. **Claim Priorities**

As noted, we are accustomed in the U.S. to the supremacy of policyholders over other unsecured creditors. This priority is critically important when available assets may not suffice to discharge fully all liabilities of the insurer. Of course, in insurer insolvencies, typically the category of general creditors includes most notably reinsureds. Thus, the interests of reinsureds and policyholders, treated as congruent in much of this section, may be very divergent in particular circumstances. Policyholder priority may not be observed as strictly, or at all, in other jurisdictions.

d. **Guaranty Association Coverage**

Over the last four decades the U.S. insurance sector has implemented nearly universal guaranty fund mechanisms, providing at least basic protection for the insureds of most failed insurers. There are, of
course, notable exceptions like HMOs, risk retention groups, surplus lines carriers and certain lines (separate account annuities, fiduciary bonds, etc.) in the main; however, this “safety net” serves to soften the impact of insurer failure and effectively provides a standard against which are measured the anticipated results of restructuring. Most non-U.S. jurisdictions have not implemented nearly as comprehensive an insolvency protection scheme. The guaranty association mechanism is typically not available to reinsureds in the U.S. or elsewhere.

e. Right to Vote

Although largely foreign to U.S. insurer restructuring and insolvency proceedings, in other jurisdictions, policyholders may have a right to vote on the restructuring plan. Most often, however, that right exists when the plan does not require that policyholder contracts be fulfilled in their entirety. In such plans, policyholders whose claims consist of incurred but not reported losses may have different rights from policyholders who have unsettled paid claims or outstanding losses.

f. Cram Down

In certain jurisdictions, it is possible for policyholders and reinsureds to be compelled to accept a restructuring plan that requires that they make economic concessions. The plan may require approval upon the votes of creditors, or it may simply require regulatory or court approval. This should be contrasted with U.S. laws, which typically do not permit restructuring plans in which policyholders’ interests are compromised for the benefit of non-policyholder creditors.

g. Voice in Replacement

The restructuring plan may entail coverages being transferred to other insurers or reinsurers with whom policyholders and reinsureds had no relationship. In some cases (including instances in the U.S.), policyholders and reinsureds may have little discretion in the transaction (except potentially non-payment of premium and forfeiture of coverage).

h. Transparency

The ability of creditors, including policyholders or reinsureds, to obtain information about the proceeding, and the financial factors upon which key decisions will be based, varies considerably from jurisdiction to jurisdiction. Access to relevant information, however, is often the essential first step in policyholders’ ability to protect their interest in a restructuring.

i. Accountability

The individual or entity responsible for managing the restructuring may be a private practitioner engaged by the restructuring entity’s management, a group of creditors, or a regulatory authority. Alternatively, the process may be placed in the hands of a public official. The degree to which the individual or entity in charge of the process is accountable to a superior or independent authority can be critically important in ensuring the fairness and efficacy of the process. In those instances in which oversight consists principally of court supervision, the independence of the tribunal is important, as is the degree to which interested parties have access to that tribunal.

j. Regulatory Protection
In some jurisdictions (including the U.S.) statutory or common law (judicial decision) standards govern the manner in which an insurer may be restructured. They range from fundamental constitutional protections against the taking of property without due process to specific thresholds that must be satisfied before a Rehabilitation Plan can be approved. The availability of such protections and of viable enforcement mechanisms (such as an empowered administrative agency) are generally key to the prospect of a meaningful recovery or protection for policyholders and reinsureds.

k. ENFORCEMENT IN THE UNITED STATES

Non-U.S. restructuring plans have been enforced by the U.S. courts under Chapter 15 of the United States Bankruptcy Code. Chapter 15 governs cross-border insolvencies and is a framework whereby representatives in corporate restructuring procedures outside the U.S. can obtain access to U.S. courts. Chapter 15 permits a U.S. bankruptcy court to cooperate with a foreign procedure in which assets and affairs of the debtors are “subject to control or supervision by a foreign court, for the purpose of reorganization or liquidation.” Recent Bankruptcy Act amendments resulting in the current form of this provision were intended in part to bring U.S. law into greater harmony with the provisions adopted by the United Nations Commission on International Trade Law (UNCITRAL) and observed throughout much of the world. Applicability of these rules can be complex and often commences with a determination of which jurisdiction’s proceeding will control. The emerging trend is to defer to the jurisdiction in which lies the Center of Main Interest (COMI). However, it is important to note that the COMI may not necessarily be the domiciliary jurisdiction of the insolvent, and cases applying this principle sometimes reach puzzling results. While further discussion of these issues is beyond the scope of this section, the subject merits careful attention when applicable.

I. STANDING TO APPEAR

The ability to appear before the tribunal or agency conducting or overseeing the proceeding may be an important component of creditor protection. Of course, the fairness and impartiality of such a tribunal or agency are of critical importance. Moreover, the right to appear may be far less important when the individual managing or overseeing the process is charged principally or in material part with protection of policyholders and reinsureds and takes that responsibility seriously.

m. SET-OFFS, CLAIMS ACCELERATION AND ESTIMATION, PREFERENCES, AND VOIDABLE TRANSFERS

Insolvency proceedings can trigger a number of unique technical rules that are common in U.S. jurisdictions but may not receive the same treatment in other regimes. Among these are provisions that govern set-offs of claims and credits, acceleration and estimation of claims, when payments before commencement of a proceeding may be deemed to be reversible preferences, when such payments may constitute fraudulent or voidable transfers, and other such rules.

The issue of claims acceleration and estimation is illustrative of this difference in rules. Reinsurers have repeatedly expressed opposition to any system that could result in the accelerated and involuntary payment of their obligations based on any estimation of policyholder claims. Reinsurers oppose compelled payment of reinsurance recoverables based on IBNR on the basis that they are theoretical losses with theoretical values allocated in a theoretical fashion. Because reinsurance is a contract of indemnity, reinsurers assert that they cannot be required to pay losses, such as IBNR losses, which are unidentified or unknown.
While it is beyond the scope of this section to consider the details of each of these “technical” issues, it is important for the affected party to identify those that may be important in the particular case and determine how they are addressed in the specific proceeding. It should be noted that the application of these rules may not always be immediately evident. For example, if only part of a company’s business is subject to the restructuring plan, reinsurers may be concerned that they will lose existing set-off rights. This concern by reinsurers may affect the ability of reinsureds to receive full payment.

n. Politics

Finally, it should never be forgotten that “all politics are local.” In the U.S., the degree to which political considerations control an outcome is somewhat mitigated by cultural and legal constraints. These constraints, however, may not be as applicable in non-U.S. jurisdictions. Familiarity with the local environment is essential in order to avoid unpleasant surprises. And political considerations may not relate just to governmental entities—they may relate to the industry as well. For example, when the reinsured is also a reinsurer, it may be unwilling to help one of its potential competitors with a restructuring. The presence of existing disputes or investigations may also affect how a reinsured views a restructuring plan.
VI. CONCLUSION

Overall, although alternative mechanisms for troubled insurers can provide cost savings or greater efficiency over the current system, these mechanisms can also pose unique risks for consumers and require specialized surveillance monitoring, practices, and procedures, particularly where the activities may occur outside of court-supervised receivership proceedings. In this context, regulators are encouraged to consider implementing standards and best practices responsive to these risks in order to preserve important consumer protections, increase transparency, and provide appropriate procedural safeguards.

First and foremost, it is the responsibility of regulators to protect insurance consumers. Thus, proponents of alternative mechanisms for troubled insurers should be pressed to prove to the regulator’s satisfaction that the claims of greater efficiency or flexibility will not be used to strip policyholders and claimants of their policy rights so that value can be returned to investors. And regulators should ensure that all alternative mechanisms for troubled insurers place the interests of consumers ahead of other competing interests, coupled with a clear statement of goals and objectives and a meaningful oversight mechanism.
VII. APPENDIX

A. CASE STUDIES

This appendix describes troubled insurance company situations to illustrate some of the alternative concepts and techniques discussed earlier in this paper. The names of the insurers have intentionally been omitted. These case studies are not intended to reveal all problems or situations that may arise during the restructuring of a troubled reinsurance company. Additionally, the proposed actions with respect to the subject company may not be appropriate in all jurisdictions in light of changing market conditions and the possible differences in statutes, regulations, and implementing tools and resources.

1. RESTRUCTURED TROUBLED REINSURANCE COMPANY

Company characteristics, circumstances, and concerns:
- A property/casualty reinsurance company (treaty and individual risk basis).
- Primary reinsured lines included allied lines, commercial multiple peril, accident & health, workers’ compensation, liability, and non-proportional reinsurance.
- Immediate parent and primary reinsurer of a direct property/casualty insurer.
- Non-U.S. ultimate parent.
- Parent refused to provide further financial support to its subsidiary.

BACKGROUND. Restructured Troubled Reinsurance Company (RTRC) was an established property/casualty reinsurer that appeared to be reporting significantly improving financials since two years earlier, accomplished through active re-underwriting and non-renewal of underperforming business. RTRC was a large reinsurer licensed or accredited in 27 states. Growth was moderate over the years, and the company remained adequately capitalized until significant adverse development constrained resources. Almost all property/casualty lines of reinsurance were written by RTRC with primary focus on workers’ compensation, accident & health, liability, and proportional reinsurance. The group restructured through a series of transactions and separated its third-party assumed reinsurance business into an independent corporate structure. RTRC received a surplus note contribution from its ultimate parent that provided for semi-annual interest payments.

CAUSES OF TROUBLE. The Insurance Department had no information immediately on hand that would have raised a question regarding the solvency of RTRC. The financial statements reported much improved underwriting results, as well as ratios that were also continuing to show improvement. Approximately six months after the financial examination, but a few months prior to the restructuring, management met with the Department to discuss the rising amount of reinsurance recoverable related to its “Unicover” business. RTRC conducted a detailed internal review of its prior years’ U.S. casualty business and found that significant reserve strengthening was necessary in its general liability and specialty liability lines, causing a substantial surplus strain and the triggering of the Department’s hazardous financial condition regulation.

PRELIMINARY ACTIONS. The Department had several telephone conferences with RTRC management whereby the Department was informed that a capital contribution from RTRC’s ultimate parent would be forthcoming as a result of the significant adverse development discussed above. Management then contacted the Department for a meeting on the premise that the Chairman was in town and wanted a face-to-face meeting to discuss what was going on at the group. During that meeting, the Department was informed that RTRC and its direct subsidiary would be placed in run-off and neither would irreceiv
a capital infusion as originally discussed. A firm was hired by RTRC’s parent to assist in the development of a strategic plan for a solvent run-off.

**Corrective Actions.** The Department sought to institute more rigorous financial monitoring. RTRC entered into a confidential letter agreement with the Department that required the Department’s approval prior to, among other things, making any material changes to management; moving books and records; making any withdrawals from bank accounts outside the ordinary course of business; incurring any debt; writing or assuming any new business; or making dividend payments or other distributions. It also provided that the Department would receive a monthly report of commutation activity (which, as can be seen below, was the bedrock of the run-off plan); a copy of the final reserve analysis report prepared by an outside firm; and any additional reports the Department reasonably determined were necessary to monitor the financial condition. Finally, the agreement provided that senior management would meet with Department staff weekly, in person or by conference call.

RTRC hired outside actuaries to conduct an external audit. In addition to the reserve strengthening was a non-admission of its deferred tax asset.

A cash flow analysis was commissioned by the Department to conclude whether RTRC could, in fact, have a solvent run-off. RTRC developed a Business Plan/Run-off Plan, which combined commutations with expense cuts (staff and facilities reduction). Quarterly RBC filings were required. Employment levels were reduced commensurate with the Plan, and a retention plan was implemented to help retain talented, necessary staff and management. Surplus note interest payments were disapproved. The Department requested NAIC staff to set up a conference call for regulators to inform states of the situation and provide them time to ask questions or air concerns.

Ultimately, an RBC plan was approved by the Department. Subsequently, a revised Business Plan/Run-off Plan was filed and approved, and the agreement was extended for an additional year.

As commutations continued and improvements began to take hold, the company and its subsidiary were eventually sold. A new plan was developed, as—under new ownership with substantial resources—emphasis was no longer on an aggressive commutation strategy but was now on an aggressive asset management strategy. Monthly calls with management were temporarily put into place to ensure the Department would be aware of any changing circumstance. A less restrictive agreement was implemented as the Department was more comfortable with the possibility of a positive outcome. Ultimately, the subsidiary was again sold—another positive development for RTRC. The frequency of reserve reporting was reduced to an annual basis as long as there was no change in Chief Actuary, and RTRC was released from the agreement.

2. **NEW YORK REGULATION 141 PLAN**

Company characteristics, circumstances, and concerns:
- Professional property and casualty reinsurers and insurers that write such business and also assume reinsurance of property and casualty business.
- All property and casualty lines, but not life business.
- Member of a holding company group or stand-alone entity.
- Other members of the holding company would not or could not provide further financial help.
BACKGROUND. ABC Reinsurance Company (ABC) was a professional reinsurer incorporated in New York in 1977. ABC became capital-impaired and ceased underwriting in 1985. ABC’s management sought approval to commute certain assumed contracts, but the New York Superintendent of Insurance maintained that these commutations would prefer certain creditors over others and that the Superintendent lacked statutory authority to approve such commutations under then-existing New York insurance laws.

CAUSES OF TROUBLE. The parent company refused to add capital. The Department, lacking the authority to authorize the commutations, moved to place ABC in rehabilitation pursuant to New York Insurance Law Article 74. In 1987, the Superintendent moved in Supreme Court, New York County, for an order of liquidation. ABC remained in liquidation until 1992.

During those five years, ABC’s liquidator approved some cedents’ claims, but paid none. In 1990, however, the New York Insurance Department introduced, and the legislature adopted, an amendment of NYIL 1321 to permit an impaired or insolvent New York insurer to commute reinsurance agreements and, with the Superintendent’s approval, eliminate the risk that those agreements could be avoidable as a preference.

In May 1992, the Superintendent, in his role as ABC’s liquidator, petitioned the court to approve a plan of reorganization based on a 100% quota share of ABC’s portfolio of outstanding losses on all business that ABC wrote before its liquidation. XYZ Reinsurance Company of New York (XYZ) proposed the reorganization plan and provided the reinsurance cover.

After a July 1992 hearing, the court approved ABC’s reorganization plan and entered a final order and judgment that terminated the liquidation proceeding. The XYZ quota share contained a $305 million limit and an expansion of the quota share’s limit that expanded based on a formula that included, among other things, paid losses, reinsurance recoveries, and interest income. ABC resumed operations with new directors and officers, but the plan also provided for a manager to administer ABC’s run-off.

When the Superintendent petitioned the court in 1992 to approve the reorganization plan, ABC’s projected liabilities were, as of December 31, 1990, $295.3 million. By 1993, ABC and its quota share reinsurer had paid more than $302.8 million to its ceding insurers. In 2002, ABC substantially increased its asbestos-related IBNR reserves, as did much of the industry. As reported on its 2002 annual statement, ABC’s capital became impaired by more than $12.7 million.

PRELIMINARY ACTIONS. As a result of its 2002 impairment, and pursuant to New York Insurance Law § 1321 and Insurance Regulation 141 (11 NYCRR Part 128) (Regulation 141), ABC submitted to the New York Insurance Department a plan to eliminate capital impairment pursuant to Regulation 141. As required under Regulation 141, ABC’s board and the company’s sole shareholder stipulated that if ABC’s implementation of the Regulation 141 Plan failed to restore ABC’s surplus to policyholders to the minimum required as determined in accordance with Regulation 141, ABC would not oppose a petition to again liquidate the company pursuant to New York Insurance Law Article 74.

Under Regulation 141, no commutation of ABC’s assumed reinsurance could become effective, and no consideration for any such commutation agreement could be paid, until the Superintendent determined that a sufficient number of fully executed commutation agreements had been returned to restore ABC’s surplus to the required minimum (11 NYCRR § 128.5). Regulation 141 also required that ABC provide the Superintendent with copies of all e-mail, correspondence, and other communications between ABC
and its ceding insurers relating to the current Regulation 141 commutation offers, including any such communications rejecting the offer.

The proposed 141 Plan and Regulation 141 also required that ABC offer the same, non-negotiable commutation terms to all of its ceding companies. The 141 Plan further required that an offer to commute reinsurance agreements be made to every ceding insurer for which ABC had paid losses and LAE (Paid Losses) or known case losses and LAE (Case Reserves) on its books as of June 30, 2003.

Under its Regulation 141 Plan, ABC offered to pay 100% of Paid Losses and 60% of Case Reserves to commute obligations under the reinsurance agreements. Cedents were required to respond to this offer within 90 days.

CORRECTIVE ACTIONS. In January 2004, the Superintendent approved the 141 Plan and allowed ABC to extend commutation offers to its cedents. Shortly thereafter, ABC mailed commutation offers pursuant to the Plan to about 580 cedents. In October, ABC delivered to the Superintendent more than 300 executed commutation agreements along with copies of all correspondence with cedents relating to the Plan. The Superintendent subsequently determined that these commutation agreements would, upon his approval, eliminate ABC’s impairment.

With the Superintendent’s approval, ABC paid $22,558,221 to those ceding insurers that accepted its Regulation 141 commutation offers. The post-Plan ABC balance sheet showed a positive surplus of $3,675,366 and the elimination of its 2002 impairment.

The completed Regulation 141 Plan left ABC with many cedents. No cedents were compelled to accept the 141 commutation offers, and the Superintendent’s approval of the Plan was premised on ABC’s sufficient surplus to policyholders to complete its run-off. At the same time, Regulation 141 gave the Superintendent the statutory authority to permit commutation with a troubled company—avoid a protracted receivership—while also respecting every cedent’s right to reject the proposed commutation offers and run the risk that ABC would lack sufficient capital to complete its run-off.

3. COMMERCIAL INSURANCE COMPANY RUN-OFF

Company characteristics, circumstances, and concerns:

- A property/casualty insurance company, writing primarily commercial lines on a national basis.
- Primary lines included commercial multiple peril, accident & health, workers’ compensation, general liability.
- Member of a large multinational property/casualty insurance and reinsurance group with a non-U.S. ultimate parent.
- Parent sought to provide sufficient capital support to its subsidiary.

BACKGROUND. Restructured Troubled Insurance Company (RTIC) was an established property/casualty insurer pursuing a business model outsourcing most of its underwriting and claims functions to managing general agents (MGAs) and third-party administrators (TPAs), respectively. RTIC was licensed and operated in 50 states and wrote directly and through six subsidiary companies. The company had been operating for over 50 years and independent for approximately six years prior to being purchased by its current parent. Following the acquisition, RTIC pursued a modified business strategy for three years before being placed into run-off. RTIC wrote most lines of commercial liability insurance with primary
focus on workers’ compensation, accident & health, and general liability insurance.

**CAUSES OF TROUBLE.** Although the parent company installed new management and sought to reverse the business decline at RTIC following the acquisition, continued underwriting losses and adverse development from past years resulted in a ratings downgrade at the company. In addition, the California Insurance Department had been monitoring RTIC for some time due to the poor underwriting results and concern over the company’s capitalization. The parent determined that the business model for the company was not appropriate for the then-current market and was not likely to result in a return to profitable business for the company. The parent also determined that the profitable lines of business RTIC was writing could be pursued through restructured and separately capitalized subsidiary companies, while the potential for continued adverse development in certain lines written by RTIC—particularly workers’ compensation—would require substantial new capital for RTIC to regain its ratings. Accordingly, the parent determined to place RTIC into run-off.

**PRELIMINARY ACTIONS.** The parent developed a run-off plan that called for the capital and operational restructuring of RTIC. Representatives of the parent, RTIC, and the run-off manager met with the Department to present a detailed plan for RTIC in run-off. The plan included a restructured capital base intended to provide sufficient flexibility and liquidity for the run-off. A principal component of this restructuring was the merger of a subsidiary of the parent already in run-off into RTIC. This contributed company had been in solvent run-off for a number of years and held sufficient excess capital to support RTIC in run-off. The resulting merged entity was to be placed under the management team of the contributed company, a dedicated professional team with 10 years of experience in the operation of run-off companies.

Over the course of a three-month period, the Department and the company representatives met frequently to refine the run-off plan. The Department was receptive to a solvent run-off under the control of the parent, provided that the parent could demonstrate sufficient capitalization within RTIC, the establishment of certain financial standards for RTIC, and enhanced financial and operational reporting by the company. Upon approval by the Department of the run-off plan and the merger, RTIC was formally placed in run-off.

**CORRECTIVE ACTIONS.** The Department, the parent, and RTIC entered into an agreement that required RTIC to maintain a minimum RBC standard of 200%, a net-reserves-to-surplus ratio of no greater than 3-to-1, and a specified minimum surplus amount. The parent guaranteed that RTIC would meet these standards. RTIC also agreed to provide frequent and detailed reporting to the Department on the progress of the run-off.

Based upon the company’s actuarial analysis and a separate review by the Department, RTIC strengthened reserves in certain lines. The run-off plan also included a restructuring of the capital of RTIC which, in addition to the merger, included the contribution of a three-year term note from the parent to insure liquidity and sufficient capital, and the transfer of the stock of certain affiliated companies from RTIC into a trust in favor of RTIC. Certain subsidiaries of RTIC were purchased by the parent to continue writing certain lines outside of the run-off. RTIC reduced staff, and certain operations were subsequently transferred directly to the run-off manager. A retention plan was created to help retain knowledgeable, talented staff and management for the run-off. RTIC met separately with the domestic regulators of its subsidiary insurance companies to inform them of the plan and obtain their approval where necessary. RTIC and the Department also coordinated with NAIC staff to inform all interested states of the situation at an NAIC regulator meeting and to provide
regulators with the opportunity to ask questions or air concerns.

With the Department’s agreement, RTIC began to terminate its MGA and most of its TPA agreements and assumed direct control of most of its claims. The company then began to aggressively settle claims, reduce its overall exposures, and commute certain reinsurance contracts where protection was uncertain or disputed. The investment manager restructured RTIC’s investment portfolio to better address the anticipated cash flow and capital requirements of the run-off.

**PROGRESS OF THE RUN-OFF.** The Department’s cooperation with management and establishment of clear operating guidelines, the capital support at RTIC provided by the parent, and singular focus of management on the satisfaction of RTIC’s obligations and responsible management of the company’s assets have resulted in a stable and successful run-off. Five years into the run-off, RTIC had reduced open claims by approximately 85%, reduced reserves by approximately 40%, and increased surplus by over 70%. The stabilization of RTIC, its successful execution of the run-off plan, and gains in its investment portfolio have resulted in the Department’s agreement to terminate the trust arrangements created for the affiliated company investments, deferral, and subsequent forgiveness of the third installment of the parent note and the return of excess capital from RTIC to the parent. RTIC continues to adhere to the established financial standards, maintaining a comfortable margin over the minimum requirements established by the Department. RTIC management and the Department continue to meet approximately quarterly to review the progress of the run-off.

### 4. RESTRUCTURED TROUBLED LONG-TERM CARE COMPANY

Company characteristics, circumstances, and concerns:
- A stock life, accident and health company.
- Part of a large national life and A&H group.
- Primary line of business is a closed block of predominately long-term care in force.
- Ceased writing new business five years prior to restructuring.
- Received large capital contributions from parent for many years.
- Continuous premium rate increase requests.
- Adverse claim development and reserve strengthening.
- Low RBC ratio.

**BACKGROUND.** Restructured Troubled Long-Term Care Company was a writer of predominately long-term care business, operating in most of the 46 states, D.C., and the U.S. Virgin Islands. It had held a firm niche position in the long-term care market with profitable operations and a conservative balance sheet. The long-term care block of business was written by the Company and its predecessor companies prior to being acquired by the Company in the 1990s.

**CAUSES OF TROUBLE.** Shortly after the acquisition of long-term care blocks in the 1990s, the Company reported a reserve deficiency. The Company phased in a new reserve valuation basis for long-term care policies, requested and implemented premium rate increases, and implemented tighter underwriting standards. The cause of trouble was under-pricing and under-reserving that became evident as the company experienced claim costs and utilization that exceeded expectations. The original pricing assumptions on long-term care assumed a 4% to 5% lapse rate, while the actual lapse rate was only 1% to 2%. Additionally, the Company’s investment return assumptions were much higher than actual returns.
Over the course of more than a dozen years, the Company received capital contributions to offset losses. The Company reported an increasingly larger reserve deficiency each year from 1998 to 2007, several years in excess of $100 million deficient. The Company reported net losses in each year from 1997 to 2007.

PRELIMINARY ACTIONS. In 2003, Company management decided to stop marketing insurance products and to place the Company in run-off. The insurance department began monitoring the Company monthly and meeting with Company management on a quarterly basis as a result of continued poor operating performance, reserve deficiencies, and multi-year rate increase requests. A study was conducted of the Company’s incurred claims experience. As a result, the Company updated the claim cost assumptions underlying the contract reserves and unearned premium reserves for the long-term care policies. The change was made using the “pivot” method, such that the change in claim costs would be accrued into the reserve balance over time. Multiple premium rate increases were sought. Over the course of 15 years, the Company received over $900 million in capital contributions from the parent. The parent company indicated that no future capital contributions would be forthcoming.

The Company also came under scrutiny for market conduct issues, including claims administration and complaint handling practices. The Company underwent a market conduct examination to get a further understanding of the market conduct problems within the Company and, as a result, a settlement agreement was reached, recommendations for corrective measures were made, and an improvement plan was developed. The settlement included a monetary penalty for violations; a contingent penalty for non-compliance with improvements, including systems upgrades and improved claims administration; and restitution and remediation regarding the reevaluation of denied claims.

CORRECTIVE ACTIONS. With the approval of the insurance department, the Company’s parent transferred the stock of the Company to a non-profit independent trust. In connection with the transfer, the parent contributed additional capital to the Company to fund future operating expenses. The capital was in the form of senior notes payable, invested assets, cash, and the forgiveness of unpaid dividends. The trust is intended to operate the Company for the exclusive benefit of the long-term care policyholders, without a profit motive. It is governed by a board of trustees under the oversight of the insurance department, as outlined in the Form A Acquisition Order.

5. LIABILITY OF INSURERS TRANSFERRED TO THIRD PARTY – EUROPE

BACKGROUND. The European market is a provider of insurance and reinsurance to insureds and cedents worldwide.

Events that took place in Europe during the 1990s provide an example of an extreme case of a market coming to the brink of collapse, only to be saved by a series of transactions that were simple in concept but, of necessity, very complex in their implementation. Those transactions amounted to what has become a famous event in the history of insurance. Most recently the final transaction took place, which had the effect of removing the outstanding liabilities of the re/insurers in question.

CAUSES OF TROUBLE. In the early 1990s there was an unexpected, huge increase in long-tail liability claims (typically asbestos, pollution and health hazard) made against certain European market insurers. Many of these insurers faced collapse, as the liabilities swamping the market and the difficulty in estimating the IBNR and calculating an appropriate reinsurance premium were so great. The effect was that several troubled European insurers were without protection and remained exposed to the incoming claims.
CORRECTIVE ACTIONS. The situation was so dire that immense efforts were made to bring about a solution. One solution, in particular, allowed certain troubled European insurers to pay a premium (which varied according to exposure) and have all the liabilities for the exposed years 1992 and earlier to be reinsured by a specially formed company, ABC Reinsurer. Claims handling and all other aspects of the run-off were transferred to XYZ insurer (a wholly owned subsidiary of ABC Reinsurer). XYZ also reinsured ABC Reinsurer under a retrocession agreement. Certain rights of the original troubled insurers as reinsurees of ABC Reinsurer were held on trust for policyholders: In this way, the benefit of all reinsurance recoveries were applied in paying the liabilities due to policyholders. The intervening 10 years to 2006 found XYZ working to plan with a controlled program of inwards and outwards commutations as a means of dealing with the run off of these liabilities. In all practicality the original troubled insurers had finality—i.e. they were no longer financially exposed personally so long as XYZ remained solvent. However, as a matter of law, they did remain personally liable to policyholders for any excess liability over and above that paid by XYZ.

By early 2006, the market in the purchase of portfolios in run-off had taken off. XYZ was the world’s largest business in run-off, so large that the number of likely purchasers was very limited. However, fortunately by the end of 2006, the two-stage deal with a large conglomerate—XOX—was announced, the stages being:

1) XYZ retroceded to XOX’s subsidiary, BOB, its liabilities to ABC Reinsurer arising under the agreement. Cover was limited to approximately $6 billion (U.S.) over and above existing reserves of approximately $9 billion, as of March 2006. The premium was all of XYZ’s assets less approximately $340 million, plus a $145 million contribution from some of the original troubled insurers. Staff and operations were transferred to another XOX subsidiary, RRR.

2) A “Part VII transfer” of all the liabilities of the original troubled European insurers (and the protection of the ABC Reinsurer–XYZ–BOB reinsurance chain) to a third-party company. Provided the transfer was to take place before December 2009, XYZ would be entitled to purchase further reinsurance from BOB of up to $1.3 billion if XYZ’s net undiscounted reserves had not deteriorated by more than $2 billion from their March 31, 2006, position.

Part VII of the UK Financial Services & Markets Act 2000 (FSMA) provides a statutory novation of business (i.e., reinsurees’ obligations to their policyholders) by a transferor re/insurer to the transferee re/insurer, provided that strict procedures are complied with. The novation is effected by court order. The court order has the effect of vesting the transferor’s business in the transferee without the need for consent of the policy holders/reinsurees. The court can and usually does order assets attributable to the underlying business to be transferred—i.e., including the outwards reinsurance contracts. There are strict definitions of business that are subjected to a Part VII transfer. Put broadly, it applies to transfers of business carried on in the UK or elsewhere within the European Economic Area (EEA) with a UK connection as defined and where the transferred business is to be carried on from an establishment of a transferee in an EEA state. There are various conditions and exclusions.

The unusual position of these particular re/insurers, should they wish to avail themselves of Part VII, was recognized at the time Part VII first became law. However, additional changes to the legislation had to be made to facilitate this transaction, and they became law in 2008. In particular, the Part VII provisions in the FSMA were extended to a further cohort of these particular re/insurers.
Under the Part VII transfer procedure, there are two court applications. The first gives directions as to notices to be served and other technical requirements allowing any opposing reinsureds or outwards reinsurers to object to the transfer. In the case of the XYZ Part VII, certain requirements were dispensed with taking into account the high volume of notices that would have to be given to individual names and other relevant parties. An essential part of the procedure is the report provided by an independent expert whose identity is approved by the Financial Services Authority (FSA). Furthermore, the FSA itself provides a report indicating its views that is made available to those interested in the transfer. Time is allowed for any objectors to produce their own case in the context of the independent expert report and the FSA’s report. In the case of the XYZ transfer, the FSA indicated that it would not object to the transfer.

The second and final stage of the process is the application for sanction by the court. The court has discretion whether to sanction the transfer scheme but may not do so unless it considers it appropriate in all the circumstances of the case. Under case law on the statutory provisions, the court is concerned as to whether a policyholder, employee or other interested person will be adversely affected by the transfer scheme. The hearing took place in mid-year 2009, and the judge concluded that the Part VII transfer scheme should go ahead.

During the hearing, the judge was satisfied that other requirements protecting policyholders of the business being transferred had been fulfilled, such as that certificates of solvency for the transferee company were obtained confirming the adequacy of the transferee’s solvency for the purpose. Presentations explaining the import of the transfer had been carried out in the UK and in the jurisdiction of XOX to transferring policyholders, the original troubled insurers, and their representatives. Help lines and a Web site had been set up. Numerous telephone calls, e-mails or letters had been sent in response by the Part VII advisers, with less than 10 people raising substantive issues.

**Enforcement in Other Jurisdictions.** Part VII of the FMSA originates from EU Directives. The sanction order is thereby recognized throughout the EEA. A further step would be needed to ensure enforcement in the United States and other countries where policyholders were located. However, the shape of the scheme is such that enforcement in the United States and other jurisdictions is most probably unnecessary. Policyholders would be entitled to drawdown on trust funds located in the United States, Canada, Australia and South Africa, providing them with security for amounts accruing due to them over time should there be any default payment.

**Progress.** With the sanction of this transfer scheme granted during mid-year 2009, the two-stage transaction provided by the XOX group was completed in time. Because the transfer was affected prior to December 2009, it is believed that the further amount of $1.3 billion (U.S.) reinsurance cover will be available to secure future payment of all policyholder claims.
Attachment Two

B. SAMPLE DOCUMENTS

1. SAMPLE SUPERVISION CONSENT ORDER

In the Matter of:

The Administrative Supervision of

RESTRICTED TROUBLED REINSURANCE CORPORATION, a Connecticut domiciled property and casualty insurance company.

CONSENT ORDER

This Consent Order is entered into by and between Restructured Troubled Reinsurance Corporation (RTRC) and the Insurance Commissioner of the State of Connecticut (the Commissioner) to provide supervision and regulatory oversight of RTRC in the run-off of its insurance and reinsurance obligations in force.

WHEREAS, the Commissioner hereby finds, and RTRC agrees, as follows:

1. The Commissioner has jurisdiction over the subject matter and of RTRC.

2. RTRC is a Connecticut-domiciled property and casualty insurer and reinsurance company having its principal office at XXX Street, Anywhere, XX 00000, and holds a certificate of authority to transact the business of insurance and reinsurance in Connecticut and is licensed or accredited in a number of other states.

3. RTRC is a wholly owned direct subsidiary of Restructured Troubled Corporation (RTC), a Delaware corporation and an indirect subsidiary of Restructured Troubled (Barbados) Ltd., a Barbados corporation which is a wholly owned direct subsidiary of Restructured Troubled Group Ltd. (RTG), a Bermuda corporation.

4. Due to the significant deterioration of RTG’s financial condition in 20XX, on December 3, 20XX, RTRC entered into a “letter of understanding” with the Connecticut Insurance Department (Department) as part of the Department’s continuing financial monitoring of RTRC pursuant to which RTRC agreed that it would not take certain actions without the prior written approval of the Connecticut Insurance Commissioner or her designee, including, among others, disposing of any assets, settling any intercompany balances or paying any dividends.

5. RTRC has submitted to the Department a risk-based capital report, (the RBC Report) pursuant to CONN. AGENCIES REGS. § 38a-72-2. The RBC Report indicates that RTRC was at the “Regulatory Action Level Event” as of December 31, 20XX. On July 30, 20XX, RTRC filed with the Department an updated RBC Report which estimates that RTRC was at the “Authorized Control Level Event” as of June 30, 20XX.

6. RTRC has ceased underwriting activities and has determined that it is in the best interests of its
policyholders and creditors to run-off the existing operations of RTRC in such a manner as would maximize the availability of funds to satisfy the interests of policyholders, creditors, and other constituents.

7. RTRC has retained the services of a firm with expertise and experience in run-off management to review the operations of RTRC and its subsidiaries in run-off, to supplement its internal resources, and to accelerate the successful completion of the run-off, all pursuant to a comprehensive run-off plan (including therein, among other items, a plan to effectuate commutation of existing reinsurance obligations). The run-off management consultant will develop and submit, along with a more extensive run-off engagement agreement retaining their services to manage the run-off, to the RTRC Board of Directors for approval and, if such plan and agreement are approved, to the Commissioner, creditors of RTC, and other constituencies for approval.

8. On April 15, 20XX, the Department commenced a targeted examination of the financial condition of RTRC pursuant to CONN. GEN. STAT. § 38a-14. The examination was called based on RTRC’s submission of a Cash Flow Projection Model to demonstrate that RTRC has sufficient assets and cash flow to pay both claims and operating expenses as those obligations become due.

10. RTRC is in such condition that regulatory control of the insurer is appropriate to help safeguard its financial security and is in the best interests of the policyholders and creditors of the insurer and of the public as RTRC administers the run-off of its existing business.

IT IS THEREFORE ORDERED AND AGREED THAT:

11. RTRC hereby consents to and shall be placed under the administrative supervision of the Commissioner pursuant to CONN. GEN. STAT. § 38a-962b and under the terms herein.

12. RTRC hereby knowingly and voluntarily waives receipt of written notice under CONN. GEN. STAT. § 38a-962b of grounds for the Commissioner to effectuate administrative supervision by the Commissioner.

13. The period of administrative supervision by the Commissioner shall commence upon execution of this Consent Order. The period of supervision pursuant to this Consent Order shall be coterminous with the run-off of RTRC’s existing business, unless the Commissioner takes action pursuant to Paragraph 27 hereof.

14. The determination that RTRC shall be subject to administrative supervision by the Commissioner may be abated and thereby released from administrative supervision by the Commissioner if RTRC complies with the orders of supervision provided herein and, during the period of supervision, RTRC shall have attained sufficient liquidity, surplus, and reserves necessary to exceed and maintain Company Action Level RBC, as defined in CONN. AGENCIES REGS. § 38a-72-1, or the Commissioner in her sole discretion determines the supervision of RTRC is no longer necessary for the protection of policyholders, claimants, creditors, or is no longer in the public interest.

15. During the period of supervision, RTRC shall not undertake, engage in, commit to accept, or renew
any insurance obligations including without limitation, insurance or reinsurance policies or any similar
arrangements or agreements of indemnity or, without the prior written approval of the Commissioner,
make any material change in any insurance or reinsurance agreement which would increase the financial
obligations of RTRC in any material respect. Moreover, RTRC shall not engage inactivities beyond those
that are routine in the day-to-day conduct of its business in run-off and are otherwise consistent with its
comprehensive business run-off plan (Run-off Plan) to be filed with, and found acceptable by, the
Commissioner, without the prior approval of the Commissioner or her designee. The routine day-to-day
conduct of RTRC’s business in run-off includes but is not limited to: (a) paying claims and operating
expenses as such obligations become due and in accordance with the applicable law and the settlement
and commutation of claims and insurance and reinsurance obligations, unless otherwise provided in the
following paragraph or otherwise directed or approved by the Commissioner or her designee; (b)
defending RTRC and persons insured or claiming to be insured by RTRC against claims arising from or
related to insurance policies and reinsurance agreements previously issued, assumed, or ceded by
RTRC; (c) settling or otherwise resolving or attempting to adjust and resolve such claims; (d) engaging,
directing, discharging, and compensating counsel (including reasonable costs incurred) with respect to
such claims or other matters; (e) paying settlements or judgments with respect to such claims; and (f)
investing the assets of RTRC and liquidating such assets in an appropriate manner as required to pay
claims, operating expenses, settlements, commutations, and other charges in the ordinary course of
business and subject to the provisions of this Consent Order.

The routine day-to-day conduct of RTRC’s business in run-off also includes but is not limited to: (a)
submitting information to reinsurers with respect to RTRC’s reinsured losses and loss adjustment
expenses; (b) advising reinsurers of all sums due to RTRC under their respective reinsurance contracts
and treaties with RTRC (including settlement and commutation thereof), provided, however, that RTRC
shall not enter into commutation of liabilities (either inward or outward including obligations of others
to RTRC) or settlements of claims other than for amounts not in excess of $250,000 except as otherwise
provided in the Run-off Plan or otherwise approved by the Commissioner or her designee); and
taking all actions necessary and appropriate to recover all sums due to RTRC from reinsurers and others.

The following activities, to the extent not necessary for the adjusting and payment of losses and expenses
associated with claims adjusting and settlement or commutation of reinsurance agreements are understood
to be outside the day-to-day conduct of RTRC’s business in run-off, and in no event shall RTRC engage
in or undertake the following activities without the prior approval of the Commissioner or her designee:

(a) Dispose of, convey, or encumber any of its assets or its business in force.
(b) Withhold any of its bank accounts.
(c) Lend any of its funds.
(d) Invest any of its funds.
(e) Transfer any of its property.
(f) Incur any debt, obligation, or liability.
(g) Merge or consolidate with another company.
(h) Write new or renewal business.
(i) Enter into any new reinsurance contract or treaty.
(j) Terminate, surrender, forfeit, convert, or lapse any insurance policy, certificate, or
contract, except for nonpayment of premiums due.
(k) Release, pay, or refund premium deposits, unearned premiums, or other reserves
on any insurance policy, certificate, or contract.
(l) Make any material change in management.
(m) Increase salaries and benefits of officers or directors or the preferential payment of bonuses, dividends or other payments deemed preferential.

RTRC shall make a recommendation with the reasons therefore in writing to obtain the prior approval of the Commissioner as to any of the foregoing actions.

16. The Commissioner shall have the final authority to approve or disapprove the initiation, settlement, or withdrawal by RTRC of any action, dispute, arbitration, litigation, or proceeding of any kind involving RTRC that is not in the ordinary course of business or would require payment in excess of $250,000. RTRC shall prepare a written report to the Commissioner with a recommendation for approval or disapproval with the reasons therefore.

17. Without the prior written approval of the Commissioner, RTRC shall not (i) add any individual who is not currently a senior executive officer of RTRC, or one of its affiliates, to the board of directors of RTRC or (ii) move the principal offices or records of RTRC to a location outside of Connecticut.

18. RTRC shall file with the Department a monthly financial statement consisting of a balance sheet and income statement on the 25th day of each month as of the end of the prior month.

19. At least annually, RTRC shall submit an actuarial analysis prepared by a qualified actuary as defined in CONN. AGENCIES REGS. § 38a-53-1 of the loss and loss adjustment expense reserves.

20. RTRC shall submit a report on a quarterly basis containing detailed information on all commutations of reinsurance treaties and related activities which have occurred year-to-date, including specific impact on RTRC’s statutory financial statement.

21. RTRC shall submit to the Department any additional reports that the Department reasonably determines as necessary to ascertain the financial condition of RTRC.

22. RTRC shall submit any and all reports or items required by this Consent Order, and all requests for the Commissioner’s action or approval to:

(name)
Connecticut Insurance Department
P.O. Box 816
Hartford, Connecticut 06142-0816
(860) 297-3823
(860) 566-7410 FAX

23. The Commissioner may retain, at RTRC’s expense, such experts (including, but not limited to, attorneys, actuaries, accountants, and investment advisors) not otherwise a part of the Commissioner’s staff, as the Commissioner reasonably believes is necessary to assist in the supervision of RTRC.

24. RTRC hereby knowingly and voluntarily waives all rights of any kind to challenge or to contest this Consent Order, in any forum now available to it, including the right to any administrative appeal pursuant to CONN. GEN. STAT. § 4-183.
25. This Consent Order of supervision, and proceedings, hearings, notices, correspondence, reports, records and other information in the possession of the Commissioner or the Department relating to the administrative supervision by the Commissioner of RTRC are subject to the confidentiality provisions of CONN. GEN. STAT. § 38a-962c and § 38a-8.

26. RTRC shall continue to comply with all obligations under law, including applicable financial, regulatory, and tax reporting requirements.

27. Nothing in this Consent Order shall preclude the Commissioner from taking further action as the Commissioner in her sole discretion deems appropriate and in the best interest of RTRC’s policyholders and the public, including commencement of further legal proceedings if and as necessary under Chapter 704c of the Connecticut General Statutes.

28. This Consent Order shall supersede in all respects the “letter of understanding” between RTRC and the Department referenced to in Paragraph 4 of this Consent Order, which letter shall have no further force and effect.

29. The Board of Directors of RTRC, at a specially called meeting or by unanimous written consent, has simultaneously, with the entry of this Consent Order, approved and provided resolutions complying with the terms of this Consent Order, which is effective upon entry of this Consent Order.

The foregoing Consent Order for Restructured Troubled Reinsurance Corporation is entered and shall be effective at 3:00 p.m. on this____ day of September 20XX.

(name)
Insurance Commissioner

Agreed and Consented to by RESTRUCTURED TROUBLED REINSURANCE CORPORATION on this___________day of September 20XX.

By: _________________________________

2. SAMPLE REINSURER LETTER AGREEMENT

November, 20XX

President
Restructured Troubled Reinsurance Company XXX Street
Anywhere, XX 00000

Dear [Name],

The Any State Insurance Department (Department) continues its financial monitoring of Restructured Troubled Reinsurance Corporation (RTRC or Company).

The Company’s parent, Restructured Troubled Group Ltd. (RTG) reported an operating loss of $245 million for the third quarter of 2002 and an operating loss of $252.6 million for the first nine months of 2002. The loss resulted principally from approximately $100.7 million of loss reserve increases recorded by the operating subsidiaries and a $64.5 million loss related to the establishment of a deferred tax valuation reserve. The operating results for the first nine months of 20XX included approximately $33 million of loss development related to the September 11th terrorist attacks recorded in the first quarter of 20XX. On October 18, 20XX, A.M. Best Company lowered the ratings of the operating subsidiaries of RTG from A- to B+. Subsidiary Insurance Company was lowered from A- to B. The downgrade constituted an event of default under RTG’s bank credit facility, under which banks had issued $336 million in letters of credit to support RTG’s underwriting at its Lloyd’s operation. On November 1, 20XX, with the approval of the Department, the Company entered into an Underwriting and Reinsurance Arrangement with Facility Re, Inc., whereby new business is underwritten by Facility Insurance Company, a member of the Facility Group. On November 14, 20XX, A.M. Best again lowered the ratings of the operating subsidiaries of RTG from B+ to B-. Subsidiary Insurance Company was lowered from B to C++. In order to protect the existing quality and integrity of RTRC’s assets, reserves, and management to protect policyholders/reinsureds and the public, it is requested that the Company agree to the following:

1. RTRC shall not take any of the following actions without the prior written approval of the Insurance Commissioner or her designee:
   a. Dispose of, convey, or encumber any of its assets or its business in force.
   b. Withdraw any of its bank accounts except in the ordinary course of business.
   c. Settle any intercompany balances.
   d. Lend any of its funds.
   e. Transfer any of its property.
   f. Make any investments other than cash equivalents.
   g. Incur any debt, obligation, or liability, except liabilities in the ordinary course of business.
   h. Make any material change in management.
Attachment Two

i. Make any material change in the operations of the Company.

j. Move any books and records from its office in Stamford, Connecticut.

k. Pay any dividends, ordinary or extraordinary.

l. Enter into any affiliated reinsurance contracts, affiliated commutation agreements, or settlement agreements.

m. Enter into any unaffiliated insurance or reinsurance contracts that would constitute new or renewal business, or any unaffiliated commutation agreements or settlement agreements in excess of $1 million not in the ordinary course of business.

n. Enter into affiliated transactions of any nature.

2. Senior management shall meet with the Department, in person or by conference call, with such frequency as may be deemed necessary by the Insurance Commissioner or her designee, to provide updates on the status of the parent and any changes in the status of the Company.

3. A monthly financial statement consisting of a balance sheet and income statement shall be filed with the Department on the 25th day of each month as of the prior month end.

4. The above-described terms shall continue in effect until such time as the Insurance Commissioner shall deem they are no longer necessary or issues an order that supersedes this agreement.

5. RTRC acknowledges that nothing contained herein shall in any way limit any power or authority given the Insurance Commissioner under the laws of the State of Connecticut, including the right to initiate any further actions as she deems in her discretion to be necessary for the protection of RTRC’s policyholders/reinsureds and the public.

I have enclosed two originals of this letter to your attention. Please sign and date both originals, retain one for your file, and return one executed original to me.

Sincerely,

__________________________, Chief Examiner
Financial Analysis & Compliance

AGREED TO this ______ day of November, 20XX, by a duly authorized representative of RTRC.
C. SAMPLE OUTLINE FOR RUN-OFF PLANS

The following is a sample outline for a run-off plan.

I. Introductory Overview
   A. Executive Summary: Providing an executive level summary of the history, current business conditions, recent significant transactions, and proposed run-off solution.
      1. Status
      2. Mission
      3. Business (Guiding) Principles
   B. Plan Objectives: Describing the ability of the plan to fully and timely settle all valid policyholder claims in compliance with the liquidation priorities of state distribution scheme.
   C. Advantages
   D. Benefits

II. Corporate History
   A. Summary
   B. Recent Happenings: Description of business plans, significant transactions, prior restructuring plans, and financial performance related thereto.
      1. Mergers & Acquisitions
      2. Employment
      3. Internal Growth
      4. External Factors
      5. Current Position
   C. Business Description: Including a comprehensive description of organizational and corporate structure, lines of insurance, nature of policyholder and other risks, and claim-handling function associated with the run-off.
      1. Lines
      2. Programs
      3. Markets
   D. Reserve Development
      1. Environmental Issues
      2. Underwriting Issues
      3. Adverse Development
      4. Reserves by Line – Summary
E. Financial Condition: Summary of recent financials
   1. Summary
   2. Statutory Surplus
   3. Consolidated Financial Statement(s)
   4. Operating Expenses
      a. Staffing
      b. Insurance
      c. Real Estate
      d. Fixed Costs
      e. Information Technology
   5. Taxes

F. Operations: Description and historical comparison of staffing, real estate, expenses, insurance and information technology, and other pertinent operations associated with run-off.
   1. Claims Handling
   2. Reinsurance
      a. Outstanding Balances
      b. Disputes
      c. Solvency Issues
      d. Uncollectables
      e. Write-offs
      f. Collateral
      g. Lines of Business
      h. Programs
      i. Processes & Systems

III. Run-off Plan: Description of initiatives and priorities, including demonstration of Run-Off Plan serving the best interests of policyholders and other claimants.
   A. Summary
   B. Financial Projections: Including description of surplus-enhancing initiatives and transactions, loss development, liquidity and expense projections.
      1. Key Factors
      2. Assumptions
      3. Revenues
4. Expenses
5. Surplus Projection
6. Liquidity Projection

C. Initiatives
1. Surplus Enhancing
   a. Policy Buybacks
   b. Expense Reductions
      i. Operating Expenses
         a. Staffing
         b. Real Estate
         c. Fixed Costs
         d. Insurance/Benefits
         e. Information Technology
      ii. Allocated Loss Adjustment Expenses
   c. Reinsurance Commutations
2. Liquidity
   a. Asset Portfolio Assessment
   b. Encumbered Assets
   c. Unencumbered Assets
   d. Statutory Deposits

D. Risk Factors: Description and projection of risks associated with Run-Off Plan, including regulatory concerns, preferences, and risks associated with policyholders, and guaranty funds/associations, including identification of critical elements for plan success.
1. Define Uncertainties
   a. Business
   b. Economic
   c. Regulatory
2. Additional Adverse Loss Reserve Development
3. Increased Reinsurance Disputes
4. Unexpected Liabilities
5. Drastic Asset Value Changes
6. Financial Market – Investments
E. Voluntary Run-off vs. Receivership: Analysis and comparison between the alternative mechanisms from best interests of policyholders, claimants, and guaranty funds/associations.

F. Regulatory Reporting: Description of proposed regulatory supervision and reporting requirements—e.g., monthly statutory basis financial statements (balance sheet, statement of income and statement of cash flow), including comparison of actual results to Plan projections; quarterly reports demonstrating reinsurance recoverables and premium receivables past due, in dispute, litigation or arbitration; report demonstrating material credit exposures, related collateral held, and identity of credit impaired transactions; unpaid losses on state-by-state basis; weekly cash flow report; periodic review of loss reserves and amortization of any permitted loss reserve discounting, including appropriate actuarial certification; copies of all internal and external audit reports within five business days of issue; approval of all transactions exceeding pre-determined thresholds; and identification of prohibited transactions.

G. Corporate Governance: Description of proposed governance and internal controls.
D. RELEVANT NAIC MODEL LAWS & REGULATIONS AND STATE STATUTES

This appendix section provides current and relevant NAIC Model Laws and Regulations, as well as specific state statutes that pertain to an insurance department’s authority and responsibilities in dealing with troubled insurers. The sections are not intended to be all-inclusive, but rather a reference source.

1. NAIC MODEL LAWS & REGULATIONS

- Administrative Supervision Model Act
- Insurers Receivership Model Act
- Model Regulation to Define Standards and Commissioners’ Authority for Companies Deemed to be in a Hazardous Financial Condition
- Criminal Sanctions for Failure to Report Impairment Model Bill

2. RULES AND REGULATIONS OF THE STATE OF NEW YORK – TITLE 11 INSURANCE
DEPARTMENT – CHAPTER IV FINANCIAL CONDITION OF INSURER AND REPORTS TO
SUPERINTENDENT – SUBCHAPTER D REINSURANCE – PART 128 COMMUTATION OF
REINSURANCE AGREEMENTS (REGULATION 141)

(Text is current through February 15, 2008.)

Section 128.0. Purpose.
Section 1321 of the Insurance Law authorizes the Superintendent of Insurance to permit an impaired or insolvent domestic insurer or an impaired or insolvent United States branch of an alien insurer entered through this state to commute reinsurance agreements as a means of eliminating such an impairment or insolvency. This Part sets forth applicable standards that the superintendent will use in determining whether such commutations will be approved.

Section 128.1. Applicability.
This Part shall be applicable to any domestic insurer or United States branch of an alien insurer entered through this state, other than a life insurance company as defined in section 107(a)(28) of the Insurance Law.

Section 128.3. General provisions.
(a) Nothing in this Part shall require the superintendent to give prior consideration to a plan which contains the commutation of reinsurance agreements in lieu of taking any other action against an impaired or insolvent insurer in accordance with the Insurance Law, including proceeding against such insurer pursuant to article 74 of the Insurance Law.
(b) All the terms and conditions of any plan which contains the commutation of reinsurance agreements are subject to approval by the superintendent and no such plan will be approved by the superintendent unless the effect of the plan shall eliminate the insurer’s impairment or insolvency and restore the insurer’s surplus to policyholders to the greater of the minimum amount required to be maintained pursuant to the applicable provisions of the Insurance Law or to the amount the superintendent determines is adequate in relation to the insurer’s outstanding liabilities or financial needs. The determination regarding the adequacy of the insurer’s surplus to policyholders shall be made in accordance with the factors set forth in section 1104(c) of the Insurance Law.

Section 128.4. Requirements.
(a) Any plan submitted by an impaired or insolvent insurer which contains the commutation of reinsurance agreements shall provide that:
(1) the offer to commute reinsurance agreements is made to each and every ceding insurer to which the impaired or insolvent insurer has obligations;
(2) the terms of the commutation agreement to be offered to each and every ceding insurer are the same, except that the percentage by which the impaired or insolvent insurer proposes to discount obligations due to each
ceding insurer may vary in regard to the type of business being commuted. Any variance by type of business shall be reasonable, actuarially sound and supported by documentation justifying such a variance; and

(3) the impaired or insolvent insurer agrees to enter into a stipulation with the superintendent consenting to an order of rehabilitation or liquidation in the event that the implementation of the plan by the insurer does not result in restoring the insurer’s surplus to policyholders to the minimum required as determined in accordance with section 128.3(b) of this Part.

(b) Any plan submitted by an impaired or insolvent insurer which contains the commutation of reinsurance agreements shall include:

(1) a balance sheet that reflects the insurer’s impairment or insolvency as determined by the superintendent, a pro forma balance sheet reflecting the financial condition of such insurer subsequent to the effective date of the plan, and a reconciliation between both balance sheets;

(2) an exhibit setting forth the obligations due to each and every ceding insurer as of the proposed effective date of such plan and the consideration to be offered each and every ceding insurer for the commutation of such obligations. The obligations shall be classified in accordance with the categories contained in the definition set forth in section 128.2(c) of this Part; and

(3) details regarding any retrocessionaire’s participation in the plan.

Section 128.5. Procedures.

(a) Any plan which contains the commutation of reinsurance agreements shall be submitted to the superintendent by the impaired or insolvent insurer within a period designated by the superintendent, which shall not be more than 90 days from the determination of the insurer’s impairment or insolvency.

(b) If the superintendent has no objection to any of the plan’s terms and conditions and determines that the impaired or insolvent insurer’s surplus to policyholders will be restored to the minimum required as determined in accordance with section 128.3(b) of this Part, the proposed plan shall be approved and the insurer shall offer the commutation proposals to its ceding insurers. No commutation agreement shall become effective and no consideration for any commutation agreement shall be paid by the impaired or insolvent insurer until the superintendent determines that, as a result of the commutation proposals agreed to and executed by the ceding insurers, along with the effect of any other components of the plan, the impaired or insolvent insurer’s surplus to policyholders is restored to the minimum required.

(c) Within 10 days after the superintendent approves the plan, the impaired or insolvent insurer shall deliver the proposed commutation agreements to each ceding insurer. The terms of any commutation agreement shall not be subject to negotiation between the impaired or insolvent insurer and the ceding insurer.

(d) The impaired or insolvent insurer shall submit to the superintendent, within a designated period as determined by the superintendent, copies of the executed commutation agreements from those ceding insurers agreeing to the proposed terms, copies of rejections of the commutation agreements by those ceding insurers not agreeing to the proposed terms and copies of any other correspondence pertaining to all such offers made to the ceding insurers. This submission shall include a balance sheet that reflects the effect of the executed agreements, together with any other components of the plan, upon the insurer’s impairment or insolvency as determined by the superintendent. The insurer shall also submit copies of executed agreements with any retrocessionaires which either modify, commute or assign any retrocession agreement.

(e) If the superintendent determines that, as a result of the executed commutation agreements submitted by the impaired or insolvent insurer, together with any other components of the plan, the insurer’s surplus to policyholders is restored to the minimum required as determined in accordance with section 128.3(b) of this Part, the executed commutation agreements shall become effective.

(f) If the superintendent determines that, as a result of the executed commutation agreements submitted by the impaired or insolvent insurer, together with any other components of the plan, the insurer’s surplus to policyholders is not restored to the minimum required as determined in accordance with section 128.3(b) of this Part, the superintendent may proceed against the insurer in accordance with the stipulation executed pursuant to section 128.4(a)(3) of this Part.

Section 128.6. Reporting requirements.

Any impaired or insolvent insurer which eliminates such impairment or insolvency using commutations approved by the superintendent in accordance with the provisions of this Part shall exclude all historical data pertaining to such
commutations from the loss development schedules contained in future financial statements filed in accordance with applicable provisions of the Insurance Law. The historical data pertaining to the businesses commuted shall be reported on a supplemental loss development schedule in a form consistent with the schedule contained in statutory financial statements as filed with this department. The supplemental schedule shall show the aggregate experience of such business as of the effective date of commutation agreement.

3. RHODE ISLAND STATUTE AND REGULATION – VOLUNTARY RESTRUCTURING OF SOLVENT INSURERS

§ 27-14.5-2 Jurisdiction, venue, and court orders.
(a) The court considering applications brought under this chapter shall have the same jurisdiction as a court under chapter 14.3 of this title.
(b) Venue for all court proceedings under this chapter shall lie in the superior court for the county of Providence.
(c) The court may issue any order, process, or judgment that is necessary or appropriate to carry out the provisions of this chapter. No provision of this chapter providing for the raising of an issue by a party in interest shall be construed to preclude the court from, on its own motion, taking any action or making any determination necessary or appropriate to enforce or implement court orders or rules, or to prevent an abuse of process.

§ 27-14.5-3 Notice.
(a) Wherever in this chapter notice is required, the applicant shall, within ten (10) days of the event triggering the requirement, cause transmittal of the notice:
(1) By first class mail and facsimile to the insurance regulator in each jurisdiction in which the applicant is doing business;
(2) By first class mail to all guarantee associations;
(3) Pursuant to the notice provisions of reinsurance agreements or, where an agreement has no provision for notice, by first class mail to all reinsures of the applicant;
(4) By first class mail to all insurance agents or insurance producers of the applicant;
(5) By first class mail to all persons known or reasonably expected to have claims against the applicant including all policyholders, at their last known address as indicated by the records of the applicant;
(6) By first class mail to federal, state, and local government agencies and instrumentalities as their interests may arise; and
(7) By publication in a newspaper of general circulation in the state in which the applicant has its principal place of business and in any other locations that the court overseeing the proceeding deems appropriate.
(b) If notice is given in accordance with this section, any orders under this chapter shall be conclusive with respect to all claimants and policyholders, whether or not they received notice.
(c) Where this chapter requires that the applicant provide notice but the commissioner has been named receiver of the applicant, the commissioner shall provide the required notice.

§ 27-14.5-4 Commutation plans.
(a) Application. Any commercial run-off insurer may apply to the court for an order implementing a commutation plan.
(1) The applicant shall give notice of the application and proposed commutation plan.
(2) All creditors shall be given the opportunity to vote on the plan.
(3) All creditors, assumption policyholders, reinsurers, and guaranty associations shall be provided with access to the same information relating to the proposed plan and shall be given the opportunity to file comments or objections with the court.
(4) Approval of a commutation plan requires consent of: (i) fifty percent (50%) of each class of creditors; and (ii) the holders of seventy-five percent (75%) in value of the liabilities owed to each class of creditors.
(1) The court shall enter an implementation order if: (i) the plan is approved under subdivision (b)(4) of this section; and (ii) the court determines that implementation of the commutation plan would not materially adversely affect either the interests of objecting creditors or the interests of assumption policyholders.
(2) The implementation order shall:
(i) Order implementation of the commutation plan;

(ii) Subject to any limitations in the commutation plan, enjoin all litigation in all jurisdictions between the applicant and creditors other than with the leave of the court;

(iii) Require all creditors to submit information requested by the bar date specified in the plan;

(iv) Require that upon a noticed application, the applicant obtain court approval before making any payments to creditors other than, to the extent permitted under the commutation plan, payments in the ordinary course of business, this approval to be based upon a showing that the applicant’s assets exceed the payments required under the terms of the commutation plan as determined based upon the information submitted by creditors under paragraph (iii) of this subdivision;

(v) Release the applicant of all obligations to its creditors upon payment of the amounts specified in the commutation plan;

(vi) Require quarterly reports from the applicant to the court and commissioner regarding progress in implementing the plan; and

(vii) Be binding upon the applicant and upon all creditors and owners of the applicant, whether or not a particular creditor or owner is affected by the commutation plan or has accepted it or has filed any information on or before the bar date, and whether or not a creditor or owner ultimately receives any payments under the plan.

(3) The applicant shall give notice of entry of the order.

(1) Upon completion of the commutation plan, the applicant shall advise the court.

(2) The court shall then enter an order that:

(i) Is effective upon filing with the court proof that the applicant has provided notice of entry of the order;

(ii) Transfers those liabilities subject to an assumption reinsurance agreement to the assumption reinsurer, thereby notating the original policy by substituting the assumption reinsurer for the applicant and releasing the applicant of any liability relating to the transferred liabilities;

(iii) Assigns each assumption reinsurer the benefit of reinsurance on transferred liabilities, except that the assignment shall only be effective upon the consent of the reinsurer if either:

(A) The reinsurance contract requires that consent; or

(B) The consent would otherwise be required under applicable law; and

(iv) Either:

(A) The applicant be discharged from the proceeding without any liabilities; or

(B) The applicant be dissolved.

(3) The applicant shall provide notice of entry of the order.

(e) Reinsurance. Nothing in this chapter shall be construed as authorizing the applicant, or any other entity, to compel payment from a reinsurer on the basis of estimated incurred but not reported losses or loss expenses, or case reserves for unpaid losses and loss expenses.

(f) Modifications to plan. After provision of notice and an opportunity to object, and upon a showing that some material factor in approving the plan has changed, the court may modify or change a commutation plan, except that upon entry of an order under subdivision (d)(2) of this section, there shall be no recourse against the applicant’s owners absent a showing of fraud.

(1) The commissioner and guaranty funds shall have the right to intervene in any and all proceedings under this section; provided, that notwithstanding any provision of title 27, any action taken by a commercial run-off insurer to restructure pursuant to chapter 14.5, including the formation or re-activation of an insurance company for the sole purpose of entering into a voluntary restructuring shall not affect the guaranty fund coverage existing on the business of such commercial run-off insurer prior to the taking of such action.

(2) If, at any time, the conditions for placing an insurer in rehabilitation or liquidation specified in chapter 14.3 of this title exist, the commissioner may request and, upon a proper showing, the court shall order that the commissioner be named statutory receiver of the applicant.

(3) If no implementation order has been entered, then upon being named receiver, the commissioner may request, and if requested, the court shall order, that the proceeding under this chapter be converted to a rehabilitation or liquidation pursuant to chapter 14.3 of this title. If an implementation order has already been entered, then the court may order a conversion upon a showing that some material factor inapproving the original order has changed.
Attachment Two

(4) The commissioner, any creditor, or the court on its own motion may move to have the commissioner named as receiver. The court may enter such an order only upon finding either that one or more grounds for rehabilitation or liquidation specified in chapter 14.3 of this title exist or that the applicant has materially failed to follow the commutation plan or any other court instructions.

(5) Unless and until the commissioner is named receiver, the board of directors or other controlling body of the applicant shall remain in control of the applicant.

RI Regulation 68 – [link]

Section 2 Purpose
The purpose of this Regulation is to outline the procedural requirements for insurance companies applying for the implementation of a Commutation Plan pursuant to R.I. Gen. Laws § 27-14.5-1, et seq. and related matters.

4. PART VII OF THE FINANCIAL SERVICES AND MARKETS ACT 2000 (FSMA)

Superintendent Elizabeth Kelleher Dwyer
Commissioner Glen Mulready
Co-Chairs, NAIC Restructuring Mechanisms (E) Working Group

Attention: Dan Daveline (ddaveline@naic.org)

Dear Superintendent Dwyer and Commissioner Mulready,

The draft white paper of the Restructuring Mechanisms Working Group provides a comprehensive summation of activities leading to the development of insurance business transfer (IBT) and corporate division (CD) laws. In its review the Working Group concludes that each state will have different needs and approaches to these restructuring mechanisms and it is best left to the states to decide what is required for their purposes.

The recently concluded Allstate Division transaction in Illinois provides a good illustration of how these restructuring tools can be successfully implemented. While each transaction is unique depending on the specific proposals, the Allstate Division provides a solid framework for the division process in Illinois and other states with similar CD legislation and serves as a model for all transactions going forward.

Allstate Division

On February 2, 2021, Allstate Insurance Company filed the first plans of division in the U.S. market to restructure its insurance operations. The Allstate plans of division were filed with the Illinois Department of Insurance (the “Department”) pursuant to the Illinois Domestic Stock Company Division Law.

1 The plans involved eight insurance company subsidiaries under the Allstate, Esurance, and Encompass brands, (the “Dividing Companies”) with each filing a plan of division with the Illinois Director of Insurance (“Director”).

The “Dividing Companies” are: (i) Allstate Insurance Company ("AIC"); (ii) Allstate Indemnity Company; (iii) Allstate Property and Casualty Insurance Company; (iv) Allstate Fire and Casualty Insurance Company ("AFCIC"); (v)
The eight plans of division allocated certain portions of each company’s inactive Michigan automobile insurance business (the “Specified Policies”) to eight (8) new insurance companies created in the division process (“New Companies”). Immediately following the divisions, the eight New Companies merged into three newly formed Illinois domestic insurers pursuant to the Illinois Merger Law, so that there was one surviving insurer for each of the Allstate, Esurance and Encompass brands (the “Merger Companies”) Following the mergers all the assets, liabilities, contracts, and required surplus associated with the Specified Business allocated to the New Companies passed by operation of law to the Merger Companies. Upon the closing of the transaction, the Merger Companies continued to be wholly owned, indirect subsidiaries of Allstate, which is the ultimate controlling person of each of the Merger Companies.

**Division Transaction review and implementation**

Central to any successful restructuring transaction is the effective program management of all the subsidiary projects and tasks involved. Keeping the program and all the relevant staff and advisers focused and on track is fundamental. Arguably the most important roles in delivering a successful transfer on time are those of the project manager, legal advisers, financial advisors and other experts. These key appointments must be considered carefully by the parties to the transfer.

There are a number of key elements to a restructuring transaction using either the IBT or CD legislation that include:

- **a)** Information gathering
- **b)** Selection and appointment of advisers
- **c)** Assessment of capital adequacy and solvency
- **d)** Assessment of notice requirements
- **e)** Assessment of the impact on affected policyholders
- **f)** Contingency planning

For IBT and CD transactions, an important consideration for the regulator is the scale of the transaction. Scale is defined by gross liabilities, obligations to policyholders, other creditors, reinsurance and other assets. Scale will affect the cost of the transfer, and what the parties must do to satisfy the regulatory review. Generally, a regulator will adopt a principle of proportionality, namely the bigger, more complex or controversial a transaction is, then the greater the degree of regulatory scrutiny.

The Allstate transaction was a large, relatively complex transaction and the first of its kind in the U.S. As a result, both the Department and Allstate went above and beyond the legislative

---

Encompass Indemnity Company; (vi) Encompass Property and Casualty Company; (vii) Esurance Insurance Company; and (viii) Esurance Property and Casualty Insurance Company. Each Dividing Company is an Illinois domestic insurer, holding a license from the IL DOI, and is licensed as a foreign insurer in Michigan.
requirements of the Illinois Division law in connection with the financial review and notice requirements.

For the Allstate Division, the Department engaged me as project manager to assist in the implementation of the legislation. In addition to my engagement, the Department also engaged Stephen Schwab of DLA Piper as outside counsel to represent the Department. To support the financial review, the Department retained Risk & Regulatory Consulting (“RRC”) as its independent actuarial consultant to focus on reserves and capital. RRC conducted an independent reserve analysis and evaluated the initial capital levels of the Merger Companies.

The Department’s review focused on policyholder and claimant protection and prudent financial analyses. The key areas considered under the financial evaluation scope included:

- Capital adequacy
- Loss reserves
- Financial modelling and projections

Allstate conducted its own internal analysis to determine the capital adequacy of the Merger Companies. Allstate utilized several tools and methodologies, including: (1) Allstate’s estimate of required capital using A.M. Best’s BCAR framework; (2) the NAIC RBC ratio; and (3) a peer company review.

In addition to Allstate’s internal analyses, Allstate retained outside consultants including A.M. Best, a rating agency, to provide an independent rating analysis and a preliminary credit assessment for the Merger Company group. Allstate also retained Lazard, a financial advisory and asset management firm, to analyze the capital adequacy of the Merger Companies. As part of its mandate, Lazard was charged with preparing a report analyzing the business and financial condition of the Merger Companies and assessing this information against certain financial aspects of the Division Law’s requirements. Specifically, Lazard analyzed pro forma financial metrics as provided by Allstate. Lazard also performed a peer benchmarking analysis, comparing key pro forma financial metrics of the Merger Companies to public information regarding selected comparable companies. After consideration of all findings presented, the Department concluded that the initial capital levels were reasonable.

Early engagement with the Department was key to the success of the Allstate transaction. Allstate worked closely with the Department providing detailed information regarding the business to be divided, the assets to be allocated to support the business, how the companies were to be capitalized, and how policyholder considerations were to be addressed. Allstate’s comprehensive planning identified potential sources of areas of objection, and, prior to the hearing, Allstate took the necessary actions to address these concerns. All parties worked together to complete the project and obtain necessary approvals within Allstate’s requested timeline. The collaborative working environment enabled this transaction to be completed on Allstate’s time schedule notwithstanding that it was executed during a Pandemic and was the first transaction of its kind in the U.S.
Notice and Hearing

The Illinois Division Law requires a hearing only if the Director deems it to be in the public interest or if requested by the Dividing Company. Also notice is not required unless the Director deems it to be in the public interest. Because of the significance of this being the first division transaction undertaken in the United States and Allstate’s desire for transparency, Allstate requested a public hearing. Allstate’s division plans also included a Communication Plan that provided notice to affected policyholders, guaranty funds, the Michigan regulator and other relevant stakeholders. Allstate also provided broad public notice through ads published twice in each of The Chicago Tribune and The Detroit Free Press.

The Department closely reviewed and approved Allstate’s Communication Plan and the notice of hearing that was provided to the affected policyholders and claimants, and other stakeholders. In addition, Allstate requested that the Hearing Officer, Judge MaryAnne Mason (ret.), review the notice of hearing. The hearing was held virtually by Zoom and provided the opportunity for any person to submit a comment or intervene in the proceedings.

Any interested person was able to attend the hearing via a Zoom link. No objections or other comments were submitted to the Hearing Officer. On March 19, 2021, based on the Hearing Officer’s Findings of Fact and Conclusions of Law, the Director issued an order approving the eight Plans of Division.

Conclusion

The key “lessons learned” from this transaction include the following:

- Early engagement with the regulator is essential
- Careful selection of project manager, consultants and experts is key
- Communication and transparency are important
- A collaborative working environment facilitates timely execution

Allstate’s Division transaction is a landmark transaction for the insurance industry to successfully implement the Illinois Division legislation in a complex transaction structure. Importantly, the transaction was achieved by Allstate and the Illinois Department working together with their consultants and representatives to put forth a transaction structure that allowed Allstate to accomplish its corporate objectives and better position itself for the future while ensuring that the interests of policyholders and claimants were properly protected.

Respectfully submitted,

Luann Petrellis

Comments to Restructuring Mechanisms Working Group draft white paper

Dear Superintendent Dwyer and Commissioner Mulready:

Thank you to the entire working group and NAIC staff for the time and effort directed into the development of this white paper. As you have recognized, the need for restructuring transactions within the insurance industry continues to grow. The growth of the runoff industry reflects the success this market has achieved to improve the capital and managerial efficiencies of the insurance industry. We appreciate your leadership and recognition of the importance of preparing US regulators for the continued need for these types of transactions.

Enstar is a publicly traded global insurance group and market leader in the active runoff management industry. We recognize that it is often difficult to quantify and differentiate between active runoff management insurers, active insurers that also hold business in runoff, and companies that have transitioned from active insuring to managing their own runoff. As the working group continues to pursue its charges, we would appreciate the opportunity to address how these differences may be relevant to the recommendations of the working group. We believe that these distinctions may give additional insight into the purposes and value of the restructuring transactions identified within the white paper. These distinctions are likely to be developed further by the Restructuring Mechanisms Subgroup in pursuit of its charges, and we hope that this pending work will be added to the white paper once completed.

We appreciate that the white paper recognizes the importance of state licensing on companies looking to aggregate runoff business into a single company. We agree that it is in the interests of policyholders, regulators, and insurers for companies to be able to obtain insurance licenses despite operating a business model that would not necessarily require a license to be granted. We hope that the working group will consider taking on a
charge or referral on this issue and will make a place in this white paper for any additional insights developed during this process.

We have valued and enjoyed the opportunities offered to us to share our perspective on the runoff industry with the working group, and we remain available should there be any further opportunities for us to assist the working group and its subgroups with their charges.

Sincerely,

Robert Redpath
US Legal Director

Re: Comment on Draft Restructuring Mechanisms White Paper

Dear Restructuring Mechanisms (E) Working Group:

The Virginia State Corporation Commission’s (the “Commission”) Bureau of Insurance (the “Bureau”) appreciates the efforts of the Restructuring Mechanisms (E) Working Group (the “Working Group”) to compile its thoughtful draft white paper on the complex topic of Restructuring Mechanisms (the “White Paper”). The Bureau submits this comment to bring to the attention of the Working Group both § 38.2-136 of the Code of Virginia (the “Code”), which is in essence an anti-novation statute, and how that section of the Code governed the Commission’s approach to a prior Insurance Business Transfer (“IBT”) involving Virginia policies.

The Bureau respectfully proposes that the White Paper should include a discussion of anti-novation statutes, like § 38.2-136 of the Code, because these statutes and analogous legal principles will influence the sections on “Assumption Reinsurance,” “Guarantee Association Issues,” and “How Other Jurisdictions Might Analyze IBT or CD Decisions from Other States.”

**Background:**

*Assumption Reinsurance Model Act.* As the White Paper notes, ten states have enacted the NAIC Assumption Reinsurance Model Act (“Model Act”). Under the Model Act, individual policyholders are notified of a proposed transfer of their policy and “have the right to reject the transfer and novation of their contracts of insurance.” Model Act §§ 4, 5. This core requirement of policyholder consent, however, is not only found in states that have adopted the Model Act. While the details will vary, a state may also require such consent through independent anti-novation statutes or the application of common law principles. In Virginia, the principle of policyholder consent is codified in § 38.2-136 of the Code.

*Section 38.2-136 of the Code.* In relevant part, § 38.2-136 of the Code prohibits the assumption of policy obligations on risks located in Virginia as direct obligations unless (1) the
policyholder consents and (2) the assuming insurer is properly licensed in Virginia. See § 38.2-136 (B) of the Code. Absent policyholder consent, such a transaction requires an order from the Commission approving the transaction. The Commission may enter such an order whenever (i) the Commission finds a licensed insurer to be impaired or in hazardous financial condition, (ii) a delinquency proceeding has been instituted against the licensed insurer for the purpose of conserving, rehabilitating, or liquidating the insurer, or (iii) the Commission finds, after giving the insurer notice and an opportunity to be heard, that the transfer of the contracts is in the best interests of the policyholders. See § 38.2-136 (C) of the Code. Additionally, if granting an approval order, the Commission is required to ensure that policyholders do not lose any rights or claims afforded under their original policies by the Virginia Property and Casualty Insurance Guaranty Association or the Virginia Life, Accident and Sickness Insurance Guaranty Association. Id.

Virginia’s Application of § 38.2-136 of the Code to IBTs. As noted in the section of the White Paper on “Transactions Completed to Date:”

In 2020, the District Court of Oklahoma County approved Providence Washington Insurance Company’s (“PWIC”) IBT plan. The plan transferred all the insurance and reinsurance business underwritten by PWIC, a Rhode Island domestic insurer, to Yosemite Insurance Company (“Yosemite”). (White Paper at 12.)

The transferred business, however, included a number of Virginia workers’ compensation policies. As such, the Bureau informed PWIC and Yosemite that the IBT—as to the Virginia policies—required policyholder consent under § 38.2-136 (B) of the Code because it involved the cessation or assumption of policy obligations on risks located in Virginia. In response, PWIC and Yosemite requested that the Commission waive the policyholder consent requirement by finding that the transfer of the Virginia policies was in the best interests of the policyholders pursuant to § 38.2-136 (C)(iii) of the Code. The Commission found that the transfer of Virginia policies was subject to the requirements of § 38.2-136 (B) of the Code (i.e. policyholder consent and proper licensure), but approved the transfer pursuant to § 38.2-136 (C)(iii) of the Code (i.e. best interests of the policyholders). See Order Approving Application, Case No. INS-2021-00055 (June 17, 2021).

Effect on the White Paper:

The existence of § 38.2-136 of the Code and its application to the PWIC / Yosemite IBT raise important considerations with respect to three sections of the White Paper.

First, in the section on Assumption Reinsurance, the Bureau would encourage the Working Group to not only discuss states with the Model Act, but to also consider jurisdictions—like Virginia—that have independent anti-novation provisions or principles. That addition will prevent any misimpression that the important issues raised in this section only exist in the ten states that have adopted the Model Act.

1 While requesting this order, PWIC and Yosemite did not concede that such an order was necessary.
2 Included with this comment for reference are (1) a copy of the text of § 38.2-136 of the Code and (2) the Commission’s order regarding the PWIC / Yosemite IBT.
Furthermore, this section could be clarified as to whether it is (a) only raising the issue of how statutory restructuring mechanisms would interact with the Model Act if both were included within a single jurisdiction’s laws or (b) also addressing how one state’s statutory restructuring mechanism would interact with the Model Act or an independent anti-novation statute or principle in another jurisdiction. If the White Paper is only addressing the former, the Bureau would propose also flagging the even more complex issue raised by a multi-jurisdictional analysis (e.g. if State A had an IBT statute and State B had the Model Act or an anti-novation statute, how would those statutes interact if State A attempted to approve the transfer of policies located in State B). Understanding the complexity of that multi-state scenario will likely be important for regulators weighing the persuasiveness of the suggestion by some stakeholders noted in the White Paper that the “statutes coexist.” (White Paper at 15.)

The interaction of these statutes can also raise thorny legal and factual issues worth highlighting in the White Paper. Most notably, there are varying standards for approving a transaction. As explained by the White Paper, various IBT statutes require that there be “no material adverse impact on affected policyholders.” (White Paper at 10.) For Virginia to approve an IBT authorized by another jurisdiction with respect to Virginia policyholders, however, the Commission must find the transfer of the Virginia policies to be “in the best interests of the policyholders.” § 38.2-136 (C)(iii) of the Code.3 Simply put, those pursuing novel statutory restructuring mechanisms should be aware that other jurisdictions—like Virginia—may hold the transfer to a higher standard.4

Finally, the White Paper’s observation in this section that “[t]he issue has not yet been addressed by any court nor raised in the proceedings on restructurings,” could be updated to reflect that the Commission, which acts as a court of record, applied Virginia’s anti-novation statute to the PWIC / Yosemite IBT. (White Paper at 15.)

Second, in Virginia and any states with a similar statute, the guaranty association concerns identified in the White Paper’s section on “Guarantee Association Issues” take on added importance. The Bureau certainly agrees with the White Paper’s position that “guaranty association coverage should not be reduced or eliminated by the restructuring.” (White Paper at 13.) Under Virginia law, however, the bar is higher for a transaction that is dependent on an approval order pursuant to § 38.2-136 (C) of the Code due to the lack of policyholder consent. Such an order could not be issued and, therefore, such a restructuring could not occur unless the Commission determined that policyholders would not lose any rights or claims afforded under their original policies by the Virginia guaranty associations.5 As a result, the language in this

---

3 In certain circumstances, the Model Act also permits the “transfer and novation” of policies “notwithstanding the provisions of [the Model Act]” if such a transfer “is in the best interest of the policyholders.” Model Act § 7.

4 As a practical matter, this difference in standards (“no material adverse impact” v. “best interests”) may result in the record from an IBT proceeding standing alone not satisfying the heightened standard found in another state.

5 With respect to the PWIC / Yosemite IBT, which involved two insurers who were both licensed in Virginia and guaranty coverage from the Virginia Property and Casualty Insurance Guaranty Association, the Commission determined “[b]ased upon the Bureau’s review of the Application and the Applicants”
section and the corresponding recommendation in Section 6 could be strengthened to reflect that unless and until guaranty association coverage can be ensured, transactions involving policies in states with anti-novation statutes will not be possible.  

* * *

Third, Virginia’s treatment of the PWIC / Yosemite IBT should potentially be referenced in the section on “How Other Jurisdictions Might Analyze IBT or CD Decisions from Other States.” The Commission’s order is one concrete example not just of how another jurisdiction might respond to an IBT, but how another jurisdiction did in fact respond. Regulators approving IBTs and insurers looking to utilize them should be aware that if policies from a state with an anti-novation statute or principle are involved, they are likely to see a response from those jurisdictions similar to Virginia’s response to the PWIC / Yosemite IBT.

* * *

The Bureau again thanks the Working Group for its work on this complex issue and appreciates the opportunity to comment on the draft White Paper. If you have any questions regarding this comment, the Bureau’s staff would be happy to discuss the matter with you and/or provide additional information regarding the above referenced proceedings before the Commission.

Sincerely,

Scott A. White
Commissioner of Insurance

---

representations” that “the Virginia policyholders will not lose any rights or claims afforded under their original contracts.” Order Approving Application, Case No. INS-2021-0005, at 3.

* For example, the recommendations section currently advises that “regulators should very carefully consider how plans presented address the guaranty association issues to assure that consumers are not harmed by the transaction.” (White Paper at 19.) This advice could be expanded to also advise states to consider whether a transfer of policies in other jurisdictions will even be possible due to the uncertainty around guaranty association coverage in certain circumstances.
§ 38.2-136. Reinsurance

A. Except as otherwise provided in this title, any insurer licensed to transact the business of insurance in this Commonwealth may, by policy, treaty or other agreement, cede to or accept from any insurer reinsurance upon the whole or any part of any risk, with or without contingent liability or participation, and, if a mutual insurer, with or without membership therein.

B. No insurer licensed in this Commonwealth shall cede or assume policy obligations on risks located in this Commonwealth whereby the assuming insurer assumes the policy obligations of the ceding insurer as direct obligations of the assuming insurer to the payees under the policies and in substitution for the obligations of the ceding insurer to the payees, unless: (i) the policyholder has consented to the assumption and (ii) the assuming insurer is licensed in this Commonwealth to write the class or classes of insurance applicable to the policy obligations assumed.

C. Notwithstanding the provisions of subsection B, the transfer of risk under any reinsurance agreement may be effected by entry of an order by the Commission approving the transaction whenever (i) the Commission finds a licensed insurer to be impaired or in hazardous financial condition, (ii) a delinquency proceeding has been instituted against the licensed insurer for the purpose of conserving, rehabilitating, or liquidating the insurer, or (iii) the Commission finds, after giving the insurer notice and an opportunity to be heard, that the transfer of the contracts is in the best interests of the policyholders. In granting any such approval, the Commission shall ensure that policyholders do not lose any rights or claims afforded under their original policies pursuant to Chapter 16 (§ 38.2-1600 et seq.) or 17 (§ 38.2-1700 et seq.) of this title. Prior to granting an approval under clause (iii), the Commission shall consider whether there is a reasonable expectation that the ceding insurer may not be able to meet its obligations to all policyholders; whether the ceding insurer’s continued operation in this Commonwealth may become hazardous to policyholders, creditors and the public in this Commonwealth; or whether the ceding insurer may otherwise be unable to comply with the provisions of this title.

The chapters of the acts of assembly referenced in the historical citation at the end of this section(s) may not constitute a comprehensive list of such chapters and may exclude chapters whose provisions have expired.
APPLICATION OF

YOSEMITE INSURANCE COMPANY
AND PROVIDENCE WASHINGTON
INSURANCE COMPANY

For approval of the transfer of certain
insurance policies pursuant to
§ 38.2-136 (C)(iii) of the Code of Virginia

ORDER APPROVING APPLICATION

By Application filed with the State Corporation Commission ("Commission") of the
Commonwealth of Virginia ("Virginia") dated April 14, 2021, Yosemite Insurance Company, an
Oklahoma-domiciled insurer ("Yosemite"), and Providence Washington Insurance Company, a
Rhode Island-domiciled insurer ("PWIC" together with Yosemite, "Applicants"), requested
approval of the transfer of 251 Virginia workers' compensation policies from PWIC to Yosemite
("Virginia Transfer") pursuant to § 38.2-136 (C)(iii) of the Code of Virginia ("Code").

Yosemite and PWIC are affiliates within the Enstar Group ("Enstar") and both are licensed to
transact the business of insurance in Virginia and are in good standing.

The transfer of these Virginia workers' compensation policies is part of an Insurance
Business Transfer ("IBT") that PWIC filed with the Oklahoma Insurance Department on
November 13, 2019 pursuant to Oklahoma's Insurance Business Transfer Act. On November 26,
2019, the Commissioner of the Oklahoma Insurance Department approved the IBT after

1 PWIC previously obtained the Virginia policies in question from Reciprocal of America, in receivership, pursuant
to a Loss Portfolio Transfer Agreement approved by an order of the Commission on June 16, 2014. See Final
Order, Case No. INS-2013-00190 at 9 (June 16, 2014) (adopting Hearing Examiner's recommendations and finding
that the "Deputy Receiver has met all the requirements of § 38.2-136 (C) of the Code.").
concluding it would not have a material adverse impact on the interests of the policyholders. On October 15, 2020, the District Court of Oklahoma County approved the IBT following an approval hearing.

The Commission’s Bureau of Insurance (“Bureau”) informed Yosemite and PWIC that the IBT required policyholder consent under § 38.2-136 (B) of the Code to the extent that it involved the cessation or assumption of policy obligations on risks located in Virginia whereby the assuming insurer assumes the policy obligations of the ceding insurer as direct obligations.

Pursuant to § 38.2-136 (C)(iii) of the Code, the Applicants have requested that the Commission waive § 38.2-136 (B) of the Code’s policyholder consent requirement for the Virginia Transfer by finding that the transfer of these policies is in the best interests of the policyholders. The Applicants have waived the right to a hearing under § 38.2-136 (C)(iii) of the Code in their application.

In support of the Application, Yosemite and PWIC state, *inter alia*, that during the Oklahoma IBT proceedings notice of the Virginia Transfer was mailed to the Virginia policyholders and that no policyholder objected prior to or during the approval hearing held before the District Court of Oklahoma County.

Following submission of the Application, Yosemite and PWIC informed the Bureau on May 14, 2021 that Enstar is in the process of selling PWIC and had entered into a stock purchase agreement with Everspan Insurance Company (“Everspan”). As a result, if the Virginia Transfer were not to occur, the Virginia workers’ compensation policies in question would leave Enstar and go to Everspan with PWIC.

While requesting an order pursuant to § 38.2-136 (C)(iii) of the Code, the Applicants do not concede that such an order is necessary for the Virginia Transfer. *See Application at 4.*
The Bureau, based upon the Application, the record in the Oklahoma IBT proceedings and the information available in this matter, has recommended that the Virginia Transfer is in the best interests of the Virginia policyholders. Based upon the Bureau's review of the Application and the Applicants' representations, the Virginia policyholders will not lose any rights or claims afforded under their original contracts pursuant to Chapter 16 of Title 38.2 of the Code.

NOW THE COMMISSION, having considered the Application, the recommendation of the Bureau that the Virginia Transfer is in the best interests of the Virginia policyholders, and the law applicable hereto, is of the opinion that the Virginia Transfer is subject to the requirements of § 38.2-136 (B) of the Code, and that the Application should be approved.

Accordingly, IT IS ORDERED THAT the Application of Yosemite Insurance Company and Providence Washington Insurance Company for the approval of the transfer of 251 Virginia workers' compensation policies from PWIC to Yosemite pursuant to § 38.2-136 (C)(iii) of the Code be, and it is hereby, APPROVED.

A COPY hereof shall be sent by the Clerk of the Commission by electronic mail to: Scott J. Sorkin, Esquire, Bland & Sorkin, P.C., at ssorkin@blandsorkin.com, 5398 Twin Hickory Road, Glen Allen, Virginia 23059; Robert Redpath, Senior Vice President and U.S. Legal Director, Enstar (US) Inc., at robert.redpath@enstargroup.com, 475 Kilvert Street, Suite 330, Warwick, Rhode Island 02886; and a copy shall be delivered to the Commission's Office of General Counsel in care of Attorney, Thomas J. Sanford and the Bureau of Insurance in care of Deputy Commissioner Douglas C. Stolte.
Wayne Mehlman  
Senior Counsel

RE: Draft White Paper on Restructuring Mechanisms

Superintendent Dwyer and Commissioner Mulready:

The American Council of Life Insurers (ACLI) would like to thank you for this opportunity to comment on the Restructuring Mechanisms Working Group’s draft White Paper on Restructuring Mechanisms.

ACLI believes that certain guardrails, including important process, review, and consumer and company solvency protections, must be in place before a proposed insurance business transfer (IBT) or corporate division transaction can be approved by a state regulator (and in the case of an IBT, by a state court).

Accordingly, in 2019, ACLI’s Board of Directors adopted a comprehensive set of Principles and Guidelines on Insurance Business Transfer & Corporate Division Legislation that ACLI and its members would refer to when evaluating potential legislation, regulations and models. As you finalize this White Paper, we strongly encourage the Working Group to incorporate the following Principles and Guidelines:

Policyholders and Other Impacted Stakeholders Must Have Access to the Process

- All transactions must be subject to a public hearing.
- Individual policyholders, reinsurers, applicable state regulators, guaranty associations, and any other persons determined by the regulator must receive notice of the proposed transaction.

The Regulatory Review Process Must Be Robust

- The Commissioner’s review process must include certain findings, including:
  - The financial condition of an involved insurer will not jeopardize the financial stability of the insurers, or prejudice the interest of its policyholders or reinsurers;
An involved insurer will not have plans or proposals to liquidate another involved insurer, sell its assets, or consolidate or merge or to make any other material change in its business or corporate structure or management, that are unfair or unreasonable to policyholders, reinsurers or the public;

- The involved insurers will be solvent at the time of the transaction;
- The assets allocated to the involved insurers will not be, at the time of the transaction, unreasonably small in relation to the business and transaction;
- The terms of the transaction will not be unfair or unreasonable to any involved insurer’s policyholders or reinsurers;
- The competence, experience and integrity of the persons who would control the operation of an involved insurer are such that it would be in the interest of the involved insurers’ policyholders and reinsurers and the general public to permit the transfer; and
- The transaction is not likely to be hazardous or prejudicial to the insurance-buying public;
- The interest of the policyholders of an involved insurer that may become policyholders of another insurer will be adequately protected; and
- The transaction is not being made for purposes of hindering, delaying or defrauding any policyholders or reinsurers.

In determining whether to approve the transaction, the regulator must consider, among other things, all assets, liabilities, cash flows and the nature and composition of the assets proposed to be transferred including, without limitation:

- An assessment of the risks and quality (including liquidity and marketability) of the proposed transfer portfolio, and
- Consideration of asset/liability matching and the treatment of the material elements of the portfolio for purposes of statutory accounting.

Independent Experts Must be Utilized as Part of the Process

- An independent expert is required for all transactions and the expert’s report must address:
  - Business purposes of the proposed transaction;
  - Capital adequacy and risk-based capital (including consideration of the effects of asset quality, non-admitted assets and actuarial stresses to reserve assumptions);
  - Cash flow and reserve adequacy testing (including consideration of the effects of diversification on policy liabilities);
  - The impact, if any, of concentration of lines of business following the transaction;
  - Business plans; and
  - Management’s competence, experience and integrity.

Court Approval is Required for Insurance Business Transfer Transactions, but Not Necessarily for Corporate Division Transactions

- For insurance business transfer transactions, court approval is required.
- For corporate division transactions, court approval is not required, provided the Principles relating to public hearing, notice, and independent expert report(s) are included in the analysis.

Policyholders and the State-Based Guaranty Association System Should Be Protected

- Involved insurers must be licensed such that policyholders maintain guaranty association coverage in the same state in which they had it immediately prior to the transaction.

In addition, we have some specific comments and suggestions:

- On Pages 4 and 10, Arkansas has not yet enacted corporate division legislation, while Colorado, Georgia and Nebraska have.
- On Page 5, in the first paragraph, the types of runoff business mentioned in the third sentence should also refer to life insurance business.
- On Page 6, in the second full paragraph, it should read: “subject to approval of a court and an independent expert review”.
- On Page 9, in the third full paragraph, it should refer to “UK’s Part VII” instead of “UK’s Part IV”.
- On Page 10, the second paragraph should refer to an “independent expert report”.
- On Page 10, (2) should read: “the resulting insurer would not be eligible to receive a license in the same state(s) as the dividing insurer”.
- On Page 11, in the last paragraph, it should be noted that Colorado’s and Iowa’s corporate division statutes contain independent expert requirements.
- On Pages 13 and 14, it should refer to “guaranty associations” instead of “guarantee associations”.
- On Page 15, at the end of the second paragraph under “Separate Issues in Long-Term Care”, we suggest adding the following sentence: “That being said, there should be increased scrutiny for any block transfers, not just those relating to long-term care insurance, that are currently in a projected deficit situation”.
- On Page 17, the last paragraph should refer to “Allianz” instead of “Allainz”.
- On Page 18, in the Subgroup’s charge, the sentence “Complete by the 2021 Summer National Meeting” should be deleted.
- On Page 19, in the first paragraph under “Guaranty Association Issues”, it states that “A number of states – Connecticut, California, and Oklahoma – have enacted statutory solutions to these issues.” We are not aware of any such solutions and ask that this sentence either be clarified or deleted. In addition, it should mention that some states, such as Colorado and Illinois, and to a certain degree, Arkansas, require an assuming or resulting insurer to be licensed in the the same state(s) as the transferring or dividing insurer.
- On Page 19, under “Statutory Minimums”, we suggest adding the following after the first paragraph:

> The American Council of Life Insurers (ACLI) has developed a set of Principles and Guidelines on Insurance Business Transfers and Corporate Division Legislation which includes the following principles:
> - Policyholders and other impacted stakeholders must have access to the process.
> - The regulatory review process must be robust.
> - Independent experts must be utilized as part of the process.
> - Court approval is required for insurance business transfer transactions, but not necessarily for corporate division transactions.
> - Policyholders and the state-based guaranty association system should be protected.

- On Page 20, after the first sentence that ends with “without a history with the insurer”, we suggest adding the following sentence: “Some stakeholders, however, believe that the expert should not be an employee of the department that is reviewing the proposed IBT or CD transaction and should be independent of the insurer or sponsor who is proposing the transaction.”

Thanks again for this opportunity to provide comments. If you have any questions, feel free to contact me at waynemehlman@acli.com or 202-624-2135.

Sincerely,

Wayne A. Mehlman

Re: NAIC Restructuring Mechanisms Working Group White Paper

Thank you for the opportunity to comment on the NAIC's Draft Restructuring Mechanisms White Paper. Swiss Re appreciates the ongoing effort the NAIC is making to identify and address the critical issues in the restructuring mechanisms arena. Our hope is that the White Paper serves as a basis for continuing discussions about these issues and that the NAIC devote time and effort to answering the questions identified and developing any guidance necessary to meet state insurance regulators' financial solvency and consumer protection objectives.

Overall, the White Paper accurately identifies areas in need of additional scrutiny and attention. In addition to the issues delineated, an assessment of the use of protected cells in connection with an insurance business transfer was previously deferred but is still among the issues to be reviewed by the Working Group.

As the NAIC has done with other issues, the creation of specific, technical ad hoc groups representing all stakeholders' interests could be a useful approach that would bring the necessary resources to aid in completing the NAIC's work. Ultimately, a more fulsome discussion of the issues and concerns, pro and con, will benefit regulators, policyholders, and insurers.

Swiss Re supports additional work being done in the areas identified in the White Paper – financial standards, guaranty funds, statutory minimum requirements, and licensure.

Financial Standards

The NAIC Restructuring Mechanisms Subgroup is already tasked with developing best practices to be used in considering the approval of proposed restructuring transactions. Providing clarity
on what decision-making criteria should be applied to insurance business transfers and corporate divisions will establish a known baseline on which all stakeholders can rely in evaluating the merits of any proposed transaction. In addition to the areas of reserves, capital, and liquidity already identified, the Subgroup may want to consider whether different standards should be applied to intragroup versus third-party transfers, including the role, if any, of third-party guarantees or reinsurance.

**Guaranty Funds**

In addition to perfecting guaranty fund statutory language to address the possibility of bulk orphan policyholders and clarify that no coverage will be eliminated, or new coverage created, as the result of a restructuring transaction, the NAIC should discuss whether guaranty fund considerations should also be evaluated in the costing/value of a transaction.

**Statutory Minimum Requirements**

When discussing and developing statutory minimum requirements, the NAIC should consider whether review procedures should differ by line or type of business — consumer P&C, life and health, specialty lines, reinsurance, commercial lines, surplus lines, etc. However, even if such differing requirements are warranted by line or type of business, the NAIC should consider whether statutory minimums should be applied to both insurance business transfers and corporate divisions with some degree of parity. Arguably regulators do not want to create a situation that encourages regulatory arbitrage between the two mechanisms, where a transaction is accomplished under one statute when it would not meet the statutory minimum standards under the other.

**Licensure**

Licensing of insurers seeking to engage in restructuring transactions should be considered in parallel with other issues. In addition to reviewing the appropriate application of licensing rules, the Working Group should consider licensure in the other workstreams involving financial standards, guaranty funds, and statutory minimums.

Swiss Re looks forward to the continuing dialogue on restructuring mechanisms. If you have any questions, please contact me.

Yours sincerely,

Matthew Wulf

Elizabeth Kelleher Dwyer
Glen Mulready
Co-Chairs, NAIC Restructuring Mechanisms (E) Working Group

Attention: Dan Daveline (ddaveline@naic.org)
Casey McGraw (cmcgraw@naic.org)

Dear Superintendent Dwyer and Commissioner Mulready:

The undersigned companies support the important work being done by the Restructuring Mechanisms (E) Working Group and are grateful for the opportunity to deliver these comments on the draft White Paper. The United States insurance marketplace is highly competitive and we strongly believe that policyholders choose their insurers for very specific reasons, including the insurer’s financial strength and market reputation. A process that substitutes a new insurer for the client’s chosen insurer, without consent, is a significant event that needs to be approached with great respect and with the best interest of the policyholder in mind.

Need for Urgency on the Development of National Accreditation Standards.

As the White Paper highlights, several states have enacted insurance business transfer (“IBT”) and corporate division (“CD”) statutes. Indeed, some states have already approved transactions. As we have emphasized in our prior comment letters (attached for reference), IBT and CD statutes raise significant consumer protection and insurance regulatory framework issues that should be addressed in a nationally uniform manner before any additional transactions are approved, especially for long-duration business such as life, annuity, and long-term care insurance. As we have seen with Senior Health Insurance Company of Pennsylvania (“SHIP”, which was formed in 2008 as a result of what many consider to be one of the first US insurance restructuring transactions), even the best intentioned proposals that receive expert regulatory review have the potential to go awry. The fact is that isolating capital-intensive long-duration business that must endure many different economic cycles is inherently risky. Although best practices and accreditation standards cannot guarantee that every approved restructuring transaction will result in long-term success, the existence of those tools will help ensure consistency across all states, instill confidence in the process, and best ensure that only those proposals that have the highest likelihood of long-term success will be approved. Further, these tools will allow the state-based system to defend its processes if an insurer involved in a restructuring transaction ultimately becomes insolvent.

The Restructuring Mechanism Subgroup has been charged with developing best practices for approving restructuring transactions, including, among other things, the expected level of reserves and capital and the adequacy of long-term liquidity – topics not addressed in the White
Paper. Although COVID understandably delayed many work streams, we note that the initial deadline for this work was Summer 2021. We respectfully request that the White Paper make clear that the work of the Subgroup will be completed by the Summer 2022 NAIC national meeting so that these best practices can be implemented. Our prior comment letters include several specific recommendations for the Subgroup to consider.

It is also important to note that proponents of restructuring laws point to Part VII of the UK Financial Services and Markets Act of 2000 (“Part VII”), and its success to date, to support state adoption of IBT and CD laws, yet safeguards in US laws enacted to date often fall significantly short of UK Part VII. If IBT and CD laws are to be affected in the US, we agree that Part VII, in its entirety with all safeguards, should be used as a regulatory baseline for US laws. Accordingly, we further believe that the White Paper should recommend the development of accreditation requirements that substantially incorporate, at a minimum, the UK Part VII’s robust regulatory and court review process. Accreditation standards would provide uniformity, consistency, and less uncertainty for the industry and consumers, and would preclude forum shopping by insurers seeking approval for an IBT or CD transaction.

*Focus on Potential Adverse Consequences to Policyholders of Long Duration Products and Development of Accreditation Requirements.*

Although the White Paper discusses the advantages of restructuring to both companies and consumers, we believe that it should more fully discuss the potential adverse consequences to policyholders of longer duration personal lines insurance products and policyholders of companies that fund the guaranty association system. In a worst-case scenario, the acquiring or resulting insurer that accepts the existing liabilities would become insolvent while the original insurer remains strong. In that situation, there are several negative consequences that can be anticipated, and the White Paper should propose specific solutions for those consequences.

First and foremost, any insurer failure will be a new strain on the guaranty association system that consumes resources to both manage and fund the liabilities. The burden to provide these resources will fall on member companies of the guaranty associations and their policyholders. Accordingly, the possibility of those burdens should be acknowledged in the White Paper.

Further, many policyholders of a failed company will not receive the full benefits of their policies because coverage under guaranty association laws is limited. And, if the policyholders are not covered by the same guaranty association as they were prior to the restructuring transaction (and instead receive coverage via the insurer’s domestic guaranty association), the domestic guaranty association may not have the necessary assessment capacity to pay claims on a timely basis, nor offer the same level of guaranty association coverage as the previous guaranty association, further harming policyholders. Given these concerns, and the importance of a strong guaranty association safety net, the White Paper should take into account these strains and recommend an accreditation requirement that policyholders must have coverage under the same guaranty association both before and after the transaction, which will require licensing of the acquiring or resulting insurer in each of the jurisdictions where customers of the existing insurer reside.
If an acquiring or resulting insurer were to fail, it would be very damaging to the reputation of the state regulatory system, especially because of the strong public interest in the many issues involved with these transactions. Consequently, the transparency and public trustworthiness of the restructuring approval process must be as sound and defensible as possible. We believe that the White Paper should require restructuring laws to include certain safeguards as accreditation requirements to help instill public confidence in the process:

- For transactions under Part VII, the approving UK regulator has national jurisdiction. In addition, Part VII requires at least the implicit approval of several other national regulators before a transaction is approved. The US insurance regulatory framework, obviously, does not have a national regulator. Accordingly, to provide the equivalent of this protection in the US, every state regulator that has policyholders impacted by the transaction should be consulted so that all concerns are satisfactorily addressed before a transaction is approved.

- As required by Part VII, the US framework should require the use of an independent expert. Restructuring transactions are significant events, and having the independent expert report will be an important data point if a transaction goes awry many years into the future. We appreciate that some regulators have expressed concern with making this a mandatory requirement. We would like to provide additional context for our position:
  - The requirement to have an independent expert report does not speak to the qualifications of experts at the various insurance departments. We agree that, often, employees at the insurance department will have a better understanding of the insurer and its operations. And many departments have employees with the skillset to analyze the proposed transaction. The independent expert report does not, in any way, hamper or serve as a substitute for the authority and accountability of the insurance commissioner to make a final determination.
  - However, not all insurance departments are staffed at the same level or will necessarily remain at their current staffing in the future. The requirement to have an independent expert report puts all states on the same baseline standard regardless of how department expertise ebbs and flows over the years.
  - Additionally, an independent expert report that buttresses the insurance commissioner’s findings provides additional public confidence in the outcome to consumers, creditors, and other regulators and interested parties, which will be critical if an acquiring or resulting insurer has solvency issues. Creating a process that results in heightened confidence is especially important because policyholders do not have the ability to opt out of an approved transaction.

- All impacted policyholders should receive notice of the proposed transaction, and the information the regulators and independent experts use to evaluate the transaction, along with the final reports, should be made publicly available. Although the insurer requesting the restructuring may want to hold information confidential, the public must
be able to understand the transaction and its potential impact. To inform decisions and allow for the opportunity to provide meaningful public comments, there must be public access to: (1) relevant financial analysis, including an independent expert report, (2) a business plan for the dividing/transferring and resulting/transferee insurers, and (3) information on the background and qualifications of controlling persons and management. This public transparency, which allows interested parties from varied backgrounds to review and comment, will be extremely valuable to reduce the risk of failure and to reduce the likelihood of process concerns if an acquiring or resulting company fails to perform as expected. If the requesting insurer does not want to make this information public, then it should not avail itself of the IBT or CD process.

- Given the extraordinary nature of these transactions, and the potentially significant impact on the established contractual rights of policyholders, court approval should be required. Approval should take place in two steps: (1) discretionary approval by the domiciliary insurance commissioner based on the information submitted regarding the proposed transaction, and (2) a court process leading to a formal judgment and a court order once statutory conditions are satisfied, giving all interested parties the benefit of an established legal process and the right to object. Court approval will further legitimize the approval of the transaction if an acquiring or resulting insurer becomes insolvent. Further, court approval may decrease the likelihood that these transactions face Constitutional scrutiny.

*Long-Term Care Insurance Should Be Ineligible for Division or Transfer*

We appreciate that the White Paper devotes a section specifically to long-term care insurance. However, we would recommend that the White Paper specifically state that long-term care insurance should not be eligible for division or transfer. As we have highlighted in our prior comments, the history of reserve deficiencies, rate increases and, in some cases, insolvencies, associated with this product demonstrates the challenges of arriving at satisfactory valuations. Given this history and the long duration of the liabilities, it is clear to us that long-term care blocks should not be separated from other businesses that provide financial stability and diversification for the entity overall.

In addition, the riskiness of the investment strategy/assets backing these liabilities for transferred or divided businesses, particularly if used for long-term care insurance, is of significant concern. Many life/annuity/LTC insolvencies in the past were driven by liability issues, which tend to occur slowly over time. If business transfers or divisions lead to overly aggressive investment strategies, more future insolvencies could be driven by the assets – which could happen more quickly and as a result be much more impactful.

****

We appreciate the opportunity to comment. In the end, our comments attempt to drive towards one goal – ensuring that no policyholder should ever be left worse off after a restructuring transaction is completed. We would support a statement in the White Paper that, if there is any
doubt about the ability of a transaction to live up to this standard over the long-term duration of the policies, the presumption should be to protect policyholders and not approve the transaction.

Re: The Restructuring Mechanism Working Group’s Charges

Dear Superintendent Dwyer and Deputy Commissioner Combs:

The undersigned companies support the important work being done by the Restructuring Mechanisms (E) Working Group and are grateful for the opportunity to deliver these comments.

**Division and Transfer Laws Have Serious Implications that Demand Procedural Protections**

As life insurers, the financial security that we provide to our policyholders is often delivered gradually, over decades. Consumers have this long-term promise in mind when they enter into life insurance, annuity, and long-term care insurance contracts, and expect that the company that sold them a policy will stand behind it over the years to come. Life insurers, knowing that their obligations will last decades, manage their assets and liabilities conservatively to ensure they will maintain the financial strength needed to fulfil their promises. And the guard rails of our state insurance regulatory framework and backstop provided by our guaranty association system have developed over the years to be efficient and effective counterparts to a system where life insurers remain obligated for their promises.

Insurance business transfer and insurer corporate division statutes have the potential to turn this paradigm on its head. If consumers no longer can expect that the company that sells them their policy will stand behind it, will they trust life insurers to meet their financial security needs? If life insurers anticipate that they have an out for unsuccessful business, will they have less incentive to exercise their traditional conservatism in writing and managing long-term business? And, what strains and gaps might appear in our insurance regulatory system and guaranty backstop if life insurer liabilities become “fungible”?

Put another way, life insurers have options to transfer their policyholder contracts without transfer and division statutes. Those options protect policyholders by requiring a life insurer that wants to be relieved of its promises to give the policyholder the opportunity to say “no”.

Removing this protection not only disadvantages affected policyholders, it raises the broader threats to our life insurance marketplace and regulatory system described above.

For these reasons, we urge extreme caution when considering laws that permit insurers to divide or transfer life, annuity, or long-term care contracts without policyholder consent. A prior letter
from New York Life and Northwestern Mutual to the Restructuring Mechanisms (E) Subgroup recommended principles for the regulatory review of proposed divisions or transfers. That letter (attached here for the Working Group’s reference) focused on financial standards, consistent with the charges of the Subgroup. Given the Working Group’s process-oriented charges, this letter elaborates on procedural safeguards we believe should be included in any such laws. We believe these procedural protections serve the principle that policyholders should never be left worse off by a division or transfer.

Our procedural recommendations follow four themes: (1) protecting policyholders in other states; (2) notice and transparency; (3) two-step approval process; and (4) ensuring uniform application of procedural protections. Robust financial standards can only succeed if they are accompanied by equally robust procedural safeguards. Procedural protections to reduce the potential for harm are particularly important because division and transfer laws do not include an effective proxy for policyholder consent, such as an “opt-out” right or a requirement for a supermajority vote by policyholders.

**Protecting Policyholders in Other States**

Although the dividing or transferring insurer may be licensed in multiple states, transfer and division laws have been silent regarding the process for bringing a division or transfer into force in states outside of the approving state. This omission creates significant uncertainty and magnifies the risk of adverse guaranty association impacts.

Any such law should require notice to the primary insurance regulator in each state with residents holding insurance contracts of a dividing or transferring insurer. Consultation with each foreign commissioner should be required, and each affected commissioner should have a right to object to the transaction, with a robust process to address objections. Policyholders should be able to participate and communicate regarding the transaction through their local insurance commissioner.

Lastly, the law should require that the resulting or transferee insurer be licensed in each state in which policyholders reside. This requirement is necessary to ensure that guaranty association coverage is provided directly in all states in which insureds reside rather than as orphan coverage provided by the domestic state guaranty association. The future of the state guaranty associations could be in jeopardy without this change.

**Notice and Transparency**

Policyholders and others affected by a proposed division or transfer must receive adequate information and the opportunity to make their voices heard. Some division and transfer laws provide even less public access to information than required in connection with a Form A filing. Public hearings should be required prior to commissioner or court action. Any division or transfer law should require delivery of a notice in sufficient detail to inform decision-making, well before any hearing or action, directly to all policyholders, agents, brokers, reinsurers, creditors, regulators and state guaranty associations of the dividing/transferring and resulting/assuming insurers.
Likewise, confidentiality provisions must balance the insurer’s desire to safeguard competitively sensitive information with the public’s interest in understanding the transaction and its potential impact. To inform decisions and allow for the opportunity to provide meaningful public comments, there must be public access to (1) relevant financial analysis, including an independent expert report, (2) a business plan for the dividing/transferring and resulting/transferee insurers, and (3) information on the background and qualifications of controlling persons and management.

Two-Step Approval Process

Unlike Part VII transfers in the United Kingdom and insurance business transfer legislation that has been enacted in the United States (e.g., in Oklahoma), insurer corporate division statutes enacted to date have not required court approval. Given the extraordinary nature of these transactions, and the potentially significant impact on the established contractual rights of policyholders, court approval should be required.

Approval should take place in two steps: (1) discretionary approval by the domiciliary insurance commissioner based on the insurer’s application and the public hearing, and (2) a court process leading to judgment and a court order once statutory conditions are satisfied, giving all interested parties the benefit of an established legal process and the right to object.

Ensuring Uniform Application of Procedural Protections

We have two recommendations to ensure that these important procedural protections are applied uniformly to protect policyholders. First, we suggest they should be set forth directly in statute, rather than being left to implementing regulations or to a set of best practices or guidance. Second, as with the standards for review addressed in the attached letter to the Subgroup, we believe it is essential for the NAIC to establish strong, minimum procedural requirements as accreditation standards. The strength of the procedural safeguards applied to division and transfer transactions will contribute importantly to the solvency implications of those transactions and would eliminate the threat of forum-shopping. And maintaining uniform state laws that protect solvency is the essential purpose of the NAIC’s accreditation system.

David Smith
Co-Chairs, NAIC Restructuring Mechanisms (E) Subgroup

Attention: Dan Daveline (ddaveline@naic.org)
Robin Marcotte (rmarcotte@naic.org)

Re: The Restructuring Mechanism Subgroup’s Charges

Dear Messrs. Stolte and Smith,

The undersigned companies are grateful for the opportunity to comment on the charges of the Restructuring Mechanisms (E) Subgroup.

In general, we strongly support the subgroup’s charges. While we endorse all the charges, we ask that the subgroup give special emphasis to the development of uniform minimum standards for restructuring mechanisms.

*The Importance of Strong, Uniform Standards for Divisions and Business Transfers*

Several states have recently enacted new “division” and “insurance business transfer” laws that allow insurers to transfer and novate business without policyholder consent. While these laws offer new flexibility to companies and regulators, they also introduce new dangers for policyholders and the state-based system of insurance regulation. Because we believe there are existing alternatives that provide sufficient flexibility in nearly all circumstances and because we want to maintain policyholder protections, our strong preference is against the enactment or use of division and insurance business transfer statutes for life, annuity or health insurance. However, recognizing that regulators may wish to find a way to permit, in limited circumstances, transactions that are beneficial to all policyholders, our comments in this letter address the minimum standards required if life, annuity or health divisions or transfers are to be considered.

Unlike traditional indemnity reinsurance, where the original insurer remains liable, these new structures allow the original insurer to extinguish liability to policyholders. We have grave concerns about several aspects of these new laws:

- There is no nationally uniform financial standard or actuarial level of confidence for regulators to apply when reviewing the financial strength of a business included in a division or transfer. A strong, nationally uniform standard is necessary to ensure that policyholders are protected against the risk of insolvency. This standard should become an NAIC accreditation requirement. The development of this standard should be a critical area of focus for the subgroup.
In some states, division and insurance business transfer laws are open to any line of business, even when it is difficult or impossible to arrive at a credible long-term valuation of the business involved. For example, a division could allocate distressed, hard-to-value long-term care liabilities to a newly created splinter company. In this scenario, healthier business and associated assets might remain with the original company, endangering policyholders relegated to the splinter company.

Some laws also allow the creation of monoline insurers, potentially depriving policyholders of the benefits of diversification without their consent.

Some laws also allow the division of a multi-state insurer into a splinter company licensed in a single state, potentially overwhelming the state’s domestic guaranty association in the event of insolvency.

Some laws sanction the use of non-admitted assets to support policy liabilities.

Several laws lack other important procedural and substantive safeguards like public notice, requirements to consult with other interested states, independent expert review, a hearing or court process, and requirements to assess corporate governance and owner qualifications.

At their worst, these new laws could enable transactions that enrich shareholders at the expense of policyholders, guaranty associations and the reputations of both the industry and state-based system of insurance regulation. Effective, nationally uniform oversight of solvency has long been a hallmark of state-based insurance regulation. It is essential that the NAIC act to preserve this strength of the state-based system. These new transaction structures must not be allowed to undermine fundamental solvency regulation and policyholder protections. We expect that the subgroup’s work will be a critical part of this effort.

In the discussion below, we suggest several principles that should govern regulatory review of proposed division and business transfer transactions.

**Policyholders Should Never Be Left Worse Off**

Regulators should never approve a division or insurance business transfer if it would leave any class of policyholders worse off. Instead, policyholders should be left in the same or a better position after completion of the transaction. Before the regulator signs off, a valuation should be undertaken by an expert to establish at a high level of confidence that policyholders will experience no adverse effects. The expert should be independent of any influence from the companies involved.

This approach would align the U.S. regulatory framework with well-established international precedents like the United Kingdom’s “Part VII” business transfer regime. A focus on policyholder protection has been fundamental to the success of the U.K. regime. In a Part VII transaction, the regulator must provide a detailed report to the court and certify the solvency of the resulting entity. An independent expert must also provide a detailed report. When there are
questions about the strength of the business involved, the U.K. regulators and the court will 
normally insist on ensuring that the business is transferred to a stronger insurer, not isolated in a 
weaker insurer.

Some state laws provide that a regulator should approve a division or business transfer if there is 
no “material adverse effect” on policyholders. This standard falls far short of what should be 
required. The standard endorses policyholder harm so long as the harm does not rise to a 
vaguely defined materiality threshold. For example, a transaction might accomplish nothing 
more than benefit shareholders at the expense of policyholders. Although the damage to 
policyholders may not rise to the level of a “material adverse effect,” the law should not call on 
the regulator to approve unless the effect on policyholders is neutral or there is some expected 
policyholder benefit.

No Monolines

Regulators should never permit a transaction that transforms a diversified insurance company 
into one or more monoline insurers, especially when the transaction involves long-duration life, 
annuity or health insurance business. It makes little sense to deprive policyholders the benefits 
of diversification. The wisdom of this principle is borne out by the recent experience of carriers 
like Penn Treaty that concentrated their offerings in long-term care insurance.

Hard-to-Value Business Like LTC Should Be Ineligible for Division or Transfer

It is important that standards for approval acknowledge fundamental differences among lines of 
business. A standard that may be appropriate for short-duration commercial property and 
casualty risks is likely to need significant adjustments before it can be applied successfully to 
long-duration retail life, annuity and health businesses.

As a threshold matter, some lines of business are best excluded from division and business 
transfer transactions. Long-term care offers the best example. The history of reserve 
deficiencies, rate increases and, in some cases, insolvencies, associated with this product 
demonstrates the challenges of arriving at satisfactory valuations. Given this history and the 
long duration of the liabilities, it is clear to us that long-term care blocks should not be separated 
from other businesses that provide financial stability and diversification for the entity overall.

The experience of long-term care leads us to suggest the following possible approach to similar 
long-duration life and health businesses: for each such business, the regulator should be able to 
confirm the sufficiency of assets supporting the liabilities based on a reasonable valuation 
relative to an industry standard of experience. To make this determination, the Commissioner 
should first compare the valuation of liabilities to what the valuation would be using 
standardized valuation tables adopted by the NAIC for each line of business. If such 
standardized valuation tables are not available, the business should not be eligible for division or 
transfer.
Require Strong Financial Standards and Stress Testing for Long-Duration Business

Even if a long-duration life or health business is eligible for inclusion in a transaction, regulators will still need a robust framework to evaluate the long-term solvency of the business. Regulators should consider the following principles in the development of this framework:

- For long-duration life, annuity and health business, regulators should start with a focus on policy reserves, and should require stress testing of reserves at a “severely adverse” level. If reserves are not subjected to a high level of stress testing, a division or transfer may appear to leave a business adequately capitalized at the time of the transaction. However, the picture can change over time as long-term experience diverges from assumptions. Again, consider the recent experience of long-term care.

- Starting from a basis of reserves meeting a “severely adverse” standard, formulaic application of risk-based capital will, appropriately, result in a higher level of required capital for the business affected by the division or transfer. However, while risk-based capital may provide a useful starting point to establish capital requirements, it is not designed to measure relative financial strength and therefore would be insufficient on its own to determine the minimum required financial position of a transferred business.

- Instead, in addition to risk-based capital, regulators should explore capital standards for long-duration life and health business that are based on a defined ratio of asset adequacy standards. Capital standards based on this type of cash flow projection technique can help ensure that enough capital is held in a transferred business, supplementing the existing risk-based capital framework.

- Regulators should establish a confidence level based on the greatest present value of accumulated deficiencies over a long-term horizon across stochastic scenarios. The confidence level should be set at a standard that assures solvency over the life of the business so as to provide a robust backstop to the combination of reserves established to meet a “severely adverse” standard and risk-based capital.

- Prescribed assumptions should be included in capital calculations to avoid the manipulation of capital thresholds.

- Actuarial reserve and capital calculations should be performed by an expert that is independent of the insurance companies involved.

Use Uniform NAIC Valuation and Accounting Standards

When evaluating the solvency impact of a proposed transaction, regulators should not give credit for non-admitted assets. Decisions about these transactions should start from the NAIC’s uniform statutory valuation and accounting rules.

The possibility that non-admitted assets might be used to back reserves and capital in these transactions is deeply troubling for the following reasons:
• Most non-admitted assets are classified that way because they are not readily available to satisfy policyholder claims.

• Put another way, many non-admitted assets are not readily marketable or do not produce future cash flows.

• Non-admitted assets can include anything a company owns, from illiquid and contingent letters of credit to office furniture, equipment, hardware and software.

• It makes sense to exclude these items from the pool of assets an insurance company can count toward the payment of future claims, as they are illiquid, unlikely to retain their value, and generally do not produce additional income.

• The distinction between admitted and non-admitted assets should not change in the context of a division or business transaction. In fact, given the risk that companies will use restructuring mechanisms to wall off distressed businesses, it is especially important that regulators scrutinize the quality of the assets involved.

Minimum Requirements Should Become NAIC Accreditation Standards

Ultimately, it will be essential that the NAIC establish strong minimum requirements for these transactions as accreditation standards. The strength of state-based system depends upon the integrity of solvency regulation across the country. Regulators will need to rely on their counterparts in other states to ensure that transferred businesses are uniformly supported by sufficient reserves and capital, and are run off in a solvent manner. Companies should not be allowed to arbitrage their way to diminished solvency oversight by choosing one domicile over another.

Other Procedural Safeguards Are Also Important

In this letter, we have focused primarily on the financial standards that should apply to divisions and insurance business transfers. We expect those standards will be a significant focus of the subgroup. However, there are other procedural safeguards that are equally important for these transactions. For example, since policyholders lose their normal right to consent, court oversight and approval should be required. Policyholders and other affected parties should always be given notice, access to all information needed to meaningfully review a proposed transaction, and an opportunity to be heard in court. Also, the process should require approval or non-objection of all affected states and the resulting entities should be licensed in all states needed so as not to impair policyholders’ access to their state guaranty associations. We believe these protections should also be considered for accreditation requirements. We look forward to providing our views on this and other procedural safeguards to the Restructuring Mechanisms (E) Working Group.

Glen Mulready
Insurance Commissioner
Oklahoma Insurance Department
400 NE 50th Street
Oklahoma City, OK 73105

Dear Superintendent Dwyer and Commissioner Mulready:

We are privileged to serve as counsel to ProTucket Insurance Company (“ProTucket”), a Rhode Island insurer formed to assist in the assumption and restructuring of legacy books of insurance, whether by traditional loss portfolio transactions or by future mechanisms that may result from the study undertaken by the NAIC Restructuring Mechanism Working Group (“RM Working Group”).

We appreciate the opportunity, on behalf of our client, to comment upon the draft White Paper dated October 22, 2021 exposed for comment by the RM Working Group on the subject of Insurance Business Transfers (“IBTs”) and insurer Corporate Divisions (“CDs”) (together, restructuring mechanisms ["RMs"]). We understand that in a related development the Property and Casualty Risk Based Capital Working Group (“RBC Working Group”) issued draft comments dated October 25, 2021 (attached) on Risk Based Capital (“RBC”) (the “RBC Memo”) as applied to run-off insurers.

We respectfully submit comments on the White Paper and the RBC Memo in the form of suggestions, set forth below, that the RM Working Group adopt charges for 2022 to elaborate upon and add to those found in the 2022 Proposed Charges with the objective of formulating a comprehensive evaluation of the issues, risks, benefits, timing and prospects involved in adopting RMs in the U.S. insurance market.

Specifically, we suggest that the RM Working Group:
1) Study and report upon the financial standards to apply to RMs:

   a) Intra-Group vs. Third Party Transactions.

   Recent RM transactions have occurred mainly between affiliated insurers. Regulators and the market are generally more comfortable with transactions where the ultimate controlling party after the transaction remains the same. (In two transactions noted in the White Paper, the post-transfer liabilities in the Enstar IBT and the AllState CD remained within the same group.) These transactions may be enhanced by intra-group guarantees or reinsurance.

   Third party transactions that do not have the benefit of intra-group affiliations may nonetheless achieve similar results with strong third party guarantees or reinsurance.

   We suggest that the RM Working Group consider the differences between intra-group and third party RM transactions and specifically address the standards that should apply to such transactions.

   Domestic state regulators regularly review insurer transactions that affect policyholders in other states, including acquisitions (Form A), dividend distributions, reinsurance protection, affiliate transactions, investment restrictions, mergers and other issues of corporate finance and governance. Many of these domestic state regulatory procedures are governed or influenced by NAIC standards and some involve some coordination among the states. RM transactions could pose similar questions involving how domestic state actions might affect policyholders in other states.

   We suggest that the RM Working Group specifically analyze these and similar financial and regulatory standards and procedures present in law and NAIC standards to compare how domestic regulators affect policyholders in sister states and to review proposals that might achieve similar results in RM transactions.

2) Possible Use of Supplemental Financial Tools.

   In light of the novelty of RMs in the U.S. insurance market, it may be advisable to consider different or modified analytical tools to evaluate RM transactions, such as using longer term projections, imposing capital surcharges onto the assuming insurer or its parent, and conducting enhanced periodic oversight.

   We suggest that the RM Working Group address this subject with specificity to formulate a variety of possible novel tools or methodologies to evaluate RMs.
Elizabeth Dwyer
Glen Mulready
December 1, 2021
Page 3

3) Make a referral to the Capital Adequacy Task Force requesting specific guidance as to:

a) Definition and Licensing of Run-off Insurers.

The RBC Memo offered a suggestion to define “runoff” insurers so as to preclude insurers that may assume more than one book of discontinued business or that have any amount of continuing business. Such a definition would preclude those insurers that may assume more than one book and those that may have a de minimis amount of in-force business. Without prejudgment of the issue, it would appear that a more fulsome review of the options and consequences of such a definition would be important to the development and ultimate operation of a possible RM market. The market options available to those who wish to transfer books of business, the costs associated with such transactions and the profitability and financial viability of those who may wish to assume such business could all depend on such a definition. Of additional concern is that some states decline to license and may, in some cases, threaten the licensed status of runoff insurers. Creating difficulties for the licensing of runoff insurers can call into question protections for policyholders and oversight by regulators over such insurers.

We suggest that the RM Working Group re-refer this specific issue to the Capital Adequacy Task Force requesting reconsideration of the definition of a runoff insurer to allow for greater flexibility and practicality, including allowing such insurers to assume more than one book of business and to maintain a de minimis amount of in-force business. Insofar as some states may currently decline to license insurers in runoff, we suggest that the RM Working Group also refer the issue of the licensing of such insurers to appropriate NAIC committees with the purpose of liberalizing the standards for licensing.

b) Possible Reformulation of RBC.

We understand that the RM Subgroup has not yet completed its review of financial best practices for RMs, and consequently the White Paper does not yet address these issues. Nevertheless, we note that some consideration has already been given to some minor changes to the RBC formula (see the above-mentioned RBC Memo). However, we would posit that the RBC formula was not developed to consider the unique characteristics of insurers in run-off. A couple of examples illustrate this point: RBC factors when applied to RMs may result in distortions that fail to capture the true risk of the transaction to the assuming insurer, and also, insurers assuming business under a RM will not have all of the risks subject to the covariance formula. Consequently, the resulting capital requirements under the RBC formula may be overstated.

We suggest that the RM Working Group make a referral to the Capital Adequacy Task Force requesting that the RBC formula be reviewed to evaluate whether it fairly reflects the risk profile of runoff insurers, specifically in the context of possible RM transactions.
c) Possible Suspension of RBC for RMs.

We understand that considerable timing and policy issues may postpone revisions to the RBC factors.

Under the circumstances, the RM Working Group should request that the RM Subgroup consider whether it would be appropriate to suspend application of the RBC formula (or a portion thereof) in the determination of the capital adequacy of runoff insurers. The RBC laws in most, if not all states, allow the chief insurance regulator latitude in applying the RBC requirements. Consequently, guidance with regards to suspension or easing of those statutory RBC requirements would not necessarily violate financial best practices.¹

4) Make a referral as to financial aspects of U.K. Part VII:

More than 300 Part VII RM transfers have been effected with success in the U.K. over the last 20 years. Solvency II financial standards have been applied to these transactions without controversy. A deeper understanding of the differences between those standards and applicable U.S. financial standards could help U.S. regulators to evaluate the prudential issues in U.S. RMs.

We suggest that the RM Working Group make a referral to appropriate NAIC committees to report to the RM Working Group on the salient differences between Solvency II and U.S. insurer solvency standards as applicable to run-off insurers and RMs.

5) Make a referral as to regulatory standards for RMs:

Currently, approximately four states have adopted IBT statues and a small number have adopted CD statutes. Although a few transactions have been effected under each of these types of RM statutes, most states have yet to adopt such legislation and still remain unfamiliar with the concept, process and implications of these transactions. Uniform standards for RMs would enhance regulatory and market understanding of RMs, and would assure sister states that requisite standards are being followed.

Guidance in the NAIC Financial Analysis Handbook, even short of a Model Law at the moment, may be sufficient to adopt these nationwide standards. Adopting such guidance in an existing NAIC Handbook, such as the Financial Analysis Handbook, may have the result of making such guidance an accreditation standard. Such guidance should include specifics, such as whether a court must participate in the proceeding (as is the case with IBTs, but not CDs), the use of independent experts, and the required degree of input or form of input from guaranty associations.

¹ Although the suspension of RBC requirements was mentioned in a slightly different context, it is interesting to note that a similar suggestion was made in the 1997 Liability Based Restructuring White Paper.
other regulators and affected parties.

We suggest that the RM Working Group make a referral to appropriate NAIC committees to adopt such standards and to do so, if possible, by way of a modification to the Financial Analysis Handbook, if not a Model Law.

6) Study and report upon distinctions by lines of insurance:

Regulators and market participants have commented extensively on the distinctions among lines of insurance that may become subject to RMs. Despite the fact that some RM statutes are not limited by line of insurance or nature of coverage, most regulators agree that RMs may not be appropriate for every line or type of insurance. Among the many relevant distinctions are property/casualty versus life or other long-term products, long-term care, personal lines versus commercial lines, admitted versus surplus lines or reinsurance, workers compensation and numerous others, in addition to the length of run-off or whether run-off liabilities need to be an essential element of the RM transaction. Different analysis may be necessary for these variations.

A study of these variations would be important to focus regulatory attention on those RMs that would be most useful, easiest to regulate and deserving most study. We note that the draft White Paper concludes that long-term care is not likely to be a line of business that is appropriate for RMs.

We suggest that the RM Working Group specifically address the distinctions among the lines and type of insurance to help establish priorities and focus the group’s future work.

7) Make a referral as to guaranty association coverage for RM transactions:

There appears to be substantial consensus among regulators and market participants that whatever the form of RM and whoever the participants, there is no justification for policyholders to be deprived of guaranty fund protection or to gain a guaranty fund windfall as a result of a RM transaction. We have not performed a 50 state survey on the subject and cannot state whether all states have statutes that would assure a neutral result.

We suggest that the RM Working Group make a referral to appropriate NAIC committees to review and propose for adoption appropriate NAIC model laws to clarify that no guaranty fund coverage would be lost or changed and that new coverage would not be created as result of a proposed transaction.

8) Make a referral as to application of Assumption Reinsurance laws to RMs:

We are aware that a number of states have raised the question of whether the NAIC Model Assumption Reinsurance Law or derivative provisions under state law would have the effect of prohibiting IBTs (and perhaps CDs) from becoming effective
for certain policyholders in their states without complying with provisions of those laws.2 While RM transactions by their terms would obviate the basis upon which such laws could prohibit these transactions3, the assertion of this prohibition can pose an obstacle for those who wish a “clean” transfer without objection. While the NAIC cannot enforce its interpretation of state laws upon the states, we would urge the appropriate committee at the NAIC or NAIC staff to clarify this issue as best it can, especially in respect of the NAIC Model Assumption Reinsurance Law. Clarifying its position on the Model law would help to eliminate confusion and discordant positions among the states on the laws that derive from the Model.

Although we believe that the Model does not effectively prohibit RMs as described above, if the appropriate NAIC committee or NAIC staff were to disagree, we would then urge the RM Working Group to refer the matter for amendment of the Model. We believe that a different result would be be contrary to the very objectives of the RM Working Group.

We suggest that the RM Working Group make a referral to appropriate NAIC committees and/or the relevant NAIC staff to consider the application of the Model Assumption Reinsurance Law to IBTs and CDs to policyholders, specifically policyholders with insurance issued on an admitted basis. And, in the event that the determination resulting from such a referral were to indicate that the Model Law would be applicable, we suggest that the referral be amended to seek a revision to the Model to indicate that it would not be applicable.

9) Study and report upon legal recognition of RMs among the states:

ProTucket has previously supplied the RM Working Group with a White Paper (dated March 27, 2019, entitled “ProTucket Insurance Company Paper on Insurance Business Transfer Plans Under Rhode Island Law” [the “ProTucket White Paper”]) settling forth the legal basis for recognition of IBTs among the states. While no legal position can foreclose challenges, it would be helpful for the RM Working Group to report upon its working assumptions on the legal framework of RMs. In addition, nationwide standards for RMs, to be established as suggested above, could assist in the process of clarifying the legal validity of RMs.

We suggest that the RM Working Group specifically study and report upon its working assumptions on the legal framework of RMs and whether it will support a nationwide standard to advance its position on these issues.

---

2 Provisions of the Model and derivative laws could effectively prohibit IBTs (and possibly CDs) by calling for an approved novation procedure that could require insurers to obtain approval to notify and obtain consent from policyholders, specifically those with admitted policies, in order to effectuate an assumption of their policies by the assuming insurer.

3 Both the IBT and CD laws are intended to effect a change in corporate structure that, by operation of law, replaces the obligor under the insurance (or reinsurance) contract. Consequently, although frequently spoken of as a statutory novation, the transfer is not a novation requiring consent of the insured (reinsured).

Page 7

10) Consider adopting interim guidance:

In light of the many issues before the RM Working Group and the limitations of time and resources and the interest and pace of developments in the market, it may be prudent to plan for interim measures pending development of final guidance.

We suggest that the RM Working Group adopt interim guidance on the suggestions raised above pending adoption of final guidance.

11) Review the issue of protected cells in the context of RM:

Pursuant to the 2021 Adopted Charges and 2022 Proposed Charges, the RM Working Group is to identify and address the legal issues associated with restructuring insurers using protected cells. Those issues were addressed in the ProTucket White Paper in 2019, but were not addressed in the White Paper. The ProTucket White Paper also address the financial and accounting issues associated with restructuring insurers using protected cells.

We request that the RM Working Group include a discussion of the relevant issues related to protected cells in the context of RMs, including both legal and financial and accounting issues. Furthermore, if the RM Working Group decides that these protected cell issues should be referred to another committee of the NAIC, we would be pleased to further contribute to this subject.

We thank the RM Working Group for considering these suggestions and are available to answer questions or to supplement this submission at your convenience.

Sincerely,

Robert A. Romano

MEMORANDUM

TO: David Smith (VA) and Doug Stolte (VA), Co-Chairs of the Restructuring Mechanisms (E) Subgroup
    Judith L. French (OH), Chair of the Capital Adequacy (E) Task Force

FROM: Tom Botsko (OH), Chair of the Property and Casualty Risk-Based Capital (E) Working Group

DATE: Oct. 25, 2021

RE: Response to Request for Input Regarding Runoff Companies

The Property and Casualty Risk-Based Capital (E) Working Group formed a small ad hoc group to discuss this topic and try to determine the best course of action. The Restructuring Mechanisms (E) Subgroup requested that the Working Group take the lead in addressing the charge to “consider the need to make changes to the RBC formula to better assess the minimum surplus requirements for companies in runoff.”

After several discussions about what adjustments should be made to the risk-based capital (RBC) formula, the ad hoc group concluded that the best course of action is to monitor these companies through the state analysis and exam team functions. The characteristics and financial conditions of these runoff companies are very diverse, and it would be difficult to incorporate these varied characteristics into one adjusted formula. Many international countries monitor these companies through the analysis and exam processes and do not have a separate RBC formula.

Of the 2020 RBC filers, we identified 111 companies out of 2,477 that have the characteristics of a runoff company. Most of these companies have an RBC ratio greater than 300%. Five are below 200%.

During a series of discussions, the ad hoc group agreed that a runoff company, voluntary or involuntary, should include the following characteristics: 1) no renewing of policies for at least 12 months; 2) no new direct or new assumed business; and 3) no additional runoff blocks of business. In addition, the amount of renewal premium to reserves has also been identified as a characteristic of these types of companies when this ratio is de minimis.

The ad hoc group also recommends that a general and RBC interrogatory be added for the purpose of identifying a runoff company. The domiciliary state shall have the ability to verify the interrogatory response during the annual company financial analysis process.

As the ad hoc group considered various types and conditions of runoff companies, it became apparent that while many of these companies share the characteristic of very long tail liabilities, there are other characteristics of these companies that are so diverse that it made it difficult to summarize them into their own RBC formula.
The ad hoc group reviewed several international perspectives of runoff companies. The international treatment of runoff companies is handled through the Analysis and Exam Teams. The ad hoc group agrees that a similar treatment of runoff companies is warranted.

The ad hoc group has some recommendations for the Working Group regarding the RBC instructions, specifically to the runoff companies. These include the following:

- Remove the Trend Test from the RBC calculation. These are runoff companies, and the possible retrospective premium should not complicate the already diverse situation.
- Remove the charge for premium growth if the company is no longer writing business.
- Remove $R_{\text{cat}}$ from the formula. Because one of the characteristics of a runoff company is to not have written any new business for at least 12 months, we believe this short-term liability risk is not warranted.

As the ad hoc group shares its findings with the other two RBC working groups, we expect to hear other perspectives regarding the unique conditions of runoff companies from the Life Risk-Based Capital (E) Working Group and the Health Risk-Based Capital (E) Working Group.

Please contact Eva Yeung, NAIC staff support for the Property and Casualty Risk-Based Capital (E) Working Group, at eyeung@naic.org with any questions.

JOINT SUBMISSION OF NOLHGA AND NCIGF TO NAIC'S RESTRUCTURING MECHANISMS WORKING GROUP REGARDING THE RESTRUCTURING MECHANISMS WHITE PAPER DRAFT

December 1, 2021

The National Organization of Life & Health Insurance Guaranty Associations ("NOLHGA") and the National Conference of Insurance Guaranty Funds ("NCIGF") commend the Restructuring Mechanisms Working Group's (the "Working Group") efforts in preparing the draft Restructuring Mechanisms White Paper (the "White Paper"). NOLHGA and NCIGF appreciate the Working Group's recognition of the importance of ensuring that the guaranty association/fund protection a policyholder would have had prior to a restructuring transaction is preserved when the transaction is consummated. We write to offer high-level observations on the White Paper for the Working Group's consideration, along with a few technical notes related to the differences between the life and health guaranty associations and the property and casualty guaranty funds, which are relevant to the effort to preserve guaranty protection.

Overarching Comments: Importance of Maintaining Policyholder Protections

NOLHGA and NCIGF remain neutral on whether restructuring statutes – either insurance business transfer ("IBT") or corporate division ("CD") statutes – should be adopted. We do, however, emphasize that the enactment of an IBT or CD statute should not affect important policyholder protections that existed prior to the transaction. As noted above and recognized by the White Paper, the policyholder protection of guaranty system coverage should not be lost, reduced, created, or otherwise changed as a result of a restructuring transaction. How this standard is satisfied likely differs depending on the type of business involved in the restructuring transaction (see below for additional detail).

The Restructuring Mechanisms Subgroup's work to develop standards for the review of restructuring transactions and identify best practices for the ongoing monitoring of companies post-restructuring also will be important to ensure that policyholders continue to receive the protection of robust solvency regulation. We applaud the recognition of this fact through the subgroup's existing charges and encourage continued focus on coordinated solvency regulation through FAWG, R-FAWG, and similar mechanisms.

1 The White Paper currently provides, "In order to uphold the stated declaration that restructuring should not materially adversely affect consumers, guaranty association coverage should not be reduced or eliminated by the restructuring." White Paper, pg. 13.
Possible Approval Standards – Differences Between Systems

Section 4 of the White Paper appropriately identifies certain differences between the life and health guaranty associations and the property and casualty guaranty funds. As the Working Group considers potential solutions to ensure that restructuring transactions do not result in changes to guaranty association/fund coverage, it will be important to account for and address differences. Similarly, the analysis a regulator engages in to determine whether a restructuring transaction affects guaranty association/fund coverage will differ based on the type of business involved. We encourage the Working Group to consider making changes to Sections 4(A) and 6(B) of the White Paper (regarding guaranty association issues) to recognize that solutions and issues may differ based on the lines of business involved in a restructuring. We summarize the considerations by lines of business below. We have attached specific, proposed edits to the White Paper as Attachment 1 to this letter for the Working Group’s consideration.

Life & Health Guaranty Association Considerations

For life and health insolvencies, there is a concern that restructuring transactions could result in policyholders losing guaranty association coverage as it existed prior to the transaction. One potential remedy is to specifically require that an assuming or resulting insurer must be licensed in all states where the issuing insurer was licensed or had ever been licensed. That would preserve coverage from the guaranty association that would have provided coverage prior to the transaction. If the assuming or resulting insurer is not licensed in a state, it will not be a "member insurer" of the guaranty association in that state. If it is not a "member insurer," the guaranty association will not be statutorily triggered to provide coverage to resident policyholders in the event of the insurer's liquidation. (Such policyholders are sometimes referred to as "orphans.") Instead, policyholders residing in states where the insurer is not licensed may be eligible for guaranty association coverage only in the assuming or resulting insurer's domiciliary state. This could concentrate guaranty association coverage in a single state (the state of domicile). If there is a large enough concentration of coverage, it could strain assessment capacity in the domiciliary state.\(^2\) It also could result in policyholders receiving different guaranty association coverage than they would have received from their state of residence, and create distortions and fairness issues with respect to member insurer assessments.

To address these concerns, restructuring statutes (or the regulators reviewing proposed restructuring transactions) should clearly provide that assuming or resulting insurers must be licensed so that policyholders maintain eligibility for guaranty association coverage from the same guaranty association that would have provided coverage immediately prior to a restructuring transaction.

Property & Casualty Guaranty Fund Considerations

The considerations for the property and casualty guaranty funds are equally urgent but substantially different and require different procedures/remedies. For property and casualty insolvencies, and as described more fully in Section 4 of the White Paper, possible technical

---

\(^2\) The Baldwin-United insolvency in the 1980s was the tipping point in convincing regulators and stakeholders of the need to change from providing guaranty association coverage based on the state of domicile of the insolvent insurer to the state of residency of the covered person, an approach that has been adopted nationwide.
gaps in guaranty fund coverage may be created if a state has adopted the NAIC P&C Insurance Guaranty Association Model Law. The NCIGF has determined that an amendment to a state's guaranty fund act, or other related law, may be necessary in many states to address this issue. For those states that have adopted the NAIC P&C Insurance Guaranty Association Model Law, NCIGF has developed technical amendatory language to help ensure that guaranty fund protection is not changed as a result of a restructuring transaction. These revisions have been shared with the Working Group and are included as Attachment 2 to this letter. NCIGF believes that state law amendments, along with careful review of guaranty fund issues by regulators reviewing a proposed restructuring transaction, will best protect the claimants that the guaranty fund system is intended to protect. This amendment can easily be tailored to the NAIC model or any state act. We encourage regulators and other sponsors of this legislation to work with the local guaranty fund to appropriately amend their act to achieve neutrality of guaranty fund coverage. As the White Paper recognizes, this needs to be a state-by-state process to fashion the appropriate remedy. The NCIGF stands ready to work in conjunction with the RITF to develop appropriate language for the NAIC model and assist and partner with regulators and other concerned parties in state-specific efforts to enact this remedy nationwide.

Both of the undersigned organizations are prepared to continue this dialogue and to work closely with the Working Group in providing any additional technical changes to the White Paper. Similarly, the organizations are prepared to offer any insight that might be helpful to the Working Group or subgroup as they work through their charges, and with other assigned committees that may take up issues related to restructuring mechanisms.

Thank you for the opportunity to share our perspective on the proposed White Paper, and we look forward to working with you as this important project moves forward.

Section 1: Overview of IBT and Corporate Division Laws and Mechanics

A. Introduction

Insurance is a business that sells a promise to pay upon the occurrence of a future event. Policyholders may submit claims many years into the future on covered losses incurred during the policy period requiring insurers to record a liability for these incurred but not reported claims. As such, it is nearly impossible for an insurer to decide to discontinue writing a certain line of business and pay off all its legal obligations to its policyholders because there are almost always unknown potential future policyholder obligations that have not yet been reported. Policies previously written on a line of business that is no longer being written creates a block of business that may no longer be the focus of the insurer’s business model and left to slowly runoff. For some insurance companies, runoff business remains embedded with the core business without the ability to segregate the runoff business. There are even runoff specialists that have developed within the insurance industry that specialize in handling these old blocks of business.

Until recently, U.S. insurance companies wanting to restructure their liabilities had been limited to sale, reinsurance/loss portfolio transfers or individual policy novation. Other than individual policy novation, these solutions do not provide finality as the ultimate liability remain with the original insurer. The only way to transfer a block of business with finality is an individual policy novation. However, the current process of novating individual policies is considered by the industry to be inconsistent among the states, cumbersome, time-consuming, and expensive. The industry suggests that in many instances it will be impossible to obtain positive consent to a novation from all policyholders, especially on older books of business where policyholders are difficult to locate.

The NAIC has addressed aspects of this issue in the following two previous white papers. In 1997, the Liability-Based Restructuring Working Group of the NAIC Financial Condition (EX4) Subcommittee issued a paper titled “Liability-Based Restructuring White Paper.” (See Attachment 1.) The white paper focused on the efforts by property and casualty insurers attempting to wall off “material exposures to asbestos, pollution and health hazard (APH) claims and other long-tail liabilities” from current insurer operations. The white paper achieves this focus by inclusion of various section on related topics as well as multiple appendixes. In 2009, the Restructuring Mechanisms for Troubled Companies Subgroup of the Financial Condition (E) Committee issued a white paper titled “Alternative Mechanisms for Troubled Companies.” (See Attachment 2.) The white paper focuses on troubled companies although it also addresses the statutory restructuring mechanisms available in the United States (“US”) at that time. This white paper similar to the 1997 white paper, also includes a number of sections on related topics as well as multiple appendixes.

Over the past few years, states have begun enacting statutes which provide opportunities for restructuring of insurance companies with finality. The purpose of this white paper is to update the 1997 and 2009 white papers and provide explanation of these new statutory processes. These processes can be

1 For purposes of this paper “runoff business” is defined as a block of insurance business that is no longer being actively written by an insurance company and no premiums are being collected, except where required to in accordance with contractual or regulatory obligations, and where the existing or assumed group of insurance policies or contracts are managed through their termination. This definition was developed based on comments received by the Restructuring Mechanism Subgroup from both regulators and industry interested parties; however, this definition has not yet been adopted by the subgroup.

broken down into two categories generally referred to as insurance business transfer (“IBT”) and corporate division (“CD”). Several states, including Arkansas, Oklahoma, Rhode Island, and Vermont, have enacted IBT statutes while other states such as Arizona, Connecticut, Illinois, Iowa, Arkansas, Pennsylvania, and Michigan have enacted CD statutes. The stated intent of all these statutes is to enable insurers to take advantage of the statutory process in order to enhance their ongoing operations.

This white paper will discuss and explore these laws within the US and identify the various regulatory and legal issues involving IBT and CD legislation. This white paper is not intended to establish an official position by the NAIC regarding IBTs or CDs. The authors suggest that each state and its various regulatory authorities should make their own determinations on how best to proceed within their respective jurisdictions. In addition, this paper is not intended to address every situation a company may encounter and leaves possible situations to each insurer as well as the review and approval of all applicable regulatory authorities. Because the robust procedures used in the United Kingdom (“UK”) are seen as a means to utilize IBT in the US, the procedures are discussed in Section 2 of this white paper.

A separate workstream was created to develop financial standards appropriate in US to evaluate IBT and CD transactions. Some stakeholders question whether, even with robust standards, adequate consumer protections would exist when IBTs and CDs are utilized. Therefore, this white paper includes a discussion of a UK case which discussed consumer protection issues.

This is a constantly changing area with states adding and amending statutory provisions and considering new and unique transactions on a continuous basis. Therefore, the factual statements in this whitepaper should be considered a “point in time” discussion.

B. Purposes

During the course of the Restructuring Mechanisms (E) Working Group’s (“Working Group”) discussions, stakeholders identified a number of potential purposes for restructuring transactions. Testimony indicated that reinsurers and insurers were looking for new solutions that provide legal and economic finality to runoff insurance risks to improve the efficient allocation of capital and management resources to runoff and on-going insurance operations. Efficiencies that are obtained through restructuring transactions include the segregation and transfer of runoff books of business with the intent to free up capital, better allocate specialized management resources currently being occupied with the oversight of disparate discontinued and on-going businesses and rationalize and facilitate the runoff of discontinued lines of business. Experience outside the US, including in the UK, has shown that prudent allocation of reserves and management of runoff books of business reduces volatility and improves capital efficiency with benefits for reinsureds and policyholders of both runoff and on-going books of business. Furthermore, runoff experts bring focused expertise to managing runoffs compared to on-going enterprises. The focus of an on-going enterprise is the continual generation of increased premium growth. Runoff business can be both a distraction to management’s focus as well as redirect regulatory focus away from the insurer’s on-going business. The isolation of such business from on-going business enhances the visibility of those runoff operations as well as the supervision of runoff operations, by both regulators and the insurer.

Advocates of these restructuring mechanisms argue that efficiencies resulting from the segregation and specialized management of disparate books of business result in transferring insurers releasing resources and allowing these insurers to better focus on improving current operations. Transferring insurers can better focus on core areas, leading ultimately to better service for current and future policyholders and better service for runoff policyholders. In many cases, the runoff business consists of long-tail lines, such
as mass tort, asbestos, environmental and general liability risks. These long-tail lines tie up financial and management resources which are out of proportion compared to the size or importance of the runoff book within the insurer.

As described in the 1997 white paper, restructuring of insurers can be initiated for several reasons that provide value to the insurer. These reasons include restructuring for credit rating, solvency, more effective claims management, need to raise capital and a desire to exit a line of business. With respect to capital and earnings volatility, the 1997 white paper explained that restructuring could allow liabilities to be separated thereby creating the ability to dedicate surplus to support restructured operations, eliminating the drag on earnings in its on-going operations and avoiding further commitment of capital for pre-existing liabilities. One restructuring expert indicated there were three primary reasons that an insurer may choose to restructure: (1) regulatory, capital and earnings volatility; 2) finality of economic transfer and 3) operational efficiencies.

Of note, restructuring mechanisms may also be beneficial for purposes of credit ratings. Credit ratings are often looked at in terms of capital volatility. Credit rating agencies may take a more favorable view of an insurer that has been able to isolate a particular risk which may be more volatile and subject to further reserve development. However, rating agencies also consider the strength of the insurance group when issuing insurance financial strength ratings, which can negate the credit rating benefit that may be found in restructuring. Ratings are critical for insurers that are writing new business in which the rating has value to potential new customers. While insurance groups use different strategies, it is common that some insurers within a particular insurance group are more critical to the ongoing success of the insurance group as a whole. It is therefore not uncommon for rating agencies to recognize this fact and provide separate ratings for individual insurers within an insurance group. While these considerations can lessen the value of restructuring for credit rating in some instances, insurance groups do still choose to restructure for credit rating purposes.

C. Regulator Concerns with Restructuring Plans

While restructuring may provide value to the insurer, regulators are concerned that restructuring does not create new resources from which claims can be paid. Restructuring should not be utilized to allow insurers to escape these liabilities or separate claims in a manner that provides less capital than is needed to satisfy the insurer’s obligation. Restructuring plans that place solvency at risk or threaten consumer benefits will be faced with challenges from regulators. However, when regulators are shown that the restructuring plan benefits both the insurer and the insured, then the regulator may be willing to approve the restructuring plan. Regulators have utilized procedures to ensure the resulting structure will have sufficient assets, both as to quality and duration, to meet policyholder and other creditor obligations. One of the recommendations of this white paper is to memorialize and standardize those procedures.

Section 2: History of Restructuring in the United Kingdom

3 David Scaimbrough (Swiss Re America Holding Corporation) as stated during the April 6, 2019 meeting of the Restructuring Mechanisms (E) Working Group.
A. Part VII Transfers in the United Kingdom

IBT and CD laws and regulations are relatively new in the US, but the legal mechanism for the transfer of insurance business has been implemented and operational in the UK for over twenty years. Part VII of the Financial Services and Markets Act of 2000⁶ (“Part VII” and “FSMA”) enables insurers to transfer portfolios of business to another insurer subject to court approval. At the time of this writing, more than 300⁷ successful Part VII transfers have taken place in the UK providing guidance to American insurers on how this process could continue to unfold in the US.

A Part VII transfer is a regulatory mechanism, governed by sections 104–116 within Part VII of the FSMA. This act allows an insurer or reinsurer to transfer long-term as well as general insurance business from one legal entity to another, subject to approval of a court. Many insurers use the procedure to give effect to group reorganizations and consolidations. Part VII transfers have also been used extensively in response to Brexit.

In accordance with the FSMA, the Prudential Regulatory Authority (“PRA”) and the Financial Conduct Authority (“FCA”) maintain a Memorandum of Understanding which describes each regulator’s role in relation to the exercise of its functions under the FSMA relating to matters of common regulatory interest and how each regulator intends to ensure the coordinated exercise of such functions. Under the Memorandum of Understanding, the PRA will lead the Part VII transfer process and be responsible for specific regulatory functions connected with Part VII applications, including the provision of certificates.

Section 110 of the FSMA allows both the PRA and the FCA to be heard in the proceedings. The Memorandum of Understanding confirms that both the PRA and the FCA may provide the court with written representations setting out their views on the proposed scheme, and the PRA may prepare a report regarding the IBT.

As set out in the Memorandum of Understanding, before nominating or approving an independent expert under section 109(2)(b) of FSMA . . . the PRA will first consult the FCA. Further, the PRA will consult appropriately with the FCA before approving the notices required under the Business Transfers Regulations.

Part VII transfers require a “scheme report.” This report is similar to the independent expert report under US IBTs, however, because the word “scheme” has a different context in the US, the word “scheme” is not used. Under section 109(2) of FSMA an independent expert report may only be made by a person:

(a) appearing to the PRA to have the skills necessary to enable him to make a proper report; and

(b) nominated or approved by the PRA.

---

The regulators expect the independent expert making the report to be a neutral person, who:

(a) is independent, that is any direct or indirect interest or connection he, or his employer, has or has had in either the transferor or transferee should not be such as to prejudice his status in the eyes of the court; and

(b) has relevant knowledge, both practical and theoretical, and experience of the types of insurance business transacted by the transferor and transferee.

The PRA may only nominate or approve an independent expert appointment after consultation with the FCA. An independent expert report must accompany an application to the court to approve the Part VII transfer plan. The independent expert report must comply with the applicable rules on expert evidence and contain the specific information set forth in the statute.

The purpose of the independent expert report is to inform the court. The independent expert, therefore, likely has a duty to the court. Further, policyholders, reinsurers, regulators, and others affected by the Part VII transfer will be relying on the independent expert report. For these reasons, a detailed report is necessary. The amount of detail that it is appropriate to include will depend on the complexity of the transfer, the materiality of each factor and the circumstances surrounding each factor.

During the Working Group’s discussion of the Part VII transfers, consumer representatives raised the UK court’s decision in Prudential v Rothesay which imposed several limitations on Part VII transfers. On August 16, 2019, the High Court of Justice issued an opinion rejecting a Part VII transfer between Prudential Assurance Company Limited and Rothesay Life PLC. This Part VII plan was the subject of a four-day hearing in which each insurer was represented by counsel, the PRA and FCA appeared, and a number of policyholders appeared in person. The Court noted that both the PRA and the FCA each produced reports regarding the plan, and both stated that they did not object. The independent expert filed a detailed report that ultimately did not reject the plan either.

The applicant received approximately 7,300 responses from policyholders in response to the approximately 258,000 policyholder packets that were sent out. Of those, about 1,000 were characterized as an objection. The main objection to the plan was that these consumers specifically selected the transferring insurer as their provider. These consumers argued that they should not have their annuity transferred against their will to a smaller insurer with a very different history and reputation just to further the commercial and financial purposes of the transferor.

This decision was appealed and ultimately overturned. The UK Court of Appeals found that the lower court incorrectly exercised its authority finding amongst other things, that the judge was wrong to

---

1 As noted by Biny Birnbaum (Center for Economic Justice—CEJ) during the Dec 8, 2019 Meeting of the Restructuring Mechanisms (E) Working Group. Note this was overturned by The Prudential Assurance Company Limited v. Rothesay Life PLC (2020) EWCA Civ 1626.
2 Prudential Assurance Company Ltd and Rothesay Life PLC, Re England and Wales Court of Appeal (Civil Division) (Dec. 2, 2020).
give weight to (i) the different capital management policies of both insurers; and (ii) the objections of a small subset of policyholders.

In so holding, the Court of Appeals stated:

(1) The Court below was wrong to decide that both the independent expert and PRA were not justified in looking at the solvency metrics at a specific date to support their conclusions.

(2) The Court below was wrong to find a material disparity in the parent company structure since the parent companies could never be required to provide support to their subsidiaries’ capital.

(3) The Court below should not have accorded any weight to the fact that the policyholders had chosen Prudential based on its long-established reputation, age, and venerability nor to the fact that they had reasonably assumed that Prudential would be their annuity provider throughout its lengthy term. 10

Despite this set of complex UK decisions, the Part VII transfer continues to be used in the UK and watched closely by the US regulators and stakeholders.

B. Differences between Part VII and Solvent Schemes of Arrangements

Solvent schemes of arrangement are another method of restructuring that exists within the UK. These are primarily designed as a procedure that can allow all liabilities to be settled for an insurer. In doing so, it can achieve many of the objectives set out in this white paper. However, unlike the Part VII transfer, the policies are subject to a court ordered termination instead of transferred. While such an arrangement may provide some of the same features as a Part VII transfer the solvent scheme does not continue the coverage with a new insurer the way a Part VII transfer does. Other differences may exist in law but are not deemed to be relevant to this specific white paper.

Section 3: Survey of US Restructuring Statutes and Regulations

Various states have enacted corporate restructuring statutes or regulations. Those generally following the UK structure began with Rhode Island in 2002 adopting a statute titled Voluntary Restructuring of Solvent Insurers 11 patterned after Solvent Schemes of Arrangements. This type of process was renamed Commutation Plans and differs from the UK law in a number of areas including an enhanced role for the regulator, designating the independent expert as a consultant to the regulator and limiting the process to commercial property and casualty risks. One commutation plan was adjudicated by the Rhode Island court in 2011 and withstood a constitutional challenge. 12 Commutation Plans continue to be available under RI law.

---

10 Id. at Page 6 of Appeal Nos: A2/2019/2407 and 2409 Case No: 1236/5/7/15
In 2015 Rhode Island adopted an Insurance Business Transfer Plan regulation structured similar to the Part VII transfers. Again, in contrast to the UK, the regulation provides an enhanced role for the regulator, designates the independent expert as a consultant to the regulator and limits the process to commercial property and casualty risks. The RI regulation provides for notice at the time the plan is filed with the regulator and an ability to comment at that time. If the regulator, after a thorough review of the Plan and comments received, continues to believe that it meets the statutory requirements, it will authorize the Plan to be filed with the Court. The Court will require notice to policyholders and hearings to allow all comments and objections to be considered. A Rhode Island domestic insurer has been formed specifically to undertake IBTs, but a plan has not yet been filed with the regulator.

In 2013, Vermont adopted the Legacy Insurance Management Act ("LIMA"). LIMA is limited to surplus lines risks and reinsurance, involves department approval but not court approval and allows policyholders to opt-out of the plan. As of this date, no transactions have been completed under LIMA.

In 2018, Oklahoma adopted the Insurance Business Transfer Act modeled after UK’s Part IV regulation with a few significant differences. The differences include no restriction on the type of insurance nor restrictions on the age of the business. Oklahoma law provides for both insurers to nominate a potential independent expert with the Insurance Commissioner appointing one or another if he or she is not satisfied with the nominations. The independent expert report is submitted with the IBT application to the Oklahoma Insurance Department which approves the IBT plan to be submitted to the court upon satisfactory showing that statutory standards are met. The court requires notice and opportunity to be heard prior to court approval of implementation of the plan. As of this writing, Oklahoma has completed two IBTs in October 2020 and September 2021, involving a Rhode Island and Wisconsin insurer respectively, which are described below. Neither of the plans were challenged in the state court proceedings.

In 2021, Arkansas adopted the Insurance Business Transfer Act which is based on the Oklahoma and Rhode Island statutes. The key differences are: the assuming insurer must be licensed in each line of business in each state where the transferring insurer is licensed unless an exception is made for an extraordinary circumstance; specific factors are provided in the Arkansas IBT law that the Commissioner must consider before approving the IBT including the impact on contract holders and reinsurers in addition to policyholders, additional guidance on what would be a material adverse impact; specific guidance for proposed long-term care IBTs and additional requirements for the expert opinion report.

The National Council of Insurance Legislators has promulgated a model IBT law modeled after the Oklahoma IBT statutes, as well as a model CD law. A number of states have adopted CD statutes, whether specific to insurance or based on the state’s general power over corporations. Those states include Arizona, Connecticut, Illinois, Iowa, Michigan, Arkansas, and Pennsylvania. All of these statutes allow for corporate restructures. As discussed in more detail below, Pennsylvania and Illinois have each completed CD transactions.

13 230 RICR 20-45-6.
15 Insurance Business Transfer Act, OKLA. STAT. tit. 36, §§ 1681 et seq.
A. Similarities and Differences between Statutes

Rhode Island’s IBT law permits transfers of property and casualty commercial blocks of business that have been closed for at least 60 months. In contrast, Oklahoma and Arkansas IBT laws permit transfers of both open and closed books of business and are not limited in the line of business that can be transferred. All three states require approval by a court and no material adverse impact on affected policyholders. The approval of the ceding and assuming insurer’s domestic insurance regulator is also required. All states require an expert report that contains an opinion on the likely effects of the transfer plan on policyholders considering whether the security position of policyholders is materially adversely affected by the transfer. All states also require notification to all affected policyholders as well as the opportunity to be heard at a public hearing.

As noted above, several states have also enacted CD laws, rules, and regulations. While differences exist between IBTs and CDs, there are also many similarities between the two mechanisms: they require a regulatory review of the effect on policyholders, they have balance sheet considerations, and they are a way to separate run-off certain books of business from an insurer.

The Illinois’ Domestic Stock Company Division Law\(^{20}\) requires disclosure of the allocation of assets and liabilities among companies. Although not statutorily required, the Illinois Department of Insurance Director has committed to providing an opportunity to comment at a public hearing. The standard in the Illinois statute is that the plan must be approved by the Director unless the following characteristics exist:

(1) policyholder/shareholder interest are not protected;
(2) each insurer would not be eligible to receive a license in the state;
(3) division violates the uniform fraudulent act;
(4) division is made for the purpose of hindering, delaying, or defrauding other creditors;
(5) any of the companies are insolvent after the division is complete.

The Connecticut CD statute\(^{21}\) creates something legally distinct from a merger, consolidation, dissolution, or formation. The resulting insurers are deemed legal successors to the dividing insurer, and any of the assets or obligations allocated are done as a result of succession and not by direct or indirect transfer. The plan must include among other things (1) the name of the domestic insurer; (2) the resulting insurer(s); (3) proposed corporate by-laws for new insurers; (4) manner for allocating liabilities and reasonable description of policies; (5) other liabilities and capital and surplus to be allocated, including the manner by which each reinsurance contract is allocated; and (6) all other terms and conditions. Connecticut requires approval by the board of directors, stockholders, and other owners before being considered by the Department of Insurance. The plan is then discussed with the Department which will determine whether the liabilities and policies are clearly defined and identifiable and whether the assumptions are conservative based upon actuarial findings. Connecticut law does not require an independent expert or a communication strategy as part of the application, but the Department of Insurance has stated that it will.

---

require certain notifications related to a hearing (e.g., newspaper or print publications). Connecticut does not require notice of hearing however the insurance commissioner may require a hearing if in the public interest. Similar to Illinois law, the insurance commissioner must approve a plan of division unless he or she finds that (1) the interest of any policyholder or interest holder would not be adequately protected or (2) the division constitutes a fraudulent transfer. The division itself must be effectuated within 90 days of the filing.

The Pennsylvania CD statute was enacted in 1990 and is the subject of the NAIC 1997 white paper on Liability Based Restructuring. The statute upon which the transaction discussed in the 1997 white paper is based is not specific to insurance. The law is brief with only four paragraphs—requiring the plan to be submitted in writing, reasonable notice and opportunity for a hearing, investigations and supplemental studies and approval through an order from the Department and subject to judicial review. The associated procedural regulations essentially are those that exist under the states equivalent of the NAIC Insurance Holding Company System Regulatory Act (Model 440).

While the Rhode Island, Oklahoma and Arkansas laws have approval processes that are similar to UK Part VII transfers, there are differences between the three statutes. Rhode Island permits transfers of mature (at least 60 months) closed commercial property and casualty books of business or non-life reinsurance but no other lines of business. Oklahoma does not have similar restrictions and specifically allows property and casualty, life, and health lines of business. Oklahoma and Arkansas do not require the book of business to be closed.

While the CD laws enacted to date all require regulatory review of the effect on policyholders, balance sheet considerations and other operational requirements, the most significant differences that exist in CD laws are not among themselves, but rather in comparison to the IBT statutes. This is because the CD statutes do not require approval by a court or the same level of notification to policyholders. In addition, while CD states reserve the right to hire their own external expert—similar to a Form A (Change in Control), these states may perform their review based upon their own internal experts.

B. Transactions Completed to Date

One of the earliest transactions completed under these types of laws occurred in Pennsylvania in announced that it had approved a transaction that transferred a book of business from one entity to another. This transaction is discussed within Attachment 1, which is the 1997 Liability-Based Restructuring White Paper, and is commonly referred to as “the Brandywine” transaction, but within the 1997 White Paper is discussed within Appendix 1 and relates to Cigna, where more information is available. During the Working Group’s discussions in 2019, the Pennsylvania Insurance Department, which is captured in the following paragraph.

The Brandywine transaction was subject to an insurance department review, which included an actuarial review, a review of the financial information by a consultant and participation by other states that had an interest to understand how the plan would be restructured. There were four actuarial firms that opined on the transaction as well as two opinions from investment banks, one contracted by the insurer and another contracted by the Department. Issues regarding guaranty coverage were not addressed, but it did require Pennsylvania policyholders to be covered by the Pennsylvania fund. Confidentiality was applied to

---

22 15 PA. CONS. STAT. §§ 361 et seq.
any examination document prepared in the process, actuarial reports, and questions and comments, but insurer responses were made available to the public. The transaction was a large commercial transaction and immaterial to the policyholders, therefore reducing some of the concerns that may have otherwise existed.

In 2011, GTE Re23 completed a commutation plan in Rhode Island. The plan was approved by the Rhode Island court and the insured was ordered dissolved after all assureds had been paid full value for their policies. The GTE Re Plan was objected to, on a theoretical basis, and the Providence County Superior Court issued a decision24 on a contract clause issue.

In 2020, the District Court of Oklahoma County approved Providence Washington Insurance Company’s (”PWIC”) IBT plan.25 The plan transferred all the insurance and reinsurance business underwritten by PWIC, a Rhode Island domestic insurer, to Yosemite Insurance Company. Later in 2020, the Oklahoma Insurance Commissioner issued an order authorizing Sentry Insurance a Mutual Company (“Sentry”), a Wisconsin-based insurer, to submit its IBT Plan to the District Court of Oklahoma County for approval.26 This IBT transfers a block of reinsurance business underwritten by Sentry to National Legacy Insurance Company, an insurer domiciled in Oklahoma and a subsidiary of Randall & Quilter Investment Holdings Ltd (NLIC). The Sentry transfer was approved by the Court in August of 2021.

Illinois completed a transaction under their CD statute in early 2020. The transaction was a transfer of risks with distinct characteristics into a single insurer within a holding company structure. All the transfers originated and ended within the same holding company. The Illinois Department of Insurance has indicated that it will issue a detailed regulation as experience develops with CD plans proposed and completed under the statute.

Section 4: Impact of IBTs and CDs to Personal Lines

A. Guarantee Association Issues

An important issue for corporate restructuring is the availability of guaranty association coverage in the event of the insolvency of the restructured insurer. In order to uphold the stated declaration that restructuring should not materially adversely affect consumers, guaranty association coverage should not be reduced, eliminated or otherwise changed by the restructuring. Each state guaranty association is a separate entity governed by the laws of that state, and those statutes will determine association coverage. Although most states pattern their laws after the NAIC model law, there could potentially be different results concerning guaranty association coverage depending on where the insured resides. Guaranty association coverage. It is possible that a corporate restructuring could result in the reduction, elimination or change in guaranty association coverage provided to a policyholder in the event of the restructured insurer’s insolvency if steps are not taken to prevent that result. The potential coverage issues are different

24 State of Rhode Island Providence County Superior Court C.A. No. PB 10-3777

26 Approval Order in Case No. 20-0582-IBT from Oklahoma Insurance Commissioner, filed on November 23, 2020, at
for life and health guaranty association coverage and property and casualty guaranty fund coverage. We
address them separately below.

Transactions Involving Life or Health Insurance

The Working Group received input from both the National Organization of Life and Health
Insurance Guaranty Associations (“NOLHGA”) and the National Conference of Insurance Guaranty Funds
(“NCIGF”). NOLHGA described how about the concerns for insurance consumers of personal lines life and
health insurance business in particular are pronounced.

NOLHGA indicated that for there to be guaranty association coverage in the event of a life or
health insurer insolvency, there are three conditions that must be present. Those conditions are:

1. The consumer seeking protection must be an eligible person under the guaranty association
   statute; typically, this is achieved by being a resident of the guaranty association’s state
   at the time of the insurer’s liquidation;
2. The product must be a covered policy; and
3. The failed insurer for which protection is being sought must be a member insurer of the
   guaranty association of the state where the policyholder resides. To be a member insurer,
   the insurer must be licensed in that state, or have been licensed in the state to write the lines
   of business covered by the guaranty association.

In most states, coverage can be provided for an “orphan” policyholder of the insurer whereby
the coverage is issued but the policyholder has since moved to a state that is not a guaranty association
member. Those policies are covered under the state in which the insolvent insurer’s domiciled.
Orphan policyholders are policyholders who are residents of states where the guaranty association
cannot provide coverage because the insolvent insurer is domiciled. This provision is intended to
plug the gap in these rare situations. Orphan coverage was not designed to provide
coverage to all policyholders regardless of domicile as might occur if

A key factor when considering a life or health IBT or CD transaction is whether the resulting
insurer in an IBT does not meet the requirements for guaranty association coverage. These issues can or
will be addressed in legislative and regulatory manners including maintaining a certificate of authority in
each state, so the insurer is a guaranty association a member insurer in each state. However, if any of the
same guaranty associations where the transferring insurer is insolvent an unable was a member insurer of
the resulting insurer is a member insurer of the same guaranty associations as the transferring insurer,
guaranty association coverage will be preserved and not changed for all policyholders. Of course, specific
guaranty association coverage will be determined if/when the resulting insurer is placed under an order of
liquidation with a finding of insolvency. If the resulting insurer is not a member insurer of the same
guaranty associations as the transferring insurer, policyholders may lose guaranty association coverage or
be covered as orphans by the guaranty association in the insurer’s domestic state. Orphan coverage was not designed to plug the gap in this situation. Shifting the coverage obligation to meet such requirements in the domestic state guaranty association could impair the ability of guaranty association coverage being concentrated in that state.

To address these concerns with respect to complete restructuring IBT and CD transactions involving life or health insurance, restructuring statutes (or regulators reviewing proposed restructuring transactions) should clearly provide that assuming or resulting insurers must be licensed so that policyholders maintain eligibility for guaranty association coverage from the same guaranty association that would have provided coverage immediately prior to a restructuring transaction. This means that the resulting insurer must be licensed in all states where the transferring insurer was licensed or had ever been licensed with respect to the policies being transferred.

Transactions Involving Property and Casualty Insurance

The Working Group received input from the National Conference of Insurance Guaranty Funds (“NCIGF”) about the concerns for insurance consumers of personal lines property and casualty insurance business.

One interpretation of the NAIC Property and Casualty Insurance Guaranty Association Model Act (Model # 540) is that based on the definitions of “Covered Claim,” “Member Insurer,” “Insolvent Insurer,” and “Assumed Claim Transaction” an orphan policyholder could not be covered by the state guaranty association. Consequently, there is a concern that no guaranty association coverage would be provided if policies are transferred to a nonmember insurer. Many property and casualty guaranty fund statutes require that the policy be issued by the now-insolvent insurer and that it must have been licensed either at the time of issue or when the insured event occurred. These limitations, however, are designed to avoid coverage being provided when the policy at issue did not “contribute” to the association, which would not exist in the case of an accessible policy later transferred to a nonmember insurer. Moreover, the restrictions exist to prevent claims resulting from a company regulated as a surplus lines or a similar structure to benefit from the protections afforded licensed business when a licensed company is liquidated.

NCIGF’s position is that where there was guaranty fund coverage before the IBT or CD, state regulators should ensure that there is coverage after the IBT or CD. An IBT or CD should not reduce, eliminate or in any way impact guaranty fund coverage. An CD or IBT should not create, expand, or in any way impact coverage. NCIGF suggested that possible technical gaps may exist in states that have adopted the NAIC Property & Casualty Insurance Guaranty Association Model Act. These gaps could include the definitions of Covered Claim, Member Insurer, Insolvent Insurer, and the Assumed Claims Transaction found in Section 5 of the model law.

Fulfilling this intent may require property and casualty guaranty association fund statutes be amended in each of the states where the original insurer was a member of a guaranty association before the transaction becomes final. NCIGF indicated that it had created a subcommittee to address this issue and

---

oversee a coordinated, national effort to enact the necessary changes in each state. Further discussion of this subcommittee’s work is discussed in the Recommendations section below.

B. Assumption Reinsurance

Existing assumption reinsurance statutes exist to provide policyholder disclosures and rights for rejection of a proposed novation of their policy. These statutes are primarily designed for the benefit of individual policyholder with regard to personal lines coverages, whether for automobile, homeowners, life insurance or long-term care insurance, in situations where the solvency of the insurer might be at risk. There are currently ten states that have enacted the NAIC Assumption Reinsurance Model Act. 30

The Assumption Reinsurance Model Act was drafted by state insurance regulators and initially adopted by the NAIC on December 5, 1993. The effect of an assumption reinsurance transaction is to relieve the transferring insurer of all related insurance obligations and to make the assuming insurer directly liable to the policyholder for the transferred risks. Under these statutes, individual policyholders receive a notice of transfer and may reject or accept the transfer. If the policyholder does not respond, the policyholder is deemed to have given implied consent, and the novation of the contract will be affected. When a new agreement replaces an existing agreement, a novation has occurred. There is no judicial involvement under the Assumption Reinsurance Model Act.

Some stakeholders have questioned whether the existence of rights under the Assumption Reinsurance Model Act by implication prohibit an IBT or a CD. The argument is that the existence of the assumption reinsurance statute prohibits other statutory restructuring mechanisms without the policyholders express individual consent. Other stakeholders have suggested that these statutes coexist with restructuring mechanisms since the restructuring statutes are not addressing individual novations of policies. The argument is that the restructuring statutes address transfers of books of business not individual novation of policies and, therefore, are completely separate from assumption reinsurance statutes.

This is not an issue that can be resolved in this white paper. The issue has not yet been addressed by any court nor raised in the proceedings on restructurings. Therefore, while it is raised here for informational purposes, resolution of the issue is left unanswered for now and for the courts to determine in the future.

---

30 Assumption Reinsurance Model Act NAIC Model #803 (Adopted by Colorado, Georgia, Kansas, Maine, Missouri, Nebraska, North Carolina, Oregon, Rhode Island, and Vermont)
C. Separate Issues in Long-Term Care

Long-tail liabilities are naturally subject to greater reserve uncertainty and may impact the regulators’ willingness to consider the restructuring of certain lines of business. During the Working Group’s discussion, it was noted by a number of regulators that restructuring of certain lines of business, such as long-term care insurance, could be problematic since the specific line of business has presented significant challenges in determining appropriate reserving and capital required to support the business. The Working Group acknowledges that, regardless of whether some state laws would permit it, use of a corporate restructuring mechanism in certain lines, such as long-term care insurance, is likely to be subject to a great deal of opposition and higher capital requirements for the insurers involved.

The nature of long-term care insurance policyholders will make restructuring challenging especially with a transfer to a completely new insurer in a new holding company system. Long-term care insurance policyholders are individuals who may find it much more challenging to assert their rights in a court proceeding than a corporate entity would. This fact, along with the traditional inability of insurers to properly estimate future liabilities in this line of business, makes it a line of business that likely is not appropriate for restructuring mechanisms. This conclusion, however, could be refuted if the appropriate plan addresses these issues and provides benefit to the policyholders.

Section 5: Legal Impacts of IBT and CD Laws

A. How Other Jurisdictions Might Analyze IBT or CD Decisions from Other States

As previously discussed by others, a restructuring mechanism in one state will not provide finality unless the decision is recognized by other jurisdictions. The US Constitution includes the Full Faith and Credit Clause as well as the Privileges and Immunities Clause (also referred to as the doctrine of Comity) in Article IV. These clauses create methods of extending the effect of a restructuring mechanism beyond the state that issued the judgment and giving that state’s judgment effect in all other states in which the insurer does business.

Thus, the Privileges and Immunities Clause or the Full Faith and Credit Clause are two methods stemming from the US Constitution that provide for recognition of court orders from other states. We will briefly touch on both concepts but leave these non-core insurance topics to others to discuss in more depth.

The policyholder challenging the decision must first identify the property of which they are being deprived. Assuming the resulting insurer is sufficiently capitalized, a policyholder who has been reallocated to the resulting insurer, but alleges no additional harm, may have difficulty identifying the property interest of which they have been deprived. The determination on full faith and credit will likely rely upon the issues raised and considered in the Court of the domestic state.

The issue is not likely to be ripe until an insolvency occurs with the assuming insurer. At that point, if the assuming insurer is insolvent and the original insurer is still financially sound, will a court give full

32 The same analysis does not apply to jurisdictions outside the United States and is not addressed in this white paper.
faith and credit to the approval of the IBT or CD? This is an open question that is unlikely to be resolved until the specific factual scenario presents itself to the courts. The fact that this issue exists makes it even more important that only transactions with the greatest chance for success be subject to corporate restructuring process.

Comity is typically understood to be a courtesy provided between jurisdictions, not necessarily as a right but rather out of deference and good will. As such, comity might not require in this context that a state honor the decision of another state. This is an analysis to be conducted by the individual jurisdictions.

B. Impact of UK Part VII Transactions in the US

Although there has been limited experience in the US courts in approving commutations and IBTs, some US courts have had opportunities to review these types of issues because US insurers have been involved with UK-based commutations or transfers. Since the 2000 and 2005 revisions to UK laws, solvent schemes and Part VII transfers have been employed much more frequently in the UK. This has led to more frequent reviews by US courts of the underlying UK transactions. Some of the impact in the US is felt in bankruptcy courts, which often are implicated because US policyholders obtain coverage from UK-based insurers on a regular basis, while others involve non-bankruptcy situations, such as when a policyholder wants to submit a claim for payment but no longer has coverage.

There are several interesting cases that provide some guidance on these issues. Narragansett Electric Co. v. American Home Assurance Co. is one such case. In Narragansett Electric Co., the court reviewed claims by London-based insurer, Equitas, that the plaintiff had sued the wrong insurer on a claim that was alleged to have occurred more than sixty years earlier. Equitas argued that it had not assumed the obligations at issue. As the court summarized, “Equitas’s motion to dismiss raises the question whether this [Part VII] transfer of insurance obligations from Lloyd’s to Equitas is effective and enforceable under U.S. law.” First, the court decided that it was sitting in diversity jurisdiction and that the appropriate substantive law to apply was English. Next, the court discussed a prior District Court case where another Part VII transfer was discussed at length and not recognized as a foreign bankruptcy proceeding. In reaching a conclusion to reject the request for dismissal, the court relied on a letter sent by Equitas to US policyholders notifying them that Equitas was assuming the obligations of the original insurer. The court found that regardless of whether the Part VII had any effect the letter sent by Equitas raised sufficient basis to let the suit continue. Equitas attempted to argue that the Part VII transfer did not state that it would become effective in the US, rather that it was only effective in certain countries of Europe. Nevertheless, the utility company alleged that it had not relied on the English High

---

Court Order executing the Part VII transfer, but rather relied on the notice letter it received as the evidence of obligation by the new named insurer.

_Air & Liquid System Corp. v. Allianz Insurance Co._, dealt with a discovery dispute as to whether a policyholder impacted by a Part VII transfer could later have access to the information that went into a UK’s independent expert’s report. Ultimately, the special master in the District Court allowed discovery to proceed with a deposition of the expert. _Allianz Insurance Co._ is an example of one way that Part VII transfers can be used to add complication to an insurance coverage dispute, embroiling all involved in later litigation. _Allianz Insurance Co._ also shows how the approval of such a transfer, even though well vetted originally, can later come under scrutiny in unintended or unforeseen locations.

_Allianz Insurance Co._ concerned General Star, which wrote policies for excess coverage outside the US for only three years, 1998–2000, and then was put into runoff and ceased writing new policies. By 2010, it had substantially wound down its business and decided to transfer its policies to a new insurer via a Part VII transfer. Both General Star (the transferor) and the transferee taking over the policies shared an ultimate parent company—Berkshire Hathaway. At issue here was whether the expert who opined on the Part VII transfer had properly included one particular US-based insured, Howden North America (“Howden”), and all three policies it had purchased from General Star. That insurance contract had been for excess coverage, and Howden had informed General Star of 13,500 potential asbestos related claims that were likely to exceed the initial layers of insurance, making it likely that the General Star excess policy would be required to pay out claims. The real issue in _Allianz Insurance Co._ seemed to be that the post-Part VII insurer was put into voluntary liquidation days after the Part VII transfer concluded, leading to questions about whether and how the independent expert had valued Howden’s potential asbestos claims.

_In re Board of Directors of Hopewell International Insurance Ltd._ involved a New York bankruptcy judge analyzed a solvent scheme of arrangement that occurred in Bermuda, and applied Bermuda law, rather than the requested Minnesota law. The court determined that, given the location of the petitioner’s assets, Respondents had failed to object to the solvent scheme as proposed when they had been provided notice, and that petitioner had been subjected to a foreign proceeding, it had jurisdiction. As such, the court enjoined the respondent from taking action against petitioner based on the underlying action. The court in _Hopewell_ also recognized the Bermuda solvent scheme as one qualifying as a foreign proceeding under US Bankruptcy Code.

### Section 6: Recommendations

#### A. Financial Standards Developed by Subgroup

38 Id. at *12. This interrelated nature is not unusual and is referred to as an intra-company transaction.

40 Written by then the Chief United States bankruptcy judge in the Southern District of New York Tina Brozman, this decision detailed relevant history behind the Bermuda schemes of arrangement, including the different methods available to companies. One arrangement involved a cut-off scheme, developed in 1995, in which companies have no more than five years to submit additional claims prior to a bar date. This scheme greatly reduced the time for a run-off to wind down its business.

41 Citing to 11 U.S.C. § 101(23)(2012), The court applied a standard that “a foreign proceeding is a foreign judicial or administrative process whose end is to liquidate the foreign estate, adjust its debts or effectuate its reorganization.” Id. at 49 (internal quotations omitted).
As reflected in this whitepaper, these restructuring mechanisms depend considerably upon the specific plan being proposed. Currently, each state with relevant statutes is being presented with plans for evaluation with no standard set of criteria under which to judge the financial underpinnings of the plan. The Working Group believes that trust in these mechanisms and protection of the policyholders who will be impacted by them, demands a standard set of financial principles under which to judge the transaction. As such, the Working Group created a subgroup to specifically address these financial issues.

The Restructuring Mechanism Subgroup (“Subgroup”) has been charged with the following initial work related to this White Paper:

- Develop best practices to be used in considering the approval of proposed restructuring transactions, including, among other things, the expected level of reserves and capital expected after the transfer along with the adequacy of long-term liquidity needs. Also develop best practices to be used in monitoring the companies after the transaction is completed. Once completed, recommend to the Financial Regulation Standards and Accreditation (F) Committee for its consideration. Complete by the 2021 Summer National Meeting.  

- Members of the Subgroup have studied and acknowledge that UK Part VII procedures set forth robust processes and that setting similar requirements should be applied to IBT and CDs. As of the date of this paper, the charge related to best practices has not been completed. The Subgroup will continue its work with the goal of developing financial best practices. Those practices will be exposed for comment and discussion prior to referral to other groups.

B. Guaranty Association Issues

As discussed above, when these restructuring mechanisms are applied to personal lines serious issues arise over the continuation of guaranty association coverage. A number of states—Connecticut, California, and Oklahoma—have enacted statutory solutions to these issues. In addition, NCIGF has provided proposed statutory language. The Working Group would suggest that these issues, and the potential solutions, be referred to the Receivership Task Force for consideration to include language in the Guaranty Association Model Act.

On the life and health side, as noted above, restructuring statutes (or regulators reviewing proposed restructuring transactions) should clearly provide that assuming or resulting insurers must be licensed so that policyholders maintain eligibility for life and health guaranty association coverage from the same guaranty association that would have provided coverage immediately prior to a restructuring transaction. This means that the resulting insurer must be licensed in all states where the transferring insurer was licensed or had ever been licensed with respect to the policies being transferred.

On the property and casualty side, amendments to the guaranty fund statutes likely will be necessary. A number of states—California, Illinois, and Oklahoma—have enacted statutory solutions to the property and casualty guaranty association issues similar to what NCIGF has suggested to the working group. In addition, NCIGF has provided proposed statutory language for other states to consider. The Working Group would suggest that these issues, and the potential solutions, be referred to the Receivership Task Force for consideration to include language in the Guaranty Association Model Act.

42 Charges were adopted by the Financial Condition (E) Committee Oct. 27, 2020 (see NAIC Fall National Meeting Minutes for the Financial Condition (E) Committee-Attachment Two).
and Insolvency Task Force for consideration. Specifically, the Working Group recommends that the language proposed by NCIGF be included in the NAIC Property and Casualty Insurance Guaranty Association Model Act. Regulators, guaranty funds and other appropriate industry stakeholders should work cooperatively to implement this statutory remedy with all deliberate speed.

Inclusion in the model, of course, only provides a roadmap for a state. The Working Group, therefore, suggests that, once appropriate language has been drafted, a serious effort be undertaken to obtain changes to the statutes in the various states to address this issue. Until that is accomplished, regulators should very carefully consider how plans presented address the property and casualty guaranty association issues to assure that consumers are not harmed by the transaction.

C. Statutory Minimums

During the Working Group hearing, stakeholders made a number of suggestions as to provisions which should be required to be included in IBT and CD statutes. Those include:

1. Requirement of court approval must be required for all restructuring mechanisms. Currently the IBT statutes (except for Vermont) require court approval, but the CD statutes generally do not.

2. Requirement of the use of an independent expert to assist the state in both IBT and CD transactions, even though none of the states require this independent expert assistance for a CD.

3. Requirement of a notice to stakeholders, a public hearing, robust regulatory process, and an opportunity to submit written comments are necessary for all policyholders, reinsurers, and guaranty associations.

None of the restructuring mechanism are based on an NAIC model. While the Rhode Island, Oklahoma and Arkansas statutes are similar and are based on the Part VII processes in the UK, all CD processes are different and drafted by the legislatures of the states which enacted the statutes. Each of these recommendations is designed to address possible impairment of the financial position of the policyholders of the companies involved in the IBT and CD. As some commenters indicated, each of these suggestions would be beneficial in some transaction. Other transactions, however, may not need all of these provisions. For example, an intra holding company transaction may not need full faith and credit.

While independent experts can be of value, the mere fact that someone is employed by an insurance department does not mean that their skill set is not sufficient for certain transactions. Depending upon the transaction, department staff with a deep understanding of the insurer might provide more protection for consumers than a newly hired individual without a history with the insurer. Thus far, none of the transactions have been undertaken without a robust regulatory process; however, there would be concern from other regulators if this quality of regulatory process was not in place.

D. Impact of Licensing Statutes

Insurers formed for the purpose of effectuating restructuring mechanisms may, in the right transactions, provide value to consumers in the efficient management of runoff liabilities. However, these newly formed companies have difficulty getting licensed in the various states either because of...
“seasoning” issues or because they are not writing ongoing business so the state may be hesitant to grant a license. Lack of licensure can provide a lack of regulatory control which can lead to actions which harm consumers. The Working Group, therefore, recommends that the appropriate committee look at licensing standards to consider whether any changes should be made to the licensure process for runoff companies resulting from restructuring transactions of runoff blocks. A streamlined process that still ensures appropriate regulatory oversight (and any licensure necessary to preserve guaranty association coverage) may be appropriate in limited circumstances.

Commented [A5]: If possible, we suggest that the appropriate committee be identified here.

NCIGF Proposed Edits to Property and Casualty Insurance Guaranty Association Model
PROPERTY AND CASUALTY INSURANCE GUARANTY ASSOCIATION MODEL ACT

Table of Contents

Section 1. Title
Section 2. Purpose
Section 3. Scope
Section 4. Construction
Section 5. Definitions
Section 6. Creation of the Association
Section 7. Board of Directors
Section 8. Powers and Duties of the Association
Section 9. Plan of Operation
Section 10. Duties and Powers of the Commissioner
Section 11. Coordination Among Guaranty Associations
Section 12. Effect of Paid Claims
Section 13. [Optional] Net Worth Exclusion
Section 14. Exhaustion of Other Coverage
Section 15. Prevention of Insolvencies
Section 16. Tax Exemption
Section 17. Recoupment of Assessments
Section 18. Immunity
Section 19. Stay of Proceedings

Section 1. Title

This Act shall be known as the [State] Insurance Guaranty Association Act.

Section 2. Purpose

The purpose of this Act is to provide a mechanism for the payment of covered claims under certain insurance policies, to avoid excessive delay in payment and to the extent provided in this Act minimize financial loss to claimants or policyholders because of the insolvency of an insurer, and to provide an association to assess the cost of such protection among insurers.

Section 3. Scope

This Act shall apply to all kinds of direct insurance, but shall not be applicable to the following:

A. Life, annuity, health or disability insurance;
B. Mortgage guaranty, financial guaranty or other forms of insurance offering protection against investment risks;
C. Fidelity or surety bonds, or any other bonding obligations;
D. Credit insurance, vendors’ single interest insurance, or collateral protection insurance or any similar insurance protecting the interests of a creditor arising out of a creditor-debtor transaction;
E. Insurance of warranties or service contracts including insurance that provides for the repair, replacement or service of goods or property, indemnification for repair, replacement or service for the operational or structural failure of the goods or property due to a defect in materials, workmanship or normal wear and tear, or provides reimbursement for the liability incurred by the issuer of agreements or service contracts that provide such benefits;
Property and Casualty Insurance Guaranty Association Model Act

F. Title insurance;

G. Ocean marine insurance;

H. Any transaction or combination of transactions between a person (including affiliates of such person) and an insurer (including affiliates of such insurer) which involves the transfer of investment or credit risk unaccompanied by transfer of insurance risk; or

I. Any insurance provided by or guaranteed by government.

Drafting Note: This Act focuses on property and liability kinds of insurance and therefore exempts those kinds of insurance deemed to present problems quite distinct from those of property and liability insurance. The Act further precludes from its scope certain types of insurance that provide protection for investment and financial risks. Financial guaranty is one of these. The NAIC Life and Health Insurance Guaranty Association Model Act provides for coverage of some of the lines excluded by this provision.

For purposes of this section, “Financial guaranty insurance” includes any insurance under which loss is payable upon proof of occurrence of any of the following events to the damage of an insured claimant or obligee:

1. Failure of any obligor or obligors on any debt instrument or other monetary obligation, including common or preferred stock, to pay when due the principal, interest, dividend or purchase price of such instrument or obligation, whether failure is the result of a financial default or insolvency and whether or not the obligation is incurred directly or as guarantor by, or on behalf of, another obligor which has also defaulted;

2. Changes in the level of interest rates whether short term or long term, or in the difference between interest rates existing in various markets;

3. Changes in the rate of exchange of currency, or from the inconvertibility of one currency into another for any reason;

4. Changes in the value of specific assets or commodities, or price levels in general.

For purposes of this section, “credit insurance” means insurance on accounts receivable.

The terms “disability insurance” and “accident and health insurance,” and “health insurance” are intended to be synonymous. Each State will wish to examine its own statutes to determine which is the appropriate phrase.

A State where the insurance code does not adequately define ocean marine insurance may wish to add the following to Section 5, Definitions: “Ocean marine insurance” means any form of insurance, regardless of the name, label or marketing designation of the insurance policy, which insures against maritime perils or risks and other related perils or risks, which are usually insured against by traditional marine insurance, such as hull and machinery, marine builders risk, and marine protection and indemnity. Perils and risk insured against include without limitation loss, damage, expense or legal liability of the insured for loss, damage or expense arising out of or incident to ownership, operation, chartering, maintenance, use, repair or construction of any vessel, craft or instrumentality in use in ocean or inland waterways for commercial purposes, including liability of the insured for personal injury, illness or death or for loss or damage to the property of the insured or another person.

Section 4. Construction

This Act shall be construed to effect the purpose under Section 2 which will constitute an aid and guide to interpretation.

Section 5. Definitions

As used in this Act:

[Optional:

A. “Account” means any one of the three accounts created by Section 6.]

Drafting Note: This definition should be used by those States wishing to create separate accounts for assessment purposes. For a note on the use of separate accounts for assessments see the Drafting Note after Section 6. If this definition is used, all subsequent subsections should be renumbered.

A. “Affiliate” means a person who directly, or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with another person on December 31 of the year immediately preceding the date the insurer becomes an insolvent insurer.
B. “Association” means the [State] Insurance Guaranty Association created under Section 6.

C. “Association similar to the association” means any guaranty association, security fund or other insolvency mechanism that affords protection similar to that of the association. The term shall also include any property and casualty insolvency mechanism that obtains assessments or other contributions from insurers on a preinsolvency basis.

Drafting Note: There are two options for handling claims assumed by a licensed carrier from an unlicensed carrier or self insurer. Alternative 1 provides that these claims shall be covered by the guaranty association if the licensed insurer becomes insolvent subsequent to the assumption. Alternative 2 provides coverage only if the assuming carrier makes a payment to the guaranty association in an amount equal to that which the assuming carrier would have paid in guaranty association assessments had the insurer written the assumed business itself. If a State wishes to adopt Alternative 1, it must select Alternative 1 in Section 5D and Alternative 1a or 2a in Section 8A(3). If a State wishes to adopt Alternative 2, it must select Alternative 2 in Section 5D and Q and Alternative 1b or 2b in Section 8A(3).

D. [Alternative 1] “Assumed claims transaction” means the following:

1. Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a final order of liquidation, through a merger between the insolvent insurer and another entity obligated under the policies; or

2. An assumption reinsurance transaction in which all of the following has occurred:
   a. The insolvent insurer assumed, prior to the entry of a final order of liquidation, the claim or policy obligations of another insurer or entity obligated under the claims or policies; and
   b. The assumption of the claim or policy obligations has been approved, if such approval is required, by the appropriate regulatory authorities; and
   c. As a result of the assumption, the claim or policy obligations became the direct obligations of the insolvent insurer through a novation of the claims or policies.

[Alternative 2] “Assumed claims transaction” means the following:

1. Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a final order of liquidation, through a merger between the insolvent insurer and another entity obligated under the policies, and for which Assumption Consideration has been paid to the applicable guaranty associations, if the merged entity is a non-member insurer; or

2. Policy obligations that have been assumed by the insolvent insurer, prior to the entry of a final order of liquidation, pursuant to a plan, approved by the domestic commissioner of the assuming insurer, which:
   a. Transfers the direct policy obligations and future policy renewals from one insurer to another insurer; and
   b. For which Assumption Consideration has been paid to the applicable guaranty associations, if the assumption is from a non-member insurer.
   c. For purposes of this section the term non-member insurer also includes a self-insurer, non-admitted insurer and risk retention group; or

3. An assumption reinsurance transaction in which all of the following has occurred:
   a. The insolvent insurer assumed, prior to the entry of a final order of liquidation, the claim or policy obligations of another insurer or entity obligated under the claims or policies;
Property and Casualty Insurance Guaranty Association Model Act

(b) The assumption of the claim or policy obligations has been approved, if such approval is required, by the appropriate regulatory authorities; and

(c) As a result of the assumption, the claim or policy obligations became the direct obligations of the insolvent insurer through a novation of the claims or policies.

E. “Claimant” means any person instituting a covered claim, provided that no person who is an affiliate of the insolvent insurer may be a claimant.

F. “Commissioner” means the Commissioner of Insurance of this State.

Drafting Note: Use the appropriate title for the chief insurance regulatory official wherever the term “commissioner” appears.

G. “Control” means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or nonmanagement services, or otherwise, unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if a person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing ten percent (10%) or more of the voting securities of any other person. This presumption may be rebutted by a showing that control does not exist in fact.

H. “Covered claim” means the following:

(1) An unpaid claim, including one for unearned premiums, submitted by a claimant, which arises out of and is within the coverage and is subject to the applicable limits of an insurance policy to which this Act applies, if the insurer becomes an insolvent insurer after the effective date of this Act and:
   
   (a) The claimant or insured is a resident of this State at the time of the insured event, provided that for entities other than an individual, the residence of a claimant, insured or policyholder is the State in which its principal place of business is located at the time of the insured event; or
   
   (b) The claim is a first party claim for damage to property with a permanent location in this State.

   (c) Notwithstanding any other provision in this Act, an insurance policy issued by a member insurer and later allocated, transferred, assumed by or otherwise made the sole responsibility of another insurer, pursuant to a state statute providing for the division of an insurance company or the statutory assumption or transfer of designated policies and under which there is no remaining obligation to the transferring entity (commonly known as “Division” or “Insurance Business Transfer” statutes), shall be considered to have been issued by a member insurer which is an Insolvent Insurer for the purposes of this Act in the event that the insurer to which the policy has been allocated, transferred, assumed or otherwise made the sole responsibility of is placed in liquidation.

   (d) An insurance policy that was issued by a non-member insurer and later allocated, transferred, assumed by or otherwise made the sole responsibility of a member insurer under a state statute described in subsection (a) shall not be considered to have been issued by a member insurer for the purposes of this Act.
(2) Except as provided elsewhere in this section, “covered claim” shall not include:

(a) Any amount awarded as punitive or exemplary damages;

(b) Any amount sought as a return of premium under any retrospective rating plan;

(c) Any amount due any reinsurer, insurer, insurance pool or underwriting association, health maintenance organization, hospital plan corporation, professional health service corporation or self-insurer as subrogation recoveries, reinsurance recoveries, contribution, indemnification or otherwise. No claim for any amount due any reinsurer, insurer, insurance pool, underwriting association, health maintenance organization, hospital plan corporation, professional health service corporation or self-insurer may be asserted against a person insured under a policy issued by an insolvent insurer other than to the extent the claim exceeds the association obligation limitations set forth in Section 8 of this Act;

(d) Any claims excluded pursuant to Section 13 due to the high net worth of an insured;

(e) Any first party claims by an insured that is an affiliate of the insolvent insurer;

(f) Any fee or other amount relating to goods or services sought by or on behalf of any attorney or other provider of goods or services retained by the insolvent insurer or an insured prior to the date it was determined to be insolvent;

(g) Any fee or other amount sought by or on behalf of any attorney or other provider of goods or services retained by any insured or claimant in connection with the assertion or prosecution of any claim, covered or otherwise, against the association;

(h) Any claims for interest; or

(i) Any claim filed with the association or a liquidator for protection afforded under the insured’s policy for incurred-but-not-reported losses.

Drafting note: The language in this provision referring to claims for incurred-but-not-reported losses has been inserted to expressly include the existing intent of this provision and make it clear that “policyholder protection” proofs of claim, while valid to preserve rights against the State of the insolvent insurer under the Insurer Receivership Model Act, are not valid to preserve rights against the association.

I. “Insolvent insurer” means an insurer that is licensed to transact insurance in this State, either at the time the policy was issued, when the obligation with respect to the covered claim was assumed under an assumed claims transaction, or when the insured event occurred, and against whom a final order of liquidation has been entered after the effective date of this Act with a finding of insolvency by a court of competent jurisdiction in the insurer’s State of domicile.

Drafting Note: “Final order” as used in this section means an order which has not been stayed. States in which the “final order” language does not accurately reflect whether or not the order is subject to a stay should substitute appropriate language consistent with the statutes or rules of the State to convey the intended meaning.

J. “Insured” means any named insured, any additional insured, any vendor, lessor or any other party identified as an insured under the policy.

K. (1) “Member insurer” means any person who:
Property and Casualty Insurance Guaranty Association Model Act

(a) Writes any kind of insurance to which this Act applies under Section 3, including the exchange of reciprocal or inter-insurance contracts; and

(b) Is licensed to transact insurance in this State (except at the option of the State).

(2) An insurer shall cease to be a member insurer effective on the day following the termination or expiration of its license to transact the kinds of insurance to which this Act applies, however, the insurer shall remain liable as a member insurer for any and all obligations, including obligations for assessments levied prior to the termination or expiration of the insurer’s license and assessments levied after the termination or expiration, which relate to any insurer that became an insolvent insurer prior to the termination or expiration of the insurer’s license.

L. “Net direct written premiums” means direct gross premiums written in this State on insurance policies to which this Act applies, including policy and membership fees, less the following amounts: (1) return premiums, (2) premiums on policies not taken, and (3) dividends paid or credited to policyholders on that direct business. “Net direct written premiums” does not include premiums on contracts between insurers or reinsurers.

M. “Novation” means that the assumed claim or policy obligations became the direct obligations of the insolvent insurer through consent of the policyholder and that thereafter the ceding insurer or entity initially obligated under the claims or policies is released by the policyholder from performing its claim or policy obligations. Consent may be express or implied based upon the circumstances, notice provided and conduct of the parties.

N. “Person” means any individual, aggregation of individuals, corporation, partnership or other entity.

O. “Receiver” means liquidator, rehabilitator, conservator or ancillary receiver, as the context requires.

Drafting Note: Each State should conform the definition of “receiver” to the definition used in the State’s insurer receivership act.

P. “Self-insurer” means a person that covers its liability through a qualified individual or group self-insurance program or any other formal program created for the specific purpose of covering liabilities typically covered by insurance.

Q. [Alternative 2b] “Assumption Consideration” shall mean the consideration received by a guaranty association to extend coverage to the policies assumed by a member insurer from a non-member insurer in any assumed claims transaction including liabilities that may have arisen prior to the date of the transaction. The Assumption Consideration shall be in an amount equal to the amount that would have been paid by the assuming insurer if the business had been written directly by the assuming insurer.

In the event that the amount of the premiums for the three year period cannot be determined, the Assumption Consideration will be determined by multiplying 130% against the sum of the unpaid losses, loss adjustment expenses, and incurred but not reported losses, as of the effective date of the Assummed claims transaction, and then multiplying such sum times the applicable guaranty association assessment percentage for the calendar year of the transaction.

The funds paid to a guaranty association shall be allocated in the same manner as any assessments made during the three year period. The guaranty association receiving the Assumption Consideration shall not be required to recalculate or adjust any assessments levied during the prior three calendar years as a result of receiving the Assumption Consideration. Assumption Consideration paid by an insurer may be recouped in the same manner as other assessments made by a guaranty association.

Section 6. Creation of the Association

There is created a nonprofit unincorporated legal entity to be known as the [State] Insurance Guaranty Association. All insurers defined as member insurers in Section 5K shall be and remain members of the association as a condition of their authority to

© 2021 National Association of Insurance Commissioners 181
transact insurance in this State. The association shall perform its functions under a plan of operation established and approved under Section 9 and shall exercise its powers through a board of directors established under Section 7.

[Alternate Section 6. Creation of the Association]

There is created a nonprofit unincorporated legal entity to be known as the [State] Insurance Guaranty Association. All insurers defined as member insurers in Section 5KJ shall be and remain members of the association as a condition of their authority to transact insurance in this State. The association shall perform its functions under a plan of operation established and approved under Section 9 and shall exercise its powers through a board of directors established under Section 7. For purposes of administration and assessment, the association shall be divided into three separate accounts:

A. The workers’ compensation insurance account;
B. The automobile insurance account; and
C. The account for all other insurance to which this Act applies.

Drafting Note: The alternate Section 6 should be used if a State, after examining its insurance market, determines that separate accounts for various kinds of insurance are necessary and feasible. The major consideration is whether each account will have a base sufficiently large to cover possible insolvencies. Separate accounts will permit assessments to be generally limited to insurers writing the same kind of insurance as the insolvent company. If this approach is adopted the provision of alternate Sections 8A(3) and 8B(6) and optional Section 5A should also be used.

Section 7. Board of Directors

A. The board of directors of the association shall consist of not less than five (5) nor more than [insert number] persons serving terms as established in the plan of operation. The insurer members of the board shall be selected by member insurers subject to the approval of the commissioner. Vacancies on the board shall be filled for the remaining period of the term by a majority vote of the remaining insurer members subject to the approval of the commissioner. If no members are selected within sixty (60) days after the effective date of this Act, the commissioner may appoint the initial members of the board of directors. Two (2) persons, who must be public representatives, shall be appointed by the commissioner to the board of directors. Vacancies of positions held by public representatives shall be filled by the commissioner. A public representative may not be an officer, director or employee of an insurance company or any person engaged in the business of insurance. For the purposes of this section, the term “director” shall mean an individual serving on behalf of an insurer member of the board of directors or a public representative on the board of directors.

Drafting Note: A State adopting this language should make certain that its insurance code includes a definition of “the business of insurance” similar to that found in the NAIC Insurer Receivership Model Act.

B. In approving selections to the board, the commissioner shall consider among other things whether all member insurers are fairly represented.

C. Members of the board of directors may be reimbursed from the assets of the association for reasonable expenses incurred by them as members of the board of directors.

D. Any board member who is an insurer in receivership shall be terminated as a board member, effective as of the date of the entry of the order of receivership. Any resulting vacancies on the board shall be filled for the remaining period of the term in accordance with the provisions of Subsection A.

E. In the event that a director shall, because of illness, nonattendance at meetings or any other reason, be deemed unable to satisfactorily perform the designated functions as a director by missing three consecutive board meetings, the board of directors may declare the office vacant and the member or director shall be replaced in accordance with the provisions of Subsection A.

F. If the commissioner has reasonable cause to believe that a director failed to disclose a known conflict of interest with his or her duties on the board, failed to take appropriate action based on a known conflict of
interest with his or her duties on the board, or has been indicted or charged with a felony, or misdemeanor involving moral turpitude, the commissioner may suspend that director pending the outcome of an investigation or hearing by the commissioner or the conclusion of any criminal proceedings. A company elected to the board may replace a suspended director prior to the completion of an investigation, hearing or criminal proceeding. In the event that the allegations are substantiated at the conclusion of an investigation, hearing or criminal proceeding, the office shall be declared vacant and the member or director shall be replaced in accordance with the provisions of Subsection A.

Section 8. Powers and Duties of the Association

A. The association shall:

1. (a) Be obligated to pay covered claims existing prior to the order of liquidation, arising within thirty (30) days after the order of liquidation, or before the policy expiration date if less than thirty (30) days after the order of liquidation, or before the insured replaces the policy or causes its cancellation, if the insured does so within thirty (30) days of the order of liquidation. The obligation shall be satisfied by paying to the claimant an amount as follows:

   i. The full amount of a covered claim for benefits under a workers’ compensation insurance coverage;

   ii. An amount not exceeding $10,000 per policy for a covered claim for the return of unearned premium;

   iii. An amount not exceeding $500,000 per claimant for all other covered claims.

(b) In no event shall the association be obligated to pay a claimant an amount in excess of the obligation of the insolvent insurer under the policy or coverage from which the claim arises. Notwithstanding any other provisions of this Act, a covered claim shall not include a claim filed with the guaranty fund after the final date set by the court for the filing of claims against the liquidator or receiver of an insolvent insurer.

For the purpose of filing a claim under this subsection, notice of claims to the liquidator of the insolvent insurer shall be deemed notice to the association or its agent and a list of claims shall be periodically submitted to the association or association similar to the association in another State by the liquidator.

Drafting Note: On the general subject of the relationship of the association to the liquidator, the working group/task force takes the position that since this is a model State bill, it will be able to bind only two parties, the association and the in-State liquidator. Nevertheless, the provisions should be clear enough to outline the requests being made to out-of-State liquidators and the requirements placed on in-State liquidators in relation to out-of-State associations.

Drafting Note: Because of its potential impact on guaranty association coverage, it is recommended that the legislation include an appropriate provision stating that the bar date only applies to claims in liquidation commencing after its effective date. Drafters should insure that the State’s insurance liquidation act would permit, upon closure, payments to the guaranty association and any association similar to the association for amounts that are estimated to be incurred after closure for workers compensation claims obligations. The amounts should be payable on these obligations related to losses both known and not known at the point of closure.

(c) Any obligation of the association to defend an insured shall cease upon the association’s payment or tender of an amount equal to the lesser of the association’s covered claim obligation limit or the applicable policy limit.

Drafting Note: The obligation of the association is limited to covered claims unpaid prior to insolvency, and to claims arising within thirty days after the insolvency, or until the policy is cancelled or replaced by the insured, or it expires, whichever is earlier. The basic principle is to permit policyholders to make an orderly transition to other companies. There appears to be no reason why the association should become in effect an insurer in competition with member insurers by continuing existing policies, possibly for several years. It is also felt that the control of the policies is properly in the hands of the liquidator. Finally, one of the major objections of the public to rapid termination, loss of unearned premiums with no corresponding coverage, is ameliorated by this bill since unearned premiums are permissible claims, up to $10,000, against the association. The maximums ($10,000 for the return of unearned premium; $500,000 for all other covered claims) represent the working group’s concept of practical limitations, but each State will wish to evaluate these figures.
(2) Be deemed the insurer to the extent of its obligation on the covered claims and to that extent, subject to the limitations provided in this Act, shall have all rights, duties and obligations of the insolvent insurer as if the insurer had not become insolvent, including but not limited to, the right to pursue and retain salvage and subrogation recoverable on covered claim obligations to the extent paid by the association. The association shall not be deemed the insolvent insurer for the purpose of conferring jurisdiction.

(3) [Alternative 1a] Assess insurers amounts necessary to pay the obligations of the association under Subsection A(1) subsequent to an insolvency, the expenses of handling covered claims subsequent to an insolvency, and other expenses authorized by this Act. The assessments of each member insurer shall be in the proportion that the net direct written premiums of the member insurer for the calendar year preceding the assessment bears to the net direct written premiums of all member insurers for the calendar year preceding the assessment. Each member insurer shall be notified of the assessment not later than thirty (30) days before it is due. A member insurer may not be assessed in any year an amount greater than two percent (2%) of that member insurer’s net direct written premiums for the calendar year preceding the assessment. If the maximum assessment, together with the other assets of the association, does not provide in any one year an amount sufficient to make all necessary payments, the funds available shall be prorated and the unpaid portion shall be paid as soon as funds become available. The association may exempt or defer, in whole or in part, the assessment of a member insurer, if the assessment would cause the member insurer’s financial statement to reflect amounts of capital or surplus less than the minimum amounts required for a certificate of authority by a jurisdiction in which the member insurer is authorized to transact insurance. However, during the period of deferment no dividends shall be paid to shareholders or policyholders. Deferred assessments shall be paid when the payment will not reduce capital or surplus below required minimums. Payments shall be refunded to those companies receiving larger assessments by virtue of the deferment, or at the election of the company, credited against future assessments.

[Alternative 2a] Assess insurers amounts necessary to pay the obligations of the association under Subsection A(1) subsequent to an insolvency, the expenses of handling covered claims subsequent to an insolvency, and other expenses authorized by this Act. The assessments of each member insurer shall be in the proportion that the net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer of the member insurer for the calendar year preceding the assessment bears to the net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer of all member insurers for the calendar year preceding the assessment. Each member insurer shall be notified of the assessment not later than thirty (30) days before it is due. A member insurer may not be assessed in any year an amount greater than two percent (2%) of that member insurer’s net direct written premiums and any premiums received for an assumed contract after the effective date of an assumed claims transaction with a non-member insurer for the calendar year preceding the assessment. The 2% limitation on assessments shall not preclude a full payment for assumption consideration. If the maximum assessment, together with the other assets of the association, does not provide in any one year an amount sufficient to make all necessary payments, the funds available shall be prorated and the unpaid portion shall be paid as soon as funds become available. The association may exempt or defer, in whole or in part, the assessment of a member insurer, if the assessment would cause the member insurer’s financial statement to reflect amounts of capital or surplus less than the minimum amounts required for a certificate of authority by a jurisdiction in which the member insurer is authorized to transact insurance. However, during the period of deferment no dividends shall be paid to shareholders or policyholders. Deferred assessments shall be paid when the payment will not reduce capital or surplus below required minimums. Payments shall be refunded to those companies receiving larger assessments by virtue of the deferment, or at the election of the company, credited against future assessments.

(3) [Alternate 1b] Allocate claims paid and expenses incurred among the three (3) accounts separately, and assess member insurers separately for each account, amounts necessary to pay the obligations of the
Allocate claims paid and expenses incurred among the three (3) accounts separately, and assess member insurers separately for each account, amounts necessary to pay the obligations of the association under Subsection 8A(1) subsequent to an insolvency, the expenses of handling covered claims subsequent to an insolvency and other expenses authorized by this Act. The assessments of each member insurer shall be in the proportion that the net direct written premiums of the member insurer for the calendar year preceding the assessment on the kinds of insurance in the account bears to the net direct written premiums of all member insurers for the calendar year preceding the assessment on the kinds of insurance in the account. Each member insurer shall be notified of the assessment not later than thirty (30) days before it is due. A member insurer may not be assessed in any one year on any account an amount greater than two percent (2%) of that member insurer’s net direct written premiums for the calendar year preceding the assessment on the kinds of insurance in the account. If the maximum assessment, together with the other assets of the association in any account, does not provide in any one year in any account an amount sufficient to make all necessary payments from that account, the funds available shall be pro-rated and the unpaid portion shall be paid as soon thereafter as funds become available. The association may exempt or defer, in whole or in part, the assessment of a member insurer, if the assessment would cause the member insurer’s financial statement to reflect amounts of capital or surplus less than the minimum amounts required for a certificate of authority by a jurisdiction in which the member insurer is authorized to transact insurance. However, during the period of deferment no dividends shall be paid to shareholders or policyholders. Deferred assessments shall be paid when the payment will not reduce capital or surplus below required minimums. Payments shall be refunded to those companies receiving larger assessments by virtue of such deferment, or at the election of the company, credited against future assessments. A member insurer may set off against any assessment, authorized payments made on covered claims and expenses incurred in the payment of claims by the member insurer if they are chargeable to the account for which the assessment is made.}
(4) Investigate claims brought against the association and adjust, compromise, settle and pay covered claims to the extent of the association’s obligation and deny all other claims. The association shall pay claims in any order that it may deem reasonable, including the payment of claims as they are received from the claimants or in groups or categories of claims. The association shall have the right to appoint and to direct legal counsel retained under liability insurance policies for the defense of covered claims.

(5) Notify claimants in this State as deemed necessary by the commissioner and upon the commissioner’s request, to the extent records are available to the association.

Drafting Note: The intent of this paragraph is to allow, in exceptional circumstances, supplementary notice to that given by the domiciliary receiver.

(6) (a) Have the right to review and contest as set forth in this subsection settlements, releases, compromises, waivers and judgments to which the insolvent insurer or its insureds were parties prior to the entry of the order of liquidation. In an action to enforce settlements, releases and judgments to which the insolvent insurer or its insureds were parties prior to the entry of the order of liquidation, the Association shall have the right to assert the following defenses, in addition to the defenses available to the insurer:

(i) The association is not bound by a settlement, release, compromise or waiver executed by an insured or the insurer, or any judgment entered against an insured or the insurer by consent or through a failure to exhaust all appeals, if the settlement, release, compromise, waiver or judgment was:

(I) Executed or entered within 120 days prior to the entry of an order of liquidation, and the insured or the insurer did not use reasonable care in entering into the settlement, release, compromise, waiver or judgment, or did not pursue all reasonable appeals of an adverse judgment; or

(II) Executed by or taken against an insured or the insurer based on default, fraud, collusion or the insurer’s failure to defend.

(ii) If a court of competent jurisdiction finds that the association is not bound by a settlement, release, compromise, waiver or judgment for the reasons described in Subparagraph (a)(i), the settlement, release, compromise, waiver or judgment shall be set aside, and the association shall be permitted to defend any covered claim on the merits. The settlement, release, compromise, waiver or judgment may not be considered as evidence of liability or damages in connection with any claim brought against the association or any other party under this Act.

(iii) The association shall have the right to assert any statutory defenses or rights of offset against any settlement, release, compromise or waiver executed by an insured or the insurer, or any judgment taken against the insured or the insurer.

(b) As to any covered claims arising from a judgment under any decision, verdict or finding based on the default of the insolvent insurer or its failure to defend, the association, either on its own behalf or on behalf of an insured may apply to have the judgment, order, decision, verdict or finding set aside by the same court or administrator that entered the judgment, order, decision, verdict or finding and shall be permitted to defend the claim on the merits.

(7) Handle claims through its own employees, one or more insurers, or other persons designated as servicing facilities, which may include the receiver for the insolvent insurer. Designation of a servicing facility is subject to the approval of the commissioner, but the designation may be declined by a member insurer.
(8) Reimburse each servicing facility for obligations of the association paid by the facility and for expenses incurred by the facility while handling claims on behalf of the association and shall pay the other expenses of the association authorized by this Act.

(9) Submit, not later than 90 days after the end of the association’s fiscal year, a financial report for the preceding fiscal year in a form approved by the commissioner.

B. The association may:

(1) Employ or retain persons as are necessary to handle claims and perform other duties of the association;

(2) Borrow funds necessary to effect the purposes of this Act in accordance with the plan of operation;

(3) Sue or be sued;

(4) Negotiate and become a party to contracts necessary to carry out the purpose of this Act;

(5) Perform other acts necessary or proper to effectuate the purpose of this Act;

(6) Refund to the member insurers in proportion to the contribution of each member insurer to the association that amount by which the assets of the association exceed the liabilities, if at the end of any calendar year, the board of directors finds that the assets of the association exceed the liabilities of the association as estimated by the board of directors for the coming year.

[Alternate Section 8B(6)

(6) Refund to the member insurers in proportion to the contribution of each member insurer to that account that amount by which the assets of the account exceed the liabilities, if at the end of any calendar year, the board of directors finds that the assets of the association in any account exceed the liabilities of that account as estimated by the board of directors for the coming year.]

Drafting Note: The working group/task force feels that the board of directors should determine the amount of the refunds to members when the assets of the association exceed its liabilities. However, since this excess may be quite small, the board is given the option of retaining all or part of it to pay expenses and possibly remove the need for a relatively small assessment at a later time.

C. Suits involving the association:

(1) Except for actions by the receiver, all actions relating to or arising out of this Act against the association shall be brought in the courts in this State. The courts shall have exclusive jurisdiction over all actions relating to or arising out of this Act against the association.

(2) The exclusive venue in any action by or against the association is in [designate appropriate court]. The association may, at its option, waive this venue as to specific actions.

[Optional Section 8D]

D. The legislature finds:

(a) The potential for widespread and massive damage to persons and property caused by natural disasters such as earthquakes, windstorms, or fire in this State can generate insurance claims of such a number as to render numerous insurers operating within this State insolvent and therefore unable to satisfy covered claims;

(b) The inability of insureds within this State to receive payments of covered claims or to timely receive the payments creates financial and other hardships for insureds and places undue burdens on the State, the affected units of local government, and the community at large;
The insolvency of a single insurer in a material amount or a catastrophic event may result in the same hardships as those produced by a natural disaster;

The State has previously taken action to address these problems by adopting the [insert name of guaranty association act], which among other things, provides a mechanism for the payment of covered claims under certain insurance policies to avoid excessive delay in payment and to avoid financial loss to claimants or policyholders because of the insolvency of an insurer; and

In order for the association to timely pay claims of insolvent insurers in this State and otherwise carry out its duties, the association may require additional financing options. The intent of the Legislature is to make those options available to the association in the event that a natural disaster such as an earthquake, windstorm, fire or material insolvency of any member insurer results in covered claim obligations currently payable by the association in excess of its capacity to pay from current funds and current assessments under Subsection A(3). In cases where the association determines that it is cost effective, the association may issue bonds as provided in this subsection. In determining whether to issue bonds, the association shall consider the transaction costs of issuing the bonds.

In the event a natural disaster such as an earthquake, windstorm, fire or material insolvency of any member insurer results in covered claim obligations currently payable by the association in excess of its capacity to pay from current funds and current assessments under Subsection 8A(3), the association, in its sole discretion, may by resolution request the [insert name of agency] Agency to issue bonds pursuant to [insert statutory authority], in such amounts as the association may determine to provide funds for the payment of covered claims and expenses related thereto. In the event bonds are issued, the association shall have the authority to annually assess member insurers for amounts necessary to pay the principal of, and interest on those bonds. Assessments collected pursuant to this authority shall be collected under the same procedures as provided in Subsection 8A(3) and, notwithstanding the two percent (2%) limit in Subsection 8A(3), shall be limited to an additional [insert percentage] percent of the annual net direct written premium in this State of each member insurer for the calendar year preceding the assessment. The commissioner’s approval shall be required for any assessment greater than five percent (5%). Assessments collected pursuant to this authority may only be used for servicing the bond obligations provided for in this subsection and shall be pledged for that purpose.

In addition to the assessments provided for in this subsection, the association in its discretion, and after considering other obligations of the association, may utilize current funds of the association, assessments made under Subsection 8A(3) and advances or dividends received from the liquidators of insolvent insurers to pay the principal and interest on any bonds issued at the board’s request.

Assessments under this subsection shall be payable in twelve (12) monthly installments with the first installment being due and payable at the end of the month after an assessment is levied, and subsequent installments being due not later than the end of each succeeding month.

In order to assure that insurers paying assessments levied under this subsection continue to charge rates that are neither inadequate nor excessive, within ninety (90) days after being notified of the assessments, each insurer that is to be assessed pursuant to this subsection shall make a rate filing for lines of business additionally assessed under this subsection. If the filing reflects a rate change that, as a percentage, is equal to the difference between the rate of the assessment and the rate of the previous year’s assessment under this subsection, the filing shall consist of a certification so stating and shall be deemed approved when made. Any rate change of a different percentage shall be subject to the standards and procedures of [cite appropriate statutory authority for provisions on filing and approval of rates].

Drafting Note: This provision should only be considered by those States that have serious concerns that circumstances could result in a substantial capacity problem resulting in unpaid or pro rata payment of claims. An association intending to consider this provision should first consult with experienced bond
counsel in its State to identify an appropriate State agency or bonding authority to act as vehicle for issuing the bonds. That agency or authority’s statute may also have to be amended to specifically authorize these types of bonds and to cross-reference this provision in the guaranty association law. It is possible that in some situations a new bonding authority may have to be created for this purpose.

Regardless of the vehicle used, it is important that the decision-making authority on whether bonds are needed and in what amounts be retained by the association’s board.

The extent of additional assessment authority under this subsection has not been specified. When considering the amount of additional authority that will be needed, a determination should be made as to the amount of funds needed to service the bonds. More specifically, consideration should be given to the amount of the bonds to be issued, interest rate and the maturity date of the bonds. The association should be able to raise sufficient funds through assessments to pay the interest and retire the bonds after some reasonable period (e.g. ten (10) years). Subsection D(2) requires the Commissioner’s approval before the association can impose an additional assessment in excess of 5%. This is to assure that the additional assessment will not result in financial hardship to the member insurers and additional insolvencies.

The intent of Subsection D(4) is to permit recoupment by member insurers of the additional cost of assessments under this subsection without any related regulatory approval. A State enacting this subsection may need to revise Subsection D(4) so that it conforms to the particular State’s recoupment provisions, as well as the provisions on filing and approval of rates.

Section 9. Plan of Operation

A. (1) The association shall submit to the commissioner a plan of operation and any amendments to the plan of operation necessary or suitable to assure the fair, reasonable and equitable administration of the association. The plan of operation and amendments shall become effective upon approval in writing by the commissioner.

(2) If the association fails to submit a suitable plan of operation within ninety (90) days following the effective date of this Act, or if at any time thereafter the association fails to submit suitable amendments to the plan, the commissioner shall, after notice and hearing, adopt reasonable rules necessary or advisable to effectuate the provisions of this Act. The rules shall continue in force until modified by the commissioner or superseded by a plan submitted by the association and approved by the commissioner.

B. All member insurers shall comply with the plan of operation.

C. The plan of operation shall:

(1) Establish the procedures under which the powers and duties of the association under Section 8 will be performed;

(2) Establish procedures for handling assets of the association;

(3)Require that written procedures be established for the disposition of liquidating dividends or other monies received from the estate of the insolvent insurer;

(4) Require that written procedures be established to designate the amount and method of reimbursing members of the board of directors under Section 7;

(5) Establish procedures by which claims may be filed with the association and establish acceptable forms of proof of covered claims;

(6) Establish regular places and times for meetings of the board of directors;

(7) Require that written procedures be established for records to be kept of all financial transactions of the association, its agents and the board of directors;

(8) Provide that any member insurer aggrieved by any final action or decision of the association may appeal to the commissioner within thirty (30) days after the action or decision;
NAIC Model Laws, Regulations, Guidelines and Other Resources—April 2009

(9) Establish the procedures under which selections for the board of directors will be submitted to the commissioner;

(10) Contain additional provisions necessary or proper for the execution of the powers and duties of the association.

D. The plan of operation may provide that any or all powers and duties of the association, except those under Sections 8A(3) and 8B(2), are delegated to a corporation, association similar to the association or other organization which performs or will perform functions similar to those of this association or its equivalent in two (2) or more States. The corporation, association similar to the association or organization shall be reimbursed as a servicing facility would be reimbursed and shall be paid for its performance of any other functions of the association. A delegation under this subsection shall take effect only with the approval of both the board of directors and the commissioner, and may be made only to a corporation, association or organization which extends protection not substantially less favorable and effective than that provided by this Act.

Section 10. Duties and Powers of the Commissioner

A. The commissioner shall:

(1) Notify the association of the existence of an insolvent insurer not later than three (3) days after the commissioner receives notice of the determination of the insolvency. The association shall be entitled to a copy of a complaint seeking an order of liquidation with a finding of insolvency against a member company at the same time that the complaint is filed with a court of competent jurisdiction;

(2) Provide the association with a statement of the net direct written premiums of each member insurer upon request of the board of directors.

B. The commissioner may:

(1) Suspend or revoke, after notice and hearing, the certificate of authority to transact insurance in this State of a member insurer that fails to pay an assessment when due or fails to comply with the plan of operation. As an alternative, the commissioner may levy a fine on a member insurer that fails to pay an assessment when due. The fine shall not exceed five percent (5%) of the unpaid assessment per month, except that a fine shall not be less than $100 per month;

(2) Revoke the designation of a servicing facility if the commissioner finds claims are being handled unsatisfactorily.

(3) Examine, audit, or otherwise regulate the association.

Drafting Note: This section does not require periodic examinations of the guaranty associations but allows the commissioner to conduct examinations as the commissioner deems necessary.

C. A final action or order of the commissioner under this Act shall be subject to judicial review in a court of competent jurisdiction.

Section 11. Coordination Among Guaranty Associations

A. The association may join one or more organizations of other State associations of similar purposes, to further the purposes and administer the powers and duties of the association. The association may designate one or more of these organizations to act as a liaison for the association and, to the extent the association authorizes, to bind the association in agreements or settlements with receivers of insolvent insurance companies or their designated representatives.
B. The association, in cooperation with other obligated or potentially obligated guaranty associations, or their
designated representatives, shall make all reasonable efforts to coordinate and cooperate with receivers, or
their designated representatives, in the most efficient and uniform manner, including the use of Uniform Data
Standards as promulgated or approved by the National Association of Insurance Commissioners.

Section 12. Effect of Paid Claims

A. Any person recovering under this Act shall be deemed to have assigned any rights under the policy to the
association to the extent of his or her recovery from the association. Every insured or claimant seeking the
protection of this Act shall cooperate with the association to the same extent as the person would have been
required to cooperate with the insolvent insurer. The association shall have no cause of action against the
insured of the insolvent insurer for sums it has paid out except any causes of action as the insolvent insurer
would have had if the sums had been paid by the insolvent insurer and except as provided in Subsection B
and in Section 13. In the case of an insolvent insurer operating on a plan with assessment liability, payments
of claims of the association shall not operate to reduce the liability of the insureds to the receiver, liquidator
or statutory successor for unpaid assessments.

B. The association shall have the right to recover from any person who is an affiliate of the insolvent insurer all
amounts paid by the association on behalf of that person pursuant to the Act, whether for indemnity, defense
or otherwise.

C. The association and any association similar to the association in another State shall be entitled to file a claim
in the liquidation of an insolvent insurer for any amounts paid by them on covered claim obligations as
determined under this Act or similar laws in other States and shall receive dividends and other distributions
at the priority set forth in [insert reference to State priority of distribution in liquidation act].

D. The association shall periodically file with the receiver or liquidator of the insolvent insurer statements of the
covered claims paid by the association and estimates of anticipated claims on the association which shall
preserve the rights of the association against the assets of the insolvent insurer.

Section 13 [Optional] Net Worth Exclusion

Drafting Note: Various alternatives are provided for a net worth limitation in the guaranty association act. States may choose any of the Subsection B alternatives below or may elect to not have any net worth limitation. Subsection A, which defines “high net worth insured,” has two alternates allowing States to choose different net worth limitations for first and third party claims if that State chooses alternatives 1 or 2 to Subsection B. Subsections C, D and E are recommended to accompany any of the Subsection B alternatives. In cases where States elect not to include net worth, States may either omit this section in its entirety or include only Subsection C, which excludes from coverage claims denied by other States’ net worth restrictions pursuant to those States’ guaranty association laws.

A. For purposes of this section “high net worth insured” shall mean any insured whose net worth exceeds $50 million on December 31 of the year prior to the year in which the insurer becomes an insolvent insurer, provided that an insured’s net worth on that date shall be deemed to include the aggregate net worth of the insured and all of its subsidiaries and affiliates as calculated on a consolidated basis.

Alternate Section 13A

A. (1) For the purposes of Subsection B(1), “high net worth insured” shall mean any insured whose net worth exceeds $25 million on December 31 of the year prior to the year in which the insurer becomes an insolvent insurer; provided that an insured’s net worth on that date shall be deemed to include the aggregate net worth of the insured and all of its subsidiaries and affiliates as calculated on a consolidated basis.

(2) For the purpose of Subsection B(2) [and B(4) if Alternative 2 for Subsection B is selected] “high net worth insured” shall mean any insured whose net worth exceeds $50 million on December 31 of the year prior to the year in which the insurer becomes an insolvent insurer; provided that an insured’s net worth on that date shall be deemed to include the aggregate net worth of the insured and all of its subsidiaries and affiliates as calculated on a consolidated basis.
Drafting Note: States may wish to consider the impact on governmental entities and charitable organizations of the application of the net worth exclusion contained in the definition of "covered claim." The Michigan Supreme Court, in interpreting a “net worth” provision in the Michigan guaranty association statute, held that governmental entities possess a “net worth” for purposes of the provision in the Michigan guaranty association statute that prohibits claims against the guaranty association by a person who has a specified net worth. Oakland County Road Commission vs. Michigan Property & Casualty Guaranty Association, 575 N.W. 2d 751 (Mich. 1998).

[Alternative 1 for Section 13B]
B. (1) The association shall not be obligated to pay any first party claims by a high net worth insured.

(2) The association shall have the right to recover from a high net worth insured all amounts paid by the association to or on behalf of such insured, whether for indemnity, defense or otherwise.]

[Alternative 2 for Section 13B]
B. (1) The association shall not be obligated to pay any first party claims by a high net worth insured.

(2) Subject to Paragraph (3), the association shall not be obligated to pay any third party claim relating to a policy of a high net worth insured. This exclusion shall not apply to third party claims against the high net worth insured where:

(a) The insured has applied for or consented to the appointment of a receiver, trustee or liquidator for all or a substantial part of its assets;

(b) The insured has filed a voluntary petition in bankruptcy, filed a petition or an answer seeking a reorganization or arrangement with creditors or to take advantage of any insolvency law; or

(c) An order, judgment, or decree is entered by a court of competent jurisdiction, on the application of a creditor, adjudicating the insured bankrupt or insolvent or approving a petition seeking reorganization of the insured or of all or substantial part of its assets.

(3) Paragraph (2) shall not apply to workers’ compensation claims, personal injury protection claims, no-fault claims and any other claims for ongoing medical payments to third parties.

(4) The association shall have the right to recover from a high net worth insured all amounts paid by the association to or on behalf of such insured, whether for indemnity, defense or otherwise.]

[Alternative 3 for Section 13B]
B. The association shall not be obligated to pay any first party claims by a high net worth insured.

C. The association shall not be obligated to pay any claim that would otherwise be a covered claim that is an obligation to or on behalf of a person who has a net worth greater than that allowed by the insurance guaranty association law of the State of residence of the claimant at the time specified by that State’s applicable law, and which association has denied coverage to that claimant on that basis.

D. The association shall establish reasonable procedures subject to the approval of the commissioner for requesting financial information from insureds on a confidential basis for purposes of applying this section, provided that the financial information may be shared with any other association similar to the association and the liquidator for the insolvent insurer on the same confidential basis. Any request to an insured seeking financial information must advise the insured of the consequences of failing to provide the financial information. If an insured refuses to provide the requested financial information where it is requested and available, the association may, until such time as the information is provided, provisionally deem the insured to be a high net worth insured for the purpose of denying a claim under Subsection B.
E. In any lawsuit contesting the applicability of this section where the insured has refused to provide financial information under the procedure established pursuant to Subsection D, the insured shall bear the burden of proof concerning its net worth at the relevant time. If the insured fails to prove that its net worth at the relevant time was less than the applicable amount, the court shall award the association its full costs, expenses and reasonable attorneys’ fees in contesting the claim.

Section 14. Exhaustion of Other Coverage

A. (1) Any person having a claim against an insurer, shall be required first to exhaust all coverage provided by any other policy, including the right to a defense under the other policy, if the claim under the other policy arises from the same facts, injury or loss that gave rise to the covered claim against the association. The requirement to exhaust shall apply without regard to whether the other insurance policy is a policy written by a member insurer. However, no person shall be required to exhaust any right under the policy of an insolvent insurer or any right under a life insurance policy.

(2) Any amount payable on a covered claim under this Act shall be reduced by the full applicable limits stated in the other insurance policy, or by the amount of the recovery under the other insurance policy as provided herein. The association shall receive a full credit for the stated limits, unless the claimant demonstrates that the claimant used reasonable efforts to exhaust all coverage and limits applicable under the other insurance policy. If the claimant demonstrates that the claimant used reasonable efforts to exhaust all coverage and limits applicable under the other insurance policy, or if there are no applicable stated limits under the policy, the association shall receive a full credit for the total recovery.

[Alternative 1 for Section 14A(2)(a)]

(a) The credit shall be deducted from the lesser of: (i) The association’s covered claim limit; (ii) The amount of the judgment or settlement of the claim; or (iii) The policy limits of the policy of the insolvent insurer.

[Alternative 2 for Section 14A(2)(a)]

The credit shall be deducted from the lesser of: (i) The amount of the judgment or settlement of the claim; or (ii) The policy limits of the policy of the insolvent insurer.

(b) In no case, however, shall the obligation of the association exceed the covered claim limit embodied in Section 8 of this Act.

(3) Except to the extent that the claimant has a contractual right to claim defense under an insurance policy issued by another insurer, nothing in this section shall relieve the association of the duty to defend under the policy issued by the insolvent insurer. This duty shall, however, be limited by any other limitation on the duty to defend embodied in this Act.

(4) A claim under a policy providing liability coverage to a person who may be jointly and severally liable as a joint tortfeasor with the person covered under the policy of the insolvent insurer that gives rise to the covered claim shall be considered to be a claim arising from the same facts, injury or loss that gave rise to the covered claim against the association.

(5) For purposes of this section, a claim under an insurance policy other than a life insurance policy shall include, but is not limited to:

(a) A claim against a health maintenance organization, a hospital plan corporation, a professional health service corporation or disability insurance policy; and

(b) Any amount payable by or on behalf of a self-insurer.
The person insured by the insolvent insurer’s policy may not be pursued by a third-party claimant for any amount paid to the third party by which the association’s obligation is reduced by the application of this section.

B. Any person having a claim which may be recovered under more than one insurance guaranty association or its equivalent shall seek recovery first from the association of the place of residence of the insured, except that if it is a first party claim for damage to property with a permanent location, the person shall seek recovery first from the association of the location of the property. If it is a workers’ compensation claim, the person shall seek recovery first from the association of the residence of the claimant. Any recovery under this Act shall be reduced by the amount of recovery from another insurance guaranty association or its equivalent.

Drafting Note: This subsection does not prohibit recovery from more than one association, but it does describe the association to be approached first and then requires that any previous recoveries from like associations must be set off against recoveries from this association.

Section 15. Prevention of Insolvencies

To aid in the detection and prevention of insurer insolvencies:

A. The board of directors may, upon majority vote, make recommendations to the commissioner on matters generally related to improving or enhancing regulation for solvency.

B. At the conclusion of any domestic insurer insolvency in which the association was obligated to pay covered claims, the board of directors may, upon majority vote, prepare a report on the history and causes of the insolvency, based on the information available to the association and submit the report to the commissioner.

C. Reports and recommendations provided under this section shall not be considered public documents.

Section 16. Tax Exemption

The association shall be exempt from payment of all fees and all taxes levied by this State or any of its subdivisions except taxes levied on real or personal property.

Section 17. Recoupment of Assessments

Drafting Note: States may choose how they wish to allow member insurers to recoup assessments paid by selecting one of three alternatives for Section 17.

[Alternative 1 for Section 17]

A. Except as provided in Subsection D, each member insurer shall annually recoup assessments it remitted in preceding years under Section 8. The recoupment shall be by means of a policyholder surcharge on premiums charged for all kinds of insurance in the accounts assessed. The surcharge shall be at a uniform percentage rate determined annually by the commissioner that is reasonably calculated to recoup the assessment remitted by the insurer, less any amounts returned to the member insurer by the association. Changes in this rate shall be effective no sooner than 180 days after insurers have received notice of the changed rate.

B. If a member insurer fails to recoup the entire amount of the assessment in the first year under this section, it shall repeat the surcharge procedure provided for herein in succeeding years until the assessment is fully recouped or a de minimis amount remains uncollected. Any such de minimis amount shall be collected as provided in Subsection D of this section. If a member insurer collects excess surcharges, the insurer shall remit the excess amount to the association, and the excess amount shall be applied to reduce future assessments in the appropriate account.

C. The amount and nature of any surcharge shall be separately stated on either a billing or policy declaration sent to an insured. The surcharge shall not be considered premium for any purpose, including the [insert all appropriate taxes] or agents’ commission.
D. A member may elect not to collect the surcharge from its insureds only when the expense of collecting the surcharge would exceed the amount of the surcharge. In that case, the member shall recoup the assessment through its rates, provided that:

1. The insurer shall be obligated to remit the amount of surcharge not collected by election under this subsection; and

2. The last sentence in Subsection C above shall not apply.

E. In determining the rate under Subsection A for the first year of recoupment under this section, under rules prescribed by the commissioner, the commissioner shall provide for the recoupment in that year, or in such reasonable period as the commissioner may determine, of any assessments that have not been recouped as of that year. Insurers shall not be required to recoup assessments through surcharges under this section until 180 days after this section takes effect.

[Alternative 2 for Section 17]
A. Notwithstanding any provision of [insert citation to relevant tax and insurance codes] to the contrary, a member insurer may offset against its [insert all appropriate taxes] liability the entire amount of the assessment imposed under this Act at a rate of [insert number] percent per year for [insert number of years] successive years following the date of assessment. If the assessment is not fully recovered over the [insert number of years] period, the remaining unrecovered assessment may be claimed for subsequent calendar years until fully recovered.

Drafting Note: States may choose the number of years to allow an insurer to offset an assessment against the insurer’s premium tax liability.

B. Any tax credit under this section shall, for the purposes of Section [insert citation to retaliatory tax statute] be treated as a tax paid both under the tax laws of this State and under the laws of any other State or country.

C. If a member insurer ceases doing business in this State, any uncredited assessment may be credited against its [insert all appropriate taxes] during the year it ceases doing business in this State.

D. Any sums that are acquired by refund from the association by member insurers and that have been credited against [insert all appropriate taxes], as provided in this section, shall be paid by member insurers to this State as required by the department. The association shall notify the department that the refunds have been made.

[Alternative 3 for Section 17]
The rates and premiums charged for insurance policies to which this section applies shall include amounts sufficient to recoup a sum equal to the amounts paid to the association by the member insurer less any amounts returned to the member insurer by the association. Rates shall not be deemed excessive because they contain an additional amount reasonably calculated to recoup all assessments paid by the member insurer.

Section 18. Immunity

There shall be no liability on the part of, and no cause of action of any nature shall arise against a member insurer, the association or its agents or employees, the board of directors, or any person serving as an alternate or substitute representative of any director, or the commissioner or the commissioner’s representatives for any action taken or any failure to act by them in the performance of their powers and duties under this Act.

Section 19. Stay of Proceedings

All proceedings in which the insolvent insurer is a party or is obligated to defend a party in any court in this State shall, subject to waiver by the association in specific cases involving covered claims, be stayed for six (6) months and such additional time as may be determined by the court from the date the insolvency is determined or an ancillary proceeding is instituted in the State, whichever is later, to permit proper defense by the association of all pending causes of action.

The liquidator, receiver or statutory successor of an insolvent insurer covered by this Act shall permit access by the board or its authorized representative to such of the insolvent insurer’s records which are necessary for the board in carrying out its
functions under this Act with regard to covered claims. In addition, the liquidator, receiver or statutory successor shall provide the board or its representative with copies of those records upon the request by the board and at the expense of the board.

Chronological Summary of Actions (all references are to the Proceedings of the NAIC).

1993 Proc. 2nd Quarter 12, 33, 227, 600, 602, 621 (amended).
This chart is intended to provide readers with additional information to more easily access state statutes, regulations, bulletins or administrative rulings related to the NAIC model. Such guidance provides readers with a starting point from which they may review how each state has addressed the model and the topic being covered. The NAIC Legal Division has reviewed each state’s activity in this area and has determined whether the citation most appropriately fits in the Model Adoption column or Related State Activity column based on the definitions listed below. The NAIC’s interpretation may or may not be shared by the individual states or by interested readers.

This chart does not constitute a formal legal opinion by the NAIC staff on the provisions of state law and should not be relied upon as such. Nor does this state page reflect a determination as to whether a state meets any applicable accreditation standards. Every effort has been made to provide correct and accurate summaries to assist readers in locating useful information. Readers should consult state law for further details and for the most current information.
# PROPERTY AND CASUALTY INSURANCE GUARANTY ASSOCIATION MODEL ACT

## KEY:

**MODEL ADOPTION:** States that have citations identified in this column adopted the most recent version of the NAIC model in a substantially similar manner. This requires states to adopt the model in its entirety but does allow for variations in style and format. States that have adopted portions of the current NAIC model will be included in this column with an explanatory note.

**RELATED STATE ACTIVITY:** Examples of Related State Activity include but are not limited to: older versions of the NAIC model, statutes or regulations addressing the same subject matter, or other administrative guidance such as bulletins and notices. States that have citations identified in this column only (and nothing listed in the Model Adoption column) have not adopted the most recent version of the NAIC model in a substantially similar manner.

**NO CURRENT ACTIVITY:** No state activity on the topic as of the date of the most recent update. This includes states that have repealed legislation as well as states that have never adopted legislation.

A regulator discussed the history of revising this model in relation to the new NAIC model law process. He stated that the draft was re-exposed for new comments. 2008 Proc. 1st Quarter Vol. II 10-440.

The Financial Condition (E) Committee adopted amendments to this model. The Committee summarized the more significant changes including the Task Force’s recommendation on the assumed business options. 2008 Proc. 4th Quarter Vol. II 10-5.

The joint Executive Committee/Plenary adopted amendments to this model. A commissioner noted that an interested party provided a comment requesting reconsideration of the optional net worth exclusion provision. The commissioner reiterated that the provision was optional and intended to provide uniform language for states interested in implementing a net worth exclusion. 2009 Proc. 1st Quarter Vol. I 3-5.

Section 1. Title

Section 2. Purpose

In 1969 the NAIC prepared a statement of position on automobile insurance. One part of that study concerned automobile insurer insolvencies. It was stated that the “… position of the NAIC [is] that no innocent person should suffer as a result of the insolvency of an insurer…” and the association vowed to take action to assure that end. They recommended serious consideration be given to the establishment of an industry facility regulated by the states to guarantee solvency and to indemnify the public against the insolvency of any casualty insurer. A federal guaranty corporation was suggested in a congressional bill, but a resolution was adopted by the NAIC in opposition to this proposal. The resolution emphasized the fact that the NAIC was recommending a program in each state to establish a means to guarantee the payment of claims against insolvent insurers. 1969 Proc. II 549-552.

Every insurance company failure undermines public confidence in, and the value of, the insurance institution whose continued existence is the result of the public’s desire and need to be secure from risk. Like taxes, the over-all cost of the solvency of an individual company and of such industry-wide schemes as guaranty funds ultimately falls upon the consumer. 1970 Proc. I 262.

An insurer association recommended that Section 2 be deleted because it added no substance to the model. 1994 Proc. 2nd Quarter 510.

The working group decided instead to retain the section, but decided to replace the word “avoid” with “the extent provided in this act, minimize.” The group also deleted a phrase that said one of the purposes was “the detection and prevention of insurer insolvencies.”

The working group felt that the two changes made the section better reflect the purpose of the guaranty association. 1994 Proc. 3rd Quarter 419.

The Receivership Model Act Working Group voted to delete this section. A couple of regulators made a motion to restore the original language. The argument was that the clause expanded the coverages provided by the guaranty associations. The Task Force voted to retain the original language. 2008 Proc. 1st Quarter 10-440.

Section 3. Scope

In a report comparing losses of insurance companies and banks, it was pointed out that the property/casualty insurance industry is quite different from the life insurance industry. 1969 Proc. II 564. The first priority was drafting legislation implementing the NAIC position on automobile insurance problems. 1970 Proc. I 1252.
Basic to drafting a model bill is the determination of its scope. What types of insurance and insurers should be included and excluded? The existing bills range from including only automobile insurance to one embracing both life and property coverages. What contacts must there be with the state before recourse may be had against the fund? \textit{1970 Proc. I 263}.

Section 3

The task force was charged with the task of considering whether the term “direct” needed to be defined. There has been litigation and many questions arising as to the types of coverage considered “direct” by the model act language. Courts have found large self-insured groups who purchase excess and aggregate stop loss coverage to be covered by the guaranty associations since there was no underlying contract of insurance, even though the coverage was more in the nature of reinsurance coverage. \textit{1989 Proc. II 331}.

A. The drafters intended that a state choose the term “health insurance,” “disability insurance,” or “accident and sickness insurance” to conform to the terminology found elsewhere in the insurance code of the state in question. \textit{1973 Proc. I 1157}.

Amendments proposed in 1985 were considered a “radical departure” from the original model by the task force chair. The proposed amendments excluded products unless they were specifically listed as included. That meant new products would be excluded unless they fit under a generic term. Some of the items not included under the industry-suggested approach were based on a desire to exclude them, such as financial guarantee insurance. Other exclusions resulted from the belief that, recognizing the extraordinary nature of a guaranty fund, many insured exposures did not represent an extreme hardship to the person involved. Still others may have resulted from drafting difficulties. \textit{1985 Proc. II 473-475}.

By the time the amendments were adopted at the end of 1985, the mechanics of the scope section had changed from the earlier draft. Rather than limiting coverage only to stated types of insurance, the list excluded certain types of coverage. One listed item was removed just before adoption of the model. It had provided an exclusion from the act for errors and omissions insurance for directors and officers of for-profit organizations. \textit{1986 Proc. I 294}.

B. The task force was unanimously in favor of excluding financial guarantee insurance from the coverage of the guaranty fund. \textit{1986 Proc. I 431}.

C. After the insolvencies of two large writers of surety business the federal government urged the NAIC to consider coverage of surety bonds under the guaranty association. It had not been the policy to do so because such bonds were generally associated with commercial ventures. \textit{1986 Proc. I 429}.

D. Clarification of the subsection was made in 1986. Originally the model only said “credit insurance” but the additional language was inserted to make clear other types of collateral protection insurance similar to credit insurance were also originally intended to be excluded. \textit{1987 Proc. I 450}.

E. In 1995 the NAIC considered an amendment to Subsection E to amplify the exclusion of coverage for insurance of warranties or service contracts. This provision was included in the package of amendments adopted in 1996. \textit{1995 Proc. 3rd Quarter 586, 1996 Proc. 1st Quarter 571}.

I. When model amendments were adopted in 1985, consideration was given to adding a subsection to exclude coverage for claims covered under a governmental insurance program. The exclusion was not adopted at that time, but instead Section 12 was amended to add a requirement to exhaust governmental benefits before the guaranty fund would be responsible for the claim. \textit{1986 Proc. I 296, 304}. In 1986 the Section 12 limitation was deleted and the exclusion contained in Subsection I added. \textit{1987 Proc. I 421}.
An industry association suggested that the comment at the end of the section be amended to note that the Life and Health
Insurance Guaranty Association Model Act addresses some of the lines of coverage excluded by this provision. 1994 Proc.
2nd Quarter 510.

When considering amendments to the model in the latter part of 1995, the working group agreed to add a comment at the end
of Section 3. It contained a definition of ocean marine insurance for states whose codes did not contain a definition, so that
there would be no question as to the coverages encompassed by the exclusion of ocean marine insurance. The working group
agreed to limit the exclusion to craft used for commercial purposes. The working group also decided not to include within the
Section 3
definition coverage written pursuant to the Jones Act or the Longshore and Harbor Worker's Compensation Act. It was the
opinion of the group that these coverages were properly classified as workers' compensation insurance. 1995 Proc. 3rd
Quarter 586.

Section 4. Construction

An industry association recommended that Section 4 be deleted because it added no substance to the model act. 1994 Proc. 2d
Quarter 510.

The working group recommended that the section be retained to encourage appropriate construction of the Act by the courts
and to lessen the likelihood that courts would strain to interpret the Act in a manner inconsistent with the intentions of the
drafters. The group did remove one word so that the model no longer said liberally construed. 1994 Proc. 3rd Quarter 419.

The Receivership Model Act Working Group voted to delete this section. A couple of regulators made a motion to restore the
original language. The argument was that the clause expanded the coverages provided by the guaranty associations. The Task
Force voted to retain the original language. 2008 Proc. 1st Quarter 10-440.

Section 5. Definitions

F. “Covered claim” was considered for modification in 1985. An industry draft suggested a net worth exclusion under which
no protection was extended to wealthy persons. The draft recommended exclusion of coverage for any claim in favor of a
person having a net worth of $50 million or more. It was their belief that an insured with that much net worth ought to buy
insurance intelligently enough so that it would not be insured by an unsound insurer. They suggested it was not good public
policy to send bills for such wealthy persons’ losses or claims to all of the homeowners and small business insureds to pay.

The net worth exclusion was adopted because of potential capacity problems for guaranty funds. The advisory committee felt
the suggested change would provide a more even balance between those who really need the protection of guaranty funds and

Just before adoption of the model revisions in December 1985, the Guaranty Fund Task Force voted to remove a net worth
limit of $10 million that had been included in the draft. A net worth provision was added instead to Section 11. 1986 Proc. I
294.

The National Committee on Insurance Guaranty Funds approved a document called “Guiding Principles for Settling Disputes
Between Property and Casualty Insurance Guaranty Associations as to Responsibility for Claims” and asked the NAIC’s
acceptance of the program. The purpose was to answer questions about which state’s fund should handle the covered claim.
A suggestion made to the working group considering amendments to the model in 1994 was to revise the definition of “covered claim” to make it clear that unearned premium claims are covered by the guaranty fund in the state where the policyholder resided at the time the policy was issued. 1994 Proc. 2nd Quarter 510.

The working group did not follow the suggestion because of a concern that the proposed revised language would be construed to limit the claims that would be covered. 1994 Proc. 3rd Quarter 419.

Just before adoption of the amendments by the working group, further discussion was held on the suggestion to assign coverage of an unearned premium claim to the guaranty association in the state where the insured resided at the time of issuance of the policy. One regulator said the proposed amendment would place an additional burden on receivers of insolvent insurers, who often must deal with policy records that are unorganized, inadequate or non-existent. Another regulator agreed the proposal could cause delays in paying claims and increase the workload of both receivers and guaranty associations. The working group agreed to defer action on the suggestion.

1994 Proc. 4th Quarter 575.

Amendments were considered again later in 1995 and Paragraph (2) was revised. It clarifies which guaranty association is primarily liable for the claim for property damage and does not narrow coverage. 1995 Proc. 3rd Quarter 586.

At a hearing on the proposed amendments held in early 1996 one regulator objected to this proposed amendment. An interested party responded that the amendment does not restrict guaranty association coverage, but only determines the guaranty association that has primary responsibility for a property damage claim. The purpose of the amendment is to clarify that the guaranty association in the jurisdiction where the property giving rise to the claim is located has primary responsibility for the claim. 1996 Proc. 1st Quarter 569.

An association of guaranty funds recommended that the exclusion from “covered claim” be expanded to exclude claims for reinsurance recoveries, contribution and indemnification brought by other insurers and to prohibit insurers from pursuing such claims against an insolvent company up to the guaranty fund limits. 1994 Proc. 2nd Quarter 510.

Paragraph (3)(d) was added in the 1994 revisions. It contains a net worth exclusion for first party claims by an insured whose net worth exceeds $25 million. The association of guaranty funds had suggested $10 million as the appropriate level. 1994 Proc. 3rd Quarter 419.

G. “Insolvent insurer” was modified in 1972 to change the definition from an insurer “authorized” to transact to one “licensed” to transact insurance. It was the intent of the NAIC committee which drafted the bill to provide coverage only for carriers licensed in the state. In other words, coverage was not to be included for unauthorized insurers since they were not subject to the state’s regulation for solvency. “Authorized” might have been construed to include eligible surplus lines insurers. 1973 Proc. I 155.

At the June 1976 meeting the industry advisory committee submitted a recommendation for an amendment to the definition of “insolvent insurer.” They contended the law was designed to apply to companies being liquidated, but the language of the model was not sufficiently precise to accomplish that limited objective. The suggestion to add specific language to clarify this point was not acted upon at that time. 1978 Proc. I 277. It was, however, adopted in December 1978. 1979 Proc. I 217.

The definition was revised in 1994 to require a final order of liquidation with a finding of insolvency. A drafting note explaining that “final order” means an order that has not been stayed was also included in the amendments. 1994 Proc. 3rd Quarter 419.
H. Paragraph (2) was added in 1994 to incorporate language concerning termination of membership and liability for assessment in the event of a termination. 1994 Proc. 3rd Quarter 419.

Section 6. Creation of the Association

Section 7. Board of Directors

A. This provision was modified to allow vacancies to be filled by a majority vote of the remaining board members. By the terms of the original model, it would have been necessary to call a meeting of all member insurers, which would have been extremely cumbersome. 1972 Proc. I 480.

An advisory group was asked to consider the issue of public representation on guaranty association boards in 1992. The committee report recommended against it, but one member proposed that a drafting note be added to include a provision for public representation on the board where the state had a premium tax offset. 1993 Proc. IB 703.

Section 7

One member of the advisory group submitted a minority report explaining her reasons for recommending public representation on guaranty association boards. The main reasons given by the consumer representative were because the public ultimately bears the cost of guaranty fund assessments, because a different perspective is needed, and because accountability is needed. 1993 Proc. I 707.

As a follow-up from that minority report, the working group decided to draft amendments to both the Life and Health Insurance Guaranty Association Model Act and the Post-Assessment Property and Liability Insurance Guaranty Association Model Act, which were designed to add two public representatives as members of the board of directors of the guaranty associations without increasing the overall number of members on the boards. The amendments also addressed potential conflicts of interest by requiring that the public representatives not be employed or contracted by any entity regulated by the state insurance department or required to register as a lobbyist in the state, or related to either. 1993 Proc. 2nd Quarter 619.

A representative from an association of guaranty funds said an earlier suggestion for public representatives failed to gain support because of a perception that the commissioner was the representative of the public. Another association representative said his organization’s position was that it was a public policy question for the legislatures to determine. The underlying question related to the individual members themselves: their expertise, accountability and responsibility. 1993 Proc. 2nd Quarter 619.

The consumer representative who authored the minority report restated her position. She believed that because the public ultimately bears the burden of insolventcies either through increased taxes or policy surcharges, the public was entitled to representation on the boards. Any problem experienced with incentive to attend meetings or structure of the board should be addressed separately from the overall issue of representation and should not result in a denial of representation of the public. 1993 Proc. 2nd Quarter 619.

In a letter of comment on the exposure draft providing for public representation, one association said it had developed a position opposed to public representation when the model was originally drafted. The association’s position was that there were substantial conflicts of interest in having consumers and other public representatives on the board. The state guaranty funds stand in the shoes of the insolvent insurer and must pay claims and decide coverage issues as the insolvent insurer would have done. Had the insolvent insurer remained solvent, it would not have had consumers involved in its internal claims process. 1993 Proc. 2nd Quarter 605.

The consumer representative said insurers also faced a conflict of interest because their interests were not aligned with those of policyholders either, but rather with the solvent insurers who paid the assessment. 1993 Proc. 2nd Quarter 619.
Another insurer association gave conditional support for the amendment. Its experience had been that qualified public representatives can make a positive contribution to board deliberations. The association expressed some concern about selecting qualified individuals who should be knowledgeable about the insurance industry. It recommended the draft be revised to require only one public member, who should not be eligible to serve as the chair of guaranty fund boards. 1993 Proc. 2nd Quarter 604.

Before the Executive Committee voted on adoption of the amendment regarding public representatives, further discussion took place. The chair of the Financial Condition Subcommittee said the purpose of the amendment was to improve communication among regulators, the insurance industry and consumers on guaranty fund and insurer insolvency issues. The addition of public representatives to the governing boards would provide consumers with access to the guaranty fund process and a direct means to express concerns. The addition of public representatives also recognizes the impact of insurer insolvencies on the general revenues of states and taxpayers. Another commissioner stated that he occupied a position on the guaranty association boards and acted as a public representative since it was his function to protect the public interest. A third commissioner said that public input into the guaranty fund process would be valuable, and that even though the commissioner’s function was protection of the consumers, the issue was one of direct public access. He did not favor inclusion of this provision in the financial regulation standards for accreditation. The chair of the subcommittee responded that this was not being recommended. 1993 2nd Quarter 32.

Section 7

Before final adoption the NAIC plenary body considered the matter again. Concern was expressed that this amendment would be required for a state to be accredited. After a sure that the amendments were not being considered, indeed were not even related to financial solvency, the model amendment was adopted. 1993 Proc. 2nd Quarter 12.

In 1994 language was added to Section 7A to allow the commissioner to appoint the initial members of the board of directors if not selected by the member insurers within 60 days. A provision was also added to allow the commissioner to fill any vacancies in position held by public representatives. 1994 Proc. 3rd Quarter 419.

Late in 1995 the working group reviewing suggestions for change to the model recommended that Subsection A be amended to simplify the qualifications for serving as a public member of the board of directors of a guaranty association. 1995 Proc. 3rd Quarter 586.

The amendment to Subsection A was adopted in 1996, as well as the drafting note following the subsection. 1996 Proc. 1st Quarter 573.

Section 8. Powers and Duties of the Association

One of the major areas of concern when initially drafting the model was the manner in which the guaranty function was to be performed. Should the program be administered by the commissioner or through an industry association? What functions should the group perform? Shall they be authorized to delegate functions to a servicing insurer? 1970 Proc. I 263.

A. The drafters started with the promise that the first draft should be a post-assessment rather than a prefunded plan. Then a number of decisions needed to be made in determining those assessments. Should insurers be assessed by lines of business? What, if any, should the maximum rate of assessment be? Should assessments be recognized in the making of premium rates? 1970 Proc. I 263.

Paragraph (3) of this subsection was amended in December 1971. As the model existed before, if the amount raised by a maximum assessment was insufficient to pay all covered claims, the association would have to marshal all the claims before it
could make any payment on any one particular claim. Language was added giving the association the right to pay claims in the order it deemed reasonable, thus avoiding administrative problems and delay. 1972 Proc. I 480.

A second amendment in December 1971 provided that if a company had deferred payment of an assessment due to its financial condition, that company could not pay any dividends to shareholders or policyholders during the period of deferment, and would have to pay the deferred amount as soon as payment would not reduce capital or surplus below required minimums. 1971 Proc. I 480.

A December 1978 amendment added a sentence to the last paragraph of Subsection A(1) to eliminate claims filed after the final date set by the court for filing claims against the liquidator. 1979 Proc. I 217.

The model originally contained a $100 deductible provision that was deleted in December 1980. At the same time a sentence was added at the end of Subsection A(1) to pay only the amount of unearned premium over $100. The reasoning for this was that certain consumers bore a disproportionate share of the losses; if there were no deductibles, the losses would be borne more equitably by all insureds. The administrative costs of handling the deductibles were high in relation to the amounts involved, sometimes exceeding what would have been paid out in claims. 1981 Proc. I 225, 228.

The most notable of the amendments to the model act considered in 1994 included deletion of the $100 deductible for unearned premium claims. 1994 Proc. 4th Quarter 574.

The working group was asked to consider deletion of the provision that allows the guaranty fund to pay only that portion of an unearned premium claim in excess of $100. In support of his proposal, the regulator said his state’s receiver spent $91.18 in costs to adjudicate each policyholder claim for the deductible. He said the substantial number of these claims filed a lso
Section 8A (cont.)

creates an administrative burden, as well as depleting assets of the insolvent insurer. An industry spokesperson said the industry favored the deductible because it had the effect of spreading the loss due to insolvency and also reduced the cost of each insolvency to the guaranty association. The working group decided to recommend the deletion of the provision for the deductible. 1994 Proc. 3rd Quarter 419.

Several industry associations commented on the proposal to delete the $100 deductible and indicated a desire to retain the provision. A regulator responded that the costs to the estate associated with the deductible were out of proportion to any benefit to policyholders. Another regulator said she received numerous complaints from policyholders about the application of the deductible to their claims. Another regulator said that, although guaranty associations might initially derive some cost savings from the deductible, those savings were offset by the cost to the estate, which ultimately results in less money available for distribution to policyholders, guaranty associations and other creditors. Another added that the necessity of processing claims for the deductible unnecessarily prolongs the administration of estates, which is detrimental to the guaranty association. A guaranty association representative argued that the cost savings related to the deductible was important to guaranty associations. He said in one state it was estimated that the deductible had resulted in savings of more than $13 million. He suggested other options for addressing the issue, including an exclusion of nominal claims from payment by the receiver and lowering the priority of claims for reimbursement of the deductible. He said costs of the guaranty associations are passed on to the public through rate surcharges and premium tax offsets, and that it was appropriate for policyholders to share some of the costs associated with an insolvency. After much discussion the working group decided to dispense with the deductible for unearned premium claims. 1994 Proc. 4th Quarter 574-575.

The amendments adopted in December 1985 included a revision of this section, including a limit of $10,000 per policy for claims on return of unearned premiums. The advisory committee also suggested a limit of $50,000 on non-economic loss, but this suggestion was not adopted. 1986 Proc. I 300, 344.

In 1986 an alternative provision was drafted to give the liquidator authority to sell a limited extended reporting period to insureds of an insolvent company that would provide coverage for the time period for filing claims with the liquidator. To prevent inconsistencies the time period was set for 18 months. 1986 Proc. II 409-411. This provision was adopted six months later. 1987 Proc. I 421.

Revisions were made to this section in 1994 to eliminate the alternative section that had been included for states with a provision in the liquidation law giving the liquidator authority to sell a limited extended reporting period for claims made policies. 1994 Proc. 3rd Quarter 424-425.

The last sentence of the subsection originally read “Each member insurer may set off against any assessment authorized payments made on covered claims and expenses incurred in the payment of such claims by the member insurer.” That sentence was deleted as being unnecessary and a potential cause of conflict. 1987 Proc. I 450.

Section 8A(1) was amended to be consistent with the revised definition in Section 5G by replacing “determination of insolvency” with “order of liquidation.” Language was added at the end of Paragraph (1) that provided that the association’s duty to defend ceased upon payment or tender of an amount equal to the lesser of the association covered claim limit or the applicable policy limit. 1994 Proc. 3rd Quarter 419.

Late in 1995 a working group considering amendments to the model discussed a proposal from a group suggesting a change to the provision regarding the date at which liability to the guaranty association is cut off and discussed the exclusion from coverage of policyholder protection claims. After lengthy discussion the regulators decided not to recommend the proposed amendments. The group also considered amending Paragraph (1)(b) to provide for an aggregate limit of $10 million per insured. 1995 Proc. 3rd Quarter 586.
Members of the working group expressed their support for the idea of an aggregate limit per insured in general, but raised some specific concerns with the proposal. These concerns included the difficulty of application of the aggregate limit if not adopted uniformly by all states and whether the amendment would create an incentive for a guaranty association to delay claim payments so that payments by other guaranty associations would satisfy the limit, thereby avoiding its statutory responsibility. Another concern was that guaranty association coverage would be exhausted by those who filed claims early, leaving other claimants without any coverage. 1996 Proc. 1st Quarter 569.

The working group decided to adopt the proposed package of amendments without including the aggregate limit, but to consider a revised proposal in the future. 1996 Proc. 1st Quarter 570.

A provision was added to Paragraph (2) authorizing the association to pursue and retain salvage and subrogation as to claims paid by the association. 1994 Proc. 3rd Quarter 419.

An association of guaranty funds recommended that the guaranty funds have the exclusive right to appoint and direct legal counsel retained to defend liability claims. The working group decided to add a provision to Paragraph (4) giving the association the right to choose legal counsel for the defense of covered claims. 1994 Proc. 3rd Quarter 419. Section 8 (cont.)

B. A suggestion was made by an association of guaranty funds to amend Subsection B(3) to afford guaranty associations the right to intervene in a proceeding involving an insolvent insurer. Some members of the working group expressed concern that this provision would result in the estate incurring unnecessary litigation expenses. Another concern expressed was that other creditors would, by extension, also be granted a right to intervene. One regulator felt that guaranty associations should not have rights superior to those of other creditors. No amendments to this subsection were included in the recommendations adopted in 1996. 1995 Proc. 3rd Quarter 586, 1996 Proc. 1st Quarter.

C. The working group agreed to create an optional Subsection C providing a method of raising funds in excess of the association’s normal assessment capacity to pay claims resulting from a natural disaster. This provision was patterned after legislation already enacted in one state. 1995 Proc. 3rd Quarter 586.

The amendments adopted in 1996 included an optional Subsection C and a comment on that subsection. 1996 Proc. 1st Quarter 576.

Section 9. Assessments

Section 10. Plan of Operation

To supplement the model bill a separate model plan of operation was also adopted. 1970 Proc. IIB 1092-1096.

When considering revisions to the model in 1994, a suggestion was made to the working group that provision be made for disposition of dividends and other advances received by a guaranty fund from an estate. 1994 Proc. 2nd Quarter 510.

Section 11. Duties and Powers of the Commissioner

A. The second sentence was added to Paragraph (1) in December 1972. Receipt of a copy of the commissioner’s petition for insolvency upon the filing of such a petition with a court would assist the guaranty funds in beginning to prepare to handle an insolvency once declared by a court of competent jurisdiction. 1973 Proc. I 156.

B. Subsection B contained a provision requiring the association to notify insureds and other interested parties of the insolvency. This provision was deleted in 1994. 1994 Proc. 3rd Quarter 420.
Section 11. Effect of Paid Claims (Previous version of model)

In 1975 the drafters considered an amendment which would have given guaranty funds immediate access to insolvent company assets, declare the guaranty funds priority creditors, and offer a “rescue” funding mechanism. 1976 Proc. I 296.

The recommendation was not adopted by the executive committee, but was sent back to the drafting task force. 1975 Proc. I 9.

B. On a close vote the Guaranty Fund Task Force decided to include an amendment to this section limiting covered claims to claimants whose net worth was under $50 million. All of Subsection B was new material added in December 1985. 1986 Proc. I 340, 347.

The task force generally favored the net worth exclusion as long as third-party liability claimants who may not have a sufficient net worth were protected. This approach would serve as an incentive to risk managers for commercial insureds to shop wisely in placing their insurance. 1986 Proc. I 431.

The footnote in Subsection B was added to clarify the original drafter’s intent that the net worth provision apply to workers’ compensation claims. 1987 Proc. I 451.

A working group considering amendments in 1995 was asked to lower the net worth exclusion to $25 million but declined to make that recommendation. 1995 Proc. 3rd Quarter 586.

C. In 1994 Subsection C was substantially amended to clarify the rights of the association as claimant in the estate of an insolvent insurer and to require receivers to accept settlements of covered claims and determination of covered claim eligibility by guaranty associations. 1994 Proc. 3rd Quarter 420.

In late 1995 an amendment was proposed to Subsection C to address the concern of some members that guaranty association determination of covered claims not affect the receiver’s adjudication of excess claims. 1995 Proc. 4th Quarter 728.

A second issue identified by the working group was whether the receiver should be bound to accept the guaranty fund’s determination of a covered claim and the amount paid by the guaranty fund in satisfaction of the claim. The suggested amendments addressed the concerns of regulators. 1995 Proc. 4th Quarter 728.

Section 12. Exhaustion of Other Coverage (Previous version of model)

Section 12 was titled “Nonduplication of Recovery” from the time the original model was adopted in 1962. The title was changed in 1996 to better reflect the intent of the section. 1996 Proc. 1st Quarter 570.

A new Subsection B was added in December 1985 requiring a person with any right of recovery under a governmental insurance program to exhaust his right there first before submitting a claim to the guaranty association. 1986 Proc. I 296, 304. A year later this paragraph was deleted and the model returned to its original language. Instead Section 3 was amended to add an additional subsection excluding any insurance provided by or guaranteed by the government. This would have the effect of excluding flood and crop hail insurance guaranteed by the federal government from covered claims. 1987 Proc. I 421.

A. In 1994 Subsection A was amended to clarify that “other insurance” was not limited to coverage provided by a member insurer. 1994 Proc. 3rd Quarter 420.
Protection against insolvency is one of the paramount objectives of insurance regulation. Two approaches are used to achieve this objective. First, insolvency funds have been created to afford protection when insolvencies actually occur. Second, statutes have armed insurance departments with various regulatory standards, procedures and tools to prevent or reduce the likelihood of insolvencies. The drafters also questioned whether additional insolvency preventive measures should be incorporated in the model bill.

1970 Proc. I 263

The section was rewritten in 1983 at the urging of the guaranty funds because they felt the section imposed duties on the guaranty funds boards which were more appropriately carried out by insurance departments. 1983 Proc. I 350. The recommended changes allowed interaction between the guaranty funds and the insurance commissioners. 1984 Proc. I 326.

A. The old Subsection A was deleted in 1994 to address antitrust concerns. It had required the board of directors to make recommendations to the commissioner for ways to detect and prevent insolvency and to discuss and make recommendations about the status of any member insurer whose financial condition might be hazardous to its policyholders. This was replaced with a provision authorizing the board of directors to make general recommendations concerning solvency regulation. 1994 Proc. 3rd Quarter 420.

Section 13. Credits for Assessments Paid (Tax Offsets) – OPTIONAL

A regulator stated that the E Committee requested the Task Force reconsider a solution regarding assumed claims transactions. Another regulator stated that the Working Group considered the topic twice and agreed that something should be covered by the guaranty associations. A regulator suggested optional language to avoid controversy and ensure a timely response. After extensive discussion, the Task Force agreed to further study the issue. 2008 Proc. 2nd Quarter Vol. II 10-490 to 10-492.

A regulator recommended including two options – one option where assumed business was covered, and a second option where assumed business was not covered. Another regulator explained a third option as having two parts. This alternative would be a way to take care of all assumed claims, not necessarily with guaranty fund coverage but by means of a segregated account. The Task Force discussed comments received on these options and whether drafting notes would resolve the issue. A commissioner summarized the four existing options and the potential fifth option. The Task Force decided to draft a background summary and finalize a decision at the 2008 Fall National Meeting. 2008 Proc. 3rd Quarter Vol. II 10-368 to 10-370.

A commissioner stated that the Committee requested that the Task Force reconsider the assumed business language by considering optional language. A regulator stated that Option Three appeared to be an interim step for when insolvency takes place before a company issues their own policies. This option would be a way to handle the previous incurred losses before the assumption. The Task Force discussed issues related to this option. 2008 Proc. 4th Quarter Vol. II 10-622.

A commissioner stated that Option Four followed Virginia Law. An interested party stated that Option Four is the mechanism by which Virginia implemented Option One. A regulator asked for clarification on the options. Another regulator said that Option Five was an attempt to be in the middle ground. The Task Force discussed the various aspects of Option Five. An interested party stated that he had an alternative that achieved Option Five’s goal through a different mechanism. Another interested party stated that the option they were most supportive of was Option Three. This option leaves parties as close as possible to the position into which they put themselves while still providing relief on a going forward basis for those people finding themselves with a new insurer, but after the transaction date, their claims would be covered just as if they had been issued by the assuming carrier. The Task Force discussed the pros and cons of Option Three. A regulator polled the members on the different options. Options One and Five, received positive support from the majority. Options Two and Three did not receive support. 2008 Proc. 4th Quarter Vol. II 10-624 to 10-625.

The Task Force voted to send Option One and Option Five to the Financial Condition (E) Committee as optional language within the model. 2008 Proc. 4th Quarter 10-626.
At the December 1972 meeting of the NAIC Property and Liability Guaranty Fund Subcommittee, it was suggested that a task force consisting of both regulators and industry actuaries and rate-making personnel create a recoupment formula under the model law. 1973 Proc. 1395.

The task force made the following recommendations: (1) In making rates consideration should be given to past assessments paid. It is the intent of the guaranty fund law that the assessments are to be borne by the policyholders eventually through their premium payments. (2) The language is quite clear on the point that, if assessments have been paid, rates are not to be considered excessive because they contain an amount to recoup the assessments paid. Because rate-making is prospective in nature, the rating law required that due consideration be given to prospective expenses as well as past expenses. (3) The task force recommended numeric formulas considering available information from prior insolvencies covered by guaranty funds. 1973 Proc. II 396-397.

In 1995 the working group recommended the deletion of the assessment recoupment formula because it appeared that the formula had not been utilized by any state. 1995 Proc. 3rd Quarter 586.

Section 17. Immunity

An amendment to this section was made in December 1986. The words “... for any action taken or any failure to act by them ...” were added to strengthen the immunity and reflect more clearly the intent of the drafters. 1987 Proc. I 451.

A provision was added in 1994 amendments to extend immunity to those persons substituting for a member of the board of directors. 1994 Proc. 3rd Quarter 420.

Section 18. Stay of Proceedings

Three years after the model was originally adopted, a change was made allowing a proceeding to be stayed for six months instead of the 60 days in the original model. It was found that the records of an insolvent company were in many cases nonexistent, and it took time to determine what actions were pending. The amendment allowed the association up to six months within which to prepare a proper defense, and such time thereafter as the court may grant in its discretion. 1973 Proc. I 156.

The liquidator of an insolvent insurance company was reluctant, in some cases, to turn over the insolvent company’s claims files to the servicing carrier. Because the association couldn’t function without access to the insolvent company’s files, the second paragraph of Section 18 was added. 1973 Proc. I 156-157.

The language in the first sentence of this section was modified to remove the words “up to” which had preceded “six months.” It was the view of the committee that the words “up to six months” imposed an unnecessary restriction upon the staying power of the court. 1987 Proc. I 451.

An association of guaranty funds recommended that the stay be extended to the claim filing deadline to allow the guaranty funds more time to obtain and review claim files and determine what actions need to be taken. 1994 Proc. 2nd Quarter 511.

The drafting group declined to follow the suggestion and recommended retention of the six-month period. The group did, however, add a provision allowing the association to waive the stay in instances where circumstances justify or require quicker action. 1994 Proc. 4th Quarter 588.
PROPERTY AND CASUALTY INSURANCE GUARANTY ASSOCIATION MODEL ACT

Proceedings Citations
Cited to the Proceedings of the NAIC

Section 18 (cont.)

A set of general comments had been included after Section 18 with further suggestions for drafters. When amendments were considered in 1994, one suggestion was to omit these comments. An insurer association suggested that many comments in the model were outdated and no longer applicable and should be deleted. 1994 Proc. 2nd Quarter 521.

Chronological Summary of Actions

June 1969: Model adopted.
December 1971: Amended Section 7 to provide method for filling board vacancies and Section 8 to allow payment of claims in any order deemed reasonable.
December 1972: Amended definition of insolvent insurer and added procedures to assist the guaranty association in its duties.
June 1973: Recoupment formula adopted.
December 1978: Revised definition of insolvent insurer and added sentence to limit covered claims to those timely filed.
December 1980: Eliminated $100 claims deductible but added sentence to retain $100 unearned premium deductible.
December 1983: Modified Section 13 to aid in detection and prevention of insolvencies.
December 1985: Extensive amendments adopted to clarify and limit scope of act, to add definitions of “claimant” and “control” and to expand section on limits of payments. The net worth limit in Section 11 was added.
December 1986: Amendments adopted to provide for extended reporting period endorsement of a claims-made policy, to exclude flood and crop hail damage insurance provided or guaranteed by the federal government, and to make technical amendments.
September 1993: Adopted amendment to Section 7 to provide for public representatives on the guaranty fund board.
March 1995: Adopted amendments to clarify and update the model.
June 1996: Adopted amendments to clarify and update the model.
January 2009: Adopted amendments to clarify and update the model.

Section 1: Overview of IBT and Corporate Division Laws and Mechanics

A. Introduction

Insurance is a business that sells a promise to pay upon the occurrence of a future event. Policyholders may submit claims many years into the future on covered losses incurred during the policy period requiring insurers to record a liability for these incurred but not reported claims. As such, it is nearly impossible for an insurer to decide to discontinue writing a certain line of business and pay off all its legal obligations to its policyholders because there are almost always unknown potential future policyholder obligations that have not yet been reported. Policies previously written on a line of business that is no longer being written creates a block of business that may no longer be the focus of the insurer’s business model and left to slowly runoff. For some insurance companies, runoff business remains embedded with the core business without the ability to segregate the runoff business. There are even runoff specialists that have developed within the insurance industry that specialize in handling these old blocks of business.

Until recently, U.S. insurance companies wanting to restructure their liabilities had been limited to sale, reinsurance/loss portfolio transfers or individual policy novation. Other than individual policy novation, these solutions do not provide finality as the ultimate liability remain with the original insurer. The only way to transfer a block of business with finality is an individual policy novation. However, the current process of novating individual policies is considered by the industry to be inconsistent among the states, cumbersome, time-consuming, and expensive. The industry suggests that in many instances it will be impossible to obtain positive consent to a novation from all policyholders, especially on older books of business where policyholders are difficult to locate.

The NAIC has addressed aspects of this issue in the following two previous white papers. In 1997, the Liability-Based Restructuring Working Group of the NAIC Financial Condition (EX4) Subcommittee issued a paper titled “Liability-Based Restructuring White Paper.” (See Attachment 1.) The white paper focused on the efforts by property and casualty insurers attempting to wall off “material exposures to asbestos, pollution and health hazard (APH) claims and other long-tail liabilities” from current insurer operations. The white paper achieves this focus by inclusion of various section on related topics as well as multiple appendices. In 2009, the Restructuring Mechanisms for Troubled Companies Subgroup of the Financial Condition (E) Committee issued a white paper titled “Alternative Mechanisms for Troubled Companies.” (See Attachment 2.) The white paper focuses on troubled companies although it also addresses the statutory restructuring mechanisms available in the United States (“US”) at that time. This white paper similar to the 1997 white paper, also includes a number of sections on related topics as well as multiple appendices.

Over the past few years, states have begun enacting statutes which provide opportunities for restructuring of insurance companies with finality. The purpose of this white paper is to update the 1997 and 2009 white papers and provide explanation of these new statutory processes. These processes can be

1 For purposes of this paper “runoff business” is defined as a block of insurance business that is no longer being actively written by an insurance company and no premiums are being collected, except where required to in accordance with contractual or regulatory obligations, and where the existing or assumed group of insurance policies or contracts are managed through their termination. This definition was developed based on comments received by the Restructuring Mechanism Subgroup from both regulators and industry interested parties; however, this definition has not yet been adopted by the subgroup.

broken down into two categories generally referred to as insurance business transfer (“IBT”) and corporate division (“CD”). Several states, including Arkansas, Oklahoma, Rhode Island, and Vermont, have enacted IBT statutes while other states such as Arizona, Connecticut, Illinois, Iowa, Arkansas, Pennsylvania, and Michigan have enacted CD statutes. The stated intent of all these statutes is to enable insurers to take advantage of the statutory process in order to enhance their ongoing operations.

This white paper will discuss and explore these laws within the US and identify the various regulatory and legal issues involving IBT and CD legislation. This white paper is not intended to establish an official position by the NAIC regarding IBTs or CDs. The authors suggest that each state and its various regulatory authorities should make their own determinations on how best to proceed within their respective jurisdictions. In addition, this paper is not intended to address every situation a company may encounter and leaves possible situations to each insurer as well as the review and approval of all applicable regulatory authorities. Because the robust procedures used in the United Kingdom (“UK”) are seen as a means to utilize IBT in the US, the procedures are discussed in Section 2 of this white paper.

A separate workstream was created to develop financial standards appropriate in US to evaluate IBT and CD transactions. Some stakeholders question whether, even with robust standards, adequate consumer protections would exist when IBTs and CDs are utilized. Therefore, this white paper includes a discussion of a UK case which discussed consumer protection issues.

This is a constantly changing area with states adding and amending statutory provisions and considering new and unique transactions on a continuous basis. Therefore, the factual statements in this whitepaper should be considered a “point in time” discussion.

B. Purposes

During the course of the Restructuring Mechanisms (E) Working Group’s (“Working Group”) discussions, stakeholders identified a number of potential purposes for restructuring transactions. Testimony indicated that reinsurers and insurers were looking for new solutions that provide legal and economic finality to runoff insurance risks to improve the efficient allocation of capital and management resources to runoff and on-going insurance operations. Efficiencies that are obtained through restructuring transactions include the segregation and transfer of runoff books of business with the intent to free up capital, better allocate specialized management resources currently being occupied with the oversight of disparate discontinued and on-going businesses and rationalize and facilitate the runoff of discontinued lines of business. Experience outside the US, including in the UK, has shown that prudent allocation of reserves and management of runoff books of business reduces volatility and improves capital efficiency with benefits for reinsureds and policyholders of both runoff and on-going books of business. Furthermore, runoff experts bring focused expertise to managing runoffs compared to on-going enterprises. The focus of an on-going enterprise is the continual generation of increased premium growth. Runoff business can be both a distraction to management’s focus as well as distract regulatory focus away from the insurer’s on-going business. The isolation of such business from on-going business enhances the visibility of those runoff operations as well as the supervision of runoff operations, by both regulators and the insurer.

Advocates of these restructuring mechanisms argue that efficiencies resulting from the segregation and specialized management of disparate books of business result in transferring insurers releasing resources and allowing these insurers to better focus on improving current operations. Transferring insurers can better focus on core areas, leading ultimately to better service for current and future policyholders and better service for runoff policyholders. In many cases, the runoff business consists of long-tail lines, such
as mass tort, asbestos, environmental and general liability risks. These long-tail lines tie up financial and management resources which are out of proportion compared to the size or importance of the runoff book within the insurer.

As described in the 1997 white paper, restructuring of insurers can be initiated for several reasons that provide value to the insurer. These reasons include restructuring for credit rating, solvency, more effective claims management, need to raise capital and a desire to exit a line of business.³ With respect to capital and earnings volatility, the 1997 white paper explained that restructuring could allow liabilities to be separated thereby creating the ability to dedicate surplus to support restructured operations, eliminating the drag on earnings in its on-going operations and avoiding further commitment of capital for pre-existing liabilities.⁴ One restructuring expert indicated there were three primary reasons that an insurer may choose to restructure: (1) regulatory, capital and earnings volatility; (2) finality of economic transfer and (3) operational efficiencies.⁵

Of note, restructuring mechanisms may also be beneficial for purposes of credit ratings. Credit ratings are often looked at in terms of capital volatility. Credit rating agencies may take a more favorable view of an insurer that has been able to isolate a particular risk which may be more volatile and subject to further reserve development. However, rating agencies also consider the strength of the insurance group when issuing insurance financial strength ratings, which can negate the credit rating benefit that may be found in restructuring. Ratings are critical for insurers that are writing new business in which the rating has value to potential new customers. While insurance groups use different strategies, it is common that some insurers within a particular insurance group are more critical to the ongoing success of the insurance group as a whole. It is therefore not uncommon for rating agencies to recognize this fact and provide separate ratings for individual insurers within an insurance group. While these considerations can lessen the value of restructuring for credit rating in some instances, insurance groups do still choose to restructure for credit rating purposes.

C. Regulator Concerns with Restructuring Plans

While restructuring may provide value to the insurer, regulators are concerned that restructuring does not create new resources from which claims can be paid. Restructuring should not be utilized to allow insurers to escape these liabilities or separate claims in a manner that provides less capital than is needed to satisfy the insurer’s obligation. Restructuring plans that place solvency at risk or threaten consumer benefits will be faced with challenges from regulators. However, when regulators are shown that the restructuring plan benefits both the insurer and the insured, then the regulator may be willing to approve the restructuring plan. Regulators have utilized procedures to ensure the resulting structure will have sufficient assets, both as to quality and duration, to meet policyholder and other creditor obligations. One of the recommendations of this white paper is to memorialize and standardize those procedures.

Section 2: History of Restructuring in the United Kingdom

⁵ David Scasbrook (Swiss Re America Holding Corporation) as stated during the April 6, 2019 meeting of the Restructuring Mechanisms (E) Working Group.
A. Part VII Transfers in the United Kingdom

IBT and CD laws and regulations are relatively new in the US, but the legal mechanism for the transfer of insurance business has been implemented and operational in the UK for over twenty years. Part VII of the Financial Services and Markets Act of 20006 (“Part VII” and “FSMA”) enables insurers to transfer portfolios of business to another insurer subject to court approval. At the time of this writing, more than 307 successful Part VII transfers have taken place in the UK providing guidance to American insurers on how this process could continue to unfold in the US.

A Part VII transfer is a regulatory mechanism, governed by sections 104–116 within Part VII of the FSMA. This act allows an insurer or reinsurer to transfer long-term as well as general insurance business from one legal entity to another, subject to approval of a court. Many insurers use the procedure to give effect to group reorganizations and consolidations. Part VII transfers have also been used extensively in response to Brexit.

In accordance with the FSMA, the Prudential Regulatory Authority (“PRA”) and the Financial Conduct Authority (“FCA”) maintain a Memorandum of Understanding which describes each regulator’s role in relation to the exercise of its functions under the FSMA relating to matters of common regulatory interest and how each regulator intends to ensure the coordinated exercise of such functions. Under the Memorandum of Understanding, the PRA will lead the Part VII transfer process and be responsible for specific regulatory functions connected with Part VII applications, including the provision of certificates.

Section 110 of the FSMA allows both the PRA and the FCA to be heard in the proceedings. The Memorandum of Understanding confirms that both the PRA and the FCA may provide the court with written representations setting out their views on the proposed scheme, and the PRA may prepare a report regarding the IBT.

As set out in the Memorandum of Understanding, before nominating or approving an independent expert under section 109(2)(b) of FSMA . . . the PRA will first consult the FCA. Further, the PRA will consult appropriately with the FCA before approving the notices required under the Business Transfers Regulations.

Part VII transfers require a “scheme report.” This report is similar to the independent expert report under US IBTs, however, because the word “scheme” has a different context in the US, the word “scheme” is not used. Under section 109(2) of FSMA an independent expert report may only be made by a person:

(a) appearing to the PRA to have the skills necessary to enable him to make a proper report; and

(b) nominated or approved by the PRA.

The regulators expect the independent expert making the report to be a neutral person, who:

(a) is independent, that is any direct or indirect interest or connection he, or his employer, has or has had in either the transferor or transferee should not be such as to prejudice his status in the eyes of the court; and

(b) has relevant knowledge, both practical and theoretical, and experience of the types of insurance business transacted by the transferor and transferee.

The PRA may only nominate or approve an independent expert appointment after consultation with the FCA. An independent expert report must accompany an application to the court to approve the Part VII transfer plan. The independent expert report must comply with the applicable rules on expert evidence and contain the specific information set forth in the statute.

The purpose of the independent expert report is to inform the court. The independent expert, therefore, likely has a duty to the court. Further, policyholders, reinsurers, regulators, and others affected by the Part VII transfer will be relying on the independent expert report. For these reasons, a detailed report is necessary. The amount of detail that it is appropriate to include will depend on the complexity of the transfer, the materiality of each factor and the circumstances surrounding each factor.

During the Working Group’s discussion of the Part VII transfers, consumer representatives raised the UK court’s decision in *Prudential v Rothesay*⁸ which imposed several limitations on Part VII transfers. On August 16, 2019, the High Court of Justice issued an opinion rejecting a Part VII transfer between Prudential Assurance Company Limited and Rothesay Life PLC. This Part VII plan was the subject of a four-day hearing in which each insurer was represented by counsel, the PRA and FCA appeared, and a number of policyholders appeared in person. The Court noted that both the PRA and the FCA each produced reports regarding the plan, and both stated that they did not object. The independent expert filed a detailed report that ultimately did not reject the plan either.

The applicant received approximately 7,300 responses from policyholders in response to the approximately 258,000 policyholder packets that were sent out. Of those, about 1,000 were characterized as an objection. The main objection to the plan was that these consumers specifically selected the transferring insurer as their provider. These consumers argued that they should not have their annuity transferred against their will to a smaller insurer with a very different history and reputation just to further the commercial and financial purposes of the transferor.

This decision was appealed and ultimately overturned. The UK Court of Appeals⁹ found that the lower court incorrectly exercised its authority finding amongst other things, that the judge was wrong to

---

⁸ As noted by Birny Birnbaum (Center for Economic Justice—CEJ) during the Dec 8, 2019 Meeting of the Restructuring Mechanisms (E) Working Group. Note this was overturned by The Prudential Assurance Company Limited v. Rothesay Life PLC [2020] EWCA Civ 1626.

⁹ *Prudential Assurance Company Ltd and Rothesay Life Plc, Re*, England and Wales Court of Appeal (Civil Division)(Dec. 2, 2020).
give weight to (i) the different capital management policies of both insurers; and (ii) the objections of a small subset of policyholders.

In so holding, the Court of Appeals stated:

(1) The Court below was wrong to decide that both the independent expert and PRA were not justified in looking at the solvency metrics at a specific date to support their conclusions.

(2) The Court below was wrong to find a material disparity in the parent company structure since the parent companies could never be required to provide support to their subsidiaries’ capital.

(3) The Court below should not have accorded any weight to the fact that the policyholders had chosen Prudential based on its long-established reputation, age, and venerability nor to the fact that they had reasonably assumed that Prudential would be their annuity provider throughout its lengthy term.10

Despite this set of complex UK decisions, the Part VII transfer continues to be used in the UK and watched closely by the US regulators and stakeholders.

B. Differences between Part VII and Solvent Schemes of Arrangements

Solvent schemes of arrangement are another method of restructuring that exists within the UK. These are primarily designed as a procedure that can allow all liabilities to be settled for an insurer. In doing so, it can achieve many of the objectives set out in this white paper. However, unlike the Part VII transfer, the policies are subject to a court ordered termination instead of transferred. While such an arrangement may provide some of the same features as a Part VII transfer the solvent scheme does not continue the coverage with a new insurer the way a Part VII transfer does. Other differences may exist in law but are not deemed to be relevant to this specific white paper.

Section 3: Survey of US Restructuring Statutes and Regulations

Various states have enacted corporate restructuring statutes or regulations. Those generally following the UK structure began with Rhode Island in 2002 adopting a statute titled Voluntary Restructuring of Solvent Insurers11 patterned after Solvent Schemes of Arrangements. This type of process was renamed Commutation Plans and differs from the UK law in a number of areas including an enhanced role for the regulator, designating the independent expert as a consultant to the regulator and limiting the process to commercial property and casualty risks. One commutation plan was adjudicated by the Rhode Island court in 2011 and withstood a constitutional challenge. The written decision in that case addressed many of the issues raised with restructuring plans generally.12 Commutation Plans continue to be available under RI law.

10 Id. at Page 6 of Appeal Nos: A2/2019/2407 and 2409 Case No: 1236/5/7/15
In 2015 Rhode Island adopted an Insurance Business Transfer Plan regulation structured similar to the Part VII transfers. Again, in contrast to the UK, the regulation provides an enhanced role for the regulator, designates the independent expert as a consultant to the regulator and limits the process to commercial property and casualty risks. The RI regulation provides for notice at the time the plan is filed with the regulator and an ability to comment at that time. If the regulator, after a thorough review of the Plan and comments received, continues to believe that it meets the statutory requirements, it will authorize the Plan to be filed with the Court. The Court will require notice to policyholders and hearings to allow all comments and objections to be considered. A Rhode Island domestic insurer has been formed specifically to undertake IBTs, but a plan has not yet been filed with the regulator.

In 2013, Vermont adopted the Legacy Insurance Management Act (“LIMA”). LIMA is limited to surplus lines risks and reinsurance, involves department approval but not court approval and allows policyholders to opt-out of the plan. As of this date, no transactions have been completed under LIMA.

In 2018, Oklahoma adopted the Insurance Business Transfer Act modeled after UK’s Part IV regulation with a few significant differences. The differences include no restriction on the type of insurance nor restrictions on the age of the business. Oklahoma law provides for both insurers to nominate a potential independent expert with the Insurance Commissioner appointing one or another if he or she is not satisfied with the nominations. The independent expert report is submitted with the IBT application to the Oklahoma Insurance Department which approves the IBT plan to be submitted to the court upon satisfactory showing that statutory standards are met. The court requires notice and opportunity to be heard prior to court approval of implementation of the plan. As of this writing, Oklahoma has completed two IBTs in October 2020 and September 2021, involving a Rhode Island and Wisconsin insurer respectively, which are described below. Neither of the plans were challenged in the state court proceedings.

In 2021, Arkansas adopted the Insurance Business Transfer Act which is based on the Oklahoma and Rhode Island statutes. The key differences are: the assuming insurer must be licensed in each line of business in each state where the transferring insurer is licensed unless an exception is made for an extraordinary circumstance; specific factors are provided in the Arkansas IBT law that the Commissioner must consider before approving the IBT including the impact on contract holders and reinsurers in addition to policyholders; additional guidance on what would be a material adverse impact; specific guidance for proposed long-term care IBTs and additional requirements for the expert opinion report.

The National Council of Insurance Legislators has promulgated a model IBT law modeled after the Oklahoma IBT statutes, as well as a model CD law. A number of states have adopted CD statutes, whether specific to insurance or based on the state’s general power over corporations. Those states include Arizona, Connecticut, Illinois, Iowa, Michigan, Arkansas, and Pennsylvania. All of these statutes allow for corporate restructures. As discussed in more detail below, Pennsylvania and Illinois have each completed CD transactions.

13 230 RICR 20-45-6.
15 Insurance Business Transfer Act, OKLA. STAT. tit. 36, §§ 1681 et seq.
A. Similarities and Differences between Statutes

Rhode Island’s IBT law permits transfers of property and casualty commercial blocks of business that have been closed for at least 60 months. In contrast, Oklahoma and Arkansas IBT laws permit transfers of both open and closed books of business and are not limited in the line of business that can be transferred. All three states require approval by a court and no material adverse impact on affected policyholders. The approval of the ceding and assuming insurer’s domestic insurance regulator is also required. All states require an expert report that contains an opinion on the likely effects of the transfer plan on policyholders considering whether the security position of policyholders is materially adversely affected by the transfer. All states also require notification to all affected policyholders as well as the opportunity to be heard at a public hearing.

As noted above, several states have also enacted CD laws, rules, and regulations. While differences exist between IBTs and CDs, there are also many similarities between the two mechanisms: they require a regulatory review of the effect on policyholders, they have balance sheet considerations, and they are a way to separate runoff certain books of business from an insurer.

The Illinois’ Domestic Stock Company Division Law20 requires disclosure of the allocation of assets and liabilities among companies. Although not statutorily required, the Illinois Department of Insurance Director has committed to providing an opportunity to comment at a public hearing. The standard in the Illinois statute is that the plan must be approved by the Director unless the following characteristics exist:

1. policyholder/shareholder interest are not protected;
2. each insurer would not be eligible to receive a license in the state;
3. division violates the uniform fraudulent act;
4. division is made for the purpose of hindering, delaying, or defrauding other creditors;
5. any of the companies are insolvent after the division is complete.

The Connecticut CD statute21 creates something legally distinct from a merger, consolidation, dissolution, or formation. The resulting insurers are deemed legal successors to the dividing insurer, and any of the assets or obligations allocated are done as a result of succession and not by direct or indirect transfer. The plan must include among other things (1) the name of the domestic insurer; (2) the resulting insurer(s); (3) proposed corporate by-laws for new insurers; (4) manner for allocating liabilities and reasonable description of policies; (5) other liabilities and capital and surplus to be allocated, including the manner by which each reinsurance contract is allocated; and (6) all other terms and conditions. Connecticut requires approval by the board of directors, stockholders, and other owners before being considered by the Department of Insurance. The plan is then discussed with the Department which will determine whether the liabilities and policies are clearly defined and identifiable and whether the assumptions are conservative based upon actuarial findings. Connecticut law does not require an independent expert or a communication strategy as part of the application, but the Department of Insurance has stated that it will

require certain notifications related to a hearing (e.g., newspaper or print publications). Connecticut does not require notice of hearing however the insurance commissioner may require a hearing if in the public interest. Similar to Illinois law, the insurance commissioner must approve a plan of division unless he or she finds that (1) the interest of any policyholder or interest holder would not be adequately protected or (2) the division constitutes a fraudulent transfer. The division itself must be effectuated within 90 days of the filing.

The Pennsylvania CD statute was enacted in 1990 and is the subject of the NAIC 1997 white paper on Liability Based Restructuring. The statute upon which the transaction discussed in the 1997 white paper is based is not specific to insurance. The law is brief with only four paragraphs—requiring the plan to be submitted in writing, reasonable notice and opportunity for a hearing, investigations and supplemental studies and approval through an order from the Department and subject to judicial review. The associated procedural regulations essentially are those that exist under the states equivalent of the NAIC Insurance Holding Company System Regulatory Act (Model 440).

While the Rhode Island, Oklahoma and Arkansas laws have approval processes that are similar to UK Part VII transfers, there are differences between the three statutes. Rhode Island permits transfers of mature (at least 60 months) closed commercial property and casualty books of business or non-life reinsurance but no other lines of business. Oklahoma does not have similar restrictions and specifically allows property and casualty, life, and health lines of business. Oklahoma and Arkansas do not require the book of business to be closed.

While the CD laws enacted to date all require regulatory review of the effect on policyholders, balance sheet considerations and other operational requirements, the most significant differences that exist in CD laws are not among themselves, but rather in comparison to the IBT statutes. This is because the CD statutes do not require approval by a court or the same level of notification to policyholders. In addition, while CD states reserve the right to hire their own external expert—similar to a Form A (Change in Control), these states may perform their review based upon their own internal experts.

B. Transactions Completed to Date

One of the earliest transactions completed under these types of laws occurred in Pennsylvania in announced that it had approved a transaction that transferred a book of business from one entity to another. This transaction is discussed within Attachment 1, which is the 1997 Liability-Based Restructuring White Paper, and is commonly referred to as “the Brandywine” transaction, but within the 1997 White Paper is discussed within Appendix 1 and relates to Cigna, where more information is available. During the Working Group’s discussions in 2019, the Pennsylvania Insurance Department, which is captured in the following paragraph.

The Brandywine transaction was subject to an insurance department review, which included an actuarial review, a review of the financial information by a consultant and participation by other states that had an interest to understand how the plan would be restructured. There were four actuarial firms that opined on the transaction as well as two opinions from investment banks, one contracted by the insurer and another contracted by the Department. Issues regarding guaranty coverage were not addressed, but it did require Pennsylvania policyholders to be covered by the Pennsylvania fund. Confidentiality was applied to

17 15 PA. CONS. STAT. §§ 361 et seq.
any examination document prepared in the process, actuarial reports, and questions and comments, but insurer responses were made available to the public. The transaction was a large commercial transaction and immaterial to the policyholders, therefore reducing some of the concerns that may have otherwise existed.

In 2011, GTE Re\(^3\) completed a commutation plan in Rhode Island. The plan was approved by the Rhode Island court and the insured was ordered dissolved after all insureds had been paid full value for their policies. The GTE Re Plan was objected to, on a theoretical basis, and the Providence County Superior Court issued a decision\(^4\) on a contract clause issue.

In 2020, the District Court of Oklahoma County approved Providence Washington Insurance Company’s (“PWIC”) IBT plan.\(^7\) The plan transferred all the insurance and reinsurance business underwritten by PWIC, a Rhode Island domestic insurer, to Yosemite Insurance Company. Later in 2020, the Oklahoma Insurance Commissioner issued an order authorizing Sentry Insurance a Mutual Company (“Sentry”), a Wisconsin-based insurer, to submit its IBT Plan to the District Court of Oklahoma County for approval.\(^8\) This IBT transfers a block of reinsurance business underwritten by Sentry to National Legacy Insurance Company, an insurer domiciled in Oklahoma and a subsidiary of Randall & Quilter Investment Holdings Ltd (NLIC). The Sentry transfer was approved by the Court in August of 2021.

Illinois completed a transaction under their CD statute in early 2020. The transaction was a transfer of risks with distinct characteristics into a single insurer within a holding company structure. All the transfers originated and ended within the same holding company. The Illinois Department of Insurance has indicated that it will issue a detailed regulation as experience develops with CD plans proposed and completed under the statute.

Section 4: Impact of IBTs and CDs to Personal Lines

A. Guarantee Association Issues

An important issue for corporate restructuring is the availability of guaranty association coverage in the event of the insolvency of the restructured insurer. In order to uphold the stated declaration that restructuring should not materially adversely affect consumers, guaranty association coverage should not be reduced, eliminated or otherwise changed by the restructuring. Each state guaranty association is a separate entity governed by the laws of that state, and those statutes will determine association coverage. Although most states pattern their laws after the NAIC model law, there could potentially be different results concerning guaranty association coverage depending on where the insured resides. Guaranty association coverage. It is possible that a corporate restructuring could result in the reduction, elimination or change in guaranty association coverage provided to a policyholder in the event of the restructured insurer’s insolvency if steps are not taken to prevent that result. The potential coverage issues are different.

\(^3\) C.A. No. PB 10-3777 (R.I. Super. Apr. 25, 2011)
\(^4\) State of Rhode Island Providence County Superior Court C.A. No. PB 10-3777
for life and health guaranty association coverage and property and casualty guaranty fund coverage. We
address them separately below.

**Transactions Involving Life or Health Insurance**

The Working Group received input from both the National Organization of Life and Health
Insurance Guaranty Associations (“NOLHGA”) and the National Conference of Insurance Guaranty Funds
(“NCIGF”). NOLHGA described how significant the concerns for insurance consumers of personal lines life and
health insurance business is particularly pronounced.

NOLHGA indicated that for there to be guaranty association coverage in the event of a life or
health insurer insolvency, there are three conditions that must be present. Those conditions are:

1. The consumer seeking protection must be an eligible person under the guaranty association
   statute; typically, this is achieved by being a resident of the guaranty association’s state
   at the time of the insurer’s liquidation;

2. The product must be a covered policy; and

3. The failed insurer for which protection is being sought must be a member insurer of the
   guaranty association of the state where the policyholder resides. To be a member insurer,
   the insurer must be licensed in that state, or have been licensed in the state to write the lines
   of business covered by the guaranty association.

In most states, coverage can be provided for an “orphan” policyholder of the insurer when the
coverage is issued but the policyholder has since moved to a state that is not a guaranty association
member. Those policies are covered under the state in which the insolvent insurer’s domestic
state. Orphan policyholders are policyholders who are residents of states where the guaranty association
cannot provide coverage because the insolvent insurer is domiciled. This provision is not a member insurer
due to not being licensed at the time required by the guaranty association act. The orphan policyholder
situation can arise when a policyholder purchases a policy in a state where the issuing company is licensed
(i.e., is a member of the guaranty association) but subsequently moves to a state where the issuing
insurance company was never licensed (i.e., is not a member of the guaranty association). The provision in
the NAIC Life and Health Insurance Guaranty Association Model Act, and the laws of most states, that
provides that orphan policies are covered by the guaranty association in the insolvent insurer's domestic
state is designed to plug the gap in these rare situations. Orphan coverage was not designed to provide
coverage to all policyholders regardless of domicile as might occur if

A key factor when considering a life or health IBT or CD transaction is whether the resulting
insurer in an IBT does not meet the requirements for guarantee association coverage. These issues can be or
will be addressed in legislative and regulatory manners including maintaining a certificate of authority in
each state, so the insurer is a guaranty association member insurer in each state. However, if the
same guaranty associations where the transferring insurer is domiciled or unable to be a member insurer, if
the resulting insurer is a member insurer of the same guaranty associations as the transferring insurer,
guaranty association coverage will be preserved and not changed for all policyholders. (Of course, specific
guaranty association coverage will be determined if when the resulting insurer is placed under an order of
liquidation with a finding of insolvency.) If the resulting insurer is not a member insurer of the same
guaranty associations as the transferring insurer, policyholders may lose guaranty association coverage or
be covered as orphans by the guaranty association in the insurer’s domestic state. Orphan coverage was not
designed to plug the gap in this situation. Shifting the coverage obligation to meet such requirements if the
domestic state guaranty association could impede the ability of a guaranty association coverage being
concentrated in that state.

To address these concerns with respect to complete restructuring of IBT and CD transactions
involving life or health insurance, restructuring statutes (or regulators reviewing proposed restructuring
transactions) should clearly provide that assuming or resulting insurers must be licensed so that
policyholders maintain eligibility for guaranty association coverage from the same guaranty association
that would have provided coverage immediately prior to a restructuring transaction. This means that the
resulting insurer must be licensed in all states where the transferring insurer was licensed or had ever been
licensed with respect to the policies being transferred.

**Transactions Involving Property and Casualty Insurance**

The Working Group received input from the National Conference of Insurance Guaranty Funds
(“NCIGF”) about the concerns for insurance consumers of personal lines property and casualty insurance
business.

One interpretation of the NAIC Property and Casualty Insurance Guaranty Association Model Act (Model # 540)\(^\text{27}\) is that based on the definitions of “Covered Claim,” “Member Insurer,”
“Insolvent Insurer,” and “Assumed Claim Transaction” an orphan policyholder could not be covered by
the state guaranty association.\(^\text{28}\) Consequently, there is a concern that no guaranty association
coverage would be provided if policies are transferred to a nonmember insurer.

Many many property and casualty guaranty fund statutes require that the policy be issued by the now-
insolvent insurer and that it must have been licensed either at the time of issue or when the insured event
occurred. These limitations, however, are designed to avoid coverage being provided when the policy at
issue did not “contribute” to the association, which would not exist in the case of an accessible policy later
transferred to a nonmember insurer. Moreover, the restrictions exist to prevent claims resulting from a
company regulated as a surplus lines or a similar structure to benefit from the protections afforded licensed
business when a licensed company is liquidated.

NCIGF’s position is that where there was guaranty association coverage before the IBT or CD,
state regulators should ensure that there is coverage after the IBT or CD. An IBT or CD should not reduce,
eliminate or in any way impact guaranty association coverage. An CD or IBT should not create,
exand, or in any way impact coverage. NCIGF suggested that possible technical gaps may exist in states
that have adopted the NAIC Property & Casualty Insurance Guaranty Association Model Act.\(^\text{29}\) These gaps
could include the definitions of Covered Claim, Member Insurer, Insolvent Insurer, and the Assumed
Claims Transaction found in Section 5 of the model law.

Fulfilling this intent may likely require property and casualty guaranty association fund statutes be amended in each of the states where the original insurer was a member of a guaranty association before
the transaction becomes final. NCIGF indicated that it had created a subcommittee to address this issue and

oversee a coordinated, national effort to enact the necessary changes in each state. Further discussion of this subcommittee’s work is discussed in the Recommendations section below.

B. Assumption Reinsurance

Existing assumption reinsurance statutes exist to provide policyholder disclosures and rights for rejection of a proposed novation of their policy. These statutes are primarily designed for the benefit of individual policyholder with regard to personal lines coverages, whether for automobile, homeowners, life insurance or long-term care insurance, in situations where the solvency of the insurer might be at risk. There are currently ten states that have enacted the NAIC Assumption Reinsurance Model Act.30

The Assumption Reinsurance Model Act was drafted by state insurance regulators and initially adopted by the NAIC on December 5, 1993. The effect of an assumption reinsurance transaction is to relieve the transferring insurer of all related insurance obligations and to make the assuming insurer directly liable to the policyholder for the transferred risks. Under these statutes, individual policyholders receive a notice of transfer and may reject or accept the transfer. If the policyholder does not respond, the policyholder is deemed to have given implied consent, and the novation of the contract will be affected. When a new agreement replaces an existing agreement, a novation has occurred. There is no judicial involvement under the Assumption Reinsurance Model Act.

Some stakeholders have questioned whether the existence of rights under the Assumption Reinsurance Model Act by implication prohibit an IBT or a CD. The argument is that the existence of the assumption reinsurance statute prohibits other statutory restructuring mechanisms without the policyholders express individual consent. Other stakeholders have suggested that these statutes coexist with restructuring mechanisms since the restructuring statutes are not addressing individual novations of policies. The argument is that the restructuring statutes address transfers of books of business not individual novation of policies and, therefore, are completely separate from assumption reinsurance statutes.

This is not an issue that can be resolved in this white paper. The issue has not yet been addressed by any court nor raised in the proceedings on restructurings. Therefore, while it is raised here for informational purposes, resolution of the issue is left unanswered for now and for the courts to determine in the future.

30 Assumption Reinsurance Model Act NAIC Model #803 (Adopted by Colorado, Georgia, Kansas, Maine, Missouri, Nebraska, North Carolina, Oregon, Rhode Island, and Vermont)
C. Separate Issues in Long-Term Care

Long-tail liabilities are naturally subject to greater reserve uncertainty and may impact the regulator’s willingness to consider the restructuring of certain lines of business. During the Working Group’s discussion, it was noted by a number of regulators that restructuring of certain lines of business, such as long-term care insurance, could be problematic since the specific line of business has presented significant challenges in determining appropriate reserving and capital required to support the business. The Working Group acknowledges that, regardless of whether some state laws would permit it, use of a corporate restructuring mechanism in certain lines, such as long-term care insurance, is likely to be subject to a great deal of opposition and higher capital requirements for the insurers involved.

The nature of long-term care insurance policyholders will make restructuring challenging especially with a transfer to a completely new insurer in a new holding company system. Long-term care insurance policyholders are individuals who may find it much more challenging to assert their rights in a court proceeding than a corporate entity would. This fact, along with the traditional inability of insurers to properly estimate future liabilities in this line of business, makes it a line of business that likely is not appropriate for restructuring mechanisms. This conclusion, however, could be refuted if the appropriate plan addresses these issues and provides benefit to the policyholders.

Section 5: Legal Impacts of IBT and CD Laws

A. How Other Jurisdictions Might Analyze IBT or CD Decisions from Other States

As previously discussed by others, a restructuring mechanism in one state will not provide finality unless the decision is recognized by other jurisdictions. The US Constitution includes the Full Faith and Credit Clause as well as the Privileges and Immunities Clause (also referred to as the doctrine of Comity) in Article IV. These clauses create methods of extending the effect of a restructuring mechanism beyond the state that issued the judgment and giving that state’s judgment effect in all other states in which the insurer does business.

Thus, the Privileges and Immunities Clause or the Full Faith and Credit Clause are two methods stemming from the US Constitution that provide for recognition of court orders from other states. We will briefly touch on both concepts but leave these non-core insurance topics to others to discuss in more depth.

The policyholder challenging the decision must first identify the property of which they are being deprived. Assuming the resulting insurer is sufficiently capitalized, a policyholder who has been reallocated to the resulting insurer, but alleges no additional harm, may have difficulty identifying the property interest of which they have been deprived. The determination on full faith and credit will likely rely upon the issues raised and considered in the Court of the domestic state.

The issue is not likely to be ripe until an insolvency occurs with the assuming insurer. At that point, if the assuming insurer is insolvent and the original insurer is still financially sound, will a court give full

32 The same analysis does not apply to jurisdictions outside the United States and is not addressed in this white paper.
faith and credit to the approval of the IBT or CD? This is an open question that is unlikely to be resolved until the specific factual scenario presents itself to the courts. The fact that this issue exists makes it even more important that only transactions with the greatest chance for success be subject to corporate restructuring process.

Comity is typically understood to be a courtesy provided between jurisdictions, not necessarily as a right but rather out of deference and good will. As such, comity might not require in this context that a state honor the decision of another state. This is an analysis to be conducted by the individual jurisdictions.

B. Impact of UK Part VII Transactions in the US

Although there has been limited experience in the US courts in approving commutations and IBTs, some US courts have had opportunities to review these types of issues because US insurers have been involved with UK-based commutations or transfers. Since the 2000 and 2005 revisions to UK laws, solvent schemes and Part VII transfers have been employed much more frequently in the UK. This has led to more frequent reviews by US courts of the underlying UK transactions. Some of the impact in the US is felt in bankruptcy courts, which often are implicated because US policyholders obtain coverage from UK-based insurers on a regular basis, while others involve non-bankruptcy situations, such as when a policyholder wants to submit a claim for payment but no longer has coverage.

There are several interesting cases that provide some guidance on these issues. Narragansett Electric Co. v. American Home Assurance Co. is one such case. In Narragansett Electric Co., the court reviewed claims by London-based insurer, Equitas, that the plaintiff had sued the wrong insurer on a claim that was alleged to have occurred more than sixty years earlier. Equitas argued that it had not assumed the obligations at issue. As the court summarized, “Equitas’s motion to dismiss raises the question whether this [Part VII] transfer of insurance obligations from Lloyd’s to Equitas is effective and enforceable under U.S. law.” First, the court decided that it was sitting in diversity jurisdiction and that the appropriate substantive law to apply was English. Next, the court discussed a prior District Court case where another Part VII transfer was discussed at length and not recognized as a foreign bankruptcy proceeding. In reaching a conclusion to reject the request for dismissal, the court relied on a letter sent by Equitas to US policyholders notifying them that Equitas was assuming the obligations of the original insurer. The court found that regardless of whether the Part VII had any effect the letter sent by Equitas to US policyholders notifying them that Equitas was assuming the obligations of the original insurer. The court found that regardless of whether the Part VII had any effect the letter sent by Equitas to US policyholders notifying them that Equitas was assuming the obligations of the original insurer. Equitas attempted to argue that the Part VII transfer did not state that it would become effective in the US, rather that it was only effective in certain countries of Europe. Nevertheless, the utility company alleged that it had not relied on the English High

Court Order executing the Part VII transfer, but rather relied on the notice letter it received as the evidence of obligation by the new named insurer.

Air & Liquid System Corp. v. Allianz Insurance Co., dealt with a discovery dispute as to whether a policyholder impacted by a Part VII transfer could later have access to the information that went into a UK’s independent expert’s report. Ultimately, the special master in the District Court allowed discovery to proceed with a deposition of the expert. Allianz Insurance Co. is an example of one way that Part VII transfers can be used to add complication to an insurance coverage dispute, embroiling all involved in later litigation. Allianz Insurance Co. also shows how the approval of such a transfer, even though well vetted originally, can later come under scrutiny in unintended or unforeseen locations.

Allianz Insurance Co. concerned General Star, which wrote policies for excess coverage outside the US for only three years, 1998–2000, and then was put into runoff and ceased writing new policies. By 2010, it had substantially wound down its business and decided to transfer its policies to a new insurer via a Part VII transfer. Both General Star (the transferor) and the transferee taking over the policies shared an ultimate parent company—Berkshire Hathaway. At issue here was whether the expert who opined on the Part VII transfer had properly included one particular US-based insured, Howden North America (“Howden”), and all three policies it had purchased from General Star. That insurance contract had been for excess coverage, and Howden had informed General Star of 13,500 potential asbestos related claims that were likely to exceed the initial layers of insurance, making it likely that the General Star excess policy would be required to pay out claims. The real issue in Allianz Insurance Co. seemed to be that the post-Part VII insurer was put into voluntary liquidation days after the Part VII transfer concluded, leading to questions about whether and how the independent expert had valued Howden’s potential asbestos claims.

In re Board of Directors of Hopewell International Insurance Ltd. involved a New York bankruptcy judge analyzed a solvent scheme of arrangement that occurred in Bermuda, and applied Bermuda law, rather than the requested Minnesota law. The court determined that, given the location of the petitioner’s assets, Respondents had failed to object to the solvent scheme as proposed when they had been provided notice, and that petitioner had been subjected to a foreign proceeding, it had jurisdiction. As such, the court enjoined the respondent from taking action against petitioner based on the underlying action. The court in Hopewell also recognized the Bermuda solvent scheme as one qualifying as a foreign proceeding under US Bankruptcy Code.

Section 6: Recommendations

A. Financial Standards Developed by Subgroup

38 Id. at *12. This interrelated nature is not unusual and is referred to as an intra-company transaction.
40 Written by then the Chief United States bankruptcy judge in the Southern District of New York Tina Brozman, this decision detailed relevant history behind the Bermuda schemes of arrangement, including the different methods available to companies. One arrangement involved a cut-off scheme, developed in 1995, in which companies have no more than five years to submit additional claims prior to a bar date. This scheme greatly reduced the time for a run-off to wind down its business.
41 Citing to 11 U.S.C. § 101(23) (2012). The court applied a standard that “a foreign proceeding is a foreign judicial or administrative process whose end is to liquidate the foreign estate, adjust its debts or effectuate its reorganization.” Id. at 49 (internal quotations omitted).
As reflected in this whitepaper, these restructuring mechanisms depend considerably upon the specific plan being proposed. Currently, each state with relevant statutes is being presented with plans for evaluation with no standard set of criteria under which to judge the financial underpinnings of the plan. The Working Group believes that trust in these mechanisms and protection of the policyholders who will be impacted by them, demands a standard set of financial principles under which to judge the transaction. As such, the Working Group created a subgroup to specifically address these financial issues.

The Restructuring Mechanism Subgroup (“Subgroup”) has been charged with the following initial work related to this White Paper:

Develop best practices to be used in considering the approval of proposed restructuring transactions, including, among other things, the expected level of reserves and capital expected after the transfer along with the adequacy of long-term liquidity needs. Also develop best practices to be used in monitoring the companies after the transaction is completed. Once completed, recommend to the Financial Regulation Standards and Accreditation (F) Committee for its consideration. Complete by the 2021 Summer National Meeting.42

Members of the Subgroup have studied and acknowledge that UK Part VII procedures set forth robust processes and that setting similar requirements should be applied to IBT and CDs. As of the date of this paper, the charge related to best practices has not been completed. The Subgroup will continue its work with the goal of developing financial best practices. Those practices will be exposed for comment and discussion prior to referral to other groups.

B. Guaranty Association Issues

As discussed above, when these restructuring mechanisms are applied to personal lines serious issues arise over the continuation of guaranty association coverage. A number of states—Connecticut, California, and Oklahoma—have enacted statutory solutions to these issues. In addition, NCIGF has provided proposed statutory language. The Working Group would suggest that these issues, and the potential solutions, be referred to the Receivership Task Force for consideration to include language in the Guaranty Association Model Act.

On the life and health side, as noted above, restructuring statutes (or regulators reviewing proposed restructuring transactions) should clearly provide that assuming or resulting insurers must be licensed so that policyholders maintain eligibility for life and health guaranty association coverage from the same guaranty association that would have provided coverage immediately prior to a restructuring transaction. This means that the resulting insurer must be licensed in all states where the transferring insurer was licensed or had ever been licensed with respect to the policies being transferred.

On the property and casualty side, amendments to the guaranty fund statutes likely will be necessary. A number of states—California, Illinois, and Oklahoma—have enacted statutory solutions to the property and casualty guaranty association issues similar to what NCIGF has suggested to the working group. In addition, NCIGF has provided proposed statutory language for other states to consider. The Working Group would suggest that these issues, and the potential solutions, be referred to the Receivership

42 Charges were adopted by the Financial Condition (E) Committee Oct. 27, 2020 (see NAIC Fall National Meeting Minutes for the Financial Condition (E) Committee-Attachment Two).
and Insolvency Task Force for consideration. Specifically, the Working Group recommends that the language proposed by NCIGF be included in the NAIC Property and Casualty Insurance Guaranty Association Model Act. Regulators, guaranty funds and other appropriate industry stakeholders should work cooperatively to implement this statutory remedy with all deliberate speed.

Inclusion in the model, of course, only provides a roadmap for a state. The Working Group, therefore, suggests that, once appropriate language has been drafted, a serious effort be undertaken to obtain changes to the statutes in the various states to address this issue. Until that is accomplished, regulators should very carefully consider how plans presented address the property and casualty guaranty association issues to assure that consumers are not harmed by the transaction.

C. Statutory Minimums

During the Working Group hearing, stakeholders made a number of suggestions as to provisions which should be required to be included in IBT and CD statutes. Those include:

1. Requirement of court approval must be required for all restructuring mechanisms. Currently the IBT statutes (except for Vermont) require court approval, but the CD statutes generally do not.

2. Requirement of the use of an independent expert to assist the state in both IBT and CD transactions, even though none of the states require this independent expert assistance for a CD.

3. Requirement of a notice to stakeholders, a public hearing, robust regulatory process, and an opportunity to submit written comments are necessary for all policyholders, reinsurers, and guaranty associations.

None of the restructuring mechanism are based on an NAIC model. While the Rhode Island, Oklahoma and Arkansas statutes are similar and are based on the Part VII processes in the UK, all CD processes are different and drafted by the legislatures of the states which enacted the statutes. Each of these recommendations is designed to address possible impairment of the financial position of the policyholders of the companies involved in the IBT and CD. As some commenters indicated, each of these suggestions would be beneficial in some transaction. Other transactions, however, may not need all of these provisions. For example, an intra holding company transaction may not need full faith and credit. While independent experts can be of value, the mere fact that someone is employed by an insurance department does not mean that their skill set is not sufficient for certain transactions. Depending upon the transaction, department staff with a deep understanding of the insurer might provide more protection for consumers than a newly hired individual without a history with the insurer. Thus far, none of the transactions have been undertaken without a robust regulatory process; however, there would be concern from other regulators if this quality of regulatory process was not in place.

D. Impact of Licensing Statutes

Insurers formed for the purpose of effectuating restructuring mechanisms may, in the right transactions, provide value to consumers in the efficient management of runoff liabilities. However, these newly formed companies have difficulty getting licensed in the various states either because of
“seasoning” issues or because they are not writing ongoing business so the state may be hesitant to grant a license. Lack of licensure can provide a lack of regulatory control which can lead to actions which harm consumers. The Working Group, therefore, recommends that the appropriate committee look at licensing standards consider whether any changes should be made to the licensure process for runoff companies resulting from restructuring transactions of runoff blocks. A streamlined process that still ensures appropriate regulatory oversight (and any licensure necessary to preserve guaranty association coverage) may wish to adopt be appropriate in limited circumstances.

Commented [A5]: If possible, we suggest that the appropriate committee be identified here.

Re: NAIC Restructuring Mechanisms (E) Working Group
Workers Compensation Residual Market Considerations in Restructuring Transactions

Dear Superintendent Dwyer and Commissioner Mulready:

On behalf of the NWCRAs Board of Directors, we reiterate the concerns and comments included in my prior letter dated July 14, 2021 (copy attached), which do not yet appear to be addressed in the exposure draft of the Working Group’s white paper. However, we also recognize that several NWCRAs representatives have been invited to participate in the December 6 meeting of the Working Group and hope our concerns and comments on the draft white paper will be discussed for consideration at that meeting. The NWCRAs Board concern on avoiding restructuring transactions creating uncertainty with regard to NWCRAs member company obligations. We appreciate the invitation and opportunity to discuss those concerns and address any questions the working Group might have on these issues.

For your information, the individuals planning to participate as NWCRAs representatives are Gerald Chiddick (NWCRAs Board Chair), Rowe Snider (Board counsel), and Cliff Merritt and Michael Kahlowsky (NCCI as NWCRAs Administrator). We look forward to the discussion.

Very truly yours,

Gerald Chiddick
NWCRAs Board Chair

Re:  NAIC Restructuring Mechanisms (E) Working Group  
Workers Compensation Residual Market Considerations in Restructuring Transactions

Dear Superintendent Dwyer and Commissioner Mulready:

I am writing to you in my capacity as Chair of the Board of Directors (the “Board”) of the National Workers Compensation Reinsurance Association NFP (“NWCRA”), which is an industry organization that manages the reinsurance mechanism presently supporting the workers compensation residual market in 23 states. That residual market reinsurance mechanism was affected by the initial Insurance Business Transfer (“IBT”) transaction completed last October in Oklahoma. The transferor in the Oklahoma IBT, Providence Washington Insurance Company (“PWIC”), was a participant in the residual market reinsurance mechanism and its workers compensation policies were transferred to Yosemite Insurance Company (“Yosemite”). As explained below, the Board understands that the transaction included the transfer of PWIC’s residual market reinsurance obligations to Yosemite. Further, based upon its review of this initial IBT transaction, the NWCRA Board has developed some suggestions related to residual market obligations which we respectfully submit for the Working Group’s consideration. The Board believes that these suggestions, if included in the Working Group’s forthcoming White Paper, could improve how workers compensation residual market obligations are analyzed and treated in the review and approval process for IBTs and Company Divisions (together, “Restructuring Transactions”).\(^1\) The same concepts applicable to the NWCRA states may also be applicable to the workers compensation residual market mechanisms in other states, particularly those using a similar reinsurance mechanism to facilitate the residual market.

\(^1\) While this letter primarily addresses IBT transactions in reaction to the Oklahoma IBT, the Board believes that the concepts and suggestions discussed in this letter are also applicable to company divisions under statutes like those enacted in Illinois and Connecticut, for example.
Background Discussion

Before turning to the Oklahoma IBT and our suggestions, some background regarding the NWCRA’s workers compensation residual market may be useful context for the Working Group.

The Workers Compensation Residual Market in NWCRA states.

Given the mandatory nature of workers compensation insurance for most employers in almost all states, most states provide for a "residual market" for difficult-to-place employers so they may comply with the law by obtaining workers compensation insurance. In the NWCRA states, the workers compensation residual market is implemented through a statutorily-authorized Workers Compensation Insurance Plan ("WCIP" or "Plan"). The Plan is a filed program established and maintained by the National Council on Compensation Insurance ("NCCI") and approved by each state’s insurance regulator. The Plan provides a process through which eligible employers who are unable to secure such coverage through ordinary means, i.e., in the voluntary market, may obtain workers compensation insurance. The Plan is also known as the "involuntary market" or the "assigned risk market." (The latter term applies because involuntary market employers are assigned to a specific insurer, which issues them a workers compensation policy.) In general, all admitted workers compensation insurers in a state must participate in that state’s Plan, either through membership in the NWCRA and its reinsurance mechanism or, in states where permitted, as Direct Assignment Carriers.  

National Workers Compensation Reinsurance Pooling Mechanism

The National Workers Compensation Reinsurance Pooling Mechanism ("NWCRP" or "residual market reinsurance mechanism") is a contractual quota share reinsurance mechanism that affords participating workers compensation insurers a means for complying with state Plan requirements by the participating insurer's sharing in the operating results of certain involuntary market policies written pursuant to state insurance Plans. Through the NWCRP, participating insurers reinsure certain servicing carriers, who issue the involuntary market policies to eligible employers who apply through the Plan. By electing to participate in this residual market reinsurance mechanism, participating voluntary market insurers in a state each share an equitable proportion of the residual market results in the state with all other participants based upon each insurer’s share of the state’s calendar year direct written premium, avoiding random and variable burden of each insurer assuming and absorbing the results of individual assigned risk policies.

The NWCRP, as a quota share reinsurance mechanism, has been in existence since 1970. As noted above, the participants’ quota shares are calculated on a policy year basis in each NWCRA state. Consequently, the NWCRP is comprised of approximately 1500 individual state residual market policy year quota share reinsurance calculations, each of which is adjusted quarterly. Overall operating results, including remittance of involuntary market premium minus servicing carrier allowances and indemnity owed reinsured servicing carriers for paid losses, are netted quarterly. NCCI, as administrator of the NWCRP, calculates statements of net account balances.

---

2 Not all NWCRA states allow Plan participants to opt to be a Direct Assignment Carrier, rather than participating in the residual market reinsurance mechanism. This letter does not address the potential impact Restructuring Transactions may have, if any, on Direct Assignment Carriers.

3 While the NWCRA presently reinsures the residual market in 23 states, that number has varied over time. There are presently open reinsured policy years in a total of 41 states.
of the participating companies and servicing carriers and settles the cash flow of such accounts quarterly, with participating insurers retaining liability for unearned premium and unpaid loss reserves. At year-end 2020, the total amount of reinsured residual market liabilities within the NWCRP exceeds $4 Billion.

It is important for present purposes to emphasize that the NWCRP is a pass-through reinsurance mechanism, so in addition to members’ proportional assumption of the reinsurance liabilities, the related assets, intended to cover the reinsurance obligations, are also almost entirely distributed to the participating members. Aside from a relatively small “working fund” advanced by participating companies to provide liquidity and cover expenses between quarterly settlements, the NWCRP reinsurance mechanism distributes proportionately all assets to participating companies. Accordingly, any restructuring transaction involving an NWCRP participating company and transferring or allocating policies written in a NWCRA state will need to evaluate not only any affected residual market reinsurance obligations, but should not separate those obligations from the associated assets held by the participating company.

*The National Workers Compensation Reinsurance Association NFP*

Insurance companies participate in the NWCRP residual market reinsurance mechanism as members of the National Workers Compensation Reinsurance Association NFP (“NWCRA”), which is organized as a not-for-profit corporation. The NWCRA is responsible for all policymaking and oversight functions for the NWCRP residual market reinsurance mechanism. The NWCRA operates that mechanism pursuant to the NWCRA Bylaws under the direction of the NWCRA’s Board of Directors and consistent with quota share reinsurance agreements between the servicing carrier and the participating members. The NWCRA contracts with NCCI for operational and managerial support, as well as for administration of the residual market reinsurance mechanism (the “NWCRP Administrator”).

*The NWCRA and the Initial Oklahoma IBT*

At the time the initial Oklahoma IBT transaction was approved, PWIC was a member of the NWCRA having residual market obligations in more than twenty states and totaling approximately $2.3 Million. These obligations include unpaid loss reserves and thus present exposure capable of adverse development.

Based upon non-sealed, available court records and a limited investigation by Board’s counsel, the Board believes that PWIC’s residual market obligations were not specifically analyzed in the review of the transaction. There was a suggestion in at least one public discussion of the transaction that these residual market obligations were considered not to be material to the analysis. The Board, of course, recognizes that it has limited insight into the review process and there are sealed court filings, so there may be relevant information and aspects of the analysis of which we are not aware.

The Board was unable to confirm that NCCI, in its capacity as NWCRP Administrator, received notice of the proposed IBT. Nor was the NWCRP Administrator contacted to verify PWIC’s residual market obligations or their amount. The NWCRP Administrator did receive a copy of the October 15, 2020, Judgment and Order of Approval (the “Order”) implementing the IBT. The Order, however, contains no express reference to or direction regarding PWIC’s residual market

92319806v.7
obligations, which PWIC had assumed as a result of the “subject business” that was being transferred to Yosemite in the IBT.

Given our understanding that PWIC’s entire book of workers compensation policies were included in the “subject business” being transferred to Yosemite, the NWCRP Administrator concluded that the intention of the IBT was that all of PWIC’s residual market reinsurance obligations were also transferred to Yosemite. This conclusion seems further supported by the language in paragraph 46 of the Order, which states as a conclusion of law that Yosemite will be treated as the “original insurer” from inception of the transferred PWIC policies for not only with regard to “contractual rights, obligations, and liabilities, but also to seamless application of regulatory laws applicable to the Subject Business…” as if Yosemite has issued the transferred policies initially. Nowhere in the Order was transfer of these residual market obligations expressly addressed. Because Yosemite was already a member of the NWCRA and had executed the appropriate membership documents, NCCI could readily transfer PWIC’s outstanding residual market obligations to Yosemite in the NWCRP records. At this point, no NWCRP operational issues have arisen from the Oklahoma IBT, but we note that it was an intra-group transfer, which may have decreased the chances of any operational issue arising. If the IBT had transferred residual market obligations to a non-affiliated insurer without being explicitly addressed, operational issues with billing and payment of quarterly settlement balances would have been more likely to arise.

Suggestions for consideration of Workers Compensation Residual Market Obligations in the Review and Approval of proposed Restructuring Transactions.

The NWCRA Board, as part of its managerial responsibilities, followed and has discussed the initial Oklahoma IBT transaction, given it involved PWIC as a member company with residual market obligations. Further, aware of the increasing number of states that have enacted or may enact statutes authorizing Restructuring Transactions, the Board has consulted with its counsel and developed some suggestions related to the NWCRA and the residual market for the Working Group’s consideration in conjunction with the White Paper it is drafting. We respectfully suggest that these suggestions may be appropriate for the Working Group to incorporate in some way in the White Paper.

1. Identify and verify any Residual Market Reinsurance Obligations affected by a proposed Restructuring Transaction.

We suggest that when a regulator is reviewing a proposed Restructuring Transaction involving workers compensation policies, the regulator should be certain that the review process has specifically identified what residual market obligations may be affected by the Restructuring Transaction. The existence of such obligations may need to be verified, which, in the case of NWCRA states, an appropriate representative of the regulator could contact the NWCRP Administrator for such verification. Almost all insurers that have written workers compensation insurance in one of the NWCRA states at any time since 1970 will have incurred residual market reinsurance obligations for various policy years. In the first instance, the applicant insurer should be able to provide information about the existence of any such residual market obligations and whether those obligations are potentially affected by the proposed Restructuring Transaction. If there is any doubt or uncertainty about these obligations or what states and policy years may be affected, it may be prudent for the reviewing regulator (or his/her appropriate representative) to
contact the NWCRA Administrator to verify the nature and extent of the residual market obligations that may be affected.

2. Where an applicant’s Residual Market Obligations are affected, verify that those Residual Market Obligations are accurately stated in the applicant’s financial statements and in the application documents.

Given the nature of the NWCRP’s quota share reinsurance mechanism, each NWCRA member participating insurer has individually assumed its proportionate share of the residual market reinsurance obligations as its own liability. NCCI’s policies and procedures, as NWCRP Administrator, provide all NWCRA member insurers with sufficient information for each member insurer to appropriately record the member’s share of the residual market reinsurance obligations on its financial statements. That being said, the NWCRA Board has no knowledge of each member insurer’s actual practices in accounting for its participation in the NWCRP residual market reinsurance mechanism. Accordingly, it may be prudent to have the reviewing regulator (or his/her appropriately credentialed representative) contact the NWCRP Administrator to verify that the residual market reinsurance obligations affected by the transaction are accurately stated as they are considered in the review process.

3. Ensure that both Residual Market Obligations and associated assets are considered as part of the evaluation process and are appropriately transferred or allocated in Restructuring Transactions.

As noted above, in the NWCRP residual market reinsurance mechanism, both reinsurance obligations and associated assets are distributed to participating member insurers. If a proposed Restructuring Transaction affects residual market reinsurance obligations, the reviewing regulator should make certain that both residual market reinsurance obligations and appropriate related assets are taken into consideration in the evaluation process. Each NWCRA member insurer has not only residual market reinsurance obligations, but also holds related assets (basically, a share of residual market insurance premiums) distributed to the member insurer at approximately the same time the reinsurance obligations were originally assumed. Accordingly, appropriate consideration should be given to the allocation/transfer of both the obligations and related assets in the effectuation of any Restructuring Transaction.

4. In approving any Restructuring Transaction affecting the Residual Market Reinsurance Obligations, the approval orders or judgments should provide clear and specific guidance regarding the disposition of the affected residual market obligations.

Clarity and certainty in the administration of residual market mechanisms benefits all stakeholders. Given the nature of Restructuring Transactions, the NWCRP Board understands that, generally, outstanding residual market reinsurance obligations would be transferred or allocated in a fashion that follows responsibility for the voluntary market policies that generated the direct written premium on the basis of which those residual market reinsurance obligations originally arose as quota share obligations. As noted above, based upon the IBT transferring all PWIC’s workers compensation policies and, further, the Order “deeming” Yosemite to have been the original insurer of the transferred policies for regulatory purposes, PWIC’s residual market obligations have been transferred to Yosemite by the IBT. An explicit direction to make this transfer would have removed any uncertainty for all stakeholders. Additional direction and more
specific communications may be required if some other result were intended in other Restructuring Transactions, or if only a portion of an applicant's workers compensation book is being transferred or allocated to the transferee insurer while other blocks of workers compensation business remain with the applicant transferor insurer. To make the point in stark practical terms, NCCI, as NWCRA Administrator of the NWCRP reinsurance mechanism, needs to know with certainty the insurer to whom it sends quarterly reports and from whom it will collect reinsurance obligations when a net amount is due and owing to the residual market reinsurance mechanism.

Conclusion

The Board appreciates the Working Group’s consideration of our suggestions and hopes these prove helpful. Should you have any questions or wish to discuss any of the suggestions, please feel free to contact me (gerald.chiddick@zurichna.com) or Cliff Merritt (cliff_merritt@ncci.com) and/or counsel (rsnider@lockelord.com).

Very truly yours,

Gerald Chiddick

The Risk-Focused Surveillance (E) Working Group of the Financial Condition (E) Committee met Nov. 9, 2021. The following Working Group members participated: Justin Schrader, Chair (NE); Amy Malm, Vice Chair (WI); Blase Abreo and Sheila Travis (AL); Susan Bernard (CA); William Arfanis and Kathy Belfi (CT); Carolyn Morgan and Virginia Christy (FL); Daniel Mathis (IA); Cindy Andersen and Eric Moser (IL); Ray Eft (IN); Stewart Guerin (LA); Dmitriy Valekha (MD); Vanessa Sullivan (ME); Judy Weaver (MI); Debbie Doggett (MO); Jackie Obusek and monique smith (NC); Patricia Gosselin (NH); Mark McLeod (NY); Dwight Radel and Tracy Snow (OH); Eli Snowbarger (OK); Melissa Greiner and Kimberly Rankin (PA); Jack Broccoli and John Tudino (RI); Johanna Nickelson (SD); Jake Garn (UT); Greg Chew, David Smith, and Doug Stolte (VA); Dan Petterson (VT); and John Jacobson (WA).

1. Discussed Comments Received on the Exposure of Affiliated Services Guidance

Mr. Schrader stated that the first agenda item for the call is to discuss comments received during the exposure of proposed revisions to the NAIC’s Financial Analysis Handbook (Analysis Handbook) and Financial Condition Examiners Handbook (Exam Handbook) to enhance guidance related to the review of affiliated service agreements. This issue was first brought to the Working Group based on discussions held during a meeting of the Chief Financial Regulator Forum in November 2020. During that meeting, the Forum discussed the growing prevalence of market-based expense allocations in affiliated service agreements and noted a need for some additional guidance or best practices in reviewing these agreements. Because it is important to ensure consistency and communication across the analysis and examination functions in reviewing and monitoring the impact of affiliated service agreements, the issue was referred to the Working Group, as opposed to being sent to the individual handbook groups.

Mr. Schrader stated that the referral provided some detail on existing guidance included in the Analysis Handbook on this topic. Such guidance already states, “compensation bases other than actual cost should be closely evaluated” and “insurers should not use related-party transactions as a market for transferring profits of the insurance company to an affiliate or related party.” However, the referral indicates that additional guidance, including best practices or illustrations to help analysts apply these standards, could be beneficial. In addition, the referral states that the Exam Handbook does not currently include any guidance on reviewing market-based expense allocations and only provides general guidance on reviewing affiliated service agreements.

Mr. Schrader stated that the referral was received by the Working Group earlier this year, and several members volunteered to develop some initial proposed guidance for the Working Group to consider. Volunteer states participating on the project include Connecticut, Idaho, Maine, North Carolina, Pennsylvania, Virginia, and Wisconsin. After being formed, the volunteer group met multiple times over a period of months to discuss the issues and develop proposed Analysis and Exam Handbook revisions for consideration, which were subsequently released for a 60-day public comment period that ended Oct. 29.

Ms. Malm provided an overview of the proposed revisions to both the Analysis Handbook and the Exam Handbook to enhance guidance related to the regulatory review of affiliated service agreements. Many of the changes to the Analysis Handbook are included in the Form D review procedures and related analyst reference guide. Ms. Malm stated that several of the changes were proposed to incorporate recent amendments to the Insurance Holding Company System Regulatory Act (#440) that were adopted by the NAIC in August 2021. Other changes were proposed to place greater emphasis on fair and reasonable considerations in reviewing affiliated services agreements, particularly those whose compensation is market-based. Changes to other sections of the Analysis Handbook include enhancements to ongoing operational risk review to monitor ongoing impacts of affiliated services and recommended discussion of affiliated service agreements in exam planning meetings. For the Exam Handbook, changes are proposed to three sections of guidance. General background information on affiliated services transactions is proposed for inclusion in the narrative guidance; revisions to possible risks, controls, and test procedures to be performed related to affiliated service agreements are included in the Related Party Exam Repository; and a discussion of affiliated service agreements was added to Exhibit D – Planning Meeting with the Financial Analyst.

Mr. Schrader stated that comment letters were received during the exposure period from the Hawaii Insurance Division, the Ohio Department of Insurance, the Medicaid Health Plans of America (MHPA), the Association for Behavioral Health and Wellness (ABHW), and a consolidated group of various other interested parties.
Mr. Bruggeman provided an overview of the Ohio comments on maintaining the importance of the Form D review and approval process by being careful not to discount that approval and constantly reevaluate it during ongoing examination activities. Instead, the focus of the exam should be in verifying that the services are following the approved terms and conditions and operating as intended. Mr. Bruggeman also discussed recommendations related to increased focus on market-based agreements and removing or not requiring language regarding a notice to the insurer that the agreement is subject to ongoing verification.

Keith Bell (Travelers) provided an overview of the comments submitted by a joint group of interested parties. He stated that any review of an approved service agreement after the fact should be limited to those agreements that are material and have the potential to result in a solvency or compliance concern. Such a review should be focused on whether the profit included in a market-based agreement was negotiated at arms-length, and he stated that companies often conduct detailed transfer pricing analysis before finalizing such transactions, which state insurance regulators may be able to utilize and leverage. In addition, any subsequent review conducted by the department should be initiated by and coordinated with the assigned financial analyst. Mr. Bell also stated that another comment in the letter was focused on clarifying language in the Exam Handbook regarding related party versus affiliate in referring to transactions and agreements. Finally, he encouraged the Working Group to allow interested parties to assist in any ongoing redrafting efforts.

Joe Zolecki (Blue Cross Blue Shield Association—BCBSA) thanked the Working Group for providing a 60-day exposure period at the request of interested parties to allow more time to review and accumulate comments. He stated that the Form D review guidance is viewed by the industry as a significant issue. As such, he asked the Working Group to defer adoption of any updated guidance until after the issues raised in the comment letter can be thoroughly discussed and addressed, and he requested that a collaborative drafting group of state insurance regulators and interested parties be formed to work on the project.

Ms. Weaver stated that limiting a review of affiliated party agreements to those that are material could be problematic, as subsequent agreements could be based on the terms of the initial, non-material agreement. Mr. McLeod asked the interested parties for their definition of material when it comes to affiliated services agreements. Mr. Bell stated that materiality considerations for affiliated service agreements should focus on the dollar impact of the services rendered under the agreement. He stated that with that in mind, existing definitions for materiality in NAIC guidance can be utilized to make that determination. Mr. Zolecki added that the financial analysis process has become much more risk-focused in nature in recent years, which should allow the analyst to direct any substantive review of affiliated service agreements on an ongoing basis.

Ms. Belfi stated that limiting the ongoing review of affiliated service agreements based upon materiality can become a slippery slope, as there is a lot of variation from one agreement to another. As such, state insurance regulators should be able to make their own determinations about which agreements are subject to ongoing review. Ms. Belfi also stated that the goal of developing additional guidance in this area is to promote more uniformity in the review and approval process across states, which would be beneficial to the industry. Therefore, if the industry can contribute to this process by presenting a methodology for evaluating the fairness and reasonableness of contract terms that is used consistently across the industry, it would be very valuable.

Mr. Schrader stated his agreement with the goal of driving more uniformity and consistency in state review, approval, and ongoing monitoring of affiliated service agreements, as they often use similar terms across states. He also stated his concerns with a strict materiality threshold that limits regulatory review options and his preference for listing materiality as a consideration. Mr. Bell stated that any materiality considerations applied to affiliated service agreements should be both qualitative and quantitative in nature to allow adequate flexibility.

Mr. Stolte stated that affiliated service agreements incorporating market-based compensation are generally not very transparent and are difficult to review and approve. This is often because rates are based on public sources of information on third-party rates and profits that may not be relevant to the services being rendered by the affiliate. In addition, it can be very difficult to unwind or revoke an agreement after it has been approved by the department, even if concerns are noted in an examination. Therefore, states should take care to ensure that the initial approval verifies that terms are fair and reasonable and are not functioning as an unapproved dividend to pull profits out of the insurer.

Mr. Schrader stated that based on the comments received and discussions held, the proposed guidance could benefit from additional clarifications. He stated his preference for asking the existing drafting group to work with volunteers from the interested parties to develop clarifications using the current draft as a starting point. Ms. Malm stated her agreement with this proposal. Ms. Weaver added her agreement with the proposal, and she recommended that the drafting group also research the legal process and authority across states to revoke regulatory approval of a Form D filing. Mr. Schrader stated his agreement.
with this recommendation, and he asked NAIC staff to work with the drafting group and interested party volunteers to schedule a call to move forward on this project in early 2022.

2. **Adopted Updated Salary Ranges and Rates**

Mr. Schrader said the second item on the agenda is to consider adoption of updated salary ranges for analysts and examiners and legacy per diem rates for examiners. This task is the responsibility of the Working Group based on its charge to “[c]ontinually maintain and update standardized job descriptions/requirements and salary range recommendations for common solvency monitoring positions to assist insurance departments in attracting and maintaining suitable staff.”

Mr. Schrader stated that the recommended salary ranges for analysts and examiners were first added to NAIC handbooks in 2020 based on the research and recommendations of the Working Group. At that time, the Working Group committed to reviewing and updating the ranges as needed, with a minimum review period of every other year. In addition, legacy per diem examiner rates continue to be published in the Exam Handbook, which require annual review and updates.

Mr. Schrader stated that NAIC staff were asked to utilize existing industry resources to review general changes in salary rates over the last two years, as well as changes in the Consumer Price Index over the last year, to recommend updates to both the salary ranges and legacy per diem rates in the handbooks.

Bailey Henning (NAIC) presented the results of NAIC staff research in this area. NAIC staff obtained and reviewed the Robert Half Salary Guides for 2019–2021, which showed modest annual increases from 2019 to 2020 (2–4%), and minimal increases from 2020 to 2021 (1% or less). The total change for the period ranged from 4–8% depending on position and seniority. To recognize this variation in salary increases over the past two years, NAIC staff recommended adjusting the low end of the analyst/examiner salary ranges by 3% and the high end of the salary ranges by 6%.

Ms. Henning also summarized the work performed to recommend updates to the legacy per diem rate in the Exam Handbook. Based upon the current Consumer Price Index (CPI) data available (July 2020 – July 2021), the estimated annual change in the CPI was approximately 5.37%. However, economic experts have suggested that the current level of inflation, which is a key factor in the CPI, is primarily driven by temporary supply chain disruptions due to the ongoing impact of the COVID-19 pandemic and related economic conditions. As such, NAIC staff recommended a slightly lower increase of 4.5% to base per diem salary rates in all position classifications.

Mr. Eft made a motion, seconded by Ms. Bernard, to adopt the proposed salary ranges and per diem rates (Attachment Eight-A). The motion passed unanimously.

3. **Discussed Referral Received from Chief Financial Regulator Forum**

Mr. Schrader stated that the third agenda item is to discuss a referral that the Working Group recently received from the Chief Financial Regulator Forum resulting from discussions held in August. On that call, financial regulators discussed the need to update the standardized job descriptions for analyst and examiner positions maintained by the Working Group. The referral recommends that the job descriptions be updated to incorporate additional information on relevant educational backgrounds, as well as additional duties associated with new areas of financial regulation.

Mr. Schrader suggested the formation of a volunteer drafting group to review and propose updates to the job descriptions for Working Group consideration. Ms. Belfi and Ms. Rankin both offered their support for the recommendation, and they discussed the need to keep the job descriptions up to date to assist states in attracting and maintaining qualified staff. Mr. Schrader encouraged those states interested in volunteering for the project to contact NAIC staff.

4. **Discussed Other Matters**

Mr. Schrader stated that the Working Group has continued to oversee the NAIC’s Peer Review Project in 2021 by holding two virtual sessions in light of the ongoing pandemic. Twelve states participated in a virtual session for financial analysts in May, with six states participating in a virtual session for financial examiners in October. For 2022, the Working Group is hoping that in-person sessions can be held during the second half of the year. However, the Working Group is planning to schedule another virtual analysis session for January or February 2022 to take advantage of reduced workloads for financial analysts during this time of year.
Ms. Greiner asked whether another Own Risk and Solvency Assessment (ORSA) peer review session would be scheduled for 2022. Mr. Schrader stated that the Working Group is hoping to schedule another ORSA session in 2022, and those states previously scheduled to participate in the 2020 session that was cancelled would be given priority treatment for registration.

Having no further business, the Risk-Focused Surveillance (E) Working Group adjourned.
MEMORANDUM

TO: Risk-Focused Surveillance (E) Working Group
FROM: NAIC Staff
DATE: November 9, 2021
RE: Recommended Increases to Financial Analyst and Examiner Salary Range Guidelines and Financial Examiner Per Diem Rates

The Risk-Focused Surveillance (E) Working Group is charged with maintaining and updating salary range guidelines for financial analysts and financial examiners published in the Financial Analysis Handbook and Financial Condition Examiners Handbook, respectively. The Working Group expects to consider updates to the salary ranges every two years, with the next salary survey to be conducted during 2023 and resulting recommendations to be considered for inclusion in the 2024 Handbooks. Additionally, as several states currently base examiner compensation on the salary and per diem guidelines contained in Section 1 – II (D) of the Financial Condition Examiners Handbook the Working Group will continue to ensure those rates are updated. The Working Group expects to update per diem rates annually. This memo outlines the recommended increases to the salary ranges and per diem rates, along with the methodology utilized to reach these recommendations.

Salary Range Guidelines
In 2019 the Working Group adopted salary range guidelines that were developed in recognition of the importance of compensation, particularly as it relates to the ability of an Insurance Department to attract and retain well-qualified employees. These guidelines, which were first published in the 2020 editions of the Financial Analysis Handbook and Financial Condition Examiners Handbook, were based on an in-depth salary survey that collected and analyzed salary data for state insurance regulators, banking regulators, and other related position in the financial services sector (e.g., internal and external auditors, etc.). The Working Group reviewed a high-level analysis of salary data prepared by NAIC staff which showed that increases to comparable salaries were not material. Therefore, the Working Group determined that a full salary survey is not necessary at this time, and instead recommended applying a flat rate adjustment to the existing salary ranges.

NAIC staff obtained and reviewed the Robert Half Salary guides for 2019-2021 which showed modest annual increases from 2019 to 2020 (2% - 4%), and minimal increases from 2020-2021 (1% or less). The total change for the period since the last salary survey ranges from 4% - 8% depending on position and seniority. To recognize this variation in salary increases, NAIC staff recommend adjusting the low end of the salary ranges by 3% and the high end of the salary ranges by 6%, as shown in the table below.

Salary and Per Diem Guidelines

The per diem guidelines are based off the Consumer Price Index (CPI). The Consumer Price Index, as defined by the U.S. Bureau of Labor Statistics (BLS), is a measure of the average change in prices of goods and services purchased by households over time. The CPI is based on prices of food, clothing, shelter, fuels, transportation fares, charges for doctors’ and dentists’ services, drugs, and other goods and services purchased for day-to-day living. In 2008, regulators determined that because the CPI takes into consideration most costs incurred by the average household, it is reasonable that an increase in salary should be within the same parameters as the increase in the cost of living. In years in which the CPI does not accurately reflect market conditions, additional work—including surveys and salary studies—may be completed to ensure proper salary suggestions.

Based upon the current CPI data available (July 2020–July 2021), the estimated annual change in CPI is approximately 5.37%. Multiple economic experts continue to suggest that the current level of inflation, which is a key factor in the CPI, is primarily driven by temporary supply chain disruptions due to the ongoing impact of the COVID-19 pandemic and related economic conditions. As such, we recommend a slightly lower increase of 4.5% to base salary rates in all position classifications shown below.

The following data table shows the average annual salary increases adopted in the previous five years as compared to the CPI, as well as the proposed increase for the following year. The information “as published by BLS” compares the CPI as of July of each year, consistent with the analysis performed in past years. As shown below, the rates suggested by the NAIC have been consistently comparable to those published by the BLS, regardless of method used.

Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation

Mutual Recognition of Jurisdictions (E) Working Group
Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation

1. **Group Capital Calculation.** On December 9, 2020, the NAIC adopted revisions to the NAIC Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450). These revisions implement the Group Capital Calculation (GCC) filing requirements for insurance groups at the level of the ultimate controlling person for the purposes of evaluating solvency at the group level. The revisions specifically provide that the requirement to file the NAIC’s GCC applies to U.S.-based groups, while a group headquartered outside the U.S. is exempt from the GCC (subject to limited exceptions) if its group-wide supervisor “recognizes and accepts” the GCC for U.S. groups doing business in that jurisdiction. Likewise, a U.S. group subject to a group capital calculation specified by the Federal Reserve Board is exempt from the GCC. This process codifies the concepts of mutual recognition and one group/one group-wide supervisor.

2. **NAIC Listing Process.** Section 4L(2) of Model #440 provides two ways a non-U.S. jurisdiction may meet the standards for its insurance groups to be exempt from the GCC:

   (a) If the jurisdiction has been determined to be a Reciprocal Jurisdiction for purposes of credit for reinsurance, which includes a requirement that the jurisdiction “recognizes the U.S. state regulatory approach to group supervision and group capital”; or

   (b) If the jurisdiction has otherwise been determined to recognize and accept the GCC by procedures specified in regulation.

Jurisdictions meeting either of these criteria will be referred to informally as “‘Recognize and Accept’ Jurisdictions.” Sections 21D and 21E of Model #450 provide a general framework for how the process to identify “Recognize and Accept” Jurisdictions will work and specifically contemplates the development of a list of such jurisdictions through the NAIC Committee Process. The purpose of this document is to provide a documented evaluation process for creating and maintaining this list of jurisdictions that recognize and accept the GCC.

3. **Covered Agreements.** The “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” was

---

1 Under Section 4L(2)(e) of Model #440, if the worldwide insurance operations of a non-U.S. group are exempt from the GCC, the group’s U.S. Lead State Commissioner may nevertheless require a GCC that is limited to the group’s U.S. operations if: “after any necessary consultation with other supervisors or officials, it is deemed appropriate by the lead state commissioner for prudential oversight and solvency monitoring purposes or for ensuring the competitiveness of the insurance marketplace.” A group’s exemption is also contingent on the group providing sufficient information to the lead state, directly or through the group-wide supervisor, sufficient to enable the lead state to comply with the group supervision approach set forth in the NAIC Financial Analysis Handbook.

2 Model #440. § 4L(2)(c).
signed on September 22, 2017. On December 18, 2018, a similar Covered Agreement was signed with the United Kingdom (UK) (collectively “Covered Agreements”). The Covered Agreements include, inter alia, the elimination of reinsurance collateral requirements for certain reinsurers licensed and domiciled in participating jurisdictions, and limit the worldwide application of prudential group insurance measures on insurance groups based in participating jurisdictions. In relevant part, the Covered Agreements provide that U.S. insurers and reinsurers can operate in the EU and UK without subjecting the U.S. parent to the host jurisdiction’s group-level governance, solvency and capital, and reporting requirements, and also provide the same protections for EU and UK insurers and reinsurers operating in the U.S. However, the Covered Agreements only exempt U.S., EU and UK insurance groups from each other’s worldwide group capital requirements if the home supervisor performs worldwide group capital assessments on its own insurance groups and has the authority to impose preventive and corrective measures.

4. Reciprocal Jurisdictions. In response to the Covered Agreements, the NAIC also amended the Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) to provide that jurisdictions that are subject to in-force covered agreements are considered to be “Reciprocal Jurisdictions,” and large, financially strong reinsurers that are based in those jurisdictions are not required to post reinsurance collateral. In addition, a “Qualified Jurisdiction” under Section 2E of Model #785 may become a Reciprocal Jurisdiction if, among other requirements, it “recognizes the U.S. state regulatory approach to group supervision and group capital.” By the terms of the Covered Agreements, insurance groups based in EU Member States and the UK are entitled to exemption from the extraterritorial application of the U.S. GCC, and Section 4L(2)(c) of Model #440 recognizes that other Reciprocal Jurisdictions, which have made the same commitment, are entitled to the same treatment.

5. Other Jurisdictions that Recognize and Accept. In addition, because most of the requirements for Reciprocal Jurisdiction status are not relevant to group capital and group supervision, Section 4L(2)(d) of Model #440 provides an alternative pathway for the exemption. The ultimate controlling person of an insurance holding company system whose non-U.S. group-wide supervisor is not in a Reciprocal Jurisdiction is exempted from filing the GCC as long as the jurisdiction of its group-wide supervisor “recognizes and accepts” the GCC, as specified by the commissioner in regulation. Section 21D of Model #450 provides that a non-U.S. jurisdiction is considered to “recognize and accept” the GCC if it satisfies all of the following criteria:

   (a) The non-U.S. jurisdiction recognizes the U.S. state regulatory approach to group supervision and group capital, by providing confirmation by a competent regulatory authority, in such jurisdiction, that insurers and insurance groups whose lead state is accredited by the NAIC under the NAIC Accreditation Program shall be subject only
to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, by the lead state and will not be subject to group supervision, including worldwide group governance, solvency and capital, and reporting, at the level of the worldwide parent undertaking of the insurance or reinsurance group by the non-U.S. jurisdiction;

(b) Where no U.S. insurance groups operate in the non-U.S. jurisdiction, that non-U.S. jurisdiction indicates formally in writing to the lead state with a copy to the International Association of Insurance Supervisors that the group capital calculation is an acceptable international capital standard. This will serve as the documentation otherwise required in Section 21D(1)(a);

(c) The non-U.S. jurisdiction provides confirmation by a competent regulatory authority in such jurisdiction that information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to the lead state commissioner in accordance with a memorandum of understanding or similar document between the commissioner and such jurisdiction, including but not limited to the International Association of Insurance Supervisors Multilateral Memorandum of Understanding or other multilateral memoranda of understanding coordinated by the NAIC. The commissioner shall determine, in consultation with the NAIC Committee Process, if the requirements of the information sharing agreements are in force;

(d) Notwithstanding these exemptions, Section 4L(2)(e) of Model #440 provides that a lead state commissioner shall require the group capital calculation for U.S. operations of any non-U.S. based insurance holding company system from a Reciprocal Jurisdiction or “Recognize and Accept” Jurisdiction where, after any necessary consultation with other supervisors or officials, it is deemed appropriate by the commissioner for prudent oversight and solvency monitoring purposes or for ensuring the competitiveness of the insurance marketplace. Section 21E(1) of Model #450 then provides that to assist with a determination under Section 4L(2)(e) of Model #440, the list will also identify whether a jurisdiction that is exempted under either Sections 4L(2)(c) or 4L(2)(d) requires a group capital filing for any U.S.-based insurance group’s operations in that non-U.S. jurisdiction.

6. Mutual Recognition of Jurisdictions (E) Working Group. On March 8, 2021, the Financial Condition (E) Committee repositioned the Qualified Jurisdiction (E) Working Group to report directly to the Committee and revised the name of the group to the Mutual Recognition of Jurisdictions (E) Working Group. The Working Group received the additional charge of developing a process for evaluating jurisdictions that meet the NAIC requirements for recognizing and accepting the GCC (“Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation,” or “Recognize and Accept” Process). A separate
process exists for evaluating Qualified and Reciprocal Jurisdictions (“Process for Evaluating Qualified and Reciprocal Jurisdictions”), and it is intended that the “Recognize and Accept” Process will closely mirror this process. The Committee charged this Working Group with developing and implementing the “Recognize and Accept” Process due to this Working Group’s experience and expertise in evaluating the insurance regulatory systems of non-U.S. jurisdictions and their recognition of U.S. group-wide supervision.

7. **List of Jurisdictions that Recognize and Accept the GCC.** The Mutual Recognition of Jurisdictions (E) Working Group will evaluate non-U.S. jurisdictions in accordance with this “Recognize and Accept” Process. A list of “Recognize and Accept” Jurisdictions is published through the NAIC committee process (“NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation”; “‘Recognize and Accept’ List”; or “List”). The creation of the List does not constitute a delegation of regulatory authority to the NAIC. Although a state must consider this List under Section 21E(3) of Model #450 in its determination of whether a non-U.S. insurance group is exempt from filing an annual GCC, the List is not binding and the ultimate authority to designate a “Recognize and Accept” Jurisdiction resides solely in each state.

   (a) The List will include all Reciprocal Jurisdictions that recognize the U.S. state regulatory approach to group supervision and group capital. [See discussion in paragraph 9.]

   (b) The evaluation of non-U.S. jurisdictions that are non-Reciprocal Jurisdictions as “Recognize and Accept” Jurisdictions will be conducted in accordance with the provisions of Section 4L(2) of Model #440 and Section 21 of Model #450, and any other relevant guidance developed by the NAIC. [see discussion in paragraphs 10 and 11.]

   (c) As specified in Section 21E(1) of Model #450, the List will also identify which “Recognize and Accept” Jurisdictions require a group capital filing for a U.S.-based insurance group’s operations in that jurisdiction. [See discussion of Subgroup Capital Calculation in paragraph 13.]

   (d) Upon final inclusion of a jurisdiction on the List, any confidential documents reviewed by the Mutual Recognition of Jurisdictions (E) Working Group in its evaluation of the jurisdiction will be made available to individual U.S. state insurance regulators upon request and confirmation that the information contained therein will remain confidential. The NAIC will maintain the List on its public website and in other appropriate NAIC publications.

   (e) If a non-US group’s lead state exempts the group from the GCC, and the group-wide
supervisor is based in a jurisdiction that is not on the “Recognize and Accept” List, the state must thoroughly document the justification for the exemption.

8. Procedure for Evaluation of Non-U.S. Jurisdictions. In undertaking the evaluation of a non-U.S. Jurisdiction for inclusion on the “Recognize and Accept” List, the Mutual Recognition of Jurisdictions (E) Working Group shall utilize similar processes and procedures to those outlined in the Process for Evaluating Qualified and Reciprocal Jurisdictions. Specifically, the Working Group will undertake the following procedure in making its evaluation:

(a) **Initiation of Evaluation.** Formal notification of the Mutual Recognition of Jurisdictions (E) Working Group’s intent to initiate the evaluation process will be sent by the NAIC to the supervisory authority in the jurisdiction selected. The process of evaluation and all related documentation are private and confidential matters between the NAIC and the applicant jurisdiction, unless otherwise provided in this document. Upon receipt of confirmation by a competent regulatory authority of the non-U.S. jurisdiction, the Mutual Recognition of Jurisdictions (E) Working Group:

i. Will direct NAIC staff and/or outside consultants with the appropriate knowledge, experience and expertise to review the materials received from the jurisdiction. Upon completing its review of the evaluation materials, the internal reviewer(s) will report initial findings to the Mutual Recognition of Jurisdictions (E) Working Group, including any significant issues or concerns identified. This report will be included as part of the official documentation of the evaluation. Copies of the initial findings may also be made available to the Federal Insurance Office (FIO) and other relevant federal authorities subject to appropriate confidentiality and information-sharing agreements being in place.

ii. Will issue public notice on the NAIC website inviting public comments with respect to consideration of the jurisdiction as a “Recognize and Accept” Jurisdiction.

iii. Will consider public comments from state regulators, U.S. insurance groups, and any other interested parties.

iv. May review other public materials deemed relevant to making a determination.

v. Will invite each non-U.S. jurisdiction, or its designee, to provide any additional information it deems relevant to making a determination.

vi. Relevant U.S. state and federal authorities will be notified of the Mutual Recognition of Jurisdictions (E) Working Group’s decision to evaluate a
jurisdiction.

(b) Preliminary Evaluation Report. NAIC staff will prepare a Preliminary Evaluation Report for review by the Mutual Recognition of Jurisdictions (E) Working Group. The report will contain a recommendation as to whether the NAIC should recognize the jurisdiction as a “Recognize and Accept” Jurisdiction. Upon review by the Working Group, the results of the Preliminary Evaluation Report will be immediately communicated in written form to the supervisory authority of the jurisdiction under review. At that time, a copy of the Preliminary Evaluation Report will also be shared with the Group Capital Calculation (E) Working Group in regulator-to-regulator session. The Group Capital Calculation (E) Working Group will also be kept advised of any new developments in the evaluation of this jurisdiction.

(c) Final Evaluation Report. Upon receipt of the Preliminary Evaluation Report, the supervisory authority will have an opportunity to respond to the initial findings and determination. The Mutual Recognition of Jurisdictions (E) Working Group will consider any response, and will proceed to prepare its Final Evaluation Report. The Working Group will consider the Final Evaluation Report for approval in regulator-to-regulator session.

(d) Summary of Findings and Determination. Upon approval of the Final Evaluation Report, the Mutual Recognition of Jurisdictions (E) Working Group will issue a public statement and a summary of its findings with respect to its determination. At this time, the Working Group will release the Summary of Findings and Determination for public comment. Once the Working Group has finally adopted the Summary of Findings and Determination in open session after opportunity for public comment, it will submit the summary of its findings and its recommendation to the Financial Condition (E) Committee at an open meeting. Upon approval by the Committee, the summary and recommendation will be submitted to the Executive (EX) Committee and Plenary, as well as to the Federal Insurance Office (FIO), United States Trade Representative (USTR) and other relevant federal authorities for informational purposes. Upon approval as a “Recognize and Accept” Jurisdiction by the Executive (EX) Committee and Plenary, the jurisdiction will be added to the NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation.

9. Evaluation of Reciprocal Jurisdictions. Under Section 4L(2)(c) of Model #440, Reciprocal Jurisdictions that recognize the U.S. state regulatory approach to group supervision and group capital are exempt from the GCC. Because a “recognize and accept” evaluation by the Mutual Recognition of Jurisdictions (E) Working Group is already part of the Reciprocal Jurisdiction review process, all Reciprocal Jurisdictions designated by the NAIC through that review process are also automatically designated as “Recognize and Accept” Jurisdictions. Likewise,
in view of the terms of the EU and UK Covered Agreements, all EU Member States and the UK are automatically designated “Recognize and Accept” Jurisdictions. If there is a material change to the terms of the U.S.-EU or U.S.-UK Covered Agreement, or if the United States enters into a new covered agreement with one or more non-U.S. jurisdictions, the Mutual Recognition of Jurisdictions (E) Working Group will consider, and will consult with FIO and USTR regarding, whether and how the applicability of the procedures in this document may apply

10. Evaluation of Non-Reciprocal Jurisdictions with U.S. Insurance Group Operations. Under Section 21D(1)(a) of Model #450, a non-Reciprocal Jurisdiction, in which a U.S. insurance group has operations, that recognizes the U.S. state regulatory approach to group supervision and group capital may be included on the NAIC “Recognize and Accept” List. The Mutual Recognition of Jurisdictions (E) Working Group may rely on written confirmation by a competent regulatory authority in that jurisdiction that insurers and insurance groups whose lead state is accredited by the NAIC under the NAIC Accreditation Program shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, by the lead state and will not be subject to group supervision, including worldwide group governance, solvency and capital, and reporting, at the level of the worldwide parent undertaking of the insurance or reinsurance group by the non-U.S. jurisdiction.

(a) The Mutual Recognition of Jurisdictions (E) Working Group will perform a due diligence review of available public and confidential documents to confirm that to the best of its determination the representations in the written confirmation are true and accurate.

(b) The jurisdiction must also have an acceptable Memorandum of Understanding to be included on the “Recognize and Accept” List, as described in paragraph 12 of this Process.

(c) NAIC staff will work with the Mutual Recognition of Jurisdictions (E) Working Group and the applicant jurisdiction to prepare an acceptable confirmation letter for this purpose. The NAIC will publish a form letter in the Appendix: Letter Templates that a competent regulatory authority of a non-U.S. jurisdiction may use to provide confirmation pursuant to Section 21D(1)(a), Section 21D(1)(b) and 21D(2) of Model #450 as well as a template letter that any “Recognize and Accept” Jurisdiction, including a Reciprocal Jurisdiction, may use to provide confirmation, pursuant to Section 21(E)(1) of Model #450, as to whether or not it requires a group capital filing for any U.S. based insurance group’s operations. NAIC Staff will work with the jurisdiction to modify these forms if necessary for a particular jurisdiction.

Because the GCC embraces and encourages the concepts of mutual recognition and one group/one group-wide supervisor, a non-U.S. jurisdiction may be included on the “Recognize and Accept” List, enabling its insurance groups to do business in the U.S. without being subject to U.S. group-wide supervision, even if no U.S. groups operate in that jurisdiction. Under Section 21D(1)(b) of Model #450, such a jurisdiction must document its recognition and acceptance by indicating formally in writing to the lead state of each of its insurance groups doing business in the U.S., with a copy to the International Association of Insurance Supervisors (IAIS), that the GCC is an acceptable international capital standard. The Mutual Recognition of Jurisdictions (E) Working Group may rely on written confirmation by a competent regulatory authority in that jurisdiction.

(a) The Mutual Recognition of Jurisdictions (E) Working Group will perform a due diligence review of available public and confidential documents to confirm that, to the best of its determination, the representations in the written confirmation are true and accurate.

(b) The jurisdiction must also have an acceptable Memorandum of Understanding to be included on the “Recognize and Accept” List, as described in paragraph 12 of this Process.

(c) NAIC staff will work with the Mutual Recognition of Jurisdictions (E) Working Group and the applicant jurisdiction to prepare an acceptable confirmation letter for this purpose.

12. Memorandum of Understanding.

Section 21D(2) of Model #450 requires a non-Reciprocal Jurisdiction that “recognizes and accepts” the GCC to provide confirmation by a competent regulatory authority that information regarding insurers, and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to the lead state commissioner of any U.S.-based insurance group doing business in that jurisdiction, in accordance with a memorandum of understanding or similar document between the commissioner and the jurisdiction. Acceptable MOUs include, but are not limited to, the International Association of Insurance Supervisors Multilateral Memorandum of Understanding (“IAIS MMoU”) or other multilateral memoranda of understanding coordinated by the NAIC. The Mutual Recognition of Jurisdictions (E) Working Group will review such memoranda of understanding and include an opinion in the Summary of Findings and Determination as to whether the jurisdiction has met this condition to be included on the “Recognize and Accept” List.

(a) The lead state will act as a conduit for information between the “Recognize and Accept” Jurisdiction and other states that have an insurer from that jurisdiction, and will share information with these states consistent with the terms governing the further sharing of
information included in the applicable MOU, and pursuant to the NAIC Master Information Sharing and Confidentiality Agreement. The jurisdiction must also confirm in writing that it is willing to permit this lead state to act as the contact for purposes of sharing information concerning all insurers within the group.

(b) If a jurisdiction has not been approved by the IAIS as a signatory to the MMoU, it must either (1) enter into an MOU with the lead state, or (2) enter into an MOU with a state that has agreed to serve as a single point of contact for multiple lead states, similar to the procedure for sharing information under the Process for Evaluating Qualified and Reciprocal Jurisdictions. The MOU must also provide for appropriate confidentiality safeguards with respect to the information shared among the jurisdictions.

(c) The same requirements and procedures will apply to a Reciprocal Jurisdiction that is subject to a case-by-case “recognize and accept” review, unless the necessary information-sharing procedures are already specified in the applicable covered agreement.

13. Prudential Oversight and Solvency Monitoring. Section 4L(2)(e) of Model #440 directs a lead state commissioner to require the group capital calculation for U.S. operations of any non-U.S. based insurance holding company system based in a “Recognize and Accept” Jurisdiction if, after any necessary consultation with other supervisors or officials, the commissioner deems such a “subgroup” calculation to be appropriate for prudential oversight and solvency monitoring purposes or for ensuring the competitiveness of the insurance marketplace. Section 21E(1) of Model #450 provides that to assist with such a determination, the “Recognize and Accept” List will also identify whether a listed jurisdiction requires a group capital filing for any U.S. based insurance group’s operations in that jurisdiction. As part of Paragraph 8, Procedure for Evaluation of Non-U.S. Jurisdiction, the Mutual Recognition of Jurisdictions (E) Working Group will perform a due diligence review of available public and confidential documents to confirm whether or not any “Recognize and Accept” Jurisdiction requires a subgroup group capital filing for a U.S.-based insurance group’s operations, and a discussion and findings on this review will be included in the Preliminary Evaluation Report, Final Evaluation Report and Summary of Findings and Determination. If the Working Group has evidence indicating that a jurisdiction requires a subgroup group capital filing for any U.S.-based insurance group’s operations in that jurisdiction, it will attempt to obtain written confirmation of the existence and scope of any such requirement from a competent regulatory authority in that jurisdiction, but it is recognized that such a confirmation is not an essential element of the Working Group’s determination. The NAIC will identify such jurisdictions on the “Recognize and Accept” List, and may include an explanatory note in cases where a simple “Yes” or “No” response does not adequately describe the jurisdiction’s requirements. States may rely on this List when making determinations under Section 4L(2)(e) of Model #440.
14. **Process for Periodic Evaluation.** The process for determining whether a non-U.S. jurisdiction is a “Recognize and Accept” Jurisdiction is ongoing and subject to periodic review. The Mutual Recognition of Jurisdictions (E) Working Group will perform a yearly review of the NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation to determine whether there have been any significant changes over the prior year that might affect inclusion on the List. This yearly review shall follow such abbreviated process as may be determined by the Working Group to be appropriate.

(a) Upon determination by a lead state commissioner that a non-U.S. jurisdiction no longer meets one or more of the requirements to “recognize and accept” the GCC, the lead state commissioner may provide a recommendation to the Working Group that the jurisdiction be removed from the “Recognize and Accept” List. Upon review and after consultation with the “Recognize and Accept” Jurisdiction, the Working Group may remove the jurisdiction from the List, which must then be confirmed by the Financial Condition (E) Committee and the NAIC Executive (EX) Committee and Plenary.

(b) Upon determination by a lead state commissioner that a non-U.S. jurisdiction requires a group capital filing for any U.S. based insurance group’s operations in that non-U.S. jurisdiction, the lead state commissioner may provide a recommendation to the Working Group that the non-U.S. jurisdiction be identified as such on the “Recognize and Accept” List. Upon receipt of any such notice, the Mutual Recognition of Jurisdictions (E) Working Group will also consider whether it is necessary to re-evaluate the jurisdiction’s “Recognize and Accept” status.

(c) The Mutual Recognition of Jurisdictions (E) Working Group will also give due consideration to any notice from a U.S.-based insurance group that it has been required to perform a group capital calculation, at either the group-wide or subgroup level, in a jurisdiction on the “Recognize and Accept” List.

(d) If a jurisdiction referred for re-evaluation under this Paragraph is a Reciprocal Jurisdiction, the Mutual Recognition of Jurisdictions (E) Working Group shall conduct a concurrent review of the jurisdiction’s continuing status as a Reciprocal Jurisdiction, or, in the case of a jurisdiction entitled to that status by virtue of a covered agreement, shall refer the matter to the Reinsurance (E) Task Force for further discussion and communication with appropriate federal and/or international authorities, in accordance with the *Process for Evaluating Qualified and Reciprocal Jurisdictions.*
Appendix: Letter Templates

Paragraph 10(c) of the Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation provides that the NAIC will publish a form letter that a competent regulatory authority of a non-U.S. jurisdiction that is not a Reciprocal Jurisdiction may use to provide confirmation pursuant to Section 21(D)(1)(a), Section 21(D)(1)(b) and 21(D)(2) of the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450), as well as a template letter that any “Recognize and Accept” Jurisdiction, including a Reciprocal Jurisdiction, may use to provide confirmation, pursuant to Section 21(E)(1) of Model #450, as to whether or not it requires a group capital filing for any U.S. based insurance group’s operations. The following template letters are designed to satisfy these requirements:

A. Jurisdictions with U.S. Insurance Group Operations. In order to satisfy the requirements of Sections 21D(1)(a) and 21D(2) of Model #450, the competent regulatory authority of a non-U.S. Jurisdiction in which U.S. insurance groups operate shall provide the NAIC with a written letter, confirming, as follows:

As the competent regulatory authority for [non-U.S. Jurisdiction], I hereby confirm to the National Association of Insurance Commissioners (NAIC) and the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories the following:

- [Non-U.S. Jurisdiction] recognizes the U.S. state regulatory approach to group supervision and group capital, and confirms that that insurers and insurance groups whose lead state is accredited by the NAIC under the NAIC Accreditation Program shall be subject only to worldwide prudential insurance group supervision including worldwide group governance, solvency and capital, and reporting, as applicable, by the lead state and will not be subject to group supervision, including worldwide group governance, solvency and capital, and reporting, at the level of the worldwide parent undertaking of the insurance or reinsurance group by the non-U.S. jurisdiction;

- Information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to a lead state commissioner in accordance with a memorandum of understanding or similar document between the commissioner and [non-U.S. Jurisdiction], including but not limited to the International Association of Insurance Supervisors Multilateral Memorandum of Understanding or other multilateral memoranda of understanding coordinated by the NAIC.

- [Non-U.S. Jurisdiction] will immediately notify the NAIC upon any changes to the assurances provided in this letter.
B. Jurisdictions with No U.S. Insurance Group Operations. In order to satisfy the requirements of Sections 21D(1)(b) and 21D(2) of Model #450, the competent regulatory authority of a non-U.S. Jurisdiction in which no U.S. insurance groups operate shall provide the NAIC with a written letter, confirming, as follows:

As the competent regulatory authority and lead insurance regulatory supervisor for [non-U.S. Jurisdiction], I hereby confirm to the National Association of Insurance Commissioners (NAIC) and the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories, with a copy to the International Association of Insurance Supervisors (IAIS), the following:

- [Non-U.S. Jurisdiction] recognizes the Group Capital Calculation as defined under Section 4L(2) of the NAIC Insurance Holding Company System Regulatory Act (#440) as an acceptable international capital standard.

- Information regarding insurers and their parent, subsidiary, or affiliated entities, if applicable, shall be provided to a lead state commissioner in accordance with a memorandum of understanding or similar document between the commissioner and [non-U.S. Jurisdiction], including but not limited to the International Association of Insurance Supervisors Multilateral Memorandum of Understanding or other multilateral memoranda of understanding coordinated by the NAIC.

- [Non-U.S. Jurisdiction] will immediately notify the NAIC upon any changes to the assurances provided in this letter.

C. Jurisdictions with Subgroup Capital Requirements. Paragraph 13 of the Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation provides that the Mutual Recognition of Jurisdictions (E) Working Group will attempt to obtain written confirmation from a competent regulatory authority in any jurisdiction where the Working Group has evidence indicating that the jurisdiction requires a subgroup group capital filing for any U.S. based insurance group’s operations in that jurisdiction. The NAIC will identify such jurisdictions on the “Recognize and Accept” List, and will provide an explanation and discussion on such determination in its Summary of Findings and Determination. States may rely on this List when making determinations under Section 4L(2)(e) of Model #440.
ReFAWG Review Process for Passporting Certified and Reciprocal Jurisdiction Reinsurers

Reinsurance Financial Analysis (E) Working Group
ReFAWG Review Process for Passporting Certified and Reciprocal Jurisdiction Reinsurers (“ReFAWG Review Process”)

1. ReFAWG Review Process

The Reinsurance Financial Analysis (E) Working Group (ReFAWG) normally operates in Executive Session, in accordance with the NAIC Policy Statement on Open Meetings and in open session when addressing policy issues. The authority of the Working Group is limited to that of an advisory body. This authority is derived from the 2011 Preface to Credit for Reinsurance Models, which provided that the purpose of the Working Group is “to provide advisory support and assistance to states in the review of reinsurance collateral reduction applications. Such a process with respect to the review of applications for reinsurance collateral reduction and qualified jurisdictions should strengthen state regulation and prevent regulatory arbitrage.”

a. In November 2011, the NAIC adopted revisions to its Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786) which reduce the prior reinsurance collateral requirements for non-U.S. licensed reinsurers that are licensed and domiciled in Qualified Jurisdictions and establish a certification process for reinsurers under which a Certified Reinsurer is eligible for collateral reduction with respect to contracts entered into or renewed subsequent to certification. The authority to issue individual ratings of certified reinsurers is reserved to the NAIC member jurisdictions under their respective statutes and regulations. While this forum is intended to strengthen state regulation and prevent regulatory arbitrage, it is not within the authority of the Working Group to assign collateral requirements for individual reinsurers.

b. On June 25, 2019, the NAIC adopted further revisions to the models, which implement the reinsurance collateral provisions of the Covered Agreements with the European Union (EU) and the United Kingdom (UK). The revisions eliminate reinsurance collateral requirements and local presence requirements for EU and UK reinsurers that maintain a minimum amount of own-funds equivalent to $250 million USD and a solvency capital requirement (SCR) of 100% under Solvency II. The revisions also incorporate the “Reciprocal Jurisdiction” concept. Reciprocal Jurisdiction status is afforded to (1) jurisdictions subject to an in-force Covered Agreement within the U.S.; (2) accredited U.S. jurisdictions; and (3) Qualified Jurisdictions if they meet certain requirements in the credit for reinsurance models. ReFAWG has also been given additional responsibilities with respect to these “Reciprocal Jurisdiction Reinsurers.” ReFAWG will coordinate its efforts with the Mutual Recognition of Jurisdictions (E) Working Group (formerly known as the Qualified Jurisdictions (E) Working Group).

c. Issues upon which the Working Group may provide advisory support and assistance include but are not limited to:

   i. Provide advisory support and assistance to states in the review of reinsurance collateral reduction applications. Such a process with respect to the review of applications for
reinsurance collateral reduction and qualified jurisdictions should strengthen state
regulation and prevent regulatory arbitrage.

ii. Provide a forum for discussion, among NAIC jurisdictions, of reinsurance issues related to
specific companies, entities or individuals.

iii. Support, encourage, promote and coordinate multi-state efforts in addressing issues related
to certified reinsurers, including but not limited to multi-state recognition of certified
reinsurers.

iv. Provide analytical expertise and support to the states with respect to certified reinsurers
and applicants for certification.

v. Interact with domiciliary regulators of ceding insurers and certifying states to assist and
advise on the most appropriate regulatory strategies, methods and actions with respect to
certified reinsurers.

vi. Provide advisory support with respect to issues related to the determination of qualified
jurisdictions.

vii. Ensure the public passporting website remains current.

viii. For reinsurers domiciled in Reciprocal Jurisdictions, determine the best and most effective
approaches for the financial solvency surveillance to assist the states in their work to
protect the interests of policyholders.

2. Lead States and Passporting Process

a. A reinsurer seeking recognition as either a Certified Reinsurer or a Reciprocal Jurisdiction
Reinsurer must submit certain information to each state in which it seeks such recognition. A
reinsurer may decide to make a filing with a Lead State and use the NAIC Passporting process to
facilitate multi-state recognition or a reinsurer may decide to submit the information to each state
as a separate application. Under the ReFAWG Review Process, ReFAWG will assist the states with
the initial review of this information and provide guidance to the states in making their review of
the reinsurer to determine whether it has met the regulatory requirements to be recognized as a
Certified Reinsurer and/or a Reciprocal Jurisdiction Reinsurer.

b. Passporting for Certified Reinsurers - In addition to this assistance to individual states,
ReFAWG will also assist with a passporting process for the states. “Passporting” refers to the
process under which a state has the discretion to defer to the certification of a reinsurer (and the
rating assigned to that certified reinsurer) by another state. Under this process, a reinsurer will apply
to an initial state for certification, referred to as the “Lead State,” which will begin its analysis of
the reinsurer and notify ReFAWG of the application. The Lead State will complete its initial
analysis and will submit filing information and other documentation to ReFAWG for a peer review.
Upon completion of the confidential peer review process, ReFAWG will make its recommendation
concerning both the certified status of the reinsurer and its rating. The Lead State then makes the
final determination regarding certification, upon which the Lead State notifies ReFAWG and the
certified reinsurer is eligible to apply for passporting into other states. States are encouraged to
utilize the passporting process to reduce the amount of documentation filed with the states and
reduce duplicate filings.
c. **Passporting for Reciprocal Jurisdiction Reinsurers** - A similar Passporting Process is in place with respect to Reciprocal Jurisdiction Reinsurers as outlined in Sections 5 and 6 below. In order to facilitate multi-state recognition of assuming insurers and to encourage uniformity among the states, the NAIC has initiated a process called “passporting” under which the commissioner has the discretion to defer to another state’s determination with respect to compliance with this section. Passporting is based upon individual state regulatory authority, and states are encouraged to act in a uniform manner in order to facilitate the passporting process. States are also encouraged to utilize the passporting process to reduce the amount of documentation filed with the states and reduce duplicate filings.

d. **Discretion to Defer to Lead State** - If an NAIC accredited jurisdiction has determined that the conditions set forth for recognition as a Reciprocal Jurisdiction Reinsurer have been met, the commissioner of any other state has the discretion to defer to that jurisdiction’s determination and add such assuming insurer to the list of assuming insurers to which cessions shall be granted credit. The commissioner may accept financial documentation filed with the Lead State or with the NAIC and is encouraged to support a uniform submission and approval process among the states of the NAIC. ReFAWG and the Mutual Recognition of Jurisdictions (E) Working Group will coordinate efforts to obtain financial information regarding both Certified Reinsurers and Reciprocal Jurisdiction Reinsurers and disseminate it to the states.

e. **Communication with ReFAWG** - The ReFAWG Review Process is designed to facilitate communication of relevant information with respect to individual reinsurers or reinsurance related issues by allowing interested state insurance regulators the opportunity to monitor the ReFAWG meetings and discussion. It should be noted that the process for engaging ReFAWG in the consideration of an application is intended to be flexible. Specific circumstances may necessitate discussion between ReFAWG and any states that have received any application in order to determine an appropriate lead state on a case-by-case basis.

f. **Change of Lead State** - The Lead State for a Certified Reinsurer and/or a Reciprocal Jurisdiction Reinsurer may change based upon mutual agreement between the current lead state and any other state where the reinsurer is recognized, with input to be provided by ReFAWG. Upon a change in lead state, NAIC staff will provide timely notification to all states. In order to facilitate a change of lead state from one state to another, both states should discuss the rationale for the change during a regulator-only ReFAWG meeting. NAIC Staff will update the lead state and note such change on NAIC systems and send notice to ReFAWG and interested regulators.

### 3. **ReFAWG Review Process for Certified Reinsurers**

ReFAWG makes available to the states a *Uniform Application Checklist for Certified Reinsurers* (Exhibit 1) for certification of reinsurers based upon the requirements of the Credit for Reinsurance Model Law and Regulation. It is intended that the checklist be used by lead states for the initial/renewal application review and by ReFAWG in its review of Passporting requests.
The following timeline applies to these filings:

In order to be eligible for certification, the assuming insurer shall meet the following requirements:

a. **Qualified Jurisdiction** - The assuming insurer must be domiciled and licensed to transact insurance or reinsurance in a Qualified Jurisdiction. The applicant must be in good standing and provide a copy of the certificate of authority or license to transact insurance and/or reinsurance business.

b. **Capital and Surplus** - The assuming insurer must maintain capital and surplus of no less than $250,000,000 as reported within its audited financial statement. This requirement may also be satisfied by an association including incorporated and individual unincorporated underwriters having minimum capital and surplus equivalents (net of liabilities) of at least $250,000,000 and a central fund containing a balance of at least $250,000,000.

c. **Financial Strength Ratings** - The assuming insurer must maintain financial strength ratings from two or more rating agencies deemed acceptable by the commissioner. These ratings shall be based on interactive communication between the rating agency and the assuming insurer and shall not be based solely on publicly available information. The applicant must provide the rating agency report. If the rating is a group rating, the rationale for the group rating must be provided. Initial or Affirmed financial strength rating dates must be within 15 months of the application date/renewal filing date. Acceptable rating agencies include: A.M. Best, Fitch Ratings, Moody’s, Standard & Poor’s or any other Nationally Recognized Statistical Rating Organization by the SEC. Kroll is not recognized as an acceptable rating organization in Model #786 but has been recognized as an acceptable rating organization by the Reinsurance (E) Task Force.

e. **Protocol for Considering a Group Rating** - Section 8B(4) of the *Credit for Reinsurance Model Regulation (#786)* provides, in relevant part: “Each certified reinsurer shall be rated on a legal entity basis, with due consideration being given to the group rating where appropriate.” Understanding the rating agency basis for utilizing a group rating is a key factor in determining whether an applicant’s group rating may be considered appropriate. The recommended protocol for understanding the rationale involves one or more of the following protocol steps:

i. For reasons set forth in the rating agency report or its published ratings standards or guidelines, the rating agency utilizes the group rating as a consequence of finding that the company had sufficient interconnectivity with the group;

ii. For reasons set forth in the rating agency report or its published ratings standards or guidelines, the rating agency enhances the group rating due to the subsidiary’s potential benefit of capital support from one or more affiliated companies;

iii. The group rating was utilized because the subsidiary derives benefit from its inclusion within a financially strong and well-capitalized insurance group;
iv. The lead state has contacted the rating agency and was provided a written explanation for the use of the group rating;

v. Other factors deemed appropriate by the Reinsurance Financial Analysis (E) Working Group; or

vi. To assist the Lead State in the assessment of the appropriateness of the use of a group rating, applicants are encouraged to provide their rational for the use of a group rating.

f. Changes in Ratings

Section 8(B)(7)(a) of Model #786 provides that a certified reinsurer is required to notify the Commissioner of a certifying state within 10 days of any regulatory actions taken against the certified reinsurer, any change in the provisions of its domiciliary license or any change in rating by an approved rating agency, including a statement describing such changes and the reasons. The certified reinsurer may also fulfill this requirement by notifying its Lead State commissioner, with this information being distributed to other certifying states by the NAIC through the ReFAWG process. Upon receipt of any such notification, a certifying state should immediately notify ReFAWG in order to facilitate communication of the information to other states. ReFAWG will subsequently send notification to all applicable regulators and may coordinate an interim meeting as deemed appropriate in order to discuss the issue(s).

Changes requiring action by a certifying state in accordance with statute and/or regulation may include but are not limited to: deterioration in financial condition; downgrade in a financial strength rating; change in the status of its domiciliary license; change in the qualification status of its domestic jurisdiction; and the triggering of certain thresholds with respect to reinsurance obligations to U.S. ceding insurers that are past due (in accordance with Section 8(B) of Model #786). While such changes may require action under statute or regulation, the ReFAWG process is intended to facilitate communication and coordination with respect to the date upon which changes in a certified reinsurer’s rating/status are effective, as well as discussion of any other relevant issues.

As part of the ongoing review process, other information may come to the attention of a certifying state and/or ReFAWG that warrants consideration with respect to a certified reinsurer’s rating/status. While ReFAWG cannot require a state to delay any action with respect to a certified reinsurer’s rating/status, certifying states are strongly encouraged to notify ReFAWG prior to taking any related action, as the ReFAWG process will serve to provide a proactive regulatory mechanism for communication of such information, discussion among regulators with respect to changes being considered on the basis of subjective rating criteria, and possible coordination of applicable effective dates if such changes are enacted. Upon receipt of any such information, ReFAWG will send notification to the NAIC Chief Financial Regulators listing and may coordinate an interim meeting as deemed appropriate in order to discuss the issue(s).

g. Schedule F/S (Ceded Reinsurance) – Applicants domiciled in the U.S. must provide the most recent NAIC Annual Statement Blank Schedule F (property/casualty) and/or Schedule S (life and
health). Applicants domiciled outside the U.S. must provide Form CR-F (property/casualty) and/or Form CR-S (life and health), completed in accordance with the instructions.

h. **Disputed and/or Overdue Reinsurance Claims** - The applicant must provide a detailed explanation regarding reinsurance obligations to U.S. cedents that are in dispute and/or more than 90 days past due that exceed 5% of its total reinsurance obligations to U.S. cedents as of the end of its prior financial reporting year or reinsurance obligations to any of the top 10 U.S. cedents (based on the amount of outstanding reinsurance obligations as of the end of its prior financial reporting year) that are in dispute and/or more than 90 days past due exceed 10% of its reinsurance obligations to that U.S. cedent. The applicant must then provide a description of its business practices in dealing with U.S. ceding insurers and a statement that the applicant commits to comply with all contractual requirements applicable to reinsurance contracts with U.S. ceding insurers.

i. **Mechanisms Used to Secure Obligations Incurred as a Certified Reinsurer** - The applicant must specify the mechanisms it will use to secure obligations incurred as a Certified Reinsurer. Use of multi-beneficiary trust must include: (1) approval from the domiciliary regulator; (2) the form of the trust that will be used as a certified reinsurer; and (3) the form of the trust that will be used to secure obligations incurred outside of the applicant’s certified reinsurer status (if applicable).

j. **Regulatory Actions** – The applicant must provide a description of any regulatory actions taken against the applicant. Include details on all regulatory actions, fines, and penalties. Further, a description of any changes in with respect to the provisions of the applicant’s domiciliary license should be provided.

k. **Audited Financial Report and Actuarial Opinion** – As filed with its non-U.S. jurisdiction supervisor, with a translation into English, the applicant must file audited financial statement for the current and prior year and an actuarial opinion (must be stand-alone, or the functional equivalent under the Supervisor’s applicable Actuarial Function Holder Regime).

l. **Solvent Schemes of Arrangement** - The applicant must provide a description of any past, present, or proposed future participation in any solvent scheme of arrangement, or similar procedure, involving U.S. ceding insurers.

m. **Form CR-1** - The applicant must provide a state lead state specific Form CR-1, which must be properly executed by an officer authorized to bind the applicant to the commitments set forth in the form.

n. **Other Requirements** - The applicant must commit to comply with other reasonable requirements deemed necessary for certification by the certifying state. Further, the applicant must provide a statement that it agrees to post 100% security upon the entry of an order of rehabilitation or conservation against the ceding insurer or its estate.

o. **Public Notice** - The commissioner is required to post notice on the insurance department’s website promptly upon receipt of any application for certification, including instructions on how members
of the public may respond to the application. The commissioner may not take final action on the application until at least 30 days after posting such notice. The commissioner will consider any comments received during the public notice period with respect to this application.

4. **Certified Reinsurers – Certified by Another NAIC Accredited Jurisdiction**

If an applicant for certification has been certified as a reinsurer in an NAIC accredited jurisdiction, the state has the discretion to defer to that jurisdiction’s certification and assigned rating (i.e., passporting) as provided in the *Uniform Application Checklist for Certified Reinsurers* (Exhibit 1).

To assist in the determination to defer to another jurisdiction’s certification the following documents are required:

a. **Qualified Jurisdiction** - The assuming insurer must be domiciled and licensed to transact insurance or reinsurance in a Qualified Jurisdiction.

b. **Verification of Certification Issued by an NAIC Accredited Jurisdiction** – The applicant must provide a copy of the approval letter or other documentation provided to the applicant by the NAIC accredited jurisdiction. The letter should include the state, rating and collateral percentage assigned, effective date, lines of business, and the applicant’s statement on compliance. ReFAWG may also verify a certification issued by an NAIC accredited jurisdiction through its internal processes.

c. **Mechanisms Used to Secure Obligations Incurred as a Certified Reinsurer** - The applicant must specify the mechanisms it will use to secure obligations incurred as a Certified Reinsurer. Use of multi-beneficiary trust must include: (1) approval from the domiciliary regulator; (2) the form of the trust that will be used as a certified reinsurer; and (3) the form of the trust that will be used to secure obligations incurred outside of the applicant’s certified reinsurer status (if applicable).

d. **Form CR-1** - The applicant must provide a state lead state specific Form CR-1, which must be properly executed by an officer authorized to bind the applicant to the commitments set forth in the form.

e. **Other Requirements** - The applicant must commit to comply with other reasonable requirements deemed necessary for certification by the certifying state. Further, they must provide a statement that they agree to post 100% security upon the entry of an order of rehabilitation or conservation against the ceding insurer or its estate.

f. **Public Notice** - The commissioner is required to post notice on the insurance department’s website promptly upon receipt of any application for certification, including instructions on how members of the public may respond to the application. The commissioner may not take final action on the application until at least 30 days after posting such notice. The commissioner will consider any comments received during the public notice period with respect to this application.
5. **Reciprocal Jurisdiction Process - Initial Application to Lead State**

**Annual Verification of Minimum Standards:**

Pursuant to the *Uniform Checklist for Reciprocal Jurisdiction Reinsurers* (Exhibit 2), the “Lead State” will uniformly require assuming insurers to provide the following documentation so that other states may rely upon the Lead State’s determination:

a. **Status of Reciprocal Jurisdiction** - The assuming insurer must be licensed to write reinsurance by, and have its head office or be domiciled in, a Reciprocal Jurisdiction that is listed on the *NAIC List of Reciprocal Jurisdictions*. A “Reciprocal Jurisdiction” is a jurisdiction, as designated by the commissioner, that meets one of the following: (1) a non-U.S. jurisdiction that is subject to an in-force Covered Agreement with the United States; (2) a U.S. jurisdiction that meets the requirements for accreditation under the NAIC Financial Standards and Accreditation Program; or (3) a Qualified Jurisdiction that has been determined by the commissioner to meet all applicable requirements to be a Reciprocal Jurisdiction. The Reciprocal Jurisdiction Reinsurer should identify which type of jurisdiction it is domiciled in and provide any documentation to confirm this status if requested by the commissioner.

b. **Minimum Capital and Surplus** - The assuming insurer must have and maintain on an ongoing basis minimum capital and surplus, or its equivalent, calculated on at least an annual basis as of the preceding December 31 or at the annual date otherwise statutorily reported to the Reciprocal Jurisdiction: no less than $250,000,000 (USD); or if the assuming insurer is an association, including incorporated and individual unincorporated underwriters: minimum capital and surplus equivalents (net of liabilities) or own funds of the equivalent of at least $250,000,000 (USD); and a central fund containing a balance of the equivalent of at least $250,000,000 (USD). The assuming insurer’s supervisory authority must confirm to the Lead State commissioner on an annual basis according to the methodology of its domiciliary jurisdiction that the assuming insurer satisfies this requirement. The Mutual Recognition of Jurisdictions (E) Working Group will coordinate the confirmations of the domiciliary jurisdictions with ReFAWG with respect to individual Reciprocal Jurisdiction Reinsurers.

c. **Minimum Solvency or Capital Ratio** - The assuming insurer must have and maintain on an ongoing basis a minimum solvency or capital ratio: The ratio specified in the applicable in-force
Covered Agreement where the assuming insurer has its head office or is domiciled; or if the assuming insurer is domiciled in an accredited state, a risk-based capital (RBC) ratio of three hundred percent (300%) of the authorized control level, calculated in accordance with the formula developed by the NAIC; or if the assuming insurer is domiciled in a Reciprocal Jurisdiction that is a Qualified Jurisdiction, such solvency or capital ratio as the commissioner determines to be an effective measure of solvency. The assuming insurer’s supervisory authority must confirm to the Lead State commissioner on an annual basis that the assuming insurer complies with this requirement. The Mutual Recognition of Jurisdictions (E) Working Group will coordinate the confirmations of the domiciliary jurisdictions with ReFAWG with respect to individual Reciprocal Jurisdiction Reinsurers.

d. **Form RJ-1** - The assuming insurer must provide a signed Form RJ-1, which must be properly executed by an officer of the assuming insurer.

e. **Audited Financial Report** - The assuming insurer’s annual audited financial statements, in accordance with the applicable law of the jurisdiction of its head office or domiciliary jurisdiction, as applicable, including the external audit report as provided under Section 9C(5)(a) of Model #786.

f. **Solvency and Financial Condition Report or Actuarial Opinion** – The applicant must submit a solvency and financial condition report or actuarial opinion, if filed with the assuming insurer’s supervisor as provided under Section 9C(5)(b) of Model #786.

g. **Overdue Reinsurance Claims** – The applicant must submit a list of all disputed and overdue reinsurance claims outstanding for 90 days or more, regarding reinsurance assumed from ceding insurers domiciled in the United States as provided under Section 9C(5)(c) of Model #786. The commissioner shall request the reinsurer to provide the information required to demonstrate the reinsurer’s practice of prompt payment of claims under its reinsurance agreements prior to entry into a reinsurance agreement, and annually thereafter, in order to demonstrate compliance with Section 9C(6) of Model #786.

h. **Assumed and Ceded Reinsurance Schedules** – The applicant must submit information regarding the assuming insurer’s assumed reinsurance by ceding insurer, ceded reinsurance by the assuming insurer, and reinsurance recoverable on paid and unpaid losses by the assuming insurer as provided under Section 9C(5)(d) of Model #786. Applicants domiciled in the U.S. must provide the most recent NAIC Annual Statement Blank Schedule F (property/casualty) and/or Schedule S (life and health). Applicants domiciled outside the U.S. may provide this information using Form CR-F (property/casualty) and/or Form CR-S (life and health), which ReFAWG considers sufficient to meet this requirement.

i. **Prompt Payment of Claims** - The assuming insurer must maintain a practice of prompt payment of claims under reinsurance agreements. The lack of prompt payment will be evidenced if any of the following criteria is met: (1) more than fifteen percent (15%) of the reinsurance recoverables from the assuming insurer are overdue and in dispute as reported to the commissioner; (2) more than fifteen percent (15%) of the assuming insurer’s ceding insurers or reinsurers have overdue
reinsurance recoverable on paid losses of 90 days or more which are not in dispute and which exceed for each ceding insurer $100,000, or as otherwise specified in a Covered Agreement; or (3) the aggregate amount of reinsurance recoverable on paid losses which are not in dispute, but are overdue by 90 days or more, exceeds $50,000,000, or as otherwise specified in a Covered Agreement.

6. Reciprocal Jurisdiction Process – Passporting States

Per the Uniform Checklist for Reciprocal Jurisdiction Reinsurers (Exhibit 2), if an NAIC accredited jurisdiction has determined that the conditions set forth under the Filing Requirements for Lead States have been met, the commissioner has the discretion to defer to that jurisdiction’s determination and add such assuming insurer to the list of assuming insurers to which cessions shall be granted credit. The commissioner may accept financial documentation filed with the Lead State or with the NAIC. The following document is required to be filed with the state:

a. Form RJ-1 - The assuming insurer must provide a signed Form RJ-1, which must be properly executed by an officer of the assuming insurer.

b. Verification of Determination Issued by an NAIC Accredited Jurisdiction – The applicant must provide a copy of the approval letter or other documentation provided to the applicant by the NAIC accredited jurisdiction. The letter should include the state, effective date, and lines of business.

7. NAIC Staff Review of Certified and Reciprocal Jurisdiction Reinsurers

The reinsurer will file this information with the initial reviewing state and such Lead State will submit the information to ReFAWG in accordance with the applicable information sharing process. This submission by the Lead State will also facilitate other states’ access to the information. NAIC staff shall prepare a report for review by ReFAWG intended to provide information regarding whether the Lead State’s submission meets the requirements of the ReFAWG Review Process, and to determine whether there are any deficiencies in the application. This report will be considered confidential but may be made available to states through the NAIC’s information sharing process.

NAIC Staff under the direction of ReFAWG will assist in the review of the filings and in monitoring the ongoing condition of the reinsurers. If during the review process or during an interim period ReFAWG determines that a reinsurer’s assigned rating or status may warrant reconsideration, notice will be sent to the Lead State. The specific issues identified will be presented for discussion during the next ReFAWG meeting.

8. Process for Ongoing Monitoring of Reinsurers

Certified and Reciprocal Jurisdiction Reinsurers are required to file specific information to a certifying state on an ongoing basis. NAIC Staff and ReFAWG will review this information in an effort to assist states with the ongoing monitoring of the reinsurers. Subject to applicable state law, all non-public information submitted by reinsurers shall be kept confidential and regulator only.
9. **Withdrawal/Termination of a Certified or Reciprocal Jurisdiction Reinsurer**

When a reinsurer requests to withdraw its status or the lead state terminates the reinsurer’s status as a certified or reciprocal reinsurer, notice of this action should be promptly conveyed to the appropriate NAIC Staff. Once NAIC Staff receives notification of withdrawal or termination, the applicable Passported Reinsurers List(s) will be updated to reflect this status change. The Passported reinsurer will follow the lead state’s laws regarding its withdrawal or termination regarding any active reinsurance contracts.

10. **Interaction Between Certified Reinsurers and Reciprocal Jurisdiction Reinsurer Status**

   a. Under Section 8A(5) Model #786, credit for reinsurance shall apply only to reinsurance contracts entered into or renewed on or after the effective date of the certification of the assuming insurer with respect to Certified Reinsurers. Under Section 2F(7) of the Credit for Reinsurance Model Law (#785), credit shall be taken with respect to Reciprocal Jurisdiction Reinsurers only for reinsurance agreements entered into, amended, or renewed on or after the effective date of the statute adding this subsection, and only with respect to losses incurred and reserves reported on or after the later of (i) the date on which the assuming insurer has met all eligibility requirements to be designated a Reciprocal Jurisdiction Reinsurer, and (ii) the effective date of the new reinsurance agreement, amendment, or renewal.

   b. It is expected that certain assuming insurers may be considered to be Certified Reinsurers for purposes of in-force business or business with existing liabilities and Reciprocal Jurisdiction Reinsurers with respect to reinsurance agreements entered into, amended, or renewed on or after the effective date. In addition, these same reinsurers may also have certain blocks of business that are fully collateralized under the prior provisions of Model #785 and Model #786. The NAIC Blanks have been amended to reflect the status of these reinsurers with respect to each type of insurance assumed.

   c. With respect to those reinsurers that are currently Certified Reinsurers but are seeking recognition by ReFAWG as Reciprocal Jurisdiction Reinsurers for passporting purposes, the same process as outlined in paragraphs 3-6 of this ReFAWG Review Process must be followed. A Form RJ-1 must be filed with each state in which the reinsurer seeks recognition as a Reciprocal Jurisdiction Reinsurer, and the reinsurer must meet all other applicable requirements. However, states may share this information with other states through the NAIC and the ReFAWG Review Process, and previously filed information used in the review of the reinsurer as a Certified Reinsurer may also be utilized in its review as a Reciprocal Jurisdiction Reinsurer. For example, a Reciprocal Jurisdiction Reinsurer may cross reference information/documentation that has been filed with respect to its status as a Certified Reinsurer, so that it is not necessary to file duplicative documents. ReFAWG will take full advantage of the passporting process, with the intent of reducing the amount of documentation filed with the states and reduce duplicate filings.

   d. During the initial phases of the implementation of the review of Reciprocal Jurisdiction Reinsurers, not all states may have fully implemented their internal processes for performing these reviews. During this interim period, if a Reciprocal Reinsurer has been approved by a lead state and
ReFAWG, the Reciprocal Jurisdiction Reinsurer may seek passporting approval from other states that have adopted the model law and regulation even where a formal internal process for doing so has not yet been finalized. States and Reciprocal Jurisdiction Reinsurers are encouraged to communicate on these issues and, as appropriate, to coordinate through the NAIC to facilitate the passporting process.

11. Commissioner Shall Create and Publish Lists

Section 2E(3) of Model #785 and Section 8C(1) of Model #786 require the commissioner to publish a list of Qualified Jurisdictions, while Section 2E(4) of Model #785 and Section 8B(2) of Model #786 require the commissioner to publish a list of all Certified Reinsurers and their ratings. Section 2F(2) & (3) of Model #785 and Section 9D and E of Model #786 require the commissioner to (a) timely create and publish a list of Reciprocal Jurisdictions; and (b) timely create and publish a list of Reciprocal Jurisdiction Reinsurers. It is expected that the commissioner will publish these respective lists on the insurance department’s website, along with special instructions or other guidance as to how Certified Reinsurers and Reciprocal Jurisdiction Reinsurers may meet the applicable filing requirements under the models. There currently are no specific requirements as to the format in which these lists must be published, but ReFAWG and NAIC staff will assist the states with questions on the publication of these lists. In addition, ReFAWG will maintain links on its NAIC webpage to the lists published on the insurance departments’ webpages.
Comments of the Center or Economic Justice

To the NAIC Climate and Resiliency Task Force

December 9, 2021

2022 Charges

CEJ writes to recommend an additional charge Financial Condition (E) Committee for 2022.

Impacts of Insurer Investments on Communities of Color

We propose a charge for the Financial Condition (E) Committee e to engage on race and insurance. Attached is our letter to the Committee on Race urging their endorsement of charges related to race and insurance to subject matter committees, task forces and working groups.

Despite powerful statements1 made in connection with the establishment of the Committee on Race regarding the importance and urgency of addressing issues of race in insurance in July 2020, the Committee has progressed very slowly with little progress or concrete actions. One notable exception is the work of the health work stream’s efforts to develop principles for data collection to facilitate analysis of racially-biased outcomes in health insurance.

While we endorse the role of the Committee on Race as a coordinating body for the NAIC’s efforts to address systemic racism in insurance, placing all work on race and insurance has been limited to the activities of the Committee. This has proven to be an unproductive approach for at least two reasons.

---

1 “It is the duty of the insurance sector to address racial inequality while promoting diversity in the insurance sector. We welcome the public commitments of industry leaders to address these issues and I am excited by the strong and personal commitment of my fellow commissioners to take action on these important subjects. If not us, who? If not now, when?” NAIC President Ray Farmer

“Our regulatory system and insurance in general is a reflection of the society it aims to protect, and while state insurance regulators have worked to eliminate overt discrimination and racism, we all have been increasingly aware that unconscious bias can be just as damaging to society,” said NAIC CEO, Mike Consedine.

At https://content.naic.org/article/news_release_naic_announces_special_committee_race_and_insurance.htm
First, the work streams – particularly life and p/c – have moved very slowly and have had a difficult time developing a strategy for moving forward. The p/c stream has only recently – last week! – started on the important step of reviewing critical concepts in unfair discrimination. But the scale of the issue of race and insurance is far too great for all the work to be done in one location, as evidenced by the lack of progress by the Committee.

Two, whenever CEJ has raised the issue of racial bias in subject matter committees, task forces and working groups, the response has always been that the issues are being addressed at the Committee on Race and the subject matter group declines to even examine issues of race and insurance in their subject matter areas. By excluding the subject matter groups from examining issues of race and insurance in their areas of expertise, the Committee on Race loses the opportunity for better understanding of racial impacts in particular phases of the insurance life cycle and the members of the subject matter groups lose the opportunity to engage more fully and better understand issues of race and insurance.

Consequently, we have urged the Committee on Race to distribute important and necessary work to the relevant subject matter committees, task forces and working groups, while continuing both the coordination of work on race and insurance and addressing the high-level issues that cross lines of insurance and phases of the insurance life cycle. We urge to Financial Condition (E) Committee to seek and accept a relevant charge related to exploring issues of race and insurance.

Financial Condition (E) Committee

- **E Committee**: Examine and identify investment practices of insurers that may disproportionately impact communities of color. Report to the Committee on Race by the 2022 Summer National Meeting.

Thank you for your consideration.

The Accounting Practices and Procedures (E) Task Force met in San Diego, CA, Dec. 11, 2021. The following Task Force members participated: Cassie Brown, Chair, represented by Jamie Walker (TX); Trinidad Navarro, Vice Chair, represented by Rylynn Brown (DE); Lori K. Wing-Heier represented by David Phifer (AK); Alan McClain represented by Leo Liu (AR); Ricardo Lara represented by Kim Hudson and Susan Bernard (CA); Andrew N. Mais represented by William Arfas and Kenneth Cotrone (CT); Karima M. Woods represented by N. Kevin Brown (DC); David Altmaier represented by Robert Ridenour (FL); Michelle B. Santos (GU) Doug Ommen represented by Kevin Clark and Daniel Mathis (IA); Dean L. Cameron represented by Jessie Adamson and Eric Fletcher (ID); Amy L. Beard represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Stewart Guerin (LA); Gary D. Anderson represented by John Turchi (MA); Eric A. Cioppa represented by Vanessa Sullivan (ME); Anita G. Fox represented by Judy Weaver (MI); Grace Arnold represented by Kathleen Orth (MN); Chlora Lindley-Myers represented by John Rehagen (MO); Mike Causey represented by Amy Malm (WI); Allan L. McVey represented by Tonya Gillespie (WV); and Jeff Rude represented by Linda Johnson (WY).

1. Adopted its Summer National Meeting Minutes

Mr. Bruggeman stated that the Working Group adopted the following nonsubstantive revisions to statutory accounting guidance:

A. SSAP No. 32R—Preferred Stock: Revisions remove lingering references to clarify that historical cost is not a permitted valuation method. Other revisions ensure consistencies with previously adopted language. (Ref #2021-17)

B. SSAP No. 43R—Loan-Backed and Structured Securities: Revisions capture Securities Valuation Office (SVO)-identified credit tenant loans (CTLs) in scope of SSAP No. 43R. Revisions also remove examples of various securities from a non-scope paragraph. (Ref #2021-11)

C. Appendix F – NAIC Policy Statements: NAIC Policy Statement on Maintenance of Statutory Accounting Principles: In response to a referral received from the Financial Condition (E) Committee, revisions modify the historical use of the terms “substantive” and “nonsubstantive.” Effective Jan. 1, 2022, substantive modifications will be identified as a “new SAP concept,” while nonsubstantive modifications will be a “SAP clarification.” (Ref #2021-14)
D. Blanks Proposal: Adopted an agenda item supporting supplemental reporting of Federal Home Loan Bank (FHLB) borrowings classified as a deposit-type contract and reported on Exhibit 7 – Deposit-Type Contracts. This agenda item did not result in statutory revisions; however, it reflected support for blanks proposal 2021-15BWG. (Ref #2021-16)

E. Adopted the following editorial revisions (Ref #2021-19EP):

   i. SSAP No. 16R—Electronic Data Processing Equipment and Software: Revisions correct various paragraph references.

   ii. SSAP No. 43R: Revisions remove outdated references to guidance previously deleted.

F. Nullified Interpretation (INT) 20-10: Reporting Nonconforming Credit Tenant Loans as no longer applicable for statutory accounting. While the INT expired on Oct. 1, for historical documentation purposes, the Working Group nullified the reporting exceptions within the INT. The revisions adopted to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) make this guidance no longer relevant. (INT 20-10 and Ref# 2021-11)

Mr. Bruggeman said the Working Group exposed the following nonsubstantive revisions to statutory accounting guidance:

A. SSAP No. 22R—Leases:

   i. Revisions clarify that in any scenario in which a lease terminates early, all remaining leasehold improvements shall be immediately expensed. (Ref #2021-25)

   ii. Revisions reject Accounting Standards Update (ASU) 2021-05, Leases (Topic 842), Lessors—Certain Leases with Variable Lease Payments for statutory accounting. (Ref #2021-29)

B. SSAP No. 25—Affiliates and Other Related Parties and SSAP No. 43R: Revisions clarify the identification and reporting requirements for affiliated transactions and incorporate new disclosures to identify investments held that involve related parties. The new disclosures will require identification when investments are acquired through, or in, related parties, regardless of if they meet the definition of an affiliate. (Ref #2021-21)

C. SSAP No. 43R: Revisions reflect updated NAIC designation and designation category guidance adopted by the Valuation of Securities (E) Task Force to the P&P Manual for residential mortgage-backed securities (RMBS) and commercial mortgage-backed securities (CMBS). (Ref #2021-23)

D. SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance: Revisions reflect 2021 clarifications to life and health reinsurance disclosures and provide a proposed guidance document to address auditor inquiries based on disclosures initially reported at year-end 2020. (Ref #2021-31)

E. SSAP No. 68—Business Combinations and Goodwill: Revisions reject ASU 2021-03, Intangibles – Goodwill and Other (Topic 350) – Accounting Alternative for Evaluating Triggering Events for statutory accounting. (Ref #2021-28)

F. SSAP No. 72—Surplus and Quasi-Reorganizations: Revisions reject ASU 2021-04, Earnings Per Share (Topic 260), Debt—Modifications and Extinguishments (Subtopic 470-50), Compensation—Stock Compensation (Topic 718), and Derivatives and Hedging—Contracts in Entity’s Own Equity (Subtopic 815-40)—Issuer’s Accounting for Certain Modifications or Exchanges of Freestanding Equity-Classified Written Call Options for statutory accounting. Revisions incorporate guidance on how to account for changes in fair values for written call options. (Ref #2021-27)

G. SSAP No. 86—Derivatives: Agenda item seeks public comment regarding possible revisions in considering an expanded effective hedge relationship permitted under U.S. generally accepted accounting principles (GAAP) within ASU 2017-12: Derivatives and Hedging: Targeted Improvements to Accounting for Hedging Activities. (Ref #2021-20)

H. SSAP No. 108—Derivatives Hedging Variable Annuity Guarantees: Revisions remove reference to the “standard scenario” to ensure consistency with VM-21, Requirements for Principle-Based Reserves for Variable Annuities. (Ref #2021-18)
I. **Appendix D—Nonapplicable GAAP Pronouncements**: Revisions reject ASU 2021-04, Presentation of Financial Statements (Topic 205), Financial Services—Depository and Lending (Topic 942), and Financial Services—Investment Companies (Topic 946), Amendments to SEC Paragraphs Pursuant to SEC Final Rule Releases No. 33-10786, Amendments to Financial Disclosures about Acquired and Disposed Businesses, and No. 33-10835, Update of Statistical Disclosures for Bank and Savings and Loan Registrants as not applicable for statutory accounting. (Ref #2021-30)

J. **Bond Proposal Project**: Exposed a discussion draft of potential reporting options to revise Schedule D, Part 1: Long-Term Bonds to capture more granularity and transparency of investments reported as bonds. It also exposed revisions to the proposed principle concepts in determining whether an asset-backed security (ABS) satisfies the credit enhancement criteria for reporting as a bond. (Ref #2019-21)

K. **Blanks Referrals**

i. Exposed and sponsored a proposal to the Blanks (E) Working Group to supplement reporting of subsidiary, controlled, and affiliated entities (SCA) investments reported in Schedule D, Part 1, Section 1: Valuation of Shares of Subsidiary, Controlled or Affiliated Companies. The supplemental data is consistent with SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities disclosure requirements, and it will assist state insurance regulators in identifying: 1) sub 1 and sub 2 filings are being submitted; and 2) situations where NAIC-approved values vary significantly from values reported on Schedule D-6-1. (Ref #2021-22)

ii. Exposed and sponsored a proposal to the Blanks (E) Working Group to add a new general interrogatory to require disclosure of when cryptocurrencies are directly held or permitted for the remittance of premiums. (Ref #2021-24)

L. **Editorial Revisions**: Exposed revisions to terminology references of “substantive” and “nonsubstantive” to reflect “new SAP concept” and “SAP clarification.” (Ref #2021-26EP)

Mr. Bruggeman stated that the comment period for items exposed is Feb. 18, 2022, except for agenda items 2021-18 and 2021-31, which have a Jan. 14, 2022, comment deadline to allow for possible adoption prior to the filing of the 2021 financial statements and their audited reports. He noted that these two items may be subject to a possible e-vote for adoption.

Mr. Bruggeman stated that the Working Group disposed agenda item 2020-24: Accounting and Reporting of Credit Tenant Loans without statutory revisions. He noted that with edits adopted to clarify the determination of a CTL, further discussion on this agenda item was no longer required. (Ref #2020-24)

Mr. Bruggeman provided that the Working Group received an update on the following items:

B. Received an update on the Working Group referral of agenda item 2019-49: Retroactive Reinsurance Exception regarding diversity in the reporting of companies applying the retroactive reinsurance exception, which allows certain contracts to be reported prospectively. The Casualty Actuarial and Statistical (C) Task Force discussed this item on Dec. 7 and exposed a presentation.

C. Received an update on U.S. GAAP exposures, noting that pending items will be addressed during the normal maintenance process.

D. Received an update on key pending projects and discussed priorities.

Mr. Bruggeman made a motion, seconded by Mr. Eft to adopt the report of the Statutory Accounting Principles (E) Working Group (Attachment One). The motion passed unanimously.

Mr. Hudson provided the report of the Blanks (E) Working Group, which met Nov. 16, 2021.

Mr. Hudson stated that the Working Group adopted its July 22 minutes (*see NAIC Proceedings – Summer 2021, Accounting Practices and Procedures (E) Task Force, Attachment Two*).

Mr. Hudson stated that the Working Group adopted its editorial listing and proposal 2021-14BWG, which expands the number of lines of business reported on Schedule H to match the lines of business reported on the Health Statement and modifies the instructions so they will be uniform between life/fraternal and property.

Mr. Hudson said the Working Group approved the State Filing Checklists.

Mr. Hudson said the Working Group rejected proposal 2021-11BWG requesting to add a new annual statement supplement to the Property/Casualty (P/C) statement to capture exposure data for Annual Statement Lines 4, 19.1, 19.2, and 21.2 of the Exhibit of Premiums and Losses. He noted that the Working Group also deferred for future discussion proposal 2021-13BWG for a public comment period ending March 4, 2022. Proposal 2021-13BWG adds a new supplement to capture premium and loss data for Annual Statement Lines 17.1, 17.2, and 17.3 of the Exhibit of Premiums and Losses (State Page) – Other Liability by more granular lines of business. He also stated that the Working Group exposed seven new proposals for a public comment period ending March 4, 2022.

Mr. Hudson announced that the long-time chair, Jake Garn (UT), is stepping down as chair of the Blanks (E) Working Group, but he will remain a member of the Working Group. He stated that Patricia Gosselin (DE) agreed to become the Working Group chair in 2022.

Mr. Hudson made a motion, seconded by Ms. Malm to adopt the report of the Blanks (E) Working Group (Attachment Two). The motion passed unanimously.

Having no further business, the Accounting Practices and Procedures (E) Task Force adjourned.
The Statutory Accounting Principles (E) Working Group met Dec. 11, 2021. The following Working Group members participated: Dale Bruggeman, Chair (OH); Carrie Mears and Kevin Clark, Co-Vice Chairs (IA); Kim Hudson and Susan Bernard (CA); William Arfanis, Kathy Belfi, and Kenneth Cotrone (CT); Rylynn Brown (DE); Kevin Fry (IL); Stewart Guerin (LA); Judy Weaver (MI); Doug Bartlett (NH); Bob Kasinow (NY); Melissa Greiner, Kimberly Rankin, and Matt Milford (PA); Jamie Walker (TX); Greg Chew (VA); and Amy Malm (WI).

1. Adopted its Nov. 10, Oct. 25, Sept. 10, Aug. 26, July 20, and July 12 Minutes

Ms. Malm made a motion, seconded by Mr. Chew, to adopt the Working Group’s Nov. 10 (Attachment One-A), Oct. 25 (Attachment One-B), Sept. 10 (Attachment One-C), Aug. 26 (Attachment One-D), July 20 (see NAIC Proceedings – Summer 2021, Accounting Practices and Procedures (E) Task Force, Attachment One-A), and July 12 (see NAIC Proceedings – Summer 2021, Accounting Practices and Procedures (E) Task Force, Attachment One-B) minutes. The motion passed unanimously.

The Working Group met Dec. 2, Aug. 10, and July 29 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) and paragraph 6 (consultations with NAIC staff related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings. No actions were taken during these meetings. The discussion for the respective dates referenced above included review of the Fall National Meeting agenda, an update on the “SSAP No. 43R Project,” and a review of certain (company specific) financial information from 2020 year-end financial statements filed with the NAIC.

2. Adopted Non-Contested Positions

The Working Group held a public hearing to review comments (Attachment One-E) on previously exposed items.

a. Agenda Item 2019-24

Mr. Bruggeman directed the Working Group to agenda item 2019-24: SSAP No. 71 – Levelized and Persistency Commissions – Issue Paper. Robin Marcotte (NAIC) stated that this issue paper documents the discussions that occurred during the development of the nonsubstantive revisions to Statement of Statutory Accounting Principles (SSAP) No. 71—Policy Acquisition Costs and Commissions, which are effective Dec. 31. She stated that the adoption of the nonsubstantive revisions to SSAP No. 71 has been through the entire committee adoption process; however, the issue paper was directed to document the discussions for historical retention purposes. In addition to the revisions to SSAP No. 71, the original agenda item also recommended a new annual statement general interrogatory to identify when a third-party has been utilized for the payment of commission expenses. This new general interrogatory was adopted by the Blanks (E) Working Group for annual 2021 reporting.

Ms. Belfi made a motion, seconded by Mr. Fry, to adopt Issue Paper No. 165—Levelized Commissions (Attachment One-F). The motion passed unanimously.

b. Agenda Item 2021-11

Mr. Bruggeman directed the Working Group to agenda item 2021-11: SSAP No. 43R – Credit Tenant Loans – Scope. Julie Gann (NAIC) stated that this agenda item was drafted as a result of the Valuation of Securities (E) Task Force’s adopted revisions to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual), which clarified that the definition of a credit tenant loan (CTL) is specific to mortgage loans in scope of SSAP No. 37—Mortgage Loans. She stated that the revisions clarify that the application of the structural assessment to identify CTLs is limited to direct mortgage loans and pertains to the potential reclassification of investments from Schedule B: Mortgage Loans to Schedule D-1: Long-Term Bonds for qualifying investments. In response to the P&P Manual revisions, this agenda item proposed three items: 1) to nullify Interpretation (INT) 20-10: Reporting Nonconforming CTLs as no longer applicable; 2) to dispose agenda item 2020-24: Accounting and Reporting of Credit Tenant Loans without statutory revisions; and 3) nonsubstantive revisions to SSAP No. 43R—Loan-Backed and Structured Securities to explicitly identified Securities Valuation Office (SVO)-identified CTLs in scope and delete references to examples of “other Loan-Backed and Structured Securities” in paragraph 27.b, as that paragraph is not a scope paragraph. Ms. Gann stated that INT 20-10 was proposed for formal nullification, with information on why the
INT is no longer relevant, even though the INT expired on Oct. 1. She stated that this documentation will provide the historical documentation on why the INT was not renewed or other statutory accounting revisions were not considered.

Mr. Fry made a motion, seconded by Mr. Clark, to: 1) nullify INT 20-10 as no longer applicable (Attachment One-G); 2) dispose agenda item 2020-24 without statutory revisions; and 3) adopt the exposed nonsubstantive revisions to SSAP No. 43R (Attachment One-H). The motion passed unanimously.

c. Agenda Item 2021-16

Mr. Bruggeman directed the Working Group to agenda item 2021-16: SSAP No. 30R – FHLB Disclosures – Blanks Referral. Jim Pinegar (NAIC) stated that this agenda item was to identify Federal Home Loan Bank (FHLB) borrowings that are captured in scope of SSAP No. 52—Deposit-Type Contracts and reported in Exhibit 7 – Deposit-Type Contracts. He stated that due to the varied reporting on Exhibit 7 based on differing policy forms, FHLB borrowings in Exhibit 7 were not readily identifiable to financial statement users. This agenda item did not propose statutory revisions but resulted in a proposal to the Blanks (E) Working Group to include a supplemental footnote for FHLB funding agreements in Exhibit 7.

Ms. Greiner made a motion, seconded by Mr. Bartlett, to adopt agenda item 2021-16 (Attachment One-I), noting no statutory revisions but support for the corresponding Blanks (E) Working Group proposal. The motion passed unanimously.

d. Agenda Item 2021-17

Mr. Bruggeman directed the Working Group to agenda item 2021-17: SSAP No. 32R – Permitted Valuation Methods. Mr. Pinegar stated that this agenda item removes a lingering reference indicating that historical cost is a permissible valuation method and introduces other minor consistency modifications to SSAP No. 32R—Preferred Stock.

Ms. Walker made a motion, seconded by Mr. Hudson, to adopt the exposed nonsubstantive revisions to SSAP No. 32R (Attachment One-J). The motion passed unanimously.

e. Agenda Item 2021-19EP

Ms. Weaver made a motion, seconded by Mr. Clark, to adopt the exposed nonsubstantive revisions to SSAP No. 16R and SSAP No. 43R (Attachment One-K). The motion passed unanimously.

3. Reviewed Comments on Exposed Items

The Working Group held a public hearing to review comments (Attachment One-E) on previously exposed items.

a. Agenda Item 2021-18

Mr. Bruggeman directed the Working Group to agenda item 2021-18: VM-21 Scenario Consistency Update. Ms. Marcotte stated that this agenda item proposed edits to SSAP No. 108—Derivatives Hedging Variable Annuity Guarantees to ensure consistency with VM-21, Requirements for Principle-Based Reserves for Variable Annuities. She stated that interested parties provided potential edits to the exposure, and the edits were shared with a few of the Life Actuarial (A) Task Force representatives, who suggested additional revisions. In an effort to have the updates in place for year-end 2021 reporting, a shortened exposure period of the combined edits was recommended so the Working Group could consider via e-vote potential adoption in January 2022.

Michael M. Monahan (American Council of Life Insurers—ACLI) stated that the ACLI supports a shortened exposure period and an e-vote for possible adoption by the Working Group.
Mr. Chew made a motion, seconded by Mr. Hudson, to expose agenda item 2021-18 until Jan. 14, 2022. The motion passed unanimously.

b. Agenda Item 2021-14

Mr. Bruggeman directed the Working Group to agenda item 2021-14: Policy Statement Terminology Change – Substantive and Nonsubstantive. Ms. Gann stated that this agenda item was drafted in response to a Financial Condition (E) Committee referral, which identified during the SSAP No. 71 discussions (Ref #2019-24: SSAP No. 71 – Levelized and Persistency Commission) that the statutory accounting terminology of “substantive” and “nonsubstantive” to describe statutory accounting revisions could be misunderstood by users that are not familiar with the specific definitions and application of those terms. She stated that those not familiar with the AP&P maintenance process may incorrectly reference a material financial impact as “substantive”, however, the use of the term in the AP&P Manual was to reflect the introduction of a new statutory accounting concept. She stated that the terms do not consider potential financial impact, and the introduction of a new statutory accounting principles (SAP) concept is a substantive change, regardless of any financial impact to a company, and SAP clarifications are nonsubstantive, even if a company previously misapplied the existing guidance and could have a financial impact from correcting past practice. She stated that this agenda item proposes revisions in the NAIC Policy Statement on Maintenance of Statutory Accounting Principles (Policy Statement) to replace the term “substantive” with “new SAP concept” and replace “nonsubstantive” with “SAP clarification.” She stated that interested parties suggested removal of the classifications completely with assessment as to the appropriate effective date and discussion process for every agenda item. She stated that this proposal went beyond the referral from the Committee to not revise the basis in determining the type of statutory revisions and only revise terminology. In addition, the Working Group can deviate from established processes to have more discussion, an issue paper, and an effective date for nonsubstantive (SAP clarification) changes, and it has utilized that ability in the past. Ms. Gann stated that if this concept is further desired by industry, a separate agenda item from interested parties could sponsor this change for further consideration.

Ms. Belfi made a motion, seconded by Ms. Malm, to adopt the exposed nonsubstantive revisions to the Policy Statement (Attachment One-L). The motion passed unanimously.

4. Considered Maintenance Agenda – Pending Listing – Exposures

Mr. Hudson made a motion, seconded by Mr. Bartlett, to move agenda items 2021-20 through 2021-31 to the active listing and expose all items for public comment. The motion passed unanimously.

Mr. Bruggeman stated that the public comment period for all agenda items (except 2021-18 and 2021-31) ends Feb. 18, 2022. The public comment period for agenda items 2021-18 and 2021-31 ends Jan. 14, 2022.

a. Agenda Item 2021-20

Mr. Bruggeman directed the Working Group to agenda item 2021-20: Effective Derivatives – ASU 2017-12. Ms. Gann stated that this agenda item was drafted to consider expanding guidance in SSAP No. 86—Derivatives for what qualifies as a highly effective hedging derivative. She stated that the intent is to mirror effective hedging determinations that the Financial Accounting Standards Board (FASB) permits within Accounting Standard Update (ASU) 2017-12, Derivatives and Hedging (Topic 815): Targeted Improvements to Accounting for Hedging Activities. While ASU 2017-12 was previously reviewed, the review was limited in scope and only adopted updates for hedging documentation, noting that a broader review would occur at a later date. Ms. Gann stated that both state insurance regulators and industry representatives requested further consideration of ASU 2017-12, particularly with regards to the permitted derivative arrangements that U.S. generally accepted accounting principles (GAAP) now allow to qualify as a highly effective hedge. She stated that in general, NAIC staff believe that if a hedging relationship is considered effective under U.S. GAAP, it should also be considered effective for statutory accounting. However, differences in the accounting between U.S. GAAP and statutory accounting need to be reviewed before those new effective hedging relationships are permitted to ensure the financial statement reporting and derivative impact is defined and understood. Ms. Gann stated that this agenda item will result in substantive revisions; however, the agenda item does not currently propose revisions but seeks public comment on several aspects in accordance with the current accounting and reporting provisions in SSAP No. 86. The agenda item details specifics, but she summarized a few items as follows:

- Partial Term Hedging – A provision that permits entities to enter into fair value hedges of interest rate risk for only a portion of the hedged financial instrument. Prior to ASU 2017-12, these arrangements were not generally successful
in being identified as highly effective due to timing differences between the underlying hedged item’s principal payment and the maturity of the hedging instrument. However, for statutory accounting, this could cause an issue if the underlying item is a liability and the hedging transactions results in an adjustment to the “basis of the hedged item.” Such an adjustment could result in a financial statement presentation that reduces the hedged liability when the contractual obligation has not actually been reduced, affecting the assessment of debt in the financial statements.

- Last of Layer – A provision that permits hedging in a closed portfolio of prepayable financial assets so that the items not expected to be affected by prepayments, defaults, and other factors affecting the timing and amount of cash flows are the underlying hedged item. In addition to U.S. GAAP specifications on how the derivative adjustments are reflected in the portfolio and not individual items, the guidance has the potential for derivative bifurcation so that a derivative can continue to effectively hedge one layer if another layer is no longer effective. The bifurcation of derivatives is not currently permitted in statutory accounting. and if changes are incorporated to allow this approach, the reporting of both the effective and noneffective portions of the hedging instrument will need to be determined.

- Expansion of Excluded Components – A provision that permits the ability to exclude a component from the assessment of hedge effectiveness. This also involves the bifurcation of derivatives and how the excluded components shall be reported for statutory accounting.

Mr. Bruggeman stated that the concepts in the agenda item will need significant input from both industry and state insurance regulators, especially with the reporting of derivatives and the resulting impact in the balance sheet. In addition to exposure, there was no objection to the recommendation for NAIC staff to work directly with industry to discuss and develop potential resolutions during the exposure period.

b. Agenda Item 2021-21

Mr. Bruggeman directed the Working Group to agenda item 2021-21: Related Party Reporting. Ms. Gann stated that this agenda item has been drafted in response to recent discussions on the reporting and disclosure requirements for investments that involve related parties. This agenda item clarifies the reporting of affiliate transactions within existing reporting lines in the investment schedules. The clarification is intended to be consistent with the definition of an affiliate pursuant to the Insurance Holding Company System Regulatory Act (#440), SSAP No. 25—Affiliates and Other Related Parties, and SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities. Additionally, this agenda item incorporates new disclosures for investment transactions that involve related parties, regardless of whether the related party is classified as an affiliate. Ms. Gann stated that the agenda item proposes new reporting requirements so that direct investments, investments sponsored or originated by related parties, and investments with other related party involvement are specifically identified in the investment schedules using a new electronic column. She stated that the Blanks (E) Working Group is planning to expose a Blanks proposal to capture the new electronic columns for year-end 2022 reporting.

c. Agenda Item 2021-22

Mr. Bruggeman directed the Working Group to agenda item 2021-22: Schedule D-6-1, Supplemental Reporting. Mr. Pinegar stated that this agenda item proposes four additional data capture elements for Schedule D-6-1: Valuation of Shares of Subsidiary, Controlled or Affiliated Entities. He stated that SSAP No. 97 details several filing requirements, including a requirement for certain subsidiary, controlled, and affiliated entities (SCAs) to file information with the NAIC annually to support the values reported on Schedule D-6-1. If a reported value for a SCA investment materially differs from the value approved by the NAIC, the insurer is required to adjust the reported value in its next quarterly financial statement blank, unless otherwise directed by the insurer’s state of domicile. Mr. Pinegar stated that upon review of the 2019 SCA filings, approximately 17% of all valuation filings resulted in valuation decreases, and some entities have year-after-year valuation decreases. This proposal to add four additional electronic-only columns will assist state insurance regulators in identifying that valuation filings are being submitted when required and identifying situations where the NAIC-approved value varies significantly from values reported on Schedule D-6-1. Mr. Pinegar stated that the supplemental data to be captured is consistent with existing disclosure requirements, so the agenda item does not propose statutory revisions, but it will result in a concurrent proposal to the Blanks (E) Working Group to include the new electronic columns in Schedule D-6-1. Mr. Bruggeman stated that he views this agenda item, which is recommended for exposure, as a way for state insurance regulators to perform reviews and reconciliations of SCA valuations more efficiently.
d. **Agenda Item 2021-23**

Mr. Bruggeman directed the Working Group to agenda item 2021-23: SSAP No. 43R – Financial Modeling Updated Guidance. Mr. Pinegar stated that this agenda item reflects updated NAIC designation/NAIC designation category guidance adopted on Oct. 20 by the Valuation of Securities (E) Task Force to the P&P Manual for residential mortgage backed securities (RMBS) and commercial mortgage backed securities (CMBS). He stated that while the P&P Manual governs the financial modeling process, when this guidance was first adopted, a summarized process was reflected in the AP&P Manual. However, as the financial modeling concept is no longer new and is governed by the Task Force, NAIC staff have proposed two alternatives for possible exposure. The first option will retain summarized financial modeling guidance in SSAP No. 43R, updated to reflect the changes by the Task Force. The second option will remove the financial modeling guidance from SSAP No. 43R and refer users to the source financial modeling guidance in the P&P Manual.

Mr. Bruggeman stated that his preference is to expose both options, seeking input as to which option is preferable to state insurance regulators and industry. Mr. Hudson stated that California supports exposing both options for public comment.

e. **Agenda Item 2021-24**

Mr. Bruggeman directed the Working Group to agenda item 2021-24: Cryptocurrency General Interrogatory. Jake Stultz (NAIC) stated that in May, the Working Group adopted **INT 21-01: Accounting for Cryptocurrencies**, which clarified that directly held cryptocurrencies do not reflect cash and do not meet the definition of an admitted asset. He stated that while researching this topic, it was noted that some insurance companies held cryptocurrencies, but these were not always easy to identify in the statutory financial statements. At the request of state insurance regulators, this agenda item has been drafted to propose a new general interrogatory within the annual reporting blanks specific to the use or acceptance of cryptocurrencies. The general interrogatory will capture whether cryptocurrencies are held (and if held, identification of which schedules the cryptocurrencies are reported) and whether cryptocurrencies are accepted for the payment of premiums. Mr. Stultz stated that while the agenda item is recommended for exposure and does not propose statutory revisions, it will result in a proposal to the Blanks (E) Working Group to add this new general interrogatory to the annual statement for year-end 2022 reporting.

f. **Agenda Item 2021-25**

Mr. Bruggeman directed the Working Group to agenda item 2021-25: Leasehold Improvement After Lease Termination. Mr. Stultz stated that in 2019, the Working Group adopted substantive revisions resulting in **SSAP No. 22R—Leases**. The updated guidance rejected financing lease treatment that was adopted in U.S. GAAP, but it incorporated language from Accounting Standards Codification (ASC) Topic 842, which kept SSAP No. 22R as consistent as possible with the primary concepts in the U.S. GAAP standard. This agenda item has been drafted to address questions about the treatment of leasehold improvements in situations where a leased property is purchased by the lessee during the lease term. It was noted that guidance for these situations was not addressed in **SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements or SSAP No. 73—Health Care Delivery Assets and Leasehold Improvements in Health Care Facilities**. This agenda item proposes nonsubstantive revisions to SSAP No. 19 and SSAP No. 73 to clarify that in any scenario in which a lease terminates early, all remaining leasehold improvements shall be immediately expensed. This would include scenarios where the lease naturally terminates or when the lessee purchases a property it is leasing.

g. **Agenda Item 2021-26EP**

Mr. Bruggeman directed the Working Group to agenda item 2021-26EP: Editorial Updates (Substantive vs. Nonsubstantive). Mr. Pinegar stated that this agenda item is in response to the Working Group’s adoption of agenda item 2021-14, which modifies the use of the terminology of “substantive” and “nonsubstantive” in the Policy Statement. This agenda item reviews all remaining uses of those terms throughout the AP&P Manual and recommends changes where appropriate. Mr. Pinegar stated that changes are recommended in the preamble, table of contents, summary of changes, and the Policy Statement (Appendix F). He stated that in addition, a file has been posted to identify every use of the terms and includes the rationale of why some were not proposed for modification. As the intent is to use the new phraseology going forward, starting on or after Jan. 1, 2022, historical documents are not proposed for revision.

h. **Agenda Item 2021-27**

Mr. Bruggeman directed the Working Group to agenda item 2021-27: **ASU 2021-04, Issuer’s Accounting for Certain Modifications**. Mr. Stultz stated that this agenda item reviews **ASU 2021-04, Earnings Per Share (Topic 260), Debt**—
Modifications and Extinguishments (Subtopic 470-50), Compensation—Stock Compensation (Topic 718), and Derivatives and Hedging—Contracts in Entity’s Own Equity (Subtopic 815-40): Issuer’s Accounting for Certain Modifications or Exchanges of Freestanding Equity-Classified Written Call Options. He stated that ASU 2021-04 directs that when a freestanding equity-classified written call option is modified or exchanged and the instrument remains classified as equity after the modification/exchange, the differences in fair value before and after the modification are to be accounted for as an adjustment to equity. However conversely, ASU 2021-04 directs that if the modification/exchange is related to a debt instrument or line-of-credit, the differences in fair value before and after the modification may be capitalized in accordance with U.S. GAAP debt issuance guidance, a concept disallowed per SSAP No. 15—Debt and Holding Company Obligations. Mr. Stultz stated that this agenda item proposes to reject ASU 2021-04 for statutory accounting; however, it also proposes nonsubstantive modifications to SSAP No. 72—Surplus and Quasi-Reorganizations, incorporating minor updates related to the accounting for changes in fair value involving the exchange of a free-standing equity-classified written call options.

i. Agenda Item 2021-28

Mr. Bruggeman directed the Working Group to agenda item 2021-28: ASU 2021-03, Intangibles – Goodwill and Other. Mr. Pinegar stated that this agenda item reviews ASU 2021-03, Intangibles – Goodwill and Other – Accounting Alternative for Evaluating Triggering Events. He stated that ASU 2021-03 provides private companies and not-for-profit entities with an optional accounting alternative for the performance of a goodwill impairment triggering evaluation. The amendments allow for the assessment of goodwill impairment only as of the end of a reporting period. Mr. Pinegar stated that statutory accounting’s authoritative guidance regarding impairment is documented in INT 06-07: Definition of Phrase “Other Than Temporary” and does not permit the delay of an impairment assessment until a reporting period. He stated that this agenda item proposes nonsubstantive revisions to SSAP No. 68—Business Combinations and Goodwill to reject ASU 2021-03 for statutory accounting.

j. Agenda Item 2021-29

Mr. Bruggeman directed the Working Group to agenda item 2021-29: ASU 2021-05 – Variable Lease Payments. Mr. Stultz stated that this agenda item reviews ASU 2021-05, Leases (Topic 842): Lessors—Certain Leases with Variable Lease Payments. He stated that ASU 2021-05 applies to lessors with lease contracts that have variable lease payments that do not depend on a reference index or rate and/or would have resulted in the lessor being required to recognize a day one selling loss (at lease commencement) if those leases were classified as sales-type or direct financing. He stated that SSAP No. 22R requires nearly all leases to be treated as operating leases, and adoption of this guidance would be redundant and unnecessary, so this agenda item proposes nonsubstantive revisions in SSAP No. 22R to reject ASU 2021-05.

k. Agenda Item 2021-30

Mr. Bruggeman directed the Working Group to agenda item 2021-30: ASU 2021-06 – Amendments to SEC Paragraphs. Mr. Stultz stated that this agenda item reviews ASU 2021-06, Presentation of Financial Statements (Topic 205), Financial Services—Depository and Lending (Topic 942), and Financial Services—Investment Companies (Topic 946), Amendments to SEC Paragraphs Pursuant to SEC Final Rule Releases No. 33-10786, Amendments to Financial Disclosures about Acquired and Disposed Businesses, and No. 33-10835, Update of Statistical Disclosures for Bank and Savings and Loan Registrants. He stated that ASU 2021-06 provides formatting and paragraph references applicable to only U.S. Securities and Exchange Commission (SEC) registrants. This agenda item proposes nonsubstantive revisions to Appendix D—Nonapplicable GAAP Pronouncements to reject ASU 2021-06 as not applicable to statutory accounting.

l. Agenda Item 2021-31

Mr. Bruggeman directed the Working Group to agenda item 2021-31: Life Reinsurance Disclosure Clarifications. Ms. Marcotte stated that this agenda item is to address questions received from members of the American Institute of Certified Public Accountants’ (AICPA) NAIC Task Force regarding the life reinsurance disclosures and the related audited notes that were first effective in December 2020. The disclosures were adopted in SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance from agenda item 2017-28: Reinsurance Risk Transfer for Short Duration Contracts. Ms. Marcotte stated that preparers and auditors have highlighted unclear elements in the disclosures and requested several clarifications, specifically whether the disclosures apply to ceding and assuming contracts, the format expected for the audited notes, and how broadly to interpret the scope of certain disclosures. The proposed nonsubstantive revisions to SSAP No. 61R narrow the scope and clarify what is required in the disclosures. In order to allow for a possible adoption for year-end 2021 reporting, a shortened exposure period of Jan. 14, 2022, was recommended.
Ms. Marcotte summarized the proposed revisions by paragraph:

- **Paragraph 78 revision** is to provide clarity that a supplemental table is not required if the answer is none or not applicable. The disclosure responses indicating that such features were identified could be either in the audited notes or the audited supplemental table.

- **Paragraph 79 and 80 revisions** provide clarity that the disclosure applies to ceding contracts.

- **Paragraph 80 revisions** are to narrow the scope of the risk limiting features disclosure, which is currently broadly written. The proposed revisions would not require disclosure of excess of loss and stop loss deductible and caps, which are not adjustable. She stated that such clauses are standard features in such contracts.

- **Paragraph 82.b. revisions** would remove the disclosure of non-proportional reinsurance that does not result in significant surplus relief, as the disclosure would only capture immaterial items.

- **Paragraph 83 and 84 revisions** pertain to U.S. GAAP to statutory accounting reporting differences of reinsurance contracts. The revisions clarify that if the entity is not a U.S. GAAP preparer or not included in upstream U.S. GAAP preparer financial statements, then the disclosure can be noted as not applicable. She stated that because of the Life and Health Reinsurance Agreements Model Regulation (#791), the life and health disclosure will capture more reinsurance contracts than the related property/casualty (P/C) disclosures.

Ms. Marcotte noted that subsequent to posting the national meeting materials, NAIC staff also received a question on whether the disclosure was intended to be comparative, meaning the current and prior year. Mr. Bruggeman stated that these disclosures will generally be comparative, but the proposed revisions could be prospective; therefore, prior year 2020 disclosures did not have to be updated with these disclosure changes. Otherwise, he stated that the disclosures should be comparative and include the current and prior year. He noted that the disclosures needed to be exposed to make sure that revisions do not remove state insurance regulator-desired disclosures. He stated agreement with the revisions in paragraphs 83 and 84 regarding non-U.S. GAAP filers. He noted that if early statutory filers submit information before any action is taken by the Working Group, more information may be disclosed than will ultimately be required; however, the clarifications would still assist auditors.

Mr. Monahan stated that the ACLI supports a shortened exposure period and an e-vote for possible adoption by the Working Group.

5. **Discussed Other Matters**

   a. **Ref #2019-21: SSAP No. 43R – Update**

Ms. Gann stated that this agenda item, now referred to as the principles-based bond proposal project, intends to define the type of instruments eligible for reporting on Schedule D-1. She provided a brief history of the project, noting that the principles-based definition was exposed in May with comments considered in August. She stated that as part of the direction in August to begin drafting an issue paper and statutory revisions, the Working Group directed ongoing discussions with state insurance regulators and industry to discuss and refine the principles-based bond definition. She stated that as a part of this continued discussion, two items are recommended for exposure. The first is a discussion document, which presents possible reporting changes to incorporate improved transparency and granularity in Schedule D-1. This document requests information on potential changes in reporting lines, a new sub-schedule for Schedule D-1 to detail certain asset-backed securities (ABS), and potential changes to the columns and information currently reported in Schedule D-1. A key proposed element is to move away from the current “general categories” for reporting and replace those groupings with more useful reporting lines based on investment type. The exposure reviews items for possible change consideration and specifically requests comments on the removal of the general categories and whether those changes would hinder any tools or analyses performed. Ms. Gann stated that in terms of a possible new Sub-Schedule D-1, this schedule could include non-traditional reporting items and additional informational items, such as balloon payments and expected payoff dates. In response to comments received from industry, this could also be an opportunity to review how other informational data elements are captured, reviewing for usefulness and relevance for state insurance regulators.
Ms. Gann stated that the second item recommended for exposure proposes revisions to the “sufficiency” definition previously captured in the bond proposal definition, specifically what is required for sufficient credit enhancement for an ABS to qualify for reporting on Schedule D-1. She stated that for an ABS to be reported on Schedule D-1, sufficient credit enhancement must be present so that the holder is in a different economic position than had they directly owned the underlying collateral. In response to comments received, the agenda item now reflects the use of the term “substantive” credit enhancement, as the prior term of “sufficient” was more akin to a credit evaluation, which was not in line with the proposed principal bond concepts.

Mr. Clark stated that the latest phraseology update is in line with the principal concepts, and it will prevent situations where items are placed in a special purpose vehicle (SPV) and the SPV then issues bonds to an insurer. This new phraseology will prevent these situations by ensuring that the bond holder is in a different economic position than had they held the underlying collateral directly. He stated that the updated phraseology corrects prior notions that a quantitative assessment is required to determine the amount of credit enhancement, which was beyond the scope of the project.

Michael Reis (Northwestern Mutual), representing interested parties, stated appreciation for state insurance regulators and NAIC staff for their continued collaboration on this project, noting that they support the principles-based approach and believe a workable solution will be achieved. He stated that several topics remain outstanding, which include transitional reporting (reporting of items that may ultimately move schedules), as well as the accounting and reporting of items that do not meet the principal concepts. Other items of concern to interested parties relate to risk-based capital (RBC) and may need to be addressed through the Capital Adequacy (E) Task Force; however, interested parties remain willing to assist in the project.

Ms. Gann stated that to be sensitive to the time commitments of industry for year-end reporting, the draft issue paper and possible statutory revisions will not be exposed until later in the first quarter of 2022. In addition, the earliest the new principal concepts could be adopted and reflected in Schedule D-1 is likely Jan. 1, 2024. She stated that thus far, the project has included updated reporting guidance of residual tranches and the formation of an informal coordination group involving the chairs/vice chairs of the Statutory Accounting Principles (E) Working Group, Valuation of Securities (E) Task Force, Capital Adequacy (E) Task Force, and related RBC working groups to discuss appropriate RBC charges for residual tranches and other potential RBC impacts from the development of the principles-based bond definition. In addition, several other issues remain outstanding. Examples include defining an operating entity, which is required for an issuer obligation classification; when principal payment relies on refinancing; as well as transitional accounting and reporting guidance. Mr. Bruggeman stated that the intent of the informal coordination group is to ensure that all affected parties understand the types of investments that are being specifically addressed in the project, especially those that may be subject to RBC arbitrage.

Mr. Clark made a motion, seconded by Ms. Weaver, to expose the discussion draft of potential reporting options and the proposed revised guidance and related examples for defining and determining whether an ABS has substantive credit enhancement to qualify for reporting on Schedule D-1. The motion passed unanimously.

Ms. Gann stated that INT 20-03: Troubled Debt Restructuring Due to COVID-19 and INT 20-07: Troubled Debt Restructuring of Certain Debt Instruments Due to COVID-19 were adopted in response to modifications that were being made to loans and debt securities in response to COVID-19. The adopted INTs provided exceptions to the application of guidance in SSAP No. 36—Troubled Debt Restructuring. The INTs were originally scheduled to expire as of Dec. 31, but they were extended to Jan. 2, 2022, in accordance with the extension of the Coronavirus, Aid, Relief, and Economic Security (CARES) Act. She stated that NAIC staff received informal comments that industry would not request an extension, and they recommended that the INTs automatically expire on Jan. 2, 2022.

Mr. Monahan stated that the ACLI recommends allowing INT 20-03 and 20-07 to expire on Jan. 2, 2022. With this commentary, the Working Group did not propose further consideration.

c. Review of GAAP Exposure

Ms. Gann stated that the FASB has two U.S. GAAP exposures open for public comment, both of which do not warrant comment from the Working Group. One exposure proposes removing the U.S. GAAP troubled debt restructuring guidance for lenders as no longer necessary under the U.S. GAAP current expected credit loss (CECL) standard. Ms. Gann stated that the proposed FASB revisions may cause further U.S. GAAP to statutory accounting differences, as the CECL standard has not been adopted for statutory accounting.
Ms. Gann stated that in addition to these updates, Insurance Core Principle (ICP) 14, the international standard for asset valuation, is undergoing review. NAIC staff are participating in these discussions and will keep the Working Group informed of any updates.

d. Referral to the Casualty Actuarial and Statistical (C) Task Force – Update

Ms. Marcotte stated that the Casualty Actuarial and Statistical (C) Task Force met Dec. 7 to initially discuss a presentation regarding the Working Group referral on agenda item 2019-49: Retroactive Reinsurance Exception regarding diversity in reporting for retroactive intercompany reinsurance contracts, which meet the exception and allow for prospective reporting. She stated that actions taken on Dec. 7 resulted in a 45-day exposure of the presentation. She stated that the largest issue to address is whether to allocate premium back to prior years on annual statement Schedule P when multiple years of premium are ceded to a reinsurer. She noted that no matter which methodology is used, such contracts produce distortions, and determining what will produce the most useful Schedule P information is relevant. A response from the Task Force is not anticipated until late in the first quarter or early in the second quarter of 2022. Ms. Marcotte also noted that there may be disconnects between some of the SSAP No. 62R—Property and Casualty Reinsurance guidance in paragraphs 36 and 37 and the intercompany pooling guidance in the annual statement instructions.

e. Key Items from the Maintenance Agenda

Ms. Gann provided an update on outstanding projects; a summary of each is as follows:

- **ASU 2016-13, Financial Instruments – Credit Losses:** At a minimum, this topic will require review of statutory accounting’s incurred loss impairment guidance; however, multiple varying viewpoints and consideration will need to be made. One example provided is that the asset valuation reserve (AVR), a credit component utilized only by statutory accounting, could be a substitute for ASU 2016-13; however, only life companies are subject to AVR. While ASU 2016-13 has been delayed multiple times, its effective date for non-SEC filers is January 2023.

- **Goodwill:** While two agenda items remain outstanding (agenda item 2019-12: ASU 2014-17, Business Combinations – Pushdown Accounting and agenda item 2019-14: Attribution of Goodwill), additional disclosures are expected from the 2021 financials. Accordingly, NAIC staff recommend that these topics be deferred until the information from these new disclosures is shared with the Working Group.

- **Derivatives Hedging Fixed Indexed Products:** NAIC staff have identified this topic to be a priority project; however, the development of statutory revisions is currently paused as NAIC staff is monitoring discussions at the Index-Linked Variable Annuity (A) Subgroup. Prior Working Group and industry comments have noted that it would be ideal for both the reserve calculation and derivative guidance to move in tandem.

- **State Affordable Care Act (ACA) Reinsurance Programs:** This agenda item is to provide accounting and reporting guidance regarding state ACA reinsurance programs being run under Section 1332 waivers. NAIC staff will work with industry to develop additional revisions for Working Group consideration that expand the principles-based guidance to address the diversity in state programs identified in the prior exposure.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.
The Statutory Accounting Principles (E) Working Group met Nov. 10, 2021. The following Working Group members participated: Dale Bruggeman, Chair (OH); Carrie Mears and Kevin Clark, Co-Vice Chairs (IA); Blase Abreo and Sheila Travis (AL); Kim Hudson (CA); William Arfanis (CT); Rylwynn Brown (DE); Cindy Andersen and Kevin Fry (IL); Stewart Guerin (LA); Judy Weaver (MI); Doug Bartlett (NH); Bob Kasinow (NY); Melissa Greiner and Kimberly Rankin (PA); Jamie Walker (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI).

1. **Reviewed Comments on Exposed Items**

The Working Group held a public hearing to review comments (Attachment One-A1) on previously exposed items.

   a. **Agenda Item 2021-15**

Mr. Bruggeman directed the Working Group to agenda item 2021-15: SSAP No. 43R – Residual Tranches. Julie Gann (NAIC) stated that this agenda item provides updates to SSAP No. 43R—Loan-Backed and Structured Securities to clarify that securitization residual tranches shall be reported on Schedule BA: Other Long-Term Invested Assets and valued at the lower of cost or fair value. She stated that during the Working Group’s continued collaboration with industry representatives on the “Bond Proposal Project” (agenda item 2019-21: SSAP No. 43R), inconsistencies were identified regarding the reporting of residual tranches. From information received, some entities already report residual tranches on Schedule BA, while other entities report these tranches on Schedule D-1: Long-Term Bonds with either a self-assigned 5GI or a self-assigned NAIC 6 designation. She stated that the use of the NAIC 5GI process for residual tranches is an incorrect application of the guidance as: 1) there are no contractual interest and principal payments to certify as current; and 2) the insurer cannot have an actual expectation of receiving all anticipated principal and interest payments. Residual tranches absorb the first losses in a securitization structure and only receive cash flows after all other tranches receive their contractual cash flows. Thus, a reporting entity cannot have an actual expectation on the collection of future payments. Ms. Gann stated that comments received from interested parties indicate support for the reporting of residual tranches on Schedule BA. However, due to the proximity to year-end 2021, they requested a Dec. 31, 2022, effective date. In addition, if the residual tranches are permitted to remain on Schedule D-1 for year-end 2021, interested parties support the requirement to report these securities with an NAIC 6 designation.

Ms. Gann stated that NAIC staff recommend that the Working Group adopt the exposed revisions to SSAP No. 43R with edits proposed by interested parties, which include a Dec. 31, 2022, effective date (with early adoption permitted). Additionally, NAIC staff recommend a memorandum from both the Working Group and the Valuation of Securities (E) Task Force to the Blanks (E) Working Group to clarify that self-assigned NAIC 5GI designations are not permitted for residual tranches, and such items reported on Schedule D-1 for year-end 2021 are required to be reported with an NAIC 6 designation. She stated that NAIC staff also recommend a referral to the Task Force with a request to clarify the Purposes and Procedures Manual of the NAIC Investment Office (P&P Manual) to mitigate future misapplication of the NAIC 5GI process.

Diane Bellas (Allstate), representing interested parties, stated that no further comments are offered on this agenda item. However, interested parties appreciate the ongoing collaboration and the consideration of interested parties’ comments and support adoption with the edits as recommended by NAIC staff.

Mr. Clark made a motion, seconded by Ms. Walker, to adopt agenda item 2021-15 and the exposed nonsubstantive revisions to SSAP No. 43R, with the edits presented by NAIC staff (Attachment One-A2). The motion also included direction for NAIC staff to provide: 1) a memorandum to the Blanks (E) Working Group to direct that self-assigned NAIC 5GI designations are not permitted for residual tranches, and such items reported on Schedule D-1 are required to be reported with an NAIC 6 designation; and 2) a referral to the Valuation of Securities (E) Task Force recommending that the Task Force consider edits to the P&P Manual to clarify the application of the NAIC 5GI process. The motion passed unanimously.
b. **Agenda Item 2021-12EP**

Mr. Bruggeman directed the Working Group to agenda item 2021-12EP: Editorial Updates. Robin Marcotte (NAIC) stated that the agenda item provides five editorial maintenance updates to the *Accounting Practices and Procedures Manual* (AP&P Manual). Four of the updates include minor formatting or revisions for consistency to the Preamble, Appendix A-001, Appendix C, and Appendix C-2. Ms. Marcotte stated that the remaining edit includes a minor update to improve the readability of the guidance for securities receivables in SSAP No. 21R—Other Admitted Assets.

Mr. Hudson made a motion, seconded by Ms. Malm, to adopt the exposed nonsubstantive editorial revisions to the Preamble, Appendix A-001, Appendix C, Appendix C-2, and SSAP No. 21R (Attachment One-A3). The motion passed unanimously.

c. **Agenda Item 2021-13**

Mr. Bruggeman directed the Working Group to agenda item 2021-13: Salvage – Legal Recoveries. Ms. Marcotte stated that this agenda item recommended nonsubstantive revisions to SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses to clarify that salvage and subrogation estimates and recoveries should be reported as a reduction to both claims/losses and loss adjusting expenses (LAE), as appropriate. She stated that while this practice is believed to already be consistent with the current practice of most reporting entities, the revisions clarify that salvage and subrogation estimates and recoveries can include amounts related to both claims/losses and LAE. The corresponding estimates should be reported as a reduction of losses and/or LAE reserves. However, once the amounts for salvage and subrogation and coordination of benefits are received, they shall be reported as a reduction of paid losses and LAE depending on the nature of the costs being recovered. Ms. Marcotte stated that notice of this exposure was sent to the Casualty Actuarial and Statistical (C) Task Force, the Life Actuarial (A) Task Force, and the Health Actuarial (B) Task Force, and no comments were received. She stated that interested parties are supportive of the proposal, which also included an updated disclosure related to the reporting of estimated salvage and subrogation and their impact on unpaid claims, losses, or associated LAE.

Ms. Weaver made a motion, seconded by Mr. Kasinow, to adopt the exposed nonsubstantive revisions SSAP No. 55 (Attachment One-A4). The motion passed unanimously.

d. **INT 21-02T**

Mr. Bruggeman directed the Working Group to Interpretation (INT) 21-02T: Extension of the Ninety-Day Rule for the Impact of Hurricane Ida. Jake Stultz (NAIC) stated that this interpretation provides a 60-day extension to the “90-day rule” in SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers for policies affected by Hurricane Ida. He stated that the optional, temporary extension is supported by interested parties and would apply to uncollected premium balances, bills receivable for premiums, and amounts due from agents and policyholders and would automatically nullify on Jan. 24, 2022. The optional extension applies to year-end 2021 reporting. However, as it expires in January 2022, the INT will be reflected in Appendix H—Superseded SSAPs and Nullified Interpretations in the “As of March 2022” edition of the AP&P Manual.

Mr. Hudson made a motion, seconded by Ms. Brown, to adopt INT 21-02: Extension of the Ninety-Day Rule for the Impact of Hurricane Ida (Attachment One-A5). The motion passed unanimously.

Ms. Gann stated that the next Working Group meeting is expected to occur in-person on Dec. 11 in San Diego, CA. This meeting will be held as part of the Fall National Meeting and will be immediately followed by the Accounting Practices and Procedures (E) Task Force meeting. She stated that an audio option is available for individuals that register for the meeting. However, it is unknown at this time if that option will permit those registrants the ability to speak. She stated that information is available on the NAIC National Meeting web page.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

Mr. Dale Bruggeman, Chairman  
Statutory Accounting Principles Working Group  
National Association of Insurance Commissioners  
1100 Walnut Street, Suite 1500  
Kansas City, MO 64106-2197

RE: Ref #2021-15, SSAP No. 43R-Residual Tranches

Dear Mr. Bruggeman:

Interested parties (“IPs”) appreciate the opportunity to comment on the Statutory Accounting Principles Working Group (the Working Group) proposal Ref #2021-15, SSAP No. 43R-Residual Tranches (“the proposal”).

The proposal would require certain modifications to SSAP No. 43R to report non-rated residual tranches or interests, currently in the scope of SSAP No. 43R, on Schedule BA as Other Long-Term Invested Assets at lower of cost or market. Also proposed is that a footnote be added to further define “non-rated residual tranches or interests” as follows:

“Reference to “non-rated residual tranches or interests” intends to capture securitization tranches, beneficial interests, interests of structured finance investments, as well as other structures captured in scope of this statement, that reflect loss layers without contractual interest or principal payments. Payments to holders of these investments occur after contractual interest and principal payments have been made to other tranches or interests and are based on the remaining available funds. Although payments to holders can occur throughout an investment’s duration (and not just at maturity), such instances still reflect the residual amount permitted to be distributed after other holders have received contractual interest and principal payments.”

IPs have the following comments related to the proposal:

1) IPs agree that residual tranches or interests in scope of SSAP No. 43R, which meet the definition in the proposed footnote, should be reported on Schedule BA at lower of cost or market (“LOCOM”).

Some companies already report such investments on Schedule BA and others report them on Schedule D measured at either LOCOM or amortized cost. We believe the proposed
change in reporting would be cost justified as it would not be overly burdensome to insurers and would provide consistent reporting by insurers. It also would provide additional information for regulators to continue to evaluate such investments.

2) IPs believe an effective date of 12/31/2021 is achievable with regard to rating all residual tranches in the scope of SSAP No. 43R as NAIC 6. However, for various reasons noted below, IPs do not believe it would be feasible to transfer those residual tranches currently reported on Schedule D to Schedule BA for year-end 2021 reporting.

In conversations with NAIC staff and regulators, while working on the Working Group’s Bond Project (formerly known as the 43R Project), IPs have been asked if adopting the proposal effective 12/31/2021 is feasible and also if reporting such interests on Schedule BA separately depending on the underlying collateral (e.g., fixed income, equity, real estate, etc.; same categories that currently exist on Schedule BA) would be feasible beginning at year-end 2022.

IPs believe that the 12/31/2021 reporting is not feasible as it would be operationally difficult to change processes in a timely manner prior to year-end reporting, including any vendor modifications that would be required, as well as address downstream implications such as impacts on cash flow statements and investment schedule rollforwards, etc., to ensure there are no unintended consequences related to the various statutory blanks and related processes. IPs support making such a change beginning at year-end 2022 and support the more granular reporting requested (i.e., based on underlying collateral) as it will allow the requisite amount of time to address those operational items discussed above. IPs also support allowing those companies that can address their processes prior to year-end 2021, the opportunity to transfer the residual tranches in scope from Schedule D to BA in 2021. It is important that the Working Group make companies aware that (1) the transfer of residual tranches to Schedule BA is optional for year-end 2021/quarterly 2022 and (2) if they choose to transfer the residual tranches to Schedule BA at year-end 2021, they would also be required to transfer them at year-end 2022 into the more granular categories discussed above based on underlying collateral (e.g., equities, fixed income, real estate, etc.). For those companies that decide to transfer the residual tranches in 2021, Blanks instructions would be needed well in advance of year-end to provide clarity related to the following:

- The specific section and subsection of Schedule BA where the residual tranches and interests in scope of this proposal would be reported.
- How the various existing columns of Schedule BA would be used for such investments. For example, Schedule BA “cost” would be used to report “amortized cost” for such investments.
- Communicating that LOCOM would be applied to such investments and clarifying where both amortized cost and fair value would be reported on the existing Schedule BA.
3) IPs recommend certain modifications to the proposed footnote and changes to SSAP No. 43R as follows:

- Eliminate the reference to “non-rated” in paragraphs 26a, b, and c and the proposed footnote. IPs recommend eliminating the reference to non-rated as its definition may be interpreted inconsistently by various insurers (e.g., rated by the NAIC, rated by an NRSRO, insurer-rated such as NAIC 5 or 6?). We believe the intent is to exclude from Schedule D reporting, those investments that are typically not rated in the investment markets because their characteristics are not debt-like (e.g., no contractual payments of principal and/or interest) and thus we believe the inclusion of only the criteria “no contractual payments of principal and/or interest” will capture all investments intended to be captured.

- IPs recommend removing the term “structured finance investments” from the footnote as it is an undefined term and is not clear to IPs at to what it is intended to capture. We believe retaining the references to “securitization tranches and beneficial interests” is adequate and would be understood to include all those investments intended by the regulators to be in the scope of the proposal.

- IPs recommend modifying the footnote to include those investments “…that reflect loss layers without contractual interest or principal payments” to those investments “…that reflect loss layers without any contractual payments, whether principal, interest, or both”. This proposed change would be more complete and “all-encompassing”.

- Ensure LOCOM is clarified to be “lower of amortized cost or market”. The use of the term “amortized cost” versus “cost” more accurately reflects the type of investment and is more aligned with the use of the term in existing SSAP No. 43R.

The following proposal reflects IPs comments discussed above as related to the footnote:

“Reference to “residual tranches or interests” intends to capture securitization tranches and beneficial interests as well as other structures captured in scope of this statement, that reflect loss layers without any contractual payments, whether principal, interest, or both. Payments to holders of these investments occur after contractual interest and principal payments have been made to other tranches or interests and are based on the remaining available funds. Although payments to holders can occur throughout an investment’s duration (and not just at maturity), such instances still reflect the residual amount permitted to be distributed after other holders have received contractual interest and principal payments.”

We would be happy to discuss any of our recommendations above and appreciate the continued dialogue related to this topic and the overall Bond Project among the Working Group, NAIC Staff, Regulators, and IPs.

* * *
Thank you for considering interested parties’ comments. If you have any questions in the interim, please do not hesitate to contact us.

Sincerely,

D. Keith Bell                                      Rose Albrizio

cc: NAIC staff
    Interested parties

Kansas City, MO 64106-2197

RE: Items Exposed for Comment by the Statutory Accounting Principles Working Group on August 26, 2021 with Comments due October 1, 2021

Dear Mr. Bruggeman:

Interested parties appreciate the opportunity to comment on the exposure drafts released for comment by the NAIC Statutory Accounting Principles (E) Working Group (the Working Group). We offer the following comments:

**Ref #2021-11 SSAP No. 43R**

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed the following:

1. Revisions to *SSAP No. 43R—Loan-Backed and Structured Securities*, as illustrated in the proposal, to explicitly identify the SVO-Identified CTLs that are in scope of SSAP No. 43R. These revisions also propose to delete the examples of “other loan-backed and structured securities” in paragraph 27.b. Comments are requested if this deletion is perceived to remove investments from the scope of SSAP No. 43R.

2. Request for comment on the Working Group’s intent to nullify INT 20-10. (This INT nullifies automatically on Oct. 1, 2021, but it is anticipated that the explicit nullification will identify the revisions adopted by the VOSTF for historical reference.)

3. Disposal of agenda item 2020-24: Accounting and Reporting of Credit Tenant Loans without statutory revisions. This was the agenda item in response to the initial VOSTF referral and is no longer applicable with the adopted Task Force edits to clarify that CTLs are mortgage loans in scope of SSAP No. 37.
Interested parties have no comment on this item.

Ref #2021-12 NAIC Accounting Practices and Procedures Manual Editorial and Maintenance Update

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed editorial revisions to the Preamble, Appendix A-001: Investments of Reporting Entities, Appendix C Actuarial Guidelines – Appendices, Appendix C-2 Interpretations of the Emerging Actuarial Issues (E) Working Group, and SSAP No. 21R —Other Admitted Assets, as illustrated in the proposal.

Interested parties have no comment on this item.

Ref #2021-13 SSAP No. 55: Salvage - Legal Recoveries

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and took the following actions:

1. Exposed revisions to SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses, as illustrated in the proposal, to clarify that salvage and subrogation recoveries should be reported as a reduction of losses and/or loss adjusting expense (LAE reserves), depending on the nature of the costs being recovered. In addition, updates to the disclosure in paragraph 17.h. were exposed.

2. Directed NAIC staff to coordinate develop conforming revisions to the Annual Statement instructions.

3. Directed notification of the exposure to the following actuarial Task Forces:
   a. Casualty Actuarial and Statistical (C) Task Force,
   b. Life Actuarial (A) Task Force, and
   c. Health Actuarial (B) Task Force

Interested parties support this proposal.

Ref #2021-14 Policy Statement Terminology Change – Substantive & Nonsubstantive

The Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to the NAIC Policy Statement on Maintenance of Statutory Accounting Principles, as illustrated in the proposal and suggested by the Financial Condition (E) Committee in their Aug. 14, 2021, referral, to alter the terminology used when discussing types of statutory accounting revisions.

After some discussion and consideration of the proposal and its impact on the implementation of new statutory accounting standards, interested parties concluded that the distinction between substantive (proposed to change to “development of new SSAPs or New SAP Concepts in an
Existing SSAPs”) and non-substantive (proposed to change to “Development of SAP Clarifications”) is at times confusing and that there would be more transparency in the development process if the distinction were eliminated. Instead, we recommend that all new standards be handled similarly but that the effective date for each new standard be determined by evaluating the complexity of implementation (e.g., the extent that systems changes are required) and the availability of data to insurers to implement the new standard. This determination would be made as the new standard is being completed and with feedback from industry as to the time needed to adopt the new requirements.

**INT 21-02T: Extension of Ninety-Day Rule for the Impact of Hurricane Ida**

The Working Group reached a tentative consensus for a one-time optional extension of the ninety-day rule for uncollected premium balances, bills receivable for premiums and amounts due from agents and policyholders required per SSAP No. 6, paragraph 9. For policies in effect as of the declaration of a state of emergency by either the states, U.S. territories or federal government, as described in paragraph 1, insurers with policyholders in areas impacted by Hurricane Ida, its aftermath and the related flooding may wait 150 days (90 days per existing guidance, plus a 60-day extension), not to extend beyond Jan. 23, 2022, before nonadmitting premiums receivable from those directly impacted policyholders as required per SSAP No. 6, paragraph 9. b. Existing impairment analysis remains in effect for these affected policies.

The Working Group noted that a temporary sixty day (60) extension had previously been provided for other nationally significant disasters including INT 20-11: Extension of Ninety-Day Rule for the Impact of 2020 Hurricanes, California Wildfires and Iowa Windstorms, INT 18-04: Extension of Ninety-Day Rule for the Impact of Hurricane Florence and Hurricane Michael; INT 17-01: Extension of Ninety-Day Rule for the Impact of Hurricane Harvey, Hurricane Irma and Hurricane Maria; INT 13-01: Extension of Ninety-Day Rule for the Impact of Hurricane/Superstorm Sandy; and INT 05-04: Extension of Ninety-day Rule for the Impact of Hurricane Katrina, Hurricane Rita and Hurricane Wilma.

This interpretation will be automatically nullified on Jan. 24, 2022 and will be included as a nullified INT in Appendix H – Superseded SSAPs and Nullified Interpretations in the “As of March 2022” *NAIC Accounting Practices and Procedures Manual.*

Interested parties support this proposal.

**Ref #2019-24 SSAP No. 71: Levelized Commissions**

The Working Group exposed Issue Paper No. 16x: Levelized Commissions to document the historical discussion and final action adopted through the Executive Committee/Plenary.

Interested parties have no further comment on this item.
Thank you for considering interested parties’ comments. If you have any questions in the interim, please do not hesitate to contact us.

Sincerely,

D. Keith Bell

</thead>
<tbody>
<tr>
<td>New Issue or SSAP Interpretation</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Description of Issue:** Although the broad principles-based bond proposal project is establishing principles for reporting investments on Schedule D-1: Long-Term Bonds, it has been identified that there is current inconsistency in practice for the reporting of non-rated residual tranches for structures captured in scope of SSAP No. 43R—Loan-Backed and Structured Securities. To address this current inconsistency, it has been requested that revisions occur as an interim step to provide specific accounting and reporting for these items.

As background information, SSAP No. 43R provides guidance for investments in loan-backed and structured securities, as well as purchased and retained beneficial interests in securitized financial assets. The guidance presumes that the investments within scope reflect fixed-income instruments, particularly with the Schedule D-1: Long-Term Bond reporting as well as the amortized cost measurement method, but it has been identified that non-rated, first loss layers without contractual principal or interest (known as residual tranches or interests) are technically captured within the legal-form structure currently permitted within scope of the guidance.

As part of the principles-based bond project discussions, it has been identified that some entities report these residual investments on Schedule BA: Other Long-Term Investments. However, it has been noted that other entities report these residual tranches on Schedule D-1, as in scope of SSAP No. 43R. Since items on Schedule D-1 are required to have NAIC designations, and these tranches are not (and cannot be) rated from a CRP or receive an NAIC designation, some entities have applied the “NAIC 5GI” process to self-assign an NAIC 5 designation. For life entities, an NAIC 5 permits an amortized cost valuation and for all lines of business a NAIC 5 receives a lower RBC charge than what is received if reporting on Schedule BA.

The NAIC 5GI process permits entities to self-assign an NAIC 5 when they can certify to the following three components:

1. Documentation necessary to permit a full credit analysis of the security does not exist or an NAIC CRP ratings for an FE or PL security is not available.
2. The issuer or obligor is current on all contracted interest and principal payments.
3. The insurer has an actual expectation of ultimate payment of all contracted interest and principal payments.

Use of the NAIC 5GI process for non-rated residual investments is an incorrect application of the guidance as 1) there are no contracted interest and principal payments to certify as current and 2) the insurer cannot have an actual expectation of receiving all contractual principal and interest of the underlying collateral as these tranches absorb the losses first for the securitization structure. Although cash flows may pass through to these holders at periodic intervals in the waterfall, ultimate returns depend on continued performance, therefore, there can be no actual expectation that future payments will be received.
From the discussions that have occurred on the principles-based bond project, there is general agreement that these non-rated residual tranches do not belong on Schedule D-1 as long-term bonds. This agenda item proposes minor revisions to SSAP No. 43R, as an interim action in advance of the adoption of the principles-based bond project, to prescribe the accounting and reporting for these non-rated residual investments to ensure consistent reporting. As detailed, it is proposed that these items remain in scope of SSAP No. 43R, as they are a component of a securitization, with specific guidance to report on Schedule BA with a lower of cost or fair value measurement.

Existing Authoritative Literature:

Reporting Guidance for All Loan-Backed and Structured Securities

26. Loan-backed and structured securities shall be valued and reported in accordance with this statement, the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*, and the designation assigned in the *NAIC Valuations of Securities* product prepared by the NAIC Securities Valuation Office or equivalent specified procedure. The carrying value method shall be determined as follows:

   a. For reporting entities that maintain an Asset Valuation Reserve (AVR), loan-backed and structured securities shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value.

   b. For reporting entities that do not maintain an AVR, loan-backed and structured securities designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at amortized cost; loan-backed and structured securities that are designated medium quality, low quality, lowest quality and in or near default (NAIC designations 3 to 6, respectively) shall be reported at the lower of amortized cost or fair value.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): The Statutory Accounting Principles (E) Working Group has a comprehensive project to establish principles-based concepts for the definition for bond investments for reporting on Schedule D-1: Long-Term Bonds. This separate agenda item was directed as an interim action on Aug. 26, 2021, as it was identified that there is inconsistent reporting for non-rated residual tranches, with some entities reporting these non-rated loss-layer investments on D-1 with a self-assigned NAIC 5GI designation.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation:

NAIC staff recommends that the Working Group move this item to the active listing, categorized as a new SAP concept, and expose revisions to SSAP No. 43R to establish specific accounting and reporting guidance for non-rated residual tranches or interests. Additionally, it is recommended that the Working Group sponsor a blanks proposal to capture a new reporting line specific for these items on Schedule BA and send a referral to the Valuation of Securities (E) Task Force to identify that the NAIC 5GI process shall not be used to self-assign an NAIC designation to non-rated residual investments.

Proposed edits to SSAP No. 43R:
Reporting Guidance for All Loan-Backed and Structured Securities

26. Loan-backed and structured securities shall be valued and reported in accordance with this statement, the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*, and the designation assigned in the *NAIC Valuations of Securities* product prepared by the NAIC Securities Valuation Office or equivalent specified procedure. The carrying value method shall be determined as follows:

a. For reporting entities that maintain an Asset Valuation Reserve (AVR), loan-backed and structured securities, excluding non-rated residual tranches or interests, shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value.

b. For reporting entities that do not maintain an AVR, loan-backed and structured securities designated highest-quality and high-quality (NAIC designations 1 and 2, respectively), excluding non-rated residual tranches or interests, shall be reported at amortized cost; loan-backed and structured securities that are designated medium quality, low quality, lowest quality and in or near default (NAIC designations 3 to 6, respectively) shall be reported at the lower of amortized cost or fair value.

c. For non-rated residual tranches or interests captured in scope of this statement, all reporting entities (regardless of AVR) shall report the item on Schedule BA: Other Long-Term Invested Assets at the lower of cost or fair value. Changes in the reported value from the prior period shall be recorded as unrealized gains or losses.

New Footnote: Reference to “non-rated residual tranches or interests” intends to capture securitization tranches, beneficial interests, interests of structured finance investments, as well as other structures captured in scope of this statement, that reflect loss layers without contractual interest or principal payments. Payments to holders of these investments occur after contractual interest and principal payments have been made to other tranches or interests and are based on the remaining available funds. Although payments to holders can occur throughout an investment’s duration (and not just at maturity), such instances still reflect the residual amount permitted to be distributed after other holders have received contractual interest and principal payments.

Staff Review Completed by: Julie Gann, NAIC Staff – September 2021

Status:
On September 9, 2021, in response to an e-vote to expose, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 43R—Loan-Backed and Structured Securities to clarify that non-rated residual tranches shall be reported on Schedule BA – Other Long-Term Investments and valued at the lower of cost or fair value.

On November 10, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, exposed revisions to SSAP No. 43R—Loan-Backed and Structured Securities, incorporating edits proposed by interested parties and clarifying application of IMR/AVR, as illustrated below. The revisions clarify that residual tranches or interests shall be reported on Schedule BA – Other Long-Term Investments and valued at the lower of amortized cost or fair value. While the revisions are nonsubstantive in nature, the guidance is effective Dec. 31, 2022, with early application permitted. (This means that reporting entities can continue reporting on Schedule D-1: Long-Term Bonds for 2021 but could reclassify the instruments to Schedule BA – Other Long-Term Investments utilizing the “Other” or another Schedule BA reporting line that is appropriate for the investment for year-end 2021.) In addition,
the Working Group provided guidance to the Blanks (E) Working Group to clarify that a self-assigned NAIC 5GI is not permitted for residual tranches, and such items reported on Schedule D-1 for year-end 2021 are required to be reported with an NAIC 6 designation.

**Adopted revisions to SSAP No. 43R**

26. Loan-backed and structured securities shall be valued and reported in accordance with this statement, the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*, and the designation assigned in the *NAIC Valuations of Securities* product prepared by the NAIC Securities Valuation Office or equivalent specified procedure. The carrying value method shall be determined as follows:

   a. For reporting entities that maintain an Asset Valuation Reserve (AVR), loan-backed and structured securities, excluding residual tranches or interests, shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value.

   b. For reporting entities that do not maintain an AVR, loan-backed and structured securities designated highest-quality and high-quality (NAIC designations 1 and 2, respectively), excluding residual tranches or interests, shall be reported at amortized cost; loan-backed and structured securities that are designated medium quality, low quality, lowest quality and in or near default (NAIC designations 3 to 6, respectively) shall be reported at the lower of amortized cost or fair value.

   c. For residual tranches or interests FN captured in scope of this statement, all reporting entities shall report the item on Schedule BA: Other Long-Term Invested Assets at the lower of amortized cost or fair value. Changes in the reported value from the prior period shall be recorded as unrealized gains or losses. For reporting entities that maintain an AVR, the accounting for unrealized gains and losses shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*.

   **New Footnote:** Reference to “residual tranches or interests” intends to capture securitization tranches and beneficial interests as well as other structures captured in scope of this statement, that reflect loss layers without any contractual payments, whether principal or interest, or both. Payments to holders of these investments occur after contractual interest and principal payments have been made to other tranches or interests and are based on the remaining available funds. Although payments to holders can occur throughout an investment’s duration (and not just at maturity), such instances still reflect the residual amount permitted to be distributed after other holders have received contractual interest and principal payments.

56. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. Subsequent revisions to this statement include:

   a. Substantive revisions pertaining to valuation and impairment based on expected cash flows, as detailed in *Issue Paper No. 140—Substantive Revisions to SSAP No. 43—Loan-Backed and Structured Securities*, were effective September 30, 2009. (Transition guidance previously included in SSAP No. 43R was removed from the SSAP in the *As of March 2018 Accounting Practices and Procedures Manual* but is retained for historical purposes in the issue paper.)
b. Substantive revisions to incorporate a new method to determine the final NAIC designation were effective, on a prospective basis, for reporting periods ending on or after December 31, 2009. In 2011, revisions were incorporated to this process to be consistent with the (P&P Manual). These revisions expanded the guidance to explicitly detail the process for “financial modeling” and “modified filing exempt” securities.

c. Nonsubstantive revisions to clarify the accounting for gains and losses between AVR and IMR securities were adopted in June 2010 with a January 1, 2011, effective date with early application allowed. Reporting entities that had previously bifurcated gains and losses between AVR and IMR for sale transactions were restricted from reversing prior bifurcations and were prohibited from reverting to a process that did not bifurcate gains and losses in the period between adoption and the effective date.

d. Nonsubstantive revisions, reflected in paragraph 50, to incorporate guidance from INT 00-11: EITF 98-15: Structured Notes Acquired for a Specified Investment Strategy were effective September 11, 2000.

e. Nonsubstantive revisions pertaining to the calculation of investment income for prepayment penalty and/or acceleration fees, reflected in paragraph 13, were effective January 1, 2017, on a prospective basis with early application permitted.

f. Nonsubstantive revisions to eliminate the modified filing exempt (MFE) method were effective March 31, 2019, with early adoption permitted for year-end 2018. Early adoption was considered an “all or nothing” approach. As such, reporting entities that did not elect to early adopt were required to apply the MFE process to all applicable SSAP No. 43R securities as of year-end 2018, whereas reporting entities that elected to early adopt were not permitted to use the MFE process for any SSAP No. 43R securities for year-end 2018.

g. Revisions adopted April 2019 to explicitly include mortgage-referenced securities in scope of this statement are effective December 31, 2019.

gh. Nonsubstantive revisions adopted in November 2021 to clarify that residual tranches or interests (as defined in footnote ___) shall be reported at the lower of amortized cost or fair value on Schedule BA: Other Invested Assets are effective December 31, 2022. Reporting entities may elect to reclassify residual tranches or interests to Schedule BA in advance of the effective date. As of the effective date, residual tranches or interests previously reported on Schedule BA shall be reclassified to the appropriate residual tranche Schedule BA reporting line based on the underlying characteristics of the investment structure.

**Recommendation:**
NAIC staff recommend that the Statutory Accounting Principles (E) Working Group move this agenda item to the active listing, categorize as nonsubstantive, and expose editorial revisions as illustrated below.

**Status:**
On August 26, 2021, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed editorial revisions to the Preamble, *Appendix A-001: Investments of Reporting Entities, Appendix C Actuarial Guidelines – Appendices, Appendix C-2 Interpretations of the Emerging Actuarial Issues (E) Working Group*, and *SSAP No. 21R —Other Admitted Assets*, as illustrated below.

**Preamble**

41. The multitude of unique circumstances and individual transactions makes it virtually impossible for any codification of accounting principles to be totally comprehensive. Application of SAP, either contained in the SSAPs or defined as GAAP and adopted by the NAIC, to unique circumstances or individual transactions should be consistent with the concepts of conservatism, consistency, and recognition.
V. Statutory Hierarchy

42. The following Hierarchy is not intended to preempt state legislative and regulatory authority.

Level 1
- SSAPs, including U.S. GAAP reference material to the extent adopted by the NAIC from the FASB Accounting Standards Codification\[1\] (FASB Codification or GAAP guidance)

Level 2
- Consensus positions of the Emerging Accounting Issues (E) Working Group as adopted by the NAIC (INTs adopted before 2016)
- Interpretations of existing SSAPs as adopted by the Statutory Accounting Principles (E) Working Group (INTs adopted in 2016 or beyond)

Level 3
- NAIC Annual Statement Instructions
- Purposes and Procedures Manual of the NAIC Investment Analysis Office

Level 4
- Statutory Accounting Principles Preamble and Statement of Concepts\[2\]

Level 5
- Sources of nonauthoritative GAAP accounting guidance and literature, including: (a) practices that are widely recognized and prevalent either generally or in the industry, (b) FASB Concept Statements, (c) AICPA guidance not included in FASB Codification, (d) International Financial Reporting Standards, (e) Pronouncements of professional associations or regulatory agencies, (f) Technical Information Service Inquiries and Replies included in the AICPA Technical Practice Aids, and (g) Accounting textbooks, handbooks and articles

432. If the accounting treatment of a transaction or event is not specified by the SSAPs, preparers, regulators and auditors of statutory financial statements should consider whether the accounting treatment is specified by another source of established statutory accounting principles. If an established statutory accounting principle from one or more sources in Level 2 or 3 is relevant to the circumstances, the preparer, regulator or auditor should apply such principle. If there is a conflict between statutory accounting principles from one or more sources in Level 2 or 3, the preparer, regulator or auditor should follow the treatment specified by the source in the higher level—that is, follow Level 2 treatment over Level 3. Revisions to guidance in accordance with additions or revisions to the NAIC statutory hierarchy should be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

\[1\] Effective September 15, 2009, the FASB Codification is the source of authoritative U.S. generally accepted accounting principles. As of that date, the FASB Codification superseded all then-existing non-SEC accounting and reporting standards. All other nongrandfathered, non-SEC accounting literature not included in the FASB Codification is nonauthoritative. As of September 15, 2009, AICPA Statements of Position are no longer reviewed as part of the statutory maintenance process as they are no longer considered authoritative GAAP literature. If the AICPA were to address an issue that affects the FASB Codification, an accounting standard update (ASU) would be issued and reviewed for applicability to statutory accounting.
The Statutory Accounting Principles Statement of Concepts incorporates by reference FASB Concepts Statements One, Two, Five and Six to the extent they do not conflict with the concepts outlined in the statement. However, for purposes of applying this hierarchy the FASB Concepts Statements shall be included in Level 5 and only those concepts unique to statutory accounting as stated in the statement are included in Level 4.

Appendix A-001 Investments of Reporting Entities

Update designation codes for preferred stock – the codes marked for deletion are no longer in use. Note: the blanks have already been updated through an editorial update that occurred in March 2021.

Section 2. Investment Risks Interrogatories

Appendix C Actuarial Guidelines - Appendices

Updates reference to the former Emerging Actuarial Issues (E) Working Group as well as adding reference the Valuation Analysis (E) Working Group’s use of included interpretations.

Appendix C-2 Interpretations of the Emerging Actuarial Issues (E) Working Group

Updates reference to the former Emerging Actuarial Issues (E) Working Group as well as adding reference the Valuation Analysis (E) Working Group’s use of included interpretations.

Introduction

The former Emerging Actuarial Issues (E) Working Group (EAIWG) and the current Valuation Analysis (E) Working Group (VAWG) respond to questions of application, interpretation and clarification with respect to Actuarial Guideline XXXVIII—The Application of the Valuation of Life Insurance Policies Model Regulation (AG 38). Following an abbreviated public comment and review period of no less than seven days, the Working Group will adopt by consensus formal interpretations on issues presented before it. These interpretations will then be reported to the Financial Condition (E) Committee, which, after adopting, will direct the Financial Analysis (E) Working Group to follow the interpretations in performing its reviews of the reserving methodologies under AG 38. These interpretations will not become effective until formally adopted by the Financial Condition (E) Committee. In no event shall a consensus opinion of the former EAIWG Working Group or current VAWG supersede or otherwise conflict with AG 38.

SSAP No. 21R—Other Admitted Assets

Updates improve the readability of paragraph 9 regarding receivables for securities.

9. Sales of securities are recorded as of the trade date. A receivable due from the broker is established in instances when a security has been sold, but the proceeds from the sale have not yet been received. Unless the
receivable for securities, meets the criteria set forth in paragraph 11, the receivable for securities is an admitted asset to the extent it conforms to the requirements of this statement. For other than a receivables arising from the sale of a security which was acquired on a “To Be Announced” (“TBA”) basis, or from the sale of securities that are received as stock distributions that may be restricted (unregistered) or in physical form, and which has yet to be actually received, admissibility shall be in accordance with (see paragraph 12), meets the criteria set forth in paragraph 11, the receivable for securities is an admitted asset to the extent it conforms to the requirements of this statement.

</tbody>
</table>

Description of Issue:
This agenda item recommends nonsubstantive revisions to **SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses** to clarify that salvage and subrogation estimates and recoveries can include amounts related to both claims/losses and loss adjusting expenses. The corresponding estimates should be reported as a reduction of losses and/or loss adjusting expense (LAE) reserves. Once the amounts for salvage and subrogation and coordination of benefits recoveries (COB) are received, they are reported as a reduction of paid losses and LAE depending on the nature of the costs being recovered.

SSAP No. 55 contains salvage and subrogation guidance. Key points of the guidance regarding salvage, subrogation and COB are as follows:

- Salvage, subrogation and coordination of benefits recoveries are estimated using the same techniques used for estimating unpaid claims/losses and unpaid loss adjusting expenses.
- Separate recoverables are not established. Estimated salvage, subrogation and coordination of benefit recoveries (net of associated expenses) are deducted from the liability for unpaid claims or losses (for reporting entities that choose to anticipate such recoveries).
- Salvage, subrogation and coordination of benefits recoveries received (net of associated expenses) are reported as a reduction to paid losses/claims.

This agenda item is in response to an industry request. The proposed clarification provides additional detail regarding loss adjusting expenses for salvage, subrogation and coordination of benefits that is believed to be consistent with current practice by a majority of reporting entities. For example, if legal fees are recovered in a subrogation lawsuit, it is believed that such amounts are currently being reported as reduction in paid adjusting expenses for legal fees. SSAP No. 55 does not explicitly discuss the recovery of loss adjusting expenses in the discussion of salvage, subrogation and COB. However, the property and casualty annual statement instructions, which are level two on the statutory hierarchy of authoritative literature, includes an explicit reference to reduce loss adjusting expenses for such amounts in the Schedule P instructions (See Existing Authoritative Literature below).

Existing Authoritative Literature:

SSAP No. 55 provides the following (bolding added for emphasis):

**General**

11. The liability for claim reserves and claim liabilities, unpaid losses, and loss/claim adjustment expenses shall be based upon the estimated ultimate cost of settling the claims (including the effects of inflation and other societal and economic factors), using past experience adjusted for current trends, and
any other factors that would modify past experience. These liabilities shall not be discounted unless authorized for specific types of claims by specific SSAPs, including SSAP No. 54R and SSAP No. 65—Property and Casualty Contracts.

12. Various analytical techniques can be used to estimate the liability for IBNR claims, future development on reported losses/claims, and loss/claim adjustment expenses. These techniques generally consist of statistical analysis of historical experience and are commonly referred to as loss reserve projections. The estimation process is generally performed by line of business, grouping contracts with like characteristics and policy provisions. The decision to use a particular projection method and the results obtained from that method shall be evaluated by considering the inherent assumptions underlying the method and the appropriateness of those assumptions to the circumstances. No single projection method is inherently better than any other in all circumstances. The results of more than one method should be considered.

13. For each line of business and for all lines of business in the aggregate, management shall record its best estimate of its liabilities for unpaid claims, unpaid losses, and loss/claim adjustment expenses. Because the ultimate settlement of claims (including IBNR for death claims and accident and health claims) is subject to future events, no single claim or loss and loss/claim adjustment expense reserve can be considered accurate with certainty. Management’s analysis of the reasonableness of claim and loss and loss/claim adjustment expense reserve estimates shall include an analysis of the amount of variability in the estimate. If, for a particular line of business, management develops its estimate considering a range of claim or loss and loss/claim adjustment expense reserve estimates bounded by a high and a low estimate, management’s best estimate of the liability within that range shall be recorded. The high and low ends of the range shall not correspond to an absolute best-and-worst case scenario of ultimate settlements because such estimates may be the result of unlikely assumptions. Management’s range shall be realistic and, therefore, shall not include the set of all possible outcomes but only those outcomes that are considered reasonable. Management shall also follow the concept of conservatism included in the Preamble when determining estimates for claims reserves. However, there is not a specific requirement to include a provision for adverse deviation in claims.

14. In the rare instances when, for a particular line of business, after considering the relative probability of the points within management’s estimated range, it is determined that no point within management’s estimate of the range is a better estimate than any other point, the midpoint within management’s estimate of the range shall be accrued. It is anticipated that using the midpoint in a range will be applicable only when there is a continuous range of possible values, and no amount within that range is any more probable than any other. For purposes of this statement, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management’s best estimate shall be accrued. This guidance is not applicable when there are several point estimates which have been determined as equally possible values, but those point estimates do not constitute a range. If there are several point estimates with equal probabilities, management should determine its best estimate of the liability.

15. If a reporting entity chooses to anticipate salvage and subrogation recoverables (including amounts recoverable from second injury funds, other governmental agencies, or quasi-governmental agencies, where applicable), the recoverables shall be estimated in a manner consistent with paragraphs 11-13 of this statement. Estimated salvage and subrogation recoveries (net of associated expenses) shall be deducted from the liability for unpaid claims or losses. If a reporting entity chooses to anticipate coordination of benefits (COB) recoverables of Individual and Group Accident and Health Contracts, the recoverables shall be estimated in a manner consistent with paragraphs 11-13 of this statement and shall be deducted from the liability for unpaid claims or losses. A separate receivable shall not be established for these recoverables. In addition, all of these recoverables are also subject to the impairment guidelines established in SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets and an entity shall not reduce its reserves for any recoverables deemed to be impaired. Salvage and subrogation recoveries received (net of associated expenses) are reported as a reduction to paid losses/claims. Coordination of benefits...
Ref #2021-13

(COB) recoveries received of Individual and Group Accident and Health Contracts (net of associated expenses) are reported as a reduction to paid claims.

16. Changes in estimates of the liabilities for unpaid claims or losses and loss/claim adjustment expenses resulting from the continuous review process, including the consideration of differences between estimated and actual payments, shall be considered a change in estimate and shall be recorded in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors. SSAP No. 3 requires changes in estimates to be included in the statement of operations in the period the change becomes known. This guidance also applies to the period subsequent to the March 1 filing deadline for annual financial statements through the filing deadline of June 1 for audited annual financial statements.

Disclosures

17. The financial statements shall include the following disclosures for each year full financial statements are presented. The disclosure requirement in paragraph 17.d. is also applicable to the interim financial statements if there is a material change from the amounts reported in the annual filing. Life and annuity contracts are not subject to this disclosure requirement.

   a. The balance in the liabilities for unpaid claims and unpaid losses and loss/claim adjustment expense reserves at the beginning and end of each year presented;

   b. Incurred claims, losses, and loss/claim adjustment expenses with separate disclosures of the provision for insured or covered events of the current year and increases or decreases in the provision for insured or covered events of prior years;

   c. Payments of claims, losses, and loss/claim adjustment expenses with separate disclosures of payments of losses and loss/claim adjustment expenses attributable to insured or covered events of the current year and insured or covered events of prior years;

   d. The reasons for the change in the provision for incurred claims, losses, and loss/claim adjustment expenses attributable to insured or covered events of prior years. The disclosure should indicate whether additional premiums or return premiums have been accrued as a result of the prior-year effects. (For Title reporting entities, “provision” refers to the known claims reserve included in Line 1 of the Liabilities page, and “prior years” refers to prior report years);

   e. Information about significant changes in methodologies and assumptions used in calculating the liability for unpaid claims and claim adjustment expenses, including reasons for the change and the effects on the financial statements for the most recent reporting period presented;

   f. A summary of management’s policies and methodologies for estimating the liabilities for losses and loss/claim adjustment expenses, including discussion of claims for toxic waste cleanup, asbestos-related illnesses, or other environmental remediation exposures;

   g. Disclosure of the amount paid and reserved for losses and loss/claim adjustment expenses for asbestos and/or environmental claims, on a direct, assumed and net of reinsurance basis (the reserves required to be disclosed in this section shall exclude amounts relating to policies specifically written to cover asbestos and environmental exposures). Each company should report only its share of a group amount (after applying its respective pooling percentage) if the company is a member of an intercompany pooling agreement; and
Estimates of anticipated salvage and subrogation (including amounts recoverable from second injury funds, other governmental agencies, or quasi-governmental agencies, where applicable), deducted from the liability for unpaid claims or losses.

The Property and Casualty Annual Statement Instructions for Schedule P, Part 1 discuss salvage and subrogation regarding loss reserve and paid claims and then provide additional detail regarding losses and loss adjusting expenses in a later paragraph as excerpted below (bolding added for emphasis):

Cumulative salvage and subrogation received and losses and expenses paid should be reported for each specific year. For “prior,” report only salvage and subrogation received and losses and expenses paid in current year.

In Schedule P, Part 1, salvage and subrogation received should be reported net of reinsurance, if any. Loss payments are to be reported net of salvage and subrogation received in Schedule P.

Adjusting & Other Payments, Column 9, should only reflect ceded recoveries made in 1997 and subsequent. Adjusting & Other Payments, Column 8, should reflect net payments in 1996 and prior and direct and assumed payments for 1997 and subsequent.

Premiums earned and losses paid, unpaid, and incurred should reconcile with the Statement of Income page. The workpapers that show a reconciliation explaining reinsurance, discounting, and salvage and subrogation adjustments should be available for examination on request.

Report in Column 23 the estimated amount of anticipated salvage and subrogation that has been taken as credit (netted) in the reserves for unpaid losses and loss adjustment expenses reported in Column 24. (Note: Column 23 is a memo column only as the amounts contained therein have already been taken into consideration in Columns 13 through 20.)

The Life and Health Annual Statement Instructions for Note 36 (matches SSAP No. 55, paragraph 17h disclosure.)

36. Loss/Claim Adjustment Expenses

Instruction:

The financial statement shall include the following disclosures for each year full financial statements are presented. Life and annuity contracts are not subject to this disclosure requirement:

- The balance in the liabilities for unpaid loss/claim adjustment expense reserves at the beginning and end of each year presented.
- Incurred loss/claim adjustment expenses with separate disclosures of the provision for insured or covered events of the current year and increases or decreases in the provision for insured or covered events of prior years.
- Payments of loss/claim adjustment expenses with separate disclosure of payment of loss/claim adjustment expenses attributable to insured or covered events of the current year and insured or covered events of prior years.
- Estimates of anticipated salvage and subrogation (including amounts recoverable from second injury funds, other governmental agencies, or quasi-governmental agencies, where applicable), deducted from the liability for unpaid claims or losses.
Illustration:
The balance in the liability for unpaid accident and health claim adjustment expenses as of and ______ was $_______ and $______, respectively.

The Company incurred $_______ and paid $_______ of claim adjustment expenses in the current year, of which $_______ of the paid amount was attributable to insured or covered events of prior years. The Company did not increase or decrease the provision for insured events of prior years.

The Company took into account estimated anticipated salvage and subrogation of the liability for unpaid claims/losses and reduced such liability by $_______.

The Health Annual Statement Instructions for note 31 matches SSAP No. 55, paragraph 17h disclosure.

31. Anticipated Salvage and Subrogation
Instruction:
Estimates of anticipated salvage and subrogation (including amounts recoverable from second injury funds, other governmental agencies, or quasi-governmental agencies, where applicable), deducted from the liability for unpaid claims or losses. Refer to SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses for accounting guidance.

Illustration:
The Company took into account estimated anticipated salvage and subrogation in its determination of the liability for unpaid claims/losses and reduced such liability by $______________.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Staff Review Completed by:
Robin Marcotte, NAIC Staff - August 2021

Staff Recommendation:
NAIC staff recommends that the Working Group move this agenda item to the active listing, categorized as nonsubstantive, and expose revisions to SSAP No. 55, which clarify that subrogation recoveries should be reported as a reduction of losses and/or loss adjusting expense LAE reserves, depending on the nature of the costs being recovered. In addition, updates to the disclosure in paragraph 17h are recommended. In conjunction, with the agenda item, NAIC staff should be directed to coordinate develop conforming revisions to the annual statement instructions. While NAIC staff believes the proposed clarification is consistent with the current practice of most entities, the Working Group should notify the Casualty Actuarial and Statistical (C) Task Force, the Life Actuarial (A) Task Force and the Health Actuarial (B) Task Force of the exposure.
**SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses** proposed revisions

**General**

11. The liability for claim reserves and claim liabilities, unpaid losses, and loss/claim adjustment expenses shall be based upon the estimated ultimate cost of settling the claims (including the effects of inflation and other societal and economic factors), using past experience adjusted for current trends, and any other factors that would modify past experience. These liabilities shall not be discounted unless authorized for specific types of claims by specific SSAPs, including SSAP No. 54R and SSAP No. 65—Property and Casualty Contracts.

12. Various analytical techniques can be used to estimate the liability for IBNR claims, future development on reported losses/claims, and loss/claim adjustment expenses. These techniques generally consist of statistical analysis of historical experience and are commonly referred to as loss reserve projections. The estimation process is generally performed by line of business, grouping contracts with like characteristics and policy provisions. The decision to use a particular projection method and the results obtained from that method shall be evaluated by considering the inherent assumptions underlying the method and the appropriateness of those assumptions to the circumstances. No single projection method is inherently better than any other in all circumstances. The results of more than one method should be considered.

13. For each line of business and for all lines of business in the aggregate, management shall record its best estimate of its liabilities for unpaid claims, unpaid losses, and loss/claim adjustment expenses. Because the ultimate settlement of claims (including IBNR for death claims and accident and health claims) is subject to future events, no single claim or loss and loss/claim adjustment expense reserve can be considered accurate with certainty. Management's analysis of the reasonableness of claim or loss and loss/claim adjustment expense reserve estimates shall include an analysis of the amount of variability in the estimate. If, for a particular line of business, management develops its estimate considering a range of claim or loss and loss/claim adjustment expense reserve estimates bounded by a high and a low estimate, management’s best estimate of the liability within that range shall be recorded. The high and low ends of the range shall not correspond to an absolute best-and-worst case scenario of ultimate settlements because such estimates may be the result of unlikely assumptions. Management’s range shall be realistic and therefore, shall not include the set of all possible outcomes but only those outcomes that are considered reasonable. Management shall also follow the concept of conservatism included in the Preamble when determining estimates for claims claim and loss and loss/claim adjustment expense reserves. However, there is not a specific requirement to include a provision for adverse deviation in claims.

14. In the rare instances when, for a particular line of business, after considering the relative probability of the points within management’s estimated range, it is determined that no point within management’s estimate of the range is a better estimate than any other point, the midpoint within management’s estimate of the range shall be accrued. It is anticipated that using the midpoint in a range will be applicable only when there is a continuous range of possible values, and no amount within that range is any more probable than any other. For purposes of this statement, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management’s best estimate shall be accrued. This guidance is not applicable when there are several point estimates which have been determined as equally possible values, but those point estimates do not constitute a range. If there are several point estimates with equal probabilities, management should determine its best estimate of the liability.

15. If a reporting entity chooses to anticipate salvage and subrogation recoverables (including amounts recoverable from second injury funds, other governmental agencies, or quasi-governmental agencies, where applicable), the recoverables shall be estimated in a manner consistent with paragraphs 10-12 of this statement. Estimated salvage and subrogation recoveries (net of associated recovery expenses) shall be deducted from the liability for unpaid claims, unpaid losses, and unpaid loss/claim adjustment expenses, depending on the whether the subrogation represents a recovery of claims/losses or loss/claims adjustment expenses.
expenses or losses. If a reporting entity chooses to anticipate coordination of benefits (COB) recoverables of Individual and Group Accident and Health Contracts, the recoverables shall be estimated in a manner consistent with paragraphs 11-13 of this statement and shall be deducted from the liability for unpaid claims or losses. A separate receivable shall not be established for these recoverables. In addition, all of these recoverables are also subject to the impairment guidelines established in SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5R) and an entity shall not reduce its reserves for any recoverables deemed to be impaired. Salvage and subrogation recoveries received (net of associated recovery expenses) are reported as a reduction to paid losses/claims and/or paid loss/claim adjustment expenses. Coordination of benefits (COB) recoveries received of Individual and Group Accident and Health Contracts (net of associated recovery expenses) are reported as a reduction to paid claims.

Disclosures

17. The financial statements shall include the following disclosures for each year full financial statements are presented. The disclosure requirement in paragraph 17.d. is also applicable to the interim financial statements if there is a material change from the amounts reported in the annual filing. Life and annuity contracts are not subject to this disclosure requirement.

a. The balance in the liabilities for unpaid claims and unpaid losses and loss/claim adjustment expense reserves at the beginning and end of each year presented;

b. Incurred claims, losses, and loss/claim adjustment expenses with separate disclosures of the provision for insured or covered events of the current year and increases or decreases in the provision for insured or covered events of prior years;

c. Payments of claims, losses, and loss/claim adjustment expenses with separate disclosures of payments of losses and loss/claim adjustment expenses attributable to insured or covered events of the current year and insured or covered events of prior years;

d. The reasons for the change in the provision for incurred claims, losses, and loss/claim adjustment expenses attributable to insured or covered events of prior years. The disclosure should indicate whether additional premiums or return premiums have been accrued as a result of the prior-year effects. (For Title reporting entities, “provision” refers to the known claims reserve included in Line 1 of the Liabilities page, and “prior years” refers to prior report years);

e. Information about significant changes in methodologies and assumptions used in calculating the liability for unpaid claims and claim adjustment expenses, including reasons for the change and the effects on the financial statements for the most recent reporting period presented;

f. A summary of management’s policies and methodologies for estimating the liabilities for losses and loss/claim adjustment expenses, including discussion of claims for toxic waste cleanup, asbestos-related illnesses, or other environmental remediation exposures;

g. Disclosure of the amount paid and reserved for losses and loss/claim adjustment expenses for asbestos and/or environmental claims, on a direct, assumed and net of reinsurance basis (the reserves required to be disclosed in this section shall exclude amounts relating to policies specifically written to cover asbestos and environmental exposures). Each company should report only its share of a group amount (after applying its respective pooling percentage) if the company is a member of an intercompany pooling agreement; and
h. Estimates of anticipated salvage and subrogation (including amounts recoverable from second injury funds, other governmental agencies, or quasi-governmental agencies, where applicable), deducted from the liability for unpaid claims, or losses or their associated adjusting expenses.

Status:
On August 26, 2021, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and took the following actions:

1. Exposed revisions to SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses, as illustrated above, to clarify that salvage and subrogation recoveries should be reported as a reduction of losses and/or loss adjusting expense (LAE reserves), depending on the nature of the costs being recovered. In addition, updates to the disclosure in paragraph 17.h. were exposed.
2. Directed NAIC staff to coordinate develop conforming revisions to the Annual Statement instructions.
3. Directed notification of the exposure to the following actuarial Task Forces:
   a. Casualty Actuarial and Statistical (C) Task Force,
   b. Life Actuarial (A) Task Force, and
   c. Health Actuarial (B) Task Force

On November 10, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, exposed revisions SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses, as shown above. The revisions clarify that subrogation recoveries should be reported as a reduction of losses and/or loss adjusting expense (LAE) reserves, depending on the nature of the costs being recovered. Included in this adoption is an update to the related disclosures to isolate the reporting of estimated salvage and subrogation and their impact on unpaid claims, losses, or associated LAE.

Interpretation of the Statutory Accounting Principles Working Group

INT 21-02: Extension of Ninety-Day Rule for the Impact of Hurricane Ida

INT 21-02T Dates Discussed

September 9, 2021; November 10, 2021

INT 21-02T References

SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers

INT 21-02T Issue

1. Hurricane Ida and its aftermath has resulted in tremendous loss of life and property, the extent to which is currently not known. The Federal Emergency Management Agency (FEMA) lists Louisiana, New Jersey and New York as having emergency declarations because of the hurricane and related flooding. This interpretation is intended to cover storm impacted policies in areas in which a state of emergency was declared. State regulators and insurers are taking action to provide policyholders affected by this disaster with the support and understanding that is deserved.

2. Should a 60-day extension of the 90-day rule for uncollected premiums be temporarily granted to insurers for policies in U.S. jurisdictions where a state of emergency was declared which were affected by the hurricane, its aftermath and related flooding?

INT 21-02T Discussion

3. The Working Group reached a consensus for a one-time optional extension of the ninety-day rule for uncollected premium balances, bills receivable for premiums and amounts due from agents and policyholders required per SSAP No. 6, paragraph 9, as described within this paragraph.

   a. For policies in effect as of the declaration of a state of emergency by either the states, U.S. territories or federal government, as described in paragraph 1, insurers with policyholders in areas impacted by Hurricane Ida, its aftermath and the related flooding may wait 150 days (90 days per existing guidance, plus a 60-day extension), not to extend beyond Jan. 23, 2022, before nonadmitting premiums receivable from those directly impacted policyholders as required per SSAP No. 6, paragraph 9.

   b. Existing impairment analysis remains in effect for these affected policies.

4. The Working Group noted that a temporary sixty day (60) extension had previously been provided for other nationally significant disasters including INT 20-11: Extension of Ninety-Day Rule for the Impact of 2020 Hurricanes, California Wildfires and Iowa Windstorms; INT 18-04: Extension of Ninety-Day Rule for the Impact of Hurricane Florence and Hurricane Michael; INT 17-01: Extension of Ninety-Day Rule for the Impact of Hurricane Harvey, Hurricane Irma and Hurricane Maria; INT 13-01: Extension of Ninety-Day Rule for the Impact of Hurricane/Superstorm Sandy; and INT 05-04: Extension of Ninety-day Rule for the Impact of Hurricane Katrina, Hurricane Rita and Hurricane Wilma.

5. Due to the short-term nature of the applicability of this extension, which expires Jan. 23, 2022, this interpretation will be publicly posted on the Statutory Accounting Principles (E) Working Group web page. This
interpretation will be automatically nullified on Jan. 24, 2022, and will be included as a nullified INT in Appendix H – Superseded SSAPs and Nullified Interpretations in the “As of March 2022” Accounting Practices and Procedures Manual.

INT 21-02 Status

6. No Further discussion is planned.

Statutory Accounting Principles (E) Working Group
E-Vote
October 25, 2021

The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force conducted an e-vote that concluded Oct. 25, 2021. The following Working Group members participated: Dale Bruggeman, Chair (OH); Kevin Clark, Co-Vice Chair (IA); Sheila Travis (AL); Kim Hudson (CA); Eric Moser (IL); Stewart Guerin (LA); Judy Weaver (MI); Doug Bartlett (NH); Bob Kasinow (NY); Kimberly Rankin (PA); Jamie Walker (TX); Doug Stolte (VA); and Amy Malm (WI).

1. Exposed Agenda Items 2021-16, 2021-17, 2021-18 and 2021-19EP

The Working Group conducted an e-vote to consider exposure of agenda items 2021-16: SSAP No. 30R – FHLB Disclosures – Blanks Referral, 2021-17: SSAP No. 32R – Permitted Valuation Methods, 2021-18: VM 21 Scenario Consistency Update, and 2021-19EP: Editorial Revisions. A summary of each is as follows:

1) Agenda item 2021-16 does not propose statutory accounting revisions; however, it resulted in a referral to the Blanks (E) Working Group to include a supplemental data capture footnote for Federal Home Loan Bank (FHLB) borrowings that are classified as a deposit-type contract and reported in Exhibit 7 – Deposit-Type Contracts.

2) Agenda item 2021-17 proposes revisions to Statement of Statutory Accounting Principles (SSAP) No. 30R—Unaffiliated Common Stock to remove a reference that indicates that historical cost is an allowable valuation method for redeemable preferred stock. Such valuation methods were previously superseded in July 2020 when SSAP No. 30—Unaffiliated Common Stock was substantively revised.

3) Agenda item 2021-18 proposes to SSAP No. 108—Derivatives Hedging Variable Annuity Guarantees to ensure consistency with the Valuation Manual, specifically removing reference to the “standard scenario,” as that language is no longer utilized in VM-21, Requirements for Principle-Based Reserves for Variable Annuities.

4) Agenda item 2021-19EP proposes minor editorial corrections in accordance with the maintenance process. The agenda item proposes correcting paragraph references in SSAP No. 16R—Electronic Data Processing Equipment and Software and the removal of outdated references in SSAP No. 43R—Loan-Backed and Structured Securities.

Mr. Hudson made a motion, seconded by Mr. Kasinow, to expose agenda items 2021-16, 2021-17, 2021-18, and 2021-19EP for a public comment period ending Nov. 12. The motion passed unanimously.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.
The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force conducted an e-vote that concluded Sept. 10, 2021. The following Working Group members participated: Dale Bruggeman, Chair (OH); Kevin Clark, Co-Vice Chair (IA); Kim Hudson (CA); Kathy Belfi (CT); Eric Moser (IL); Stewart Guerin (LA); Judy Weaver (MI); Doug Bartlett (NH); Bob Kasinow (NY); and David Smith (VA).

1. **Exposed Agenda Item 2021-15 and INT 21-02T**

The Working Group conducted an e-vote to consider exposure of agenda item 2021-15: SSAP No. 43R – Residual Tranches and Interpretation 21-02T – Hurricane Ida. A summary of each is as follows:

1) Agenda item 2021-15 proposes revisions to **SSAP No. 43R—Loan-Backed and Structured Securities**, clarifying that for all instruments within scope, nonrated residual tranches shall be reported on Schedule BA – Other Long-Term Investments and valued at the lower of cost or fair value. These provisions are proposed to be in effect for 2021 year-end reporting.

2) INT 21-02T proposes that for policies affected by Hurricane Ida, a 60-day extension to the “90-day rule” in **SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers** be granted for uncollected premiums balances, bills receivable for premiums, and amounts due from agents and policyholders. The temporary extension is proposed to be automatically nullified on Jan. 24, 2022.

Mr. Clark made a motion, seconded by Mr. Smith, to expose agenda item 2021-15 and INT 21-02T for a 21-day public comment period ending Oct 1. The motion passed unanimously.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

https://naiconline.sharepoint.com/sites/NAICSupportStaffHub/MemberMeetings/Fall2021/TF/App/SAP/Minutes/Att-One-C_09102021-EvoteStatAcctWGminTPR.docx.
The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force met Aug. 26, 2021. The following Working Group members participated: Dale Bruggeman, Chair (OH); Carrie Mears and Kevin Clark, Co-Vice Chairs (IA); Sheila Travis (AL); Kim Hudson (CA); William Arfanis (CT); Rylynn Brown (DE); Cindy Andersen, Eric Moser and Kevin Fry (IL); Doug Bartlett (NH); Bob Kasinow (NY); Melissa Greiner and Kimberly Rankin (PA); Ludi Skinner and Jamie Walker (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI).

1. Reviewed Comments on Exposed Items

The Working Group held a public hearing to review comments (Attachment One-D1) on previously exposed items.

a. Agenda Item 2021-04

Mr. Bruggeman directed the Working Group to agenda item 2021-04: Valuation of Foreign Insurance SCAs. Fatima Sediqzad (NAIC) stated that this agenda item originated from comments received during the development of agenda item 2018-26: SCA Loss Tracking – Accounting Guidance, which adopted revisions in Statement of Statutory Accounting Principles (SSAP) No. 97—Investments in Subsidiary, Controlled and Affiliated Entities to state that reported equity method losses of an investment in a subsidiary, controlled, or affiliated entity (SCA) would not create a negative value in an SCA investment; thus, equity method losses would stop at zero. However, those adopted revisions also clarified that to the extent that there was a financial guarantee or commitment, it would require recognition under SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets. In November 2020, the Working Group adopted agenda item 2020-18: SSAP No. 97 Update, which removed a lingering, superseded reference regarding negative equity method loss valuations. Ms. Sediqzad stated that SSAP No. 97 requires specific limited statutory basis of accounting adjustments to paragraph 8.b.ii. (insurance-related SCA) and paragraph 8.b.iv. (foreign insurance SCA) entities. These adjustments are to prevent assets held by an SCA from receiving a more favorable accounting treatment than had they been held directly by the insurer. It was during the Working Group’s discussion of agenda item 2020-18 that industry requested consideration of whether foreign insurance SCAs should continue to be subject to the long-standing SSAP No. 97 statutory adjustments and the adjustments should result in a negative SCA valuation. Interested parties’ initial response was that foreign insurance operations are subject to foreign jurisdiction regulations and should be allowed to stand independently of a domestic insurer; thus, in the absence of a guarantee or commitment, equity valuation should not go negative. Industry inquired whether foreign insurance subsidiaries captured in scope of SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies are also intended to reflect the limited statutory adjustments, as required in SSAP No. 97, and whether the equity method of those investments shall reflect a negative value in the absence of a required U.S. generally accepted accounting principles (GAAP) audit.

Ms. Sediqzad stated that it is important to separate the SSAP No. 97, paragraph 13 (equity method) adjustments, which stop at zero from the SSAP No. 97, paragraph 9 (limited statutory basis of accounting) adjustments, which intentionally do not stop at zero. However, it is noted that reporting entities with investments captured under SSAP No. 48, which requires an audit for admittance, may not recognize that additional adjustments are needed if the investment is nonadmitted. Ms. Sediqzad also noted that if these SSAP No. 48 investments are not audited, reporting entities may have difficulty calculating the required adjustments to be made pursuant to SSAP No. 97, paragraph 9. From this discussion, in May 2021, the Working Group exposed nonsubstantive revisions to SSAP No. 48 and SSAP No. 97 to clarify the application of the guidance and limit when the statutory adjustments are required for foreign insurance subsidiaries.

Ms. Sediqzad noted that comments received from the exposure were supportive of the exposed edits. She recommended that the Working Group adopt the exposed nonsubstantive revisions to SSAP No. 48 to clarify that the adjustments in SSAP No. 97, paragraph 9 may result in a negative equity valuation; however foreign insurance SCA entities may stop at zero, provided that the entity does not provide services or hold assets on behalf of a U.S.-based reporting entity.

Angelica Tamayo-Sanchez (New York Life), representing interested parties, stated appreciation for the Working Group’s consideration of this matter, as they believe foreign insurance SCAs are distinctly different from SSAP No. 97, paragraph 8.b.ii. entities, and this amendment will reflect the appropriate accounting of such items.
Mr. Hudson made a motion, seconded by Mr. Kasinow, to adopt the exposed nonsubstantive revisions in SSAP No. 48 and SSAP No. 97 (Attachment One-D2). The motion passed unanimously.

b. Agenda Item 2021-10

Mr. Bruggeman directed the Working Group to agenda item 2021-10: SSAP No. 32R – Clarification of Effective Call Price. Jim Pinegar (NAIC) stated that this agenda item proposes a clarification of the valuation ceiling for perpetual preferred and publicly traded preferred stock warrants in SSAP No. 32R—Preferred Stock. He stated that SSAP No. 32R requires that perpetual preferred stock be reported at fair value, with a valuation ceiling not to exceed any currently “effective call price.” However, as questions arose regarding the interpretation of this requirement, the exposed revisions clarify that the valuation ceiling will only apply in cases where the issuer has announced that the instrument will be called, or the call is currently exercisable, by the issuer. Mr. Pinegar stated that this interpretation will ensure that instruments in scope of SSAP No. 32R are not reported at a value exceeding an amount for which the item can be immediately called and will properly reflect the economics of these equity investments. He stated that the exposed footnote interpretation received informal comments indicating that interested parties support this proposal.

Ms. Malm made a motion, seconded by Mr. Bartlett, to adopt the exposed nonsubstantive revisions in SSAP No. 32R (Attachment One-D3). The motion passed unanimously.

2. Considered Maintenance Agenda – Pending Listing – Exposures

a. Agenda Item 2021-11

Mr. Bruggeman directed the Working Group to agenda item 2021-11: SSAP No. 43R – Credit Tenant Loans – Scope. Julie Gann (NAIC) stated that this agenda item was drafted because the Valuation of Securities (E) Task Force recently adopted revisions to the credit tenant loan (CTL) guidance in the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual). She stated that with the newly adopted guidance, mortgage loans in scope of SSAP No. 37—Mortgage Loans will continue historical practice, with reporting entities having the ability to file the structures with the NAIC Securities Valuation Office (SVO) for a structural assessment to determine whether the mortgage loan can be reclassified from Schedule B: Mortgage Loans to Schedule D-1: Long-Term Bonds. Security structures that have underlying real estate risk, whether they are referred to as CTLs or by another name that qualify in scope of SSAP No. 26R—Bonds or SSAP No. 43R—Loan-Backed and Structured Securities, shall follow the accounting and reporting provisions of those applicable SSAPs. Ms. Gann stated that upon review of the Task Force adoptions, the temporary reporting provisions directed in INT 20-10: Reporting Nonconforming CTLs are no longer applicable. She stated that the Working Group could either nullify INT 20-10 or let the INT automatically expire on Oct. 1. Additionally, she stated that with the Task Force adoptions, NAIC staff are recommending disposal, without statutory revisions, of agenda item 2020-24: Accounting and Reporting of Credit Tenant Loans. She stated that NAIC staff are also recommending limited revisions to: 1) clarify that mortgage loans in scope of SSAP No. 37 that qualify under the SVO structural assessment as CTLs are in scope of SSAP No. 43R; and 2) remove outstanding references to examples of loan-backed and structured securities from SSAP No. 43R, paragraph 27.b. She stated that the proposed exposure period would end on Oct. 1, which is the same day INT 20-10 is scheduled to no longer be in effect. However, after comments are received, the Working Group could consider making an explicit statement regarding whether to allow the INT to automatically expire or that the Working Group has intentionally nullified the INT. Mr. Bruggeman stated that an affirmative action of the Working Group would likely be beneficial for historical record. He stated that the revisions only affect mortgage loans that are in the form of a CTL, not similarly named items that are in the legal form of a security.

Michael M. Monahan (American Council of Life Insurers—ACLI) stated that the ACLI supports exposure of the aforementioned items, as recommended by NAIC staff.

John Garrison (Lease-Backed Securities Working Group) stated support for the exposures, as recommended by NAIC staff, as the edits are in line with the recent adoptions of the Task Force.

Ms. Weaver made a motion, seconded by Mr. Clark, to expose for a public comment period ending Oct. 1: 1) nonsubstantive revisions detailed in agenda item 2021-11; 2) the disposal, without statutory revisions, of agenda item 2020-24; and 3) whether INT 20-10 should be allowed to automatically nullify or if explicit nullification comments are warranted by the Working Group. The motion passed unanimously.
b. **Agenda Item 2021-12EP**

Mr. Bruggeman directed the Working Group to agenda item 2021-12EP: Editorial Updates. Robin Marcotte (NAIC) stated that this agenda item contains five editorial maintenance updates to the *Accounting Practices and Procedures Manual* (AP&P Manual). Four of the updates include minor formatting or revisions for consistency to the *Preamble, Appendix A-001, Appendix C,* and *Appendix C-2.* Ms. Marcotte stated that the remaining edit includes a minor update to improve the readability of the guidance for securities receivables in *SSAP No. 21R—Other Admitted Assets.*

Mr. Hudson made a motion, seconded by Ms. Weaver, to expose agenda item 2021-12EP for a public comment period ending Oct. 1. The motion passed unanimously.

c. **Agenda Item 2021-13**

Mr. Bruggeman directed the Working Group to agenda item 2021-13: Salvage – Legal Recoveries. Ms. Marcotte stated that this agenda item recommends nonsubstantive revisions to *SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* to clarify that salvage and subrogation estimates and recoveries should be reported as a reduction to both claims/losses and loss adjusting expenses (LAEs), as appropriate. However, once the amounts for salvage, subrogation, and coordination of benefits (COB) recoveries are received, they are reported as a reduction of paid losses and LAEs depending on the nature of the costs being recovered. Ms. Marcotte stated that SSAP No. 55 does not explicitly discuss the recovery of LAEs in the discussion of salvage, subrogation, and COB; however, the property/casualty (P/C) annual statement instructions, which are Level Two on the statutory hierarchy of authoritative literature, includes an explicit reference to reduce LAEs for such amounts in the instructions for *Schedule P – Analysis of Losses and Loss Expenses.* She stated that the proposed clarification, which was requested by industry, provides additional detail regarding LAEs for salvage, subrogation, and COB that is believed to be consistent with current practice by most reporting entities. She stated that even though NAIC staff believe the proposed clarification is consistent with the current practice of most entities, the Working Group should notify the Casualty Actuarial and Statistical (C) Task Force, the Life Actuarial (A) Task Force, and the Health Actuarial (B) Task Force of the exposure.

Mr. Hudson made a motion, seconded by Mr. Stolte, to expose agenda item 2021-13 and send notice of the exposure to the Casualty Actuarial and Statistical (C) Task Force, the Life Actuarial (A) Task Force, and the Health Actuarial (B) Task Force. The motion passed unanimously.

d. **Agenda Item 2021-14**

Mr. Bruggeman directed the Working Group to agenda item 2021-14: Policy Statement Terminology Change. He stated that this agenda item was drafted in response to a referral received from the Financial Condition (E) Committee regarding the Working Group’s historical use of statutory accounting terminology of “substantive” and “nonsubstantive” to describe statutory accounting revisions being considered by the Working Group. The use of these terms could be misunderstood by users that are not familiar with the specific definitions. Mr. Bruggeman stated that the suggestions provided in the referral have been incorporated into the agenda item for exposure consideration. Ms. Gann stated that the agenda item only currently proposes modifications to the *NAIC Policy Statement on Statutory Accounting Principles Maintenance Agenda Process,* as that is the source document for those definitions. Once approved by the Working Group, it is anticipated that an editorial agenda item will be utilized to change the remaining references throughout the AP&P Manual. Mr. Bruggeman stated that after adoption, the new terms will be used on a go-forward basis and updating historical documents will not occur.

Mr. Hudson made a motion, seconded by Mr. Bartlett, to receive the referral from the Financial Condition (E) Committee and expose agenda item 2021-14. The motion passed unanimously.

3. **Considered Maintenance Agenda – Active Listing**

a. **Agenda Item 2019-24**

Mr. Bruggeman directed the Working Group to agenda item 2019-24: Levelized and Persistency Commission – Issue Paper. He stated that this agenda item is to document the historical background regarding discussions during the development of the nonsubstantive revisions to *SSAP No. 71—Policy Acquisition Costs and Commissions.* He noted that the nonsubstantive revisions to SSAP No. 71 were adopted through the NAIC committee process, with final adoption occurring by the Executive (EX) Committee and Plenary at the Summer National Meeting.
Mr. Stolte made a motion, seconded by Mr. Hudson, to expose Issue Paper No. 16x: Levelized Commission for a public comment period. The motion passed unanimously.

Mr. Bruggeman stated that all the items exposed for comment have an Oct. 1 comment deadline.

4. Discussed Other Matters

a. Received and Responded to a Valuation of Securities (E) Task Force Referral on WCFIs

Ms. Marcotte stated that in July 2021, the Valuation of Securities (E) Task Force adopted changes to the P&P Manual incorporating revisions consistent with the revisions approved by the Working Group in May 2020 to SSAP No. 105R—Working Capital Finance Investments. Additionally, the Task Force directed a 30-day exposure and a referral to the Working Group regarding additional proposed P&P Manual edits concerning unrated and nonguaranteed subsidiary obligors in Working Capital Finance Investment (WCFI) programs. Ms. Marcotte stated that although the public comment period for this item has ended, Task Force support staff have confirmed that the Working Group will have additional time to respond to the referral.

Ms. Marcotte stated that the referral received provided notification of an exposed policy change that would direct the SVO to rely upon the NAIC designation of an unrated subsidiary obligor’s parent entity for WCFI programs, without notching for the subsidiary. She stated that a referral was provided to the Working Group, as a qualifying NAIC designation of the obligor is a required element for admittance of WCFI receivables under SSAP No. 105R. She stated that the Task Force’s exposure is a variation of the industry’s prior recommendations, which were previously rejected by the Working Group. The Task Force exposure proposes to require the rating of the WCFI program parent to be relied on for unrated, unsecured obligated obligors. If the Task Force agrees and deems it essential that the SVO assign NAIC designations to WCFI transactions with unrated, non-guaranteed obligors, then this policy change will affect how NAIC designations are assigned to WCFI transactions. The policy would direct SVO staff to apply/imply the credit rating of the parent to unrated, unguaranteed subsidiaries for WCFI programs even if they do not have financial information on the subsidiary. This direction is noted in the exposed SVO memo as contrary to current SVO credit substitution methodologies and is noted as not a generally accepted credit rating technique, as implied parent support is not legally enforceable.

Ms. Marcotte stated that the draft referral response notes that although the Task Force oversees the process to determine NAIC designations, the proposed methodology is a significant departure for how SVO ratings are otherwise assigned. However, the provisions within SSAP No. 105R were established in accordance with historical practices, which allow the SVO to apply its credit substitution methodology as it does for other asset classes. If the Task Force chooses to move away from the historical application of financial analysis (and use of the credit substitution methodology in determining NAIC designations for WCFI programs), the Working Group may deem it necessary to incorporate additional guardrail provisions to SSAP No. 105R, as the NAIC designation of the obligor may no longer provide the intended safeguards for WCFI programs. The draft referral response also noted that the proposed P&P Manual revisions include two elements that would require further coordination to avoid inconsistencies with SSAP No. 105R.

Mr. Bruggeman stated that while the Task Force has the responsibility for determining credit quality and NAIC designations, SSAP No. 105R has historically required reliance on a parent for such determination. However, the proposed policy would require the SVO to imply an NAIC designation to an unrated entity based on the parent entity’s credit quality, all without guarantees or other legally binding provisions that provide assurance that the parent will be legally or contractually obligated to financially cover the obligations of the unrated entity. Although, for a given program, and not related to the parent/sub relationship, the SVO may not notching or otherwise not give a rating to that program. Mr. Bruggeman stated that if the SVO takes such action, the Working Group may consider additional changes to SSAP No. 105R.

Mr. Fry stated that despite the Task Force’s proposal to no longer rely on the parent for a subsidiary’s credit determination, the WCFI program has several mitigants and is well controlled with several safeguards. He stated that this is a safe asset class with a proven track record.

Mr. Hudson made a motion, seconded by Mr. Arfanis, to receive the referral from the Task Force and send the referral response. The motion passed unanimously.

5. Reviewed and Discussed the Proposed Principles-Based Bond Definition

The Working Group held a public hearing to review comments (Attachment One-D4) on previously exposed items.
a. **Agenda Item 2019-21**

Mr. Bruggeman directed the Working Group to agenda item 2019-21: SSAP No. 43R. Ms. Gann stated that in October 2020, a small group of state insurance regulators and industry met regularly to draft a principles-based bond definition. The intent of this project is to clarify what should be reported on Schedule D-1, regardless of whether the instrument is in scope of SSAP No. 26R or SSAP No. 43R. In May 2021, the Working Group exposed the principles-based bond definition, along with a glossary and appendices with examples for application purposes. As a result of the exposure, three comment letters were received. Ms. Gann stated that NAIC staff are requesting Working Group input as to whether the proposed definition provides the general framework that should be used to proceed with the development of an issue paper and statutory accounting revisions. She stated that with direction from the Working Group to move forward with these principle concepts, all elements are still subject to continuous discussion, and revisions are expected to occur throughout the process.

Ms. Gann stated that depending on the Working Group’s direction, the next steps would include the development of: 1) an issue paper and proposed revisions to incorporate the bond concepts; 2) guidance that specifically details accounting and reporting for items that may no longer be eligible for Schedule D-1 reporting as a bond; and 3) reporting revisions to incorporate more granularity on Schedule D-1. She stated that due to the significance of the changes expected, the earliest application of the new standard would likely be Jan. 1, 2024. She stated that in addition to directing development of an issue paper, it is recommended that the Working Group repurpose the “43R small group” as a “43R study group” and request that additional state insurance regulators volunteer to participate as regular members. She stated that until revised guidance is adopted and effective, reporting entities can continue reporting as they have been for items currently in scope of SSAP No. 26R or SSAP No. 43R. However, an interim agenda item is anticipated to clarify that non-rated residual tranches or interests should be reported on Schedule BA: Other Long-Term Invested Assets.

Mr. Clark stated appreciation for the collaboration with industry on the SSAP No. 43R project. Creating a bond definition that is based on substance rather than legal form, is critical for state insurance regulators’ understanding of the types of risks present in an insurer’s investment portfolio, especially those reported on Schedule D-1. He stated that the development of a principles-based approach will accommodate a vast array of investment structures and is the best way to accomplish this goal.

In response to an inquiry from Ms. Weaver, Mr. Bruggeman stated that the intent of the project is to properly classify bonds and investments so that they are reported on an appropriate schedule and receive an adequate risk-based capital (RBC) charge. Ms. Mears stated that this was her understanding, but she also wanted to reiterate that the role of the project is reporting, not to determine credit quality nor modify the NAIC designation process. Accordingly, lower quality instruments that meet the definition of a bond will still qualify for Schedule D-1 reporting.

Michael Reis (Northwestern Mutual), representing interested parties, stated appreciation to the Iowa regulators and NAIC staff in their collaborative efforts with this project. He stated that the principle concepts will be helpful to ensure appropriate reporting while preventing potential investment reporting abuses. He stated that interested parties are generating additional examples for discussion to ensure there are not any unintended consequences, and they look forward to the continued collaboration. Mr. Bruggeman stated that the intent of the project is to remain principles-based; however, certain circumstances may require additional specificity to ensure clarity of the standard.

Ms. Gann stated in response to an inquiry from Mr. Bruggeman that the intent is to not allow pure grandfathering of existing structures. However, transition accommodations will likely be considered. Mr. Clark stated that grandfathering would negate the benefits of the project, especially as prior investments would not be subject to the new guidance. State insurance regulators would not know which investments follow the new guidance, especially as prior investments might not be liquidated for several years. Mr. Clark identified that transition guidance is anticipated as part of the additional discussions.

Ms. Gann summarized the comments received from Pinnacol Assurance, noting that they pertain to what is known as “stapled investments,” as certain debt security holders are contractually obligated to hold a corresponding equity component. Mr. Clark stated that the prevalence of these investments is likely more common than originally anticipated; however, review of the differentiation of these investments versus those that are in substance no different than had the insurer held 100% of an equity interest (that has been recharacterized as a debt), will be reviewed as a part of this project.

Aaron Sarfatti (Equitable) inquired if the risk characteristics of an investment can be separated from the bond definition. He inquired due to certain investments having a broad range of outcomes, whether an investment should qualify as a bond and whether the current RBC infrastructure provides an adequate charge. He stated that he believes that any subordinate debt structure should not qualify for bond treatment, unless there is a special exception provided by the Working Group or the SVO.
The concepts proposed would not adequately capture credit quality of possible investor outcomes. Mr. Bruggeman stated that the role of statutory accounting is to address the reporting of certain instruments, while investment quality is determined through NAIC designations through the Valuation of Securities (E) Task Force; risk charges of investments, often determined based on the reported NAIC designations, are determined through the Capital Adequacy (E) Task Force. He stated that as the project proceeds, the Working Group will consider appropriate referrals, as deemed necessary. Mr. Sarfatti stated that he will submit a comment letter to the appropriate working groups or task forces to further articulate his points.

Caleb Brainerd (Athene) inquired of Mr. Sarfatti if his comments mean that any subordinated tranche should not qualify as a bond or that only the most subordinated tranche would not qualify. Mr. Sarfatti stated that any subordinated tranche has a binary outcome, and while differing tranches have varying degrees of outcome uncertainty, the current RBC treatments for such items are likely not adequate, and he recommends additional review by state insurance regulators. Mr. Brainerd stated that he does not agree that all tranches have a binary outcome and will await Equitable’s comment letter.

In response to a submitted inquiry, Mr. Bruggeman stated that in terms of the permitted practice process, the bond proposal will not have an impact on the process per se. However, if an accounting treatment other than what is adopted by the Working Group is sought, it would require approval from an insurer’s domestic regulator as a permitted practice.

Mr. Clark made a motion, seconded by Ms. Malm, to affirm the direction of the exposed principle-based bond concepts, repurpose the “43R small group” as a “43R study group,” and direct staff to proceed with an interim project to require non-rated residual tranches or interests be reported on Schedule BA. The motion passed unanimously.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

RE: Comments on Ref# 2021-04: SSAP No. 97 – Valuation of Foreign Insurance SCAs

Dear Mr. Bruggeman:

Interested parties appreciate the opportunity to provide comments on Ref# 2021-04 (the “exposure draft”), which was re-exposed by the Statutory Accounting Principles Working Group (the “Working Group”) on May 20, 2021.

The exposure draft proposes to make the following changes to the SSAP No. 97 and SSAP No. 48:

SSAP No. 97 Paragraph 9

Note that the outcome of these adjustments can result in a negative equity valuation of the investment for all paragraph 8.b.ii. entities. For a paragraph 8.b.iv. entity, the application of these adjustments will stop at zero, and will not result in negative equity valuation unless the 8.b.iv entity provides services to the reporting entity or its affiliates or holds assets on behalf of the reporting entity. If such services, including reinsurance transactions, are occurring, the adjustments required in this paragraph can result in a negative equity valuation. (See additional equity method application guidance in paragraph 13.e. regarding guarantees and financial support.)

SSAP No. 48 Paragraph 6

Investments in these ventures, except for joint ventures, partnerships and limited liability companies with a minor ownership interest, shall be reported using an equity method as defined in SSAP No. 97—Investments in Subsidiary, Controlled and
Statutory Accounting Principles Working Group  
July 15, 2021  
Page 2

Affiliated Entities, paragraphs 8.b.i. through 8.b.iv. (The equity method calculation may result with a negative valuation of the investment, therefore the SSAP No. 97 equity method calculation shall occur regardless of whether the investment is supported by an audit and the reporting entity will nonadmit the investment.) A reporting entity whose shares of losses in a SSAP No. 48 entity exceeds its investment in the SSAP No. 48 entity shall disclose the information required by SSAP No. 97, paragraph 35.a.

Interested parties agree with these changes. As stated in our previous comment letters on this topic, there are significant differences between 8.b.ii and 8.b.iv subsidiaries that warrant different accounting treatment. Interested parties believe that the proposed edits to SSAP No. 97 provide for the appropriate accounting for 8.b.iv subsidiaries while at the same time providing effective guardrails to prevent any potential abuses of the rules.

* * *

Thank you for considering interested parties’ comments. If you have any questions in the interim, please do not hesitate to contact us.

Sincerely,

D. Keith Bell                    Rose Albrizio

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

RE: New York Life’s Comments on Item 2021-04 SSAP No. 97 – Valuation of Foreign Insurance SCAs

Dear Mr. Bruggeman:

New York Life (“NYL”) appreciates the opportunity to provide comments on Item 2021-04 (the “Exposure”), which was re-exposed by the Statutory Accounting Principles (E) Working Group (the “SAPWG”) on May 20, 2021.

The Exposure proposes to make the following changes to the SSAP No. 97 and SSAP No. 48

SSAP No. 97 Paragraph 9

Note that the outcome of these adjustments can result in a negative equity valuation of the investment for all paragraph 8.b.ii. entities. For a paragraph 8.b.iv. entity, the application of these adjustments will stop at zero, and will not result in negative equity valuation unless the 8.b.iv entity provides services to the reporting entity or its affiliates or holds assets on behalf of the reporting entity. If such services, including reinsurance transactions, are occurring, the adjustments required in this paragraph can result in a negative equity valuation. (See additional equity method application guidance in paragraph 13.e. regarding guarantees and financial support.)

SSAP No. 48 Paragraph 6

Investments in these ventures, except for joint ventures, partnerships and limited liability companies with a minor ownership interest, shall be reported using an equity method as defined in SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, paragraphs 8.b.i. through 8.b.iv. (The equity method calculation may result with a negative valuation of the investment, therefore the SSAP No. 97 equity method calculation shall occur regardless of whether the investment is supported by an audit and the reporting entity will nonadmit the investment.) A reporting entity whose shares of losses in a SSAP No. 48 entity exceeds its investment in the SSAP No. 48 entity shall disclose the information required by SSAP No. 97, paragraph 35.a.
NYL agrees with the proposed changes to both SSAPs. We believe that the language being proposed reflects the appropriate accounting for an 8.b.iv entity and at the same time prevents potential interpretations that would allow an 8.b.iv entity’s equity to be floored at zero if the 8.b.iv is only in existence to benefit the reporting entity.

Thank you for considering our comments.

Sincerely,

Robert M. Gardner
Senior Vice President and Controller

Douglas A. Wheeler
Senior Vice President, Office of Governmental Affairs
Statutory Accounting Principles (E) Working Group  
Maintenance Agenda Submission Form  
Form A

**Issue: SSAP No. 97 – Valuation of Foreign Insurance SCAs**

**Check (applicable entity):**

- Modification of existing SSAP [ ]
- New Issue or SSAP [ ]
- Interpretation [ ]

**Description of Issue:**

In March 2020, agenda item 2018-26 – SCA Loss Tracking – Accounting Guidance adopted guidance in SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities to state that reported equity method losses of an investment in a subsidiary controlled or affiliated entity (SCA) would not create a negative value in a SCA investment, thus equity method losses would stop at zero. However, the agenda item also clarified that to the extent there was a financial guarantee or commitment, it would require appropriate recognition under SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets.

In November 2020, the Working Group adopted agenda item 2020-18 - SSAP No. 97 Update and removed a lingering, superseded reference regarding negative equity method loss valuations.

However guidance in SSAP No. 97 also requires specific adjustments to 8.b.ii (insurance related SCA) and 8.b.iv (foreign insurance SCA) entities. These long-standing adjustments require the non-admission of certain assets to achieve a limited statutory basis of accounting. The adjustments have typically been viewed as necessary in order to prevent assets being held by SCA receiving more favorable treatment than had the assets been held directly by the insurer. (e.g., requiring the nonadmittance of certain assets per SSAP No. 20—Nonadmitted Assets). Per SSAP No. 97, an equity method of accounting for 8.b.ii and 8.b.iv entities would be a beginning point which would then be adjusted by the provisions of SSAP No. 97, paragraph 9 (see “authoritative literature section”). It is important to note the outcome of these adjustments can result in a negative equity valuation of the investment. Again, this is so assets held by an SCA aren’t reported at a higher value than had they been held directly by the insurer.

During the discussion of agenda item 2020-18, industry comments requested consideration of whether 8.b.iv entities should be subject to the provisions of SSAP No. 97, specifically that paragraph 9 adjustments may result in a negative equity valuation. While stating many positions, industry’s primary response that foreign insurance operations are subject to foreign jurisdiction and should be allowed to stand independently of a domestic insurer – thus in the absence of a guarantee or commitment, equity valuation should not go negative and thus stop at zero.

Comments were received from industry noted that the circumstances that would cause a foreign insurance reporting entity to record negative equity is not prevalent, however indicated the potential to arise in the future.

At the direction of the NAIC staff have drafted this agenda item to determine if further edits to SSAP No. 97 are required, specifically if the required statutory adjustments to 8.b.iv entities should no longer be able to result in a negative equity valuation.

One note, NAIC staff reviewed all SCA filings for the last 3 years, noting that less than 7% of all SCA filings were 8.b.iv entities. It was further noted that there was not a single instance of an 8.b.iv in a negative equity situation.
Existing Authoritative Literature:
Paragraph 9 of SSAP No. 97 details the modifications that are necessary to adjust audited U.S. Generally Accepted Accounting Principle (GAAP) financial statements to a limited statutory basis of accounting. These long-standing adjustments ensure that assets held by an SCA are not accounted for in a more favorable manner than had the assets been held directly by the insurer.

SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities

9. The limited statutory basis of accounting for investments in noninsurance SCA entities, subject to paragraph 8.b.ii. and foreign insurance SCA entities, subject to paragraph 8.b.iv., shall be adjusted for the following:

   a. Nonadmit assets pursuant to the following statutory accounting principles as promulgated by the NAIC in the Accounting Practices and Procedures Manual:

      i. SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers

      ii. SSAP No. 16R—Electronic Data Processing Equipment and Software

      iii. SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements

      iv. SSAP No. 20—Nonadmitted Assets

      v. SSAP No. 21R—Other Admitted Assets (e.g., collateral loans secured by assets that do not qualify as investments are nonadmitted under SAP)

      vi. SSAP No. 29—Prepaid Expenses

      vii. SSAP No. 105R—Working Capital Finance Investments
