   a. Consider the following in order to determine whether to model such assets for purposes of projecting cash flows:
      i. The degree of linkage between the portfolio performance and the calculation of the reinsurance cash flows.
      ii. The sensitivity of the valuation result to the asset portfolio performance.
   b. If the company concludes that modeling is unnecessary, document the testing and logic leading to that conclusion.
   c. If the company determines that modeling is necessary, comply with the requirements in Section 7.E and Section 9.F, taking into account:
      i. The investment strategy of the company holding the assets, as codified in the reinsurance agreement or otherwise based on current documentation provided by that company.
      ii. Actions that may be taken by either party that would affect the net reinsurance cash flows (e.g., a conscious decision to alter the investment strategy within the guidelines).

Guidance Note: In some situations, it may not be necessary to model the assets held by the other party. An example would be modeling by an assuming company of a reinsurance agreement containing provisions, such as experience refund provisions, under which the cash flows and effective investment return to the assuming company are the same under all scenarios.

Guidance Note: Special considerations for modified coinsurance: Although the modified coinsurance (ModCo) reserve is called a reserve, it is substantively different from other reserves. It is a fixed liability from the ceding company to the assuming company in an exact amount, rather than an estimate of a future obligation. The ModCo reserve is analogous to a deposit. This concept is clearer in the economically identical situation of funds withheld. Therefore, the value of the modified coinsurance reserve generally will not have to be determined by modeling. However, the projected ModCo interest may have to be modeled. In many cases, the ModCo interest is determined by the investment earnings of an underlying asset portfolio, which, in some cases, will be a segregated asset portfolio or in others the ceding company’s general account. Some agreements may use a rate not tied to a specific portfolio.

14. If a ceding company has knowledge that an assuming company is financially impaired, the ceding company shall establish a margin for the risk of default by the assuming company. In the absence of knowledge that the assuming company is financially impaired, the ceding
company shall review the projected future profitability (after consideration of the assuming and ceding company actions modeled) of each group of reinsurance agreements by assuming company and establish a margin for the risk of default by the assuming company that is a function of the profitability of those agreements.

15. If an assuming company has knowledge that a ceding company is financially impaired, the assuming company shall establish a margin for the risk of default by the ceding company. Such margin may be reduced or eliminated if the assuming company has a right to terminate the reinsurance upon non-payment by the ceding company. In the absence of knowledge that a ceding company is financially impaired, the assuming company is not required to establish a margin for the risk of default by the ceding company.

16. In setting any margins required by Section 8.C.14 and Section 8.C.15 to reflect potential uncertainty regarding the receipt of cash flows from a counterparty, the company shall take into account the ratings, RBC ratio or other available information related to the probability of the risk of default by the counterparty, as well as any security or other factor limiting the impact on cash flows.

Additional Disclosures for VM-31 would likely be required, but are not included in this Draft APF.
In presenting the original APF 2018-58, NYL and NWM argued “we believe it is inappropriate to reflect reserve differences due to differing expectations of increases to future non-guaranteed premiums.”

Since that first presentation, there have been at least three different proposals concerning the proper way to model YRT premium increases in the DR and SR. Regulators were asked to choose the one that we felt is the “best”.

The approach taken then has the following weaknesses:
1. The guidance offered in all the proposals would only apply to the ceding company. This cannot resolve an issue of differing expectations, as described by NYL and NWM.

2. Contrary to the view tacitly underlying these discussions, the relationship between cedants and reinsurers is not one-to-one; rather, it is many-to-many: cedant may have more than one reinsurer on a block of business and the reinsurer can base its pricing decisions on the experience of multiple cedants.

3. By looking only at the DR and SR, we are not necessarily producing an outcome that is satisfactory when the final reserve credit is determined.

4. It is limited to YRT premiums. The problem of differing perspectives exists in other areas of reinsurance, such as COIs for UL (consider the perspective of an assuming company under coinsurance).

5. It goes against the grain of a principle-based approach, under which a company should have the freedom to select its approach, provided such approach is acceptable to its regulator. This must apply equally to cedants and reinsurers.

In my APF 2019-30, I proposed that concern over the DR and/or SR is misplaced, and that regulators should rather be concerned with the resulting reserve credit. Most recently, APF 2019-39, which was accepted by regulators in a close vote, limits the reserve credit to Cx/2 on an interim basis, pending a long-term solution.

The reserve credit is the difference between the pre-reinsurance reserve, which is the maximum of three reserves (NPR, DR and SR) and the post-reinsurance reserve, which is also a maximum of three reserves. As demonstrated by examples provided by Pat Allison, there is no rhyme or reason as to which of the three reserves will be the highest. Every year-end, a new issue year is added to the in-force, which changes its profile; so inferences from one year to the next are not possible. Therefore, a long-term solution based on consideration of each or any of the NPR, DR and SR will not be fruitful. On the other hand, regulators seem to be arriving at the conclusion that governing the reserve credit will produce a more satisfactory result.

It is debatable whether Cx/2 is an appropriate formula for the YRT Reinsurance NPR, in light of the multi-year nature of modern reinsurance treaties.

The primary purpose of this document is to propose a long-term solution, based on the principle that the reserve credit taken by cedant should bear a reasonable relationship to the reserve established by the assuming insurer. As discussed in my APF 2019-30, the proposed long-term solution is that the reserve credit taken by cedant shall not exceed the NPR established by the assuming company. I also propose a new formula for the NPR for YRT Reinsurance, based on existing guidance for the Term VM-20 Reserving Category.
In order to implement this guidance, there will need to be changes to both the Valuation Manual and the SSAP as follows:

1. Changes to SSAP:
   Revise
   (i) SSAP 61R, paragraph 37 (determination of YRT reserve credit); and
   (ii) SSAP 61R, paragraph 19, and the related Appendix A-791, so that the reserve credit for policies issued after on or after a specified date is determined in accordance with the provisions of the Valuation Manual. (I think (ii) is harder.)

2. Changes to Valuation Manual:
   Introduce in VM-20 Section 3 the calculation of the NPR for YRT Reinsurance based on the following guidance, applicable to cedant and reinsurer:

   Methodology: Follow the guidance in VM-20, Section 3.B.4, ignoring shock lapse provision.

   Assumptions:
   Interest: Follow VM-20, Section 3.C.2.b.
   Mortality: Follow the NPR guidance for the reinsured contract.
   Lapsation: Follow the NPR guidance for the reinsured contract.
   Net Amount At Risk: Follow the NPR guidance for the reinsured contract and the terms of the reinsurance treaty.

   Then, stipulate that the YRT reserve credit for a group of policies is capped at the sum of the corresponding YRT Reinsurance NPRs, as follows:

   a. Calculate the pre-reinsurance-ceded minimum reserve, here referred to as C.
   b. Calculate the post-reinsurance-ceded minimum reserve, here referred to as D.
   c. Calculate the NPR for the YRT reinsurance (Section 3.B.xx), as if it were a block of stand-alone policies each of which is mapped to a reinsured contract, here referred to as E.
   d. Determine an amount A, floored at 0, such that C – (D+A) ≤ E.
   e. Report the pre-reinsurance-ceded minimum reserve as C and the post-reinsurance-ceded minimum reserve as D+A.
APF 2019-41 Field Testing Instructions

**Unique components to this APF are highlighted in Yellow**

**Testing of this APF Includes:**

1. The company should perform a VM-20 reserve calculation, and if possible projection of future reserve results, using the 2020 Valuation Manual, except modified by APF 2019-41 under three mortality improvement scenarios: 0%, 0.5%, and 1% of future mortality improvement for 15 years.

2. When determining whether recapture would occur or whether changes to the current reinsurance premium scale are modeled or expected, the company should follow the principles developed in APF 2019-40.

3. The future mortality improvement assumptions of 0%, 0.5%, 1% for 15 years should only be applied for projected reinsurance claim settlements, not the actual pre-reinsurance death claims.

4. The only difference between the pre-YRT-reinsurance and post-YRT-reinsurance results should be YRT reinsurance. This can be handled in either of two options: model no reinsurance or retrocessions for the pre-YRT-reinsurance results and only model YRT reinsurance or retrocessions for the post-YRT-reinsurance results or 2) model other types of reinsurance or retrocessions for both the pre-YRT-reinsurance and the post-YRT-reinsurance results.

5. When reviewing output for this APF, ensure to look at how results vary for companies with low credibility. Base this using indicator for low credibility (below 80%) for testing APF 2019-42/17.

**Testing of this APF should Produce Disclosures:**

1. Provide reserve results per $1000 of NAAR. If possible, projected reserves should be provided on an annual basis for the company’s full projection horizon. These results should be provided separately for Term, ULG, and Other, as applicable. That is, for each projection year, provide the following reserve results:

<table>
<thead>
<tr>
<th>Mort</th>
<th>Pre-Reinsurance-Ceded</th>
<th>Post-Reinsurance-Ceded</th>
</tr>
</thead>
<tbody>
<tr>
<td>Improv</td>
<td>DR</td>
<td>SR</td>
</tr>
<tr>
<td>0%</td>
<td></td>
<td></td>
</tr>
<tr>
<td>0.5%</td>
<td></td>
<td></td>
</tr>
<tr>
<td>1%</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>ULG (results per $1000)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mort</td>
</tr>
<tr>
<td>Improv</td>
</tr>
<tr>
<td>0%</td>
</tr>
<tr>
<td>0.5%</td>
</tr>
<tr>
<td>1%</td>
</tr>
<tr>
<td>Mort</td>
</tr>
<tr>
<td>------</td>
</tr>
<tr>
<td>Improv</td>
</tr>
<tr>
<td>0%</td>
</tr>
<tr>
<td>0.5%</td>
</tr>
<tr>
<td>1%</td>
</tr>
</tbody>
</table>

2. For each scenario result (0%, 0.5%, 1.0% improvement for 15 years), disclose for the DR the individual annual reinsurance cash flows (e.g., reinsurance premiums paid, ceded benefits) for the time zero valuation projection.

3. For each scenario result (0%, 0.5%, 1.0% improvement for 15 years), disclose whether, and if so in what time period, the company assumed recapture would occur.

4. Disclose any material modeling simplifications and/or approximations applied.

5. For each scenario result (0%, 0.5%, 1.0% for 15 years), disclose whether the improvement is higher or lower than that assumed by the company for the same block of business as part of CFT. In addition, disclose the “company’s best estimate of mortality improvement” (both the improvement level and length) if such wording were kept in APF 2019-41, as currently written below.

6. For both Term and ULSG, disclose the mix of business by Product Type (e.g., Term length), Issue Age, Gender, and Policy Year.

See Exposed APF 2019-41 Below:
APF 2019-41 REDLINE FOR FIELD TESTING:

Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.
   Identification:
   David E. Neve, Vice President, Regulatory and Government Affairs, Global Atlantic Financial Group
   Title of the Issue:
   VM-20 Treatment for YRT Cash Flows in Modeled Reserves

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:
   VM-20 Section 8.C
   January 1, 2019 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)
   See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)
   Developing an appropriate margin for YRT reinsurance premiums has proven to be very difficult, given the margins in mortality assumptions that are used to determine YRT reinsurance claim settlements. Several proposals have been made that define the margin for reinsurance premiums to be somewhat consistent with the mortality margin that is used to determine YRT claim settlements. In effect, these proposals attempt to offset the two margins so that they largely cancel out. These proposals, while conceptually sound, are complex and difficult to implement.
   This proposal accomplishes the same goal of having offsetting margins, but does so using a straightforward and simple approach. It defines the margin for both reinsurance premiums and reinsurance claim settlements to be zero, so that the prudent estimate assumptions for YTR reinsurance premiums and YRT reinsurance claims are the company’s best estimate assumptions. Reinsurance premiums are projected using the premiums rates from the reinsurance treaties along with the company’s best estimate of future rate increases and recaptures. Projected reinsurance claim settlements are based on mortality rates that exclude the VM-20 prescribed margins, exclude the grading to an industry table, and include the company’s best estimate of mortality improvement.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Notes: VM APF 2019-41
VM-20 Section 8.C

(The proposal below inserts a new Sec. 8.C.8 and renumbers the following sections accordingly)

7. The company shall assume that the counterparties to a reinsurance agreement are knowledgeable about the contingencies involved in the agreement and likely to exercise the terms of the agreement to their respective advantage, taking into account the context of the agreement in the entire economic relationship between the parties. In setting assumptions for the NGE in reinsurance cash flows, the company shall include, but not be limited to, the following:

a. The usual and customary practices associated with such agreements.

b. Past practices by the parties concerning the changing of terms, in an economic environment similar to that projected.

c. Any limits placed upon either party’s ability to exercise contractual options in the reinsurance agreement.

d. The ability of the direct-writing company to modify the terms of its policies in response to changes in reinsurance terms.

e. Actions that might be taken by a party if the counterparty is in financial difficulty.

8. The company shall use best estimate assumptions with no implicit or explicit margins, except margins pursuant to Section 8.C.16 through Section 8.C.18, as the prudent estimate assumptions for YRT reinsurance premiums paid and YRT reinsurance claim settlements received, using the following procedure:

a. Use the reinsurance rates and provisions from the relevant reinsurance agreement as the initial prudent estimate assumption for YRT reinsurance premiums paid, and project future reinsurance rate increases and recaptures using what the company actually expects will occur, based on treaty provisions, past reinsurance rate increase experience, and ongoing relationship with the reinsurer.

b. The mortality rates used to determine the prudent estimate assumptions for YRT reinsurance claim settlements shall equal the company’s anticipated experience assumptions adjusted to reflect the company’s best estimate of mortality improvement.

98. The company shall account for any actions that the ceding company and, if different, the direct-writing company have taken or are likely to take that could affect the expected cash flows of the reinsured business in determining assumptions for the modeled reserve.

[Renumber following sections accordingly]
APF 2019-42 Field Testing Instructions

Testing of this APF Includes:

1. The company should perform a VM-20 reserve calculation, and if possible projection of future reserve results, using the 2020 Valuation Manual, except modified by APF 2019-42 under four mortality improvement scenarios: 5, 10, 15, and 20 years of future mortality improvement.

2. For the purposes of the field testing reserve calculations, the company should not make any modification to the standard assumption based on Section 8.C.18.c. Instead, the impact of Section 8.C.18.c will be assessed through narrative response.

3. The only difference between the pre-YRT-reinsurance and post-YRT-reinsurance results should be YRT reinsurance. This can be handled in either of two options: model no reinsurance or retrocessions for the pre-YRT-reinsurance results and only model YRT reinsurance or retrocessions for the post-YRT-reinsurance results or 2) model other types of reinsurance or retrocessions for both the pre-YRT-reinsurance and the post-YRT-reinsurance results.

Testing of this APF should Produce Disclosures:

1. Direct Writers or Reinsurers assuming on a Coinsurance Basis: Provide reserve results per $1000 of NAAR. If possible, projected reserves should be provided on an annual basis for the company’s full projection horizon. These results should be provided separately for Term, ULSG, and Other, as applicable. The results should be provided pre-YRT-reinsurance and post-YRT-reinsurance. That is, for each projection year, provide the following reserve results:

<table>
<thead>
<tr>
<th>Term (results per $1000)</th>
<th>Pre-YRT-Reinsurance-Ceded</th>
<th>Post-YRT-Reinsurance-Ceded</th>
</tr>
</thead>
<tbody>

</tr>
</tbody>
</table>

Note that if a reinsurer assumes on both a coinsurance and YRT basis, they are requested to report their Term results separately for non-YRT and YRT, so that the modeling of business assumed on a YRT basis can be reviewed in isolation.

3. For each scenario result (5, 10, 15, and 20 years), disclose for the DR the individual annual reinsurance cash flows (e.g., reinsurance premiums paid/received, ceded benefits) for the time zero valuation projection.

4. Separately for each scenario (5, 10, 15, and 20 years), disclose whether, and if so in what time period, the company would assume recapture would occur if the company were to follow Section 8.C.18.c.

5. Separately for each scenario (5, 10, 15, and 20 years), if the company were to follow Section 8.C.18.c, disclose whether a different variation in the reinsurance premium assumption under VM-20 Section 8.C.18.c would be applied, and if so describe the variation and reasoning. Also disclose whether this treatment has been discussed with the domiciliary commissioner and their response to the treatment.

6. Disclose whether the minimum credibility (80%) and/or the minimum SDP (10 years) were applied due to being higher than the company’s calculated credibility and SDP under VM-20. If possible, results with and without these minimums should be provided, to ensure that they are functioning as intended, which was to avoid unfair and unrealistic high reinsurance premium margins on small companies or new blocks of business. If a full retesting is not possible, a qualitative assessment of the impact of these minimums is requested.

7. For each scenario result (5, 10, 15, and 20 years), disclose whether the length of time is longer or shorter than that assumed by the company for the same block of business as part of CFT.

8. Disclose whether the mortality improvement rates of Section 9.C.3.g are higher or lower annual rates overall than those assumed by the company for the same block of business as part of CFT. [For the purposes of this response, compare annual rates only – disregarding the length of time that mortality improvement is applied.]

9. Disclose any material modeling simplifications and/or approximations applied.

10. For both Term and ULSG, disclose the mix of business by Product Type (e.g., Term length), Issue Age, Gender, and Policy Year.

11. Are any policies in the Other category UL? For UL in the Other category, describe the mix of funding levels among low, medium, or high, where:
a. Low describes funding that is roughly designed to ensure term to age X or N-year term,
b. Medium describes funding that is roughly designed to mimic permanent insurance and endow at 100/unit at the valuation tables terminal (omega) age, and
c. High describes funding as dump-in products (whether single premium, MECs, etc., designed to maximize tax-sheltering and mature with much more than 1000/unit)
VM-20 Section 8.C.18 (New Section)

18. When projecting non-guaranteed future reinsurance features, the company shall use prudent estimate reinsurance premiums in projecting the reinsurance cash flows. The company shall project reinsurance cash flows pursuant to all provisions within a reinsurance agreement and shall determine the prudent estimate reinsurance premiums using the following procedure:

   a. Use the reinsurance rates and provisions from the relevant reinsurance agreement as the anticipated experience assumption for reinsurance, subject to any modifications in Section 8.C.18.c. No margin is required for years in which the reinsurance features are guaranteed. For years when reinsurance features are not guaranteed, Section 8.C.18.b below sets forth the prescribed reinsurance premium margin.

   **Guidance Note:** While the most commonly considered non-guaranteed reinsurance feature is future YRT premium rates, other non-guaranteed features are also to be considered, such as non-guaranteed expense allowances.

   b. Set the reinsurance premium margin equal to $\lambda$ times the reinsurance premium rate, where $\lambda = [(i) - (ii)]$ divided by (ii), in which (i) and (ii) are described below.

      i. “Baseline credibility” prudent estimate mortality, i.e., prudent estimate mortality following Section 9.C.1 through Section 9.C.6, but recalculated (1) with the margins determined under Section 9.C.5.b modified to reflect a credibility percentage equal to the greater of the one originally determined pursuant to Section 9.C.4 and 80% and (2) with grading modified to reflect a sufficient data period equal to the greater of the one originally determined pursuant to Section 9.C.6.b.ii and 10 years.

      i+ii. Company experience mortality as provided in Section 9.C.2, but recalculated including mortality improvement for [Separately test 5, 10, 15 and 20] years beyond the valuation date. Mortality improvement rates shall equal the mortality improvement rates of Section 9.C.3.g, whether or not the company chose to apply mortality improvement to the industry basic mortality table.
**Guidance Note:** Simplifications or approximations to estimate the effect of the “baseline credibility” prudent estimate mortality in Section 8.C.18.b.i are permissible if they comply with VM-20 Section 2.G.

For example, in situations where the sufficient data period originally determined pursuant to Section 9.C.6.b.ii was greater than or equal to 10 years, there is a simple approximation. Separately for the 2008 VBT limited underwriting, the 2015 VBT using Limited Fluctuation, and the 2015 VBT using Bühlmann, for a given credibility percentage, X%, the ratio of the margin with X% credibility to the margin with 80% credibility is fairly stable across all attained ages. Thus, the effect of the baseline credibility can be approximated by calculating $\lambda'$ by following Section 8.C.18.b using prudent estimate mortality rather than “baseline credibility” prudent estimate mortality and then obtaining $\lambda$ by multiplying $\lambda'$, by $\Theta/100$ in durations prior to when grading begins, by $(100 + \Theta)/200$ in the grading durations, and by 1.0 in durations after grading is complete, where $\Theta$ is:

</tbody>
</table>

**Guidance Note:** In the case where applicable industry tables are used in lieu of company experience, Section 8.C.18.b.i would be the industry tables, but using company experience margins corresponding to the baseline 80% credibility and grading corresponding to a sufficient data period of 10, graded into that same industry table with industry margins. Similarly, Section 8.C.18.b.ii would be the industry tables, with future mortality improvement applied using the mortality improvement rates in Section 9.C.3.g.
c. Reinsurance premium prudent estimate assumptions may be modified if, in the company’s judgment, the prescribed reinsurance premium prudent estimate assumptions do not appropriately reflect the expected reinsurance premium experience under a moderately adverse scenario. In cases where the reinsurance premium prudent estimate assumptions are modified, the modifications must not result in reinsurance premium anticipated experience assumptions that are lower than those prescribed in Section 8.C.18.a or reinsurance premium margins that are lower than those prescribed in Section 8.C.18.b without prior approval by the domiciliary commissioner. Note that if the reinsurance agreement allows for the ceding company to recapture the ceded business if the reinsurer raises rates, the ceding company may model this explicitly or limit prudent estimate reinsurance premiums such that they do not exceed the prudent estimate mortality following Section 9.C.1 through Section 9.C.6, and this modification would not require commissioner approval.

**Guidance Note:** Examples of reasons to modify the reinsurance premium prudent estimate assumptions include, but are not limited to, counterparty default concerns, reinsurance contract language that contains particularly restrictive or permissive provisions regarding reinsurance rate increases, and potential recapture of the reinsured business.

**VM-31 Section 3.C.8.b**

b. **Assumptions** – Description of reinsurance assumptions used to determine the cash flows included in the model, **including the anticipated experience assumptions and margins for future reinsurance premiums reflecting non-guaranteed reinsurance features. For future reinsurance premiums, describe any adjustments made pursuant to VM-20 Section 8.C.18.c and provide the rationale for such adjustments.**

Executive summary
Long-term solution for modeling non-guaranteed reinsurance

BACKGROUND
A wide range of practice was observed from early adopters of FRS in regards to the modeling of non-guaranteed reinsurance and a formulaic solution was adopted as an interim basis for the 2020 Valuation Manual.

A field test is being performed to aid the NAIC Life Actuarial (A) Task Force ("LATF") in the selection of a longer-term solution that is more principles-based.

ANALYTICAL SUPPORT
Oliver Wyman was selected to support and supplement the industry field test. The scope of our support is summarized below and further outlined in the remaining slides of this section of the presentation.

1 - Analysis and insights
Using generic industry models, Oliver Wyman will perform analysis that will be provided in advance of field test results and provide additional insights beyond those provided by field test participants, informed by a survey on broader industry practices. As needed, analysis outside the scope of the field test may be performed.

2 - Field test support
Oliver Wyman will lead calls with field test participants and assist in the preparation and interpretation of results. Additionally, analysis will be performed to better understand the range of variation in participant results (e.g., company and reinsurance structure, field test interpretations, modeling simplifications and/or limitations).

The purpose of today’s presentation is to share details on the design of the analysis models as well as initial insights.

Initial analysis and insights
• Initial analysis and associated model design, with capabilities to analyze the impact field tested proposals across a range of product types, reinsurance structures and relevant reinsurance scenarios.
• Field test support will work closely with field test participants to ensure consistent understanding of field testing assumptions and provide additional analysis in light of any model simplifications or limitations (e.g., one-time assumptions).
• Reports summarizing results from industry field test, with additional analysis to further understand the range of interpretations for field tested proposals across a much larger participation base than the actual field test.

Deliverables for the stages of work shown on the prior slide are described on the next slide.

Field test support
• Field test participants will prepare the scenarios for the field test while Oliver Wyman performs deep analysis across a range of products and reinsurance scenarios to provide regulatory with representative potential solutions impacting on an apples-to-apples basis. Initial analysis will be shared with LATF at the Fall NAIC meeting (December 2019) and subsequent analysis shared at the Winter NAIC meeting (March 2020).

Deliverables for the stages of the field test depicted below

Timeline
Oliver Wyman will support the stages of the field test depicted below

Deliverables
Deliverables for the stages of work shown on the prior slide are described below.

Stage | Deliverables
--- | ---
Analysis and insights | • Initial analysis and associated model design, with capabilities to analyze the impact field tested proposals across a range of product types, reinsurance structures and relevant reinsurance scenarios.
• Field test support will work closely with field test participants to ensure consistent understanding of field testing assumptions and provide additional analysis in light of any model simplifications or limitations (e.g., one-time assumptions).
• Reports summarizing results from industry field test, with additional analysis to further understand the range of interpretations for field tested proposals across a much larger participation base than the actual field test.

Field test support | • Field test participants will prepare the scenarios for the field test while Oliver Wyman performs deep analysis across a range of products and reinsurance scenarios to provide regulatory with representative potential solutions impacting on an apples-to-apples basis. Initial analysis will be shared with LATF at the Fall NAIC meeting (December 2019) and subsequent analysis shared at the Winter NAIC meeting (March 2020).

Initial analysis and insights
Assumptions and modeling methodology underlying the results shown today are summarized below.

Component | Description
--- | ---
Model | • Liability assumptions are intended to reflect industry averages and are based on analysis from recent SOA experience studies.
• Future mortality improvements in 75% per year in all years.

Best estimate assumptions | • Mortality is improved to each valuation date to reflect historic mortality improvement.
• Future data period expected to be 25 years and increased by one year each future valuation date, subject to maximum years of sufficient data allowed for under VM-20 for the given level of credibility.

Prudent estimate assumptions | • Future data period expected to be 25 years and increased by one year each future valuation date, subject to maximum years of sufficient data allowed for under VM-20 for the given level of credibility.

Resource assumptions | • The DR (and if shown, SR) are re-valued annually for 10-years and every 5-years thereafter. Reserve balances are interpolated using policy level reserve calculations between re-valuation dates and smoothed to account for any “reserve blips” caused by the reinvestment frequency and resulting earned rates.

Analysis is intended to align with industry field test instructions and the products and assumptions are intended to be broadly representative of the industry.
Background

This section explores the relationship between mortality margin and the impact that reinsurance has on reserves under PBR.

1. Mortality and PBR prescribed margins
2. Impact of mortality margins
3. Projected reinsurance credit
4. Formulaic reserve credit

Results are presented for two sets of boundary reinsurer reactions under PBR mortality margins, and an analytical benchmark (10% mortality margin).

Mortality and PBR prescribed margin

Level of margin by VM-20 mortality assumption component is illustrated below:

- Male, 40 year old, preferred non smoker, 2019 valuation

Impact of mortality margins (1/2)

The impact of a 50% first dollar YRT reinsurance agreement with the current scale of rates equal to best estimate mortality is shown below:

- Rates are increased annually, on policy anniversary, by an amount equal to the difference between PBR mortality and the current scale of YRT rates.

The impact of reinsurance depends largely on the modeled reinsurer reaction.
Impact of mortality margins (2/2)

The impact of the 50% reinsurance agreement is re-evaluated below after updating the PBR mortality assumption to use a level 10% margin.

The impact of reinsurance depends largely on the modeled reinsurer reaction.

Impact on deterministic reserve
Impact on PBR reserve (max of NPR and DR)

Projected reinsurance credit

The reinsurance reserve credit (difference between pre- and post-reinsurance reserve) under the two sets of margins is shown below.

Key takeaways

1. Reinsurer reaction scenarios can produce reserve credits in excess of ½ Cx
   - ½ Cx represents the cost of reinsurance that corresponds to the period for which the reinsurance premium has been paid, but not yet earned by the reinsurer, with no provision for reinsurance beyond the paid to date.
   - Full reinsurer reaction scenario tested above for:
     - Reinsurer reaction that reflects differences between evolution of mortality margin and reinsurance premium payment dates.
     - Contractual provisions around the return of future unearned reinsurance premiums on death and lapse.
     - Other mechanical differences due to VM-20 requirements (e.g., differences in starting assets and the resulting earned rates).

2. It is important to look at long-term projections of reserves when evaluating the impact of reinsurance modeling approaches.
   - The level of margin in mortality as compared to best estimate changes at future valuation dates, due to unlocking of mortality improvement and extending the sufficient data period.
   - As the business ages, higher mortality and shorter projection horizons will change the impact of reinsurance on reserves at future valuation dates.
Overview
Proposed granularity for the analysis and modeling is outlined below.

<table>
<thead>
<tr>
<th>Reinsurance reaction</th>
<th>Sensitivity</th>
<th>Justification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Very high granularity of reinsurance reactions is tested as this is the primary driver of this area of where subjectivity can be found. Reinsurance reactions are tested across methodology analysis dimensions below</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

This section contains the results of sensitivities performed to confirm this level of granularity. See Appendix B for further details on the analysis design.

Impact analysis | High granularity
The following summarizes the impact reinsurance on PBR reserves for the sensitivities on model components with high granularity.

Impact on Deterministic Reserve

Impact on PBR reserve (loss of DR and NPR)

Both the properties of reinsurance and mortality have a significant impact on the reinsurance reserve credit.

Impact analysis | Low-medium granularity
The following summarizes the impact reinsurance on PBR reserves for the sensitivities on model components with low-medium granularity.

Impact on Deterministic Reserve

Impact on PBR reserve (loss of DR and NPR)

The product and yield curve sensitivities have a lower impact on the reinsurance reserve credit.

Reinsurer reaction scenarios
Proposed coverage is shown below. As needed, these results will be produced for the methodology analysis dimensions (e.g., product, company size, reinsurance attributes).

- N/A: Allow future mortality improvement in reserves
- N/A: Use reinsurance reserves (

- No change
- Increase by 100% of prescribed mortality margin
- Increase by 100% of prescribed mortality margin, including
- Increase by 105% of the difference between current scale and PBR mortality
- Increase by 100% of prescribed mortality margin, including
- Increase by 105% of the difference between current scale and PBR mortality
- Increase by 100% of prescribed mortality margin
- Increase by 100% of prescribed mortality margin
- Increase by 105% of the difference between current scale and PBR mortality
- Increase by 100% of prescribed mortality margin

These results will be produced primarily to assist with the analysis and interpretation of field test results.
Scope of field test
The scope of the industry field test is focused on the “field test modified” APFs discussed on the September 12th LATF call and summarized below.

### APF Description

<table>
<thead>
<tr>
<th>APF</th>
<th>Description</th>
<th>Field testing variations</th>
</tr>
</thead>
<tbody>
<tr>
<td>2019-40</td>
<td>Actuarial judgement with clarified modeling principles/guidance</td>
<td>• Prudent estimate of all counterparty actions</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Prudent estimate of rate changes only after reaching 115% reinsurer loss ratio</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Model prudent estimate of rate changes only after reaching 5 consecutive years of reinsurer losses</td>
</tr>
</tbody>
</table>

| 2019-41 | Reinsurance margin such that the difference between best estimate mortality and the current scale of YRT rates is maintained | • Best estimate mortality (used for the purposes of calculating reinsurance margin) contains future mortality improvement for 15 years at a rate of 5%, 3% and 1% per year |
|         |                                                                             | • Reinsurance rates by reinsurance premium margin, equal to the percentage difference between PBR and best estimate mortality |
|         |                                                                             | • Increase reinsurance rates by reinsurance premium margin, equal to the percentage difference between PBR and best estimate mortality |
|         |                                                                             | • Judgment modifications are allowed if these are consistent with what the market considers appropriate |

The field test submission calls for two baselines: the interim solution (½ Cx) and a scenario where no change from the current scale of YRT rates is assumed.

### Initial insights and analysis

The remainder of this section focuses on representative impacts for the field-tested APFs, as summarized in the table below. In addition the impact is provided for the two baselines described on the prior slide.

#### APF Field testing variations

- **2019-40**
  - Prudent estimate of all counterparty actions
  - Prudent estimate of rate changes only after reaching 115% reinsurer loss ratio
  - Model prudent estimate of rate changes only after reaching 5 consecutive years of reinsurer losses

- **2019-41**
  - Reinsurance margin such that the difference between best estimate mortality and the current scale of YRT rates is maintained
  - Best estimate mortality (for the purposes of calculating reinsurance margin) contains future mortality improvement for 15 years at a rate of 5%, 3% and 1% per year

- **2019-42**
  - Increase reinsurance rates by reinsurance premium margin, equal to the percentage difference between PBR and best estimate mortality
  - Judgment modifications are allowed if these are consistent with what the market considers appropriate

The purpose of these results is to foster dialogue around these APFs, the format results are presented in, and any desired follow-up analysis.

### Initial analysis

The remainder of this section focuses on representative impacts for the field-tested APFs, as summarized in the table below. In addition the impact is provided for the two baselines described on the prior slide.

#### APF Field testing variations

- **2019-40**
  - Prudent estimate of all counterparty actions
  - Prudent estimate of rate changes only after reaching 115% reinsurer loss ratio
  - Model prudent estimate of rate changes only after reaching 5 consecutive years of reinsurer losses

- **2019-41**
  - Reinsurance margin such that the difference between best estimate mortality and the current scale of YRT rates is maintained
  - Best estimate mortality (used for the purposes of calculating reinsurance margin) contains future mortality improvement for 15 years at a rate of 5%, 3% and 1% per year

- **2019-42**
  - Increase reinsurance rates by reinsurance premium margin, equal to the percentage difference between PBR and best estimate mortality
  - Judgment modifications are allowed if these are consistent with what the market considers appropriate

The purpose of these results is to foster dialogue around these APFs, the format results are presented in, and any desired follow-up analysis.

Impact analysis | APF 2019-40
YRT rates are increased by 75% of the difference between the current scale and PBR mortality, until recapture in 2044

The reinsurer reaction (5% over mortality margin) produces a reserve credit in excess of ½ Cx (See Background section for explanation) until recapture in 2044.

Impact analysis | APF 2019-40
No change in YRT rates until 2024 followed by progressive increases to break even in 2044 and later

The reserve credit is higher than the prior slide because of a slower reinsurer action. The reserve credit persists beyond 2044 because recapture is not modeled.

Impact analysis | APFs 2019-41, 2019-42
Future mortality improvement included in the best estimate component of reinsurance margin for 15 years at a rate of 0.75% per year

The impact of APFs 2019-41 and 2019-42 are equal due to the selection of mortality improvement parameters and the method used to calculate the reinsurance margin.

</tbody>
</table>
Documentation
Details the requirements, design, documentation, and testing of the model in a modular and expandable structure.

Documentation is centralized into a single, all-inclusive report to facilitate future maintenance. Appendices summarize future improvements and other key project deliverables.

User guide
Supplements the model documentation and provides additional detail on the AXIS model structure.

Testware
Replicates model calculations while supporting version management, increasing transparency, and augmenting documentation.

Analysis tool
Aggregates results under pre-PBR and PBR setups and provides financial metrics and implied rate analysis.
Project team and governance

The consultant analysis will be overseen by NAIC Staff, the Academy, and the ACLI, as depicted in the following chart.

The report and the findings herein are subject to the reliance and limitations outlined at the beginning of this report. This report is considered a statement of actuarial opinion under the guidelines promulgated by the American Academy of Actuaries. Chris Whitney, Dylan Strother and Katie van Ryn of Oliver Wyman developed this report and meet the qualification requirements of the American Academy of Actuaries to render the opinion contained herein.
QUALIFICATIONS, ASSUMPTIONS AND LIMITING CONDITIONS

Oliver Wyman was requested by the American Council of Life Insurers, the American Academy of Actuaries and the National Association of Insurance Commissioners to support an industry field test being conducted to aid the NAIC Life Actuarial (A) Task Force in the selection of a long-term solution for the treatment of non-guaranteed reinsurance under PBR.

Oliver Wyman shall not have any liability to any third party in respect of this report or any actions taken or decisions made as a consequence of the results, advice or recommendations set forth herein.

This report does not represent investment advice or provide an opinion regarding the fairness of any transaction to any and all parties. This report does not represent legal advice, which can only be provided by legal counsel and for which you should seek advice of counsel. The opinions expressed herein are valid only for the purpose stated herein and as of the date hereof.

Information furnished by others, upon which all or portions of this report are based, is believed to be reliable but has not been verified. No warranty is given as to the accuracy of such information. Public information and industry and statistical data are from sources Oliver Wyman deems to be reliable; however, Oliver Wyman makes no representation as to the accuracy or completeness of such information and has accepted the information without further verification. No responsibility is taken for changes in market conditions or laws or regulations and no obligation is assumed to revise this report to reflect changes, events or conditions, which occur subsequent to the date hereof.

© 2019 National Association of Insurance Commissioners
Objective

- **AIRWG Pillars of Objective**
  1. **Adverse Selection Criteria**: Both risk in all-new, new-risk in moderately adverse conditions requires greater statutory
     reserve, and vice versa.
  2. **Consistency**: The statutory reserve accounts for all material risks covered in the Valuation Manual, product
     features, and potential management actions associated with the policies or contracts being valued.
  3. **Consistency across Products**: Statutory reserves between two contracts with similar features and risk are consistent
     given the same assumptions, regardless of product type.
  4. **Principles and Appropriateness**: Balance principles above with an approach that is practical, implementable, and
     able to be implemented.

(path forward)

Path Forward

- **Aug – Dec 2019**
  - Develop proposed fixed annuity PBR framework deck
  - Begin initial modeling sensitivities for general FI/annuity

- **Spring 2020**
  - AIRWG to present framework deck proposal to LATF

- **Fall 2020**
  - Seek LATF endorsement of PBR framework deck [as feedback addressed]
  - Valuation Manual language drafting efforts

- **Spring 2021**
  - Begin industry field testing using draft [specifics TBD]

- **Spring 2022**
  - Target adoption of fixed annuity PBM (potentially VM-22)
  - Target 1/1/2023 effective date (monitor as progress develops)
Topics for LATF Discussion

1) Net Assets and Reinvestment Risk – Primary driver for fixed annuity modeled reserves is general account investment income. Therefore, aligning with VA 20 with the following:
   - Company-specific spread/return for “x” years (e.g., 10 years) and grade to prescribed assumptions over time (e.g., 5-year period). Consider consistency with AII and certifications.
   - Company-specific reinvestment assumptions, including the Yn-Yn+Yn+1 certification from an investment officer?
2) Exclusion Test Methodology – Agree with exclusion test to ease implementation burden for fixed annuities with limited optionality or maximum risk? Thoughts on approach?
3) Scope – Any concerns with proposed product scope or potential retrospective application?

Preliminary Framework Methodology Elements

American Academy of Actuaries
Annuity, Reserves Work Group (AMWG)

1 – Product Scope

- Products In Scope:
  - Account Value Indexed Annuities
  - Deferred Annuities (SPDAs & PFDAs)
  - Multi-Year Guarantee Annuities (MYGAs)
  - Fixed Indexed Annuities (FIAs)
  - Market Value Adjustments (MVAs)
  - Two-Tiered Annuities
  - GLBs and Other Guarantees/Riders
  - Period Annuities
  - Single Premium Immediate Annuities (SPIAs)
  - Deferred Income Annuities (DIAs)
  - Pension Risk Transfer Annuities (PRT)
  - Structured Settlements

- Products Out-of-Scope:
  - Guaranteed Investment Contracts (GICs)
  - Funding Agreements
  - Mortality-Linked Securities
  - Longevity Reinsurance

- VA 21 or Fixed Annuity PBR (TBD)
  - Modified Guaranteed Annuities (MGA)
  - Structured Annuities
  - Hybrid Variable and Fixed Annuities

- Retrospective Application? (TBD)
  - Required in both private and non-business
2 – Hedging Requirements

Recommendation: Allow future hedging programs to be modeled if sufficiently to control whether CDHM or not. Use VM-21

Explanation: Use VM-21 where all hedging is limited or excluded.

Preliminary Fixed Annuity MB Methodology (consistent with VM-21 except hedge on indexed credits and CDHM)

a) No Hedges— Recommend all future hedging be reflected, regardless of whether CDHM or not.

b) Hedging Exclusions— Recommend all future hedging be reflected, regardless of whether CDHM or not.

c) Prorated Hedging— Recommend only 3/20 rates for SPIAs issued on/after 2018, and AG33/35 methodology (with interest rate

d) Exclusions— Recommend exclusion be reflected regardless of whether CDHM or not.

3 – Discount Rate and Starting Assets

Preliminary Fixed Annuity MB Methodology (consistent with VM-21)

4 – Exclusion Test Methodology

Preliminary Fixed Annuity MB Methodology (consistent with VM-21)

5 – Exclusion Test Methodology

Preliminary Fixed Annuity MB Methodology (consistent with VM-21)
5 – Preliminary Modeling Efforts

- Develop a reserve model for a prototype fixed Indexed annuity (IFA) product with a guaranteed living benefit (GLB) to project a preliminary non-variable annuity FIA
- Include sensitivity tests on various product features, probability level, economic conditions, reinvestment strategies, and liability assumptions
- Objectives are as follows:
  - Compare projected reserves for stochastic FIA reserves at 20% or less without and with GLB
  - Help test and refine ASAP recommendations for frameworks elements
  - Set potential threshold for percentage breakdown of stochastic reserve data test

6 – Topics for LATF Discussion

1) Net Assets and Investment Mix – Primary driver for S&L annuity modeled reserves is general account investments. Therefore, academy wants to explore refining from VA-19 with the following:
   - Company-specific IAIAC/LOA for “a” which (a) and (b) grade to prescribed assumptions over time (a & b) and year (2) consider consistency with VA-19 and VA-20
   - Company-specific reinvestment assumptions, including the VA-19/VA-20-1 certifications from an investment office?
2) Exclusion Test Methodology – Agree with Academy’s preference to use an exclusion test to ease implementation burden for fixed annuities with limited optionality or economic risk. Thoughts on discussed approach?
3) Supervision – Academy members expressed interest in researching retrospective application, including revisions issued prior to 2015. Between 2013 and 2018, effective dates, and prospectively, any concerns or considerations with retrospective adoption?

Appendix I: Product Descriptions

W:\National Meetings\2019\Fall\TF\LA\National Meeting\1.4 Academy ARWG Update_Complete\ARWG LATF Update Fall 2019 (4 per page)
Standard Valuation Law
Interest Rate
Modernization Update

Chris Conrad, MAAA, FSA
Chairperson, SVL Interest Rate Modernization Work Group

Non-SPIA* Valuation Rates

- Must coordinate with the Annuity Reserves Work Group (ARWG)
  - Working plan is to develop valuation rates for products which pass under-development exclusion test
  - Current Plan: Refresh current valuation rates using similar methodology as was used to develop current rates
    - Generally, calculate the weighted average yield over the life of the business, taking into account the time value of money
    - Specifically, calculate the present value of benefits and expenses using portfolio book yields (including realized gains and losses)
      - Determine single rate that will produce the same present value as described above,
        - Consistent with VM-20 Deterministic Reserve

Non-SPIA Valuation Rates

- Open issues:
  - Examining three interest rate scenarios: level, rising, falling
  - How to use valuation rates produced from the three scenarios.
  - Whether to retain single locked-in valuation rate at issue or require future unlocking
  - Same scope as current regime: produce valuation rates for all non-SPIA annuities
  - So as to cover any annuities that pass the under-development exclusion test

Contemplated Changes to Current Framework

- New Reference Index: Treasuries + VM-20 Spreads
- Potential Differentiators:
  - Surrender Charge Period
  - Market Value Adjustment
  - Partial Free Withdrawals
  - Single Premium vs. Flexible Premium
  - Multi-Year Guarantee vs. Annuity Reset
- Work Continues on Multi-Year Guarantee and Annual Reset Annuities
- Proposed Effective Date: 1/1/23 (Consistent with ARWG)
  - May be part of field test

Mortality Improvement Scale Methodology
AG38 and VM20

SOA Preferred Mortality Oversight Group ("Joint Committee") and Life Mortality Improvements Subgroup ("LMIS")

Purpose of the Individual Life MI Recommended Scale
- Used in conjunction with AG38 and VM20 reserve development
- Updated each year to account for an additional year of mortality improvement
- Applied to improve Valuation Basic Table mortality from the table date (e.g., 2015 for the 2015 VBT) to current valuation date

Current methodology for annual recommendations
- In use since year-end 2013 for AG38
- Approach is consistent with development process for the MI scale used in the 2015 VBT and 2017 Commissioners Standard Ordinary table development work

Agenda
- Purpose of Individual Life Mortality Improvement (MI) Recommended Scale
- Current methodology for annual recommendations
- Application of recommended scale
- Next steps
Current Methodology for annual recommendations

- Consistent • Use • Age • MI

**Next Steps**

**Develop a consistent framework for producing MI scales**

- **Objective:** Develop a common tool, which would be made available to SOA members, to be used by practitioners from individual life, individual and group annuity, and pension/retirement (target: 2020)
  - Tool, currently in development, will use 2-dimensional approach
  - Similar to CM1 and RIPE MP table development, with some modifications
  - For life tables, intent is to use gender specific SSA data for the US population and SOA non-smoker and smoker experience with consideration to eventually allow users to input their own data
  - Will allow practitioner decisioning to convergence period
  - Requires significant testing from multiple practitioners across practice areas

---

**Suggested Next Steps**

- Revise prescribed methodology to remove any material actuarial judgement – Develop a threshold level of change to indicate update to the scale in any given year (timeline: for 2020 scale update)
  - Include a description of the methodology used each year to updated the life MI scale in the current valuation manual (timeline: TBD)
  - Scale updates would be made each year without required formal approval by LATF as long as no changes are made to the prescribed methodology (next change: expected only after recommended MI framework is released by SOA Mortality and Longevity Steering Committee)

---

PBR Treatment for Individually Underwritten Group Insurance

Life Reserve Working Group

The VM, Section II.B and Section II.D state minimum reserve requirements for individual life contracts, thus excluding group life contracts.

- Section II.B* states the minimum reserve requirements for variable and nonvariable individual life contracts, with certain exceptions, are subject to PBR requirements and VM-20 and is silent on the treatment of individually underwritten group life insurance.
- Section II.D.1* provides for the PBR exemption in terms of premiums for ordinary life insurance, which, by definition, excludes group life contracts.

Discussion topic

- Certain group life certificates are solicited, acquired, managed, and have policy provisions consistent with individual ordinary life policies.
- These types of group life certificates should be subject to the same reserve requirements and other reporting within the Valuation Manual (VM) as other ordinary life insurance contracts of the same product type.

SSAP No. 50 Paragraph 33 defines group life characteristics*

- Insurance is on the lives of a group of persons under a single master contract;
- Customarily written on a yearly renewable term basis, though permanent products are sold;
- The terms are based on a master policy, which:
  - Usually precludes or disallows individual selection;
  - Is for the benefit of persons other than the policyholder;
  - Individual insured members are issued certificates of insurance rather than an insurance policy; and
- Contract is between the policyholder and the insurer—there is no contract of insurance between the policyholder and the members.

* Exposed to similar risk; (usually a work profession) who are related in some way such as belonging to a certain association.
Certain contracts issued under a master group contract or franchise contract reflect the characteristics of ordinary individual life contracts

- To qualify for issuance of a group insurance certificate, certain group contracts:
  - Require individual risk selection in order to qualify for issuance of the group insurance certificate; and
  - Do not require continued membership in the group in order to maintain coverage.
- These certificates have similar acquisition approaches, provisions, certificate-holder rights, pricing, and risk classification as individual ordinary life insurance contracts.
- These certificates are managed in a similar manner to individual ordinary life insurance contracts.
- These individual certificates should follow the same reserve requirements as other individual life contracts of the same product type.

VM-51 scope excludes individually solicited group life

- VM-51 scope for individual ordinary life insurance and currently excludes separate lines of business such as:
  - SI/GI
  - Worksite
  - Individually solicited group life
  - Direct response
  - Final expense
  - Pre-need
  - Home service
  - Credit life
  - CDL/ BOLI/charity-owned life insurance (CHOLI).

LRWG recommends seven clarifying changes to the VM and one referral for change to the NAIC Blanks, PBR Supplemental Report

1. Change the minimum reserve requirements (Section II) to also apply to group life which, other than the difference between issuing a policy and issuing a certificate, have the same or mostly similar contract provisions, risk selection process, and underwriting as individual ordinary life contracts;
2. Add language to Reserve Requirements Section II, Subsection 1.D.5 and the corresponding footnote to include premiums from group life contracts which have individual certificates that were issued using individual risk selection processes (including in the footnote bring premiums associated with these types of group contracts into the PBR Exemption determination);
3. Add new paragraph, VM-20, Section 1.B, to clarify group life certificates issued using individual risk selection processes, including a definition for individual risk selection process, are subject to the requirements of VM-20;
4. Add guidance note after first sentence in VM-20, Section 2.A.1, to clarify applicability to group life insurance certificates that meet the individual risk selection process definition;
5. Modify VM-51 to no longer exempt individually solicited group life contracts which meet the requirements and definitions under items (1) and (2) above; and
6. Modify VM-51, Appendix 4, to no longer exempt individually solicited group life contracts which meet the requirements under items (1) and (2) above.
7. Refer to NAIC Blanks (E) Working Group, modifications to the VM-20 Reserves Supplement, Part 3 to report premiums for total Group Life and Group Life with an individual risk selection process as defined in VM-20 Section 1.B separately.
### Individual insured risk selection process for group life insurance certificates

**Proposed definition:**
- The risk selection process is based on characteristics of the insured(s) beyond sex, gender, age, and membership in a particular group.
- This may include, but is not limited to, completion of an application, questionnaire(s), or tele-interview (beyond acknowledgement of membership to the group master policyowner, sex, gender, and age), the use of non-medical information, medical or health history information, prescription history information, avocations, usage of tobacco, family history, or submission of fluids such as blood, Home Office Specimens (HOS), or oral fluid. The resulting risk classification is determined based on the characteristics of the individual insured(s) rather than the group, if any, of which it is a member (e.g., employer, affinity, etc.).

---

### Recommendation to include the premiums for group life subject to an individualized risk selection process in the PBR Exemption

<table>
<thead>
<tr>
<th>Yes</th>
<th>No</th>
<th>Further Analysis</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use US definition within subsection II(B) of the Revisions for the Life Risk Business (e.g., PBR), Section III</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**To avoid unintended consequences for non-life group insurance:**
- Recommendation for this definition within VM-20, Section II and not within VM-21.

---

### Recommend a three-year transition period

- **Recommend changes required for group certificates issued on or after 1/1/2024**
- **Need to allow companies with certificates meeting the definition of group certificates, which utilize an individual risk selection process, sufficient time to incorporate PBR**
  - Especially if previously met PBR exemption

---

### Appendix: VM, Section II. Reserve Requirements for Life Insurance Products

- **Section II.A:**
  - This subsection establishes reserve requirements for all contracts issued on and after the operative date of the Valuation Manual that are classified as life contracts as defined in SAP No. 31 (R) in the Life Manual, with the exception of annuity contracts, credit life, and collective contracts.
  - Reserves are based on life table mortality rates applicable to the insureds at the inception of the contract and are based on the mortality tables used for the life contracts as defined in SAP No. 31 (R) of the Valuation Manual.
  - The mortality tables used for the life contracts as defined in SAP No. 31 (R) of the Valuation Manual are as follows:
    - United States Male and Female Mortality Tables
    - United States Male and Female Mortality Tables
    - United States Male and Female Mortality Tables

- **Section II.B:**
  - This subsection establishes reserve requirements for variable and non-variable individual life contracts—excluding guaranteed issue life contracts, prepaid life contracts, industrial life contracts, and policies of companies exempt pursuant to the life PBR exemption in paragraph 16.1 (b) below for the purpose of being classified as life contracts under the definition of the transition period in paragraph 1A.2.1. For the purpose of being classified as life contracts, the reserve requirements of VM-20 are consistent with the principles-based valuation requirements for purposes of the Valuation Manual.

- **Nonforfeiture requirements for life contracts subject to VM-20:**
  - Nonforfeiture requirements for life contracts subject to VM-20 are consistent with the principles-based valuation requirements for purposes of the Valuation Manual.

- **Mortality tables:**
  - Mortality tables used for the life contracts as defined in SAP No. 31 (R) of the Valuation Manual are as follows:
    - United States Male and Female Mortality Tables
    - United States Male and Female Mortality Tables
    - United States Male and Female Mortality Tables

---

© 2019 National Association of Insurance Commissioners
Appendix: VM, Section II. Reserve Requirements for Life Insurance Products, continued

Section II.D

1. A company meeting the condition in D.2 below may file a statement of exemption for ordinary life insurance policies, except for policies in D.3 below, issued directly or assumed during the current calendar year, that would otherwise be subject to VM-20. Such a statement must be filed with the domiciliary commissioner prior to July 1 of that year certifying that condition D.2 was met based on premiums from the prior calendar year annual statement. The statement of exemption must also be included with the NAIC filing for the second quarter of that year.

The domiciliary commissioner may reject such statement prior to Sept. 1 and require the company to follow the requirements of VM-20 for the ordinary life policies covered by the statement.

Footnote

1 Premiums reported as direct plus reinsurance assumed from an unaffiliated company for the ordinary life line of business reported in the prior calendar year life/health annual financial statement, Exhibit II, Part I, Column 3. "Ordinary Life Insurance" excluding premiums for guaranteed issue policies and preneed life contracts and excluding amounts that represent the transfer of reserves in force as of the effective date of a reinsurance assumed transaction and are reported in Exhibit I Part I, Column 3 as ordinary life insurance premium. Proceeds is as defined in VM-01.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

American Academy of Actuaries, Life Reserves Work Group

Addition of language to clarify the definition of individually underwritten life insurance and the applicability of Principle-Based Reserve (PBR) requirements for group insurance contracts with individual risk selection issued under insurance certificates.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

January 1, 2020, version of the Valuation Manual used.

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See Appendix.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

Individual insurance certificates issued under a group contract which utilize an individual risk selection process, pricing, premium rate structures and product features are similar to individual life insurance policies. They are currently excluded from VM-20 because they are filed under a group contract, but they should be subject to VM-20 due to this similarity. See Appendix.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Notes: APF 2019-33
Appendix

Issue

Certain contracts issued under a master group contract require individual risk selection in order to qualify for issuance of the group insurance certificate and do not require continued membership in the group in order to maintain coverage. The certificates have similar acquisition approaches, provisions, certificate-holder rights, pricing and risk classification, and are managed in a similar manner as individual ordinary life insurance contracts. These individual certificates should follow the same reserve requirements as other individual life contracts of the same product type. Therefore, a change is needed within the Valuation Manual to bring these individual certificates into scope of VM-20.

Eight Seven changes are recommended:

1) Within the Reserve Requirements section (Section II), change the minimum reserve requirements to also apply to group life contracts which, other than the difference between issuing a policy and issuing a group certificate, have the same or mostly similar contract provisions, risk selection process and underwriting as individual ordinary life contracts;

2) Within the Reserve Requirements section (Section II), add a transition period for individual group certificates issued on or before 1/1/2024;

3) Add new paragraph, VM-20 Section 1.B (and reformat to make current paragraph Section 1.A) to clarify group life certificates issued using individual risk selection processes, including a definition for individual risk selection process, are subject to the requirements of VM-20;

4) Add guidance note after first sentence in VM-20 Section 2.A.1 that group life certificates that meet the definition for individual risk selection process use the same VM-20 Reserving Categories as defined in Section 2;

5) Modify VM-51 Section 2.B to no longer exempt individually solicited group life which meet the requirements and definitions under items (1) and (2) above; and

6) Modify VM-51, Appendix 4, Item 17 to no longer exempt individually solicited group life contracts which meet the requirements under items (1) and (2) above.

Referral to the NAIC Blanks (E) Working Group, to revise the PBR Supplemental Report VM-20 Reserves Supplement, Part 3 to report premiums, reserves, claims, etc. for total Group Life and Group Life with an individual risk selection process as defined in VM-20 Section 1.B separately.
VM Changes 1, 2 and 3 – II. Reserve Requirements

II. Reserve Requirements

This section provides the minimum reserve requirements by type of product, as set forth in the seven subsections below, as follows:

(1) Life Insurance Products
(2) Annuity Products
(3) Deposit-Type Contracts
(4) Health Insurance Products
(5) Credit Life and Disability Products
(6) Riders and Supplemental Benefits
(7) Claim Reserves

All reserve requirements provided by this section relate to business issued on or after the operative date of the Valuation Manual. All reserves must be developed in a manner consistent with the requirements and concepts stated in the Overview of Reserve Concepts in Section I of the Valuation Manual.

Guidance Note: The terms “policies” and “contracts” are used interchangeably.

Subsection 1: Life Insurance Products

A. This subsection establishes reserve requirements for all contracts issued on and after the operative date of the Valuation Manual that are classified as life contracts as defined in SSAP No. 50 in the AP&P Manual, with the exception of annuity contracts and credit life contracts. Minimum reserve requirements for annuity contracts and credit life contracts are provided below in subsection 2 and subsection 5, respectively.

B. Minimum reserve requirements for variable and nonvariable individual life contracts—excluding guaranteed issue life contracts, preneed life contracts, industrial life contracts, and policies of companies exempt pursuant to the life PBR exemption in paragraph D below—are provided by VM-20, Requirements for Principle-Based Reserves for Life Products, except for election of the transition period in paragraph C below. For this purpose, joint life policies are considered individual life.

1. Minimum reserve requirements for group life contracts in which the individual certificate holders were subjected to an individual risk selection process as described in VM-20 Section 1.B to obtain the insurance coverage are provided by VM-20, except for election of the transition period in paragraph C below.

1.2 Minimum reserve requirements of VM-20 are considered principle-based valuation requirements for purposes of the Valuation Manual.

3. Minimum reserve requirements for life contracts not subject to VM-20 are those pursuant to applicable requirements in VM-A and VM-C. For guaranteed issue life contracts issued after Dec. 31, 2018, mortality tables are defined in VM Appendix M – Mortality Tables (VM-M), and the same table shall be used for reserve requirements as is used for minimum nonforfeiture requirements as defined in VM-02, Minimum Nonforfeiture Mortality and Interest.
C. A company may elect to establish minimum reserves pursuant to applicable requirements in VM-A and VM-C for:

1. Business described in Section B.1 above and issued on or after the operative date of the Valuation Manual and prior to 1/1/2024.

2. Business not described in Section B.1 otherwise subject to VM-20 requirements and issued during the first three years following the operative date of the Valuation Manual.

A company electing to establish reserves using the requirements of VM-A and VM-C may elect to use the 2017 Commissioners’ Standard Ordinary (CSO) Tables as the mortality standard following the conditions outlined in VM-20 Section 3. If a company during the three years elects to apply VM-20 to a block of such business, then a company must continue to apply the requirements of VM-20 for future issues of this business.

D. Life PBR Exemption

1. A company meeting the condition in D.2 below may file a statement of exemption for ordinary life insurance policies and group life contracts individually underwritten life insurance policies, except for policies in D.3 below, issued directly or assumed during the current calendar year, that would otherwise be subject to VM-20. Such a statement must be filed with the domiciliary commissioner prior to July 1 of that year certifying that condition D.2 was met based on premiums from the prior calendar year annual statement. The statement of exemption must also be included with the NAIC filing for the second quarter of that year.

The domiciliary commissioner may reject such statement prior to Sept. 1 and require the company to follow the requirements of VM-20 for the ordinary life policies covered by the statement.

2. Condition for Exemption:
   a. The company has less than $300 million of ordinary life premiums, and if the company is a member of an NAIC group of life insurers, the group has combined ordinary life premiums of less than $600 million.

3. Policies Excluded from the Life PBR Exemption:
   a. Universal life with secondary guarantee (ULSG) policies with a secondary guarantee that does not meet the VM-01, Definitions for Terms in Requirements, definition of a “non-material secondary guarantee.”

4. Each exemption, or lack of an exemption, applies only to policies issued or assumed in the current year, and it applies to all future valuation dates for those policies. The minimum reserve requirements for the ordinary life policies subject to the exemption are those pursuant to applicable methods required in VM-A and VM-C using the mortality as defined in VM-20 Section 3.C.1 and VM-M Section 1.H.

Footnote change

-Premiums are measured as direct plus reinsurance assumed from an unaffiliated company from the ordinary life line of business reported in the prior calendar year life/health annual financial statement, Exhibit 1, Part 1, Column 3, “Ordinary Life Insurance”. For exemptions after 1/1/2024, premiums should also include the premiums from group life insurance certificates that were subject to an individual risk selection process as defined in VM-20 Section 1.2 and included in the group life certificates subject to an individual risk selection process line of business reported in the prior calendar year life/health annual financial statement, VM-20 Reserves Supplement Exhibit 1, Part 1, Column 3, “Ordinary Life Insurance”. Premiums should exclude premiums for guaranteed issue policies and preneed life contracts and excluding amounts that represent the transfer of reserves in force as of the effective date of a reinsurance assumed transaction and are

© 2019 National Association of Insurance Commissioners
reported in Exhibit 1 Part 1, Column 3 as ordinary life insurance premium. Preneed and guaranteed issue life insurance policy are as defined in VM-01.

**VM Change 4 – VM-20: Requirements for Principle-Based Reserves for Life Products**

**VM-20: Requirements for Principles-Based Reserves for Life Products**

**Section 1: Purpose**

A. These requirements establish the minimum reserve valuation standard for individual life insurance policies issued on or after the operative date of the *Valuation Manual* and subject to a principle-based valuation with an NPR floor under Model #820. These requirements constitute the Commissioners Reserve Valuation Method (CRVM) for policies of individual life insurance.

B. These requirements establish the minimum reserve valuation standard for group life insurance certificates in which an individual risk selection process is used to obtain group life insurance coverage, and which are issued on or after the operative date of the *Valuation Manual* and subject to a principle-based valuation with an NPR floor under Model #820. An individual risk selection process is based on characteristics of the insured(s) beyond sex, gender, age, and membership in a particular group. This may include, but is not limited to, completion of an application, questionnaire(s) or tele-interview (beyond acknowledgement of membership to the group master policyowner, sex, gender and age), the use of non-medical information, medical or health history information, prescription history information, avocations, usage of tobacco, family history, or submission of fluids such as blood, Home Office Specimens (HOS), or oral fluid. The resulting risk classification is determined based on the characteristics of the individual insured(s) rather than the group, if any, of which it is a member (e.g., employer, affinity, etc.).
VM Change 5 - VM-20: Requirements for Principle-Based Reserves for Life Products

Section 2: Minimum Reserve

A. All policies subject to these requirements shall be included in one of the VM-20 Reserving Categories, as specified in Section 2.A.1, Section 2.A.2 and Section 2.A.3 below.

Guidance Note: Since Group Insurance subject to an individual risk selection process, as defined by Section 1.B, is subject to VM-20 requirements, Section 2.A shall apply—meaning that any such contracts will be included in one of the VM-20 Reserving Categories defined by Section 2.A.1, Section 2.A.2, and 2.A.3. All requirements in VM-31 which apply to a VM-20 Reserving Category shall apply to any group insurance subject to Individual Underwriting Selection that has been included in that VM-20 Reserving Category.

The company may elect to exclude one or more groups of policies from the stochastic reserve calculation and/or the deterministic reserve calculation. When excluding a group of policies from a reserve calculation, the company must document that the applicable exclusion test defined in Section 6 is passed for that group of policies. The minimum reserve for each VM-20 Reserving Category is defined by Section 2.A.1, Section 2.A.2 and Section 2.A.3, and the total minimum reserve equals the sum of the Section 2.A.1, Section 2.A.2 and Section 2.A.3 results below, defined as:
VM Change 6– VM-51: Experience Reporting Formats, Section 1.B.2

VM-51: Experience Reporting Formats

Table of Contents

Section 1: Introduction .................................................................
Section 2: Statistical Plan for Mortality ...........................................
Appendix 1: Preferred Class Structure Questionnaire ......................
Appendix 2: Mortality Claims Questionnaire .................................
Appendix 3: Additional Plan Code Form ........................................
Appendix 4: Mortality Data Elements and Format ............................

Section 2: Statistical Plan for Mortality

A. Type of Experience Collected Under This Statistical Plan

The type of experience to be collected under this statistical plan is mortality experience.

B. Scope of Business Collected Under This Statistical Plan

The data for this statistical plan is the individual ordinary life line of business. Such business is to include direct written business issued in the U.S., and all values should be prior to any reinsurance ceded. Therefore, reinsurance assumed from a ceding company shall be excluded from data collection to avoid double-counting of experience submitted by an issuer and by its reinsurers; however, assumption reinsurance of an individual ordinary life line of business, where the assuming company is legally responsible for all benefits and claims paid, shall be included within the scope of this statistical plan. The ordinary life line of business does not include separate lines of business, such as SI/GI, worksite, individually solicited group life that did not use an individual risk selection process as defined in VM-20 Section 1.B, direct response, final expense, pre-need, home service, credit life and COLI/BOLI/charity-owned life insurance (CHOLI).

C. Criteria to Determine Companies That Are Required to Submit Experience Data

Companies with less than $50 million of direct individual life premium shall be exempted from reporting experience data required under this statistical plan. This threshold for exemption shall be measured based on aggregate premium volume of all affiliated companies and shall be reviewed annually and be subject to change by the Experience Reporting Agent. At its option, a group of nonexempt affiliated companies may exclude from these requirements affiliated companies with less than $10 million direct individual life premium provided that the affiliated group remains nonexempt.

Additional exemptions may be granted by the Experience Reporting Agent where appropriate, following consultation with the domestic insurance regulator, based on achieving a target level of approximately 85% of industry experience for the type of experience data being collected under this statistical plan.

### Substandard Indicator

18 64 1 Substandard Indicator

- 0 = Policy segment is not substandard
- 1 = Policy segment is substandard
- 2 = Policy segment is uninsurable

**Note:**

- a. All policy segments that are substandard need to be identified as substandard or uninsurable.
- b. Submission of substandard policies is optional.
- c. If feasible, identify substandard policy segments where temporary flat extra has ceased as substandard.

### Plan Exclude from contribution: spouse and children under family policies or riders. If Form for Additional Plan Codes was submitted for this policy, enter unique three-digit plan number(s) that differ from the plan numbers below:

- 000 = If unable to distinguish among plan types listed below
- 100 = Joint life plan unable to distinguish among joint life plan types listed below

#### Permanent Plans:

- 010 = Traditional fixed premium fixed benefit
- 011 = Permanent life (traditional) with term
- 012 = Single premium whole life
- 013 = Econolife (permanent life with lower premiums in the early durations)
- 014 = Excess interest whole life
- 015 = First to die whole life plan (submit separate records for each life)
- 016 = Second to die whole life plan (submit separate records for each life)
- 017 = Joint whole life plan – unknown whether 015 or 016 (submit separate records for each life)
- 018 = Permanent products with non-level death benefits

#### Term Insurance Plans:

- 020 = Term (traditional level benefit and attained age premium)
- 021 = Term (level death benefit with guaranteed level premium for five years and anticipated level term period for five years)
- 211 = Term (level death benefit with guaranteed level premium for five years and anticipated level term period for 10 years)
- 212 = Term (level death benefit with guaranteed level premium for five years and anticipated level term period for 15 years)
- 213 = Term (level death benefit with guaranteed level premium for five years and anticipated level term period for 20 years)

VM Change 8 – VM-20 Reserves Supplement, Part 3: Life PBR Exemption

Refer to NAIC Blanks (E) Working Group, request for modification to the supplemental report for the Life PBR Exemption, to show the premiums for the group life that utilized an individual risk selection process as these premiums are currently grouped together with other Group Insurance in Exhibit 1. As there are other instances where the ordinary life premiums are not included in the determination of the Life PBR Exemption (e.g., for guaranteed issue policies), it may be useful to request addition of the breakdown of premiums used to determine the exemption.

Possible insertion between questions 1 and 2 for disclosure of premiums used in the determination of eligibility for the Life PBR Exemption, split by ordinary life and group subject to an individual risk.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.
American Academy of Actuaries’ Life Reserves Work Group.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:
   January 1, 2020, edition of the Valuation Manual with NAIC adoptions through August 6, 2019
   Locations with proposed changes: VM-20 and VM-31

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment):
   See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)
   The Valuation Manual already requires that if there is additional risk arising from the conversion of term life insurance, whether group or individual, it must be reserved for. The purpose of this APF is to emphasize this requirement and to provide guidance on what must be included in the Life PBR Actuarial Report with respect to conversions.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Notes: VM APF 2019-62
Add Guidance Note related to converted policies at the end of the section.

**Guidance Note:** The company must ensure that excess mortality associated with policies issued via conversion from term policies or from group life contracts is appropriately reflected in the anticipated experience mortality rates. This can be accomplished through the use of a separate segment for converted policies, through inclusion of conversion experience with the experience of a group of similar directly issued policies, by adjustment of anticipated experience rates for such group of similar directly issued policies, or through other methods.

---

3. **Policies** – A summary of the base policies within each VM-20 reserving category. Include information necessary to fully describe the company's distribution of business. For direct business, use PBR Actuarial Report Template A located on the NAIC website (https://www.naic.org/pbr_data.htm?tab_3) to provide descriptions of each base policy product type and underwriting process (including a description of the process, the time period in which it was used, and the level of any additional margin), with a breakdown of policy count and face amount by base policy product type and underwriting process. Also include the target market, primary distribution system, and key product features that affect risk, including conversion privileges.

---

**d. Assumption and Margin Development** – The following information for each risk factor: description of the methods used to determine anticipated experience assumptions and margins, including the sources of experience (e.g., company experience, industry experience, or other data); how changes in such experience are monitored; any adjustments made to increase mortality margins above the prescribed margin (such as to reflect increased uncertainty due to newer underwriting approaches; and any other considerations, such as conversion features helpful in or necessary to understanding the rationale behind the development of assumptions and margins, even if such considerations are not explicitly mentioned in the Valuation Manual.

**Commented [A1]:** Since the intent is to determine the range of company practices, it may be better not to give examples.

**Commented [A2]:** The conversion features have been moved away from the margins sentence because conversions should inform anticipated experience and the general requirement for uncertainty margins covers conversions. Not sure if we should just delete this.
We suggest placing after Adjustments for Mortality Improvement and before Mortality for Impaired Lives

x. Mortality for Converted Policies – Description of the treatment of mortality for policies issued under group or term conversion privileges including:

i. A description of the method(s) by which any excess conversion mortality was taken into account in the development of company experience mortality rates (e.g., through the use of separate mortality segments for policies issued upon conversion, through aggregation of claim experience, or through use of other methods), the rationale for the method(s) used, and any changes in the method(s) from those used in previous years.

ii. The source(s) of the data used in the method(s) employed.

VM-31 Section 3.D.4.x and y (new sections) [Life Report – Policyholder Behavior]

x. Term Conversions – Description of how the company reflects the impact of any term conversions privilege contained in the policy when setting reserves.

y. Lapse Rates for Converted Policies – Description of and rationale for lapse rates used for policies issued under any group or term conversion privilege.

a. Agreements – For those reinsurance agreements included in the calculation of the minimum reserve as per VM-20 Section 8.A, a description of each reinsurance agreement, including, but not limited to, the type of agreement, the counterparty, the risks reinsured, any provisions related to converted policies, the portion of business reinsured, identification of both affiliated and non-affiliated, as well as captive and non-captive, or similar relationships, and whether the agreement complies with the requirements of the credit for reinsurance under the terms of the AP&P Manual.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
Rachel Hemphill, Texas Department of Insurance
Mary Bahna-Nolan, Pacific Life

Title of the Issue:
VM-20 restriction on using different credibility methods for significantly different blocks of business

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-20 Sections 9.C.5.a and 9.C.7.b.ii
January 1, 2020 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

Currently, a company must select a single credibility methodology, Limited Fluctuation or Bühlmann, for all business that company has that is subject to VM-20 and requires credibility percentages. The Bühlmann methodology is technically allowed for Simplified Issue business within the Valuation Manual; however, at present, it is not practically possible since there are no industry factors available for Simplified Issue. Therefore, only the Limited Fluctuation method can currently be used for determining credibility for Simplified Issue business. The factors in VM-20 for the Bühlmann were developed to only be used in conjunction with the 2015 VBT. Thus, currently, a company with any Simplified Issue business subject to VM-20 that requires credibility calculations must use the Limited Fluctuation method for all of their business subject to VM-20 that requires credibility calculations, including the fully underwritten business. We do not see this as a reasonable restriction. VM-20 already requires that companies not change their credibility method once selected unless they receive commissioner approval for the change, and we believe that that constraint is sufficient to avoid any significant gaming of the credibility method selection.

* This form is not intended for minor corrections, such as formatting, grammar, cross–references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Notes: APF 2019-60
**VM-20 Section 9.C.5.a**

5. Credibility of Company Experience

a. For valuations in which the industry basic mortality table is the 2008 VBT, determine an aggregate level of credibility over the entire exposure period using a methodology to determine the level of credibility that follows common actuarial practice as published in actuarial literature (for example, but not limited to, the Limited Fluctuation Method or Bühlmann Empirical Bayesian Method).

For valuations in which the industry basic mortality table is the 2015 VBT, determine an aggregate level of credibility following either the Limited Fluctuation Method by amount, such that the minimum probability is at least 95% with an error margin of no more than 5% or Bühlmann Empirical Bayesian Method by amount. Once chosen, the credibility method must be applied to all business subject to VM20 and requiring credibility percentages.

Not all blocks of a company’s business subject to VM-20 necessarily need to use the same credibility method. However, a company seeking to change the credibility methods for a given block of business must request and subsequently receive the approval of the insurance commissioner. The request must include the justification for the change and a demonstration of the rationale supporting the change.

**VM-20 Section 9.C.7.b.ii**

7. Process to Determine Prudent Estimate Assumptions

a. If applicable industry basic tables are used in lieu of company experience as the anticipated experience assumptions, or if the level of credibility of the data as provided in Section 9.C.5 is less than 20%, the prudent estimate assumptions for each mortality segment shall equal the respective mortality rates in the applicable industry basic tables as provided in Section 9.C.3, including any applicable improvement pursuant to Section 9.C.3.g, plus the prescribed margin as provided in Section 9.C.6.c, plus any applicable additional margin pursuant to Section 9.C.6.d.v and/or Section 9.C.6.d.vi.

b. If the company uses company experience mortality rates as the anticipated experience assumptions, the following process shall be used to develop prudent estimate assumptions:

i. Determine the values of A, B and C from the Grading Table below, based on the level of credibility of the data as provided in Section 9.C.5.

ii. Determine the value of D, which represents the last policy duration that has a substantial volume of claims, using the chosen data source(s) as specified in Section 9.C.2.b. D is defined as the last policy duration at which there are 50 or more claims (not the first policy duration in which there are fewer than 50 claims), not counting riders. This may be determined at either the mortality segment level or at a more aggregate level if the mortality for the individual mortality segments was determined using an aggregate level of mortality experience pursuant to Section 9.C.2.d.
**Guidance Note:** The same level of aggregation is used in Section 9.C.2.d for determining company experience mortality rates, Section 9.C.5.b for determining credibility, and Section 9.C.7.b.ii for determining the value of D. Thus, when determining the value of D, all claims being aggregated will have used the same credibility method in Section 9.C.5.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
Rachel Hemphill, Texas Department of Insurance

Title of the Issue:
The Life PBR Exemption restriction is intended to apply to ULSG with material secondary guarantees regardless of whether the secondary guarantee is an embedded guarantee or is a separate rider.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM Section II, Subsection 1.D.3

January 1, 2020 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

ULSG policies with material secondary guarantees are intended to be excluded from the Life PBR Exemption, regardless of whether the secondary guarantee is embedded in the base policy or is a separate rider. The VM does say that non-ULSG base policies with secondary guarantee riders follow the reserving requirements for ULSG policies in Section II, Subsection 6.C: “ULSG and other secondary guarantee riders shall be valued with the base policy and follow the reserve requirements for ULSG policies under VM-20, VM-A and/or VM-C, as applicable.” It should be made clear that following the reserve requirements for ULSG includes exclusion from the Life PBR Exemption, when the secondary guarantee is material.

* This form is not intended for minor corrections, such as formatting, grammar, cross–references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Proposed GI Life Valuation (A) Subgroup

Proposed Charge for 2020:

Provide recommendations regarding valuation requirements for Guaranteed Issue Life business including any appropriate mortality table(s) for valuation as well as nonforfeiture. Initial recommendations are to be provided to LATF by the 2020 Summer National Meeting.

Establishment of this subgroup is consistent with the following LATF charges:

1.A. - keep reserve requirements current
1.B.1 - work with the Academy of Actuaries and the Society of Actuaries to create, update and revise mortality tables that are necessary for valuation purposes
1.B.6 – provide recommendations for changes necessary for reserving and nonforfeiture standards and interact with other NAIC groups to comment on their work and assist in addressing actuarial matters

Preliminary Agenda for early 2020 Subgroup open meetings and calls

1. Recap GI Life valuation concerns and explain issues with maintaining the current interim solution which includes reverting to the 2001 CSO table.
   a. A GI Life specific mortality table was created and adopted to ensure that an assumed higher mortality rate compared to underwritten business was being appropriately reflected in GI Life reserves.
   b. The newly adopted table created a deficiency reserve issue that had not been identified when the table was established. Instead it was discovered as companies prepared for implementation of the new table. There may have been some issues with the low number of companies participating in the SOA study and an attempt to cover mortality for X% of those companies while the experience of the companies was wide in range.
   c. The 2001 CSO table may not appropriately reflect the slope of mortality for GI Life and could result in reserves developing into a deficient position over time. Discuss potential issues with maintaining the current interim solution of going back to the 2001 CSO table.

2. Consider the short term solution and problems that could arise from deficient reserves for some or all companies if the mortality is understated by the 2001 CSO table.
   a. Can VAWG, or another NAIC group, under LATF charge 1.B.6 be asked to determine the exposure to reserve inadequacies under the interim solution, standalone AAT for GI Life blocks, etc?
   b. Should the short-term solution be modified?

3. The Subgroup may need more time to formulate a long-term solution, but could design one by Summer National Meeting 2020. A long-term solution may contemplate the following:
   a. Establishment of a better table or a decision to utilize more than one table as well as company specific experience in establishing valuation mortality for a company. How does this work with nonforfeiture and the taxability of life insurance benefits?
   b. Establishment of a method that can be used to combine more than one table or combine tables with company experience such that the appropriate valuation mortality is used by each company.
   c. Data collection requirements under the VM that will allow updates to the set of tables used in the new valuation and nonforfeiture process for GI Life.
GI Life Valuation (A) Subgroup

This subgroup is needed to provide recommendations to improve valuation requirements for guaranteed issue (GI) life insurance. Recent attempts by LATF to improve valuation requirements were lacking sufficient data to produce a mortality valuation table tailored for the types of guaranteed issue business in the marketplace. The subgroup will focus on possible alternative methods in the short term in addition to a possible longer term effort for the data needed to develop an improved valuation table.

The recommended charge for this subgroup is as follows:

2020 Charge:

Provide recommendations regarding valuation requirements for Guaranteed Issue Life business including any appropriate mortality table(s) for valuation as well as nonforfeiture. Initial recommendations are to be provided to LATF by the 2020 Summer National Meeting.

PBR-RELEVANT ASOPS

- ASOP No. 52: Principle-Based Reserves for Life Products under the NAIC Valuation Manual
- More ASOPs

PBR QUALIFICATION STANDARDS

Qualification Standards Response on PBR

What are the minimum requirements an actuary should consider to be qualified to render opinions related to PBR under the U.S. Qualification Standards? This question and answer came from the Academy’s Committee on Qualifications, which developed a list of frequently asked questions for actuaries.
Seminars/Webinars

- Academy is having a 2½-day seminar here in Austin December 9–11; first ever to also include variable annuities
- Will have another if demand warrants it
- Also conducting webinars: e.g., plan on webinars on VM-21 changes for variable annuities

Practice Note on PBR Projections

- Contains questions and answers related to projecting future principle-based reserve and capital calculations
- Focuses on VM-20, but also applicable to other frameworks

Four-Page “PBR Checklist”

- The PBR Checklist Task Force is has prepared a short reference of important characteristics to consider for PBR valuations
- Can act as a reminder to actuaries as to all the tasks as well as letting senior management know the extent of issues that need to be considered
- Released in October 2019

PBR Analysis Template

- Academy group under Pat Allison is developing ways to display PBR (and other) data:
  - Examples: waterfalls, trend analysis graphs
  - Advantages: one picture is worth a 1,000 words
- Goal is to have this done the middle of next year
**Update to VM-20 Practice Note**

- Work on updates to VM-20 practice note to reflect changes effective in the 2020 Valuation Manual is in process
- Target release for this update is December 2019

---

**Questions/Suggestions**

- Anything else the Academy can do to help you with PBR?
Update on the Request for Proposal for the Economic Scenario Generator (ESG)

Pat Allison, MAAA, FSA
12/5/2019

RFP for a New ESG

- An RFP is being developed to select a vendor to provide a new ESG to be prescribed for life and annuity reserves and capital (VM-20, VM-21, C-3 Phase I, and C-3 Phase II)
- The group drafting the RFP includes regulators, NAIC staff, the Academy, the ACLI, and industry subject-matter experts.
- The targeted completion date for the RFP is Q1 2020
- The new ESG is expected to be implemented no earlier than 2022
Cessation of the London Interbank Offered Rate (LIBOR)

Pat Allison, MAAA, FSA
12/5/2019

Agenda

- LIBOR Background
- Transition to Secured Overnight Financing Rate (SOFR)
  - Alternative Reference Rates Committee
  - Reasons for Selection of SOFR
- Risks
- Actions Needed
- Useful Links

LIBOR Background

- LIBOR is a global benchmark interest rate calculated daily representing the cost of short-term unsecured borrowing by banks
- LIBOR is used to set interest rates on about $200 trillion of assets, including corporate bonds, home mortgages, business loans, and derivatives contracts.
- The UK’s Financial Conduct Authority is responsible for regulating LIBOR and has indicated that publication of LIBOR is not guaranteed beyond 2021.
- LIBOR has become less suitable as a benchmark because:
  - Banks have substantially reduced this type of borrowing
  - Banks typically must submit rates based on judgment instead of actual transactions, and many are reluctant to continue doing so

Transition to SOFR: Alternative Reference Rates Committee

- The Alternative Reference Rates Committee (AARC) was formed in 2014 by the Federal Reserve Board and the NY Fed
- AARC was formed in response to recommendations and objectives from the Financial Stability Board and the Financial Stability Oversight Council to address risks related to USD LIBOR
- In 2017, the AARC identified the Secured Overnight Financing Rate (SOFR) as the rate that represents best practice for use in certain new USD derivatives and other financial contracts
Transition to SOFR: Alternative Reference Rates Committee

- AARC members include:
  - Banks
  - Asset managers
  - Industry trade associations
  - Insurers

- The AARC has 10 working groups to help ensure a successful transition from USD LIBOR to SOFR, e.g.:
  - Outreach/Communications Working Group
  - Regulatory Issues Working Group
  - Accounting/Tax Working Group

- In April 2018, the NY Fed began publishing SOFR daily

Reasons for Selection of SOFR

The AARC selected SOFR for the following reasons:

- As an overnight secured rate, SOFR better reflects the way financial institutions fund themselves today.
- SOFR is fully based on actual transactions and does not rely on judgment.
- SOFR references multiple segments of the US Treasury repurchase agreement market. The transactions underlying SOFR regularly exceed $800 billion in daily volumes.
- SOFR’s underlying market is resilient and robust.
- SOFR is a true “risk-free” rate suitable as a reflection of interest rates overall.
- SOFR is produced by the public sector using a transparent methodology.

Risks

- Many contracts linked to LIBOR continue past 2021, when LIBOR may no longer be available.
- Industry readiness – A significant effort may be needed to prepare for the transition.
- Many contracts contain fallback provisions describing what happens if LIBOR is not produced.
  - Many were written to address temporary unavailability of LIBOR. There may be unintended consequences (e.g. floating rate products become fixed, interest rates for a borrower increase substantially).
  - Amending old fallback language may be difficult.

Actions Needed

- Insurance companies will need to take inventory of existing products and processes that use LIBOR, which may include:
  - Investments (e.g. floating rate debt, where the interest rate is reset periodically based on LIBOR; derivatives linked to LIBOR)
  - Contracts with policyholders (e.g. annuities with credited rates linked to LIBOR)
  - Reinsurance treaties
  - IT feeds
- Take action where required to move toward SOFR or another rate
- Study tax, accounting, and actuarial impacts
**Actions Needed**

Make *Valuation Manual* and other updates as needed:

  
  Interest rate swap spreads over Treasuries shall be prescribed by the NAIC for use throughout the cash flow model wherever appropriate for transactions and operations including, but not limited to, purchase, sale, settlement, cash flows of derivative positions and reset of floating rate investments. A current and long-term swap spread curve shall be prescribed for year one and years four and after, respectively, with yearly grading in between. The three-month and six-month points on the swap spread curves represent the corresponding London Interbank Offered Rate (LIBOR) spreads over Treasuries.

- Accounting Practices & Procedures Manual – various citations where LIBOR is mentioned

- Others?

**Questions?**
Update on Life Insurance Mortality Experience Reporting for 2020

Pat Allison, MAAA, FSA
12/5/2019

Agenda
- Data collection timeline
- Recap of company selection process
- Communication with companies and regulators
- NAIC Preparation
  - Resources for companies
  - Data checks
  - Legal agreements
  - Security
- Reports to be produced
- FAQs

Data Collection Timeline

- Q4, 2019: Companies may begin 1) requesting exemptions or communicating exclusions, and 2) testing data submissions using the Regulatory Data Collection (RDC) tool
- Q2, 2020: Call for companies to submit data for 2018 observation year using 2020 Valuation Manual requirements
- 9/30/2020: Deadline for companies to submit data using the RDC tool
- 12/31/2020: Deadline for companies to make corrections
- 5/31/2021: Deadline for NAIC to submit aggregate experience data to SOA

Company Selection Process

Scope: VM-51 Section 2.B
- Individual ordinary life line of business, excluding SI/GI, worksite, individually solicited group life, direct response, final expense, pre-need, home service, credit life, COI, BOLI, CHOLI
- Direct written business, prior to reinsurance ceded (exception: assumption reinsurance is in scope)

Selection Criteria: VM-51 Section 2.C
- Achieve target level of approximately 85% of industry experience
- Individual companies or groups of affiliated companies with less than $50 million of direct individual life premium are exempt
Company Selection Process

Additional criteria used:

- Focus on groups of affiliated companies and individual companies that are large enough to be subject to PBR in 2020, to enable regulators to receive reports and monitor experience
- Achieve a reasonable distribution of large and small companies across states of domicile

Results:

- 176 companies selected, across 31 states of domicile
- 69 of these companies are new to this process (the other 107 have participated in the KS or NY data calls)

Communication with Companies

- Sent notifications to 176 companies selected for data collection
  - Requested that each of the selected companies identify primary and secondary contacts to receive future communications regarding data collection
  - Requested notification to the NAIC as soon as possible if the company plans to request an exemption for any reason
- Sent notifications to the remaining 513 companies to let them know they were not selected for data collection

Communication with Regulators: Exclusions and Exclusions

Exclusions

- Business out of scope
- A group may elect to exclude data for an affiliate with < $10 million premium
  - No regulator decision needed

Exemptions

VM-51 Section 2.C: "Additional exemptions may be granted by the Experience Reporting Agent where appropriate, following consultation with the domestic insurance regulator, based on achieving a target level of approximately 85% of industry experience for the type of experience data being collected under this statistical plan."
- NAIC will consult with domestic regulator prior to granting or disallowing exemptions

NAIC Preparation: Resources for Companies

https://www.naic.org/pbr_data.htm
VM-50 / VM-51 EXPERIENCE REPORTING
Company Training on Mortality Experience Data Reporting
Company Training on Mortality Experience Data Reporting Powerpoint
Mortality Statistical Plan Company Selection Memo
RDC File Submission Instructions (PDF)
Contact experience_reporting@naic.org with questions.

Submission Beta testing – Companies have the ability to test their submissions using RDC and make adjustments prior to the 2020 data call

More to come: FAQs, Control files, RDC form and format checks

NAIC Preparation: Data Checks

Control Files
• Control totals – VM-50 Section 4.B.2 requires each data submission to be balanced against a set of control totals provided by the company.
• Data reconciliation – VM-50 Section 4.B.3 requires companies to provide a reconciliation between submitted experience data and its statistical and financial data, along with an explanation of differences.

Reasonability Checks
• RDC form and format screening (Ready)
• Actuarial data review (In development)

NAIC Preparation: Legal Agreements

• The NAIC will be entering into agreements with a small number of states
• The agreements between these states and the NAIC will cover data collection and confidentiality, and will consider state procurement requirements in the data collection process
• “Click-through agreements” are nearly final

NAIC Preparation: Security

• Internal and External Data Security Audits
  – Annually, the NAIC will undertake a Service Organization Control (SOC) 2 external data security audit and internally assess their data security practices through a Standardized Information Gathering (SIG) questionnaire.
  – The 2019 reports have been completed for both the SOC 2 external data security audit and the internal SIG process
• Policies and procedures are in place to ensure confidentiality, including defined RDC user roles, secure logins, and data encryption
**Reports**

- VM-51 Section 2.F requires the NAIC to provide an experience data report of aggregated experience to the SOA for development of industry and valuation mortality tables. A report has been programmed to match SOA specifications.

- After data is collected, reports will be provided to state insurance departments
  - VM-50 Section 5.E requires the NAIC to provide a list of companies whose data is included, and a list of those whose data was excluded because it fell outside the tolerances set for missing or invalid data, or for any other reason.

**FAQs**

**Will there be a cost for the 2020 Mortality Experience Data Call?**

No. The NAIC will not be charging companies a fee for the 2020 data collection.

**Will New York and/or Kansas continue with their own data calls? Will MIB continue to be involved in data collection?**

KS – No
NY – Yes

States may implement their own data calls and choose another Experience Reporting Agent (e.g. MIB).

- VM-50 Section 6.B.3.b: “Use of the Experience Reporting Agent by the contracting state insurance departments does not preclude those state insurance departments or any other state insurance departments from contracting independently with another Experience Reporting Agent for similar data required under this Valuation Manual or other data purposes.”

**FAQs**

**My company is the direct writer for a block of business in scope, but the business is covered by a 100% coinsurance arrangement and is now administered by the assuming company. The policies were not legally novated. Does my company need to submit mortality experience data for this business?**

Yes. This is not assumption reinsurance. Unless the policies were legally novated, the original direct writer of the life insurance will be required to submit the mortality experience data.
Mortality Aggregation Examples

NAIC National Meeting
Summer 2019

Rachel Hemphill, MAAA, FSA, FCAS
Pat Allison, MAAA, FSA

Key Concepts for Mortality Aggregation

- Mortality segments subject to the same or similar underwriting processes may be aggregated to calculate credibility
- Using separate mortality segment experience to set each corresponding assumption and then simply grouping the segments together to calculate credibility is not mortality aggregation under VM-20
- The aggregate experience must inform the mortality segment assumptions; two approaches are allowed under VM-20

Agenda

- Key Concepts and Applicable VM-20 Language
- Examples and Comparison of Approaches
- Next Steps

Applicable VM-20 Language

VM-20 Section 9.C.2.d

vi. If the company uses the aggregate company experience for a group of mortality segments when determining the company experience mortality rates for each of the individual mortality segments in the group, the company shall either:

a. Use techniques to further subdivide the aggregate experience into the various mortality segments (e.g., start with aggregate non-smoker then use the conservation of total deaths principle, normalization or other approach to divide the aggregate mortality into super preferred, preferred and residual standard non-smoker class assumptions), or

b. Use techniques to adjust the experience of each mortality segment in the group to reflect the aggregate company experience for the group (e.g. by credibility weighting the individual mortality segment experience with the aggregate company experience for the group).
Mortality Aggregation Examples

Disclaimer:

The examples presented are for illustrative purposes to demonstrate acceptable approaches. They are not intended to cover all complexities that may arise in practice. Additional variations and other methods may be appropriate. These examples are intended to illustrate general principles, not to be an exhaustive presentation of acceptable methods.

Approach: “Bottom Up”

Level of Aggregation: All Segments

### Comparison of Approaches

<table>
<thead>
<tr>
<th>Methodology</th>
<th>&quot;Top Down&quot; Example</th>
<th>&quot;Bottom Up&quot; Example</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Uses relativities to subdivide the aggregate experience into mortality segments.</td>
<td>Uses credibility weighting to adjust the experience of each mortality segment to reflect the aggregate experience.</td>
</tr>
<tr>
<td>Source of experience data</td>
<td>Uses a company experience study A/E for the aggregate class(es), along with predefined expected relativities between mortality segments determined from a reliable and applicable external source.</td>
<td>Uses company experience study A/E and credibility results for all individual mortality segments and for the aggregate class.</td>
</tr>
</tbody>
</table>

### Updates based on new experience studies

- The aggregate class A/E ratios(s) and aggregate credibility must be updated based on each new company experience study. The relativities would not change unless the external source (e.g., RR Tool, reinsurer) indicates that relationships between segments have changed or the external source data is no longer representative of the company experience.

- The aggregate class and individual mortality segment credibilities and A/E ratios must be updated based on each new company experience study.

### Conservation of deaths

Conservation of deaths is maintained using the normalization process, such that the total amount of expected claims is not less than the aggregate.

### Prudent estimate assumptions

Anticipated experience assumptions are likely to be different by approach, but prescribed margins would be the same if the same level of aggregation is used to determine credibility.

### Other examples have been developed.

See Excel spreadsheet.
Next Steps

Consider exposing examples for public comment

Review comments and revise accordingly

Post examples to the Industry Tab on the NAIC website
IIPRC Report to LATF December 6, 2019

Management Committee & Commission Meeting: Monday, December 9, 3:00 to 4:30

- The full agenda is available on the compact website
- Management Committee and Commission will consider approval/adoption of the following Uniform Standards
  - Group Policyholder Application
  - Group Annuity Certificate for Employer Groups
  - Group Guaranteed Interest Contracts for Non-Variable Annuities for Employer Groups
- Consider approval of Proposed Strategic Plan, 2020 Annual Budget, and 2020 Schedule of Fees
- Hear reports of the Audit Committee, Product Standards Committee, and Rulemaking Committee
- Form Compact Member Committees
- Form Management Committee
- Appointments to the Industry Advisory Committee
- Election of 2019/2020 Officers

Uniform Standards Development—See IIPRC website: insurancecompact.org

- PSC has finalized its work on group annuity Uniform Standards. The Commission adopted the Single Premium Group Fixed Annuity Contract Standards (used for pension risk transfer) and they will be effective for filing January 14th. As noted above, The Commission will consider the remaining group annuity Uniform Standards for adoption during Monday’s Management Committee and Commission meeting.
- PSC continues to address the priority list for filling in gaps in existing individual life and annuity uniform standards. This includes a referral to the Actuarial Working Group to consider developing standards for index-linked variable annuity products. The AWG requested more information about these products and SEC registration requirements from industry trades and is continuing its discussions on developing new standards for these products.
- The PSC will be recommending amendments to the Additional Standards for Waiver of Premium and Additional Standards for Waiver of Monthly Deduction to the Management Committee on Monday to add qualifying events triggers other than the current total disability. They will also recommend a new standard for Waiver of Surrender Charge Benefit for life insurance, similar to the standard on the annuity side.
- Reminder: You can follow the progress of both the PSC and the AWG by reviewing the Call Summaries that are posted under the Committee links on the About the Compact section of the Compact’s website and the Docket (Uniform Standards Under Construction) and participating in the Public Calls that are posted on our events calendar.

Product Operations

- To Be Provided Later
- With respect to 2017 CSO filings, the large increase in the number of life filings the compact has received this year can in part be explained by the change to 2017 CSO. From BOY 2019 through June 2019 we received over 450 life filings compared to 295 filings for the same period last year. We’re receiving more complete filings instead of revisions/amendments and more UL and VUL in 2019.
• The Compact implemented a pilot program to allow companies to pay additional fees to receive an expedited review of their filing. The program has been extended to the end of the year.

**LTC Annual Rate Certification and Triennial Memos**

• The Compact completed the review of the certifications/memos that were due May 1 of this year.
• The Compact has prepared a public report summarizing the review, common compliance issues, and outstanding issues.
• The report will be released at the Commission meeting Monday and will be available on the Compact website.
• The public report will be sent to Commissioners along with a confidential addendum with a summary of the LTC products filed for use in their state.

**Other Activities**

• Monitoring IUL Illustration Subgroup conference calls as well as the LTC Executive Task Force work stream calls
• Webinars
  o The Compact recently completed a series of webinars for regulators.
  o The Compact plans to offer a webinar for regulatory actuaries in the spring of 2020.
  o The Compact plans to offer a webinar for LTC company actuaries on the LTC annual certification requires in the spring of 2020

**Additional Resources**

• Added a full-time actuary, Naomi Kloeppersmith, in July and a new full-time form reviewer, Yada Horace, in August.

**What types of product information regarding Compact filings and review would be helpful for LATF to receive, if any?**
IUL Illustration (A) Subgroup
Conference Call
November 14, 2019

The IUL Illustration (A) Subgroup of the Life Actuarial (A) Task Force met via conference call Nov. 14, 2019. The following Subgroup members participated: Fred Andersen, Chair (MN); Ted Chang (CA); Andrew Greenhalgh (CT); Vincent Tsang (IL); Rhonda Ahrens (NE); Bill Carmello (NY); Peter Weber (OH); Mike Boerner and John Carter (TX); and Craig Chupp (VA). Also participating was: Rachel Hemphill (TX).

1. Discussed Comments on the IUL Illustration Questions Exposed on Nov. 1

Mr. Andersen said nine comment letters were received in response to the Nov. 1 exposure. He suggested discussing the issues question by question instead of sequentially discussing each commenter’s letter. On the question related to the effective date of the proposed changes, he recommended that the changes be effective the later of five months after adoption by the Life Actuarial (A) Task Force or three months after adoption by the Executive (EX) Committee and Plenary. There was no opposition to the recommendation.

a. Question 2

The second question exposed was related to the application of the recommended changes to in-force illustrations. Mr. Andersen discussed his summary of feedback received from commenters (Attachment Twenty-Five-A). He noted that commenters supported positions for and against application of the changes to in-force illustrations. A few Subgroup members expressed desires to find a compromise solution. One member advocated strongly for application of the changes to in-force illustrations.

Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI comment letter (Attachment Twenty-Five-B) did not specifically address this question.

Birny Birnbaum (Center for Economic Justice—CEJ) said the CEJ comment letter (Attachment Twenty-Five-C) points to the applicability of Actuarial Guideline XLIX—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest (AG 49) to in-force policies. He said the issue was discussed and settled years ago. He said the application is not retroactive because it applies only to new illustrations.

Mr. Andersen asked Mr. Birnbaum to address a commenter’s question related to a consumer purchased multiplier option, the value of which has increased with the market but would no longer be illustratable under the proposed changes to AG 49. Mr. Birnbaum responded that the company should explain that the illustration can no longer illustrate the multiplier, but the consumer is still able to see the historical performance of the multiplier.

Chris Kite (Financial Independence Group) said, while in-force illustrations are used in policy replacement comparisons, the original intent was to demonstrate how policies work. Sheryl J. Moore (Moore Market Intelligence) concurred that in-force illustrations help manage the consumers expectations of their policy’s performance.

Tom Doruska (Global Atlantic) said the Global Atlantic comment letter (Attachment Twenty-Five-D) encourages the Subgroup to apply the proposed changes on a going forward basis.

Scott Harrison (Harrison Law Office) said the two comment letters written (Attachment Twenty-Five-E and Attachment Twenty-Five-F) on behalf of Lincoln Financial Group, Pacific Life, Sammons Financial Group, and John Hancock Insurance (collectively, the “IUL Coalition”) support the grandfathering of in-force illustrations from the proposed changes to AG 49.

Gary A. Sanders (National Association of Insurance and Financial Advisors—NAIFA) said the NAIFA comment letter (Attachment Twenty-Five-G) states its opposition to application of the proposed changes to in-force illustrations.

Ata Azarshahi (National Life) said the National Life comment letter (Attachment Twenty-Five-H) recommends not applying the proposed changes to in-force policies, as doing so may cause consumer confusion.
Gayle Donato (Nationwide) said the Nationwide comment letter (Attachment Twenty-Five-I) suggests that, if the changes are applied to in-force policies, a one-year phase-in would allow time for customer and producer education.

Ernest Armijos (Pacific Life) said the Pacific Life comments (Attachment Twenty-Five-J) support prospective application of the proposed changes to AG 49.

Seth Detert (Securian Life) said the Securian Life comments (Attachment Twenty-Five-K) support the application of the proposed changes to policies regardless of when they are sold.

Mr. Boerner said further clarification of the treatment of hedges for indexed-based credits may be necessary. He recommended deferring the vote until the Fall National Meeting to allow time for additional information to be provided.

b. Question 3

The third question in the exposure requested comments on the Task Force decision to not allow multiplier products to illustrate more favorably or no worse than non-multiplier products.

The Nationwide comment letter proposes two methods of addressing the issue. Ms. Donato said changes are needed to Section 4 and Section 5 of AG 49 to implement the Task Force decision. She noted the Section 4 changes can be addressed later. The changes to Section 5 are to ensure that it is not more or less difficult for a product with a multiplier to pass disciplined current scale (DCS) testing. Method One uses investment returns net of investment expenses when determining the maximum net investment return for DCS testing. Method Two inputs gross investment returns and reflects investment expenses, including hedge costs, as negative cashflow. Ms. Donato said the Nationwide recommendation is to revise Section 5, noting that it provides a net limit on the annual earned rate, and exclude the supplemental option budget from Section 5.A.iii.

Mr. Andersen asked if a sentence could be added to further define the use of the term “net.” Ms. Donato said clarity will be added.

Mr. Chupp said he is concerned that there is double-counting in Section 4 based on how the multiplier is determined.

Laura Hanson (Allianz Life) suggested moving the “145 percent rule” to Section 4 and taking a principled approach in Section 5 as a way to avoid the double-counting. She noted that there are different approaches to DCS testing, which makes a formulaic approach to addressing the issue difficult.

Mr. Andersen said he prefers making revisions under the current structure of AG 49 and addressing other issues at a later date.

Donna Megregian (Reinsurance Group of America—RGA) agreed with the Subgroup direction, but she suggested the addition of a guidance note to address the double-counting issue.

As discussion continued, a number of concerns about Section 4.E were raised.

Having no further business, the IUL Illustration (A) Subgroup adjourned.
### Summary of early November 2019 IUL illustration comments

1. Should the effective date for new policies be the later of 5 months after LATF adoption or 3 months after NAIC Executive/Plenary adoption?

   - **ACLI:** Yes - if revisions are substantively consistent with those in 11/1 version
   - **CEJ:** Should be 11-12 weeks (just less than 3 months) after NAIC Exec/Plenary adoption; No record of past effective dates are needed
   - **GlobalAtl:** Yes - acceptable if the approved version is materially consistent with the 11/1 version
   - **IUL Coalit.:** Yes - acceptable if the NAIC-adopted version is materially consistent with LATF-adopted version
   - **NAIFA:** Response not provided
   - **Nat’l Life:** Yes - acceptable if the approved version is materially consistent with the 11/1 version
   - **N’Wide:** Yes - if revisions are substantively consistent with those in 11/1 version
   - **Pac Life:** Response not provided (comments reflected in IUL Coalition letter)
   - **Securian:** Yes - expects Exec / Plenary version to match LATF version

2. Should the revised guidelines be in place for inforce illustrations for policies sold before the effective date for new policies?

   - **ACLI:** Response not provided
   - **CEJ:** Yes - decided by NAIC in 2016 that AG 49 changes would apply to inforce policies
   - **GlobalAtl:** Yes - assuming sufficient time is provided; fulfills a goal of uniform practice & prevents confusion when comparing policies
   - **IUL Coalit.:** No - consumer benefit is not clear & compelling and inforce illustration serves different purpose than illustration at time of sale
   - **NAIFA:** No - Retroactively applying revisions made to NAIC models to inforce business/products is likely to confuse consumers and adversely impact the consumer/producer relationship
   - **Nat’l Life:** No - it could cause undue consumer confusion and disruption
   - **N’Wide:** If revisions are put in place for inforce policies, apply to inforce one year after the effective date of the revised AG 49 to new policies; this would allow time for customer & producer education
   - **Pac Life:** No - consumer confusion and loss of confidence will result if feature purchased is not illustrated
   - **Securian:** Yes - otherwise unrealistic expectations will be reinforced

3a. Does the approach of having the disciplined current scale earned rate including or excluding the Supplemental Option Budget lead to the result of the multiplier product illustrating about the same as a non-multiplier product?

   - **ACLI:** Since charges for a multiplier reduce policy values, both the crediting of interest and the funding of option credits need to consider not only the rate but also the balance against which that rate is applied
   - **CEJ:** Yes - decided by NAIC in 2016 that AG 49 changes would apply to inforce policies
   - **GlobalAtl:** Pay attention to Sections 3 through 6; to attain the desired result, the return of the Supplemental Option Budget, not its inclusion or exclusion, is required
   - **IUL Coalit.:** Response not provided
   - **NAIFA:** Response not provided
   - **Nat’l Life:** The cost of the hedge should be offset with the hedge payoff
   - **N’Wide:** Depends on how a company reflects hedge cash flows in DCS testing; Add "net" to 5A wording; update Section 4 & 6B, also;
   - **Pac Life:** Response not provided
   - **Securian:** Recent revisions do reasonable job; If Supplemental Option Budget included, need to define what constitutes cash flows from DCS testing standpoint

3b. If neither of the approaches mentioned in 3a leads to this result, is there an alternative approach that leads to this result such as providing explicit guidance in Section 4?

   - **ACLI:** Contained in 3A response
   - **CEJ:** Contained in 3A response
   - **GlobalAtl:** Need to align 4E and 4A/4B; 6B creates unintended consequences
   - **IUL Coalit.:** Response not provided
   - **NAIFA:** Response not provided
   - **Nat’l Life:** In the absence of an explicit charge, the funding for the multiplier could come from the company’s net earned rate and may result in different total index credits.
   - **N’Wide:** Investment returns are net of investment expenses; or Investment expenses are treated separately as expenses
   - **Pac Life:** Response not provided
   - **Securian:** Alternate: Introduce new definitions; Add language to 4C, agrees with 4E
November 12, 2019

Mr. Fred Andersen
Chair, NAIC IUL Illustration (A) Subgroup

Re: Indexed Universal Life (IUL) Illustration Subgroup Questions

Dear Mr. Andersen:

The American Council of Life Insurers (ACLI)\(^1\) appreciates the opportunity to submit the following responses to several of the questions posed by the IUL Illustration Subgroup on its November 1\(^{st}\) call.

**Question 1:** Should the effective date for new policies be the later of 5 months after LATF adoption or 3 months after NAIC Executive/Plenary adoption?

**ACLI Response to 1:** If the revisions to Actuarial Guideline 49 are substantially consistent with the version circulated on the November 1\(^{st}\) call, ACLI would be supportive of the 5 month/3 month recommendation. If modifications are made to the exposure, that timeframe may not be appropriate depending on the extent and significance of those changes.

**Question 3a:** Does the approach of having the disciplined current scale earned rate including or excluding the Supplemental Option Budget lead to the result of the multiplier product illustrating about the same as a non-multiplier product?

**Question 3b:** If neither of the approaches mentioned in 3a leads to this result, is there an alternative approach that leads to this result such as providing explicit guidance in Section 4?

**ACLI Response to 3a/3b:** The language in the current exposure appears to create a discrepancy in the requirements, and as such it’s unclear if this approach meets the desired regulatory outcome. Section 3.C.vi. provides for more than one benchmark account when a product has different levels of account charges. The language in Sections 4.a and 4.b provide for a separate illustrated rate for each benchmark account. The account charges that generated separate benchmark accounts seem to meet the definition of a Supplemental Option Budget. Applying the language in Section 4.e, however, seems to produce a different answer than that derived within 4.a and 4.b.

---

\(^1\) The American Council of Life Insurers (ACLI) advocates on behalf of 280 member companies dedicated to providing products and services that promote consumers’ financial and retirement security. 90 million American families depend on our members for life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, dental and vision and other supplemental benefits. ACLI represents member companies in state, federal and international forums for public policy that supports the industry marketplace and the families that rely on life insurers’ products for peace of mind. ACLI members represent 95 percent of industry assets in the United States. Learn more at [www.acli.com](http://www.acli.com).
Regarding deciding if a product with a multiplier should be illustrated the same as a product without a multiplier, there are two issues at work: one being how the interest is being credited, and how the option crediting is funded. Since charges for a multiplier reduce policy values, both the crediting of interest and the funding of option credits need to consider not only the rate but also the balance against which that rate is applied. To have consistent results between a product with a multiplier and one without, different rates would need to be applied due to differences in the account values.

As regulators contemplate clarification of the drafted language, we would note that care needs to be taken to where the option budget is added in the text to avoid unfairly advantaging or disadvantaging multiplier products through potentially doubling counting of credits or charges.

We look forward to a discussion of these questions on a future Subgroup call. Thank you.

Sincerely,

[Banffeli]

cc Reggie Mazyck, NAIC
Comments for the Center for Economic Justice

To the Indexed Universal Life Subgroup of the NAIC Life Actuarial Task Force

Proposed Revisions to AG 49

November 12, 2019

In response to questions posed by the subgroup and the exposed draft revisions to AG 49, CEJ submits the following comments to the IUL subgroup. The following questions were exposed for comment:

1. Should the effective date for new policies be the later of 5 months after LATF adoption or 3 months after NAIC Executive/Plenary adoption?

2. Should the revised guidelines be in place for inforce illustrations for policies sold before the effective date for new policies?

3a. Does the approach of having the disciplined current scale earned rate including or excluding the Supplemental Option Budget lead to the result of the multiplier product illustrating about the same as a non-multiplier product?

3b. If neither of the approaches mentioned in 3a leads to this result, is there an alternative approach that leads to this result such as providing explicit guidance in Section 4?

Application to In-force policies – Question 2

It is unclear why the question of application of AG 49 to new illustrations for in-force policies is being presented as an issue for discussion. LATF, the A Committee and the NAIC Executive Committee and Plenary decided in 2016 that AG 49 would apply to in-force policies. There is no evidence that any of rationale for this decision was misplaced or needs to be revisited.

A lengthy debate regarding application of AG 49 to in-force policies occurred throughout 2016 and the NAIC settled the debate with a decision in 2016 to adopt the revisions to AG 49 that included:
i. Effective March 1, 2017, Section 4 and Section 5 shall be effective for all in-force life insurance illustrations on policies within the scope of this actuarial guideline, regardless of the date the policy was sold.

LATF recommended this change to the Life Insurance and Annuities (A) Committee with a proposed effective date of July 1. The A Committee revised the effective date to March 1, 2017 when adopting the provision on December 11, 2019. The Executive Committee and Plenary adopted the revision to AG 49 from the A Committee on December 13, 2016.

The arguments in favor of application of AG 49 to new illustrations for in-force policies include: 1

- Consistent application of the consumer protection of AG 49 for all consumer receiving an illustration on or after the effective date;
- Realistic illustrated interest rates for consumers receiving an updated illustration for a policy issued before the effective date;
- Ease of compliance for insurers and regulatory oversight by regulators compared to; a system of multiple interest rate regimes depending upon the date of policy issuance;
- Reduced expenses for insurers from elimination of multiple systems of interest rate calculations.

The arguments against application of AG 49 to new illustrations for in-force policies were that consumers would be confused when a new illustration used a different crediting rate than an older illustration and that application to in-force policies was retroactive application of AG49.

Regarding “consumer confusion,” no evidence was ever presented to support this claim and examination of the argument proved it was without merit. First, crediting rates for updated illustrations can already vary from crediting rates for prior illustrations based on changes in the calculation prescribed in Section 4 of AG 49. Second, failure to apply AG 49 – or the most current version of AG 49 – to new illustrations for in-force policies will cause disparate treatment of consumers, including:

- Two consumers purchasing the same product a day before and a day after the effective date of the revisions would receive different illustration crediting rates;
- Two consumers receiving updated illustrations of the same product would receive different illustration crediting rates if one purchased the product before the effective date and one purchased the product after the effective date.
- Consumers purchasing an IUL product before the effective date do not receive the same consumer protections as consumers who purchased the product after the effective date.

---

1 AXA letter of July 31, 2016; AAA letter of August 1, 2016, CEJ letters of July 31, 2016 and August 19, 2016. CEJ’s comment letters are attached.
Similarly, the argument that application of AG49 to new illustrations for in-force policies was a “retroactive” change to IUL policies was without merit. Application to new illustrations for in-force policies did not and will not require any insurer to revise or replace any illustration provided before the effective date. Rather, the proposed change applies to all illustrations provided on or after the effective date and, consequently, will not impact previously-issued illustrations or any features of the IUL contract.

Effective Date – Question 1

The effective date should be the first day of the month 11 to 12 weeks after adoption by the NAIC Executive Committee and Plenary.

In 2016, LATF adopted revisions to AG 49, including application to in-force policies, on November 17. The A Committee and Exec/Plenary adopted the revisions with a March 1, 2017 effective date on December 11 and December 13, 2016, respectively. The March 1, 2017 effective date was 78 days after adoption by Exec/Plenary.

An effective date for the proposed revisions to AG 49 no greater than 11 to 12 weeks following adoption by Exec/Plenary is reasonable. First, industry has shown itself capable of implementing changes to AG 49 within an 11 to 12 week time frame. The NAIC determined – and there is no evidence to contradict – that insurers could both revise illustration software and prepare any necessary information for existing customers within that time frame. Second, changes to illustration parameters in illustration software are routine and do not require lengthier lead times. Insurers and their intermediaries and vendors tweak parameters in illustration software when crediting rates change – due to a change in the cap or a change in the illustrated scale crediting rate calculation – and when new products are introduced.

The Effective Date section should be simplified to simply state “This version of the Actuarial Guideline is effective [date].” The current effective date section contains 3 subsections with three different effective dates to reflect a phased-in approach for AG 49. All those dates have passed and there is no longer a need for an updated AG 49 to retain these provisions. Just as the new versions of the Valuation Manual do not include effective dates for all provisions, so are multiple past effective dates in AG 49 unnecessary. If an insurer or regulator wishes to see the AG 49 provisions in effect prior to the effective date of the proposed revisions to AG 49, they can refer to that earlier version of AG 49.

What Revisions Are Needed to Ensure a Non-Multiplier Product Illustrates Like a Multiplier Product, All Other Things Equal – Question 3

There are structural problems with the Life Insurance Illustrations Model Regulation and with AG 49 such that there is no technical solution to problems in AG 49 caused by insurers’ use of multipliers and bonuses to game the current provisions of AG 49. The goal should be to revise AG 49 to stop current abuses and ask the A Committee to review illustrations more broadly to fix structural problems, such as permitting back-testing of indexes as the basis for projecting future performance.
CEJ suggests the following approach to ensure non-multiplier products illustrate the same as a multiplier product, all other things equal. The concept is to include a specific prohibition against including any interest-crediting enhancements beyond the cap and 0% floor in the development of the Benchmark Index Account. In addition to the specific prohibition, the proposal deletes most of current vi and vii to eliminate the gaming that would otherwise occur with multiple accounts used in the illustration.

We understand our proposal will limit illustration of some of the features of some IUL products. However, the subgroup has already acknowledged this with the decision to require products with bonuses and multipliers to illustrate the same as products without, all other things equal. The deletion of vi and vii is consistent with this concept and necessary to avoid the gaming of AG49 that would occur if these sections remain.

We reiterate that the framework of the illustration regulation and AG49 cannot eliminate the problems with and potential for misleading life insurance illustrations. The revisions to AG49 should be seen as the first step to protecting consumers followed quickly by a thorough review of illustrations generally to develop a meaningful approach to empowering consumers to understand the key aspects of increasingly complex life insurance products.

B. Benchmark Index Account: An Index Account with the following features:

i. The interest calculation is based on the percent change in S&P 500® Index value only, over a one-year period using only the beginning and ending index values. (S&P 500® Index ticker: SPX)

ii. An annual cap is used in the interest calculation.

iii. The annual floor used in the interest calculation shall be 0%.

iv. The participation rate used in the interest calculation shall be 100%.

v. Interest is credited once per year.

vi. No charges or benefits from interest crediting enhancements are permitted. While an illustration may vary based on the cap and floor and non-hedging costs, no variation in the illustration is permitted for differences in asset charges, multipliers, bonuses or other interest-crediting enhancement benefits or costs.

vii. Account charges, other than any charges for interest crediting enhancements, are the highest of any do not exceed the account charges for any corresponding Index Accounts within the policy in any policy year. If Index Accounts with different levels of account charges are offered with the illustrated policy, more than one Benchmark Index Account may be used in determining the maximum illustrated crediting rates for the policy’s Index Accounts, subject to the requirements of 5.D. However, for each Index Account within the policy, only one Benchmark Index Account shall apply. Any rate calculated in 4 (B) shall not apply for an Index Account if the account charges for the applicable
Benchmark Index Account exceed the account charges for that Index Account in any policy year. Account charges include all charges applicable to an Index Account, whether deducted from policy values or from premiums or other amounts transferred into such Index Account.

vii. Additional amounts credited are not less than the additional amounts credited for any corresponding Index Accounts within the policy in any policy year. Any rate calculated in 4 (B) shall not apply for an Index Account if the additional amounts credited for the applicable Benchmark Index Account are less than the additional amounts credited for that Index Account in any policy year. Additional amounts include all credits that increase policy values, including but not limited to experience refunds or bonuses.

viii. There are no limitations on the portion of account value allocated to the account...
Comments of the Center for Economic Justice
to the
NAIC Life Insurance and Annuities (A) Committee

In Support of LATF-Adopted Revisions to AG 49 to
Create Consistent Consumer Protections for Indexed Universal Life Illustrations

December 9, 2016

Summary of Comments

The Center for Economic Justice (CEJ) supports adoption by the A Committee of the LATF-adopted changes in Actuarial Guideline 49 (AG 49) to apply the requirements of Sections 4 and 5 of AG 49 to indexed universal life (IUL) illustrations for new business and in-force policies on or after the effective date. These changes create consistent consumer protections by applying the AG49 protections for non-guaranteed crediting rates in IUL illustrations to avoid unreasonable and unrealistic illustrations. The changes also promote efficiency and cost-savings for insurers and regulatory oversight. The arguments against the proposed change – “retroactive application” and “consumer confusion” – are glaringly inaccurate, without any evidentiary support, highly illogical and profoundly anti-consumer.

CEJ urges a change in the effective date to March 1, 2017. The proposed effective date of July 1, 2017 is much longer than needed for industry to implement this needed consumer protection for updated illustrations for in-force policies. AG 49 has been effective for new business for over a year which means that the industry has the infrastructure in place to produce AG49-compliant crediting rates. There is no need to provide industry with over six months lead time simply to utilize a crediting rate based on a methodology industry is already using. Delaying the implementation date to July 1, 2017 extends the period in which existing IUL policyholders may continue to receive updated illustrations with unreasonable and unrealistic illustrations.
Discussion

The purpose of AG 49 is to protect consumers from the use of unrealistic non-guaranteed crediting (interest) rates in illustrations for indexed universal life insurance. AG 49 was developed and adopted on an expedited basis to stop the use of abusive and unreasonable projected returns for the policy. It is useful to recall the purpose of AG 49 – a fundamental consumer protection guideline to ensure consumers presented with IUL illustrations received useful information to assist in their decision-making.

Because of the expedited nature of the development and adoption of AG 49, LATF committed to the Life A Committee to continue work on AG 49 after initial adoption to address ongoing issues. One of those issues is now before LATF – whether to apply the non-guaranteed illustration crediting rate calculation and capping requirements of Sections 4 and 5 of AG 49 to all illustrations on or after a future effective date. Stated differently, the proposal is to apply the crediting rate requirements of AG 49 for both new business illustrations and for updated illustrations on or after the effective date for in force policies.

It is important to state clearly what the proposed change is not doing – the proposal will not require revision of an illustration provided prior to the effective date.

It is also important to be clear what aspect of an IUL illustration is affected by this change – the crediting rate and the methodology for the illustrating insurer to calculate the crediting rate for the non-guaranteed scale. The proposal does not change any aspect of the IUL policy. The proposed change may impact the crediting rate the insurer uses for an updated illustration – in those instances in which the crediting rate would be higher than permitted by AG 49.

A crediting rate for the non-guaranteed scale of an illustration is already subject to change. The crediting rate for an updated illustration for an in-force policy may change from the crediting rate used in a prior illustration under pre-AG 49 methodologies because the performance of the underlying index has changed. ACLI has confirmed this during the August 2016 LATF meeting in San Diego, explaining that an insurer offering an illustration for a replacement policy will use the same crediting rate assumptions for an updated illustration of the existing policy as used for the replacement policy illustration to ensure a fair comparison of the products. Changing the crediting rate in an updated illustration from that used in a prior illustration is neither a retroactive change to the existing policy or a structurally-difficult endeavor for insurers.
The benefits of the proposed change are many and obvious:

1. Consistent consumer protection

The proposal will ensure consistent consumer protection regarding crediting rates for the non-guaranteed illustration by applying AG 49 to all illustrations on or after the effective date – regardless of whether that illustration is for new business or an updated illustration of an in-force policy. It would be illogical to provide different consumer protection for two consumers evaluating the same policy, but differing only by a few months in the date of purchase.

2. Better information for consumers reviewing their IUL products

As discussed above, the purpose of AG49 was to stop the use of unrealistic and unreasonable crediting rates for illustrations of future earnings with an IUL policy. The application of AG49 requirements for the development of a maximum crediting rate provides consumers with better information and, consequently, empowers consumers to make better decisions for themselves.

3. Easier and less costly compliance for insurers

Under the current AG49, an insurer must calculate AG49-compliant crediting rates for new business IUL policies on or after September 1, 2015. But AG49 does not currently apply to updated illustrations on IUL policies issued before September 1, 2015. This means that insurers must maintain and utilize the non AG 49 compliant crediting rate methodologies and be able to demonstrate to regulators which of perhaps many methodologies were used in calculating the crediting rate for illustrations on or after September 1, 2015 depending on when the policy was issued. Clearly, it will be far easier for insurers to maintain compliance with a single set of requirements for crediting rate methodologies on or after an effective date than to maintain compliance for multiple methodologies.

4. Easier and less costly oversight for regulators

The same logic applies to ease of regulatory oversight of crediting rate methodologies and calculations as for insurer compliance. It will be far easier – and, consequently, less costly for regulators and insurers – to have a single set of requirements for crediting rate methodology and calculations on or after the effective date.
The arguments against the proposal are without merit and include the following:

1. “Retroactive application of a rule or regulation”

Some industry commenters claim the proposal is an impermissible retroactive change to a contract. This is clearly incorrect. The proposed change to AG 49 will not change any contractual feature of an existing IUL policy. Opponents of the proposal have not – and cannot – point to any contractual feature of the IUL policy that would be “retroactively” changed by the proposed change to AG 49.

We suggest that it is an abuse of process at LATF for opponents of the proposed change to AG 49 to claim “retroactive” application and seek to delay a LATF decision by demanding NAIC legal review without identification of any contract feature that could be changed by the proposal.

2. “Consumer confusion”

Opponents of the proposed change have claimed that consumers will be confused if they receive an updated illustration with a lower, more realistic crediting rate for the non-guaranteed scale illustration. Putting aside that, despite months of opportunity to support this claim, no evidence – or logic – has been presented in support of this claim of consumer confusion.

We assert that the claim of consumer confusion is patently absurd – that a consumer who purchased an IUL policy with unrealistically-high crediting rates for the non-guaranteed scale illustration acted rationally – despite bad information – and these same consumers when presented with more realistic information – better information for an informed evaluation – will become irrational and make bad decisions with their policies. This argument is profoundly anti-consumer – asserting that consumers are better off without the illustration protections of AG 49.

The logical extension of the opponents’ “consumer confusion” argument – that when provided more realistic non-guaranteed illustrations, the consumer will irrationally replace the IUL policy – is that consumers are better off continuing to get unrealistic illustrations and be surprised to learn that they have to pay additional premiums because the policy did not perform as illustrated. Surely, consumers are in a better position to discuss these issues with their producer or insurer based on realistic illustration than to be surprised.
Finally, we note that “consumer confusion” argument is based on the premise that when faced with AG49 compliant non-guaranteed crediting rates, consumers will react by cancelling or replacing their policies. Yet, opponents offer no evidence to support this claim. The available evidence suggests this will not be the case. If opponents were correct, then we would have expected to see a sharp drop in IUL sales following implementation of AG49. That has not occurred. According to a company that tracks IUL sales, IUL sales have remained strong since AG49 became effective at the end of third quarter of 2015:

Third quarter indexed universal life (IUL) sales were $452.9 million, compared with sales of $478.6 million for the third quarter of 2015. When evaluating third quarter IUL sales, results were up nearly 3.0% when compared with the previous quarter, and down over 5.0% when compared to the same period last year. “It is amazing to see that indexed life sales continue to thrive in a post-AG49 environment,” professed Sheryl J. Moore, President and CEO of both Moore Market Intelligence and Wink, Inc. She added “This is the second-largest third quarter sales have been, in the history of the product line. IUL continues to thrive!”

The 2016Q3 results are not an aberration. Wink reported the following for 2016Q2 sales:

Second quarter indexed universal life (IUL) sales were $441.0 million, compared with sales of $458.0 million for the second quarter of 2015. When evaluating second quarter IUL sales, results were up over 2.0% when compared with the previous quarter, and down nearly 4.0% when compared to the same period last year. “Many projected that AG49 would not only limit illustrated rates on indexed life, but that it would kill the product line,” protested Sheryl J. Moore, President and CEO of both Moore Market Intelligence and Wink, Inc. She added “Not if the IUL industry has anything to do with it! Sales are already nearly at 2015’s levels, before the regulation took effect.”

In summary, the “consumer confusion” argument is without empirical or logical support and must not be a reason to stop this important consumer protection.

3. “Conflict with another NAIC model”

During the October 20, 2016 LATF call, one LATF member asked if the proposed change to AG49 creates conflicts for producers in the Life Insurance and Annuities Replacement Model Regulation. We would again suggest that it is an abuse of process at LATF to broadly suggest conflict with other rules or statutes without referencing some specific “conflict.” Nevertheless, we have reviewed the model in question and find no reference to any requirements for the crediting rate for the non-guaranteed scale in an updated illustration for the existing policy. For example, the model defines “policy summary” for universal life insurance products:

---

1 “WINK releases third quarter 2016 indexed life sales.”
For universal life policies, means a written statement that shall contain at least the following information: the beginning and end date of the current report period; the policy value at the end of the previous report period and at the end of the current report period; the total amounts that have been credited or debited to the policy value during the current report period identifying each by type (e.g., interest, mortality, expense and rides); the current death benefit at the end of the current period on each life covered by the policy; the net cash surrender value of the policy as of the end of the current period; and the amount of outstanding loans, if any, as of the end of the current report period.

As for alleged problems or conflicts for the producer, there are none. Section 4A states:

A producer who initiates an application shall submit to the insurer, with or as part of the application, a statement signed by both the applicant and the producer as to whether the applicant has existing policies or contracts.

If the answer is yes, then the producer and applicant must sign a disclosure described in Appendix A of the model. That disclosure includes the following:

Make sure you know the facts. Contact your existing company or its agent for information about the old policy or contract. If you request one, an in-force illustration, policy summary or available disclosure documents must be sent to you by the existing insurer.

Clearly, the consumer protections of AG 49 applied to an in-force illustration, as referenced in the paragraph above, is consistent with the purposes of the replacement model regulation and with consumer protection, generally.

Effective Date

CEJ urges a change in the effective date to March 1, 2017. The proposed effective date of July 1, 2017 is much longer than needed for industry to implement this needed consumer protection for updated illustrations for in-force policies. AG 49 has been effective for new business for over a year which means that the industry has the infrastructure in place to produce AG49-compliant credit rates. There is no need to provide industry with over six months lead time simply to utilize a crediting rate based on a methodology industry is already using. Delaying the implementation date to July 1, 2017 extends the period in which existing IUL policyholders may continue to receive update illustrations with unreasonable and unrealistic illustrations.
Comments of the Center for Economic Justice
to the NAIC IUL Illustration (A) Subgroup
Amending the Effective Date Provision of AG 49

July 31, 2016

The Center for Economic Justice submits the following comments regarding the effective date provisions of AG 49.

When originally adopted by LATF, AG 49 staggered implementation by phasing in the requirements for the “illustrated scale” and the “disciplined scale,” effective September 15, 2015, and, then later, requirements for policy loan illustrations and additional standards, effective March 1, 2016. The actuarial guideline applies the requirements to policies sold on or after these dates and not to policies in-force on or after these dates.

CEJ urges the effective date provisions be changed deleting the word “sold” as follows:

1. Effective Date
   This Actuarial Guideline shall be effective for all new business and in force life insurance illustrations on or after September 1, 2016, as follows:

   i. Sections 4 and 5 shall be effective for all new business and in force life insurance illustrations on policies sold on or after September 1, 2015.

   ii. Sections 6 and 7 shall be effective for all new business and in force life insurance illustrations on policies sold on or after March 1, 2016.

   Since March 1, 2016 has come and gone, there is no longer a need for two effective dates and setting the date into the near future will reduce confusion without harming consumer protection.

   The effect of this change is that all illustrations produced after the effective dates will be subject to the consumer protections of AG 49. Under the current language, illustrations produced after the effective dates for policies sold prior to the effective date are not subject to the guideline. There are several compelling reasons for this change.
1. **Consistent consumer protections for all IUL illustrations after the effective dates.** Under the current language some consumers receiving new illustrations will receive protection against inflated and misleading crediting rates while other consumers will not. For example, assume two consumers with the identical IUL policy. One purchased the policy (“was sold”) on July 1, 2015 and the other purchase the policy on October 1, 2015. Both consumers request an update illustration in July 2016. The first consumer continues to get an illustration without the AG 49 protections while the second consumer does receive the protection – even though both are receiving an illustration of the same policy on the same day. This is unfair, deceptive and misleading to the first consumer.

2. **The proposed change is not a retroactive change to the policy.** The proposed change has no impact on illustrations already provided to the consumer – only to illustrations provided after the proposed change to remove “sold” is enacted.

3. **The proposed change will reduce illustration expenses for insurers.** Under the current guideline, the insurer must maintain at least two methods of calculating the crediting rates used in the illustrations and the documentation to support the two or more methods. Under the proposed change, the insurer will only need to maintain the AG-49 compliant method of calculating crediting rates and associated documentation for that one method.

4. **The proposed change will simplify regulatory oversight of illustration crediting rates.** Under the current guideline, market conduct regulators will need to examine multiple crediting calculation methods for illustrations after the effective date because the crediting calculations will vary on current illustrations depending on when the policy was sold. The proposed change will greatly simplify market regulation review of compliance with AG 49.

5. **The proposed change will simplify the implementation of the recent changes to AG 49 regarding multiple scales within a policy.** The changes to AG 49, adopted this year, did not include any effective date changes to AG 49 or effective dates specific to the changed provisions. The result is that AG 49 will provide guidance applicable to policies sold between 2015 and 2016, but before the guidance was adopted in 2016. Our proposed changes to the effective date provision eliminate this issue because AG 49 will apply – in its entirety – to new illustrations regardless of the sold-by date.

   During an earlier meeting in which the effective date issue was discussed, an industry representative suggested, among other things, that LATF should consider the impact on insurer solvency resulting from policyholder behavior significantly different than originally estimated if the proposed change in the effective date provision was enacted. The comment was startling, as it implied that illustrations under AG 49 would be so radically different for policyholders sold IUL policies before the effective date that large numbers of policyholders would now drop their policies. If this is true, the consumer protection afforded by the proposed change is hugely important to allow consumers to make informed decisions based on reasonable and not misleading information.
Supplemental Comments of the Center for Economic Justice

to the NAIC IUL Illustration (A) Subgroup

Amending the Effective Date Provision of AG 49

August 19, 2016

The Center for Economic Justice submits the following responses to the comments submitted by ACLI, AAA and ALIA regarding the effective date provisions of AG 49.

CEJ supports application of AG 49 for illustrations provided for new and in-force policies as set out in our July 31, 2016 letter. We suggested the following revision to the Effective Date section:

1. Effective Date
   This Actuarial Guideline shall be effective for all new business and in force life insurance illustrations on or after September 1, 2016, as follows:

   i. Sections 4 and 5 shall be effective for all new business and in force life insurance illustrations on policies sold on or after September 1, 2015.

   ii. Sections 6 and 7 shall be effective for all new business and in force life insurance illustrations on policies sold on or after March 1, 2016.

The proposed language makes clear that previously-provided illustrations are not implicated by the guideline nor is there a requirement to re-issue an illustration. The effect of this change is that all illustrations produced after the effective dates will be subject to the consumer protections of AG 49.

ALIA and ACLI: “Retroactive” Application

The ACLI and ALIA mischaracterize the proposed change as “retroactive” application of the guideline to existing policies and then criticize their mischaracterization as “unprecedented.” The proposal is not “retroactive” application. The proposed change will not require any insurer to revise or replace any illustration provided before the effective date. Rather, the proposed change applies to all illustrations provided on or after the effective date and, consequently, will not impact previously-issued illustrations.
AAA, ACLI and ALIA: “Confusion for Consumers”

The purpose of AG49 is to ensure the use of reasonable – and not unrealistic – crediting rates for IUL illustrations. The basic premise behind the “consumer will be confused” comment is bizarre: When presented with an updated illustration showing a lower illustrated crediting rate, consumers will be confused because the crediting rate has gone down. Given that even under pre-AG49 credit rate methodologies the crediting rate can change over time, it is unclear why an updated illustration with a lower crediting rate will confuse consumers. More importantly, it is absurd to argue that consumers should continue to receive illustrations with unrealistic crediting rates because providing the realistic illustrated crediting rate – necessary for a rational consumer to make an informed judgment – will somehow confuse the consumer.

The ALIA comments raise concern about IUL sales and the role of illustrations. ALIA writes:

We are very concerned about the negative impact on existing policyholders. Policyholders with in-force policies that were previously illustrated at a higher rate than the AG 49 maximum would be required to be informed that a reduced rate for their in-force projections must now be used. For example, a policyholder that had received an illustration using a rate of 7% would be told that the premium to achieve their objective must be increased because the carrier is now required to impose a maximum illustration rate of 6%. That policyholder would also be told that a premium increase will be necessary to meet their goals - even if the actual experienced performance to date was better than the originally illustrated 7%.

First, a consumer with a policy issued before the effective date would receive an updated illustration either because of a request by the consumer or because the insurer already periodically provides updated illustrations to the policyholder. There is no requirement to inform policyholders “that a reduced rate for their in-force projects must now be used.” If the consumer does request or receive an updated illustration with a significantly-lower illustrated crediting rate, it is reasonable for the consumer to ask why illustrated crediting rate has changed. A reasonable response by the insurer would be: Insurance regulators were concerned about unrealistic crediting rates used for illustrations and have established guidelines for insurers to use more realistic crediting rates. The new crediting rates were developed using the new guidelines established by regulators.”

Second, the example provided by ALIA indicates that premium charges are based on illustrated crediting rates and that changes in illustrated crediting rates will alter the premium requirements of the insurer. If this is the case, there are far bigger problems with IULs than simply inflated crediting rates. But, if ALIA has accurately explained the role of illustrated crediting rates in determining IUL premiums, then it is even more important for a consumer to receive updated illustrations with realistic crediting rate illustrations.
ACLI also asserts consumers will confused, though offers no evidence or logic for the assertion. ACLI writes:

Providing an illustration on a different basis than prior illustrations can cause confusion and will give the perception that the product has changed, or is not the same as was originally sold, even if the product has had no changes. Such confusion could provide improper incentive for lapse or replacement.

As noted above, updated illustrations may contain a different illustrated crediting rate than the one used in the original illustration even using the insurer’s pre-AG 49 methodology because the performance of the index has changed. But, the ACLI comment implies that a consumer who purchased a policy with an unrealistic illustrated credit rate was rational and not confused, but a consumer presented with an illustration using a realistic crediting rate would become hapless, confused and irrational. At best, the ACLI proposition is illogical. At worst, it is a cynical effort to prevent consumers from having the accurate information needed to make an informed decision.

ACLI has provided no empirical evidence or academic research for either the “consumers will be confused” argument or its assertion that AG 49 was only intended for pre-sale illustrations and “will have limited impact” in post-sale illustrations. ACLI’s argument is contradictory – on the one hand, application of AG 49 to updated illustrations will have limited impact, but, on the other hand, it will lead consumers to irrationally abandon policies. The reasoning for applying AG 49 requirements consistently to all illustrations issued on or after an effective date is clear – regardless of whether the illustration is pre-sale or post-sale, regardless of whether a consumer is using the illustration to decide on purchasing a new policy or evaluating the suitability of an existing policy, the consumer will receive the most realistic information needed to make an informed decision.

AAA also asserts consumer confusion without any empirical support for the claim. AAA writes:

Changing the format, content, and disciplined current scale from previous illustrations may cause confusion for consumers, since the perception could be that the policy’s nonguaranteed elements have changed when, in fact, they have not. As a result, customers could react in ways that may not be in their best interest.

As with ACLI and ALIA, the AAA comments are premised on the assertion that the prior illustration was crystal clear and the consumer was sufficiently informed to make an informed and rational decision, but presented with more realistic illustrated crediting rates and clearer content and format, this same consumer will transmogrify into an irrational, confused being. Whatever the degree of rationality exhibited by a consumer, we find no excuse for continuing to use unrealistic crediting rates for IUL illustrations.
CEJ Comments to IUL Illustration Subgroup
August 19, 2016
Page 4

ACLI: “Industry Expenses”

ACLI writes:

Illustration systems are often developed specific to the product. Once that product is no longer being sold, those systems are no longer actively maintained. Being required to modify numerous systems that have been set aside, for a very limited purpose, with no demonstrated benefits seems to be a waste of industry resources.

The ACLI comment implies that once a product is no longer sold, the insurer no longer maintains the system that generated the illustrations for that product. This seems implausible because, if true, an insurer would not be able to provide updated illustrations requested by consumers for IULs continuing in force after product sales ended. The comment is also inconsistent with the prior ACLI comment about illustrations for replacements.

As set out in our July 31, 2016 comments and the AAA comment letter, applying AG 49 to all illustrations for sales and in-force policies issued on or after a future effective date will clearly reduce insurer costs by eliminating the need to maintaining multiple illustration systems and reduce compliance costs for insurers and regulators.

In summary, the arguments against the proposal to revise the Effective Date section of AG 49 are without empirical support or logic.
Supplemental Comments of the Center for Economic Justice
to the NAIC IUL Illustration (A) Subgroup

Amending the Effective Date Provision of AG 49

October 10, 2016

The Center for Economic Justice (CEJ) submits additional analysis in support of the proposal to
revise AG 49 to require AG 49-compliant interest rates be used for all illustrations on or after the
effective date.

The arguments in favor of the change, submitted by CEJ, AXA and the AAA include:¹

- Consistent application of the consumer protection of AG 49 for all consumer receiving an
  illustration on or after the effective date;
- Realistic illustrated interest rates for consumers receiving an updated illustration for a
  policy issued before the effective date;
- Ease of compliance for insurers and regulatory oversight by regulators compared to; a
  system of multiple interest rate regimes depending upon the date of policy issuance;
- Reduced expenses for insurers from elimination of multiple systems of interest rate
  calculations.

The arguments against the change, submitted by ACLI, AAA and ALIA include:²

- Confusion for consumers receiving an updated illustration;
- More expenses for insurers to maintain multiple systems.

During the discussion of AG 49 at the LATF meeting in San Diego, both arguments in
opposition were shown to be without merit.

Regarding expenses, ACLI admitted their argument was untrue. ACLI originally asserted:³

Illustration systems are often developed specific to the product. Once that product is no
longer being sold, those systems are no longer actively maintained. Being required to
modify numerous systems that have been set aside, for a very limited purpose, with no
demonstrated benefits seems to be a waste of industry resources.

¹ AXA letter of July 31, 2016; AAA letter of August 1, 2016, CEJ letters of July 31, 2016 and August 19, 2016
³ ACLI letter of July 31, 2016
CEJ Comments AG49 Effective Date
October 10, 2016
Page 2

During the LATF discussion in San Diego, however, ACLI admitted this claim had no merit. When asked about interest rates used for illustration in a replacement scenario, ACLI explained that the same interest rate was used for the replacement policy illustration and the existing policy updated illustration.

When asked about illustrations used for replacements, ACLI said:\(^4\)

an inforce illustration is used to either review a policy’s performance or to compare against another policy in a replacement situation. He said that, in a replacement situation, the inforce illustration and the illustration for the proposed replacement product both use the same specified interest rates.

Clearly, if the insurer can utilize the same interest rate for a current (prospective) replacement policy illustration as for the existing policy illustration, the insurer has the ability to use an interest rate compliant with AG 49 for updated illustrations of policies issued before the effective date. The original ACLI argument about alleged expenses associated “modifying numerous systems that have been set aside” is without merit.

Regarding alleged confusion among consumers, neither ACLI, AAA nor ALIA offered any empirical evidence to support their consumer confusion claim. While this consumer confusion claim is without merit on its face – somehow a consumer faced with a realistic interest rate in an illustration will be confused while a consumer faced with an unrealistic interest rate would be rational – ACLI, again, contradicted its original argument during the LATF meeting.

ACLI stated that during a replacement scenario, the same interest rate was used for the replacement policy illustration and the existing policy updated illustration. Consequently, industry practice, according to the ACLI, contradicts ACLI’s claim that using a different interest rate in an updated illustration than in the original illustration or using an interest rate compliant with AG 49 rather than an interest rate produced by the original pre-AG 49 methodology is “confusing” to consumers.

In conclusion, the arguments against applying Sections 4 and 5 to all illustrations on or after the effective date have been shown to be without merit. We urge LATF to revise AG 49 to make this important and overdue change to AG 49.

\(^4\) Draft Minutes of August 24-25, 2016 LATF meeting

Life Actuary, NAIC

Re: Questions on IUL Illustrations

Dear Mr. Andersen and Mr. Mazyck,

Global Atlantic Financial Group, and Accordia Life and Annuity Company, appreciate the continued efforts of the IUL Illustrations Subgroup regarding the illustrations of Indexed Universal Life (IUL) products under Actuarial Guideline 49 (AG49), including the most recent exposure draft released on November 1, 2019. We look forward to continued engagement on this topic in the future.

Our March 8, 2019 comment letter recommended the following key areas of focus for any AG49 update:

1. The use of leverage via implied or explicit additional charges to the policy owner,
2. How the value of leverage is illustrated, and
3. How the outcome of leverage flows into illustrations that use participating loans.

We are pleased that the proposed changes to AG49 focus on these key areas and our comments below pertain to the questions asked with the November 1, 2019 exposure draft release. The proposed changes address a complex topic. Before adopting any changes, we encourage additional time be taken to both fully understand the issues and thoroughly vet the proposed updates.

Should the effective date for new policies be the later of 5 months after LATF adoption or 3 months after NAIC Executive/Plenary adoption?

An effective date corresponding to the later of 5 months after LATF adoption or 3 months after NAIC Executive/Plenary adoption is acceptable provided the version approved is materially consistent with current drafts. If substantial changes are made, additional time may be needed to effect the changes within illustration systems.

Should the revised guidelines be in place for inforce illustrations for policies sold before the effective date for new policies?

We support making the revised guidelines applicable for inforce policies sold before the effective date for new policies, assuming sufficient time is provided to implement the changes within inforce illustration systems. While requiring such policies to illustrate per the new guidelines may create confusion in some instances, having some IUL policies illustrate differently than other IUL policies due to their issue date can cause confusion for policyholders who look to compare policies with issue dates before and after adoption of the rule changes. Having the updated guidelines applicable to
all IUL brings uniform practice, a goal of AG49. We therefore recommend applicability to all inforce policies.

**Does the approach of having the disciplined current scale earned rate including or excluding the Supplemental Option Budget lead to the result of the multiplier product illustrating about the same as a non-multiplier product?**

For a result of multiplier products illustrating about the same as non-multiplier products, attention must be given to each of Sections 3, 4, 5 and 6. For this result within the disciplined current scale earned rate, the return on the Supplemental Option Budget, not its inclusion or exclusion, is required.

**If neither of the approaches mentioned in 3a leads to this result, is there an alternative approach that leads to this result such as providing explicit guidance in Section 4?**

As indicated above, each of Sections 3, 4, 5 and 6 must be considered to enact this result. We believe further improvements to the currently exposed draft are needed to meet the goal while at the same time eliminating unintended consequences and ambiguity.

Ambiguity is created due to Section 4.E of the current draft. Section 3.C.vi provides for multiple Benchmark Index Accounts due to different levels of account charges. Sections 4.A and 4.B provide for separate maximum crediting rates for each benchmark account. These account charges seem to meet the definition of a Supplemental Option Budget. The maximum illustrated rate per Section 4.E’s use of the Supplemental Option Budget does not seem to align with that of Sections 4.A and 4.B, thereby creating ambiguity that needs to be addressed.

Unintended consequences are created due to Section 6.B. Consider a loan interest rate of 4%. The total index credits cannot exceed 5%. Products may have a Supplemental Option Budget of 150bps. In this scenario, limiting the total index credits to 5% would result in a 3.5% net credited rate after the account charge. 100bp of loan leverage allowed for non-multiplier products is not available per the proposed wording for a multiplier product. The goal is to illustrate the same, yet the current draft exposure has the unintended consequence of disadvantaging multiplier products.

Re: Comments to Exposure Questions 3a & 3b Regarding Actuarial Guideline 49

Fred:

This letter represents a joint response submitted on behalf of the following companies (the “Ad Hoc IUL Coalition”) responses to Questions 3a and 3b that were exposed on November 1; 2019.

Pacific Life
Lincoln Financial
Sammons Financial Group
John Hancock
National Life Group
Securian Financial

We appreciate the opportunity to provide the IUL Illustration Subgroup with our comments to these questions.

3a. Does the approach of having the disciplined current scale earned rate including or excluding the Supplemental Option Budget lead to the result of the multiplier product illustrating about the same as a non-multiplier product?

The self and lapse support tests require a comparison of accumulated policy cash flows to policyholder value (i.e. cash surrender value). The example below demonstrates the cash flows related to the index accounts that should be reflected in the self and lapse support tests. The example assumes that the
supplemental option budget is a negative cash flow when the options are purchased. The example demonstrates that the return from the supplemental option budget (assumed to be equal to the cost) must be included as a cash flow to offset the cost. Including this cash flow results in the policy cash flows growing by the same amount as the cash value of the policy. If the return from the supplemental option budget is not included as a cash flow, then the cash value grows by more than the policy cash flows, resulting in a multiplier product illustrating worse than a non-multiplier product.

Assumptions
Annual net investment earnings rate = Base account option budget = 4.5%
Base account option budget = 4.5%
Base account option return = 1.45 * 4.5% = 6.525%
Multiplier = 25%
Supplemental option budget = Base account option budget * multiplier = 4.5% * 25% = 1.125%
Supplemental option budget return = 1 * 1.125% = 1.125%
Account value charge to support multiplier = 1.125%

Scenario 1 - No multiplier, no Supplemental option budget
Scenario 2 - 25% Multiplier, Supplemental Option Budget = 1.125%, Supplemental option return included = 1.125%
Scenario 3 - 25% Multiplier, Supplemental Option Budget = 1.125%, Supplemental option return not included = 0%

Regarding the question of including the supplemental option budget in the DCS earned rate, we believe that clarity is needed in the Section 5A of the guideline. One interpretation is that the supplemental option budget return should be included as part of the earned rate underlying the DCS. Another interpretation is that the return from the supplemental option budget is simply a return of the hedge cost and should not increase the earned rate. The example below demonstrates this alternative interpretation. A solution may be to clearly describe how the hedge return is to be included in the testing and whether it should be part
of the earned rate. If it is not part of the earned rate, the guideline should specify how the hedge return is incorporated in the testing.

**Alternative Interpretation:**

In calculating the net earned rate, the excess of the Hedge Proceeds over the Hedge Cost is added to Investment Income.

Net Earned Rate = Annual Net Investment Earnings Rate + Gain From Hedges.

In Scenario 1 (no Multiplier), the Hedge Payout is 6.525%, and the Hedge Cost is 4.500%.
Net Earned Rate = 4.500% + (6.525% - 4.500%) = 6.525%
This is the same answer as above.

In Scenarios 2 and 3 (Multiplier), the Total Hedge Payout is (6.525% + 1.125%) for 7.650%, and the Total Hedge Cost is (4.500% + 1.125%) for 5.625%
Net Earned Rate = 4.500% + (7.650% - 5.625%) = 6.525%

As the cost of the hedge purchased with the Supplemental Option Budget is clearly deducted in the determination of the Net Earned Rate, the definition of the Maximum Earned Rate need only consider the Gain from this hedge, which is 0% * 1.125%.
This approach assumes that the cost of the supplemental option budget is not a negative cash flow in the accumulation of policy cash flows.

If the cost of the hedge purchased with the Supplemental Option Budget were somehow not considered to represent a reduction in Investment Income, then the definition of the Maximum Earned Rate would need to include the full Supplemental Option Budget.
In this case, the "Net Earned Rate" would be 7.650% if we exclude the cost of the hedge purchased with the Supplemental Option Budget but include the cost of the hedge purchased with the Basic Option Budget.
This approach assumes that the cost of the supplemental option budget is a negative cash flow in the accumulation of policy cash flows.
3b. If neither of the approaches mentioned in 3a leads to this result, is there an alternative approach that leads to this result such as providing explicit guidance in Section 4?

Given the uncertainty over how Section 5A of the guideline is to be interpreted we are not prepared to say at this time whether an alternative approach is needed. Following clarification of our questions regarding interpretation we will consider whether further response to this question is required.

Respectfully Submitted,

Scott R. Harrison

Re: Comments to Exposure Questions 1 & 2 Regarding Actuarial Guideline 49

Fred:

This letter is submitted on behalf of the following companies (“the Coalition”).

Lincoln Financial Group
Pacific Life
Sammons Financial Group
John Hancock Insurance

This letter serves as our response to questions 1 & 2 as set forth in the IUL Illustration Subgroup’s November 1, 2019 exposure. Our comments to questions 3a and 3b are contained in a separate letter submitted on behalf of an Ad Hoc Coalition of companies that formed to address those particular items.

We appreciate the opportunity to provide the Subgroup with our views on the November 1 exposure questions. We also appreciate the Subgroup’s recognition of the complexities associated with the proposed changes to AG 49 and the need for a timetable that allows sufficient opportunity for thoughtful review and analysis of proposed changes.
1. **Should the effective date for new policies be the later of five months after LATF adoption or three months after NAIC Executive/Plenary adoption?**

The exposure question contemplates that companies will need at least five months to implement the final changes to AG49 for new policies. We agree. Based upon our companies’ experience with the time and effort involved with making changes to policy illustration systems and related business processes, five months is a reasonable timeframe.

The question also contemplates that the implementation timeline could begin tolling before revisions are reviewed by the Life Insurance and Annuities (A) Committee and before final adoption by NAIC Exec/Plenary. The Coalition believes that the NAIC review and approval procedure for guidelines and models is essential to ensure appropriate input from all States and stakeholders. It is through this process the changes to AG49 will be considered final. Impacted companies will need to know what the final changes are before they can begin to implement them. Since there is a chance that the proposed revisions may not be the ones that are ultimately approved and adopted by the NAIC Executive/Plenary, the Coalition is extremely uncomfortable with any implementation period beginning before the full NAIC has reviewed and approved any changes to AG49.

Nonetheless, the Coalition understands that some regulators have expressed a strong desire to complete this process as soon as possible. The Coalition respectfully requests that should the implementation timeline begin tolling prior to final approval of any revisions by the NAIC Exec/Plenary that it be conditional upon the ability of companies could obtain additional time if needed should the changes to AG49 that are formally adopted by the NAIC differ from LATF’s recommendations.

2. **Should the revised guidelines be in place for inforce illustrations for policies sold before the effective date for new policies?**

As a policy matter the Coalition generally opposes the application to inforce policies of changes to existing regulatory requirements. The decision whether to apply any guideline or model to inforce business is an important policy decision that has broad impacts on consumers, producers, insurance markets, and companies. Applying model or guideline changes to inforce policies should only be done when a clear and compelling consumer benefit can be demonstrated.

No such compelling justification exists here. In fact, requiring companies to provide inforce illustrations to policyholders reflecting the proposed changes to the guideline would frustrate the purpose of the inforce illustration, create significant confusion for policyholders, and could create the conditions for unhealthy market activities such as improper replacements and churning.

Policyholders should have every expectation that inforce illustrations will provide a meaningful, accurate basis for comparison of the policy’s performance against previous illustrations. An inforce illustration serves an entirely different purpose than an illustration provided at the time of sale. With an inforce illustration, the decision to purchase has already been made and the policyowner depends upon inforce illustrations to provide a comparison of how their policy is performing from prior years. Applying the proposed revisions to inforce illustrations would deny
policyholders critical information about their policy’s performance relative to their expectations at the time of purchase, make meaningful comparisons extremely difficult if not impossible, make premium planning decisions more difficult, and would ensure that consumers receive incomplete and even distorted information. This could also lead to the perception that the underlying product is not performing as described in the illustration provided at the time of sale - when in fact the product mechanics have not changed.

It has been suggested that the 2016 application of the crediting rates to enforce policies under AG 49 serves as precedent for LATF to follow in this instance. We respectfully disagree. The imposition of new limits on crediting rates in 2016 is not an “apples to apples” comparison with the illustration of multipliers. A crediting rate is an *input* to a product illustration. A multiplier, on the other hand, is an optional *product feature* that is selected and paid for by the policyholder. A better comparison from AG49 can be found in the treatment of Sections 6 and 7, which were not applied to illustrations of policies issued before AG49’s effective date. The treatment of policy loans is relevant precedent for a different method of illustration for policies issued before a guideline change became effective.

As noted above, applying these proposed changes to enforce policies will result in illustrations that bear little to no resemblance to as-sold illustrations provided by the company. This could incentivize replacement recommendations by those seeking to capitalize on policyholder confusion and frustration. Such replacements may expose consumers to surrender charges, higher cost of insurance rates, and new contestable periods due primarily to a prohibition against generating enforce illustrations on comparable basis as the as-sold illustration.

For each of these reasons the guideline revisions should apply only to policies sold on or after the effective date of any changes.

Thank you again for the opportunity to comment. We appreciate the chance to provide input to the Subgroup and look forward to further discussions.

Respectfully Submitted,

Fred Anderson, Deputy Commissioner of Insurance
Minnesota Department of Commerce
Chair, NAIC IUL Illustration (A) Subgroup

Re: IUL Illustration Subgroup Request for Comments re Proposed Revisions to AG 49

Dear Mr. Anderson:

This letter will provide the comments of the National Association of Insurance and Financial Advisors (NAIFA) regarding the IUL Illustration Subgroup’s request for comments on certain questions relating to IUL illustrations, specifically question 2: “Should the revised guidelines be in place for inforce illustrations for policies sold before the effective date for new policies?”

Founded in 1890 as The National Association of Life Underwriters (NALU), NAIFA is one of the nation’s oldest and largest associations representing the interests of insurance professionals from every Congressional district in the United States. NAIFA members assist consumers by focusing their practices on one or more of the following: life insurance and annuities, health insurance and employee benefits, multiline, and financial advising and investments. NAIFA’s mission is to advocate for a positive legislative and regulatory environment, enhance business and professional skills, and promote the ethical conduct of its members.

As a general matter, NAFIA opposes the retroactive application of laws and regulations, including NAIC guidelines or models, to existing products. Retroactively
applying revisions made to NAIC models to inforce business/products is likely to confuse consumers and adversely impact the consumer/producer relationship and should only be considered when very compelling reasons exist.

NAIFA does not see any such compelling reasons in the current matter. If the proposed changes to AG 49 were to be applied retroactively to inforce business, it will result in consumer confusion and make it more difficult for consumers to comprehend how what is already a complex product is performing.

It is important to keep in mind that the AG 49 revisions being considered will only affect how the performance of these products is illustrated and will not change any of the terms or provisions of the IUL policy itself. Explaining to policyholders that there has been no change to the underlying product they purchased but that some of the potential benefits of the product can no longer be illustrated in the manner previously used due to changes in regulatory actuarial guidelines will be an exceedingly difficult task for the producer. Retroactive application is likely to cause confusion, erode the consumer’s confidence in his/her producer and could unfairly damage the reputation of producers who used illustrations that were in compliance with the rules in place at the time of sale.

Furthermore, retroactive application of the proposed AG 49 revisions may lead to the client’s perceiving that the policy is not performing as expected or as described in the original illustration, which could lead to inappropriate and costly surrenders and replacements of products. This would impose unnecessary costs on consumers, because they would be replacing a policy based on revised illustration requirements rather than on actual changes to the product itself.

NAIFA recognizes that regulators have concerns about some features of IUL products are illustrated and that the NAIC is therefore conducting an important review of AG 49. NAIFA members sell a wide variety of life insurance products from a broad range of companies, and NAIFA supports efforts to improve consumer understanding of these products and the important role they can play in financial planning. NAIFA does, however, request that the Subgroup be cognizant of the potential unintended impact that actions being considered by the Subgroup, such as those discussed in this letter, could have on both insurance producers and consumers.
NAIFA appreciates the opportunity to provide input to the Subgroup and thanks you for your work on this issue. If you have any questions, please feel free to contact me at gsanders@naifa.org.

Sincerely,

Gary A. Sanders
Counsel and Vice President, Government Relations

Re: Comments to Exposure Questions Regarding Actuarial Guideline 49

We appreciate the opportunity to comment on the November 1 exposure questions.

Question 1: Should the effective date for new policies be the later of five months after LATF adoption or three months after NAIC Executive/Plenary adoption?

Recognizing that regulators have expressed urgency around this change, National Life Group would be supportive of the 5 month /3 month recommendation for the changes that would be required based on the draft updates to AG 49 that have been shared. Additional time may be needed if any modifications are made to the exposure. It's worth noting that beginning implementation after LATF approval, but prior to Executive/Plenary approval, is not typical.

Question 2: Should the revised guidelines be in place for inforce illustrations for policies sold before the effective date for new policies?

We recommend not applying revised guidelines to inforce illustrations for policies sold prior to changes made to AG49 language. If the basis of inforce illustrations are changed while the underlying product features have not changed, it could cause undue consumer confusion and disruption. This is consistent with how sections 6 and 7 are handled in the current version of the actuarial guideline for policies sold on or after the effective date.

Questions 3a/3b:

3a. Does the approach of having the disciplined current scale earned rate including or excluding the Supplemental Option Budget lead to the result of the multiplier product illustrating about the same as a non-multiplier product?

3b. If neither of the approaches mentioned in 3a leads to this result, is there an alternative approach that leads to this result such as providing explicit guidance in Section 4?

Our understanding of the stated objective is: if a product includes a charge to fund the multiplier, that product should illustrate the same as a comparable product design without a supplemental option budget. To accomplish this, the cost of the hedge should be offset with the hedge payoff. This is to ensure there is no double counting of the supplemental option budget or hedge payoff. In the absence of an explicit charge, the funding for the multiplier could come from the company’s net earned rate and may result in different total index credits.

We look forward to working with the rest of the industry and regulators to further clarify these questions.

Sincerely,
Ata Azarshahi

Mr. Fred Andersen  
Cc: Mr. Reggie Mazyck

Re: The NAIC IUL Illustration (A) Subgroup requested comments by November 12, 2019 on the following questions related to IUL illustrations. We also recommend a change in Section 6B on Policy Loans to more fully limit loan leverage to 100 basis points. We would be happy to discuss any questions you may have.

1. Should the effective date for new policies be the later of 5 months after LATF adoption or 3 months after NAIC Executive/Plenary adoption?

If Actuarial Guideline (AG) 49 is substantially similar to the November 1 version, we support the timeline noted here. If there are significant revisions, then we would like the opportunity to review and may suggest a longer timeline.

2. Should the revised guidelines be in place for inforce illustrations for policies sold before the effective date for new policies?

If the revisions are put in place for inforce policies, we recommend this apply one year after the effective date of the revised AG 49. This would allow time for customer and producer education.

3a. Does the approach of having the disciplined current scale earned rate including or excluding the Supplemental Option Budget lead to the result of the multiplier product illustrating about the same as a non-multiplier product?

The question of whether including or excluding the Supplemental Option Budget from Section 5A will lead to the desired result depends on how a company reflects hedge cash flows in their DCS testing.

Section 3.4.1(a) of Actuarial Standard of Practice 24: Compliance with the NAIC Life Insurance Illustrations Model Regulation states that in DCS testing, “investment return factors may be net of investment expenses or, alternately, investment expenses may be treated separately as expenses.” Below we describe these two methods for determining investment returns in DCS testing for an IUL product, and we show why the Supplemental Option Budget should be excluded from the DCS earned rate using Method 1 but included when using Method 2. We do not think that DCS testing is easier to pass under Method 1 or 2, nor do we think that either method should be preferred over the other.
Method 1: Investment Returns are Net of Investment Expenses

This method recognizes that hedge costs and general account investment earnings in the DCS cash flows approximately offset. Only the net investment return, which is the return from the hedge assets, limited to 145% times the Annual Net Investment Earnings Rate (NIER), is reflected in the DCS cash flows. Under this method, the cost of funding a multiplier is not a negative cash flow in the DCS, so it is not a cost that needs to be offset. For companies that use this method, the supplemental option budget should be excluded from Section 5A.

Maximum Net Investment Return = 145% * NIER

Method 2: Investment Expenses are Treated Separately as Expenses

Under this method, a company reflects both the gross investment returns and the corresponding investment expenses separately. This results in approximately the same net investment return as in Method 1, however there is an explicit negative cash flow to reflect hedge costs. A product with charges used to fund a multiplier will have higher hedge costs than an identical product without charges to fund a multiplier. Since these higher hedge costs are reflected in the DCS cash flows under this method, Section 5A needs a positive adjustment for the Supplemental Option Budget. This will offset the multiplier hedge costs and get to a net result that is neutral between multiplier and non-multiplier products under this interpretation.

Gross Investment Return = Gross Portfolio Earnings + Return from Hedge Assets

Investment Expenses = Core Hedge Costs + Multiplier Hedge Costs
                  + Other Investment Expenses & Default Costs

Net Investment Return = Gross Investment Return – Investment Expenses

= NIER + (Return from Hedge Assets – Core Hedge Costs – Multiplier Hedge Costs)

Note: NIER and Core Hedge Costs approximately offset

= Return from Hedge Assets – Multiplier Hedge Costs

Maximum Net Investment Return = 145% * NIER – Multiplier Hedge Costs

Note: Supplemental Option Budget is needed to offset Multiplier Hedge Costs

To accommodate both methods fairly, we suggest that the word “net” be added to the currently proposed wording in 5A as follows: “If an insurer engages in a hedging program for indexed Credits, the assumed net annual earned rate underlying the disciplined current scale...” Along with this change, we then suggest 5A(iii) read “0% times the Supplemental Option Budget.” We note that Section 5 places limits on DCS testing assumptions and does not directly limit illustrations. However, if allowance is not made appropriately for how multiplier product features can affect DCS testing, it may be more difficult or less difficult to pass DCS testing for products with a multiplier.
3b. If neither of the approaches mentioned in 3a leads to this result, is there an alternative approach that leads to this result such as providing explicit guidance in Section 4?

To limit multipliers in illustrations, Section 4 should be updated in addition to the Section 5 changes suggested above. We would also like to note that much of the discussion and proposed changes to AG 49 have centered around products with charges that are used for multipliers. There are also products with charges that are used to offer a higher cap, and how these will fit into the proposed changes to AG 49 is unclear.

Section 6B. Policy Loans

We suggest that the wording in Section 6B be adjusted as follows:

“If the illustration includes a loan, then the total amount credited as a result of the loan balance, including Indexed Credits and all other illustrated benefits and bonuses that impact the policy's account value, shall not exceed the sum of explicit illustrated loan charges and asset-based charges applicable to the loan balance by more than 100 basis points.”

Without including “all other illustrated benefits and bonuses that impact the policy's account value”, an IUL illustration could exceed the 100 basis point limit through other product features. Additionally, we believe that “asset-based charges” should be included to prevent products with a multiplier from illustrating worse than a product without a multiplier.

We view the actions that we have articulated above as being important preliminary steps to apply reasonable limits within IUL illustrations. We also look forward to continuing to work with the NAIC on the more holistic changes that need to be made to illustrations to provide more consumer clarity.

Again, we would welcome the opportunity to discuss our position further with you. I can be reached at (614) 249-5947.

Re: Illustration of Index Multipliers under AG 49

Fred:

Thank you for the opportunity to respond to the questions exposed by the IUL Illustration (A) Subgroup on November 1 related to Actuarial Guideline 49 (“AG 49”). Pacific Life joins in the letter submitted by the Coalition, and submits this letter to underscore the importance of applying the currently proposed changes to AG 49 on a prospective basis only.

The primary purpose of infuse illustrations is to help consumers manage their life insurance policies into the future. Infuse illustrations allow consumers to adjust expectations based on the policy’s actual performance, relative to the assumptions contained in the as-sold illustration. To the extent actual policy performance differs from that assumed in the as-sold illustration, consumers may use infuse illustrations to help vary premium or coverage amounts. Instead, prohibiting the illustration of a multiplier feature for consumers who have already purchased the product – while the feature continues to function on these products – will lead to consumer confusion and a loss of confidence, and will frustrate the essential purpose of infuse illustrations.

The decision whether to apply any NAIC guideline retroactively is an important policy decision that has broad impacts on consumers, state insurance markets, insurance producers and companies. As such, Pacific Life respectfully requests that the Subgroup limit the proposed changes to prospective application, similar to its prior treatment of policy loans under Section 6 of AG 49.1

Very truly yours,

Ernest Armijos

1 See AG 49, Section 1.C, Effective Date.
November 13, 2019

Fred Andersen
Acting Deputy Commissioner of Insurance
Minnesota Department of Commerce
85 7th Place East, Suite 280
St. Paul, MN 55101

Dear Fred:

Thanks for your work and the Subgroup’s work to update the IUL Illustrations regulation (AG49). Below are our thoughts on the most recent exposed version of AG49 and answers to the questions proposed by the subgroup on November 1st.

General thoughts:

- Securian believes that the conversation and proposed changes to AG49 are a positive and necessary step forward and appreciate the thought and work put in by the subcommittee to get the industry to this point.
- Securian directionally agrees with the changes being made. We also believe that there are several outstanding issues that are not in relation to Section 5A of AG49 that deserve attention to assure transparency and clarity for consumers.
  - Section 4: for greatest clarity, Securian would suggest clearer language in Section C to bring consistency on how carriers illustrate non benchmark indices. We have made recommendations in the past and re-iterate them below.
  - Section 4: Securian agrees with Suggestion 4E in the most recent exposed draft of AG49—Tying the maximum total amount of crediting in any year of the illustration to the Annual Earned interest rate underlying the Disciplined Current Scale defined in Section 5 of AG49
  - Section 6: Securian agrees that Policy loans and the application of 100bps should include all credits
  - Securian believes that several of the Additional Disclosure items discussed would provide increased consumer transparency and understanding and would like the group to continue to pursue them.
    - Developing uniform policy cost and sequence of return disclosures being our top two items to focus on after AG49 gets finalized.
- Securian recognizes the process has been grueling to this point and encourages everyone to see the changes come to a conclusion by years end.

Comments to the questions posed on Nov 1st

- Q1: Should the effective date for new policies be the later of 5 months after LATF adoption or 3 months after NAIC Executive/Plenary adoption?
  - Securian believes 5 months after LATF adoption is an appropriate amount of time to make the required changes and receive final approval from the NAIC Executive/Plenary committee.
  - Securian believes that after LATF adoption the expectations for future illustrative practices will have been set for IUL illustrations.
• We believe that the NAIC Executive/Plenary adoption is going to approve the recommendation of LATF and therefore waiting for a timeframe after the NAIC adoption is unnecessary.
• We understand that it will take time for carriers (including Securian) to change their illustration systems to accommodate the new regulation.
• Based upon our experience and consulting with other carriers, 5 months seems like a reasonable amount of time to make the changes considering the amount of time that has elapsed to date.

• Q2: Should the revised guidelines be in place for Inforce illustrations for policies sold before the effective date for new policies?
  o Securian believes that the recommended changes to AG49 should be applied to inforce contracts without regard to when they were sold.
  • The existing AG49 and changes to the model illustration law have created a precedent suggesting application to inforce contracts sold prior to the regulations being updated/adopted.
  • The Subgroup’s direction indicates that greater clarity and transparency is required on all IUL contracts with multipliers.
  • Securian believes that if the adopted changes do not apply to inforce contracts two things will happen:
    • Carriers that currently have large multipliers will continue to show current illustrations, which the subgroup has already determined aren’t appropriate, till the last possible date.
    • Inforce illustrations will continue to reinforce the unrealistic expectations set by original sales illustration. It is always better to reset expectations sooner than later.
  • There would be additional work on the carrier’s part to support two sets of illustration code for policies on the same policy form that are sold before and after the effective date. This would be confusing to agents, consumers and the carriers.

• Q3a: Does the approach of having the disciplined current scale earned rate including or excluding the Supplemental Options Budget lead to the result of the multiplier product illustrating about the same as a non-multiplier product?
  o We believe that changes included in the last exposed draft of AG49 do a reasonable job in having products that have a charged for multiplier/bonus illustrate very similarly to a non-multiplier product.
  o As with the original draft of AG49 the existence of the 145% in Section 5A will allow for a “included” multiplier/bonuses to illustrate slightly better than a product without one.
  o We believe that the most recent draft including 0% of the Supplemental Options budget will be effective in limiting the benefits of charged for multipliers.
  o Securian believes that if you include the Supplemental Options Budget we need to define further what constitutes cash flows from DSC testing standpoint to ensure there isn’t the ability to game the system. We are still currently thinking about what the added definitions would look like and plan to have some comments in Q3b but plan to further build them out by the next call for comments at the end of this month.

• Q3b: If neither of the approaches mentioned in 3a leads to this result, is there an alternative approach that leads to this result such as providing explicit guidance in Section 4?
  o Need to introduce new definitions
    • Base Options Budget: The lesser of the Annual Net Investment Earnings Rate and the portion of the Annual Net Investments Earnings Rate used to provide the Cap, Floor, and Participation Rate of the index being tested.
• **Supplemental Options Budget**: The total amount spent to generate the Index Credits of the index being tested minus the Base Options Budget of the index being tested. The amount is expressed as a percentage of the policy’s indexed account value.

• **Hedging Cash Flows**: For the purpose of DCS testing hedging cash flows will be defined as such
  - **Hedging Expense**: The expected cost of the hedging instruments used to support the Index Credits of the index being tested.
  - **Hedging Payoff**: Cannot exceed the Supplemental Options Budget of Index being tested.

With the definition of Hedging Cash Flows then 5A could change to be
  - Base Options Budget plus
  - Base Options Budget * 45% plus
  - 100% times the Supplemental Options Budget

Without the definition of Hedging Cash Flows I am still leaning to 5A needing to be
  - Base Options Budget plus
  - Base Options Budget * 45% plus
  - 0% times the Supplemental Options Budget

We believe this would make all multipliers regardless of if they are “included or charged for” illustrate the same as a non-multiplier product.

Again, if you would like to have a discussion about any of these topics please reach out to me and I would be happy to expand upon them.

Respectfully,

Seth Detert
Director & Actuary, Life & Annuity Products
Draft: 11/26/19

IUL Illustration (A) Subgroup
Conference Call
November 1, 2019

The IUL Illustration (A) Subgroup of the Life Actuarial (A) Task Force met via conference call Nov. 1, 2019. The following Subgroup members participated: Fred Andersen, Chair (MN); Ted Chang (CA); Andy Greenhalgh (CT); Mike Yanacheak (IA); Vincent Tsang (IL); Rhonda Ahrens (NE); Bill Carmello (NY); Peter Weber (OH); Mike Boerner and John Carter (TX); Tomasz Serbinowski (UT); and Craig Chupp (VA). Also participating was: Rachel Hemphill (TX).

1. Discussed Comments on the IUL Illustration Menu of Options

Mr. Andersen acknowledged that the targeted timeline was aggressive. He said to avoid mistakes, the plans for addressing the changes to Actuarial Guideline XLIX—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest (AG 49) are being extended. He said the immediate focus is to address the remaining major issues by Nov. 14 and clear up the technical issues in time for exposure of the revisions at the Fall National Meeting. One of the major issues identified was the impact of the effective date on in-force illustrations. A second major issue is that companies need four to five months of lead time for the implementation of new standards. Mr. Andersen said the proposed revision to AG 49 provides a May 1, 2020, effective date. Birny Birnbaum (Center for Economic Justice—CEJ) said the effective date cannot be determined until the revisions are final. He suggested an effective date that is three months after revisions are final. Mr. Andersen said members of industry have suggested five months of lead time. Mary Bahna-Nolan (Pacific Life) said five months is more realistic, given that companies tend to prohibit system changes in the month of December. Mr. Boerner clarified that the timing being discussed is in reference to adoption by the Life Actuarial (A) Task Force. Mr. Andersen said he will redraft the AG 49 revisions to reflect the discussion. Reggie Mazyck (NAIC) said the effective date of the initial version of AG 49 was five months after its adoption by the Task Force.

Mr. Andersen asked whether the new illustration standards should apply to in-force illustrations. Ms. Hemphill said the issue of in-force policies is very different from the issue of sales illustrations. She said applying the standards to in-force policies would be somewhat problematic. Ms. Ahrens said in-force policies should be grandfathered. Mr. Tsang said he believes the new standard should apply to in-force policies being considered for replacement.

Donna Megregian (Reinsurance Group of America—RGA) said the earned rate of the disciplined current scale (DCS) does not drive what goes into the policy. She agreed to provide a numerical example in the following weeks. Mr. Andersen suggested that Ms. Megregian could discuss the issue further at the Fall National Meeting. Mr. Yanacheak opined that Section 4 of AG 49 is the appropriate place for changes.

Mr. Andersen said the issues on which comments will be solicited for the next conference call are:

1) The timing of the effective date of changes to the guideline.
2) The potential impact on in-force illustrations.
3) Coordination of Section 4 and Section 5.
4) Whether the supplemental option budget should be included in the DCS test.

Having no further business, the IUL Illustration (A) Subgroup adjourned.
The IUL Illustration (A) Subgroup of the Life Actuarial (A) Task Force met via conference call Sept. 16, 2019. The following Subgroup members participated: Fred Andersen, Chair (MN); Ted Chang (CA); Andy Greenhalgh (CT); Mike Yanacheak (IA); Vincent Tsang (IL); Rhonda Ahrens (NE); Bill Carmello (NY); Peter Weber (OH); Mike Boerner and John Carter (TX); Tomasz Serbinowski (UT); and Craig Chupp (VA).

1. Discussed Comments on the IUL Illustration Menu of Options

The Subgroup heard comments on the two questions exposed at the Summer National Meeting. The first question asked, “Should a product with a multiplier feature illustrate a higher scale than a product without multiplier features?” The second question asked, “To what extent should the 145% disciplined current scale (DCS) factor apply to charges supporting bonuses and multipliers?”

Mr. Andersen said the Subgroup will narrow the range of potential solutions. Those solutions will then be offered to the Life Actuarial (A) Task Force for consideration. He said once the Task Force decides on a direction, the task of implementing a solution will be the responsibility of the Subgroup. He provided five possible options for discussion:

1) The illustrated rate is not adjusted to offset multiplier charges, resulting in a multiplier product not illustrating, as well as a non-multiplier product.

2) The illustrated rate is adjusted to exactly offset multiplier charges, resulting in a multiplier product illustrating the same as a non-multiplier product.

3) The illustrated rate is adjusted up to 1% annually to a level that slightly more than offsets multiplier charges, resulting in a multiplier product illustrating slightly better than a non-multiplier product.

4) The illustrated rate is adjusted by 1%–2% annually, resulting in a multiplier product that illustrates significantly better than a non-multiplier product.

5) The illustrated rate is adjusted by more than 2% annually, resulting in a multiplier product that illustrates substantially better than a non-multiplier product.

Donna Megregian (American Academy of Actuaries—Academy) discussed the Academy comment letter (Attachment Twenty-Seven-A). She said because of their differing risk profiles, it may be reasonable that multiplier and non-multipliers illustrate differently. She indicated that more clarification of the possible options is necessary and that more disclosure is required.

Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI comment letter (Attachment Twenty-Seven-B) in largely consistent with the Academy letter. He said illustrations should appropriately reflect the risk profile of all the features in the policy. He noted that the mechanics of the policy should be understandable for the policyowner. Mr. Bayerle agreed that further clarification from state insurance regulators is necessary.

Birny Birnbaum (Center for Economic Justice—CEJ) said the CEJ comment letter (Attachment Twenty-Seven-C) indicates a preference for possibility #2. He suggested that the Subgroup’s actions should be focused on addressing illustration excesses, before sending the issue to the Life Insurance and Annuities (A) Committee for consideration of enhanced disclosures for all products. Mr. Birnbaum stressed the importance of consumer testing of any enhancements to disclosures.
Ernest Armijos (Pacific Life) said the comment letter from Lincoln Financial Group, Pacific Life and Sammons Financial Group (Coalition) (Attachment Twenty-Seven-D) advocates application of the 145% to all options in the disciplined current scale testing and setting guardrails to protect consumers against continually increasing charges. The comment provides an example of disclosure enhancements that displays a breakout of charges, provides information on the potential impact of index volatility on accumulated values and the downside risk of the product including the multiplier. He indicated that the Coalition preference is closer to possibility #5.

The Nationwide comment letter (Attachment Twenty-Seven-E) indicated that products with multipliers, bonuses and additional credits should be permitted to illustrate a higher scale than a non-multiplier product, with a reasonable limit. The letter recommends limiting charges to 50% of the product hedge budget. The Nationwide comments favor a proposal that is close to possibility #4.

Mr. Armijos said the Pacific Life comment letter (Attachment Twenty-Seven-F) is supportive of the Coalition letter and reiterates Pacific Life’s belief that any proposed limit on illustrations should reflect sound actuarial principles and reasonable assumptions.

Seth Detert (Securian Financial) said the comment letter (Attachment Twenty-Seven-G) jointly submitted by Securian Financial, Penn Mutual and Mutual of Omaha lays out three alternatives. The first alternative aligns with possibility #1 or possibility #2. The second and third alternatives align with possibility #3 or possibility #4. He said the letter also provides several disclosure proposals and recommends modifications to the language related to the illustration of the arbitrage limit for variable and indexed loans.

In a separate comment letter (Attachment Twenty-Seven-H), Securian Financial addresses that company’s principles applicable to the illustrations and provides a demonstration (Attachment Twenty-Seven-I) of providing transparency to consumers.

Ms. Ahrens said the illustration of multipliers should be allowed, and there should be discussion about the applicability of the 145% DCS factor to all charges.

Mr. Carmello said illustration disclosures should be enhanced. He expressed support for possibility #2.

Mr. Weber said his preference lies between possibility #3 and possibility #4.

Mr. Sartain said he supports the Securian Financial proposal.

Mr. Yanacheak said he supports possibility #4 or possibility #5.

Mr. Andersen said the next discussion of the issue will occur during a Life Actuarial (A) Task Force conference call.

Having no further business, the IUL Illustration (A) Subgroup adjourned.
September 4, 2019

Mr. Fred Andersen
Chair, IUL Illustration (A) Subgroup
National Association of Insurance Commissioners

Dear Mr. Andersen,

The Life Illustrations Work Group (“the Work Group”) of the American Academy of Actuaries \(^1\) appreciates the opportunity to provide comments on the questions exposed August 2, 2019, by the IUL Illustration (A) Subgroup regarding the illustrations of Indexed Universal Life (IUL) products under Actuarial Guideline XLIX (AG 49). These comments pertain to those questions.

1. Should a product with a multiplier feature illustrate a higher scale than a product without multiplier features?

The Work Group believes that products with multiplier features could reasonably illustrate differently than products without multiplier features, assuming the products with multipliers have a different risk/return profile than products without a multiplier. The different risk return profiles could cause products with multipliers to illustrate higher or lower than products without multiplier due to factors such as option costs, different market exposure, and other product features. We are also supportive of making illustrations clearer with regard to the potential higher costs associated with the multiplier features.

2. To what extent should the 145% disciplined current scale factor apply to charges supporting bonuses and multipliers?

The Work Group’s response to this question is dependent on the intent of the 145% factor and what it applies to. As stated in our June 27, 2019, letter, some actuaries could interpret the 145% factor as imposing a limit on the return of the general account assets when hedging is used, while other actuaries may interpret the 145% factor as imposing a limit on the return on the assets supporting the hedge. Other interpretations may apply. Given the variety of possible interpretations, the Work Group thinks clarification is needed on the intent of the 145% factor, and what it applies to when charges are used to purchase additional assets that may enhance returns on IUL products.

****

\(^1\) The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
The Work Group appreciates the efforts of the IUL Illustration Subgroup to review AG 49. If you have any questions or would like further dialogue on the above topics, please contact Ian Trepanier, life policy analyst, at trepanier@actuary.org.

Sincerely,

Donna Megregian, MAAA, FSA

Mr. Fred Andersen
Chair, NAIC IUL Illustration (A) Subgroup

Re: Indexed Universal Life (IUL) Illustration Subgroup Questions

Dear Mr. Andersen:

The American Council of Life Insurers (ACLI)\(^1\) appreciates the opportunity to submit the following responses to most recent questions posed by the IUL Illustration Subgroup. ACLI supports life insurance policy illustrations that help consumers determine the policy that is best suited for their needs. Consumers need to understand the risk/reward trade-offs inherent in the various policies and indices being considered. In that vein, we submit the following responses:

**Question 1:** Should a product with a multiplier feature illustrate a higher scale than a product without multiplier features?

**ACLI Response:** Consistent with our prior comments, ACLI believes that illustrations should appropriately convey to customers the risk/reward profile of all product features.

**Question 2:** To what extent should the 145% disciplined current scale factor apply to charges supporting bonuses and multipliers?

**ACLI Response:** Consistent with our prior comments, ACLI is supportive of clarification around the application of the 145% disciplined current scale (DCS) factor.

In an effort to help regulators understand the application of the 145% DCS factor under two interpretations, descriptions of the two interpretations are provided below and numeric examples of the calculation of the year one total net earnings rate are provided in Appendix One. These examples are simplified to convey the general application of the two interpretations, and do not directly correspond to any one company’s interpretation. Appendix One presents three examples: a product without a multiplier, and a product with a multiplier under the following two interpretations:

---

\(^1\) The American Council of Life Insurers (ACLI) advocates on behalf of 280 member companies dedicated to providing products and services that promote consumers’ financial and retirement security. 90 million American families depend on our members for life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, dental and vision and other supplemental benefits. ACLI represents member companies in state, federal and international forums for public policy that supports the industry marketplace and the families that rely on life insurers’ products for peace of mind. ACLI members represent 95 percent of industry assets in the United States. Learn more at [www.acli.com](http://www.acli.com).
Interpretation #1: The maximum interest earnings rate that applies to a multiplier’s option budget is 145% of the net investment earnings rate of the General Account assets excluding the hedges allocated to the product (4.5% * 145% = 6.525% as shown in the example).

Interpretation #2: The maximum interest earnings rate that applies to a multiplier’s option budget is 45%. We note that under this interpretation, the same results are obtained if you use the options budget x 45% or if you use the notional amount x 145% x net investment earnings rate (NIER). However, we chose not to illustrate that for ease of comparison of the two primary interpretations.

Mechanically, the calculation of the total net earnings rate of the two interpretations are similar, except for the assumed return rate on the option budget. The total net earnings rate in both interpretations can be decomposed into two components: the base policy net interest earnings (which can be further decomposed into the general account net interest earnings and the base policy options net interest earnings), and the multiplier’s net interest earnings. The calculation of these values are as follows:

A. General account net interest earnings: account value after charges times the NIER.

B. Base policy options net interest earnings: base policy option budget (notional amount after charges times option cost) times the maximum 45% return.

C. Base policy net earnings: the sum of A and B. Additionally, this could also be calculated directly as the product of the notional value after charges times the NIER times the 145% limit.

D. Multiplier net interest earnings: multiplier’s option budget times the assumed return. This return is what would vary between the two interpretations:

   Under Interpretation #1, it is assumed to be the option budget times NIER times the 145% limit.

   Under Interpretation #2, it is assumed to be the option budget times 45%. We note that Interpretation #2 is equivalent to the notional amount of the multiplier (the multiplier times the base notional amount) times the NIER times 145% all less the option budget.

Additional information and assumptions can be found in the appendix. We have separately provided these examples as an Excel Spreadsheet (Attachment 1) to allow regulators and interested parties to step through the calculations.

We look forward to a discussion of these questions on a future Subgroup call. Thank you.

Sincerely,

Brian Bayerle
Senior Actuary

W:\National Meetings\2019\Fall\TF\LA\IUL Illustration SG09 16\ACLI Comments on Exposed IUL Questions
Comments for the Center for Economic Justice

To the NAIC IUL Illustration (A) Subgroup

Questions Regarding Proposed Changes to AG 49

September 6, 2019

In response to the problem of misleading illustrations associated with new products designed to game AG 49, the subgroup requested stakeholder comment on two questions:

- Should a product with a multiplier feature illustrate a higher scale than a product without multiplier features? **CEJ Answer: No.**

- To what extent should the 145% disciplined current scale factor apply to charges supporting bonuses and multipliers? **CEJ Answer: The 145% scale factor should be changed to 100%**

Discussion:

CEJ believes there is clear evidence that new IUL products that feature bonuses and multipliers have been designed to create fabulous illustrations – illustrations which demonstrate extraordinary accumulation and returns for the policyholder but which are misleading and deceptive.

What is the evidence? First, AG 49 was created to stop the use of unrealistic crediting rates which produced unrealistic and misleading illustrations of product operation. After AG 49, we see product designs that, despite lower crediting rates and much greater expenses than for prior products, produce significantly greater accumulation values.

Second, we see significant amounts of premium-financed IUL – meaning that people are borrowing money to “invest” in an IUL. Why would such a sales practice ever be successful? Because the illustrations show steady crediting rates significantly greater than the loan interest rates charged and, consequently, showing a risk-free arbitrage opportunity that, in reality, doesn’t exist.
Third, we are seeing product designs that contradict the stated purposes of IULs – to protect policyholders’ assets against downside risk – by putting consumers into products that are effectively pure option bets and riskier than if the consumer invested in the index itself. And with the asset charges associated with the bonuses and multipliers, the risk of downside loss is created. The argument that these products provide “consumer choice” is a red herring. Suppose a consumer wants to buy a government bond to avoid risk. Do we now see government issuers creating bond-option combinations to give consumers a “choice” of risk return? Of course not. If a consumer wants a riskier investment, they buy something other than a bond. If a consumer wants an insurance product that includes downside risk, they buy something other than an IUL policy that promises volatility protection and lack of downside risk. It is a fundamental contradiction to suggest that consumers are seeking “risk-return choices” within a product specifically created to eliminate risk to the consumer.

Fourth, if the new multiplier/bonus products were, in fact, created to meet consumer demands, we would expect to see the same features demanded by consumers for fixed indexed annuities. Putting aside the complete absence of any evidence of such consumer demand, the use of bonuses and multipliers is generally not found with FIA products. The fact that indexed products designed with bonuses and multipliers are found in IUL and not with FIA makes clear that the new multiplier/bonus designs are not responding to consumer demands but intended to juice the sales process with fabulous illustrations.

Fifth, we see illustrations that, because of unrealistic accumulation values and sequence and loan interest rate arbitrage, indicate a policyholder can “borrow” money from the IUL and never repay the loan with little or no impact on overall accumulation or premium payments – effectively, illustrating an IUL as if it were an ATM machine.

The entire illustration regime for life insurance and annuities requires a thorough overhaul – illustrations intended to explain the operation of a product are doing the opposite. Illustrations are omitting the significant risk of return sequence, among other problems. So the question becomes, what are the best immediate actions to take as a path to the broader rehabilitation of illustrations?

**For AG 49 and IUL Illustrations, that path consists of:**

1. Reducing the options budget for illustrations to 100%
2. Requiring products with bonus/multiplier features to illustrate the same as products without such features.
3. Eliminating loan arbitrage by requiring loan rates be no less than crediting rates for purposes of the illustration
4. Adopting these changes as soon as possible with a recommendation to the Life Insurance A Committee that these changes are a tourniquet to stanch the bloodletting and that a broader examination of and development of a re-imagined approach to illustrations is needed to better demonstrate the operation of the product, to overcome the limitations and misleading features of current illustrations and to ensure a consistent approach across all indexed products.
With regard to the two specific questions posed by the subgroup (and the issue of loan arbitrage), we suggest that anything short of an outright ban on the practices in question will simply allow insurers to find new ways to game the requirements of AG 49. Given the absence of any requirement to show volatility of returns or impact of sequence of returns, any opportunity to game the crediting rate limitation in AG 49 will be taken to make a company’s product illustration more “competitive.” Limiting what can be illustrated does not stop an insurer from developing new product features and explaining those product features to the consumer. Rather, limiting what can be illustrated stops the use of misleading illustrations to create misleading sales.

Regulators have the opportunity to limit the damage that will inevitably occur to consumers and to the life insurance industry as a result of overly complex products marketed with misleading illustrations that will fail to perform as suggested and may leave consumers far worse off than with simpler, lower fee products. We’ve seen the scandals with vanishing premium, unexpected dramatic increases in costs of insurance for universal life and others. We urge regulators to take action before more damage is done.
September 6, 2019

Fred Andersen
Deputy Commissioner of Insurance
Minnesota Department of Commerce
Chair, NAIC IUL Illustration (A) Subgroup

Re: Comments to the IUL Illustration (A) Subgroup Questions regarding Actuarial Guideline 49

Fred:

This letter is submitted on behalf of the following companies (“the Coalition”).

Lincoln Financial Group
National Life Group
Pacific Life
Transamerica

Thank you for the opportunity to respond.

This letter provides the Coalition’s response to questions that were exposed for comment by the IUL Illustration Subgroup on August 2, 2019. In addition, this letter also (1) addresses other points raised during the Subgroup discussion at the recent NAIC Summer National Meeting in New York City, and (2) proposes a solution that enhances consumer protections and regulatory controls over IUL products containing multipliers while ensuring that IUL products can continue to evolve to meet consumer needs.

The Coalition believes multiplier features offer consumers meaningful value and are an appropriate choice for some consumers. They offer consumers the potential to meet long-term
protection and accumulation needs at a lower premium than other IUL designs. That said, we acknowledge regulatory concerns about the effect of multipliers on current product illustrations and the potential to influence consumer expectations. As discussed in more detail below, the Coalition proposal offers a three-part solution that includes new guardrails on how illustrations reflect multiplier features.

A. Responses to IUL Illustration (A) Subgroup Questions:

1. Should a product with a multiplier feature illustrate a higher scale than a product without multiplier features?

Response: Yes. A core purpose of product illustrations is to foster consumer education. Therefore, product illustrations should incorporate actual product mechanics. In the case of multiplier features, an illustration should include both the associated additional charges and credits. For at least some product designs, this would lead to a higher disciplined current scale and a lower guaranteed scale, thus demonstrating potential benefits and risks of the multiplier feature.

It has been suggested that it may be possible to describe multiplier features to customers without the benefit of including such features in product illustrations. We believe that such an approach is contrary to existing regulatory guidance and would be detrimental to consumers for the following reasons:

- It would conflict with the educational goals of both the NAIC’s Life Insurance Illustrations Model Regulation\(^1\) and AG49\(^2\) by denying consumers the illustration of actual product mechanics.

- It would leave producers on their own to determine how best to describe the effect of multipliers. Unlike riders that provide supplemental benefits (such as waiver of premium or accidental death benefit), the cost and benefits of multipliers are not easily described and must be illustrated to demonstrate the impact on the account value. We believe that consumers are best served if the information provided about multipliers has a degree of consistency across products.

- It would mislead consumers about the benefits and risks of multipliers. Even if the benefits of a multiplier are not illustrated, insurers may nonetheless be obligated to illustrate any related charges in order to comply with the Life Illustrations Model Regulation, effectively ensuring that IUL products with multiplier features would illustrate at a lower rate than IUL products without such features. Such a proposal would not help consumers understand a multiplier feature or its risks.

---

\(^1\) "The purpose of this regulation is to provide rules for life insurance policy illustrations that will protect consumers and foster consumer education." Life Insurance Illustrations Model Regulation, Sec. 1 (2001).

\(^2\) "This guideline . . . [requires] additional consumer information . . . that will aid in consumer understanding. Actuarial Guideline XLIX, Background (2016).
Finally, the Coalition acknowledges that Section 5A of AG49 does not explicitly address how product illustrations should reflect multiplier features. For the following reasons, we believe that the most reasonable reading of the current language of AG49 is that the full inclusion of multipliers in product illustrations is currently allowed:

- It is widely acknowledged that multiplier features were uncommon at the time that AG49 was promulgated. The drafting of the guideline did not contemplate such features. Accordingly, the guideline is silent on how such features should be treated.

- The language in Section 5A established a principle for how purchased options should be handled in an AG49-compliant illustration. In the absence of specific guidance, it is a logical extension to apply the same principle to options supporting a multiplier that have identical economic value.

2. **To what extent should the 145% disciplined current scale factor apply to charges supporting bonuses and multipliers?**

**Response:** Options funded by any source, whether by the Net Investment Earned Rate or by policy charges (whether explicitly dedicated to a product feature or implicitly included in typical policy charges), are economically identical. As such, the 145% disciplined current scale factor should be applied to all options in the DCS testing.

It has been suggested that a way to create a guardrail on multipliers would be to reduce the assumed return on options that support multiplier-related features. Not only is this economically inconsistent, it would lead to practical challenges when applied to products where such charges for such options are not explicitly identified. Therefore, we do not believe that such a guardrail would be effective in practice, at least on a standalone basis.

**B. Proposal to Add Guardrails and Enhanced Disclosure:**

Acknowledging regulatory concerns, the Coalition proposes a three-part solution that would involve modifying AG49 to clarify the treatment of multipliers, impose new guardrails, and enhance consumer education through disclosure. We believe that this solution would enhance both consumer protection and education.

With respect to guardrails, as a guiding principle we believe that any proposed limit on the illustration of benefits should be derived from sound principles and reasonable assumptions. The new guardrails should ensure that illustrations of multipliers are consistent with regulatory goals. They should also avoid creating an illustration advantage to economically similar product features, which could include various designs of index accounts, including accounts with multipliers, higher caps or other parameters.
Specifically, we propose:

1. Imposing a set of guardrails that would involve some combination of the following:
   a. Allowing the illustration of benefits only up to a stated maximum percentage of implicit and explicit indexed account value-based charge;
   b. Allowing the illustration of benefits only up to a maximum indexed-based multiplier;
   c. Limiting the difference between multiplier-related benefits and charges in the DCS; and/or
   d. Allowing the application of the 145% to the hedge budget up to a stated maximum percentage of the account value.

2. Clarifying that the 145% limitation imposed by Section 5A of AG49 is applicable to all options in the DCS testing, for reasons described above. Below are two potential ways to achieve this:
   a. Revise Section 5A of AG49 to state: If an insurer engages in a hedging program for index-based interest, the assumed earned interest rate underlying the disciplined current scale shall not exceed 145% of the annual net investment earnings rate plus any explicit or implicit charges supporting the hedge budget.
   b. Revise Section 5 of AG49 to state: If an insurer engages in a hedging program for index-based interest, the ratio of the assumed hedge payout to the assumed hedge cost may not exceed 145%. Further, to ensure clarity, add the following: The cost of the hedge shall be included as a cash flow out, and the payout of the hedge shall be included as a cash flow in. Hedge cash flows and liability cash flows, including taxes, will be accumulated at the annual net investment earnings rate of the general account assets (excluding hedges for index-based credits) allocated to support the policy.

3. Providing more effective disclosure to consumers by:
   a. Requiring a mandatory breakout of charges on illustrations. These sections are typically already available but are not currently mandatory.
   b. Requiring consumers to receive clear and concise information on: (1) the potential impact on accumulated values of index volatility; and (2) downside risks of the product, including any multiplier. An example of how this could be done can be found in Appendix 1.
We appreciate the opportunity to provide input to the Subgroup and look forward to further discussions.

Respectfully Submitted,

Scott R. Harrison
Harrison Law Office, P.C.

Appendix I

XYZ Company
Illustration Summary

Basic Description
Indexed Universal Life policies provide policyholders with the ability to allocate their cash value to Indexed Accounts. When placed in Indexed Accounts, their cash value will be credited based on the growth of an underlying index subject to a minimum rate (the floor) and a maximum rate (the cap).

This crediting methodology means that these accounts are unlikely to see the same return year after year. Illustrations are regularly prepared using a single illustrated rate in all years for ease of understanding and additional illustrations, such as the alternate scale illustration and the guaranteed illustration, are included to help understand potential outcomes under more conservative assumptions. However, because of the nature of the indexed accounts, showing the impact of non-linear returns helps better understand this policy.

Range of Possibilities
The graph and charts below show the cash value pattern as well as other key policy metrics under a low and high indexed return scenario and compares it to the illustrated scenario that you chose for your illustration.
The scenarios’ used in this analysis are based on historical experience and in accordance with Actuarial Guideline 49. More detail on how these were selected can be found on pg. Y of this illustration.

The Order of the Indexed Returns Matter

It is possible to have an average rate of return equal to the illustrated rate occur in many ways. It does not need to be the same number every year. The order in which the returns happen in a sequence of returns will impact your policy. Below is chart demonstrating how your policies performance would be impacted.
Certain features you select on your policy will impact the Range of Possibilities as well as the Order of Returns. It is important to discuss with your life insurance producer to decide what is right for you.

I have received and read a copy of this illustration and understand that any non-guaranteed elements illustrated are subject to change and could be higher or lower. The life insurance producer has told me that they are not guaranteed. I understand this is an illustration and not a contract. For full policy details, I will refer to the contract.

APPLICANT’S SIGNATURE  DATE

I certify that this illustration has been presented to the applicant and that I have explained that any non-guaranteed elements illustrated are subject to change. I have made no statements that are inconsistent with this illustration nor have I made any promises about the expected future Index Credits of this contract.

LIFE INSURANCE PRODUCER’S SIGNATURE  DATE
The Low and High scenario are based on the same historical scenarios that the maximum Ag49 lookback rate are based on. They are the 25-year sequences that result in the lowest and highest compound annual growth rate. The 25-year period is repeated for the length on the illustration period. Scenarios A and B are similar in concept.
Re: The IUL Illustration Subgroup requested comments by August 30, 2019 on the following questions related to IUL illustrations. The comment due date was later extended to September 6, 2019.

1. Should a product with a multiplier feature illustrate a higher scale than a product without multiplier features?
2. To what extent should the 145% disciplined current scale factor apply to charges supporting bonuses and multipliers?

Dear Mr. Andersen:

Broadly-speaking, we feel that the objective of life insurance product illustrations should be to help consumers make informed financial decisions by adequately demonstrating the potential risk and return opportunities. Disallowing the inclusion of a multiplier does not guarantee a proper view of the risk-return tradeoff, however allowing the inclusion of a multiplier without improvements to illustration effectiveness may also not give a proper view of risk and return.

Today's illustrations show a level index return each year. These illustrations can span decades. A more typical pattern of returns would have returns that were positive for five to seven years followed by a year or two of zero. While we believe that sales professionals are accountable for reviewing the risks and return opportunities associated with life insurance policies with consumers, we also see an opportunity for improvement in the way these products are illustrated.

With this broader opportunity in mind, we have also provided comments and suggestions below on the two specific questions posed on July 15, 2019. We would be happy to discuss any questions you may have.
1. **Should a product with a multiplier feature illustrate a higher scale than a product without multiplier features?**

Products with multipliers, bonuses, and additional credits should be permitted to illustrate, to some extent, a higher scale than the product would without these features, but with a reasonable limit. Purposes of an Indexed Universal Life policy range from providing life insurance protection to efficient wealth transfer. When charges that enhance the hedge budget to pay for multipliers, bonuses, and additional credits rival or exceed the underlying product hedge budget (approximately the annual net investment earnings rate), the emphasis of the product shifts and this may not be consistent with the purpose of this product. Therefore, applying a reasonable limit in illustrations on the charges used to enhance the hedge budget is appropriate.

We recommend limiting charges to 50% of the product hedge budget (approximately the annual net investment earnings rate), which would place a reasonable ceiling on the charges used to enhance the hedge budget. For example, a hedge budget of 4% would result in a limit of 2%.

2. **To what extent should the 145% disciplined current scale factor apply to charges supporting bonuses and multipliers?**

The 145% disciplined current scale factor should apply to charges supporting bonuses, multipliers, and additional credits. However, as described above, charges used to enhance the hedge budget for illustrations should have a reasonable limit.

We view the actions that we have articulated above as being important preliminary steps to apply reasonable limits within the IUL product. We also look forward to continuing to work with the NAIC on the more holistic changes that need to be made to illustrations to provide more consumer clarity.

Again, we would welcome the opportunity to discuss our position further with you. I can be reached at (614) 249-5947.

Re: Comments to the IUL Illustration (A) Subgroup Questions regarding Actuarial Guideline 49

Fred:

Thank you for the opportunity to provide our comments with respect to the questions exposed subsequent to the Subgroup’s August 1 meeting.

Pacific Life reiterates its support for the positions contained in the letter submitted by the Harrison Law Office on behalf of Pacific Life and three other IUL carriers. We believe that the establishment of new illustration guardrails, along with enhanced information regarding volatility of credits, can help address consumer education and level expectations.

With respect to guardrails, Pacific Life believes that it is critical that any proposed limit on the illustration of benefits be derived from sound principles and reasonable assumptions. This methodology will help regulators best target changes to AG 49.

We appreciate the opportunity to provide input to the Subgroup, and look forward to further discussions.

Respectfully Submitted,

Ernest Armijos

St. Paul, MN 55101

Dear Fred,

The undersigned companies present this proposal in response to the NAIC request for comments set forth by the Life and Annuity Task Force on August 5, 2019.

Respectfully,

Seth Detert, Securian Financial
Seth Harlow, Mutual of Omaha
Andrew Martin, Penn Mutual

The IUL Illustration Subgroup requested comments by August 30, 2019 on the following questions related to IUL illustrations:

- Should a product with a multiplier feature illustrate a higher scale than a product without multiplier features?
- To what extent should the 145% disciplined current scale factor apply to charges supporting bonuses and multipliers?

We categorized our comments and requests for direction into two items related to these topics. We would be happy to discuss our comments with you or the members of LATF.

Item #1 –Can charges impact assumed earned interest underlying the DCS. AG49 Section 5A

- We would like a change to AG49 Section 5A to clarify how charges within a contract that support index parameters, bonuses, multipliers, or any form of additional credits should be interpreted:
- Current AG49 wording
  - “If an insurer engages in a hedging program for index-based interest, the assumed earned interest rate underlying the disciplined current scale shall not exceed 145% of the annual net investment earnings rate (gross portfolio earnings less provisions for investment expenses and default costs) of the general account assets (excluding hedges for index-based credits) allocated to support the policy.”
- Recommended additions to the current wording
  - Alternative #1: The annual net investment earnings rate cannot include or be increased by any policy charges that are used to support index parameters, bonuses, multipliers, or any form of additional credits.
  - Alternative #2: If there are policy charges that are used to support index parameters, bonuses, multipliers, or any form of additional credits, the annual net investment earnings rate can be increased by the lesser of: (a) the amount of charges assessed;(b) a percentage of the charges assessed such that the charges as a percentage of account value does not exceed the guaranteed floor of the indexed account being tested.
• Alternative #3: If there are policy charges that are used to support index parameters, bonuses, multipliers, or any form of additional credits, the annual net investment earnings rate can be increased by the lesser of: (a) the amount of charges assessed; (b) a percentage of the charges assessed such that the charges as a percentage of account value does not exceed the guaranteed interest rate on the fixed account of the policy.

• We also recommend additional changes to AG 49 Section 5 to clarify how policies with multiple indexes should be tested. Each recommendation would be a unique sub bullet of AG 49 Section 5.
  • Recommended Addition #1: Each individually marketed product is required to be tested for self-support and lapse support individually. There cannot be aggregation of marketed products that share a single policy form.
  • Recommended Addition #2: Each indexed account needs to be tested for self-support and lapse support individually. To the extent that multiple indexed accounts produce the exact same illustrated values, they can be aggregated.

Item 2 – Variable/index loans and the 1% arbitrage limit. AG49 Section 6

• We believe that variable/index loans should continue to be illustrated, however we would support changing the language in AG49 above to make it clear that the “illustrated rate credited to the loan balance” is inclusive of all policy credits.

• Current AG49 wording
  o If the illustration includes a loan, the illustrated rate credited to the loan balance shall not exceed the illustrated loan charge by more than 100 basis points.

• Recommended changes to the wording
  o If the illustration includes a loan, the aggregate rate for all amounts credited to the loan balance (including all bonuses, multipliers, or any form of additional credits) shall not exceed the amount of loan interest charged by more than 100 basis points of the loan balance.

Re: National Association of Insurance Commissioners – Life Actuarial (A) Task Force – IUL Illustration (A)
Subgroup Request for Comments on Actuarial Guideline 49

Dear Fred,

I want to take this opportunity to thank you again for your leadership on the critically important issue of making updates to Actuarial Guideline 49 (AG49). The entire industry wants to accomplish the same goal: providing invaluable benefits to our customers in their times of need. It is only through a partnership among carriers and the regulators that we can accomplish that worthy goal.

I would like to begin by re-iterating Securian Financial’s principles on this complex issue:

- Securian Financial believes in transparency for the consumer and the advisor; without transparency, there cannot be understanding. Today, the way the industry illustrates some product designs lacks the necessary transparency for consumers and advisors to understand how the product performs and the associated risks.
- Securian Financial believes in providing clarity for the insurance carriers with regards to satisfying AG49 and other regulations; without clarity, there is an unlevel playing field. Today, there are strong differences of opinion as to how to interpret AG49 and the Model Illustration Law.
- Securian Financial believes in product innovation and consumer choice. However, Securian Financial does not believe all product innovations need to be illustrated. There are several product innovations today (e.g. certain indices, riders such as critical illness, etc.) that are discussed and presented to the consumer every day without being illustrated.
- Securian Financial believes illustrations should set appropriate expectations for future performance. We believe that some of the multipliers and participating loans currently being illustrated are setting overly aggressive expectations for the consumers. Securian Financial does not see any logic that would suggest a year over year cash value growth of 10+ percent inside an index universal life policy is appropriate.

To assist in bringing those principles to life, there is an attachment to this letter with several pages that demonstrate further transparency to the consumer, including

- A mock-up of an additional options page. This would be an example of how a carrier could conceptually talk about the risk and reward of the consumer incurring a higher level of charges to
potentially participate in a higher level of returns. By making this option an additive page and not part of the base illustration, transparency and understanding would be significantly increased while allowing carriers the freedom to innovate in their product designs.

- A mock-up of an additional page describing variable/index loans versus fixed loans. This page could be used in the case where the base illustration does not allow for variable/index loans to illustrate more favorably than fixed loans. Much like additive charges that create the potential for additional return, variable/index loans create additional risk in exchange for the potential for additional return.
- A mock-up of a charges disclosure page.
- A mock-up of a sequence of returns page. One attribute that would assist in consumer understanding how an indexed universal life policy operates would be to show a non-level return scenario. The attachment shows one conceptual way to show the impact of non-level returns.

As you see in each of the mock-ups, Securian Financial believes the information provided is important enough to require a client and advisor signature to ensure the disclosures are understood.

Securian Financial fully realizes and appreciates that these are simply drafts of what might become part of required disclosures, but we want to put the concepts on paper to match the words we have been saying and to provide a starting point for discussion.

If the industry decides to move forward with these concepts, Securian Financial will be more than willing to dedicate our time and resources to moving quickly from draft stage to final stage in partnership with other carriers and the regulators.

In addition, Securian Financial has submitted a letter in conjunction with some other carriers articulating position statements with which we believe all carriers could be comfortable and specific recommended changes to AG49. I wanted to take this opportunity to re-iterate Securian Financial’s stance on a few of the core issues:

- Securian Financial believes there should be a tight limit as to the amount of policy level charges that can be used to increase the indexing parameters and/or bonus mechanics. There is some suggested language in the multi-carrier letter, but Securian Financial encourages you to consider a concrete limit with regard to how much of the assumed earned rate can be multiplied by the 145% factor that resides in AG49. There was a wisdom to the crafting of the current version of AG49, which uses an explicitly defined historical average of the S&P 500 to calculate the maximum illustrated rate. The corollary here would be to explicitly define a historical average of General Account-like assets to calculate the maximum earned rate that can be multiplied by the 145% factor. An example would be a 20-year average of the Moody’s Corporate Bond Index for 10-year bond instruments.
- Securian Financial believes the industry would be in a better position if variable/index loans were not allowed to be illustrated, but instead explained on a concept page as described above.
- Securian Financial believes there should be some clarification made to the illustration actuary testing and certification requirements, including:
  - Changes need to be made to eliminate the aggregation of multiple marketed products using the same base policy form; each marketed product needs to pass on its own.
  - Each separately illustrated index account needs to pass on its own.
Fred, thank you for the several instances where you have taken your valuable time to meet with me and other representatives from Securian Financial. We know there is no perfect outcome here and stand ready to assist you in any way we can.

Respectfully,

Robert J Ehren
The below is an example of what a charges disclosure page could look like.

I have reviewed and understand the credits in the policy as presented are constant every year. I

Policy Owner ___________________________ Date ___________________________

Agent ___________________________ Date ___________________________

* To find the Best and the Worst Scenarios we calculated the geometric average annual credited rate for the S&P 500 for each daily 25-year period starting 12/31/1948 and ending with the 25-year period that ends on 12/31 of the prior calendar year.
Historical data
The 30-year historical index performance table shows past index performance along with a hypothetical crediting rate using our current growth cap, floor and participation rate. We also provide the historical compound average returns over designated periods for your illustrated indexed account options. Please keep in mind that historical performance does not represent future performance for these indexed accounts.

This product has index account options available to you that increase the charges in the contract in exchange for higher caps and/or higher credits to the policy, based upon the index return.

These are the options available on this policy:
• A is S&P 500 with 10% cap, no charge, no multiplier
• B is S&P 500 with 10% cap, 1.5% charge, 30% multiplier
• C is S&P 500 with 10% cap, 5% charge, 100% multiplier

Below is a chart of the last 30 years of S&P 500 returns to demonstrate the higher volatility of index crediting results, but also the potential for higher returns.

Please allow me to submit the following comments on behalf of Virginia regarding the following exposure:

**Actuarial Guideline 49 (AG 49) – Draft for 11/15/19 Exposure**

1. **Benchmark Index Account.** Section 3.C would seem to allow an Indexed Account with a multiplier to be a Benchmark Index Account and as such could lead to very high maximum credited rate in 4.B and possible double-counting in 4.E. For example, consider a product where only one Index Account is offered under a S&P 500 one-year point-to-point crediting rate strategy with a 5% account charge to fund an interest credit multiplier of 2.0 which doubles the option budget and the potential Indexed Credits. The Indexed Account would seem to meet all of the criteria in Section 3.C. To address this, I propose adding an additional requirement ix. for Benchmark Index Accounts in Section 3.C as follows:

   ix. The Supplemental Option Budget shall be 0%.

2. **Limits on Illustrated Bonuses or Other Enhancements.** Section 4.E is problematic in that it creates the potential for double-counting of interest credit multipliers. However, if Section 4.E is removed, then there is no explicit reference to limitations of bonuses or other enhancements in Section 4. Some actuaries have interpreted this to mean there is no explicit limit to illustrated bonuses or other enhancements in Section 4 and illustrate an index rate plus a bonus or other enhancement, so that the total credited benefits exceed the maximum illustrated rate (see Q.4.13 in the Life Illustrations Practice Note, updated February 2019 version). I propose adding a new Section 4.E, that would clarify that the maximum credited rate in Section 4.B is meant to set a bound for all types of indexed-related credits:

   E. The Indexed Credits under the illustrated scale for any policy year shall not exceed:

   i. the account or accumulation value of the policy, before any policy charges are deducted, multiplied by

   ii. the applicable rate calculated in 4(B).

   If interest is credited less frequently than once per year, the limit above may be applied in total over the interest crediting period so that the total Indexed Credits over the interest crediting period do not exceed the above limit. For example, if a two-year point-to-point indexed crediting strategy is used over policy years 9 and 10, the applicable rate in 4(B) is 6.0%, and the account value in policy years 9 and 10 is $100 and $110, respectively, then the total Indexed Credits for policy years 9 and 10 shall not exceed $12.60.

Thank you for providing me the opportunity to submit this comment.

Craig Chupp, FSA, MAAA
Life and Health Insurance Actuary

Mr. Fred Andersen  
Cc: Pat Allison  

Dear Fred:

The NAIC IUL Illustration (A) Subgroup requested proposals for edits to AG 49 and responses to the items below (in blue) by November 25, 2019. The attached draft AG49 provides a framework to address these items. The changes have the following goals:

- Multiplier and non-multiplier strategies will illustrate the same at the maximum illustrated rate,
- Strategies that modify the Benchmark Index Account (e.g. Cap buy-ups) will be addressed, and
- Illustrations for all types of index strategies will be subject to a consistent limit based on a company’s investment earned rate.

Given the limited timeframe for comments, we welcome the opportunity to collaborate further and discuss questions.

2. Section 4.E., to ensure relevance and consistency with Section 5 in light of changes to Section 5 and to ensure the coordination with Sections 4A and 4B to produce a clear and appropriate calculation.

The attached draft proposes language in Section 4 to create clear illustration limits that are applied across different types of index strategies. We believe the resulting illustrations will align with the regulators’ stated goals and avoid advantaging or disadvantaging any particular index strategy design. The new language covers index strategies that include charges to modify the Benchmark Index Account (such as Cap buy-ups), charges to support a multiplier bonus, both, or neither. These various index strategies will be consistently limited to a maximum net effective illustrated rate of 145% times the Annual Net Investment Earnings Rate (NIER).

To achieve this, the “Supplemental Option Budget”, as defined in the exposure draft, was replaced with two separate definitions in Sections 3G and 3H. The distinction is between charges used to support higher index crediting parameters (e.g. Cap buy-ups), which could create a new Benchmark Index Account, versus charges used to fund multipliers, which are applied outside of the maximum credited rate for the Benchmark Index. This bifurcation is
needed so that the charges can be reflected in the appropriate place in Sections 4B and 4C. Charges that affect the Benchmark Index Account, such as for Cap buy-up strategies, should not be added on top of the lookback rate in 4B(i) to prevent inappropriate double counting, but should be added in 4B(ii) to avoid disadvantaging these product designs. On the other hand, if a charge does not affect the lookback rate, such as for multipliers, it is added after the maximum credited rate is determined. This is accomplished in Section 4C in the attached draft. We believe when placing limits on illustrations which have charges deducted from the account value, defining the charges themselves rather than their relationship to a hedge budget provides more clarity, consistency in interpretation, and accuracy.

The numerical example below demonstrates how these product features will each be limited to the same net illustrated rate with the proposed language. This fits with the current wording of allowing multiple Benchmark Index Accounts, but ultimately limits all strategies to 145% times the NIER or, if less, to the maximum credited rate for their respective Benchmark Index Account.

Examples of proposed 4 (B) and 4 (C) language:

<td>7.4% - 1% - 0%</td>
<td>7.4% - 1% - 3%</td>
</tr>
</tbody>
</table>

Note: These examples demonstrate the mechanics of the formulas in the draft. They are representative, but do not show all possible strategy designs. All Indexed Credits are limited to a maximum net rate of 145% * NIER.
3. Section 5B (new part of Section 5), to ensure:
   a. Inappropriate double counting of credits or charges is avoided;
   b. Clarity is added, including defining the new term “net” in 5B(A); and
   c. Cap buy-ups are appropriately addressed.
   Supplemental math examples may be provided to add clarity.

The attached language in Section 5 was expanded to more clearly describe the rate as a net rate. The drafting note provides further clarification. The risk of inappropriate double counting resulting from Section 5 is avoided with Section 5B(A) being a net limit and specifying that the limit is 145% of the NIER which does not include additional charges. Additional edits to Section 5 are not needed for cap buy-ups, which are addressed in our proposed changes to Section 4.

4. Section 6B to ensure the 100 basis point loan limits is applied as intended.

The current language for Policy Loans only applies the 100 bps limit to Indexed Credits. If all types of bonuses are not included in this limit, it may be possible for the limit to be exceeded through other product features not directly tied to an index. Section 6B in the attached draft has updated language to address this concern.

Also, the Subgroup will accept proposals on potential compromise approaches for the inforce application issue, in case the Life Actuarial Task Force decides to take a compromise route instead of a straight-forward inclusion or exclusion of the new guidance to inforce illustrations.

If the revisions are put in place for inforce policies, we recommend this apply one year after the effective date of the revised AG 49. This would allow time for customer and producer education. Specific wording suggestions for this compromise have not been included in the attached draft AG49.

-----

We look forward to continuing discussions on ways to improve the attached language and, long term, on more holistic changes to illustrations to provide greater consumer clarity.

Regards,

Pete Rothermel
VP, CFO - Individual Life
Proposed AG 49 edits reflecting “possibility 2” supported by LATF, multipliers illustrating the same as non-multipliers

**Actuarial Guideline XLIX – Draft to discuss on 11/1/19 subgroup call – potential basis for exposure on 11/14/19 call**

**THE APPLICATION OF THE LIFE ILLUSTRATIONS MODEL REGULATION TO POLICIES WITH INDEX-BASED INTEREST**

**Background**

The *Life Insurance Illustrations Model Regulation* (#582) was adopted by the NAIC in 1995. Since that time there has been continued evolution in product design, including the introduction of benefits that are tied to an external index or indices. Although these policies are subject to Model #582, not all of their features are explicitly referenced in the model, resulting in a lack of uniform practice in its implementation. In the absence of uniform guidance, two illustrations that use the same index and crediting method often illustrated different credited rates. The lack of uniformity can be confusing to potential buyers and can cause uncertainty among illustration actuaries when certifying compliance with Model #582.

This guideline provides uniform guidance for policies with index-based interest. In particular, this guideline:

1. Provides guidance in determining the maximum crediting rate for the illustrated scale and the earned interest rate for the disciplined current scale.
2. Limits the policy loan leverage shown in an illustration.
3. Requires additional consumer information (side-by-side illustration and additional disclosures) that will aid in consumer understanding.

**Text**

1. **Effective Date**

   This Actuarial Guideline shall be effective as follows:

   A. Sections 4 and 5A, except as noted in iv., shall be effective for all new business and in force life insurance illustrations on policies sold on or after September 1, 2015.

   B. Effective March 1, 2017, Section 4 and Section 5A, except as noted in iv., shall be effective for all in-force life insurance illustrations on policies within the scope of this actuarial guideline, regardless of the date the policy was sold.

   C. Sections 6A and 7 shall be effective for all new business and in force life insurance illustrations on policies sold on or after March 1, 2016.

   D. Sections 4E, 5B, and 6B shall be effective for all policies sold on or after May 1, 2020.

2. **Scope**

   This Actuarial Guideline shall apply to any life insurance illustration that meets both (i) and (ii), below:

   A. The policy is subject to Model #582.

   B. Interest credits are linked to an external index or indices.

3. **Definitions**

   A. **Alternate Scale**: A scale of non-guaranteed elements currently being illustrated such that:
i. The credited rate for each Index Account does not exceed the lesser of the maximum credited rate for the illustrated scale less 100 basis points and the credited rate for the Fixed Account. If the insurer does not offer a Fixed Account with the illustrated policy, the credited rate for each Index Account shall not exceed the average of the maximum credited rate for the illustrated scale and the guaranteed credited rate for that account. However, the credited rate for each Index Account shall never be less than the guaranteed credited rate for that account.

ii. If the illustration includes a loan, the illustrated rate total amount credited as a result of the loan balance, including Indexed Credits and all other illustrated benefits and bonuses that impact the policy’s account value, shall not exceed the illustrated loan charges does not exceed the illustrated loan charge.

iii. All other non-guaranteed elements are equal to the non-guaranteed elements for the illustrated scale.

B. Annual Net Investment Earnings Rate: Gross portfolio annual earnings rate, less provisions for investment expenses and default cost, of the general account assets (excluding hedges for Indexed Credits) allocated to support the policy. Any asset-based charges or other policy charges that are used to increase the total amount spent to generate the Indexed Credits of the policy Index Parameter Charges and Index Bonus Charges are not included in Annual Net Investment Earnings Rate.

C. Benchmark Index Account: An Index Account with the following features:

i. The interest calculation is based on the percent change in S&P 500® Index value only, over a one-year period using only the beginning and ending index values. (S&P 500® Index ticker: SPX)

ii. An annual cap is used in the interest calculation.

iii. The annual floor used in the interest calculation shall be 0%.

iv. The participation rate used in the interest calculation shall be 100%.

v. Interest is credited once per year.

vi. Account charges do not exceed the account charges for any corresponding Index Accounts within the policy in any policy year. If Index Accounts with different levels of account charges are offered with the illustrated policy, more than one Benchmark Index Account may be used in determining the maximum illustrated crediting rates for the policy’s Index Accounts, subject to the requirements of 5.D. However, for each Index Account within the policy, only one Benchmark Index Account shall apply. Any rate calculated in 4 (B) shall not apply for an Index Account if the account charges for the applicable Benchmark Index Account exceed the account charges for that Index Account in any policy year. Account charges include all charges applicable to an Index Account, whether deducted from policy values or from premiums or other amounts transferred into such Index Account.

vii. Additional amounts credited are not less than the additional amounts credited for any corresponding Index Accounts within the policy in any policy year. Any rate calculated in 4 (B) shall not apply for an Index Account if the additional amounts credited for the applicable Benchmark Index Account are less than the additional amounts credited for that Index Account in any policy year. Additional amounts include all credits that increase policy values, including but not limited to experience refunds or bonuses.

viii. There are no limitations on the portion of account value allocated to the account.

D. Fixed Account: An account where the credited rate is not tied to an external index or indices.

E. Index Account: An account where the credited rate is tied to an external index or indices.

F. Indexed Credits: Any interest credit, multiplier, factor, bonus, or other enhancement to policy values that is linked directly or indirectly to an index or indices.
G. Supplemental Option Budget Index Parameter Charges: Any asset-based charges or other policy charges that are
deducted from the account value to support index parameters (e.g., cap rate, participation rate, floor rate) explicitly
used to increase the total amount spent to generate the Indexed Credits of the policy. This amount is expressed as a
percent of the policy’s indexed account value.

*Drafting Note: This is intended to capture charges that modify the Benchmark Index Account lookback rate, such
as cap buy-up strategies, or cause development of a hypothetical Benchmark Index Account. Section 3(C) vi could
be updated to use these defined terms.*

H. Index Bonus Charges: Any asset-based charges or other policy charges that are deducted from the account value to
support bonuses, such as multipliers or other enhancements to policy values, that are linked to an index or indices.
This amount is expressed as a percent of the policy’s indexed account value.

*Drafting Note: This is intended to capture charges that support multipliers or other bonuses that are applied outside
of the Benchmark Index Account lookback rate. This is the counterpart to the Index Parameter Charges. A charge
could fall under the definition in either 3G or 3H, or be split between both; however this is not intended to allow
any one charge to be double counted in both definitions.*

4. Illustrated Scale

The credited rate for the illustrated scale for each Index Account shall be limited as follows:

A. Calculate the geometric average annual credited rate for each applicable Benchmark Index Account for the 25-year
period starting on 12/31 of the calendar year that is 66 years prior to the current calendar year (e.g., 12/31/1949 for
2015 illustrations) and for each 25-year period starting on each subsequent trading day thereafter, ending with the
25-year period that ends on 12/31 of the prior calendar year.

i. If the insurer offers an applicable Benchmark Index Account with the illustrated policy, the
illustration actuary shall use the current annual cap for the applicable Benchmark Index Account
in 4(A).

ii. If the insurer does not offer an applicable Benchmark Index Account with the illustrated policy,
the illustration actuary shall use actuarial judgment to determine a hypothetical, supportable
current annual cap for a hypothetical, supportable Index Account that meets the definition of a
Benchmark Index Account, and shall use that cap in 4(A).

B. For each applicable Benchmark Index Account, the arithmetic mean of the geometric average annual credited rates
calculated in 4(A) shall be the maximum credited rate(s) for the illustrated scale shall be the minimum of (i) and (ii):

i. The arithmetic mean of the geometric average annual credited rates calculated in 4(A)

ii. The sum of (145% times the Annual Net Investment Earnings Rate), plus (any Index Parameter
Charges adjusted for timing differences between when the charges are taken out and when interest
is credited).

C. Total Indexed Credits may not exceed the sum of the maximum credited rate calculated in 4(B) plus any Index
Bonus Charges, adjusting for timing differences between when the charges are taken out and when interest is
credited.

C. For other Index Accounts using other equity, bond, and/or commodity indexes, and/or using other crediting
methods, the illustration actuary shall use actuarial judgment to determine the maximum credited rate for the
illustrated scale. The determination shall reflect the fundamental characteristics of the Index Account and the
parameters shall have the appropriate relationship to the expected risk and return of the applicable Benchmark Index
Account. In no event shall the credited rate for the illustrated scale exceed the applicable rate calculated in 4(B)
or shall the total Indexed Credits exceed the limit calculated in 4(C).
E. At the beginning of each calendar year, the insurer shall be allowed up to three (3) months to update the credited rate for each Index Account in accordance with 4 (B) and 4 (C).

F. The table below illustrates four examples of the calculation of the maximum credited rate for the illustrated scale and the maximum illustrated Indexed Credits. Example 1 assumes Index Parameter Charges and Index Bonus Charges are zero. Example 2 assumes Index Bonus Charges are positive. Example 3 assumes Index Parameter Charges are positive. Example 4 assumes both Index Parameter Charges and Index Bonus Charges are positive.

4 (B) i Historical Credited Rate for Benchmark Index Account
- 6% = 6%
- 6% = 6%
- 7.4% = 7.4%
- 7.4% = 7.4%

4 (B) ii 145% * NIER + Index Parameter Charges
- 6.53% = 1.45 * 4.5% + 0%
- 6.53% = 1.45 * 4.5% + 0%
- 7.53% = 1.45 * 4.5% + 1%
- 7.53% = 1.45 * 4.5% + 1%

4 (B) Maximum Illustrated Credited Rate
- 6% = Min(6%, 6.53%)
- 6% = Min(6%, 6.53%)
- 7.4% = Min(7.4%, 7.53%)
- 7.4% = Min(7.4%, 7.53%)

4 (C) Maximum Indexed Credits
- 6% = 6% + 0%
- 9% = 6% + 3%
- 7.4% = 7.4% + 0%
- 10.4% = 7.4% + 3%

4 (C) Maximum Indexed Credits less Index Charges
- 6% = 6% - 0% - 0%
- 6% = 9% - 0% - 3%
- 6.4% = 7.4% - 1% - 0%
- 6.4% = 10.4% - 1% - 3%

Drafting note: These examples demonstrate the mechanics of the formulas in Section 4. They are representative but do not show all possible strategy designs. Ultimately, all Indexed Credits are limited to a maximum net rate of 145% * NIER.

If charges that fund a Supplemental Option Budget are deducted from the illustrated cash value, then Indexed Credits generated by the return from the Supplemental Option Budget within the scenario being illustrated may be illustrated in an amount up to, but not exceeding, such charges.

Drafting note: The intention is to specify that designs with multipliers or other enhancements should not illustrate better than non-multiplier designs.

5A. Disciplined Current Scale

The earned interest rate for the disciplined current scale shall be limited as follows:

A. If an insurer engages in a hedging program for index-based interest, the assumed earned interest rate underlying the disciplined current scale shall not exceed 145% of the annual net investment earnings rate (gross portfolio earnings less provisions for investment expenses and default costs) of the general account assets (excluding hedges for index-based credits) allocated to support the policy.

B. If an insurer does not engage in a hedging program for index-based interest, the assumed earned interest rate underlying the disciplined current scale shall not exceed the annual net investment earnings rate of the general account assets allocated to support the policy.
C. These experience limitations shall be included when testing for self-support and lapse-support under Model #582, accounting for all benefits including illustrated bonuses.

D. If more than one Benchmark Index Account is used for an illustrated policy, each set of Index Accounts that correspond to each Benchmark Index Account must independently pass the self-support and lapse-support tests under Model #582, subject to the limitations in 5 (A), (B), and (C). All experience assumptions that do not directly relate to the Index Accounts as to expenses, mortality, investment earnings rate of the general account assets, lapses, and election of any Fixed Account shall equal the assumptions used in the testing for the entire policy.

5B. Disciplined Current Scale

The annual earned interest rate for underlying the disciplined current scale shall be limited as follows:

A. If an insurer engages in a hedging program for index-based interest Indexed Credits, the assumed annual net investment performance underlying the disciplined current scale, inclusive of all general account assets and hedge assets that support the policy and net of default costs and investment expenses, including the amount spent to generate the Indexed Credits of the policy, shall not exceed 145% of the Annual Net Investment Earnings Rate.

Drafting Note: The focus was shifted from the earned rate to the investment performance to distinguish the term from that in the Model Regulation and avoid creating inconsistency with Section 4. The limit is based on a Net rate, so it does not include multiplier returns in the 145% limit. This would still allow reflecting the multiplier hedge return in DCS testing up to the amount spent to hedge the multiplier, as long as the corresponding hedge cost is also reflected, resulting in a net effect of 0.

i. the Annual Net Investment Earnings Rate, plus

ii. 45% times the Annual Net Investment Earnings Rate, plus

iii. 0% times the Supplemental Option Budget.

145% of the annual net investment earnings rate (gross portfolio earnings less provisions for investment expenses and default costs) of the general account assets (excluding hedges for index-based credits) allocated to support the policy.

A.B. If an insurer does not engage in a hedging program for index-based interest Indexed Credits, the assumed annual earned interest rate underlying the disciplined current scale for the policy shall not exceed the Annual Net Investment Earnings Rate of the general account assets allocated to support the policy.

B.C. These experience limitations shall be included when testing for self-support and lapse-support under Model #582, accounting for all Indexed Credits and all other illustrated benefits and including illustrated bonuses.

D. If more than one Benchmark Index Account is used for an illustrated policy, each set of Index Accounts that correspond to each Benchmark Index Account, including all illustrated Indexed Credits that apply to an Indexed Account, must independently pass the self-support and lapse-support tests under Model #582, subject to the limitations in 5 (A), (B), and (C). All experience assumptions that do not directly relate to the Index Accounts and Indexed Credits as to expenses, mortality, investment earnings rate of the general account assets, lapses, and election of any Fixed Account shall equal the assumptions used in the testing for the entire policy.

The table below illustrates two examples of the calculation of the assumed annual earned interest rate underlying the disciplined current scale and assumes the insurer engages in a hedging program. Example 1 assumes the insurer’s Supplemental Option Budget is zero. Example 2 assumes the insurer’s Supplemental Option Budget is positive.

#### 6A. Policy Loans

If the illustration includes a loan, the illustrated rate credited to the loan balance shall not exceed the illustrated loan charge by more than 100 basis points.

#### 6B. Policy Loans

If the illustration includes a loan, the total index credits amount credited as a result of illustrated rate credited to the loan balance, including Indexed Credits and all other illustrated benefits and bonuses that impact the policy’s account value, shall not exceed the sum of the interest rate charged to the loan and any asset-based charges for Indexed Credits applicable to the loan balance illustrated loan charge by more than 100 basis points. For example, if the loan charge plus asset-based charges for Indexed Credits is 6% of the loan balance, Indexed Credits and all other illustrated benefits and bonuses that impact to the loan balance cannot exceed 7%, regardless of product features available.

#### 7. Additional Standards

The basic illustration shall also include the following:

- **A.** A ledger using the Alternate Scale shall be shown alongside the ledger using the illustrated scale with equal prominence.
- **B.** A table showing the minimum and maximum of the geometric average annual credited rates calculated in 4 (A).
- **C.** For each Index Account illustrated, a table showing actual historical index changes and corresponding hypothetical interest rates using current index parameters for the most recent 20-year period.
November 25, 2019

Mr. Fred Andersen  
Chair, NAIC IUL Illustration (A) Subgroup  
Mr. Reggie Mazyck  
Life Actuary, NAIC

Re: Questions on IUL Illustrations

Dear Mr. Andersen and Mr. Mazyck,

Global Atlantic Financial Group, through Accordia Life and its predecessor companies, has been continuously offering IUL products since the product was first introduced in the 1990’s, longer than any other carrier in the market today. We participated in the development of the original AG49 and thank the IUL Illustrations Subgroup for the opportunity to provide input to discussions on potential AG49 updates with this, our fourth comment letter of 2019.

Our March comment letter recommended that the underlying intention of AG49 be applied to all components of interest credits, inclusive of multipliers.

AG49’s goals of consistency and transparency were at the heart of our June comment letter recommendations of:

- Whether explicit or implicit charges are used to create a higher hedging budget, the resulting interest credit should follow the same underlying guidance of AG49 for interest crediting absent such charges, and
- The 100bp loan leverage limit should be applied collectively to all sources of index returns.

We reiterated these items within our comment letter from earlier this month as we noted that:

- Products with multipliers would not illustrate the same as non-multiplier products as each benchmark account has a unique maximum illustrated rates while, per Section 4E, multiplier products are subject to a separate limit.
- Products with multipliers would not illustrate the same as non-multiplier products as, per Section 6B, different loan leverage amounts result for multiplier and non-multiplier products due to the charges for the multiplier.

Global Atlantic believes the current draft wording fails to bring all IUL illustrations in line with the underlying intention of AG49. We therefore recommend that additional time be taken to ensure that any AG49 updates:

1. Provide consistent guidance for interest crediting regardless of the source of hedging budget,
2. Generate consistent loan leverage limits regardless of product design, and
3. Create no bias in the manner for which hedge budgets are derived or investment returns are generated.

AG49 provides uniformity in illustrating IUL’s index value proposition. Products that offer higher index growth potential due to a higher cap, for example, are provided a higher maximum illustrated rate reflective of that increased potential. A product’s growth potential does not change based on the source of the hedge budget. Any AG49 updates should continue to provide for maximum illustrated rates commensurate with the growth potential and should not vary the maximum rate based on the source of the hedge budget.

AG49 provides a 100bp maximum difference between the rate charged on loaned funds and the rate credited on loaned funds. The intent of this provision is to limit the index value proposition to 100bps on loaned funds. Ensuring this value proposition limit is applied to the total index credit will not only result in compliance with the spirit of AG49 but also achieve the illustrated consistency being sought between multiplier and non-multiplier products.

AG49 directs the illustration actuary on earned rate assumption within the disciplined current scale given the use of hedge assets on IUL products. Limitations for this assumption are appropriate. The return on the hedge asset does not depend on the asset source; any limitations should not depend on the source of the asset. A consistent limitation within Section 5B would create the uniform practice desired without bias or incentive to certain product designs or hedge budget bifurcation.

With a consistent limitation in Section 5B, we believe Section 4E can be removed. For consistent loan leverage limits, we believe Section 6B should read “If the illustration includes a loan, the total index credits to the policy loan balance shall not exceed the illustrated loan charge, including any asset-based or other policy charges deducted to hedge the Index Credits as a result of the loan balance, by more than 100 basis points.”

In summary, Global Atlantic recommends further refinement of proposed updates to facilitate consistent and uniform illustration of the index value proposition while ensuring the spirit of AG49 through appropriate loan leverage and disciplined current scale limits.

David P. Wilken
President, Life
Introduction to VBT Analysis Process

Academy Life Experience Committee and SOA Preferred Mortality Oversight Group ("Joint Committee")

NAIC 2019 Fall National Meeting - Life Actuarial (A) Task Force - Austin, Texas

Agenda

- Monitoring 2015 VBT for when to modify
- Metrics to be reviewed
- Triggers for action
- Potential corrective actions
- Next steps

Monitoring 2015 VBT for Need to Modify

- In VM-20, Section 9.C, companies are required to use an Industry Mortality Table for determining their prudent best estimate mortality.
- The industry mortality table is currently based on the 2015 VBT and corresponding RR Tables, advanced forward to the valuation date using prescribed mortality improvement factors published by the Society of Actuaries (SOA).

Monitoring 2015 VBT for Need to Modify, cont’d

- Once PBR is mandatory, there will be a significant increase in the number of contributing companies and amount of exposure and claims via the mandatory data collection within VM-51.
- The “Joint Committee” is recommending a method based on analytics to determine when there is sufficient change in the underlying mortality relative to the experience to warrant changes to the table.
Metrics to Be Reviewed

- Confidence Intervals (CI) based on normal distribution
  - CI of expected deaths vs. actual deaths
  - CI of A/E’s vs. 100% reference
  - Proposed 95% CI; can be parameterized
  - CI of [A-E]
- Amount based only
  - VBT based on amount-based experience
- Test 3rd moments to test if statistically <> 0
- Track/check Bühlmann coefficients based on recent data

New Calculated Fields—to Be Added to Individual Life Mortality data

- Expected deaths and A/E’s with and without mortality improvement adjustment to current observation year
- Based on 2019 YE VM-35/AG38 mortality improvement factors
- Components to calculate Variance
  - By count and amount
  - To be used in CI calculation (normal distribution)
- Will facilitate Limited Fluctuation and Bühlmann Credibility calculations
- Components to calculate 3rd Moment
  - By count and amount
  - May be used in a future, enhanced CI calculation that takes skewness into account; current limitations in software capabilities and budget prevent this today

Data Partitions for Review

- Determine how many years of data to use
- Will partition and review CI’s and [A-E] of data by
  - Face amount bands
  - Gender
  - Age groups—quinquennial age groups for oldest attained ages
  - Duration groups
  - Nonsmoker/smoker status; will consider going down to preferred levels but lack of credibility may preclude this
- Each partition will be fully credible (~5,000 claims) based on frequency and severity

Trigger for Action

- Determine total number of partitions
- Determine total number of partitions outside CI
- [A-E] by amount results used to determine materiality
- If number outside CI greater than expected, action needed by VBT team
- For example, if using 95% CI and 200 partitions
  - 10 partitions should be outside of CI, 5 above and 5 below
- Monitor trends, if nearing the limit—create watchlist, may do additional analysis
### Potential Corrective Actions on Current VBT

- Slope adjustments using multiplicative factors
- Adjustments to mortality improvement factors
- New VBT developed
- $|A-E|$ by amount results used to prioritize areas of the VBT to adjust

### Software

- Recommend Tableau as delivery platform for data and calculations
- Benefits of Tableau
  - VBT team able to work with large ILEC datasets
  - CI calculations can be added using new calculated fields
  - Grouping feature can be used to create partitions of the data
  - Create visual displays of the data and areas of concern
- Current Limitations of Tableau
  - CI calc with skewness requires a new "R" function to be developed and a Linux server. Will complete a proof of concept in 2020 and determine whether to proceed with a future implementation.

### Next Steps

- Provide MIB and NAIC with request to add new calculated fields and complete Bühlmann calculations
- MIB to add new fields to 2009–2017 data
- NAIC to add new fields to 2015 test data and 2018+
- Complete Tableau calculations and visualizations in first half 2020
- Present to LATF in Summer 2020

### Appendix
New Calculated Fields

Re: Amendment Proposal 2019-56, Revisions to VM-51 Data Elements for AUW

Thank you for the opportunity to provide input on this proposal.

While we can appreciate the interest in collecting additional data, we struggle to understand the practical value potential of the current proposal. Because of several specific concerns noted below, especially regarding consumer data privacy and security, we believe that this proposal requires a tighter focus, and would benefit from further discussion and revision.

1. Privacy and Security
   The privacy and security of our applicants’ information is of the utmost importance to us. We go to great lengths to protect that information, and to comply with all regulations regarding the same. We would be very concerned about the sharing of any data, especially highly sensitive medical information at the individual level, with third parties and outside of our data environment.

2. Data Complexity
   Additionally, the depth and complexity of this expanded data scope increase the likelihood that carriers make different interpretations, resulting in non-uniform submissions for certain data elements. This in turn will render those elements unusable (or worse, misleading), effectively defeating the intended purpose of the expanded data.

3. Underwriting Regime Definitions
   Fundamentally, we struggle to see how the additional data breadth and granularity will actually enable more effective mortality table construction or establishment of more appropriate reserves.

The recent perceived innovations in the underwriting process, commonly referred to as “accelerated” underwriting, are in many respects an extension of existing common practice (e.g. consider how medical records, aka “APS”, are typically only ordered at older ages and higher face amounts, or for cause). There is no obvious reason why this most recent underwriting iteration would necessitate a substantial overhaul to the data collection methodology for this process.

Also, the recent perceived underwriting innovations are very immature, and rapidly evolving. It is probable that in just a few years, many of the data elements currently being explored will no longer be relevant, and that new items will have emerged as well. Trying to collect information on some of these new elements is likely to be wasted effort.
If more specific knowledge about how a policy was underwritten would add value to the various stakeholders, there seem to be several viable and more practical alternatives, such as submitting metadata about the type underwriting or tests used, rather than case-level data and test results.

4. Operational Costs

And finally, this expansion does generate a high degree of operational difficulty and cost. The issues are myriad, and include lack of available data, data maintained in disparate locations, and data maintained in image rather than structured format. The proposed phasing in of the requirements does not address the fundamental issue – namely, that a significant capital investment will be required to enable compliance, yet, as mentioned above, there is no clear expected value to be gained, for neither the carrier nor the consumer. Increasing the operating costs of carriers ultimately results in increased prices in market to be borne by consumers.

We thank you for your consideration, and look forward to continued dialogue on this important issue.

Sincerely,

Brian Guntli, FSA, MAAA
Director and Actuary
Allstate Life Insurance Company
October 7, 2019

Mr. Mike Boerner
Chair, NAIC Life Actuarial Task Force

Re: Accelerated Underwriting Data Elements

Dear Mike:

The American Council of Life Insurers (ACLI)\footnote{ACLI is a Washington, D.C.-based trade association with approximately 290 member companies operating in the United States and abroad. ACLI advocates in state, federal, and international forums for public policy that supports the industry marketplace and the 75 million American families that rely on life insurers' products for financial and retirement security. ACLI members offer life insurance, annuities, retirement plans, long-term care and disability income insurance, and reinsurance, representing 95 percent of industry assets, 93 percent of life insurance premiums, and 98 percent of annuity considerations in the United States. Learn more at www.acli.com.} appreciates the opportunity to comment on the exposed Accelerated Underwriting Data Elements on behalf of our member companies.

The ACLI has significant concerns about the current scope of the proposal, which are outlined below. These concerns echo many of the concerns we expressed in our November 7, 2017 letter. We are concerned that in its current state, the request does not serve the needs of consumers, regulators, or industry. ACLI would recommend that this APF be assessed in much greater detail through thorough dialogue on the regulatory and predictive value of the additional data elements, especially as regards the vision for turning the additional data into more effective reserving or other practical benefits. In addition, ACLI would encourage further review of retrospective elements and the timing of prospective elements.

1. Consumer Privacy and Confidentiality

ACLI member companies treat the privacy and security of our customers’ information very seriously, and would be very concerned about the sharing of data, especially highly sensitive and unique medical information at the individual level, with third parties and outside of our data environment. These concerns include, but are not limited to, elements capturing the following data:

   i. Personal history information captured in items 86-101;
   ii. Family history information captured in items 128-152;
   iii. Detailed medical results captured in item 104-106, 108-109, 111-112;
   iv. Other personal information captured in item 118, 121-127.

2. Level of Granularity

ACLI believes that there should be a discussion of the appropriateness of collecting underwriting data at the policy level rather than at the level of the underwriting regime for the policy. This can include elements similar to existing items 73-85, but applied generally for the underwriting practices the company follows within certain age groups, face amounts, or risk classes. An underwriting-regime-level of
detail should generally be sufficient for studying life mortality, and categorizing experience into similar underwriting frameworks as needed. While many companies collect such data on an individual basis, we are concerned about it being required for reporting purposes for both consumer privacy and the sheer amount of data to be collected.

Further, the depth and complexity of this expanded data request increase the likelihood that carriers make different interpretations, resulting in non-uniform submissions for certain data elements. This in turn renders those elements unusable (or worse, misleading), effectively defeating the intended purpose of the expanded data.

ACLI acknowledges that more granular data might be beneficial as mortality improvement assumptions are able to set using insured population data, and should be part of the conversation about the level of granularity in the data collection.

3. Applicable Timing of the Data Elements

We believe there needs to be greater clarification of time expectation of the new elements. For example, if an element is mandatory in 2021, given the lag in reporting, it would imply companies would need to be collecting that data in 2019, before the APF would be fully adopted through the Valuation Manual updating process. It is an unrealistic expectation for companies to plan on retaining such data before the requirements are finalized. We would advise further deferring these additional elements no less than 1 to 2 years to properly allow companies an opportunity to update their internal processes to maintain such data.

Even if we are incorrect in our assumptions on timing, many of these fields are likely too new to consistently gather useful data. We do not think the timing is reasonable for elements related to marketing data or credit-based risk score, for example.

4. Operational Burden

This dramatic expansion of required data elements and the accompanying timetable for collection create an undue operational burden for many companies. The issues are myriad: lack of available data, data maintained in disparate locations, and data maintained in unstructured formats such as images or PDFs. Many member companies operate under disciplined and lean technology structures, with prescribed system change protocols and release dates scheduled in advance; in this environment, it can take many months or even years to implement changes. The proposed phasing in of the requirements does not address the fundamental issue – namely, that a significant capital investment will be required to enable compliance, yet, as mentioned in the opening general commentary, there is no expected value to be gained from this exercise, neither for the carrier nor the consumer.

We look forward to a discussion of these issues.

Sincerely,

cc Reggie Mazyck, NAIC
Comments for the Center for Economic Justice
To the Experience Reporting Subgroup of LATF
VM-51 Experience Reporting

November 10, 2019

The Center for Economic Justice offers the following comments in response to the VM-51 exposure draft released following the Summer 2019 National Meeting.

All page references are to the page numbers in the LATF meeting materials for the Summer 2019 national meeting.

Page 93

The scope of reporting includes direct written business and assumption reinsurance where the assuming company is legally responsible for benefits and claims paid but excludes reinsurance assumed from a ceding company to avoid double counting by an insurer and by its reinsurer.

It would be useful to provide examples of which entity is responsible for reporting what experience in various situations. For example, when does the direct writer’s responsibility for reporting end (if ever) if it utilizes assumption reinsurance or some other mechanism? What is the direct insurer’s responsibility if the assumption reinsurer is an alien insurer?

Page 98

For the “segment type” data field, is a data element “primary insured additional permanent rider” needed?

Page 98

For the “type of application” data field, the data elements mix how the application information is assembled (paper, electronic form, verbal) with how the application information is delivered – (internet, paper). This data element should be clarified – perhaps to “method of collecting information from the consumer” with data elements for paper form completed by consumer, electronic form completed by consumer, phone application. Data elements for multiple approaches might be necessary.
In addition, a number of insurers are utilizing data pre-fill for applications in which the insurer utilizes third-party sources to obtain information about the consumer from sources other than the consumer. A Y/N data element for “consumer data obtained from third-party sources” might be useful to distinguish applications that relied upon only data provided by the consumer or upon consumer-supplied data plus third-party data.

For the “applicant type” data field, can a COLI or BOLI or Trust-Owned also be either individual or group? It might be useful to break applicant type into two or three items – individual or group and type of group.

For the “gender” data field, is clarification or expansion needed to recognize transgender people?

For the “smoker and non-smoker classes” data fields, why are smoker and non-smoker classes separated into two data fields? Perhaps the two data fields could be combined into one data field – class – while keeping all the segments listed. With new methods of underwriting, smoker/non-smoker may become one characteristic of several that determine a class. For illustration, an insurer might develop a 10-class system in which smoker/non-smoker, credit score, social media score and more are used to determine class placement. Another approach would be to have separate data fields for the components of class determination, such as a separate data field just for smoker/non-smoker.

Also, to be meaningful for any type of aggregation purposes, a data field is needed to report the total number of smoker and non-smoker classes. Third-preferred class for an insurer with three classes is significantly different from third-preferred class for an insurer with ten classes.

Finally, with the advent of AUW and scoring algorithms, the number of classes may grow exponentially. That has been the experience on the property casualty side. For example, for personal auto, Allstate went from nine classes to 384 in the mid 2000’s and now employs tens or hundreds of thousands of classes.
CEJ Comments to LATF Experience Reporting Subgroup: VM 51
November 10, 2019
Page 3

Page 110

For the “Length of Surrender Charge Period” data field, what is the purpose or intended use of these data? We ask because the reporting options are ten-year periods that seem too broad for meaningful analysis. It seems like the more granularity would facilitate better data analysis. In addition, we suggest that instead of a series of ten-year periods for reporting options, this data element simply require the length of the surrender charge period in years. The statistical agent will be able to create time periods if needed, but the specific number of years will permit more robust analysis.

Page 110:

For the “Distribution Channel” data field, two concepts are mingled – distribution and marketing. Some of the reporting options refer to the intermediary distributing the product – career, independent, broker, IMO, financial planner – while other options refer to marketing – website, direct mail, print media, tv, telephone. The data element should be clarified and limited to distribution channel. If type of marketing is relevant, than a separate data field is advisable.

In any event, reporting choices should be defined to ensure the choices are mutually exclusive or that a reporting option is provided to permit multiple selections.

Page 120

For the “Type of Underwriting Requirement” data field, two concepts are mingled – type of underwriting and method of acquisition (guaranteed issue, term conversion, group conversion, exercise of a guaranteed insurability option). These latter categories seem to be variations of “not underwritten” and belong in a different data field.

Definitions of the terms – traditional, simplified, guaranteed, accelerated underwriting – are needed to ensure the choices are mutually exclusive and understandable to reporting companies.

Page 120

For the “Is financial data of any kind used in a marketing pre-screening process?” data field, “financial data” should be defined as it is a very broad concept. This data element might be broken out into consumer credit information and non-credit consumer financial data.

Page 121

For the “Was there an underwriter review?” data field, we suggest the choices be expanded to unknown, yes via algorithm only, yes via human, no.
CEJ Comments to LATF Experience Reporting Subgroup: VM 51
November 10, 2019
Page 4

Page 121

For the “After the policy is issued, is monitoring employed?” data field, we suggest adding Yes, wearable or other internet-enabled devices

Page 121

For the “Was the application designed with Sentinel Value or Behavioral Economics considerations?” data field, the definition of “Sentinel Value” describes a particular application design while the definition of “Behavioral Economics” describes a field of research. We suggest this data field needs further consideration and more specificity towards specific techniques or practices. Ask if these issues were considered is overly broad.

Page 122

For the “predictive analytics for marketing selection (lead generation)” data field, we suggest some refinement is needed. For decades, insurers have obtained lists of consumers from consumer reporting agencies (credit bureaus) who met certain qualifications (such as a minimum credit score). This was/is a crude form of predictive analytics. We suspect the intent of this data field is to identify more refined approaches that might utilize non-credit data. We suggest the following reporting options: unknown, no, yes based only consumer credit information, yes based only non-credit consumer data, yes based on consumer credit information plus additional data.

Page 122

For the “predictive analytics for underwriting triage or risk classification” data field, we suggest some refinement is needed. Traditional underwriting and risk classification utilizes predictive analytics based on mortality tables and selected consumer characteristics. The term “predictive analytics” should be defined to distinguish the information sought with this data field from traditional predictive analytics used for underwriting and risk classification.

Pages 123 to 125

The data fields on these pages relate to health status and medical conditions of the consumer. We assume that all of these fields intend to collect these data as of the date of application, but a statement in that regard would be useful. We would note that with insurers’ access to data from consumers’ wearable devices and more widespread use of electronic medical records, insurers can update medical condition information routinely and rapidly.
For the financial and credit data fields, we offer the following. “Credit data” presumably means data from a credit bureau, which is technically known as a consumer reporting agency pursuant to the Fair Credit Reporting Act, which is the federal law that permits the use of such information for insurance underwriting. While, historically, some insurers reviewed consumer credit reports to identify specific events – such as a bankruptcy or other public record – for the past 25 years, insurers have utilized consumer credit data indirectly through the use of credit-based insurance scores.

In addition, “credit data,” understood as information in a consumer credit report, was historically limited to information on lines of credit – mortgages, auto loans, personal loans, credit cards – and consisted of payment history, amounts and types of credit and public records such as bankruptcy and loans in collection. However, in recent years, credit bureaus have begun to add “alternative” data to consumer credit files, including utility, telecom and rental payments.

We provide this background to suggest that data items 113, 114 and 115 could be refined to Financial Data Other Than a Consumer Credit Report; Consumer Credit Data Other Than a Credit-Based Scoring Algorithm and Credit-Based Insurance Score or Other Credit-Based Algorithm.

On page 126, there are three data elements related to driving – motor vehicle records, driving record – moving violation and driving record – specific violations. On page 127, we find the data field “driving record.” It is unclear what the data field on page 127 is attempting to capture that is not already captured in the page 126 data fields.

In addition, some vendors provide motor vehicle record information that expands upon that available in an individual state’s motor vehicle record. For example TransUnion provides a series of products related to driving violations1

Driving violations have historically been categorized as minor or major. Speeding may be a minor or major violation depending on how excessive the speeding is.

Based on the above, we suggest the following.

Data Field: Driving Record Information Used: No, Yes Major Violations Only, Yes All Violations, Yes, All Violations and Other Driving Record Information

1 https://www.transunion.com/resources/transunion/doc/products/resources/P-driverrisk-ig.pdf
Other Considerations

We suggest data fields that ask if the insurer utilized social media and facial analytics for underwriting (limited to the decision to accept or reject the applicant) or risk class placement.

Appendix 2: Plan Design Data Elements and Format ....................................................................
Appendix 3: Underwriting Specifications Data Elements and Format ............................................

Section 1: Introduction

A. The experience reporting requirements are defined in Section 3 of VM-50. The experience reporting requirements
state that the Experience Reporting Agent will collect experience data based on statistical plans that are defined in
VM-51 of the Valuation Manual. Statistical plans are to be added to VM-51 of the Valuation Manual when they
are ready to be implemented.

B. Each statistical plan shall contain the following information:

1. The type of experience data to be collected (e.g., mortality experience; policy behavior experience, such as
surrenders, lapses, conversions, premium payment patterns, etc.; and company expense experience, such as
commission expense, policy issue and maintenance expense, company overhead expenses etc.);

2. The scope of business to be included in the experience data to be collected (e.g., line(s) of business, such as
individual or group, life, annuity or health; product type(s), such as term, whole life, universal life, indexed life,
variable life, fixed annuity, indexed annuity, variable annuity, LTC or disability income; and type of
underwriting, such as medically underwritten, simplified issue (SI), GI, accelerated, etc.);

3. The criteria for determining which companies or legal entities must submit the experience data to be collected;

4. The process for submitting the experience data to be collected, which will include the frequency of the data
collection, the due dates for data collection and how the data is to be submitted to the Experience Reporting
Agent;

5. The individual data elements and format for each data element that will be contained in each experience data
record, along with detailed instructions defining each data element or how to code each data element. Additional
information may be required, such as questionnaires and plan code forms that will assist in defining the
individual data elements that may be unique to each company or legal entity submitting such experience data
elements;

6. The experience data reports to be produced.

Section 2: Statistical Plan for Mortality

A. Type of Experience Collected Under This Statistical Plan

The type of experience to be collected under this statistical plan is mortality experience.

B. Scope of Business Collected Under This Statistical Plan

The scope of data to be collected under this statistical plan is individual ordinary life line of business.

© 2019 National Association of Insurance Commissioners
Direct written business issued in the U.S.;
Assumption reinsurance of an individual ordinary life line of business, where the assuming company is legally responsible for all benefits and claims paid;
Policies issued as conversions from term or group contracts;
Term/paid up riders or additional amounts of insurance purchased through dividend options; and
Terminations (both death and non-death).

Not included in scope:
Separate lines of business, such as SI/GI, worksite, individually solicited group life, direct response, final expense, pre-need, home service, credit life and COLI/BOLI/charity-owned life insurance (CHOLI);
Reinsurance assumed from a ceding company, to avoid double-counting of experience submitted by an issuer and by its reinsurers;
Policies that cover more than two lives on the base policy segment; and
Child term riders.

Such business is to include direct written business issued in the U.S., and all values should be prior to any reinsurance ceded. Therefore, reinsurance assumed from a ceding company shall be excluded from data collection to avoid double-counting of experience submitted by an issuer and by its reinsurers, however, assumption reinsurance of an individual ordinary life line of business, where the assuming company is legally responsible for all benefits and claims paid, shall be included within the scope of this statistical plan. The ordinary life line of business does not include separate lines of business, such as SI/GI, worksite, individually solicited group life, direct response, final expense, pre-need, home service, credit life and COLI/BOLI/charity-owned life insurance (CHOLI).

Each company is to submit data for in-force and terminated life insurance policies that are within the scope defined in Section 2.B policies in scope, except:

i. For policies issued before Jan. 1, 1990, companies may certify that submitting data presents a hardship due to fields not readily available in their systems/databases or legacy computer systems that continue to be used for older issued policies and differ from computer systems for newer issued policies.

ii. For policies issued on or after Jan. 1, 1990, companies must:
   a) Document the percentage that the face amount of policies excluded are relative to the face amount of submitted policies issued on or after Jan. 1, 1990;
   b) Certify that this requirement presents a hardship due to fields not readily available in their systems/databases or legacy computer systems that continue to be used for older issued policies and differ from computer systems for newer issued policies.

C. Criteria to Determine Companies That Are Required to Submit Experience Data

Companies with less than $50 million of direct individual life premium shall be exempted from reporting experience data required under this statistical plan. This threshold for exemption shall be measured based on aggregate premium volume of all affiliated companies and shall be reviewed annually and be subject to change by the Experience Reporting Agent. At its option, a group of nonexempt affiliated companies may exclude from these requirements affiliated companies with less than $10 million direct individual life premium provided that the affiliated group remains nonexempt.

Additional exemptions may be granted by the Experience Reporting Agent where appropriate, following consultation with the domestic insurance regulator, based on achieving a target level of approximately 85% of industry experience for the type of experience data being collected under this statistical plan.

D. Process for Submitting Experience Data Under This Statistical Plan
Data for this statistical plan for mortality shall be submitted on an annual basis. Each company required to submit this data shall submit the data using the Regulatory Data Collection (RDC) online software submission application developed by the Experience Reporting Agent. For each data file submitted by a company, the Experience Reporting Agent will perform reasonability and completeness checks, as defined in Section 4 of VM-50, on the data. The Experience Reporting Agent will notify the company within 30 days following the data submission of any possible errors that need to be corrected. The Experience Reporting Agent will compile and send a report listing potential errors that need correction to the company.

Data for this statistical plan for mortality will be compiled using a calendar year method. The reporting calendar year is the calendar year that the company submits the experience data. The observation calendar year is the calendar year of the experience data that is reported. The observation calendar year will be two years prior to the reporting calendar year. For example, if the current calendar year is 2018 and that is the reporting calendar year, the company is to report the experience data for policies that were in-force or issued in calendar year 2016, which is the observation calendar year.

Given an observation calendar year of 20XX, the calendar year method requires reporting of experience data as follows:

i. Report policies in force during or issued during calendar year 20XX.

ii. Report terminations that occurred during calendar year 20XX and reported before July 1, 20XX+1. However, exclude rescinded policies (e.g., 10-day free look exercises) from the data submission.

For any reporting calendar year, the data call will occur during the second quarter, and data is to be submitted according to the requirements of the Valuation Manual in effect during that calendar year. Data submissions must be made by Sept. 30 of the reporting calendar year. Corrections of data submissions must be completed by Dec. 31 of the reporting calendar year.

E. Experience Data Elements and Formats Required by This Statistical Plan

Companies subject to reporting pursuant to the criteria stated in Section 2.C are required to complete the data elements and formats forms in Appendix 1 and Appendix 2 as appropriate, and also complete the Experience Data Elements and Formats as defined in underwriting specification data elements as defined in Appendix 43.

The data should include policies issued as standard, substandard (optional) or sold within a preferred class structure. Preferred class structure means that, depending on the underwriting results, a policy could be issued in classes ranging from a best preferred class to a residual standard class. Policies issued as part of a preferred class structure are not to be classified as substandard.

Policies issued as conversions from term or group contracts should be included. For these converted policies, the issue date should be the same date of the converted policy, and the underwriting field will identify any prior underwriting from conversion.

Terminations, each policy number represents a policy issued as a result of ordinary underwriting. If a single life policy, the base policy on a single life has the policy number and a segment number of 1. On a joint life policy, each life has separate records with the same policy number. The base policy on the first life has a segment number of 1, and the base policy on the second life has a segment number of 2. Policies that cover more than two lives are not to be submitted. Term/paid up riders or additional amounts of insurance purchased through dividend options on a policy issued as a result of ordinary underwriting are to be submitted. Each rider is on a separate record with the same policy number as the base policy and has a unique segment number. The details on the rider record may differ from the corresponding details on the base policy record. If underwriting in addition to the base policy underwriting is done, the coverage is given its own policy number. Terminations (both death and non-death) are to be submitted. Terminations are to include those that occurred in the observation year and were reported by June 30 of the year after the observation year.
Plans of insurance should be carefully matched with the three-digit code in item 19, Plan. These plans of insurance are important because they will be used not only for mortality experience data collection, but also for policyholder behavior experience data collection. It is expected that most policies will be matched to three-digit codes that specify a particular policy type rather than select a code that indicates a general plan type.

F. Experience Data Reports Required by This Statistical Plan

1. Using the data collected under this statistical plan, the Experience Reporting Agent will produce an experience data report that aggregates the experience data of all companies whose data have passed all of the validity and reasonableness checks outlined in Section 4 of VM-50 and has been determined by the Experience Reporting Agent to be acceptable to be used in the development of industry mortality experience.

2. The Experience Reporting Agent will provide to the SOA or other actuarial professional organizations an experience data report of aggregated experience that does not disclose a company’s identity, which will be used to develop industry mortality experience and valuation mortality tables.

3. As long as a company is licensed in a state, that state insurance regulator will be given access to a company’s experience data that is stored on a confidential database at the Experience Reporting Agent. Access by the state insurance regulator will be controlled by security credentials issued to the state insurance regulator by the Experience Reporting Agent.
### Appendix 1: Mortality Data Elements and Format

#### Section 1: Basic Policy Information

Round all dollar amounts to the nearest dollar. All values should be prior to any reinsurance ceded. If an item is unknown, leave blank unless otherwise specified.

### Section 1. Basic Policy Information

Round all dollar amounts to the nearest dollar. All values should be prior to any reinsurance ceded.

If an item is unknown, leave blank unless otherwise specified.

<table>
<thead>
<tr>
<th>ITEM</th>
<th>COLUMN</th>
<th>L</th>
<th>DATA ELEMENT</th>
<th>DESCRIPTION</th>
</tr>
</thead>
</table>
| 4    | 30–32  | 3 | Segment Number | Includes all policy segment entry, entire segment number. For a single life policy, the base policy is to be put in the record with segment number ‘1.’ Subsequent policy segments are in separate records with information about that coverage and differing segment numbers.

For joint life policies, the base policy of the first life is to be put in a record with segment number ‘1,’ and the base policy of the second life is to be put in a separate record with segment number ‘2.’ Joint life policies with more than two lives are not to be submitted. Subsequent policy segments are in separate records with information about that coverage and differing segment numbers.

A policy segment is a layer of coverage that represents a unique combination of Items 3, 5, 6, and 16. Assign each policy segment a unique integer starting with ‘1’ for the base policy coverage. Use the same segment number for each policy segment in all Observation Years. Note that additional amounts of insurance should be reported in a separate policy segment, rather than added to the base coverage or reported in a new policy number.

For joint life policies, the base policy of the first life is to be put in the record with segment number ‘1,’ and the base policy of the second life is to be put in a separate record with segment number ‘2.’ Joint life policies with more than two lives are not to be submitted. Subsequent policy segments are in separate records with information about that coverage and differing segment numbers.

Policy segments with the same policy number are to be submitted for:
- Single life policies;
- Joint life policies;
- Term/paid up riders;
- Additional amounts of insurance including purchase through dividend options.

**Commented [MA4]:** For elements that may not be readily available, the phase in period identifies the year in which this element will be required.

© 2019 National Association of Insurance Commissioners
For level term segments with plan codes 021 through 027, 041 through 045 or 211 through 271 of Item 19, Plan, for each segment that has Item 20, with the In-force Indicator = 1, enter the annualized premium for the policy year that includes the end of the observation year. Otherwise, enter the annualized premium that would have been paid at the end of the observation year. If the end of year premium is not available, enter the annualized premium as of the Actual Termination Date (Item 26).

Except for level term segments specified above, leave blank for non-base segments.

For the base segments for ULSG and VLSG with plan codes 071 through 078 or 090 through 096 of Item 19, Plan, use the annualized billed premium. For base segments that have Item 20, with the In-force Indicator = 1, enter the annualized billed premium for the policy year that includes the end of the observation year. Otherwise, enter the annualized billed premium that would have been paid at the end of the observation year. If the end of year premium is not available, enter the annualized premium as of the Actual Termination Date (Item 26).

Round to the nearest dollar.
If unknown, leave blank.

For Segment Types 01 through 03 (Item 5) level term segments with plan codes 021 through 027, 041 through 045 or 211 through 271 of Item 19, Plan, for each segment that has Item 20, with the In-force Indicator = 1, enter the annualized premium for the policy year that includes the end of the observation year.

For Segment Types 01 through 03 (Item 5) where the In-force Indicator = 0, enter the annualized premium that would have been paid at the end of the observation year. If end of year premium is not available, enter the annualized premium as of the Actual Termination Date (Item 26).

Except for level term segments specified above, leave blank for non-base segments.

For the base segments for ULSG and VLSG with plan codes 071 through 078 or 090 through 096 of Item 19, Plan, use the annualized billed premium. For base segments that have Item 20, with the In-force Indicator = 1, enter the annualized billed premium for the policy year that includes the end of the observation year. Otherwise, enter the annualized billed premium that would have been paid at the end of the observation year. If the end of year premium is not available, enter the annualized premium as of the Actual Termination Date (Item 26).

Round to the nearest dollar.
If unknown, leave blank.

### Section 2. Underwriting Information

For non-base segments, leave blank.

Round all dollar amounts to the nearest dollar. All values should be prior to any reinsurance ceded.

If an item is unknown, leave blank unless otherwise specified.

<table>
<thead>
<tr>
<th>ITEM</th>
<th>COLUMN</th>
<th>L</th>
<th>DATA ELEMENT</th>
<th>DESCRIPTION</th>
</tr>
</thead>
</table>
| 65   | 007    | 1 | Do you have a reflexive aspect to your application? | 0 = Unknown  
1 = No  
2 = Yes  
Reflexive questions are questions that are asked depending on the response to a previous question. For example, if the applicant answers yes to a specific condition question, then reflexive questions would gather additional information about the condition.

Prospective 2021 |
| 66   | 008    | 1 | Was there an underwriter review? | 0 = Unknown  
Y = Yes  
N = No  
Round to the nearest dollar.

Prospective 2023 |
| 67   | 009    | 1 | After the policy is issued, is monitoring employed? | 0 = Unknown  
1 = No or None  
2 = Yes, Prescription Data  
3 = Yes, Attending Physician Statement  
4 = MIB  
5 = Multiple  
6 = Unknown, Leave Blank

Prospective 2024 |
| 68   | 010    | 1 | Was the application designed with Sentinel Value or Behavioral Economic considerations? | 0 = Unknown  
1 = Yes  
2 = No  
Sentinel Value involves asking specific questions in order to prompt the applicant to divulge information that they might not otherwise divulge or to discourage them from proceeding with the application because of the information divulged.  
Behavioral Economics is the study of how cognitive, emotional, and social factors affect decision-making. In life insurance, the structure of the application, order of the questions and product design may all be developed with the thought of influencing the truthfulness of the applicant or policyholder. Round to the nearest dollar.

Prospective 2021 |
| 69   | 011    | 1 | Was there a senior underwriting questionnaire or protocol done? | 0 = Unknown  
1 = No  
2 = Yes

Prospective 2021 |
| 70   | 012    | 1 | Field Underwriting (Impairment or Rx Knockouts) | 0 = Unknown  
1 = No  
2 = Yes  
Round to the nearest dollar.

Health Insurance and Managed Care (B) Committee
Austin, Texas
December 8, 2019

The Health Insurance and Managed Care (B) Committee met in Austin, TX, Dec. 8, 2019. The following Committee members participated: Jessica Altman, Chair (PA); Lori K. Wing-Heier, Vice Chair (AK); Michael Conway (CO); Dean L. Cameron (ID); Vicki Schmidt (KS); Nancy G. Atkins represented by John Melvin (KY); Steve Kelley (MN); Mike Chaney represented by Bob Williams (MS); Jon Godfread (ND); John Elias represented by Maureen Belanger (NH); Linda A. Lacewell represented by Tom Dudek (OK); Andrew Stolfi (OR); Hodgen Mainda (TN); Scott A. White represented by Julie Blauvelt (VA); and Mike Kreidler and Jane Beyer (WA). Also participating were: Steve Ostlund (AL); Ryan James (AR); Fleur McKendell and Leslie Ledogar (DE); Doug Ommen and Andria Seip (IA); Alex Peck (IN); Frank Opelka (LA); Kevin Dyke (MI); Paige Duhamel (NM); Glen Muready (OK); Marie Ganim (RI); Nancy Clark (TX); Todd E. Kiser and Tanji Northrup (UT); and Nathan Houdek and Jennifer Stegall (WI).

1. **Adopted its Oct. 24 and Summer National Meeting Minutes**

The Committee met Oct. 24 and Aug. 4. During its Oct. 24 meeting, the Committee took the following action: 1) adopted the Health Actuarial (B) Task Force’s 2020 proposed charges, the Regulatory Framework (B) Task Force’s 2020 proposed charges, and the Senior Issues (B) Task Force’s 2020 proposed charges; and 2) adopted its 2020 proposed charges.

Director Wing-Heier made a motion, seconded by Commissioner Godfread, to adopt the Committee’s Oct. 24 (Attachment One) and Aug. 4 (see NAIC Proceedings – Summer 2019, Health Insurance and Managed Care (B) Committee) minutes. The motion passed unanimously.

2. **Adopted its Subgroup, Working Group and Task Force Reports**

Commissioner Conway made a motion, seconded by Commissioner Kreidler, to adopt the following reports: the Consumer Information (B) Subgroup, including its Nov. 18 (Attachment Two), Oct. 21 (Attachment Three) and Oct. 7 (Attachment Four) minutes; the Health Innovations (B) Working Group (Attachment Five); the Health Actuarial (B) Task Force; the Long-Term Care Insurance (E/B) Task Force; the Regulatory Framework (B) Task Force; and the Senior Issues (B) Task Force. The motion passed unanimously.

3. **Heard an Update from the CCIIO**

Randy Pate (federal Center for Consumer Information and Insurance Oversight—CCIIO) updated the Committee on the CCIIO’s regulatory activities related to the federal Affordable Care Act (ACA) and other activities of interest to the Committee. He provided a snapshot of the current open enrollment period to date, including application and enrollment numbers. He highlighted the effect of the ACA Section 1332 waivers in reducing premium costs. He said that to date, the CCIIO has approved 13 waivers. Most of the approved waivers were for establishing a reinsurance program. He also highlighted the steps the Trump Administration has taken to improve price transparency in healthcare, which is one of the Trump Administration’s key priorities, including the publication of a proposed rule on Nov. 15 to require issuers to provide information to consumers on projected out-of-pocket (OOP) costs and make price information available to third-party vendors. Mr. Pate also discussed the CCIIO’s recently released Risk Adjustment Data Verification (RAD-V) white paper. The RAD-V white paper lays out options for potential modifications to several aspects of the U.S Department of Health and Human Services (HHS)-RADV methodology. Mr. Pate urged state insurance regulators to submit comments on the RAD-V white paper.

4. **Heard a Presentation on “Overcharged: Why Americans Pay Too Much for Health Care”**

Charles Silver (University of Texas at Austin & CATO Institute), co-author of the book “Overcharged: Why Americans Pay Too Much for Health Care,” discussed the problems in the U.S. healthcare system, which have contributed to high health care costs. He said these problems include: 1) fraud, waste and abuse; 2) uncontrolable spending; 3) opaque prices; 4) surprise bills; 5) quality that is highly variable and often mediocre; and 6) absurd prices for prescription drugs. He suggested several potential solutions to address these problems, such as: 1) eliminating tax exemptions and coverage for mandates; 2) promoting competition and encouraging medical tourism; 3) letting the insurance-driven spending cycle burn itself out; and 4) turning Medicare, Medicaid and other programs into cash-transfer programs along the lines of social security and the earned income tax credit.
Professor Silver described the problems in the U.S. health care system and its high and increasing health care costs as a vicious cycle with its excessive reliance on third-party payment. He said coverage of health care costs stimulates demand for more and more expensive medical treatments. This heightened demand drives up prices and encourages the proliferation of services. He said with these rising prices and expanded health care needs, consumers become scared and demand more protection. Insurers and government agencies respond to this panic by offering more comprehensive coverage, circling back to the beginning of the problem.

Professor Silver said the solution to ending this vicious cycle is to let it burn out. He said that as spending increases, insurance becomes more expensive, which leads to more uninsured. As people go without insurance or carry higher deductible and copays, the army of self-paying consumers grows. He said the retail sector responds to this increase in demand by offering options for obtaining medical care that is cheaper and more convenient. He discussed a current example of this retail revolution, the Surgery Center of Oklahoma.

Commissioner Stolfi asked Professor Silver about the consequences of letting the system burn itself out, particularly with respect to the poor. Professor Silver said he believes consumers should use health insurance to insure against catastrophic events like other types of insurances. He said his idea for creating cash-transfer programs would address the needs of the poor. Commissioner Conway questioned one aspect of Professor Silver’s theory of letting the system burn itself out with respect to consumers paying more in deductibles and copays leading to lower health care prices in light of the growth of high deductible health plans (HDHPs). Professor Silver said it takes time for the transition. He cited the example of CVS halting the sale of tobacco products and establishing walk-in health care clinics. He acknowledged the difficulty of such a change with respect to catastrophic health care services.

5. Heard a Panel Presentation on State Surprise Billing Laws

Ms. Beyer provided an overview of Washington’s Balance Billing Protection Act (BBPA). She explained that as of Jan. 1, 2020, in Washington, surprise/balance billing is prohibited for: 1) all emergency services at in-network and out-of-network (OON) hospitals; and 2) non-emergency surgical or ancillary services provided by an OON provider at an in-network hospital or ambulatory surgical center. She discussed the scope of the BBPA, including how it applies to emergency services received out-of-state. She discussed the BBPA’s application, including a provision that permits self-funded plans to opt-in to the BBPA’s balance billing prohibition, consumer protections, and arbitration provisions. She said that self-funded plans that want to opt-in can use a simple on-line “opt-in” process to do so. She said the Washington Department of Insurance (DOI) will maintain a list of self-funded plans choosing to opt-in.

Ms. Beyer discussed the BBPA’s OON payment provision. She said the BBPA provides that the OON provider be paid a “commercially reasonable amount based on payment for the same or similar services provided in a similar geographic area.” If the provider and health carrier cannot agree on this amount, after a 30-day informal negotiation period, they can proceed to arbitration. Ms. Beyer explained that to inform negotiations and arbitration, providers, carriers and arbitrators have access to a data set from the state’s all payer claims database (APCD). She also described the BBPA’s transparency and enforcement provisions.

Ms. Taylor said Texas’ surprise billing law is similar in many ways to Washington’s BBPA. She said Texas’ law is also effective Jan. 1, 2020. The Texas law’s application to insured plans and state employee plans is similar to Washington’s law, except Texas’ law does not include provisions permitting self-funded plans to opt-in. Ms. Taylor said Texas’ law is unique in that it includes both an arbitration process and a mediation process. She said Texas’ arbitration process must conclude by day 51. Its mediation process may last up to 120 days. Ms. Taylor said the OON provider payment is based on 80% of billed charges and geographic area.

Commissioner Altman asked what advice Ms. Beyer and Ms. Taylor would provide to the states considering such legislation. Ms. Beyer said she believes that in order to get such legislation enacted, it must strike a balance where stakeholders are not completely happy with the legislation, but they can live with it. Ms. Taylor agreed. Commissioner Godfread asked what services are not included in the scope of either law. Ms. Beyer said air ambulance and ground ambulance services are not included in the scope of Washington’s law. Ms. Taylor said Texas’ law is similar. Ms. Duhamel discussed New Mexico’s surprise bill law and its challenge with setting the OON payment benchmark. She agreed with Washington and Texas that one key to getting such legislation enacted was involving stakeholders throughout the process. Commissioner Mulready discussed Oklahoma’s struggle with such legislation concerning the lack of authority the DOI has over certain health care providers. Ms. Beyer said Washington worked through this issue and ultimately worked out an agreement to work collaboratively with its Department of Health (DOH) concerning any provider enforcement issues.
6. **Heard an Update on Legal Action Surrounding the ACA**

William Schiffbauer (Law Office of William G. Schiffbauer) gave an update from his presentation at the Spring National Meeting on the four major cases involving the ACA: 1) *Texas v. United States of America, et al.*, which challenges the constitutionality of the ACA’s individual mandate and its potential impact on other key ACA provisions; 2) *State of New York v. U.S. Department of Labor*, which challenges the legality of the federal association health plan (AHP) regulation; 3) *Association of Community Affiliated Plans, et al. v. U.S. Department of Treasury, et al.*, which challenges the legality of the federal short-term, limited-duration (STLD) plan regulation; and 4) *Maine Community Health Options v. United States*, which challenges the legality of the federal government withholding full risk corridor payment amounts to participants.

Mr. Schiffbauer provided an overview of the timeline, current status, and main arguments for each of the cases. The *Texas v. United States of America, et al.* case is pending in the U.S. Court of Appeals for the Fifth Circuit. The *State of New York v. U.S. Department of Labor* and *Association of Community Affiliated Plans, et al. v. U.S. Department of Treasury, et al.*, cases are both pending in the U.S. Court of Appeals for the Washington, DC Circuit. The *Maine Community Health Options v. United States* case is pending before the U.S. Supreme Court. Oral arguments in this case are scheduled before the U.S. Supreme Court Dec. 10.

Mr. Schiffbauer explained that if these cases are not already before the U.S. Supreme Court, no matter the outcome at the U.S. Court of Appeals level, it is anticipated that the parties in these cases will file a Petition for Certiorari to the U.S. Supreme Court. He summarized the cases as follows: 1) the Fifth Circuit Court of Appeals decision in *Texas v. United States of America, et al.* is expected before the end of the year, most likely following the end of the current open enrollment period ending Dec. 15. A U.S. Supreme Court opinion would be issued on or before July 31, 2020; 2) the District of Columbia Court’s opinion in *State of New York v. U.S. Department of Labor* is expected in by December 2019 or January 2020. A U.S. Supreme Court opinion would be issued on or before July 31, 2020; 3) The District of Columbia Court will hold oral arguments in the *Association of Community Affiliated Plans, et al. v. U.S. Department of Treasury, et al.* case in March or April 2020. The court would issue an opinion in May or June 2020. It is unlikely that the U.S. Supreme Court would issue an opinion on or before July 31, 2020; and 4) The U.S. Supreme Count is likely to issue an opinion in the *Maine Community Health Options v. United States* on or before July 31, 2020.

7. **Heard a Federal Legislative Update**

Joe Touschner (NAIC) provided a federal legislative update on Congressional activity of interest to the Committee. He discussed the current status of surprise billing legislation, explaining that it appears that a bi-cameral agreement has been reached. He said he would provide more details on this agreement to the Committee and other state insurance regulators after the Fall National Meeting. He said the NAIC received a letter from the federal Centers for Medicare & Medicaid Services (CMS) Administrator seeking recommendations for creating interstate compacts for the sale of health insurance across state lines, as required by ACA section 1333 and in compliance with an Executive Order. He said the Government Relations (EX) Leadership Council considered a letter responding to the request Dec. 4. He also said there is strong bipartisan support for further delaying the health insurance tax (HIT), which was not paid in 2019. He said the difficulty that the U.S. Congress (Congress) is facing is how to pay for it. The HIT brings in over $16 billion a year. Mr. Touschner said delaying the HIT could be part of an end-of-the-year budget deal.

Having no further business, the Health Insurance and Managed Care (B) Committee adjourned.
Health Insurance and Managed Care (B) Committee
Conference Call
October 24, 2019

The Health Insurance and Managed Care (B) Committee met via conference call Oct. 24, 2019. The following Committee members participated: Jessica Altman, Chair (PA); Lori K. Wing-Heier, Vice Chair, represented by Sarah Bailey (AK); Michael Conway (CO); Dean L. Cameron represented by Weston Trexler (ID); Vicki Schmidt represented by Julie Holmes (KS); Nancy G. Atkins (KY); Steve Kelley represented by Grace Arnold (MN); Jon Godfread (ND); Andrew Stolfi (OR); Hodgen Mainda (TN); Scott A. White (VA); and Mike Kreidler represented by Molly Nollette (WA). Also participating was: Kevin Dyke (MI).

1. **Adopted the Health Actuarial (B) Task Force’s 2020 Proposed Charges**

Mr. Dyke provided a brief overview of the Health Actuarial Task Force’s 2020 proposed charges. He said the Task Force’s proposed charges are similar to its 2019 charges. The Task Force will continue to focus on issues related to the federal Affordable Care Act (ACA) and long-term care insurance.

Commissioner Conway made a motion, seconded by Ms. Arnold, to adopt the Task Force’s 2020 proposed charges (see NAIC Proceedings – Fall 2019, Health Actuarial (B) Task Force, Attachment One-A). The motion passed unanimously.

2. **Adopted the Regulatory Framework (B) Task Force’s 2020 Proposed Charges**

Commissioner Conway said the Regulatory Framework’s 2020 proposed changes are straightforward, with only one completion date changed from 2019 to 2020. He said the Accident and Sickness Insurance Minimum Standards (B) Subgroup’s charge to revise the Accident and Sickness Insurance Minimum Standards Model Act (#170) was removed, as that work has been completed (including changing the title to the Supplementary and Short-Term Health Insurance Minimum Standards Model Act).

Ms. Nollette made a motion, seconded by Mr. Trexler, to adopt the Task Force’s 2020 proposed charges (see NAIC Proceedings – Fall 2019, Regulatory Framework (B) Task Force, Attachment One-A). The motion passed unanimously.

3. **Adopted the Senior Issues (B) Task Force’s 2020 Proposed Charges**

David Torian (NAIC) said the Senior Issues (B) Task Force’s 2020 proposed charges are basically the same as its 2019 charges, except for the following changes: Charge 2 and Charge 3 have been deleted because the subgroup and working group, respectively, have completed their work; and Charge 1F has been revised to add the Limited Long-Term Care Insurance Model Act (#642) and the Limited Long-Term Care Insurance Model Regulation (#643).

Commissioner Atkins made a motion, seconded by Commissioner Godfread, to adopt the Task Force’s 2020 proposed charges (see NAIC Proceedings – Fall 2019, Senior Issues (B) Task Force, Attachment One-A). The motion passed unanimously.

4. **Adopted its 2020 Proposed Charges**

Commissioner Altman stated that, prior to the call, NAIC staff distributed the Committee’s 2020 proposed charges and posted them on the Committee’s website, but—similar to many of the task force charges—there are not significant changes. The Committee will continue much of the important work that is already ongoing.

Commissioner Conway made a motion, seconded by Commissioner Stolfi, to adopt the Committee’s 2020 proposed charges (Attachment One-A). The motion passed unanimously.

Having no further business, the Health Insurance and Managed Care (B) Committee adjourned.
HEALTH INSURANCE AND MANAGED CARE (B) COMMITTEE

The mission of the Health Insurance and Managed Care (B) Committee is to consider issues relating to all aspects of health insurance.

Ongoing Support of NAIC Programs, Products or Services

1. The Health Insurance and Managed Care (B) Committee will:
   A. Respond to inquiries from the U.S. Congress (Congress), the White House and federal agencies; analyze policy implications and their effect on the states of proposed and enacted federal legislation and regulations; and communicate the NAIC’s position through letters and testimony, when requested.
   B. Monitor the activities of the Health Actuarial (B) Task Force.
   C. Monitor the activities of the Regulatory Framework (B) Task Force.
   D. Monitor the activities of the Senior Issues (B) Task Force.
   E. Serve as the official liaison between the NAIC and the Joint Commission on Accreditation of Healthcare Organizations (Joint Commission), the National Committee for Quality Assurance (NCQA), and URAC.
   F. Examine factors that contribute to rising health care costs and insurance premiums. Review state initiatives to address cost drivers.
   G. Coordinate with the Market Regulation and Consumer Affairs (D) Committee, as necessary, to provide policy recommendations regarding uniform state enforcement of the federal Affordable Care Act (ACA).
   H. Coordinate with the Producer Licensing (D) Task Force, as necessary, regarding the regulation and activities of navigators and non-navigator assistance personnel as provided under the ACA and regulations implementing the ACA.
   I. Coordinate with the Antifraud (D) Task Force, as necessary, regarding state and federal antifraud activities related to the implementation of the ACA.
   J. Coordinate with the Market Regulation and Consumer Affairs (D) Committee, as necessary, to collect uniform data and monitor market conduct trends on plans that are not regulated under the ACA, including short-term, limited-duration (STLD) insurance, association health plans (AHPs), and packaged indemnity health products.

2. The Consumer Information (B) Subgroup will:
   A. Develop information or resources, as needed, that would be helpful to state insurance regulators and others in assisting consumers to better understand health insurance.
   B. Review NAIC publications that touch on health insurance to determine if they need updating. If updates are needed, suggest specific revisions to the appropriate NAIC group or NAIC division to make the changes.

3. The Health Innovations (B) Working Group will:
   A. Gather and share information, best practices, experience and data to inform and support health innovation at the state and national levels, including, but not limited to, state flexibility options through the ACA and other health insurance-related policy initiatives.
   B. Discuss state innovations related to health care—i.e., access, insurance plan designs, underlying medical and prescription drug costs, stability for health care and insurance as a whole, health insurer and provider consolidation or competition, the use of data in regulatory and policy decision-making, and health care delivery and financing models—to achieve better patient outcomes and lower spending trends.
   C. Explore sources and methods for state insurance regulators to obtain data to inform health reform initiatives.
   D. Disseminate materials and reports, via the NAIC, to the states and the U.S. territories wishing to utilize the information gathered by the Working Group.
   E. Take up other matters as directed by the Health Insurance and Managed Care (B) Committee.
Consumer Information (B) Subgroup

Conference Call

November 18, 2019

The Consumer Information (B) Subgroup of the Health Insurance and Managed Care (B) Committee met via conference call Nov. 18, 2019. The following Subgroup members participated: Angela Nelson, Chair, Jessica Schrimpf, Carrie Couch, Danielle McAfee-Thoenen and Camille Anderson-Weddle (MO); Michelle Baldock (IL); Alex Peck and Jenifer Groth (IN); Joy Hatchette (MD); Melinda Domzalski-Hansen (MN); Cuc Nguyen (OK); Katie Dzurec, David Buono and Elizabeth Hart (PA); Jill Kruger, Candy Holbrook and Gretchen Brodkorb (SD); Heidi Clausen and Jaakob Sundberg (UT); and Jennifer Stegall, Eric Corman, Julie Walsh, Mary Kay Rodriguez, Rebecca Rebolz and Sue Ezalarab (WI). Also participating were: Jacob Lauten and Chelsey Maller (AK); Julia Yee (CA); John Reilly (FL); Teresa Winer (GA); Cynthia Banks Radke and Sonya Sellmeyer (IA); Emily DeLaGarza (MI); Pam Koenig and Michelle Scaccia (MT); Jessica Baker, Monica Bryant and Patricia Trujillo (NM); Jana Jarrett (OH); Libby Camp Elliott and Markus Wilcox (TX); Yolanda Tennyson (VA); Dena Wildman, Ellen Potter and Vanessa George (WV); and Denise Burke (WY).

1. Discussed a Consumer Guide on Using Health Insurance

Ms. Nelson brought up the consumer guide, Using Your Health Coverage. She said that it had been sent to Brenda J. Cude (University of Georgia) to review for readability. She said that Ms. Cude had some questions overall and encouraged greater consistency in use of terms. Ms. Nelson said that the draft uses the terms “health insurance,” “health plan,” “coverage,” and others and asked how the Subgroup would like to align these references.

The Subgroup discussed choosing one term and adding a definition of it early in the document. Harry Ting (Chester County Department of Aging Services - Apprise Program) said that the document references Medicare in some places and that “health plan” would be a better fit than “carrier” in the Medicare context. The Subgroup discussed the use of “health plan” further.

Ms. Hatchette said that one concern is that the broader the application, the longer the document, and the fewer people who will read it. Ms. Cude said that all these terms could be used, but the document should stick with consistent phrasing. She said that the conversation was helpful and that she would need to review the document again.

2. Discussed a Consumer Guide on Claims Issues

Ms. Nelson brought up the next item on the Subgroup’s work plan, a consumer guide related to claims. She said that this piece has a great deal of potential benefit for consumers. She said that many states have consumer information on appeals and grievances, but she would like to take a step back to the beginning of the process and provide better information on explanations of benefits (EOBs).

Ms. Nelson asked who the target audience for the guide should be. She asked whether the Subgroup had concerns with writing it in a broad-based way that applies to all private health coverage. Ms. Domzalski-Hansen asked whether it would cover Medicare, and Ms. Nelson responded that it should be focused on private coverage, not Medicare or Medicaid plans. The two discussed whether the document should include information on which government agency consumers should contact with a complaint, depending on the type of plan they have. Ms. Nelson said it should describe common elements in EOBs and present whom to call, but also help consumers be advocates for themselves.

Ms. Hatchette said that one concern is that the broader the application, the longer the document, and the fewer people who will read it. She said this piece could be something distributed in doctors’ offices, but if it is a multi-page document, that is difficult. Ms. Nelson said the Subgroup could consider a longer piece that consists of multiple one-pagers that could be used individually.

Ms. Nelson asked what topics should be covered in the guide. She mentioned several potential topics, including EOBs, claims denials, prior authorization, prescription drug exceptions, medical necessity determinations, mental health parity, provider access and external appeals. Ms. Baldock suggested focusing on appeals, complaints and external reviews, and the Subgroup
discussed how to keep the document readable with a large number of potential topics. Mr. Ting suggested prioritizing the ones that come up the most often or are most important for consumers. Ms. Nelson stressed the importance of explaining EOBs.

Ms. Nelson asked about documents that could serve as models for the consumer guide. Ms. Hatchette said she likes a publication from Georgians for a Healthy Future, but it is still too long. Mr. Ting agreed that many existing pieces are too long and suggested that the guide include sample letters for different appeals. Ms. Cude questioned whether the guide should be split into multiple documents, and Ms. Nelson said it was an option and, in any case, the guide should be streamlined and easily digestible.

Ms. Nelson asked that the Subgroup send ideas for topics to cover in response to an initial list she would send.

Having no further business, the Consumer Information (B) Subgroup adjourned.
The Consumer Information (B) Subgroup of the Health Insurance and Managed Care (B) Committee met via conference call Oct. 21, 2019. The following Subgroup members participated: Angela Nelson, Chair, and Jessica Schrimpf (MO); William Rodgers (AL); Weston Trexler (ID); Michelle Baldock and David Osborn (IL); Alex Peck (IN); Joy Hatchette and Mary Kwei (MD); Melinda Domzalski-Hansen (MN); Martin Swanson (NE); Cuc Nguyen (OK); Elizabeth Hart and Katie Dzurec (PA); Gretchen Brodkorb (SD); Heidi Clausen, Tanji Northrup and Jaakob Sundberg (UT); Todd Dixon (WA); Jennifer Stegall, Rebecca Rebolz and Julie Walsh (WI). Also participating were: Chelsey Maller (AK); Gerard O’Sullivan (CT); Fleur McKendell (DE); John Reilly (FL); Cynthia Banks Radke and Sonya Sellmeyer (IA); Emily DeLaGarza and Renee Campbell (MI); Bob Williams (MS); Pam Koenig (MT); Jana Jarrett (OH); Vickie Trice (TN); Angela Herron, Scott Helmcamp, Rachel Bowden and Marcus Wilcox (TX); and Yolanda Tennyson (VA); Joylynn Fix (WV); and Tana Howard (WY).

1. Discussed the Updated the Health Insurance Shopping Tool

Ms. Nelson provided an overview of the revisions the NAIC’s Communications Division made to the Health Insurance Shopping Tool adopted by the Subgroup in 2018. She said that it looks better than before. In response to questions, she said that the text had not changed but the layout did. She said the states can use it to assist consumers. Subgroup members also inquired whether states are permitted to add their own branding so that the document shows both state and NAIC logos and whether an editable version would be available.

Joe Touschner (NAIC) responded that he would bring these questions to the Communications Division and get back to the Subgroup.

Ms. Nelson brought up the consumer guide, Using Your Health Coverage. She reminded the Subgroup that it is intended for consumers enrolled in different kinds of coverage, including insurance in the individual market, as well as employer-sponsored coverage. She provided an overview of the updates to the table of contents, and the Subgroup had no further edits.

Ms. Nelson said that Ms. Baldock and Candy Gallaher (America’s Health Insurance Plans—AHIP) collaborated on edits to the “Life Changes” section and asked them to review them. Ms. Gallaher said that they added subheadings and noted that open enrollment period and special enrollment period were not listed in the glossary, which they recommended be added.

The Subgroup discussed whether and how to reference transitions to Medicare. Ms. Gallaher noted that a note early in the document says that the guide is not applicable to Medicare, but that Medicare can be a more affordable option for eligible individuals than marketplace plans. She suggested that the guide recommend exploring Medicare options. Anna Howard (American Cancer Society Cancer Answer Network—ACS CAN) suggested a direction to contact a State Health Insurance Assistance Program (SHIP) with Medicare questions.

The Subgroup discussed how to deal with short-term health plans, which do not provide a Summary of Benefits and Coverage (SBC). Some suggested making reference to comprehensive coverage, which would exclude short-term plans. Others observed that existing language notes that the guides does not cover supplemental plans. Ms. Nelson said that the average consumer may not know what these terms mean. The Subgroup discussed adding text in the “Getting to Know Your Health Plan” section that urges consumers to identify the type of plan they are enrolled in and potentially saying that those in comprehensive coverage will receive an SBC. Some Subgroup members suggested a direction to check the policy.

Ms. Nelson asked whether the consumer guide is ready for a review for readability by Brenda J. Cude (University of Georgia). Ms. Cude said she is happy to review the document.

Ms. Nelson said the goal is to complete the guide by Jan. 1, 2020, and then move on to a guide to help consumers deal with claims denials. She said that the Subgroup can still make edits after Ms. Cude’s review.
3. **Adopted Revisions to the FAQ Document**

Ms. Nelson told the Subgroup that the “Frequently Asked Questions About Health Care Reform” (FAQ document) is for consumer services staff in state insurance departments to use when assisting consumers. She said the questions on the individual mandate and anti-discrimination provisions had been updated based on input from Subgroup members.

Ms. Dzurec made a motion, seconded by Mr. Swanson, to adopt the revised FAQ document (Attachment Three-A). The motion passed.

Ms. Nelson asked that the FAQ be posted to the Subgroup web page on the NAIC website and sent to the NAIC’s Health Reform email list.

Having no further business, the Consumer Information (B) Subgroup adjourned.
FREQUENTLY ASKED QUESTIONS ABOUT HEALTH CARE REFORM

TABLE OF CONTENTS

HEALTH CARE REFORM OVERVIEW .................................................................

Q 1: When did the ACA take effect? ............................................................

Q 2: What changes have taken place? .........................................................

Q 3: Where can a person find more information about the ACA, including detailed timeline information? ..............

Q 4: Do the consumer protections of the ACA apply to all health coverage? .................................................................

EXCHANGE BASICS ..................................................................................

Q 5: What is the [insert name of state health insurance exchange]? (For questions about the [insert name of state SHOP exchange], see Questions 40–44, 46–50, and 69–72). ..........................................................

Q 6: Are there different types of health insurance exchanges? .................................................................

Q 7: What is a CO-OP plan? ........................................................................

Q 8: If consumers live in one state but work in another, to which state’s exchange should they apply? ..................

Q 9: Who can buy a plan through the [insert name of state exchange]? ..........................................................

Q 10: When are consumers able to enroll in plans through the [insert name of state exchange]? ...........................

Q 11: What if a consumer wants to enroll or change plans outside of the open enrollment period? ...........................

Q 12: How can a consumer prepare to enroll in a plan through the [insert name of state exchange]? ...........

SHOPPING FOR HEALTH INSURANCE: WHAT IS COVERED? ..........

Q 13: What types of plans are available through the [insert name of state exchange]? ................................................

Q 14: How do the tiers (bronze, silver, gold, and platinum) help consumers compare plans? ..........................

Q 15: What is actuarial value? .................................................................

Q 16: What services/benefits must plans cover? What are essential health benefits? .........................................

Q 17: What insurance companies will offer coverage through the [Insert name of state exchange]? How can consumers get a list of companies and plans available? ..........................

Q 18: How can a consumer find out the details about what a particular plan covers? .....................................

Q 19: How can consumers compare benefits and understand what a plan covers? ........................................

Q 20: How can consumers see and compare premiums for plans? ..............................................................

Q 21: Can a person or a health insurance issuer take benefits out of a plan? What if a consumer doesn’t need all of the benefits in a plan? ..........................................................

Q 22: Can consumers’ health conditions affect what coverage they are able to get? ......................................

Q 23: Can an insurance company charge tobacco users more than non-tobacco users? ...................................

Q 24: What are preventive benefits and how are they covered? .................................................................

Q 25: Are dental or vision benefits available through the [insert name of state exchange]? ..............................

Q 26: How does a consumer find out what drugs a plan covers? .................................................................

Q 27: What are out-of-network services, and do consumers have any coverage for them? ..............................

Q 28: How do consumers determine if their doctor or dentist is in the network? ..........................................

© 2019 National Association of Insurance Commissioners
Q 29: Do consumers have access to emergency care out-of-network?

Q 30: What is a “grandfathered” health plan?

Q 31: Can consumers keep an existing plan that isn’t grandfathered, but which doesn’t comply with the ACA reforms (known as transitional plans or “grandmothered” plans)?

EMPLOYER-SPONSORED COVERAGE

Q 32: Is employer-based coverage required to cover dependents (spouses and children)?

Q 33: What can a consumer do when employer-based health coverage ends?

Q 34: Must a consumer exhaust all available COBRA coverage before buying coverage through the exchange with subsidies?

Q 35: If a consumer has access to employer-based coverage, can an employer make the consumer wait before becoming eligible for benefits?

Q 36: Can a consumer with access to employer-based coverage get a tax credit to buy a plan through the [insert name of state exchange]? 

Q 37: If a consumer is offered employer-based coverage that would cover a spouse or dependents, can that consumer’s spouse or children get a tax credit to buy coverage through the exchange?

Q 38: What is a health reimbursement arrangement?

Q 39: If a consumer is offered a health reimbursement arrangement, can that consumer get a tax credit to buy coverage through the exchange?

Q 40: What is the [insert name of state SHOP exchange]?

Q 41: Is there a cost to participate in [insert name of state SHOP exchange]?

Q 42: Can insurers charge more (or less) for policies sold through [insert name of state SHOP exchange]?

Q 43: What happens if an employer’s staff increases to more than 50 employees in the year after the employer bought coverage through the SHOP?

Q 44: How are small employers defined?

Q 45: How do employers with full-time and part-time employees know whether they’re required to pay a penalty if they don’t offer health insurance to their workers?

Q 46: Are health insurers required to sell their plans through the federal SHOP exchange?

Q 47: Are small employers required to buy a health plan for their employees through [insert name of state SHOP exchange]?

Q 48: Will consumers be better off with individual coverage through the [insert name of state exchange] rather than small employer coverage?

Q 49: Are there participation rates that insurers can require employers to meet to be eligible to buy small group coverage through the [insert name of state SHOP exchange] or in the market outside the [insert name of state SHOP exchange]?

Q 50: Can small employers who are the sole employees of their business buy small group coverage either through the [insert name of state SHOP exchange] or the outside market?

Q 51: How does rating work in the small group market?

Q 52: Do small employers that don’t offer health care insurance coverage to their employees, have to pay a tax penalty?
Q 53: Do large employers have to offer health care insurance coverage to their employees? What about seasonal employees?

Q 54: What are the penalties if large employers don’t provide coverage?

Q 55: How do small employers find out if they’re eligible for the Small Business Health Care Tax Credit?

Q 56: What ACA requirements apply to large employers?

ACA REQUIREMENT TO HAVE BASIC HEALTH CARE COVERAGE (INDIVIDUAL MANDATE)

Q 57: What is the individual responsibility requirement, and does it mean consumers must buy coverage through the [insert name of state exchange]?

Q 58: Without a tax penalty, is having minimum essential coverage important?

ENROLLING IN HEALTH CARE COVERAGE: WHERE CAN CONSUMERS GET HELP?

Q 59: Where do consumers go for help to choose and enroll in a plan?

Q 60: May consumers directly enroll for coverage through insurers?

Q 61: How are people who help consumers enroll in health coverage paid?

Q 62: How can consumers find an insurance agent or broker to help them enroll in a plan?

Q 63: What are the qualifications required for health insurance agents and brokers to participate in the [insert name of state exchange]?

Q 64: Where should consumers go with a problem enrolling in a plan through the [insert name of state exchange]?

Q 65: Do consumers have to re-enroll annually?

Q 66: How will insurance agents and brokers be able to help consumers with enrollment through the [insert name of state exchange]?

Q 67: How will a navigator be able to help consumers with enrollment through the [insert name of state exchange]?

Q 68: How can the in-person assister or the certified application counselor be able to help consumers with enrollment through the [insert name of state exchange]?

Q 69: Can small employers use licensed insurance agents or brokers to buy health insurance through [insert name of state SHOP exchange]?

Q 70: Will small employers be able to use navigators to buy health insurance?

Q 71: How can an insurance agent or broker help a small employer interested in participating in the [insert name of state SHOP exchange]?

Q 72: What is the benefit of using an insurance agent to enroll in the [insert name of state exchange] or [insert name of state SHOP exchange]?

Q 73: Will an insurance agent or broker show consumers all of the plan choices available through the [insert name of state exchange]?

Q 74: Will consumers have to share their personal information, including their tax returns, with an agent or broker, navigator, in-person assistance personnel, or certified application counselor?

Q 75: Will consumers have to share their account username and password with an insurance agent or broker, navigator, in-person assister, or certified application counselor?

Q 76: What help should an insurance agent or broker, navigator, in-person assister, or certified application counselor give consumers if they or their dependents are eligible for Medicaid or CHIP?
Q 77: May an insurance agent or broker continue to work with consumers once they’re enrolled in a plan through the [insert name of state exchange]?

COSTS AND ASSISTANCE WITH COSTS

Q 78: Is there cost-sharing for contraceptives?

Q 79: How much do plans offered through the [insert name of state exchange] cost?

Q 80: Do plans offered through the [insert name of state exchange] have large out-of-pocket costs?

Q 81: Where can consumers inquire to learn if they’re eligible for help paying premiums or for Medicaid?

Q 82: Is there help for consumers who can’t afford coverage?

Q 83: Who’s eligible for premium tax credits and cost-sharing reductions?

Q 84: How do premium tax credits to buy coverage through the [insert name of state exchange] work?

Q 85: Is an individual who is a victim of domestic abuse and separated (but not divorced) from his or her spouse eligible for subsidies on the exchange?

Q 86: If a consumer is eligible for subsidy assistance, is there a grace period before a company can terminate the consumer for non-payment of premiums?

Q 87: What should consumers do if they find themselves enrolled in both Medicaid/CHIP and exchange coverage with premium tax credits?

QUESTIONS ABOUT OTHER TYPES OF COVERAGE

Q 88: What is available in the market outside the [insert name of state exchange]?

Q 89: What are short-term plans?

Q 90: If consumers already have coverage, may they buy separate policies for their children?

ACA MEDICARE-RELATED QUESTIONS

Q 91: Who should consumers contact with questions about Medicare, Medicare Supplement insurance, or Medicare Advantage plans?

Q 92: Are people who pay premiums for Medicare Part A able to enroll through the [insert name of exchange]?

Q 93: If individuals become eligible for Medicare and are already in a QHP, can they stay in their plan instead of enrolling in Medicare?

Q 94: If individuals become eligible for Medicare and are already in a QHP, can they stay in their plan?

Q 95: Is there anything consumers and their dependents who are already on Medicare and have employer-based coverage need to do because of the ACA?

Q 96: Is there anything consumers and their dependents who are already on Medicare and have retiree coverage from an employer need to do because of the ACA?

Q 97: Will consumers with Medicare Supplement insurance be affected by the ACA?

Q 98: How will consumers’ Medicare prescription drug “donut hole” be affected?

Q 99: What about LTC insurance policies?

ACA MEDICAID-RELATED QUESTIONS

Q 100: Where can consumers find more information about Medicaid?

Q 101: Did consumers’ eligibility for Medicaid changed under the ACA?

Q 102: What is the expanded Medicaid eligibility under the ACA?

Q 126: Why is this a time to be especially on guard against health insurance fraud? .......................................................... 
Q 127: Can consumers get help from their current insurance agent or insurance company to buy health insurance coverage through the [insert name of state exchange]? .................................................................... 
Q 128: If consumers don’t have a relationship with an insurance agent or company, where should they go for help?.
Q 129: If someone comes to consumers’ homes, calls consumers out of the blue, or sends emails to offer consumers health insurance coverage for a terrific premium, how will consumers know whether the person and the health insurance coverage are legitimate?

PURPOSE

This document is designed for state insurance departments to use as they give answers to frequently asked questions (FAQ) and guide consumers about their health care choices. This document reflects regulations and guidance received from the federal government as of October 2019 and is subject to change.

This document isn’t intended to be given directly to consumers. States will need to modify this document to include state-specific information and terminology. Drafting notes indicate where states may choose to add additional clarity on state policies. While some sections may be useful for direct-to-consumer communications, the document’s primary purpose is to give insurance department staff accurate and understandable information to use when they respond to consumer questions about healthcare reform.

Note that the federal Affordable Care Act (ACA) and related regulations refer to “exchanges” that operate in the states, while federal guidance documents refer to these exchanges as “marketplaces.” This document uses the term “exchanges.” However, some states may decide to follow federal guidance and use the term “marketplaces.”

Note, also, that states will need to modify this FAQ if the state has combined the exchange for individuals and families with the Small Business Health Options Program (SHOP) exchange.

HEALTH CARE REFORM OVERVIEW

Health care has changed in many ways as a result of the passage and implementation of the Patient Protection and Affordable Care Act, Public Law 111-148 (PPACA), and the Health Care and Education Reconciliation Act of 2010, Public Law 111-152. These two laws are collectively known as the ACA.

Q 1: When did the ACA take effect?

The ACA was enacted March 23, 2010.

Q 2: What changes have taken place?

Several changes took place before Jan. 1, 2014:

- Lifetime and annual dollar limits on essential health benefits (EHB) are not allowed. Annual dollar limits on EHB were also phased out by Jan. 1, 2014.
- Consumers are guaranteed certain appeal rights.
- Nearly all adult children up to age 26 are eligible to remain on a parent’s health insurance policy, regardless of the child’s marital status, financial dependency, enrollment in school or place of residence.
- Insurers must cover certain preventive services without cost sharing. (See Question 25.)
- Medical loss ratio (MLR) standards limit how much of premium dollars insurers can spend on administrative expenses.
- Many insurers must use a standardized Summary of Benefits and Coverage (SBC), which makes it easier to compare plans.
- Small businesses that provide health care for employees can apply for a tax credit.
- Persons with Medicare prescription drug coverage receive a rebate to help cover the cost of the “donut hole.” For 2020, consumers no longer face a donut hole.
Several major changes became effective for non-grandfathered individual and small group plans sold or renewed on or after Jan. 1, 2014:

- Plans must include new consumer protections. Health insurers can’t deny or refuse to renew coverage because of a pre-existing medical condition. They also can’t charge a higher premium due to a person’s gender or health condition.
- Insurers must cover routine medical costs if a person participates in a clinical trial for cancer or other life-threatening diseases.
- Many, though not all, insurance plans must cover a minimum set of EHB and can’t put annual dollar limits on these benefits.
- Individuals and families with incomes below 400% of the federal poverty level may qualify for financial assistance when they shop in the health insurance exchanges.
- In the small group market, from the period November 15 to December 15 each year, small employers can purchase coverage for their workers for the following year without having to meet minimum participation or minimum contribution requirements.

Note: Plans sold before March 23, 2010, that have had no significant changes are considered “grandfathered” and aren’t required to comply with many of these requirements. (See Question 31 on grandfathering.) Additionally, plans sold before Jan. 1, 2014, may—if allowed by the state—continue to be renewed through policy years beginning on or before Oct. 1, 2020, without coming into compliance with certain reforms. (See Question 32 on transition policy.)

Q 3: Where can a person find more information about the ACA, including detailed timeline information?

For more general and detailed information about the ACA and its key provisions, visit the federal government’s website at www.healthcare.gov, or call 1-800-318-2596 (TTY: 1-855-889-4325).

For information about implementation of the ACA in [insert name of state], contact [insert name of state exchange] at [email address] or [xxx-xxx-xxxx].

There are also several other helpful sites and resources for more information about the ACA, including: Kaiser Family Foundation (www.kff.org/health-reform/); Commonwealth Fund (https://www.commonwealthfund.org/health-care-coverage-and-access); The Robert Wood Johnson Foundation (www.rwjf.org), the Georgetown Center on Health Insurance Reforms (http://chir.georgetown.edu/projects-pubs); and the Center on Budget and Policy Priorities (www.healthreformbeyondthebasics.org).

Q 4: Do the consumer protections of the ACA apply to all health coverage?

No, not all health coverage is required to comply with all of the protections included in the ACA. The ACA largely established new protections in the individual and small group markets, which includes policies sold through the exchanges in every state. Health coverage sold outside of the individual or small group markets, or that is not considered insurance may not be required to comply with some or any of these protections.

Consumers may have questions about several types of coverage other than the qualified health plans sold through exchanges.

- Short-term, limited duration insurance. Several protections applicable in the individual market do not apply; however, state law or regulation may add some protections. Because the ACA does not apply, these plans may:
  - deny coverage or increase premium due to health status,
  - exclude essential health benefits,
  - refuse renewal,
  - limit coverage for pre-existing conditions,
  - establish annual or lifetime benefit maximums,
  - not establish an out-of-pocket maximum, or
  - exceed medical loss ratio standards without rebating premium.
• Association health plans. Depending on the structure of the association and state law, consumer protections applicable to individual, small group, or large group market plans may apply.
• Health care sharing ministry. These coverage arrangements are not considered to be insurance, so the requirements and protections described in this FAQ do not apply.
• Fixed indemnity insurance. The requirements and protections described in this FAQ generally do not apply.

Drafting note: States may want to add more details about state-level protections that apply to the coverage types mentioned in the bullets.

EXCHANGE BASICS

Q 5: What is the [insert name of state health insurance exchange]? (For questions about the [insert name of state SHOP exchange], see Questions 40-44, 46-50, and 69-72).

The [insert name of state exchange] is the name of [insert name of state]’s health insurance exchange. The ACA created health insurance exchanges as places where individuals, families, and small employers can compare private health insurance plans and shop for coverage. Exchanges also provide access to a tax credit to help lower- and middle-income individuals pay for coverage. (See Questions 81-84.) Through exchanges, individuals may also qualify for help to lower their out-of-pocket costs (deductibles, coinsurance or copayments) when they receive health care services. Insurers may sell plans through the exchange, as well as in the market outside the exchange. Premium tax credits and cost-sharing reductions aren’t available for plans sold outside the exchange.

Drafting Note: States that have no market outside the exchange should modify the previous paragraph accordingly. States should note, however, that some individuals such as incarcerated individuals and immigrants not legally present cannot be denied coverage on the basis of health status even though they will not be able to buy coverage through the exchange. (See Questions 118-119.)

To learn more, or to apply for coverage through the [insert name of state exchange], individuals and families should visit the website for the [insert name of state exchange] at [insert link to state exchange website]. For more general information about health insurance exchanges, visit the federal government’s website at https://www.healthcare.gov/what-is-the-health-insurance-marketplace.

Q 6: Are there different types of health insurance exchanges?

While the basic features of exchanges are the same in all of the states, the ACA allows for differences in who operates them. Some exchange operation options include the federal government operating the exchange, the state operating the exchange, and a partnership between the federal and state governments working together to operate the exchange. Please contact [insert state consumer affairs contact information] to learn how your state’s exchange is operated.

Q 7: What is a CO-OP plan?

CO-OP stands for Consumer Operated and Oriented Plan, which is a type of health insurer created under the ACA. The ACA gave low interest loans to private organizations to create a new type of nonprofit insurer designed to increase the plan choices available through the state exchanges. Any profits earned by CO-OPS must be applied to either lower premiums or expand benefits for customers. The federal Center for Insurance Information and Insurance Oversight (CCIIO) in the U.S. Department of Health and Human Services (HHS) maintains oversight of the CO-OPS. CO-OPS also must be governed by their members (or customers) and are required to offer plans through their respective states’ exchanges.

In [insert name of state], the [insert name of CO-OP] is the CO-OP available through the [insert name of state exchange]. If a CO-OP in the state is no longer available or enrollment has been capped, consumers can explore other coverage options through the exchange during the open enrollment period (or may be eligible for a special enrollment period (SEP) if their CO-OP coverage ends outside of the open enrollment period).

To find out more about the CO-OP program, please visit http://www.cms.gov/CCIIO/Programs-and-Initiatives/Insurance-Programs/Consumer-Operated-and-Oriented-Plan-Program.html.
Drafting Note: States should modify or eliminate this question if there aren’t any CO-OPs in the state, if the CO-OP is no longer available, or enrollment has been capped.

**Q 8: If consumers live in one state but work in another, to which state’s exchange should they apply?**
Consumers who don’t have access to coverage through their employer (or their spouse’s employer) should apply for coverage in the state where they live.

**Q 9: Who can buy a plan through the [insert name of state exchange]?**
In [insert name of state], any individual or family who wants may buy coverage through the [insert name of state exchange]. The only people who can’t are those who are not lawfully present in the U.S. (see Questions 119-120), incarcerated individuals (other than pending disposition of charges) (see Question 121), and generally, people on Medicare (see Question 94).

Small employers (employers with fewer than [XX] employees) may buy health insurance for their employees through the [insert name of state SHOP exchange]. (For more information about the [insert name of state SHOP exchange], see Questions 40-44, 46-50, and 69-72).

Drafting note: States should insert the appropriate number in place of XX above, taking into account the specific rules for SHOP participation.

**Q 10: When are consumers able to enroll in plans through the [insert name of state exchange]?**
Consumers may enroll during the annual open enrollment period or when they qualify for a special enrollment period. In [insert name of state], open enrollment in [insert name of state exchange] for 2020 coverage for individuals and families begins [Nov. 1, 2019], and continues through [Dec. 15, 2019].

Coverage effective dates depend on the date of enrollment and are contingent on consumers paying the first month’s premium directly to the insurance company. [Enrollment during Open Enrollment becomes effective on January 1, 2020.] Enrollment during a special enrollment period will be effective on either the first day of the following month—if a consumer enrolls by the 15th of the month—or the first day of the second following month, if a consumer enrolls after the 15th of the month.

During open enrollment, consumers may change plans, change insurance companies, or stay with the plan they have, if it’s still available. Current enrollees will also receive a new eligibility determination to determine if they will receive more or less financial help in the form of premium tax credits or cost-sharing reductions. If a consumer does not actively select a new plan and is eligible for auto-renewal, he or she will be automatically re-enrolled into the closest comparable plan for 2020. So, if a consumer wants to make changes to their coverage effective on Jan. 1, he or she must choose a plan by Dec. 15.

**Q 11: What if a consumer wants to enroll or change plans outside of the open enrollment period?**
Consumers may be eligible to enroll in coverage at times other than during the open enrollment period. There are special enrollment periods (SEPs) for individuals or families if they experience certain events. Some examples of events that trigger an SEP include: 1) loss of minimum essential coverage for an individual or their dependent; 2) gaining or becoming a dependent (such as marriage or the birth/adoption of a baby); and 3) being enrolled in a plan through the exchange without tax credits and then becoming newly eligible for tax credits. (See Question 83.) The federal website https://www.healthcare.gov/coverage-outside-open-enrollment/special-enrollment-period/ lists possible options for consumers to obtain coverage outside an open enrollment period. Consumers generally have 60 days from the date of the event that triggered an SEP to enroll in coverage. Additional information on SEP rules is available at http://www.healthreformbeyondthebasics.org/wp-content/uploads/2015/06/SEP-Reference-Chart.pdf.

Consumers can apply for coverage through [insert name of state exchange] any time during the year, regardless of whether it’s an enrollment period. The [insert name of state exchange] will process the application and tell the consumer whether or not he or she can enroll or must wait until an enrollment period. Contact the [insert name of state exchange] at [insert website] or [insert phone number] for information about whether a consumer might be eligible to enroll in coverage through
the [insert name of state exchange] during an SEP. People who are eligible for Medicaid and the Children’s Health Insurance Program (CHIP) can apply and enroll in [insert name of state Medicaid agency] at any time.

Q 12: How can a consumer prepare to enroll in a plan through the [insert name of state exchange]?

The federal website https://www.healthcare.gov/apply-and-enroll/get-ready-to-apply/ has suggestions for things consumers should be thinking about to prepare to enroll in a plan through the exchange. The [insert name of state department of insurance] website at [insert website] has helpful information for consumers who are thinking about enrolling in a plan through the [insert name of state exchange]. Consumers can also make an appointment with a navigator, certified application counselor, insurance agent or broker, or other assister to help prepare for enrollment and compare plans. To find those that can assist consumers, go to Find Local Help at: https://localhelp.healthcare.gov/.

Consumers can start gathering basic information about household income, such as their most recent tax return if they filed one, or other income information. A full list of required documents is available at https://marketplace.cms.gov/outreach-and-education/marketplace-application-checklist.pdf. Many people will qualify for financial help to make insurance affordable, and consumers will need income information to find out how much help they are eligible for. Consumers can find more information about how to save money on coverage at https://www.healthcare.gov/lower-costs/.

SHOPPING FOR HEALTH INSURANCE: WHAT IS COVERED?

Q 13: What types of plans are available through the [insert name of state exchange]?

Health plans sold through the [insert name of state exchange] are required to meet comprehensive standards for items and services that must be covered. (See Question 16.) To help consumers compare costs, plans available through the [insert name of state exchange] are organized in four tiers, or four levels, that estimate the generosity of the plans’ coverage:

- **Bronze level** – The plan must cover about 60% of expected costs across a standard population. This is the lowest level of coverage.
- **Silver level** – The plan must cover about 70% of expected costs across a standard population.
- **Gold level** – The plan must cover about 80% of expected costs across a standard population.
- **Platinum level** – The plan must cover about 90% of expected costs across a standard population. This is the highest level of coverage.

In addition, catastrophic plans cover the same services, but its coverage will be slightly less generous than the bronze level plans. A catastrophic plan may be a less expensive option for those who are eligible: Only individuals under age 30 and individuals who cannot afford other coverage are allowed to buy catastrophic plans. If consumers have their plan cancelled and can’t afford replacement coverage, they may apply for a hardship exemption and buy a catastrophic plan. Premium tax credits and cost-sharing reductions aren’t available for catastrophic plans. Also, catastrophic plans cannot be used with health savings accounts (HSAs).

Stand-alone dental plans are available through the [insert name of state exchange]. (See Question 25.)

Q 14: How do the tiers (bronze, silver, gold, and platinum) help consumers compare plans?

The tiers are a way to categorize plans based on “actuarial value.” Plans within each tier have a similar actuarial value, even if they cover different benefits or have different types of cost-sharing. While all plans in a tier must cover EHB (see Question 17), the details of their coverage (such as how many physical therapy visits are covered or which prescription drugs are covered) may be different. Not all plans in the same tier have the same benefits or cost-sharing requirements. Some plans may offer benefits in addition to the EHB.

The metal levels indicate only the level of cost-sharing required by the plan. They do not provide consumers an indication of the plans’ provider network size, quality, or any other aspect of coverage.
**Q 15: What is actuarial value?**

Actuarial value represents how much of a standard population’s medical spending the health insurance plans in a given metal level would cover. Percentages (60% for bronze, 70% for silver, 80% for gold, and 90% for platinum) represent the approximate actuarial value of plans at each level. A higher percentage means the plan covers more of a standard population’s costs (and the population pays less out-of-pocket). A lower percentage means the plan covers less (and the population pays more). The actuarial value calculation focuses mainly on cost-sharing charges so that a bronze plan generally would have higher enrollee cost-sharing amounts compared to a gold plan. There also may be differences in how benefits are covered, such as differences in the prescription drugs that are covered or how many physical therapy visits the plan covers. The law requires all the metal level plans and catastrophic plans to cover a set of EHB.

Actuarial value is calculated for a standard population and doesn’t mean that the plan will pay that percentage of any given person’s actual costs. For instance, a silver tier plan will pay more than 70% of covered medical expenses for some people and less than 70% for other people.

Actuarial value doesn’t give other information about a plan that may be important to a particular person or affect their costs. It doesn’t tell you how broad or narrow a plan’s provider network is, the quality of the provider network, about the plan’s customer service and support, how broad or narrow the drug formulary is, or the premium levels. All of this information is important for consumers to consider when they choose a plan.

See [https://www.healthcare.gov/choose-a-plan/](https://www.healthcare.gov/choose-a-plan/) for more consumer information about choosing a plan.

**Q 16: What services/benefits must plans cover? What are essential health benefits?**

Many plans sold in the individual and small group market, including all of those sold through the [insert name of state exchange] and [insert name of state SHOP exchange] must cover, at a minimum, a comprehensive set of benefits known as essential health benefits (EHB). These EHB include the following:

- Ambulatory patient services
- Emergency services
- Hospitalization
- Maternity and newborn care
- Mental health and substance abuse disorder services, including behavioral health treatment
- Prescription drugs
- Rehabilitative and habilitative services and devices
- Laboratory services
- Preventive and wellness services, including chronic disease management
- Pediatric services, including oral and vision care

“Grandfathered,” “transitional,” and “short-term” plans in the individual and small group markets aren’t required to include EHB. For more information on these plans, see Questions 30-31.

For more detailed information about essential health benefits in [insert name of state] and other states, visit [https://www.cms.gov/cciio/resources/data-resources/ehb.html#ehb](https://www.cms.gov/cciio/resources/data-resources/ehb.html#ehb).

**Q 17: What insurance companies will offer coverage through the [Insert name of state exchange]? How can consumers get a list of companies and plans available?**

There are listings of the health plans available through the [insert name of state exchange] on its website: [Insert links to state exchange website]. People without access to the Internet can call the customer service line for the [insert name of state exchange] at [insert phone number] or get help from an agent, broker, or other type of assister. (See Question 62.)
Q 18: How can a consumer find out the details about what a particular plan covers?

All individual and small group plans offered after Jan. 1, 2014, will cover EHB (see Question 16), except grandfathered, transitional, and short-term plans. (See Questions 30-31 and 89.)

To learn if a specific benefit is covered, and at what level, check a plan’s Summary of Benefits and Coverage (SBC). An SBC is a uniform document that includes details about what a plan does and doesn’t cover. It also includes information about what kinds of costs a consumer can expect to pay out-of-pocket, such as copayments, coinsurance, and deductibles. An insurance company must provide an SBC for all health plans except for short term and limited benefit plans. It gives information in the same way for every plan to make it easier to compare plans. The SBC forms are available on the federal government’s website at www.healthcare.gov, the [insert name of state exchange] website at [insert link], the insurance company’s website, or from an agent or broker for plans offered in the market outside the exchange.

It should be noted that the SBC provides a summary of the benefits. More detailed information is available through the insurer or an insurance agent or broker, and each SBC must include a link to a copy of the actual individual coverage policy or group certificate of coverage that will provide more detailed information.

The [insert name of state exchange] website at [insert link] includes information about what each plan covers and links to the insurer’s plan brochures.

Q 19: How can consumers compare benefits and understand what a plan covers?

In addition to getting an SBC (see Question 18), consumers can get information about the health plan options available in their state online at the [insert name of state exchange] website at [insert link], through the [insert name of state exchange]'s toll-free telephone number, or from agents, brokers, navigators or consumer assisters. To find those that can assist you in your area, you can go to “Find Local Help” at https://localhelp.healthcare.gov/.

Q 20: How can consumers see and compare premiums for plans?

The [insert name of state exchange] is set up to let consumers compare policies on the basis of premiums, provider network, actuarial value, and other factors. In addition to premium costs, consumers should look at all the benefits and cost-sharing provisions when choosing a plan because plans with the lowest premium often have the highest out-of-pocket costs.

Consumers can get information to compare premiums from the [insert name of state exchange] website at [insert link] or call center at [insert phone number]. Also, navigators, certified application counselors, insurance agents or brokers, or other assisters should be able to help consumers compare plans.

Drafting Note: States that allow stand-alone vision plans to be sold through the exchange should modify this answer to include stand-alone vision plans.

Q 21: Can a person or a health insurance issuer take benefits out of a plan? What if a consumer doesn’t need all of the benefits in a plan?

No. Neither consumers nor health insurance issuers can take benefits out of a plan. At a minimum, every health plan on the [insert name of state exchange] must provide coverage for all of the essential health benefits the ACA requires. (See Question 16.) Even though a person may not need every benefit in a plan, plans must cover all of the essential benefits to share risk across a broad pool of consumers and be sure all benefits are available for everyone. This also helps to protect people from risks they can’t always predict across their lifetimes.

There may be short-term plans or limited benefit plans available that do not cover all of the essential health benefits.
**Drafting Note:** States with an individual mandate may want to add: Consumers who don’t have a plan that provides minimum essential coverage may have to pay a penalty when they file their state income taxes. The federal penalty was reduced to $0 starting with tax year 2019. (See Question 57.)

**Q 22: Can consumers’ health conditions affect what coverage they are able to get?**

No. Under the ACA, health insurance companies no longer can leave coverage out of a plan based on a person’s health condition, a practice that used to be known as a “pre-existing condition exclusion.” Nor can they charge a higher premium because of a person’s health condition. These protections apply whether a person buys an individual market plan through the exchange or outside the exchange; it does not apply to short term or limited benefit plans.

**Q 23: Can an insurance company charge tobacco users more than non-tobacco users?**

Under the ACA, health insurance companies in the individual and small group markets can charge consumers who use tobacco products a higher premium. People who use tobacco may be charged up to [insert state-specific tobacco surcharge – no higher than 50%] more than people who don’t use tobacco. Consumers in group plans may not have to pay this extra charge if they complete a tobacco cessation program and cannot be charged more unless they are provided an opportunity to complete a tobacco cessation program. This does not apply to coverage that is not considered individual coverage, including short-term plans.

**Drafting Note:** States that don’t allow the tobacco surcharge should replace the previous paragraph with the following one: In [insert name of state], health insurance companies can’t charge consumers a higher premium for being a tobacco user.

**Q 24: What are preventive benefits and how are they covered?**

Preventive benefits are designed to keep people healthy by providing screening for early detection of certain health conditions or to help prevent illnesses. The ACA requires that individual market and non-grandfathered group health plans cover many preventive services with no out-of-pocket costs (meaning no deductibles, co-payments and coinsurance) for all new plans sold after Sept. 23, 2010. Some of these covered preventive services are:

- Colorectal cancer screenings, including polyp removal for individuals over age 50
- Immunizations and vaccines for adults and children
- Counseling to help adults stop smoking
- Well-woman check-ups, as well as mammograms and cervical cancer screenings
- Well-baby and well-child exams for children

Unless an insurer doesn’t have an in-network provider to do a particular preventive service, plans can charge for these preventive services when done by an out-of-network provider.

For more detailed information about covered preventive services, visit the federal government’s website at https://www.healthcare.gov/what-are-my-preventive-care-benefits.

**Q 25: Are dental or vision benefits available through the [insert name of state exchange]?**

The ACA requires plans sold through the [insert name of state exchange] to include vision coverage for children, so children’s vision benefits are included in plans through the [insert name of state exchange]. Dental benefits are treated differently. The ACA lets insurance companies offer health plans through the [insert name of state exchange] that don’t include children’s dental benefits as long as the [insert name of state exchange] offers a stand-alone dental plan that includes a pediatric dental benefit.

Plans aren’t required to include dental or vision coverage for adults, but a plan can choose to include these benefits as part of its coverage. Check a plan’s SBC to learn if the plan includes dental or vision coverage for adults.

Some insurance companies may offer stand-alone dental plans through the [insert name of state exchange]. Check the [insert name of state exchange] website at [insert link] for more information.
Check the federal website at www.healthcare.gov for more information about dental benefits.

**Drafting Note:** States where consumers may buy dental coverage without purchasing health coverage should add a sentence as appropriate to explain.

**Drafting Note:** States that allow people with Medicare to buy dental plans through the exchange should include this information in this answer.

**Drafting Note:** States that allow stand-alone vision plans to be sold through the exchange should modify the answer to this question as appropriate.

**Q 26: How does a consumer find out what drugs a plan covers?**

Health insurers keep lists of which drugs are covered and which are covered at the lowest cost for each of their plans. These lists are called formularies. Drug cost-sharing is often “tiered”—that is, consumers pay less for a generic drug, more for a brand name drug and sometimes even more for a nonpreferred brand name drug. Consumers should review the formularies in any plan they are considering to be sure the plan meets their prescription drug needs and to know what cost sharing is required for any given drug. For plans that use formularies, the SBC includes an Internet address to obtain information about the plan’s drug coverage. Consumers also can call health insurers for information.

Formulary information is also available on [insert name of state exchange] website. If a consumer enrolls in coverage and needs access to a drug not on the plan’s formulary, the enrollee may be able to use the drug exceptions process to request and gain access to the needed drug.

**Drafting Note:** States should include their rules regarding whether the insurance company can change the formulary or tiering after the consumer has bought the plan.

**Q 27: What are out-of-network services, and do consumers have any coverage for them?**

Services are considered out-of-network if they’re from a doctor, hospital, or other provider that doesn’t have a contractual relationship with a particular health plan. Not all plans cover out-of-network services, but when they do, a consumer’s share of the cost is usually a lot higher than for an in-network service. (See Question 24 regarding preventive services and Question 29 regarding emergency services.) Consumers should find out whether a provider is in-network before they receive services. Consumers also should find out if their regular or desired health care providers are in-network before they buy a plan. Additionally, different plans offered by the same insurer may have different provider networks, so consumers should be careful to look at the network for their specific plan.

Although the ACA limits how much money a person is required to spend each year on his or her family’s health care, health insurers are permitted, although not required by federal law, to count the cost of out-of-network services toward these limits.

A plan’s SBC will include information about coverage for out-of-network services and an Internet address to see the plan’s provider network.

**Q 28: How do consumers determine if their doctor or dentist is in the network?**

The [insert name of state exchange] website (at [insert website]) lets consumers look up whether their doctor is in the plan network. For plans with a provider network, the SBC includes an Internet address to get a list of network providers. Because plan networks may change regularly, consumers also should check with the doctor or dentist before they schedule an appointment to learn if the provider is still in the plan’s network.

**Q 29: Do consumers have access to emergency care out-of-network?**

Yes. The ACA requires many health plans that provide benefits for emergency services to cover them regardless of whether the provider is in or out of the network. Under the ACA, health plans aren’t allowed to charge a higher copayment or coinsurance for out-of-network services received in an emergency. In addition, [insert name of state] prohibits balance billing for emergency care received out-of-network, meaning only in-network rates will apply for all emergency care.
Drafting Note: States that allow health care providers to balance bill for emergency care received out-of-network should replace the previous paragraph with the following:

Yes. The ACA requires many health plans that provide benefits for emergency services to cover them whether the provider is in or out of the network. While health plans aren’t allowed to charge a higher copayment or coinsurance for out-of-network services received in an emergency, [Insert state name] allows health care providers to bill consumers for the difference between the cost of emergency care received out-of-network and the amount the plan allows. For more information about [insert name of state]’s rules on balance billing, please contact [insert specific state contact information]. Under federal law, to limit amounts of balance billing for out-of-network emergency services, insurers must calculate amounts they pay for such services in such a way that yields the highest payment of the following three amounts:

(A) The amount negotiated with in-network providers for the emergency service furnished, excluding any in-network copayment or coinsurance imposed with respect to the participant, beneficiary, or enrollee

(B) The amount for the emergency service calculated using the same method the plan generally uses to determine payments for out-of-network services (such as the usual, customary, and reasonable amount), excluding any in-network copayment or coinsurance imposed with respect to the participant, beneficiary, or enrollee.

(C) The amount that would be paid under Medicare Parts A or B for the emergency service, excluding any in-network copayment or coinsurance imposed with respect to the participant, beneficiary, or enrollee.

Q 30: What is a “grandfathered” health plan?

A grandfathered health plan is a plan that has existed continuously since before March 23, 2010, and that has not made certain significant changes in the plan. Grandfathered plans aren’t subject to many of the ACA requirements, such as the requirement that plans cover EHB (see Question 16), but they are considered to provide minimum essential coverage under the ACA. (See Question 57.)

Grandfathered plans that make certain changes, such as major increases in their cost-sharing (such as coinsurance, deductibles, copayments) or eliminating benefits to diagnose or treat a particular condition, may lose grandfathered status and then would have to follow the applicable ACA requirements. Employer-sponsored plans that significantly increase the employee share of the premium also could lose grandfathered status.

In the individual market, a consumer cannot enroll in a grandfathered plan with a new enrollment. However, consumers who are already enrolled in an individual market plan as of March 23, 2010, can renew their coverage in that grandfathered plan.

A plan must indicate in the plan materials if it’s a grandfathered plan. Also, consumers can check with their insurance company or employer to determine if their plan is grandfathered.

Q 31: Can consumers keep an existing plan that isn’t grandfathered, but which doesn’t comply with the ACA reforms (known as transitional plans or “grandmothered” plans)?

It depends. In November 2013, CMS announced a transitional policy that would permit insurers, if allowed by the state, to extend policyholders’ 2013 coverage for up to several additional years even if the plan did not comply with certain ACA reforms. These transitional plans can no longer be sold to new customers (after Jan. 1, 2014), and aren’t eligible for subsidies. Insurers that provide transitional plans will provide notice to affected individuals and small businesses. Check with your insurance carrier to see if it will be renewing these plans and what changes, if any, it will be making to the plans.

Drafting Note: States that did not adopt this policy, applied it only in certain markets (i.e., in the small group market but not the individual market), or that have already phased out transition plans would need to edit this answer accordingly or perhaps delete it entirely.
EMPLOYER-SPONSORED COVERAGE

Q 32: Is employer-based coverage required to cover dependents (spouses and children)?

Under the ACA, if an employer with 50 or more employees doesn’t offer coverage that meets minimum standards to employees and their dependents, and employees access premium tax credits through the exchange, the employer may have to pay a tax penalty. (See Questions 53-54.) However, for purposes of this penalty, the IRS has interpreted the phrase “and their dependents” to mean children under age 26 but not spouses. For more information, see https://www.irs.gov/affordable-care-act/employers/employer-shared-responsibility-provisions. Small employers with fewer than 50 employees that don’t offer coverage to employees or their dependents are not subject to any tax penalties, but may qualify for a tax credit if they choose to do so. (See Question 55.)

Also, if employer-based coverage includes children, the ACA requires the employer to let children up to age 26 stay on their parents’ policy. Adult children up to age 26 can stay on their parents’ policy whether or not they live in their parents’ home, are married, or the parents no longer claim them as a dependent on their tax return. The employee can be required to pay for this coverage, however.

Q 33: What can a consumer do when employer-based health coverage ends?

Under the Consolidated Omnibus Budget Reconciliation Act (COBRA), a federal health law since 1986, when employees and their dependents lose employer-based coverage, they are still eligible to stay on their employer’s group health plan, even though that coverage would otherwise end. COBRA doesn’t apply to employers with fewer than 20 employees [insert state mini-COBRA law information if applicable].

However, COBRA coverage can be expensive because the former employer isn’t required to pay any part of the premium. Those who have lost employer-based health coverage may be eligible to access advance premium tax credits to buy a more affordable individual or family policy through the [insert name of state exchange] (see Question 83-84) even if the loss of coverage occurs outside of the open enrollment period. Consumers enrolled in COBRA cannot qualify for advance premium tax credits. Dropping COBRA coverage outside of an open enrollment period will not qualify as a special enrollment opportunity.

Q 34: Must a consumer exhaust all available COBRA coverage before buying coverage through the exchange with subsidies?

No. COBRA allows group health plan participants and beneficiaries to continue coverage under their group health plan for a limited period of time after certain events cause a loss of coverage, such as voluntary or involuntary job loss, reduction in the number of hours worked, transition between jobs, death, and divorce. If an individual loses eligibility for minimum essential coverage, including employment-based coverage, he or she will be eligible for a special enrollment period (SEP) during which he or she can buy coverage on the [insert name of state exchange] or in the individual market outside of it. At this time, the individual may also apply for advance premium tax credits and cost-sharing reductions through [insert name of state exchange] to see if he or she is eligible to receive them. However, if an individual has already enrolled in COBRA coverage, he or she must wait until the next open enrollment period or until that COBRA coverage has been exhausted before enrolling in an individual market plan.

Q 35: If a consumer has access to employer-based coverage, can an employer make the consumer wait before becoming eligible for benefits?

Yes. Employers may require a waiting period before individuals become eligible for benefits. Under the ACA, this waiting period can’t be longer than 90 days. Employers also may impose an additional one-month orientation period before the waiting period begins. For more information, consumers should contact their employer’s human resources department.
Q 36: Can a consumer with access to employer-based coverage get a tax credit to buy a plan through the [insert name of state exchange]?

A consumer who has access to employer-based coverage is free to buy a plan through the [insert name of state exchange], but tax credits to buy the coverage are available only if the employer’s plan isn’t affordable or doesn’t provide minimum value. (See Question 83.) If a consumer has access to employer-sponsored coverage that is affordable and provides minimum value, the consumer will not be able to get tax credits and cost-sharing reductions.

Coverage isn’t affordable if the cost of employee-only coverage under the lowest cost employer plan is more than 9.78% of the employee’s annual household income in 2020. The plan doesn’t provide minimum value if it pays for less than 60% of medical costs that the plan covers, or if it fails to provide substantial coverage of inpatient hospital or physician services. The HHS and IRS have developed a minimum value calculator at www.cms.gov/CCIIO/Resources/Regulations-and-Guidance/Downloads/mv-calculator-final-4-11-2013.xlsm.

Consumers can find out if an employer plan meets minimum value by looking at the SBC or by requesting that the employer fill out an Employer Coverage Tool. This form provides information that will help the consumer answer application questions correctly at the [insert name of state exchange]. The Employer Coverage Tool can be found at https://www.healthcare.gov/downloads/employer-coverage-tool.pdf.

There’s more information on [insert name of state exchange]’s website and on these IRS websites:

www.irs.gov/Affordable-Care-Act/Individuals-and-Families/The-Premium-Tax-Credit

Q 37: If a consumer is offered employer-based coverage that would cover a spouse or dependents, can that consumer’s spouse or children get a tax credit to buy coverage through the exchange?

It depends on whether the employer-based coverage is affordable and meets minimum value. If the premiums for employee-only coverage in the lowest cost plan are less than 9.78% of household income and the coverage provides minimum value, then no one in the family who is eligible for the plan is eligible for premium tax credits. This may be the case even when it would be unaffordable for a spouse or children to enroll in the plan, based on the cost of family coverage. Depending on state eligibility rules, the children may be eligible for Medicaid or CHIP coverage. (See Question 99.) Contact the [insert name of state exchange] to learn more.

Q 38: What is a health reimbursement arrangement?

Under a health reimbursement arrangement (HRA), an employer may offer employees tax-free funds to be used to purchase health coverage. Under an integrated HRA, an employer may offer funds instead of a group health plan to some or all employees. The employees use the funds to purchase individual market health plans for themselves and their families. Under an excepted benefits HRA, an employer may offer funds alongside a group health plan. The employees and their families may use the HRA funds to purchase coverage other than comprehensive health coverage, such as dental coverage, vision coverage, or short-term, limited duration insurance.

Q 39: If a consumer is offered a health reimbursement arrangement, can that consumer get a tax credit to buy coverage through the exchange?

It depends on the amount of the HRA offered by the employer. If the employer offers enough money through an HRA to make an exchange plan affordable for an employee, neither the employee nor family are eligible for a premium tax credit. If the size of the HRA does not make coverage affordable, the employee and family may still receive a premium tax credit. If the HRA is a qualified small employer HRA (QSEHRA), the amount of the tax credit is reduced by the amount of the QSEHRA.

The [state exchange name] may not take a consumer’s HRA into account when calculating how much premium tax credit the consumer is eligible for. In that case, the consumer may want to apply less than the full amount of the credit they are
awarded when paying for their premiums every month. This can help avoid the need to pay back some of the credit when the consumer files his or her federal income tax return.

Q 40: What is the [insert name of state SHOP exchange]?

Under the ACA, states or the federal government may create Small Business Health Options Program (SHOP) exchanges, where small employers who want to offer coverage to their employees can shop for plans. In [insert name of state], the SHOP exchange is called the [insert name of state SHOP exchange]. The SHOP can allow a small employer to offer a range of small group plans to their workers. Eligible employers can apply for the Small Business Health Care Tax Credit if they offer coverage through the SHOP and meet certain other criteria. The SHOP has no minimum contribution requirements for employers, but, some states may impose a contribution requirement in addition to a minimum participation rate. Employers who are interested in applying for the Small Business Health Care Tax Credit, however, must contribute at least 50% to their employees’ premium costs in order to be eligible for the credit. Just as with the regular small group market, employers that sign up for coverage during the small group open enrollment period that runs from Nov. 15 to Dec. 15 will face no minimum participation requirements. Coverage would then be effective for workers beginning Jan. 1.

The ACA calls for “employee choice” in the SHOP exchanges. Under this provision, small employers may choose to give their employees a choice of health plans from multiple insurers across all metal levels on the SHOP exchange. In some states, employers may also choose to offer coverage by one insurance company. Whether offering employee choice or not, in most states, employers will work with their SHOP registered agent or broker, or insurance company or companies to obtain application, enrollment and billing information.

There’s more information about the [insert name of state SHOP exchange] at [insert link to state SHOP exchange website]. There are resources for information about small employer issues and the ACA on the following websites:

http://healthcare.gov/small-businesses

U.S. Department of Labor Patient Protection and Affordable Care Act information

Affordable Care Act Tax Provisions

Q 41: Is there a cost to participate in [insert name of state SHOP exchange]?

There’s no fee for small employers or their employees to enroll in SHOP coverage. Some employers may be eligible for the Small Business Health Care Tax Credit, which can be worth up to 50% of the employer’s premium contribution.

Q 42: Can insurers charge more (or less) for policies sold through [insert name of state SHOP exchange]?

No. Insurers must charge the same for similar plans whether they’re sold through the [insert name of state SHOP exchange] or in the market outside of the [insert name of state SHOP exchange].

Q 43: What happens if an employer’s staff increases to more than 50 employees in the year after the employer bought coverage through the SHOP?

The small employer still will be eligible to buy health insurance through the [insert name of state SHOP exchange] through the end of their plan year because the employer had 1-50 employees at the time they bought coverage through [insert name of state SHOP exchange].

Drafting Note: States should modify this paragraph in accordance with the state definition of small employer.
Q 44: How are small employers defined?

Generally, small employers who are eligible to get coverage in the small group market or in the SHOP are those with 50 or fewer employees, though the definition may vary by state.

Drafting Note: States should modify this paragraph in accordance with the state definition of small employer.

Q 45: How do employers with full-time and part-time employees know whether they’re required to pay a penalty if they don’t offer health insurance to their workers?

All employers will want to assess whether they’ll be considered to have at least 50 full-time equivalent employees. Penalties will be assessed (starting Jan. 1, 2016), against employers with at least 50 full-time equivalent employees who 1) do not offer health coverage that meets minimum standards, 2) have an employee who gets coverage through the exchange, and 3) have an employee who gets the premium tax credit. (See Questions 53-54.)

Q 46: Are health insurers required to sell their plans through the federal SHOP exchange?

It’s expected that only some insurers currently offering small group health insurance plans will choose to sell their plans through [insert name of state SHOP exchange]. If they choose to, they must at least offer one plan in the silver metal tier and one in the gold. (See Question 15.) They may offer plans in the other metal tiers, but they might choose to offer those plans only in the market outside the [insert name of state exchange]. That’s another reason to compare exchange plans with those in the market outside the exchange. It’s important for small employers to understand all of their options. Small employers may work with SHOP registered agents or brokers for information about the small group insurance options in their state.

Q 47: Are small employers required to buy a health plan for their employees through [insert name of state SHOP exchange]?

No. Small employers may buy health insurance for employees through the [insert name of state SHOP exchange] or in the market outside the exchange. However, to be eligible for the Small Business Health Care Tax Credit (see Question 55), in most cases the coverage must be bought through the SHOP exchange. It will be important for small employers to understand and compare all options available to them. State licensed health insurance agents and brokers, including SHOP registered agents and brokers, are available to help small employers compare options and determine which plan best meets their needs.

More information on the Small Business Health Care Tax Credit

Drafting Note: States that require small employers to buy health insurance for their employees through the exchange should modify this answer as appropriate.

Q 48: Will consumers be better off with individual coverage through the [insert name of state exchange] rather than small employer coverage?

Maybe. It depends on many variables, such as the employees’ out-of-pocket expenses under the small group plan offered, the consumers’ personal circumstances, and the premiums of the plans available through the exchange. Employees, their spouses, and dependents offered coverage through an employer are usually not eligible for premium tax credits, so small employer-sponsored coverage could cost less than individual coverage through the federal exchange.

Rates are available for plans offered through the [insert name of state exchange] and for plans in the market outside the [insert name of state exchange] so employers and employees can compare their options.
Q 49: Are there participation rates that insurers can require employers to meet to be eligible to buy small group coverage through the [insert name of state SHOP exchange] or in the market outside the [insert name of state SHOP exchange]?

As a result of the ACA, insurers offering coverage in the small group market cannot deny coverage to a small employer based on failure to meet minimum participation requirements, provided that the employer seeks coverage during the small group open enrollment period that runs from Nov. 15 to Dec. 15 each year. Outside of that time period, insurers in the small group market may impose participation requirements through the [insert name of state exchange] or outside the [insert name of state exchange] consistent with [insert name of state] law.

[Insert name of state] law doesn’t allow a small employer insurer to impose more stringent requirements than the following:

- [insert participation limits consistent with state law]

**Drafting Note:** States with state-based exchanges may impose minimum participation rates as a condition of participation in a state SHOP exchange. In states with a federally-facilitated exchange, the SHOP has a default minimum participation rate of 70% for qualified health plans (QHPs) and the minimum participation rate will be adjusted higher or lower depending on state law or general insurer practice. For more information, see this link: https://marketplace.cms.gov/outreach-and-education/shop-minimum-participation-rates.pdf

Q 50: Can small employers who are the sole employees of their business buy small group coverage either through the [insert name of state SHOP exchange] or the outside market?

Neither federal nor state law lets insurers sell small group health insurance plans to self-employed individuals with no common law employees through the SHOP.

Contact the [insert name of state exchange] at [insert link] or [phone number], or a licensed agent or broker for help.

Q 51: How does rating work in the small group market?

Under the ACA, there is adjusted community rating in the small group market. This means that the rates each employer pays for health insurance depends on the claims experience of the insurer’s entire small group market in [insert name of state], rather than the claims experience of that employer’s small group.

The ACA offers states the option to combine the individual and small group markets. By combining the markets, risk gets pooled among a larger number of policyholders. A larger risk pool increases rate stability; however, initially premiums for individuals are likely to be lower on average, while premiums for small employers are likely to be higher.

Q 52: Do small employers that don’t offer health care insurance coverage to their employees, have to pay a tax penalty?

No. Small employers who want to provide coverage may be eligible for the Small Business Health Care Tax Credit to help make insurance more affordable.

If the employer does offer coverage, however, the coverage must meet the ACA’s minimum standards for small group insurance plans, as well as specific requirements that apply to the small group market, such as coverage of EHB and the prohibition on discrimination based on health status.

In [insert name of state], the [insert name of state SHOP exchange] is a place where small employers who want to offer coverage to their employees can shop. There’s more information about the [insert name of state SHOP exchange] at [insert link to state SHOP exchange website].
Q 53: Do large employers have to offer health care insurance coverage to their employees? What about seasonal employees?

Under the ACA, if a large employer doesn’t offer affordable coverage that provides minimum value to full-time employees (and their dependents1), and an employee gets a premium tax credit, the employer has to pay a penalty. For employer-based coverage to be considered affordable in 2020, the premiums for the plan’s employee-only option must be less than 9.78% of his or her 2020 annual household income.

To offer minimum value, the plan must pay at least 60% of the medical costs for services the plan covers and include substantial coverage of inpatient hospital and physician services. The HHS and IRS have developed a minimum value calculator at www.cms.gov/CCIIO/Resources/Regulations-and-Guidance/Downloads/mv-calculator-final-4-11-2013.xlsm.

Large employers for this purpose are employers with 50 or more full-time employees, including full-time equivalent (FTE) employees. Full-time employees are employees with 30 hours or more of service in a week. The number of FTE employees is determined by adding the number of hours of service in a month for all part-time workers and dividing by 120 hours per month.

Penalties were assessed starting Jan. 1, 2016, against employers with 50 or more FTE employees not offering health coverage if an employee gets the premium tax credit.

Employers with a large seasonal workforce (such as agricultural workers hired for the harvest season or retail clerks hired for the holiday season) are given leeway under the ACA not to count seasonal employees to decide if they meet the definition of a large employer. If the employer has more than 50 full-time or FTE employees during 120 or fewer days per year, the employer doesn’t have to count those employees for those months.

This question does not take into account all possible situations. Employers should consult a tax professional for assistance with their particular situation.

Q 54: What are the penalties if large employers don’t provide coverage?

Large employers may have to pay a tax penalty if they don’t offer affordable coverage that provides minimum value for at least 95% of their full-time employees and their dependents, or all but five full-time employees, whichever is greater, and at least one of their employees gets premium tax credits through the [insert name of state exchange]. The penalty was imposed starting Jan. 1, 2016, for coverage not offered in 2015.

The penalty for a large employer that doesn’t offer coverage to full-time employees and their dependents is $2,320 multiplied by the number of full-time employees, if at least one full-time employee has received a premium tax credit. The first 30 employees are exempted in the count to calculate the penalty.

Similarly, the penalty for a large employer that offers coverage that isn’t affordable or doesn’t give minimum value is $3,480 multiplied by the number of full-time employees who receive premium tax credits. (The maximum penalty may not be greater than $2,320 multiplied by the total number of all full-time employees.)

Medicaid-eligible employees can’t get premium tax credits, so employers will not face penalties for employees who receive Medicaid coverage or for employees’ children who receive CHIP coverage.

---

**Q 55: How do small employers find out if they’re eligible for the Small Business Health Care Tax Credit?**

Employers who buy coverage for their employees through the [insert name of state SHOP exchange] may be eligible for the Small Business Health Care Tax Credit. To qualify, the employer must: 1) have fewer than 25 full-time equivalent employees; 2) pay employees an average annual wage that’s less than $50,000; and 3) pay at least half of the insurance premiums.

The tax credit operates on a sliding scale, with a maximum credit of 50% of the employer’s share of the premium costs and is only available to small employers buying health insurance through [insert name of state SHOP exchange]. The tax credit may be worth up to 50% of an employer’s contribution toward employees’ premium costs (up to 35% for tax-exempt employers).

Contact the [insert name of state SHOP exchange] at [insert link] or [insert phone number] for more information. A competent tax advisor also should be able to advise a small employer. There’s more information on the IRS website at www.irs.gov/uac/Small-Business-Health-Care-Tax-Credit-Questions-and-Answers:-Calculating-the-Credit.

**Q 56: What ACA requirements apply to large employers?**

Several ACA requirements apply to non-grandfathered health plans that large employers offer on either an insured or self-insured basis. The requirements include limits on out-of-pocket expenditures and waiting periods, no annual or lifetime dollar limits on coverage of EHB or cost-sharing for preventive services, the requirement that coverage be offered to adult children up to age 26, and the requirement of access to internal and external appeals. Also, as noted in Question 53 and Question 82, large employers are required to offer affordable and adequate coverage, or face a tax penalty.

**Q 57: What is the individual responsibility requirement, and does it mean consumers must buy coverage through the [insert name of state exchange]?**

Under the ACA, consumers and their dependent children are required to have “minimum essential coverage” unless they qualify for an exemption. This requirement is known as “individual shared responsibility” or the “individual mandate.”

However, beginning in 2019, the penalty for going without coverage is reduced to $0. Therefore, those without coverage will have to pay out-of-pocket for any health care expenses they incur, but they will not pay an additional tax penalty.

This link to the IRS website has more information: www.irs.gov/Affordable-Care-Act/Individuals-and-Families/ACA-Individual-Shared-Responsibility-Provision-Minimum-Essential-Coverage.

Coverage purchased through an exchange counts as minimum essential coverage, and so do other types of coverage. Employer-sponsored coverage, grandfathered plans, Medicare, Medicaid, and CHIP are all minimum essential coverage. Short-term health plans, fixed indemnity insurance, and coverage through a health care sharing ministry are not minimum essential coverage.

Check the website at www.healthcare.gov/fees/fee-for-not-being-covered/ for more information.

**Q 58: Without a tax penalty, is having minimum essential coverage important?**

After 2018, the tax penalty for not having Minimum Essential Coverage becomes $0. There’s more information on the penalty at www.healthcare.gov/fees-exemptions/fee-for-not-being-covered/.

Individuals without minimum essential coverage are ineligible for one type of Special Enrollment Period (SEP). Those who are enrolled in MEC that ends are eligible for an SEP that allows them to enroll in individual market coverage, including exchange coverage. Those who are enrolled in coverage that is not MEC do not qualify for this SEP. Therefore, if their coverage ends, they need to wait until the next Open Enrollment Period or until they qualify for another SEP to enroll. Individuals cannot be eligible for premium tax credits until they are enrolled in an exchange plan. More information on SEP rules is available at http://www.healthreformbeyondthebasics.org/wp-content/uploads/2015/06/SEP-Reference-Chart.pdf.
And of course, having coverage offers consumers some protection against high health costs, even if there is no tax penalty for going without coverage.

**Drafting Note:** States with their own penalties for lacking MEC should include that information.

**ENROLLING IN HEALTH CARE COVERAGE: WHERE CAN CONSUMERS GET HELP?**

**Q 59: Where do consumers go for help to choose and enroll in a plan?**

Consumers should make a list of questions before they shop for a health plan. Consumers should gather information about household income and set a budget for health insurance. Consumers should find out if they can stay with their current doctors and pharmacy, and understand how insurance works—including understanding deductibles, out-of-pocket maximums, and co-payments.

There are several resources from the Kaiser Family Foundation, Consumer Reports, the NAIC, HHS and U.S. Department of Labor (DOL) to help consumers understand how insurance works, the different insurance options, and what to consider when buying coverage.

A standard form called the Summary of Benefits and Coverage, or SBC, and the companion set of uniform definitions, also is available for many health insurance plans. This information can help consumers compare different insurance options. (See Question 18.) Consumers can get the form and definitions through the [insert name of state exchange] at [insert link to state exchange webpage], or ask the plan for it. The [insert name of state exchange] also can direct consumers to more information and resources about the options that are available.

If a consumer is eligible to buy coverage through the [insert name of state exchange], he or she can enroll through the [insert name of state exchange] website at [insert link], by phone at [insert phone number], or in person through [insert links and contact information].

Also, there are four types of individuals trained to help consumers make decisions about health coverage:

- **A. Insurance agents or brokers**

  Health insurance agents and brokers sell insurance coverage from one or more insurance companies. Health insurance agents and brokers are licensed by [insert name of state] and receive continuing education related to their job. They can help educate consumers about health insurance policies, help consumers apply for coverage, and advise consumers about the type of health insurance coverage that best suits them and their family. Agents and brokers can sell consumers insurance plans in the market outside the exchange, as they always have.

  Agents and brokers who want to sell policies through the [insert name of state exchange] have extra training from the HHS or the state-based exchange. They have passed a test at the end of their training to sell insurance policies through the [insert name of state exchange]. [Insert name of state] requires agents and brokers to have extra state-specific training before they sell through the [insert name of state exchange]. A list of agents and brokers authorized to sell through the [insert name of state exchange] is available on the [insert name of state exchange] website at [insert link]. Consumers may want to talk with more than one agent or broker before they decide which plan to buy. (See Question 66.)

  **Drafting Note:** States where there may not be a list of agents and brokers on the exchange may want to modify the answer accordingly.

- **B. Navigators**

  Navigators are individuals trained to help consumers understand the insurance policies available through the [insert name of state exchange] and answer consumer questions about the [insert name of state exchange]. They also can answer questions about insurance affordability programs, including Medicaid and CHIP. Navigators also can help educate consumers about their health insurance policy options and help them apply for coverage. Navigators get grants from the [insert name of state exchange] to receive training on how to help consumers. After training, they must pass a test and be
certified by [insert name of state exchange]. In [insert name of state], navigators also must have extra state-specific training before they can help consumers. Consumers can contact navigators at [insert state contact information]. (See Question 67.)

**Drafting Note:** States where the HHS will be doing training and certification should modify the preceding paragraph accordingly. The HHS will certify navigators in the federally facilitated exchanges.

**C. In-person assistance personnel**

In-person assistance personnel generally do the same things as navigators. In-person assistance personnel have received and successfully completed comprehensive training. They also can help educate consumers about health insurance policies and help them apply for coverage. [Insert name of state] has set up an in-person assistance program. Consumers can contact in-person assistance personnel at [insert contact information].

**Drafting Note:** States should delete this section if they do not have in-person assistance personnel.

**D. Certified application counselors**

Certified application counselors provide enrollment assistance to consumers. Certified application counselors receive and successfully complete comprehensive training. They, too, can help educate consumers about health insurance plans and help them complete an application for coverage. In [insert name of state], examples of application counselors include staff at [insert name of local community health centers or hospitals or consumer nonprofit organizations].

**Drafting Note:** States will need to customize this section depending on what type of exchange they have and what kinds of individuals will be assisting consumers. More customization may be necessary if the state has any licensure or certification requirements.

**Q 60: May consumers directly enroll for coverage through insurers?**

Yes. Consumers may buy coverage directly from an insurance company. However, consumers should make sure that the coverage they buy is offered through the [insert state name of state exchange] and that the insurer has an agreement to do direct enrollment through the [insert name of state exchange] so they can get any tax credits or cost-sharing reductions to which they are entitled.

Consumers enrolling directly through the insurance company portal may not see all plans available through the [insert name of state exchange].

**Drafting Note:** States that do not allow insurers to enroll consumers directly into plans through the exchange should change this answer accordingly.

**Q 61: How are people who help consumers enroll in health coverage paid?**

Insurance agents and brokers may have an agreement that the insurance company will pay them if they enroll consumers in a health insurance policy consistent with state law. The state-based exchange may set rules about paying health insurance agents and brokers from the exchange or directly from insurance companies. In [insert name of state], the agent or broker will be paid an amount agreed to by the health insurance agent or broker and the company.

In [insert name of state], navigators will get funding from [insert funding source]. They don’t get enrollment-based reimbursement from insurance companies and aren’t allowed to charge a fee.

In-person assistance personnel will be paid by [insert funding source]. They don’t get enrollment-based reimbursement from insurance companies and aren’t allowed to charge a fee.

Certified application counselors will not be paid through the [insert name of state exchange]. They don’t get enrollment-based reimbursement from insurance companies and aren’t allowed to charge a fee. They may, however, receive federal funding through other grant programs, or Medicaid, or from another source.
Q 62: How can consumers find an insurance agent or broker to help them enroll in a plan?

In [insert state name], the [insert name of state health insurance exchange] website at [insert web address] lists insurance agents and brokers authorized to enroll individuals, families, and small businesses in coverage through the [insert name of state exchange]. Consumers can contact the [insert state Insurance Department] for a list of licensed health insurance agents and brokers in their area. Some agents and brokers don’t contract with all health plans, so consumers must make sure they know the full list of plans that are available to them before they ask an agent or broker for help. Also, health insurance agents and brokers may or may not be able to help individuals complete the enrollment process for Medicaid or CHIP after they get an eligibility decision.

Drafting Note: States should modify this answer consistent with the information available in the state. In the federally-facilitated exchanges, such a listing will not be available for agents assisting consumers with individual QHPs. It has not been decided whether such a listing will be available for the federally facilitated SHOP exchange.

Q 63: What are the qualifications required for health insurance agents and brokers to participate in the [insert name of state exchange]?

In [insert name of state], health insurance agents and brokers are regulated by the [insert name of state department of insurance]. Agents and brokers receive training from the [insert name of state exchange or the HHS]. The insurance companies must appoint the insurance agents and brokers who sell their plans through the [insert name of state exchange]. An agent or broker selling plans through the [insert name of state exchange] must provide information on all plans that are offered on the [insert name of state exchange], even if the agent or broker isn’t authorized to sell some of those plans.

Drafting Note: States that aren’t requiring agents and brokers to be appointed to all the insurance companies selling through the exchange or that aren’t requiring agents to provide information about all plans available through the exchange should modify the previous paragraph accordingly.

Q 64: Where should consumers go with a problem enrolling in a plan through the [insert name of state exchange]?

The [insert name of state exchange] should be able to help consumers with any problems. In particular, [insert name of state exchange] operates a call center to help answer consumer questions. The number for the call center is [insert number] and is available on the [insert name of state exchange] website at [insert link]. Insurance agents and brokers, navigators, in-person assistance personnel, and certified application counselors also should be able to help. (See Question 59.) Consumers can also contact the [insert name of state insurance department] at [insert phone number] to file a complaint or report a concern about a negative experience with an insurance company, agent and broker, navigator, in-person assister, or certified application counselor during and after the enrollment process.

Q 65: Do consumers have to re-enroll annually?

Eligibility for premium assistance and enrollment in a health plan will be decided annually using updated income, family size, and tax information (when authorized). Each year, before the open enrollment period, the [insert name of state exchange] will check income data and send a notice to consumers who are determined eligible for enrollment in a plan through the [insert name of state exchange]. This notice explains the consumer’s eligibility for the upcoming year and tells the consumer to let the [insert name of state exchange] know of any changes. After this, there will be an annual open enrollment period for consumers to change plans or insurance companies if they want to.

All consumers are encouraged to go to the exchange to review all of their options and to update income and other information to ensure the correct subsidy is received. Those enrolled in a plan through the exchange in 2019 who are eligible for auto-renewal and choose not to re-enroll or enroll in a different plan by Dec. 15, 2019, will be automatically re-enrolled in their current or similar plan. For the 2020 coverage year, the key dates are as follows:

- Nov. 1, 2019: Open enrollment starts—the first day a consumer can apply for 2019 coverage.
- Dec. 15, 2019: The last date to enroll for coverage that starts Jan. 1, 2020. Consumers who miss this deadline can’t sign up for a health plan inside or outside the exchange or change plans unless they qualify for a special enrollment period (SEP). (See Question 12.)
• **Dec. 31, 2019**: The date when all 2019 exchange coverage ends, no matter when the consumer enrolled.
• **Jan. 1, 2020**: The date 2020 coverage can start if consumers applied by Dec. 15, 2019, or consumers were automatically enrolled in their 2020 plan or a similar plan.

During the year, consumers with coverage through the [insert name of state exchange] must report certain life changes to the [insert name of state exchange]. Consumers should report changes as soon as possible, especially in the case of changes that qualify a consumer for an SEP. Consumers eligible for an SEP typically have 60 days to enroll in new coverage. (See Question 12.) Changes include changes in income from a new job and getting married or divorced. See www.healthcare.gov/how-do-i-report-life-changes-to-the-marketplace/ for information about reporting life changes.

Consumers who have not requested financial assistance do not need to report changes related to financial assistance eligibility.

**Q 66: How will insurance agents and brokers be able to help consumers with enrollment through the [insert name of state exchange]?**

In [insert name of state], health insurance companies will appoint agents and brokers. Insurance companies will make sure the agent’s license is valid and registered with the [insert name of state exchange]. The agent can help consumers log on to the [insert name of state exchange]. Consumers should log into their own [insert name of state exchange] account. The agent or broker can help consumers as needed. The agent or broker will then work with consumers to complete the application. Consumers will be prompted to enter the insurance professional’s [insert name of state exchange] user identification number and national producer number on the application to show that the professional helped them.

**Drafting Note**: States should change this answer as appropriate to reflect the process in the state.

**Q 67: How will a navigator be able to help consumers with enrollment through the [insert name of state exchange]?**

In [insert name of state], navigators can help consumers create an account and log on to the [insert name of state exchange]. Consumers should log into their own [insert name of state exchange] account. The navigator can help consumers as needed to complete the application. Consumers may be prompted to enter the navigator’s [insert name of state exchange] user identification number on the application to show that the navigator helped them.

The navigator can help consumers to compare health plans and answer questions about health insurance policies in general. The navigator can answer questions from consumers about the differences in health plans and what they might mean for them, but the navigator CANNOT recommend or suggest which health plan would be best for consumers and their families. Navigators aren’t permitted to collect premium payments on behalf of an insurer or the [insert name of state exchange]. Consumers will be asked to enter the navigator’s [insert name of state exchange] user identification number on the enrollment page to show that the navigator helped them.

Navigators CANNOT sell, solicit or negotiate a health plan through the [insert name of state exchange]. They CANNOT suggest that one plan would be better for the individual than another.

**Drafting Note**: States should change this answer as appropriate to reflect the process in the state.

**Q 68: How will the in-person assister or the certified application counselor be able to help consumers with enrollment through the [insert name of state exchange]?**

In [insert name of state], the in-person assister or certified application counselor can help consumers create an account and log on to the [insert name of state exchange]. Consumers should log in to their own [insert name of state exchange] account. The in-person assister or certified application counselor can help consumers as needed to complete the eligibility application. Consumers may be prompted to enter the in-person assister’s or the certified application counselor’s [insert name of state exchange] user identification number on the application to show that the assister or counselor helped them.
The in-person assister or certified application counselor can help consumers compare health plans and answer questions about health insurance policies in general. The assister or counselor can answer questions from the consumer about the differences in health plans and what they might mean to them (such as explaining deductibles or out-of-pocket limits), but the assister or counselor cannot recommend or suggest which health plan would be best for consumers and their families. Consumers will be asked to enter the in-person assister’s or certified application counselor’s [insert name of state exchange] user identification number on the enrollment page to show that they helped them.

The in-person assister or certified application counselor cannot sell, solicit, or negotiate a health plan through the [insert name of state exchange]. They cannot suggest that one plan would be better for the individual than another.

**Drafting Note**: States should change this answer as appropriate to reflect the process in the state.

**Q 69: Can small employers use licensed insurance agents or brokers to buy health insurance through [insert name of state SHOP exchange]?**

Yes. Licensed insurance agents and brokers are available to help small employers compare and determine which health plan best meets their needs, like they do today. This is true whether they’re interested in buying coverage in the market outside the [insert name of state SHOP exchange] or through the [insert name of state SHOP exchange].

Licensed insurance agents and brokers will be able to compare plans in the market outside the [insert name of state SHOP exchange] against those offered through the [insert name of state SHOP exchange] to decide where they can buy the plan best for them. Employers may wish to talk with more than one agent or broker before making a decision about which plan to buy.

**Q 70: Will small employers be able to use navigators to buy health insurance?**

Navigators, by law, aren’t allowed to sell health insurance unless they have an agent/broker license. Navigators are available to help small employers view plan options displayed on the [insert name of state SHOP exchange] website and can help consumers small employers with enrolling through the SHOP. Navigators can explain the parts of the plans offered through the [insert name of state SHOP exchange] but cannot legally offer advice as to which plan is a better fit for the small employer. Only a licensed insurance agent or broker is qualified and allowed to offer this service.

**Q 71: How can an insurance agent or broker help a small employer interested in participating in the [insert name of state SHOP exchange]?**

An insurance agent or broker can help any small employer, as has been true in the past. The agent or broker can help the employer decide which health insurance policy would be best for them, enroll employees in the plan, file health insurance claims, and understand the process of enrollment.

In the [insert name of state SHOP exchange], the HHS expects that insurance agents and brokers will be in contact with employers both before and after enrollment, as they will be a primary contact for customer service issues.

**Q 72: What is the benefit of using an insurance agent to enroll in the [insert name of state exchange] or [insert name of state SHOP exchange]?**

Whether consumers are individuals or small group businesses, the insurance agent or broker can work with their needs and requirements. Agents and brokers have a working knowledge of the qualified health plans and their benefits. An agent or broker may help individual consumers or small employers to create an account with the [insert name of state exchange] if needed, but consumers, or a legally authorized representative, must create their own [insert name of state exchange] username and password. Consumers should not share this information with third parties, including insurance agents or brokers.
**Q 73: Will an insurance agent or broker show consumers all of the plan choices available through the [insert name of state exchange]?**

In [insert name of state], agents and brokers aren’t required to show consumers all available health plans. If the consumer is using the [insert name of state exchange] website with the help of an agent or broker, all QHP choices will be displayed. If the agent or broker goes through an insurance company portal, all plans available through the [insert name of state exchange] may not be shown, but other plans available in the market outside the exchange—that aren’t eligible for the advance premium tax credit—may be shown. Consumers should ask the insurance agent or broker if they’re being shown all of the plans available through the [insert name of state exchange] and whether tax credits or cost-sharing reductions apply to the plans they are looking at.

All agents and brokers must follow applicable [insert name of state] laws, regulations, and [insert name of state exchange] requirements, including standards related to relationships or appointments with insurance companies.

[Insert name of state] expects that the insurance agent or broker will tell consumers if the information given is about health plans with which the agent or broker has a business relationship and that consumers can always directly access the [insert name of state exchange] website. They’ll find information about other available qualified health plans there. The [insert name of state] expects that insurance agents and brokers will advise consumers to check with the [insert name of state exchange] about available tax credits or cost-sharing reductions.

**Drafting Note:** States should modify this answer if agents and brokers are required to show consumers all options available through the exchange.

**Q 74: Will consumers have to share their personal information, including their tax returns, with an agent or broker, navigator, in-person assistance personnel, or certified application counselor?**

No. A consumer isn’t required to share personal information, including tax returns, with an agent or broker, navigator, in-person assistance personnel, or certified application counselor. When consumers complete the application on the [insert name of state exchange] website with the help of an agent or broker, navigator, or assister, they should be able to fill out and submit their eligibility application without the agent, navigator or assister in direct view of the application. While consumers applying for financial assistance are asked to enter income amounts, income figures from the IRS won’t be shown during the application process, whether or not the consumer gets help filling out the application or does it independently. In [insert name of state], after completing the registration and training, agents or brokers, navigators, in-person assistance personnel, and certified application counselors must complete and comply with a privacy and security agreement and get a user ID to use with the [insert name of state exchange].

**Q 75: Will consumers have to share their account username and password with an insurance agent or broker, navigator, in-person assister, or certified application counselor?**

No. An agent or broker, navigator, in-person assistance personnel, or certified application counselor shouldn’t ask for a consumer’s account username and password. If a consumer is asked to share a username or password, he or she should contact the [insert name of state insurance department] at [insert phone number] and discuss this with the consumer assistance representatives.

**Q 76: What help should an insurance agent or broker, navigator, in-person assister, or certified application counselor give consumers if they or their dependents are eligible for Medicaid or CHIP?**

Agents or brokers, navigators, in-person assistants, and certified application counselors will work with all consumers who ask for help with [insert name of state exchange] enrollment, including those eligible for Medicaid or CHIP. The [insert name of state exchange] will send a notice to consumers who are eligible for Medicaid or CHIP. An agent or broker, navigator, in-person assister, or certified application counselor working with these consumers is expected to refer consumers to the [insert name of state Medicaid and CHIP agency]. Agent and broker, navigator, in-person assister, and certified application counselor training will include information about where to direct Medicaid- or CHIP-eligible consumers.
Agents and brokers should be able to give consumers a referral to a navigator, in-person assister, certified application counselor, or the [insert name of state Medicaid agency]. Navigators, in-person assisters, and certified application counselors should help all consumers seeking assistance with completing an application through the [insert name of state exchange]. If the [insert name of state exchange] assesses the consumer as Medicaid- or CHIP-eligible, the navigator, in-person assister, or certified application counselor may refer the consumer to the state Medicaid agency for more information. Navigators, in-person assisters and certified application counselors often are not required to help consumers fill out a state Medicaid application if it is different from the application used by the [insert name of state exchange], but they can refer consumers to appropriate resources in those cases.

Q 77: May an insurance agent or broker continue to work with consumers once they’re enrolled in a plan through the [insert name of state exchange]?

Insurance agents and brokers may continue to communicate with consumers after they’ve enrolled in a plan through the [insert name of state exchange], as long as the communications follow any laws and regulations that apply.

The communications also must follow the privacy and security standards the [insert name of state exchange] has adopted (pursuant to 45 C.F.R. §155.260). These standards limit how an agent or broker may use any information gained to provide help and services to qualified consumers.

COSTS AND ASSISTANCE WITH COSTS

Q 78: Is there cost-sharing for contraceptives?

With the exception of health plans sponsored by certain employers that have religious or moral objections to contraception, all plans, including those offered through the [insert state name of state exchange], must cover in-network doctor-prescribed FDA-approved methods of contraception without cost-sharing.

For specific information about a plan’s contraceptive coverage, consumers should check the plan’s SBC or ask their employer or benefits administrator. There’s more information about contraceptive coverage on the federal website at www.healthcare.gov/coverage/birth-control-benefits/ and www.cms.gov/cciio/resources/fact-sheets-and-faqs/downloads/aca_implementation_faqs26.pdf.

Q 79: How much do plans offered through the [insert name of state exchange] cost?

There are a variety of plans intended to fit different budgets, both through the [insert name of state exchange] and in the market outside the exchange. Also, many consumers purchasing coverage through [insert name of state exchange] qualify for the premium tax credits (see Questions 82-83), which pay for part of their premium and help lower the cost of coverage. To see specific costs of plans offered through the [insert name of state exchange], go to [insert state exchange webpage], call [insert state exchange telephone number], or talk to a navigator, certified application counselor, in-person assister, insurance agent or broker, or other assister. (See Question 59.)

Q 80: Do plans offered through the [insert name of state exchange] have large out-of-pocket costs?

The health insurance plans available through the [insert name of state exchange] feature a variety of out-of-pocket costs for consumers. But, the ACA requires that all non-grandfathered plans (including most plans that people get from an employer) limit consumers’ annual out-of-pocket costs for in-network EHB services to no more than $8,150 for individuals and $16,300 for families in 2020. These maximum out-of-pocket amounts will go up in future years. However, out-of-network services do not count toward these limits on annual out-of-pocket costs. (See Question 27.) There are separate out-of-pocket maximums for stand-alone dental plans.

Plans are required to cover certain preventive services without cost-sharing. (See Question 24.) Also, consumers whose incomes are below a certain amount may be eligible for a premium tax credit and a Silver plan that features lower cost-sharing and lower out-of-pocket costs (co-payments, coinsurance and deductibles) without paying a higher premium. Check with the [insert name of state exchange] at [insert link] or direct the consumer to an online calculator to estimate whether they...
may qualify for subsidies: https://www.kff.org/interactive/subsidy-calculator/. Navigators, certified application counselors, in-person assisters, agents or brokers, or other assisters should be able to help consumers learn if they qualify. Also, the exchange application tells consumers whether they might be eligible for Medicaid or CHIP programs, which have very limited out-of-pocket costs.

**Q 81: Where can consumers inquire to learn if they’re eligible for help paying premiums or for Medicaid?**

Consumers may apply with the [insert name of state exchange] or the [insert name of state Medicaid agency].

The [insert name of state exchange] determines eligibility for advance payments of premium tax credits and cost-sharing reductions. They also assess Medicaid and CHIP eligibility and make a referral, if appropriate, to the [insert name of state Medicaid agency] for a final determination.

Consumers also may apply directly with the [insert name of state Medicaid agency]. The [insert name of state Medicaid agency] will enroll eligible consumers in Medicaid or CHIP, or send their information to the [insert name of state exchange] to determine their eligibility for advance payments of the premium tax credit and cost-sharing reductions if they aren’t eligible for Medicaid or CHIP.

**Drafting Note:** States with a different process will need to modify this answer accordingly.

**Q 82: Is there help for consumers who can’t afford coverage?**

Yes, consumers with low or moderate incomes can qualify for reduced costs, either through Medicaid, CHIP, or exchange coverage, but eligibility rules apply. In [insert name of state], nonelderly adults without minor children don’t qualify for Medicaid. Beginning in 2014, some states used federal government funds to expand the program so that Medicaid also would cover adults with an income at or lower than 138% of the federal poverty level. In 2020, that is roughly $17,200 for a family of one and $35,500 for a family of four. Consumers should contact the [insert name of state exchange] or the [insert name of state Medicaid agency] directly if they think they might be eligible for Medicaid.

In [insert name of state], children may be able to get coverage through Medicaid or CHIP programs for which their parents aren’t eligible. Some families may find it more affordable to enroll their children in Medicaid or CHIP and buy coverage for the parents through the exchange.

**Drafting Note:** States may need to modify the answer to this question depending on the state’s decisions regarding Medicaid expansion.

**Q 83: Who’s eligible for premium tax credits and cost-sharing reductions?**

The ACA created premium tax credits and cost-sharing reductions to help cut costs for eligible consumers who buy a plan through the [insert name of state exchange]. (See Question 82.) The amount of the tax credit or cost-sharing reduction depends on family size and income. The amount of the tax credit and cost-sharing reductions varies on a sliding scale: Larger families and families with lower incomes get the most help. Tax credits and cost-sharing reductions aren’t available for individuals who are eligible for Medicaid, CHIP, Medicare or qualifying employer-sponsored coverage. More information about tax credits and cost-sharing reductions is available at www.healthcare.gov.

This link has general information about income levels at which financial help or coverage is available, as well as what counts as income: www.healthcare.gov/lower-costs/qualifying-for-lower-costs/.

**Q 84: How do premium tax credits to buy coverage through the [insert name of state exchange] work?**

Consumers who qualify for the premium tax credits can either receive them in advance, or they can wait until they file their taxes. The advance payment is sent to the insurance company that offers the plan the consumer has chosen and is used to reduce the monthly insurance premium. Consumers also have the choice to wait to receive their tax credits until they file their taxes. They also can use just part of their estimated tax credit in advance.
Consumers who want to use their tax credit in advance need to be as accurate as possible to estimate how much income they expect to have in the year they get coverage. If they underestimate their income and the tax credit is overestimated, they may have to repay part of their tax credits at tax time.

Consumers need to update the [insert name of state exchange] during the year about any changes in income, family size (like having a baby), employment (like getting a job where health coverage is offered) or becoming eligible for Medicare. The [insert name of state exchange] will change the tax credit amount to reflect the new information. Consumers who forget to update the [insert name of state exchange] about such changes might owe money at tax time or realize they could have been using a larger tax credit amount in advance.

Consumers who don’t use the tax credit in advance don’t have to tell the [insert name of state exchange] about any changes to their income or employment during the year. They can get the tax credit on their tax returns.

Consumers may go to the [insert name of state exchange] website at [insert link] or call the [insert name of the state exchange] at [insert telephone number] for more information about tax credits. Navigators, certified application counselors, in-person assisters, agents or brokers, or other assisters also are able to give consumers information about the tax credit. There’s more information about premium tax credits on the federal website at www.healthcare.gov.

Q 85: Is an individual who is a victim of domestic abuse and separated (but not divorced) from his or her spouse eligible for subsidies on the exchange?

Yes. In general, married couples must file a joint tax return in order to be eligible for a premium tax credit and cost-sharing reductions. For victims of domestic abuse, however, contacting their spouse to file a joint return may present a risk and may be legally prohibited if a restraining order is in place. As a result, married individuals who are victims of domestic abuse may still be eligible for subsidies if they are living separately from their spouse. Consumers in this situation should list “unmarried” on their exchange application and can do that without fear of penalty for misstating their marital status. For more information, see www.healthcare.gov/income-and-household-information/household-size or www.irs.gov.

Q 86: If a consumer is eligible for subsidy assistance, is there a grace period before a company can terminate the consumer for non-payment of premiums?

Yes. The ACA requires insurance companies to give enrollees who receive subsidies a 90-day grace period for non-payment of premiums before the policy can be terminated, provided the enrollee has paid at least one month’s premium. Claims must be paid during the first 30 days of the grace period, but the insurer may suspend payments to providers during the remainder of the grace period. In order to keep coverage at the end of the grace period, a consumer’s account must be fully paid within 90 days of missing a premium payment. For example, if a consumer misses a payment in July but makes payments in August and September, the consumer will be terminated in October if he or she has not also paid the missing payment from July. And, a company may deny coverage in the next year if the consumer is in the grace period. For example, if the consumer misses a payment in November and December, the consumer may be denied coverage in January if they haven’t paid premiums due the year before.

Drafting Note: States should review their laws for other grace periods that might otherwise apply.

Q 87: What should consumers do if they find themselves enrolled in both Medicaid/CHIP and exchange coverage with premium tax credits?

The [insert name of exchange] conducts periodic data matching to identify individuals enrolled in both Medicaid/CHIP and private insurance with premium tax credits and sends notices to those consumers. Upon receiving the notice, consumers may end their exchange coverage with premium tax credits by contacting the exchange. If a consumer wants to maintain exchange coverage while enrolled in Medicaid, he or she may apply for coverage without financial assistance, during the annual open enrollment period or a special enrollment period (SEP). Consumers whose enrollment status has changed since the data match (either in Medicaid or CHIP or exchange coverage with premium tax credits) should take no further action with the [insert name of state exchange]. Consumers might opt to contact their state Medicaid or CHIP agency to confirm that they are not enrolled. If found to be enrolled in Medicaid or CHIP coverage, they should follow the steps above to end exchange coverage with premium tax credits, if applicable, because consumers determined eligible for Medicaid or CHIP are not eligible for exchange coverage with premium tax credits or cost-sharing reductions.
If consumers are enrolled in exchange coverage with premium tax credits or cost-sharing reductions and are enrolled in Medicaid or CHIP, when the tax filer(s) file their tax return, they will likely have to pay back all or some of the tax credits received for the months following the eligibility determination for Medicaid or CHIP. Consumers who receive the notice but have more recently been denied eligibility for Medicaid or CHIP do not need to take any further action with [insert name of state exchange], but they may wish to contact their state Medicaid or CHIP agency to confirm that they’re not enrolled.

**QUESTIONS ABOUT OTHER TYPES OF COVERAGE**

**Q 88: What is available in the market outside the [insert name of state exchange]?**

In [insert state name], health insurance coverage is also available in the market outside the [insert name of state exchange]. However, if consumers want to take advantage of premium tax credits to help pay for part of their premiums or for cost sharing assistance, they must buy coverage through the [insert name of state exchange]. (See Question 83 and Question 84.) Consumers may buy plans in the market outside the exchange that aren’t required to cover the EHB, such as fixed indemnity plans, short-term policies, or insurance coverage and discount plans that include only specialty or ancillary services (for example, hearing, chiropractic, etc.) Note, though, that these policies do not have to comply with ACA reforms such as the prohibition on excluding coverage for pre-existing conditions. (See Question 4.) The NAIC has some resources discussing these types of plans:

- www.insureuonline.org/consumer_guide_cancer.pdf
- https://www.naic.org/documents/consumer_alert_health_sharing_ministries.htm

Contact [insert Department of Insurance contact] or an insurance agent or broker for help.

**Q 89: What are short-term plans?**

Under federal law, short-term plans are those with an initial term of no more than 364 days and that include a statement describing potential coverage limitations. Short-term plans may be renewed at the option of the insurer, but the same policy may only be in effect for up to three years in total. Short term plans are not required to comply with many of the consumer protections of the ACA. For instance, they may charge different premiums based on an applicant’s health conditions, exclude essential health benefits, and exclude coverage for pre-existing conditions.

**Drafting note:** States with their own regulations on short term plans should add a statement that describes allowable short-term plans, including duration restrictions, rating requirements, or benefit mandates.

**Q 90: If consumers already have coverage, may they buy separate policies for their children?**

Consumers who already have coverage for themselves are eligible to buy a policy for a child through the [insert name of state exchange]. The ACA requires that any health plan offered through the exchange also must be offered as a child-only plan at the same tier of coverage. Consumers also may be eligible for tax credits for child-only plans they buy through the [insert name of state exchange]. Visit the [insert name of state exchange] website at [insert website for the state exchange] for more information about child-only plans available through the [insert name of state exchange].

However, children who aren’t legal residents of the United States aren’t eligible for child-only plans through the [insert name of state exchange]. Consumers may be able to buy a child-only policy in the market outside the [insert name of state exchange], either directly from an insurer or through an agent or broker. For a list of licensed insurers in [insert name of state], visit the [name of state department of insurance] website at [insert website of state dept. of insurance]. A child also may be eligible for Medicaid (contact [insert name of state Medicaid agency] at [insert contact information]) or coverage through [insert state Children’s Health Insurance Program (CHIP)]. To learn more about CHIP plans, visit www.insurekidsnow.gov.
ACA MEDICARE-RELATED QUESTIONS

Q 91: Who should consumers contact with questions about Medicare, Medicare Supplement insurance, or Medicare Advantage plans?

Medicare coverage, Medicare Supplement insurance (Medigap), and Medicare Advantage plans aren’t available through the [insert name of state exchange]. Consumers who are currently enrolled in Medicare may not buy coverage through the exchange. Direct questions involving the ACA and Medicare, Medicare Supplement insurance, or Medicare Advantage Plans to [insert name of State Health Insurance Program (SHIP)] at [insert contact information]. The federal government’s Medicare website, www.medicare.gov, also has more information about health reform and Medicare changes.

Drafting Note: Some states have enrollees who are on Medicare because of end stage renal disease (ESRD) or some other high-cost medical disorder. In those states, beneficiaries with ESRD may be able to enroll through that state’s exchange. Medicare beneficiaries with other high-cost medical disorders in those states may have a limited special right to enroll in a Medicare Advantage plan.

Q 92: Are people who pay premiums for Medicare Part A able to enroll through the [insert name of exchange]?

If individuals who desire Medicare have to pay the premium for Part A because they aren’t entitled to those benefits, they can buy coverage through [insert name of exchange] instead of Medicare, and they may also be eligible for a tax credit. This includes those beneficiaries who only enrolled in Medicare Part B because they couldn’t afford the Part A premium. In both cases, these beneficiaries have to disenroll from Medicare Part A, if they have it, and from Medicare Part B, if they have it. There are consequences to substituting a QHP for Medicare. Consumers may pay higher premiums for Medicare if they decide to enroll in the future and may have a gap in benefits. The [insert name of SHIP] at [insert contact information] should be able to give consumers more information about their choices.

Q 93: Can a person with ESRD (End Stage Renal Disease) enroll in or stay in a QHP instead of enrolling in Medicare?

If a consumer with ESRD has not applied for Medicare, she or he can stay in or apply for coverage through the [insert name of exchange]. However, there are consequences to delaying Medicare benefits. Individuals with ESRD may not be eligible for certain Medicare benefits if they enroll in Medicare in the future, may pay a higher premium for late enrollment, or may have a delay in when benefits begin. The [insert name of SHIP] at [insert contact information] should be able to give consumers more information about these complex choices.

Q 94: If individuals become eligible for Medicare and are already in a QHP, can they stay in their plan?

If a person stays in a QHP* and is eligible for or enrolled in Medicare, he or she is no longer eligible to receive any tax credits. If the consumer has been receiving an advance premium tax credit, the consumer must report the change to the [insert name of state exchange] to end the tax credit. If the consumer does not do this, the consumer will be liable to repay the tax credits for which he or she was not eligible.

Although under federal laws the QHP cannot terminate coverage from the same policy to which the individual was enrolled upon becoming eligible for Medicare, a QHP is not designed to coordinate its benefits with Medicare. Both the premium and the benefits of a QHP are designed to provide primary coverage, not supplemental coverage. Depending on state law, a QHP may reduce its benefits to pay covered expenses that remain after Medicare pays, but the premium will stay the same. This may happen even if the individual does not sign up for Part B of Medicare. Consumers are encouraged to enroll in Medicare when they are eligible to do so to avoid premium penalties and delayed benefits later. The [insert name of SHIP] at [insert contact information] should be able to give consumers more information about how and when to enroll in Medicare and any penalties that can apply.

*Note that this information (except for the tax credit) applies to individual coverage inside and outside an exchange.
Q 95: Is there anything consumers and their dependents who are already on Medicare and have employer-based coverage need to do because of the ACA?

Generally, there’s nothing consumers need to do because of the ACA if they’re already on Medicare and have employer-based coverage. If consumers have coverage through an employer and that employer’s current benefits pay first and Medicare pays second, the ACA didn’t change that.

If the employer changes the benefits that cover consumers or their dependents, then they will send consumers a notice about those changes. Consumers can ask their employer’s human resources department how those changes work with Medicare.

The [insert name of SHIP] at [insert contact information] should be able to give consumers more information about how their existing coverage works with Medicare.

Q 96: Is there anything consumers and their dependents who are already on Medicare and have retiree coverage from an employer need to do because of the ACA?

The ACA didn’t change those benefits. Consumers should contact their employer’s human resources department for help. If they need more information about how Medicare and retiree benefits work together, they can contact the SHIP at [insert contact information].

Q 97: Will consumers with Medicare Supplement insurance be affected by the ACA?

No. The ACA doesn’t change the cost sharing for Medicare supplement policies.

Q 98: How will consumers’ Medicare prescription drug “donut hole” be affected?

The ACA began closing the “donut hole” in 2011, and it was closed entirely effective for 2019. The donut hole was closed by combining a 50% discount on the cost of brand-name drugs and a gradual increase in the share of prescription drug costs for both generics and brand-name drugs that Medicare pays, until a beneficiary only owes 25% of the total cost. Medicare beneficiaries whose prescription drug costs are greater than the Part D deductible will need to pay only a 25% coinsurance rate (after meeting the plan’s deductible, if any) until their expenditures reach the catastrophic level.

For more information, contact Medicare at www.medicare.gov or 1-800-MEDICARE or by contacting [insert name of SHIP] at [insert contact information].

Q 99: What about LTC insurance policies?

The [insert name of state exchange] doesn’t include LTC insurance policies, and policies sold on the [insert name of state exchange] don’t typically cover LTC services. Insurance agents and brokers still sell LTC insurance outside the exchange. The HHS website https://longtermcare.acl.gov/ has information about LTC insurance.

ACA MEDICAID-RELATED QUESTIONS

Q 100: Where can consumers find more information about Medicaid?

Contact the [insert name of state Medicaid agency] at [insert contact information] with any questions or concerns about Medicaid and the ACA. Also, the HHS website has basic information about Medicaid posted at www.healthcare.gov.

Q 101: Did consumers’ eligibility for Medicaid changed under the ACA?

The same categories of consumers continue to be eligible for Medicaid, although the financial methodology has changed. They still need to be part of an eligible group, such as children, pregnant women, parents (or other caretaker relatives), blind, disabled, or elderly, and they still need to meet the financial eligibility test set by [insert name of state]. Contact the [insert state Medicaid agency] at [insert contact information] for more information.
Drafting Note: States that have expanded Medicaid should modify this answer as appropriate.

There is more information about who is eligible for Medicaid at this link: https://www.healthcare.gov/medicaid-chip/.

Q 102: What is the expanded Medicaid eligibility under the ACA?

Adults who weren’t eligible for Medicaid in the past may be eligible under the ACA. [Insert name of state] has decided to expand Medicaid coverage to new groups, now covering [explain new eligibility criteria]. Contact the [insert name of state Medicaid agency] at [insert contact information] for more information.

Drafting Note: States that have not expanded Medicaid will need to revise this answer accordingly.

There is more information on who is eligible for Medicaid at this link: https://www.healthcare.gov/medicaid-chip/.

Q 103: What is the federal poverty level (FPL), and why is it important in the context of health care coverage?

The FPL is how the federal government defines poverty, and it’s used to decide who’s eligible for federal subsidies and entitlement programs. In states that expanded Medicaid, people under 65 with incomes up to 138% of the FPL (or about $35,500 for a family of four) generally can get Medicaid coverage. People with incomes above this level but less than 400% FPL may be eligible for premium tax credits to help them buy a plan through the [insert name of state exchange]. Cost-sharing reductions are available until a family’s income reaches 250% of the FPL.

Drafting Note: States that didn’t expand Medicaid will need to revise the previous paragraph accordingly.

This link has general information about income levels at which financial help or coverage is available, as well as what counts as income: www.healthcare.gov/lower-costs/qualifying-for-lower-costs/.

Q 104: What benefits will be available for adults newly eligible for Medicaid?

Each state can define the benefit package for this newly eligible group. The benchmark benefit package needs to at least include the EHB available through the [insert name of state exchanges]. (See Question 17.) Contact the [insert name of state Medicaid agency] at [insert contact information] for more information.

Q 105: Are undocumented immigrants eligible for Medicaid?

Undocumented immigrants are not eligible for most categories of Medicaid coverage, but may receive services in emergency circumstances.

Q 106: How do consumers apply for Medicaid?

Consumers can apply online through the [insert name of state exchange]. They also can apply by mail, fax or in person. If a consumer applies through the [insert name of state exchange], his or her eligibility for Medicaid also will be assessed, and the consumer’s application will be transferred to the [insert name of state Medicaid agency] for final determination. Under the law, there’s “no wrong door” to apply for health coverage, whether it’s through [insert name of state Medicaid agency], CHIP, or the [insert name of state exchange]. If a consumer isn’t eligible for Medicaid, then the consumer’s eligibility for coverage through the [insert name of state exchange] and for premium tax credits or cost-sharing reductions will be evaluated.

Q 107: Will consumers still need to submit documents to prove their income?

As much as possible, the [insert name of state exchange] uses existing data sources or gets information from various federal and state agencies, such as the IRS, to verify income. The rules are designed to ensure a high degree of program integrity and reduce the amount of paperwork that consumers need to provide.
Some consumers will be asked to provide documents to prove their income. There are separate processes to verify income in order to qualify for Medicaid and CHIP and for premium tax credits and cost-sharing reductions. To verify income for Medicaid, CHIP, premium tax credits, and cost-sharing reductions, [insert name of state exchange] will use data from the IRS, the Social Security Administration (SSA) and other income data sources.

For Medicaid and CHIP, issues that come up about verifying income will be resolved through a process of explanations and documentation. For premium tax credits and cost-sharing reductions, most verification issues will be resolved through a process of explanations and documentation. But, to limit the administrative burden, the [insert name of state exchange] may use a sample-based review in some cases.

**COMMON CONCERNS ABOUT HOW THE ACA AFFECTS CONSUMERS**

**Q 108: Does the ACA eliminate private health insurance?**

No. There is still private health insurance under the ACA. The ACA created health insurance exchanges (see Questions 5-6) where consumers can compare and shop for private insurance plans. The ACA also sets many new federal rules and protections that apply to people in each state who purchase private health insurance. (See Questions 2 and 4.)

**Q 109: Does the ACA include rules about insurance premiums?**

For individual and small group health insurance market plans covered by the ACA’s rating rules, premiums may only vary based on an individual’s age, the area of the state in which the policy is sold, tobacco use, and family composition. For covered plans, these are the only factors that an insurance company can use when it sets premiums. Covered plans can’t refuse to insure or charge higher premiums to consumers with medical problems. The ACA also reduces the difference in premiums covered plans charged for younger and older people and eliminates differences between premiums charged for men and women. These rating rules cover individual and small group health plans offered through the exchanges or outside of them, but do not apply to short-term, limited duration plans.

To help make coverage affordable, many consumers who buy qualified health plans through the individual market exchanges are eligible for premium tax credits. Also, consumers under age 30 or who can’t afford coverage may be eligible to buy catastrophic plans, which cost less.

**Drafting Note:** States may want to link to rate submissions and final approvals. States that don’t allow the tobacco surcharge or use a different ratio than 1.5:1 should note that health insurance companies are prevented from charging consumers a higher premium for being a tobacco user or limited in the amount of tobacco surcharge that can be applied.

**Q 110: Does the ACA address discrimination?**

ACA explicitly prohibits insurance companies from discriminating on the basis of race, color, national origin, sex, age, or disability. The ACA regulations additionally prohibit discrimination against individuals on the basis of expected length of life, degree of medical dependency, quality of life, other health conditions, sex stereotypes, gender identity, or sexual orientation. These nondiscrimination standards apply to the exchanges and exchange activities, insurers and insurance plans, navigators, certified application counselors, insurance agents or brokers, other assisters, and the EHB, among others. As of October 2019, changes to these regulations have been proposed, but not yet finalized by the federal government.

Section 1557 of the ACA prohibits discrimination by any health program or activity receiving funds from HHS. The scope of this prohibition was first outlined via final rule in 2016; however, challenges to the scope of the rule, specifically with respect to gender identity or termination of pregnancy, resulted in a national preliminary injunction that bars HHS from enforcing the 2016 final rule as written. Health insurers, however, must follow any state laws and regulations that apply to marketing and can’t use marketing practices or benefit designs that will discourage individuals with significant health needs from enrolling. Health insurers must also provide meaningful access for individuals with limited English proficiency and post taglines in the languages spoken by persons with limited English proficiency.
Insurance companies won’t pay for services not covered by a plan, such as care that isn’t medically necessary. Consumers have the right to ask their insurance company to reconsider a decision to deny coverage and, after that, consumers have the right to an independent external review of the decision. (See Question 115.)

**Q 111: What are the income tax implications of the ACA?**

The [insert name of department of insurance] does not interpret or enforce obligations under the tax code. Consumers can contact the IRS or their tax advisor for information.

**Q 112: Where else can consumers find answers to health insurance questions?**

[Insert links to State DOI, Exchange, Medicaid, navigator organizations, etc.]

**Q 113: What does the health plan “accreditation status” information on the exchange Web page mean?**

Accreditation is a comprehensive process by private, nonprofit organizations that review how well health plans deliver care and how they work to improve the delivery of care over time. Health plans offered through the [insert name of state exchange] must be certified by a recognized accrediting body, such as URAQ and/or the National Committee for Quality Assurance (NCQA).

Part of the certification requires that the plan is accredited by a recognized accrediting entity within a time frame set by the [insert name of state exchange]. Accreditation ensures that the plans sold on the [insert name of state exchange] meet minimum quality, access, nondiscrimination, and marketing standards in the ACA.

**Q 114: What does the health plan “consumer experience” information on the [insert name of state exchange] Web page mean?**

Consumer experience ratings come from surveys that ask individuals who have coverage through a health insurance plan how they like the plan. These individuals also rate the quality of the medical care they receive and the accessibility of the medical care that they need.

**Q 115: What appeal rights do consumers have?**

Consumers have a right to appeal an unfavorable coverage decision by their health insurance company. Insurance companies must give consumers owning an individual policy a first-level internal appeal, administered by the company, and if the company upholds its initial unfavorable coverage decision, it must provide an external review administered by an independent third party. Consumers in individual policies may also be able to request a voluntary second-level internal appeal. However, those two levels of internal appeals must also be done within the time limit imposed by the law for all internal appeal process, whether one- or two-levels. Expedited review for emergency situations is available. For group policies, the insurance company may require two levels of internal appeals before the external review option. For more information about how to appeal a health insurance company’s unfavorable decision, the consumer can refer to the notice of the insurance company’s unfavorable coverage decision (often referred to an Explanation of Benefits, or EOB), plan or policy documents, or contact [insert state insurance department] at [insert telephone number].

Consumers also can file complaints with [insert name of state insurance department] when claims are denied, or when they believe that their health insurance company isn’t properly following the legal appeals process. To reach the state insurance department, consumers can contact [insert contact information].

Note that there is a separate appeals process if a consumer is dissatisfied with an eligibility decision made by [insert name of state exchange]. The consumer can contact [insert name of state exchange] for more information.
Q 116: Where do consumers file a complaint for a product sold through the [insert name of state exchange]? What about plans sold in the market outside the [insert name of state exchange]?

Consumers should first contact the insurance company with any complaint about benefits or services they're not receiving. If consumers aren’t satisfied, they should contact the [insert name of state exchange] for help with questions or complaints.

The [insert state department of insurance] investigates complaints about insurance companies and can either look up consumers’ complaints or direct consumers to the right place to file a [insert name of state exchange] related complaint. The [insert state insurance department] is ready to help consumers with any question or complaint they may have about their coverage. To find out more about filing appeals, consumers can contact the [insert state department of insurance] at [insert contact information].

Q 117: If consumers apply for coverage in the market outside the [insert name of state exchange], what are the rules regarding open and special enrollment?

In [insert name of state], insurance companies sell policies in the market outside the exchange. Enrollment periods for coverage outside the [insert name of state exchange] generally are the same as enrollment periods through the exchange. (See Question 12.) Contact the [insert name of state department of insurance] at [insert contact information], or an insurance agent or broker, for more information about enrollment.

If someone is not eligible to enroll in health coverage through the [insert name of state exchange] or does not want to enroll in coverage through the [insert name of state exchange], insurers must make policies available in the [insert name of state exchange] available outside the [insert name of state exchange], although the policies aren’t required to be marketed as available outside the [insert name of state exchange].

For more information about special enrollment periods (SEPs), see this link: www.healthreformbeyondthebasics.org/wp-content/uploads/2015/06/SEP-Reference-Chart.pdf.

QUESTIONS INVOLVING SPECIAL CIRCUMSTANCES AND POPULATIONS

Q 118: What is available for consumers with chronic conditions? Does the ACA help them get better coverage?

Yes. All plans subject to the ACA must insure consumers with a chronic or pre-existing medical condition, must cover pre-existing conditions, and can’t charge higher premiums because of a health or medical condition. They are also required to offer comprehensive coverage. Discrimination on the basis of age, disability or expected length of life is prohibited. Coverage for these benefits is available from the beginning of the policy coverage period, without a waiting period, even if there was no prior coverage. Many plans include wellness programs to help consumers manage chronic conditions.

Q 119: What options are there for consumers with children who aren’t citizens or legal residents?

Consumers won’t be able to buy a policy through the [insert name of state exchange] for those children who aren’t lawfully present, but they may be able to buy a policy directly from an insurance company or through an agent. Insurers that sell policies through the exchange, however, must make those policies available upon request to individuals, including children, who are not eligible to participate in the [insert name of state exchange]. For a list of licensed insurance companies in [insert name of state], visit [insert link]. Lawfully present children also may be eligible for the [insert name of state Medicaid and CHIP]. To learn more about these plans, go to www.insurekidsnow.gov.

Q 120: Are immigrants not legally present eligible for coverage through the [insert name of state exchange] or for premium tax credits?

No. Immigrants not legally present aren’t eligible for coverage through the [insert name of state exchange]. They also aren’t eligible for advance payment of premium tax credits. Insurers that sell policies through the exchange, however, must make those policies available upon request to individuals, including children, who are not eligible to participate in the [insert name of state exchange].

© 2019 National Association of Insurance Commissioners 38
Q 121: Are incarcerated people eligible for coverage through the [insert name of state exchange] or for premium tax credits?

No. Incarcerated people aren’t eligible for coverage through the [insert name of state exchange]. They also aren’t eligible for advance payments of the premium tax credits. Consumers who are incarcerated pending the disposition of charges still are eligible. Insurers that sell policies through the exchange, however, must make those policies available upon request to individuals, including children, who are not eligible to participate in the [insert name of state exchange].

Q 122: Are tribal members eligible for coverage through the [insert name of state exchange] or for premium tax credits?

Yes. Tribal members may buy coverage through the [insert name of state exchange]. Tribal members have access to enrollment continuously. They’re also eligible for premium tax credits. And, because of the federal government’s special trust responsibility, members of federally recognized Indian tribes are eligible to receive benefits not available to others, such as plans with no cost-sharing, under certain circumstances. For more information, go to www.healthcare.gov or the website for the Indian Health Service (IHS) agency within the HHS at www.ihs.gov/.

QUESTIONS ABOUT MLR

Q 123: What is the Medical Loss Ratio (MLR) requirement?

The ACA’s MLR requirement is that health insurers must spend at least a certain percentage of consumers’ premium dollars on direct medical care and health care quality improvement. That limits the amount of premium dollars spent on administrative expenses, such as overhead, marketing, salaries, and profit.

The ACA requires that health insurance companies providing coverage in the large employer market (usually 50 or more employees) must spend at least 85% of premiums on direct medical care and quality improvement activities. Health insurers who provide coverage in the small employer market (usually fewer than 50 employees) and individual market must spend at least 80% of premiums on direct medical care and quality improvement activities, or they have to rebate (refund) the extra premium.

Q 124: What is an MLR Rebate?

Under federal law, if a health insurer doesn’t meet the MLR target (described in Question 123), that health insurer must give consumers or employers a rebate for the amount of premiums it collected that was greater than the target.

Q 125: How can consumers learn if their insurer paid rebates?

Companies that pay rebates send notices to enrollees. The list of the rebates paid can be found at www.cms.gov/CCIIO/Resources/Data-Resources/mlr.html.

QUESTIONS ABOUT WHETHER A PLAN IS LEGITIMATE

Q 126: Why is this a time to be especially on guard against health insurance fraud?

Health insurance rules and regulations are constantly changing. Con artists posing as representatives of the federal government or posing as legitimate insurance agents, brokers, or navigators might try to steal consumers’ money or identity through various health insurance schemes. For instance, criminals might try to steal consumers’ personal information to receive a “national health insurance card” or a new Medicare card under the ACA. Or they might try to sell consumers health insurance policies that are fake, worthless, or not what they claim to be. These scams are often attempted through automated telephone calls or websites that mimic legitimate sites.
Q 127: Can consumers get help from their current insurance agent or insurance company to buy health insurance coverage through the [insert name of state exchange]?

Yes. Working with individuals known personally or known to be working for legitimate organizations is a dependable way to avoid fraud.

Q 128: If consumers don’t have a relationship with an insurance agent or company, where should they go for help?

When consumers contact the [insert name of state exchange], they’ll have the option to contact a navigator specifically trained to help them choose the best health insurance product for their needs.

Drafting Note: States without navigators should update this response to provide alternate sources for consumer assistance.

Q 129: If someone comes to consumers’ homes, calls consumers out of the blue, or sends emails to offer consumers health insurance coverage for a terrific premium, how will consumers know whether the person and the health insurance coverage are legitimate?

Remember this simple formula: STOP – CALL – CONFIRM.

STOP – Consumers should ask the person for identification and a phone number where they may be reached later. If the person refuses to give this information for any reason, or tries to pressure them into signing any document, consumers should immediately hang up, close their door, or walk away.

Consumers should NOT volunteer their Social Security number (SSN) or a credit/debit card number to anyone unless they personally know the individual. Likewise, they should NOT sign any paperwork or write a check.

CALL – Consumers then should contact the [insert name of state department of insurance] or the [insert name of state exchange]. The insurance company or agent or broker, as well as the navigator, must be registered or licensed with the [insert state department of insurance] before they can sell coverage or counsel consumers through the [insert name of state exchange].

Drafting Note: States should modify the previous paragraph as necessary to reference the entity charged with registering or licensing navigators.

CONFIRM – Consumers should always confirm that the company, agent, or broker offering insurance coverage, or the navigator trying to provide assistance, is authorized to provide information or coverage before they sign any documents or give any personal information.

Remember that if something seems too good to be true, it usually is.
The Consumer Information (B) Subgroup of the Health Insurance and Managed Care (B) Committee met via conference call Oct. 7, 2019. The following Subgroup members participated: Angela Nelson, Chair, Amy Hoyt, Jessica Schrmpf and Mary Mealer (MO); Michelle Baldock and Mike Chrysler (IL); LeAnn Crow (KS); Mary Kwei (MD); Melinda Domzalski-Hansen (MN); Cuc Nguyen and Rebecca Ross (OK); David Buono and Katie Dzurec (PA); Candy Holbrook and Gretchen Brodkorb (SD); Heidi Clausen and Jaakob Sundberg (UT); and Jennifer Stegall and Sue Ezalarab (WI). Also participating were: Chelsey Maller and Jacob Lauten (AK); Erin Klug (AZ); Julia Yee (CA); Dayle Axman (CO); Howard Liebers (DC); John Reilly (FL); Teresa Winer (GA); Cynthia Banks Radke (IA); Emily DeLaGarza (MI); Jeannie Keller and Pam Koenig (MT); Chanell McDevitt (NJ); Mark Jordan (NM); Jana Jarrett (OH); Jennifer Ramcharan and Vickie Trice (TN); Marcus Wilhouse and Rachel Bowden (TX); Jackie Myers and Yolanda Tennyson (VA); Dena Wildman and Joylynn Fix (WV); and Denise Burke and Tana Howard (WY).

1. Discussed a Consumer Guide on Using Health Insurance

Ms. Nelson reminded the Subgroup that the intended audience for the consumer guide, *Using Your Health Coverage*, is individuals who are already enrolled in health plans and would like help understanding their plans. She said her goal is to have a document ready for distribution by Jan. 1, 2020.

Ms. Nelson asked for comments on proposed changes to the listing of the document’s contents. Brenda J. Cude (University of Georgia) asked how readers with a hard copy could use internal links, and the Subgroup agreed to add page numbers to the table of contents.

Ms. Nelson asked the Subgroup for suggestions on how to provide direction to readers seeking information in languages other than English. Ms. Ramcharan said any information should be earlier in the document, since those with limited English proficiency will not make it far into the document. Ms. Baldock suggested that the states could translate the document or provide other assistance. Ms. Nelson said it was worth inquiring with the NAIC Communications Department about whether it could translate the document, at least into Spanish.

The Subgroup discussed the section on life changes. Ms. Cude said it need not mention every possible life change. Ms. Domzalski-Hansen said it should mention developing a disability. Mr. Buono urged the inclusion of information on the time limits associated with Special Enrollment Periods. Ms. Ezalarab suggested adding information on becoming eligible for Medicare. Candy Gallaher (America’s Health Insurance Plans—AHIP) said there should be some direction to readers as to what steps to take after a life change. Ms. Baldock suggested separate headings for each life event that show who to contact about a life change. Ms. Gallaher suggested starting with categories for each type of health coverage, employer, individual, etc. Ms. Baldock volunteered to start a draft of a table with this information.

Ms. Nelson reviewed the different sections in the document and explained that the next consumer guide would be focused on claims and denials.

Ms. Nelson discussed next steps for *Using Your Health Coverage* and encouraged members of the Subgroup and interested parties to focus on the content and the look of the document. She asked for ideas for info graphics and text boxes to highlight important points. She said after these ideas are incorporated, Ms. Cude can review the document for readability.

2. Discussed FAQ about Health Care Reform

Ms. Nelson brought up the need to update Frequently Asked Questions (FAQ) about Health Care Reform for the 2020 plan year. She explained that the document is intended for insurance department staff, not for consumers directly; though staff can use it in answering consumer questions. She reviewed edits to the document made by Joe Touschner (NAIC), highlighting one removed question on multi-state plans and one added question on health reimbursement arrangements.
Ms. Nelson asked about the existing question on protections against discrimination. She asked whether the existing answer should be changed in light of court decisions limiting enforcement of the protections and a proposed rule to change their application. Ms. Dzurec said the answer should point out the proposals to change the protections and encourage insurance department staff to check state laws that may offer similar protections. She said she would work on suggested edits to the answer.

Ms. Dzurec suggested that, rather than removing the question on multi-state plans, it be replaced with an explanation of the change in policy. She said it would be useful to clarify what happened to not just this policy, but others like co-ops. Ms. Nelson responded that staff can research elsewhere regarding policy changes and the document should not be unwieldy with these types of explanations. Ms. Gallaher suggested that the document could have an archive at the end with information about superseded policies.

Ms. Nelson asked when the document should be modified, as discussed, and posted or reviewed during the next conference call. The Subgroup decided to review it during the next call.

Having no further business, the Consumer Information (B) Subgroup adjourned.

W:\National Meetings\2019\Fall\Cmte\B\CnsmrInfoSG\CnsmrInfo.Min10.7.19.docx
Health Innovations (B) Working Group  
Austin, Texas  
December 7, 2019

The Health Innovations (B) Working Group of the Health Insurance and Managed Care (B) Committee met in Austin, TX, Dec. 7, 2019. The following Working Group members participated: Marie Ganim, Chair (RI); Martin Swanson, Vice Chair, and Laura Arp (NE); Andrew Stolfi, Vice Chair, and TK Keen (OR); Jacob Lauten (AK); Howard Liebers (DC); Andria Seip (IA); Alex Peck (IN); Craig Van Aaslt (KS); Marti Hooper (ME); Chrystal Bartuska (ND); Maureen Belanger (NH); Marlene Caride (NJ); Paige Duhamel (NM); David Cassetty (NV); Katie Dzurec (PA); Kent Sullivan and Doug Danzeiser (TX); Tanji Northrup (UT); Molly Nollette (WA); Nathan Houdek and Jennifer Stegall (WI); and Ellen Potter (WV). Also participating were: Kate Morthland (IL); and Nancy G. Atkins (KY).

1. **Adopted its Oct. 28 and Summer National Meeting Minutes**

The Working Group met Oct. 28 and Aug. 3. During its Oct. 28 meeting, the Working Group took the following action:

1) discussed state efforts to address prescription drug costs; and
2) discussed state laws and regulations that pertain to telehealth.

Commissioner Caride made a motion, seconded by Commissioner Stolfi, to adopt the Working Group’s Oct. 28 (Attachment Five-A) and Aug. 3 (see NAIC Proceedings – Summer 2019, Health Insurance and Managed Care (B) Committee, Attachment Eight) minutes. The motion passed unanimously.

2. **Heard Two Presentations on Innovative Insurer Practices to Contain Health Care Costs from UHG and Medica**

Dr. Richard Migliori (UnitedHealth Group—UHG) said that innovation has to be practical and focused on an identified problem. He said that 30% of health care spending is wasteful, which he defined as doing the wrong thing or doing the right thing, but executing it poorly. He noted wide variation in prices for the same services, giving the example of MRI services. He said that transparency that allows comparisons across health systems is vital. He said that consumer-directed health plans can accomplish a one-time reduction in spending but that existing trends of cost increases continue afterwards.

Dr. Migliori emphasized the importance of looking at the total cost of care. He said pushing on the balloon in one place can lead costs to increase in others, but also increased spending in one place can bring savings in another. He said expensive medications can bring down the total cost of care for patients living with a condition.

Dr. Migliori said changing behaviors and lifestyle are important to reducing costs. He highlighted UHG’s Motion program, which provides incentives for healthy behaviors. He shared that claims data allows his company to see many behavior choices and target innovations. He said that examining data from Delta Airlines showed the airports with the highest health activation also had lower injuries, fewer delayed flights and higher customer satisfaction, so the returns to better health choices can go beyond health spending.

Dr. John Piatkowski (Medica) described his company’s work with accountable care organizations (ACOs). He defined ACOs as health system partners that want to reduce costs. He said Medica has gotten away from the sticky attribution question. He said enrollees with ACOs are happier, in part because they have less duplication of services. He said the process has to start with an analysis of where a health system is; some have accepted upside and downside risk for years, while others are just starting. He said that it is always an iterative process with incremental gains.

Dr. Piatkowski said ACOs working with Medica have shown risk-adjusted cost improvement in five of six cases. He said individuals ACOs are getting big enough to be sustainable, which generally requires more than 5,000 members. He said state insurance regulators can encourage effective ACOs is different ways. A first step is getting adequate coverage for members and developing ways to communicate claims data. He observed that different health information rules in different states are a problem. Also, any willing provider laws are a barrier. He said that having tight networks is a benefit, so surprise billing laws should protect insurers’ ability to manage networks.
Ms. Dzurec asked how behavioral health fits into these practices. Dr. Migliori replied that it has to be treated because it can really increase costs. He gave an example of an intervention to allow treatment facilities to distribute medications because getting patients to take the first dose of a drug increases later adherence. Dr. Piatkowski said there is a need for greater parity in behavioral health treatment and that frequent users of emergency departments often have a mental health diagnosis.

Ms. Seip asked why only 30% of contracts have payment based on quality and how state insurance regulators can encourage more. Dr. Migliori said some practices are not ready and must change and get bigger so they can invest in the infrastructure needed to take on the responsibility of managing care.

Dr. Danzeiser ask whether ACOs must take on downside risk. Dr. Piatkowski said Medica requires them to take it but caps the amount for smaller organizations. Dr. Migliori said that when ACOs take downside risk, the insurer can share more of the upside with them.

Health Commissioner Ganim said the Working Group may need to look more into alternative payment models. Ms. Dzurec said it should look at transparency but acknowledged that it is not natural for consumers to shop for health services.

3. Heard a Presentation on Health Care Cost Data from the HCCI

Niall Brennan (Health Care Cost Institute—HCCI) described his organization’s dataset as one of the largest concentrations of employer data, covering roughly one-third of the employer market. He said policymakers struggle to get a handle on health care spending because it is a big part of national and local economies. It drives jobs, which makes people nervous about changes, even though consumers are caught in the middle.

Mr. Brennan said value-based care may be working at the margins but has only been rigorously evaluated in Medicare. He said the data shows Americans have been using less care but paying more for it. He said there is a need for system transparency, not consumer transparency. He said three-fourths of hospitals markets are concentrated and that concentration is increasing in most areas. He said value-based care will not save us if price increases continue as they have, using the example of emergency department prices.

Health Insurance Commissioner Ganim asked what state insurance regulators can do about the prices of health care providers. Commissioner Stolfi said one thing Oregon has done is establish a cost growth benchmark. He said Oregon will spend the next year figuring out the data it needs, how best to measure costs and what limits to place on them. He said the state will consider whether it can enforce the cost growth benchmark against all payers and providers. He said it has already been in place for Medicaid, saving $2 billion over a couple of years.

4. Heard a Provider Perspective on Cost Containment Practices from the TMA

Dr. Debra Patt (Texas Medical Association—TMA) said physicians want to assure value as well as appropriate care, and they want to reduce administrative waste.

Dr. Patt said doctors know utilization management is not going away, but it should not diminish care. She said the burden of prior authorization (PA) and step therapy has increased in recent years. She said doctors need more staff because of PA, saying doctors and their staff spend two days per week on PA.

She said PA should not be a blunt instrument. It should be regulated so that it does not delay care. She advocated for greater transparency and said that issuers should be limited in their ability to ask for additional data after the initial PA request. She said standards should apply to the time issuers can take to process PA requests and that physicians, preferably in the state, should be the ones making PA decisions because of their training. Further, she said regulations should disallow retroactive denials and make PA valid for one year.

She also discussed price increases for prescription drugs and ways to stabilize health insurance markets. She said that short-term, limited duration (STLD) plans can be shoddy products. She urged states to expand Medicaid and increase competition in their markets.
Dr. Patt said real innovation is in alternative payment models because they help practices invest in solutions. And she said physician practices need better data from insurance companies.

Ms. Duhamel said that medical societies should recognize that many states already have PA standards in place. Dr. Patt agreed and said physicians should not just complain to insurers, but engage state regulators when PA practices violate standards.

5. **Heard a Consumer Perspective on Cost Containment Practices from Families USA**

Claire McAndrew (Families USA) shared data on consumer views and experiences with health care costs. She said even among those with comprehensive insurance, 25% limited the care they received because of cost. She said that from 2013–2017, overall health care utilization went down while prices went up, so overall cost of health care went up. She said this shows policymakers have to target prices.

Ms. McAndrew discussed some state efforts to address costs. She said Washington passed a public option plan that ties payment to Medicare rates. She noted state efforts on prescription drug costs: Maryland created a board to review drug affordability, and legislators in Illinois introduced a bill to prevent price gouging, which would offer rebates in the private market similar to how they are used in Medicaid.

She said states do not need to reinvent the wheel on transparency. She urged that any NAIC model law related to pharmacy benefit managers (PBMs) should have teeth. She said that legislation to address surprise bills should not raise premiums. Therefore, federal or state laws should not include an inflationary payment standard. She said that costs should not be shifted onto the backs of consumers and that wellness programs should be participatory and not based on health outcomes.

6. **Discussed Innovative Initiatives from Working Group Member States**

Ms. Bartuska described North Dakota’s health care costs study. She said it requires urban hospitals to report data, which will then be analyzed by actuaries. The analysis will be used to develop policy recommendations, but it will not disclose specific hospital data.

Having no further business, the Health Innovations (B) Working Group adjourned.
The Health Innovations (B) Working Group of the Health Insurance and Managed Care (B) Committee met via conference call Oct. 28, 2019. The following Working Group members participated: Marie Ganim, Chair (RI); Martin Swanson, Vice Chair, and Michael Muldoon (NE); Andrew Stolfi, Vice Chair, Cassie Soucy, Jesse O’Brien, Tashia Sizemore and Rick Barry (OR); Jacob Lauten (AK); Steve Ostlund and William Rodgers (AL); Andria Seip and Cynthia Banks-Radke (IA); Claire Szpara and Karl Knable (IN); Julie Holmes (KS); Amy Hoyt (MO); John Arnold (ND); Maureen Belanger (NH); Chaneil McDevitt and Diana Sherman (NJ); Paige Duhamel and Renee Blechner (NM); Katie Dzurec (PA); Douglas Danzeiser (TX); Heidi Clausen (UT); Molly Nollette, Jane Beyer and Jennifer Kreitler (WA); Nathan Houdek, Jennifer Stegall, Barbara Belling, Sue Ezalarab, Diane Dambach, Mary Kay Rodriguez and Julie Walsh (WI); and Joylynn Fix (WV). Also participating were: Mary Boatright (AZ); Christopher Citko (CA); Adam Boggess (CO); Fleur Mc Kendell and Leslie Ledogar (DE); Chris Struk (FL); Kathy McGill (ID); Ryan Gillespie and Sara Stanberry (IL); Melinda Domzalski-Hansen (MN); Bob Williams (MS); Ashley Perez, Michelle Scaccia, and Pam Koenig (MT); Robert Croom, Ted Hamby and Mike Wells (NC); Laura Miller (OH); Kendall Buchanan (SC); Jill Kruger (SD); and Bob Grissom and Yolanda Tennyson (VA).

1. Discussed State Efforts to Address Prescription Drug Costs

Commissioner Stolfi and Ms. Soucy shared an overview of Oregon’s Prescription Drug Price Transparency program. Commissioner Stolfi described the requirements the program imposes on both prescription drug manufacturers and health insurers. He said health insurers must provide information on the top 25 highest cost drugs and the contributions of drug prices to premium increases. He reported that as of September, 300 manufacturers had filed 700 reports, which are available on a state website. The reports include price increases over the past five years and the prices the manufacturers charge in other countries. He said that Oregon plans to do more analysis of the reported data next year. He noted that fulfilling the consumer notice provisions of the law has been challenging, but his department has sent flyers to pharmacies. Ms. Soucy said that Oregon needed to identify the manufacturers that were required to report and that the Board of Pharmacy helped with a list. She said that education is needed to get the manufacturers to report correctly as many of them lack the specifics required to support their claims of trade secrets.

Joel Ario (Manatt Health) described activity in other states around drug pricing. He said 33 states have passed 59 laws on prescription drugs, many of them related to transparency and volume-based pricing. He explained California’s test of bulk pricing. He said California’s pool has 13 million people and includes Medicaid enrollees in the state. He noted that California’s experience will show how effective this strategy can be. He also mentioned California’s law on pay for delay. Mr. Ario also described Maryland’s drug price reforms. He said the first effort was stopped in the courts and warned that drug companies will look to litigation on all of these types of laws. He said that Maryland’s drug cost board will review the entire pharmaceutical supply chain and issue a report by December 2020. The report will consider direct price controls, a reverse auction and bulk purchasing as in California. He said that Maine has also enacted a drug affordability board with a 2021 start date, and it will consider spending targets and moving to more direct price controls over time.

2. Discussed State Laws and Regulations That Pertain to Telehealth

Health Insurance Commissioner Ganim said that telehealth is an innovative practice with the potential to reduce costs. She said that in Rhode Island, insurers are contracting with providers to provide telehealth services, but the providers may be from a national network and are not part of the patient’s medical home. She said that pediatricians in the state want to be the contracted entity to provide telehealth services to their patients to improve continuity of care. She said that in her state, state law is very general and only says that insurers must pay for telehealth.

Ms. Bartuska spoke about North Dakota’s laws. She said that the law defines facility and provider, and providers must meet the standards for medical professionals. Health insurance policies must cover telehealth and provide the same coverage for services delivered in person. However, she said that not all services are allowed via telehealth, and a carrier may define medical necessity. Ms. Sizemore said that Oregon grappled with the same questions about payment parity but that many of the questions have sorted themselves out without new laws or regulations. Ms. Bartuska added that North Dakota protects consumers from disparate co-pays for telehealth but does not get involved in payment amounts between carriers and providers. Commissioner Ganim asked whether North Dakota requires any invested in infrastructure, and Ms. Bartuska responded that...
that was not necessarily something the department of insurance (DOI) would be aware of. Ms. Hoyt and Ms. Duhamel said Missouri and New Mexico have parity laws, as well. Ms. Duhamel said that New Mexico has Project ECHO, which allows providers to consult with other providers via telehealth.

Erika Melman (federal Centers for Medicare & Medicaid Services—CMS and Center for Consumer Information and Insurance Oversight—CCIIO) asked how states define telehealth and whether it can include communications like phone or email. Ms. Sizemore said Oregon law requires two-way synchronous communication; other states said they have similar requirements. Ms. Melman asked whether providers provide the site with the remote connection. Ms. Sizemore responded that providers might, but not issuers, and that senior centers or libraries can also provide sites. Runi Shukla (CMS–CCIIO) asked how telehealth affects network adequacy measures such as time and distance. Ms. Duhamel said it is hard to count telehealth providers as an addition to a plan’s network because providers already have full panels and cannot add more patients through telehealth. She said there is some advantage in provider-to-provider consultations, though. Ms. Sizemore said that in Oregon, insurers use telehealth to allow patients in areas with booked clinics to see providers in areas where clinics are not as busy. Ms. Melman asked where issuers provide access through telehealth to providers licensed in another state. Ms. Bartuska said some carriers allow for consultations with out-of-state providers, but only when the provider has a contract with an in-state hospital. Other states said they have similar arrangements.

Having no further business, the Health Innovations (B) Working Group adjourned.
HEALTH ACTUARIAL (B) TASK FORCE

The Health Actuarial (B) Task Force met in Austin, TX, Dec. 6, 2019. The following Task Force members participated: Anita G. Fox, Chair, represented by Kevin Dyke (MI); Jim L. Ridling, Vice Chair, represented by Steve Ostlund (AL); Lori K. Wing-Heier represented by Jacob Lauten (AK); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by Paul Lombardo (CT); Dean L. Cameron represented by Weston Trexler (ID); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Eric A. Cioppa represented by Marti Hooper (ME); Steve Kelley represented by Grace Arnold (MN); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Seong-min Eom (NJ); John G. Franchini represented by Anna Krylova (NM); Jillian Froment represented by Laura Miller (OH); Glen Mulready represented by Andrew Schallhorn (OK); Jessica Altman represented by Tracie Gray (PA); Kent Sullivan represented by Mike Boerner and Raja Malkani (TX); Todd E. Kiser represented by Jaakob Sundberg (UT); Mike Kreidler represented by Lichiou Lee (WA); and James A. Dodrill represented by Joylynn Fix (WV).

1. **Adopted its Sept. 17, Aug. 27 and Summer National Meeting Minutes**

The Task Force met Sept. 17, Aug. 27 and Aug. 2. During its Sept. 17 meeting, the Task Force adopted its 2020 proposed charges. During its Aug. 27 meeting, the Task Force heard a presentation on a replacement for the 2005 Group Term Life Waiver Mortality and Recovery Tables from Willis Towers Watson.

Mr. Lombardo made a motion, seconded by Ms. Miller, to adopt the Task Force’s Sept. 17 (Attachment One), Aug. 27 (Attachment Two), and Aug. 2 (see NAIC Proceedings – Summer 2019, Health Actuarial (B) Task Force) minutes. The motion passed unanimously.

2. **Heard an Update from the SOA on Health Insurance Research**

Dale Hall (Society of Actuaries—SOA) gave an update (Attachment Three) on recent SOA health insurance research.

3. **Adopted the Report of the Long-Term Care Actuarial (B) Working Group**

Mr. Ostlund said the Long-Term Care Actuarial (B) Working Group met Dec. 6 and took the following action: 1) adopted the reports of the Long-Term Care Pricing (B) Subgroup and the Long-Term Care Valuation (B) Subgroup; 2) heard an update from the American Academy of Actuaries (Academy) regarding its Long-Term Care Valuation Work Group’s development of mortality and lapse valuation tables for long-term care insurance (LTCI); and 3) heard an update from the SOA on recent work on the SOA’s Long-Term Care Experience Study.

Mr. Ostlund made a motion, seconded by Mr. Shea, to adopt the report of the Long-Term Care Actuarial (B) Working Group (Attachment Four). The motion passed unanimously.

4. **Adopted the Report of the Health Care Reform Actuarial (B) Working Group**

Mr. Shea said the Health Care Reform Actuarial (B) Working Group has not met since the Summer National Meeting.

Beth Parish (federal Center for Consumer Information and Insurance Oversight—CCIIO) and Allison Yadsko (CCIIO) gave an update (Attachment Five) on the federal Affordable Care Act (ACA) risk adjustment data validation (RADV) white paper published Dec. 6. Ms. Parish asked the Task Force to provide comments on the white paper by Jan. 6, 2020.

Mr. Shea made a motion, seconded by Ms. Eom, to adopt the report of the Health Care Reform Actuarial (B) Working Group. The motion passed unanimously.

5. **Heard an Update from the Academy Council on Professionalism**

Shawna Ackerman (California Earthquake Authority—CEA) said the Academy will publish the Actuaries Climate Risk Index soon, which correlates climate index data with economic losses, deaths and injuries.
Kathleen Riley (Actuarial Standards Board—ASB) said the ASB continues work on Actuarial Standard of Practice (ASOP) No. 28, *Statements of Actuarial Opinion Regarding Health Insurance Liabilities and Assets*. She said ASOP No. 28 was last updated in 2011. She said guidance in the ASOP has been expanded to include actuaries making and reviewing statements of actuarial opinion. She said reviews of ASOP No. 3, *Continuing Care Retirement Communities*, and ASOP No. 18, *Long-Term Care Insurance*, are continuing. She said ASOP No. 56, *Modeling*, will be released soon.

David Ogden (Actuarial Board for Counseling and Discipline—ABCD) said the ABCD has received requests for guidance concerning a client that wanted to censor information in a report provided by an actuary, federal Affordable Care Act (ACA) risk adjustment issues, client modification of a report issued by an actuary, qualifications necessary for pricing a family leave benefit, qualifications necessary for pricing stop-loss insurance, mental health parity issues and the effects of incomplete data used in a rate filing.

6. **Heard an Update from the Academy Health Practice Council**

Barb Klever (Blue Cross and Blue Shield Association—BCBSA) gave an update (Attachment Six) on recent Academy Health Practice Council activities and publications.

Having no further business, the Health Actuarial (B) Task Force adjourned.

W:\National Meetings\2019\Fall\TF\HA\HATF 12-06-19.docx
The Health Actuarial (B) Task Force met via conference call Sept. 17, 2019. The following Task Force members participated: Anita G. Fox, Chair, represented by Kevin Dyke (MI); Jim L. Ridling, Vice Chair, represented by Steve Ostlund (AL); Lori K. Wing-Heier represented by Jacob Lauten (AK); Ricardo Lara represented by Perry Kupferman (CA); Andrew N. Mais represented by Paul Lombardo (CT); Dean L. Cameron represented by Weston Trexler (ID); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Eric A. Cioppa represented by Marti Hooper (ME); Mike Causey represented by David Yetter (NC); John G. Franchini represented by Anna Krylova (NM); Barbara D. Richardson represented by Jack Childress (NV); Jillian Froment represented by Laura Miller (OH); Jessica Altman represented by Tracie Gray (PA); Kent Sullivan represented by Mike Boerner (TX); Todd E. Kiser represented by Jaakob Sundberg (UT); Scott A. White represented by David Shea (VA); Mike Kreidler represented by Lichiou Lee (WA); and James A. Dodrill represented by Joylynn Fix (WV).

1. **Adopted its 2020 Proposed Charges**

Mr. Ostlund made a motion, seconded by Mr. Boerner, to adopt the Task Force’s 2020 proposed charges (Attachment One-A). The motion passed unanimously.

Having no further business, the Health Actuarial (B) Task Force adjourned.
2020 PROPOSED CHARGES

HEALTH ACTUARIAL (B) TASK FORCE

The mission of the Health Actuarial (B) Task Force is to identify, investigate and develop solutions to actuarial problems in the health insurance industry.

Ongoing Support of NAIC Programs, Products or Services

1. The Health Actuarial (B) Task Force will:
   A. Provide recommendations, as appropriate, to address issues and provide actuarial assistance and commentary with respect to model requirements for appropriate long-term care insurance (LTCI) rates, rating practices and rate changes.
   B. Provide support for issues related to implementation of, and/or changes to, the federal Affordable Care Act (ACA).
   C. Continue to develop health insurance reserving requirements (VM-25, Health Insurance Reserves Minimum Reserve Requirements) using a principle-based reserving (PBR) framework.
   D. Develop LTCI experience reporting requirements in VM-50, Experience Reporting Requirements, and VM-51, Experience Reporting Formats, of the Valuation Manual.
   E. Provide recommendations, as appropriate, to address issues and provide actuarial assistance and commentary to other NAIC groups relative to their work on health actuarial matters.

2. The Health Care Reform Actuarial (B) Working Group will:
   A. Assist the Health Actuarial (B) Task Force in completing its charge to provide support for issues related to implementation of, and/or changes to, the federal Affordable Care Act (ACA).

3. The Long-Term Care Actuarial (B) Working Group will:
   A. Assist the Health Actuarial (B) Task Force in completing the following charges:
      1. Provide recommendations, as appropriate, to address issues and provide actuarial assistance and commentary with respect to model requirements for appropriate long-term care insurance (LTCI) rates, rating practices and rate changes.
      2. Continue to develop health insurance reserving requirements (VM-25, Health Insurance Reserves Minimum Reserve Requirements) using a principle-based reserving (PBR) framework.

4. The Health Reserves (B) Subgroup will:
   A. Assist the Health Actuarial (B) Task Force in completing its charge to continue to develop health insurance reserving requirements (VM-25, Health Insurance Reserves Minimum Reserve Requirements) using a principle-based reserving (PBR) framework.

NAIC Support Staff: Eric King
The Health Actuarial (B) Task Force met via conference call Aug. 27, 2019. The following Task Force members participated: Jim L. Ridling, Vice Chair, represented by Steve Ostlund (AL); Lori K. Wing-Heier represented by Jacob Lauten (AK); Ricardo Lara represented by Perry Kupferman (CA); Andrew N. Mais represented by Paul Lombardo and Wanchin Chou (CT); Eric A. Cioppa represented by Marti Hooper (ME); Marlene Caride represented by Seong-min Eom (NJ); John G. Franchini represented by Anna Krylova (NM); Barbara D. Richardson represented by Annette James (NV); Kent Sullivan represented by Raja Malkani (TX); Todd E. Kiser represented by Jaakob Sundberg (UT); Mike Kreidler represented by Lichiou Lee (WA); and James A. Dodrill represented by Joylynn Fix (WV).

1. **Heard a Presentation on a Replacement for the 2005 Tables from Willis Towers Watson**

Sue Sames (Willis Towers Watson) gave an update (Attachment Two-A) on work by the joint American Academy of Actuaries (Academy) and Society of Actuaries (SOA) Group Life Waiver Valuation Table Work Group on a replacement for the 2005 Group Term Life Waiver Mortality and Recovery Tables (2005 Tables).

Mr. Chou asked what credibility standard will be used for blending company experience with the proposed replacement tables.

Ms. Sames said the Work Group will review the credibility standards used for the 2012 Group Long-Term Disability Valuation Table in *Actuarial Guideline XLVII—The Application of Company Experience in the Calculation of Claim Reserves Under the 2012 Group Long-Term Disability Valuation Table* (AG 47) and for the 2013 Individual Disability Income Valuation Table in *Actuarial Guideline L—2013 Individual Disability Income Valuation Table Actuarial Guideline* (AG 50) to inform its decision. She said the work group will also consider other credibility standards for use with the replacement tables.

Having no further business, the Health Actuarial (B) Task Force adjourned.
Update

- We are an Academy work group and SOA group collaborating on this project
- Volunteer recruiting is complete
- Work group structures and planning is set
- Work is off to a good start
- We are on target for timing

Plans for 2019–2020

- Data analysis
  - This is a double decrement table (mortality/recovery)
  - Using new techniques to determine appropriate additional dimensions
- Company experience
  - Enhancing approach to Credibility and use of company experience

Plans for 2021

- Address margins and financial impact
- Develop documentation
- Develop proposed update to AG XLIV

W:\National Meetings\2019\Fall\TF\HA\HATF Materials\Society of Actuaries Research Update-HATF (reduced)
The Long-Term Care Actuarial (B) Working Group of the Health Actuarial (B) Task Force met in Austin, TX, Dec. 6, 2019. The following Working Group members participated: Steve Ostlund (AL); Paul Lombardo (CT); John Reilly (FL); Weston Trexler (ID); Nicole Boyd (KS); Marti Hooper (ME); Fred Andersen (MN); Rhonda Ahrens (NE); Anna Krylova (NM); Laura Miller (OH); Tracie Gray (PA); Andrew Dvorine (SC); Mike Boerner and Raja Malkani (TX); and Tomasz Serbinowski (UT).

Mr. Ostlund chaired the meeting on behalf of Perry Kupferman (CA).

Ms. Ahrens made a motion, seconded by Mr. Lombardo, to adopt the Working Group’s Oct. 24 (Attachment Four-A), Sept. 24 (Attachment Four-B), Aug. 28 (Attachment Four-C), Aug. 20 (Attachment Four-D) and Aug. 2 (see NAIC Proceedings – Summer 2019, Health Actuarial (B) Task Force, Attachment One) minutes. The motion passed unanimously.

2. Heard an Update from the Academy on LTC Work Group Activities

Warren Jones (PricewaterhouseCoopers LLP) gave an update (Attachment Four-E) on the American Academy of Actuaries (Academy) Long-Term Care Valuation Work Group’s development of mortality and lapse valuation tables. He said the Academy has published the “Long-Term Care (LTC) Combination Product Valuation Practice Note,” as requested by the Working Group in July 2015.

3. Heard an Update on SOA LTCI Research

Dale Hall (Society of Actuaries—SOA) gave an update (Attachment Four-F) on recent work on the SOA’s Long-Term Care Experience Study.

4. Adopted the Report of the Long-Term Care Pricing (B) Subgroup

Mr. Lombardo said the Long-Term Care Pricing (B) Subgroup met Sept. 12 and discussed group long-term care insurance (LTCI) pricing.

Mr. Lombardo made a motion, seconded by Ms. Ahrens, to adopt the report of the Long-Term Care Pricing (B) Subgroup, including its Sept. 12 minutes (Attachment Four-G). The motion passed unanimously.

5. Adopted the Report of the Long-Term Care Valuation (B) Subgroup

Mr. Andersen said an Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves (AG 51) guidance document (Guidance Document) was developed to be used for year-end 2019 AG 51 filings, and it is available on the Subgroup’s web page. He said a review group composed of Subgroup members has reviewed AG 51 year-end 2018 filings for the 50 largest LTCI companies, based on policyholder exposure. He said the review group has conducted in-person meetings with 11 insurers to further discuss their AG 51 filings.

Mr. Andersen made a motion, seconded by Mr. Boerner, to adopt the report of the Long-Term Care Valuation (B) Subgroup, and the Guidance Document (Attachment Four-H). The motion passed unanimously.

Having no further business, the Long-Term Care Actuarial (B) Working Group adjourned.
The Long-Term Care Actuarial (B) Working Group of the Health Actuarial (B) Task Force met via conference call Oct. 24, 2019. The following Working Group members participated: Perry Kupferman, Chair (CA); Steve Ostlund (AL); Paul Lombardo (CT); Benjamin Ben (FL); Marti Hooper (ME); Fred Andersen (MN); Rhonda Ahrens (NE); Anna Krylova (NM); Bill Carmello (NY); Chuck Sha (TX); and Jaakob Sundberg (UT).

1. **Discussed a Draft of Revisions to the Forms**

   Mr. Kupferman presented draft of revisions (Attachment Four-A1) to the Long-Term Care Experience Reporting Forms (Forms) found in the annual financial statement and instructions (Attachment Four-A2) for the revised forms. He said the draft was produced as a response to a referral from the Financial Analysis (E) Working Group that requests assistance from the Long-Term Care Actuarial (B) Working Group with long-term care insurance (LTCI) total reserve reporting in the Forms and the annual financial statement.

   Mr. Kupferman said Form 1 has been modified to make a distinction between direct, assumed and ceded amounts. He said the column to report net reserve has been removed. He said reporting in Form 1 is no longer at the policy form level.

   Paul Graham (American Council of Life Insurers—ACLI) said column 9, column 10 and column 11 of Form 1 are duplicates of information that is reported in the recently revised Exhibit 6 of the annual financial statement, and he suggested these three columns be eliminated from Form 1.

   Mr. Kupferman said he will compare Exhibit 6 and the draft Form 1 for duplicate information. He said Form 1 is structured in a way that will show that insurers are responsible for the reserves associated with ceded business.

   Mr. Graham said he thinks for total inception to date rows, column 1 and column 2 the only columns where this category is applicable.

   Mr. Kupferman said he will review Form 1 given this suggestion.

   Mr. Kupferman asked if Form 1 should, as proposed, be split between individual and group business.

   Mr. Andersen said this distinction is helpful due to the differences between individual and group business.

   Mr. Graham said Exhibit 6 of the annual financial does not separate individual and group business.

   Mr. Andersen asked why Form 2 reports incurred claims but not earned premium. He said he thinks reporting percent of male lives insured is not necessary, as this number is fairly consistent among insurers.

   Ms. Ahrens said many insurers offered unisex rates, and reporting percent of male lives insured could help identify companies whose block is disproportionately weighted in subsidized cells.

   Mr. Ben said that the percent of male lives insured is useful for rate review and that he supports reporting earned premium in Form 2.

   Ray Nelson (America’s Health Insurance Plans—AHIP) said it will not be burdensome for companies to provide percent of male lives insured for current in-force policies, but this may not be true for total inception-to-date.

   Mr. Kupferman said the draft of revisions to the Forms does not propose any changes to the current Form 3.

   Mr. Andersen and Mr. Lombardo suggested the addition of earned premium to the draft revisions to Form 4.
Mr. Graham said that he does not understand how reporting third-party funding percentages in Form 4 is useful and that reporting an accurate figure for this category will be difficult.

Mr. Kupferman said the draft of revisions to the Forms removes reserve reporting from Form 5.

Mr. Graham said the rate increase pending column may be misleading to users of Form 5 and may not be easy for companies to accurately report. He said state insurance regulators can obtain this information directly from rate increase requests received by states.

Ms. Ahrens said she does not find it useful to include this in Form 5, as the information can be obtained elsewhere.

Having no further business, the Long-Term Care Actuarial (B) Working Group adjourned.

Form 1

Definitions and Formulas

**Current**
Current calendar year of reporting.

**Total Inception-to-Date**
Aggregate experience data since issuance of policies.

**Assumed /Ceded Rows**
Does not include YRT reinsurance transactions. For columns that are designated with a # rather than a $, assumed/ceded business is only recorded here if the business is 100% coinsured.

<table>
<thead>
<tr>
<th>Column 1 – Earned Premiums</th>
</tr>
</thead>
<tbody>
<tr>
<td>Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.</td>
</tr>
</tbody>
</table>

**Life, Accident & Health, Fraternal and Property/Casualty Only**
Total earned premiums should equal direct earned premiums for LTC business from Schedule H, Part 1, Line 2.

<table>
<thead>
<tr>
<th>Column 2 - Incurred Claims</th>
</tr>
</thead>
<tbody>
<tr>
<td>Developed claims incurred during the calendar year. Equal to the present value of all claim payments and any outstanding claim reserves. The discount rate is the statutory valuation interest rate for case reserves.</td>
</tr>
</tbody>
</table>

Paid claims in the year of incurral are discounted one-quarter year.
Paid claims subsequent to the year of incurral are assumed to be paid mid-year and discounted back to the midpoint of the incurred year.
Outstanding claim reserves for a given incurred year plus transferred reserves from Form 3, Part 3 are discounted from the valuation date to the midpoint of the incurred year.
Negative results are possible for acquired business only. Negative results indicate downward development of ultimate claims.

<table>
<thead>
<tr>
<th>Column 3 – New Claims During the Year</th>
</tr>
</thead>
<tbody>
<tr>
<td>The number of claims that have at least one benefit payment made during the year after the elimination period but have no payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. For the purpose of including a claim in this count, payments that do not require satisfaction of the elimination period are excluded. A claim that has terminated by the end of the year should be included in the count.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Column 4 - Claims Closed During Year</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of claims that were closed during the year due to recovery, exhaustion of benefits, or death.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Column 5 – Open Claims</th>
</tr>
</thead>
<tbody>
<tr>
<td>Open claims are all claims that have not been closed. Include IBNR as well as claims in course of settlement.</td>
</tr>
</tbody>
</table>
Column 6 – Terminations

Total number of policyholders whose coverage ended during the year for any reason, including death, lapse, or benefit exhaustion.

Column 7 – Policies In-force at Year End

Total number of policies or certificates in force at the end of the year.

Column 8 – Lives In-force at Year End

Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.

Column 9 – Active Life Reserves

Total amount of reserves held for policyholders who are not currently on claim.

Column 10 – Claim Reserves

Total amount of reserves held for payment of claims that have been incurred but not yet paid.

Column 11 – Other Reserves

Total amount of other reserves associated with long-term care policies, including premium deficiency reserves, unearned premium reserves, and additional actuarial reserves. For the additional actuarial reserve, use the lesser of the aggregate additional reserve and a reserve calculated specifically for LTC business.

The amount reported in annual statement Exhibit 6, Line 2 for life, accident & health, and fraternal only.

A reserve must be carried for any block of contracts for which future gross premiums when reduced by expenses for administration, commissions, and taxes will be insufficient to cover future claims or services.
Form 2

Definitions and Formulas

Current
Current calendar year of reporting.

Total Inception-to-Date
Aggregate experience data since issuance of policies.

Comprehensive
Policy forms that provide a combination of institutional or facility and non-institutional coverage. These include institutional only policies with non-institutional riders.

Institutional Only
Policy forms that provide institutional coverage only.

Non-Institutional Only
Policy forms that provide only non-institutional coverage.

Column 1 – Calendar Year of Peak Issues
Calendar Year in which the largest number of policies in the block were sold. When reporting figures for inception-to-date, include all policies ever sold in the block. For the current year, include only those policies that remain in force as of 12/31.

Column 2 – Male/Female Mix% Male Lives Insured
Percentage of males/women within the block of policyholders. For example, a block consisting of 60% males would be reported as 60, and 40% females would be reported as 60/40.

Column 3 – Average Attained Age
Unweighted average of the attained ages of all in force policyholders in the block.

Column 4 – Annual Net Premium
\[
\text{Annual Net Premium} = \sum (\text{annual valuation net premiums for policies issued in calendar year } n \text{ at the start of calendar duration } t). \text{ Companies may report zero (0) for the net premiums during the Preliminary Term period. For calendar duration 0, the annual net premiums at issue should be reported.}
\]

Column 5 – Annual Gross Premium
\[
\text{Annual Gross Premium} = \sum (\text{Annualized Premium In Force, including mode loadings for policies issued in calendar year } n \text{ at the start of calendar duration } t). \text{ For calendar duration 0, the annual gross premiums collected at issue should be reported.}
\]
**Column 6 – Net/Gross Premium Ratio**

\[
\text{Net/Gross Premium Ratio} = \frac{\text{[Column 4]}}{\text{[Column 5]}}
\]

**Column 47 – Incurred Claims**

Developed claims incurred during the calendar year. Equal to the present value of all claim payments and any outstanding claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

- Paid claims in the year of incurrence are discounted one-quarter year.
- Paid claims subsequent to the year of incurrence are assumed to be paid mid-year and discounted back to the midpoint of the incurred year.
- Outstanding claim reserves for a given incurred year are discounted from the valuation date to the midpoint of the incurred year.
- Negative results are possible for acquired business only. Negative results indicate downward development of ultimate claims.

**Column 58 – Lives In-force at End of Year**

Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.

**Column 69 – Terminations**

Total number of policyholders whose coverage ended during the year for any reason including death, lapse, or benefit exhaustion.

**Column 710 – New Lives Insured**

Total number of new LTC policies issued during the year.
Form 4

Definitions and Formulas

Current
Current calendar year of reporting.

Total Inception-to-Date
Aggregate experience data since issuance of policies.

Comprehensive
Policy forms that provide a combination of institutional or facility and non-institutional coverage. These include institutional only policies with non-institutional riders.

Institutional Only
Policy forms that provide institutional coverage only.

Non-Institutional Only
Policy forms that provide only non-institutional coverage.

Column 1 – Calendar Year of Peak Issues
Calendar Year in which the largest number of policies in the block were sold.

Column 2 – Third Party Funding
Indicate whether premiums are paid in whole or in part by a third party such as an employer. Example: If the level of third party funding is 25%, enter “25” in this column.

Column 3 – Average Attained Age
Unweighted average of the attained ages of all inforce policyholders in the block.

Column 4 – Annual Net Premium

Annual Net Premium = Σ (annual valuation net premiums for policies issued in calendar year n at the start of calendar duration t). Companies may report zero (0) for the net premiums during the Preliminary Term period. For calendar duration 0, the annual net premiums at issue should be reported.

Column 5 – Annual Gross Premium

Annual Gross Premium = Σ (Annualized Premium In Force, including mode loadings for policies issued in calendar year n at the start of calendar duration t). For calendar duration 0, the annual gross premiums collected at issue should be reported.

Column 6 – Net/Gross Premium Ratio

Net/Gross Premium Ratio = Column 4 / Column 5
Column 47 – Incurred Claims

Developed claim amounts for claims incurred during the calendar year. Equal to the present value of all claim payments and any outstanding claim reserve. The discount rate is the statutory valuation interest rate for case reserve.

Paid claims in the year of incurral are discounted one-quarter year.
Paid claims subsequent to the year of incurral are assumed to be paid mid-year and discounted back to the midpoint of the incurred year.
Outstanding claim reserves for a given incurred year are discounted from the valuation date to the midpoint of the incurred year.
Negative results are possible for acquired business only. Negative results indicate downward development of ultimate claims.

Column 58 – Lives In-force at End of Year

Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.

Column 69 – Terminations

Total number of policyholders whose coverage ended during the year for any reason including death, lapse, or benefit exhaustion.

Column 710 – New Lives Insured Issues

Total number of new LTC certificates issued during the year.
Form 5

Definitions and Formulas

Current

Current calendar year of reporting.

Total Inception-to-Date

Aggregate experience data since issuance of policies.

Stand-alone LTC

An LTC product that is sold by itself, not as a rider on another type of insurance.

Life/LTC Accelerated Benefits Riders

Riders attached to life insurance or annuity products that allow for a benefit to be claimed upon the occurrence of a long-term care need at the cost of reduction in the death benefit or annuity payout benefit.

LTC Extension of Benefit Riders

Riders attached to life insurance or annuity products that allow for a benefit to be claimed above and beyond the initial benefit amount in the event that all accelerated benefits have been claimed and the insured is still in need of long-term care services.

Column 1 – State Code

The state for which data is being reported. Example: CA for California

Column 2 – Earned Premiums

Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.

Life, Accident & Health, Fraternal and Property/Casualty Only

Total earned premiums should equal direct earned premiums for LTC business from Schedule H, Part 1, Line 2.

Column 3 – New Lives During Year

Total number of new lives that entered the block during the year. Joint policies are to be counted as multiple lives.

Column 4 – Lives In-force at End of Year

Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.
Column 5 – Average Attained Age

Unweighted average of the attained ages of all inforce policyholders associated with the in the block.

Column 6 – Incurred LTC Claims

Developed claim amounts for LTC claims incurred during the calendar year including accelerated claims, but not including payments due to extension of benefits. Equal to the present value of all claim payments and any outstanding claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Paid claims in the year of incurral are discounted one-quarter year. Paid claims subsequent to the year of incurral are assumed to be paid mid-year and discounted back to the midpoint of the incurred year. Outstanding claim reserves for a given incurred year are discounted from the valuation date to the midpoint of the incurred year. Negative results are possible for acquired business only. Negative results indicate downward development of ultimate claims.

Column 7 – Incurred Extended Benefits Claims

Developed claim amounts for LTC claims incurred during the calendar year due to extension of benefits after exhaustion of accelerated benefits. Equal to the present value of all claim payments and any outstanding claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Paid claims in the year of incurral are discounted one-quarter year. Paid claims subsequent to the year of incurral are assumed to be paid mid-year and discounted back to the midpoint of the incurred year. Outstanding claim reserves for a given incurred year are discounted from the valuation date to the midpoint of the incurred year. Negative results are possible for acquired business only. Negative results indicate downward development of ultimate claims.

Column 8 – Open Claims End of Year

Open claims are all claims that have not been closed. Include IBNR as well as claims in course of settlement.

Column 9 – New Claims During the Year

The number of claims that have at least one LTC benefit payment made during the year after the elimination period but have no payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. For the purpose of including a claim in this count, payments that do not require satisfaction of the elimination period are excluded. A claim that has terminated by the end of the year should be included in the count.
Column 10 - New Extended Benefits Claims

The number of claims that have at least one benefit payment made during the year resulting from extension of benefits, but have no extension of benefits payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. A claim that has terminated by the end of the year should be included in the count.

Column 11 – Accelerated Benefits Available

Maximum amount of remaining death benefit available to be paid on an accelerated basis due to LTC Acceleration of Benefits riders.

Column 12 – Extended Benefits Available

Maximum amount of remaining extended benefits available to policyholders with extension of benefit riders.

Column 13 – Rate Increases

Indicate whether the company has any rate increase requests pending in that state.
1. Discussed a Draft of Revisions to the Forms

Mr. Kupferman presented draft of revisions (Attachment Four-B1) to the Long-Term Care Experience Reporting Forms (Forms) found in the annual financial statement, and instructions (Attachment Four-B2) for the revised forms. He said the draft was produced as a response to a referral from the Financial Analysis (E) Working Group that requests assistance from the Long-Term Care Actuarial (B) Working Group with long-term care insurance (LTCI) total reserve reporting in the Forms and the annual financial statement. He presented comments (Attachment Four-B3) from the American Council of Life Insurers (ACLI) on the proposed revisions to the Forms.

Mr. Lombardo suggested that the instructions for completing Form 1 or the exhibit should make a distinction between direct, assumed, and ceded amounts. Mr. Leung suggested that yearly renewable term (YRT) reinsurance amounts be excluded from reporting. Bob Yee (PricewaterhouseCoopers LLP) said YRT amounts should not be excluded. Ms. Ahrens said the definition of the amount to be reported in the Other Reserve column of Form 1 needs to be very clear.

Jan Graeber (American Council of Life Insurers—ACLI) asked to what extent the proposed forms report information that is also reported in revised Form 6 of the annual financial statement. She asked if it is necessary to request duplicate information. Mr. Kupferman said he will compare the revised Form 6 to the proposed forms to identify any duplicate requests.

Mr. Serbinowski suggested changing the Male/Female Mix (%) column in Form 2 to be reported as percentage male or female.

Ray Nelson (America’s Health Insurance Plans—AHIP) suggested the Annual Net Premium and Net/Gross Premium Ratio columns be removed from Form 2, as this information is reported in Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves (AG 51) filings. Mr. Serbinowski agreed.

Having no further business, the Long-Term Care Actuarial (B) Working Group adjourned.

**Form 1**

Definitions and Formulas

**Current**
Current calendar year of reporting.

**Total Inception-to-Date**
Aggregate experience data since issuance of policies.

**Column 1 – Earned Premiums**
- Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.

**Life, Accident & Health, Fraternal and Property/Casualty Only**
- Total earned premiums should equal direct earned premiums for LTC business from Schedule H, Part 1, Line 2.

**Column 2 - Incurred Claims**
- Developed claims incurred during the calendar year. Equal to the present value of all claim payments and any outstanding claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

- Paid claims in the year of incurral are discounted one-quarter year.

- Paid claims subsequent to the year of incurral are assumed to be paid mid-year and discounted back to the midpoint of the incurred year.

- Outstanding claim reserves for a given incurred year plus transferred reserves from Form 3, Part 3 are discounted from the valuation date to the midpoint of the incurred year.

- Negative results are possible for acquired business only. Negative results indicate downward development of ultimate claims.

**Column 3 – New Claims During the Year**
- The number of claims that have at least one benefit payment made during the year after the elimination period but have no payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. For the purpose of including a claim in this count, payments that do not require satisfaction of the elimination period are excluded. A claim that has terminated by the end of the year should be included in the count.

**Column 4 - Claims Closed During Year**
- Number of claims that were closed during the year due to recovery, exhaustion of benefits, or death.

**Column 5 – Open Claims**
- Open claims are all claims that have not been closed. Include IBNR as well as claims in course of settlement.

**Column 6 – Terminations**
- Total number of policyholders whose coverage ended during the year for any reason, including death, lapse, or benefit exhaustion.

© 2019 National Association of Insurance Commissioners  
1
Column 7 – Policies In-force at Year End

Total number of policies or certificates in force at the end of the year.

Column 8 – Lives In-force at Year End

Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.

Column 9 – Active Life Reserves

Total amount of reserves held for policyholders who are not currently on claim.

Column 10 – Claim Reserves

Total amount of reserves held for payment of claims that have been incurred but not yet paid.

Column 11 – Other Reserves

Total amount of other reserves associated with long-term care policies, including premium deficiency reserves, unearned premium reserves, and additional actuarial reserves.

The amount reported in annual statement Exhibit 6, Line 2 for life, accident & health, and fraternal only.

A reserve must be carried for any block of contracts for which future gross premiums when reduced by expenses for administration, commissions, and taxes will be insufficient to cover future claims or services.
Form 2

Definitions and Formulas

Current
Current calendar year of reporting.

Total Inception-to-Date
Aggregate experience data since issuance of policies.

Comprehensive
Policy forms that provide a combination of institutional or facility and non-institutional coverage. These include institutional only policies with non-institutional riders.

Institutional Only
Policy forms that provide institutional coverage only.

Non-Institutional Only
Policy forms that provide only non-institutional coverage.

Column 1 – Year of Peak Issues
Year in which the largest number of policies in the block were sold. When reporting figures for inception-to-date, include all policies ever sold in the block. For the current year, include only those policies that remain in force as of 12/31.

Column 2 – Male/Female Mix
Percentage of males/females within the block of policyholders. For example, a block consisting of 60% males and 40% females would be reported as 60/40.

Column 3 – Average Attained Age
Unweighted average of the attained ages of all in force policyholders in the block.

Column 4 – Annual Net Premium

\[ \text{Annual Net Premium} = \sum (\text{annual valuation net premiums for policies issued in calendar year } n \text{ at the start of calendar duration } t) \]
Companies may report zero (0) for the net premiums during the Preliminary Term period. For calendar duration 0, the annual net premiums at issue should be reported.

Column 5 – Annual Gross Premium

\[ \text{Annual Gross Premium} = \sum (\text{Annualized Premium In Force, including mode loadings for policies issued in calendar year } n \text{ at the start of calendar duration } t) \]
For calendar duration 0, the annual gross premiums collected at issue should be reported.
Column 6 – Net/Gross Premium Ratio

= [Column 4] / [Column 5]

Column 7 – Incurred Claims

Developed claims incurred during the calendar year. Equal to the present value of all claim payments and any outstanding claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Paid claims in the year of incurrence are discounted one-quarter year.
Paid claims subsequent to the year of incurrence are assumed to be paid mid-year and discounted back to the midpoint of the incurred year.
Outstanding claim reserves for a given incurred year are discounted from the valuation date to the midpoint of the incurred year.
Negative results are possible for acquired business only. Negative results indicate downward development of ultimate claims.

Column 8 – Lives In-force at End of Year

Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.

Column 9 – Terminations

Total number of policyholders whose coverage ended during the year for any reason including death, lapse, or benefit exhaustion.

Column 10 – New Issues

Total number of new LTC policies issued during the year.
Form 4

Definitions and Formulas

**Current**
Current calendar year of reporting.

**Total Inception-to-Date**
Aggregate experience data since issuance of policies.

**Comprehensive**
Policy forms that provide a combination of institutional or facility and non-institutional coverage. These include institutional only policies with non-institutional riders.

**Institutional Only**
Policy forms that provide institutional coverage only.

**Non-Institutional Only**
Policy forms that provide only non-institutional coverage.

Column 1 – Year of Peak Issues
Year in which the largest number of policies in the block were sold.

Column 2 – Third Party Funding
Indicate whether premiums are paid in whole or in part by a third party such as an employer. Example: If the level of third party funding is 25%, enter “25” in this column.

Column 3 – Average Attained Age
Unweighted average of the attained ages of all inforce policyholders in the block.

Column 4 – Annual Net Premium

\[
\text{Annual Net Premium} = \Sigma (\text{annual valuation net premiums for policies issued in calendar year } n \text{ at the start of calendar duration } t). \text{ Companies may report zero (0) for the net premiums during the Preliminary Term period. For calendar duration 0, the annual net premiums at issue should be reported.}
\]

Column 5 – Annual Gross Premium

\[
\text{Annual Gross Premium} = \Sigma (\text{Annualized Premium In Force, including mode loadings for policies issued in calendar year } n \text{ at the start of calendar duration } t). \text{ For calendar duration 0, the annual gross premiums collected at issue should be reported.}
\]

Column 6 – Net/Gross Premium Ratio

\[
= \frac{[\text{Column 4}]}{[\text{Column 5}]}
\]
Column 7 – Incurred Claims

Developed claim amounts for claims incurred during the calendar year. Equal to the present value of all claim payments and any outstanding claim reserve. The discount rate is the statutory valuation interest rate for case reserve.

Paid claims in the year of incurral are discounted one-quarter year.
Paid claims subsequent to the year of incurral are assumed to be paid mid-year and discounted back to the midpoint of the incurred year.
Outstanding claim reserves for a given incurred year are discounted from the valuation date to the midpoint of the incurred year.
Negative results are possible for acquired business only. Negative results indicate downward development of ultimate claims.

Column 8 – Lives In-force at End of Year

Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.

Column 9 – Terminations

Total number of policyholders whose coverage ended during the year for any reason including death, lapse, or benefit exhaustion.

Column 10 – New Issues

Total number of new LTC policies issued during the year.
Form 5

Definitions and Formulas

Current

Current calendar year of reporting.

Total Inception-to-Date

Aggregate experience data since issuance of policies.

Stand-alone LTC

An LTC product that is sold by itself, not as a rider on another type of insurance.

Life/LTC Accelerated Benefits Riders

Riders attached to life insurance or annuity products that allow for a benefit to be claimed upon the occurrence of a long-term care need at the cost of reduction in the death benefit or annuity payout benefit.

LTC Extension of Benefit Riders

Riders attached to life insurance or annuity products that allow for a benefit to be claimed above and beyond the initial benefit amount in the event that all accelerated benefits have been claimed and the insured is still in need of long-term care services.

Column 1 – State Code

The state for which data is being reported. Example: CA for California

Column 2 – Earned Premiums

Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.

Life, Accident & Health, Fraternal and Property/Casualty Only

Total earned premiums should equal direct earned premiums for LTC business from Schedule H, Part 1, Line 2.

Column 3 – New Lives During Year

Total number of new lives that entered the block during the year. Joint policies are to be counted as multiple lives.

Column 4 – Lives In-force at End of Year

Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.

Column 5 – Average Attained Age

Unweighted average of the attained ages of all inforce policyholders associated with the in the block.
Column 6 – Incurred LTC Claims

Developed claim amounts for LTC claims incurred during the calendar year including accelerated claims, but not including payments due to extension of benefits. Equal to the present value of all claim payments and any outstanding claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Paid claims in the year of incurral are discounted one-quarter year. Paid claims subsequent to the year of incurral are assumed to be paid mid-year and discounted back to the midpoint of the incurred year. Outstanding claim reserves for a given incurred year are discounted from the valuation date to the midpoint of the incurred year. Negative results are possible for acquired business only. Negative results indicate downward development of ultimate claims.

Column 7 – Incurred Extended Benefits Claims

Developed claim amounts for LTC claims incurred during the calendar year due to extension of benefits after exhaustion of accelerated benefits. Equal to the present value of all claim payments and any outstanding claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Paid claims in the year of incurral are discounted one-quarter year. Paid claims subsequent to the year of incurral are assumed to be paid mid-year and discounted back to the midpoint of the incurred year. Outstanding claim reserves for a given incurred year are discounted from the valuation date to the midpoint of the incurred year. Negative results are possible for acquired business only. Negative results indicate downward development of ultimate claims.

Column 8 – Open Claims End of Year

Open claims are all claims that have not been closed. Include IBNR as well as claims in course of settlement.

Column 9 – New Claims During the Year

The number of claims that have at least one LTC benefit payment made during the year after the elimination period but have no payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. For the purpose of including a claim in this count, payments that do not require satisfaction of the elimination period are excluded. A claim that has terminated by the end of the year should be included in the count.

Column 10 – New Extended Benefits Claims

The number of claims that have at least one benefit payment made during the year resulting from extension of benefits, but have no extension of benefits payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. A claim that has terminated by the end of the year should be included in the count.

Column 11 – Accelerated Benefits Available

Maximum amount of remaining death benefit available to be paid on an accelerated basis due to LTC Acceleration of Benefits riders.
Column 12 – Extended Benefits Available

Maximum amount of remaining extended benefits available to policyholders with extension of benefit riders.

Column 13 – Rate Increases

Indicate whether the company has any rate increase requests pending in that state.
September 20, 2019

Perry Kupferman  
Chair, NAIC Long-Term Care Actuarial Working Group (LTCAWG) 

Re: LTC Experience Reporting Forms 

Dear Mr. Kupferman, 

Thank you for the time you and other regulators have spent on the proposed revisions to the NAIC Long-Term Care Experience Exhibits. AHIP and ACLI appreciate the opportunity to provide suggestions/comments regarding potential changes to the current LTC Experience Exhibits in the NAIC Annual Statements. 

First and foremost, we want to ensure that regulators have the information they need to do their job. We also want to ensure that regulators have the information they need to assess the entire market, including data on hybrid products. 

We agree with your statements on the recent Long-Term Care Actuarial Working Group call that the intent of the revisions to the experience exhibits should not be to: 

- disclose confidential information,  
- disclose information that is better suited for submission through an alternative channel such as an AG51 report or a rate filing, or  
- create meaningless work for companies. 

While we can provide general comments on the current draft of proposed revision, we ask that you consider approaching this project as outlined below. You mentioned that you receive regular requests from both your commissioner and outside parties, such as the media, for information that you are unable to adequately answer in a timely way because the data is not readily available or currently reported. It would be very helpful to know the specific nature and focus of those questions. With that information, we could then work together to compile a list of common questions that are routinely asked, or could be asked, to better understand the LTC market. Some initial questions that come to mind are:

**Individual Stand-Alone Long-Term Care Market** 

How many carriers are actively marketing (nationwide and in each state)?  
What products are carriers marketing?  
How many policyholders are covered?  
What percentage of policies are marketed through an employer or association relationship?  
What’s the distribution of business by:  
- Inflation vs non-inflation  
- Issue age  
- Attained age  
- Benefit period
**Long-Term Care Hybrid Market**
Identify the various types of hybrid/combo products currently marketed.
Which companies sell each type?
How many policyholders are covered?
What’s the average face amount?
How many claims were death claims?
How many claims were LTC claims?

**Group Long-Term Care Market**
How many carriers currently market group business?
What’s the average issue age?
What’s the average attained age?
What’s the average daily benefit?
What’s the average benefit period?

If the working group prefers to continue moving forward with the current draft, below are some initial comments.

- Due to the low volume of business in many states, a state by state view of (1) Average Age, (2) Claim Counts, and (3) Reserve Balances will not generate meaningful insights or credible conclusions. In fact, it could be counter-productive, potentially provoking cross-state subsidization concerns as have already arisen, and possibly triggering misplaced objections or analysis from individuals who may tie rate increase need (and state rate increase approvals) to state by state claims experience.

- Encouraging focus on single state experience is inconsistent with the fact that LTC products were generally marketed on a nationwide basis and were priced, designed and sold consistent with NAIC models, so coverage features and initial pricing were consistent across states. State by state focus also seems inconsistent with one of the primary charges of the recently formed NAIC LTC EX Task Force, which is to “[develop] a consistent national approach for reviewing long-term care insurance rates that result in actuarially appropriate increases being granted by the states in a timely manner, and eliminates cross-state rate subsidization.”

**Form Specific Comments:**

**Form 1.**
- Is Form 1 necessary? The Form appears to be designed to address the FAWG request to measure total liabilities. Is this information now adequately captured in the recently changed Exhibit 6 (Aggregate Reserves for Accident and Health Contracts) in the Annual Statement that will take effect in 2019?

- We support the change made in the latest draft to combine the counts for Deaths and Lapses into one data point called Terminations on Forms 1, 2 and 4. The split data would have been problematic to collect and was generally unreliable.
Form 2.
- Question: What is the expected value or intended use of collecting the "Year of Peak Issues"?
- Are the Net Premium and Net/Gross Ratios needed/useful? What is the thinking behind these? Will these continue to be calculated as proxy's based on current Valuation data?

Form 4.
- Same comments/questions as for Form 2 apply to Form 4.
- Group cases may have different levels of 3rd party funding. It is not clear how this entry should be calculated when this is the case.

Form 5.
- Due to the low volume of business in many states, a state by state view of (1) Average Age, (2) Claim Counts, and (3) Reserve Balances will not generate meaningful insights or credible conclusions. As noted above, it could needlessly provoke cross-state subsidization concerns, and could trigger misplaced objections or analysis from individuals who may tie rate increase need (and state rate increase approvals) to state by state claims experience.
- As also noted above, encouraging focus on single state experience is inconsistent with the fact that LTC products were generally marketed on a nationwide basis and were priced, designed and sold consistent with NAIC models, with coverage features and initial pricing typically consistent across states. State by state focus is also inconsistent with the charge of the recently formed NAIC LTC EX Task Force to "develop a consistent national approach for reviewing long-term care insurance rates that result in actuarially appropriate increases being granted by the states in a timely manner, and eliminates cross-state rate subsidization."
- Similarly, "Average Attained Age," "# Open Claims End of Year," and "# New Claims" can be significantly misleading. We believe those items should be removed from Form 5. Company experience can vary, for example across ages and in group versus individual business. Recent examples where commentators have misinterpreted narrow data points (e.g., morbidity improvement) or published flawed conclusions reached by applying their own home grown modeling techniques to select data points, have caused distractions to regulators and companies alike. If regulators consider those data points to be essential, we request that those data points be included in AG 51 filings and that reserves, if required on a state by state basis, be aggregated as "Total Reserves<" not divided between "ALR," "Claim" and "Other" reserves.

Thank you for the opportunity to comment. Please note that we have not had an opportunity to fully discuss changes made to the forms that were released on September 17, 2019, with our respective
member companies. As a result, the above comments should be considered as preliminary. We would be happy to answer any questions your working group has with these recommendations.

Sincerely,

Raymond Nelson
Consultant to AHIP

Jan Graeber
ACLI
The Long-Term Care Actuarial (B) Working Group of the Health Actuarial (B) Task Force met via conference call Aug. 28, 2019. The following Working Group members participated: Perry Kupferman, Chair (CA); Steve Ostlund (AL); Paul Lombardo (CT); Benjamin Ben (FL); Marti Hooper (ME); Fred Andersen (MN); Rhonda Ahrens (NE); Anna Krylova (NM); Laura Miller (OH); Andrew Schallhorn (OK); Jim Laverty (PA); Andrew Dvorine (SC); Chuck Sha (TX); and Tomasz Serbinowski (UT).

1. Heard an Academy Long-Term Care Valuation Work Group Update

Bob Yee (PricewaterhouseCoopers) gave an update on the American Academy of Actuaries (Academy) Long-Term Care Valuation Work Group’s development of long-term care insurance (LTCI) mortality and lapse valuation tables (Attachment Four-C1).

Having no further business, the Long-Term Care Actuarial (B) Working Group adjourned.
**Agenda**

1. Summary
2. Mortality
3. Lapse

**Charges to the LTC Valuation Work Group**

- Develop a replacement mortality table for LTC active life reserves
  - Based on the 2012 Annuitant Mortality Table
  - Recommend a margin for conservatism
- Develop a replacement lapse table
  - Recommend a margin for conservatism
- Consider developing tables for valuation on total lives basis as well as active lives basis
Progress to Date

- Reviewed and selected data from SOA 2000–2011 Intercompany Study
- Develop raw rates
- Smooth rates
- Determined proposed adjustment factors for tables
- Develop adjustment factors
- Compare actual lapses to expected determined from preliminary proposed rates

Proposed Adjustment Factors for Tables

<table>
<thead>
<tr>
<th>Factor</th>

</tbody>
</table>

Factors are applied to the base mortality and lapse rates to reflect the profile of the policyholder.

Base Mortality Rates

- Developed from 48,000 deaths among companies with reasonable data ("DEFN 2" companies*) during policy years 15 and beyond for experience period 2008–2011.

* 10 companies' data were deemed to be reasonably reliable:
  - Identified deaths from lapses, and
  - Less than 25% unknown terminations.

Agenda

1. Summary
2. Mortality
3. Lapse
Base Mortality Rates

- Use 2012 IAM as a guide when data is sparse.
- Generally higher than corresponding 2012 IAM rates.

Data for ages 95 & over is fairly credible with 2,878 and 1,278 deaths for female and male respectively.

LTC mortality rates are generally higher than corresponding 2012 IAM Basic and 2015 VBT Unismoker except for female ages past 100.

Durational Factors—Younger Issue Ages

- Durational selection effects extend beyond 20 years.
- Greater selection than aggregate for all issue ages.

Durational Factors—Older Issue Ages

- Durational selection effects shorter than 20 years at issue ages 75 and over.
Risk Class Factors—Preferred

- Permanent selection for issue ages under 60.

Risk Class Factors—Standard (including Substandard)

- Permanent selection for issue ages under 60.

Married Factors

- Permanent selection for issue ages under 70.
- Less selection than corresponding preferred class factors.

Not Married Factors
Background on Data

- Source of data is the 2000-2011 LTC Intercompany Study.
- Select data for DEFN 2 companies and experience years 2008–2011 only.

Select Factors for Lapse

- Key lapse factors were identified using a logistic regression method.

<table>
<thead>
<tr>
<th>Factors for Lapse in Order of Significance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Policy Duration</td>
</tr>
<tr>
<td>Premium Paying Status</td>
</tr>
<tr>
<td>Underwriting Class</td>
</tr>
<tr>
<td>Periodic Premium Level</td>
</tr>
<tr>
<td>Marital Status</td>
</tr>
<tr>
<td>Premium Mode</td>
</tr>
<tr>
<td>Rate Increase Indicator</td>
</tr>
</tbody>
</table>

Select Data

- Minimum 240 lapses in any rate-cell (minimum 50% partial credibility).
Select Factors for Lapse

- To be consistent with the factors selected for Mortality Table, Work Group selected the following factors for lapse:
  - Factors for Lapse in Order of Significance:
    - Policy Duration
    - Premium Paying Status
    - Issue Age
    - Underwriting Class
    - Periodic Premium Level
    - Marital Status
    - Premium Mode
    - Rate Increase Indicator

Raw Lapse Rates—Individual

- Raw rates were capped by prior year’s rates to remove increasing patterns.

Smoothed Lapse Rates—Individual

- Capped raw rates for each issue age group were fitted by either an exponential (Expon.) or a power trend line.

Preliminary Proposed Risk Class Factors—Individual

- Unsmoothed adjustment factors were used due to unevenness at the tails.
Preliminary Proposed Marital Factors—Individual

- Raw adjustment factors converted to smoothed factors using 2nd polynomial (Poly.) trend lines.

Actual Lapse to Expected—Individual

- As A/E varies by within 20% by policy duration, a decision has not yet been made to make further adjustments.

Rate Increase Status Ignored

- 48% of total exposures have unknown rate increase status.

Raw Lapse Rates—Group

- Raw rates were not capped since there are only a few instances where the rates are higher than the prior year's rates.
Smoothed Lapse Rates—Group

- Raw rates for each issue age group were fitted by either an exponential (Expon.) or a 2nd degree polynomial (Poly.) trend line.
- A/E adjustments by policy year needed for proposed rates.

Smoothing Lapse Rates by Issue Age Group and Policy Duration

- Poly. (Under 35)
- Expon. (35-39)
- Expon. (40-44)

No Other Factors for Preliminary Proposed Group Lapse Table

- Marital status data for Group was minimal.
- Underwriting risk class was deemed to be unreliable (under further review).
- Covered person (employee, spouse, family members, etc.) is not a significant lapse factor.
- Occupational class data is not available.

Actual Lapse to Expected—Group

- The high A/E at policy durations 11–15 was the result of keeping the proposed rates non-increasing.

Actual Lapses to Expected Lapses Based on Preliminary Proposed Lapse Table

Next Steps

- Develop proposed active lives tables
- Review reasonableness of total terminations
- Recommend margins
- Update NAIC LTC Actuarial Working Group on any new issues
- Produce report

The Long-Term Care Actuarial (B) Working Group of the Health Actuarial (B) Task Force met via conference call Aug. 20, 2019. The following Working Group members participated: Perry Kupferman, Chair (CA); Benjamin Ben (FL); Nicole Boyd (KS); Marti Hooper (ME); Rhonda Ahrens and Michael Muldoon (NE); Anna Krylova (NM); Bill Carmello (NY); Laura Miller (OH); Andrew Schallhorn (OK); Jim Laverty (PA); Andrew Dvorine (SC); Chuck Sha (TX); and Tomasz Serbinowski (UT).

1. Discuss a Draft of Revisions to the Forms

Mr. Kupferman presented a draft (Attachment Four-D1) of revisions to the Long-Term Care Experience Reporting Forms (Forms) found in the annual financial statement. He said the draft was produced as a response to a referral from the Financial Analysis (E) Working Group that requests assistance from the Long-Term Care Actuarial (B) Working Group with long-term care insurance (LTCI) total reserve reporting in the Forms and the annual financial statement.

Mr. Andersen asked if the draft contains completely new versions of forms 2 and 4, or if the draft represents suggested edits to the current forms 2 and 4. Mr. Kupferman said forms 1, 2, 4 and 5 in the draft are unrelated to the current respective form numbers, and are all new proposed forms.

Mr. Schallhorn asked if the information requested on draft form 1 is only for stand-alone LTCI policies, or if it also includes LTCI riders on life insurance or annuity policies. Mr. Kupferman said the intention is to collect information only on stand-alone policies. Mr. Schallhorn suggested adding a category for similar information on LTCI riders. Mr. Andersen said a clear definition of “stand-alone policy” and “rider” should be added to the instructions for completing the forms. He said “rider” should be defined as having a specific premium associated with the coverage, as the LTCI component of combination or hybrid life or annuity products with LTCI benefits comingle do not have a specific portion of their total premium clearly allocated to providing LTCI coverage. Mr. Serbinowski said combination or hybrid policies should not be excluded from information gathered in the forms.

Mr. Sha said actual-to-expected calculations should not be deleted from any future versions of the forms.

Jan Graeber (American Council of Life Insurers—ACLI) said a clear understanding of what information state insurance regulators need from the forms will help the ACLI to comment on the development of revisions to the forms. She suggested caveats may need to be included with the forms to prevent information contained in them from being used or applied incorrectly. She said conclusions drawn from state-level information from the forms could be incorrectly extrapolated to a nationwide basis. She said the instructions for completing the forms and what they represent need to be very clear to avoid misuse of the information or invalid conclusions being reached. Mr. Kupferman asked if the forms should be separated into individual and group business. Ms. Graeber said this would be helpful. She said distinctions among types of group business, such as employer-paid versus employee-paid, should be made for reporting group information.

Having no further business, the Long-Term Care Actuarial (B) Working Group adjourned.

**Progress Since Summer Meeting**

- Graduated lapse rates on total lives basis
- Started review of actual-to-expected lapse on total lives basis
- Started review of reasonableness of total terminations on total lives basis
- Developed exposures for active life mortality

**Remaining Tasks**

- Complete review of actual-to-expected lapse on total lives basis
- Complete review of reasonableness of total terminations on total lives basis
- Develop mortality improvement from mid-point of exposure period, 2008 – 2011, to 2020
- Recommend margins for lapse and mortality
- Develop lapse and mortality on an active lives basis
- Complete Report

**Charges to the LTC Valuation Work Group**

- Develop a replacement mortality table for LTC active life reserves
  - Based on the 2012 Annuitant Mortality Table
  - Recommend a margin for conservatism
- Develop a replacement lapse table
  - Recommend a margin for conservatism
- Consider developing tables for valuation on total lives basis as well as active lives basis
### Expected Timeline

- Complete development of lapse and mortality on total and active lives bases including margins by Spring 2020 meeting
- Publish Report by Summer 2020 meeting

Presentation Disclaimer

The material and information contained in this presentation is for general information only. It does not replace independent professional judgment and should not be used as the basis for making any business, legal or other decisions. The Society of Actuaries assumes no responsibility for the content, accuracy or completeness of the information presented.

Data

- Data collected on policies exposed between 1/1/2000 and 12/31/2016
- 19 companies submitted data >>> 80% of all 2016 LTC Earned Premium
- Data requested was expanded from the previous study. New data collected:
  - Additional underwriting information
  - Expanded benefit information
  - ICD-9-CM/ICD-10-CM claim information

Status Update

- Completed steps
  - Validation and logic checks defined and programmed
  - Exposure calculations defined and implemented
  - Initial validation reports sent out to contributing companies
- To be completed
  - Contributing companies review data validation reports and resubmit data, if necessary
  - SOA staff and LTC experience committee review of aggregated results
Deliverables

• A database of termination and incidence data including:
  • Data dictionary
  • Summary of data collected
  • High level results
• Data will be HIPAA compliant and follow safe harbor reporting rules
  • Results for ages 90+ grouped
  • Similar level of detail as the prior study
• Expected completion date: May 31, 2020
  • Four year lag between latest data collected and publication
  • Comparable to past LTC studies

Challenges of the current study

• Heightened awareness of HIPAA compliance by participating companies resulted in:
  • Additional contracting between data compiler and contributors
  • Additional research into HIPAA compliance options

>>>> Resulted in delays in data collection phase
The Long-Term Care Pricing (B) Subgroup of the Long-Term Care Actuarial (B) Working Group of the Health Actuarial (B) Task Force met via conference call Sept. 12, 2019. The following Subgroup members participated: Paul Lombardo, Chair (CT); Jacob Lauten (AK); Steve Ostlund (AL); Benjamin Ben (FL); Marti Hooper (ME); Fred Andersen (MN); Anna Krylova (NM); Bill Carmello (NY); David Yetter (NC): Andrew Dvorine (SC); Raja Malkani (TX); and Jaakob Sundberg (UT).

1. Discussed Group LTCI Pricing

Mr. Lombardo said the Subgroup will continue its discussion of group long-term care insurance (LTCI) pricing considerations from its July 11 conference call.

Jan Graeber (American Council of Life Insurers—ACLI) said group LTCI can be classified as either true group or multi-life. She said true group LTCI uses a master policy that is issued to the group sponsor or employer, and certificates of coverage are issued to the employees or members of the group. She said true group premiums can be funded entirely by the employer, partially by the employer, or entirely by the employee, but, typically, there is at least partial funding by the employer. She said there is no master policy issued for multi-life LTCI, and individual policies are issued to each member of the multi-life group. She said true group plans that are at least partially employer-funded typically are lower risk than ones with no employer funding. She said the lower risk associated with employer-funded plans is primarily due to the risk being spread over a broader base of insured members. She said lapse rates for employees that leave the employer are higher for employer-funded plans, as the terminating employee will have to pay the portion of premium previously paid by the employer to continue coverage. She said lapse rates for terminating employees associated with plans entirely funded by the employee are similar to those seen for individual LTCI.

Ms. Graeber said employer-funded true group plans typically offer a base plan of benefits and give employees the option of purchasing increased coverage, such as a greater daily benefit. She said the average base plan daily benefit is typically lower than that for individual LTCI policies. She said most group base plans do not include inflation protection, and only a very small percentage have lifetime benefits. She said there are generally not gender-distinct rates or underwriting classes, and the base coverage is guaranteed issue. She said employees that decline coverage during open enrollment can enroll at a later date but will have to submit evidence of insurability. She said members that are not full-time employees or are not actively at work are usually subject to full underwriting. She said the average issue age for true group LTCI is lower than that for individual LTCI. She said the combination of lesser benefits and lower issue ages results in lower average premiums for true group compared to individual LTCI.

Ms. Graeber said rate increases for group LTCI may be lower than those in the individual market due to absence of inflation protection and lifetime benefits in group coverage. She said the lower average issue age for group affords more time for a rate increase to offset ultimate claims experience, resulting in lower rate increases for group.

Ms. Graeber said multi-life LTCI uses individual policies that are issued to members, and there is no contract between the insurer and the plan sponsor. She said the plan sponsor can be an employer or an association, such as the AARP. She said multi-life plan coverage and assumptions are more similar to individual market offerings than true group. She said if the plan sponsor is an employer where the member’s actively-at-work status can be verified, underwriting may be less stringent than that seen in the individual market. She said underwriting for an association plan is similar to individual underwriting. She said multi-life plan premiums reflect a discount from similar individual premiums, due to group administrative efficiencies.

Mr. Lombardo asked if, in a true group setting, an employee applies for enhanced benefits, is the application fully underwritten. Ms. Graeber said the increase is typically fully underwritten. Mr. Lombardo asked what percentage of employees purchase enhanced benefits, and for employees that do purchase enhanced benefits, is the total set of benefits comparable to individual market benefits. Ms. Graeber said she can ask ACLI members for percentages of employees selecting enhanced benefits. She said the richness of total benefit packages available to employees varies by employer.

Mr. Lombardo asked if there is any concern that group policies that use simplified underwriting may present an actual risk profile that differs from that assumed in initial pricing. Ms. Graeber said in the case of true group that uses an actively-at-work
underwriting provision, the limited nature of the underwriting is accounted for in initial pricing. She said that multi-life plans, where there is no actively-at-work provision, use underwriting that is similar in intensity to that for individual market plans. Dave Plumb (John Hancock) said insurers typically assume higher claims costs for true group plans, given the limited underwriting in place. He said the risk profile for a true group member at a later attained age is similar to that of a fully-underwritten individual policyholder of the same attained age.

Mr. Lombardo asked if the experience associated with true group or multi-life group members that leave the employer or association, but elect coverage under a continuation or portability policy, stays with the original true group or multi-life block, or if this experience is transferred to the insurer’s individual pool. Ms. Graeber said for true group where the employer pays at least part of the premium, terminating employees that continue with the same coverage by paying the entirety of the premium are treated as any other member of the group for experience purposes. Mr. Plumb said he agrees with this. Ms. Graeber said for associations, the policy is already an individual policy, so the policy is completely portable. She said if the association dissolves, association members may be given the option to convert to a new individual policy, and the new policy experience may be placed in a new pool. Mr. Lombardo asked if insurers anticipate that employees who terminate from their employer, but elect to continue coverage, present a different risk profile than an insured who is still working for the employer. Ms. Graeber said she does not think insurers distinguish between the two classes of certificate holders in their pricing but rather consider the group’s experience as a whole when setting rates.

Mr. Lombardo said during the Subgroup’s July 11 conference call, Bonnie Burns (California Health Advocates—CHA) said she was told by a group LTCI company that it has a high percentage of claims that last less than one year. She said the explanation given was the low average age of the company’s block of insureds. Mr. Lombardo asked what reasons there could be that explain this difference. Ms. Graeber said that if there is such a difference, it is likely due to the event that triggered the claim, such as a car accident where long-term care (LTC) is needed during recovery from the accident, rather than conditions more prevalent in older age groups that result in longer-duration claims. Mr. Plumb said he thinks that recovery rates for younger attained ages will be higher than older attained ages for both individual and group coverage. Mr. Lombardo asked if group insurers have enough claims experience for older attained ages to accurately predict claims at older ages, or if they assume that incidence, morbidity and claim continuance for group insureds are the same as for individual insureds at older ages. Mr. Plumb said some group policies allow for family members of the employee to also be insured, which can create differences in group experience.

Mr. Lombardo asked allowing family members of the employee to also be insured may increase the average age of group contracts. He asked about the prevalence of insurers offering coverage to family members of employees and if there are estimates of how frequently family members of employees enroll for LTCI when this is an option. Mr. Plumb said his experience has been that the volume of family members insured is low and has little impact on the average age of an insurer’s block. Ms. Graeber said ACLI members have reported that in only 5% to 6% of cases do employers offer coverage to family members, and of these 5% to 6%, roughly only 1% of employees add coverage for a family member.

Mr. Lombardo asked Mr. Plumb if he thinks group pricing should be similar to individual pricing. Mr. Plumb said this is true for older ages but not necessarily for younger ages. Mr. Plumb said for a given younger age, group lapse rates are higher than individual, and group morbidity is lower. He said that these assumptions generally converge at older ages.

Having no further business, the Long-Term Care Pricing (B) Subgroup adjourned.
Below is a request for information related to companies’ long-term care insurance (LTC) asset adequacy testing that is being sent to each company filing an Actuarial Guideline 51 (AG 51) Memorandum. The request is related to a Valuation Analysis Review Group of the National Association of Insurance Commissioners project to review AG 51 reserve analysis. For each of the items below, please provide an answer or point to the section and page in the AG 51 filing where the item is addressed. The same confidentiality standards will apply to this information as applied to the AG 51 memorandum. The response should be sent as separate section of the AG 51 filing on the AG 51 filing due date.

I. Inforce

a. Provide charts containing the distribution of business (number of lives) by issue age band, issue year, coverage type, inflation protection, benefit period, and premium payment period. For premium payment period, distinguish between inforce policyholders with lifetime premium periods, inforce policyholders with limited-pay premium periods but still paying premiums, and inforce policyholders no longer paying premiums. In these charts, please exclude policyholders on claim.

II. Morbidity

In this context, morbidity refers to claim incidence rates, length of claim, and claim utilization.

a. Provide the year of the most recent morbidity study applied to support the company’s morbidity assumptions and provide the data period covered in the study. Explain which aspects of morbidity assumptions are reviewed on an annual basis and which are reviewed on a less frequent basis.

b. Discuss the general trend in morbidity experience and expectations over the past year and past several years at the company. If the trend has been in the direction of higher morbidity overall or in certain attained-age ranges, explain the extent to which this finding is reflected in updated assumptions. Also, if the company uses a claims-cost model (as opposed to a first-principles model), explain how company and/or industry trends in incidence and length-of-claim are tracked and reflected in updated assumptions.

c. Discuss the relevance of outside morbidity data applied to support the company’s morbidity assumptions, along with how that data was adjusted to fit the company’s circumstance and how the fit was determined to be appropriate. Explain how validation to historical company experience was performed.

d. Discuss whether and how the morbidity assumptions were compared with industry-average morbidity rates. Is there a reason for company assumptions to be higher or lower than industry average experience, such as benefits provided, policy provisions, underwriting standards, or claims practices? Note that the most recent Society of Actuaries’ (SOA) morbidity study is based on 2000-2011 data and may understate future morbidity in many instances. If the SOA table is relied upon, provide information on how morbidity assumptions used by the company are based on updated experience.
e. Discuss how morbidity assumptions for attained ages 85 and over were set in light of potential gaps in availability, credibility, and relevance of supporting data.

f. Discuss whether the company expects changes in morbidity assumptions in upcoming years as older-age experience develops. Describe how the company added margin to the morbidity assumption to address a potential increase in morbidity expectations. Also, please express a confidence interval of claim-cost-related assumptions for attained ages 90 and 95, including how the interval was determined. Does any sensitivity testing of the impact of adverse developments in morbidity appropriately address the level of potential older-age morbidity assumption increase?

g. Discuss assumed morbidity improvement (if applicable) and the basis for that assumption. Is the assumption supported by company experience? Does justification go beyond studies performed on the population as opposed to studies performed on insureds? Also, explain if the morbidity improvement and mortality improvement assumptions were determined separately. If not, please state the rationale.

h. Where applicable, provide an overview of changes in morbidity assumptions from those used in the previous AG 51 filing, including the basis for any changes.

i. Discuss assumed benefit utilization, including the cost-of-care inflation assumption. Provide the current average daily maximum benefit for policies with 5% compound inflation protection, policies with other inflation protection, and policies with no inflation protection.

j. Discuss the assumed underwriting wear-off pattern, duration in years of the wear-off, and the impact on beyond-select period morbidity assumptions. For policy durations 5, 10, and 20, provide the range of incidence rates for the best and worst underwriting classes for unmarried policyholders.

k. Explain whether incidence rates are determined using a denominator that is based on total lives or active lives. If the projections use a different denominator than the studies used to determine the incidence rate assumptions, please explain how adjustments are made to reconcile the difference and provide an example of this reconciliation, if possible. (If the company uses a total claim cost model, please address this question assuming that “incidence rates” were replaced with “claim costs”).

l. To help in understanding the morbidity assumption, calculate the present value of future benefits as of policy duration 10 of the following set of policies, each with $150 initial daily benefits, 2 ADL or severe cognitive impairment trigger, and 85- to 105-day elimination period:
   i. Female, issue age 55, lifetime benefits, 5% compound inflation
   ii. Female, issue age 55, 3-year benefits, no inflation
   {these cells were retained to provide context for the more-detailed calculation in m.; other 2018 cells are excluded}

For each calculation, use the following pricing assumptions for the following factors:
   - Ultimate, annual voluntary lapse of 0.5%
- 2012 IAR mortality applied to active lives [Clarification sent 1/9/19]
- 4% discount rate
- Assume the most preferred underwriting classification that contains at least 30% of the lives
- Assume a single female with no partner discount.

Use the company’s assumptions on claims’ incidence, length of claim, benefit utilization, and any other morbidity-related aspect.

m. This request is intended to help in the understanding of differences in companies’ morbidity assumptions underlying the present value amounts calculated in association with item II.l immediately above.

For the present value calculation associated with two cells:
   i) female, issue age 55, lifetime benefits, 5% compound inflation and
   ii) female, issue age 55, 3-year benefits, no inflation,
please provide the following durational information used in the present value calculation for each cell:

For attained ages 65, 70, 75, 80, 85, 90, 95, and 100:
   - 1-year incidence rate assumption
   - Maximum Annual Benefit, equal to 365 times Maximum Daily Benefit, inflated at 5% per year for the 5% compound inflation cell
   - Utilized Annual Benefit
   - Length of stay assumption over an entire claim for a claim starting at the specified attained age
   - Total Claim Cost for a claim started at the specified attained age

A preferred format of this information is shown below (Submissions in Excel are preferred):

<table>
<thead>
<tr>
<th>Attained Age</th>

</table>

The assumptions above should only be provided for one year associated with the specified attained ages, not as the sum or average over a quinquennial range.

It is anticipated that the final column will be the product of the four preceding columns. If this is not the case, then please provide a narrative description of any adjustments.
It is preferred that any adjustments to incidence rates, including morbidity improvement, underwriting, spousal discount, etc., be embedded in the incidence rates in the table.

If the company uses a total claim cost model, please provide the total claim cost data column as well as any other data columns that are available.

Also, if there are any other factors not included in the table above that you believe could potentially lead the company’s present value amounts to be lower or higher than industry averages, then please include a narrative description. Identify if, for any of the cases in the two cells above, you believe the results are impacted by more conservative morbidity assumptions having been selected due to lower-than-average company credibility for that specific issue age and/or benefit type. Please identify whether the company morbidity assumptions used for this exercise were best estimate assumptions or included margins. Also identify if the morbidity assumptions used by the company and reflected in the calculations are unisex or gender-specific. Please explain if the attained age values shown in the table are for total lives or active lives.

In addition, please identify the type of product used as the basis for the calculation, in particular whether it was an expense reimbursement product, an indemnity (also known as cash) product, or another type. If there are other significant product aspects that are unique, please include a description. Identify whether the product is individual or group.

III. Reinsurance treaty information

a. Provide information on any new LTC-related reinsurance transactions or significant changes to existing LTC-related treaties that occurred in 2019.

IV. Sensitivity Tests

If the company performed cash-flow testing, provide the present value of ending surplus in a level interest-rate scenario using baseline assumptions. If the company performed a gross premium valuation, provide the resulting value using baseline assumptions. Also, provide the same values using all baseline assumptions except:

a. No morbidity improvement and no mortality improvement.

b. No morbidity improvement but with mortality improvement.

c. No future, non-approved premium rate increases.

d. Net yield pickup on existing and reinvestment assets capped at 150 basis points above Treasury yields at the time the asset was purchased or will be purchased. This cap applies as an average over the entire portfolio supporting the LTC block.
e. 80% benefit utilization of the projected total daily benefit amounts for products with higher-than 3% annual inflation protection.

AG 51 provides uniform guidance for the asset adequacy testing applied to a company’s LTC block of contracts, and is effective for reserves reported with respect to the Dec. 31, 2017, and subsequent annual statutory financial statements. A statement of actuarial opinion on the adequacy of the reserves and assets supporting reserves after the operative date of the Valuation Manual is required under Section 3B of the NAIC Standard Valuation Law (#820) and VM-30 of the Valuation Manual. Section 14A of Model #820 provides that actuarial opinions and related documents, including an asset adequacy analysis, are confidential information, while Section 14B provides that such confidential information may be shared with other state regulatory agencies and the NAIC. The asset adequacy analyses required under AG 51 reviewed in the preparation of this report were shared with the Valuation Analysis (E) Working Group and the NAIC in accordance with these requirements, and continue to remain confidential in nature.
Purpose & Background

- HHS-RADV:
  - Serves as an audit of the information used in establishing an enrollee’s risk score for purposes of calculating the issuer’s plan liability risk score (PLRS) under the risk adjustment (RA) program
  - Uses a multi-step process called error estimation to calculate error rates that are used to adjust outlier issuers’ risk scores and RA transfers for the applicable state market risk pool(s)

<td>RADV White Paper with comment period</td>
</tr>
</tbody>
</table>

Purpose & Background

- White Paper Purpose: is to outline and seek feedback on certain HHS-RADV issues:
  - Enrollee Sampling
  - Outlier Detection
  - Error Rate Calculation
  - Application of HHS-RADV Error Rates
- Comments on the options outlined in this paper will help inform potential future rulemaking
**Enrollee Sampling**

Goals for HHS-RADV sample size refinement:
- Ensure samples accurately represent issuer enrollee populations
- Increase the number of samples that meet the 10 percent precision target for a two-sided 95 percent confidence interval
- Minimize the administrative and financial burden on issuers

---

**Outlier Detection**

- **Issue 1:** The current methodology determines an issuer’s outlier status based on national, static, confidence intervals common to all issuers
  - Examines alternative methodologies to more precisely identify which issuers have failure rates that are very different from the national average
- **Issue 2:** The current methodology allows for HCC hierarchies in RA to be split across HCC failure rate groupings in HHS-RADV
  - Examines alternative methodologies to address the influence of HCC hierarchies

---

**Error Rate Calculation**

- The RADV White Paper:
  - Examines alternative adjustment thresholds for calculating error rates for issuers that are just outside of the acceptable range of variation (the “payment cliff” or “leap frog effect”)
  - Examines a potential approach to mitigate the impact of HHS-RADV adjustments due to negative error rate issuers with negative failure rates

---

**Application of HHS-RADV results**

- HHS currently uses an issuer’s HHS-RADV error rate from the prior year to adjust the issuer’s risk score in the current transfer year (with the exception of exiting issuers)
  - Considers options to transition to an approach that applies HHS-RADV results to the same RA benefit year PLRS and transfers for all issuers (e.g., 2021 HHS-RADV results applied to 2021 RA PLRS and transfers)
RADV Updates

• Next Steps
    • Comments should be submitted to CCHIACARADataValidation@cms.hhs.gov with the subject line of “December 2019 HHS-RADV White Paper.”
  – White HHS-RADV Paper Education Webinar is scheduled for December 18 at 2pm (ET) – Register at: Registrar@REGTA info.
  – Potential Future Rulemaking (TBD)

• Other Upcoming Activities
  – Proposed 2021 Payment Notice
  – Complete 2018 BY RADV
Health Practice Council Presentation to NAIC Health Actuarial Task Force (HATF)
December 6, 2019
Talking Points: Recent Work

Since the last HATF meeting, the Academy’s Health Practice Council (HPC) has continued to actively engage policymakers and regulators. The HPC has held a number of meetings with various federal agencies and Congressional committees on the topics of long-term care (LTC), social determinants of health, wellness programs, short-term limited duration insurance plans, and health savings accounts. Various committees within the HPC continue to work on publications within these areas. Furthermore, members of the LTC Reform Subcommittee continued discussions with a federal LTC Interagency Task Force organized by the Department of the Treasury’s (Treasury) Federal Insurance Office (FIO) regarding their experience and expertise in the LTC insurance (LTCI) space, including pricing, product development, and regulation. The Task Force participated in the Academy’s Annual Public Policy Forum on November 5-6 to update actuaries on a forthcoming report while staff from the Center for Consumer Information and Insurance Oversight (CCIIO) also participated in a separate session of the meeting to update attendees on recent and forthcoming regulatory changes. A third breakout session focused on examining the proposals to expand public health insurance plans while Commissioner Altman from Pennsylvania also participated as our plenary featured speaker.

Other recent work includes:

Affordable Care Act (ACA)
- The Individual and Small Group Markets Committee sent comments on October 3 to Centers for Medicare & Medicaid Services (CMS) on rules finalized in the 2020 Notice of Benefit and Payment Parameters (NBPP) concerning risk adjustment data validation (RADV)-related transfers.

Long-Term Care
- On August 30, members of the LTC Reform Subcommittee submitted comments following their discussion with the Federal Interagency Task Force on LTCI earlier this year. These comments reiterate and expand on their original discussion including addressing regulatory hurdles to innovation.
- This week, the LTC Practice Note was published in final form to provide information to actuaries on current and emerging practices in which their peers are engaged with respect to the considerations in the statutory, Generally Accepted Accounting Principles (GAAP) and tax valuation of long-term care combination products.

Health Care Delivery
- On September 25, Susan Pantely and Mick Diede of the Telehealth Work Group, presented on the topic of telehealth along with the debut of their new issue brief moderated by Cori Uccello, senior health fellow, to Capitol Hill staff. The brief explores the perspectives of the patients and providers, while analyzing the financial, legal and regulatory aspects associated with telehealth.
- The Health Practice Council released an issue brief on September 10, Surprise Medical
Bills: An Overview of the Problem and Approaches to Address It, providing an overview of the surprise-billing problem and insights on how to address it.

**NAIC**

- Two work groups presented detailed briefings to regulators following the NAIC’s national meeting in early August. The Long-Term Care Valuation Work Group presented updates on the mortality and lapse tables development on August 28, and the Group Life Waiver Valuation Table Work Group updated the Health Actuarial Task Force on group life waiver of premium mortality and recovery tables development on August 27.
- On September 4, the Health Solvency Subcommittee submitted comments to the NAIC Health Risk-Based Capital (HRBC) Working Group in response to comment letters received on the exposure of the Draft Bond Structure and Instructions.

**Reminders:**

- All of the materials mentioned are on the Academy's website, actuary.org in the Health section under the Public Policy tab, or contact David Linn, the Academy's Senior Health Analyst.
- *(If Joeff Williams has not already plugged)* Academy reception tonight at 5:30pm in Room 409 of the JW Marriott Austin.

The Regulatory Framework (B) Task Force met in Austin, TX, Dec. 7, 2019. The following Task Force members participated:

- Michael Conway, Chair (CO)
- Scott A. White, Vice Chair (VA)
- Lori K. Wing-Heier represented by Jacob Lauten (AK)
- Jim L. Ridling represented by Steve Ostlund (AL)
- Allen W. Kerr represented by Ryan James (AR)
- Stephen C. Taylor represented by Howard Liebers (DC)
- David Altmaier represented by James Dunn III (FL)
- Doug Ommen represented by Andria Seip (IA)
- Dean L. Cameron represented by Weston Trexler (ID)
- Vicki Schmidt (KS)
- Nancy G. Atkins represented by John Melvin (KY)
- Gary Anderson represented by Kevin Beagan (MA)
- Eric A. Cioppa represented by Robert Wake and Marti Hooper (ME)
- Steve Kelley (MN)
- Chlora Lindley-Myers represented by Angela Nelson (MO)
- Mike Chaney represented by Bob Williams (MS)
- Mike Causey represented by Ted Hamby (NC)
- Jon Godfread (ND)
- Bruce R. Ramge represented by Martin Swanson and Laura Arp (NE)
- John Elias represented by Maureen Belanger (NH)
- John G. Franchini represented by Paige Duhamel (NM)
- Glen Mulready represented by Ron Kreiter (OK)
- Andrew Stolfi represented by TK Keen and Rick Blackwell (OR)
- Jessica Altman represented by Michael Humphreys and Katie Dzurec (PA)
- Raymond G. Farmer represented by Kendall Buchanan (SC)
- Larry Deiter represented by Jill Kruger (SD)
- Kent Sullivan represented by Doug Danzeiser (TX)
- Todd E. Kiser represented by Tanji Northrup (UT)
- Mike Kreidler represented by Molly Nollette (WA)
- Andrew Stolfi represented by Nathan Houdek and Jennifer Stegall (WI)
- and James A. Dodrill represented by Erin K. Hunter (WV).

1. **Adopted its Oct. 2 and Summer National Meeting Minutes**

The Task Force met Oct. 2 and Aug. 3. During its Oct. 2 meeting, the Task Force adopted its 2020 proposed charges.

Mr. Trexler made a motion, seconded by Mr. Swanson, to adopt the Task Force’s Oct. 2 (Attachment One) and Aug. 3 (see NAIC Proceedings – Summer 2019, Regulatory Framework (B) Task Force) minutes. The motion passed unanimously.

2. **Adopted its Subgroup and Working Group Reports**

Mr. Keen made a motion, seconded by Commissioner Godfread, to adopt the following reports: the Accident and Sickness Insurance Minimum Standards (B) Subgroup, including its Nov. 25 (Attachment Two), Nov. 19 (Attachment Three), Nov. 4 (Attachment Four), Oct. 28 (Attachment Five), Oct. 7 (Attachment Six) and Sept. 16 (Attachment Seven) minutes; the ERISA (B) Working Group (Attachment Eight); the HMO Issues (B) Subgroup, including its Nov. 21 (Attachment Nine) and Sept. 16 (Attachment Ten) minutes; and the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup, including its Oct. 3 (Attachment Eleven), Aug. 29 (Attachment Twelve), Aug. 22 (Attachment Thirteen) and Aug. 15 (Attachment Fourteen) minutes. The motion passed unanimously.

3. **Heard an Update on the CHIR’s Work Related to the ACA**

Justin Giovannelli (Center on Health Insurance Reforms—CHIR, Georgetown University Health Policy Institute) provided an update on the CHIR’s work related to the federal Affordable Care Act (ACA) and other issues of interest to state insurance regulators. He highlighted a forthcoming CHIR report, supported by the Commonwealth Fund, concerning state oversight of health care sharing ministries. He explained how health care sharing ministries are treated under the ACA. Mr. Danzeiser said the National Council of Insurance Legislators (NCOIL) has a draft model on health care sharing ministries, the Health Care Sharing Ministry Registration Model Act.

Mr. Giovannelli discussed the CHIR’s work regarding multiple employer welfare arrangements (MEWAs). He said the CHIR recently published thousands of pages of the U.S. Department of Labor’s (DOL) investigative records concerning MEWAs that it obtained in response to a 2018 Freedom of Information Act (FOIA) request. He said the CHIR has posted the materials and a summary of those materials on the CHIR website at [http://chirblog.org/the-mewa-files/](http://chirblog.org/the-mewa-files/). The CHIR anticipates providing additional analysis of these materials soon. He said the CHIR will continue to track and analyze state regulatory approaches to MEWAs and short-term, limited-duration plans (STLDPs) in the wake of recent federal rule changes with respect to these products.

Mr. Giovannelli also discussed the CHIR’s work related to state reforms affecting the individual market, including state actions involving the ACA’s section 1332 waiver program and state actions to improve the affordability of comprehensive coverage. He highlighted future CHIR research projects, including projects related to reinsurance, standardized health plans and state strategies concerning the Small Business Health Options Program (SHOP). He discussed the CHIR’s ongoing state technical
assistance regarding insurance regulatory matters with the support of the Robert Wood Johnson Foundation through its State Health and Value Strategies Program. He also highlighted the CHIR’s assistance, provided with the support by the Laura and John Arnold Foundation, to state and federal policymakers regarding regulatory approaches to balance billing.

Commissioner Conway asked about the CHIR’s timing for its reinsurance report. Mr. Giovannelli said the CHIR anticipates publishing a report in early Spring 2020. Commissioner Godfread asked Mr. Giovannelli if the CHIR has a position on provisions in the federal bills on balance billing that propose to use arbitration as the method for determining the out-of-network provider payment. Mr. Giovannelli said the CHIR has not taken any position on that issue, but its governing principle with respect to such legislation is that the consumer be held harmless.

4. **Heard a Presentation on the Implementation of a Consumer Purchasing Model in Summit County, CO**

Tamara Pogue-Drangstveit (Peak Health Alliance—Peak) provided an overview of the Peak community-based model for providing health insurance. She said this model provides existing community-based efforts with access to expertise and resources while maintaining local control. She said Peak is a non-profit purchasing cooperative governed by the local community. Peak also is a non-risk-bearing entity.

Ms. Pogue-Drangstveit described the traditional model used to provide health insurance benefits and Peak’s model. She highlighted the differences between the traditional model and Peak’s model. She described the process used to develop the Peak model, including the challenges encountered in developing such a model. She detailed how Peak set prices for certain services and procedures. She described Peak’s plan benefit designs, highlighting its plan benefit designs for mental health benefits.

Ms. Duhamel asked if Peak’s health benefit plans are sold on the ACA’s health insurance exchanges. Ms. Pogue-Drangstveit said Peak’s health benefit plans are sold both on and off the ACA’s health insurance exchanges. She also discussed the unintended consequences on the subsidized population because of Colorado’s reinsurance program and Peak’s successes. Mr. Humphreys asked how Peak’s model can be expanded to other states. Ms. Pogue-Drangstveit said Peak will only go into an area if it has a “sponsor” in order to have buy-in and creditability with the community and other stakeholders. Ms. Dzurec asked about Peak’s experience with rural hospitals and provider facilities and their lack of an ability to reduce prices due to their tight profit margins. Ms. Pogue-Drangstveit said Peak chose not to tackle prescription drug pricing during its first year. She said Peak plans to look at the data and prices for prescription drugs provided in facilities. She said Peak also plans to ask insurers how they can reduce prescription drug prices.

5. **Heard a Presentation on Health Care Cost Trends and Affordability**

Leanne Gassaway (America’s Health Insurance Plans—AHIP) discussed current health care cost trends and approaches to improving consumer affordability. She discussed three levers to lower premiums: 1) reducing the cost of health care; 2) offering premium savings; and 3) increasing participation to balance risk. She discussed AHIP’s suggested solutions to lower premiums for each lever.

To reduce health care costs, Ms. Gassaway suggested that curbing prescription drug costs is critical. She discussed the four themes that AHIP believes contribute to high prescription drug costs, including: 1) a broken and distorted pharmaceutical market; 2) excessive price increases on new and older drug therapies; and 3) high launch prices. She suggested that state solutions address this issue, including providing drug price transparency to consumers and providers.

Ms. Gassaway said another key to reducing health care costs is to reduce surprise medical bills. She said surprise medical bills raise costs. She also said private equity staffing firms are part of the reason for the increase in costs due to their exploitation of patients seeking care. She described how this is occurring. She also discussed state solutions to protect patients from surprise medical bills. She described how third-party payments are also driving up premiums. She highlighted California legislation addressing the issue.
Ms. Gassaway discussed how state reinsurance programs established under the ACA’s section 1332 waiver program can offer premium savings. She also discussed ways to increase participation to balance risk, including increasing consumer outreach and education about plan coverage options.

Commissioner Conway questioned whether market forces alone can address prescription drug costs. Ms. Gassaway said the states need to begin with providing prescription drug price transparently in order to obtain the necessary information to make more informed policy decisions. Commissioner Schmidt expressed concern that some of the information included in Ms. Gassaway’s presentation regarding prescription drug prices is out-of-date, and as such, it might not reflect the current situation. She also questioned why Ms. Gassaway did not mention pharmacy benefit managers (PBMs). Ms. Gassaway said AHIP views PBMs as partners in controlling prescription drug costs. She said pharmaceutical manufacturers set the prices, and AHIP does not view PBMs as driving up prescription drug costs.

Having no further business, the Regulatory Framework (B) Task Force adjourned.
The Regulatory Framework (B) Task Force met via conference call Oct. 2, 2019. The following Task Force members participated: Michael Conway, Chair (CO); Scott A. White, Vice Chair (VA); Lori K. Wing-Heier represented by Sarah Bailey and Jacob Lauten (AK); Jim L. Ridling represented by William Rodgers (AL); Allen W. Kerr represented by William Lacy and Mel Anderson (AR); Ricardo Lara represented by Sheirin Ghodoucy (CA); David Altmaier represented by Chris Struk (FL); Doug Ommen represented by Cynthia Banks Radke (IA); Dean L. Cameron represented by Fernanda Vallejo (ID); Vicki Schmidt represented by Julie Holmes (KS); Gary Anderson represented by Kevin Beagan (MA); Eric A. Cioppa represented by Robert Wake (ME); Steve Kelley represented by Candace Gergen (MN); Chlora Lindley-Myers represented by Carrie Couch and Jessica Schrimpf (MO); Mike Chaney represented by Bob Williams (MS); Mike Causey represented in the Ted Hamby (NC); Jon Godfread represented by Ross Hartley (ND); Bruce R. Ramge represented by Martin Swanson (NE); Glen Mulready represented by Ron Kreiter (OK); Andrew Stolfi represented by Gayle Woods (OR); Jessica Altman (PA); Raymond G. Farmer represented by Kendall Buchanan (SC); Larry Deiter represented by Jill Kruger (SD); Kent Sullivan represented by Doug Danzeiser (TX); Todd E. Kiser represented by Jaakob Sundberg and Heidi Clausen (UT); Mike Kreidler represented by Molly Nollette (WA); Mark Afable represented by Nathan Houdek and Jennifer Stegall (WI); James A. Dodrill represented by Ellen Potter and Joylynn Fix (WV); and Jeff Rude (WY).

1. **Adopted its 2020 Proposed Charges**

Commissioner Conway said that prior to the conference call, NAIC staff distributed the Task Force’s 2020 proposed charges. He explained that the proposed charges generally are unchanged from the Task Force’s 2019 charges. He said the main substantive change is in the Accident and Sickness Insurance Minimum Standards (B) Subgroup’s charge deleting the reference to the *Accident and Sickness Insurance Minimum Standards Model Act* (#170) because the Subgroup completed its work on Model #170 earlier this year (which included changing the title to *Supplementary and Short-Term Health Insurance Minimum Standards Model Act*).

Mr. Lauten suggested a technical change to the Task Force’s charge 1E. He suggested revising the charge’s language for consistency with the language in the Task Force’s charge 1F. There was no objection.

Ms. Nollette made a motion, seconded by Mr. Danzeiser, to adopt the Task Force’s 2020 proposed charges (Attachment One-A). The motion passed unanimously.

Having no further business, the Regulatory Framework (B) Task Force adjourned.
2020 PROPOSED CHARGES

REGULATORY FRAMEWORK (B) TASK FORCE

The mission of the Regulatory Framework (B) Task Force is to: 1) develop NAIC model acts and regulations for state health care initiatives; and 2) consider policy issues affecting state health insurance regulation.

Ongoing Support of NAIC Programs, Products and Services

1. The Regulatory Framework (B) Task Force will:
   A. Coordinate and develop the provision of technical assistance to the states regarding state-level implementation issues raised by federal health legislation and regulations.
   B. Review managed health care reforms, their delivery systems occurring in the marketplace and other forms of health care delivery. Recommend appropriate revisions to regulatory jurisdiction, authority and structures.
   C. Consider the development of new NAIC model laws and regulations and the revision of existing NAIC model laws and regulations, including those affected by federal legislation and final federal regulations promulgated pursuant to such legislation.
   D. Continue to review NAIC models recommended for revision by the former Affordable Care Act (ACA) Model Review (B) Working Group and, as appropriate, appoint a working group or subgroup to revise the NAIC model(s) prioritized for revision in 2019-2020.
   E. At the direction of the Health Insurance and Managed Care (B) Committee, through the work of the ERISA (B) Working Group, monitor, analyze and report developments related to association health plans (AHPs).
   F. Monitor, analyze and report, as necessary, developments related to short-term, limited-duration (STLD) coverage.

2. The Accident and Sickness Insurance Minimum Standards (B) Subgroup will:
   A. Review and consider revisions to the Accident and Sickness Insurance Minimum Standards Model Act (#170) and its companion regulation, the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171).

3. The ERISA (B) Working Group will:
   A. Monitor, report and analyze developments related to the federal Employee Retirement Income Security Act (ERISA), and make recommendations regarding NAIC strategy and policy with respect to those developments.
   B. Monitor, facilitate and coordinate with the states and the U.S. Department of Labor (DOL) related to sham health plans.
   C. Monitor, facilitate and coordinate with the states and the DOL regarding compliance and enforcement efforts regarding the ACA that relate to ERISA.

4. The HMO Issues (B) Subgroup will:
   A. Revise provisions in the Health Maintenance Organization Model Act (#430) to address conflicts and redundancies with provisions in the Life and Health Insurance Guaranty Association Model Act (#520).

5. The Pharmacy Benefit Manager Regulatory Issues (B) Subgroup will:
   A. Consider developing a new NAIC model to establish a licensing or registration process for pharmacy benefit managers (PBMs). The Subgroup may consider including in the new NAIC model provisions on PBM prescription drug pricing and cost transparency.

NAIC Support Staff: Jolie H. Matthews/Jennifer R. Cook

© 2019 National Association of Insurance Commissioners
The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met via conference call Nov. 25, 2019. The following Subgroup members participated: Melinda Domzalski-Hansen, Co-Chair (MN); Glen Mulready, Co-Chair, represented by Buddy Combs (OK); Eric Unger (CO); Chris Struk (FL); Frank Opelka (LA); Camille Anderson-Weddle (MO); Martin Swanson (NE); Gayle Woods (OR); Katie Dzurec (PA); Glynda Daniels (SC); Rachel Bowden and Sean Fry (TX); Heidi Clausen and Jaakob Sundberg (UT); Emily Brown (VT); Andrea Philhower and Michael Bryant (WA); and Jennifer Stegall (WI).

1. Continued Discussion of the July 30 Comments on Sections 1–5 of Model #171

Ms. Domzalski-Hansen said the purpose of today’s conference call is for the Subgroup to continue its discussion section-by-section of the comments received by the July 30 public comment deadline on Sections 1–5 of the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171), beginning with Section 5L, the definition of “preexisting condition.” However, before starting that discussion, she said the Subgroup needs to complete its discussion of Section 5K, the definition of “physician.”

Ms. Domzalski-Hansen reminded the Subgroup of its discussion of Section 5K during its Nov. 19 conference. She said during this discussion, Ms. Philhower had agreed to rewrite the provision for clarity. Ms. Philhower said that following the Subgroup’s Nov. 19 call, she reviewed the provision and decided that Section 5K does not belong in Section 5—Policy Definitions; it should be moved to Section 7—Accident and Sickness Minimum Standards for Benefits because it is more of a substantive provision than a definition. After discussion, the Subgroup agreed to move Section 5K’s provisions to Section 7.

The Subgroup next discussed Section 5L, the definition of “preexisting condition.” Ms. Domzalski-Hansen said the Subgroup received comments on Section 5L from America’s Health Insurance Plans (AHIP), the Missouri Department of Insurance (DOI), the Washington DOI, and the NAIC consumer representatives. Chris Petersen (Arbor Strategies, LLC), speaking on behalf of AHIP, said AHIP’s comments suggest that the Subgroup consider different definitions of “preexisting condition” for supplementary products and short-term, limited-duration plans (STLDPs) because of the differences in the type of coverage. He said that for supplementary products, AHIP believes the definition of “preexisting condition” in Section 5L should remain unchanged. He said the NAIC consumer representatives’ suggested revisions for the term are not appropriate for supplementary products because they are excepted benefits, and they are not required to comply with the requirements under the federal Affordable Care Act (ACA) for comprehensive health insurance products. He said he also believes that the provisions in the Supplementary and Short-Term Health Insurance Minimum Standards Model Act (#170), the companion model to Model #171, would prohibit such changes. He said that if the Subgroup believes changes for this definition need to be made for STLDPs, then the Subgroup should include those changes in the provisions in Model #171 applying only to STLDPs.

The Subgroup discussed whether to delete the specific timeframes in the definition and include specific timeframes in the specific sections for each product covered under Model #171. The Subgroup also discussed whether there should be a general definition of this term in Section 5 or if the definition should be removed and included in Section 7 for each product described in that section. After additional discussion, the Subgroup decided to move Section 5L to Section 7 without a timeframe and include a timeframe for each product described in Section 7.

The Subgroup discussed the Missouri DOI’s suggestion to remove language in the definition concerning the prudent layperson standard. Sarah Lueck (Center on Budget and Policy Priorities—CBPP) pointed out that the NAIC consumer representatives made a similar suggestion. She explained that the NAIC consumer representatives suggest such a revision because the prudent layperson standard is hard for consumers to understand when completing an application with respect to previous or current health conditions, and the suggested revised language is easier for consumers to understand.

J.P. Wieske (Horizon Government Affairs) expressed concern with the NAIC consumer representatives’ suggested revision, particularly with respect to disability income protection coverage. He said the potential revision would make it easier for consumers to game the system. He said consumers could delay seeing a physician, apply for coverage knowing that they have a medical condition; and because there are no waiting periods, they could receive coverage under the policy immediately. Ms. Lueck said the NAIC consumer representatives’ suggested revision adds transparency to the definition and as such, should be
beneficial to insurers. The Subgroup discussed the NAIC consumer representatives’ suggested revision. Ms. Stegall asked Ms. Lueck if she knew of any state’s definitions of “preexisting condition” that strike the appropriate balance with respect to consumer understanding while not contributing to the ability of consumers to game the system. Ms. Lueck said she did not. However, she agreed to research it. Katie Keith (Out2Enroll) agreed to send the Subgroup information on the subject compiled by the Kaiser Family Foundation (KFF). Mr. Petersen asked if the KFF’s information relates to major medical coverage. Ms. Keith said it did. Mr. Petersen suggested that the Subgroup needed to receive information related to supplementary coverages. After discussion, the Subgroup agreed that any information it receives on this issue would be valuable to the Subgroup as it continues its discussions of the term.

The Subgroup next discussed the Washington DOI’s suggestion to delete language in Section 5L’s drafting note seemingly related to post-claims underwriting when an insurer reviews an insured’s health history and as a result of that review decides to exclude a specific condition. Ms. Philhower said she is concerned about the discriminatory aspects of such language. Mr. Wieske said he believes that this language is a holdover from Model #171’s provisions when it included comprehensive health insurance coverage. The Subgroup discussed removing the language. Ms. Bowden suggested that regardless of whether it is removed, language should be added to Section 8—Required Disclosure Provisions alerting consumers about the importance of completing applications as accurately as possible, particularly as to the consumer’s health history. Ms. Lueck questioned whether state insurance regulators should permit post-claims underwriting. She questioned why insurers cannot perform pre-claims underwriting, which is more transparent to the consumer than post-claims underwriting. The Subgroup discussed Ms. Lueck’s comments and acknowledged her concerns. However, given the ability of consumers to game the system, post-claims underwriting occurs and is needed. The Subgroup noted, however, that state insurance regulators must monitor insurers to ensure that they do not abuse the post-claims underwriting process. After additional discussion, the Subgroup accepted the Washington DOI’s suggestion to delete the language in Section 5L’s drafting note and discuss the issue raised in the language when the Subgroup discusses Section 8.

Ms. Domzalski-Hansen said she expects the Subgroup to meet next via conference call after the Fall National Meeting.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.
The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met via conference call Nov. 19, 2019. The following Subgroup members participated: Melinda Domzalski-Hansen, Co-Chair (MN); Debra Judy (CO); Howard Liebers (DC); Chris Struk (FL); Robert Wake (ME); Camille Anderson-Weddle and Carrie Couch (MO); Martin Swanson (NE); Katie Dzurec (PA); Shari Miles (SC); Rachel Bowden (TX); Anna Van Fleet (VT); Andrea Philhower and Michael Bryant (WA); and Nathan Houdek and Jennifer Stegall (WI).

1. Continued Discussion of the July 30 Comments on Model #171, Sections 1–5

Ms. Domzalski-Hansen said the purpose of today’s conference call is for the Subgroup to continue its discussion section-by-section of the comments received by the July 30 public comment deadline on Sections 1–5 of the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171), beginning with Section 5I, the definition of “partial disability.” She said, however, before starting that discussion, the Subgroup needs to complete its discussion of Section 5I, the definition of “one period of confinement.”

Ms. Domzalski-Hansen reminded the Subgroup that during its Nov. 4 conference call, the Subgroup discussed Section 5I and whether its use of the word “means” was appropriate given the language used in other definitions in Section 5, such as “may be defined” or “shall be defined.” She said the Subgroup decided to change “means” to “shall be defined.” She said the Subgroup also discussed how the term is used in policy forms, and after discussion, the Subgroup decided to seek additional information from stakeholders to answer this question. Ms. Domzalski-Hansen said she sent an email to stakeholders asking for a response to these questions: 1) What type of policies currently use this language?; 2) How is this language currently used in the policies?; and 3) Do your policies use this language for one event for each period of time or for multiple events in one period of time? She said she received comments from AFLAC; the Health Benefits Institute and the Missouri Department of Insurance (DOI).

Ms. Domzalski-Hansen discussed AFLAC’s comments. She said that in its comments, AFLAC said it uses the term “period of hospital confinement” in its hospital indemnity policies. She said AFLAC noted that its short-term disability income policies include provisions discussing one event for each time period versus multiple events in a time period.

Ms. Domzalski-Hansen discussed the Missouri DOI’s comments from Mary Mealer (MO). She said Ms. Mealer said she searched for the term “confinement” in recent health filings in the System for Electronic Rate and Form Filing (SERFF). She said Ms. Mealer found that the term “confinement” is only used in comprehensive health filings and describing benefits. The term was not defined in these policies nor used as “one period of confinement.” She said Ms. Mealer found language concerning “successive period of coverage stays” in hospital indemnity policy filings.

J.P. Wieske (Horizon Government Affairs), representing the Health Benefits Institute, said the Health Benefits Institute believes that the definition of “one period of confinement” in Section 5I is used by insurers in at least two policy forms—supplemental accident benefits and fixed indemnity products. He said it is likely that this term is used in other policy forms, but for policies that would not be covered under Model #171. Mr. Wieske said it is important that the Subgroup understand that the policies using this language will be using the language in multiple ways, with some insurers paying on a per incident basis and others on a per service basis, and may apply separate cost-sharing per incident. He provided examples of how benefits could be paid using Section 5I’s definition of the term when multiple hospital visits are necessary arising from the same injury or sickness. He also described from a consumer’s viewpoint how a narrow and broad definition of the term could affect benefits.

Mr. Wieske said the Health Benefits Institute suggests modifying Section 5I as follows: “One period of confinement” means one or more consecutive days of in-hospital service received as an in-patient, or successive confinements when discharge from and readmission to the hospital occurs within a period of time defined in the policy but not more than [ninety (90) days or three times the maximum number of days of in-hospital coverage provided by the policy to a maximum of 180 days.]

Drafting Note: This language is used in multiple policy forms that may pay benefits differently [e.g. on per incident or per service basis]. States may want to establish minimum policy standards that differ based on how the benefit is to be paid by the insurer and the type of policy.
The Subgroup discussed the Health Benefits Institute’s suggested revisions to Section 5I. Mr. Bryant questioned the language in Section 5I concerning the maximum number of days and asked if there was a way to simplify the language. Ms. Domzalski-Hansen questioned the addition of the brackets noting that including brackets would add variability to the language instead of establishing minimum standards for insurers with respect to the policies covered under Model #171. After additional discussion, the Subgroup decided to delete Section 5I and move its provisions to Section 7—Supplementary and Short-Term Health Minimum Standards for Benefits.

The Subgroup next discussed Section 5J, the definition of “partial disability.” Sarah Lueck (Center on Budget and Policy Priorities—CBPP) discussed the NAIC consumer representatives’ comments, which suggest that the Subgroup consider revising Section 5J(2) to add the language “including compensation in the form of goods and services.” She said the NAIC consumer representatives are suggesting this language to address situations when an individual is partially disabled and is employed in work not compensated through wages or profits. She explained that the Subgroup discussed the NAIC consumer representatives’ comments during its Nov. 4 conference call, but during that discussion, she neglected to tie the suggested revisions for Section 5J(2) to the NAIC consumer representatives’ suggested revisions for Section 5O, the definition of “total disability.”

Mr. Wieske reiterated his concern on whether an insurer would be able to determine the compensation to be provided to the insured in such a situation because of the difficulty in determining the value of goods and services. Chris Petersen (Arbor Strategies LLC) expressed concern with the possibility of disputes arising related to the valuation of the goods and services. Some Subgroup members agreed with Mr. Wieske’s and Mr. Petersen’s concerns. After discussion, Ms. Lueck agreed to withdraw the NAIC consumer representatives’ suggested revisions for Section 5J.

The Subgroup next discussed Section 5K, the definition of “physician.” Ms. Domzalski-Hansen said the Washington DOI submitted comments asking for clarification of Section 5K’s existing language. Ms. Philhower said her comments concerned whether the language in Section 5K(1) is an “any-willing provider” provision or something else. The Subgroup discussed her concern and decided the language was not an “any-willing provider” provision, but language requiring an insurer, for a provider contracted with the insurer, to permit the provider to the extent of its contractual obligations to provide the services within the scope of the provider’s licensed authority and applicable laws. Ms. Philhower said she also has questions about the language in Section 5K(2). She said it is unclear what the language “definition or concept” means. She also asked about the language “an owner or assignee.” Mr. Wake cautioned the Subgroup that the term “assignee” could be the physician in some cases. Mr. Bryant suggested changing the language to “policyholder or beneficiary.” Ms. Van Fleet said she believes the problem is Section 5K(2)’s construction. After discussion, Ms. Philhower volunteered to revise Section 5K for clarity for the Subgroup’s review during a future conference call.

Ms. Domzalski-Hansen said she believes the Subgroup could complete its review of the comments received on Sections 1–5 with two more conference calls. She said she would like the Subgroup to meet prior to the Fall National Meeting. The Subgroup expressed support for Ms. Domzalski-Hansen’s plan.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.
Attachment Four
Regulatory Framework (B) Task Force
12/7/19

© 2019 National Association of Insurance Commissioners

Draft: 11/8/19

The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met via conference call Nov. 4, 2019. The following Subgroup members participated: Glen Mulready (OK); Melinda Domzalski-Hansen (MN); Adam Boggess (CO); Chris Struk (FL); Frank Opelka (LA); Mary Mealer (MO); Gayle Woods (OR); Rachel Bowden (TX); Tanji Northrup and Jaakob Sundberg (UT); Phil Keller and Anna Van Fleet (VT); Andrea Philhower and Michael Bryant (WA); and Jennifer Stegall (WI).

1. Continued Discussion of the July 30 Comments on Model #171, Sections 1–5

Ms. Domzalski-Hansen said the purpose of today’s conference call is for the Subgroup to continue its discussion section-by-section of the comments received by the July 30 public comment deadline on Sections 1–5 of the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171), beginning with Section 5I, the definition of “one period of confinement.” She reminded the Subgroup that during its Oct. 28 conference call, the Subgroup discussed this provision and whether its use of the word “means” was appropriate given the language used in other definitions in Section 5, such as “may be defined” or “shall be defined.” She said that as the Subgroup requested, NAIC staff reviewed Section 5’s legislative history with respect to the definitions and found that there was nothing in the legislative history discussing the drafters’ intent in using “means,” “may be defined,” or “shall be defined.”

Ms. Domzalski-Hansen said that given this, she surveyed the Subgroup members on the issue. She said the responses she received indicated that in order to determine the appropriate language, the Subgroup would need to determine the intent of the provision, such as whether it is permissive or mandatory. She said the Subgroup has two options to consider related to the issue: 1) defer discussion on the issue until the Subgroup reviews Model #171’s substantive provisions where the terms are used; or 2) not defer the discussion and resolve the issue while the Subgroup is discussing Section 5.

The Subgroup discussed Ms. Domzalski-Hansen’s options. Ms. Philhower suggested that the Subgroup not defer the discussion and beginning with Section 5I review each definition as to its intent to decide whether the language should be “means,” “may be defined,” or “shall be defined.” She said because there has been no discussion prior to Section 5I on this issue, the Subgroup should not go back and review the definitions in Section 5 that it has already discussed. The Subgroup accepted Ms. Philhower’s suggestion.

The Subgroup discussed whether Section 5I should say “means,” “may be defined,” or “shall be defined.” Mr. Keller asked for clarification on how the Subgroup plans to use the term “one period of confinement” in policy forms. The Subgroup discussed Mr. Keller’s question, but it reached no conclusion. The Subgroup next discussed changing “means” to “may be defined” and the substantive implications of such a change. After discussion, the Subgroup decided to change “means” to “shall be defined.” Ms. Domzalski-Hansen said she would send out a question to stakeholders on how the term “one period of confinement” is used in policy forms. She said the Subgroup would return to this discussion during its next conference call Nov. 19.

The Subgroup next discussed Section 5J, the definition of “partial disability.” Sarah Lueck (Center on Budget and Policy Priorities—CBPP) discussed the NAIC consumer representatives’ comments, which suggest that the Subgroup consider revising Section 5J(2) to add the language “including compensation in the form of goods and services.” She said the NAIC consumer representatives are suggesting this language to address situations when an individual is partially disabled and is employed in a work not compensated through wages or profits. J.P. Wieske (Horizon Government Affairs) questioned whether an insurer would be able to determine the compensation to be provided to the insured in such a situation because of the difficulty in determining the value of goods and services. The Subgroup discussed the NAIC consumer representatives’ suggested revision and decided to defer making a decision. The Subgroup requested that the NAIC consumer representatives submit additional comments on the issue for the Subgroup to consider during its next conference call Nov. 19. The Subgroup next discussed Section 5K, the definition of “physician.” Ms. Domzalski-Hansen said the Washington Department of Insurance (DOI) submitted comments asking for clarification of Section 5K’s existing language. The Subgroup deferred discussion of the Washington DOI’s comments until its next conference call Nov. 19.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.
The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met via conference call Oct. 28, 2019. The following Subgroup members participated: Glen Mulready, Co-Chair, represented by Buddy Combs (OK); Melinda Domzalski-Hansen, Co-Chair (MN); Chris Struk (FL); Frank Opelka (LA); Mary Mealer (MO); Martin Swanson (NE); Katie Dzurec (PA); Kendall Buchanan (SC); Jaakob Sundberg and Heidi Clausen (UT); Phil Keller and Anna Van Fleet (VT); Michael Bryant (WA); and Nathan Houdek (WI).

1. Continued Discussion of the July 30 Comments on Model #171, Sections 1–5

Ms. Domzalski-Hansen said the purpose of today’s conference call is for the Subgroup to continue its discussion section-by-section of the comments received by the July 30 public comment deadline on Sections 1–5 of the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171) beginning with Section 5D, the definition of “hospital.” She reminded the Subgroup that during its Oct. 7 conference call, the Subgroup began discussion of the comments received on Section 5D, but it did not complete its discussion.

Sarah Lueck (Center on Budget and Policy Priorities—CBPP) discussed the NAIC consumer representatives’ comments, which suggest the Subgroup consider revising Section 5D(2)(b) and deleting Section 5D(2)(c) to remove obsolete language and for consistency with other Subgroup proposed revisions. Chris Petersen (Arbor Strategies LLC) expressed concern with deleting Section 5D(2)(c) because its deletion could be inconsistent with various state laws defining “hospital.” J.P. Wieske (Horizon Government Affairs) said Section 5D(2), if permitted under state law, allows plans to exclude the facilities listed as a type of hospital facility from a plan’s policy provisions. Some Subgroup members expressed concern with deleting the provision. After discussion, the Subgroup decided to leave Section 5D unchanged except for adding the Missouri Department of Insurance’s (DOI) clarifying revisions.

The Subgroup next discussed the comments received on Section 5E, which defines the term “injury.” Ms. Mealer said the Missouri DOI suggests deleting Section 5E(4) because “disability” has nothing to do with a definition of “injury.” She said the Missouri DOI also suggests deleting Section 5E(5) because there is most likely a better way to ensure the policy does not pay for workers’ compensation claims or claims under medical benefits coverage in automobile “no fault” and traditional automobile “fault” type contracts. Ms. Lueck suggested the Subgroup delete the language “independent of disease or bodily injury” in Section 5E(1) because of the language’s potential to limit the types of claims that could be made. The Subgroup discussed whether to delete the language “or bodily injury” in Section 5E(1). The Subgroup discussed the interaction of Section 5E(1) and Section 5E(2). Jolie H. Matthews (NAIC) explained that this definition is new and was most likely derived from a similar definition in the Interstate Insurance Product Regulation Commission’s (Compact) disability income standards. Ms. Buchanan suggesting deleting Section 5E(2) because it appears to be duplicative of Section 5E(1). The Subgroup agreed to delete Section 5E(2). The Subgroup also decided to delete the language “or bodily injury” in Section 5E(1).

Mollie Zito (UnitedHealthcare) discussed UnitedHealthcare’s suggestion to add the following sentence to Section 5E(1): “All injuries due to the same accident are deemed to be one injury.” Ms. Lueck asked if an “injury” only results from an “accident.” She pointed out that the definition of “accident” in the former Section 5B was deleted. Ms. Zito said UnitedHealthcare is proposing a new definition of “accident.” The Subgroup discussed issues related to “intentional” and/or “self-inflicted” accidents and the definition of “injury.” After additional discussion, the Subgroup deferred making a decision on UnitedHealthcare’s suggested revision.

The Subgroup next discussed Section 5G, which defines the term “mental or nervous disorder.” Ms. Mealer said the Missouri DOI’s suggested revision to Section 5G updates the definition to reflect current terminology. Mr. Petersen asked if the Missouri DOI’s language is consistent with how the term is used and defined in recent NAIC models. Ms. Matthews said she would review the NAIC models for consistency. The Subgroup agreed to accept the Missouri DOI’s suggested revision to Section 5G subject to any changes NAIC staff may make for consistency with similar language and definitions used in recent NAIC models.

The Subgroup next discussed Section 5H, which defines the term “nurse.” Ms. Lueck said the NAIC consumer representatives suggest revising Section 5H to include a reference to “advance practice nurse.” She said this additional language is consistent with current terminology. The Subgroup agreed to accept the suggested revision.
The Subgroup next discussed Section 5I, which defines the term “one period of confinement.” Ms. Mealer said the Missouri DOI suggests deleting the term because it is not used in the proposed revised model. Ms. Matthews said she did a search and found the term is no longer used because provisions in the model using the term are to be deleted. Mr. Petersen said if this term is used in policies, it should not be deleted. After discussion, the Subgroup agreed to retain the term. The Subgroup discussed whether it is appropriate for the definition to use the word “means” instead of the language used in other definitions in Section 5, such as “may be defined” or “shall be defined.” After additional discussion, the Subgroup requested NAIC staff to review the legislative history for the terms in Section 5 to determine if the drafters had any specific intent for the differing language. Ms. Domzalski-Hansen said she would also survey the Subgroup members prior to the Subgroup’s Nov. 4 conference call to see if the Subgroup members had specific suggestions to address this issue.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.

W:\National Meetings\2019\Fall\TF\RF\Accident&SicknessSG\Accident and Sickness Ins Min Stds Subgrp 10-28-19 ConfCallMin.docx
The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met via conference call Oct. 7, 2019. The following Subgroup members participated: Glen Mulready, Co-Chair (OK); Melinda Domzalski-Hansen, Co-Chair (MN); Eric Unger (CO); Chris Struk (FL); Jeff Zewe (LA); Robert Wake (ME); Mary Mealer and Molly White (MO); Gayle Woods (OR); Katie Dzurec and Michael Humphreys (PA); Kendall Buchanan (SC); Jakob Sundberg and Heidi Clausen (UT); Anna Van Fleet (VT); Andrea Philhower (WA); and Julie Walsh (WI).

1. Continued Discussion of the July 30 Comments on Model #171, Sections 1–5

Ms. Domzalski-Hansen said the purpose of today’s conference call is for the Subgroup to continue its discussion section-by-section of the comments received by the July 30 public comment deadline on Sections 1–5 of the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act* (#171). She said prior to the Subgroup continuing those discussions, as discussed during the Subgroup’s Sept. 16 conference call, she developed the following language for the Subgroup’s review for revising Section 5A—Policy Definitions: “A. A supplementary health insurance policy; a short-term health insurance policy; a limited scope dental insurance policy; or a limited scope vision insurance policy delivered or issued for delivery to any person in this state shall contain definitions respecting the matters set forth below that comply with the requirements of this section, if the policy contains one of the terms or definitions below.”

Ms. White suggested revising the suggested language to state “one of the terms and/or definitions below.” Barbara Klever (Blue Cross and Blue Shield Association—BCBSA) suggested adding the word “certificate” with respect to a short-term health insurance policy in order to ensure it applies to association coverage. The Subgroup discussed whether it was appropriate to add “certificate” given Section 5’s scope and the *Supplementary and Short-Term Health Insurance Minimum Standards Model Act* (#170). After additional discussion, the Subgroup decided to defer making a decision until it discusses the substantive sections in Model #171.

The Subgroup next discussed whether to delete Section 5C, which defines “disability” or “disabled.” Ms. Domzalski-Hansen reminded the Subgroup that during its Sept. 16 conference call, the Subgroup discussed the Washington Department of Insurance’s (DOI) suggestion to delete Section 5C but deferred making a decision until NAIC staff could research why the definition was added. She explained that NAIC staff found that this definition is derived from the Interstate Insurance Product Regulation Commission’s (Compact) disability income standards, but the definition in Section 5C does not match the Compact’s definition for the term. She said the Subgroup has at least two options: 1) delete the definition for the term; or 2) revise it to match the Compact’s definition for the term. The Subgroup discussed the options. After additional discussion, the Subgroup decided to defer making a decision until it discusses the substantive sections in Model #171.

The Subgroup next discussed the comments received on Section 5D, which defines “hospital.” Ms. Domzalski-Hansen said America’s Health Insurance Plans (AHIP), the Missouri DOI and the NAIC consumer representatives submitted comments on Section 5D. Chris Petersen (Arbor Strategies LLC), representing AHIP, said AHIP suggests adding “facilities existing primarily to provide psychiatric services” to Section 5D(2) because these types of facilities are not hospitals. Some Subgroup members expressed concern with adding the suggested language.

The Subgroup discussed the Missouri DOI’s suggested revisions to Section 5D(2). Ms. White said the Missouri DOI’s suggested revisions are meant to clarify the language. After discussion, the Subgroup agreed to accept the Missouri DOI’s suggested revisions. The Subgroup discussed whether it could accept AHIP’s suggested language because it accepted the Missouri DOI’s suggested revisions. The Subgroup deferred making a decision on AHIP’s suggested language. Sarah Lueck (Center on Budget and Policy Priorities—CBPP) discussed the NAIC consumer representatives’ comments, which suggests the Subgroup consider revising Section 5D(2)(b) and deleting Section 5D(2)(c) to remove obsolete language. The Subgroup deferred discussion of the NAIC consumer representatives’ suggested revisions until its next conference call on Oct. 28.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.
The Accident and Sickness Insurance Minimum Standards (B) Subgroup met via conference call Sept. 16, 2019. The following Subgroup members participated: Glen Mulready, Co-Chair, and Tyler Laughlin (OK); Melinda Domzalski-Hansen, Co-Chair (MN); Mary Grover (CO); Chris Struk and Shannon Doheny (FL); Frank Opelka (LA); Robert Wake (ME); Mary Mealer (MO); Martin Swanson and Laura Arp (NE); Gayle Woods (OR); Michael Humphreys (PA); Kendall Buchanan (SC); Tanji Northrup (UT); Anna Van Fleet (VT); Michael Bryant (WA); and Nathan Houdek (WI).

1. Discussed July 30 Comments on Model #171, Sections 1–5

Ms. Domzalski-Hansen said the purpose of today’s conference call is for the Subgroup to begin its review of and discuss section-by-section the comments received by the July 30 public comment deadline on Sections 1–5 of the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171). She said no comments were received on Model #171’s title or its table of contents.

Ms. Domzalski-Hansen said the Missouri Department of Insurance (DOI) submitted comments on Section 1—Purpose suggesting adding the word “renewal.” Ms. Mealer said the Missouri DOI suggests adding this word because the model’s provisions should apply to renewals, as well as the initial purchase. Ms. Domzalski-Hansen suggested also adding the word “continuation” because in some situations, the coverage may not be “renewed” but “continued.” Chris Petersen (Arbor Strategies LLC), representing America’s Health Insurance Plans (AHIP), said the word “purchase” is interpreted to include “sale and renewal.” The Subgroup discussed whether to add these references and at the end of the discussion, it decided to add the language “renewal and continuation.”

No comments were received on Section 2—Authority.

Ms. Domzalski-Hansen said the Missouri Department of Insurance (DOI) submitted comments on Section 3A—Applicability and Scope. Jeremy Crandall (BCBSA) said the BCBSA suggests revising Section 3A to include the language “regardless of the situs of the delivery of the contract” to ensure it is clear Model #171 applies to short-term, limited-duration coverage issued through out-of-state group trusts or associations and is consistent with the Supplementary and Short-Term Health Insurance Minimum Standards Model Act (formerly the Accident and Sickness Insurance Minimum Standards Model Act) (#170). After discussion, the Subgroup agreed to accept the BCBSA’s suggested revisions.

Ms. Mealer said the Missouri DOI suggests deleting the word “also” in its comments on Section 3A because the word is unnecessary. The Subgroup agreed to accept the suggested revision. Mr. Bryant said the Washington DOI suggests adding the word “supplementary” to the term “hospital indemnity or other fixed indemnity” because Model #171 does not apply to all hospital indemnity plans, such as comprehensive hospital indemnity plans. Mr. Petersen said that based on the revisions to Model #170, Model #171 has been restructured to apply to supplementary plans. He said that in addition, Model #170 does not define “supplementary hospital indemnity.” After discussion, Mr. Bryant withdrew the Washington DOI’s comment.

The Subgroup next discussed the Missouri DOI’s suggested revision to Section 3B to delete the words “shall apply” and replace it with “applies.” Ms. Mealer said the Missouri DOI’s suggested revision is clarifying. The Subgroup agreed to accept the suggested revision. No comments were received on Section 3C or Section 3D.

No comments were received on Section 4—Effective Date.

The Subgroup next discussed the comments received on Section 5A—Policy Definitions. Mr. Crandall said the BCBSA’s suggested revisions to Section 5A are intended to track the definition of “short-term, limited-duration health insurance” in Model #170. Ms. Mealer said the Missouri DOI’s suggested revisions are meant to reduce redundancy and provide precision and consistency. The Subgroup discussed the suggested revisions, including whether to use the word “policy” or “coverage.” Mr. Petersen said the Subgroup will have to decide what terminology to use throughout Model #171 to refer to these plans. The Subgroup also discussed whether it was appropriate to add the word “certificate.” Mr. Laughlin pointed out that “policy” is...
defined in Model #170. He suggested merging the BCBSA and the Missouri DOI suggested revisions. Ms. Domzalski-Hansen said she would develop language for the Subgroup to discuss during its next conference call Oct. 7.

The Subgroup next discussed the comments received on Section 5B. Ms. Mealer said the Missouri DOI’s comments to Section 5B(2) are intended to be clarifying. The Subgroup agreed. Sarah Lueck (Center on Budget and Policy Priorities—CBPP) discussed the NAIC consumer representatives’ comments. She explained that the suggested revisions update the language by deleting and revising outdated terminology. Jolie Matthews (NAIC) asked if the suggested revision to delete the language “drug addicts and alcoholics” and replace it with “individuals with a substance-related disorder” is correct. She suggested that the language should be “substance use disorder.” After discussion, the Subgroup agreed to accept the NAIC consumer representatives’ suggested revisions to Section 5B except for the language “substance-related disorder.” The Subgroup agreed that this should be “substance use disorder.” The Subgroup also agreed to allow NAIC staff to update any obsolete, outdated language throughout Model #171.

The Subgroup next discussed the Washington DOI’s suggestion to delete Section 5C, which defines “disability” or “disabled.” Mr. Bryant said the Washington DOI suggests Section 5C is not necessary because Model #171 defines “partial disability,” “residual disability” and “total disability” with respect to the inability to work. The way “disability” or “disabled” is defined in Section 5C is confusing because it is not defined with respect to the inability to work. Mr. Petersen expressed support for the Washington DOI’s comments. Mr. Laughlin suggested the Subgroup defer deleting Section 5C until it could determine why it was added. NAIC staff agreed to search the Subgroup’s 2016 minutes to find this information for discussion during the Subgroup’s Oct. 7 conference call.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.
The ERISA (B) Working Group of the Regulatory Framework (B) Task Force met in Austin, TX, Dec. 7, 2019. The following Working Group members participated: Robert Wake, Chair (ME); Ryan James (AR); Kate Harris (CO); Howard Liebers (DC); Andria Seip (IA); Craig Van Aalst (KS); Frank Opelka (LA); Grace Arnold and Steve Kelley (MN); Angela Nelson (MO); Laura Arp and Martin Swanson (NE); Laura Miller (OH); Ron Kreiter (OK); Jill Kruger (SD); Doug Danzeiser (TX); Tanji Northrup (UT); Toni Hood (WA); and Richard Wicka (WI). Also participating were: Paige Duhamel (NM); Tashia Sizemore (OR); and Sarah Neil (RI).

1. **Adopted its Summer National Meeting Minutes**

Mr. Wicka made a motion, seconded by Ms. Kruger, to adopt the Working Group’s Aug. 3 minutes (see **NAIC Proceedings – Summer 2019, Regulatory Framework (B) Task Force, Attachment Four**). The motion passed unanimously.

2. **Discussed MEWAs and AHPs**

Mr. Wake asked for information on state activities regarding multiple employer welfare arrangements (MEWAs) and association health plans (AHPs) since the District Court for the District of Columbia issued its opinion in *New York v. U.S. Department of Labor*, vacating critical portions of the U.S. Department of Labor’s (DOL) final rule on AHPs. Mr. James said Arkansas has issued Rule 119, which establishes requirements for licensing and operations of self-funded MEWAs and explains registration requirements for fully insured MEWAs. He said the rule is scheduled to take effect next week. Ms. Seip said that Iowa has seen increased interest in forming MEWAs in Iowa and that there are two new MEWAs for 2020 and a handful of applications pending. Ms. Arp said that in Nebraska, there is a fully insured MEWA that formed, but it included self-employed individuals, so in order to be able to keep operating, it has reorganized to provide two consecutive term, short-term limited duration (STLD) plans, using an association product sold to individuals.

William F. Megna (MEWA Association of America—MAA) said his organization is holding its first annual meeting on Dec. 9 at the Hyatt Place Austin hotel in Austin, TX, to discuss the development of uniform standards for regulation and solvency protections for self-funded MEWAs. He said the MAA would like to work with state insurance regulators on these standards and that everyone is welcome to attend.

Justin Giovannelli (Georgetown Center for Health Insurance Reform—CHIR) has started to research federal oversight of MEWAs. He said CHIR made a Freedom of Information Act (FOIA) request to the U.S. Department of Labor (DOL) and has received several thousand pages of DOL investigative records regarding MEWAs, including AHPs. Information continues to be released and is available to the public at [http://chirblog.org/the-mewa-files/](http://chirblog.org/the-mewa-files/). Analysis of this information by CHIR is planned.

Amber Rivers (DOL Employee Benefits Security Administration—EBSA) explained that the DOL has recently undergone a reorganization. Ms. Rivers is currently the Acting Director of the Office of Health Plan Standards and Compliance Assistance, within EBSA, which is the position formerly occupied by Amy Turner, who is now the Deputy Assistant Secretary for Regional Office Operations within EBSA. Colleen McKee is the head of the Office of Health Investigations within the Office of Enforcement within EBSA. While there have been some internal changes, Ms. Rivers assured the Working Group that there should not be any discernable difference for the NAIC; the DOL continues to want to partner with the NAIC in areas of shared jurisdiction.

Having no further business, the ERISA (B) Working Group adjourned into regulator-to-regulator session, pursuant to paragraph 2 (pending investigations which may involve either the NAIC or any member in any capacity), paragraph 3 (specific companies, entities or individuals), and paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings.
The HMO Issues (B) Subgroup of the Regulatory Framework (B) Task Force met via conference call Nov. 21, 2019. The following Subgroup members participated: Don Beatty, Chair (VA); Dayle Axman (CO); Toma Wilkerson (FL); Ryan Gillespie (IL); Robert Wake (ME); Camille Anderson-Weddle (MO); Martin Swanson (NE); Ron Pastuch (WA); Jennifer Stegall (WI); and Joylynn Fix (WV).

1. Discussed and Agreed Upon Recommendations for Revising Model #430

Mr. Beatty said that prior to the conference call, NAIC staff had distributed a cover memorandum (Attachment Nine-A) and Virginia’s revised recommendations for revising the Health Maintenance Organization Model Act (#430) for consistency with the revised Life and Health Insurance Guaranty Association Model Act (#520) (Attachment Nine-B). He discussed the recommendations, explaining that Virginia’s approach is to leave Model #430 unchanged because leaving it unchanged will provide the states that have not included health maintenance organizations (HMOs) as members under their life and health guaranty association’s statute, and those states that have not yet adopted the revised Model #520, with the guidance provided in the model they have come to rely on. He said those states that have adopted the revised Model #520 and currently have provisions in their laws or regulations based on Model #430 will have the guidance provided in the proposed drafting notes for the relevant sections in Model #430 in order for them to determine if they should amend their laws and regulations.

Mr. Wake explained that Maine’s approach (Attachment Nine-C) to revising Model #430 is substantially the same approach taken in Virginia’s revised recommendations. He said the main difference is that Maine’s approach is to revise Model #430 to reflect the states that have adopted the revised Model #520 rather than Virginia’s approach to leave Model #430 unchanged for those states that have not adopted the revised Model #520.

The Subgroup discussed the both recommendations. Chris Petersen (Arbor Strategies, LLC) expressed concern with the drafting note language in the Virginia Insurance Bureau’s recommendation to have the states consider repealing provisions in their laws or regulations concerning Section 19—Hold Harmless Provision Requirements for Covered Persons. He also expressed similar concerns about Section 14—Continuation of Benefits. He noted that he had submitted a comment letter previously to the Subgroup from a coalition of health insurers (Coalition)—Aetna, Anthem, Cigna, Health Care Service Corporation (HCSC) and UnitedHealthcare expressing those same concerns with weakening or eliminating these important consumer protections. He expressed support for Maine’s recommendations. Bonnie Burns (California Health Advocates) also expressed concern with repealing Section 19. Jeremy Crandall (Blue Cross and Blue Shield Association—BCBSA) also expressed support for Maine’s recommendations. Bob Ridgeway (America’s Health Insurance Plans—AHIP) noted that AHIP had submitted previous comments to the Subgroup suggesting the Subgroup take the approach to revising Model #430, as the Virginia Insurance Bureau’s revised recommendations reflect, because of the number of states that have adopted the revised Model #520. He expressed support for the Virginia Insurance Bureau’s revised recommendations and Maine’s suggested approach for revising Section 19.

The Subgroup discussed whether Section 19 should be deleted. After discussion, the Subgroup decided that Section 19 should be retained and that no drafting note revisions are needed.

Mr. Wake made a motion, seconded by Mr. Swanson, to have the Subgroup accept Maine’s recommendations for revising Model #430, except for the recommendations for Section 19. The motion passed unanimously.

Mr. Beatty said he anticipated the Subgroup holding its next conference call sometime after the Fall National Meeting to review an initial draft of revisions to Model #430 based on Maine’s recommendations.

Having no further business, the HMO Issues (B) Subgroup adjourned.
TO: Jolie H. Matthews  
Senior Health and Life Policy Counsel  
National Association of Insurance Commissioners

FROM: Virginia Bureau of Insurance

DATE: November 12, 2019

RE: HMO Issues (B) Subgroup  
Potential Revisions to the HMO Model Act #430

Upon review of the status of States’ adoption of the 2017 version of the Life and Health Insurance Guaranty Association Model Act (Model Act #520), the discussion during the HMO Issues (B) Subgroup’s September 16, 2019 conference call, and the comments received from America’s Health Insurance Plans (AHIP) and the National Organization of Life and Health Insurance Guaranty Associations regarding Virginia’s proposed revisions to the HMO Model Act (Model Act #430), we offer the following for consideration by the Subgroup.

We propose leaving the current requirements in the HMO Model Act as-is but recommend adding several Drafting Notes applicable to States that have adopted the Model Act #520 HMO requirements. Leaving the HMO Model Act as-is will provide States that may not include HMOs as member insurers under their Life and Health Insurance Guaranty Associations statute, and those States that have not yet adopted the 2017 Model Act revisions, with the guidance they have come to rely on. States that have adopted Model Act #520, and currently have provisions in their laws/regulations based on Model Act #430, will need to review the Sections of Model Act #430 that contain the new Drafting Notes to determine if they should amend their laws/regulations.

The Drafting Notes have been added to the following Sections:

Section 3 - Definitions:
- Subsection HH – “Uncovered Expenditures”

Section 14 – Continuation of Benefits
Section 19 – Hold Harmless Provision Requirements for Covered Persons
Section 20 – Uncovered Expenditures Deposit
Section 21 – Open Enrollment and Replacement Coverage in the Event of Insolvency

No changes have been proposed to:
- Section 5B(16) – Establishment of Health Maintenance Organizations
- Section 18 – Deposit Requirements
- Section 31 – Rehabilitation, Liquidation or Conservation of Health Maintenance Organizations

Virginia’s Proposed Revisions to the
NAIC’s Health Maintenance Organization Model Act (#430)

Section 3. Definitions

A. “Adverse determination” means a determination by a health maintenance organization or its designee utilization review organization that an admission, availability of care, continued stay or other health care service has been reviewed and, based upon the information provided, does not meet the health maintenance organization’s requirements for medical necessity, appropriateness, health care setting, level of care or effectiveness, and the requested service is therefore denied, reduced or terminated.

B. “Basic health care services” includes the following medically necessary services: preventive care, emergency care, inpatient and outpatient hospital and physician care, diagnostic laboratory and diagnostic and therapeutic radiological services. It does not include mental health services or services for alcohol or drug abuse, dental or vision services or long-term rehabilitation treatment.

C. “Capitated basis” means fixed per member per month payment or percentage of premium payment wherein the provider assumes the full risk for the cost of contracted services without regard to the type, value or frequency of services provided. For purposes of this definition, capitated basis includes the cost associated with operating staff model facilities.

D. “Coinsurance” means the percentage amount a covered person must pay under the terms of a health benefit plan in order to receive a health care service that is not fully prepaid.

Drafting Note: States that do not allow HMOs to impose a coinsurance requirement should not adopt this definition nor include the term when it is referenced throughout the model.

E. “Commissioner” means the insurance commissioner of this state.

Drafting Note: Use the title of the chief insurance regulatory official wherever the term “commissioner” appears. If the jurisdiction of health maintenance organizations lies with some state agency other than the insurance department, or if there is dual regulation, a state should add language referencing that agency to ensure the appropriate coordination of responsibilities.

F. “Copayment” means a specified dollar amount a covered person must pay under the terms of a health benefit plan in order to receive a health care service that is not fully prepaid.

G. “Covered benefits” means those health care services to which a covered person is entitled under the terms of a health benefit plan.

H. “Covered person” means any person eligible to receive covered benefits under the terms of a health benefit plan.

I. “Deductible” means the amount a covered person is responsible to pay out-of-pocket before the health maintenance organization begins to pay the covered expenses associated with treatment.

J. “Enrollee” means an individual whose employment or other status, except family dependency, is the basis for eligibility for enrollment in the health maintenance organization, or in the case of an individual contract, the person in whose name the contract is issued.

K. “Evidence of coverage” means a statement that sets out the coverage and other rights to which the covered person is entitled under the health benefit plan and that may be issued by the health maintenance organization or by the group contract holder to an enrollee electronically or, upon request, in writing.

L. “Extension of benefits” means the continuation of coverage under a particular benefit provided under a contract following termination with respect to a covered person who is totally disabled on the date of termination.
M. “Facility” means an institution providing health care services or a health care setting, including but not limited to hospitals and other licensed inpatient centers, ambulatory surgical or treatment centers, skilled nursing centers, residential treatment centers, diagnostic, laboratory and imaging centers, and rehabilitation and other therapeutic health settings.

N. “Grievance” means a written complaint submitted by or on behalf of a covered person regarding:

1. The availability, delivery or quality of health care services, including a complaint regarding an adverse determination made pursuant to utilization review;

2. Claims payment, handling or reimbursement for health care services; or

3. Matters pertaining to the contractual relationship between a covered person and a health maintenance organization.

O. “Group contract” means a contract for health care services, which by its terms limits eligibility to members of a specified group. The group contract may include coverage for dependents.

P. “Group contract holder” means a person, other than an individual, to which a group contract has been issued.

Q. “Health benefit plan” means a policy, contract, certificate or agreement offered or issued by a health carrier to provide, deliver, arrange for, pay for or reimburse any of the costs of health care services.

R. “Health care professional” means a physician or other health care practitioner license, accredited or certified to perform specified health services consistent with state law.

S. “Health care provider” or “provider” means a health care professional or facility.

T. “Health care services” means services for the diagnosis, prevention, treatment, cure or relief of a health condition, illness, injury or disease.

U. “Health carrier” or “carrier” means an entity subject to the insurance laws and regulations of this state, or subject to the jurisdiction of the commissioner, that contracts or offers to contract to provide, deliver, arrange for, pay for or reimburse any of the costs of health care services, including a sickness and accident insurance company, managed care organization, health maintenance organization, a nonprofit hospital or medical service corporation, or any other entity providing a plan of health insurance, health benefits or health care services.

Drafting Note: States that license health maintenance organizations pursuant to statutes other than the insurance statutes and regulations, such as the public health laws, will want to reference the applicable statutes instead of, or in addition to, the insurance laws and regulations.

Drafting Note: The term “hospital or medical service corporation,” as used in the model act, is intended to apply to any nonprofit health, hospital or medical service corporation or similar organization. In order to include such organizations in this section, which are also commonly referred to as “Blue Cross Blue Shield-type” plans, each state should identify these organizations in accordance with its statutory terminology for such plans or by specific statutory citation. Some states also may have to amend other laws to bring these organizations within the scope of this section since the portions of state law applicable to these organizations may provide that no other portion of the insurance code applies to these organizations without a specific reference to the other provision.

V. “Health maintenance organization” means a person that undertakes to provide or arrange for the delivery of basic health care services to covered persons on a prepaid basis, except for a covered person’s responsibility for copayments, coinsurance or deductibles.

W. “Individual contract” means a contract for health care services issued to and covering an individual. The individual contract may include dependents of the enrollee.

X. “Insolvent” or “insolvency” shall mean that the health maintenance organization has been declared insolvent and placed under an order of liquidation by a court of competent jurisdiction.
Y. “Intermediary organization” means a person, other than an individual, authorized to negotiate and execute provider contracts with health maintenance organizations on behalf of a group of health care providers or on behalf of a network, but does not include a provider or group of providers negotiating on its own behalf.

Z. “Network” means the group of participating providers providing services to a health maintenance organization.

AA. “Net worth” means the excess of total admitted assets over total liabilities, but the liabilities shall not include fully subordinated debt.

BB. “Participating provider” means a provider that, under an express or implied contract with the health maintenance organization or with its contractor or subcontractor, has agreed to provide health care services to covered persons with an expectation of receiving payment, other than copayments, coinsurance or deductibles, from the health maintenance organization or other organization under contract with the health maintenance organization to provide payment in accordance with the terms of the contract.

CC. “Person” means an individual, a corporation, a partnership, an association, a joint venture, a joint stock company, a trust, an unincorporated organization, any similar entity or a combination of the foregoing.

DD. “Policyholder” means, for individual contracts, the individual in whose name the contract is issued, and for group contracts, the group contract holder.

EE. “Qualified actuary” means an individual who is a member of the American Academy of Actuaries or meets such reasonable standards and qualifications as the commissioner may require.

FF. “Replacement coverage” means the benefits provided by a succeeding carrier.

GG. “Risk bearing entity” means an intermediary organization that is at financial risk for services provided through contractual assumption of the obligation for the delivery of specified health care services to covered persons of the health maintenance organization.

HH. “Uncovered expenditures” means the costs to the health maintenance organization for health care services that are the obligation of the health maintenance organization, for which a covered person may also be liable in the event of the health maintenance organization’s insolvency and for which no alternative arrangements have been made that are acceptable to the commissioner.

Drafting Note: Subsection HH is not applicable to States that have adopted the 2017 version of the Life and Health Insurance Guaranty Association Model Act (#520), including the requirement that Health Maintenance Organizations be member insurers of the Life and Health Guaranty Association. States that have adopted the 2017 version of Model Act #520 and currently have provisions in their laws/regulations based on Subsection HH, should consider repealing/deleting such provisions.

Drafting Note: Subsection HH defines uncovered expenditures for use in Section 20. They will vary in type and amount, depending on the arrangements of the health maintenance organization. They may include out-of-area services, referral services and hospital services. They do not include expenditures for services when a provider has agreed not to bill the covered person even though the provider is not paid by the health maintenance organization, or for services that are guaranteed, insured or assumed by a person or organization other than the health maintenance organization.

II. “Utilization review” means a set of formal techniques utilized by or on behalf of the health maintenance organization designed to monitor the use of or evaluate the clinical necessity, appropriateness, efficacy or efficiency of health care services, procedures, providers or facilities. Techniques may include ambulatory review, prospective review, second opinion, certification, concurrent review, case management, discharge planning or retrospective review.

Section 14. Continuation of Benefits

A. The commissioner shall require that each health maintenance organization have a plan for handling insolvency that provides for continuation of benefits for the duration of the contract period for which premiums have been paid and continuation of benefits to covered persons who are confined on the date of insolvency in an inpatient facility until their discharge or expiration of benefits.
B. In considering such a plan, the commissioner may require:

(1) Insurance to cover the expenses to be paid for continued benefits after an insolvency;

(2) Provisions in provider contracts that obligate the provider, after the health maintenance organization’s insolvency, to provide covered services through the period for which premium has been paid to the health maintenance organization on behalf of the covered person or until the covered person’s discharge from an inpatient facility, whichever time is greater. Covered benefits to covered persons confined in an inpatient facility on the date of insolvency will continue until their confinement in an inpatient facility is no longer medically necessary;

(3) Insolvency reserves;

(4) Acceptable letters of credit; or

(5) Any other arrangements to assure that benefits are continued as specified above.

Drafting Note: In the event of an insolvency for States that have adopted the 2017 version of the Life and Health Insurance Guaranty Association Model Act (#520), including the requirement that Health Maintenance Organizations (HMO) be member insurers of the Life and Health Guaranty Association, benefits and coverages will be provided pursuant to [insert reference to state’s guaranty association statute based on Sections 2B and 8B(2) of the Model Act]. States that have adopted the 2017 version of Model Act #520 and currently have provisions in their laws/regulations based on Section 14, should consider repealing/deleting such provisions.

Section 19. Hold Harmless Provision Requirements for Covered Persons

A. Except for coinsurance, deductibles or copayments as specifically provided in the evidence of coverage, in no event, including but not limited to nonpayment by the health maintenance organization, insolvency of the health maintenance organization or breach of contract among the health maintenance organization, risk bearing entity or participating provider, shall a risk bearing entity or participating provider bill, charge, collect a deposit from, seek compensation, remuneration or reimbursement from, or have any recourse against a covered person or a person (other than the health maintenance organization) acting on behalf of the covered person to collect sums owed by the health maintenance organization.

B. All contracts among health maintenance organizations, risk bearing entities, and participating providers shall include a hold harmless provision specifying protection for covered persons. Any attempted waiver or amendment in a manner materially adverse to the interests of covered persons of a hold harmless provision shall be null and void and unenforceable.

C. The requirement of Subsection B shall be met by including a provision substantially similar to the following:

“Provider agrees that in no event, including but not limited to nonpayment by the health maintenance organization or intermediary organization, insolvency of the health maintenance organization or intermediary organization, or breach of this agreement, shall the provider bill, charge, collect a deposit from, seek compensation, remuneration or reimbursement from, or have any recourse against a covered person or a person (other than the health maintenance organization or intermediary organization) acting on behalf of the covered person for covered services provided pursuant to this agreement. This agreement does not prohibit the provider from collecting coinsurance, deductibles, copayments or services in excess of limits, as specifically provided in the evidence of coverage, or fees for uncovered services delivered on a fee-for-service basis to covered persons.”

D. (1) Any statement sent to a covered person shall clearly state the amounts billed to the health...
maintenance organization and include a notice explaining that covered persons are not responsible for amounts owed by the health maintenance organization.

(2) All contracts among health maintenance organizations, risk bearing entities, and participating providers shall require that all statements sent to covered persons clearly state the amounts billed to the health maintenance organization and include a notice explaining that covered persons are not responsible for amounts owed by the health maintenance organization.

(3) The notice requirements in this subsection shall be met by including in the statement to covered persons a provision substantially similar the following:

NOTICE: YOU ARE NOT RESPONSIBLE FOR ANY AMOUNTS OWED BY YOUR HEALTH MAINTENANCE ORGANIZATION

E. Any violation of the provisions of this section shall constitute an unfair trade practice pursuant to [insert reference to state insurance fraud statute] and shall subject the health care provider to monetary penalties in accordance with [insert reference to state insurance fraud statute] and notification to the [insert reference to appropriate licensing entity for type of provider].

Drafting Note: For States that have adopted the 2017 version of the Life and Health Insurance Guaranty Association Model Act (#520), including the requirement that Health Maintenance Organizations (HMO) be member insurers of the Life and Health Guaranty Association, health care providers will be protected against loss due to an impairment or insolvency of an insurer (HMO) pursuant to Section 3B(1) of the Model Act. States that have adopted the 2017 version of Model Act #520 and currently have provisions in their laws/regulations based on Section 19, should consider repealing/deleting such provisions.

Drafting Note: States that do not authorize insurance departments to take action against providers should not adopt Subsection E and should consider other options such as contacting the state attorney general’s office or other appropriate state official.

Drafting Note: States with consumer protection acts that provide covered persons with a private right of action should consider including a reference in Subsection E.

Section 20. Uncovered Expenditures Deposit

A. If at any time uncovered expenditures exceed ten percent (10%) of total health care expenditures, a health maintenance organization shall place an uncovered expenditures insolvency deposit with the commissioner, with an organization or trustee acceptable to the commissioner through which a custodial or controlled account is maintained, cash or securities that are acceptable to the commissioner. The deposit shall at all times have a fair market value in an amount of 120 percent of the health maintenance organization’s outstanding liability for uncovered expenditures for covered persons in this state, including incurred but not reported claims, and shall be calculated as of the first day of the month and maintained for the remainder of the month. If a health maintenance organization is not otherwise required to file a quarterly report, it shall file a report within forty-five (45) days of the end of the calendar quarter with information sufficient to demonstrate compliance with this section.

B. The deposit required under this section is in addition to the deposit required under Section 18 and is an admitted asset of the health maintenance organization in the determination of net worth. All income from deposits or trust accounts shall be assets of the health maintenance organization and may be withdrawn from the deposit or account quarterly with the approval of the commissioner.

C. (1) A health maintenance organization that has made a deposit may withdraw that deposit or any part of the deposit if:

(a) A substitute deposit of cash or securities of equal amount and value is made;

(b) The fair market value exceeds the amount of the required deposit; or
(c) The required deposit under Subsection A is reduced or eliminated.

(2) Deposits, substitutions or withdrawals may be made only with the prior written approval of the commissioner.

D. The deposit required under this section is in trust and may be used only as provided under this section. The commissioner may use the deposit of an insolvent health maintenance organization for administrative costs associated with administering the deposit and payment of claims of covered persons of this state for uncovered expenditures in this state. Claims for uncovered expenditures shall be paid on a pro rata basis based on assets available to pay the ultimate liability for incurred expenditures. Partial distribution may be made pending final distribution. Any amount of the deposit remaining shall be paid into the liquidation or receivership of the health maintenance organization.

E. The commissioner may by regulation prescribe the time, manner and form for filing claims under Subsection D.

F. The commissioner may by regulation or order require health maintenance organizations to file annual, quarterly or more frequent reports deemed necessary to demonstrate compliance with this section. The commissioner may require that the reports include liability for uncovered expenditures as well as an audit opinion.

Drafting Note: Section 20 is not applicable to States that have adopted the 2017 version of the Life and Health Insurance Guaranty Association Model Act (#520), including the requirement that Health Maintenance Organizations be member insurers of the Life and Health Guaranty Association. States that have adopted the 2017 version of Model Act #520 and currently have provisions in their laws/regulations based on Section 20, should consider repealing/deleting such provisions.

Section 21. Open Enrollment and Replacement Coverage in the Event of Insolvency

A. Enrollment Period

(1) In the event of an insolvency of a health maintenance organization, upon order of the commissioner all other carriers that participated in the enrollment process with the insolvent health maintenance organization at a group’s last regular enrollment period shall offer the group’s enrollees of the insolvent health maintenance organization a thirty-day enrollment period commencing upon the date of insolvency. Each carrier shall offer the enrollees of the insolvent health maintenance organization the same coverages and rates that it had offered to the enrollees of the group at its last regular enrollment period.

(2) If no other carrier had been offered to some groups enrolled in the insolvent health maintenance organization, or if the commissioner determines that the other health benefit plans lack sufficient health care delivery resources to assure that health care services will be available and accessible to all of the group covered persons of the insolvent health maintenance organization, then the commissioner shall allocate equitably the insolvent health maintenance organization’s group contracts for these groups among all health maintenance organizations that operate within a portion of the insolvent health maintenance organization’s service area, taking into consideration the health care delivery resources of each health maintenance organization. Each health maintenance organization to which a group or groups are so allocated shall offer the group or groups the health maintenance organization’s existing coverage that is most similar to each group’s coverage with the insolvent health maintenance organization at rates determined in accordance with the successor health maintenance organization’s existing rating methodology and in accordance with state law.

(3) The commissioner shall also allocate equitably the insolvent health maintenance organization’s nongroup enrollees that are unable to obtain other coverage among all health maintenance organizations that operate within a portion of the insolvent health maintenance organization’s service area, taking into consideration the health care delivery resources of each health maintenance organization. Each health maintenance organization to which nongroup enrollees are allocated shall
offer the nongroup enrollees the health maintenance organization’s existing coverage for individual or conversion coverage as determined by the enrollee’s type of coverage in the insolvent health maintenance organization at rates determined in accordance with the successor health maintenance organization’s existing rating methodology. Successor health maintenance organizations that do not offer direct nongroup enrollment may aggregate all of the allocated nongroup enrollees into one group for rating and coverage purposes.

B. Replacement Coverage

(1) “Discontinuance” shall mean the termination of the contract between the group contract holder and a health maintenance organization due to the insolvency of the health maintenance organization, and does not refer to the termination of any agreement between any individual enrollee and the health maintenance organization.

(2) A health maintenance organization providing replacement coverage hospital, medical or surgical expense or service benefits within a period of sixty (60) days from the date of discontinuance of a prior health maintenance organization, shall immediately cover all covered persons who were validly covered under the previous health maintenance organization at the date of discontinuance and who would otherwise be eligible for coverage under the succeeding health maintenance organization, regardless of any provisions of the contract relating to active employment, hospital confinement or pregnancy.

Drafting Note: Under the Health Insurance Portability and Accountability Act of 1996 (HIPAA), in the group market, a succeeding carrier, including a health maintenance organization, is prohibited from including any nonconfinement rules in its plan of benefits and any actively-at-work rules provided in the succeeding carrier’s plan of benefits must provide that absence from work due to any health status-related factor be treated as being actively-at-work.

(3) Except to the extent benefits for the condition would have been reduced or excluded under the prior carrier’s contract or policy, no provision in a succeeding health maintenance organization’s contract of replacement coverage that would operate to reduce or exclude benefits on the basis that the condition giving rise to benefits preexisted the effective date of the succeeding carrier’s contract shall be applied with respect to those covered persons validly covered under the prior carrier’s contract or policy on the date of discontinuance.

Drafting Note: Section 21 is not applicable to States that have adopted the 2017 version of the Life and Health Insurance Guaranty Association Model Act (#520), including the requirement that Health Maintenance Organizations be member insurers of the Life and Health Guaranty Association. States that have adopted the 2017 version of Model Act #520 and currently have provisions in their laws/regulations based on Section 21, should consider repealing/deleting such provisions.
Maine Comments on Revisions to HMO Model Act

November 18, 2019 (Corrected Version)

In August, the Virginia Bureau of Insurance proposed some revisions to the HMO Model Act (# 430) to bring it into conformance with the current version of the Life & Health Insurance Guaranty Association Model Act (# 520), which no longer excludes HMOs from the guaranty association. Comments on the proposed revisions pointed out that not all states have updated their guaranty find laws to include HMOs. In response, Virginia has proposed a new approach, which would leave the HMO Model Act unchanged but add drafting notes describing the revisions that would be necessary for those states that no longer exclude HMOs from guaranty association membership.

While we agree that the revisions to the Model need to recognize that at least at this time, adoption of the model guaranty fund amendments has not been uniform, we believe the current proposal sends an unfortunate message, by treating the previous exclusion of HMOs as the default and recognizing the inclusion of HMOs in the guaranty association as an optional alternative some states might choose. We believe it should be the other way around – the text of the HMO Model should conform to the current version of the Guaranty Association Model, and there should be drafting notes describing what states should do if they choose to retain the prior version.

Also, NOLHGA observed that the proposed replacement for Section 14 does not accurately describe the responsibilities of the guaranty association to provide replacement coverage. While policies would remain in place for a brief period of time after the date of insolvency, backed by the guaranty association, long-term replacement coverage will be available from any solvent insurance carrier through a “special enrollment period.” This is the case whether or not there is guaranty association coverage. In general, in states that have adopted the 2017 amendments to the Guaranty Association Model, insolvent HMOs are treated like any other insolvent insurance carrier under the guaranty association laws, the health insurance laws, and the receivership laws. Therefore, there is no longer any need for the HMO laws to include an insolvency plan section that is unique to HMOs, and Section 14 should simply be repealed, not replaced.

Accordingly, we recommend the following substitute:

I. Preserve the prior numbering for ease of reference.

II. Repeal Subsection 3(HH), which currently defines the term “uncovered expenditures.” Amend the drafting note that will now follow Subsection 3(GG) to read as follows:

Drafting Note: Sections 3(HH), 14 and 20 have been repealed to bring this Model Act into conformity with the Life and Health Insurance Guaranty Association Model Act (Model #520), which was amended in 2017 to make health maintenance organizations members of the guaranty association. States that continue to exclude health maintenance organizations from guaranty association membership should retain former Subsection HH, which defined the term “uncovered expenditures.” These are costs that could be the responsibility of consumers if a health maintenance organization became insolvent without guaranty association protection for use in Section 20. They will vary in type and amount, depending on the arrangements of the health maintenance organization. They may include out-of-area services, referral services and hospital services. They do not include expenditures for services when a provider has agreed not to bill the covered person even though the provider is not paid by the health maintenance organization, or for services that are guaranteed, insured or assumed by a person or organization other than the health maintenance organization.

III. Repeal Section 14, and replace it with the following drafting note:

Drafting Note: States that exclude health maintenance organizations from guaranty association membership should retain former Section 14, which required HMO-specific insolvency planning procedures to facilitate continuation of benefits after an insolvency.

IV. Consider amending the new drafting note after Section 19 to read as follows:

Drafting Note: Pursuant to Section 3B(1) of the Life and Health Insurance Guaranty Association Model Act (Model #520), both enrollees and health care providers will be protected against loss due to an impairment or insolvency of an insurer (HMO) a health maintenance organization, in states that have adopted the current version of Model #520.
This section has been retained because its primary purpose is no longer protecting consumers against insolvency, but protecting consumers against unfair billing practices. Many states now also require similar protections for consumers covered by other types of health carriers.

V. Repeal Section 20, and replace it with the following drafting note:

**Drafting Note:** States that exclude health maintenance organizations from guaranty association membership should retain former Section 20, which required health maintenance organizations to post uncovered expenditures insolvency deposits if their uncovered expenditures, as defined in former Section 3(HH), exceeded 10% of total health care expenditures.

VI. Repeal Section 21. No replacement drafting note is necessary, as open enrollment in replacement coverage is now governed by the ACA and state guaranteed-issue laws and is no longer an HMO-specific concern.
HMO Issues (B) Subgroup
Conference Call
September 16, 2019

The HMO Issues (B) Subgroup of the Regulatory Framework (B) Task Force met via conference call Sept. 16, 2019. The following Subgroup members participated: Don Beatty, Chair, and Raquel Pino (VA); Dayle Axman (CO); Toma Wilkerson (FL); Eric Anderson (IL); Robert Wake (ME); Chlora Lindley-Myers and Mary Mealer (MO); Martin Swanson (NE); Ron Pastuch (WA); Nathan Houdek and Jennifer Stegall (WI); and Joylynn Fix (WV).

1. Exposed the Virginia Insurance Bureau’s Recommendations for Revising Model #430

Mr. Beatty said that prior to the conference call, NAIC staff had distributed a cover memorandum and the Virginia Insurance Bureau’s (Bureau) recommendations for revising the Health Maintenance Organization Model Act (#430) for consistency with the revised Life and Health Insurance Guaranty Association Model Act (#520). Ms. Pino went through the suggested recommendations. She said the Bureau recommends deleting the definition of “uncovered expenditures” in 3HH because if a health maintenance organization (HMO) is treated as an insurer in the event of an insolvency, then the insolvency protections in Model #430 related to this definition are no longer needed. Chris Petersen (Arbor Strategies LLC), representing a coalition of health insurers (Coalition), suggested the Subgroup defer specific discussion of this recommendation because of the open issue of whether Section 20—Uncovered Expenditures Deposit, where this defined term is used, should be deleted as the Bureau recommends. The Subgroup agreed.

Ms. Pino discussed Section 14—Continuation of Benefits. She said this section establishes a mechanism for providing continuation of benefits for enrollees in the event of an insolvency. She said such a provision would not be necessary because the guaranty association would be responsible for obtaining replacement coverage for an insolvent HMO’s enrollees. She said the Bureau recommends deleting Section 14’s current language and replacing it with language stating that the guaranty association would be responsible for continuation of benefits and coverages in the event of an insolvency. Mr. Petersen explained that in the Coalition’s comment letter, it suggests retaining Section 14 because it provides a significant consumer protection to ensure consumers can continue to receive health care services. He explained that Section 14 does not address who will pay for that care. Under Model #520, the guaranty association would assume responsibility for paying claims, and under Section 14, providers are required to continue to provide health care services to the insolvent HMO’s enrollees. The Subgroup discussed whether Section 14 should be retained and amended to clarify its provisions as continuation of benefits in the event of an insolvency requiring providers to continue to provide health care services to the insolvent HMO’s enrollees. After additional discussion, the Subgroup deferred making a decision.

Ms. Pino said the Bureau recommends retaining Section 19—Hold Harmless Provision Requirements for Covered Persons and adding a drafting note stating that health care providers are protected against losses due to insolvency or impairment of an HMO under Model #520. She said the Bureau recommends deleting Section 20—Uncovered Expenditures Deposit. She said the uncovered expenditures insolvency deposit authorized by Section 20 is in addition to the deposit required under Section 18—Deposit Requirements. She said that because HMOs are now members of the life and health insurance guaranty associations and subject to assessments of failed long-term care insurance (LTCI) insurers, this additional deposit does not appear to be necessary. Ms. Pino said the Bureau recommends deleting Section 21—Open Enrollment and Replacement Coverage in the Event of an Insolvency. She said Section 21 establishes a mechanism for providing replacement coverage for enrollees in the event of an insolvency, which is no longer needed because the guaranty association would be responsible for obtaining replacement coverage for an insolvent HMO’s enrollees.

Bob Ridgeway (America’s Health Insurance Plans—AHIP) said that approximately 26 states to date have adopted the revised Model #520 adding HMOs as members of the life and health insurance guaranty associations. He asked if the Subgroup is contemplating adding a drafting note to alert those states that have not adopted the revised Model #520 to not adopt the revisions to Model #430. Mr. Beatty said he does not believe such a drafting note is necessary or appropriate because he is not sure it is an issue.

The Subgroup exposed the Bureau’s recommendations for a public comment period ending Oct. 15.

Having no further business, the HMO Issues (B) Subgroup adjourned.
The Pharmacy Benefit Manager Regulatory Issues (B) Subgroup of the Regulatory Framework (B) Task Force met via conference call Oct. 3, 2019. The following Subgroup members participated: TK Keen, Chair, and Jesse O'Brien (OR); Martin Swanson and Laura Arp, Vice Chairs (NE); Chris Murray and Sarah Bailey (AK); William Rodgers (AL); Ryan James (AR); Lan Brown (CA); Andria Seip and Cynthia Banks Radke (IA); Vicki Schmidt (KS); Nancy G. Atkins and Patrick O'Connor (KY); Jeff Zewe (LA); Mary Kwei (MD); Chad Arnold (MI); Andrew Kleinendorst (MN); Chlora Lindley-Myers and Molly White (MO); Derek Oestreicher (MT); Gale Simon (NJ); Renee Blechner (NM); Michael Humphreys (PA); Rachel Jade-Rice (TN); Don Beatty (VA); Jennifer Kreitler (WA); Jennifer Stegall (WI); and Denise Burke (WY). Also participating were: Fleur McKendell (DE); and Robert Wake (ME).

1. **Heard a Presentation on the Kentucky PBM License Process**

Mr. Keen said that during the Subgroup’s August conference calls, it heard from several stakeholders. He said the purpose of this conference call is to hear from one of the last major stakeholders, the states: Arkansas, Kentucky, Montana, New Mexico and Oregon. He said following this conference call, he anticipates surveying the Subgroup members to determine the Subgroup’s next steps, particularly if the Subgroup should hear from additional stakeholders before beginning its work to develop an NAIC model regulating pharmacy benefit managers (PBMs).

Mr. O’Connor provided an overview of Kentucky’s PBM licensing process. He explained that during the 2016 legislative session, the Kentucky legislature passed Senate Bill 117 (S.B. 117), giving the Kentucky Department of Insurance (DOI) the authority to license PBMs; prior to the legislation’s passage, depending on their function, PBMs were licensed as third-party administrators (TPAs). He said S.B. 117 had two primary areas of concentration: 1) creating a framework for a separate PBM license in Kentucky with the Kentucky DOI and to subject PBMs to civil penalties; and 2) pharmacy reimbursement transparency requirements and reimbursement appeal process to the PBM and the Kentucky DOI. He said that in 2018, the Kentucky legislature passed S.B. 5, enhancing PBM reporting requirements and heightening penalties for PBM violations.

Mr. O’Connor said that due to the broad definition of PBM, the Kentucky DOI has licensed more entities than it originally anticipated. He said that for 2019, Kentucky has 45 active PBM licenses. He said that during the licensing process, the Kentucky DOI found that many PBMs did not have documented policies and procedures for provisions in the Kentucky law concerning the maximum allowable cost (MAC) appeals process and transparency requirements, which resulted in delays in the licensing process. He noted that the Kentucky DOI has had personnel expertise and resource challenges in implementing the PBM law.

Mr. Keen asked about staffing resources. Mr. O’Connor said the Kentucky DOI has two staffers. Mr. Murray asked about the number of MAC appeals the Kentucky DOI has received. Mr. O’Connor said during the law’s first year, it had no appeals, but since then, the Kentucky DOI has received approximately 3500 appeals. However, the number of appeals has decreased over time.

2. **Heard a Presentation on the Arkansas PBM Law**

Mr. James discussed the Arkansas PBM licensure law. He said the law was enacted in 2018 and is like the Kentucky licensing law. He said Arkansas currently licenses 17 PBMs. He said the law served as a guidepost for the National Council of Insurance Legislators’ (NCOIL) Pharmacy Benefits Manager Licensure and Regulation Model Act. He explained that provisions in the law related to MAC pricing were passed in 2015 but were immediately challenged and are currently on appeal. Mr. James discussed other provisions in the law, including its gag clause provisions. He said in the recently concluded 2019 legislative session, the Arkansas law was tweaked with respect to spread pricing and claw backs. He also said provisions related to MAC pricing were revised, making the National Average Drug Acquisition Cost (NADAC) the minimum floor reimbursement threshold instead of the MAC.

Mr. Ryan said that to implement the law, the Arkansas DOI established a new position, PBM coordinator, carved out from its legal division. He discussed the challenges the Arkansas DOI has encountered with respect to the MAC complaints. He also discussed possible future Arkansas legislation involving pharmacy services administrative organizations (PSAOs).
Ms. McKendell asked if the Arkansas DOI handled the MAC complaints or some other state agency. Mr. Ryan said the Arkansas DOI handles the complaints in-house. He said appeals related to the NADAC could be handled differently. Mr. Wake asked Mr. Ryan if he could provide a copy of the Arkansas PBM regulation with the Subgroup and interested state insurance regulators. Mr. Ryan said he would send a link to NAIC staff for distribution.

3. **Heard a Presentation on the Montana PBM law**

Mr. Oestreicher discussed the history, purpose and provisions of S.B. 71 to address issues related to PBMs, which passed in Montana but was ultimately vetoed. He noted that the National Academy for State Health Policy (NASHP) adopted S.B. 71 as model legislation, and Maine recently enacted legislation, L.D. 1504, which is based on S.B. 71.

Mr. Oestreicher said that before drafting S.B. 71, the Montana DOI considered two factors: 1) why prescription drug costs are so high; and 2) what state insurance departments can do to combat rising drug costs. He discussed the broken mechanisms in the prescription drug supply chain most likely contributing to high prescription drug costs. He said the Montana DOI considered different approaches to address the broken system, but ultimately, it decided to develop a bill using the DOI’s current regulatory authority over health insurers to address the issue. He said S.B. 71 comprised a list of best practices for insurers to include in their PBM contracts: 1) prohibit spread pricing; 2) require that all rebates be passed through the insurer; and 3) use rebate savings to directly lower premiums. He also discussed continuing legal and regulatory actions against the Montana DOI. He said the Montana DOI anticipates re-introducing the legislation during Montana’s 2021 legislative session.

Mr. Keen asked if S.B. 71 would have required additional staffing resources. Mr. Oestreicher said the Montana DOI did not anticipate having to hire additional staff because S.B. 71 relied on its regulatory authority over health insurers to enforce its PBM-related requirements. He said the bill’s fiscal note was $600 for the cost of the Montana DOI to promulgate rules. Ms. Seip asked about Maine’s law. Mr. Wake said the Maine law mirrors S.B. 71. Mr. Oestreicher pointed out that Maine’s law included a unique approach to spread pricing by permitting an insurer to allow spread pricing while requiring the insurer to account for the “spread” as an administrative cost for the purposes of the federal Affordable Care Act’s (ACA) medical loss ratio (MLR).

4. **Heard a Presentation on the New Mexico PBM Legislation**

Ms. Blechner discussed PBM legislation in New Mexico. She said legislation enacted in 2014 required minimum information from PBMs, but in 2019, legislation was enacted amending the law to allow the New Mexico DOI to establish PBM licensing requirements by regulation. She said PSAOs are required to register with the New Mexico DOI.

Ms. Blechner discussed the reimbursement provisions in New Mexico’s law, which includes provisions: 1) requiring objective and verifiable resources for drug pricing; 2) requiring the disclosure of derivative sources for formulating MAC prices for a particular provider on request; 3) prohibiting a PBM from paying a pharmacy less than it pays an affiliate; 4) allowing a pharmacy to appeal reimbursement disputes directly to the PBM or its PSAO; and 5) requiring PBMs to provide access to the MAC list to the New Mexico DOI and all network pharmacies.

Ms. Blechner discussed the provisions in New Mexico’s law involving contracts between pharmacies and PBMs. She said the New Mexico law prohibits PBMs from recouping monies, known as “claw backs,” from pharmacies as a result of low sales of certain drugs or patient noncompliance. She said the law also prohibits gag orders on pharmacists informing patients about lower cost options.

5. **Heard a Presentation on the Oregon Law**

Mr. O’Brien discussed PBM regulation in Oregon. He said Oregon enacted legislation in 2013 requiring PBMs to register. The legislation set a $50 registration fee and included restrictions on pharmacy audits and MAC pricing and appeals. He said the legislation was problematic due to its low registration fee and unclear enforcement mechanisms.

Mr. O’Brien said in 2017, the legislature passed legislation to address some of the issues with the 2013 law. He said the legislation: 1) allowed the Department of Financial Regulation (DFR) to set an annual registration fee by rule; 2) empowered the DFR to revoke or suspend a registration for misconduct; and 3) established a complaints process. During Oregon’s 2019 legislative session, the legislature enacted additional PBM-related legislation that: 1) prohibits gag clauses; 2) prohibits PBMs from requiring consumers to use mail-order; 3) strengthens existing MAC pricing requirements; and 4) establishes stronger rulemaking authority for the DFR. Mr. O’Brien said the DFR is currently working on promulgating rules but anticipates the
rules will focus on defining key terms, such as “specialty drug/pharmacy,” “ancillary service” and “generally available to purchase.” He said currently, there are 52 PBMs registered in Oregon.

Mr. O’Brien also discussed Oregon’s Prescription Drug Price Transparency program (Program). He explained that in 2018, the Oregon legislature passed House Bill 4005 (H.B. 4005) to increase prescription drug price transparency. The Program’s goal is to provide accountability for prescription drug pricing through transparency of specific cost and price information from pharmaceutical manufacturers and health insurers. Mr. O’Brien said Oregon’s next steps could include efforts to increase PBM transparency.

Having no further business, the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup adjourned.
Pharmacy Benefit Manager Regulatory Issues (B) Subgroup
Conference Call
August 29, 2019

The Pharmacy Benefit Manager Regulatory Issues (B) Subgroup of the Regulatory Framework (B) Task Force met via
conference call Aug. 29, 2019. The following Subgroup members participated: TK Keen, Chair (OR); Martin Swanson and
Laura Arp, Vice Chairs (NE); Sarah Bailey and Jacob Lauten (AK); William Rodgers and Anthony L. Williams (AL); Marjorie
Farmer (AR); Bruce Hinze (CA); Howard Liebers (DC); Cynthia Banks Radke and Johanna Nagel (IA); Vicki Schmidt (KS);
John Melvin (KY); Jeff Zewe (LA); Mary Kwet (MD); Chad Arnold (MI); Andrew Kleinendorst (MN); Mary Mealer and
Molly White (MO); Derek Oestreicher (MT); Gale Simon (NJ); Renee Blechner (NM); Katie Dzurec, Karen M. Feather and
Sandra L. Ykema (PA); Vicki Trice (TN); Eric Lowe (VA); Ron Pastuch (WA); Nathan Houdek and Jennifer Stegall (WI);
Joylynn Fix and Ellen Potter (WV); and Denise Burke (WY). Also participating was: Matthew Veno (MA).

1. Heard a Presentation on Managing Prescription Drug Benefits from the PCMA and Horizon Government Affairs

April Alexander (Pharmaceutical Care Management Association—PCMA) and J.P. Wieske (Horizon Government Affairs)
discussed the history, role, and services that pharmacy benefit managers (PBMs) provide in managing prescription drug benefits.
Ms. Alexander discussed how payer strategies regarding prescription drug benefits evolved over time, increasing the role PBMs
play in the provision of prescription drug benefits by plans. She noted, however, that no plan is required to use a PBM. She
provided a snapshot of the current PBM marketplace, explaining that competition in the PBM marketplace is strong. She said
there are 66 PBMs in the U.S. Ms. Alexander acknowledged that, currently, three PBMs cover 75% of the marketplace, but she
said this is changing due to market consolidation, vertical integration and new market entrants. She said that PBMs’ net profit
is the lowest among those entities in the prescription drug supply chain.

Ms. Alexander discussed the services PBMs provide, including services that save plans money. She said PBMs provide other
important services unrelated to cost savings, such as drug utilization review programs and programs to address opioid use
issues.

Ms. Alexander discussed the contracting process between PBMs and plans. She explained that as part of the contracting process,
PBMs offer various plan design models depending on a plan’s specific needs. She said plan sponsors always have the final say
when creating a prescription drug benefit plan. The PBM does not determine benefit design, cost sharing levels, deductibles or
other benefit design elements. The PBM is agnostic with respect to such decisions.

Ms. Alexander provided an example of a “negative” spread where the PBM can lose money on a drug or class of drugs using
spread pricing. Mr. Wieske described spread pricing as a way a PBM hedges its risk in its contract with a plan.

Ms. Alexander discussed how PBMs drive savings and quality by using their ability to bring volume to drug manufacturers
and the use of rebates. Mr. Wieske discussed how rebates help reduce premiums and cost-sharing and how the revenue is
included in the medical loss ratio (MLR) calculation and reported in a plan’s MLR filing.

Ms. Alexander discussed how pharmacy networks developed by PBMs play a role in driving savings and quality. She described
PBMs’ contracting process with a variety of pharmacies, typically through pharmacy services administrative organizations
(PSAOs), to ensure a robust network for plan enrollees to access. She noted that PBMs have no insight into private contract
terms between PSAOs and pharmacies.

Mr. Wieske discussed the NAIC’s work to date related to PBMs and prescription drug benefits. He highlighted the provisions
in the Health Carrier Prescription Drug Benefit Management Model Act (#22). He explained that the focus of the NAIC’s
work on Model #22 was on the consumer, not PBMs. He said that Model #22 regulates entities such as PBMs through a plan’s
contract with the entity and does not directly regulate these entities. He said the Subgroup should look at Model #22’s provisions
to decide its next steps.

Ms. Alexander described a world without PBMs. She said that without PBMs to manage the prescription drug benefit, plans
would most likely incur 40% to 50% more in costs for a variety of reasons, including lack of competition between drug
manufacturers, less efficient claims processing and less utilization of generic drugs.
Commissioner Schmidt asked about Ms. Alexander’s example illustrating “negative” spread. She questioned whether PBMs actually reimburse pharmacies based on the National Average Drug Acquisition Cost (NADAC) price as shown in the example. Ms. Alexander said the NADAC price is used as a proxy. She said this same data is used to show “positive” spread. Commissioner Schmidt suggested Ms. Alexander provide the Subgroup with the complete report, which includes this table. Ms. Alexander agreed to provide the information.

2. Heard a Presentation on the Community Pharmacy Industry Perspective Regarding PBMs and Managing Prescription Drug Benefits from the NCPA

Anne Cassity (National Community Pharmacists Association—NCPA) and Matthew Magner (NCPA) discussed the community pharmacy industry’s perspective regarding PBMs and managing prescription drug benefits. Ms. Cassity provided a profile of community pharmacists. She said 80% of community pharmacists are located in areas with populations of less than 50,000. She described the types of services that full-line, independent community pharmacists provide, such as medication therapy management; same-day, in-person delivery; immunizations; and blood pressure monitoring. Ms. Cassity explained that when the medication is covered by insurance, the consumer’s price for a drug is set by the PBM, not the pharmacy. If it is a cash transaction, then the pharmacy sets the price. Ms. Cassity said what community pharmacies charge consumers and are reimbursed is often determined by a competitor. She explained that PBMs own or are affiliated with competing retail, mail-order and/or specialty pharmacies. PBMs often require or incentivize consumers to use the PBM-owned pharmacy.

Ms. Cassity discussed how the lack of PBM oversight and regulation has had a negative impact on community pharmacies. She highlighted how this situation affects community pharmacies particularly in contracting with PBMs. She discussed how PBM steering to PBM-owned retail, mail-order and specialty pharmacies have caused consumers to lose access to trusted pharmacy providers. Between 2003 and 2018, 1,231 independent pharmacies closed in rural areas.

Mr. Magner discussed how PBMs have affected patient and payer costs. He said PBMs have no fiduciary duty to anyone but their shareholders. He said this results in a lack of accountability. He suggested the following solutions to address this issue: 1) reimbursement transparency; 2) accountability through licensure; and 3) ensuring patient access through anti-mandatory mail-order provisions, network adequacy requirements and limits on conflicts of interest.

Ms. White asked Mr. Magner about his comments concerning PBMs moving away from maximum allowable cost (MAC) lists towards generic effective rate reimbursement methodologies with respect to states enacting reimbursement transparency laws as a solution to PBMs’ lack of accountability. Mr. Magner said he made the comment to alert states that may be thinking of enacting such reimbursement transparency laws to not make the law too narrow. He said Arkansas and Maryland recently revised their laws to address this issue.

Mr. Veno asked Mr. Magner if the community pharmacy has a direct relationship with the PBM through the pharmacy’s contract with the PSAO. Mr. Magner said the community pharmacy would only have a direct relationship with the PBM if it contracted directly with the PBM. Mr. Veno questioned why PSAOs must “take it” or “leave it” with respect to the contract with the PBM if 80% of community pharmacies contract with PSAOs, which in turn contract with PBMs. Mr. Magner said because of antitrust laws, PSAOs may not decline a contract on behalf of a pharmacy. Mr. Veno questioned the value to community pharmacies of contracting with PSAOs because of this situation.

3. Heard a Presentation on the Consumer Perspective of PBMs from Families USA

Claire McAndrew (Families USA) discussed the effect of PBMs and prescription drug costs on consumers. She said consumers are struggling with high prescription drug costs. She discussed how consumers have dealt with this by not taking a medicine as prescribed or declining other medical tests or procedures or delaying doctors’ visits. Ms. McAndrew suggested that the entire drug supply chain has contributed to this rise in prescription drug costs. She discussed some state mechanisms for addressing prescription drug costs, such as price transparency, PBM regulations, anti-price gouging and drug importation.

Ms. McAndrew said PBMs present concerns for consumers due to their: 1) lack of transparency in pricing and the effect of rebates on prescription drug costs; 2) lack of accountability; 3) incentives to select high-cost drugs; and 4) potential to lead to higher prescription drug costs at the pharmacy counter for consumers with insurance. She discussed ways these concerns can be addressed, such as PBM registration and imposing a fiduciary duty on PBMs to plans.
4. **Heard a Presentation on PBMs and their Impact on Access and Affordability from the NASTAD**

Amy Killelea (National Alliance of State and Territorial AIDS Directors—NASTAD) discussed PBMs and their impact on consumer access and affordability of prescription drugs. Ms. Killelea said PBMs play an outsized role in prescription drug access due to their involvement in formulary development, utilization management and pharmacy network design. She said the NAIC’s work on Model #22 and the *Health Benefit Plan Network Access and Adequacy Model Act* (#74) addressed some of these activities, but not all.

Ms. Killelea discussed how the lack of transparency regarding prescription drugs costs and the impact of rebates on these costs have affected consumers. She said that with respect to affordability, PBMs play a significant role in the ultimate prescription drug cost passed on to the consumer. She said rebates generated are generally used to defray premiums, but not used to reduce consumer prescription drug cost-sharing. She discussed how plan copay accumulator policies put the consumer in the middle between the plan and the drug manufacturer and how such policies are not a substitute for sound prescription drug pricing reforms.

Ms. Killelea outlined certain considerations for the Subgroup as it works to complete its charge, which included:
1) strengthening and reinforcing the applicability of relevant formulary and access protections included in Model #22;
2) strengthening conflict of interest standards to ensure that formulary and access decisions are based on clinical justifications and not PBM self-dealing;
3) reviewing network adequacy standards in Model #74 and ensuring that pharmacy network nuances are addressed;
4) developing transparency standards for PBM practices; and
5) ensuring rebates are used to defray consumer prescription drug cost-sharing, not just to defray premiums.

Mr. Keen said he anticipates the Subgroup meeting via conference call sometime in September to hear from the states on their work related to PBMs.

Having no further business, the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup adjourned.
The Pharmacy Benefit Manager Regulatory Issues (B) Subgroup of the Regulatory Framework (B) Task Force met via conference call Aug. 22, 2019. The following Subgroup members participated: TK Keen, Chair (OR); Martin Swanson and Laura Arp, Vice Chairs (NE); Chris Murray and Sarah Bailey (AK); Jerry Workman and Anthony L. Williams (AL); Ryan James (AR); Bruce Hinze (CA); Andria Seip (IA); Vicki Schmidt (KS); Patrick O’Connor (KY); Jeff Zewe (LA); Mary Kwei (MD); Joseph Stoddard (MI); Melinda Domzalski-Hansen and Krisi Bohn (MN); Molly White (MO); Marilyn Bartlett (MT); Gale Simon (NJ); Renee Blechner (NM); Katie Dzurec, Karen M. Feather and Sandra L. Ykema (PA); Michael Humphreys (TN); Don Beatty and Yolanda Tennyson (VA); Jennifer Kreitler (WA); Nathan Houdek and Jennifer Stegall (WI); and Joylynn Fix and Ellen Potter (WV). Also participating were: Matthew Veno (MA); and Jesse O’Brien (OR).

1. **Heard a Presentation on PBM Economics from the University of Southern California**

Neeraj Sood (Sol Price School of Public Policy, University of Southern California) discussed the role pharmacy benefit managers (PBMs) play in the pharmaceutical supply chain. He described the flow of services and the PBM’s relationship with other supply chain participants. He said PBMs are true middlemen; they play no role in the physical distribution of prescription drugs to consumers. Dr. Sood also discussed how PBMs make money describing how rebates and spread pricing play a role in PBM income.

Dr. Sood discussed how the PBM market functions and how rebates can create misaligned incentives for the PBM in choosing certain drugs for a health plan’s formulary, potentially resulting in higher premium and increased costs for consumers. He also discussed how the lack of competition in the supply chain and a consolidated PBM market also play a role in costs. Dr. Sood discussed how the new wave of vertical consolidation in the supply chain might further curtail competition and how it could result in misaligned incentives for the PBM. He provided two examples of such misaligned incentives when: 1) a PBM owns a pharmacy; and 2) a PBM owns a health plan. He also noted the high barriers to entry for new entrants in the drug supply chain.

Dr. Sood presented potential policy solutions to address issues he discussed in the drug supply chain. He recommended the following: 1) improve drug price transparency throughout the supply chain; 2) move from a rebate system to a discounts model; 3) mandate pass-through of rebate to consumers; 4) outlaw unfair business practices of PBMs; and 5) reduce barriers to entry in the PBM market.

Ms. Arp asked if vertical integration could address the misaligned incentive with respect to rebates. Dr. Sood agreed that vertical integration could address some of those issues, but he pointed out the issues with vertical integration.

Ms. White asked about drug pricing. Dr. Sood explained that market dynamics hinder lower drug prices. He said drug manufacturers typically set high drug prices to maximize profit for their shareholders, but not to limit consumer access to those drugs. He said that to address this, the pricing model needs to be changed.

Mr. O’Brien asked if spread pricing in the situation where a PBM contracts with a health plan to pay a set price for a drug benefits the health plan. Dr. Sood explained how in some scenarios, such a contract would not benefit the health plan even if the plan’s risk is limited due to the set drug price.

Mr. Veno asked Dr. Sood why he recommends limiting the use of spread pricing and rebates instead of prohibiting their use to address issues in the drug supply chain. Dr. Sood said PBMs are providing a service and need to make money for providing that service in some way. He said that if a state prohibits PBMs from using rebates or spread pricing to make money, then PBMs could receive payment by charging administrative fees. Dr. Sood said, however, that he does not have strong feelings on which approach policy makers should take to address these issues. Ms. Seip said the federal Affordable Care Act (ACA) requires health plans to maintain a certain medical loss ratio (MLR) to help to ensure that plans are providing value to enrollees. She asked if Dr. Sood thinks a similar requirement would work for PBMs. Dr. Sood said it is possible that an MLR requirement could provide similar benefits. He said the challenge would be making sure PBMs do not circumvent the requirement.
2. **Heard a Presentation on Prescription Drug Costs from PhRMA**

Saiza Elayda (Pharmaceutical Research and Manufacturers of America—PhRMA) described the evolution of medicine over time from medicines made of chemical compounds to medicines made from living cells. She discussed the biopharmaceutical research and development process, explaining that from drug discovery through U.S. Food and Drug Administration (FDA) approval, developing a medicine on average takes 10 to 15 years. She said the competitive U.S. market provides patients with access to innovative medicines faster. She also said more medicines are available to U.S. patients than in other countries, such as the United Kingdom (UK), Canada and France.

Ms. Elayda explained how competition drives down costs. She also explained how medicine cost growth is declining, noting that after discounts and rebates, brand drug medicine costs grew just 0.3% in 2018. She said that spending on retail and physician-administered medicines continues to represent just 14% of U.S. health care spending. She said prescription drug spending is projected to grow in line with health care spending through the next decade, while growth in other health care services will be five times total medicine spending growth through the next decade.

Ms. Elayda discussed the pharmaceutical supply chain and how the pharmaceutical distribution and payment system shapes the prices of brand name medicines. She provided examples. She said the current system needs to evolve to better reward results and ensure patients more directly benefit from the significant price negotiations between PBMs and biopharmaceutical companies. Ms. Elayda discussed drug access and affordability. She said that when drug coverage is subjected to a large combined (medical and drug) deductible, on average, patients pay a higher share of their drug costs compared with their other health care services costs. She explained the impact of drug coupon use on patient out-of-pocket spending on brand name drugs.

Ms. Elayda discussed market-based reforms that could make medicines more affordable and accessible, which included: 1) modernizing the drug discovery and development process; 2) promoting value-driven health care; 3) empowering consumers; and 4) addressing market distortions. She provided three key takeaways from her presentation: 1) after accounting for discounts and rebates, brand name drugs average net price increased just 1.9% in 2017; 2) in 2016, biopharmaceutical companies paid out $127 billion in rebates and discounts to government and private payers, but these rebates and discounts were typically not shared with patients at the pharmacy counter; and 3) 90% of all prescriptions filled in 2016 were generics, with projections that $140 billion of U.S. brand name drug sales will face competition from generics of biosimilars between 2017 and 2021. There is no similar type of cost containment for other health care services.

Mr. Swanson asked Ms. Elayda about the price increases for insulin over the past few years. He asked who controls such cost increases—the drug manufacturer or the PBM. Ms. Elayda said that PhRMA, as a trade association, does not have insight on this issue. She discussed factors drug manufacturers consider in making drug pricing decisions. Mr. Swanson asked if PhRMA could support an MLR requirement. Ms. Elayda said it is something PhRMA would take under consideration. She explained that PhRMA, as a trade association of drug researchers and developers, asks its members to return a majority of its profits back into research and development.

Commissioner Schmidt asked Ms. Elayda if she had a breakdown of the $140 billion brand name drug sales amount she referenced in her presentation. Ms. Elayda said she did not currently have the information but would follow up.

Mr. Keen said that if anyone had additional questions for the presenters, send them to NAIC staff.

Having no further business, the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup adjourned.
The Pharmacy Benefit Manager Regulatory Issues (B) Subgroup of the Regulatory Framework (B) Task Force met via conference call Aug. 15, 2019. The following Subgroup members participated: TK Keen, Chair (OR); Martin Swanson and Laura Arp, Vice Chairs (NE); Chris Murray (AK); Yada Horace, Steve Ostlund and William Rodgers (AL); Ryan James (AR); Bruce Hinze (CA); Johanna Nagel and Andria Seip (IA); Vicki Schmidt (KS); Nancy G. Atkins and Patrick O’Connor (KY); Jeff Zewe (LA); Mary Kwei (MD); Chad Arnold (MI); Melinda Domzalski-Hansen and Krisi Bohn (MN); Chlora Lindley-Myers, Mary Mealer, Amy Hoyt and Molly White (MO); Derek Oestreicher and Marilyn Bartlett (MT); Gale Simon (NJ); Renee Blechner (NM); Michael Humphreys, Lorrie Brouse and Rachel Jade-Rice (TN); Eric Lowe and Yolanda Tennyson (VA); Jennifer Kreitler (WA); Nathan Houdek and Jennifer Steggall (WI); Joylynn Fix (WV); and Denise Burke (WY). Also participating were: Barbara D. Richardson (NV); and Marie Ganim (RI).

1. Heard Presentations

Mr. Keen said the purpose of the Subgroup’s conference call is to hear presentations from Jane Horvath (Horvath Health Policy and Research Faculty, Georgetown University) and Leanne Gassaway (America’s Health Insurance Plans—AHIP) concerning the pharmaceutical market and its regulatory framework and pharmacy benefit managers (PBMs) and their business practices.

   a. Horvath Presentation: “Basics of the Pharmaceutical Market & PBMs”

Ms. Horvath provided an overview of the regulatory and legal framework for the pharmaceutical industry. She explained the role of the U.S. Food and Drug Administration (FDA), the federal Centers for Medicare & Medicaid Services (CMS), and the states in regulating this industry. She provided a general overview of the basics of the product supply chain and the role pharmaceutical manufacturers, wholesalers, PBMs, insurers and pharmacies play in this supply chain. She explained the difference between prescription drug discounting and rebates. She noted that discounts are provided “up front” at the point of sale, and they are transparent. However, unlike discounts, rebates are not very transparent, and they occur after the sale of a product.

Ms. Horvath discussed stakeholder concerns with some PBM business practices, including concerns that these business practices: 1) disadvantage independent and regional pharmacy chains; 2) result in inappropriate patient pay and access policies; and 3) result in the lack of transparency to health plan clients. She discussed state responses to these concerns, including state legislative and regulatory activity. She pointed out trends in this activity resulting in more review of PBM business practices toward pharmacies, health plan clients, and enrollees. She discussed the increase in state legislation banning gag clauses.

Ms. Horvath discussed the different approaches the states have taken to regulate PBMs and their business practices, such as: 1) indirect regulation through the state insurance department’s existing regulatory authority over health insurers; 2) enacting specific PBM statutes regulating the contract between the pharmacies and health plans; and 3) requiring PBM licensure or registration. She discussed state policy approaches with respect to Medicaid and state employee health benefit plans to address PBM business practices concerning transparency and spread pricing. She discussed how the states have used reverse auctions to address rising prescription drug costs.

Ms. White asked Ms. Horvath about the timing of the reverse auctions with respect to the data given to PBMs to use in developing their bids. Ms. Horvath explained that a state would look at the data from previous years to determine which prescription drug classes and/or categories are the significant cost drivers. Then, the state would develop a request for proposals (RFP) using the reverse auction process. Mr. Keen asked about the diversity of formularies in the commercial market. Ms. Horvath said she does not believe there is great diversity, but there could be more diversity with respect to tiers.

   b. AHIP Presentation: “Pharmacy Benefit Managers Overview & Background”

Ms. Gassaway provided an overview of the prescription drug supply chain, and she discussed how insurers utilize PBMs and potential next steps for the Subgroup to consider related to its work in developing a new NAIC model regulating PBMs. Specifically, she discussed the supply flow and money flow for brand name drugs and generic drugs among the various entities in the supply chain, such as the drug manufacturers, wholesalers, PBMs, insurers and pharmacies. She discussed how rebates
play a role with respect to brand name drugs. She said insurers utilize PBMs to provide a variety of services, such as: 1) negotiating with drug manufacturers on price; 2) processing drug claims; 3) managing drug formularies; and 4) drug utilization review. She said insurers pay for these services in various ways: 1) administrative fees; 2) spread pricing; and 3) shared savings.

Ms. Gassaway discussed how drug rebates work as shared savings between the PBM and health benefit plan and how they work at the point of sale. She also discussed why AHIP does not believe rebates are the issue by pointing out that from the 300 million medications prescribed annually, 82% are generic and 18% are brand name. She also said only 2.4% of brand name drugs would be eligible for a point-of-sale rebate.

In discussing next steps, Ms. Gassaway said the Health Carrier Prescription Drug Benefit Management Model Act (#22) and the Health Benefit Plan Network Access and Adequacy Model Act (#74), taken together, establish a robust regulatory framework for the administration of prescription drug benefits. She outlined AHIP’s suggestions for regulating PBMs, including those provisions that should and should not be considered in any potential regulations and NAIC model.

Ms. Gassaway said she included two articles in her presentation related to issues relevant to the Subgroup’s discussions: 1) Milliman Analysis: Prescription Drug Rebates and Part D Drug Costs; and 2) Copay Coupons, Informational Explanation of How Drug Copay Coupons Work.

Mr. Oestreicher asked Ms. Gassaway for examples in which PBMs experienced net losses in arrangements involving spread pricing where the health plan pays the PBM a set price for a drug and the PBM pays the pharmacy more for the dispensed drug than the price set with the plan. Ms. Gassaway said because AHIP is an association, for legal reasons, it does not have this specific plan information. However, AHIP plan members have told Ms. Gassaway about their experiences and this scenario. Mr. Oestreicher said from his experience, particularly given the leverage PBMs have in contracting with affected parties, he was not sure how such a scenario would ever occur. April Alexander (Pharmaceutical Care Management Association—PCMA) said she believes there is data involving the Medicaid program where there are instances of both a positive and negative spread. She said she would provide this information to the Subgroup.

Mr. Keen asked Ms. Gassaway about the dollar numbers for the amount of money spent annually on brand name drugs versus generic drugs. Ms. Gassaway said she would provide the dollar numbers to the Subgroup, but she noted that specialty drugs and brand name drugs are driving the spending.

Mr. Swanson asked if AHIP has seen any difference in pricing to consumers in those states enacting legislation affecting PBM business practices. Ms. Gassaway said AHIP is beginning to gather data from its member plans related to spending, overall costs, dispensing fees, pharmacy participation and pharmacy networks. She said she believes it will take at least another six months before AHIP would be able to discern any trends and develop a report.

Mr. Oestreicher highlighted Montana’s experience with reducing prescription drug costs in its state employee health plan. He also mentioned Montana’s Senate Bill 71 (SB71), which was developed to address issues related to PBM business practices. SB71 passed, but it was ultimately vetoed. Mr. Oestreicher expressed his concern with information about SB71 that AHIP disseminated to state insurance regulators at the Summer National Meeting. He requested that the Subgroup allow him and Ms. Bartlett to provide a response to the AHIP information during a future Subgroup meeting. The Subgroup took Mr. Oestreicher’s request under advisement.

Ms. Seip asked Ms. Gassaway to clarify whether rebates were available only for brand name drugs. Ms. Gassaway confirmed that rebates are, for the most part, limited to brand name drugs. Ms. Seip asked about limiting the length of a drug manufacturer’s drug patent, extensions and evergreening that could have any impact on costs. Ms. Gassaway said there has been debate in the U.S. Congress (Congress) on this issue.

Having no further business, the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup adjourned.

Senior Issues (B) Task Force
Austin, Texas
December 7, 2019

The Senior Issues (B) Task Force met in Austin, TX, Dec. 7, 2019. The following Task Force members participated: Lori K. Wing-Heier, Chair (AK); Marlene Caride, Vice Chair (NJ); Jim L. Ridling represented by Steven Ostlund (AL); Allen W. Kerr represented by Bill Lacy (AR); Andrew N. Mais represented by Paul Lombardo (CT); Trinidad Navarro represented by Fleur McKendell (DE); David Altmaier represented by James Dunn (FL); John F. King (GA); Colin M. Hayashida represented by Kathleen Nakasone (HI); Doug Ommen represented by Andria Seip (IA); Dean L. Cameron represented by Wes Trexler (ID); Robert H. Muriel represented by Mike Chrysler (IL); Stephen W. Robertson represented by Alex Peck (IN); Vicki Schmidt (KS); James J. Donelon represented by Ron Henderson (LA); Gary Anderson represented by Kevin Beagan (MA); Al Redmer Jr. represented by Paula Keen (MD); Eric A. Cioppa represented by Marti Hooper (ME); Anita G. Fox represented by Kevin Dyke (MI); Steve Kelley represented by Grace Arnold (MN); Chlora Lindley-Myers represented by Angela Nelson (MO); Mike Chaney represented by Daniel Bradshaw (MS); Mike Causey represented by Ted Hamby (NC); Jon Godfread represented by Chrystal Bartuska (ND); Bruce R. Ramge represented by Martin Swanson (NE); John G. Franchini represented by Margaret Pena (NM); Barbara D. Richardson represented by Dave Cassetty (NV); Jillian Froment represented by Laura Miller (OH); Glen Mulready represented by Ron Kreiter (OK); Andrew Stolfi represented by Tashia Sizemore (OR); Jessica Altman (PA); Larry Deiter represented by Jill Kruger (SD); Hodgen Mainda represented by Brian Hoffmeister (TN); Kent Sullivan represented by Raja Malkani (TX); Todd E. Kiser represented by Shelley Wiseman (UT); Scott A. White represented by Julie Blauvelt (VA); Mike Kreidler represented by Mike Bryant (WA); Mark Afable represented by Jennifer Stegall (WI); and James A. Dodrill represented by Ellen Potter (WV).

1. Adopted its Oct. 16, Sept. 24 and Summer National Meeting Minutes

Mr. Ostlund made a motion, seconded by Commissioner Caride, to adopt the Task Force’s Oct. 16 (Attachment One), Sept. 24 (Attachment Two) and Aug. 3 (see NAIC Proceedings – Summer 2019, Senior Issues (B) Task Force) minutes. The motion passed.

2. Heard a Federal Legislative Update

David Torian (NAIC) provided an update on federal funding for the State Health Insurance Assistance Program (SHIP) and informed the Task Force about a draft legislative proposal by U.S. Sen. Pat Toomey (R-PA) based on one of the policy option recommendations adopted by the Task Force. Mr. Torian said the draft legislation would allow for retirement account dollars to be used to buy long-term care insurance (LTCI) so families can better plan for long-term services and supports (LTSS) needs. Mr. Torian said Sen. Toomey’s office would be happy to receive recommendations and comments to the draft proposal from Task Force members and stakeholders.

3. Discussed Other Matters

Bonnie Burns (California Health Advocates—CHA) discussed conflicts between Medicare, the Consolidated Omnibus Budget Reconciliation Act of 1986 (COBRA) and the Coordination of Benefits Model Regulation (#120) (Attachment Three).

Ms. Burns pointed out that too many workers do not know that they must enroll in Medicare even if they are continuing to work past the age 65. She said these conflicts have left some Medicare-eligible individuals subject to Medicare premium penalties and delays in coverage, mistakes in benefit payment and claims for recovery of mistakenly paid COBRA benefits.

Ms. Burns cited an example of a woman receiving a demand from her COBRA carrier for repayment of $150,000 for health care expenses the carrier had paid after she stopped working. The carrier alleged that while she was still working, she became eligible for Medicare on her 65th birthday and should have enrolled for Medicare benefits. The carrier alleged that Medicare should have been her primary health coverage once she stopped working and COBRA should have paid secondary benefits, not the $150,000 the carrier had paid for primary coverage. This demand for repayment of primary benefits was based on her eligibility to enroll in Medicare or “implied coverage.”

Director Wing-Heier asked Ms. Burns what the path would be for the state insurance regulator in this matter, as it seems that this an issue at the federal level. Ms. Burns replied that insurers follow Model #120, noting that the language in the model needs to be made clearer.

© 2019 National Association of Insurance Commissioners
Ms. Nelson said not all states have adopted the newest version of Model #120, noting that she shares Director Wing-Heier’s sentiment that this may be more of a federal matter.

Ms. Sizemore said Oregon is having trouble with this issue, noting that insurers cannot assume people are on Medicare; they must know and ask.

Director Wing-Heier said each state should check its own laws and suggested the Task Force look at this matter in the new year.

Having no further business, the Senior Issues (B) Task Force adjourned.
The Senior Issues (B) Task Force conducted an e-vote that concluded on Oct. 16, 2019. The following Task Force members participated: Lori K. Wing-Heier, Chair (AK); Marlene Caride, Vice Chair (NJ); Jim L. Ridling represented by Steve Ostlund (AL); Allen W. Kerr (AR); Michael Conway (CO); Andrew N. Mais represented by Paul Lombardo (CT); Trinidad Navarro represented by Susan Jennette (DE); David Altmaier (FL); John F. King (GA); Doug Ommen represented by Andria Seip (IA); Dean Cameron represented by Kathy McGill (ID); Vicki Schmidt represented by Julie Holmes (KS); James J. Donelon represented by Ron Henderson (LA); Al Redmer Jr. represented by Joy Hatchette (MD); Eric A. Cioppa represented by Marti Hooper (ME); Anita G. Fox represented by Karen Dennis (MI); Steve Kelley represented by Melinda Domzalski-Hansen (MN); Chlora Lindley-Myers (MO); Mike Causey represented by Ted Hamby (NC); Jon Godfread represented by Chrystal Bartuska (ND); Bruce R. Ramge represented by Martin Swanson (NE); Barbara D. Richardson (NV); Jillian Froment represented by Laura Miller (OH); Glen Mulready represented by Andrew Schallhorn (OK); Andrew Stolfi represented by Gayle Woods (OR); Jessica Altman represented by Michael Humphreys (PA); Larry Deiter represented by Jill Kruger (SD); Kent Sullivan represented by Doug Danzeiser (TX); Todd E. Kiser (UT); Scott A. White (VA); Mike Kreidler represented by Michael Bryant (WA); Mark Afable represented by Jennifer Stegall (WI); and Jeff Rude (WY).

1. **Adopted a Letter to CMS Regarding its New Medicare Plan Finder**

The Task Force conducted an e-vote to consider the adoption of a letter from the Task Force to the federal Centers for Medicare & Medicaid Services (CMS) regarding concerns with CMS’ new Medicare Plan Finder.

Having no further business, the Senior Issues (B) Task Force adjourned.
October 16, 2019

Hon. Seema Verma -- Administrator
Centers for Medicare and Medicaid Services
Department of Health & Human Services
200 Independence Avenue SW
Washington, D.C. 20201

Dear Administrator Verma:

The membership of the National Association of Insurance Commissioners’ (NAIC) Senior Issues Task Force (SITF) write to support the concerns expressed by state regulators, consumer advocacy groups and industry representatives regarding the new Medicare Plan Finder (Finder).

For many people with Medicare, evaluating health care and prescription drug coverage options can be a daunting task. While the Finder can be a helpful tool, this new updated version raises problems. The SITF shares many of the concerns expressed by many interested parties that this new Finder has serious inaccuracies and errors that have the potential to affect consumers, carriers and state insurance regulators.

Some examples of concerns, errors and omissions are:

- There is no Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) notice with respect to newly eligible beneficiaries on individual Medigap Plan C, Plan F and Plan High Deductible F.

- The cost comparison between Medicare Advantage (MA) and Medicare with a Medigap plan does not capture out of pocket costs – only premiums. This gives the false sense that Medigap is much more expensive overall than an MA plan.

- The total yearly estimated cost for Original Medicare and a Medigap Plan (particularly Plan F) is unreasonably high.

- The description of the Medicare Savings Program (MSP) is inaccurate since not every MSP pays for cost-sharing, which the description implies.

- General searches will not save prescription drug entries, so repeated entries will be required as needed when not doing a personalized search.
The new Finder should allow users to sort drug plans by the “total drug and premium cost” for the plan year, as was possible with the previous version of the Finder.

The drug plan summary lists the costs for mail order pharmacies but there is no ability to compare the mail order and retail cost of a drug, as was possible with the previous version of the Finder.

The new Finder should add formulary information in the summary view and the ability to sort or filter plans according to this data point.

There is no longer an option for selecting that a person gets a drug once per year, which is a common scenario for people with Medicare, as was possible with the previous version of the Finder.

The Drug Cost information section should include a monthly cost chart, including the bar graph, which includes premiums and out-of-pocket expenses, as was possible with the previous version of the Finder.

We also encourage CMS to work with the NAIC on some of the functionality issues with the Finder when CMS updates the Finder for next year. Some of the concerns include not allowing for general searches to be saved without the creation of an account and not including an email option for consumers to view and review their comparisons, rather than the current cumbersome print option. This email option was available on the previous version of the Finder.

Coming out with a new Finder on the heels of open enrollment that has errors and omissions may discourage Medicare beneficiaries from taking advantage of reviewing their drug/medical plans. We encourage you to carefully and seriously review the concerns expressed in this letter and in the letters already sent to CMS by concerned parties and make the necessary corrections, edits and changes so that the Finder can be the truly useful tool for consumers as intended.

Sincerely,

Lori K. Wing-Heier
Chair, Senior Issues (B) Task Force
Director, Alaska Division of Insurance

Also participating was: Martin Wojcik (NY).

1. Discussed a Technical Change to Model #642

   David Torian (NAIC) announced a technical change to the Limited Long-Term Care Insurance Model Act (#642). Mr. Torian said Section 6B(3) references Section 6C(1) and Section 6C(2) but should actually reference Section 6B(1) and Section 6B(2). He said Section 6B(4) twice references Section 6C(2) but should actually reference Section 6B(2).

2. Adopted its 2020 Proposed Charges

   Director Wing-Heier asked if anyone had any comments to the Task Force’s 2020 proposed charges. None were heard.

   Director Lindley-Myers made a motion, seconded by Mr. Swanson, to adopt the Task Force’s 2020 proposed charges (Attachment Two-A). The motion passed.

Having no further business, the Senior Issues (B) Task Force adjourned.
2020 PROPOSED CHARGES

SENIOR ISSUES (B) TASK FORCE

The mission of the Senior Issues (B) Task Force is to: 1) consider policy issues; 2) develop appropriate regulatory standards; and 3) revise, as necessary, the NAIC models, consumer guides and training material on Medicare supplement insurance, long-term care insurance, senior counseling programs and other insurance issues that affect older Americans.

Ongoing Support of NAIC Programs, Products or Services

1. The Senior Issues (B) Task Force will:
   A. Develop appropriate regulatory standards and revisions, as necessary, to the NAIC models, consumer guides and training material on Medicare supplement insurance, senior counseling programs and other insurance issues that affect older Americans. Work with federal agencies to advance appropriate regulatory standards for Medicare supplement and other forms of health insurance applicable to older Americans. Review the Medicare Supplement Insurance Minimum Standards Model Act (#650) and the Medicare Supplement Insurance Minimum Standards Regulation (#651) to determine if amendments are required based on changes to federal law. Work with the U.S. Centers for Medicare & Medicaid Services (CMS) to revise the annual joint publication, Choosing a Medigap Policy: A Guide to Health Insurance for People with Medicare.
   B. Monitor the Medicare Advantage and Medicare Part D marketplace. Assist the states, as necessary, with regulatory issues; maintain a dialogue and coordinate with CMS on regulatory issues, including solvency oversight of waived plans and agent misconduct. Assist the states and serve as a clearinghouse for information on Medicare Advantage plan activity.
   C. Provide the perspective of state insurance regulators to the U.S. Congress, as appropriate, and CMS on insurance issues, including those concerning the effect and result of federal activity on the senior citizen health insurance marketplace and regulatory scheme. Review and monitor state and federal relations with respect to senior health care initiatives and other impacts on the states.
   D. Monitor developments concerning the State Health Insurance Assistance Programs (SHIPs), including information on legislation impacting the funding of SHIPs. Provide assistance to the states with issues relating to SHIPs and support a strong partnership between SHIPs and CMS. Provide the perspective of state insurance regulators to federal officials, as appropriate, on issues concerning SHIPs.
   E. Monitor, maintain and review, in accordance with changes to Model #651, a record of state approvals of all Medicare supplement insurance new or innovative benefits for use by state insurance regulators and others. Review state-approved new or innovative benefits and consider whether to recommend that they be made part of standard benefit plan designs in Model #651.
   F. Develop appropriate regulatory standards and revisions, as necessary, to the NAIC models, consumer guides and training material on long-term care insurance (LTCI), including the study and evaluation of evolving LTCI product design, rating, suitability and other related factors. Review the existing Long-Term Care Insurance Model Act (#640), the Long-Term Care Insurance Model Regulation (#641), the Limited Long-Term Care Insurance Model Act (#642) and the Limited Long-Term Care Insurance Model Regulation (#643) to determine their flexibility to remain compatible with the evolving delivery of long-term care services and remain compatible with the evolving LTCI marketplace. Work with federal agencies as appropriate.
   G. Examine examples of health-related financial exploitation of seniors and work with other NAIC committees, task forces and working groups on possible solutions.

NAIC Support Staff: David Torian
Medicare, COBRA and Implied Coverage: A False Equivalency

Conflicts between Medicare and COBRA rules have led to confusion about which system, and which set of rules governs eligibility for coverage and how responsibility for payment of health care benefits for eligible individuals is determined. These conflicts have left some Medicare eligible individuals subject to Medicare premium penalties and delays in coverage, mistakes in benefit payment, and claims for recovery of mistakenly paid COBRA benefits.

Example: Mary Smith received a demand from her COBRA carrier for repayment of $150,000 for health care expenses the carrier had paid after she stopped working. The carrier alleged that while she was still working she became eligible for Medicare on her 65 birthday and should have enrolled for Medicare benefits. The carrier alleged that Medicare should have been her primary health coverage once she stopped working and COBRA should have paid secondary benefits, not the $150,000 the carrier had paid for primary coverage.

This demand for repayment of primary benefits was based on her eligibility to enroll in Medicare or “implied coverage.” Several recovery actions like this one have been reported to a California advocacy program, and the number of these actions has been steadily increasing over the last several years as more people continue working past their 65th birthday when they first become eligible for Medicare.

This paper discusses current conflicts in federal enrollment rules, and the quandary faced by individuals who fall into this quagmire of conflicts.

Implied Coverage and Recovery of Paid Benefits

COBRA, the Consolidated Omnibus Budget Reconciliation Act of 1996, prohibits carriers from refusing or terminating coverage on the basis that an individual is eligible for Medicare as long as enrollment for benefits occurred prior to their COBRA coverage. If enrollment occurs after COBRA has begun COBRA can be terminated.

Implied coverage is a concept that insurers and health plans are using to recoup primary payment of health care expenses from former employees who were eligible for Medicare but not yet enrolled in Medicare. However, being eligible for Medicare does not constitute having activated those benefits. And, a Medicare eligible individual is not compelled to enroll in Medicare when eligible to do so. In fact, a Medicare eligible individual working for an employer that is subject to Medicare’s Secondary Payer rules is protected from application of late enrollment premium penalties while employed and during an 8-month window of eligibility following separation from employment.

Background

Medicare eligibility begins at age 65 unless a person qualifies for benefits earlier as a result of a disabling physical or medical condition. And, for decades, Social Security eligibility for full retirement benefits also began at age 65. However, beginning in 1983, the age of eligibility for full Social Security retirement benefits has increased by two months each year and will end at age 67 in the year 2027. As a result, the ages of eligibility for Medicare and full Social Security retirement benefits no
longer match. While an individual can enroll for early reduced Social Security retirement benefits at age 62, they will not be eligible to enroll in Medicare until age 65.

Because of the disconnect between the age of eligibility for Medicare and the age of eligibility for full Social Security retirement benefits an employed person turning 65 often has no knowledge about when or why to sign up for Medicare. Many employees pass their 65th birthday without even knowing they are eligible for Medicare benefits before they are eligible for full Social Security benefits.

Even when an employed individual knows they are eligible for Medicare there is no reason to sign up since they have employer health benefits. Signing up for Medicare benefits while working would require payment of an additional premium and Medicare would only provide secondary coverage to their employer benefits.

**Transitioning to COBRA**

Medicare Secondary Payer rules prohibit employers from treating a Medicare eligible employee differently than other employees in regard to group health benefits or continued employment at age 65. Under federal law an employer group health plan is primary to Medicare when the employer has 20 or more employees and a Medicare eligible individual is 65 or older (100 or more employees when the Medicare eligible individual is eligible for Medicare due to a disabling condition). When an individual has permanent kidney failure known as ESRD an employer plan of any size is required to be primary during a 30-month coordination of benefit period.

The Department of Labor’s Model COBRA Notice does not mention Medicare eligibility, Medicare eligibility or enrollment, or any effect that Medicare has on COBRA benefits in regard to primary and secondary coverage. Employer HR personnel rarely understand the interaction between Medicare and COBRA, and are often only aware of the requirement to pay primary benefits when a Medicare beneficiary has permanent kidney failure (ESRD) and is enrolled for Medicare benefits. Neither Medicare nor Social Security notifies a person when they become eligible for Medicare benefits at age 65.

When a Medicare eligible individual transitions into COBRA coverage, their health care benefits are generally the same as when they were employed. While these former employees have to pay the full premium plus an administrative fee for their COBRA benefits, the only coverage change they are aware of is an increase in their premium payment. Often they don’t know that they will no longer meet the federal requirement of active employment for primary coverage of their former employer’s health benefits, or that if they aren’t already enrolled in Medicare that they must enroll now and activate that primary coverage.

**Enrollment Rules**

There is no Medicare premium penalty imposed for delayed enrollment while an eligible individual is actively employed and covered by a group health plan. Once active employment ends however the former employee has an eight month special enrollment window to sign up for Medicare Part B without incurring a late enrollment premium penalty, and 60 days to sign up for Part D unless COBRA coverage provides equivalent prescription drug coverage as the Medicare benefit. After this Part B special enrollment window closes an annual late enrollment premium penalty begins to accrue and the window to enroll shrinks to an annual 3-month period, January thru March. Benefits are delayed until July of the same year of enrollment.

Since most Medicare beneficiaries are eligible for premium free Medicare Part A no delayed enrollment penalty for that part of Medicare is imposed. There is no late enrollment penalty for Part D as long as current coverage provides equivalent prescription drug coverage as the Medicare benefit.

**Order of Payment Rules**

---

5. Federal law does not impose a late enrollment penalty Medicare Part B when an eligible individual is “actively employed” under the IRS definition, regardless of the size of the employer, or into Medicare Part D when employer sponsored insurance is providing Medicare equivalent prescription drug benefits.

6. Approximately 35% of employers offer a Medical Savings Account (MSA). A Medicare eligible individual could face tax penalties if they sign up for Medicare and continue contributions to their MSA.
The National Association of Insurance Commissioners (NAIC) Coordination of Benefits (COB) Model Regulation explains the order of health insurance benefits payments when an individual or a covered spouse or dependent is or could be eligible for health benefits under more than one health benefit plan. Federal Medicare Secondary Payer rules do not require employer health plans to pay primary benefits when an employer has fewer than 20 employees (or fewer than 100 employees in the case of a disabling condition).

The NAIC Model Regulation prohibits insurers from reducing benefits when an individual is covered or could have been covered under another health benefit plan, except in certain very restricted circumstances. One of those restricted circumstances, amended into the Model in 1984-85, is in regard to Medicare Part B benefits.7

The NAIC language allows insurers to reduce health plan benefits when a Medicare eligible individual “is or could have been” covered by Medicare Part B. There is no mention of Medicare Part A, nor any explanation for this one very focused exception. Most states have adopted the NAIC Coordination of Benefits Model Law language or similar language.

**Application of Implied Coverage**

There are currently three situations in which insurers have applied this concept of implied coverage.

- The first is when a Medicare eligible individual is eligible for COBRA coverage following a qualified event.8
- The second is when a Medicare eligible employee is covered under the health plan of an employer with fewer than 20 employees (or fewer than 100 when the Medicare eligible individual has a disability).
- The third is when a former employee is covered by the health benefits of an employer or union plan and becomes eligible for Medicare years later.

In each of these three situations the Medicare Secondary Payer (MSP) rules do not require the employer’s health plan to provide primary payment of benefits, and the NAIC COB Model allows secondary payment.9

**COBRA Coverage vs Medicare**

COBRA provides continuation of employer or union health benefits upon separation from employment. When a covered employee transitions to COBRA they are no longer actively employed under federal law. If a former employee is also enrolled for Medicare benefits Medicare would become primary coverage. COBRA or employer or union group coverage would be secondary coverage under current rules.

A problem arises when a Medicare eligible individual does not understand the need to enroll for Medicare, and the COBRA carrier does not know the individual’s Medicare status.

In this situation a Medicare eligible individual loses or leaves employment and is covered by COBRA. Prior to leaving employment the Medicare eligible individual did not enroll in Medicare and relied solely on the employer plan health benefits. The individual transitions to COBRA and continues to ignore eligibility for Medicare since the employer’s health plan benefits haven’t changed under COBRA and the individual is paying the full premium.

In a variation of this situation a Medicare eligible individual while actively employed may have accepted Medicare Part A because this part of Medicare doesn’t require any premium payment, but declined Part B and Part D because both require additional monthly premium payments and appear to duplicate the employer’s existing health benefits.

---

7 See: https://www.naic.org/store/free/MDL-120.pdf
9 None of these situations apply when an individual is eligible for Medicare due to permanent kidney failure (End Stage Renal Disease)
benefits. The individual then transitions to COBRA and continues to ignore eligibility for Medicare because they have no information regarding the consequences of that decision.

The COBRA notice does not alert the recipient to the need for Medicare, nor does it warn the Medicare eligible individual that any problems will result due to their eligibility for Medicare. More importantly the COBRA notice fails to inform the individual of the consequences of not enrolling in Medicare. These consequences include late enrollment premium penalties, delayed coverage, and the potential financial danger of future recovery actions by the COBRA carrier. There also is no notice from Medicare or Social Security that would alert a Medicare eligible beneficiary of the need to enroll for Medicare benefits or the consequences of not doing so.

In both of the situations described above the individual no longer meets the requirement of active employment once they transition to COBRA. At some point, if the COBRA carrier has paid primary benefits and later discovers an individual’s potential availability of Medicare benefits it may begin a recovery action for any COBRA benefits paid as primary benefits.

Small Employers With Less Than 20 Employees (or 100 if the Medicare eligible individual has a disability):

In this situation a Medicare eligible individual is covered by an employer group health plan and the employer plan has fewer than 20 or 100 employees. Medicare Secondary Payer rules do not require the health plan to pay primary benefits, and Medicare is primary if a beneficiary is enrolled for Medicare benefits.

Some health insurers have attempted recovery of benefit payments from Medicare eligible individuals who work for these small employers but who have NOT enrolled for Medicare benefits and instead use the employer plan as their primary health benefits.

Large Employer or Union Plans for Retirees:

In this situation former employees who are not yet Medicare eligible when they retire are covered by an employer or union retiree health plan. Later, when they become eligible for Medicare, often years after leaving employment, they may not know about the need to enroll in Medicare, and the plan administrator may not know when a member becomes eligible for Medicare and be able to advise them.

While plan documents may contain information related to Medicare eligibility the plan member may have no formal notice about when they become eligible for Medicare or understand the steps they must take as a result.

Plan administrators often do not have information to give plan members at the time they become eligible for Medicare. A review or an audit of the plan, or a change in the third party administrator may prompt a recovery action when the former employee has not enrolled in Medicare when eligible to do so.

Implied Coverage

The theory of implied coverage creates a “phantom benefit” that exposes Medicare eligible individuals to aggressive collection efforts by insurers and COBRA carriers. recovery action by insurers and COBRA carriers disregards federal criteria that eligibility does not constitute enrollment for Medicare when a Medicare eligible individual is eligible for Medicare but has not yet enrolled for benefits. Federal law clearly states: “A qualified beneficiary becomes entitled to Medicare benefits upon the effective date of enrollment in either part A or B, whichever occurs earlier. Thus, merely being entitled to enroll in Medicare does not constitute being entitled to Medicare benefits” (emphasis added).

If a Medicare eligible employee did not enroll in either Part A or Part B prior to applying for COBRA under current law the individual’s COBRA coverage cannot be terminated. However, in current practice, if a Medicare eligible individual leaves

---

10 Has contributed the appropriate number of quarters to qualify for Social Security benefits and Medicare, or is eligible to pay some or all of the Medicare Part A premium and/or Medicare Part B premium
11 https://www.law.cornell.edu/cfr/text/26/54.4980B-7
employment without enrolling in either part of Medicare a COBRA carrier may insist that they enroll in that program to obtain primary coverage. If a Medicare eligible individual complies and does enroll while receiving COBRA benefits the COBRA carrier can terminate coverage on the basis that their enrollment occurred after their COBRA coverage was effective. This is a conflict that sets up a catch 22 for Medicare eligible employees and it must be resolved.

**Recommended Actions**

Conflicts between eligibility for Medicare and COBRA are certain to increase as more people work past the age of 65. The Bureau of Labor statistics show that the number of employed seniors today is the highest it’s been in 55 years. The Bureau estimates that 36 percent of 65- to 69-year-olds will be active participants in the labor market by 2024.12 Employers and COBRA carriers are unlikely to be prepared for the conflicts in coverage that are certain to accompany a growing number of Medicare eligible employees having employer coverage or transitioning to COBRA. As evidence of this trend, the California state health insurance counseling program HICAP (one of the federally funded SHIPs) has had an influx of clients with demands from COBRA carriers or insurance companies for repayment of primary benefits.13

Information about interaction between COBRA and Medicare coverage is non-existent from federal sources such as the Department of Labor (DOL) and the Centers for Medicare and Medicaid Services (CMS). While one can readily find information about eligibility criteria for COBRA or Medicare, nothing about the relationship between the two health benefit programs is available.

Recovery actions based simply on presumed coverage for Medicare without the requisite enrollment for benefits could potentially be the subject of legal action against the carrier or an insurer given the employer’s and the COBRA carrier’s failure to inform employees about the conflict between Medicare and COBRA, as well as any potential legal liability for recovery of the primary benefits paid by the COBRA carrier.

State regulators play an important role in balancing the needs of consumers with the financial oversight of insurance companies, enforcing consumer protections, and setting and enforcing regulatory rules that ensure fairness in the marketplace. There are a number of actions state regulators and federal governmental agencies should take to help employers and insurers accurately and fairly administer the benefits of overlapping health benefit programs.

The Department of Labor (DOL) should prohibit the application of implied coverage if a Medicare eligible individual has failed to enroll in Medicare, and prohibit recovery actions based on failure to enroll in Medicare. DOL should revise the Model COBRA Notice to ensure that all of the pertinent information and the dangers of interaction between Medicare and COBRA are clearly described to all COBRA applicants.

The DOL should review ERISA notification requirement to ensure that employers are meeting their responsibilities to accurately and timely notify employees and their dependents of any requirements and conflicts in regard to the relationship and coordination of overlapping health benefits.

The Centers for Medicare and Medicaid Services (CMS) should develop a Special Enrollment Period (SEP) with equitable relief for Medicare eligible individuals caught in this conflict. CMS should revise all their Medicare information and publications to reflect issues related to COBRA. Medicare eligible individuals need to understand how COBRA and Medicare benefits interact and conflict, as well as the consequences of not enrolling for Medicare benefits when eligible for COBRA. CMS should work with the state SHIPs to ensure their understanding of these issues when counseling Medicare beneficiaries who leave employment.

The National Association of Insurance Commissioners (NAIC) should revise the current language in the Association’s Coordination of Benefits Model Regulation. There is no justification for that language that penalizes people with Medicare who take advantage of COBRA protection. The current language expressly prohibits insurers from taking into consideration other coverage when determining coverage or denying a claim, and it prevents

---

13 The Health Insurance Counseling Program (HICAP) California HICAP is part of a national network of State Health Insurance and Assistance Programs (SHIP). SHIP is a Federal grant program that helps States enhance and support a network of local programs, staff, and volunteers. The Centers for Medicare and Medicaid (CMS) administers the SHIP grant programs nationally.
insurers from refusing to pay or reducing benefits based on the availability of other coverage, except when that other coverage is Medicare Part B coverage.

The NAIC should ensure that issuers provide accurate information about coordination of health insurance benefits between Medicare, COBRA, and employer sponsored health plans, and that companies fairly administer overlapping benefits.

The NAIC Senior Issues Task Force should develop a compliance notice for insurance companies and agents and an educational notice for consumers. Both notices should accurately explain the relationship of COBRA coverage to Medicare and the difference between being eligible for Medicare and being enrolled for benefits.

State insurance regulators should examine their laws and regulations to ensure that insurers and COBRA carriers are in compliance with all state and federal laws and regulations, and that Medicare eligible individuals are not subjected to unfair recovery actions.

Additional Information

COBRA Q and A

§ 54.4980B-7 Duration of COBRA continuation coverage. 14

The following questions-and-answers address the duration of COBRA continuation coverage:

Q-3: When may a plan terminate a qualified beneficiary's COBRA continuation coverage due to the qualified beneficiary's entitlement to Medicare benefits?

A-3: (a) If a qualified beneficiary first becomes entitled to Medicare benefits under title XVIII of the Social Security Act (42 U.S.C. 1395-1395ggg) after the date on which COBRA continuation coverage is elected for the qualified beneficiary, then the plan may terminate the qualified beneficiary's COBRA continuation coverage upon the date on which the qualified beneficiary becomes so entitled. By contrast, if a qualified beneficiary first becomes entitled to Medicare benefits on or before the date that COBRA continuation coverage is elected, then the qualified beneficiary's entitlement to Medicare benefits cannot be a basis for terminating the qualified beneficiary's COBRA continuation coverage.

A qualified beneficiary becomes entitled to Medicare benefits upon the effective date of enrollment in either part A or B, whichever occurs earlier. Thus, merely being eligible to enroll in Medicare does not constitute being entitled to Medicare benefits. (Highlight added)

The NAIC Coordination of Benefits Model Regulation (MDL-120)

The NAIC Coordination of Benefits Model Regulation (MDL-120) excludes Medicare Part B with the following language:

Section 5. Use of Model COB Contract Provision

D. A COB provision may not be used that permits a plan to reduce its benefits on the basis that:

(1) Another plan exists and the covered person did not enroll in that plan;

(2) A person is or could have been covered under another plan, except with respect to Part B of Medicare; or

(3) A person has elected an option under another plan providing a lower level of benefits than another option that could have been elected.

14 https://www.law.cornell.edu/cfr/text/26/54.4980B-7

© 2019 National Association of Insurance Commissioners   6
[Author’s Note: Notice that exempting Medicare Part B allows the prohibited practice described in (1), and potentially the prohibited practice described in (3).]

Summary Of Situations Discussed In This Paper:

- Medicare eligible individuals not yet enrolled for benefits under Part A or Part B prior to becoming eligible for COBRA cannot be refused COBRA coverage
- Individuals enrolled in either Medicare Part A or Part B prior to becoming eligible for COBRA cannot be refused COBRA coverage
- Medicare eligible individuals who are eligible for Medicare while working but enroll after becoming eligible for COBRA can be terminated from COBRA coverage
- Medicare eligible individuals actively working for employers of less than 20 employee are not covered by Medicare Secondary Payer rules that require employer health care benefits to be primary to Medicare coverage
- COBRA covered individuals who are eligible for Medicare but not enrolled in Medicare Part A or Part B are penalized under both COBRA and Medicare law
- COBRA benefits and Medicare eligible individuals who are enrolled in either Medicare Part A or Part B are penalized under both COBRA and Medicare law
- Medicare Secondary Payment rules do not require COBRA coverage to be primary to Medicare
- The National Association of Insurance Commissioners (NAIC) Coordination of Benefits Model Regulation establishes the order of payments for health benefits and requires health benefits to be secondary to Medicare, regardless of whether Medicare benefits have been activated.

The Property and Casualty Insurance (C) Committee met in Austin, TX, Dec. 9, 2019. The following Committee members participated: Elizabeth Kelleher Dwyer, Chair, and Matt Gendron (RI); Scott A. White, Vice Chair, and Don Beatty (VA); Jim L. Ridling represented by Sheila Travis (AL); Andrew N. Mais and George Bradner (CT); David Altmair (FL); Robert H. Muriel (IL); James J. Donelson represented by Warren Byrd (LA); Al Redmer Jr. and Robert Baron (MD); Marlene Caride (NJ); John G. Franchini and Anna Krylova (NM); Glen Mulready (OK); Larry Deiter (SD); Mark Afable represented by Rebecca Rebholz (WI); and James A. Dodrill represented by Gregory Elam (WV). Also participating was: Travis Grassel (IA).

1. **Adopted its Nov. 18 Minutes**

The Committee met Nov. 18 and took the following action: 1) adopted its Sept. 10 minutes, which included adoption of its Summer National Meeting minutes and adoption of documents related to the private flood insurance data call; 2) adopted additional documents related to the private flood insurance data call, including making the data publicly available; 3) discussed proposed blanks changes related to private flood insurance; and 4) discussed the upcoming Fall National Meeting.

Commissioner Dieter made a motion, seconded by Commissioner Caride, to adopt the Committee’s Nov. 18 minutes (Attachment One). The motion passed unanimously.

2. **Adopted the Reports of its Task Forces and Working Groups**

Commissioner Altmair made a motion, seconded by Mr. Byrd, to adopt the following task force and working group reports: the Casualty Actuarial and Statistical (C) Task Force; the Surplus Lines (C) Task Force; the Title Insurance (C) Task Force; the Workers’ Compensation (C) Task Force; the Cannabis Insurance (C) Working Group (Attachment Two); the Catastrophe Insurance (C) Working Group (Attachment Three); the Climate Risk and Resilience (C) Working Group (Attachment Four); the Lender-Placed Insurance Model Act (C) Working Group; the Pet Insurance (C) Working Group (Attachment Five); the Terrorism Insurance Implementation (C) Working Group (Attachment Six); and the Transparency and Readability of Consumer Information (C) Working Group. The motion passed unanimously.

3. **Adopted an Extension for Revisions to the Proposed Real Property Lender-Placed Insurance Model Act**

Commissioner Altmair made a motion, seconded by Commissioner Caride, to adopt an extension to the 2020 Spring National Meeting for revisions to the proposed Real Property Lender-Placed Insurance Model Act. The motion passed unanimously.

4. **Adopted its 2020 Charges**

Commissioner Caride made a motion, seconded by Director Dieter, to adopt the Committee’s 2020 charges (Attachment Seven). The motion passed unanimously.

5. **Adopted a Blanks Request Regarding Private Flood Insurance**

Superintendent Dwyer said the Committee discussed during its Nov. 18 conference call proposed revisions to the annual statement to include private flood insurance data. She said the Committee has drafted a proposal to the Blanks (E) Working Group that requests: 1) a new supplement that will separate residential from commercial private flood, as well as capture standalone/endorsement and first dollar/excess policy information for private flood policies; and 2) revisions to the Credit Insurance Experience Exhibit to collect lender-placed flood coverages including a split between first dollar and excess coverages.

Superintendent Dwyer said the proposed annual statement changes would not take effect until 2021, collecting 2020 data. She noted that states are currently in the process of issuing a data call that will collect 2018 private flood data early next year and 2019 data later in 2020.
Commissioner Mais made a motion, seconded by Commissioner Altmaier, to adopt the blanks request related to private flood insurance (Attachment Eight). The motion passed unanimously.

Mr. Bradner said a drafting group established by the Catastrophe Insurance (C) Working Group began working last year on a document to include strategies to encourage the development of the private flood insurance market. He said the drafting group sent its draft to the Catastrophe Insurance (C) Working Group on July 18, and the Working Group received comments through Aug. 22. He said changes were made to the document to reflect the comments received. He said comments were also received from the Reinsurance Association of America (RAA) on Dec. 4 and from the National Association of Mutual Insurance Companies (NAMIC) on Dec. 7.

Mr. Bradner said the document recognizes that the Property and Casualty Insurance (C) Committee has already begun to take steps to enhance the collection of private flood insurance data, including collecting more granular data through the annual statement and the Credit Insurance Experience Exhibit, as well as from the surplus lines market through the Surplus Lines (C) Working Group. He said the document also recognizes that a private flood insurance line will be implemented for the Market Conduct Annual Statement (MCAS). The document presents other considerations for the Property and Casualty Insurance (C) Committee, including:

- Considering ways to incorporate a conforming conditions clause in the form approval process.
- Referring state law conflicts relating to statute of limitations and cancellation/renewal provisions to the Government Relations (EX) Leadership Council to resolve at the federal level.

Mr. Bradner said the majority of the document provides state insurance regulators with concrete actions that can be or have been taken to assist with the development of the burgeoning private insurance market for residential flood insurance. He said the actions are split into several categories, including: 1) legislative and regulatory changes such as supporting private flood insurance legislation and products and tailoring rate and form requirements; 2) consumer information, such as consumer outreach and collecting residential private flood insurance data; and 3) agent and lender actions, such as implementing specific continuing education (CE) requirements for producers and conducting agent and lender education.

Mr. Bradner said the document also includes an appendix that would be more valuable with the addition of more state examples of actions states have taken. He recommended the Committee make the appendix a living document that can be updated on an ongoing basis.

Aaron Brandenburg (NAIC) said RAA had suggested adding the following paragraph to page 19 of the document:

> To avoid unintended consequences policymakers interested in facilitating a private flood insurance market should familiarize themselves with the requirements for residential customers with a federally backed mortgage to purchase flood insurance coverage and with the existing private insurance markets that provide coverage for flood damage, including coverage provided under: (a) commercial policies, (b) residential policies providing coverage in excess of required flood insurance coverage limits, (c) residential policies for those not mandated to purchase flood insurance, and (d) comprehensive auto policies. With such knowledge, legislative and regulatory changes can be tailored to accomplish the policy objectives without adversely impacting existing flood insurance markets.

Ms. Nelson asked if the word “policies” in “comprehensive auto policies” should read “coverages.” Dennis Burke (RAA) agreed with this change.

Mr. Brandenburg said NAMIC suggested adding language to page 21 to read:

> In Florida, the statute requires a 10-day cancellation for non-payment of premium. In Florida, to comply with the flood statute as other than Flexible or Supplement flood insurance, the insurer would have to give at least 45 days.

Commissioner Altmaier said he does not have a problem with this change. Mr. Bradner suggested the word “notice” be added after the phrase “at least 45 days.”

Mr. Brandenburg said RAA recommended moving the placement of a paragraph on page 22 and including a sentence:

> As a result, any flood insurance policy covering such properties is not required to be as broad as the NFIP policy.
Mr. Brandenburg said each of these changes is reflected in the current document before the Committee. Mr. Bradner made a motion, seconded by Commissioner Caride, to accept the edits recommended by the RAA and NAMIC, including the additional edits from Ms. Nelson and Mr. Bradner. The motion was adopted unanimously.

Mr. Bradner made a motion, seconded by Commissioner Caride, to adopt the newly revised Considerations for State Insurance Regulators in Building the Private Flood Insurance Market (Attachment Nine) and keep the appendix as a living document that can be updated with state activities. The motion passed unanimously.

7. Heard a Presentation from SBP on the Work it Does to Promote Resiliency and Mitigation Among Homeowners Pre- and Post-Disaster

Deirdre Manna (Zurich) said Zurich recognizes that flooding affects more people than any other disaster. She said in 2013, Zurich started a flood resilience program to link academic insights to humanitarian efforts and Zurich’s expertise. She said Zurich creates post-event reviews to shift the focus from post-disaster response to community resilience. She said $1 spent in prevention can save $5 in future losses. She said Zurich has conducted 16 post-event catastrophe reviews. In 2020, Zurich will launch a review of the 2017–2018 California wildfires. She said Zurich has collaborated with SBP in educating communities about disasters.

Mark Smith (SBP) explained SBP is a nonprofit founded in St. Bernard Parish, LA, after Hurricane Katrina. SBP has since built 18 homes in eight states and has operations in those states plus Puerto Rico and the Bahamas. He said the best way to help families is to increase resiliency before disasters and improve preparedness.

Mr. Smith said SBP recognizes that disaster survivors have breaking points determined by the amount of time recovery takes, the predictability of the recovery, and the vertical and horizontal resilience of each survivor. He said SBP’s mission is to prevent survivors from reaching their breaking point by shrinking the time between disaster and recovery. He said SBP strives to improve preparedness and provide tools before a disaster occurs. He said SBP’s strategic interventions have to do with building, sharing, preparing, advising and advocating. He said SBP prepares communities by identifying communities at high risk and advises governments about the best use of resources.

Mr. Smith said SBP partners with corporations such as Zurich to obtain additional resources in rebuilding homes. These corporate partnerships allow for the creation of disaster resilience and recovery labs, eLearning modules, government advisory and advocacy activities, and assisting communities with improving their Community Rating System score which can then improve the National Flood Insurance Program (NFIP) rates they receive.

Mr. Smith said SBP would like to partner with the NAIC before disasters to help communities better understand and mitigate risk ahead of disasters and partner after disasters to leverage SBP’s turnkey educational and advocacy materials to help survivors recover more quickly after disasters.

Superintendent Dwyer said Director Raymond G. Farmer (SC) recommended SBP make this presentation, and South Carolina has partnered with SBP.

Mr. Bradner said he co-chairs a statewide long-term recovery task force that helps communities to prepare and recover from disasters and that he would like to work with SBP in identifying resiliency needs. He said his group would like to work with SBP in helping communities improve their Community Rating System scores.

Mr. Smith said SBP often works with nonprofits in recovery programs.

Superintendent Dwyer said the NAIC’s Northeast Zone works on these issues, and she asked Mr. Bradner to leverage SBP in the work the Northeast Zone conducts.

8. Heard a Presentation Regarding Underinsurance Issues from the APCIA and NAMIC

Superintendent Dwyer reminded the Committee that Amy Bach (United Policyholders) spoke to the Committee during the Summer National Meeting about the problem of underinsurance.

Dave Snyder (American Property Casualty Insurance Association—APCIA) said he believes the top unresolved property/casualty (P/C) insurance issue is natural catastrophe risk and resiliency. He commended the NAIC for making this a top priority.
Mr. Snyder agreed with many of Ms. Bach’s points, including that more Americans need to be protected from natural disasters and that many property owners do not have enough coverage on their home. He said 75% of the losses from Hurricane Harvey were uninsured. He stressed property valuation is the responsibility of the property owner working with the insurer. He said the most significant protection gap is with flood damage.

Mr. Snyder said property valuation is difficult and is not the same as market value. He said actual cash value is the standard, but most policies are replacement cost. Insurers often offer extended replacement cost that provides up to an additional 25% in most cases to help address the underinsurance issues. He said this does not help if there are additions such as renovations or significant changes to the home. He said revised building codes also add to reconstruction costs.

Mr. Snyder said most insurers include inflation guard coverage to address increasing materials and labor costs. He said many insurers ask policyholders annually about substantial structural changes. Insurers also conduct insurance-to-value campaigns. He said insurers and policyholders need to work together to establish the correct value. He said balance is the key. Too much coverage creates a moral hazard, and too little coverage creates underinsurance issues.

Mr. Snyder said flooding is the most common disaster in the U.S. and can occur almost anywhere in the country. He said the NFIP has just more than 5 million policyholders. He noted CoreLogic estimates that 29 million homes have moderate to severe risk of flood loss. He said the biggest question for agents is still whether consumers have to buy flood insurance. People think of it as a binary decision; they are either required to purchase flood insurance or they are not. He said it should be stressed that where it rains, it can flood.

Mr. Snyder said the number of nonrenewals has crept up in areas with wildfire losses. He said this happens with other perils until the market is able to recover. He said development is often allowed where it should not be.

In terms of what the industry is doing, Mr. Snyder said the industry is supportive of NFIP Risk Rating 2.0, modernizing policy language, modernizing flood mapping, and the Federal Emergency Management Agency’s (FEMA) “moonshot” goal of doubling flood insurance as well as consumer education. He said 98% of all counties have had a flooding event. He said the APCIA has developed numerous educational materials and state and local mitigation programs.

Mr. Snyder stressed state insurance regulators should allow innovations such as revising anti-rebating laws and allowing parametric insurance. He said state insurance regulators should continue to help to develop the private flood insurance market, such as promoting ideas within the Considerations for State Insurance Regulators in Building the Private Flood Insurance Market.

Cate Paolino (NAMIC) said several inputs can affect underinsurance, including market changes, input challenges and post-catastrophe surge. She said insurers and agents should provide communications regarding how to actively manage risk, including available products such as inflation guard protection options. She said people improve their property, they need to share that information with insurers. Insurers often ask for additional information with a supplemental or renewal questionnaire. She said some individuals elect not to insure-to-value.

Ms. Paolino said rebuilding often costs more after a large catastrophe due to increases in labor, equipment and supplies. This demand surge can sometimes be 30% or higher. She said approximately 14 states have laws that prohibit policy limits from exceeding replaced cost estimates. She noted that over insurance should be avoided, as well as underinsurance.

Ms. Paolino said the industry wishes to work with state insurance regulators in encouraging the growth of the private flood insurance market. She said flood should be distinguished from property with respect to certain property regulations, such as weather-related loss limitations. She said the Build Strong Coalition was formed in 2011 to bring together a diverse group to respond to an increasing number of severe disasters. She said a primary focus of this group has been support of the federal Disaster Recovery Reform Act, which shifts the federal government approach to disaster recovery by incentivizing states to implement resiliency measures before natural disasters. She noted the Act provides monies to states and communities for pre-disaster mitigation measure. She said she would like to see state insurance regulators weigh in on the importance of mitigation efforts, especially improving building codes. NAMIC works with state legislators and others in promoting disaster mitigation and resiliency through a resiliency week.

Mr. Bradner said the International Residential Code (IRC) has upcoming building code changes that lower wind speed requirements because the code looks at historical averages of wind speeds. He is concerned that climate changes are not being considered.
Mr. Snyder said this is a source of concern and that there is opportunity for state insurance regulators to advise others in state
government about building codes and their effectiveness. He said the insurance industry also needs to provide information and
advocacy. He said new houses often are not built to withstand fire.

Mr. Bradner said he has worked with the construction industry on building codes, but state differences and lack of data make it difficult to get consensus. He said data is needed from the insurance industry to understand the effectiveness of mitigation steps.

Mr. Byrd said often repairs cost more to get up to code and that the insurer should have an incentive for the policyholder to take these steps to become a better risk. He wondered whether the insurer would pay some or all of these increased costs. Mr. Snyder said he would follow up on this issue.

Commissioner Mulready said Oklahoma recently experienced record flooding. He said maps have changed in areas where banks communicate with the homeowners that flood insurance is no longer required. He asked if the insurance industry had worked with the American Bankers Association (ABA) on educating consumers about flood risks.

Mr. Snyder said consumers often only consider whether the bank requires them to carry flood coverage. He said this decision-making process needs to change and that it will take work. He said research into communicating risks needs to continue. He said the insurance industry is trying to communicate these risks to policyholders.

Superintendent Dwyer said she also supervises banks in Rhode Island and said there is a lack of understanding by lenders on floods, earthquakes and other perils. She said banks say they are at a competitive disadvantage if they encourage the purchase of additional insurance.

Mr. Grassel said the key is pushing resiliency and mitigation efforts.

Superintendent Dwyer said she finds flood insurance to be difficult to buy if one is not required to purchase it.

Ms. Paolino said she is hopeful the growth of the private flood insurance market will help in the purchase process.

Tom Glassic (Wright National Flood Insurance Company) said it is becoming easier to purchase flood insurance, such as by going to the floodsmart.gov website. He said write-your-own (WYO) companies and FEMA are working to make the flood policy look like other policies.

Mr. Bradner said the states should think about how they can work more closely with the construction industry on mitigation steps, including sharing research conducted by the Insurance Institute for Business & Home Safety (IBHS). He said the states should also work with the construction sector on obtaining data on mitigation efforts.

Superintendent Dwyer said she will ask California to speak at the 2020 Spring National Meeting to discuss its experience with wildfire risks.

9. Heard an Update on Crop Insurance

Dave Miller (U.S. Department of Agriculture—USDA) said the federal crop insurance program was established in 1938. He said the private sector delivers the program through 14 insurance companies through sales, loss adjustment and underwriting. He said the standard reinsurance agreement is provided through the USDA.

Mr. Miller said the USDA works with states to share information about the market behavior and financial stability of the insurers. He said the USDA has worked with individual states recently with companies cancelling policies and leaving gaps in the marketplace. USDA’s compliance office has worked closely with state insurance regulators to deal with sales and rebating issues. He said the federal Crop Insurance Handbook was last updated in 2013 and should be looked at again based on new federal legislation. He also noted the NAIC’s federal relations staff has worked with the USDA as federal legislation arises. He said state data is available on the USDA website.

Tom Zacharias (National Crop Insurance Services—NCIS) said NCIS provides a unique suite of services to the crop insurance industry ranging from actuarial and analytical support to the development of crop loss adjustment standards and industry-wide training for both company staff and industry loss adjusters. He said NCIS is the only entity that fully supports both the state-regulated and federally regulated lines of the crop insurance business.
Dean Strasser (NCIS) noted the federal crop insurance program requires that adjusters be licensed in the state in which they service claims in order to be certified under the Standard Reinsurance Agreement (SRA) between the USDA Risk Management Agency (RMA) and the Approved Insurance Providers (AIPs). However, if a state’s licensing requirements are not crop insurance-specific or the state has no loss adjuster licensing requirements, RMA requires completion of a proficiency program to be certified. (Completing the Crop Adjuster Proficiency Program [CAPP] satisfies this requirement.) Several states that have crop adjuster license requirements do recognize CAPP as meeting their exam requirements for licensure.

Mr. Zacharias said NCIS files loss costs with states. He said crop-hail insurance has about $1 billion in premium, while federal crop insurance premiums are about $10 billion. Preventative planting claims were about $4 billion in 2019.

Director Ramge said it is important to maintain the working relationships with USDA and NCIS when issues arise with crop insurance companies.

Director Deiter said there have not been many issues in crop insurance lately, but he appreciates the presentation.

Superintendent Dwyer said she would like to continue these updates on an annual basis.

10. **Heard an Update on the Auto Insurance Report**

Superintendent Dwyer reported that state insurance regulators are currently reviewing private passenger auto state exhibits created from auto data collected from statistical agents. She said the Committee plans to release the private passenger auto report on its web page in the near future.

Having no further business, the Property and Casualty Insurance (C) Committee adjourned.
The Property and Casualty Insurance (C) Committee met via conference call Nov. 18, 2019. The following Committee members participated: Elizabeth Kelleher Dwyer, Chair (RI); Scott A. White, Vice Chair (VA); Jim L. Ridling (AL); Ricardo Lara represented by Ken Allen (CA); Andrew N. Mais represented by George Bradner (CT); David Altmaier and Robert Lee (FL); James J. Donelon (LA); Marlene Caride represented by Carl Sornson (NJ); John G. Franchini represented by Ashley Hernandez (NM); Glen Mulready (OK); Larry Deiter represented by Jill Kruger (SD); and Mark Afable (WI).

1. Adopted its Sept. 10 Minutes

The Committee met Sept. 10 and took the following action: 1) adopted its Summer National Meeting minutes; and 2) adopted a data call template to collect private flood data.

Commissioner Afable made a motion, seconded by Commissioner Donelon, to adopt the Committee’s Sept. 10 minutes (Attachment One-A). The motion passed unanimously.

2. Adopted Documents Related to the Private Flood Insurance Data Call

Superintendent Dwyer said the Committee adopted a private flood insurance data call template during its Sept. 10 conference call (Attachment One-A1), contingent on changes to make the data elements consistent with the annual financial statement and the Market Conduct Annual Statement (MCAS). She said NAIC staff made those changes, and the template—along with information related to data checks and filing the data—was distributed.

Superintendent Dwyer said one of the main purposes for the data call and subsequent blanks revisions is for state insurance regulators, the industry, consumers and others to have an accurate picture of the private flood insurance market, its growth and who the major carriers are. She noted that for data calls, the states often collect data under their examination laws because the data needs to be kept confidential. She said data within the data call will mirror what will be collected in 2021 on the annual financial statement. Data collected on the annual financial statement will be publicly available, as it normally is. Superintendent Dwyer said the data collected through the data call will be publicly available just as the data collected on the annual financial statement will be. She noted that to implement the data call, NAIC staff will be reaching out to all states asking them to indicate participation through a signed document.

Birny Birnbaum (Center for Economic Justice—CEJ) said the instructions say the data should be reported in a spreadsheet format, but later it lists input requirements referring to comma delimited format, which is a text format. Aaron Brandenburg (NAIC) said the instructions would be clarified.

Don Griffin (American Property Casualty Insurance Association—APCIA) asked why the data call would be public if state insurance regulators could just wait for the annual financial statement data to be submitted.

Superintendent Dwyer said 2020 data on private flood insurance would not be collected on the annual financial statement until 2021. She also said what is currently collected on the annual financial statement does not split residential policies from commercial policies. She said state insurance regulators and others desire to know which companies are writing what sort of policies. She also noted that writers of commercial general liability policies that do not exclude flood coverage cannot be distinguished from companies writing residential flood coverage.

Mr. Griffin said other lines of business, such as workers’ compensation or stop loss products, are not separated between first-dollar and excess.

Mr. Birnbaum said flood insurance data is fundamentally different, as it mixes commercial and residential coverages, noting that it is critical to distinguish primary from excess coverages in order to inform public policy issues. He said state insurance regulators should lead that discussion and they need to have the data to do so. He said the special data call just collects the annual financial statement data at an earlier time.
Commissioner Donelon agreed with and said state insurance regulators need to have residential policies separated from commercial policies in order to inform public policy discussions.

Superintendent Dwyer said state insurance regulators are often asked who is writing what coverages, and currently they cannot answer that.

Commissioner Mulready made a motion, seconded by Commissioner White, to adopt the supplemental documentation related to the private flood data call (Attachment One-B). The motion passed unanimously.

3. Discussed Proposed Blanks Changes Related to Private Flood Insurance

Superintendent Dwyer said the Committee had previously distributed a proposal to collect private flood insurance data through a new annual financial statement supplement that would collect residential and commercial private flood insurance data and through revisions to the Credit Insurance Experience Exhibit (CIEE) that would collect lender-placed flood coverage data. She said comments were received on the proposed changes from the APCIA, the National Association of Mutual Insurers (NAMIC) and the CEJ.

Mr. Lee asked why first-dollar and excess coverages would not be collected within the CIEE. He said the National Flood Insurance Program (NFIP) has a separate program for lender-placed policies.

Mr. Birnbaum said if flood is required and a policyholder is given a force-placed policy, it is on a first-dollar basis, but if a lender requires more than the maximum offered by the NFIP, there would also be force-placed excess coverage. He suggested that should be broken out on the CIEE.

Superintendent Dwyer said a revised version of the CIEE would be distributed prior to the Fall National Meeting, at which time the Committee might consider adoption of the blanks proposal.

Mr. Griffin said he is concerned that collecting first-dollar and excess coverages would require changes to the way companies collect data. He said he understands that state insurance regulators need to understand the market, but it will take a lot of time to report data in this manner. He said he does not see a need to determine primary from excess for lender-placed policies.

Mr. Birnbaum said lender-placed policies are usually written by the same insurer for primary and excess coverages, but this is not necessarily true in the voluntary market. He said there are likely different companies specializing in first-dollar and excess coverages. He said a distinction is needed between first-dollar and excess so that state insurance regulators can see who is writing the policies and whether there is different experience in the policies. He said the distinction between first-dollar and excess is being made on the MCAS and in the surplus lines flood data collection. He also said the blanks process allows companies to have ample time to make changes so they can report the data. He said first-dollar and excess will be written by companies on two different forms, so it should not be that difficult to report the data.

4. Discussed the Fall National Meeting

Superintendent Dwyer said that during the Fall National Meeting, the Committee hopes to consider adoption of a document from the Catastrophe Insurance (C) Working Group that describes steps the states can take to facilitate the growth of the private flood insurance market. She said the Committee will also consider adoption of its 2020 proposed charges. She said the Committee will continue a conversation from the Summer National Meeting on underinsurance by hearing from the APCIA and NAMIC. She said the Committee will also hear from SBP, which is a nonprofit organization that will speak about its mission to prepare citizens prior to and following disasters with mitigation and resilience steps.

Having no further business, the Property and Casualty Insurance (C) Committee adjourned.
The Property and Casualty Insurance (C) Committee met via conference call Sept. 10, 2019. The following Committee members participated: Elizabeth Kelleher Dwyer, Chair (RI); Scott A. White, Vice Chair (VA); Jim L. Ridling (AL); Ricardo Lara represented by Ken Allen (CA); David Altmair (FL); Robert H. Muriel represented by Reid McClintock (IL); James J. Donelon (LA); Marlene Caride represented by Carl Sornson (NJ); John G. Franchini represented by Anna Krylova (NM); Glen Mulready (OK); Larry Deiter represented by Dan Nelson (SD); and James A. Dodrill represented by Jamie Taylor (WV).

1. **Adopted its Summer National Meeting Minutes**

Commissioner Altmaier made a motion, seconded by Mr. Nelson, to adopt the Committee’s Aug. 5 minutes (**see NAIC Proceedings – Summer 2019, Property and Casualty Insurance (C) Committee**). The motion passed unanimously.

2. **Adopted a Data Template for a Private Flood Insurance Data Call**

Superintendent Dwyer said the Committee discussed the possibility of a data call to collect private flood insurance data during its July 18 conference call. She said the Committee has separately discussed collection of private flood data through the annual financial statement blank and that the data collected in each would be as similar as possible. She noted three comment letters were received on the blanks proposal and said those comments would be discussed on a future conference call.

Superintendent Dwyer said state insurance regulators, the Federal Emergency Management Agency (FEMA), the industry and consumers have struggled with defining just how big the private flood market is and how fast it might be growing. Private flood data collected through the annual financial statement does not distinguish between residential and commercial policies. She noted that insurance publications cite the largest writer of private flood insurance as a company that writes large corporations and does not exclude flood from its policies. The company is not issuing standalone residential policies, but this cannot be determined from the data found in the annual financial statement.

Superintendent Dwyer said new data received from a revision to the annual financial statement would not be received until 2021, so a data call would allow that data to be collected sooner. The draft data call proposes five main sections: four sections for residential coverages, including standalone first dollar, standalone excess, endorsements first dollar and endorsements excess; and one section for all commercial policies. Data collected at a state level would include direct written and earned premium, direct losses paid, direct losses case reserves, defense and cost containment paid, defense and cost containment case reserves, number of policies in force at the end of the year, number of claims reported, open claims and closed claims with payment, and percentage of polices written in a special flood hazard area (SFHA). Superintendent Dwyer said the data call would collect 2018 data later this year or early next year and then 2019 data in 2020.

Birny Birnbaum (Center for Economic Justice—CEJ) said the data call should collect 2018 data after the end of 2019. He said the first six data categories track the State Page but not precisely. He recommended using State Page definitions for those data elements. He recommended the number of policies in force be collected at the beginning and end of the year. He said claims information is included in the Market Conduct Annual Statement (MCAS), although this reporting does not start with 2018 data. He said knowing the number of policies in an SFHA is important, but it may not be readily available as companies may not routinely collect it.

Lisa Brown (American Property Casualty Insurance Association—APCIA) said she agrees with Mr. Birnbaum. She noted that some of the data is collected on the MCAS and that data collection might start in 2020 for 2019 data. It was later determined that private flood data would begin to be collected through the MCAS in 2021 for 2020 data.

Superintendent Dwyer asked if companies would have the SFHA data, and Ms. Brown said she would check with members. Mr. Birnbaum said the claims data in the data call should use definitions equivalent to what MCAS uses.
Commissioner White made a motion, seconded by Commissioner Mulready, to adopt the private flood data call template with revisions made during the conference call (Attachment One-A1). The motion passed unanimously.

Having no further business, the Property and Casualty Insurance (C) Committee adjourned.

PRIVATE FLOOD INSURANCE DATA CALL
2018 Data

NAIC Group Code ......................................... NAIC Company Code ......................................

Company Name ..........................................................................................................................
................................................................................................................................................

Part 1 - Interrogatories

Private Flood Insurance Coverage:

1. Does the reporting entity write any stand-alone first-dollar residential private flood
   insurance? Yes [  ] No [  ]
   If yes, complete Part 2

2. Does the reporting entity write any stand-alone excess residential private flood?
   Yes [  ] No [  ]
   If yes, complete Part 3

3. Does the reporting entity write any first-dollar residential private flood provided as an
   endorsement? Yes [  ] No [  ]
   If yes, complete Part 4

4. Does the reporting entity write any excess residential private flood insurance
   provided as an endorsement? Yes [  ] No [  ]
   If yes, complete Part 5

5. Does the reporting entity write any commercial private flood insurance provided as
   either a stand-alone or package policy? (include both first-dollar and excess)
   Yes [  ] No [  ]
   If yes, complete Part 6
### Part 2 – Standalone Residential Private Flood Policies

PRIVATE FLOOD INSURANCE DATA CALL

DATA DEFINITIONS

This data call is intended to provide state regulators with information regarding the size of the private market for flood insurance, particularly as it relates to residential coverage. The size of the private market is of interest due to constraints in federal coverage such as pricing and limits of coverage offered through the National Flood Insurance Program (NFIP), and in order for state regulators, FEMA and the public to understand the growth of the private flood insurance market.

The data call will be split into two parts, in order to collect private flood insurance data for the data years 2018 and 2019. Subsequently, private flood insurance data will be collected through the NAIC Financial Annual Statement beginning in 2021 with 2020 data. The data obtained through the data call will be made available to the public in the same manner that data received through the Annual Statement is available to the public.

Data submitted for the data call should be separated into five exhibits. Exhibits are described in detail below. Report experience for Private Flood regardless of the line of business in the statutory annual statement in which the experience is reported.

PART 1 | Company Information

NAIC Group Code - The NAIC Group code if the carrier is part of a holding company. If not part of a holding company, leave the field blank.

NAIC Company Code - The NAIC Cocode for the reporting company.

Company Name - Legal name of the insurance company.

Contact Name - The company contact person for the purposes of this report. First name, Last name.

Contact E-mail Address - The email address for the company contact included above.

Private Flood Insurance is coverage that insures commercial and residential property against the peril of flood, not offered through the National Flood Insurance Program.

For Residential Policies, Standalone and Endorsements, First Dollar and Excess, please include flood policies covering the following property types:

- Mobile/manufactured homes intended for use as a dwelling
- Individual unit condo coverage
- Single family homes
- Residential structures including four or fewer family units
Exclude:

- NFIP policies
- Private flood written on a surplus lines basis (subject to the separate flood data collection conducted through the IID).
- Lender-placed or creditor-placed policies.

Part 2 | Standalone Residential Private Flood Policies. First Dollar

This Exhibit should include data relative to residential policies sold on a standalone basis for the sole purpose of insuring against losses due to flood. Coverage should be included for first dollar losses, not contingent to NFIP coverage or amounts over and above NFIP policy limits.

Part 3 | Standalone Residential Private Flood Policies. Excess

This Exhibit should include data relative to residential policies sold on a standalone basis for the sole purpose of insuring against losses due to flood. Coverage should be included for amounts over and above NFIP policy limits.

Part 4 | Residential Private Flood Policy Endorsements. First Dollar

This Exhibit should include data relative to residential policies sold as an endorsement for the purpose of insuring against losses due to flood attached to another policy, including but not limited to, homeowners, dwelling or umbrella. This differs from data collected through the Market Conduct Annual Statement as it includes all endorsements in one place. MCAS collects separately on homeowner’s policy endorsements and all other policy endorsements. Coverage should be included for first dollar losses, not contingent to NFIP coverage or amounts over and above NFIP policy limits.

Part 5 | Residential Private Flood Policy Endorsements. Excess

This Exhibit should include data relative to residential policies sold as an endorsement for the purpose of insuring against losses due to flood attached to another policy, including but not limited to, homeowners, dwelling or umbrella. This differs from data collected through the Market Conduct Annual Statement as it includes all endorsements in one place. MCAS collects separately on homeowner’s policy endorsements and all other policy endorsements. Coverage should be included for amounts over and above NFIP policy limits.
For Commercial Policies, Standalone and Endorsements, First Dollar and Excess, please include flood policies covering the following property types:

- Non-residential coverage
- Commercial coverage including, but not limited to:
  - Allied lines
  - Businessowners policies
  - Commercial general liability
  - Condo master policies

Exclude:

- NFIP policies
- Private flood written on a surplus lines basis (subject to the separate flood data collection conducted through the IID).

Part 6 | Commercial Private Flood Policy Endorsement. First Dollar and Excess

This Exhibit should include data relative to commercial policies sold both as stand-alone coverage and as an endorsement to any underlying policy for the purpose of insuring against losses due to flood. This differs from data collected through the Market Conduct Annual Statement as it includes coverage offered under commercial policies. These amounts should include policies offered as first dollar coverage as well as excess to NFIP policy limits.

**EACH EXHIBIT INCLUDES THE FOLLOWING DATA ELEMENTS:**

**Direct Written Premium**

Written premium is defined as the contractually determined amount charged by the reporting entity to the policyholder for the effective period of the contract based on the expectation of risk, policy benefits, and expenses associated with the coverage provided by the terms of the insurance contract.\(^1\) Amounts should be consistent with the amount reported on the NAIC Annual Financial Statement Exhibit of Premiums and Losses. This includes direct premium written during the calendar year specified (2018 for the first reporting year). Premiums reported should be gross, including policy and membership fees, less return premiums and premiums on policies not taken. Premiums may include new and renewal policies. If premium is refunded or additional premium is written during the reporting period (regardless of the applicable policy effective date) the net effect should be reported. Reporting shall not include premiums received from or losses paid to other carriers on account of reinsurance assumed by the reporting carrier, nor, shall any deductions be made by the reporting carrier for premiums added to or for losses recovered from other carriers on account of reinsurance ceded.

---

\(^1\) Statement of Statutory Accounting Principles No. 53. Property Casualty Contracts—Premiums.
Direct Premium Earned

Earned premium may be pro-rated daily or monthly, accounting for the portion of expired premiums under the contract. Additional premiums charged to policyholders for endorsements or changes in coverage under the contract shall be recorded on the effective date and accounted for in a manner consistent with the expiration of the initial premium charged pursuant to the policy contract.\(^2\) Amounts should be consistent with the amount reported on the NAIC Annual Financial Statement Exhibit of Premiums and Losses. This includes direct premium earned during the calendar year specified (2018 for the first reporting year). Premiums reported should be gross, including policy and membership fees, less return premiums and premiums on policies not taken. Reporting shall not include premiums received from or losses paid to other carriers on account of reinsurance assumed by the reporting carrier, nor, shall any deductions be made by the reporting carrier for premiums added to or for losses recovered from other carriers on account of reinsurance ceded.

Direct Losses Paid

Direct losses paid should include losses paid less salvage, not including reserves or unpaid claim amounts. Amounts should be consistent with the amount reported on the NAIC Annual Financial Statement Exhibit of Premiums and Losses. Policies may include per-occurrence or claims-made.

Direct Losses Incurred

Direct losses incurred should include losses incurred during the reporting year, including amounts held in reserve. Amounts should be consistent with the amount reported on the NAIC Annual Financial Statement Exhibit of Premiums and Losses.

Defense and Cost Containment Expense Paid

Defense and cost containment expense paid should include only those amounts actually paid during the reporting year. Amounts should be consistent with the amount reported on the NAIC Annual Financial Statement Exhibit of Premiums and Losses. DCC include defense, litigation, and cost containment expenses, whether internal or external. DCC include, but are not limited to, the following items:

- Surveillance expenses
- Litigation management expenses
- Fees or salaries for appraisers, private investigators, hearing representatives, reinspectors and fraud investigators, if working in defense of a claim;
- Attorney fees incurred owing to a duty to defend, even when other coverage does not exist; and
- The cost of engaging experts\(^3\)

---

\(^3\) Statement of Statutory Accounting Principles No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses

© 2019 National Association of Insurance Commissioners
Defense and Cost Containment Expense Incurred

Defense and cost containment expense incurred should include expenses incurred during the reporting year, including amounts held in reserve. Amounts should be consistent with the amount reported on the NAIC Annual Financial Statement Exhibit of Premiums and Losses. DCC include defense, litigation, and cost containment expenses, whether internal or external. DCC include, but are not limited to, the following items:

- Surveillance expenses
- Litigation management expenses
- Fees or salaries for appraisers, private investigators, hearing representatives, reinspectors and fraud investigators, if working in defense of a claim;
- Attorney fees incurred owing to a duty to defend, even when other coverage does not exist; and
- The cost of engaging experts

Number of Policies In Force (as of 1/1/2018)

Amounts should include a count of policies in effect as of Jan. 1, 2018.

Number of Policies In Force (as of 12/31/2018)

Amounts should include a count of policies in effect as of Dec. 31, 2018.

Number of Claims Open on 1/1/2018

Number of Claims Opened during the Reporting Year

Number of Claims Open on 12/31/2018

---

4 Statement of Statutory Accounting Principles No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses

© 2019 National Association of Insurance Commissioners
Number of Claims Closed with Payment

Amounts should include claims closed with payment where the claim was closed during the reporting period (calendar year 2018) regardless of the date of loss or when the claim was received. For claims where the net payment is $0 due to subrogation recoveries, report the number of claims in which any amount was paid to the insured; do not net the payment with subrogation recoveries when counting the number of paid claims. Please EXCLUDE:

- If a claim is reopened for the sole purpose of refunding the insured’s deductible, do not count it as a paid claim.
- If claims were paid for company loss adjustment expenses and no payment is made to the insured/claimant, do not count it as a paid claim.
- If claims are closed because the amount claimed is below the insured’s deductible, do not count it as a paid claim.
PRIVATE FLOOD INSURANCE DATA CALL

FILING INSTRUCTIONS

Each company that wrote premium for private flood insurance in 2018 should submit THEIR OWN XLSX file through ----.

Files should contain all SIX parts as shown on the data template provided here.

Data elements will be checked upon uploading them to the system. If the file contains errors as described below, the file will be rejected, and errors must be corrected prior to submission.

DATA FORM AND FORMAT AND REASONABILITY CHECKS

The template provided must include six tabs in the following order: Introduction, Part 2, Part 3, Part 4, Part 5, Part 6.

Part 1 should include the following elements.

<table>
<thead>
<tr>
<th>Data Element</th>
<th>Input Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>NAIC Group Code</td>
<td>Numeric (max length = 15 characters)</td>
</tr>
<tr>
<td>NAIC Company Code</td>
<td>Numeric (max length = 5 characters)</td>
</tr>
<tr>
<td>Company Name</td>
<td>Alphanumeric (max length = 100 characters)</td>
</tr>
<tr>
<td>Contact Name</td>
<td>Alphanumeric (max length = 50 characters)</td>
</tr>
<tr>
<td>Contact E-Mail Address</td>
<td>E-mail Address (max length = 75 characters)</td>
</tr>
</tbody>
</table>

Column A of the template should be unaltered and include the full state & District of Columbia in alphabetical order, followed by the territories in alphabetical order and a total on the final row, (row 58).

The 12 data elements listed in row 1 along the top of the spreadsheet should consist of the following data elements.

<table>
<thead>
<tr>
<th>Data Element</th>
<th>Input Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Direct Written Premium</td>
<td>Numeric (comma delimited, max length including commas = 15 characters)</td>
</tr>
<tr>
<td>Direct Premium Earned</td>
<td>Numeric (comma delimited, max length including commas = 15 characters)</td>
</tr>
<tr>
<td>Direct Losses Paid</td>
<td>Numeric (comma delimited, max length including commas = 15 characters)</td>
</tr>
<tr>
<td>Direct Losses Incurred</td>
<td>Numeric (comma delimited, max length including commas = 15 characters)</td>
</tr>
<tr>
<td>Defense and Cost Containment Expense Paid</td>
<td>Numeric (comma delimited, max length including commas = 15 characters)</td>
</tr>
<tr>
<td>Defense and Cost Containment Expense Incurred</td>
<td>Numeric (comma delimited, max length including commas = 15 characters)</td>
</tr>
<tr>
<td>Number of Policies In Force (as of 1/1/2018)</td>
<td>Numeric (comma delimited, max length including commas = 15 characters)</td>
</tr>
<tr>
<td>-------------------------------------------</td>
<td>-------------------------------------------------------------------</td>
</tr>
<tr>
<td>Number of Claims Open on 1/1/2018</td>
<td>Numeric (comma delimited, max length including commas = 15 characters)</td>
</tr>
<tr>
<td>Number of Claims Opened during the Reporting Year</td>
<td>Numeric (comma delimited, max length including commas = 15 characters)</td>
</tr>
<tr>
<td>Number of Claims Open on 12/31/2018</td>
<td>Numeric (comma delimited, max length including commas = 15 characters)</td>
</tr>
<tr>
<td>Number of Claims Closed with Payment</td>
<td>Numeric (comma delimited, max length including commas = 15 characters)</td>
</tr>
</tbody>
</table>

**ANTICIPATED ANALYSIS OF DATA RECEIVED**

1. **Count of insurers offering by state for each covered loss type** (residential, commercial), policy type (standalone, endorsement), and coverage type (first dollar, excess, both).

2. **Total premiums by state and covered loss type/policy type/coverage type = Direct Premium Written and Earned.**

3. **Average Premium** = Direct Premium Written/Number of policies In Force as of 12/31/2018

4. **Loss Ratio by State and Coverage Type** = (Direct Losses Incurred + Defense and Cost Containment Incurred)/Direct Premium Written

5. **Loss Ratio by State and Coverage Type** = (Direct Losses Paid + Defense and Cost Containment Paid)/Direct Premium Earned

6. **Policy growth** = Count of policies in force beginning and end of year by State and Coverage Type.

7. **Loss Severity** = (Losses Paid + DCC Paid)/Number of Policies in Force as of 12/31/2018

8. **Frequency of Losses** = Number of Claims Closed with Payment/Number of Policies in Force as of 12/31/2018

9. **Claim Frequency** = (Number of Claims Open on 12/31/2018 + Number of Claims Opened during the Reporting Year – Number of Claims Open on 1/1/2018)/Number of Policies In Force as of 12/31/2018
Cannabis Insurance (C) Working Group
Conference Call
October 10, 2019

The Cannabis Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met via conference call Oct. 10, 2019. The following Working Group members participated: Ricardo Lara, Chair, represented by Bryant Henley, Camille Dixon and Camilo Pizarro (CA); Michael Conway, Vice Chair, represented by Peg Brown (CO); Joanne Bennett and Austin Childs (AK); Steve Kinion (DE); John Melvin (KY); Robert Baron (MD); Nicole A. Brown and Carl Sornson (NJ); Kelsey Barlow (NV); Cuc Nguyen (OK); Alex Cheng and TK Keen (OR); John Lacek (PA); Matt Gendron (RI); Pat Murray and Christina Rouleau (VT); and Michael Bryant (WA). Also participating were: Vincent Gosz (AZ); Derek Silver (FL); Linda Grant (IN); Jeana Thomas (MO); Anna Krylova (NM); Gerald Scattaglia (NY); and Paige Hansen (TX).

1. Adopted Revisions to its 2020 Proposed Charges

Mr. Henley said revisions were made to the Working Group’s 2020 proposed charges based on feedback from its last conference call and additional changes from Commissioner Lara. The revised 2020 proposed charges are as follows: 1) assess and periodically report on the status of federal legislation that would protect financial institutions from liability associated with providing services to cannabis businesses operating legally under state law; 2) encourage admitted insurers to improve coverage adequacy in the states where cannabis, including hemp, is legal; 3) provide insurance resources to stakeholders and keep up with new products and innovative ideas that may shape insurance in this space; and 4) collect aggregated insurance availability and coverage gap information, as well as other cannabis and hemp insurance-related data to then publicly share the cannabis and hemp insurance-related data in a released report by the end of 2021.

Ms. Brown said she liked the revisions. Mr. Gendron asked if the second charge should include the Working Group capturing information on coverage adequacy, such as the number of insurers writing in a state and what coverages they offer. Ms. Dixon said the Working Group was unsuccessful in its attempts to do this previously when it asked the states to verify similar information collected from the National Cannabis Industry Association (NCIA).

Ms. Brown said Colorado’s recent survey of crop insurers found that there was a significant difference in coverage available for marijuana and hemp. She said large managing general agents (MGAs) are in a better position to negotiate contracts for large vertically integrated operations with large national insurance carriers.

Mr. Keen expressed concern that the second charge presupposed a coverage adequacy problem. Mr. Gendron said this paralleled his earlier concern. Mr. Henley proposed that the word “improve” in the second charge be modified to “ensure.”

Ms. Brown made a motion, seconded by Ms. Bennett, to adopt the charges with the revision to the second charge. The motion passed unanimously.

2. Discussed Memorandum to the Property and Casualty Insurance (C) Committee

Mr. Henley said the memorandum (Attachment Two-A) summarizes the activity of the Working Group and explains the intent of its 2020 proposed charges and future deliverables. There were no comments on the memorandum.

3. Discussed its Next Steps

Anne Obersteadt (NAIC) said the Understanding the Market for Cannabis Insurance white paper will be considered for full adoption by the Executive (EX) Committee and Plenary at the Fall National Meeting.

Aaron Brandenburg (NAIC) said the Property and Casualty Insurance (C) Committee will likely consider the charges of the groups reporting to it for adoption at the Fall National Meeting, with associated materials being posted electronically two weeks prior to the meeting.
4. **Discussed Other Matters**

Mr. Melvin said Kentucky is a hemp-only state and has been receiving blanket exclusions from insurers, particularly in commercial filings. He asked if other states have had similar experiences. Ms. Dixon said California had not.

Mr. Keen asked how many states are hemp-only. Mr. Melvin said there were 14 states according to the National Council on Compensation Insurance (NCCI), most of which were in the southeast portion of the country. Mr. Keen suggested that the best experience comparison would be with other states that are also hemp-only.

Having no further business, the Cannabis Insurance (C) Working Group adjourned.
MEMORANDUM

TO: Superintendent Elizabeth Dwyer (RI)
    Chair of the Property and Casualty Insurance (C) Committee

FROM: Commissioner Ricardo Lara (CA)
    Chair of the Cannabis Insurance (C) Working Group

DATE: 

RE: Update and Proposed 2020 Charges

The Executive (EX) Committee appointed the Cannabis Insurance (C) Working Group during its Aug. 5, 2018, meeting to study insurance issues related to legal cannabis business. Specifically, the Working Group is charged to: “…consider the insurance regulatory issues surrounding the legalized cannabis business, including availability and scope of coverage, workers’ compensation issues, and consumer information and protection. The Working Group will develop a white paper outlining the issues and containing recommendations for the development of regulatory guidance as appropriate. The Working Group will complete its work by first quarter 2020.” This memorandum summarizes the activity of the Working Group and sets forth proposed 2020 charges intended to specify its future deliverables.

Submission of the White Paper to the Committee for Potential Adoption

The primary deliverable of the Cannabis Insurance (C) Working Group is to prepare a White Paper outlining the issues and containing recommendations for the development of regulatory guidance. The Working Group exposed the white paper Understanding the Market for Cannabis Insurance for a 30-day period, ending June 24, on its May 23 conference call. After accounting for all submitted comments, the Working Group unanimously adopted the White Paper on its July 9th conference call. As such, the Working Group submitted the White Paper to the C Committee for approval at the Summer National Meeting. The C Committee unanimously adopted the White Paper on August 5, 2019 at the National meeting in New York. The White Paper will be considered for potential adoption by the Executive (EX) Committee and Plenary during the Fall National Meeting in Texas.

Proposed Working Group Charges for 2020

Given the completion of its charge to develop the Understanding the Market for Cannabis Insurance white paper, the Working Group would like to propose updated charges for 2020.

As such, the following represents proposed changes to the 2020 Charges for the Working Group:

1) Assess and periodically report on the status of federal legislation that would protect financial institutions from liability associated with providing services to cannabis businesses operating legally under state law.

2) Encourage admitted insurers to improve coverage adequacy in states where cannabis, including hemp, is legal.
3) Provide insurance resources to stakeholders, and keep up with new products and innovative ideas that may shape insurance in this space.

4) Collect aggregated insurance availability and coverage gap information, as well as other cannabis and hemp insurance-related data to then publicly share the cannabis and hemp insurance-related data in a released report by the end of 2021.

The Working Group has specified the charges include the evaluation of commercial insurance issues related to hemp. Both hemp and marijuana come from the same cannabis species. Many states are tracking hemp issues in parallel with marijuana issues, as businesses operating in both these spaces face many of the same issues (banking, insurance availability, etc.). Additionally, the Working Group’s proposed charges reflect its intent to examine commercial insurance issues, including commercial auto and workers compensation issues. The Working Group feels issues related to impairment and safety extend beyond just cannabis-related issues and should be undertaken as part of a comprehensive effort under other Working Groups.
Catastrophe Insurance (C) Working Group
Austin, Texas
December 7, 2019

The Catastrophe Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met in Austin, TX, Dec. 7, 2019. The following Working Group members participated: Mike Chaney, Chair (MS); David Altmaier, Vice Chair, represented by Virginia Christy and Susanne Murphy (FL); Jerry Workman (AL); Michael Ricker (AK); George Bradner (CT); Colin M. Hayashida (HI); Judy Mottar (IL); Heather Droge (KS); Warren Byrd (LA); Kevin Beagan (MA); Paula Keen (MD); Fred Fuller (NC); Tom Botsko (OH); Cuc Nguyen (OK); Brian Fordham (OR); Mike McKenney (PA); Beth Vollucci (RI); Joe Cregan (SC); Patrick Merkel (TN); J’ne Byckovski and Mark Worman (TX); John Haworth (WA); and James A. Dodrill (WV). Also participating were: Peg Brown (CO); Travis Grassel (IA); and Scott A. White (VA).

1. **Adopted its Summer National Meeting Minutes**

Commissioner Dodrill made a motion, seconded by Mr. Haworth, to adopt the Working Group’s Aug. 3 minutes (see NAIC Proceedings – Summer 2019, Property and Casualty Insurance (C) Committee, Attachment Two). The motion passed unanimously.

2. **Adopted its Drafting Group Reports**

Mr. Bradner said a drafting group consisting of himself, Mr. Workman, Ms. Nelson and Mr. Byrd has been working on updating the NAIC State Disaster Response Plan. The purpose of the document is to provide a template for a state department of insurance (DOI) to use when assisting consumers following a disaster. The document details how a DOI can work with other agencies, including federal, state or local agencies; the NAIC; and other state DOIs. The NAIC State Disaster Response Plan template provides states needing NAIC assistance following a disaster with high-level action items for a state DOI to do prior to contacting the NAIC, as well as the types of assistance the NAIC can provide to the states.

Mr. Bradner said the document is broken up into several topics, including: 1) preparation steps, as well as important planning considerations following a disaster; 2) important contacts that a DOI should collect on a regular basis; 3) resources required for emergency response; 4) major incident management functions; 5) disaster response teams and their purpose; 6) roles and responsibilities of various staff members following a disaster; 7) example response levels and definitions; and 8) contact templates.

Mr. Bradner said the drafting group would like to send the document to Working Group members and interested state insurance regulators for input. Once the input is received and incorporated, the document can be exposed.

Mr. Bradner made a motion, seconded by Mr. Byrd, to adopt the Working Group’s report and expose the document for a 30-day public comment period.

3. **Heard an Update Regarding Federal Legislation and the NFIP**

Brooke Stringer (NAIC) provided an update regarding federal legislation and the National Flood Insurance Program (NFIP). The NFIP continues to operate on a series of short-term extensions since its reauthorization expired two years ago. Last month, the 14th short-term extension was signed into law as part of a federal government spending bill. This extension continues through Dec. 20. There were 17 extensions over a four year period leading up to the last NFIP reauthorization. Currently, there is not much optimism for a deal on a long-term extension within the next few weeks, and additional short-term extensions are likely.

The last substantive Congressional action was in June when the U.S. House of Representatives (House) Committee on Financial Services approved a five year reauthorization bill (H.R. 3167). This bill included some provisions from the NAIC guiding principles for reauthorization, including ensuring that consumers can leave and return to the NFIP without penalty and receive pro-rata refunds when they cancel an NFIP policy midterm to switch to a private flood insurance policy. However, following the committee markup, lawmakers from coastal states introduced an alternative bill, (H.R. 3872/S. 2187) as they did not believe...
Chairwoman Maxine Waters’ bill went far enough to protect policyholders from rate hikes. Neither bill has proceeded further at this time, and there has been no focus on the NFIP reauthorization in the U.S. Senate (Senate). Ms. Stringer will continue to keep the Working Group updated on any Congressional action.

Last month, the Federal Emergency Management Agency (FEMA) announced that it will delay implementation of its Risk Rating 2.0 initiative until Oct. 1, 2021. Risk Rating 2.0 is FEMA’s new flood risk rating system.

4. Heard a Presentation from Milliman and FEMA Regarding Risk Rating 2.0

Nancy Watkins (Milliman) said FEMA’s current rating system, Risk Rating 1.0, is based on first generation technology, which is insufficient for current purposes. The technology needs to be updated due to changes in technology. Some of the limitations of the current rating system include: 1) an inconsistent match of risk to rate; 2) current rates are based on outdated methods; and 3) current rates are confusing and opaque.

Ms. Watkins said the current rating system inconsistently matches risk to rate. Inconsistent matches of risk to rate include scenarios such as: 1) neighbors having very different premiums; 2) mispriced policies for homes under water following a flood event; 3) repetitive loss properties; 4) interstate subsidization; 5) insurance to value effects; and 6) large premiums.

Ms. Watkins said insurance to value effects include the fact that dwelling replacement cost is not considered in premium calculation. Two houses with the same amount of coverage can pay the same premium, even with very different home values; therefore, high value homes are subsidized by low value homes.

Ms. Watkins said current rates are based on outdated methods, as flood zones ignore pluvial (flash) flood risk. For example, Hurricane Harvey damaged more than 204,000 homes and apartments in Harris County, and almost three-quarters of these properties were outside of the federally regulated 100-year flood plain. This flood event left thousands of homeowners uninsured and unprepared. Ms. Watkins said most urban flooding is pluvial and not considered in Risk Rating 1.0.

Ms. Watkins said historical experience regarding flooding is volatile and reflects only what has happened and not what could happen. There are other flood zone limitations including: 1) flood zones based on greater depth of a 100-year flood from either storm surge or riverine flooding at a given point; 2) combined effects of storm surge and riverine flooding not considered; 3) current mapping only produces 100-year flood elevations, but floods come in all sizes; 4) flood depths at other return periods are not considered; 5) correlation between flooding at nearby locations is not considered; and 6) concentration risk that contributes to volatility and reinsurance cost are not considered.

Ms. Watkins said elevation certification requirements are confusing to consumers. Elevation certificates are required for some homes, but not all homes, and they depend on several factors, including: 1) flood zone; 2) the year of construction; and 3) the year of the initial flood map. An elevation certificate may result in a lower premium, even when it is not mandatorily required. The elevation certificate process, decision and cost are something that most homeowners do not fully understand.

Ms. Watkins said grandfathering and remapping effects are confusing to consumers. A home built in a flood zone that is later remapped may change the elevation needs. Additionally, grandfathered rates may not be applicable to a person buying a home that has been remapped, which may substantially increase the premium for the new owner.

Ms. Watkins said there is an issue with take-up rates, as mandatory purchase of flood insurance does not apply in X zones. The lack of rate differentiation in X zones means that higher risk insureds tend to purchase coverage, while lower risk insureds tend not to purchase coverage; this lowers the take-up rate.

David Maurstad (FEMA) said FEMA’s mission is to help consumers before, during and after a disaster. He said FEMA’s intention is to build a culture of preparedness that leads to community resilience and results in less suffering due to a disaster.

Mr. Maurstad said Congress passed the 14th NFIP short-term extension in September; this extension expires on Dec. 20. Throughout the reauthorization process, FEMA believes that there is an opportunity for the U.S. Congress (Congress) to take steps to support the NFIP transformation to provide greater flexibility and make customer-centric changes.
Mr. Maurstad said FEMA continues to emphasize the importance of a timely and multi-year reauthorization that creates a sound financial framework, making the program sustainable for years to come, to increase the number of consumers covered under the NFIP program, improve the customer experience, implement essential program reforms, and move mitigation forward across the nation. He said FEMA will continue to work with Congress and the administration to be sure everyone is fully informed regarding the opportunities and the challenges faced by the NFIP. He said even with the uncertainty of a long-term reauthorization, FEMA will continue to work to transform the NFIP.

Mr. Maurstad said in 2019 there were 45 major disaster declarations across 25 states, five tribal regions, and one territory. Disaster costs also continue to increase. Disaster events in 2018 totaled $91 billion. Through October 2019, there have been a total of 10 disasters costing $1 billion each.

Mr. Maurstad said FEMA is attempting to change the national discussion focusing on the impact of disasters and their response and recovery. He said while this is necessary, FEMA needs to move to more actively engage in thinking about what can be done to reduce disaster suffering and contribute to individual and community resilience prior to a disaster.

Mr. Maurstad said 98% of the counties in the U.S. have experienced flooding events. He said flood insurance allows consumers to get back on the road to recovery more quickly and adds to individual and community resilience. The average flood insurance premium is $700 per year, and the average claim payment is $43,000. It is important to note that one inch of water can cause $25,000 of damage.

Mr. Maurstad said the National Flood Insurance Act instructs FEMA to periodically review the NFIP rating structure to be sure that there are actuarially sound principles. He said a few years ago, FEMA started to prioritize the customer experience and focus on what could be done to increase the take-up rate of flood insurance. FEMA assessed the rating product and pricing and began to build the Risk Rating 2.0 product.

The understanding of flood risk has evolved for the NFIP, insurers and reinsurers. FEMA’s current rates and methodology simply do not show the full flood risk, and incorrect pricing signals are being sent to property owners. Since the 1970s the NFIP rates have been based on property elevation and location within a zone. Relying on that static view resulted in misidentified risk and an inequitable flood insurance program.

The NFIP has inadvertently over the years resulted in the disparity of lower value homes paying relatively more for flood insurance than policyholders with higher value homes. FEMA is working to incorporate innovative technology data and modeling methodologies, as well as include private sector data sets. Risk Rating 2.0 will help policyholders to better understand their individual property risk by incorporating broader geographic and structural variables, such as distance to a close river, with the objective to strive to deliver rates that are fair, easier to understand, and better reflect a property’s unique flood risk.

Risk Rating 2.0 will fundamentally change the way FEMA rates a property’s flood risk and prices flood insurance. Risk Rating 2.0 will provide premium factors that are easier for both agents and policyholders to understand. Risk Rating 2.0 will provide the basis for more informed decision making for property owners, and it will contribute necessary information so property owners can consider mitigation actions that can also better protect the property owner and help to reduce their flood insurance premium.

FEMA now has the tools to address inequity between lower-valued and higher-valued homes. This will also provide a basis for the necessary revenues to cover prospective losses, establish a sound financial framework, and contribute to moving the NFIP to more solid fiscal ground. Risk Rating 2.0 will also ultimately result in better land use, flood plain management decisions, a more informed consumer base, more building structure mitigated to withstand flood events, more people insured, and a more financially prepared nation.

FEMA will provide more information regarding Risk Rating 2.0 when it is certain that the information is ready to release. FEMA has made a lot of progress and has worked with industry, individuals and partners to create a completely new risk rating methodology that will be able to perform and reveal a better flood risk. Risk Rating 2.0 will be rolled out for residential, multi-family and commercial structures at the same time.
Commissioner Dodrill said one of the first meetings he had as an insurance commissioner was with FEMA. He said FEMA came to tell him about existing three-year policies that were about to expire following the June 16 flooding. He said there would be consequences to the individuals if they did not convert the policies to privately paid policies; the consequence was that the next time there is a flood, FEMA is not coming. He said his DOI embarked on a campaign of public outreach over several months to encourage consumers in the state to convert those policies in August to privately paid policies. He said they did not have much success in West Virginia, as the take-up rate on flood policies was low.

Commissioner Dodrill said many of the homes in West Virginia also do not have mortgages, as they have been passed down through the generations. Mandating flood insurance for homes that have federally backed mortgages for flood is not a solution in West Virginia. Subsidization is also a huge issue in West Virginia. Commissioner Dodrill said individuals in his state simply cannot afford to convert the individual assistance policies. He asked Mr. Maurstad how Risk Rating 2.0 is going to be phased in and how it will affect lower income individuals. He also asked about the possibility of insureds paying monthly or quarterly payments instead of payment in full to make flood insurance more affordable by issuing periodic payments.

Mr. Maurstad said FEMA needs to do a better job making sure individuals understand that they have the flood policy and coverage provided by the FEMA individual assistance program. He said it is important for individuals to understand what steps can be taken to prepare for maintaining and obtaining requirements of the individual assistance grant program to be eligible for individual assistance if another flood event occurs.

Mr. Maurstad said FEMA is able to provide resources and information to help the states. He said there is technical assistance that FEMA can provide to help individuals understand that the reason that they lose that coverage is to provide an incentive for them to obtain flood insurance.

Mr. Maurstad said an affordability study has been done for Congress, and there have been proposals suggested during the reauthorization discussions to start some type of affordability program. One specific suggestion by the administration was to slow down the increases for those policyholders that earn 8% or less of the average median income in an area. Affordability is an issue that needs to be addressed.

Mr. Maurstad said monthly installments were actually part of the last reauthorization, and FEMA is in the process of developing a monthly installment program that is going through ruling right now.

Having no further business, the Catastrophe Insurance (C) Working Group adjourned.
The Climate Risk and Resilience Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met in Austin, TX, Dec. 7, 2019. The following Working Group members participated: Mike Kreidler, Chair, Jay Bruns, Annalisa Gellermann and Patrick McNaughton (WA); Michael Ricker (AK); William Arfanis and George Bradner (CT); Colin Hayashida (HI); Judy Mottar (IL); Robert Baron (MD); Steve Kelley and Peter Brickwedde (MN); Anna Krylova (NM); Marshal Bozzo (NY); Tom Botsko (OH); Andrew Stolfi (OR); Shannen Logue and Michael McKenney (PA); and Rosemary Raszka (VT). Also participating were: Travis Grassel (IA); Beth Vollucci (RI); and Scott A. White (VA).

1. **Adopted its Oct. 2 and Summer National Meeting Minutes**

   Mr. Bradner made a motion, seconded by Mr. Baron, to adopt the Working Group’s Oct. 2 (Attachment Four-A) and Aug. 3 (see NAIC Proceedings – Summer 2019, Property and Casualty Insurance (C) Committee, Attachment Three) minutes. The motion passed unanimously.

2. **Heard Updates on Working Group Members’ Climate Resilience-Related Activities**

   Commissioner Kreidler said the work of this Working Group is part of an ongoing global effort for climate action and resilience. Today, the 2019 United Nations (UN) Climate Change Conference (COP25) is meeting in Madrid, Spain. In the run-up to that meeting, the UN released a report warning that even if countries meet commitments made under the Paris Agreement, the world is heading for a 3.2 degrees Celsius global temperature rise over pre-industrial levels, leading to even wider-ranging and more destructive climate impacts. Regional, state and local efforts continue to be fundamental in combating climate risk and improving resilience in the U.S. As such, Commissioner Kreidler said it is prudent to provide an opportunity at each Working Group meeting for members to share what climate resilience activities they, or their departments, have been engaged in. Doing so provides everyone with an opportunity to learn from the other.

   a. **New York**

   Mr. Bozzo said Superintendent Linda A. Lacewell (NY) provided a keynote address during the Insurance and Climate Risk Americas conference, which was held Sept. 16 in New York City. The keynote focused on how the state of New York is approaching climate risk and resilience.

   During the keynote, Superintendent Lacewell shared that New York took the following recent actions:

   - New York Gov. Andrew M. Cuomo recently signed the Climate Leadership and Community Protection Act, committing the state to an 85% reduction in emissions and economy-wide carbon neutrality by 2050.
   - The New York State Department of Financial Services (DFS) recently became the first state banking regulator to join the Network for Greening the Financial System (NGFS). NGFS is an international coalition of bank supervisors with a goal of driving the financial industry to address climate change.
   - DFS became the third state (behind California and Washington) to join the Sustainable Insurance Forum (SIF). SIF is an international network of insurance supervisors seeking to strengthen their understanding of and responses to sustainability issues for the business of insurance.
   - DFS requires its regulated insurers to submit a National Disaster Plan annually and provides guidance on how to do so.

   Superintendent Lacewell also highlighted the following key points:

   - Insurers need to balance the climate vulnerability of their assets and liabilities.
   - Flood risk is a top concern, with the number of National Flood Insurance Program (NFIP) policies having decreased in the state.
   - Transparency is an issue. Consumers overlook the flood exclusion disclaimer on homeowners insurance policies because of the policies’ length.
Insurers need to take an accurate assessment of their climate risk and should consider participation in the Financial Stability Board (FSB) Task Force on Climate-Related Financial Disclosures (TCFD) survey.

Insurers’ use of policyholder incentives to invest in resilience is a positive market trend.

The public-private partnership is more critical than ever.

b. Connecticut

Mr. Bradner stated the Connecticut Insurance Department participated in:

- Former Connecticut Gov. Dannel Malloy’s Council on Climate Change (G3C). On Sept. 3, 2019, current Connecticut Gov. Ned Lamont issued Executive Order No. 3, reestablishing and expanding the membership and responsibilities of G3C. G3C is tasked with monitoring the implementation of Connecticut’s commitment to reduce greenhouse gases 45% by 2030.

- The Connecticut Institute for Resilience and Climate Adaptation (CIRCA) Resilient Connecticut Climate Adaptation Summit, which was held Nov. 12 in Fairfield, CT. Key points included:
  - It is helpful to use an urban development strategy that invests in resilience corridors to avoid investing in flood-prone areas. Resilience corridors are strategic investment areas linking uplands to the coast through transportation hubs and providing egress and access routes across municipalities.
  - The development of a spatial index-based approach by the Resilient Connecticut project to model vulnerabilities for Connecticut coastal towns in multi-scale with multi-criteria. The tool will help regional, municipal and site scale planners assess future sea-level rise and associated flooding.

Mr. Bradner said he presented on Connecticut’s long-term recovery efforts at the Federal Emergency Management Agency’s (FEMA) Regional Resilience Roundtable, which was held July 10 in Boston, MA. Additionally, he attended the Environmental Business Council (EBC) New England Climate Change Resilience and Adaptation Summit, which was held July 26 in Smithfield, RI. During the summit, leaders from New England states provided updates on their specific climate change strategies. He also participated on the “Ensuring Sustainability and Insuring Resilience” panel during the Insurance and Climate Risk Americas conference. During the panel:

- Mr. Bradner discussed resiliency efforts by the NAIC and this Working Group, as well as the Insurance Institute for Business and Home Safety (IIHS) and the Connecticut Recovery Working Group.
- Eric Wilson (New York City Mayor’s Office of Resiliency) spoke to efforts by New York City to address resilience in public and private buildings and discussed sustainable mandates.
- Michael Cohen (RenaissanceRe) discussed creative financial products (such as resilience bonds and parametric insurance) that communities can incorporate into their resiliency initiatives.
- David Levy (University of Massachusetts Boston) discussed efforts to examine how to finance climate adaptation. This includes moving toward rating buildings and cities for resilience to influence insurance rates and bond ratings; bringing in banks, so risk can be reflected in mortgage underwriting and rates; and addressing the tensions between market pricing of risk and affordability.

Commissioner Kreidler said he is glad to have New York join Washington and California in discussions at the SIF. He said having a robust flood insurance market is a better solution than policymakers responding to their constituents with coverage mandates that may not be advantageous to the insurance industry.

Mr. Bozzo said insurers can alter the behavior of policyholders by offering them a discount.

3. Discussed the Climate Survey, Including Resilience Measures Reported by Insurers and the Incorporation of the TCFD Guidelines

Commissioner Kreidler said the NAIC Climate Risk Disclosure Survey (Climate Survey) was developed by this Working Group and adopted by the NAIC membership in 2010. Now that there is almost a decade of responses, it is important to look at how insurers are responding to the survey’s eight questions on how they are accounting for climate risk.

Mr. Bruns said there is a lot of overlap in the TCFD survey and the Climate Survey questions. The Climate Survey is administered to about 1,000 insurers annually and is publicly available on the California Department of Insurance website. The responses are qualitative and were originally developed to better understand how insurers are considering climate risk in their underwriting, operations and reserves. Six states (California, Connecticut, Minnesota, New Mexico, New York and
Washington) administer the Climate Survey to insurers writing more than $100 million in premium. This year, 1,257 insurers responded, representing about 70% of the U.S. market.

The Climate Survey questions are:

1. Does the company have a plan to assess, reduce or mitigate its emissions in its operations or organizations? If yes, please summarize. If no, please describe why not.

2. Does the company have a climate change policy with respect to risk management and investment management? If yes, please summarize. If no, how does the company account for climate change in your risk management?

3. Describe your company's process for identifying climate change-related risks and assessing the degree that they could affect your business, including financial implications. If your company has a process, please summarize. Otherwise, please describe why not.

4. Summarize the current or anticipated risks that climate change poses to your company. Explain the ways that these risks could affect your business. Include identification of the geographical areas affected by these risks. If your company has identified risks, explain the ways that these risks could affect your business. Include identification of the geographical areas affected by these risks. Otherwise, please describe why not.

5. Has the company considered the impact of climate change on its investment portfolio? Has it altered its investment strategy in response to these considerations? If so, please summarize steps you have taken. If the company has considered the impact, please summarize. Otherwise, please describe why not.

6. Summarize steps the company has taken to encourage policyholders to reduce the losses caused by climate change-influenced events. If the company has taken steps, please summarize. Otherwise, please describe why not.

7. Discuss steps, if any, the company has taken to engage key constituencies on the topic of climate change. If the company has taken steps, please summarize. Otherwise, please describe why not.

8. Describe actions the company is taking to manage the risks climate change poses to your business including, in general terms, the use of computer modeling. If the company is taking actions, please summarize what actions the company is taking and in general terms the use of any of computer modeling. Otherwise, please describe why not.

Responses included one respondent stating it is currently on its third greenhouse gas emissions reduction strategy, having met the first two. The most current strategy includes emissions on previously unconsidered sources, such as travel. The Hartford stated that it does have a climate change statement and has updated it. This includes an environmental, social and governance (ESG) statement on its investments. Allstate stated that its process includes managing climate risk through an enterprise risk framework that includes risk return principles, modeling and analytics. Pennsylvania Lumbermens stated that it has increased its surplus in anticipation of larger losses, shifted into more conservative investments and reached out to policyholders ahead of disasters to warn them. USAA said it reaches out to key constituencies through a newsletter and sponsored conferences.

Beginning with the 2019 Climate Survey administration, respondents were asked to refer to the TCFD survey guidelines and were permitted to submit their TCFD survey in lieu of the Climate Survey. The TCFD was established by the FSB in December 2015 to develop a set of voluntary, consistent disclosure recommendations for use by companies in providing information to investors, lenders and insurance underwriters about their climate-related financial risks.

The FSB was established and endorsed by the heads of state and government of the G20 in 2009. The FSB has assumed a key role in promoting the reform of international financial regulation and supervision. The TCFD survey, launched in 2017, was developed by industry participants, including BlackRock, Ernst & Young, Swiss Re, Moody’s and Bloomberg. Support for the TCFD survey has grown to 867 organizations, including the SIF and the International Association of Insurance Supervisors (IAIS).

Jennifer Waldner (American International Group—AIG) said AIG was the first U.S. insurer in 2006 to formally recognize the risks of anthropogenic climate change. The company currently manages more than $2.9 billion in private placement investments in renewable energy projects worldwide. This includes being a leading investor in geothermal, hydroelectric, wind and solar projects. It is also a founding member of the Blue Marble Microinsurance, which is a consortium that provides commercially viable insurance protection to the underserved.
Ms. Waldner said last year, AIG had a 34% reduction in utility usage and related carbon emissions across its New York City and United Kingdom (UK) office operations. An employee-led Sustainability Working Group was formed in 2015 to better organize its sustainability efforts across the company. It also formed a CEO-endorsed Sustainability Task Force to build out a strategic sustainability plan globally in 2018. With the help of a Boston-based consultant, AIG conducted an internal audit and formed five work streams: products and services; operations; investments; external partners; and resilience. At the end of three months, the internal audit showed AIG had 75 initiatives that were sustainable in some way.

Ms. Waldner said AIG approved its sustainability strategy in 2019, which included hiring a chief sustainability officer and launching its TCFD inaugural report in July. The strategy aligns AIG’s sustainability efforts with its core business of “future proofing” communities. Its four pillars are: city/community resilience; financial security; sustainable investments; and sustainable operations. AIG recently formed a risk management engineering and analytics center in partnership with a global engineering firm to help its clients become more resilient. The company also provides financial education to customers and the community through such things as its partnership with Foundation for Financial Planning, which focuses on the underserved. AIG also focuses on reducing its utility usage.

Ms. Waldner said AIG’s sustainability governance structure includes the chief sustainability officer reporting to Thomas Leonardi, executive vice president and vice chair of AIG Life Holdings Inc. The Sustainability Integration Team reports to the chief sustainability officer and was formed to formally embed sustainability throughout the company. An Employee Sustainability Network will be launched in 2020 to allow all employees to be involved in sustainability efforts.

Ms. Waldner said AIG decided to participate in the TCFD survey because: 1) it provides an opportunity to be more responsive and transparent with stakeholders; 2) reflects the company’s increased attention to and awareness of climate-related risks; 3) offers a more consistent approach that aligns with other reporting efforts; 4) provides a structure to guide internal discussions and thinking around climate-related risks; and 5) allows for proactive reporting, with indications that mandatory reporting will likely be instituted in some jurisdictions.

Ms. Waldner said participating in the TCFD survey allows for robust disclosure, while also adhering to the participation in the Climate Survey, thereby reducing survey fatigue. AIG is hopeful other jurisdictions will also allow for the submission of the TCFD survey in lieu of their jurisdiction-specific reports. Through participation in the TCFD survey, the company learned: 1) identifying and engaging with cross-functional colleagues across the company to develop responses is imperative; 2) responding is a commitment of time and resources; and 3) the report is a living disclosure that will undergo continuous iterative updates. The company is also contemplating performing a climate change scenario analysis.

Ms. Waldner said AIG’s next steps include: 1) evaluating how to best build on the foundational disclosure provided in the first TCFD; 2) partnering with the Sustainability Integration Team to help identify and drive current and future initiatives, build business and social impact cases, and develop flagship projects; 3) supporting the work of its newly formed Climate Working Group, ESG Working Group and Enterprise Risk Management (ERM) Sustainability Working Group; and 4) continuing to work with the NAIC and other key stakeholders to report on and discuss climate-related risks.

Commissioner Kreidler said AIG is providing important leadership on sustainability in the insurance industry. The presentation illustrates how sustainability is an important initiative in the U.S. and globally. He said there are likely to be several actions taken in this area soon, as world leaders and stakeholders try to “get ahead of the curve” on climate risk.

5. Discussed Other Matters

Commissioner Kreidler said the Working Group will begin drafting the Insurance Regulatory Frequently Asked Questions (FAQ) through an informal drafting group after the first of the year.

Having no further business, the Climate Risk and Resilience (C) Working Group adjourned.
Climate Risk and Resilience (C) Working Group  
( f.k.a. Climate Change and Global Warming (C) Working Group) 
Conference Call  
October 2, 2019 

The Climate Risk and Resilience Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met via conference call Oct. 2, 2019. The following Working Group members participated: Mike Kreidler, Chair, David Forte, Jay Bruns and Patrick McNaughton (WA); Ricardo Lara, Vice Chair, Lisbeth Landsman-Smith and Michael Peterson (CA); Austin Childs (AK); Peg Brown (CO); George Bradner (CT); Colin M. Hayashida (HI); Judy Mottar (IL); Caleb Huntington (MA); Derek Oestreicher (MT); Marshal Bozzo (NY); and Andrew Stolfi, TK Keen and Ying Liu (OR). Also participating were: William Lacy (AR); Leslie Ledogar (DE); Shaw P. Stiller (FL); Kate Kixmiller (IN); and Holly Campbell (RI). 

1. Discussed the Proposed Development of an FAQ

Commissioner Kreidler stated that severe weather events have been escalating in recent years. Using National Oceanic and Atmospheric Administration (NOAA) estimates, this decade has seen an annual average of 10.5 disasters so far. The scale of this increase amounts to one additional billion-dollar disaster every four years. Given the rise in costly disasters, many state policymakers and lawmakers are considering measures that incentivize and strengthen their jurisdictions’ resilience. As they do so, they naturally reach out to their insurance departments for information on catastrophe risk, resilience and insurance. 

Commissioner Kreidler said the purpose of today’s conference call is to get the Working Group’s thoughts on developing a product that can assist insurance departments in fielding these types of questions. This potential product, currently being referred to as the Insurance Regulatory Frequently Asked Questions (FAQ) is meant to be a compilation of questions state insurance regulators find they are frequently being asked (Attachment Four-A1). 

Commissioner Kreidler said the intent is that the Working Group product would consist only of the questions. This would allow each insurance department to voluntarily answer the questions as they relate to their specific state. The responses can then be disseminated by each insurance department to inform state and local efforts related to resilience and insurance. The FAQ is not proposed to address specific legislation, policies or regulations, but rather to be used as a guideline when such actions are being considered. 

California has passed and continues to deliberate on legislation to support resilience, recovery and rebuilding efforts after two destructive years of wildfire losses. Given all this activity, California has provided potential questions for the FAQ by compiling requests it frequently receives from its lawmakers and policymakers. The questions naturally reflect wildfire risk, but many are also applicable to other weather-related perils. Thus, the discussion will focus on getting feedback on the following questions: 

1) Does the Working Group think it would be advantageous for it to develop an FAQ product to assist state insurance departments in fielding frequently asked questions? This FAQ would consist only of questions. Responses would be left to the discretion of each insurance department. 

2) What structure should the FAQ take? Options include: 
   a. Peril-specific. In this approach, the questions would focus on just wildfire. Additional FAQs could potentially be later developed for other single perils, such as flood. 
   b. All weather-related perils, with general questions followed by peril-specific questions being broken out into subsections. 
   c. All weather-related perils, with only general questions and instructions to denote when the response varies for a peril. 

3) Should development of the FAQ be done in an informal drafting group? 

Mr. Peterson said California has been through several major wildfires, even before those in 2017. As a result, they have met with many consumers, first responders, state legislators and other stakeholders to discuss wildfire-related issues. This includes the Risk and Resilience Summit, sponsored by the NAIC in May, where state insurance regulators met for two days of discussions on insurance issues and shared responses to growing wildfire insurance risk. The Summit included a visit to Paradise, CA, and meetings with local officials, homeowners and first responders. The questions currently listed in the FAQ
are an outgrowth of this Summit, a recent data call and other related discussions. They are by no means exhaustive, but rather a start.

The first section of the FAQ is on mitigation. Mitigation represents an important tool to improving affordability and availability of insurance. However, policy structures can be elusive in how mitigation is best promoted. For instance, the government in the Netherlands invests substantially in flood prevention, which, in part enables people to live where they do. The questions represent different incentive tactics that legislators and policymakers can look to when crafting laws and policies. This includes incorporating incentives into pricing, tax incentives, mitigation grants and resilience standards. For instance, those in the Wildland-Urban Interface (WUI) often believe that meeting a certain level of home mitigation should secure them guaranteed coverage in the admitted market.

The second section of the FAQ is on the supervision of claims themselves. The speed of claims and additional living expenses (ALE) have been common themes for California. It can be advantageous for consumers to receive a portion of their payout without having to go through an exhaustive inventory list. Additionally, issues often surface around time constraints for using ALE and whether ALE should apply in cases of partial loss, when local infrastructure, such as the water system, is unusable.

The third section of the FAQ is on nonrenewal. In August, California released the results of its data call that showed an increase in non-renewals in the WUI communities. One common theme was the amount of notice a consumer gets prior to a nonrenewal. The California legislature responded by increasing the required notice of nonrenewal from 45 days to 75 days to allow consumers adequate time to take mitigation steps to prevent a non-renewal.

The fourth section of the FAQ is on underinsurance, which is a common concern with legislators, state insurance regulators and consumers. There may be a divergence between how much coverage a home has and how much it takes to replace it.

The fifth section of the FAQ is focused on safeguards to abrupt increases in insurance premiums and the impact of using new data sources to more granularly segment risk.

The sixth section of the FAQ is focused on rebuilding restrictions, which needs more focus. In California, some or all of a consumer’s insurance payout can be used to rebuild in a less risky area. This could benefit consumers and insurers as it results in a quicker claim resolution and less insured risk. However, there are different interpretations of state statutes in whether consumers can use their full coverage limit to rebuild elsewhere or if a deduction in land value should apply. These are common questions that we have heard in California in the aftermath of catastrophic wildfires and we wanted to see if they are applicable to other states and could be beneficial to consider pre-disaster.

Commissioner Kreidler stated that states may differ in which perils are emphasized in the FAQ, but most of the questions reflect at some level the dilemmas all states face after a catastrophe. Most states have Fair Access to Insurance Requirements (FAIR) Plans dating back to their implementation in the 1960s. Washington almost discontinued its FAIR plan due to low use but ultimately decided to keep it.

Commissioner Stolfi stated the FAQ is a good idea. He asked if the FAQ should focus on personal lines issues, commercial lines issues or both. He stated Oregon receives many questions on whether carriers are trying to exclude wildfire coverages. He suggested adding questions relating to building codes, exclusions and withdrawals. He stated it would be extremely useful to Oregon, and likely other states, to see how other states respond to these questions. As such, he is in support of compiling each state’s answers to the FAQ for sharing purposes.

Mr. Bozzo stated the FAQ represents a good set of discussion points. He added that being able to compare what is being done in each state would be of great benefit. He also stated it would be more beneficial to all states to include all perils.

Commissioner Kreidler stated he agrees that a more all-perils approach is best in the FAQ. He stated that an all weather-related perils, with general questions followed by peril-specific questions being broken out into subsections, makes the most sense.

Mr. Bradner suggested questions relating to the type of products each state offers in its FAIR plan be added to the FAQ. The residual market can vary drastically by state. FAIR plan products can offer consumers an option when there is not one in the admitted market.
Commissioner Kreidler stated he agrees. States can benefit from seeing other states’ FAIR plan structures and how they provide needed coverage without diminishing the admitted market.

Ms. Brown stated the FAQ is interesting. Colorado does not have a FAIR plan and is currently developing a data call to find out what areas do not have admitted insurance coverage options due to carriers withdrawing from higher risk communities. She said she also supports compiling state responses to the FAQ. Additionally, the Working Group may get industry directed suggestions on what changes are necessary to improve the affordability and availability of insurance.

Commissioner Kreidler stated he agrees, and he said Washington is also in the process of doing a data call to develop a baseline. He asked if there were any objections to developing an FAQ.

Mr. Bozzo stated the questions were an effective starting point but should be fine-tuned to reflect questions relevant to all and those that are more region-specific.

Commissioner Kreidler stated he would be interested in seeing how other states, such as New York, view and deal with flood issues, even if Washington does not face flood risk in the same way. The Working Group should begin with more general questions that apply to all states but may decide in the future to develop a more peril-specific FAQ. Additionally, responding to the FAQ would, of course, be voluntary for states and they could modify the questions as they fit.

Commissioner Stolfi said Oregon supports the FAQ and the collection of states’ responses to it.

Anne Obersteadt (NAIC) said the NAIC state government relations policy advisor recommended tweaking the FAQ toward each peril and packaging it accordingly. State lawmakers are more likely to see an FAQ packaged specifically for the peril under consideration as relevant. For instance, the FAQ could be packaged with a flood coverage page and added discussion related specifically to flood. The FAQ could then be repackaged for wildfire risk in the same way. The Working Group could consider developing general questions relevant to all states and perils first and then add subsections to the FAQ for peril-specific questions in the future. The FAQ with a flood subsection could then be packaged as a flood-specific FAQ for those lawmakers and policymakers only interested in flood. Likewise, the FAQ with a wildfire subsection could be packaged as a wildfire-specific FAQ for those only interested in wildfire.

Commissioner Kreidler stated the approach to start general and then narrow the scope by adding subsections with peril-specific questions later makes sense. He asked NAIC staff to implement the revisions thus far suggested by Working Group members on the call, with further drafting of the FAQ to be done through an informal drafting group.

Having no further business, the Climate Risk and Resilience (C) Working Group adjourned.
Insurance Regulatory FAQ on Catastrophe Events

PURPOSE

The purpose of the Insurance Regulatory Frequently Asked Questions on Catastrophe Events ("CAT FAQ") is to inform state and local efforts related to catastrophe risk, resilience, and insurance. While it doesn't address specific legislation, policies, or regulations, it can be used as a guideline when such actions are being considered.

The CAT FAQ was developed by compiling the questions insurance departments receive most frequently from legislators and policymakers. The questions are intended to be answered by each state insurance department. Thus, the responses will reflect the nuances of each state.

COMMONLY ASKED QUESTIONS

Tentative list of questions to be added/revised by Working Group.
(If responses are different by peril, please note.)

I. Mitigation
   A. Mitigation generally reduces risks and promotes more availability of insurance. What incentives do consumers have to mitigate their home?
   B. Are there incentives built in to the pricing of insurance policies?
   C. If a state funds mitigation incentives, such as grants, loans, and/or public-private partnerships, is there an overall strategy to improve availability of insurance in the state?
   D. How do statewide mitigation efforts, such as Utah’s Catastrophic Wildfire Plan, prioritize projects, monitor progress, and fund maintenance to reduce the risk of future losses?
   E. If mitigation is a potential pathway to a more resilient insurance market, are states with similar risks making similar pre-disaster investments?
   F. Do states have specific statewide standards for home or community mitigation in the wildland-urban interface?
   G. Are states offering any tax incentives for home mitigation actions?
   H. Are there any restrictions on local governments in regard to land development?
   I. Is there any scenario under which a consumer is "guaranteed" offer/renewal of insurance?
Insurance Regulatory FAQ on Catastrophe Events

COMMONLY ASKED QUESTIONS CONTINUED

II. Supervision of claims
   A. Speed
      i. What are the state laws regarding the timing of the payment of claims?
      ii. Are insurers required to distribute a certain percentage of an insured’s contents coverage
           before an inventory is submitted?
      iii. How have states approached getting money to consumers as quickly as possible so that
           they can start recovering?
   B. Additional Living Expenses (ALE)
      i. What are the time constraints for using ALE?
      ii. Does ALE apply to partial losses, or when local infrastructure is not accessible or useable
          (e.g., inaccessible roads or unusable water system) or only to total losses?

III. Nonrenewal
   A. What are the options if a consumer is non-renewed?
   B. Are there any circumstances under which a consumer must be renewed by an insurer?
   C. How much advance warning are insurers required to give insureds and is this enough time to
      take any mitigation actions to prevent a non-renewal?
   D. What prevents an insurer from asking for mitigation actions from a homeowner (replacing a
      wood shake roof with a metal roof) and then making a decision to non-renew that consumer?
   E. Are there mechanisms to determine what percentage of non-renewed consumers decide to go
      without property insurance?
   F. How are non-renewals impacting ranches and farms?
   G. What authority do regulators have over the use of wildfire models by insurers for underwrit-
      ing?

IV. Underinsurance
   A. Are insurers required to provide any regularly updated estimate of replacement cost to con-
      sumers?
   B. Are there other safeguards for consumers to reduce the likelihood of being unintentionally
      underinsured?
Insurance Regulatory FAQ on Catastrophe Events

COMMONLY ASKED QUESTIONS CONTINUED

Tentative list of questions to be added/revised by Working Group.

(If responses are different by peril, please note.)

V. Insurance Premiums
   A. Are there safeguards against abrupt insurance premium increases related to a specific risk?
   B. Are there any state laws or regulations governing “grace periods” for the payment of premiums after disasters?
   C. Do insurers commonly use predictive modeling to price insurance and how has that affected premiums for consumers?
   D. Increases in data allow insurers to segment their rates into more and more granular segments. This may increase the connection between insurance premium and risk, but also may decrease the effects of pooling. How are states addressing this issue?

VI. Rebuilding Restrictions
   A. Are consumers who suffer a total loss required to build on the same property or can they use their insurance coverage to purchase a home in a different, potentially less risky area?
The Pet Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee conducted an e-vote that concluded Dec. 5, 2019. The following Working Group members participated: Don Beatty, Chair (VA); Kendra Zoller, Vice Chair (CA); George Bradner (CT); Warren Byrd (LA); Shirley Corbin (MD); LeAnn Cox (MO); Michael McKenney (PA); Matt Gendron (RI); and David Forte (WA).

1. **Adopted its Nov. 7 and Oct. 1 Minutes**

The Working Group conducted an e-vote to consider adoption of its interim minutes. The motion passed, with a majority of the Working Group members voting in favor of adopting its Nov. 7 (Attachment Five-A) and Oct. 1 (Attachment Five-B) minutes.

Having no further business, the Pet Insurance (C) Working Group adjourned.

W:\National Meetings\2019\Fall\Cmte\PetInsWG\PetInsMinutes1205.docx
The Pet Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met via conference call Nov. 7, 2019. The following Working Group members participated: Don Beatty, Chair (VA); Kendra Zoller, Vice Chair, and Risa Salat-Kolm (CA); Kristin Fabian and George Bradner (CT); Tom Travis (LA); Shirley Corbin (MD); LeAnn Cox (MO); Michael McKenney (PA); Matt Gendron and Beth Vollucci (RI); Anna Van Fleet and Jamie Gile (VT); and David Forte and Eric Slavich (WA). Also participating were: Ken Williamson (AL); Vincent Gosz and Tom Zuppan (AZ); Heather Droge and Tate Flott (KS); Chris Aufenthie (ND); Carl Sornson (NJ); Anna Krylova (NM); Rodney Beetch (OH); Cuc Nguyen (OK); Lee Hill (SC); Dan Nelson (SD); Kathy Stajduhar (UT); Jody Ullman (WI); and Donna Stewart (WY).

1. Discussed Sections 1, Section 2 and Section 3 of the Draft Pet Insurance Model Act

   a. Section 1—Short Title

      Ms. Zoller said the term “health” should not be used in the title, as pet insurance is a property/casualty (P/C) line of business.

      Ms. Cox agreed that the term “health” could be confusing, and she suggested the use of the term “care.”

      Mr. Forte said he agreed with not using the term “health” and would be agreeable to using the term “care” or not changing the title at all.

      Mr. Beatty asked if any Working Group members wanted to use the term “health” in the title. No Working Group members stated that they want to use the term “health.”

      Ms. Zoller said the term “care” could sound like the care plans offered by pet stores, which are not pet insurance.

      Ms. Salat-Kolm suggested keeping the title as “Pet Insurance Model Act.” All Working Group members agreed on keeping the title as “Pet Insurance Model Act.”

   b. Section 2—Scope and Purpose

      Ms. Salat-Kolm said there was discussion about the term “resident” and if it referred to the pet or the pet owner. She said there is agreement that the term “resident” means pet owner.

      Mr. Forte said changing the term “covers” to “issued to” would help clarify that the term “resident” indicates the pet owner.

      Mr. Gendron said there could be policies issued in a state to a pet owner that is not a resident of that state.

      Ms. Salat-Kolm said the language could be revised to “policies issued in this state.”

      Mr. Gendron agreed with this language.

      John P. Fielding (Steptoe & Johnson), representing the North American Pet Health Insurance Association (NAPHIA), suggested removing the term “covers” and using language similar to other model laws, such as the Travel Insurance Model Act (#632).

      Lisa Brown (American Property Casualty Insurance Association—ACPIA) suggested changing the word “is” to “are” in Section 2 Part B to have correct subject and verb agreement. She also suggested changing the word “and” to “or” between the words “policies” and “certificates” in Section 2 Part B to clarify that companies can write either individual coverage, group policies or both.

      Mr. Travis and Ms. Van Fleet agreed.
c. **Section 3—Definitions**

Ms. Zoller said definitions in the policy are helpful, noting that the white paper, *A Regulator’s Guide to Pet Insurance*, found that current definitions are inconsistent and confusing.

Mr. McKenney asked if other lines of business in California have definitions mandated by statutes. He said he does not believe it is common in other lines of business to mandate definitions language.

Ms. Salat-Kolm said the California Fair Claims Settlement Practices Regulations have definitions. She said the better the definition, the clearer it would be to the consumer.

Mr. McKenney wondered if having standard definitions would make it more difficult for companies to compete in the market.

Mr. Zoller said the definitions have been in law in California, and they have received support from companies.

Mr. McKenney said with the exception of the standard fire policy, there is not another line of business that mandates standard definitions.

Ms. Van Fleet said the development of minimum standard definitions is currently happening with supplemental health policies, so there is a framework for developing minimum standard-type definitions so there is a floor of protection for consumers.

Mr. McKenney said the current draft may be creating a model law that, including both Section 3 and Section 4, creates requirements that do not exist on any other P/C coverage, especially on an optional coverage; and it may be overly burdensome and keep small players out of the market.

Ms. Zoller suggested that the Working Group look at current definitions from different companies to see how much they differ.

Ms. Cox said forcing companies to use the exact definitions within the model act would limit more innovative products. She said not all companies would have a website if they are application based. She said companies that want to have more laymen’s term policies would not want to have such wordy definitions that could confuse the policyholder even more. She suggested adding wording to the definitions that would be substantially similar but not less favorable than what is stated in the model law. She said some policies are using more youthful language to appeal to younger policyholders.

Mr. Gendron said he would find it appropriate for a policy to have more generous terms in the definitions than those currently in the model law.

Mr. Beatty said the suggestion of the Working Group is to have minimum standard definitions.

Ms. Brown said there are current policies with definitions that are substantially similar to those in the model law and requiring exact language would require refiling policies with the state insurance departments. She asked what would happen if a company wanted to develop a product that only covered a certain aspect of pet care, such as diagnosis, and if these required definitions would prevent that type of product from coming to market.

Mr. Gendron said policies that want to cover only certain aspects can still use these definitions and then explain in the disclosures section what is and is not covered by the policy.

Ms. Zoller said there is language in the model that states, “nothing in this Act shall in any way prohibit or limit the types of exclusions pet insurers may use in their policies or require pet insurers to have any of the limitations or exclusions defined below.”

Mr. Fielding said there is a distinction between the definitions of things that would always be similar, such as “chronic condition,” and the definition of things that could be different, such as “pet insurance” and “veterinary expenses.” He said despite exclusions and disclosures, the definition could lead the consumer to believe that something is covered even when it is not. He proposed using the term “eligible expenses” and letting the disclosures state what is and is not covered.
Mr. Forte suggested removing the term “pet” when speaking of pet insurers, as not all entities that use the term “pet insurer” are insurance companies selling pet insurance. He said the phrase “main page” may be confusing, as some companies do not exclusively sell pet insurance and it may not appear on their main page.

Mr. Beatty said the Working Group will want to review all sections that reference websites.

Ms. Van Fleet said Vermont does not have a framework for approving group pet insurance products, so she suggested removing the language for group policies.

Mr. Fielding asked if Vermont would consider keeping group policy language in the model.

Mr. Forte said having the group language would make adoption of the model law difficult.

Ms. Zoller said California currently covers those that have a certificate issued in a different state in a group policy. She asked if pet insurance offered as an employee benefit is offered as a group policy or an individual policy.

Mr. Fielding said he has seen both group and individual policies as a part of employee benefits programs.

Ms. Brown agreed that there are both types of policies currently written.

Ms. Salat-Kolm suggested removing the terms “individual” and “group” to make the statement broader.

Mr. Forte said the definition for “chronic condition” should be clearer. He said he would like a further definition of the term than what is currently in the model law.

Mr. Travis said the Working Group should look for a better definition of “chronic condition” from the health line of business.

The Working Group will continue discussion on these sections during future conference calls.

Having no further business, the Pet Insurance (C) Working Group adjourned.
The Pet Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met via conference call Oct. 1, 2019. The following Working Group members participated: Don Beatty, Chair, and Jessica Baggarley (VA); Kendra Zoller, Vice Chair, and Risa Salat-Kolm (CA); Kristin Fabian and George Bradner (CT); Angela King (DC); Warren Byrd and Tom Travis (LA); Sheri Cullen (MA); Linas Glemza (MD); LeAnn Cox and Jeana Thomas (MO); Michael McKenney and John Lacek (PA); Matt Gendron and Beth Vollucci (RI); Anna Van Fleet (VT); and Jeff Baughman, Dan Forsman, David Forte and Eric Slavich (WA). Also participating were: Ken Williamson (AL); Carl Sornson (NJ); Anna Krylova (NM); Dan Nelson (SD); and Jody Ullman (WI).

1. Discussed Its Referrals Regarding the Collection of Additional Pet Insurance Data

Mr. Beatty said during its June 27 conference call, the Working Group decided to ask NAIC staff to begin drafting referrals to the Blanks (E) Working Group and the Market Regulation and Consumer Affairs (D) Committee for data collection. He said the first referral had to do with collecting additional pet insurance data on the annual financial statement, noting that there are a couple possibilities for collecting additional data. He said the data could be collected through the state page, likely as a subset of the inland marine line of business, or the premium, loss and other data could be collected through a supplement to the annual financial statement that only pet insurance carriers would be required to complete.

Mr. Gendron said if pet insurance were added as a line on the state page, the companies that do not write pet insurance would leave that line as zero.

Tracey Laws (Chubb) said Chubb would prefer to report on a supplement because adding a line to the annual financial statement would require system changes that would have associated costs.

John Fielding (Steptoe & Johnson), representing the North American Pet Health Insurance Association (NAPHIA), said he would like to talk to NAPHIA’s member insurance companies to get thoughts on the best way to report pet insurance data in the annual financial Statement.

Mr. Beatty said industry representatives should submit comments on how they would prefer to report this data.

Ms. Laws asked what data would be collected through a supplement.

Aaron Brandenburg (NAIC) said the focus would be on the data collected in the columns of the state page, but the supplement could ask for more detail, such as number of exposures or policies.

Mr. Gendron said he would agree with collecting policy count numbers.

Mr. Beatty said NAIC staff are working on collecting feedback on the process of collecting pet insurance data through the Market Conduct Annual Statement (MCAS).

Mr. McKenney said he is looking for standard MCAS data for pet insurance.

Mr. Brandenburg said NAIC staff can work to gather complaints data, as well as work to collecting pet insurance data through the MCAS.

2. Discussed and Exposed Four Sections of the Draft Pet Insurance Model Act

Mr. Beatty said the Request for NAIC Model Law Development asking for permission to begin work on a Pet Insurance Model Act was adopted by the Executive (EX) Committee at the Summer National Meeting, so the Working Group can now begin work on developing it. He said the Working Group chair, vice chair and NAIC staff put together a document to help start the discussion and, after each conference call, there will be a public comment period to obtain opinions on each section of the draft model act.
Mr. Gendron said in reference to Section 1—Short Title, the description should read “Pet Insurance Act.” He also said in reference to Section 2—Scope and Purpose, Part B that “Pet Insurance that covers any resident of this state” should be changed to “Pet Insurance policies that are issued to any resident of this state” to clarify that the policy is issued to the named resident of the state. He also suggested replacing the “and” separators with “or.”

Mr. Fielding (NAPHIA) said the draft appears to be based on a bill that was vetoed in California before the current California law was enacted.

Ms. Zoller said the draft is just a starting point and that the two parts of the law that were vetoed are Section 7—Preexisting Conditions and Section 8—Reimbursement Benefits.

Mr. Fielding also suggested, in reference to Section 1, the description should read “Pet Health Insurance Act.”

Ms. Zoller said the addition of the word “health” could be confusing since this is a property/casualty (P/C) line of business.

Ms. Salat-Kolm agreed that this type of policy does not only cover things that would be considered health insurance.

Mr. Fielding said the term “health” would help differentiate between other types of coverages that cover liabilities of owning a pet.

Mr. Byrd also agreed that the term “health” would help in clarifying the purpose of this line of business.

Ms. Cox suggested using the term “care” in place of “health” so as not to confuse with traditional health insurance.

Lisa Brown (American Property Casualty Insurance Association—ACPIA) said the introductory paragraph of Section 3—Definitions seems to suggest that the definitions in a policy would have to be exactly those that appear in the model. She said it would be helpful if the definitions would be able to be substantially similar.

Mr. Byrd asked if there were issues with any of the terms as currently defined.

Ms. Brown said she has heard concerns that the “veterinary expenses” definition could be too limiting for some companies.

Mr. McKenney said he is not sure if other policy types include terms that must be defined in an exact way.

Ms. Law said mandating language in an insurance policy is limiting to competition in the marketplace.

Ms. Zoller said the definitions as defined in Section 3 are current law in California.

Mr. McKenney said the model law draft, as is, is too restricting compared to other lines of business.

Mr. Forte said he is not sure if the term “group” should be included in Section 3D, as he is unaware of P/C insurance being sold as a group policy.

Ms. Cox said Missouri does not allow for group insurance in the pet insurance market.

Mr. Beatty asked what the regulatory objections would be to allowing group insurance.

Mr. Bradner said the objection would have to do with how cancellations and non-renewals are handled.

Mr. McKenney agreed and said it would change the nature of the business and the rate filing laws in many states.

Mr. Byrd asked if any insurers currently sell group pet insurance policies.

Mr. Fielding said he will check with NAPHIA member insurance companies if policies are currently sold as group or only individual.
Mr. Gendron suggested reducing the language found in Section 3F and inserting bracketed language referencing the appropriate state licensing authority or statute.

Gary Henning (Zurich Insurance) asked if Section 4—Disclosures applies to only the insurer or if it also applies to a program administrator selling the insurer’s policies.

Mr. Byrd asked if those administrators would be the agent for the insurer.

Mr. Henning said these companies work as brokers.

Mr. Beatty said it would be the insurer’s responsibility to get the information to the consumer.

Mr. Gendron said state insurance regulators put restrictions on insurers and agreed it is the insurer’s responsibility. He also said it is important to include disclosures on preexisting conditions and hereditary disorders if they are excluded in the policy.

Mr. Beatty said the disclosures will be important to include because many of the complaints received about pet insurance policies are regarding consumers not knowing what is excluded in a policy.

Mr. McKenney said the disclosure requirements are more restricting than those currently in place in mandatory lines of insurance like automobile and homeowners.

Ms. Salat-Kolm said one of the biggest problems with pet insurance is that people do not know what they are buying.

Mr. Bradner agreed that it is a problem when exclusions are not disclosed.

Mr. McKenney said there is no data to determine if this is a problem. Ms. Zoller said there are complaints in California, noting that the A Regulator’s Guide to Pet Insurance white paper addressed some of these problems.

Mr. Byrd said the Working Group should not wait for problems to occur before implementing a law to address potential issues.

Mr. Gendron said pet insurance has evolved in the past 15 years and that consumer expectations may be too close to human health insurance.

Mr. Gendron said there may be a misconception of what should be included in pet insurance and if a wellness product would fit into an insurance policy.

Ms. Baggarley said Virginia currently sees wellness programs included in insurance policies.

Mr. Beatty said Section 1, Section 2, Section 3 and Section 4 of the draft Pet Insurance Model Act will be exposed for a 30-day public comment period ending Oct. 31.

Having no further business, the Pet Insurance (C) Working Group adjourned.
The Terrorism Insurance Implementation (C) Working Group of the Property and Casualty Insurance (C) Committee met in Austin, TX, Dec. 8, 2019. The following Working Group members participated: Marshal Bozzo, Chair (NY); Michael Ricker (AK); George Bradner (CT); Sean O’Donnell (DC); Virginia Christy (FL); Judy Mottar (IL); Heather Droge (KS); Angela Nelson (MO); Fred Fuller (NC); Cuc Nguyen (OK); Beth Vollucci (RI); J’ne Byckovski and Mark Worman (TX); Rebecca Nichols (VA); and Rosemary Raszka (VT).

1. **Adopted its Summer National Meeting Minutes**

Mr. Bradner made a motion, seconded by Ms. Nelson, to adopt the Working Group’s Aug. 4 minutes (see NAIC Proceedings – Summer 2019, Property and Casualty Insurance (C) Committee, Attachment Four). The motion passed unanimously.

2. **Discussed the Reauthorization of TRIA**

Brooke Stringer (NAIC) said the federal Terrorism Risk Insurance Act (TRIA) is set to expire Dec. 31, 2020, and the NAIC has seen significant Congressional action on TRIA reauthorization legislation. She said the U.S. House of Representatives (House) passed a seven year TRIA reauthorization bill (H.R. 4634), which does not make any substantial changes to the program. The bill would require the Government Accountability Office (GAO) to conduct a study on cyber terrorism risks, including an analysis of whether the states’ definition of cyber liability under a property and casualty line of insurance is adequate coverage for an act of cyber terrorism. It would also require biennial U.S. Department of the Treasury (Treasury Department) reporting on affordability and availability of terrorism risk insurance for places of worship. Ms. Stringer said the U.S. Senate (Senate) Committee on Banking, Housing, and Urban Affairs approved by voice vote a seven-year reauthorization bill (S. 2877), which tracks the House version. The bill may add a study on nuclear, biological, chemical and radiological (NBCR) coverage as the bill moves forward.

Ms. Stringer noted that the NAIC supports both the House and Senate bills, and it sent letters of support, which are posted on the NAIC website. She said there is widespread support from the insurance industry and all sectors of the economy that is spurring Congressional action. She said, given the strong support in both Congressional chambers, TRIA reauthorization legislation could be in a good position to be attached to the end-of-year spending package or potentially adopted by the Senate in December 2019 or January 2020.

Ms. Stringer also reported that Director Chlora Lindley-Myers (MO) testified on behalf of the NAIC at an October joint insurance and national security subcommittee hearing at the House Committee on Financial Services. She underscored state insurance regulators’ support for the program and urged prompt Congressional action on a long-term reauthorization. She also highlighted some findings from the state insurance regulator data calls. Cyber coverage was a topic that received much attention at the hearing.

3. **Heard a Report on the 2020 Terrorism Risk Insurance Data Call**

Mr. Bozzo said workers’ compensation data will be requested from the National Council on Compensation Insurance (NCCI) and independent bureaus as it has in the past, likely with a letter being distributed in January 2020 asking for data to be submitted by March 1, 2020.

Mr. Bozzo said information about the joint state insurance regulator/Treasury Department data call will be distributed early next year with a due date of May 15, 2020, the same as past years. He said there may be a change to the modeled loss question within the data call. He reported that state insurance regulators and Federal Insurance Office (FIO) staff may begin holding state insurance regulator meetings or conference calls to discuss potential changes to the data call in future years. Based on possible changes to TRIA, future data calls may ask for data on cyber coverages or religious institutions. Mr. Bozzo said state insurance regulators expect that the State Supplement will continue in 2020 as in past years.
4. **Heard a Report on the 2019 Data Call**

Aaron Brandenburg (NAIC) reported on terrorism risk insurance data received in the State Supplement portion of the data call that was due Sept. 30. He said most files have been received and the vast majority of the files have passed the basic data quality checks. He said the NAIC is following up with companies that did not file or that submitted incorrect data elements. He said the most common error was in terrorism or total exposures where some companies had obvious errors.

In terms of total premiums reported, companies submitted nearly $38 billion in premium in allied lines, fire, commercial multiperil–non liability, and boiler and machinery lines of business. The total terrorism premium submitted was about $920 million, making the terrorism premium approximately 2.4% of the total premium. Mr. Brandenburg said these figures are comparable to what has been reported previously in data calls.

The data call found that most terrorism premium, over 90%, was written as an endorsement instead of a standalone policy. Most premium was categorized as certified, about six times as much as what was reported as both certified and non-certified. Very little of the premium was labeled as non-certified. Because the exposure data is still not credible, conclusions are not able to be drawn, but it appears that commercial multiperil–non liability has the highest portion of exposures covered by terrorism insurance.

Mr. Brandenburg said the NAIC will continue to contact companies and clean the data. The next step will then be to look at statewide and ZIP Code results in looking at premium and exposure amounts and take-up rates.

Having no further business, the Terrorism Insurance Implementation (C) Working Group adjourned.
2020 Proposed Charges

PROPERTY AND CASUALTY INSURANCE (C) COMMITTEE

The mission of the Property and Casualty Insurance (C) Committee is to: 1) monitor and respond to problems associated with the products, delivery and cost in the property/casualty (P/C) insurance market and the surplus lines market as they operate with respect to individual persons and businesses; 2) monitor and respond to problems associated with financial reporting matters for P/C insurers that are of interest to regulatory actuaries and analysts; and 3) monitor and respond to problems associated with the financial aspects of the surplus lines market.

Ongoing Support of NAIC Programs, Products or Services

1. The Property and Casualty Insurance (C) Committee will:
   A. Discuss issues arising and make recommendations with respect to advisory organization and insurer filings for personal and commercial lines, as needed. Report yearly.
   B. Monitor the activities of the Casualty Actuarial and Statistical (C) Task Force.
   C. Monitor the activities of the Surplus Lines (C) Task Force.
   D. Monitor the activities of the Title Insurance (C) Task Force.
   E. Monitor the activities of the Workers’ Compensation (C) Task Force.
   F. Provide an impartial forum for considering appeals of adverse decisions involving alien insurers delisted or rejected for listing to the Quarterly Listing of Alien Insurers. Appeal procedures are described in the International Insurers Department (IID) Plan of Operation.
   G. Monitor and review developments in case law and rehabilitation proceedings related to risk-retention groups (RRGs). If warranted, make appropriate changes to the Risk Retention and Purchasing Group Handbook.
   H. Monitor the activities of the Federal Crop Insurance Corporation (FCIC) that affect state insurance regulators:
      1. Serve as a forum for discussing issues related to the interaction of federal crop insurance programs with state insurance regulation.
      3. Monitor the regulatory information exchanges between the FCIC and state insurance regulators, as well as the FCIC and the NAIC, and make recommendations for improvement or revisions, as needed.
   I. Report on the private flood insurance market using data obtained from the state insurance regulator private flood insurance data call.

2. The Cannabis Insurance (C) Working Group will:
   A. Assess and periodically report on the status of federal legislation that would protect financial institutions from liability associated with providing services to cannabis businesses operating legally under state law.
   B. Encourage admitted insurers to ensure coverage adequacy in states where cannabis, including hemp, is legal.
   C. Provide insurance resources to stakeholders and keep up with new products and innovative ideas that may shape insurance in this space.
   D. Collect aggregated insurance availability and coverage gap information, as well as other cannabis and hemp insurance-related data, to then publicly share in a released report by the end of 2021.

3. The Catastrophe Insurance (C) Working Group will:
   A. Monitor and recommend measures to improve the availability and affordability of insurance and reinsurance related to catastrophe perils for personal and commercial lines.
   B. Evaluate potential state, regional and national programs to increase capacity for insurance and reinsurance related to catastrophe perils.
   C. Monitor and assess proposals that address disaster insurance issues at the federal and state levels. Assess concentration-of-risk issues and whether a regulatory solution is needed.
   D. Provide a forum for discussing issues and recommending solutions related to insuring for catastrophe risk, including terrorism, war and natural disasters.
E. Provide a forum for discussing various issues related to catastrophe modeling, and monitor issues that will result in changes to the Catastrophe Computer Modeling Handbook.
F. Investigate and recommend ways the NAIC can assist states in responding to disasters, and discuss issues surrounding loss mitigation. Update the State Disaster Response Plan, as needed, so that it provides a blueprint for action by the states to respond to catastrophic events.
G. Continue to examine ways to help state insurance regulators facilitate the private flood insurance market.
H. Study, in coordination with other NAIC task forces and working groups, earthquake matters of concern to state insurance regulators. Consider various innovative earthquake insurance coverage options aimed at improving take-up rates.

4. The Climate Risk and Resilience (C) Working Group will:
   A. Engage with industry and stakeholders in the U.S. and abroad on climate related risk and resiliency issues.
   B. Investigate and recommend measures to reduce risks of climate change related to catastrophic events.
   C. Identify insurance and other financial mechanisms to protect infrastructure and reduce exposure to the public.
   D. Identify sustainability, resilience and mitigation issues and solutions related to the insurance industry.
   E. Evaluate private-public partnerships to improve insurance market capacity related to catastrophe perils.
   F. Investigate and receive information regarding the use of modeling by carriers and their reinsurers concerning climate risk.
   G. Review the impact of climate change on insurers through presentations by interested parties.
   H. Review innovative insurer solutions to climate risk, including new insurance products through presentations by interested parties.

5. The Lender-Placed Insurance Model Act (C) Working Group will:
   A. Complete the drafting and adoption of a new model law concerning lender-placed insurance as it relates to mortgages.

6. The Pet Insurance (C) Working Group will:
   A. Complete the development of a model law or guideline to establish appropriate regulatory standards for the pet insurance industry.

7. The Terrorism Insurance Implementation (C) Working Group will:
   A. Coordinate the NAIC’s efforts to address insurance coverage for acts of terrorism. Work with the U.S. Department of the Treasury’s Terrorism Risk Insurance Program (TRIP) Office on matters of mutual concern. Discuss long-term solutions to address the risk of loss from acts of terrorism.
   B. Review and report on data collection related to insurance coverage for acts of terrorism.

8. The Transparency and Readability of Consumer Information (C) Working Group will:
   A. Study and evaluate actions that will improve the capacity of consumers to comparison shop on the basis of differences in coverage provided by different insurance carriers offering personal lines products.
   B. Systematize and improve presale disclosures of coverage.
   C. Facilitate consumers’ capacity to understand the content of insurance policies and assess differences in insurers’ policy forms.
   D. Assist other groups with drafting language included within consumer-facing documents.
   E. Study and discuss whether there is a need for consumer disclosures regarding significant premium increases on property/casualty (P/C) insurance products.
   F. Update and develop webpage and mobile content for A Shopping Tool for Homeowners Insurance and A Shopping Tool for Automobile Insurance.
   G. Discuss and draft a disclosure for state insurance regulators to consider requiring to be added to homeowners’ policies regarding the fact that homeowners policies do not cover losses from flood, earthquake or other specified disasters.
2020 Proposed Charges

CASUALTY ACTUARIAL AND STATISTICAL (C) TASK FORCE

The mission of the Casualty Actuarial and Statistical (C) Task Force is to identify, investigate and develop solutions to actuarial problems and statistical issues in the property/casualty (P/C) insurance industry. The Task Force’s goals are to assist state insurance regulators with maintaining the financial health of P/C insurers; ensuring that P/C insurance rates are not excessive, inadequate or unfairly discriminatory; and ensuring that appropriate data regarding P/C insurance markets are available.

Ongoing Support of NAIC Programs, Products or Services

1. The Casualty Actuarial and Statistical (C) Task Force will:
   A. Provide reserving, pricing, ratemaking, statistical and other actuarial support to NAIC committees, task forces and/or working groups. Propose changes to the appropriate work products (with the most common work products noted below) and present comments on proposals submitted by others regarding casualty actuarial and statistical matters. Monitor the activities, including the development of financial services regulations and statistical (including disaster) reporting, regarding casualty actuarial issues.
      1. Property and Casualty Insurance (C) Committee – ratemaking, reserving or data issues.
      2. Blanks (E) Working Group – P/C annual financial statement, including Schedule P; P/C quarterly financial statement; P/C quarterly and annual financial statement instructions, including Statement of Actuarial Opinion (SAO) and Actuarial Opinion Summary Supplement.
   B. Monitor national casualty actuarial developments and consider regulatory implications.
      1. Casualty Actuarial Society (CAS) – Statements of Principles and Syllabus of Basic Education.
      3. Society of Actuaries (SOA) – general insurance track’s basic education.
   C. Facilitate discussion among state insurance regulators regarding rate filing issues of common interest across the states through the scheduling of regulator-only conference calls.
   D. Work with the CAS and SOA to identify: 1) whether the P/C Appointed Actuaries’ logs of continuing education (CE) should contain any particular categorization to assist regulatory review; 2) what types of learning P/C Appointed Actuaries are using to meet CE requirements for “Specific Qualification Standards” today; and 3) whether more specificity should be added to the P/C Appointed Actuaries’ CE requirements to ensure that CE is aligned with the educational needs for a P/C Appointed Actuary.
   E. In coordination with the Big Data (EX) Working Group:
      1. Draft and propose changes to the Product Filing Review Handbook to include best practices for the review of predictive models and analytics filed by insurers to justify rates.
      2. Draft and propose state guidance (e.g., information, data) for rate filings that are based on complex predictive models.
      3. Facilitate training and the sharing of expertise through predictive analytics webinars (Book Club).

2. The Actuarial Opinion (C) Working Group will:
   A. Propose revisions to the following, as needed, especially to improve actuarial opinions, actuarial opinion summaries, and actuarial reports, as well as the regulatory analysis of these actuarial documents and loss and premium reserves:
3. Annual Statement Instructions—Property/Casualty.
4. Regulatory guidance to appointed actuaries and companies.
5. Other financial blanks and instructions, as needed.

3. The **Statistical Data (C) Working Group** will:
   A. Consider updates and changes to the *Statistical Handbook of Data Available to Insurance Regulators*.
   B. Consider updates and developments, provide technical assistance, and oversee the production of the following reports and databases. Periodically evaluate the demand and utility versus the costs of production of each product.
   1. *Dwelling Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance*.
   2. *Auto Insurance Database*.

NAIC Support Staff: Kris DeFrain/Jennifer Gardner/Libby Crews

W:\National Meetings\2019\Fall\TF\CasAct\2020 CASTF Charges.docx
Draft: 11/18/19
Adopted by the Executive (EX) Committee and Plenary, TBD
Adopted by the Property and Casualty Insurance (C) Committee, Dec. 9, 2019
Adopted by the Surplus Lines (C) Task Force, Aug. 3, 2019

2020 Proposed Charges

SURPLUS LINES (C) TASK FORCE

The mission of the Surplus Lines (C) Task Force is to monitor the surplus lines market and regulation, including the activity and financial condition of U.S. and alien surplus lines insurers by providing a forum for discussion of issues; and develop or amend relevant NAIC model laws, regulations and/or guidelines.

Ongoing Support of NAIC Programs, Products or Services

1. The Surplus Lines (C) Task Force will:
   A. Provide a forum for discussion of current and emerging surplus lines-related issues and topics of public policy and determine appropriate regulatory response and action.
   B. Review and analyze quantitative and qualitative data on U.S. domestic and alien surplus lines industry results and trends.
   C. Monitor federal legislation related to the surplus lines market and ensure that all interested parties remain apprised.
   D. Develop or amend relevant NAIC model laws, regulations and/or guidelines.
   E. Oversee the activities of the Surplus Lines (C) Working Group.

2. The Surplus Lines (C) Working Group will:
   A. Operate in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings and operate in open session when discussing surplus lines topics and policy issues, such as amendments to the International Insurers Department (IID) Plan of Operation.
   B. Maintain and draft new guidance within the IID Plan of Operation regarding standards for admittance and continued inclusion on the NAIC Quarterly Listing of Alien Insurers.
   C. Review and consider appropriate decisions regarding applications for admittance to the NAIC Quarterly Listing of Alien Insurers.
   D. Analyze renewal applications of alien surplus lines insurers on the NAIC Quarterly Listing of Alien Insurers and ensure solvency and compliance per the IID Plan of Operation guidelines for continued listing.
   E. Provide a forum for surplus lines-related discussion among jurisdictions.

NAIC Support Staff: Andy Daleo/Bob Schump
2020 Proposed Charges

TITLE INSURANCE (C) TASK FORCE

The mission of the Title Insurance (C) Task Force is to study issues related to title insurers and title insurance producers.

Ongoing Support of NAIC Programs, Products or Services

1. The Title Insurance (C) Task Force will:
   A. Monitor issues and developments occurring in the title insurance industry, and provide support and expertise to other NAIC committees, task forces and/or working groups, or outside entities, as appropriate.
   B. Review and assist various regulatory bodies in combating fraudulent and/or unfair real estate settlement activities. Such efforts could include working with the Antifraud (D) Task Force and other NAIC committees, task forces and/or working groups to combat mortgage fraud and mitigating title agent defalcations through the promotion of closing protection letters and other remedies. Report results at each national meeting.
   C. Consult with the Consumer Financial Protection Bureau (CFPB) and other agencies responsible for information, education and disclosure for mortgage lending, closing and settlement services about the role of title insurance in the real estate transaction process.
   D. Consider the effectiveness of changes in financial reporting by title insurance companies and identify further improvements and clarifications to blanks, instructions, Statement of Statutory Accounting Principles (SSAPs), solvency tools, and other matters, as necessary. Coordinate efforts with the Statutory Accounting Principles (E) Working Group.
   E. Revise the Title Insurance Consumer Shopping Tool Template to include questions and answers about title insurance-related fraud topics, including but not limited to, closing protection letters and wire fraud.
   F. Evaluate the effectiveness of closing protection letters, including but not limited to, intent, state regulation and requirements, consumer protections offered and excluded, and potential alternatives for coverage.

NAIC Support Staff: Anne Obersteadt/Aaron Brandenburg
2020 Proposed Charges

WORKERS’ COMPENSATION (C) TASK FORCE

The mission of the Workers’ Compensation (C) Task Force is to study the nature and effectiveness of state approaches to workers’ compensation and related issues, including, but not limited to: assigned risk plans; safety in the workplace; treatment of investment income in rating; occupational disease; cost containment; and the relevance of adopted NAIC model laws, regulations and/or guidelines pertaining to workers’ compensation.

Ongoing Support of NAIC Programs, Products or Services

1. The Workers’ Compensation (C) Task Force will:
   A. Oversee activities of the NAIC/IAIABC Joint (C) Working Group.
   B. Discuss issues with respect to advisory organizations, rating organizations, statistical agents, and insurance companies in the workers’ compensation arena.
   C. Monitor the movement of business from the standard markets to the assigned risk pools. Alert state insurance department representatives if growth of the assigned risk pools changes dramatically.
   D. Follow workers’ compensation issues regarding cannabis in coordination with the Cannabis Insurance (C) Working Group.

2. The NAIC/IAIABC Joint (C) Working Group will:
   A. Study issues of mutual concern to insurance regulators and the International Association of Industrial Accident Boards and Commissions (IAIABC). Review relevant IAIABC model laws and white papers and consider possible charges in light of the Working Group’s recommendations.
   B. Complete the drafting and adoption of the white paper, Changing Employee Relationships – Completion date anticipated in early 2020.

IDENTIFICATION OF ITEM(S) TO CHANGE

A new Private Flood Insurance Supplement collecting residential and commercial private flood insurance data and revisions to the Credit Insurance Experience Exhibit (CIEE) to collect lender-placed flood coverages.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The State Page currently collects private flood insurance data but does not split residential from commercial coverages. Regulators, as well as industry and consumers, have a desire to better monitor and assess the growth of the residential private flood insurance market as that market begins to grow. A new Supplement will separate residential from commercial as well as capturing stand alone/endorsement and first dollar/excess policy information. The revisions to the CIEE will allow for the collection of lender-placed flood coverages in order to get a more complete picture of the private flood insurance market.

(a) Provide a description of "other" coverages (including their percent of Line 1.6, Column 7). _______________________________ ____________________________________________________________________

7. Earned Exposure:
December 9, 2019

The following document provides information regarding ways for a department of insurance (DOI) to encourage the growth of private residential flood insurance.

Currently, the Property and Casualty Insurance (C) Committee is considering enhancing the collection of private flood data. These efforts include: 1) collecting information that separates residential private flood insurance premiums from commercial private flood insurance premiums; and 2) breaking the information down by stand-alone policies and endorsements to homeowners insurance policies, by both first dollar and excess. Additionally, the proposed supplement will provide claims and policy data.

Furthermore, it has been proposed that lender-placed flood insurance data be collected on the Credit Insurance Experience Exhibit and private flood insurance data be collected for the surplus lines market through the Surplus Lines (C) Working Group.

The Market Regulation and Consumer Affairs (D) Committee has developed a private flood insurance line for the Market Conduct Annual Statement (MCAS), which will collect 2020 data in 2021. The data is expected to follow the same format as the homeowners MCAS with a focus on private flood insurance.

Other considerations for the Property and Casualty Insurance (C) Committee include:

- Considering ways to incorporate a conforming conditions clause in the form approval process.
- Referring state law conflicts relating to statute of limitations and cancellation/renewal provisions to the Government Relations Leadership Council (GRLC) to resolve at the federal level.
CONSIDERATIONS FOR STATE INSURANCE REGULATORS IN BUILDING THE PRIVATE FLOOD INSURANCE MARKET

Flood Coverage Being “At Least as Broad as” the NFIP

Continuous Coverage

Non-Compete Clause

NFIP Subsidized Rates

Ability to Assess Flood Risk Accurately
BACKGROUND AND PURPOSE

State insurance regulators have first-hand experience with the devastating effects that floods have on the constituents in their states, and they believe it is critical that flood insurance is both available and affordable in order to encourage purchases that thereby protect homes, businesses and personal property. Although private flood insurance is being written largely in the commercial market, this paper will focus on the residential flood insurance market.

For more than a half-century, the federal government’s National Flood Insurance Program (NFIP) has been the primary player in the residential flood insurance market, underwriting most policies while private insurers have largely focused on a relatively small residential supplemental market. While the NFIP has done a laudable job in making flood insurance available for millions of residential properties, a significant flood insurance gap exists across the U.S.\(^1\) with flood event after flood event revealing a substantial number of damaged properties being uninsured.\(^2\) A Federal Emergency Management Agency (FEMA) analysis from 2018 indicates that 69% of American homes in high-risk flood zones do not have flood insurance. Concurrently, there has been a heightened interest amongst private carriers to expand their residential flood insurance offerings, greatly assisted by the development of more sophisticated flood mapping and risk modeling technologies.

Funding for continuation of the NFIP expired in September 2017, and since then, the U.S. Congress has passed numerous short-term extensions, and more are expected. The federal Biggert-Waters Flood Insurance Reform Act of 2012 (Biggert-Waters) requires lenders to accept private flood insurance policies meeting certain requirements just as they would an NFIP policy to satisfy the federal mandatory purchase mortgage requirement. The NAIC has been engaged legislatively and with the federal banking regulators on their rulemaking.\(^3\) In February 2019, after six years of deliberation, the federal banking regulators finalized their rule. The final rule provides the requirements\(^4\) for lenders to accept provide flood insurance policies. The rule also provides lenders the option to accept private flood insurance policies that do not meet the mandatory acceptance requirements set forth in Biggert-Waters subject to certain conditions.

State insurance regulators and the NAIC support a long-term NFIP reauthorization, as well as the facilitation of increased private sector involvement in the sale of flood insurance, which can help ensure that consumers have access to multiple options. In 2016, the NAIC developed the “NAIC Principles for National Flood Insurance Program (NFIP) Reauthorization”\(^5\) and has testified in Congress on the importance of ensuring a viable private flood insurance market as an alternative to the NFIP.\(^6\)

---

\(^2\) www.pciaa.net/docs/default-source/industry-issues/4_lessonslearned.pdf.

\(^3\) https://www.naic.org/documents/government_relations_comment_letter_federal_banking_private_flood_insurance.pdf.

\(^4\) The key conditions in the final rule are: 1) a requirement that the policy provide sufficient protection for a designated loan, consistent with general safety and soundness principles; and 2) a requirement that the regulated lending institution document its conclusion regarding the sufficiency of protection in writing. The final rule also allows regulated lending institutions to exercise their discretion to accept certain plans providing coverage issued by “mutual aid societies.”

Following from this NAIC action, the purpose of this document is to provide state insurance regulators with concrete actions that can be and/or have been taken to assist with the development of the burgeoning private insurance market for residential flood insurance.
OVERALL STATE OF THE FLOOD INSURANCE MARKET

According to the most recent data collected by the NAIC (Table 1), approximately $644 million of direct premium was written in the private flood insurance market in 2018 throughout the U.S. In 2018, the private flood insurance market represented 15% of the total flood insurance market ($4.2 billion). The private flood insurance market has been growing over the past few years, with the $644 million in direct premium written in 2018 being an increase of 9% from 2017 direct written premiums, and an increase of 71% since 2016. In 2018, California, Florida, Louisiana, New Jersey, New York, Pennsylvania, Puerto Rico and Texas each had $20 million or more of private flood insurance direct written premium (Table 1), with these eight states/jurisdictions representing nearly 60% of the total private flood insurance market.

It is important to note that the NAIC Annual Statement data used in Table 1 and Table 2 does not differentiate between residential private flood insurance premium and commercial private flood insurance premium. The NAIC is exploring data collection via a supplement and/or data call to collect data for residential private flood insurance and commercial private flood insurance separately.

Beyond this aggregate view of premium being written by state, for a relative sense of market penetration and growth of the private flood market, two other views of the NAIC data are presented: 1) private flood as a percentage of total flood written per state in 2018 (Table 1); and 2) private flood growth by state from 2016 to 2018 (Table 2).

| Table 1: Private Flood as a Percentage of Total Flood Written per State in 2018 |
|-----------------|-----------------|-----------------|----------------|-----------------|

</table>

Clearly, this data suggests that there are considerable opportunities for private flood insurance placement and market development. However, it is important to note that in 2018, the majority of growth occurred in the private commercial flood insurance market. The residential private flood insurance market showed a slight decline from 2017.7

As insurers’ familiarity with flood catastrophe models grows, as underwriting experience develops and as state regulatory structures evolve, the number of private flood insurance policies in force could continue to grow, including among admitted carriers. Therefore, it is important to understand what the states have done (or not done) to enhance this growth.

STATE ACTION

During the six years of uncertainty regarding the federal banking rules for private flood insurance, a number of states began undertaking efforts to encourage the growth of a private flood insurance market in their state. Florida’s efforts to establish a private flood insurance market have been applauded as a potential model to be used in other states looking to expand their residential private flood insurance offerings. Florida has the largest flood insurance market in the country; approximately 35% of NFIP policies are written there. Florida has enacted legislation to create a statutory framework, allowing private insurers to offer multiple types of flood coverage ranging from standard coverage, which mirrors the NFIP, to other enhanced coverages. This legislation includes: 1) streamlining the rate filing process for private flood insurers; 2) eliminating the diligent search requirement for flood policies issued by surplus lines carriers until July 2019; and 3) providing a process by which the Office of Insurance Regulation (OIR) will certify that a private insurer’s policy equals or exceeds coverage provided by the NFIP. Florida’s OIR issued an informational memorandum providing guidance on how private insurers will need to demonstrate the financial capacity to assume this risk, as well as options for developing private flood rates and policy forms.

In addition to Florida, we can draw upon the existing experiences from other states in developing a robust flood insurance market along the key aspects of insurance regulation.

The NAIC reached out to the states on the drafting group to provide information that was not readily available on the states’ websites, as well as to gather information from other resources, including: 1) the Wharton School of the University of Pennsylvania study *The Emerging Private Residential Flood Insurance Market in the United States*; 2) Government Accountability Office (GAO) reports; and 3) a recently updated Congressional Research Service (CRS) report regarding private flood insurance and the NFIP. In the future, the NAIC might want to consider sending a more detailed questionnaire to the states to gather more information regarding the developing private flood insurance market.

State efforts to grow a viable private flood insurance market include:

**Legislative and Regulatory Changes**
- Supporting private flood insurance legislation.
- Approving private flood insurance products.
- Tailoring rate and form requirements for private flood insurance coverage.
- Allowing private flood insurers to submit rates on an informational basis.
- Removing diligent search requirements.

**Consumer Information**
- Conducting consumer outreach.
- Listing private flood insurance products on a department of insurance’s (DOI) website.
- Collecting residential private flood insurance data.

**Agent and Lender Actions**
- Implementing specific continuing education (CE) requirements for producers.
- Increasing the weighting of flood insurance questions on producer licensing exams.
- Conducting agent education.
- Conducting lender education.

---

LEGISLATIVE AND REGULATORY CHANGES

Supporting Private Flood Insurance Legislation
In addition to Florida’s legislation, West Virginia has passed legislation requiring insurers to file their private flood insurance plan of operation with the insurance commissioner and authorizing expedited processing of surplus lines policies for flood insurance.

Approving Private Flood Insurance Products
Personal lines private flood insurance products are being approved by a number of states. Currently, Alabama, California, Mississippi and Pennsylvania are among states approving new personal lines private flood insurance products for entry into the market.

In January 2018, the Insurance Services Office (ISO) developed a new private flood insurance form, for both personal and commercial flood insurance. The ISO forms are similar to a homeowner’s policy form. However, the damage to the property must be caused by flooding. As of March 2018, ISO personal flood insurance forms have been filed in 43 jurisdictions, and commercial flood insurance forms have been filed in 45 jurisdictions. The states with independent rating bureaus are not reflected in these numbers.

TAILORING RATE AND FORM REQUIREMENTS FOR PRIVATE FLOOD INSURANCE COVERAGE

The states might want to consider permitting insurers to file private flood insurance products without a prior approval requirement. For example, Florida law permits private flood insurance rates to be implemented without prior approval at the time of filing. However, insurers are required to keep supporting actuarial data for two years. Furthermore, Florida law allows insurers to request the state to certify that a private policy provides flood coverage that equals or exceeds that offered by NFIP. (See Appendix I for information on Florida’s process.)

Maryland, South Carolina and Pennsylvania have not relaxed the rate and form filing requirements. However, they are committed to an efficient and swift overview of private flood insurance filings, and they will work with insurers to make the filing and approval process as smooth as possible.

EXPORT LIST / WAIVING DILIGENT SEARCH REQUIREMENTS

Insurance generally must be sold in the admitted market. Only after a “diligent search” of the admitted market is performed and coverage is denied can insurance be placed in the surplus lines market. However, states make exceptions for those types of insurance that are known to not be available in the admitted market. These insurance products are listed on what is known as an “Export list.” When a type of insurance is listed on an Export list, the applicant can go straight to the surplus lines market without the need for the diligent search, thereby obtaining coverage more easily and quickly. At least 14 states have placed flood insurance on their “Export list,” including: Alaska, Arizona, Connecticut, Idaho, Louisiana, New Jersey, Oklahoma, Oregon, Pennsylvania, Rhode Island, Texas, Virginia, West Virginia and Wisconsin.
Allowing Private Flood Insurers to Submit Rates on an Informational Basis
Allowing insurers to submit rates on an informational basis in states with prior approval rate filing laws is another way to encourage the growth of the private flood insurance market. Two states that have taken this approach include Florida and New Jersey.\(^9\) (See Appendix I for information on Florida’s process.)

**CONSUMER INFORMATION**

Consumer Outreach

It is important to understand that everyone lives in a flood zone. Some people live in higher-risk flood zones than others, but we all live in a flood zone.

When people say they live or do not live in a flood zone, they typically mean what is known as a “special flood hazard area”. A “special flood hazard area” is an area within FEMA’s 100-year flood plain. This is where flood insurance is typically mandatory as a condition of obtaining a property loan. But there are flood zones outside of the 100-year flood plain as well. For example, there is also what FEMA classifies as moderate risk flood zones. These are the properties in the 500-year flood plain. By definition, and according to FEMA, these properties have between a 0.2% and a 1% chance of flooding in any given year. That might sound small, but over the course of a 30-year mortgage, these properties, according to FEMA, have between a 6% and 26% chance of being inundated by a flood. And flood insurance is not mandatory as a condition of obtaining a property loan in these moderate-risk flood zones.

Consumers need to understand that their property may still be at risk for flooding even if they do not live in a special flood hazard area and are not required to purchase it. They also need to understand that flood insurance can be relatively inexpensive, especially when the property is not in the highest-risk flood zones. There are options available to them, from both the NFIP and the private flood insurance market. And they can purchase lower limits of coverage; they do not need to insure the full replacement cost of their home if they do not wish to do so. Purchasing just $20,000 of coverage, for example, might go a long way in the event of a flood and may be cheaper to purchase than believed. Further, renters can buy policies that cover only their personal property and not the dwelling that they rent.

There are also many consumers under the misconception that flood damage will be covered by their homeowners insurance policy or rental insurance policy. Therefore, they are unaware of their actual flood risk, and they learn that they are uninsured for this catastrophic peril only after a flood event for which they have no coverage.

State DOIs, as well as the NAIC, are launching consumer outreach programs to help address this coverage gap.

Some states now require a flood disclosure with homeowners policies. For example, Texas recently passed a law requiring a conspicuous disclosure when homeowners policies do not include flood coverage.

The NAIC Communications Department has also launched a flood campaign this year to inform consumers of the importance of purchasing flood insurance, either private flood insurance or flood insurance provided by the NFIP. Additionally, the NAIC recently released a special section of its website.

---

dedicated to educating consumers about the risks of flooding and what kinds of coverage options are available to protect against those risks.

Finally, the NAIC’s Transparency and Readability of Consumer Information (C) Working Group has created both a basic flood insurance document and several graphic materials containing flood facts, to be used by DOIs for consumer outreach via social media.

**Listing Private Flood Insurance Writers on a DOI Website**

While many DOIs include information regarding NFIP policies on their websites, some states, including Florida, Louisiana, New Jersey and Pennsylvania, provide a list of private flood insurance writers and their contact information on their websites.

It is worthwhile to note that surplus lines writers are generally not listed by the line of business they write. However, it has been suggested that there would be value for the states to provide information regarding which surplus lines writers are writing residential private flood insurance. Pennsylvania lists the surplus lines producers placing residential flood insurance on its website.

**Collecting Residential Private Flood Insurance Data**

Florida and Texas both collect comprehensive data regarding residential private flood insurance. As described previously, the NAIC has been collecting private flood insurance data since the data year 2016. Before that, the private flood insurance line was not a separate entry in the annual statement. While residential and commercial private flood insurance are not separated in the property/casualty (P/C) annual statement blank, the NAIC, through its Property and Casualty Insurance (C) Committee, is considering enhancements to the annual statement that would require insurers to report the residential private flood insurance premiums and commercial private flood insurance premiums independently. The Surplus Lines (C) Task Force is considering similar changes to alien surplus lines private flood insurance data that is reported to the International Insurers Department (IID).

The Wholesale & Specialty Insurance Association (WSIA) is also providing the Reinsurance Association of America (RAA) with data regarding surplus lines insurance. The RAA is working on an open source database that provides information regarding private flood insurance.

These changes would allow state insurance regulators and FEMA to better measure the growth of the private residential flood insurance market.

**AGENT AND LENDER ACTIONS**

**Continuing Education and Producer Licensing Requirements**

FEMA requires all insurance producers licensed in property, casualty or personal lines of authority who sell flood insurance through the NFIP to complete a one-time course, as required by the federal Flood Insurance Reform Act of 2004. This is also the only educational requirement in many states.

At least one state has increased the weighting of the flood insurance questions on their producer licensing exam.

---

Agent Education

When purchasing insurance, many times the insurance agent is the consumer’s first point of contact. Therefore, it would be valuable if an agent could explain the risks of flooding, even if a consumer does not own or rent property in a high-risk flood zone. Recent flood events remind us that where it can rain, it can flood, and many floods occur outside of a high-risk flood zone. If agents help to educate the consumer, it will help eliminate the cost of inaction, as the occurrence of a flood event could be financially unbearable for homeowners or renters if they are not insured or are underinsured. It is critical for agents to make a special effort to educate homeowners regarding the need for flood insurance, even if a business or home is not located in a high-risk flood zone.

DOIs can provide agents with information that they have learned as a result of a flood event, and they can foster agent education by requiring CE requirements to improve an agent’s knowledge of flood insurance.

Other states’ adoption of such practices would likely improve agents’ knowledge of flood insurance, therefore helping their clients to obtain more effective flood coverage, whether through the NFIP or the private market.

Lender Education

A large percentage of Americans have a mortgage on their home. Therefore, lender education is another opportunity for consumer flood insurance education. Recent catastrophic flooding events have illustrated that floods can happen anywhere. Therefore, it may be in the best interest of homeowners to purchase flood insurance even if they do not live in a high-risk flood zone.

While state insurance regulators do not have the authority to regulate lenders, lenders should still be educated regarding the importance of flood insurance. When navigating the loan process, lenders do not always discuss purchasing flood insurance unless the borrower’s home is in a high-risk flood zone. A discussion about purchasing flood insurance even if the homeowner does not live in a high-risk flood zone should ideally be addressed with the borrower.

DOIs can raise awareness regarding flood insurance by bringing agents, consumers, lenders, FEMA, private flood insurance writers, etc. together in communities to discuss the importance of a homeowner purchasing flood insurance.

MARKET UNCERTAINTY AND THE DEVELOPMENT OF A PRIVATE FLOOD INSURANCE MARKET

The May 2019 CRS report, “Private Flood Insurance and the National Flood Insurance Program,” identified some of the barriers to the development of a private flood insurance market. Some of the barriers identified in the report include: 1) regulatory uncertainty; and 2) continuous coverage.

Most directly relevant for the NAIC members is the notion of regulatory uncertainty, which is covered below. The remaining topics will be addressed in Appendix II.
In 2016, the U.S. experienced several major flood catastrophes, causing billions of dollars in property losses. Following these storms, it was found that somewhere between 50% and 80% of these losses were not insured, which implies that communities are unable to bounce back quickly following large catastrophic events.

Floods are expected to cost U.S. households $20 billion each year. An Insurance Information Institute (I.I.I.) survey indicated that 15% of American homeowners had a flood insurance policy in 2018 and that there were approximately 5.18 million flood insurance policies held by the NFIP. Milliman estimates the potential private residential flood insurance market to represent between $34 billion and $48 billion in direct written premium. This data clearly indicates an opportunity for growth in the residential private flood insurance market in the U.S.

Recently, comments have surfaced regarding the possibility of the residential private flood insurance market cherry-picking their risks. It is important to remember the NFIP was meant to be a temporary solution that was put into place 50 years ago due to private insurers not insuring flood. While the NFIP is important, every state has some type of residual market that aids in insuring and providing insurance coverage for those who are unable to obtain insurance coverage available in the market. While not directly related to flood insurance, two good examples of successful residual markets are Florida Citizens and Louisiana Citizens. As the market has grown and shrunk in both Florida and Louisiana, both Florida Citizens and Louisiana Citizens needed to and provided a safe and reliable source of insurance for consumers. The NFIP can continue to evolve and do the same thing. Milliman believes Risk Rating 2.0 will help the NFIP and provide helpful information regarding the actual risk of a flood insurance policy; however, it was recently announced that the implementation of Risk Rating 2.0 will be delayed until Oct. 1, 2021 to allow for more analysis of its impact.

Milliman is of the opinion that a private market can coexist alongside the NFIP. Private flood insurance can be written in the admitted and non-admitted market. However, it needs to be determined if the guaranty funds will cover flood insurance in the admitted market, as flood may be excluded in many states.

Many private insurers have not serviced or written flood insurance policies. Additionally, private insurers do not have access to historical data; this poses a problem. It will be important to balance the need to protect consumers against the need to promote the private flood insurance market.

New entrants to the private flood insurance market are likely to purchase significant amounts of reinsurance. Flood insurance is inherently high-risk and volatile, so insurers may require higher amounts of profit and contingencies built into rates than for a typical homeowner's insurance product. States allowing these options might make it easier for an insurer to offer private flood insurance. For example, Wisconsin has no limitations or requirements for reinsurance cost and profit provision assumptions.

The issue of continuous coverage is problematic. In order for an NFIP policyholder to preserve any subsidies provided by the NFIP, a policyholder is required to have continuous flood insurance coverage. Currently, a policyholder loses subsidies or cross-subsidies when private flood insurance is purchased, if the policyholder chooses to return to the NFIP.

---

13 Milliman
14 https://www.iii.org/fact-statistic/facts-statistics-flood-insurance
15 https://www.fema.gov/total-policies-force-calendar-year
16 Milliman
Unless there is legislation in place allowing private flood insurance to be deemed as continuous coverage, homeowners may be averse to purchasing private flood insurance. Homeowners do not want to find themselves in a situation causing them to lose their subsidy should they elect to return to the NFIP for flood insurance coverage. While legislation has been introduced in the U.S. House of Representatives allowing private flood insurance to count towards continuous coverage, legislation has yet to be passed.

The availability of private flood insurance provides the added benefit of increasing consumer choice. As private insurers are entering the flood insurance market, some of the policies offered are providing broader coverage than that provided by the NFIP. Additionally, some policyholders are finding private flood insurance policies to be less expensive than those offered by the NFIP.17

**SUMMARY**

In the past few years, many states have experienced catastrophic flooding. Following the flood events, it has become even more apparent that a significant number of consumers are either uninsured or underinsured for the flood peril.

While the NFIP still writes a majority of the residential flood insurance policies, there are considerable opportunities for the development of the residential private flood insurance market.

This document provides details about how a few states have put procedures in place to enhance the private flood insurance market in a state. These procedures include: 1) supporting private flood insurance legislation and initiatives; 2) tailoring rate and form requirements for residential private flood insurance products; and 3) consumer, agent and lender education.

It is noteworthy to say that the states experiencing large flooding events have seen growth in the private flood insurance market regardless of any other actions. For example, following Hurricane Harvey, Texas saw growth in its residential private flood insurance market. Catastrophic events are a reminder to consumers of the devastation caused by flooding.

While there are several barriers for the residential private flood insurance market, the most significant barrier for private insurers may be uncertainty about the state regulatory environment.

To avoid unintended consequences policymakers interested in facilitating a private flood insurance market should familiarize themselves with the requirements for residential customers with a federally backed mortgage to purchase flood insurance coverage and with the existing private insurance markets that provide coverage for flood damage, including coverage provided under: (a) commercial policies, (b) residential policies providing coverage in excess of required flood insurance coverage limits, (c) residential policies for those not mandated to purchase flood insurance, and (d) comprehensive auto coverages. With such knowledge, legislative and regulatory changes can be tailored to accomplish the policy objectives without adversely impacting existing flood insurance markets.

The attached appendices discuss steps that Florida has taken in its approach to cultivate the private residential flood insurance market and discussion of other barriers to the entrance of residential private flood insurers.

---

Appendix I — Actions Florida Has Taken

**FLORIDA’S FORM FILING PROCESS EXAMPLE**

Florida reviews form filings, providing flood coverage differently based on the type of flood coverage being provided.

**Subject to the Requirements of Florida’s Flood Statute**

The coverage provided under the policy must meet one of the definitions of type of flood coverage, as defined by S. 627.715, F.S. Of the five defined types, "standard," "preferred" and "customized" are defined to meet or exceed the coverage provided by the standard NFIP policy. "Flexible" flood insurance must cover losses from the peril of "flood" as defined by the statute, but it does not have to provide coverage comparable to the entire NFIP policy. "Supplemental" flood coverage is meant to supplement an NFIP or private flood policy. Policies that fall under these definitions may have certain provisions that differ from that which would otherwise be required if not written under the flood statute.

**Items Not Subject to the Requirements of Florida’s Flood Statute**

The coverage does not have to meet or exceed the coverage provided by the standard NFIP policy. However, the provisions of the flood statute that allow changes to the form and rate requirements, as well as allowing for a certification provided by the Florida OIR, do not apply. This means that forms and rates would be subject to all the requirements of Florida law, and the coverage does not have to meet the definition of "flood" under the statute.

*Florida’s private flood insurance statute, S. 627.715 F.S., does not apply to the commercial lines market. Forms providing commercial flood coverage must comply with all applicable Florida laws.*

**REVIEW OF FLORIDA’S FORM FILING PROCESS**

How the Florida OIR Reviews Form Filings Subject to its Flood Statute

The Florida OIR coordinates with FEMA about training to educate forms analysts about the details and nuances of a federal NFIP policy. Forms analysts:

- Review the policy or endorsement and compare it to the NFIP policy.
- Review the provisions of the underlying policy that are not superseded by changes made in the endorsement.
- Make sure that the flood coverage in total (including definitions, deductibles, limits, conditions, property not covered, exclusions, etc.) are as broad as that provided under the NFIP policy.
- Exclude provisions, specific to the NFIP, that would not make sense to be in a private company’s policy.

**State Law Conflict**

There are certain provisions in the federal private flood definition that may conflict with a state’s law.

For example, the statute of limitations under the standard NFIP policy is one year after the date of denial. In Florida, the statute of limitations for most claims is five years from the date of loss. The insurer could use the standard NFIP provision, or the insurer could use a provision such as one year after the date of denial of a claim or five years from the date of the loss, whichever is greater. The modified provision would be considered as providing better coverage.
Another potential area in which there could be conflict between the standard NFIP policy and state law is the requirement for notice of cancellation. The NFIP requires 45 days, which may be more or less than state provisions.

In Florida, to comply with the flood statute or other than Flexible or Supplement flood insurance, the insurer would have to give at least 45 days notice.

The general filing requirement for forms is found in S. 627.410, F.S., which requires the Florida OIR to approve forms before use.

For commercial flood coverage, the insurer has the option to file the forms as informational pursuant to S. 627.4102, F.S.

FLORIDA RATE PROCESS EXAMPLE

Florida allows insurers to offer personal residential flood insurance coverage that meets the requirements of the flood statute. Insurers may decide to either submit the rate filings subject to the normal filing requirements of review and approval or (until Oct. 1, 2025) submit the filing for informational purposes.

Personal residential flood insurance rates submitted for informational purposes are subject to examination by the Florida OIR for a period of two years from the effective date to determine if the rates are excessive, inadequate or unfairly discriminatory.

If the coverage does not meet the requirements of the “flood statute,” the rate filing is subject to the normal filing requirements of review and approval. Commercial non-residential property rates (including that for flood coverage) are informational due to a separate provision of Florida laws, and they are an exception to these filing requirements.

FLORIDA FLOOD STATUTE – FLOOD POLICY TYPES

Florida’s flood statute (S. 627.715, F.S.) sets up five types of flood coverage that may be written using the special deviations allowed for flood insurance.

- Standard flood insurance (equivalent to coverage provided under the standard flood policy under the NFIP).
- Preferred flood insurance.
- Customized flood insurance.
- Flexible flood insurance.
- Supplemental flood insurance.

Flexible and supplemental coverage are the only flood coverage types under the statute that do not require flood insurance coverage to meet or exceed what is provided under the standard NFIP policy. Flexible coverage must provide coverage for the peril of flood as defined by the statute (which mirrors that of the NFIP). However, there are ancillary coverages that are not required to be provided.
APPENDIX II — BARRIERS TO THE RESIDENTIAL PRIVATE FLOOD INSURANCE MARKET

Flood Coverage Being “At Least as Broad as” the NFIP

Biggert-Waters specifies that private flood insurance satisfies the mandatory purchase mortgage requirement when a private flood insurance policy affords coverage that is “at least as broad as” the coverage offered by an NFIP flood insurance policy.¹⁸

Since there was not a federal banking rule in place regarding private flood insurance following the passage of Biggert-Waters, it was challenging to implement the use of private flood insurance for the mandatory purchase mortgage requirement. Some lending institutions thought that they did not have the knowledge necessary to assess whether a flood insurance policy met the definition of private flood insurance set forth in Biggert-Waters.

The federal banking rule became effective July 1, 2019. The rule fulfills the condition in Biggert-Waters that regulated lending institutions accept private flood insurance policies satisfying the conditions specified in the Act. Furthermore, the federal banking rule allows lending institutions to accept an insurer’s written assurances stated in a private flood insurance policy that the appropriate criteria is met. The rule also permits lending institutions to accept some flood insurance coverage plans provided by mutual aid societies.

Theoretically, the federal banking rule removes the acceptance of private flood insurance as a barrier to the private flood insurance market. However, educating the banking industry is clearly still needed as state insurance regulators are still hearing that lenders are telling borrowers that the only flood insurance policy that is acceptable is an NFIP flood policy. Thus, further education regarding the federal banking rule needs to be done. States may want to consider drafting a bulletin that can be used for these purposes.

Lenders may accept private flood insurance that meets the “discretionary acceptance” definition, which states that lending institutions may accept private flood insurance policies that do not meet the “mandatory acceptance” requirements, provided that certain conditions are met, such as that the policy provides sufficient protection of the loan, consistent with general safety and soundness principles.¹⁹

This distinction may be important for insurers with a product designed with higher-deductible options and/or a shorter cancellation notice for nonpayment of premiums.

Finally, many property owners are not required to purchase flood insurance because their home is outside of a Special Flood Hazard Area (SFHA) or because they do not have a federally backed mortgage. As a result, any flood insurance policy covering such properties is not required to be as broad as the NFIP policy.

Continuous Coverage

If an NFIP policy holder lets an NFIP policy lapse, by either not paying premium or going to a private flood insurer, any subsidy the NFIP policy holder would have received is immediately eliminated.²⁰ Legislation currently being considered by Congress to reauthorize the NFIP includes the ability of policyholders to leave the NFIP in order to purchase a private flood insurance policy and then return to the NFIP without penalty.

¹⁸ 42 U.S.C §4012a(b).
¹⁹ Ibid
²⁰ As required by §100205(a)(1)(B) of Biggert-Waters (P.L. 112-141, 126 Stat. 917), only for NFIP policies that lapsed in coverage as a result of the deliberate choice of the policyholder.
Non-Compete Clause

FEMA dropped its non-compete clause in 2018. FEMA now allows Write Your Own (WYO) companies to sell NFIP policies. Therefore, this is no longer a barrier.

NFIP Subsidized Rates

One of the hurdles facing private flood insurance growth involves the NFIP’s subsidized rates, as NFIP premiums do not always reflect the full risk of flooding. NFIP rates allow certain policyholders to have more affordable premiums. Additionally, NFIP rates do not incorporate profit, which is an important element for private flood insurers. Private flood insurers need to charge rates that represent the full risk of the peril.\(^{21}\)

If the NFIP were to reform its rate structure to collect full-risk rates, it might result in the encouragement of more private insurers to write policies in the private flood insurance market. Full-risk NFIP rates would fall closer to what a private insurer would charge. It is important to note that full-risk rates would likely lead to higher rates than those that currently exist.\(^{22}\)

Presently, FEMA is in the process of redesigning its rating system. The new NFIP rating system will be known as Risk Rating 2.0. This new rating structure will add replacement cost value and consider the distance between a property and a source of water. Additionally, Risk Rating 2.0 takes into consideration things that are not reflected in the current rating structure, such as intense rainfall.\(^{24}\) As stated previously it was recently announced that Risk Rating 2.0 will be delayed until Oct. 1, 2021 to allow for more analysis on its impact.

Ability to Assess Flood Risk Accurately

On June 11, 2019, the NFIP released data on flood losses and claims. Prior to the release of this data, insurers viewed the lack of access to NFIP data on flood losses and claims as a barrier for private companies offering flood insurance.

For private flood insurers to manage and diversify their risk exposure, consumer participation to manage and diversify their risk exposure is required. Many private insurers have expressed the view that broader participation in the flood insurance market would be necessary to address adverse selection and maintain a sufficiently large risk pool.\(^{25}\)

An established goal of the NFIP is to increase the number of flood insurance policies in force. Even though there is a mandatory purchase requirement for homeowners to purchase flood insurance in certain flood zones, this does not always occur.

As more insurers begin to write private flood insurance, it is likely that consumers will be offered more choices. Private flood insurers may also offer coverages not available through the NFIP. These coverages might include coverage such as basement coverage, business interruption, additional living expenses, etc. Private insurers might also be able to offer higher coverage limits than those offered by the NFIP.

\(^{22}\) Ibid.
\(^{23}\) Ibid.
\(^{24}\) Ibid.
Private flood insurance offered as an endorsement to a standard homeowners insurance policy could possibly eliminate instances where it is necessary to differentiate between flood and wind damage.26

The Casualty Actuarial and Statistical (C) Task Force met in Austin, TX, Dec. 7, 2019. The following Task Force members participated: Steve Kelley, Chair, represented by Phil Vigliaturo (MN); James J. Donelon, Vice Chair, represented by Rich Piazza (LA); Lori K. Wing-Heier represented by Michael Ricker (AK); Keith Schraad represented by Tom Zuppan (AZ); Andrew N. Mais represented by Wanchin Chou (CT); Stephen C. Taylor represented by David Christhilf (DC); David Altmaier represented by Sandra Starnes (FL); Colin M. Hayashida represented by Kathleen Nakasone (HI); Doug Ommen represented by Travis Grassel (IA); Robert H. Muriel represented by Judy Mottar (IL); Vicki Schmidt represented by Nicole Boyd (KS); Eric A. Cioppa represented by Sandra Darby (ME); Anata G. Fox represented by Kevin Dyke (MI); Chlora Lindley-Myers represented by Cynthia Amann (MO); Mike Causey represented by Kevin Conley (NC); John G. Franchini represented by Anna Krylova (NM); Barbara D. Richardson represented by Stephanie McGee (NV); Jillian Froment represented by Tom Botsko (OH); Mike Mulready represented by Cuc Nguyen and Andrew Schallhorn (OK); Andrew Stolfi represented by Brian Fordham (OR); Jessica Altmann represented by Shennan Logue and Michael McKenney (PA); Raymond G. Farmer represented by Joe Cregan (SC); Kent Sullivan represented by J’ne Byckovski and Miriam Fisk (TX); Mike Kreidler represented by Eric Slavich (WA); and James A. Dodrill represented by Tonya Gillespie (WV).

1. **Adopted its Nov. 12, Oct. 15 and Summer National Meeting Minutes**

Mr. Vigliaturo said the Task Force met Nov. 12 and Oct. 15. During these meetings, the Task Force took the following action: 1) adopted its 2020 proposed charges; 2) adopted a revised implementation plan for the Casualty Actuarial Society (CAS)/Society of Actuaries (SOA) Task Force’s Appointed Actuary Continuing Education Verification Process to delay implementation for one year; and 3) exposed the *Regulatory Review of Predictive Models* white paper for a public comment period ending Nov. 22.

The Task Force also met Nov. 19, Sept. 17 and Aug. 20 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss rate filing issues.

The Task Force held its Predictive Analytics Book Club conference calls Nov. 26, Oct. 22, Oct. 8 and Aug. 27. During its Nov. 26 meeting, David Snell (Actuaries and Technology) presented on neural networks. During its Oct. 22 meeting, Pradnya Nimkar (Clara Analytics) presented, “Natural Language Processing.” During its Oct. 8 meeting, Louise Francis (Francis Analytics and Actuarial Data Mining) presented on numerous models used and associated issues and pitfalls in modeling. During its Aug. 27 meeting, Ms. Darby presented on data, the open source model “R” and predictive analytics.

Mr. Piazza made a motion, seconded by Mr. Botsko, to adopt the Task Force’s Nov. 12 (Attachment One), Oct. 15 (Attachment Two) and Aug. 3 (see *NAIC Proceedings – Summer 2019, Casualty Actuarial and Statistical (C) Task Force*) minutes. The motion passed unanimously.

2. **Adopted the Report of the Actuarial Opinion (C) Working Group**

During the Working Group’s Nov. 20 conference call, Ms. Fisk described Texas’ efforts to collect data on Actuarial Opinion Summaries and encouraged the states to consider submitting their data. Ms. Krylova asked the chair to include this as an agenda item for a future Task Force call.

Ms. Krylova said the hardcopy of the 2019 P/C *Annual Statement Instructions* contains some minor errors. The electronic version of the instructions, found in various places on the NAIC’s website, is (and has always been) correct. As has been the case in previous years, any corrections to the hardcopy are housed on the Blanks (E) Working Group’s web page. While the errors in the hardcopy are not considered material, the chair of the Working Group is going to send an email to P/C appointed actuaries to alert them to the errors.

© 2019 National Association of Insurance Commissioners
Mr. Dyke made a motion, seconded by Mr. Botsko, to adopt the report of the Actuarial Opinion (C) Working Group, including its Nov. 20 minutes (Attachment Three); its combined Oct. 4, Oct. 1, Sept. 20, Sept. 12, Sept. 10 and Sept. 6 minutes (Attachment Four); and the 2019 Regulatory Guidance (Attachment Four-B). The motion passed unanimously.

3. **Adopted the Report of the Statistical Data (C) Working Group**

Kris DeFrain (NAIC) provided the report of the Statistical Data (C) Working Group. The *Dwelling Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance* report has been publicly released. The *Report on Profitability by Line by State* and the *Competition Database Report* are adopted, and they should be released in December. The *Auto Insurance Database* will be considered for adoption after the Fall National Meeting.

Mr. Chou made a motion, seconded by Mr. Piazza, to adopt the report of the Statistical Data (C) Working Group. The motion passed unanimously.

4. **Discussed the CAS/SOA Task Force’s Appointed Actuary CE Verification Project and Inclusion in the 2020 Actuarial Opinion Instructions**

Mr. Vigliaturo said any proposed changes to the instructions are due to the Blanks (E) Working Group by Feb. 22, 2020.

Mr. Dyke summarized the proposal for revised 2020 Actuarial Opinion instructions to implement the CAS and SOA Appointed Actuary Continuing Education Verification Process. He said each appointed actuary will attest to the CAS or SOA that specific qualification standards in the Actuarial Standards Board’s (ASB) *U.S. Qualification Standards* are met. The appointed actuaries would also log continuing education (CE), categorize CE according to the Task Force’s adopted categorization, and submit the log to the CAS or SOA if audited. Non-members of the CAS or SOA can choose to report to either organization.

Mr. Dyke said the CE log format and instructions are being developed and should be released in January 2020. He said there is no new requirement for CE, except the logging format would be required for appointed actuaries. He said the common log would facilitate the consolidation of CE categorization.

5. **Heard a Presentation about Current Pricing Practices in the UK**

Peter Kochenburger (University of Connecticut School of Law) presented on motor insurance pricing practices in the United Kingdom (UK). The longer a policyholder stays with one insurer in the UK, the higher the insurance price. He said there is no evidence that these practices increase insurance access for lower income consumers or improve the market. The UK’s Financial Conduct Authority (FCA) has not yet decided what actions to take. He said the U.S. addressed price optimization.

Ralph Blanchard (Travelers) said the U.S. consumer protections are significantly higher compared to other countries.

Mr. Kochenburger said he is envious of the ability of the FCA to gather a significant amount of market data.

6. **Discussed the Regulatory Review of Predictive Models White Paper and Comments Received**

Mr. Piazza said the third draft of the *Regulatory Review of Predictive Models* white paper was exposed during the Task Force’s Oct. 15 conference call for a 38-day public comment period ending Nov. 22. The Task Force received 11 comment letters (Attachment Five). He said the ad hoc group is getting close to a final paper for the Task Force’s consideration.

Mr. Chou said confidentiality is important, and he believes a field test should be conducted, similar to how the life actuaries had a field test when they introduced something new.

Mr. Piazza said there is merit in discussing a field test. He said the white paper would be best practice and guidance. He said implementation would vary from state to state regarding whether a state would require any specific information elements.

Birny Birnbaum (Center for Economic Justice—CEJ) said regulatory best practices and the review of complex models are different from actuarial standards of practice (ASOPs) that guide actuaries. He said numerous non-actuaries develop models, and state insurance regulators review models; they are not limited by ASOPs.
Mr. Birnbaum delineated two types of unfair discrimination. One is where consumers of similar risk are treated differently without expected differences in claims or expenses. The other is discrimination against certain protected classes, such as race, religion, national origin and, in some states, gender. He that the paper should develop more guidance on the second type of unfair discrimination. He said the potential to introduce proxy discrimination or unintentional discrimination where the data sources include bias against protected classes, or the algorithm incorporates or reflects that bias, has increased with models.

David Kodama (American Property Casualty Insurance Association—APCIA) said the ASOPs are critical guidance because they provide a standard of expectation for rate filings. He said he also supports field testing prior to adoption of the white paper. He said a data dump might not be useful. He suggested mapping the information items back to the best practices. He suggested that the paper should identify the essential core elements needed in a filing so the state insurance regulators can do their jobs of evaluating that rates are not inadequate, excessive nor unfairly discriminatory.

Andrew Pauley (National Association of Mutual Insurance Companies—NAMIC) said NAMIC still has concerns about confidentiality, the degree of what state insurance regulators might ask for as opposed to what they need, and prescriptive elements that seem to be moving toward a model regulation. He said there should not be unnecessary disclosures. He said he has substantive concerns about not mentioning the positive aspects of large databases. He said the Task Force should be conscious about regulatory bias, and it should not approach rate models like a market conduct examination. He suggested adding some of the detail drafting notes to the paper.

7. Discussed the ASB’s Request for Input on a Potential P/C Rate Filing ASOP

Mr. Vigliaturo said during the Nov. 12 conference call, the Task Force discussed the ASB’s request for input on a potential property/casualty (P/C) rate filing ASOP. He said there were quite a few different opinions amongst the members. He said he answered the questions asked by the ASB and, as a state insurance regulator, he thought most questions were specific to the individual state. He said that seems to argue against writing a Task Force letter. However, he said there might be common themes that could result from discussion. Volunteers are asked to submit potential answers to the ASB’s questions and any overall comments by Jan. 7, 2020, to NAIC staff.

Mr. Birnbaum said he believes the development of an ASOP on rates violates antitrust laws.

Mr. Vigliaturo said Robert Hunter (Consumer Federation of America) had a similar concern expressed in his letter to the ASB. He said he would like to seek advice from NAIC Legal Division staff about whether the Task Force should submit comments.

Shawna Ackerman (American Academy of Actuaries—Academy) said there are attorneys in the ASB meetings. She said the Academy does not believe that there is any possibility that asking for information is an antitrust violation.

8. Heard Reports from Actuarial Organizations

Richard Gibson (Academy) said the Casualty Practice Council focused on catastrophe issues. In 2019, Academy groups published a monograph on the National Flood Insurance Program (NFIP), letters to the U.S. Congress (Congress) encouraging early re-authorization of the Terrorism Risk Insurance Act (TRIA), and a monograph on wildfires. In 2020, the Academy groups plan to publish a monograph on cyber risk, a paper on insurance-linked securities, P/C risk-based capital (RBC) research, and an updated actuaries’ climate index.

Stephen J. Koca (Academy) said the Committee on Property and Liability Financial Reporting (COPLFR) assisted with the Regulatory Guidance, held its limited attendance opinion writing seminar, and held a webinar on changes to the Actuarial Opinion instructions and Regulatory Guidance. The COPLFR will compile a frequently asked questions (FAQ) document.

David Ogden (Actuarial Board for Counseling and Discipline—ABCD) discussed P/C-related issues submitted to the ABCD, including inadequate rates and assessments, inclusion of cost-free insurance capital in rates, and who should sign a rate filing. Kathleen A. Riley (ASB) discussed exposure and adoption actions taken or expected on various ASOPs.

Providing information on P/C actuarial research, R. Dale Hall (SOA) presented the SOA’s general insurance actuarial research and education (Attachment Six), and Mr. Blanchard presented the CAS’s P/C actuarial research (Attachment Seven).

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.
The Casualty Actuarial and Statistical (C) Task Force met via conference call Nov. 12, 2019. The following Task Force members participated: Steve Kelley, Chair, represented by Phil Vigliaturo (MN); James J. Donelon, Vice Chair, represented by Rich Piazza and Larry Steiner (LA); Lori K. Wing-Heier represented by Michael Ricker (AK); Jim L. Ridling represented by Daniel Davis and Jerry Workman (AL); Keith Schraad represented by Vanessa Darrah (AZ); Ricardo Lara represented by Lynne Wehmuller (CA); Michael Conway represented by Rolf Kaumann and Sydney Sloan (CO); Andrew N. Mais represented by Wanchin Chou and Susan Andrews (CT); David Altmaier represented by Jie Cheng, Howard Eagelfeld, Robert Lee and Sandra Starnes (FL); Doug Ommen represented by Travis Grassel and Andria Seip (IA); Robert H. Muriel represented by Judy Mottar (IL); Eric A. Cioppa represented by Sandra Darby (ME); Anita G. Fox represented by Kevin Dyke (MI); Chlora Lindley-Myers represented by Julie Lederer (MO); Mike Causey represented by Richard Kohan (NC); Marlene Caride represented by Mark McGill and Carl Sormson (NJ); John G. Franchini represented by Anna Krylova (NM); Barbara D. Richardson represented by Gennady Stolyarov (NV); Jillian Froment represented by Tom Botsko (NE); Eric A. Cioppa represented by Sandra Darby (ME); Anita G. Fox represented by Kevin Dyke (MI); Chlora Lindley-Myers represented by Julie Lederer (MO); Mike Causey represented by Richard Kohan (NC); Marlene Caride represented by Mark McGill and Carl Sormson (NJ); John G. Franchini represented by Anna Krylova (NM); Barbara D. Richardson represented by Gennady Stolyarov (NV); Jillian Froment represented by Tom Botsko (NE); Glen Mulready represented by Kate Yang (OK); Andrew Stolfi represented by David Dahl and Ying Liu (OR); Jessica Altman represented by Kevin Clark, Michael McKenney and James DiSanto (PA); Raymond G. Farmer represented by Michael Wise (SC); Kent Sullivan represented by J'ne Byckovski, Nicole Elliott, Miriam Fisk, Andy Liao and Bethany Sims (TX); Mike Kreidler represented by Eric Slavich (WA); and James A. Dodrill represented by Joylynn Fix and Juanita Wimmer (WV).

Also participating was: Gordon Hay (NE).

1. Received a Report from the Actuarial Opinion (C) Working Group

2. Received a Report from the Statistical Data (C) Working Group

Mr. Sornson said the Task Force is currently conducting an e-vote to consider adoption of the Dwelling Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance report. The Task Force should expect to consider adoption of the Report on Profitability by Line by State and the Competition Database Report soon.

The Working Group is also working on the Auto Insurance Database report.

3. Discussed CAS/ SOA CE Task Force’s Appointed Actuary Continuing Education Verification Process

Mr. Vigliaturo said as a response to the Task Force’s 2018 charge to ensure continued competence of appointed actuaries, the CAS and SOA formed the CAS/ SOA Appointed Actuary Continuing Education (CE) Task Force (CAS/ SOA CE Task Force) in 2018. Mr. Dyke presented three documents: 1) a background document prepared by NAIC staff to explain chronology of the project; 2) the project plan; and 3) an updated implementation plan containing CE categorization as revised on the Casualty Actuarial and Statistical (C) Task Force’s Oct. 15 conference call.

Mr. Dyke said the attestation process will be on the CAS and SOA websites to attest they have met the specific qualification standards for CE. He said that will be in place soon.

Mr. Dyke said it was decided on the Casualty Actuarial and Statistical (C) Task Force’s Oct. 15 conference call that the revised logging process for 2019 would be announced a little too late and it would be burdensome to go back to document categories. He said it is also an issue that the requirements are not yet in the actuarial opinion instructions. He said that on the Oct. 15 conference call, the Task Force agreed to postpone the CE logging process until 2020. Once the log is created and produced, the appointed actuaries will have plenty of time to complete that log. He said the two-year transition process is removed and, for the year 2020, appointed actuaries will log their CE using the identified categories.

Mr. Dyke said the CAS/SOA CE Task Force reviewed the comment letters sent to the Casualty Actuarial and Statistical (C) Task Force in response to public exposure of the implementation plan. Most of the comments will be accounted for when
instructions for log categorization are documented. For example, the instructions will explain that as many categories as applies can be checked for an individual CE event.

Ralph Blanchard (Travelers) said regulators should be prepared to receive a long list of categories for any one presentation. No changes were made to the implementation plan from the submitted comments.

Mr. Dyke said one outstanding issue is what do with appointed actuaries who are not members of CAS or SOA.

Mr. Davis asked if it is a long-term goal to make sure appointed actuaries’ CE is balanced in some way. In accordance with the Casualty Actuarial and Statistical (C) Task Force’s charges, Mr. Dyke said the short-term goal is to review the categorization and determine if there are different categories that should be in the U.S. qualification standards and/or whether to modify categories in the annual financial statement instructions. The qualification standards would be expected to be modified to reflect the NAIC’s new categorization. He said the longer-term goal is to understand the types of CE and how appointed actuaries obtaining CE and whether the CE is organized or self-study. He said the Casualty Actuarial and Statistical (C) Task Force will need to decide if it has other long-term goals.

Given the deadline is late February 2020 for proposed changes to annual financial statement instructions, Mr. Dyke will draft some language to document the agreed process for 2020 CE logging by appointed actuaries in support of the attestation for year-end 2020. He said the plan is to codify what has been agreed by the Casualty Actuarial and Statistical (C) Task Force.

4. Discussed the ASB’s Request for Input on Potential P/C Rate Filing ASOP

Mr. Vigliaturo said the Actuarial Standards Board (ASB) has requested input on a potential property/casualty (P/C) rate filing Actuarial Standard of Practice (ASOP). He asked whether to respond as a Task Force or as individuals. He recommended regulators respond individually. Mr. Piazza agreed, saying the questions posed seemed to anticipate individual responses.

Mr. Stolyarov said he is opposed to the ASOP being created. He said an ASOP is sometimes included in a filing as an attempt to defend against a regulator’s objection. He said the individuals developing the ASOP would predominately be written by the industry and consulting actuaries who would make such filings.

Mr. Davis said an ASOP promotes fruitful discussion and debate.

Mr. Chou said regulators’ voices would be heard in the process of development. He said the ASOP on reviewing capital adequacy provides flexibility for each state’s requirements.

Mr. Dyke said it is beneficial for organizations like the Task Force to provide comments on exposure drafts and requests for input. All comments are considered. If there are any consensus items, then the comments have meaning to them. The ASOPs are useful and not prescriptive, but they do promote good actuarial practice. They should not supersede any state or federal requirements. He said it is understood one must follow the law.

Mr. Stolyarov said the current ASOPs on loss and expense reserves regard fairly uniform state regulatory requirements. He said rate filing requirements are not subject to accreditation and are significantly different between states.

Mr. Hay said he has not yet seen reasons actuaries are advocating for the ASOP. He said the ASOPs are not binding on the people who usually submit the filings.

5. Received a Report on the Predictive Analytics Technical Advanced Statistics Training

Kris DeFrain (NAIC) said the technical advanced statistics training on predictive analytics starts Nov. 13. She said regulators should register with the NAIC’s Education and Training Department.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.
The Casualty Actuarial and Statistical (C) Task Force met via conference call Oct. 15, 2019. The following Task Force members participated: Steve Kelley, Chair, represented by Phil Vigliaturo (MN); James J. Donelon, Vice Chair, represented by Rich Piazza and Larry Steinert (LA); Lori K. Wing-Heier represented by Michael Ricker (AK); Jim L. Ridling represented by Daniel Davis and Jerry Workman (AL); Keith Schraad represented by Vanessa Darrah and Tom Zuppan (AZ); Ricardo Lara represented by Mitra Sanandajifar and Lynne Wehmueller (CA); Michael Conway represented by Mitchell Bronson and Sydney Sloan (CO); Andrew N. Mais represented by Wanchin Chou and Susan Andrews (CT); Stephen C. Taylor represented by David Christhilf (DC); David Altmaier represented by Robert Lee (FL); Colin M. Hayashida represented by Randy Jacobson (HI); Doug Ommen represented by Travis Grassel (IA); Robert H. Muriel represented by Judy Mottar (IL); Vicki Schmidt represented by Nicole Boyd and Heather Droe (KS); Eric A. Cioppa represented by Sandra Darby (ME); Anita G. Fox represented by Kevin Dyke (MI); Chlora Lindley-Myers represented by LeAnn Cox, Julie Lederer and Anthony Senevey (MO); Marlene Caride represented by Mark McGill (NJ); Barbara D. Richardson represented by Gennady Stolyarov (NV); Jillian Froment represented by Tom Botsko (OH); Glen Multready represented by Nicolas Lopez and Cuc Nguyen (OK); Jessica Altman represented by Kevin Clark, Michael McKenney and James DiSanto (PA); Raymond G. Farmer represented by Will Davis, Darien Porter and Michael Wise (SC); Kent Sullivan represented by Brock Childs, Miriam Fisk, Eric Hintikka, Elizabeth Howland, Walt Richards, Brian Ryder and Bethany Sims (TX); Mike Kreidler represented by Eric Slavich (WA); and James A. Dodrill represented by Juanita Wimmer (WV).

1. Received a Report from the Actuarial Opinion (C) Working Group

Ms. Lederer said the Actuarial Opinion (C) Working Group met six times via conference call to discuss a draft *Regulatory Guidance on Property and Casualty Statutory Statements of Actuarial Opinion* (Regulatory Guidance) document for 2019. She said a 2019 charge for the Working Group is that “based on language for the *Annual Statement Instructions—Property/Casualty* requiring completion of the appointed actuary’s attestation of qualification, provide additional guidance in the 2019 regulatory guidance document.” She said an initial draft was exposed in May, and one comment was received. During recent conference calls, verbal comments have been made. During its Oct. 4 conference call, the Working Group adopted the Regulatory Guidance document pending one section, which is the Casualty Actuarial Society (CAS)/Society of Actuaries (SOA) Task Force’s Appointed Actuary Continuing Education Verification Process.

2. Received a Report from the Statistical Data (C) Working Group

Mr. McGill said the Statistical Data (C) Working Group will soon consider adoption of the *Dwelling Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance* report. The Working Group is also reviewing data for the *Auto Insurance Database* report.

3. Adopted its 2020 Proposed Charges

Mr. Vigliaturo presented the Task Force’s 2020 proposed charges. He said most changes are nonsubstantive. He said the charges regarding the financial handbooks are moved to the Actuarial Opinion (C) Working Group. He said some charges are revised to reflect completion of charges in 2019.

Mr. Stolyarov made a motion, seconded by Mr. Piazza, to adopt the Task Force’s 2020 proposed charges and refer them to its parent committee (see NAIC Proceedings – Fall 2019, Property and Casualty Insurance (C) Committee, Attachment Seven). The motion passed unanimously.

4. Adopted a Revised Implementation Plan for the CAS/SOA Task Force’s Appointed Actuary Continuing Education Verification Process

Mr. Vigliaturo said, as a response to the Task Force’s 2018 charge to ensure continued competence of appointed actuaries, the CAS and SOA formed the CAS/SOA Appointed Actuary Continuing Education (CE) Task Force (CAS/SOA CE Task Force) in 2018. He said Mr. Dyke has been a member of the CAS/SOA CE Task Force and has been a liaison with the Casualty Actuarial and Statistical (C) Task Force. The Casualty Actuarial and Statistical (C) Task Force has thus far agreed with the
initial plan proposed by the CAS/SOA CE Task Force in late 2018. Mr. Vigliaturo said the plan has two main components: 1) attestation requirements; and 2) CE categorization requirements.

The attestation requirements would be implemented annually with the same timing as a CAS actuary attests to having met the U.S. qualification standard’s CE requirements on his or her CAS profile. The project would result in an attestation option for both CAS and SOA members: to attest to meeting the specific standard’s CE of the U.S. qualification standard required to be a U.S. appointed actuary. The attestation would be made public, and the CAS and SOA would audit CE requirements for a percentage of attesting membership.

The other component of the plan are the categorization requirements. Mr. Dyke said in May 2019, the Task Force exposed the process developed by a joint CAS/SOA CE Task Force to accept and review CE logs for appointed actuaries. The letters were reviewed and discussed at the Summer National Meeting. At that meeting, the Academy said it had a couple of additional letters that were unable to be submitted due to extenuating circumstances. At that meeting, the Task Force adopted a motion to ask the CAS and SOA to formally implement the process as described in the implementation report, with consideration given to the comment letters, including the new Academy letters, with periodic reports to Casualty Actuarial and Statistical (C) Task Force.

Pursuant to the motion, the CAS/SOA CE Task Force has been proceeding with implementation, meeting bi-weekly, with a new attestation and log to be introduced for appointed actuaries for year-end 2019. In early September, the Actuarial Opinion (C) Working Group began finalizing the changes to the Regulatory Guidance document for 2019. At that time, the document included a reference to the new CE logging procedure. As the procedure had not been announced by the CAS or SOA to its members, there was some concern that the Regulatory Guidance would be the first notice of the new requirement. There were additional concerns raised by interested parties, including the Academy’s Committee on Property and Liability Financial Reporting (COPLFR). One concern was that the Annual Statement Instructions did not include a reference to the new process or indicate that a new CE log would be required, so it did not seem appropriate for the Regulatory Guidance document to include any reference to the procedure. There was also concern about the timing of the announcement of the changes close to year-end and growing confusion whether this would usurp the current CE requirements for issuing 2019 property/casualty (P/C) Statements of Actuarial Opinion. He said the changes do not usurp the current CE requirements.

He proposed the 2019 implementation of the CE categorization process be eliminated from the project plan. He said that would allow the requirement to be added to the 2020 Annual Statement Instructions and grant the CAS and SOA additional time to develop and test a new CE log to determine if the CE categories are appropriate. He said it is important to ensure the log is an effective and efficient collection of CE for appointed actuaries. He said another benefit is that appointed actuaries can focus on the new qualification documentation requirements for year-end 2019, which he said may be more time-consuming than initially expected. Mr. Dyke said the attestation part of the project is expected to move forward, but there should be discussion of the CE categorization. Mr. Dyke said the appointed actuaries’ 2020 CE would be required to be categorized. The log would only be submitted to the CAS or SOA if requested.

Ms. Lederer said her understanding about the 2019 year-end attestation is that when CAS actuaries attest that they “meet U.S. qualification standards,” actuaries would also be able to attest that they “meet U.S. specific qualification standards.” She asked if 2019 logs would be required to be submitted to the CAS or SOA automatically. Mr. Dyke said there is no automatic submission of a CE log, but a larger percentage of appointed actuaries will be audited.

Ms. Darby made a motion, seconded by Mr. Chou, to remove the requirement to categorize 2019 CE from the implementation plan. The motion passed unanimously.

5. Exposed the Regulatory Review of the Predictive Analytics White Paper

Mr. Piazza said the white paper was exposed on May 14 for a public comment period ending June 28. Comments were submitted (see NAIC Proceedings – Summer 2019, Casualty Actuarial and Statistical (C) Task Force, Attachment One-A). Newly drafted Section VIII and Section IX were exposed Aug. 3 for a public comment period ending Sept. 16. Comments were submitted (Attachment Two-A). An Excel file was distributed detailing reasons for any changes, reasons why wording was not
changed and any revised wording (Attachment Two-B). He said drafters from Arizona, Louisiana, Maine, Minnesota, Nevada, New Jersey and Texas met numerous times via conference call.

Mr. Piazza said there are many changes to the white paper. Some changes include: 1) modification to best practices; 2) consolidation and modification of some information elements; 3) revision of some of the importance levels of information items; 4) addition of a glossary of terms; 5) expansion of “Other Considerations” in Section X to add context; and 6) deletion and movement of some information in the eliminated section “Recommendations Going Forward” to the “Other Considerations” section. He said the white paper is nearing completion, with some minor sections remaining to be completed and the mapping of best practices to each information element and vice versa. He said Section XVI is the reference section and will be completed towards the end of the project.

Mr. Chou suggested the Task Force should plan to seek industry and regulatory feedback after adoption of the white paper and then review and enhance it in a year or so. Mr. Piazza said the white paper might need to be reviewed and revised after receiving practical feedback on how well it serves the states. Ms. Darby questioned what would objectively be used as a measure of how well the guidance is working. She said a review might be more subjective than objective. Mr. Vigliaturo said evaluation of usefulness is always a good idea; he said he would be concerned about reopening the paper based on the amount of time it has taken to write the paper initially.

Mr. Chou asked for guidance on what a good split of the data into training, test and validation datasets would be. Mr. Piazza said some minimum standards could be provided as guidance. Mr. Vigliaturo said he does not want to impose standards that are rulemaking, but it would be a good discussion.

David Kodama (American Property Casualty Insurance Association—APCIA) asked about the difference between best practices and information elements. Mr. Piazza said a best practice is a goal; it is not a detailed objective or criteria to be met. An information element represents information that will help assist state insurance regulators in meeting the goal. If the goal is to understand the inputs that go into a model, the information elements will help the state insurance regulator understand the inputs.

Mr. Piazza made a motion, seconded by Mr. Stolyarov, to expose the white paper for a 38-day public comment period ending Nov. 22. The motion passed unanimously.

Kris DeFrain (NAIC) said the 2019 Statement of Actuarial Opinion instructions were adopted by the NAIC members in September. The instructions are now final and ready for implementation.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.
Dear Casualty Actuarial and Statistical Task Force (CASTF),

Thank you for the opportunity to comment on the exposure of sections 7 & 8 of the “Regulatory Review of Predictive Models”. Below are our comments.

On pages 25-26, the white paper says “Univariate methods were considered rational... But, GLM results are not always rational...” In this section, it is not clear what is meant by the term “rational”. For example, univariate methods could be considered irrational because their factors do not form a rating plan that accurately rates individual policies (because univariate methods double-count losses). From this view, GLM methods are rational and univariate methods are not. We would suggest removing the term “rational” and being more specific in explaining what was meant by this term.

On page 26, in the section “B. Credibility of Model Output”, there should be acknowledgement that if a GLM method lacks credibility, then other methods will also lack credibility. A lack of credibility is not an issue that is unique to GLMs. In these instances, a company may need to seek alternative methods of determining rating factors.

On page 27, sections 2.a and 2.c are similar and could be combined.

Once again, thank you for the opportunity to comment.

Sincerely,

Allstate Property & Casualty Actuarial Leadership

(Resend)

Kris,

Thank you for the opportunity to comment on the exposed newly-drafted Sections VIII and IX of the Best Practices for Regulatory Review of Predictive Analytics White Paper. The following provides our comments and recommended edits for consideration by the Task Force.

From page 24, delete what appears to be more commentary than guidance: But, with computing power growing exponentially, insurers are finding many ways to improve their operations and competitiveness through use of often very complex predictive models in all areas of their insurance business.

Finding rating or underwriting characteristics that may violate public policy is becoming more difficult for regulators with the increasing and innovative ways insurers use predictive models.

From page 26, delete what appears to be more commentary than guidance: But, GLM results are not always rational and the relationship to costs may be difficult to explain. Comment misinforms the regulator that the standard should always be a rational relationship that is linear and intuitive. The value of modeling and the advanced computing power and analytics that drive it is the enabling of actuaries to refine risk-based pricing in a way that reflects the dynamic environment and complexities in multivariate relationships that impact risk of loss. While the filing company should strive to provide rational explanation and validation, the critical measure should be in how rating outcomes relate to the experience of loss cost and expense.

From page 26, B. Credibility of Model Output, delete sentence: GLM output is typically assumed to be 100% credible no matter the size of the underlying data set. Credibility is always an issue that the actuary – and the data modeler - must contend with. Validation evidence is therefore the goal. Or, consider replacing text under B. Credibility of Model Output with: GLM models produce point estimates as well as confidence intervals. Modelers may apply judgment to make selections that consider the parameter estimates from the GLM model, the confidence intervals around the parameter estimates, the business problem at hand, and credibility. The performance of the final rating factors, which may include parameter estimates directly from the GLM model as well as selections, should be demonstrated through a reasonable validation exercise.

Thank you
dk

David Kodama, Jr., Assistant Vice President, Research & Policy Analysis, 847-553-3611
California Comments

Draft: 4/4/2019
As adopted by the Casualty Actuarial and Statistical (C) Task Force on XX/XX/XX

EXPOSURE NOTE: The drafting group are still considering comments on the 5/14/19 draft; no changes are yet made to the previously exposed sections of this paper. Two new sections are drafted in this paper and will be exposed for public comment at the Summer National Meeting: Part VIII Proposed Changes to the Product Filing Review Handbook and Part IX Proposed State Guidance. Please note that we expect changes from the comments on the 5/14 draft and any changes made will also be reflected in these two new sections.

I. INTRODUCTION

Insurers’ use of predictive analytics along with big data has significant potential benefits to both consumers and insurers. Predictive analytics can reveal insights into the relationship between consumer behavior and the cost of insurance, lower the cost of insurance for many, and provide incentives for consumers to better control and mitigate loss. However, predictive analytic techniques are evolving rapidly and leaving many regulators without the necessary tools to effectively review insurers’ use of predictive models in insurance applications.

When a rate plan is truly innovative, the insurer must anticipate or imagine the reviewers’ interests because reviewers will respond with unanticipated questions and have unique educational needs. Insurers can learn from the questions, teach the reviewers, and so forth. When that back-and-forth learning is memorialized and retained, filing requirements and insurer presentations can be routinely organized to meet or exceed reviewers’ needs and expectations. Hopefully, this paper helps bring more consistency and to the art of reviewing predictive models within a rate filing.

The Casualty Actuarial and Statistical (C) Task Force (CASTF) has been charged with identifying best practices to serve as a guide to state insurance departments in their review of predictive models and underlying rating plans. There were two charges given to CASTF by the Property and Casualty Insurance (C) Committee at the request of the Big Data (EX) Working Group:

A. Draft and propose changes to the Product Filing Review Handbook to include best practices for review of predictive models and analytics filed by insurers to justify rates.

B. Draft and propose state guidance (e.g., information, data) for rate filings that are based on complex predictive models.

This paper will identify best practices when reviewing predictive models and analytics filed by insurers with regulators to justify rates and provide state guidance for review of rate filings based on predictive models. Upon adoption of this paper by the Executive (EX) Committee and Plenary, the Task Force will evaluate how to incorporate these best practices into the Product Filing Review Handbook and will recommend such changes to the Speed to Market (EX) Working Group.

II. WHAT IS A “BEST PRACTICE?”

A best practice is a form of program evaluation in public policy. At its most basic level, a practice is a “tangible and visible behavior… [based on] an idea about how the actions… will solve a problem or achieve a goal.” 2 Best practices are used to maintain quality as an alternative to mandatory legislated standards and can be based on self-assessment or benchmarking. 3 Therefore, a best practice represents an effective method of problem solving. The “problem” regulators want to solve is probably better posed as seeking an answer to this question: How can regulators determine that predictive models, as used in rate filings, are compliant with state laws and regulations?

Key Regulatory Principles

In this paper, best practices are based on the following principles that promote a comprehensive and coordinated review of predictive models across states:

1. State insurance regulators will maintain their current rate regulatory authority.

2. State insurance regulators will be able to share information to aid companies in getting insurance products to market more quickly.

3. State insurance regulators will share expertise and discuss technical issues regarding predictive models.

4. State insurance regulators will maintain confidentiality, where appropriate, regarding predictive models.

In this paper, best practices are presented in the form of guidance to regulators who review predictive models and to insurance companies filing rating plans that incorporate predictive models. Guidance will identify specific information

---

1. In this paper, references to “model” or “predictive model” are the same as “complex predictive model” unless qualified.
useful to a regulator in the review of a predictive model, comment on what might be important about that information and, where appropriate, provide insight as to when the information might identify an issue the regulator needs to be aware of or explore further.

III. DO REGULATORS NEED BEST PRACTICES TO REVIEW PREDICTIVE MODELS?

The term “predictive model” refers to a set of models that use statistics to predict outcomes. When applied to insurance, the model is chosen to estimate the probability or expected value of an outcome given a set amount of input data; for example, models can predict the frequency of loss, the severity of loss, or the pure premium. The generalized linear model (GLM) is a commonly used predictive model in insurance applications, particularly in building an insurance product’s rating plan.

Depending on definitional boundaries, predictive modeling can sometimes overlap with the field of machine learning. In this modeling space, predictive modeling is often referred to as predictive analytics.

Before GLMs became vogue, rating plans were built using univariate methods. Univariate methods were considered intuitive and easy to demonstrate the relationship to costs (loss and/or expense). Today, many insurers consider univariate methods too simplistic since they do not take into account the interaction (or dependencies) of the selected input variables.

According to many in the insurance industry, GLMs introduce significant improvements over univariate-based rating plans by automatically adjusting for correlations among input variables. Today, the majority of predictive models used in private passenger automobile and homeowners’ rating plans are GLMs. However, GLM results are not always intuitive, and the relationship to costs may be difficult to explain. This is a primary reason regulators can benefit from best practices.

A GLM consists of three elements:

- Each component of Y is independent and a probability distribution from the exponential family, or more generally, a selected variance function and dispersion parameter.
- A linear predictor $\eta = X \beta$.
- A link function $g$ such that $E(Y) = \mu = g^{-1}(\eta)$.

As can be seen in the description of the three GLM components above, it may take more than a casual introduction to statistics to comprehend the construction of a GLM. As stated earlier, a downside to GLMs is that it is more challenging to interpret the GLMs output than with univariate models.

GLM software provides point estimates and allows the modeler to consider standard errors and confidence intervals. GLM output is typically assumed to be 100% credible no matter the size of the underlying data set. If some segments have little data, the resulting uncertainty would not be reflected in the GLM parameter estimates themselves (although it might be reflected in the standard errors, confidence intervals, etc.). Even though the process of selecting relativities often includes adjusting the raw GLM output, the resultant selections are not then credibility-weighted with any complement of credibility. Nevertheless, selected relativities based on GLM model output may differ from GLM point estimates.

Because of this presumption in credibility, which may or may not be valid in practice, the modeler and the regulator reviewing the model would need to engage in thoughtful consideration when incorporating GLM output into a rating plan to ensure that model predictiveness is not compromised by any lack of actual credibility. Therefore, to mitigate the risk that model credibility or predictiveness is lacking, a complete filing for a rating plan that incorporates GLM output should include validation evidence for the rating plan, not just the statistical model.

To further complicate regulatory review of models in the future, modeling methods are evolving rapidly and not limited just to GLMs. As computing power grows exponentially, it is opening up the modeling world to more sophisticated forms of data acquisition and data analysis. Insurance actuaries and data scientists seek increased predictiveness by using even more complex predictive modeling methods. Examples of these are predictive models utilizing random forests, decision

---

4 A more thorough exploration of different predictive models will be found in many statistics’ books, including Geisser, Seymour (September 2016), Predictive Inference: An Introduction. New York: Chapman & Hall.

5 The generalized linear model (GLM) is a flexible family of models that are unified under a single method. Types of GLM include logistic regression, Poisson regression, gamma regression and multinomial regression.

6 More information on model elements can be found in most statistics’ books.
trees, neural networks, or combinations of available modeling methods (often referred to as ensembles). These evolving
techniques will make the regulators’ understanding and oversight of filed rating plans incorporating predictive models
even more challenging.

In addition to the growing complexity of predictive models, many state insurance departments do not have in-house
actuarial support or have limited resources to contract out for support when reviewing rate filings that include use of
predictive models. The Big Data (EX) Working Group identified the need to provide states with guidance and assistance
when reviewing predictive models underlying filed rating plans. The Working Group circulated a proposal addressing aid
to state insurance regulators in the review of predictive models as used in private passenger automobile and homeowners’
insurance rate filings. This proposal was circulated to all of the Working Group members and interested parties on
December 19, 2017, for a public comment period ending January 12, 2018. The Big Data Working Group effort resulted in
the new CASTF charges (see the Introduction section) with identifying best practices that provide guidance to states in
the review of predictive models.

So, to get to the question asked by the title of this section: Do regulators need best practices to review predictive models?
It might be better to ask this question another way: Are best practices in the review of predictive models of value to
regulators and insurance companies? The answer is “yes” to both questions. Best practices will aid regulatory reviewers
by raising their level of model understanding. With regard to scorecard models and the model algorithm, there is often not
sufficient support for relative weight, parameter values, or scores of each variable. Best practices can potentially aid in
fixing this problem.

However, best practices are not intended to create standards for filings that include predictive models. Rather, best practices
will assist the states in identifying the model elements they should be looking for in a filing that will aid the regulator in
understanding why the company believes that the filed predictive model improves the company’s rating plan, making that
rating plan fairer to all consumers in the marketplace. To make this work, both regulators and industry need to recognize that:

- Best practices merely provide guidance to regulators in their essential and authoritative role over the
rating plans in their state.
- All states may have a need to review predictive models whether that occurs with approval of rating plans
or in a market conduct exam. Best practices help the regulator identify elements of a model that may
influence the regulatory review as to whether modeled rates are appropriately justified. Each regulator
needs to decide if the insurer’s proposed rates are compliant with state laws and regulations and whether
to act on that information.
- Best practices will lead to improved quality in predictive model reviews across states, aiding speed to
market and competitiveness of the state marketplace.
- Best practices provide a framework for states to share knowledge and resources to facilitate the technical
review of predictive models.
- Best practices aid training of new regulators and/or regulators new to reviewing predictive models. (This
is especially useful for those regulators who do not actively participate in NAIC discussions related to
the subject of predictive models.)
- Each regulator adopting best practices will be better able to identify the resources needed to assist their
state in the review of predictive models.

Lastly, from this point on in this paper, best practices will be referred to as “guidance.” This reference is in line with the
intent of this paper to support individual state autonomy in the review of predictive models.

IV. SCOPE

The focus of this paper will be on GLMs used to create private passenger automobile and home insurance rating plans.

The knowledge needed to review predictive models, and guidance in this paper regarding GLMs for personal automobile
and home insurance may be transferrable when the review involves GLMs applied to other lines of business. Modeling

2 All comments received by the end of January were posted to the NAIC website March 12 for review.
depends on context, so the GLM reviewer has to be alert for data challenges and business applications that differ from the most familiar personal lines. For example, compared to personal lines, modeling for rates in commercial lines is more likely to encounter low volumes of historical data, dependence on advisory loss costs, unique large accounts with some large deductibles and products that build policies from numerous line-of-business and coverage building blocks. Commercial lines commonly use individual risk modifications following experience, judgment, and/or expense considerations. A regulator may never see commercial excess and surplus lines filings. The legal and regulatory constraints (including state variations) are likely to be more evolved, and challenging, in personal lines. A GLM rate model for personal lines in 2019 is either an update or a late-adopter’s defensive tactic. Adopting GLM for commercial lines has a shorter history.

Guidance offered here might be useful (with deeper adaptations) when starting to review different types of predictive models. If the model is not a GLM, some listed items might not apply. Not all predictive models generate p-values or F tests. Depending on the model type, other considerations might be important. When transferring guidance to other lines of business and other types of model, unique considerations may arise depending on the context in which a predictive model is proposed to be deployed, the uses to which it is proposed to be put, and the potential consequences for the insurer, its customers and its competitors. This paper does not delve into these possible considerations but regulators should be prepared to address them as they arise.

V. CONFIDENTIALITY

Regulatory reviewers are required to protect confidential information in accordance with applicable State law. However, insurers should be aware that a rate filing might become part of the public record. Each state determines the confidentiality of a rate filing, supplemental material to the filing, when filing information might become public, the procedure to request that filing information be held confidentially, and the procedure by which a public records request is made. It is incumbent on an insurer to be familiar with each state’s laws regarding the confidentiality of information submitted with their rate filing.

VI. GUIDANCE FOR REGULATORY REVIEW OF PREDICTIVE MODELS (BEST PRACTICES)

Best practices will help the regulator understand if a predictive model is cost based, if the predictive model is compliant with state law, and how the model improves, the company’s rating plan. Best practices can, also, make the regulator’s review more consistent across states and more efficient, and assist companies in getting their products to market faster.

With this in mind, the regulator’s review of predictive models should:

1. Ensure that the factors developed based on the model produce rates that are not excessive, inadequate, or unfairly discriminatory.
   a. Review the overall rate level impact of the revisions proposed based on the predictive model output in comparison to rate level indications provided by the filer.
   b. Review the premium disruption for individual policyholders and how the disruptions can be explained to individual consumers.
   c. Review the individual input characteristics to and output factors from the predictive model (and its sub-models), as well as, associated selected relativities to ensure they are not unfairly discriminatory.

2. Thoroughly review all aspects of the model including the source data, assumptions, adjustments, variables, and resulting output.
   a. Determine that individual input characteristics to a predictive model are related to the expected loss or expense differences in risk. Each input characteristic should have an intuitive or demonstrable actual relationship to expected loss or expense.
   b. Determine that the data used as input to the predictive model is accurate, including a clear understanding how missing values, erroneous values and outliers are handled.
   c. Determine that any adjustments to the raw data are handled appropriately, including but not limited to, trending, development, capping, removal of catastrophes.
   d. Determine that rating factors from a predictive model are related to expected loss or expense differences in risk. Each rating factor should have a demonstrable actual relationship to expected loss or expense.
e. Obtain a clear understanding how often each risk characteristic, used as input to the model, is updated and whether the model is periodically rerun, so model output reflects changes to non-static risk characteristics.

3. Evaluate how the model interacts with and improves the rating plan.
   a. Obtain a clear understanding of the characteristics that are input to a predictive model (and its sub-models), their relationship to each other and their relationship to non-modeled characteristics/variables used to calculate a risk’s premium.
   b. Obtain a clear understanding of how the selected predictive model was built and why the insurer believes this type of model works in a private passenger automobile or homeowner’s insurance risk application.
   c. Obtain a clear understanding of how model output interacts with non-modeled characteristics/variables used to calculate a risk’s premium.
   d. Obtain a clear understanding of how the predictive model was integrated into the insurer’s state rating plan and how it improves that plan.
   e. For predictive model refreshes, determine whether sufficient validation was performed to ensure the model is still a good fit.

4. Enable competition and innovation to promote the growth, financial stability, and efficiency of the insurance marketplace.
   a. Enable innovation in the pricing of insurance though acceptance of predictive models, provided they are actuarially sound and in compliance with state laws.
   b. Protect the confidentiality of filed predictive models and supporting information in accordance with state law.
   c. Review predictive models in a timely manner to enable reasonable speed to market.

VII. PREDICTIVE MODELS – INFORMATION FOR REGULATORY REVIEW

This section of the paper identifies the information a regulator may need to review a predictive model used by an insurer to support a filed P/C insurance rating plan. The list is lengthy but not exhaustive. It is not intended to limit the authority of a regulator to request additional information in support of the model or filed rating plan. Nor is every item on the list intended to be a requirement for every filing. However, the items listed should help guide a regulator to obtain sufficient information to determine if the rating plan meets state specific filing and legal requirements.

Though the list seems long, the insurer should already have internal documentation on the model for more than half of the information listed. The remaining items on the list require either minimal analysis (approximately 25%) or deeper analysis to generate the information for a regulator (approximately 25%)

The “Importance to Regulator’s Review” ranking of information a regulator may need to review is based on the following level criteria:

Level 1 - This information is necessary to begin the review of a predictive model. These data elements pertain to basic information about the type and structure of the model, the data and variables used, the assumptions made, and the goodness of fit. Ideally, this information would be included in the filing documentation with the initial submission of a filing made based on a predictive model.

Level 2 - This information is necessary to continue the review of all but the most basic models; such as those based only on the filer’s internal data and only including variables that are in the filed rating plan. These data elements provide more detailed information about the model and address questions arising from review of the information in Level 1. Insurers concerned with speed to market may also want to include this information in the filing documentation.

Level 3 - This information is necessary to continue the review of a model where concerns have been raised and not resolved based on review of the information in Levels 1 and 2. These data elements address even more detailed aspects of the model including (to be listed after we assign levels). This information does not necessarily need to be included with the initial submission, unless specifically requested in a particular jurisdiction, as it is typically requested only if the reviewer has concerns that the model may not comply with state laws.
**Level 4** - This information is necessary to continue the review of a model where concerns have been raised and not resolved based on the information in Levels 1, 2, and 3. This most granular level of detail is addressing the basic building blocks of the model and does not necessarily need to be included by the filer with the initial submission, unless specifically requested in a particular jurisdiction. It is typically requested only if the reviewer has serious concerns that the model produces rates or factors that are excessive, inadequate, or unfairly discriminatory.

### A. Selecting Model Input

</tr>
<tr>
<td>A.1.c</td>
<td>Review the geographic scope and geographic exposure distribution of the raw data for relevance to the state where the model is filed.</td>
<td>1</td>
<td>Evaluate whether the data is relevant to the loss potential for which it is being used. For example, verify that hurricane data is only used where hurricanes can occur.</td>
</tr>
<tr>
<td>A.1.d</td>
<td>Be aware of any non-insurance data used (customer-provided or other), including who owns this data, how consumers can verify their data and correct errors, whether the data was collected by use of a questionnaire/checklist, whether it was voluntarily reported by the applicant, and whether any of the variables are subject to the Fair Credit Reporting Act. If the data is from an outside source, determine the steps that were taken by the company to verify the data was accurate.</td>
<td>2</td>
<td>If the data is from a third-party source, the company should provide information on the source. Depending on the nature of the data, data should be documented and an overview of who owns it and the topic of consumer verification should be addressed.</td>
</tr>
</tbody>
</table>
## 2. Sub-Models

<table>
<thead>
<tr>
<th></th>
<th>Consider the relevance of (e.g., is there a bias) of overlapping data or variables used in the model and sub-models.</th>
<th></th>
<th>Check if the same variables/datasets were used in both the model, a submodel or as stand-alone rating characteristics. If so, verify there was no double-counting or redundancy.</th>
</tr>
</thead>
<tbody>
<tr>
<td>A.2.a</td>
<td>Determine if sub-model output was used as input to the GLM; obtain the vendor name, and the name and version of the sub-model.</td>
<td>1</td>
<td>The regulator needs to know name of 3rd party vendor and contact whether model or sub-model. Examples of such sub-models include credit/financial scoring algorithms and household composite score models. Sub-models can be evaluated separately and in the same manner as the primary model under evaluation. A sub-model contact for additional information should be provided. SMEs on sub-model may need to be brought into the conversation with regulators (whether in-house or 3rd-party sub-models are used).</td>
</tr>
<tr>
<td>A.2.b</td>
<td>If using catastrophe model output, identify the vendor and the model settings/assumptions used when the model was run.</td>
<td>1</td>
<td>For example, it is important to know hurricane model settings for storm surge, demand surge, long/short-term views.</td>
</tr>
<tr>
<td>A.2.c</td>
<td>If using catastrophe model output (a sub-model) as input to the GLM under review, verify whether loss associated with the modeled output was removed from the loss experience datasets.</td>
<td>1</td>
<td>If a weather-based sub-model is input to the GLM under review, loss data used to develop the model should not include loss experience associated with the weather-based sub-model. Doing so could cause distortions in the modeled results by double counting such losses when determining relativities or loss loads in the filed rating plan. For example, redundant losses in the data may occur when non-hurricane wind losses are included in the data while also using a severe convective storm model in the actuarial indication. Such redundancy may also occur with the inclusion of fluvial or pluvial flood losses when using a flood model, inclusion of freeze losses when using a winter storm model or including demand surge caused by any catastrophic event.</td>
</tr>
<tr>
<td>A.2.d</td>
<td>If using output of any scoring algorithms, obtain a list of the variables used to determine the score and provide the source of the data used to calculate the score.</td>
<td>1</td>
<td>Any sub-model should be reviewed in the same manner as the primary model that uses the sub-model’s output as input.</td>
</tr>
<tr>
<td>A.2.e</td>
<td>Determine if the sub-model was previously approved (or accepted) by the regulatory agency.</td>
<td>2</td>
<td>If the sub-model was previously approved, that may change the extent of the sub-model’s review. If approved, verify when and that it was the same model currently under review.</td>
</tr>
</tbody>
</table>

## 3. Adjustments to Data
<p>| | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>A.3.a</strong></td>
<td>Determine if premium, exposure, loss or expense data were adjusted (e.g., developed, trended, adjusted for catastrophe experience or capped) and, if so, how? Do the adjustments vary for different segments of the data and, if so, identify the segments and how was the data adjusted?</td>
<td>2</td>
<td>Look for anomalies in the data that should be addressed. For example, is there an extreme loss event in the data? If other processes were used to load rates for specific loss events, how is the impact of those losses considered? Examples of losses that can contribute to anomalies in the data are large losses, flood, hurricane or severe convective storm models for PPA comprehensive or home losses.</td>
</tr>
<tr>
<td><strong>A.3.b</strong></td>
<td>Identify adjustments that were made to raw data, e.g., transformations, binning and/or categorizations. If any, identify the name of the characteristic/variable and obtain a description of the adjustment.</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td><strong>A.3.c</strong></td>
<td>Ask for aggregated data (one data set of pre-adjusted/scrubbed data and one data set of post-adjusted/scrubbed data) that allows the regulator to focus on the univariate distributions and compare raw data to adjusted/binned/transformed/etc. data.</td>
<td>3</td>
<td>This is most relevant for variables that have been &quot;scrubbed&quot; or adjusted. Though most regulators may never ask for aggregated data and do not plan to rebuild any models, a regulator may ask for this aggregated data or subsets of it. It would be useful to the regulator if the percentage of exposures and premium for missing information from the model data by category were provided. This data can be displayed in either graphical or tabular formats.</td>
</tr>
<tr>
<td><strong>A.3.d</strong></td>
<td>Determine how missing data was handled.</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td><strong>A.3.e</strong></td>
<td>If duplicate records exist, determine how they were handled.</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td><strong>A.3.f</strong></td>
<td>Determine if there were any data outliers identified and subsequently adjusted during the scrubbing process. Get a list (with description) of the outliers and determine what adjustments were made to these outliers.</td>
<td>2</td>
<td></td>
</tr>
</tbody>
</table>

### 4. Data Organization

| **A.4.a** | Obtain documentation on the methods used to compile and organize data, including procedures to merge data from different sources and a description of any preliminary analyses, data checks, and logical tests performed on the data and the results of those tests. | 2 | This should explain how data from separate sources was merged. |
| A.4.b | Obtain documentation on the process for reviewing the appropriateness, reasonableness, consistency and comprehensiveness of the data, including a discussion of the intuitive relationship the data has to the predicted variable. | 2 | An example is when by-peril or by-coverage modeling is performed; the documentation should be for each peril/coverage and make intuitive sense. For example, if “murder” or “theft” data are used to predict the wind peril, provide support and an intuitive explanation of their use. |
| A.4.c | Identify material findings the company had during their data review and obtain an explanation of any potential material limitations, defects, bias or unresolved concerns found or believed to exist in the data. If issues or limitations in the data influenced modeling analysis and/or results, obtain a description of those concerns and an explanation how modeling analysis was adjusted and/or results were impacted. | 1 | |

## Building the Model

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance to Regulator’s Review</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>B.1.a</td>
<td>Identify the type of model (e.g. Generalized Linear Model – GLM, decision tree, Bayesian Generalized Linear Model, Gradient-Boosting Machine, neural network, etc.). Understand the model’s role in the rating system and provide the reasons why that type of model is an appropriate choice for that role.</td>
<td>1</td>
<td>There should be an explanation of why the model (using the variables included in it) is appropriate for the line of business. If by-peril or by-coverage modeling is used, the explanation should be by-peril/coverage.</td>
</tr>
<tr>
<td>B.1.b</td>
<td>Identify the software used for model development. Obtain the name of the software vendor/developer, software product and a software version reference.</td>
<td>2</td>
<td></td>
</tr>
<tr>
<td>B.1.c</td>
<td>Obtain a description how the available data was divided between model training, test and validation datasets. The description should include an explanation why the selected approach was deemed most appropriate, and whether the company made any further subdivisions of available data and reasons for the subdivisions (e.g., a portion separated from training data to support testing of components during model building). Determine if the validation data was accessed before model training was completed and, if so, obtain an explanation how and why that came to occur.</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td>B.1.d</td>
<td>Obtain a brief description of the development process, from initial concept to final model and filed rating plan (in less than three pages of narrative).</td>
<td>1</td>
<td>The narrative should have the same scope as the filing.</td>
</tr>
<tr>
<td>B.1.e</td>
<td>Obtain a narrative on whether loss ratio, pure premium or frequency/severity analyses were performed and, if separate frequency/severity modeling was performed, how pure premiums were determined.</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td>B.1.f</td>
<td>Identify the model’s target variable.</td>
<td>1</td>
<td>A clear description of the target variable is key to understanding the purpose of the model.</td>
</tr>
<tr>
<td>Draft: 12/7/19</td>
<td>As adopted by the Casualty Actuarial and Statistical (C) Task Force on XX/XX/XX</td>
<td></td>
<td></td>
</tr>
<tr>
<td>----------------</td>
<td>--------------------------------------------------------------------------------</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

| B.1.g | Obtain a detailed description of the variable selection process. | 1 | The narrative regarding the variable selection process may address matters such as the criteria upon which variables were selected or omitted, identification of the number of preliminary variables considered in developing the model versus the number of variables that remained, and any statutory or regulatory limitations that were taken into account when making the decisions regarding variable selection. |
| B.1.h | In conjunction with variable selection, obtain a narrative on how the Company determine the granularity of the rating variables during model development. | 1 | |
| B.1.i | Determine if model input data was segmented in any way, e.g., was modeling performed on a by-coverage, by-peril, or by-form basis. If so, obtain a description of data segmentation and the reasons for data segmentation. | 1 | The regulator would use this to follow the logic of the modeling process. |
| B.1.j | If adjustments to the model were made based on credibility considerations, obtain an explanation of the credibility considerations and how the adjustments were applied. | 2 | Adjustments may be needed given models do not explicitly consider the credibility of the input data or the model’s resulting output; models take input data at face value and assume 100% credibility when producing modeled output. |

### 2. Medium-Level Narrative for Building the Model

| B.2.a | At crucial points in model development, if selections were made among alternatives regarding model assumptions or techniques, obtain a narrative on the judgment used to make those selections. | 2 | |
| B.2.b | If post-model adjustments were made to the data and the model was rerun, obtain an explanation on the details and the rationale for those adjustments. | 2 | Evaluate the addition or removal of variables and the model fitting. It is not necessary for the company to discuss each iteration of adding and subtracting variables, but the regulator should gain a general understanding how these adjustments were done, including any statistical improvement measures relied upon. |
| B.2.c | Obtain a description of univariate balancing and testing performed during the model-building process, including an explanation of the thought processes involved. | 2 | Further elaboration from B.2.b. |
### B.2.2 Obtaining the GLM

**B.2.d** Obtain a description of the 2-way balancing and testing that was performed during the model-building process, including an explanation of the thought processes of including (or not including) interaction terms.  

**B.2.e** For the GLM, identify the link function used. Identify which distribution was used for the model (e.g., Poisson, Gaussian, log-normal, Tweedie). Obtain an explanation why the link function and distribution were chosen. Obtain the formulas for the distribution and link functions, including specific numerical parameters of the distribution.  

**B.2.f** Obtain a narrative on the formula relationship between the data and the model outputs, with a definition of each model input and output. The narrative should include all coefficients necessary to evaluate the predicted pure premium, relativity or other value, for any real or hypothetical set of inputs.  

**B.2.g** If there were data situations in which GLM weights were used, obtain an explanation of how and why they were used.

#### 3. Predictor Variables

**B.3.a** Obtain a complete data dictionary, including the names, types, definitions and uses of each predictor variable, offset variable, control variable, proxy variable, geographic variable, geodemographic variable and all other variables in the model (including sub-models and external models).  

**B.3.b** Obtain a list of predictor variables considered but not used in the final model, and the rationale for their removal.  

**B.3.c** Obtain a correlation matrix for all predictor variables included in the model and sub-model(s).  

**B.3.d** Obtain an intuitive explanation for why an increase in each predictor variable should increase or decrease frequency, severity, loss costs, expenses, or any element or characteristic being predicted.

---

Further elaboration from B.2.a and B.2.b.  

B.4.1 and B.4.2 will show the mathematical functions involved and could be used to reproduce some model predictions.  

Investigate whether identical records were combined to build the model.

Types of variables might be continuous, discrete, Boolean, etc. Definitions should not use programming language or code. For any variable(s) intended to function as a control or offset, obtain an explanation of their rationale and impact.

The rationale for this requirement is to identify variables that the company finds to be predictive but ultimately may reject for reasons other than loss-cost considerations (e.g., price optimization).

While GLMs accommodate collinearity, the correlation matrix provides more information about the magnitude of correlation between variables.

The explanation should go beyond demonstrating correlation. Considering possible causation is relevant, but proving causation is neither practical nor expected. If no intuitive explanation can be provided, greater scrutiny may be appropriate.
If the modeler made use of one or more dimensionality reduction techniques, such as a Principal Component Analysis (PCA), obtain a narrative about that process, an explanation why that technique was chosen, and a description of the step-by-step process used to transform observations (usually correlated) into a set of linearly uncorrelated variables. In each instance, obtain a list of the pre-transformation and post-transformation variable names, and an explanation how the results of the dimensionality reduction technique was used within the model.

### 4. Adjusting Data, Model Validation and Goodness-of-Fit Measures

<table>
<thead>
<tr>
<th>B.3.e</th>
<th>2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Obtain a description of the methods used to assess the statistical significance/goodness of fit of the model to validation data, such as lift charts and statistical tests. Compare the model's projected results to historical actual results and verify that modeled results are reasonably similar to actual results from validation data.</td>
<td>1</td>
</tr>
</tbody>
</table>

For models that are built using multi-state data, validation data for some segments of risk is likely to have low credibility in individual states. Nevertheless, some regulators require model validation on State-only data, especially when analysis using state-only data contradicts the countrywide results. State-only data might be more applicable but could also be impacted by lower credibility for some segments of risk. Look for geographic stability measures, e.g., across states or territories within state.

<table>
<thead>
<tr>
<th>B.4.a</th>
<th>2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Obtain a description of any adjustments that were made in the data with respect to scaling for discrete variables or binning the data.</td>
<td>2</td>
</tr>
</tbody>
</table>

A.3.f addresses pre-modeling adjustments to data. In the mid-level narrative context, B.2.a addresses judgments of any kind made during modeling. Only choices made at "crucial points in model development" need be discussed.

<table>
<thead>
<tr>
<th>B.4.b</th>
<th>2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Obtain a description of any transformations made for continuous variables.</td>
<td>2</td>
</tr>
</tbody>
</table>

A.3.f addresses pre-modeling transformations to data. In the mid-level narrative context, B.2.a addresses transformations of any kind made during modeling. Only choices made at "crucial points in model development" need be discussed.

To build a unique model with acceptable goodness-of-fit to the training data, important steps have been taken. Such steps may have been numerous, and at least some of the judgments involved may be difficult to describe and explain. Nevertheless, neither the model filer nor the reviewer can assume these steps are immaterial, generally understood, or implied by the model's generic form. The model filer should anticipate regulatory concerns in its initial submission by identifying and explaining the model fitting steps it considers most important. If a reviewer has regulatory concerns not resolved by the initial submission, appropriate follow up inquiries are likely to depend on the particular circumstances.
| **B.4.d** | For each discrete variable level, review the parameter value, confidence intervals, chi-square tests, p-values and any other relevant and material tests. Determine if model development data, validation data, test data or other data was used for these tests. | Typical p-values greater than 5% are large and should be questioned. Reasonable business judgment can sometimes provide legitimate support for high p-values. Reasonableness of the p-value threshold could also vary depending on the context of the model, e.g., the threshold might be lower when many candidate variables were evaluated for inclusion in the model. Overall lift charts and/or statistical tests using validation data may not provide enough of the picture. If there is concern about one or more individual variables, the reviewer may obtain, for each discrete variable level, the parameter value, confidence intervals, chi-square tests, p-values and any other relevant and material tests. For variables that are modeled continuously, it may be sufficient to obtain statistics around the modeled parameters; for example, confidence intervals around each level of an A01 curve might be more than what is needed. |
| **B.4.e** | Identify the threshold for statistical significance and explain why it was selected. Obtain a reasonable and appropriately supported explanation for keeping the variable for each discrete variable level where the p-values were not less than the chosen threshold. | Typical p-values greater than 5% are large and should be questioned. Reasonable business judgment can sometimes provide legitimate support for high p-values. Reasonableness of the p-value threshold could also vary depending on the context of the model, e.g., the threshold might be lower when many candidate variables were evaluated for inclusion in the model. Overall lift charts and/or statistical tests using validation data may not provide enough of the picture. If there is concern about one or more individual variables, the reviewer may obtain, for each discrete variable level, the parameter value, confidence intervals, chi-square tests, p-values and any other relevant and material tests. For variables that are modeled continuously, it may be sufficient to obtain statistics around the modeled parameters; for example, confidence intervals around each level of an A01 curve might be more than what is needed. |
| B.4.f | For overall discrete variables, review type 3 chi-square tests, p-values, F tests and any other relevant and material test. Determine if model development data, validation data, test data or other data was used for these tests. | 2 | Typical p-values greater than 5% are large and should be questioned. Reasonable business judgment can sometimes provide legitimate support for high p-values. Reasonableness of the p-value threshold could also vary depending on the context of the model, e.g., the threshold might be lower when many candidate variables were evaluated for inclusion in the model. Overall lift charts and/or statistical tests using validation data may not provide enough of the picture. If there is concern about one or more individual variables, the reviewer may obtain, for each discrete variable level, the parameter value, confidence intervals, chi-square tests, p-values and any other relevant and material tests. For variables that are modeled continuously, it may be sufficient to obtain statistics around the modeled parameters; for example, confidence intervals around each level of an AOI curve might be more than what is needed. |
| B.4.g | Obtain evidence that the model fits the training data well, for individual variables, for any relevant combinations of variables and for, the overall model. | 2 | For a GLM, such evidence may be available using chi-square tests, p-values, F tests and/or other means. The steps taken during modeling to achieve goodness-of-fit are likely to be numerous and laborious to describe, but they contribute much of what is generalized about GLM. We should not assume we know what they did and ask "how?". Instead, we should ask what they did and be prepared to ask follow up questions. |
| B.4.h | For continuous variables, provide confidence intervals, chi-square tests, p-values and any other relevant and material test. Determine if model development data, validation data, test data or other data was used for these tests. | 2 | Typical p-values greater than 5% are large and should be questioned. Reasonable business judgment can sometimes provide legitimate support for high p-values. Reasonableness of the p-value threshold could also vary depending on the context of the model, e.g., the threshold might be lower when many candidate variables were evaluated for inclusion in the model. Overall lift charts and/or statistical tests using validation data may not provide enough of the picture. If there is concern about one or more individual variables, the reviewer may obtain, for each discrete variable level, the parameter value, confidence intervals, chi-square tests, p-values and any other relevant and material tests. For variables that are modeled continuously, it may be sufficient to obtain statistics around the modeled parameters; for example, confidence intervals around each level of an AOI curve might be more than what is needed. |
| B.4.i | Obtain a description how the model was tested for stability over time. | 2 | Evaluate the build/test/validation datasets for potential model distortions (e.g., a winter storm in year 3 of 5 can distort the model in both the testing and validation datasets). Obsolescence over time is a model risk. If a model being introduced now is based on losses from years ago, the reviewer should be interested in knowing whether that model would be predictive in the proposed context. Validation using recent data from the proposed context might be requested. Obsolescence is a risk even for a new model based on recent and relevant loss data. What steps, if any, were taken during modeling to prevent or delay obsolescence? What controls will exist to measure the rate of obsolescence? What is the plan and timeline for updating and ultimately replacing the model? |
| B.4.j | Obtain a narrative on how were potential concerns with overfitting were addressed. | 2 | Visual review of plots of actual errors is usually sufficient. The reviewer should look for a conceptual narrative covering these topics: How does this particular GLM work? Why did the rate filer do what it did? Why employ this design instead of alternatives? Why choose this particular distribution function and this particular link function? |
| B.4.k | Obtain support demonstrating that the GLM assumptions are appropriate. | 2 | |
| B.4.l | Obtain 5-10 sample records with corresponding output from the model for those records. | 3 | |

5. “Old Model” Versus “New Model”

| B.5.a | Obtain an explanation why this model is an improvement to the current rating plan. If it replaces a previous model, find out why it is better than the one it is replacing; determine how the company reached that conclusion and identify metrics relied on in reaching that conclusion. Look for an explanation of any changes in calculations, assumptions, parameters, and data used to build this model from the previous model. | 1 | Regulators should expect to see improvement in the new class plan’s predictive ability or other sufficient reason for the change. |
| B.5.b | Determine if two Gini coefficients were compared and obtain a narrative on the conclusion drawn from this comparison. | 3 | One example of a comparison might be sufficient. |
| B.5.c | Determine if double lift charts analyzed and what conclusion was drawn from this analysis? | 2 | One example of a comparison might be sufficient. |
### Draft: 8/14/2019

As adopted by the Casualty Actuarial and Statistical (C) Task Force on [XX/XX/XX](#)

| B.5.d | If replacing an existing model, obtain a list of any predictor variables used in the old model that are not used in the new model. Obtain an explanation why these variables were dropped from the new model. Obtain a list of all new predictor variables in the model that were not in the prior model. | 2 | Useful to differentiate between old and new variables so the regulator can prioritize more time on factors not yet reviewed. |
| 6. Modeler Software |  |
| B.6.a | Request access to SMEs (e.g., modelers) who led the project, compiled the data, built the model, and/or performed peer review. | 3 | The filing should contain a contact that can put the regulator in touch with appropriate SMEs to discuss the model. |
### C. The Filed Rating Plan

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Regulatory Review</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. General Impact of Model on Rating Algorithm</td>
<td>In the actuarial memorandum or explanatory memorandum, for each model and sub-model (including external models), look for a narrative that explains each model and its role in the rating system.</td>
<td>1</td>
<td>This item is particularly important, if the role of the model cannot be immediately discerned by the reviewer from a quick review of the rate and/or rule pages. (Importance is dependent on state requirements and ease of identification by the first layer of review and escalation to the appropriate review staff.)</td>
</tr>
<tr>
<td>C.1.a</td>
<td>Obtain an explanation of how the model was used to adjust the rating algorithm.</td>
<td>1</td>
<td>Models are often used to produce factor-based indications, which are then used as the basis for the selected changes to the rating plan. It is the changes to the rating plan that create impacts. Consider asking for an explanation of how the model was used to adjust the rating algorithm.</td>
</tr>
<tr>
<td>C.1.b</td>
<td>Obtain a complete list of characteristics/variables used in the proposed rating plan, including those used as input to the model (including sub-models and composite variables) and all other characteristics/variables (not input to the model) used to calculate a premium. For each characteristic/variable, determine if it is only input to the model, whether it is only a separate univariate rating characteristic, or whether it is both input to the model and a separate univariate rating characteristic. The list should include transparent descriptions (in plain language) of each listed characteristic/variable.</td>
<td>1</td>
<td>Examples of variables used as inputs to the model and used as separate univariate rating characteristics might be criteria used to determine a rating tier or household composite characteristic.</td>
</tr>
<tr>
<td>C.1.c</td>
<td>Obtain a narrative how the characteristics/rating variables, included in the filed rating plan, logically and intuitively relate to the risk of insurance loss (or expense) for the type of insurance product being priced.</td>
<td>2</td>
<td>The narrative should include a discussion of the relevance each characteristic/rating variable has on consumer behavior that would lead to a difference in risk of loss (or expense). The narrative should include a logical and intuitive relationship to cost, and model results should be consistent with the expected direction of the relationship. This explanation would not be needed if the connection between variables and risk of loss (or expense) has already been illustrated.</td>
</tr>
</tbody>
</table>

### 3. Comparison of Model Outputs to Current and Selected Rating Factors

<table>
<thead>
<tr>
<th></th>
<th>Description</th>
<th>Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>C.3.a</td>
<td>Compare relativities indicated by the model to both current relativities and the insurer's selected relativities for each risk characteristic/variable in the rating plan.</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>“Significant difference” may vary based on the risk characteristic/variable and context. However, the movement of a selected relativity should be in the direction of the indicated relativity; if not, an explanation is necessary as to why the movement is logical.</td>
<td></td>
</tr>
<tr>
<td>C.3.b</td>
<td>Obtain documentation and support for all calculations, judgments, or adjustments that connect the model's indicated values to the selected values.</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>The documentation should include explanations for the necessity of any such adjustments and explain each significant difference between the model's indicated values and the selected values. This applies even to models that produce scores, tiers, or ranges of values for which indications can be derived. This information is especially important if differences between model indicated values and selected values are material and/or impact one consumer population more than another.</td>
<td></td>
</tr>
<tr>
<td>C.3.c</td>
<td>For each characteristic/variable used as both input to the model (including sub-models and composite variables) and as a separate univariate rating characteristic, obtain a narrative how each was tempered or adjusted to account for possible overlap or redundancy in what the characteristic/variable measures.</td>
<td>2</td>
</tr>
<tr>
<td></td>
<td>Modeling loss ratio with these characteristics/variables as control variables would account for possible overlap. The insurer should address this possibility or other considerations, e.g., tier placement models often use risk characteristics/variables that are also used elsewhere in the rating plan. One way to do this would be to model the loss ratios resulting from a process that already uses univariate rating variables. Then the model/composite variables would be attempting to explain the residuals.</td>
<td></td>
</tr>
</tbody>
</table>

### 4. Responses to Data, Credibility and Granularity Issues

<table>
<thead>
<tr>
<th></th>
<th>Description</th>
<th>Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>C.4.a</td>
<td>Determine what, if any, consideration was given to the credibility of the output data.</td>
<td>2</td>
</tr>
<tr>
<td></td>
<td>At what level of granularity is credibility applied. If modeling was by-coverage, by-form or by-peril, explain how these were handled when there was not enough credible data by coverage, form or peril to model.</td>
<td></td>
</tr>
<tr>
<td>C.4.b</td>
<td>If the rating plan is less granular than the model, obtain an explanation why.</td>
<td>2</td>
</tr>
<tr>
<td></td>
<td>This is applicable if the insurer had to combine modeled output in order to reduce the granularity of the rating plan.</td>
<td></td>
</tr>
<tr>
<td>C.4.c</td>
<td>If the rating plan is more granular than the model, obtain an explanation why.</td>
<td>2</td>
</tr>
<tr>
<td></td>
<td>A more granular rating plan implies that the insurer had to extrapolate certain rating treatments, especially at the tails of a distribution of attributes, in a manner not specified by the model indications.</td>
<td></td>
</tr>
</tbody>
</table>
## 5. Definitions of Rating Variables

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>C.5.a</td>
<td>Obtain a narrative on adjustments made to raw data, e.g., transformations, binning and/or categorizations. If adjustments were made, obtain the name of the characteristic/variable and a description of the adjustment.</td>
</tr>
<tr>
<td>C.5.b</td>
<td>Obtain a complete list and description of any rating tiers or other intermediate rating categories that translate the model outputs into some other structure that is then presented within the rate and/or rule pages.</td>
</tr>
</tbody>
</table>

## 6. Supporting Data

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>C.6.a</td>
<td>Obtain aggregated state-specific, book-of-business-specific univariate historical experience data, separately for each year included in the model, consisting of, at minimum, earned exposures, earned premiums, incurred losses, loss ratios and loss ratio relativities for each category of model output(s) proposed to be used within the rating plan. For each data element, obtain an explanation whether it is raw or adjusted and, if the latter, obtain a detailed explanation for the adjustments.</td>
</tr>
<tr>
<td>C.6.b</td>
<td>Obtain an explanation of any material (especially directional) differences between model indications and state-specific univariate indications.</td>
</tr>
</tbody>
</table>

- For example, were losses developed/undeveloped, trended/untrended, capped/uncapped, etc?

Univariate indications should not necessarily be used to override more sophisticated multivariate indications. However, they do provide additional context and may serve as a useful reference.

- Multivariate indications may be reasonable as refinements to univariate indications, but possibly not for bringing about significant reversals of those indications. For instance, if the univariate indicated relativity for an attribute is 1.5 and the multivariate indicated relativity is 1.25, this is potentially a plausible application of the multivariate techniques. If, however, the univariate indicated relativity is 0.7 and the multivariate indicated relativity is 1.25, a regulator may question whether the attribute in question is negatively correlated with other determinants of risk. Credibility of state data should be considered when state indications differ from modeled results based on a broader data set. However, the relevance of the broader data set to the risks being priced should also be considered. Borderline reversals are not of as much concern.
| C.7.a | Obtain a listing of the top five rating variables that contribute the most to large swings in premium, both as increases and decreases. | 2 | These rating variables may represent changes to rate relativities, be newly introduced to the rating plan, or have been removed from the rating plan. |
| C.7.b | Determine if the insurer performed sensitivity testing to identify significant changes in premium due to small or incremental change in a single risk characteristic. If such testing was performed, obtain a narrative that discusses the testing and provides the results of that testing. | 3 | One way to see sensitivity is to analyze a graph of each risk characteristic’s/variable’s possible relativities. Look for significant variation between adjacent relativities and evaluate if such variation is reasonable and credible. |
| C.7.c | For the proposed filing, obtain the impacts on expiring policies and describe the process used by management, if any, to mitigate those impacts. | 2 | Some mitigation efforts may substantially weaken the connection between premium and expected loss and expense, and hence may be viewed as unfairly discriminatory by some states. |
| C.7.d | Obtain a rate disruption/dislocation analysis, demonstrating the distribution of percentage impacts on renewal business (create by rerating the current book of business). | 2 | The analysis should include the largest dollar and percentage impacts arising from the filing, including the impacts arising specifically from the adoption of the model or changes to the model as they translate into the proposed rating plan. |
| C.7.e | Obtain exposure distributions for the model’s output variables and show the effects of rate changes at granular and summary levels. | 3 | See Appendix C for an example of an exposure distribution. |
### C.7.f
Identify policy characteristics, used as input to a model or sub-model, that remain "static" over a policy's lifetime versus those that will be updated periodically. Obtain a narrative on how the company handles policy characteristics that are listed as "static," yet change over time.

- **3**
  - Some examples of "static" policy characteristics are prior carrier tenure, prior carrier type, prior liability limits, claim history over past X years, or lapse of coverage. These are specific policy characteristics usually set at the time new business is written, used to create an insurance score or to place the business in a rating/underwriting tier, and often fixed for the life of the policy. The reviewer should be aware, and possibly concerned, how the company treats an insured over time when the insured's risk profile based on "static" variables changes over time but the rate charged, based on a new business insurance score or tier assignment, no longer reflect the insured's true and current risk profile.
  - A few examples of "non-static" policy characteristics are age of driver, driving record and credit information (FCRA related). These are updated automatically by the company on a periodic basis, usually at renewal, with or without the policyholder explicitly informing the company.

### C.7.g
Obtain a means to calculate the rate charged a consumer.

- **3**
  - The filed rating plan should contain enough information for a regulator to be able to validate policy premium. However, for a complex model or rating plan, a score or premium calculator via Excel or similar means would be ideal, but this could be elicited on a case-by-case basis. Ability to calculate the rate charged could allow the regulator to perform sensitivity testing when there are small changes to a risk characteristic/variable. Note that this information may be proprietary.

### 8. Accurate Translation of Model into a Rating Plan

#### C.8.a
Obtain sufficient information to understand how the model outputs are used within the rating system and to verify that the rating plan, in fact, reflects the model output and any adjustments made to the model output.

- **1**
VIII. PROPOSED CHANGES TO THE PRODUCT FILING REVIEW HANDBOOK

TBD — placeholder to include best practices for review of predictive models and analytics filed by insurers to justify rates.

The Task Force was charged to propose modifications to the 2016 Product Filing Review Handbook to reflect best practices for the regulatory review of predictive analytics. The following are the titled sections in Chapter Three “The Basics of Property and Casualty Rate Regulation.” Proposed changes are shown as tracked changes.

CHAPTER THREE

The Basics of Property and Casualty Rate Regulation

No changes are proposed to the following sections at the beginning of Chapter Three: Introduction; Rating Laws; Rate Standards; Rate Justification and Supporting Data; Number of Years Historical Data; Segregation of Data; Data Adjustments; Premium Adjustments; Losses and LAE (perhaps just DCC) Adjustments; Catastrophe or Large Loss Provisions; Loss Adjustment Expenses; Data Quality; Rate Justification: Overall Rate Level; Contingency Provision; Credibility; Calculation of Overall Rate Level Need: Methods (Pure Premium and Loss Ratio Methods); Rate Justification: Rating Factors; Calculation of Deductible Rating Factors; Calculation of Increased Limit Factors; and Credibility for Rating Factors.

Interaction between Rating Variables (Multivariate Analysis)

If the pricing of rating variables is evaluated separately for each rating variable, there is potential to miss the interaction between rating variables. Care should be taken to have a multivariate analysis when practical. In some instances, a multivariate analysis is not possible. But, with computing power growing exponentially, insurers are finding many ways to improve their operations and competitiveness through use of often very complex predictive models in all areas of their insurance business.

Approval of Classification Systems

With rate changes, companies sometimes propose revisions to their classification system. Because the changes to classification plans can be significant and have large impacts on the consumers’ rates, regulators should focus on these changes.

Some items of proposed classification can sometimes be deemed to be against public policy, such as the use of education or occupation. You should be aware of your state’s laws and regulations regarding which rating factors are allowed. Finding rating or underwriting characteristics that may violate public policy is becoming more difficult for regulators with the increasing and innovative ways insurers use predictive models.

Rating Tiers

Some states allow an insurer to have multiple rate levels, or rating tiers, within a single company. These rating tiers are another way of classifying risks for rating purposes. Typically, there are requirements for rating tiers: the underwriting rules for each tier should be mutually exclusive, clear, and objective; there should be a distinction between the expected losses or expenses for each tier; and the placement process should be auditable. Tiers within a company are mainly seen in personal lines products.

One particular concern with rating tiers would be the analyses of whether a plan produces unfair discrimination. Questions arise around the time-sensitive aspects of the underwriting criteria and any related re-evaluation of the tiers upon renewal. For example, consider two tiers where the insured is placed in the “high” tier because of a lapse of insurance in the prior 12 months. The question is: What happens upon renewal after there has no longer been a lapse of insurance for 12 months? Does the insured get slotted in the “low” tier as he would if he was new business? Some statutes limit the amount of time that violations, loss history, or insurance scores can be used, and some statutes might only allow credit history to be used for re-
rating at the policyholder’s request. Regulators should consider the acceptability of differences in rates between existing and new policyholders when they have the same current risk profile.

Insurers also can create different rating levels by having separate companies within a group. While regulators should examine rating tiers within an insurer to a high degree of regulatory scrutiny, there tends to be less scrutiny with differences in rates that exist between affiliated companies. Workers’ compensation insurers are more likely to obtain rating tiers using separate companies.

Rate Justification: New Products – (No change is proposed.)

Predictive Modeling

The ability of computers to process massive amounts of data has led to the expansion of the use of predictive modeling in insurance ratemaking. Predictive models have enabled insurers to build rating, marketing, underwriting and claim models with significant segmentation-predictive power and are increasingly being applied in such areas as claims modeling and used in helping insurers to price risks more effectively.

Key new rating variables that are being incorporated into insurers’ predictive models include homeowners’ rates by policy, homeowners rating by building characteristics, vehicle history, usage-based auto insurance, and credit characteristics.

Data quality and communication about models are of key importance with predictive modeling. Depending on definitional boundaries, predictive modeling can sometimes overlap with the field of machine learning. In the modeling space, predictive modeling is often referred to as predictive analytics.

Insurers’ use of predictive analytics along with big data has significant potential benefits to both consumers and insurers. Predictive analytics can reveal insights into the relationship between consumer behavior and the cost of insurance, lower the cost of insurance for many, and provide incentives for consumers to better control and mitigate loss. However, predictive analytic techniques are evolving rapidly and leaving many regulators without the necessary tools to effectively review insurers’ use of predictive models in insurance applications. To aid the regulator in the review of predictive models, best practices have been developed along with specific information that will aid the regulator in their review of predictive models (specifically generalized linear models or “GLMs”) for private passenger automobile and homeowners’ insurance applications.

The term “predictive model” refers to a set of models that use statistics to predict outcomes. When applied to insurance, the model is chosen to estimate the probability or expected value of an outcome given a set amount of input data; for example, models can predict the frequency of loss, the severity of loss, or the pure premium.

To further complicate regulatory review of models in the future, modeling methods are evolving rapidly and are not limited just to GLMs. As computing power grows exponentially, it is opening up the modeling world to more sophisticated forms of data acquisition and data analysis. Insurance actuaries and data scientists seek increased predictiveness by using even more complex predictive modeling methods. Examples of these are predictive models utilizing random forests, decision trees, neural networks, or combinations of available modeling methods (often referred to as ensembles). These evolving techniques will make the regulators’ understanding and oversight of filed rating plans incorporating predictive models even more challenging.

A. Generalized Linear Models

The generalized linear model (GLM) is a commonly used predictive model in insurance applications, particularly in building an insurance product’s rating plan. Because of this and the fact most Property and Casualty regulators are most concerned about personal lines, NAIC has developed a white paper for guidance2 in reviewing GLMs for Home and private passenger automobile insurance.

Before GLMs became vogue, rating plans were built using univariate methods. Univariate methods were considered rational and easy to demonstrate the relationship to costs (loss and/or expense). However, many consider univariate methods too simplistic since they do not take into account the interaction (or dependencies) of the selected input variables. GLMs introduce significant improvements over univariate-based rating plans by automatically adjusting for correlations among

2 Refer to NAIC’s white paper titled Regulatory Review of Predictive Models, found at the NAIC website.
input variables. Today, the majority of predictive models used in private passenger automobile and home insurance rating plans are GLMs. But, GLM results are not always rational and the relationship to costs may be difficult to explain.

A GLM consists of three elements:

- Each component of $Y$ is independent and a probability distribution from the exponential family, or more generally, a selected variance function and dispersion parameter,
- A linear predictor $\eta = X\beta$,
- A link function $g$ such that $E(Y) = \mu = g^{-1}(\eta)$.

As can be seen in the description of the three GLM components above, it may take more than a casual introduction to statistics to comprehend the construction of a GLM. As stated earlier, a downside to GLMs is that it is more challenging to interpret the GLMs output than with univariate models.

B. Credibility of Model Output

GLM software provides point estimates and allows the modeler to consider standard errors and confidence intervals. GLM output is typically assumed to be 100% credible no matter the size of the underlying data set. If some segments have little data, the resulting uncertainty would not be reflected in the GLM parameter estimates themselves (although it might be reflected in the standard errors, confidence intervals, etc.). Even though the process of selecting relatives often includes adjusting the raw GLM output, the resultant selections are not then credibility-weighted with any complement of credibility. Nevertheless, selected relatives based on GLM model output may differ from GLM point estimates.

Because of this presumption in credibility, which may or may not be valid in practice, the modeler and the regulator reviewing the model would need to engage in thoughtful consideration when incorporating GLM output into a rating plan to ensure that model predictiveness is not compromised by any lack of actual credibility. Therefore, to mitigate the risk that model credibility or predictiveness is lacking, a complete filing for a rating plan that incorporates GLM output should include validation evidence for the rating plan, not just the statistical model.

C. What is a “Best Practice”?

A best practice is a form of peer group evaluation in public policy. At its most basic level, a practice is a “tangible and visible behavior… [based on] an idea about how the actions… will solve a problem or achieve a goal.”10 Best practices can maintain quality as an alternative to mandatory legislated standards and can be based on self-assessment or benchmarking.11 Therefore, a best practice represents an effective method of problem solving. The “problem” regulators want to solve is probably better posed as seeking an answer to this question: How can regulators determine that predictive models, as used in rate filings, are compliant with state laws and regulations? However, best practices are not intended to create standards for filings that include predictive models.

Best practices are based on the following principles that promote a comprehensive and coordinated review of predictive models across states:

- State insurance regulators will maintain their current rate regulatory authority.
- State insurance regulators will be able to share information to aid companies in getting insurance products to market more quickly.
- State insurance regulators will share expertise and discuss technical issues regarding predictive models.
- State insurance regulators will maintain confidentiality, where appropriate, regarding predictive models.

D. Regulatory Review of Predictive Models

The knowledge needed to review predictive models, and guidance regarding GLMs for personal automobile and home insurance may be transferable when the review involves GLMs applied to other lines of business. Modeling depends on context, so the GLM reviewer has to be alert for data challenges and business applications that differ from the most familiar personal lines. For example, compared to personal lines, modeling for rates in commercial lines is more likely to encounter

---

low volumes of historical data, dependence on advisory loss costs, unique large accounts with some large deductibles and products that build policies from numerous line-of-business and coverage building blocks. Commercial lines commonly use individual risk modifications following experience, judgment, and/or expense considerations. A regulator may never see commercial excess and surplus lines filings. The legal and regulatory constraints (including state variations) are likely to be more evolved, and challenging, in personal lines. A GLM rate model for personal lines in 2019 is either an update or a late-adopter's defensive tactic. Adopting GLM for commercial lines has a shorter history.

 Guidance offered here might be useful (with deeper adaptations) when starting to review different types of predictive models. If the model is not a GLM, some listed items might not apply. Not all predictive models generate p-values or F-tests. Depending on the model type, other considerations might be important. When transferring guidance to other lines of business and other types of model, unique considerations may arise depending on the context in which a predictive model is proposed to be deployed, the uses to which it is proposed to be put, and the potential consequences for the insurer, its customers and its competitors. This guidance does not delve into these possible considerations but regulators should be prepared to address them as they arise.

 Best practices will help the regulator understand if a predictive model is cost-based, if the predictive model is compliant with state law, and how the model improves the company’s rating plan. Best practices can also, make the regulator's review more consistent across states and more efficient, and assist companies in getting their products to market faster. With this in mind, the regulator's review of predictive models should:

1. Ensure that the factors developed based on the model produce rates that are not excessive, inadequate, or unfairly discriminatory.
   a. Review the overall rate level impact of the revisions proposed based on the predictive model output in comparison to rate level indications provided by the filer.
   b. Review the premium disruption for individual policyholders and how the disruptions can be explained to individual consumers.
   c. Review the individual input characteristics and output factors from the predictive model (and its sub-models), as well as, associated selected relatitives to ensure they are not unfairly discriminatory.

2. Thoroughly review all aspects of the model including the source data, assumptions, adjustments, variables, and resulting output.
   a. Determine that individual input characteristics to a predictive model are related to the expected loss or expense differences in risk. Each input characteristic should have an intuitive or demonstrable actual relationship to expected loss or expense.
   b. Determine that the data used as input to the predictive model is accurate, including a clear understanding how missing values, erroneous values and outliers are handled.
   c. Determine that any adjustments to the raw data are handled appropriately, including but not limited to, trending, development, capping, removal of catastrophes, and rating factors.
   d. Determine that rating factors from a predictive model are related to expected loss or expense differences in risk. Each rating factor should have a demonstrable actual relationship to expected loss or expense.
   e. Obtain a clear understanding how often each risk characteristic, used as input to the model, is updated and whether the model is periodically rerun, so model output reflects changes to non-static risk characteristics.

3. Evaluate how the model interacts with and improves the rating plan.
   a. Obtain a clear understanding of the characteristics that are input to a predictive model (and its sub-models), their relationship to each other and their relationship to non-modeled characteristics/variables used to calculate a risk’s premium.
   b. Obtain a clear understanding of how the selected predictive model was built and why the insurer believes this type of model works in a private passenger automobile or homeowner’s insurance risk application.
   c. Obtain a clear understanding of how model output interacts with non-modeled characteristics/variables used to calculate a risk’s premium.
   d. Obtain a clear understanding of how the predictive model was integrated into the insurer’s state rating plan and how it improves that plan.
   e. For predictive model refreshes, determine whether sufficient validation was performed to ensure the model is still a good fit.
4. Enable competition and innovation to promote the growth, financial stability, and efficiency of the insurance marketplace.
   a. Enable innovation in the pricing of insurance though acceptance of predictive models, provided they are actuarially sound and in compliance with state laws.
   b. Protect the confidentiality of filed predictive models and supporting information in accordance with state law.
   c. Review predictive models in a timely manner to enable reasonable speed to market.

E. Information Needed to Follow Best Practices

To assist the regulator in following each best practice, the Casualty Actuarial and Statistical Task Force created a white paper titled Regulatory Review of Predictive Models. The paper contains a list of information elements and considerations that should be useful during the review of a model underlying a rating plan. To further assist the regulator, the information elements were mapped into the best practices listed above in Section XV of the paper.

F. Confidentiality

Regulatory reviewers are required to protect confidential information in accordance with applicable State law. However, insurers should be aware that a rate filing might become part of the public record. Each state determines the confidentiality of a rate filing, supplemental material to the filing, when filing information might become public, the procedure to request that filing information be held confidentially, and the procedure by which a public record request is made. It is incumbent on an insurer to be familiar with each state’s laws regarding the confidentiality of information submitted with their rate filing.

Advisory Organizations – (No change is proposed.)

Workers’ Compensation Special Rules – (No change is proposed.)

**Premium Selection Decisions**

- Indicated Rate Change vs. Selected Rate Change

After applying credibility, the indicated rate change should reflect the company’s best estimate of their premium needs given their current or expected book of business. However, insurance companies also have other business considerations including competition, marketing, legal concerns, impact of the rate change on retention, etc. A company might wish to deviate from their indicated rate change and should justify those decisions, within the constraints of the law.

- Capping and Transition Rules

With advances in technology, it is possible for companies to introduce capping of rates on individual policies with an aim toward gradually increasing policyholders’ rates, rather than making large modifications all at one time. Similarly, premiums are often proposed to be modified when an insurer acquires another company’s book of business or decides to move from or to an advisory organization’s plan. These types of proposed capping are sometimes called “renewal premium capping,” “rate capping,” “a rate stability program,” or “transition rules.”

Transition rules for individual policyholders can get quite complex and you need to be aware of your state’s positions on premium capping rules. Any premium capping and transition rules require weighing the pros and cons of the potential for unfair discrimination (with some customers not paying the rate commensurate with the risks they have) vs. rate stability for existing policyholders.

If premium capping or transition rules are allowed, additional decisions will need to be made:

- Which rates should get capped?
- Do rate decreases get capped? If so, what is the impact if the policyholder asks to be quoted as new business?
- Do all rate increases get capped or only above a certain percentage?
- How much time will lapse or how many renewal cycles will occur before the new rates are in place or different rating plans are merged?
- Should the insured be told what the final premium will be once no more capping is applied?
- How would exposure change be addressed? If the policyholder buys a new car or changes their liability limits, what is the impact on their rate capping?
How many rate-capping rules can be implemented at any given time?

When premium capping or transition rules have been incorporated, future indicated rate changes and rating factor analyses need to properly reflect the fully approved rate changes. If the overall approved rate change was +10%, yet capping resulted in only 8% being implemented in the first year, the remaining amount to recognize the full 10% should be reflected in the premium on-level adjustment. Otherwise, the indicated rate would be redundant.

Some states encourage more frequent filing of rate changes that can help to avoid the need of premium capping and transition rules. Some states might prefer capping of individual rating variables, rather than capping for individual policyholders.

Installment Plans – (No change is proposed.)

Policy Fees – (No change is proposed.)

Potential Questions to Ask Oneself as a Regulator

Every filing will be different and will result in different regulatory analyses. But the following are some questions the regulator might ask oneself in a rate filing review:

1. Regarding data:
   a. Is the data submitted with the filing enough information for a regulatory review?
   b. Is the number of years of experience appropriate?
   c. Did the company sufficiently analyze and control their quality of data?

2. Regarding the support and justification of rates:
   a. Did they propose rate changes without justification?
   b. Are proposals based on judgment or competitive analysis? If so, are the results reasonable and acceptable? Are there inappropriate marketing practices?
   c. Are the assumptions (loss development, trend, expense load, profit provision, credibility etc.) used to develop the rate indication appropriate? Are they supported with data and are deviations from data results sufficiently explained?
   d. Is the weighting of data by year (or credibility) properly justified or does it appear random?
      • Is there more weight being placed on data in one year solely because it produces a higher indicated rate change?
      • If there are two indications being weighted together and one is for a rate increase and one is a rate decrease, is the weighting justified?
   e. Is there satisfactory explanation about why a proposed rate change deviates from the indicated rate change?

3. Regarding differences in assumptions from previous filings:
   a. Have methodologies changed significantly?
   b. Are assumptions for the weighting of years or credibility significantly different? Or does there appear to be some manipulation to the rate indication?

4. Is there unfair discrimination?
   a. Do classifications comply with state requirements?
   b. Are proposed rates established so that different classes will produce the same underwriting results?
Draft: 12/7/19
As adopted by the Casualty Actuarial and Statistical (C) Task Force on XX/XX/XX

3. If predictive models are used in the rating plan, are there concerns related to input variables that are prohibited or proxies for prohibited variables?

5. What do you need to communicate?
   a. Can you explain why you are taking a specific action on the filing?
   b. What do you need to tell the Consumer Services Department?
      • Can you explain the impact of the rate change on current business? How big is the company and how much of the market is impacted?
      • What are the biggest changes in the filing (and the ones on which consumer calls might be expected)?
      • What is the maximum rate change impact on any one policyholder?

Questions to Ask a Company

If you remain unsatisfied that the company has satisfactorily justified the rate change, then consider asking additional questions of the company. Questions should be asked of the company when they have not satisfied statutory or regulatory requirements in the state or when any current justification is inadequate and could have an impact on the rate change approval or the amount of the approval.

If there are additional items of concern, the company can be notified so they will make appropriate modifications in future filings.

The CASTF white paper, Regulatory Review of Predictive Models, documents questions that a regular may want to ask when reviewing a model. These questions are listed in the Predictive Model – Information for Regulatory Review section of the white paper. Note that although the white paper focuses on GLMs for home and private passenger auto insurance, some of the concepts may be transferable to other types of models and/or other lines of business.

Additional Ratemaking Information

The Casualty Actuarial Society (CAS) and the Society of Actuaries (SOA) have extensive examination syllabi that contain a significant amount of ratemaking information, on both the basic topics covered in this chapter and on advanced ratemaking topics. The CAS and SOA websites contain links to many of the papers included in the syllabus. Recommended reading is the Foundations of Casualty Actuarial Science, which contains chapters on ratemaking, risk classification, and individual risk rating.

Other Reading

Some additional background reading is recommended:

  o Chapter 1: Introduction
  o Chapter 3: Ratemaking
  o Chapter 6: Risk Classification
  o Chapter 9: Investment Issues in Property-Liability Insurance
  o Chapter 10: Only the section on Regulating an Insurance Company, pp. 777-787
- Casualty Actuarial Society (CAS) Statements of Principles, especially regarding property and casualty ratemaking.
- Association of Insurance Compliance Professionals: “Ratemaking—What the State Filer Needs to Know.”
- Review of filings and approval of insurance company rates.

Summary

Commented [DK10]: Page 36 of the Handbook
Commented [DK11]: REFERENCES INCLUDED IN THE WHITE PAPER WILL BE ADDED
Commented [DK12]: Page 37 of the Handbook
Rate regulation for property/casualty lines of business requires significant knowledge of state rating laws, rating standards, actuarial science, statistical modeling and many data concepts.

- Rating laws vary by state, but the rating laws are usually grouped into prior approval, file and use or use and file (competitive), no file (open competition), and flex rating.
- Rate standards typically included in the state rating laws require that “Rates shall not be inadequate, excessive, or unfairly discriminatory.”
- A company will likely determine their indicated rate change by starting with historical years of underwriting data (earned premiums, incurred loss and loss adjustment expenses, general expenses) and adjusting that data to reflect the anticipated ultimate level of costs for the future time period covered by the policies. Numerous adjustments are made to the data. Common premium adjustments are on-level premium, audit, and trend. Common loss adjustments are trend, loss development, Catastrophe/large loss provisions, and an adjusting and other (A&O) loss adjustment expense provision. A profit/contingency provision is also calculated to determine the indicated rate change.
- Once an overall rate level is determined, the rate change gets allocated to the classifications and other rating factors.
- Individual risk rating allows manual rates to be modified by an individual policyholder’s own experience.
- Advisory organizations provide the underlying loss costs for companies to be able to add their own expenses and profit provisions (with loss cost multipliers) to calculate their insurance rates.
- Casualty Actuarial Society’s Statement of Principles Regarding Property and Casualty Insurance Ratemaking provides guidance and guidelines for the numerous actuarial decisions and standards employed during the development of rates.
- NAIC model laws also include special provisions for workers’ compensation business, penalties for not complying with laws, and competitive market analysis to determine whether rates should be subject to prior approval provisions.
- Best practices for reviewing predictive models are provided the CASTF white paper titled Regulatory Review of Predictive Models. Although the white paper focuses on GLMs for home and private passenger automobile insurance, some of the concepts may be transferable to other types of models and/or other lines of insurance.

While this chapter provides an overview of the rate determination/actuarial process and regulatory review, state statutory or administrative rule may require the examiner to adopt different standards or guidelines than the ones described.

No additional changes are proposed to the Product Filing Review Handbook.

**IX. PROPOSED STATE GUIDANCE**

TBD – placeholder for guidance for rate filings that are based on predictive model

This paper acknowledges that different states will apply the guidance within it differently, based on variations in the legal environment pertaining to insurance regulation in those states, as well as the extent of available resources, including staff members with actuarial and/or statistical expertise, the workloads of those staff members, and the time that can be reasonably allocated to predictive-model reviews. States with prior-approval authority over personal-lines rate filings often already require answers in connection with many of the information elements expressed in this paper. However, states—including those with and without prior-approval authority—may also use the guidance in this paper to choose which model elements to focus on in their reviews and/or to train new reviewers, as well as to gain an enhanced understanding of how predictive models are developed, supported, and deployed in their markets. Ultimately, the insurance regulators within each state will decide how best to tailor the guidance within this paper to achieve the most effective and successful implementation, subject to the framework of statutes, regulations, precedents, and processes that comprise the insurance regulatory framework in that state.

**X. OTHER CONSIDERATIONS**

During the development of this guidance, topics arose that are not addressed in this paper. These topics may need addressing during the regulator’s review of a predictive model. A few of these issues may be discussed elsewhere within NAIC. All of these issues, if addressed, will be handled by each state on a case-by-case basis. A sampling of topics for consideration in this section include:
XI. RECOMMENDATIONS GOING FORWARD

The following are examples of topics that may be included in the recommendations:

- TBD: Discuss confidentiality as it relates to filings submitted via SERFF
- TBD: Discuss confidentiality as it relates to state statutes and regulations.
- TBD: Discuss policyholder disclosure when complex predictive model underlies a rating plan.
- TBD: Discuss the need for NAIC to update and strengthen information-sharing platforms and protocols.
- TBD: Determine the means available to a consumer to correct or contest individual data input values that may be in error.
- TBD: Given an insurer’s rating plan relies on a predictive model and knowing all characteristics of a risk, discuss a regulator's ability/need to audit/calculate the risk’s premium without consultation with the insurer.
- Other TBDs
XII. APPENDIX A – BEST PRACTICE DEVELOPMENT

Best-practices development is a method for reviewing public policy processes that have been effective in addressing particular issues and could be applied to a current problem. This process relies on the assumptions that top performance is a result of good practices and these practices may be adapted and emulated by others to improve results\(^\text{1}^\). The term “best practice” can be a misleading one due to the slippery nature of the word “best”. When proceeding with policy research of this kind, it may be more helpful to frame the project as a way of identifying practices or processes that have worked exceptionally well and the underlying reasons for their success. This allows for a mix-and-match approach for making recommendations that might encompass pieces of many good practices\(^\text{1}^\).

Researchers have found that successful best-practice analysis projects share five common phases:

A. **Scope**

   The focus of an effective analysis is narrow, precise and clearly articulated to stakeholders. A project with a broader focus becomes unwieldy and impractical. Furthermore, Bardach urges the importance of realistic expectations in order to avoid improperly attributing results to a best practice without taking into account internal validity problems.

B. **Identify Top Performers**

   Identify outstanding performers in this area to partner with and learn from. In this phase, it is key to recall that a best practice is a tangible behavior or process designed to solve a problem or achieve a goal (i.e. reviewing predictive models contributes to insurance rates that are not unfairly discriminatory). Therefore, top performers are those who are particularly effective at solving a specific problem or regularly achieve desired results in the area of focus.

C. **Analyze Best Practices**

   Once successful practices are identified, analysts will begin to observe, gather information and identify the distinctive elements that contribute to their superior performance. Bardach suggests it is important at this stage to distill the successful elements of the process down to their most essential idea. This allows for flexibility once the practice is adapted for a new organization or location.

D. **Adapt**

   Analyze and adapt the core elements of the practice for application in a new environment. This may require changing some aspects to account for organizational or environmental differences while retaining the foundational concept or idea. This is also the time to identify potential vulnerabilities of the new practice and build in safeguards to minimize risk.

E. **Implementation and evaluation**

   The final step is to implement the new process and carefully monitor the results. It may be necessary to make adjustments, so it is likely prudent to allow time and resources for this. Once implementation is complete, continued evaluation is important to ensure the practice remains effective.

---

XIII. APPENDIX B - GLOSSARY OF TERMS

Adjusting Data - TBD

Control Factor - TBD

Data source - TBD

Double-lift chart - TBD

Exponential Family - TBD

Fair Credit Reporting Act – The Fair Credit Reporting Act (FCRA), 15 U.S.C. § 1681 (FCRA) is U.S. Federal Government legislation enacted to promote the accuracy, fairness and privacy of consumer information contained in the files of consumer reporting agencies. It was intended to protect consumers from the willful and/or negligent inclusion of inaccurate information in their credit reports. To that end, the FCRA regulates the collection, dissemination and use of consumer information, including consumer credit information.\(^{14}\) Together with the Fair Debt Collection Practices Act (FDCPA), the FCRA forms the foundation of consumer rights law in the United States. It was originally passed in 1970 and is enforced by the US Federal Trade Commission, the Consumer Financial Protection Bureau and private litigants.

Generalized Linear Model - TBD

Geodemographic - Geodemographic segmentation (or analysis) is a multivariate statistical classification technique for discovering whether the individuals of a population fall into different groups by making quantitative comparisons of multiple characteristics with the assumption that the differences within any group should be less than the differences between groups. Geodemographic segmentation is based on two principles:

Home Insurance – TBD

Insurance Data - TBD

Linear Predictor - TBD

Link Function - TBD

Non-Insurance Data - TBD

Offset Factor – TBD

Overfitting - TBD

1. People who live in the same neighborhood are more likely to have similar characteristics than are two people chosen at random.

2. Neighborhoods can be categorized in terms of the characteristics of the population that they contain. Any two neighborhoods can be placed in the same category, i.e., they contain similar types of people, even though they are widely separated.

PCA Approach (Principal Component Analysis) – The method creates multiple new variables from correlated groups of predictors. Those new variables exhibit little or no correlation between them—thereby making them potentially more useful in a GLM. A PCA in a filing can be described as “a GLM within a GLM.” One of the more common applications of PCA is geodemographic analysis, where many attributes are used to modify territorial differentials on, for example, a census block level.

Private Passenger Automobile Insurance – TBD

Probability Distribution - TBD

Rating Algorithm – TBD

As adopted by the Casualty Actuarial and Statistical (C) Task Force on 12/7/19

Rating Plan – TBD
Rating System – TBD
Scrubbing data - TBD
Sub-Model - any model that provides input into another model.
Univariate Model - TBD
Etc.

XV. APPENDIX D – INFORMATION NEEDED BY REGULATOR MAPPED INTO BEST PRACTICES

TBD

XVI. APPENDIX E – REFERENCES

TBD

© 2019 National Association of Insurance Commissioners  40
Re: CASTF Regulatory Review of Predictive Models White Paper

Ms. DeFrain,

Several members of the CAS Ratemaking Research Committee have discussed the draft white paper on “Regulatory Review of Predictive Models”.

We thank you for the work that the CASTF is doing to address the regulatory challenge inherent in reviewing the use of predictive models in insurance. These techniques are only likely to increase in use and a framework which may accommodate their implementation is something which is in the best interest of regulators, the insurance industry and consumers.

We have made the following comments:

• Product Filing Review Handbook
  o The following statement appears in Chapter 3: Data Adjustments of the handbook: “Because the insurance contracts will be written to cover future accident periods, the past data needs to be adjusted to reflect the anticipated future premiums and costs. These adjustments will provide a profit/loss picture if no rate change occurs. Calculations can then be made to determine the overall rate need (or indication).”
  o Making adjustments to the data bakes assumptions into the adjusted data. The uncertainty of those assumptions, after being baked in, cannot be recognized. Some modern statistical modeling methodologies allow adjustments such as trend to be modeled. This allows the parameter estimates and the uncertainty around the parameter estimates to be understood better, which allows better decision making to take place. A more appropriate wording would be “may need to be adjusted”.

• VIII. PROPOSED CHANGES TO THE PRODUCT FILING REVIEW HANDBOOK
  o Section titled “Interaction between Rating Variables (Multivariate Analysis)” states “If the pricing of rating variables is evaluated separately for each rating variable, there is potential to miss the interaction between rating variables.”
  o We would rephrase this as “If each rating variable is evaluated separately, statistically significant interactions between rating variables will not be identified and thus, not included in the rating plan.”
  o It is quite possible for models (specifically neural net and tree-based models such as random forest or xgboost) to contain relationships between variables for which an intuitive explanation is not immediately obvious. Further, such models can also include hundreds of such relationships.
CHAPTER THREE - The Basics of Property and Casualty Rate Regulation

Section: “Interaction between Rating Variables (Multivariate Analysis)”
  - It seems as though the term “interaction” is not being used in its technical sense. Rather, it appears to refer to multivariate modeling generally and not to the more precise use of the term “interaction” in a linear modeling context. Later, the word “interaction” is used in a way that suggests it is synonymous with correlation.

Section: “Approval of Classification System”
  - “You should be aware of your state’s laws and regulations regarding which rating factors are allowed.” We would suggest adding to that sentence, “, and you should require definitions of all data elements that can affect the charged premium.”
  - The sentence “Finding rating or underwriting characteristics that may violate public policy is becoming more difficult for regulators with the increasing and innovative ways insurers use predictive models.” was added. We feel this sentence warrants further explanation. The draft states that identification of public policy violations “is becoming more difficult”. How is this so?
  - Further, the phrase “increasing and innovative ways insurers use predictive models” leaves one with the sense that insurers would willingly game or obfuscate their models to circumvent compliance. While the reviewers are aware that proxy variables (which the draft references later) may inadvertently enter an insurer’s model, this does not happen as part of an effort to contravene public policy.

Section: “Predictive Modeling”, part A “Generalized Linear Models”
  - We again note that there is a singular emphasis on GLMs. We will reiterate our concern that other models like neural networks, generalized additive models, gradient boosting machines, etc. are addressed only superficially. Insurers may develop the impression that these models will not get a fair or informed reception. Also, regulators may conclude that other kinds of models are inherently inappropriate for use.

  - Bullet 1
    - Part (a) should also be based on the impact from any selected factors. GLMs could include selected factors within the offset.
    - Also in part (a), if the insurer is using any selected factors, they should examine them in light of the factors suggested by the model.
    - Part (b) requests the regulator should “Review the premium disruption for individual policyholders and how the disruptions can be explained to individual consumers.” Reviewing the disruption for individual policyholders could require sharing significant amounts of data, and the insurer may have contractual limitations regarding the ability to share such data.
    - For part (b), we feel that regulators should be asking for a histogram of rate changes, with the expectation that there are not a lot of outliers. An explanation of individual changes feels like overreach. Moreover, this level of detail does not aid speed to market.
Bullet 2 - “Thoroughly review all aspects of the model including the source data, assumptions, adjustments, variables, and resulting output.”

- We are troubled by the use of the word “thoroughly”, particularly with respect to data. Actuaries and data scientists would consider a “thorough” review of the source data to require direct access to the data and include exploratory data analysis beyond the capabilities of most DOIs. Additionally, insurers historically are usually not asked to provide such detailed data for a rate filing. Suggested rewording “Obtain a clear understanding of the data used to build and validate the model, and thoroughly review all other aspects of the model, including assumptions, adjustments, variables, and resulting output.”

- We presume that response to bullets a-e is done by response to a request from a DOI. The DOI should ask for information rather than carrying out the analysis themselves.

- We are not clear on the difference between items (a) and (d). Item (d) could be eliminated via some re-wording of item (a).

- In item (a), we again note the use of the word “intuitive”. In this context, the word “or” has been added, which we presume considers the fact that insurers may have fair and accurate models for which there is no ready intuitive explanation (see similar point above).

Bullet 3

- Item (b) references “private passenger automobile or homeowner’s insurance”. We feel that specific lines of business do not need to be mentioned. None of the other items in this outline specify lines of business.

- We are not wholly clear on item (c). Examination of “non-modeled characteristics” can be very broad.

- Page 28, section “Capping and Transition Rules”
  - How does the regulatory position on min-max rates affect capping and transition?

- Top of page 30, item 4c
  - “If predictive models are used in the rating plan, are there concerns related to input variables that are prohibited or proxies for prohibited variables?” We feel this is a fair question.

Once again, we thank you for your consideration of these points and welcome the opportunity to discuss with you or any members of the CASTF.

Regards,

Ron Lettofsky

Re: 8/8/19 Draft White Paper on Best Practices

Dear Ms. DeFrain,

Insurance Services Office, Inc. (ISO) is a countrywide licensed rating/advisory organization serving the property/casualty market. We have extensive experience and expertise in the development of advisory insurance pricing tools including prospective loss costs, rating plans and predictive analytics, including related regulatory issues.

Generally, we think it is premature to start drafting the changes to the “Product Review Handbook” while the best practices themselves are still in draft form and could materially change.

That being said, here are some detailed comments on the draft.

- There are a few places in the draft where the text provides opinion or conjecture that would not be relevant to reviewing a filing containing a predictive model. For example, on the top of page 27 the following statement appears – “A GLM rate model for personal lines in 2019 is either an update or a late adopter's defensive tactic. “
- On page 26 in the GLM bullet-list, the first bullet states “each component of Y is independent...” but “Y” is never introduced nor defined.
- This statement “Best practices can, also, make the regulator's review more consistent across states and more efficient, and assist companies in getting their products to market
"Best practices can also increase the consistency among the regulatory review processes used across states and improve the efficiency of each regulator’s review thereby assisting companies in getting their products to market faster."

Respectfully Submitted,

Stephen C. Clarke, CPCU
### General, Non-Specific Comments by Third-Parties on Best Practices for Regulatory Review of Predictive Analytics White Paper

**Text from 5-14-2019 Exposure**

<table>
<thead>
<tr>
<th>Commenter</th>
<th>Commenter’s Suggestion</th>
<th>Final Ad Hoc Team Recommendation</th>
</tr>
</thead>
<tbody>
<tr>
<td>NAMIC</td>
<td>NAMIC would again thank the Task Force for its thorough consideration of this area of regulation. However, while positive intentions were unquestionably exhibited in this second exposure draft, significant concerns remain. There is legitimate thought that these best practices will be adopted as standard practice by regulators, and the amount of time and energy needed to provide this level of detail will still be significant as well as directly impact the industry’s ability to develop and implement models in a timely manner. NAMIC would implore the Task Force to consider these comments in drafting further exposures of this white paper. NAMIC looks forward to continuing to work with the Task Force on this critical effort.</td>
<td>No change recommended. We believe that there is a misunderstanding between the terms “best practices” and “information elements” that have been identified in this paper. Many comments appear to interpret “information elements” to mean “best practices” and as such have concerns. We believe the concerns raised in this and other similar comments is with the “information elements” that regulators may find helpful when applying the “best practices.” We believe each information element listed can be useful to a regulator’s understanding of a filed predictive model. However, we will continue to revisit the importance of each informational element and revise the level of importance as needed.</td>
</tr>
</tbody>
</table>

| NAMIC     | As mentioned in our prior comments, there are still overarching concerns about 1. the prescriptive nature of these best practices, 2. the scope and requirements of the paper, 3. the exposure of sensitive data to release even when not specifically required, 4. confidentiality and proprietary concerns, and 5. removal of regulator discretion to ascertain their baseline needs to approve a filing. NAMIC believes the best practices are somewhat drafted in a vacuum of extreme best-case actuarial perfection as opposed to real world needs of regulators and protection of consumers. | No change recommended. 1. The best practices are not prescriptive but are the informational elements that may be needed by the regulator to address the best practice that are, and should be, prescriptive. 2. The scope of the charges leading to this white paper were broad. By necessity, the scope of this paper was narrowed to GLMs and for point of reference purposes, those used in personal auto and home rate filings. We believe that the best practices, in general, are transferable to other types of models and apply to all lines of business. However, such analysis will be addressed in the future as needed. 3. A component of rate regulation is for the regulator to understand the rating plan in sufficient detail to determine that it meets the statutory requirements of their state, including whether the rating plan produces rates that are inadequate, excessive, or unfairly discriminatory and does not use rating variables otherwise prohibited by state law. The use of increasingly complex rating plans requires each state regulator to decide what information they need to evaluate the rating plan in accordance with their state laws. This white paper assists the regulator by providing areas that may be of importance (best practices) to understanding any filed rating plan. 4. As is currently the case, sensitive data that the regulator may receive in the review of a rate filing is subject to the confidentiality laws of each state. Both insurers and regulators must continue to handle sensitive data in accordance with state law. 5. We do not believe the white paper removes regulator discretion as to what information they require in order for the regulator to review a rate filing in accordance with state law. We do believe that the white paper will assist regulators in performing more informed rate plan reviews. 6. We believe that there is a misunderstanding between the terms “best practices” and “information elements” that have been identified in the white paper. Many comments appear to interpret “information elements” to mean “best practices” and therefore have a concern. The concern raised in this and similar comments is with the “information elements” that regulators may find helpful when addressing the “best practices.” We believe all “information elements” listed in the paper can be useful to a regulator’s understanding of a filed predictive model and will result in a more efficient review of a filing that includes a model. However, we will continue to revisit the importance of each informational element and revise the |
## General, Non-Specific Comments by Third-Parties on Best Practices for Regulatory Review of Predictive Analytics White Paper

**Text from 5-14-2019 Exposure**

<table>
<thead>
<tr>
<th>Commenter Name</th>
<th>Commenter’s Suggestion</th>
<th>Final Ad Hoc Team Recommendation</th>
</tr>
</thead>
<tbody>
<tr>
<td>NAMIC</td>
<td>The entire concept of the paper seems to suggest a one-size-fits-all approach. Insurers should be able to develop proprietary business models that shouldn’t necessarily raise alarms or flags to regulators. NAMIC believes that there should be baseline threshold analysis to allow the regulator to perform their mandated tasks, but the paper creates a super paradigm as opposed to baseline needs. Certainly, however, a regulator would be free to ask for more information where there is a demonstrated need or concern. No change recommended.</td>
<td></td>
</tr>
<tr>
<td>NAMIC</td>
<td>There is concern about statements that all of the data regardless of a concern or need should be submitted initially to avoid delay. Causing the accumulation of vast quantities of data that might only be potentially reviewed, not only wastes time, capital, and human effort for speculative need but allows for other unintended consequences. Additionally, it exposes this sensitive and proprietary data to breaches and other data releases. As this information is being requested by the regulator, there is an enormous duty to protect the information from exposure. Therefore, the efficacy of the all in approach should be revised, reviewed, and potentially removed as a policy and as mentioned or inferred in the paper. No change recommended.</td>
<td></td>
</tr>
<tr>
<td>CT DOI</td>
<td>There are different standards, programming tools, and criteria used in evaluating the effectiveness in developing models. We would encourage an in-person focus on the insurance company’s peer review processes and internal documents regarding consistency, correlation, converging criteria, etc. in model building. This focus could be more effective use of regulators limited resources. No change recommended.</td>
<td></td>
</tr>
<tr>
<td>CAS</td>
<td>The volume and complexity of the proposed guidelines seems counter to the desire to improve “speed to market” mentioned several times in the paper. Consumer protection is not secondary to speed to market. If a state requires that filers provide documentation with the initial submission of the filing, this should alleviate protracted interrogatories and increase speed to market. No change recommended.</td>
<td></td>
</tr>
</tbody>
</table>

The white paper does not create a one-size-fits-all for model development or regulatory review. There is regulator discretion as to what information they require in order for the regulator to review a rate filing in accordance with state law. The white paper will assist regulators in performing more informed rate plan reviews. We believe that there is a misunderstanding between the terms “best practices” and “information elements” identified in this paper. The concern raised in this and similar comments is with the “information elements” that regulators may find helpful when applying the “best practices.” We believe all “information elements” listed in the paper can be useful to a regulator’s understanding of a filed predictive model. We will continue to revisit the importance of each informational element and revise the level of importance as needed.

The intent is not to waste time, capital or human effort. Not all “information elements” need to be submitted initially. As with the current state-based regulatory scheme, each state will decide the information needed initially and as the need arises. We believe each information element listed can be useful to the regulator’s understanding of a filed predictive model. We will continue to revisit the importance of each informational element and revise the level of importance as needed.

The purpose of this white paper is to provide best practices. Each state can tailor how it approaches a specific company’s rate review.

<th>Commenter Name</th>
<th>Commenter’s Suggestion</th>
<th>Final Ad Hoc Team Recommendation</th>
</tr>
</thead>
<tbody>
<tr>
<td>CDIA</td>
<td>We are not convinced that including CBIS in this type of review is mission critical. Yet, if this review needs to be in the process, CDIA recommends the establishment of highly specific rules to protect confidentiality and proprietary information. Additionally, a separate review process of sub-models as an optional request with defined valid concerns making it mandatory would help in addressing concerns.</td>
<td>No change recommended. Review of CBIS models is &quot;mission critical&quot; for understanding the impacts of a rating plan that utilizes credit information and evaluating the fairness of the credit-based treatments for consumers. Many states have been reviewing CBIS models in detail for 1-2 decades and have already established appropriate confidentiality protections where consistent with state law.</td>
</tr>
<tr>
<td>CDIA</td>
<td>There is already a large regulatory review presence on the industry. It is already overseen at the federal level by the Consumer Financial Protection Bureau (CFPB) and Federal Trade Commission (FTC), along with several states implementing their own regulations and the Conference of State Banking Commissioners looking into the industry as well. This increased regulation not only hurts the industry, but the consumers it serves. It will significantly hamper speed to market for the products consumers need and does not appear to add much, if any, benefit to the outcome for the industry and its consumer.</td>
<td>No change recommended. Neither the CFPB nor the FTC appear to have delved in depth into the specific workings of CBIS models at the level of scrutinizing support for particular variables and not just the model as a whole. General federal consumer protection requirements, aimed at FCRA compliance and accuracy of credit-report information, do not by themselves achieve the objective of reviewing whether credit-based rating treatments and the types of variables used are fair to consumers, reasonably related to the risk of insurance loss, and not unfairly discriminatory. Insurance is regulated on the state level; each State is responsible for and has the prerogative to engage in additional model reviews as appropriate to protect its consumer constituencies.</td>
</tr>

Text from 5-14-2019 Exposure

I. INTRODUCTION

Insurers' use of predictive analytics along with big data has significant potential benefits to both consumers and insurers. Predictive analytics can reveal insights into the relationship between consumer behavior and the cost of insurance, lower the cost of insurance for many, and provide incentives for consumers to better control and mitigate loss. However, predictive analytic techniques are evolving rapidly and leaving many regulators without the necessary tools to effectively review insurers' use of predictive models in insurance applications.

When a rate plan is truly innovative, the insurer must anticipate or imagine the reviewers’ interests because reviewers will respond with unanticipated questions and have unique educational needs. Insurers can learn from the questions, teach the reviewers, and so forth.

This paper will identify best practices when reviewing predictive models and analytics filed by insurers to promote the art of reviewing predictive models within a rate filing. Upon adoption of this paper, insurance companies filing rating plans that incorporate predictive models will have a guide to state insurance departments in their review of predictive models underlying rating plans. There were two key regulatory principles outlined in the white paper.

This paper will identify best practices when reviewing predictive models and analytics filed by insurers to meet or exceed reviewers' needs and expectations. Hopefully, this paper helps bring more consistency and to the art of reviewing predictive models within a rate filing.

WHAT IS A "BEST PRACTICE?"

A best practice is a form of program evaluation in public policy. At its most basic level, a best practice is a "tangible and visible behavior… [based on] an idea about how the actions…will solve a problem or achieve a goal" [2]. Best practices are used to benchmark. [3] Therefore, a best practice represents an effective method of problem solving. The "problem" regulators face is whether models, as used in rate filings, are compliant with state laws and regulations?

In this paper, best practices are presented in the form of guidance to regulators who review predictive models and analytics filed by insurers with regulators to justify rates and provide state guidance for review of rate filings based on predictive models. This paper is intended to serve as a guide to state insurance departments in their review of predictive models filed by insurers to justify rates and provide state guidance for review of rate filings based on predictive models.

Guidance will identify specific information where appropriate, provide insight as to when the information might identify an issue the regulator needs to be aware of or state regulatory principles.

In this paper, best practices are based on the following principles that promote a comprehensive and coordinated review of predictive models:

1. Risk/Regulatory Principles

2. Insurers' own models and analytics are to be handled in a future draft of the white paper.
The term "predictive model" refers to a set of models that use statistics to predict outcomes. GLMs (Generalized Linear Models) are commonly used predictive models in insurance applications, particularly in building an insurance product's rating plans. Before GLMs became vogue, rating plans were built using univariate methods. Univariate methods were considered intuitive and easy to demonstrate the relationship to costs (loss and/or expense). Today, many insurers consider univariate methods too simplistic since they do not take into account the interaction (or dependencies) of the selected input variables. The GLMs introduce significant improvements over the use of univariate methods.

As can be seen in the description of the three GLM components above, it may take more than a casual introduction to statistics to comprehend the construction of a GLM. As stated earlier, a downside to GLMs is that it is more challenging to select relativities without much data. The paper's intent is not to restrict regulator discretion. Maybe the best way to address/clarify this is to revisit the levels of importance definitions and assignments, and to create a core set of information elements that should be in every filing that includes a model. GLMs effectively assume that the underlying datasets are 100% data, the resulting uncertainty would not be reflected in the GLM parameter estimates themselves (although it might be reflected in the output if some segments have little data, the resulting uncertainty would not be reflected in the GLM parameter estimates themselves (although it might be reflected in the output). GLM software provides point estimates and allows the modeler to consider standard errors and confidence intervals. GLM output is typically seen as a baseline for the industry, and relatively easier to explain than the underlying data. GLM results are not always intuitive, and the relationship may be difficult to explain. This is a primary reason regulators can benefit from best practices. GLM results are not always intuitive, and the relationship may be difficult to explain. This is a primary reason regulators can benefit from best practices.

<tr>
<td>3/12</td>
<td>California Department of Insurance</td>
<td>Because of this presumption in credibility, which may or may not be valid in practice, the modeler and the regulator reviewing the model would need to engage in thoughtful consideration when incorporating GLM output into a rating plan to ensure that model predictiveness is not compromised by a lack of actual credibility. Another consideration is the availability of big data, both internal and external, and may result in the selection of predictor variables that have spuriously correlated with the target variable. Therefore, to mitigate the risk that model credibility or predictiveness is lacking, a complete filing for a rating plan that incorporates GLM output should include validation evidence for the rating plan, not just the statistical model.</td>

It might be better to ask this question another way: Are best practices in the review of predictive models of value to regulators and insurance companies? The answer is "yes" to both questions. Best practices will aid regulatory reviewers by raising their level of model understanding. With regard to scorecard models and the model algorithm, there is often not sufficient support for relative weight, parameter values, or scores of each variable. Best practices can potentially aid in addressing this problem.

Best practices merely provide guidance to regulators in their essential and authoritative role over the rating plans in their state.

· Best practices will lead to improved quality in predictive model reviews across states, aiding speed to market and competitiveness of the state marketplace.

· Best practices will aid training of new regulators and/or regulators new to reviewing predictive models. (This is especially useful for those regulators who do not actively participate in NACIC discussions related to the subject of predictive models.)

· Each regulator adopting best practices will be better able to identify the resources needed to assist their state in the review of predictive models.

**Note:**

- **Split 3.b into 2.f and 3.b best practices:**
  - 2.f. Obtain a clear understanding of how the selected predictive model was built.
  - 3.b. Obtain a clear understanding of how often each risk characteristic, used as input to the model, is updated and whether the model is related to the rating plan. In addition, why the insurer believes this type of model works in a private passenger automobile or homeowner’s insurance risk application.

- **No change recommended:**
  - There is no potential for significant confusion. The goal of the regulator is to understand how the individual components of the rating plan interact to produce a consumer’s premium.披露 of premium information should be confidential from the regulator. Information that the “Disclosure of Premium Information” is essential to understanding the construction of the CBS models, their validity, and their justification. Many regulators already routinely request and examine this information.

### Best Practices for Regulatory Review of Predictive Analytics White Paper

#### Text from 5-14-2019 Exposure

**Exposure Sections 1 to 10 (Intro)**

Table: Best Practices for Regulatory Review of Predictive Analytics White Paper

<table>
<thead>
<tr>
<th>Page</th>
<th>Paragraph</th>
</tr>
</thead>
<tbody>
<tr>
<td>6/10</td>
<td>Add this descriptive paragraph: Documentation of the design and operational details of the model is required to ensure business level of management or key function at which it is intended to be used. Documentation should be sufficiently detailed and complete to enable a third party to form a sound judgment on the suitability of the model for the intended purpose. This includes a review of methodologies, software and empirical basis of the model, as well as the data used in developing and improving the model. Relevant testing and ongoing performance need to be documented, as well as model limitations and overrides that need to be followed by stakeholders under the circumstances under which the model does not satisfy. Detailed documentation should be provided and be consistent with the model results and findings. Major changes to the model need to be documented in a timely manner and documented, and IT controls should be in place, such as access to versions, change control and access to models.</td>
</tr>
<tr>
<td>6/10</td>
<td>Though the list seems long, the reviewer should schedule a formal documentation on the model more than half of the time the list is used. The remaining items on the list require either minor tracking (approximately 25%), or deeper analysis to generate the information or a regular review (approximately 25%).</td>
</tr>
<tr>
<td>6/10</td>
<td>The “importance to regulator’s review” ranking of information a regulator may need to review is based on the following hierarchy:</td>
</tr>
<tr>
<td>6/10</td>
<td><strong>Level 1</strong> - This information is necessary to begin the review of a predictive model. These data elements pertain to basic information about the model and its intended use, such as the assumptions and methodologies, the goodness of fit. Ideally, this information would be included in the filing documentation with the initial submission of a filing made based on a predictive model. If filings are delayed due to unnecessary regulatory review and redundancies, that delay ultimately harms consumers as market competition is reduced. Commentary in the Level 2 criteria states that insurers are required to include this information in the filing documentation, leaving the issue without specific clarification. Insurers and regulators are now unclear as to what is required in the filing documentation.</td>
</tr>
<tr>
<td>6/10</td>
<td><strong>Level 2</strong> - This information is necessary to continue the review of all but the most basic models, such as those that only address the fair internal data and only including variables that are in the filing rating plan. These data elements provide more detailed information about the model, and are often used for initial submission, unless specifically requested in a particular jurisdiction. It is typically required only if the reviewer has serious concerns about the model and does not necessarily need to be included by the initial submission, unless specifically requested in a particular jurisdiction. It is typically required only if the reviewer has serious concerns about the model limitation and overrides need to be followed by stakeholders under the circumstances under which the model does not satisfy. Detailed documentation should be provided and be consistent with the model results and findings. Major changes to the model need to be shared in a timely manner and documented, and IT controls should be in place, such as access to versions, change control and access to models.</td>
</tr>
<tr>
<td>6/10</td>
<td><strong>Level 3</strong> - This information is necessary to continue the review of a model where concerns have been raised and not resolved based on the information in Level 1, Level 2. This most granular level of detail is addressing the basic building blocks of the model and does not necessarily need to be included by the initial submission, unless specifically requested in a particular jurisdiction. It is typically required only if the reviewer has serious concerns about the model. More information elements should fall within Level 4 as a significant outlier level where only the most heightened of concern or scrutiny is required if at all. Also, this category and its relevance should be better defined.</td>
</tr>
<tr>
<td>6/10</td>
<td><strong>Level 4</strong> - This information is necessary to continue the review of a model where concerns have been raised and not resolved based on the information in Level 1, Level 2. This most granular level of detail is addressing the basic building blocks of the model and does not necessarily need to be included by the initial submission, unless specifically requested in a particular jurisdiction. It is typically required only if the reviewer has serious concerns about the model. ### Section

#### B. Building the Model

**1. High-level Narrative for Building the Model**

- **R.1.a**
  - **Information Element**: Software Used for Model Development
  - **Comments**: Obtaining a description ofGLM and other model types of the software used for model development is important in determining whether the model meets regulatory standards.

- **R.1.b**
  - **Information Element**: Software in Use During Model Development
  - **Comments**: It is important to understand if the model in question is a GLM, and therefore these best practices are applicable or, if it is some other model type, in which case other reasonable circumstances apply. It is important to understand if the model in question is a GLM, and therefore these best practices are applicable or, if it is some other model type, in which case other reasonable circumstances apply.

- **R.1.c**
  - **Information Element**: Data Definitions
  - **Comments**: Understanding the data definitions is crucial in ensuring that the model is appropriately used for the purpose it was intended.

#### B.1.a

- **1. High-Level Narrative for Building the Model**
  - **Information Element**: Model Development
  - **Comments**: It is important to understand if the model in question is a GLM, and therefore these best practices are applicable or, if it is some other model type, in which case other reasonable circumstances apply. It is important to understand if the model in question is a GLM, and therefore these best practices are applicable or, if it is some other model type, in which case other reasonable circumstances apply.

- **2. Dataset Definitions**
  - **Information Element**: Model Development
  - **Comments**: Understanding the data definitions is crucial in ensuring that the model is appropriately used for the purpose it was intended.

### Third-Party Comments on 5-14-2019 Exposure of Complex Model Best Practices White Paper

- **Exposed Section VII.A to VII.C**
  - **Commenter**: Exposed Section VII.A to VII.C
  - **Commenter's Suggestion**: We would propose that we add a note to indicate the level of importance for each section.
  - **Real Ad Hoc Team Recommendation**: No change recommended.

In order to ensure that rates are not unfairly discriminatory, regulators have an obligation to understand the models we review as well as the process by which they are built. In the absence of the level of importance information, there is no way to tell whether the model is a GLM or other model type. Each state can adjust the level of importance as they see fit.

#### Exposed Section VII.A to VII.C

1. **R.1.a**
   - **Information Element**: Software Used for Model Development
   - **Comments**: It is important to understand if the model in question is a GLM, and therefore these best practices are applicable or, if it is some other model type, in which case other reasonable circumstances apply. It is important to understand if the model in question is a GLM, and therefore these best practices are applicable or, if it is some other model type, in which case other reasonable circumstances apply.
   - **Real Ad Hoc Team Recommendation**: No change recommended.

2. **R.1.b**
   - **Information Element**: Software in Use During Model Development
   - **Comments**: It is important to understand if the model in question is a GLM, and therefore these best practices are applicable or, if it is some other model type, in which case other reasonable circumstances apply. It is important to understand if the model in question is a GLM, and therefore these best practices are applicable or, if it is some other model type, in which case other reasonable circumstances apply.
   - **Real Ad Hoc Team Recommendation**: No change recommended.

3. **R.1.c**
   - **Information Element**: Data Definitions
   - **Comments**: Understanding the data definitions is crucial in ensuring that the model is appropriately used for the purpose it was intended.
   - **Real Ad Hoc Team Recommendation**: No change recommended.

Add to comment field: It is important to understand if the model in question is a GLM, and therefore these best practices are applicable or, if it is some other model type, in which case other reasonable circumstances apply. It is important to understand if the model in question is a GLM, and therefore these best practices are applicable or, if it is some other model type, in which case other reasonable circumstances apply.

- **III. Complex Model Best Practices White Paper**
  - **Exposed Section VII.A to VII.C**
  - **Commenter**: Exposed Section VII.A to VII.C
  - **Commenter's Suggestion**: We would propose that we add a note to indicate the level of importance for each section.
  - **Real Ad Hoc Team Recommendation**: No change recommended.

### Paragraph 13/1B.2.d

_NAMIC_ 

_NAMIC_ suggested the following changes:

1. The link function used in the GLM should be identified, and the distribution used for the model (e.g., Poisson, Gaussian, Tweedie) should be specified. An explanation should be provided as to why the link function and distribution were chosen.

2. The formulas for the distribution and link functions should be obtained.

3. An explanation should be obtained for the convergence criterion used.

4. The formula relationship between the data and model outputs, with a definition of each model input and output, should be provided.

5. If there were data situations in which GLM weights were used, an explanation of how and why they were used should be provided.

Revise information element to:

- **model**
- **distribution**
- **convergence criterion**
- **formula relationship**
- **weights**

### Paragraph 13/2B.2.e

_NAMIC_ 

_NAMIC_ suggested the following changes:

1. The formulas for the distribution and link functions, including the applicable convergence criterion, should be obtained.

2. An explanation should be obtained for the convergence criterion selected.

3. Obtain a narrative on the formula relationship between the data and model outputs, with a definition of each model input and output.

Revise information element to:

- **distribution**
- **link function**
- **convergence criterion**
- **formula relationship**

### Paragraph 13/3B.2.f

_NAMIC_ 

_NAMIC_ suggested the following changes:

1. Obtain a complete data dictionary, including the names, types, definitions and uses of each predictor variable, offset variable, control variable, proxy variable, geographic variable, geodemographic variable and all other variables in the model; used on their own, or as an input to other variables.

2. Types of variables might be continuous, discrete, Boolean, etc. Definitions should not use programming language or code. For any variable(s) intended to function as a control or offset, obtain an explanation of their role and impact. Also, for any use of interaction between variables, obtain an explanation of its rationale and impact.

Revise information element to:

- **data dictionary**
- **types of variables**
- **control variable**
- **offset variable**
- **interaction between variables**

### Paragraph 13/4B.2.g

_NAMIC_ 

_NAMIC_ suggested the following changes:

1. If there were data situations in which GLM weights were used, an explanation of how and why they were used should be provided.

2. Obtain a complete data dictionary, including the names, types, definitions and uses of each predictor variable, offset variable, control variable, proxy variable, geographic variable, geodemographic variable and all other variables in the model; used on their own, or as an input to other variables.

3. Types of variables might be continuous, discrete, Boolean, etc. Definitions should not use programming language or code. For any variable(s) intended to function as a control or offset, obtain an explanation of their role and impact. Also, for any use of interaction between variables, obtain an explanation of its rationale and impact.

Revise information element to:

- **data dictionary**
- **types of variables**
- **control variable**
- **offset variable**
- **interaction between variables**

#### Ad Hoc Team recommendation to exposure comments as of 10-14-2019

- **Paragraph** | **Action Item** | **Recommended Action** |
- **B.2.b** | None | No change recommended. Each of the three information elements address slightly different relationships. |

#### 2. Concern vendors may overuse this point to justify their contractual existence.

- If the modeler made use of one or more dimensionality reduction chosen, and a description of the process used to transform observations (usually correlated) into a set of linearly uncorrelated variables. In each instance, obtain a list of the transformation and variable names, and an explanation how the results of the dimensionality reduction technique was used within the model.

#### 2. Concern if state specific. Concern that some regulators may expect excessive

- Nevertheless, some regulators require model validation on regulatory approach.

---

**Changes made to WP 101419**

- **Delete B.4.b information element:** Obtain a description of any adjustments that were made in the data with respect to scaling for discrete variables or binning the data.
- **Delete B.4.c. information element:** Obtain a description of any transformations made for continuous variables.
- **Delete B.4.d information element:** Get a list of the data transformations used in the model and explain how the results of the transformations were used within the model.

Exposed Section VII.A to VII.C

Exposures from 5-14-2019 Exposure

Commenter Name

Consumer’s Suggestion

Real Ad Hoc Team Recommendation

JULY C.5.a

Block a narrative on adjustments made to raw data, e.g., transformations, binning and/or rating model output, the rate and/or rule pages should present these rating tiers or categories. The company should within the rate and/or rule pages.

NAIC

The table could be used as well and be in a split of internal support for a C.5.a, description for content that needs to be had and include with a C.5.a to be able to find for a more intent with a better or in another entirely.

JULY C.5.a

Block C.5.a is related to the rating model output. For each variable in the model, the rate and/or rule pages should present these rating tiers or categories. If adjustments were made, obtain the name of the category involved and a description of any rating categories that translate the model outputs into categories.

ETIO

Block C.5.a is a list (permutations made to a data set for the model output(s) proposed to be used within the rating plan. For each data element, obtain an explanation whether it is raw or adjusted and, if the latter, a detailed explanation for the adjustments. If adjustments were made, obtain the name of the rating categories that translate the model outputs into categories.

JULY C.6.a

Block C.5.a is related to the rating model output. For each variable in the model, the rate and/or rule pages should present these rating tiers or categories. If adjustments were made, obtain the name of the rating categories that translate the model outputs into categories.

1 NAIC

Block C.6.a is related to the rating model output. For each variable in the model, the rate and/or rule pages should present these rating tiers or categories. If adjustments were made, obtain the name of the rating categories that translate the model outputs into categories.

3 NAIC

Block C.6.a is related to the rating model output. For each variable in the model, the rate and/or rule pages should present these rating tiers or categories. If adjustments were made, obtain the name of the rating categories that translate the model outputs into categories.

JULY C.6.a

Block C.6.a is related to the rating model output. For each variable in the model, the rate and/or rule pages should present these rating tiers or categories. If adjustments were made, obtain the name of the rating categories that translate the model outputs into categories.

4 NAIC

Block C.6.a is related to the rating model output. For each variable in the model, the rate and/or rule pages should present these rating tiers or categories. If adjustments were made, obtain the name of the rating categories that translate the model outputs into categories.

5 NAIC

Block C.6.a is related to the rating model output. For each variable in the model, the rate and/or rule pages should present these rating tiers or categories. If adjustments were made, obtain the name of the rating categories that translate the model outputs into categories.

6.  Supporting Data

Block C.6.a is related to the rating model output. For each variable in the model, the rate and/or rule pages should present these rating tiers or categories. If adjustments were made, obtain the name of the rating categories that translate the model outputs into categories.

REVISE

Block C.6.a is related to the rating model output. For each variable in the model, the rate and/or rule pages should present these rating tiers or categories. If adjustments were made, obtain the name of the rating categories that translate the model outputs into categories.

REVISE

Block C.6.a is related to the rating model output. For each variable in the model, the rate and/or rule pages should present these rating tiers or categories. If adjustments were made, obtain the name of the rating categories that translate the model outputs into categories.
Multivariate indications may be reasonable as refinements to univariate indications, but possibly not for bringing about significant reversals of those indications. For instance, if the univariate indicated relativity for an attribute is 1.5 and the contemplate the adjustments made in a multivariate GLM. This could lead to multivariate indicated relativity is 1.25, this is potentially a incorrect conclusions as the modeled indication considers all other items in the plausible application of the multivariate techniques. If, however, the univariate relativity for an attribute is 0.7 and the multivariate indications do not consider correlations between variables. Also, there is a differences between model indications and state-specific univariate indications. The “Supporting Data” section, specifically Secs. C.6.a and C.6.b, on “Obtain an explanation of any material (especially directional) differences between model indications and state-specific univariate indications.” pose some concerns for CRAs and could interfere with the insurance process for consumers. These rating variables may represent changes to rate relativities, be newly introduced to the rating plan, or have been removed from the rating plan. One way to see sensitivity is to describe the process used by management, if any, to mitigate those differences. Determining if the insurer performed sensitivity testing to identify significant changes in premium due to small or incremental change in a single risk characteristic. If such testing was performed, obtain a narrative that discusses the testing and provides the results of that analysis.

**Ad Hoc Team recommendation to exposure comments as of 10-14-2019**

**Best Practices for Regulatory Review of Predictive Analytics White Paper**

**Exposed Section VII.A to VII.C**

- The analysis should include the largest dollar and percentage impacts arising from the filing, including the impacts arising specifically from the adoption of the model or changes to the model as they translate into the proposed rating plan.
- Obtain a rate disruption/dislocation analysis, demonstrating the distribution of percentage impacts on renewal business (created by rerating the current book of business), and specific effects of rate changes if there is concern about particular significant impacts that have otherwise yet to be substantiated.
- No change recommended.

**Exposed Section VIII.**

- The filed rating plan should contain enough information for a regulator to be able to validate policy premiums. However, for a small changes to a risk characteristic/variable. Note that this information may be proprietary.
- Add C.7.h information element:
  - "clarification is needed to inquire as to how consumers can verify their data and correct errors."

<tbody>
<tr>
<td><strong>NEW</strong> Section 10.2.1, Interaction between Rating Variables (Multivariate Analysis):** states &quot;If the pricing of rating variables is evaluated sequentially for each rating variable, there is potential to miss the interaction between rating variables.&quot; We would rephrase this as &quot;If each rating variable is evaluated sequentially, statistically significant interactions between rating variables will not be identified and thus, not included in the rating plan.&quot;</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>NEW</strong> &quot;It is possible for models specifically trained for non-linear and non-based models, such as random forests or ensemble to contain relationships between variables for which an intuitive explanation is not immediately obvious. Further, such models can also indicate hundreds of such relationships.&quot;</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>NEW</strong> &quot;Ad Hoc Team recommendation to exposure comments as of 10-14-2019. We would suggest adding to that sentence, &quot;and you should require definitions of all data elements that can affect the charged premium.&quot;&quot;</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>NEW</strong> &quot;The sentence &quot;Finding rating or underwriting characteristics that may violate public policy is becoming more difficult for regulators with the increasing and innovative ways insurers use predictive models.&quot; was added. We feel this sentence warrants further explanation. The draft states that identification of public policy violations &quot;is becoming more difficult.&quot; How is this so? It is more difficult to review a filing for many reasons, including but not limited to: the complexity of predictive models, requires more extensive review before the nature of their treatments and qualifications are disclosed, and there are elements within the predictive model, e.g., certain variables, whose connection to insurance risk is not readily apparent and must be made clear to the satisfaction of the regulator.&quot;</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>NEW</strong> &quot;Further, the phrase &quot;increasing and innovative ways insurers use predictive models&quot; was added here with the note that insurers would willingly provide or disclose that models disclose outcomes with limited public policy. While other insurers are assuming this variable, we would not disclose it. The draft note is misleadingly worded. This means that, this does not happen in part of an effort to streamline public policy needs. No changes recommended. We see the commenter is reading too much into this paragraph. We don't think the phrase implies obfuscation. Lack of transparency may lead to deeper inquiries, but it is not believed that a company is intentionally creating models that aren’t stated law.</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>NEW</strong> &quot;From page 26, deinterlace what appears to be more commentary than guidance. <tbody>
<tr>
<td>NEW</td>
<td>Some states allow insurers to have multiple rate levels, or rating tiers, within a single company. These rating tiers are another way of classifying risks for rating purposes. Typically, there are arrangements for rating tiers with the underwriting standards for each tier. From a regulatory perspective, underwriting standards vary significantly from one insurer to another. Additionally, the underwriting standards for each tier should be mutually exclusive, clear, and objective, so there should be a division between the expected losses or expenses for each tier and the premium rates should be sustainable. Tiers within a company are mainly seen in personal lines products.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>One particular concern with rating tiers would be failure of analysis of whether applying certain characteristics of the customer. Question arises around the time when a customer is placed in a tier. The underwriting standards are only established at the time of entry into the tier. This is because of a type of insurance in the prior 12 months. The question is, What happens upon renewal after there has been no longer been a period of insurance for 12 months? Now the underwriting standards are established so that would be new business. Some standards limit the amount of time that rating tiers, losses, history, or insurance scores can be used, while some experts might allow credit history to be useful in rating at the policyholder’s request. Regulators should consider the acceptability of differences in rates between same-aged new and older policyholders when they have the same current income profile.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>Insurers also use a simplified rating approach, having separate rating tiers within a group. While regulators should examine warning fees within an insurer to a high degree of scrutiny for techniques, there tends to be less scrutiny with differences in rates that exist between affiliated companies. Regulators’ compensation insurers are more likely to obtain rating fees using separate companies.</td>
<td></td>
<td></td>
<td></td>
</tr>

<td>NEW</td>
<td>#1 Justification: New Products – (No Change proposed)</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>Predictive Modeling – page 31 of Handbook</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>The list of computers to process massive amounts of data has led to the exponential use of predictive modeling in insurance rating. Predictive models have enabled insurers to build rating, marketing, underwriting, and claim models with significant predictiveness, predictive power, and ability to understand customer behaviors.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>Insurers’ usual procedures on paying claims, including data from past claims, has a significant potential benefit to both consumers and insurers. Predictive analytics can reveal insights into the relationship between claims behavior and the cost of claims. For example, the average cost of a collision claim is $3,500, but the cost can vary significantly across different models. But as the cost of claims is reduced, the cost of premiums also decreases. This is because of a type of insurance in the prior 12 months. The question is, What happens upon renewal after there has been no longer been a period of insurance for 12 months? Now the underwriting standards are established so that would be new business. Some standards limit the amount of time that rating tiers, losses, history, or insurance scores can be used, while some experts might allow credit history to be useful in rating at the policyholder’s request. Regulators should consider the acceptability of differences in rates between same-aged new and older policyholders when they have the same current income profile.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>The term “predictive model” refers to a set of models that use statistics to predict the future outcome of an event. Predictive models are useful in many areas, including marketing, sales forecasting, and risk management.</td>
<td></td>
<td>Predictive models are useful in many areas, including marketing, sales forecasting, and risk management.</td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>To further explore this review of models in the future, modeling methods are evolving rapidly and not limited just to GLMs. As computing power grows exponentially, it is improving the modeling world to more sophisticated forms of data acquisition and data analysis. As a result, predictive analytics are evolving rapidly, allowing more complex models to predict the future outcomes of events. New models are being developed with specific information that will allow the regulator to review and understand the output of the model.</td>
<td></td>
<td>Predictive models are useful in many areas, including marketing, sales forecasting, and risk management.</td>
<td></td>
</tr>
</tbody>
</table>
We again note that there is a singular emphasis on GLMs. We will reiterate our concern that other models like neural networks, genetic algorithms, or rule-based systems are not addressed. We suggest doing a bit of research. All regulatory systems are context dependent and the risk of models is inherently insurmountable.

NEW

A. Generalized Linear Models

LJARCE

Section "Predictive Modeling," part A "Generalized Linear Models".

We again note that there is a singular emphasis on GLMs. We will reiterate our concern that other models like neural networks, genetic algorithms, or rule-based systems are not addressed. We suggest doing a bit of research. All regulatory systems are context dependent and the risk of models is inherently insurmountable.

No changes recommended.

NEW

The generalized linear model (GLM) is a commonly used predictive model in insurance applications, particularly in building insurance products’ strategies. Because auto and home insurers are most concerned about personal lines, NAIC has developed a white paper for guidance[1] in reviewing GLMs for personal automobile and home insurance.

A/HC

generally use beyond GLMs

The generalized linear model (GLM) is a commonly used predictive model in insurance applications, particularly in building insurance products’ strategies. Because auto and home insurers are most concerned about personal lines, NAIC has developed a white paper for guidance[1] in reviewing GLMs for personal automobile and home insurance.

No changes recommended.

NEW

Before GLMs became vogue, rating plans were built using univariate methods. Univariate methods were considered rational and easy to demonstrate the relationship to costs (loss and/or expense). However, many consider univariate methods too simplistic since they do not take into account the interaction (or dependencies) of the selected input variables. GLM introduces significant improvements over univariate-based rating plans by automatically adjusting correlations among input variables. Today, there are many predictive models used in private passenger automobile and home insurance rating plans are GLMs. But, GLM results are not always rational and the relationship to costs may be difficult to explain.

Allstate

On pages 8-9, the white paper says: "Univariate methods were considered rational...

In this section, it is not clear what is meant by the term "rational." For example, many consider univariate methods too simplistic since they do not consider the interaction or dependencies of the selected input variables. GLM introduces significant improvements over univariate-based rating plans by automatically adjusting correlations among input variables. Today, there are many predictive models used in private passenger automobile and home insurance rating plans are GLMs. But, GLM results are not always rational and the relationship to costs may be difficult to explain.

Because auto and home insurers are most concerned about personal lines, NAIC has developed a white paper for guidance[1] in reviewing GLMs for personal automobile and home insurance.

No changes recommended.

NEW

A GLM consists of three elements:

- Each component of the GLM is independent and probability distribution from the exponential family, or more generally, a saturated variance function and dispersion parameter.

NEW

A/HC

On pages 26 in the GLM, it states "the first bullet states" each component of Y is independent... "but Y" is never introduced nor defined.

Replace with:

- "A target variable, Y, is a random variable that is independent and follows probability distribution from the exponential family, defined by the selected variance function and dispersion parameters."

<tr>
<td>VIII to XVI</td>
<td><strong>NEW</strong></td>
<td>All data</td>
<td>We agree. If the underlying data is not credible no model will improve that credibility, and some segmentation methods could make credibility worse.</td>
</tr>
<tr>
<td></td>
<td><strong>NEW</strong></td>
<td>Allstate</td>
<td>On page 26, in the section “B. Credibility of Model Output”, there should be acknowledgement that if a GLM method lacks credibility, then other methods will also lack credibility. A lack of credibility is not an issue that is unique to GLMs. In other segments, there is little data, the resulting uncertainty would not be reflected in the GLM parameter estimates themselves (along with it might be reflected in the standard errors/coefficients interval). Even though the process of selecting relativities often includes adjusting the raw GLM output, the resulting relativities contain credibility weighted with any component of credibility. Nevertheless, selected relativities based on GLM output may differ from GLM point intervals.</td>
</tr>
<tr>
<td></td>
<td><strong>NEW</strong></td>
<td>APCA</td>
<td>From page 26, B. Credibility of Model Output, delete sentence: &quot;GLM output is typically assumed to be 100% credible no matter the context or uncertainty, and all other methods can only improve that credibility.&quot; GLM software provides point estimates and allows the modeler to consider standard confidence intervals. Modelers may apply judgment to make selections that consider the parameter estimates from the GLM model, the conditions around the parameter estimates, the business problem at hand, and credibility. The performance of the final rating factors, which may include parameter estimates directly from the GLM model as well as selections, should be measured through a new model validation technique.</td>
</tr>
<tr>
<td></td>
<td><strong>NEW</strong></td>
<td></td>
<td>Because of this presumption in credibility, which may or may not be valid in practice, the modeler and the regulator reviewing the model would need to engage in thoughtful consideration when incorporating GLM output into a rating plan to ensure that model predictiveness is not compromised by any lack of actual credibility. Therefore, it is important that the modeler not take for granted that GLM output is always credible, and must include validation evidence for the rating plan, not just the statistical model.</td>
</tr>
<tr>
<td></td>
<td><strong>NEW</strong></td>
<td></td>
<td><strong>NEW</strong> What is a &quot;Best Practice&quot;? A best practice is a form of program evaluation in public policy. At its most basic level, a practice is a &quot;tangible and visible behavior… [based on] an idea about how the actions... will solve a problem or achieve some goal?&quot; Best practices can maintain quality on an alternative to any authorized legal standards and can be based on self-assessment or benchmarking. Therefore, a best practice represents an effective method of problem solving. The &quot;problem&quot; regulators want to solve is probably better posed as asking an answer to this question: How can regulators determine that predictive models, as used in rate filings, are compliant with state laws and regulations? However, best practices are not intended to codify standards for filings that include predictive models.</td>
</tr>
<tr>
<td></td>
<td><strong>NEW</strong></td>
<td></td>
<td><strong>NEW</strong> Best practices are based on the following principles that promote a comprehensive and coordinated review of predictive models:</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>• State insurance regulators will maintain their current regulatory authority.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>• State insurance regulators will provide information to aid companies in getting insurance products to market more quickly.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>• State insurance regulators will share expertise and discuss technical issues regarding predictor models.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>• State insurance regulators will maintain confidentiality, where appropriate, regarding predictor models.</td>
</tr>

<tbody>
<tr>
<td>NEW</td>
<td>The knowledge needed to review predictive models, and guidance regarding GLMs for personal automobile and home insurance may be transferrable when the review involves GLMs applied to other lines of business. Modeling depends on context, so the GLM reviewer has to be alert for data challenges and business applications that differ from the more familiar personal lines. For example, a comparison of personal and commercial lines, modeling for rates in commercial lines is more likely to encounter lower volumes of historical data, dependence on advisory loss costs, unique accounts, and products that build upon lines of business and coverage building blocks.</td>
<td>There are a few places in the draft where the text provides guidance on how to compare personal and commercial lines. The GLM reviewer has to be alert for data challenges and business applications that differ from the more familiar personal lines. For example, compared to personal lines, modeling for rates in commercial lines is more likely to encounter lower volumes of historical data, dependence on advisory loss costs, unique accounts, and products that build upon lines of business and coverage building blocks.</td>
</tr>
<tr>
<td>NEW</td>
<td>The legal and regulatory constraints (including state variations) are likely to be more evolved, and challenging, for personal automobile and home insurance. ... modeling for rates in commercial lines is more likely to encounter lower volumes of historical data, dependence on advisory loss costs, unique accounts, and products that build upon lines of business and coverage building blocks.</td>
<td>Through review of these filings, the legal and regulatory constraints (including state variations) are likely to be more evolved, and challenging, in personal lines. A GLM rate model for personal lines in 2019 is either an update or a late adopter's defensive tactic.</td>
</tr>
<tr>
<td>NEW</td>
<td>Guidance offered here might be useful (with deeper adaptations) when starting to review different types of predictive models. If the model is not a GLM, some listed items might not apply. Not all of predictive models generate p-values or F-test. Depending on the model type other considerations might be important. When transferring guidance to other lines of business and other types of model, unique considerations may arise depending on the context in which a predictive model is proposed to be deployed, the issues which is of interest to put and the potential consequences for the insurer, its customers and competitors. This guidance does not delve into these possible considerations but regulators should be prompt to address them as they arise.</td>
<td>This statement &quot;Best practices can, also, make the regulator's review more consistent across states and more efficient, and assist companies in getting their products to market faster.&quot; appears on page 35 in the &quot;What is a Best Practice&quot; section. The statement is warranted, but sound only if it is not overly prescriptive, as regulatory authorities are not always able to perform the processes as outlined.</td>
</tr>
<tr>
<td>NEW</td>
<td>Best practices will help the regulator understand if a predictive model is cost based if the model is not a GLM, some listed items might not apply. <td>3. Determine that individual input characteristics to a predictive model and their resulting rating factors are related to the expected loss or expense differences in risk. Each input characteristic should have an intuitive or demonstrable causal relationship to expected loss or expense.</td>
<td>All data</td>
</tr>
<tr>
<td>NEW</td>
<td>a. Merge 2.a into 2.a. In order to determine that inputs are related to loss/expense one needs the associated factors (weight or directly derived from the model).</td>
<td>CAPRIC</td>
</tr>
</tbody>
</table>

For part (b), we feel that regulators should be asking for a histogram of rate changes, with the expectation that there are not a lot of outliers. An explanation of individual changes tracks the overviews. Moreover, this level of detail does not appear to market.

The amount of information required may vary by filing and is up to each state’s discretion.

No change recommended.

There may be a misunderstanding in what this best practice is looking for. We are not looking for a listing of individual policy changes but for changes aggregated by either dollar or percent change categories. We do not believe an overview of burninidence. These projections have to be submitted for approval, and exhibits may already require and should be readily available. And, state often request dollar impact as well as percent change distributions to identify extreme changes or outliers.

It is also important for regulators to explain the impact to policyholders. Therefore, the regulator needs to know which factor changes were most important in the extreme disruptions.

No change recommended.

We agree that aggregated disruption analysis may be all that is needed, not individual policy identification and changes. However, we do not believe it is overreach to understand the cause of extreme disruptions. Therefore, the regulator needs to know which factor changes were most important in the extreme disruptions.

No change recommended.

We are troubled by the use of the word “thoroughly,” particularly with respect to data. Actuaries and data scientists would consider a “thorough” review of the source data to require direct access to the data and include exploratory data analysis beyond the capabilities of most DOIs. Additionally, insurers historically are usually not asked to provide such detailed data for a rate filing.

No recommended change.

Thoroughly review all aspects of the model including the source data, assumptions, adjustments, variables, and resulting output.

Thoroughly review all aspects of the model including the source data, assumptions, adjustments, variables, and resulting output.

Thoroughly review all aspects of the model including the source data, assumptions, adjustments, variables, and resulting output.

No change recommended.

To assist the regulator in following best practices, the Casualty Actuarial and Statistical Task Force (CASTF) is issuing a white paper titled: Regulatory Review of Predictive Analytics Best Practices. The paper contains a list of information elements, and considerations that should be used during the review of a model, and a rating plan. To further assist the regulator, these information elements were mapped into the above best practices listed above in Section VIII of the paper.

| Ad Hoc | general guidance beyond UGMs | | |
| Ad Hoc | general guidance beyond UGMs | | |

Guidance on these might be useful, but also depend on context as to review different types of predictive models. If the model is not a GLM, some listed items might not apply. For example, not all models are seen as regulatory or actuarial; some other considerations might be important. When transferring guidance to other forms of business and other types of models, unique considerations may arise, depending on the context in which a predictive model is proposed to be deployed. The assumption is, which is proposed to be put, and the potential consequences as for the insurer, its customers and its competitors. This paper does not delve into these possible considerations, but regulations should be prepared to address them as they arise.

| F IV | Refer to Table 1, which lists predictive models (see Section II, B) outlining the best practices. | | |

More elaborate guidelines are also incorporated into a number of state laws. However, insurers should be aware that a rating plan might be a actuarially sound part of the premium that is not determined by the actuarial cost of claims. In some states, the confidentiality of a rate filing, supplemental material to the filing, when filing information might be one public, the insurer to request that filing information be held confidential, and the insur er to request that file public records. It is important in an insurer to be familiar with such details, and understanding the confidentiality of information submitted with their rating plan.

| NEW | | | |

After applying credibility, the indicated rate change should reflect the company’s best estimate of their premium needs given their current or expected book of business. However, insurance companies also have other business considerations including competition, marketing, legal issues, impact of the rate change on retention, etc. A company might wish to defer from that indicated rate change and should justify those decisions, within the context of the law.

| NEW | Capping and Transition Rules | CASROC | | |

Though predictive models can result in significant rate disruption at renewal, capping and transition rules do not change because of the review of predictive models. This is a separate issue to be addressed in a separate issue to be addressed independently of the review of predictive models. Capping and transition rules are at the discretion of the state and vary by state.
### Best Practices for Regulatory Review of Predictive Analytics White Paper

<table>
<thead>
<tr>
<th>New</th>
<th>Expounder Section VIII to XVI</th>
<th>Commenter Name</th>
<th>Commenter’s Suggestion</th>
<th>Final Ad Hoc Team Recommendation</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Transition rules for individual policyholders can get quite complex and you need to be aware of your state’s positions on premium capping rules. Any premiums capping and transition rules require weighing the pros and cons of the potential for unfair discrimination (with some customers not paying the same rate as others) vs. rate stability for existing policyholders.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>If premium capping or transition rules are allowed, additional decisions will need to be made.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>All rates should get capped.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>Rate decreases get capped if so, what is the impact if the policyholder asks to be quoted as new business?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>Should the insured be told what the final premium will become once rate capping is applied?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>How would price change be addressed? (If the policyholder buys a new car or changes liability limits, what is the impact on rate capping?)</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>How much time will lapse or how many renewal cycles will occur before the new rates are implemented or different rating plans are merged?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>When premiums capping or transition rules have been incorporated, future indicated rate changes and rating factor analyses need to properly reflect the full extent of rate changes. If the overall approved rate changes is 10%, set capping resulted in only 8% being implemented in the first year, the re-estimation to recognize the full 10% should be reflected in the premium level adjustment. Otherwise, the individual rate would be misleading.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>Some states encourage a more frequent filing of rate changes that can help to avoid the need for premiums capping and transition rules. Some states might prefer capping of individual rating variables, rather than capping for individual policyholders.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>Installment Plans – (No change is proposed)</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>Policy fees – (No change is proposed)</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>Potential changes to the Ad Hoc Team’s agenda – Page 35</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>Every filing will be different and will require different regulatory analyses. But the following are some questions the regulator might ask oneself in a certifying review:</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>a. Regarding data</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>b. Is the data submitted with the filing enough information for a regulatory review?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>c. Is the number of years of experience appropriate?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>d. Did the company sufficiently analyze and control their quality of data?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>2. Regarding the support and justification of rates</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>a. Do they propose rate changes written in justification?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>b. Are they based on a judgment or competitive analysis? If so, are the results reasonable and credible? Are there inappropriate market conditions?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>c. Are the assumptions (loss development, trend, expense load, profit provision, crediting metrics) used to derive the indication appropriate and how they are supported with data and are deviations from data results sufficiently explored?</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>d. Better weighting of data factors (e.g. stabilizing properly justified or data, if appropriate)</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>NEW</td>
<td>Is there more weight being placed on data in one year solely because it produces a higher indicated rate change?</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Policy text as follows:**

"Best practices for reviewing predictive models are provided in the CASP Whitepaper titled "Guiding Principles for the Use of Predictive Models." Although the white paper focuses on CASP for home and private passenger automobile insurance, some of the concepts may be transferable to other types of models and/or other lines of insurance."
NEW When are rating variables or rating plans too granular? How is granularity handled during the development of the model and during the selection of rate relativities filed in a rating plan supported by a model?

24/7 TBD When are rating variables or rating plans too granular? How is granularity handled during the development of the model and during the selection of rate relativities filed in a rating plan supported by a model?

Revise text as follows:

"During the development of the guidance, topics arose that are not thoroughly addressed in this paper. These topics may need to be addressed during the regulatory review of predictive models. A few of these topics may be discussed elsewhere within NAIC as either technical or policy matters. All of these topics, if addressed, will be part of the proposed state guidance. In many states, due to the data already collected, it may be too granular and may not be as effective in that state. If so, it may be of value to provide guidance around granularity, such as: When are rating variables or rating plans too granular? How is granularity handled during the development of the model or during the selection of rate relativities filed in a rating plan supported by a model?"

This paper acknowledges that different states will apply the guidance within it differently, based on variations in the legal environment pertaining to insurance regulation in those states, as well as the extent of available resources, including staff members with advanced knowledge and/or statistical expertise, the workloads of those staff members, and their training needs.

No additional changes are proposed to the Product Filing Review Handbook.

IX. PROPOSED STATE GUIDANCE

TBD – placeholder to include best practices for review of predictive models and analytics filed by insurers to justify rates.

This paper acknowledges that different states will apply the guidance within it differently, based on variations in the legal environment pertaining to insurance regulation in those states, as well as the extent of available resources, including staff members with actuarial and/or statistical expertise, the workloads of those staff members, and their training needs.

This paper acknowledges that different states will apply the guidance within it differently, based on variations in the legal environment pertaining to insurance regulation in those states, as well as the extent of available resources, including staff members with actuarial and/or statistical expertise, the workloads of those staff members, and their training needs. Ultimately, the insurance regulators within each state will decide how best to tailor the guidance within this paper to achieve the most effective and successful implementation, subject to the framework of statutes, regulations, precedents, and processes that comprise the insurance regulatory framework in that state.

X. OTHER CONSIDERATIONS

1. TBD. When are rating variables or rating plans too granular? How is granularity handled during the development of the model and during the selection of rate relativities filed in a rating plan supported by a model?

24/5 TBD: When are rating variables or rating plans too granular? How is granularity handled during the development of the model and during the selection of rate relativities filed in a rating plan supported by a model?

NEW No additional changes are proposed to the Product Filing Review Handbook.

<td>TIBO. Discussion of data mining being in conflict with standard scientific model and increase in “false positives.”</td>
<td></td>
<td></td>
<td>Defer to Task Force 416: Discuss in next iteration. Note: Discussion of data mining being in conflict with standard scientific model and increase in “false positives.” (Much of the following discussion is attributable to Jerrie Kallie, Michigan Department of Insurance, Financial Institutions &amp; Professional Registration.) Throughout this white paper, the regulator asks the modeler to go beyond correlation and document their basic, causal understanding of how variables used in a model or rating plan are related to risk. A correlation is not the final arbiter of validity of findings, but causal understanding can be reviewed across a variety of relationships and can yield additional insights into what are non-causal relationships, and which are most likely to be inducing causal relationships. Though this white paper does not delve deeply into these relationships are identified and documented, the paper does a fine modeler to provide their understanding of these relationships. The future considerations is whether the regulator should think deeply into the causal relationships of variables used in a model or rating plan. The Actuarial Statistical Association (ASA) impressed some degree of alarm at approaches to data mining (Waserman and Zadeh, 2010). In a formal statement of the ASA, the association warned against its so-called “black box” approach to analytics... “... a partial way (it taken itself often only weakly dense or even random) with which not only can such models be built up, but also are literally used (page 201). Last, the ASA warned strongly against an over-reliance on data mining. “Cherry picking promising findings, also known by such terms as data dredging, significance chasing...” (emphasis added) had a serious sense of analytically significant result... and should be rigorously avoided.” (page 201). A potential threat will increase significantly with the adoption of data mining techniques and the increasing availability of very large datasets that can plow everything available even just a single adverse (that data mining will threaten the risk of their model and increase in “false positives”) that has the potential to identify a non-causal results. Knowing which changes to make will be a challenge for data mining practitioners will significantly improve the model. Causality from the basis of the standard model of natural and social science. Evaluating on models should consider the nature of evidence of causal relationships.</td>
</tr>
<tr>
<td>3/12</td>
<td><strong>TIBO. Specify how the insurer will help educate consumers to mitigate their risk.</strong></td>
<td></td>
<td></td>
<td>Add/Rep/Hi/Consider:</td>
</tr>
</tbody>
</table>
Discuss the development of new tools and techniques for monitoring consumer market outcomes resulting from insurers' use of Big Data analytics in property and casualty rating plans.

"While regulators have historically pursued consumer protection by reviewing insurers' forms and rates on the front end, the variety and volume of new data sources and complexity of algorithms require a different front-end approach. Consumer protection in an era of Big Data analytics requires regulators to collate and analyze granular data on actual consumer market outcomes. This is not as easy as it sounds. Complex consumer reviews on the front end are likely no longer possible, but also because actual market outcomes may differ dramatically from historical or projected market outcomes. Stated differently, it is no longer sufficient to rely on a front-end as a point of data source or algorithm to ensure fair consumer treatment and to avoid unfair discrimination. Routine analysis of actual consumer market outcomes is needed. It is also completely feasible today."

NEW

Discuss policyholder disclosure when complex predictive model underlies a rating plan.

Delete this consideration and merge with item on "educate consumers" above.

Delete this consideration as confidentiality is adequately discussed elsewhere in this paper and will be determined by state law.

The following are examples of topics that may be included in the recommendations:

- TBD: Discuss confidentiality as it relates to filings submitted as part of the filing process.

Confidentiality, Proprietary Information, Trade Secrets, Confidential Tiers, and Information Sharing.

NAMIC wishes to continue to reiterate that exposing confidential and proprietary trade secrets, confidential information, and other business practices simply for accumulation of data in a rate filing, when otherwise unnecessary, is problematic for all involved. The data provided for these requirements subjects the regulator to increased Freedom of Information Act requests, subpoenas, and other types of litigation when there has been no demonstrated harm to consumers or triggers for the inquiry. Additionally, some proprietary trade or have contractual terms that prevent disclosure and therefore an interference with contractual relations may occur. Without a demonstrated necessity, exposing this data to additional dissemination appears to be detracting from protection.

While the Task Force has added discussion and information concerning protection of this information, which is appreciated, more should be done in the aggregate insurance consumer context including more discussion on this in the paper. Additionally, while the Task Force has been technical in its further review by NAMIC, there is concern that without that topic addressed, this paper may need further attention in the future and not provide specific action as opposed to the general nature of the discussion.

Delete this consideration as confidentiality is adequately discussed elsewhere in this paper and will be determined by state law.

- TBD: Discuss confidentiality as it relates to state statutes and regulations.

- TBD: Discuss confidentiality as it relates to filings submitted as part of the filing process.

<td>NAIC and others are concerned that the paper’s scope (GLMs used in PPA and HO) is too narrow.</td>
<td>Add new consideration: “The scope of this white paper was narrowed to GLMs as used in personal automobile and homeowners insurance applications. Many commenters expressed concern that the paper’s scope is too narrow. NAIC may want to expand these best practices or create new best practices for other lines of business, other insurance applications (other than personal automobile and homeowners) and other types of models.”</td>
</tr>
</tbody>
</table>

### New

- New California Department of Insurance
- Add: TBD: Discuss whether the filer, in the development of the model, has used any proxies for variables which may cause regulatory concern, be expressly prohibited by state regulation/statute, or be perceived to be unfairly discriminatory.
- No change recommended.
- Proxies are already addressed in B.3.a.
- Add “proxy” to Glossary.

## VIII. APPENDIX A – BEST PRACTICE DEVELOPMENT

### A. Scope

Best practices development is a tool for reviewing available policy practices that have been effective in addressing particular issues and could be helpful to a current problem. This process relies on the assumptions that top performance is a result of good practices and these practices may be adapted and emulated by others to improve results.

The term “best practice” can be a misleading one due to the slippery nature of the word “best”. When proceeding with policy research of this kind, it may be more helpful to focus the paper on a way of identifying positive or processes that have enjoyed exceptional results and the underlying reasons for their success. This allows for a more realistic and accurate approach for making recommendations that might encompass pieces of many good practices.

### B. Identify Top Performers

Identify outstanding performers in this area to partner with and learn from. In this phase, it is key to review the best practices in a tangible behavior or process designed to solve a problem or achieve a goal. The identifying conduct at the organizational level important. Furthermore, Bardach’s importance of isolating evaluators in order to avoid improperly attributing results to a best practice without taking into account internal validity problems.

### C. Analyze Best Practices

Once successful practices are identified, analysts will begin to observe, gather information and identify the distinct elements that contribute to superior performance. Bardach suggests it is important at this stage to distill the useful elements of the processes down to their most essential ideas. This allows for flexibility since the practice is adopted for new or unique organization or location.

- **Ad Hoc**
Add definitions for composite variable, continuous variable, discrete variable, discrete variable level, and post-model adjustment.

Add "composite variable," "continuous variable," "discrete variable," "discrete variable level," and "post-model adjustment."
Data dredging: Data dredging is also referred to as data fishing, data snooping, data butchery, and come back with significant results, instead of stating a single hypothesis about an underlying effect before the analysis and then conducting a single test for it.

The process of data dredging involves automatically testing huge numbers of hypotheses about a single data set by exhaustively searching—perhaps for combinations of variables that might show a correlation, and perhaps for groups of traits or observations that show differences in their means or in their breakdown by some other variable.

Conventional tests of statistical significance are based on the probability that a particular result would arise if chance alone were at work, and necessarily accept some risk of mistaken conclusions of a certain type (type I error). This level of risk is absolute significance. When millions of tests are performed, some produce falsely significant results of this type. Because of the relatively unknown hypothesis, they cannot be significant at the 5% level. Therefore, to be significant at this level the results must often have enough hypotheses at hand. It is virtually certain that some will be statistically significant but misleading, as in almost every statistical test that is conducted.

It is important to note that data dredging is a common problem in data mining techniques, where researchers can easily be misled by these results. Researchers need to be cautious when using data mining techniques to avoid spurious correlations.

The multiple comparisons hazards are common in data dredging. Subgroups are sometimes explored without adhering to the model to the number of questions at issue, which can lead to misinterpreted results.

### Double Lift Chart

The double lift chart sorts based on the ratio of the two models’ predicted loss costs. Double lift charts directly compare the results of two models.

### Fair Credit Reporting Act

The Fair Credit Reporting Act was intended to protect consumers from the willful and/or negligent inclusion of inaccurate information in their credit reports. To that end, the FCRA regulates the collection, dissemination and use of consumer information, including consumer credit information.

### Generalized Linear Model

The Generalized Linear Model (GLM) is a flexible generalization of ordinary linear regression. It introduces the concept of the link function, which connects the expected value of the response variable to the linear predictor. For quantitative target variables such as those above, the GLM will produce an estimate of the expected value of the outcome. For other applications, the target variable may be the occurrence or non-occurrence of a certain event. Examples include:

- Whether or not a policyholder will renew their policy.
- Whether a submitted claim contains fraud.
- Type of vehicle, age, or marital status for personal auto insurance.

For such variables, a GLM can be applied to estimate the probability that the event will occur. The explanatory variables, or predictors, are denoted $x_1, x_2, \ldots, x_p$, where $p$ is the number of predictors in the model. Potential predictors are typically any policy term or policyholder characteristic that an insurer may wish to include in a correlation. Some examples are:

- Type of vehicle, age, or marital status for personal auto insurance.
- Geographic type, building age, or area of structure for home insurance.

**Advice Team recommendation to expose comments as of 10-14-2019**

(Text in red are action items to be handled in a future draft of the white paper.)

- **Text from 5-14-2019 Exposure**
- **Third-Party Comments on 5-14-2019 Exposure of Complex Model Best Practices White Paper**

### Geodemographic Segmentation

- **New**
  - Whether or not a policyholder will renew his/her policy.
  - Whether a submitted claim contains fraud.
  - Type of vehicle, age, or marital status for personal auto insurance.
  - Construction type, building age, or amount of insurance (AOI) for home insurance.

- **Granularity of Data**
  - The granularity of data refers to the size in which data fields are subdivided.
  - For example, postal address can be recorded, with coarse granularity, as a single field:
    - Address: 1234 Main St, Anytown, CA 90210
  - Or, with fine granularity, as multiple fields:
    - Street address: 1234 Main St
    - City: Anytown
    - State: CA
    - Zip code: 90210

- **Insurance Data**
  - Some insurance companies may use databases to determine the probability that the event will occur.
  - The explanatory variables, or predictors, are denoted \( x_1, \ldots, x_p \), where \( p \) is the number of predictors in the model.
  - Potential predictors are typically any policy terms or policyholder characteristics, such as age, gender, or policy type.

- **Insurance Data**
  - Data collected by the insurance company.
  - Internal Event Form - Two predictor variables are used to test if the effect of one of the predictors on the target variable depends on the level of the other. Suppose that predictor variable \( x_1 \) and \( x_2 \) interact. A GLM model could account for the interaction by including interaction terms of the form \( x_1 x_2 \), in the formula for the linear predictor. For instance, rather than defining the linear predictor as \( \eta = \beta_0 + \beta_1 x_1 + \beta_2 x_2 \), the model instead could include terms \( \beta_3 x_1 x_2 \), \( \beta_4 x_1^2 \), or \( \beta_5 x_2^2 \).

- **Interaction Term**
  - The interaction term captures the relationship between two variables. For example, if we have a GLM with an interaction term \( x_1 x_2 \), the model could include terms \( \beta_3 x_1 x_2 \), \( \beta_4 x_1^2 \), or \( \beta_5 x_2^2 \).

- **Linear Predictor**
  - The linear predictor is the linear combination of explanatory variables \( x_1, x_2, \ldots, x_p \) in the model, e.g., \( \eta = \beta_0 + \beta_1 x_1 + \beta_2 x_2 \).

Ad Hoc Commented Draft 4/2/2019 v1

Third-Party Comments on 5-14-2019 Exposure of Complex Model Best Paper

Text from 5-14-2019 Exposure

Exposed Sections VIII to XVI

Commenter's Suggestion

Final Ad Hoc Team Recommendation

- Home insurance covers damage to the property, contents, and structures, as well as loss of use, liability, and medical coverage. The perils covered in home insurance include fire, windstorms, and other natural disasters.

- Overfitting is the production of an analysis that corresponds too closely or exactly to a particular set of data and may, therefore, fail to fit additional data or predict future observations reliably. (21)

- Principal Component Analysis (PCA) creates new variables from correlated groups of predictors. These new variables exhibit little or no correlation between them, thereby reducing potential problems such as collinearity.

- PCA Approach (Principal Component Analysis) - The PCA method creates multiple new variables from correlated groups of predictors. These new variables exhibit little or no correlation between them, thereby reducing potential problems such as collinearity.

- Overfitting - Overfitting is the production of an analysis that corresponds too closely or exactly to a particular set of data and may, therefore, fail to fit additional data or predict future observations reliably. (21)
### Rating System

**Sub-Model**

- The rating plan describes in detail how to combine the various components in the rules and rate pages to calculate the overall premium charged for any risk that is not specifically pre-printed in the Premium Rule Framework. The rating plan is a tool that includes explicit instructions, such as:
  - **Checklist:** In which rating variables should be considered.
  - How the effect of rating variables is applied to the calculation of premium (e.g., multiplicative, additive, or some unique on a mathematical expresses the evidence of measures or ratios or prem composity; in some cases, the insurance premium or not that can be applied).
  - Ensure that the variables are aligned with the state laws.

If the insurance product contains multiple coverages, then separate rating plans by coverage may apply.

### Scrubbing Data

- **New:** Scrubbing data is the process of removing errors from a dataset that is incorrect, incomplete, improperly formatted, or duplicated.

<table>
<thead>
<tr>
<th>Sample Record</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Transformed Data:</strong> <em>Scrubbed data is data reviewed for errors, where “Ag” has been replaced with a value, and where most transformations have been performed. Data that has been “scrubbed” is now in a useable format to begin building the model.</em></td>
</tr>
<tr>
<td><strong>In-Valid Data:</strong> <em>Scrubbing the process of editing, removing, or replacing data in a dataset that does not represent raw data. For example:</em></td>
</tr>
</tbody>
</table>

### Univariate Model

**Definition:** A univariate model is a model that only has one independent variable.

**Examples:**

- **Oracle Model:** A univariate model is a model that provides output into another model.
- **Transformation:** A transformation is a process of changing a variable to a function of a variable. Examples include: 
  - Voluntary Reported Data: *Voluntarily reported data is data directly obtained from a company or consumer. Examples would be utilization data obtained from an insurance or obtained verbally by a company representative.* 
  - Univariate Model: *A univariate model is a model that only has one independent variable.*

© 2019 National Association of Insurance Commissioners
The Actuarial Opinion (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force met via conference call Nov. 20, 2019. The following Working Group members participated: Julie Lederer, Chair (MO); Anna Krylova, Vice Chair (NM); Amy Waldhauer (CT); David Christhilf (DC); Chantel Long (IL); Sandra Darby (ME); Andrew Schallhorn (OK); Kevin Clark (PA); and Miriam Fisk and Bethany Sims (TX). Also participating was: Tomasz Serbinowski (UT).

1. Discussed Statement of Actuarial Opinion Statistics

Ms. Fisk presented statistics on Statements of Actuarial Opinion gathered by a few states (Attachment Three-A). She said five states (Illinois, New York, Ohio, Pennsylvania and Texas) have compiled data since 2006. Recently, Connecticut and Montana began providing data, and Missouri plans to start providing data. Additional states are asked to participate next year or start to collect data until the state has five years of historical data to share. Some state representatives remarked that their state had so few domestic property/casualty (P/C) insurers, the additional data would not affect the results. Therefore, it was questionable whether the time to collect and add in the information would be worthwhile. Ms. Fisk said she would like to have a complete dataset if states can participate.

2. Discussed 2019 Statement of Actuarial Opinion Instructions

Ms. Lederer said the Blanks (E) Working Group issued a correction in October to the version of the P/C Statement of Actuarial Opinion instructions included in the Annual/Quarterly Statement Instructions publication. As is usual practice with a correction, the revisions are provided on the Blanks (E) Working Group’s website. Ms. Lederer said Milliman actuaries spotted the incorrect hardcopy version and were not aware of the corrections on the website. While the changes are not significant, she said she plans to send a memorandum to appointed actuaries to describe the three minor changes and instruct where to find the corrected pages. Kris DeFrain (NAIC) said the electronic version of the Annual/Quarterly Statement Instructions requested through the NAIC publications department and the Working Group’s website posting of the 2019 actuarial opinion instructions are correct.

Having no further business, the Actuarial Opinion (C) Working Group adjourned.
P&C Actuarial Opinion Summary (AOS) Statistics
to be discussed on 11/20/2019 AOWG call

Background
- Data in companies’ Statement of Actuarial Opinion (SAO) Exhibits A and B are filed in both print and data capture format. SAO data can be queried/analyzed/summarized easily.
- Companies file their AOS with their domiciliary state directly. AOS data is not submitted electronically to the NAIC.

AOS Statistics Project
- Several states have voluntarily provided aggregate data from their domestic insurers’ AOSs.
- The information provided by the states is then combined. This allows us to look at overall trends in:
  - Carried reserve position relative to Appointed Actuaries’ estimates
  - Type of actuarial estimates provided by Appointed Actuaries
- The information is typically presented during various presentations at the CLRS and the American Academy of Actuaries’ Seminar on Effective P/C Loss Reserve Opinions

Data collected
- Number of companies where AOS included each type of estimate:
  - Point estimate only
  - Range of estimates only
  - Point estimate and range
- Number of companies where AOS showed carried reserves were:
  - More than 10% below actuary’s estimate
  - Between 5% and 10% below (including 10%)
  - Between 0% and 5% below (including 5%)
  - Equal to actuary’s estimate
  - Between 0% and 5% above (including 5%)
  - Between 5% and 10% above (including 10%)
  - More than 10% above
- Gross and net is collected separately, although some states only provide net
- All data excludes companies with zero carried reserves
- Carried vs. estimate based on point estimate if provided, midpoint of range if no point estimate provided
Who currently participates?
- IL, NY, OH, PA, TX have provided data going back through 2006.
- More recently, CT and MN began providing data, and MO plans to provide data this year.
- The 7 states providing data in 2018 represented approximately 1/3 of the total number of companies with non-zero carried net reserves found in the electronic SAO data.

What is required to begin participating?
- The first year a state participates, we request a total of 5 years of data – the current year plus the previous 4 years. In subsequent years, only the current year would need to be provided.
- The deadline for submitting data is typically the beginning of August, to allow time for the information to be included in slides for the CLRS.
- Contact Miriam Fisk (Miriam.Fisk@tdi.texas.gov). She will send you the spreadsheet template.

Texas AOS data process
In Texas, an intern enters information from each AOS we receive into an internal database. The information captured includes:
- Appointed Actuary’s estimates (gross and net)
- Whether the Appointed Actuary’s estimates include only a point estimate, only a range, or both (gross and net)
- Carried reserves (gross and net)
Once the data is in the database, it’s quick and easy to summarize using queries.

Questions for AOWG

What do other states do with AOS information?

Do states not currently providing data have concerns about participating?
- Confidentiality?
- Time and effort required to compile the data?
- Other?

Other comments/questions/concerns?
Carried Reserves vs. Actuarial Estimate* (Net)

* Midpoint of range if no point estimate provided. Point estimate if provided.
The Actuarial Opinion (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force met via conference call Oct. 4, Oct. 1, Sept. 20, Sept. 12, Sept. 10 and Sept. 6, 2019. The following Working Group members participated: Julie Lederer, Chair (MO); Anna Krylova, Vice Chair (NM); Susan Andrews, Wanchin Chou and Qing He (CT); David Christhilf (DC); Chantel Long and Judy Mottar (IL); Sandra Darby (ME); Gordon Hay (NE); Tom Botsko (OH); Andrew Schallhorn and Kate Yang (OK); Kevin Clark, James DiSanto and Melissa Greiner (PA); and Miriam Fisk, Walt Richards and Bethany Sims (TX). Also participating was: Kevin Dyke (MI); and Tomasz Serbinowski (UT).

1. **Adopted the 2019 Regulatory Guidance**

Ms. Lederer said the Working Group was given the following 2019 charge: “Based on language for the *Annual Statement Instructions—Property/Casualty* requiring completion of the appointed actuary’s attestation of qualification, provide additional guidance in the 2019 regulatory guidance document.”

Ms. Lederer said the Working Group exposed the first draft of the 2019 Regulatory Guidance in May and received one comment letter (Attachment Four-A). She said the 2019 Statement of Actuarial Opinion instructions were subsequently revised and adopted by the Financial Condition (E) Committee Aug. 29 and by the NAIC membership in September. She said those instructions differ from what was used to initially draft the 2019 Regulatory Guidance.

For the Sept. 6 conference call, Ms. Lederer said she revised the draft 2019 Regulatory Guidance. Based on the submitted comment letter, the word “may” was added to the phrase “what an Appointed Actuary should know and do.” Based on instruction changes, “NAIC” was deleted from the term “NAIC Accepted Actuarial Designation”; references to “grandfathering” were eliminated and replaced with references to the “exam-substitution table”; and a reference to qualification documentation being included in the Actuarial Report was removed.

Ralph Blanchard (Travelers) asked about the discussion of experience in the qualification documentation that may be confidential, including work experience for competitor insurers. Ms. Lederer said it would be expected that actuaries would not violate confidentiality, whether stated or not.

Mr. Blanchard suggested adding “or exam substitution” when referring to the need for basic education. Ms. Lederer agreed. Mr. Blanchard also mentioned that in years past there was no advanced reserving exam. Kris DeFrain (NAIC) said after a certain number of years, the experience an actuary has would be much more important than the exams they passed. She said state insurance regulators might consider adding such a note. Ms. Lederer said she agreed so long as the Working Group would not be adding unintended interpretations.

Kathleen C. Odomirok (American Academy of Actuaries—Academy) asked about submitting qualification documentation prior to the continuing education (CE) being completed for the year. Ms. Lederer said the instructions refer to the definition of a qualified actuary being “met or expected to be met.” She said the documentation could include CE taken and a statement explaining how the actuary plans to complete CE.

For the Sept. 10 and Sept. 12 conference calls, the Working Group discussed the revised draft 2019 Regulatory Guidance, which included changes discussed during the Sept. 6 conference call, plus some additional changes to aid communication. The group clarified the description of the timing around CE requirements.

Ms. Odomirok asked about the timing of the annual submission of qualification documentation and whether it needs to be supplied prior to the opinion being issued. Ms. Lederer said the Working Group cannot add a due date. She said it seems that the appointed actuary can work with the board and/or company management to determine an agreed time for submission.

Ms. DeFrain said that with no mention of a due date in the instructions, there is no exact date upon which the qualification documentation must be submitted. The appointed actuary would need to submit its annual documentation sometime during the year. Ms. Lederer said she would not see the annual time as needing to be on the anniversary of the appointment.
Ms. Greiner suggested that state insurance regulators should consider adding a due date in the 2020 instructions. She said the due date would aid the process for companies whose boards are not active and aid the financial examiners’ searches through board minutes.

Mr. Serbinowski and Mr. Dyke said establishing a date in the future might be preferable, perhaps to say the qualification document should be provided “prior to the issuance of the actuarial report.” Mr. Hay said he believes that the annual qualification document should be provided to the board in time for the board to take any action, if needed. Mr. Dyke said the qualification document is a workpaper, so it should be ready when the workpapers are due at the same time as the Actuarial Report. Ms. Lederer said the 2019 Regulatory Guidance followed the instructions and qualified actuary definition in order.

Ms. Krylova suggested that the guidance should be modified to be less repetitive and more useful for the board. The Academy’s Committee on Property and Liability Financial Reporting offered a rewrite of the guidance for the Sept. 20 conference call. She said: 1) the resume-type biography is normally minimal information, and she believes that there needs to be some discussion about experience and how it is relevant; and 2) the CE log should be included and might be useful for board discussion. Mr. Hay agreed.

Ms. Odomirok said the concern with the detailed log is that the board would not follow the courses, events or content, so she believes high-level descriptions such as “seminars, online courses, or industry conferences” might be sufficient for board use. Ms. Krylova said there should be more of a description. Mr. Hay said that saying, “the CE log is available” is not preferable.

The 2019 Regulatory Guidance was revised during the Oct. 1 conference call to: 1) state that the qualification documentation should provide a brief overview of the CE topics; and 2) revise the examples to be less specific and more applicable to actuarial opinion topics.

During the Oct. 4 conference call, Ms. Krylova made a motion, seconded by Ms. Andrews, to adopt the 2019 Regulatory Guidance, with Section IV.C., CE Logging Procedure, pending. The motion passed unanimously.

The Working Group discussed the Casualty Actuarial Society (CAS)/Society of Actuaries (SOA) Appointed Actuary Continuing Education Project and what should be referenced in the 2019 Regulatory Guidance. Mr. Dyke said the CAS and SOA are producing a new attestation procedure and appointed actuary log prior to year-end 2019. He proposed wording. Ms. Lederer said she had concerns about the 2019 Regulatory Guidance being the first communication about the project. Ms. Odomirok said the U.S. Qualification Standards do not require a specific log form, yet the CAS and SOA would be requiring such in conflict with the standards.

[Editor’s Note: After discussion by the Casualty Actuarial and Statistical (C) Task Force during its Oct. 15 conference call (see NAIC Proceedings – Fall 2019, Casualty Actuarial and Statistical (C) Task Force, Attachment Two) to eliminate the new CE log requirement for 2019 and to begin the CE log part of the project in 2020, the Working Group adopted wording for Section IV.C., CE Logging Procedure, via e-vote.]

The 2019 Regulatory Guidance was finalized and provided to the Academy for inclusion in the practice note (Attachment Four-B).

2. Discussed the 0% Intercompany Pool and a Company’s Persistent Adverse Development

During the Sept. 12 conference call, Ms. Greiner said a company redomiciled to Pennsylvania in a slightly troubled reserve position in that the persistent adverse development reporting requirement was triggered. The appointed actuary opined and provided the required discussion in the Actuarial Opinion Summary. Later, the company was acquired by a larger group with a different appointed actuary. From 2012 to 2016, the actuary continued to opine. After that, the company became a 0% member of an intercompany pool. With a change in appointed actuary, there was no longer any explanation about persistent adverse development. The actuary said for 0% pool companies, the opinion should be a group opinion. The group did not trigger the persistent adverse development.

Ms. Greiner said the lead company is not a Pennsylvania domestic. Mr. Hay asked if the problem was with the lead state system or with the Actuarial Opinion Summary instructions. Ms. Greiner said it is not with the lead state, but rather is a concern because there is no guaranty that the pooling arrangement will not change in the future. Ms. Long said it would be a positive action for the group to absorb the persistent development. Ms. Greiner agreed.

Having no further business, the Actuarial Opinion (C) Working Group adjourned.
I have a suggested edit to the Regulatory Guidance. Where it says:

“The NAIC’s P/C Appointed Actuary Job Analysis Project resulted in documentation of knowledge statements, or what an Appointed Actuary needs to know and do.”

I would change the “needs” to “may need”. The current wording is inaccurate. It contradicts what I’ve been told by several who participated in the process, as well as my own evaluation of the Knowledge Statements. Many of the knowledge statements are only relevant to some P&C opinions and not all.

Ralph
Adopted by the Actuarial Opinion (C) Working Group: October 25, 2019

REGULATORY GUIDANCE on Property and Casualty Statutory Statements of Actuarial Opinion, Actuarial Opinion Summaries, and Actuarial Reports for the Year 2019

Prepared by the NAIC Actuarial Opinion (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force

The NAIC Actuarial Opinion (C) Working Group (Working Group) of the Casualty Actuarial and Statistical (C) Task Force believes that the Statement of Actuarial Opinion (Actuarial Opinion), Actuarial Opinion Summary (AOS), and Actuarial Report are valuable tools in serving the regulatory mission of protecting consumers. This Regulatory Guidance document supplements the NAIC Annual Statement Instructions – Property/Casualty (Instructions) in an effort to provide clarity and timely guidance to companies and Appointed Actuaries regarding regulatory expectations on the Actuarial Opinion, AOS, and Actuarial Report.

An Appointed Actuary has a responsibility to know and understand both the Instructions and the expectations of state insurance regulators. One expectation of regulators clearly presented in the Instructions is that the Actuarial Opinion, AOS, and supporting Actuarial Report and workpapers be consistent with relevant Actuarial Standards of Practice (ASOPs).

There are changes to the Instructions for 2019. Pursuant to efforts undertaken by the Task Force and the Executive (EX) Committee, the definition of “Qualified Actuary” is significantly revised and a new requirement called “qualification documentation” was added. These changes are described in this Regulatory Guidance document and additional guidance is offered to assist an Appointed Actuary in creating qualification documentation.

There were also changes to the Instructions for 2018. As a result of these changes, the Instructions now:

- Include a new definition for “Accident & Health (A&H) Long Duration Contracts” in order to draw a distinction between these contracts and the Property and Casualty (P&C) Long Duration Contracts whose unearned premium reserves are reported on Exhibit A, Items 7 and 8,
- Add a reference to SSAP No. 65 in the definition of P&C Long Duration Contracts,
- Include a new disclosure item on Exhibit B for net reserves associated with A&H Long Duration Contracts,
- State that the Actuarial Report should disclose all reserve amounts associated with A&H Long Duration Contracts, and
- State that the Actuarial Report and workpapers summarizing the asset adequacy testing of long-term care contracts must be in compliance with Actuarial Guideline LI – The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves (AG 51) of the Accounting Practices and Procedures Manual.

I. General comments

A. Reconciliation between documents

If there are any differences between the values reported in the Actuarial Opinion, AOS, Actuarial Report, and Annual Statement, the Working Group expects Appointed Actuaries to include an explanation for these differences in the appropriate document (Actuarial Opinion, AOS, or Actuarial Report). The use of a robust peer review process by the Appointed Actuary should reduce reporting errors and non-reconciling items.

One situation in which a legitimate difference might arise is in the case of non-tabular discounting: The direct and assumed loss reserves on line 3 of the Actuarial Opinion’s Exhibit A come from Schedule P, Part 1, which is gross of non-tabular discounting, while the Actuarial Report and AOS might present the direct and assumed loss reserves on a net of discounting basis.

B. Role of illustrative language in the Instructions

While the Instructions provide some illustrative language, the Working Group encourages Appointed Actuaries to use whatever language they believe is appropriate to clearly convey their opinion and the basis for that opinion. In forming their opinion, Appointed Actuaries should consider company-specific characteristics such as intercompany pooling arrangements; recent mergers or acquisitions; and significant changes in operations, product mix, or reinsurance arrangements.

C. Qualified Actuary definition

With the introduction of an additional educational track for property and casualty (P/C) actuaries, the NAIC needed to consider revisions to the definition of “Qualified Actuary.” Upon receiving advice from a consultant on the NAIC’s definition of a “Qualified Actuary,” the NAIC began a project to re-define a Qualified Actuary using objective criteria. Upon nomination by the Casualty Actuarial Society (CAS), Society of Actuaries (SOA), and the American Academy of Actuaries (Academy), many Appointed Actuaries and other subject matter experts volunteered to assist the NAIC. The NAIC’s P/C Appointed Actuary Job Analysis Project resulted in documentation of knowledge statements, or what an Appointed Actuary may need to know and do. The NAIC’s P/C Educational Standards and Assessment Project resulted in documentation of which elements in each knowledge statement should be included in basic education as a minimum standard, with the remaining elements achievable through experience or continuing education. Using the minimum educational standards, the NAIC and subject matter experts assessed the CAS and SOA syllabi and reading materials. The CAS and SOA have made or agreed to make specific changes to their syllabi and/or reading materials to meet the standards. The revised syllabi and reference materials are required to be in place by Jan. 1, 2021.

As a result of these NAIC projects, the definition of “Qualified Actuary” was crafted to include basic education requirements and professionalism requirements (e.g. application of U.S. Qualification Standards, Code of Conduct, and ABCD). The definition of Qualified Actuary replaces the requirement to be “a member in good standing of the Casualty Actuarial Society” with a requirement to obtain and maintain an “Accepted Actuarial Designation.” An Accepted Actuarial Designation is one that was considered by the NAIC to meet the NAIC’s minimum educational standards for an Appointed Actuary. See the Instructions for the list of Accepted Actuarial Designations. It is important to note that some designations are accepted as meeting the basic education standards only if certain specific exams and/or tracks are successfully completed (with exceptions noted in the exam substitutions table of the Instructions). The NAIC process requires a recurring assessment of the “Qualified Actuary” definition every 5-10 years.

The NAIC does not intend to retroactively change requirements for Appointed Actuaries. If an actuary previously met the 2018 qualified actuary definition but lacks the specific exams and/or tracks under the new definition, the Instructions provide a list of acceptable substitutions.

D. Qualification documentation

The 2019 Instructions require the Appointed Actuary to provide “qualification documentation” to the Board of Directors upon initial appointment and annually thereafter. The documentation provided to the Board must be available to the
regulator upon request and during a financial examination. Guidance on qualification documentation is in Section IV of this document.

E. Replacement of an Appointed Actuary

The Instructions require two letters when the Board replaces an Appointed Actuary: one addressed from the insurer to the domiciliary commissioner, and one addressed from the former Appointed Actuary to the insurer. The insurer must provide both of these letters to the domiciliary commissioner.

The detailed steps are as follows:

1. Within 5 business days, the insurer shall notify its domiciliary insurance department that the former Appointed Actuary has been replaced.
2. Within 10 business days of the notification in step 1, the insurer shall provide the domiciliary commissioner with a letter stating whether in the 24 months preceding the replacement, there were disagreements with the former Appointed Actuary. The Instructions describe the types of disagreements required to be reported in the letter.
3. Within the same 10 business days referred to in step 2, the insurer shall, in writing, request that its former Appointed Actuary provide a letter addressed to the insurer stating whether the former Appointed Actuary agrees with the statements contained in the insurer’s letter referenced in step 2.
4. Within 10 business days of the request from the insurer described in step 3, the former Appointed Actuary shall provide a written response to the insurer.
5. The insurer shall provide the letter described in step 2 and the response from the former Appointed Actuary described in step 4 to the domiciliary commissioner.

Regarding the disagreements referenced in step 2 above, regulators understand that there may be disagreements between the Appointed Actuary and the insurer during the course of the Appointed Actuary’s analysis that are resolved by the time the Appointed Actuary concludes the analysis. For instance, the Appointed Actuary’s analysis may go through several iterations, and an insurer’s comments on the Appointed Actuary’s draft Actuarial Report may prompt the Appointed Actuary to make changes to the report. While regulators are interested in material disagreements regarding differences between the former Appointed Actuary’s final estimates and the insurer’s carried reserves, they do not expect notification on routine discussions that occur during the course of the Appointed Actuary’s work.

F. Reporting to the Board of Directors

The Appointed Actuary is required to report to the insurer’s Board every year, and the Instructions were amended in 2016 to require the Board’s minutes to specify the manner in which the Appointed Actuary presented the required information. This may be done in a form of the Appointed Actuary’s choosing, including, but not limited to, an executive summary or PowerPoint presentation. The Working Group strongly encourages the Appointed Actuary to present his or her analysis in person so that the risks and uncertainties that underlie the exposures and the significance of the Appointed Actuary’s findings can be adequately conveyed and discussed. Regardless of how the Appointed Actuary presents his or her conclusions, the Actuarial Report must be made available to the Board.

Management is limited to reporting single values on lines 1 and 3 of the Liabilities, Surplus, and Other Funds page of the balance sheet. However, actuarial estimates are uncertain by nature, and point estimates do not convey the variability in the projections. Therefore, the Board should be made aware of the Appointed Actuary’s opinion regarding the risk of material adverse deviation, the sources of risk, and what amount of adverse deviation the Appointed Actuary judges to be material.
G. Requirements for pooled companies

Effective with the 2014 Instructions, requirements for companies that participate in intercompany pools are as follows:

For all intercompany pooling members:
- Text of the Actuarial Opinion should include the following:
  - Description of the pool
  - Identification of the lead company
  - A listing of all companies in the pool, their state of domicile, and their respective pooling percentages
- Exhibits A and B should represent the company’s share of the pool and should reconcile to the financial statement for that company

For intercompany pooling members with a 0% share of the pooled reserves:
- Text of the Actuarial Opinion should be similar to that of the lead company
- Exhibits A and B should reflect the 0% company’s values
  - Response to Exhibit B, Item 5 (materiality standard) should be $0
  - Response to Exhibit B, Item 6 (risk of material adverse deviation) should be “not applicable”
- Exhibits A and B of the lead company should be filed with the 0% company’s Actuarial Opinion
- Information in the AOS should be that of the lead company

Note the distinction between pooling with a 100% lead company with no retrocession and ceding 100% via a quota share reinsurance agreement. The regulator must approve these affiliate agreements as either an intercompany pooling arrangement or a quota share reinsurance agreement. The proper financial reporting is dependent on the approved filings, regardless of how company management regards its operating platform.

For intercompany pooling members with a greater than 0% share of the pooled reserves, regulators encourage the Appointed Actuary to display values in the AOS on a pooled (or consolidated) basis in addition to the statutory entity basis. This can be accomplished by displaying two tables of information.

H. Explanation of adverse development

1. Comments on unusual Insurance Regulatory Information System (IRIS) ratios in the Actuarial Opinion

   The Appointed Actuary is required to provide comments in the Actuarial Opinion on factors that led to unusual values for IRIS ratios 11, 12, or 13. The Working Group considers it insufficient to attribute unusual reserve development to “reserve strengthening” or “adverse development” and expects the Appointed Actuary to provide insight into the company-specific factors which caused the unusual value. Detailed documentation should be included in the Actuarial Report to support statements provided in the Actuarial Opinion.

2. Comments on persistent adverse development in the AOS

   The Appointed Actuary is required to comment on persistent adverse development in the AOS. Comments can reflect common questions that regulators have, such as:
   - Is development concentrated in one or two exposure segments, or is it broad across all segments?
   - How does development in the carried reserve compare to the change in the Appointed Actuary’s estimate?
   - Is development related to specific and identifiable situations that are unique to the company?
   - Does the development or the reasons for development differ depending on the individual calendar or accident years?
I. Revisions

When a material error in the Actuarial Opinion or AOS is discovered by the Appointed Actuary, the company, the regulator, or any other party, regulators expect to receive a revised Actuarial Opinion or AOS.

Regardless of the reason for the change or refiling, the company should submit the revised Actuarial Opinion in hard copy to its domiciliary state and electronically to the NAIC. The company should submit the revised AOS in hard copy to the domiciliary state but should not submit the document to the NAIC.

A revised Actuarial Opinion or AOS should clearly state that it is an amended document, contain or accompany an explanation for the revision, and include the date of revision.

II. Comments on Actuarial Opinion and Actuarial Report

A. Review date

The illustrative language for the Scope paragraph includes “… and reviewed information provided to me through XXX date.” This is intended to capture the ASOP No. 36 requirement to disclose the date through which material information known to the Appointed Actuary is included in forming the reserve opinion (the review date), if it differs from the date the Actuarial Opinion is signed. When the Appointed Actuary is silent regarding the review date, this can indicate either that the review date is the same as the date the Actuarial Opinion is signed or that the Appointed Actuary overlooked this disclosure requirement. When the Appointed Actuary’s review date is the same as the date the Actuarial Opinion is signed, regulators suggest the Appointed Actuary clarify this in the Actuarial Opinion by including a phrase such as “… and reviewed information provided to me through the date of this opinion.”

B. Making use of another’s work

If the Appointed Actuary makes use of the work of another not within the Appointed Actuary’s control for a material portion of the reserves, the Instructions say that the Appointed Actuary must provide the following information in the Actuarial Opinion:

- The person’s name;
- The person’s affiliation;
- The person’s credential(s), if the person is an actuary; and
- A description of the type of analysis performed, if the person is not an actuary.

Furthermore, Section 4.2.f of ASOP No. 36 says that the actuary should disclose whether he or she reviewed the other’s underlying analysis and, if so, the extent of the review. Though this is not mentioned in the ASOP, the Working Group encourages the Appointed Actuary to consider discussing his or her conclusions from the review.

Section 3.7.2 of ASOP No. 36 describes items the actuary should consider when determining whether it is reasonable to make use of the work of another. One of these items is the amount of the reserves covered by the other’s analyses or opinions in comparison to the total reserves subject to the actuary’s opinion. The Working Group encourages the Appointed Actuary to disclose these items in the Actuarial Opinion by providing the dollar amount of the reserves covered by the other’s analyses or opinions and the percentage of the total reserves subject to the Appointed Actuary’s opinion that these other reserves represent.

C. Points A and B of the Opinion paragraph when opinion type is other than reasonable

Regulators encourage Appointed Actuaries to think about their responses to point A (meet the requirements of the insurance laws of the state) and point B (computed in accordance with accepted actuarial standards and principles) of the Opinion paragraph when they issue an Actuarial Opinion of a type other than “Reasonable.”
D. Conclusions on a net versus a direct and assumed basis

Unless the Appointed Actuary states otherwise, regulators will assume that the Appointed Actuary’s conclusion on the type of opinion rendered, provided in points C and D of the Opinion paragraph, applies to both the net and the direct and assumed reserves. If the Appointed Actuary reaches different conclusions on the net versus the direct and assumed reserves, the Appointed Actuary should include narrative comments to describe the differences and clearly convey a complete opinion. The response to Exhibit B, Item 4 should reflect the Appointed Actuary’s opinion on the net reserves.

Similarly, the materiality standard in Exhibit B, Item 5 and the RMAD conclusion in Exhibit B, Item 6 should pertain to the net reserves. If the Appointed Actuary reaches a different conclusion on the risk of material adverse deviation in the net versus the direct and assumed reserves, the Appointed Actuary should include a Relevant Comments paragraph to address the differences. Regulators understand that a net versus a direct and assumed RMAD will have different meanings and, potentially, different materiality standards.

E. Unearned premium for P&C Long Duration Contracts

Exhibit A, Items 7 and 8 require disclosure of the unearned premium reserve for P&C Long Duration Contracts. The Instructions require the Appointed Actuary to include a point D in the Opinion paragraph regarding the reasonableness of the unearned premium reserve when these reserves are material.

The Working Group expects that the Appointed Actuary will include documentation in the Actuarial Report to support a conclusion on reasonableness whenever point D is included in the Actuarial Opinion. This documentation may include the three tests of SSAP No. 65 or other methods deemed appropriate by the Appointed Actuary to support his or her conclusion.

Regulators see many opinions where dollar amounts are included in Exhibit A, Items 7 and 8; some opinions include a Relevant Comments paragraph discussing these amounts and some do not. Regulators would prefer at a minimum that Appointed Actuaries include some discussion in Relevant Comments on these amounts including an explicit statement as to whether these amounts are material or immaterial.

F. Other premium reserve items

With regard to “Other Premium Reserve Items” in Exhibit A, Item 9, the Appointed Actuary should include an explanatory paragraph about these premium reserves in Relevant Comments and state whether the amounts are material or immaterial. If the amounts are material, and the Appointed Actuary states the amounts are reasonable in an Opinion paragraph, regulators would expect the actuarial documentation to support this conclusion in the Actuarial Report.

Typical items regulators see listed as “Other Premium Reserve Items” are Medical Professional Liability Death, Disability & Retirement (DD&R) unearned premium reserves (UPR) and Other Liability Claims DD&R UPR. Depending on the nature of these exposures, these items may be also listed on Exhibit B, Line 12.2 as claims made extended UPR.

G. The importance of Relevant Comments paragraphs

The Working Group considers the Relevant Comments paragraphs to be the most valuable information in the Actuarial Opinion. Relevant Comments help the regulator interpret the Actuarial Opinion and understand the Appointed Actuary’s reasoning and judgment. In addition to the required Relevant Comments, the Appointed Actuary should consider providing information on other material items such as reinsurance with affiliates, mergers or acquisitions, other premium reserves, and catastrophe risk.

H. Risk of Material Adverse Deviation

The Relevant Comments paragraphs on the Risk of Material Adverse Deviation (RMAD) are particularly useful to regulators. The first two RMAD comments below respond to questions that Appointed Actuaries have posed to regulators. The second two stem from regulators’ reviews of Actuarial Opinions.
1. No company-specific risk factors – The Appointed Actuary is asked to discuss company-specific risk factors regardless of the RMAD conclusion. If the Appointed Actuary does not believe that there are any company-specific risk factors, the Appointed Actuary should state that.

2. Mitigating factors – Regulators generally expect Appointed Actuaries to comment on significant company-specific risk factors that exist prior to the company’s application of controls or use of mitigation techniques. The company’s risk management behaviors may, however, affect the Appointed Actuary’s RMAD conclusion.

3. Consideration of carried reserves, materiality standard, and reserve range when making RMAD conclusion – When deciding whether RMAD exists, the Appointed Actuary should consider the materiality standard in relation to the range of reasonable estimates and the carried reserves. For example, RMAD should likely exist when the sum of the materiality standard plus the carried reserves is within the range of reasonable estimates. Regardless, the Appointed Actuary should support the conclusion of whether RMAD exists.

4. Materiality standards for intercompany pool members – With the exception of intercompany pooling members that retain a 0% share, each statutory entity is required to have a separate Actuarial Opinion with its own materiality standard. Where there are no unusual circumstances to consider, it may be acceptable to determine a standard for the entire pool and assign each member its proportionate share of the total. It is not appropriate to use the entire amount of the materiality threshold for the pool as the standard for each individual pool member.

I. Regulators’ use of the Actuarial Report

Regulators should be able to rely on the Actuarial Report as an alternative to developing their own independent estimates. A well-prepared and well-documented Actuarial Report that complies with ASOP No. 41 can provide a foundation for efficient reserve evaluation during a statutory financial examination. This expedites the examination process and may provide cost savings to the company.

1. Schedule P reconciliation

The Working Group acknowledges that myriad circumstances (such as mergers, acquisitions, changes in claim systems, and the use of underwriting year data in the analysis) may make it difficult for the Appointed Actuary to reconcile the analysis data to Schedule P. The Working Group encourages Appointed Actuaries to disclose reconciliation issues in the Actuarial Report. If the data cannot be reconciled, the Appointed Actuary should document the reasons.

The Working Group believes that:

- A summary reconciliation that combines all years and all lines is an insufficient demonstration of data integrity. A reconciliation should include enough detail to reflect the segmentation of exposures used in the reserve analysis, the accident years of loss activity and the methods used by the Appointed Actuary.
- The Appointed Actuary should map the data groupings used in the analysis to Schedule P lines of business and should provide detailed reconciliations of the data at the finest level of segmentation that is possible and practical. The Working Group recognizes that the Appointed Actuary chooses the data segmentation for the analysis and that there is often not a direct correspondence between analysis segments and Schedule P lines of business.
- The Appointed Actuary should reconcile all data material to the analysis, including claim counts and earned premium if appropriate.

The Working Group draws a distinction between two types of data checks:

- The Schedule P reconciliation performed by the Appointed Actuary. The purpose of this exercise is to show the user of the Actuarial Report that the data significant to the Appointed Actuary’s analysis ties to the data in Schedule P.
- Annual testing performed by independent CPAs to verify the completeness and accuracy of the data in Schedule P or the analysis data provided by the company to the Appointed Actuary.

One key difference is that independent CPAs generally apply auditing procedures to loss and loss adjustment expense activity that occurred in the current calendar year (for example, tests of payments on claims for all accident years that
were paid during the current calendar year). Projection methodologies used by Appointed Actuaries, on the other hand, often use cumulative loss and loss adjustment expense data, which may render insufficient a testing of activity during the current calendar year alone.

Along similar lines, regulators encourage Appointed Actuaries to consider whether a reconciliation of incremental payments during the most recent calendar year for all accident/report years combined provides sufficient assurance of the integrity of the data used in the analysis, given that development factors are generally applied to cumulative paid losses by accident/report year.

2. Change in estimates

The Working Group expects the Appointed Actuary to discuss any significant change in the Appointed Actuary’s total estimates from the prior Actuarial Report. However, an explanation should also be included for any significant fluctuations within accident years or segments. When preparing the change-in-estimates exhibits, the Appointed Actuary should choose a level of granularity that provides meaningful comparisons between the prior and current year’s results.

3. Narrative

The narrative section of the Actuarial Report should clearly convey the significance of the Appointed Actuary’s findings and conclusions, the uncertainty in the estimates, and any differences between the Appointed Actuary’s estimates and the carried reserves.

4. Support for assumptions

Appointed Actuaries should support their assumptions. The use of phrases like “actuarial judgment,” either in the narrative comments or in exhibit footnotes, is not sufficient. A descriptive rationale is needed.

The selection of expected loss ratios could often benefit from expanded documentation. When making their selection, Appointed Actuaries should consider incorporating rate changes, frequency and severity trends, and other adjustments needed to on-level the historical information. Historical loss ratio indications have little value if items such as rate actions, tort reform, schedule rating adjustments, or program revisions have materially affected premium adequacy.

5. Support for roll forward analyses

The Working Group recognizes that the majority of the analysis supporting an Actuarial Opinion may be done with data received prior to year-end and “rolled forward” to year-end. By reviewing the Actuarial Report, the regulator should be able to clearly identify why the Appointed Actuary made changes in the ultimate loss selections and how those changes were incorporated into the final estimates. A summary of final selections without supporting documentation is not sufficient.

J. Exhibits A and B

1. “Data capture format”

The term “data capture format” in Exhibits A and B of the Instructions refers to an electronic submission of the data in a format usable for computer queries. This process allows for the population of an NAIC database that contains qualitative information and financial data. Appointed Actuaries should assist the company in accurately completing the electronic submission.

2. Scope of Exhibit B, Item 12

Exhibit B, Item 12 requests information on extended loss and unearned premium reserves for all property/casualty lines of business, not just medical professional liability. The Schedule P Interrogatories referenced in the parenthetical only address reserves associated with yet-to-be-issued extended reporting endorsements offered in the case of death, disability, or retirement of an individual insured under a medical professional liability claims-made policy.
3. Exhibit B, Item 13

The Working Group added disclosure item Exhibit B, Item 13 in 2018. This item requests information on reserves associated with “A&H Long Duration Contracts,” defined in the Instructions as “A&H contracts in which the contract term is greater than or equal to 13 months and contract reserves are required.”

This disclosure item was added for several reasons:

- **A desire by regulators to gain a greater understanding of property and casualty insurers’ exposure to A&H Long Duration Contracts.**
  - This guidance does not specify how P&C insurers should report the liabilities associated with A&H Long Duration Contracts on the annual statement. Through work performed on financial examinations, regulators have found that P&C insurers may include the liabilities in various line items of the Liabilities, Surplus and Other Funds page. SSAP No. 54R provides accounting guidance for insurers.
  - Regardless of where the amounts are reported on the annual statement, the materiality of the amounts, and whether the insurer is subject to AG 51, the Appointed Actuary should disclose the amounts associated with A&H Long Duration Contracts on Exhibit B, Item 13. The Appointed Actuary should provide commentary in a Relevant Comments paragraph in accordance with paragraph 6.C of the Instructions. The Appointed Actuary should also disclose all reserve amounts associated with A&H Long Duration Contracts in the Actuarial Report.

- **The adoption of AG 51 in 2017.** On August 9, 2017, the NAIC’s Executive (EX) Committee and Plenary adopted AG 51 requiring stand-alone asset adequacy analysis of long-term care (LTC) business. The text of AG 51 is included in the March 2019 edition of the NAIC’s Accounting Practices and Procedures Manual. The effective date of AG 51 was December 31, 2017, and it applies to companies with over 10,000 inforce lives covered by LTC insurance contracts as of the valuation date. The Instructions state that the Actuarial Report and workpapers summarizing the asset adequacy testing of LTC business must be in compliance with AG 51 requirements.

- **Recent adverse reserve development in LTC business.** Regulators expect Appointed Actuaries to disclose company-specific risk factors in the Actuarial Opinion. Given the recent adverse experience for LTC business, Appointed Actuaries should consider whether exposure to A&H Long Duration Contracts poses a risk factor for the company.

The Appointed Actuary is not asked to opine on the reasonableness of the reserves associated with A&H Long Duration Contracts except to the extent that the reserves are included within the amounts reported on Exhibit A of the Actuarial Opinion. For this reason, the Working Group intentionally excluded Items 13.3 and 13.4 from this sentence in paragraph 4 of the Instructions: “The Appointed Actuary should state that the items in the SCOPE, on which he or she is expressing an opinion, reflect Disclosure items 8 through 13.2 in Exhibit B.” Exhibit B, Item 13.1 asks the Appointed Actuary to disclose the reserves for A&H Long Duration Contracts that the company carries on the Losses line of the Liabilities, Surplus and Other Funds page. The Appointed Actuary is not asked to opine on the reasonableness of the reserves disclosed on Exhibit B, Item 13.1 in isolation, but these reserves are a subset of the amount included on Exhibit A, Item 1, and Exhibit A lists amounts with respect to which the Appointed Actuary is expressing an opinion. The same is true for Exhibit B, Item 13.2, whose reserves are a subset of the amount included on Exhibit A, Item 2.

A&H Long Duration Contracts are distinct from P&C Long Duration Contracts. There were no changes to the opinion requirements in 2018 regarding P&C Long Duration Contracts, but the Working Group added a reference to SSAP No. 65 in the definition of “P&C Long Duration Contracts” to clarify the difference between “A&H Long Duration Contracts” and “P&C Long Duration Contracts.” The newly-added mention of SSAP No. 65 in the Instructions is not intended to change the Appointed Actuary’s treatment of P&C Long Duration Contracts in the Actuarial Opinion or the underlying analysis, but insurers and Appointed Actuaries may refer to SSAP No. 65, paragraphs 21 through 33 for a description of the three tests, a description of the types of P&C contracts to which the tests apply, guidance on the minimum required reserves, and instructions on the Actuarial Opinion and Actuarial Report.
III. Comments on AOS

A. Confidentiality

The AOS is a confidential document and should be clearly labeled and identified prominently as such. The AOS is not submitted to the NAIC. The Working Group advises the Appointed Actuary to provide the AOS to company personnel separately from the Actuarial Opinion and to avoid attaching the related Actuarial Opinion to the AOS.

B. Different requirements by state

Not all states have enacted the NAIC Property and Casualty Actuarial Opinion Model Law (#745), which requires the AOS to be filed. Nevertheless, the Working Group recommends that the Appointed Actuary prepare the AOS regardless of the domiciliary state’s requirements, so that the AOS will be ready for submission should a foreign state – having the appropriate confidentiality safeguards – request it.

Most states provide the Annual Statement contact person with a checklist that addresses filing requirements. The Working Group advises the Appointed Actuary to work with the company to determine the requirements for its domiciliary state.

C. Format

The purpose of the AOS is to show a comparison between the company’s carried reserves and the Appointed Actuary’s estimates. Because the AOS is a synopsis of the conclusions drawn in the Actuarial Report, the content of the AOS should reflect the analysis performed by the Appointed Actuary. Therefore, all of the Appointed Actuary’s calculated estimates, including actuarial central estimates and ranges, are to be presented in the AOS consistent with estimates presented in the Actuarial Report.

The American Academy of Actuaries’ Committee on Property and Liability Financial Reporting provides illustrative examples in its annual practice note “Statements of Actuarial Opinion on Property and Casualty Loss Reserves” that show how the Appointed Actuary might choose to display the required information. These examples present the numerical data in an easy-to-read table format.

IV. Guidance on qualification documentation

The Instructions have been modified for 2019 to require the Appointed Actuary to document qualifications in what is called “qualification documentation.” The qualification documentation needs to be provided to the Board of Directors at initial appointment and annually thereafter.

The following provides guidance Appointed Actuaries may find useful in drafting qualification documentation. Appointed Actuaries should use professional judgment when preparing the documentation and need not use the sample wording or format provided below. As a general principle, Appointed Actuaries should provide enough detail within the documentation to demonstrate that they satisfy each component of the ‘Qualified Actuary’ definition.

A. Brief biographical information

- The Appointed Actuary may provide resume-type information.
- Information may include the following:
  - professional actuarial designation(s) and year(s) first attained
  - insurance or actuarial coursework or degrees;
  - actuarial employment history: company names, position title, years of employment, and relevant information regarding the type of work (e.g., reserving, ratemaking, ERM)
B. “Qualified Actuary” definition

The Appointed Actuary should provide a description of how the definition of “Qualified Actuary” in the Instructions is met or expected to be met (in the case of continuing education) for that year. The Appointed Actuary should provide information similar to the following. Items (i) through (iii) below correspond with items (i) through (iii) in the Qualified Actuary definition.

(i) “I meet the basic education, experience and continuing education requirements of the Specific Qualification Standards for Statements of Actuarial Opinion, NAIC Property and Casualty Annual Statement, as set forth in the Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States (U.S. Qualification Standards), promulgated by the American Academy of Actuaries (Academy). The following describes how I meet these requirements:

a. Basic education:"

[Option 1] “met through relevant examinations administered by the Casualty Actuarial Society;” or

[Option 2] “met through alternative basic education.” The Appointed Actuary should further review documentation necessary per section 3.1.2 of the U.S. Qualification Standards.

b. “Experience requirements: met through relevant experience as described below.”

• To describe the Appointed Actuary’s responsible experience relevant to the subject of the Actuarial Opinion, information may include specific actuarial experiences relevant to the company’s structure (e.g., insurer, reinsurer, RRG), lines of business, or special circumstances.

• Experiences may include education (through organized activities or readings) about specific types of company structures, lines of business, or special circumstances.

c. “Continuing education: met (or expected to be met) through a combination of [industry conferences; seminars (both in-person and webinar); online courses; committee work; self-study; etc.], on topics including ______ (provide a brief overview of the CE topics. For example, ‘trends in workers’ compensation’ or ‘standards of actuarial practice on reserving.’). A detailed log of my continuing education credit hours is available upon request.”

• Section 3.3 of the Specific Qualification Standards for Statements of Actuarial Opinion, NAIC Property and Casualty Annual Statement requires the Appointed Actuary to earn 15 hours of CE on topics mentioned in Section 3.1.1.2. The Appointed Actuary should consider providing expanded detail on the completion (or planned completion) of these hours in the CE documentation.

(ii) “I have obtained and maintain an Accepted Actuarial Designation.” One of the following statements may be made, depending on the Appointed Actuary’s exam track:

• “I am a Fellow of the CAS (FCAS) and my basic education includes credit for Exam 6 – Regulation and Financial Reporting (United States).”

• “I am an Associate of the CAS (ACAS) and my basic education includes credit for Exam 6 – Regulation and Financial Reporting United States) and Exam 7 – Estimation of Policy Liabilities, Insurance Company Valuation, and Enterprise Risk Management.”

• “I am a Fellow of the SOA (FSA) and my basic education includes completion of the general insurance track, including the following optional exams: the United States’ version of the Financial and Regulatory Environment Exam and the Advanced Topics in General Insurance Exam.”
Alternatively, if the actuary was evaluated by the Academy's Casualty Practice Council and determined to be a Qualified Actuary, the Appointed Actuary may note such and identify any restrictions or limitations, including those for lines of business and business activities.

(iii) “I am a member of [professional actuarial association] that requires adherence to the same Code of Professional Conduct promulgated by the Academy, requires adherence to the U.S. Qualification Standards, and participates in the Actuarial Board for Counseling and Discipline when its members are practicing in the U.S.”

C. CE logging procedure

One of the Casualty Actuarial and Statistical (C) Task Force’s 2019 charges is to work with the CAS and SOA to identify: 1) whether the P/C Appointed Actuaries' logs of continuing education (CE) should contain any particular categorization to assist regulatory review; 2) what types of learning P/C Appointed Actuaries are using to meet CE requirements for ‘Specific Qualification Standards’ today; and 3) whether more specificity should be added to the P/C Appointed Actuaries' CE requirements to ensure CE is aligned with the educational needs for a P/C Appointed Actuary.

The Task Force has adopted a project plan that includes 2020 requirements for 1) categorization of continuing education (CE) in the Appointed Actuaries’ CE log and 2) CE log audits by the CAS/SOA of a percentage of Appointed Actuaries. Appointed Actuaries will need to use a specific logging format for their CE logs. While audited Appointed Actuaries will submit their individual logs, the CAS and SOA will only share aggregated information with the NAIC. The CAS and SOA will distribute information on 2020 CE logging and submission instructions, CE categories, and categorization rules.

Re: CASTF Regulatory Review of Predictive Models White Paper

Dear Kris,

As the American Academy of Actuaries’ senior property/casualty fellow, I appreciate this opportunity to comment further on the Casualty Actuarial and Statistical Task Force (CASTF) draft white paper discussing best practices for the Regulatory Review of Predictive Models (RRPM). My comments herein relate to the discussion draft released on October 15, 2019.

Throughout the RRPM paper, the philosophical benefits of predictive analytics and big data are well documented. Additionally, the paper describes well the challenges inherent in reviewing the models and regulating rates resulting from these models. The American Academy of Actuaries remains committed to effective actuarial practice in this area. It was our great pleasure to once again host a day-long session on predictive modeling at the NAIC Insurance Summit this past June. I will also point out anew that in 2018, the Academy produced a monograph, *Big Data and the Role of the Actuary*, which includes extensive sections on regulatory and professionalism considerations. My comments here will be brief, and it is my hope that they will be helpful to you and the CASTF members.

First, I will focus on a technical point. In Section VI, we see that the wording has been modified to emphasize the concept that input characteristics and rating factors are related to the expected loss or expense differences in risk. I strongly agree with this shift from the earlier version. However, I note that in A.4.b and B.3.d, the wording of “rational relationship” and “rational explanation” are less precise. I was not certain if this was intentional or an oversight. The current Section VI wording would seem to lead to better actuarial practice.

---

1 The American Academy of Actuaries is a 19,500+ member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
My second point is more philosophical than technical. It is one that I have raised before, and I suspect that you have received similar feedback from others. In short, the new requirements of the RRPM process have the potential to become unwieldy. Rate filers and regulatory reviewers will have to perform considerably more detailed work as a result. I certainly note throughout the document that you reference the fact that the RRPM structure is meant as guidance to regulators and is not binding. I also note considerable conciliatory language throughout. Knowing many of the CASTF members personally, I have no doubt that this is genuine.

Finally, I note that you have somewhat scaled back the list of potential request items and in some cases reduced the Level of Importance. All of this notwithstanding, one can hope that the near-term learning curve that will result will be brief and that delays will not be onerous.

In closing, I wish to reiterate that the American Academy of Actuaries remains committed to working with CASTF on this matter.

If you have any questions about these comments, contact me (gibson@actuary.org) or Marc Rosenberg, senior casualty policy analyst, at 202-785-7865 or rosenberg@actuary.org.

Sincerely,

Richard Gibson, MAAA, FCAS

The American Property Casualty Insurance Association (APCIA)\(^1\) appreciates the opportunity to provide comment on the NAIC Casualty Actuarial and Statistical Task Force (CASTF) exposure draft, dated October 15, 2019, regarding the *Regulatory Review of Predictive Models*.

The APCIA remains committed to working collaboratively with the Task Force in support of innovation and the effort to leverage the advancements in technology and data analytics to effectively respond to the changing risks and needs of our insurance consumers. The APCIA believes that development of best practices regarding the regulatory review of predictive models can foster beneficial upfront dialogue between the filing company and regulator that supports an efficient and effective review appropriately focused on ensuring compliance with applicable regulatory rating standards. However, the APCIA cautions against developing best practices that could create new standards or establish information elements that extend the statutory scope of the rate review process.

The following outlines our priority items of interest in the October 15, version of the white paper:

1. **Section VI. Guidance for Regulatory Review of Predictive Models (Best Practices)**
   a. **Best Practices #1:** Remove the newly added language "or other analysis". These Best Practices relate to the review of a predictive model used to inform how an insured’s premium is determined. It is unnecessary to broaden the scope beyond predictive models to include "other analysis".
   b. **Best Practices #3:** The regulator should "Consider whether the model is an update to or resolves a model submitted within a previously approved filing or, is completely new to the rating plan." This can help the reviewer save time by using information from the previous review of the

---

\(^1\) Representing nearly 60 percent of the U.S. property casualty insurance market, the American Property Casualty Insurance Association (APCIA) promotes and protects the viability of private competition for the benefit of consumers and insurers. APCIA represents the broadest cross-section of home, auto, and business insurers of any national trade association. APCIA members represent all sizes, structures, and regions, protecting families, communities, and businesses in the U.S. and across the globe.
predictive model.

c. Opening paragraph and Best Practices #3: Remove "and improves." "Improve" applies subjectivity and may result in different interpretations from different stakeholders (regulators, consumers, agents, insurers). The Best Practices should be agnostic to how the new or resolved predictive model impacts the rating plan. After the predictive model is reviewed, then the state’s DOI may determine if the predictive model "improved" the rating plan relative to their regulatory responsibilities.

d. Best Practices 4a: revise "actuarially sound" to "consistent with actuarial standards of practice, other applicable professional standards." Otherwise, we suggest that CASTF define the term "actuarially sound" in the glossary. As stressed in previous APCIA feedback, reference to applicable actuarial standards and principles should give the regulator greater comfort and knowledge of the general professional practices that guide the elements of the actuary’s filed rating plan, including the relevant aspects and use of any predictive model.

2. Section VII - Comments on specific Information Elements

a. C.1.c - Revise this information element to include a list of the relevant characteristics/variables from the associated predictive model. A predictive model may only impact one part of the rating plan, for example solving for expenses as opposed to indemnity costs. It will be extremely burdensome and unnecessarily exhaustive to both the company producing the filing and the DOI reviewing the filing to discuss all variables used in any capacity to produce a rating plan. A relevant list of variables will aid in reviewing the filed predictive model for prohibited variables and appropriate modeling procedures, which is consistent with the goals of these Best Practices. A review of the information element as stated is a review of the entire rating plan, consistent with the responsibilities of a DOI filing reviewer, but beyond the scope of this White Paper.

b. B.4.b, B.4.c, B.4.d - P-values, Statistical Significance, and all listed statistics should not be required. For example, P-values are not always used to develop a model. The APCIA suggests rewording these information elements to align with the Best Practice #2a, specifically determining how the resulting rating factors (or coefficients) are related to the differences in risk. The insurer can then provide a narrative and results for their process of following this Best Practice. Otherwise, this is an exercise where an insurer will provide p-values that are not used in developing a model. A reviewer at the DOI will question high p-values, but the modelers will not have an adequate response since p-values were not reviewed. The information elements as written are unduly prescribing how to develop a predictive model.

3. Section X Other Considerations

a. Discuss Correlation vs. Causality. This discussion is establishing a newly defined standard in reviewing a predictive model. However, the discussion of correlation vs. causality is not limited to the variables/characteristics used in a predictive model. Consistency should be applied to all variables/characteristics used in any capacity in a rating plan. The review of a predictive model should have similar Best Practices with those for reviewing a rating plan when the requested information (causation) is not unique to a predictive model. Rational explanations for the predictiveness of a variable are subjective and each regulator, actuary, data scientist, etc. has his or her own opinion. It is understood that regulators have the authority to impose standards of a rating plan to ensure that state laws are followed, e.g. avoiding unfair discrimination and specifically unaccepted variables. However, the APCIA encourages each DOI that may
implement or revise this subjective standard to determine and communicate their position relative to the specific statutes and regulations of their respective state. Clear communication on how companies should discuss causation vs. correlation and how a DOI will evaluate the discussion will provide companies with the understanding of how to build a rating plan for that state.

b. C.2.a. The APCIA reiterates our objection to guidance that suggests all characteristics and rating variables can be isolated and related to the risk of insurance loss in a manner that is logical and intuitive to any regulator or consumer regardless of their background or expertise. We agree that an insurer should be able to show that there is statistically significant correlation between a predictive variable and loss. However, an intuitive explanation is not proof of causation. An intuitive explanation may be illusory. Instead, the focus should be on identifying variables that are unfairly discriminatory. So long as a variable is not shown to be unfairly discriminatory, as that standard is currently and in past applied, its use should be permitted without requirement of an intuitive explanation. Insurers could be required to attest to the fact its variables are not unfairly discriminatory. A regulator could then object to use of a variable that the regulator can demonstrate as unfairly discriminatory.

The APCIA believes that for this white paper to meet its purpose of providing effective and practical regulatory guidance to improve the quality of predictive model reviews across states and aid speed to market and the competitiveness of the state marketplace, measures should be taken prior to adoption to demonstrate its efficacy for regulators and the industry. To that end, the APCIA strongly suggests “field testing” the Best Practices in Section VI using the Information Elements for Regulatory Review in Section VII. This idea of field testing was raised by a regulator member of the Task Force during its October 15, conference call.

Why is Field Testing needed? The CASTF White Paper drafting group stated, "We believe that there is a misunderstanding between the terms "best practices" and "information elements" that have been identified in this paper. Many comments appear to interpret "information elements" to mean "best practices" and as such have concerns. We believe the concerns raised in this and other similar comments is with the "information elements" that regulators may find helpful when applying the "best practices." However, the White Paper does not clarify which Best Practices are supported by each information element. Therefore, DOI’s are required to understand all information elements to determine which to use when implementing these Best Practices in reviewing a predictive model filing. The White Paper would benefit from field testing that could provide more practical guidance in applying these valuable Best Practices.

What does it achieve? The CASTF members can review true examples from companies in providing information elements to satisfy the Best Practices. The examples can be discussed by those with knowledge of predictive modeling to educate and give guidance on adequate responses provided by a company or responses that require additional regulator questions.

Why does it need to occur before the final adoption of the White Paper? Field testing may identify needed revisions to the White Paper before it is finalized and implemented as information elements may provide too much or too little information to evaluate the Best Practices. If the CASTF does not leverage field testing, these practical learnings will occur individually in each state as the Best Practices are applied. Clarity and consistency of implementation across many states will aid
regulators because it increases the ability to discuss findings with each other or leverage potential
NAIC assistance in reviewing predictive models. Clarity in how states will implement these Best
Practices will aid companies in preparing documentation of a predictive model. The documentation
often occurs during or immediately after solving the model. Companies are better able to provide
filing requirements if known ahead of time because model documentation may be months before
the model is implemented in a state’s rating plan and provided to the DOI in a filing.

Thank you again for the opportunity to comment. We look forward to working with the Task Force to
achieve a solution that benefits regulators, insurers and ultimately our consumers.

****

Respectfully Submitted,

I. INTRODUCTION

Insurers’ use of predictive analytics along with big data has significant potential benefits to both consumers and insurers. Predictive analytics can reveal insights into the relationship between consumer behavior and the cost of insurance, lower the cost of insurance for many, and provide incentives for consumers to better control and mitigate loss. However, predictive analytic techniques are evolving rapidly and leaving many regulators without the necessary tools to effectively review insurers’ use of predictive models in insurance applications.

When a rate plan is truly innovative, the insurer must anticipate or imagine the reviewers’ interests because reviewers will respond with unanticipated questions and have unique educational needs. Insurers can learn from the questions, teach the reviewers, and so forth. When that back-and-forth learning is memorialized and retained, filing requirements and insurer presentations can be routinely organized to meet or exceed reviewers’ needs and expectations. Hopefully, this paper helps bring more consistency and to the art of reviewing predictive models within a rate filing.

The Casualty Actuarial and Statistical (C) Task Force (CASTF) has been charged with identifying best practices to serve as a guide to state insurance departments in their review of predictive models1 underlying rating plans. There were two charges given to CASTF by the Property and Casualty Insurance (C) Committee at the request of the Big Data (EX) Working Group:

A. Draft and propose changes to the Product Filing Review Handbook to include best practices for review of predictive models and analytics filed by insurers to justify rates.
B. Draft and propose state guidance (e.g., information, data) for rate filings that are based on complex predictive models.

This paper will identify best practices when reviewing predictive models and analytics filed by insurers with regulators to justify rates and provide state guidance for review of rate filings based on predictive models. Upon adoption of this paper by the Executive (EX) Committee and Plenary, the Task Force will evaluate how to incorporate these best practices into the Product Filing Review Handbook and will recommend such changes to the Speed to Market (EX) Working Group.

II. WHAT IS A “BEST PRACTICE?”

A best practice is a form of program evaluation in public policy. At its most basic level, a practice is a “tangible and visible behavior… [based on] an idea about how the actions… will solve a problem or achieve a goal”2. Best practices are used to maintain quality as an alternative to mandatory legislated standards and can be based on self-assessment or benchmarking.3 Therefore, a best practice represents an effective method of problem solving. The "problem" regulators want to solve is probably better posed as seeking an answer to this question: How can regulators determine that predictive models, as used in rate filings, are compliant with state laws and regulations?

Key Regulatory Principles

In this paper, best practices are based on the following principles that promote a comprehensive and coordinated review of predictive models across states:

1. State insurance regulators will maintain their current rate regulatory authority.
2. State insurance regulators will be able to share information to aid companies in getting insurance products to market more quickly.
3. State insurance regulators will share expertise and discuss technical issues regarding predictive models.
4. State insurance regulators will maintain confidentiality, where appropriate, regarding predictive models.

In this paper, best practices are presented in the form of guidance to regulators who review predictive models and to insurance companies filing rating plans that incorporate predictive models. Guidance will identify specific information

---

1 In this paper, references to “model” or “predictive model” are the same as “complex predictive model” unless qualified.
useful to a regulator in the review of a predictive model, comment on what might be important about that information and, where appropriate, provide insight as to when the information might identify an issue the regulator needs to be aware of or explore further.

III. DO REGULATORS NEED BEST PRACTICES TO REVIEW PREDICTIVE MODELS?

The term “predictive model” refers to a set of models that use statistics to predict outcomes. When applied to insurance, the model is chosen to estimate the probability or expected value of an outcome given a set amount of input data; for example, models can predict the frequency of loss, the severity of loss, or the pure premium. The generalized linear model (GLM) is a commonly used predictive model in insurance applications, particularly in building an insurance product’s rating plan.

Depending on definitional boundaries, predictive modeling can sometimes overlap with the field of machine learning. In this modeling space, predictive modeling is often referred to as predictive analytics.

Before GLMs became vogue, rating plans were built using univariate methods. Univariate methods were considered intuitive and easy to demonstrate the relationship to costs (loss and/or expense). Today, many insurers consider univariate methods too simplistic since they do not take into account the interaction (or dependencies) of the selected input variables.

According to many in the insurance industry, GLMs introduce significant improvements over univariate-based rating plans by automatically adjusting for correlations among input variables. Today, the majority of predictive models used in private passenger/persianal automobile and homeowner/home rating plans are GLMs. However, GLM results are not always intuitive, and the relationship to costs may be difficult to explain. This is a primary reason regulators can benefit from best practices.

A GLM consists of three elements:

- A target variable, $Y$, which is a random variable that is independent and follows a probability distribution from the exponential family, defined by or more generally, a selected variance function and dispersion parameter.
- A linear predictor $\eta = X^T \beta$.
- A link function $g$ such that $E(Y) = \mu = g^{-1}(\eta)$.

As can be seen in the description of the three GLM components above, it may take more than a casual introduction to statistics to comprehend the construction of a GLM. As stated earlier, a downside to GLMs is that it is more challenging to interpret the GLM output than with univariate models.

If the underlying data is not credible, then no model will improve that credibility, and segmentation methods could make credibility worse. GLM software provides point estimates and allows the modeler to consider standard errors and confidence intervals. GLM output is typically assumed to be 100% credible no matter the size of the underlying data set. GLMs effectively assume that the underlying datasets are 100% credible no matter their size. If some segments have little data, the resulting uncertainty would not be reflected in the GLM parameter estimates themselves (although it might be reflected in the standard errors, confidence intervals, etc.). Even though the process of selecting relativities often includes adjusting the raw GLM output, the resultant selections are not typically credibility-weighted with any complement of credibility. Nevertheless, selected relativities based on GLM model output may differ from GLM point estimates.

Because of this presumption in credibility, which may or may not be valid in practice, the modeler and the regulator reviewing the model would need to engage in thoughtful consideration when incorporating GLM output into a rating plan.

---

4 A more thorough exploration of different predictive models will be found in many statistics’ books, including Geisser, Seymour (September 2016). Predictive Inference: An Introduction. New York: Chapman & Hall.

5 The generalized linear model (GLM) is a flexible family of models that are unified under a single method. Types of GLM include logistic regression, Poisson regression, gamma regression and multinomial regression.

6 More information on model elements can be found in most statistics’ books.

7 Sometimes insurers do review complements of credibility and further weight the GLM output with those complements. While this may not be a standard practice today, new techniques could result in this becoming more standard in the future.

8 GLMs provide confidence intervals, credibility methods do not. There are techniques such as penalized regression that blend credibility with a GLM and improve a model’s ability to generalize.
to ensure that model predictiveness is not compromised by any lack of actual credibility. Another consideration is the availability of big data, both internal and external, that may result in the selection of predictor variables that have spurious correlation with the target variable. Therefore, to mitigate the risk that model credibility or predictiveness is lacking, a complete filing for a rating plan that incorporates GLM output should include validation evidence for the rating plan, not just the statistical model.

To further complicate regulatory review of models in the future, modeling methods are evolving rapidly and not limited just to GLMs. As computing power grows exponentially, it is opening up the modeling world to more sophisticated forms of data acquisition and data analysis. Insurance actuaries and data scientists seek increased predictiveness by using even more complex predictive modeling methods. Examples of these are predictive models utilizing random forests, decision trees, neural networks, or combinations of available modeling methods (often referred to as ensembles). These evolving techniques will make the regulators’ understanding and oversight of filed rating plans incorporating predictive models even more challenging.

In addition to the growing complexity of predictive models, many state insurance departments do not have in-house actuarial support or have limited resources to contract out for support when reviewing rate filings that include use of predictive models. The Big Data (EX) Working Group identified the need to provide states with guidance and assistance when reviewing predictive models underlying filed rating plans.9 The Working Group circulated a proposal addressing aid to state insurance regulators in the review of predictive models as used in personal insurance rate filings. This proposal was circulated to all of the Working Group members and interested parties on December 19, 2017, for a public comment period ending January 12, 2018.10 The Big Data Working Group effort resulted in the new CASTF charges (see the Introduction section) with identifying best practices that provide guidance to states in the review of predictive models.

So, to get to the question asked by the title of this section: Do regulators need best practices to review predictive models? It might be better to ask this question another way: Are best practices in the review of predictive models of value to regulators and insurance companies? The answer is “yes” to both questions. Regulatory best practices need to be developed that do not unfairly or inordinately create barriers for insurers and ultimately consumers while providing a baseline of analysis for regulators to review the referenced filings. Best practices will aid regulatory reviewers by raising their level of model understanding. With regard to scorecard models and the model algorithm, there is often not sufficient support for relative weight, parameter values, or scores of each variable. Best practices can potentially aid in this problem.

However, best practices are not intended to create standards for filings that include predictive models. Rather, best practices will assist the states in identifying the model elements they should be looking for in a filing that will aid the regulator in understanding why the company believes that the filed predictive model improves the company’s rating plan, making that rating plan fairer to all consumers in the marketplace. To make this work, both regulators and industry need to recognize that:

---

9 Minutes of the Big Data (EX) Working Group, March 9, 2018: https://secure.naic.org/secure/minutes/2018_spring/ex_it_ifpdf59
10 All comments received by the end of January were posted to the NAIC website March 12 for review.
Best practices merely provide guidance to regulators in their essential and authoritative role over the rating plans in their state.

All states may have a need to review predictive models whether that occurs with approval of rating plans or in a market conduct exam. Best practices help the regulator identify elements of a model that may influence the regulatory review as to whether modeled rates are appropriately justified. Each regulator needs to decide if the insurer’s proposed rates are compliant with state laws and regulations and whether to act on that information.

Best practices will lead to improved quality in predictive model reviews across states, aiding speed to market and competitiveness of the state marketplace.

Best practices provide a framework for states to share knowledge and resources to facilitate the technical review of predictive models.

Best practices aid training of new regulators and/or regulators new to reviewing predictive models. (This is especially useful for those regulators who do not actively participate in NAIC discussions related to the subject of predictive models.)

Each regulator adopting best practices will be better able to identify the resources needed to assist their state in the review of predictive models.

Lastly, from this point on in this paper, best practices will be referred to as “guidance.” This reference is in line with the intent of this paper to support individual state autonomy in the review of predictive models.

IV. SCOPE

The focus of this paper will be on GLMs used to create private passenger personal automobile and home insurance rating plans.

The legal and regulatory constraints (including state variations) are likely to be more evolved, and challenging, for personal automobile and home insurance. Through review of these personal lines, the knowledge needed to review predictive models, and guidance in this paper regarding GLMs for personal automobile and home insurance may be transferrable when the review involves GLMs applied to other lines of business. Modeling depends on context, so the GLM reviewer has to be alert for data challenges and business applications that differ from the more familiar personal lines. For example, compared to personal lines, modeling for rates in commercial lines is more likely to encounter low volumes of historical data, dependence on advisory loss costs, unique large accounts with some large deductibles and package products that build create policies from numerous line-of-business and coverage building blocks. Commercial lines commonly use individual risk modifications following experience, judgment, and/or expense considerations. A regulator may never see how models impact commercial excess and surplus lines filings. The legal and regulatory constraints (including state variations) are likely to be more evolved, and challenging, in personal lines. A GLM rate model for personal lines in 2019 is either an update or a late-adopter's defensive tactic. adopting GLM for commercial lines has a shorter history. Also, the legal and regulatory constraints (including state variations) are likely to be more prevalent, and challenging in personal lines, which is the basis of this paper’s guidance. A GLM rate model for personal lines in 2019 is either an update or a late-adopter's defensive tactic. adopting a GLM for commercial lines rating plans has a shorter history and thus is less familiar to many regulators.

Guidance offered here might be useful (with deeper adaptations) when starting to review different types of predictive models. If the model is not a GLM, some listed items might not apply. Not all predictive models generate p-values or F tests. Depending on the model type, other considerations might be important. When transferring guidance to other lines of business and other types of model, unique considerations may arise depending on the context in which a predictive model is proposed to be deployed, the uses to which it is proposed to be put, and the potential consequences for the insurer, its customers and its competitors. This paper does not delve into these possible considerations but regulators should be prepared to address them as they arise.

V. CONFIDENTIALITY

Regulatory reviewers are required to protect confidential information in accordance with applicable State law. However, insurers should be aware that a rate filing might become part of the public record. Each state determines the confidentiality of a rate filing, supplemental material to the filing, when filing information might become public, the procedure to request
that filing information be held confidentially, and the procedure by which a public records request is made. It is incumbent
on an insurer to be familiar with each state’s laws regarding the confidentiality of information submitted with their rate
filing.

Though state authority, regulations and rules governing confidentiality always apply, this reliance should be revisited if
the NAIC or another third party becomes involved in the review process on behalf of the states.

VI. GUIDANCE FOR REGULATORY REVIEW OF PREDICTIVE MODELS (BEST PRACTICES)

Best practices will help the regulator understand if a predictive model is cost based, if the predictive model is compliant
with state law, and how the model improves, the company’s rating plan. Best practices can, also, make the regulator's
review more consistent across states and more efficient, and assist companies in getting their products to market faster.

With this in mind, the regulator’s review of predictive models should:

1. Ensure that the selected rating factors, developed based on the model or other analysis, produce rates that are
   not excessive, inadequate, or unfairly discriminatory.
   a. Review the overall rate level impact of the proposed revisions proposed based on the predictive model
      output in comparison to rate level indications provided by the filer.
   b. Review the premium disruption for individual policyholders and how the disruptions can be explained to
      individual consumers.
   c. Review the individual input characteristics to and output factors from the predictive model (and its sub-
      models), as well as, associated selected relativities to ensure they are not unfairly discriminatory.

2. Thoroughly review all aspects of obtaining a clear understanding of the data used to build and validate the model,
   and thoroughly review all other aspects of the model, including the source data, assumptions, adjustments,
   variables, submodels used as input, and resulting output.
   a. Determine that individual input characteristics to a predictive model and their resulting rating factors are
      related to the expected loss or expense differences in risk. Each input characteristic should have an intuitive
      or demonstrable actual relationship to expected loss or expense.
   b. Determine that the data used as input to the predictive model is accurate, including a clear understanding
      how missing values, erroneous values and outliers are handled.
   c. Determine that any adjustments to the raw data are handled appropriately, including but not limited to,
      trending, development, capping, removal of catastrophes.
   d. Determine that rating factors from a predictive model are related to expected loss or expense differences in
      risk. Each rating factor should have a demonstrable actual relationship to expected loss or expense.
   e. Obtain a clear understanding of how each risk characteristic, used as input to the model, is updated
      and whether the model is periodically rerun, so model output reflects changes to non-static risk
      characteristics.
   f. Obtain a clear understanding of how often each risk characteristic, used as input to the model, is updated
      and whether the model is periodically rerun, so model output reflects changes to non-static risk
      characteristics.
   g. Determine whether internal and external data used in relation to the model is compatible with practices
      allowed in the jurisdiction and do not reflect prohibited characteristics.
   h. Obtain a clear understanding of how the selected predictive model was built.

3. Evaluate how the model interacts with and improves the rating plan.
   a. Obtain a clear understanding of the characteristics that are input to a predictive model (and its sub-models),
      their relationship to each other and their relationship to non-modeled characteristics/variables used to
      calculate a risk’s premium.
   b. Obtain a clear understanding of how the selected predictive model was built and why the insurer believes
      this type of model works in a private passenger automobile or homeowner’s insurance risk application.
   c. Obtain a clear understanding of how model output interacts with non-modeled characteristics/variables
      used to calculate a risk’s premium.
d. Obtain a clear understanding of how the predictive model was integrated into the insurer’s state rating plan and how it improves that plan.

e. For predictive model refreshes, determine whether sufficient validation was performed to ensure the model is still a good fit.

4. Enable competition and innovation to promote the growth, financial stability, and efficiency of the insurance marketplace.

   a. Enable innovation in the pricing of insurance through acceptance of predictive models, provided they are actuarially sound and in compliance with state laws.
   
   b. Protect the confidentiality of filed predictive models and supporting information in accordance with state law.
   
   c. Review predictive models in a timely manner to enable reasonable speed to market.

VII. PREDICTIVE MODELS – INFORMATION FOR REGULATORY REVIEW

This section of the paper identifies the information a regulator may need to review a predictive model used by an insurer to support a filed P/C-personal automobile or home insurance rating plan. The list is lengthy but not exhaustive. It is not intended to limit the authority of a regulator to request additional information in support of the model or filed rating plan. Nor is every item on the list intended to be a requirement for every filing. However, the items listed should help guide a regulator to obtain sufficient information to determine if the rating plan meets state specific filing and legal requirements.

Documentation of the design and operational details of the model is required to ensure business continuity and transparency of models used. Granularity of documentation takes into account the level of management or key function at which it is intended to be used. Documentation should be sufficiently detailed and complete to enable a third party to form a sound judgment on the suitability of the model for the intended purpose. The theory, assumptions, methodologies, software and empirical bases should be explained, as well as the data used in developing and implementing the model. Relevant testing and ongoing performance testing need to be documented. Key model limitations and overrides need to be pointed out so that stakeholders understand the circumstances under which the model does not work effectively. End-user documentation should be provided and key reports using the model results described. Major changes to the model need to be shared in a timely manner and documented, and IT controls should be in place, such as a record of versions, change control and access to model.¹¹

Many information elements listed below are probably confidential, proprietary or trade secret and should be treated as such according to state law. Regulators should be aware of their state laws on confidentiality when requesting data from insurers that may be proprietors or trade secret. For example, some proprietary models may have contractual terms (with the insurer) that prevent disclosure to the public. Without clear necessity, exposing this data to additional dissemination may hinder the model’s protection.¹²

Though the list seems long, the insurer should already have internal documentation on the model for more than half of the information listed. The remaining items on the list require either minimal analysis (approximately 25%) or deeper analysis to generate the information for a regulator (approximately 25%).

The “Importance to Regulator’s Review” ranking of information a regulator may need to review is based on the following level criteria:

Level 1 - This information is necessary to begin the review of a predictive model. These data elements pertain to basic information about the type and structure of the model, the data and variables used, the assumptions made, and the goodness of fit. Ideally, this information would be included in the filing documentation with the initial submission of a filing made based on a predictive model.

¹¹ Michele Bourdeau, The Modeling Platform ISSUE 4 • DECEMBER 2016 Model Risk Management: An Overview, Page 6; Published by the Modeling Section of the Society of Actuaries.

¹² There are some models that are made public by the vendor and would not result in a hindrance of the model’s protection.
Draft: 10/15/2019
As adopted by the Casualty Actuarial and Statistical (C) Task Force on XX/XX/XX

Level 2 - This information is necessary to continue the review of all but the most basic models; such as those based only on the filer’s internal data and only including variables that are in the filed rating plan. These data elements provide more detailed information about the model and address questions arising from review of the information in Level 1. Insurers concerned with speed to market may also want to include this information in the filing documentation.

Level 3 - This information is necessary to continue the review of a model where concerns have been raised and not resolved based on review of the information in Levels 1 and 2. These data elements address even more detailed aspects of the model including (to be listed after we assign levels). This information does not necessarily need to be included with the initial submission, unless specifically requested in a particular jurisdiction, as it is typically requested only if the reviewer has concerns that the model may not comply with state laws.

Level 4 - This information is necessary to continue the review of a model where concerns have been raised and not resolved based on the information in Levels 1, 2, and 3. This most granular level of detail is addressing the basic building blocks of the model and does not necessarily need to be included by the filer with the initial submission, unless specifically requested in a particular jurisdiction. It is typically requested only if the reviewer has serious concerns that the model may produce rates or rating factors that are excessive, inadequate, or unfairly discriminatory.

A. Selecting Model Input

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance to the Regulator’s Review</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>A.1.a</td>
<td>Review the details of all data sources for both insurance and non-insurance data used as input to the model (only need sources for filed input characteristics included in the filed model). For each source, obtain a list all data elements used as input to the model that came from that source.</td>
<td>1</td>
<td>Request details of all data sources, whether internal to the company or from external sources. For insurance experience (policy or claim), determine whether data are aggregated by calendar, accident, fiscal or policy year and when it was last evaluated. For each data source, get a list all data elements used as input to the model that came from that source. For insurance data, get a list all companies whose data is included in the datasets. Request details of any non-insurance data used (customer-provided or other), including who owns this data, on how consumers can verify their data and corrections, whether the data was collected by use of a questionnaire/checklist, whether data was voluntarily reported by the applicant, and whether any of the data is subject to the Fair Credit Reporting Act. If the data is from an outside source, find out what steps were taken to verify the data was accurate. Note that reviewing source details should not make a difference when the model is new or refreshed; refreshed models would report the prior version list with the incremental changes due to the refresh.</td>
</tr>
<tr>
<td>A.1.b</td>
<td>Reconcile raw-aggregated insurance data underlying the model with available external insurance reports.</td>
<td>24</td>
<td>Accuracy of insurance data should be reviewed as well. Aggregated data is straight from the insurer's data banks without modification (e.g., not scrubbed or transformed). The dataset would not be adjusted for...</td>
</tr>
</tbody>
</table>
The company should provide some form of reasonability check that the data makes sense when checked against other audited sources.

The company should explain how the data used to build the model makes sense for a specific state. The regulator should inquire which states were included in the data underlying the model build, testing and validation. The company should provide an explanation where the data came from geographically and that it is a good representation for a state, i.e., the distribution by state should not introduce a geographic bias. For example, there could be a bias by peril or wind-resistant building codes. Evaluate whether the data is relevant to the loss potential for which it is being used. For example, verify that hurricane data is only used where hurricanes can occur.

If the data is from a third-party source, the company should provide information on the source. Depending on the nature of the data, data should be documented and an overview of who owns it and the topic of consumer verification should be addressed.

Check if the same variables/datasets were used in both the model, a submodel or as stand-alone rating characteristics. If so, verify there was no double-counting or redundancy.

If the sub-model was previously approved, that may change the extent of the sub-model’s review. If approved, verify when and that it was the same model currently under review. However, previous approval does not necessarily confer a guarantee of ongoing approval, for example when statutes and regulations have changed or if a model's indications have been undermined by subsequent empirical experience. However, knowing whether a model has been previously approved can help focus the regulator’s efforts and determine whether or not the prior decision needs to be revisited.
**A.2.bc**

Determine if sub-model output was used as input to the GLM; obtain the vendor name, and the name and version of the sub-model.

To accelerate the review of the filing, the regulator needs to know the name of 3rd party vendor and contact information for a representative from the vendor, whether model or sub-model. The company should provide the name of the third-party vendor and a contact in the event the regulator has questions. The “contact” can be an intermediary at the insurer, e.g., a filing specialist, who can place the regulator in direct contact with a Subject Matter Expert (SME) at the vendor.”

Examples of such sub-models include credit/financial scoring algorithms and household composite score models. Sub-models can be evaluated separately and in the same manner as the primary model under evaluation. A sub-model contact for additional information should be provided. SMEs on sub-model may need to be brought into the conversation with regulators (whether in-house or 3rd-party sub-models are used).

**A.2.cd**

If using catastrophe model output, identify the vendor and the model settings/assumptions used when the model was run.

For example, it is important to know hurricane model settings for storm surge, demand surge, long/short-term views.

To accelerate the review of the filing, get contact information for the SME that ran the model and an SME from the vendor. The “SME” can be an intermediary at the insurer, e.g., a filing specialist, who can place the regulator in direct contact with the appropriate SMEs at the insurer or model vendor.

**A.2.de**

If using catastrophe model output (a sub-model) as input to the GLM under review, verify whether loss associated with the modeled output was removed from the loss experience datasets.

If a weather-based sub-model is input to the GLM under review, loss data used to develop the model should not include loss experience associated with the weather-based sub-model. Doing so could cause distortions in the modeled results by double counting such losses when determining relativities or loss loads in the filed rating plan. For example, redundant losses in the data may occur when non-hurricane wind losses are included in the data while also using a severe convective storm model in the actuarial indication. Such redundancy may also occur with the inclusion of fluvial or pluvial flood losses when using a flood model, inclusion of freeze losses when using a winter storm model or including demand surge caused by any catastrophic event.

Note that, the rating plan or indications underlying the rating plan, may provide special treatment of large losses and non-modeled large loss events. If such treatments exist, the company should provide an explanation how they were handled. These treatments need to be identified and the company/regulator needs to determine whether model data needs to be adjusted. For example, should large BI losses, in the case of personal automobile insurance, be capped or excluded, or should large non-catastrophe wind/hail claims in...
### A.2.2
If using output of any scoring algorithms, obtain a list of the variables used to determine the score and provide the source of the data used to calculate the score.

| 1 | Any sub-model should be reviewed in the same manner as the primary model that uses the sub-model’s output as input. |

### 3. Adjustments to Data

#### A.3.a
Determine if premium, exposure, loss or expense data were adjusted (e.g., developed, trended, adjusted for catastrophe experience or capped) and, if so, how? Do the adjustments vary for different segments of the data and, if so, identify the segments and how was the data adjusted?

| 2 | The rating plan or indications underlying the rating plan may provide special treatment of large losses and non-modeled large loss events. If such treatments exist, the company should provide an explanation how they were handled. These treatments need to be identified and the company/regulator needs to determine whether model data needs to be adjusted. For example, should large bodily injury (BI) liability losses in the case of personal automobile insurance be excluded, or should large non-catastrophe wind/hail claims in home insurance be excluded from the model's training, test and validation data? Look for anomalies in the data that should be addressed. For example, is there an extreme loss event in the data? If other processes were used to load rates for specific loss events, how is the impact of those losses considered? Examples of losses that can contribute to anomalies in the data are large losses or flood, hurricane or severe convective storm losses. |

#### A.3.b
Identify adjustments that were made to raw aggregated data, e.g., transformations, binning and/or categorizations. If any, identify the name of the characteristic/variable and obtain a description of the adjustment.

| 1 | This is most relevant for variables that have been "scrubbed" or adjusted. Though most regulators may never ask for aggregated data and do not plan to rebuild any models, a regulator may ask for this aggregated data or subsets of it. It would be useful to the regulator if the percentage of exposures and premium for missing information from the model data by category were provided. This data can be displayed in either graphical or tabular formats. |

#### A.3.c
Ask for aggregated data (one data set of pre-adjusted/scrubbed data and one data set of post-adjusted/scrubbed data) that allows the regulator to focus on the univariate distributions and compare raw data to adjusted/binned/transformed/etc. data.

| 2 | This is most relevant for variables that have been "scrubbed" or adjusted. Though most regulators may never ask for aggregated data and do not plan to rebuild any models, a regulator may ask for this aggregated data or subsets of it. It would be useful to the regulator if the percentage of exposures and premium for missing information from the model data by category were provided. This data can be displayed in either graphical or tabular formats. |

#### A.3.d
Determine how missing data was handled.

| 1 | This is most relevant for variables that have been "scrubbed" or adjusted. The regulator should be aware of assumptions the modeler made in handling missing data. |
null or "not available" values in the data. If adjustments or re-coding of values were made, they should be explained. It may be useful to the regulator if the percentage of exposures and premium for missing information from the model data were provided. This data can be displayed in either graphical or tabular formats.

<table>
<thead>
<tr>
<th>A.3.e</th>
<th>If duplicate records exist, determine how they were handled.</th>
<th>1</th>
</tr>
</thead>
<tbody>
<tr>
<td>A.3.f</td>
<td>Determine if there were any material outliers identified and subsequently adjusted during the scrubbing process. Get a list (with description) of the outliers and determine what adjustments were made to these outliers.</td>
<td>22</td>
</tr>
</tbody>
</table>

Look for a discussion of how outliers were handled. If necessary, the regulator may want to investigate further by getting a list (with description) of the outliers and determine what adjustments were made to each outlier. To understand the filer's response, the regulator should ask for the filer's materiality standard.

4. Data Organization

<table>
<thead>
<tr>
<th>A.4.a</th>
<th>Obtain documentation on the methods used to compile and organize data, including procedures to merge data from different sources or filter data based on particular characteristics and a description of any preliminary analyses, data checks, and logical tests performed on the data and the results of those tests.</th>
<th>2</th>
</tr>
</thead>
<tbody>
<tr>
<td>A.4.b</td>
<td>Obtain documentation on the insurer’s process for reviewing the appropriateness, reasonableness, consistency and comprehensiveness of the data, including a discussion of the rational relationship the data has to the predicted variable.</td>
<td>2</td>
</tr>
<tr>
<td>A.4.c</td>
<td>Identify material findings the company had during their data review and obtain an explanation of any potential material limitations, defects, bias or unresolved concerns found or believed to exist in the data. If issues or limitations in the data influenced modeling analysis and/or results, obtain a description of those concerns and an explanation how modeling analysis was adjusted and/or results were impacted.</td>
<td>1</td>
</tr>
</tbody>
</table>

A response of "none" or "n/a" may be an appropriate response.
### B. Building the Model

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance to Regulator’s Review</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>B.1.a</td>
<td>Identify the type of model underlying the rate filing (e.g. Generalized Linear Model – GLM, decision tree, Bayesian Generalized Linear Model, Gradient-Boosting Machine, neural network, etc.). Understand the model's role in the rating system and provide the reasons why that type of model is an appropriate choice for that role.</td>
<td>1</td>
<td>It is important to understand if the model in question is a GLM, and therefore these best practices are applicable or, if it is some other model type, in which case other reasonable review approaches may be considered. There should be an explanation of why the model (using the variables included in it) is appropriate for the line of business. If by-peril or by-coverage modeling is used, the explanation should be by-peril/coverage. Note, if the model is not a GLM, the guidance and information elements in this white paper may not apply in their entirety.</td>
</tr>
<tr>
<td>B.1.b</td>
<td>Identify the software used for model development. Obtain the name of the software vendor/developer, software product and a software version reference used in model development.</td>
<td>2</td>
<td>Changes in software from one model version to the next may explain if such changes, over time, contribute to changes in the modeled results. The company should provide the name of the third-party vendor and a contact in the event the regulator has questions. The “contact” can be an intermediary at the insurer who can place the regulator in direct contact with appropriate SMEs. Open-source software/programs used in model development should be identified by name and version the same as if from a vendor. If version is not known, simply state such, e.g., “R is the software source.”</td>
</tr>
<tr>
<td>B.1.c</td>
<td>Obtain a description how the available data was divided between model training, test and validation datasets. The description should include an explanation why the selected approach was deemed most appropriate, and whether the company made any further subdivisions of available data and reasons for the subdivisions (e.g., a portion separated from training data to support testing of components during model building). Determine if the validation data was accessed before model training was completed and, if so, obtain an explanation how and why that came to occur.</td>
<td>1</td>
<td>It would be unexpected if validation data were used for any purpose other than validation.</td>
</tr>
<tr>
<td>B.1.d</td>
<td>Obtain a brief description of the development process, from initial concept to final model and filed rating plan (in less than three pages of narrative).</td>
<td>1</td>
<td>The narrative should have the same scope as the filing.</td>
</tr>
<tr>
<td>Draft: 10/15/2019</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>As adopted by the Casualty Actuarial and Statistical (C) Task Force on XX/XX/XX</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

| B.1.e | Obtain a narrative on whether loss ratio, pure premium or frequency/severity analyses were performed and, if separate frequency/severity modeling was performed, how pure premiums were determined. | 1 |  

| B.1.f | Identify the model’s target variable. | 1 |  

| B.1.g | Obtain a detailed description of the variable selection process. | 1 |  

| B.1.h | In conjunction with variable selection, obtain a narrative on how the Company determine the granularity of the rating variables during model development. | 1 |  

| B.1.i | Determine if model input data was segmented in any way. For example, was modeling performed on a by-coverage, by-peril, or by-form basis? If so, obtain a description of data segmentation and the reasons for data segmentation. | 1 |  

| B.1.j | If adjustments to the model were made based on credibility considerations, obtain an explanation of the credibility considerations and how the adjustments were applied. | 2 |  

| 2. Medium-Level Narrative for Building the Model |  

| B.2.a | At crucial points in model development, if selections were made among alternatives regarding model assumptions or techniques, obtain a narrative on the judgment used to make those selections. | 2 |  

| B.2.b | If post-model adjustments were made to the data and the model was rerun, obtain an explanation on the details and the rationale for those adjustments. | 2 |  

A clear description of the target variable is key to understanding the purpose of the model. It may also prove useful to obtain a sample calculation of the target variable in Excel format, starting with the “raw” data for a policy, or a small sample of policies, depending on the complexity of the target variable calculation.

The narrative regarding the variable selection process may address matters such as the criteria upon which variables were selected or omitted, identification of the number of preliminary variables considered in developing the model versus the number of variables that remained, and any statutory or regulatory limitations that were taken into account when making the decisions regarding variable selection.

This discussion should include discussion of how credibility was considered in the process of determining the level of granularity of the variables selected.

Adjustments may be needed given models do not explicitly consider the credibility of the input data or the model’s resulting output; models take input data at face value and assume 100% credibility when producing modeled output.

Evaluate the addition or removal of variables and the model fitting. It is not necessary for the company to discuss each iteration of adding and subtracting variables, but the regulator should gain a general understanding how these adjustments were done, including any statistical improvement measures relied upon.

<tr>
<td>B.4.b</td>
<td>Obtain a description of any adjustments that were made in the data with respect to scaling for discrete variables or binning the data.</td>
</tr>
<tr>
<td></td>
<td>A3.c addresses pre-modeling adjustments to data. In the mid-level narrative context, B2.a addresses judgments of any kind made during modeling. Only choices made at &quot;crucial points in model development&quot; need be discussed.</td>
</tr>
<tr>
<td>B.4.c</td>
<td>Obtain a description of any transformations made for continuous variables.</td>
</tr>
<tr>
<td>-------</td>
<td>-------------------------------------------------------------------------</td>
</tr>
</tbody>
</table>

| A.3.f | addresses pre-modeling transformations to data. In the mid-level narrative context, B.2.a addresses transformations of any kind made during modeling. Only choices made at “crucial points in model development” need to be discussed. |

To build a unique model with acceptable goodness-of-fit to the training data, important steps have been taken. Such steps may have been numerous, and at least some of the judgments involved may be difficult to describe and explain. Nevertheless, neither the model filer nor the reviewer can assume these steps are immaterial, generally understood, or implied by the model’s generic form. The model filer should anticipate regulatory concerns in its initial submission by identifying and explaining the model fitting steps it considers most important. If a reviewer has regulatory concerns not resolved by the initial submission, appropriate follow-up inquiries are likely to depend on the particular circumstances.

| B.4.db | For each discrete variable (discrete or continuous) level, review the appropriate parameter values, confidence intervals, chi-square tests, p-values and any other relevant and material tests. Determine if model development data, validation data, test data or other data was used for these tests. |

| Typical p-values greater than 5% are large and should be questioned. Reasonable business judgment can sometimes provide legitimate support for high p-values. Reasonableness of the p-value threshold could also vary depending on the context of the model. For example, the threshold might be lower when many candidate variables were evaluated for inclusion in the model. |

Overall lift charts and/or statistical tests using validation data may not provide enough of the picture. If there is concern about one or more individual variables, the reviewer may obtain, for each discrete variable level, the parameter value, confidence intervals, chi-square tests, p-values and any other relevant and material tests. For variables that are modeled continuously, it may be sufficient to obtain statistics around the modeled parameters; for example, confidence intervals around each level of an AOI curve might be more than what is needed.
Identify the threshold for statistical significance and explain why it was selected. Obtain a reasonable and appropriately supported explanation for keeping the variable for each discrete variable level where the p-values were not less than the chosen threshold.

Typical p-values greater than 5% are large and should be questioned. Reasonable business judgment can sometimes provide legitimate support for high p-values. Reasonableness of the p-value threshold could also vary depending on the context of the model. For example, the threshold might be lower when many candidate variables were evaluated for inclusion in the model.

Overall lift charts and/or statistical tests using validation data may not provide enough of the picture. If there is concern about one or more individual variables, the reviewer may obtain, for each discrete variable level, the parameter value, confidence intervals, chi-square tests, p-values and any other relevant and material tests. For variables that are modeled continuously, it may be sufficient to obtain statistics around the modeled parameters; for example, confidence intervals around each level of an AoI curve might be more than what is needed.

For overall discrete variables, review type 3 chi-square tests, p-values, F tests and any other relevant and material test. Determine if model development data, validation data, test data or other data was used for these tests.

Typical p-values greater than 5% are large and should be questioned. Reasonable business judgment can sometimes provide legitimate support for high p-values. Reasonableness of the p-value threshold could also vary depending on the context of the model, e.g., the threshold might be lower when many candidate variables were evaluated for inclusion in the model.

Overall lift charts and/or statistical tests using validation data may not provide enough of the picture. If there is concern about one or more individual variables, the reviewer may obtain, for each discrete variable level, the parameter value, confidence intervals, chi-square tests, p-values and any other relevant and material tests. For variables that are modeled continuously, it may be sufficient to obtain statistics around the modeled parameters; for example, confidence intervals around each level of an AoI curve might be more than what is needed.

Obtain evidence that the model fits the training data well, for individual variables, for any relevant combinations of variables and for, the overall model.

For a GLM, such evidence may be available using chi-square tests, p-values, F tests and/or other means. The steps taken during modeling to achieve goodness-of-fit are likely to be numerous and laborious to describe, but they contribute much of what is generalized about GLM. We should not assume we know what they did and ask “how?” Instead, we should ask what they did and be prepared to ask follow up questions.
B.4.hf

For continuous variables, provide confidence intervals, chi-square tests, p-values and any other relevant and material test. Determine if model development data, validation data, test data or other data was used for these tests.

2

Typical p-values greater than 5% are large and should be questioned. Reasonable business judgment can sometimes provide legitimate support for high p-values. Reasonableness of the p-value threshold could also vary depending on the context of the model, e.g., the threshold might be lower when many candidate variables were evaluated for inclusion in the model.

Overall lift charts and/or statistical tests using validation data may not provide enough of the picture. If there is concern about one or more individual variables, the reviewer may obtain, for each discrete variable level, the parameter value, confidence intervals, chi-square tests, p-values and any other relevant and material tests. For variables that are modeled continuously, it may be sufficient to obtain statistics around the modeled parameters; for example, confidence intervals around each level of an AOI curve might be more than what is needed.

B.4.ig

Obtain a description how the model was tested for stability over time.

2

Evaluate the build/test/validation datasets for potential time-sensitive model distortions (e.g., a winter storm in year 3 of 5 can distort the model in both the testing and validation datasets).

Obsolescence over time is a model risk (e.g., old data for a variable or a variable itself may no longer be relevant). If a model being introduced now is based on losses from years ago, the reviewer should be interested in knowing whether that model would be predictive in the proposed context. Validation using recent data from the proposed context might be requested. Obsolescence is a risk even for a new model based on recent and relevant loss data. The reviewer may want to inquire as to the following: What steps, if any, were taken during modeling to prevent or delay obsolescence? What controls will exist to measure the rate of obsolescence? What is the plan and timeline for updating and ultimately replacing the model?

The reviewer should also consider that as newer technologies enter the market (e.g., personal automobile) their impact may change claim activity over time (e.g., lower frequency of loss). So, it is not necessarily a bad thing that the results are not stable over time.

B.4.jh

Obtain a narrative on how potential concerns with overfitting were addressed.

2
### B.4.k
Obtain support demonstrating that the GLM assumptions are appropriate.

Visual review of plots of actual errors is usually sufficient.

The reviewer should look for a conceptual narrative covering these topics: How does this particular GLM work? Why did the rate filer do what it did? Why employ this design instead of alternatives? Why choose this particular distribution function and this particular link function? A company response may be at a fairly high level and reference industry practices.

If the reviewer determines that the model makes no assumptions that are considered to be unreasonable, the importance of this item may be reduced.

### B.4.l
Obtain 5-10 sample records with corresponding output from the model for those records.

5. “Old Model” Versus “New Model”

### B.5.a
Obtain an explanation why this model is an improvement to the current rating plan.

If it replaces a previous model, find out why it is better than the one it is replacing; determine how the company reached that conclusion and identify metrics relied on in reaching that conclusion. Look for an explanation of any changes in calculations, assumptions, parameters, and data used to build this model from the previous model.

Regulators should expect to see improvement in the new class plan’s predictive ability or other sufficient reason for the change.

### B.5.b
Determine if two Gini coefficients were compared and obtain a narrative on the conclusion drawn from this comparison.

One example of a comparison might be sufficient.

This is relevant when one model is being updated or replaced. Regulators should expect to see improvement in the new class plan’s predictive ability. This information element requests a comparison of Gini coefficient from the prior model to the Gini coefficient of proposed model. It is expected that there should be improvement in the Gini coefficient. A higher Gini coefficient indicates greater differentiation produced by the model and how well the model fits that data. This comparison is not applicable to initial model introduction. Reviewer can look to CAS monograph for information on Gini coefficients.

### B.5.c
Determine if double lift charts were analyzed and obtain a narrative on the conclusion was drawn from this analysis.

One example of a comparison might be sufficient.

Note that “not applicable” is an acceptable response.

### B.5.d
If replacing an existing model, obtain a list of any predictor variables used in the old model that are not used in the new model. Obtain an explanation why these variables were dropped from the new model.

Obtain a list of all new predictor variables in the new model that were not in the prior old model.

Useful to differentiate between old and new variables so the regulator can prioritize more time on factors variables not yet reviewed.
### 6. Modeler Software

| B.6.a | Request access to SMEs (e.g., modelers) who led the project, compiled the data, built the model, and/or performed peer review. | 3 | The filing should contain a contact that can put the regulator in touch with appropriate SMEs and key contributors to the model development to discuss the model. |

### C. The Filed Rating Plan

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance to Regulator's Review</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. General Impact of Model on Rating Algorithm</td>
<td>In the actuarial memorandum or explanatory memorandum, for each model and sub-model (including external models), look for a narrative that explains each model and its role (how it was used) in the rating system.</td>
<td>1</td>
<td>The “role of the model” relates to how the model integrates into the rating plan as a whole and where the effects of the model are manifested within the various components of the rating plan. This is not intended as an overarching statement of the model’s goal, but rather a description of how specifically the model is used. This item is particularly important, if the role of the model cannot be immediately discerned by the reviewer from a quick review of the rate and/or rule pages. (Importance is dependent on state requirements and ease of identification by the first layer of review and escalation to the appropriate review staff.)</td>
</tr>
<tr>
<td>C.1.a</td>
<td>Obtain an explanation of how the model was used to adjust the rating algorithm.</td>
<td>1</td>
<td>Models are often used to produce factor-based indications, which are then used as the basis for the selected changes to the rating plan. It is the changes to the rating plan that create impacts. Consider asking for an explanation of how the model was used to adjust the rating algorithm.</td>
</tr>
<tr>
<td>C.1.b</td>
<td>Obtain a complete list of characteristics/variables used in the proposed rating plan, including those used as input to the model (including sub-models and composite variables) and all other characteristics/variables (not input to the model) used to calculate a premium. For each characteristic/variable, determine if it is only input to the model, whether it is only a separate univariate rating characteristic, or whether it is both input to the model and a separate univariate rating characteristic. The list should include transparent descriptions (in plain language) of each listed characteristic/variable.</td>
<td>1</td>
<td>Examples of variables used as inputs to the model and used as separate univariate rating characteristics might be criteria used to determine a rating tier or household composite characteristic.</td>
</tr>
</tbody>
</table>

© 2019 National Association of Insurance Commissioners
| C.2.a | Obtain a narrative regarding how the characteristics/rating variables, included in the filed rating plan, logically and intuitively relate to the risk of insurance loss (or expense) for the type of insurance product being priced. | 2 | The narrative should include a discussion of the relevance each characteristic/rating variable has on consumer behavior that would lead to a difference in risk of loss (or expense). The narrative should include a logical and intuitive relationship to cost, and model results should be consistent with the expected direction of the relationship. This explanation would not be needed if the connection between variables and risk of loss (or expense) has already been illustrated. |
| C.3.a | Compare relativities indicated by the model to both current relativities and the insurer's selected relativities for each risk characteristic/variable in the rating plan. | 1 | “Significant difference” may vary based on the risk characteristic/variable and context. However, the movement of a selected relativity should be in the direction of the indicated relativity; if not, an explanation is necessary as to why the movement is logical. |
| C.3.b | Obtain documentation and support for all calculations, judgments, or adjustments that connect the model's indicated values to the selected values. | 1 | The documentation should include explanations for the necessity of any such adjustments and explain each significant difference between the model's indicated values and the selected values. This applies even to models that produce scores, tiers, or ranges of values for which indications can be derived. This information is especially important if differences between model indicated values and selected values are material and/or impact one consumer population more than another. |
| C.3.c | For each characteristic/variable used as both input to the model (including sub-models and composite variables) and as a separate univariate rating characteristic, obtain a narrative how each characteristic/variable was tempered or adjusted to account for possible overlap or redundancy in what the characteristic/variable measures. | 2 | Modeling loss ratio with these characteristics/variables as control variables would account for possible overlap. The insurer should address this possibility or other considerations, e.g., tier placement models often use risk characteristics/variables that are also used elsewhere in the rating plan. One way to do this would be to model the loss ratios resulting from a process that already uses univariate rating variables. Then the model/composite variables would be attempting to explain the residuals. |

3. Comparison of Model Outputs to Current and Selected Rating Factors

| C.3.a | Compare relativities indicated by the model to both current relativities and the insurer's selected relativities for each risk characteristic/variable in the rating plan. | 1 | “Significant difference” may vary based on the risk characteristic/variable and context. However, the movement of a selected relativity should be in the direction of the indicated relativity; if not, an explanation is necessary as to why the movement is logical. |
| C.3.b | Obtain documentation and support for all calculations, judgments, or adjustments that connect the model's indicated values to the selected values. | 1 | The documentation should include explanations for the necessity of any such adjustments and explain each significant difference between the model's indicated values and the selected values. This applies even to models that produce scores, tiers, or ranges of values for which indications can be derived. This information is especially important if differences between model indicated values and selected values are material and/or impact one consumer population more than another. |
| C.3.c | For each characteristic/variable used as both input to the model (including sub-models and composite variables) and as a separate univariate rating characteristic, obtain a narrative how each characteristic/variable was tempered or adjusted to account for possible overlap or redundancy in what the characteristic/variable measures. | 2 | Modeling loss ratio with these characteristics/variables as control variables would account for possible overlap. The insurer should address this possibility or other considerations, e.g., tier placement models often use risk characteristics/variables that are also used elsewhere in the rating plan. One way to do this would be to model the loss ratios resulting from a process that already uses univariate rating variables. Then the model/composite variables would be attempting to explain the residuals. |

4. Responses to Data, Credibility and Granularity Issues
C.4.a  Determine what, if any, consideration was given to the credibility of the output data.  2  At what level of granularity is credibility applied. If modeling was by-coverage, by-form or by-peril, explain how these were handled when there was not enough credible data by coverage, form or peril to model.

C.4.b  If the rating plan is less granular than the model, obtain an explanation why.  2  This is applicable if the insurer had to combine modeled output in order to reduce the granularity of the rating plan.

C.4.c  If the rating plan is more granular than the model, obtain an explanation why.  2  A more granular rating plan implies that the insurer had to extrapolate certain rating treatments, especially at the tails of a distribution of attributes, in a manner not specified by the model indications.

5. Definitions of Rating Variables

C.5.a  Obtain a narrative on adjustments made to raw data/model output, e.g., transformations, binning and/or categorizations. If adjustments were made, obtain the name of the characteristic/variable and a description of the adjustment.  2  If rating tiers or other intermediate rating categories are created from model output, the rate and/or rule pages should present these rating tiers or categories. The company should provide an explanation how model output was translated into these rating tiers or intermediate rating categories.

C.5.b  Obtain a complete list and description of any rating tiers or other intermediate rating categories that translate the model outputs into some other structure that is then presented within the rate and/or rule pages.  1  .

6. Supporting Data

C.6.a  Obtain aggregated state-specific, book-of-business-specific univariate historical experience data, separately for each year included in the model, consisting of loss ratio or pure premium relativities and the data underlying those calculations: at minimum, earned exposures, earned premiums, incurred losses, loss ratios and loss ratio relativities for each category of model output(s) proposed to be used within the rating plan. For each data element, obtain an explanation whether it is raw or adjusted and, if the latter, obtain a detailed explanation for the adjustments.  2 4  For example, were losses developed/undeveloped, trended/un趋势ed, capped/uncapped, etc? Univariate indications should not necessarily be used to override more sophisticated multivariate indications. However, they do provide additional context and may serve as a useful reference.
## C.6.b
Obtain an explanation of any material (especially directional) differences between model indications and state-specific univariate indications.

Multivariate indications may be reasonable as refinements to univariate indications, but possibly not for bringing about significant reversals of those indications. For instance, if the univariate indicated relativity for an attribute is 1.5 and the multivariate indicated relativity is 1.25, this is potentially a plausible application of the multivariate techniques. If, however, the univariate indicated relativity is 0.7 and the multivariate indicated relativity is 1.25, a regulator may question whether the attribute in question is negatively correlated with other determinants of risk. Credibility of state data should be considered when state indications differ from modeled results based on a broader data set. However, the relevance of the broader data set to the risks being priced should also be considered. Borderline reversals are not of as much concern.

### 7. Consumer Impacts

<table>
<thead>
<tr>
<th>C.7.a</th>
<th>Obtain a listing of the top five rating variables that contribute the most to large swings in premium, both as increases and decreases.</th>
<th>These rating variables may represent changes to rating factors relativities, be newly introduced to the rating plan, or have been removed from the rating plan.</th>
</tr>
</thead>
<tbody>
<tr>
<td>C.7.b</td>
<td>Determine if the insurer performed sensitivity testing to identify significant changes in premium due to small or incremental change in a single risk characteristic. If such testing was performed, obtain a narrative that discusses the testing and provides the results of that testing.</td>
<td>One way to see sensitivity is to analyze a graph of each risk characteristic’s variable’s possible relativities. Look for significant variation between adjacent relativities and evaluate if such variation is reasonable and credible.</td>
</tr>
<tr>
<td>C.7.c</td>
<td>For the proposed filing, obtain the impacts on expiring policies and describe the process used by management, if any, to mitigate those impacts.</td>
<td>Some mitigation efforts may substantially weaken the connection between premium and expected loss and expense, and hence may be viewed as unfairly discriminatory by some states.</td>
</tr>
</tbody>
</table>
### C.7.d

Obtain a rate disruption/dislocation analysis, demonstrating the distribution of percentage and/or dollar impacts on renewal business (created by rerating the current book of business), and sufficient information to explain the disruptions to individual consumers.

2

The analysis should include the largest dollar and percentage impacts arising from the filing, including the impacts arising specifically from the adoption of the model or changes to the model as they translate into the proposed rating plan.

While the default request would typically be for the distribution/dislocation of impacts at the overall filing level, the regulator may need to delve into the more granular variable-specific effects of rate changes if there is concern about particular variables having extreme or disproportionate impacts, or significant impacts that have otherwise yet to be substantiated.

See Appendix C for an example of a disruption analysis.

### C.7.e

Obtain exposure distributions for the model's output variables and show the effects of rate changes at granular and summary levels, including the overall impact on the book of business.

3

See Appendix C for an example of an exposure distribution.

### C.7.f

Identify policy characteristics, used as input to a model or sub-model, that remain "static" over a policy's lifetime versus those that will be updated periodically. Obtain a narrative on how the company handles policy characteristics that are listed as "static," yet change over time.

3

Some examples of "static" policy characteristics are prior carrier tenure, prior carrier type, prior liability limits, claim history over past X years, or lapse of coverage. These are specific policy characteristics usually set at the time new business is written, used to create an insurance score or to place the business in a rating/underwriting tier, and often fixed for the life of the policy. The reviewer should be aware, and possibly concerned, how the company treats an insured over time when the insured’s risk profile based on "static" variables changes over time but the rate charged, based on a new business insurance score or tier assignment, no longer reflect the insured’s true and current risk profile.

A few examples of "non-static" policy characteristics are age of driver, driving record and credit information (FCRA related). These are updated automatically by the company on a periodic basis, usually at renewal, with or without the policyholder explicitly informing the company.
### 8. Accurate Translation of Model into a Rating Plan

| C.7.g | Obtain a means to calculate the rate charged a consumer. | 3 | The filed rating plan should contain enough information for a regulator to be able to validate policy premium. However, for a complex model or rating plan, a score or premium calculator via Excel or similar means would be ideal, but this could be elicited on a case-by-case basis. Ability to calculate the rate charged could allow the regulator to perform sensitivity testing when there are small changes to a risk characteristic/variable. Note that this information may be proprietary. |
| C.7.h | In the filed rating plan, be aware of any non-insurance data used as input to the model (customer-provided or other). In order to respond to consumer inquiries, it may be necessary to inquire as to how consumers can verify their data and correct errors. | | If the data is from a third-party source, the company should provide information on the source. Depending on the nature of the data, data should be documented and an overview of who owns it and the topic of consumer verification should be addressed, including how consumers can verify their data and correct errors. |

| C.8.a | Obtain sufficient information to understand how the model outputs are used within the rating system and to verify that the rating plan’s manual, in fact, reflects the model output and any adjustments made to the model output. | 1 | The regulator can review the rating plan's manual to see that modeled output is properly reflected in the manual's rules, rates, factors, etc. |
VIII. PROPOSED CHANGES TO THE PRODUCT FILING REVIEW HANDBOOK

TBD — placeholder to include best practices for review of predictive models and analytics filed by insurers to justify rates.

The Task Force was charged to propose modifications to the 2016 Product Filing Review Handbook to reflect best practices for the regulatory review of predictive analytics. The following are the titled sections in Chapter Three “The Basics of Property and Casualty Rate Regulation.” Proposed changes are shown as tracked changes.

CHAPTER THREE

The Basics of Property and Casualty Rate Regulation

No changes are proposed to the following sections at the beginning of Chapter Three: Introduction; Rating Laws; Rate Standards; Rate Justification and Supporting Data; Number of Years of Historical Data; Segregation of Data; Data Adjustments; Premium Adjustments; Losses and LAE (perhaps just DCC) Adjustments; Catastrophe or Large Loss Provisions; Loss Adjustment Expenses; Data Quality; Rate Justification: Overall Rate Level; Contingency Provision; Credibility; Calculation of Overall Rate Level Need: Methods (Pure Premium and Loss Ratio Methods); Rate Justification: Rating Factors; Calculation of Deductible Rating Factors; Calculation of Increased Limit Factors; and Credibility for Rating Factors.

Data Adjustments

Because the insurance contracts will be written to cover future accident periods, the past data needs to be adjusted to reflect the anticipated future premiums and costs. These adjustments will provide a profit/loss picture if no rate change occurs. Calculations can then be made to determine the overall rate need (or indication). …

Interaction between Rating Variables (Multivariate Analysis)

If each rating variable is evaluated separately, statistically significant interactions between rating variables may not be identified and, thus, may not be included in the rating plan. If the pricing of rating variables is evaluated separately, for each rating variable, there is potential to miss the interaction between rating variables. Care should be taken to have a multivariate analysis when practical. In some instances, a multivariate analysis is not possible. But, with computing power growing exponentially, insurers believe they have found many ways to improve their operations and competitiveness through use of complex predictive models in all areas of their insurance business.

Approval of Classification Systems

With rate changes, companies sometimes propose revisions to their classification system. Because the changes to classification plans can be significant and have large impacts on the consumers’ rates, regulators should focus on these changes.

Some items of proposed classification can sometimes be deemed to be against public policy, such as the use of education or occupation. You should be aware of your state’s laws and regulations regarding which rating factors are allowed, and you should require definitions of all data elements that can affect the charged premium. Finding rating or underwriting characteristics that may violate public policy is becoming more difficult for regulators with the increasing and innovative ways insurers use predictive models.

Rating Tiers

Some states allow an insurer to have multiple rate levels, or rating tiers, within a single company. These rating tiers are another way of classifying risks for rating purposes. Typically, there are requirements for rating tiers: the underwriting rules for each tier should be mutually exclusive, clear, and objective; there should be a distinction between the expected losses or expenses for each tier; and the placement process should be auditable. Tiers within a company are mainly seen in personal lines products.
One particular concern with rating tiers would be the analyses of whether a plan produces unfair discrimination. Questions arise around the time-sensitive aspects of the underwriting criteria and any related re-evaluation of the tiers upon renewal. For example, consider two tiers where the insured is placed in the "high" tier because of a lapse of insurance in the prior 12 months. The question is: What happens upon renewal after there has no longer been a lapse of insurance for 12 months? Does the insured get slotted in the "low" tier as he would if he was new business? Some statutes limit the amount of time that violations, loss history, or insurance scores can be used, and some statutes might only allow credit history to be used for rating at the policyholder’s request. Regulators should consider the acceptability of differences in rates between existing and new policyholders when they have the same current risk profile.

Insurers also can create different rating levels by having separate companies within a group. While regulators should examine rating tiers within an insurer to a high degree of regulatory scrutiny, there tends to be less scrutiny with differences in rates that exist between affiliated companies. Workers’ compensation insurers are more likely to obtain rating tiers using separate companies.

Rate Justification: New Products – (No change is proposed.)

Predictive Modeling

The ability of computers to process massive amounts of data has led to the expansion of the use of predictive modeling in insurance ratemaking. Predictive models have enabled insurers to build rating, marketing, underwriting and claim models with significant segmentation-predictive power and are increasingly being applied in such areas as claims modeling and used in helping insurers to price risks more effectively.

Key new rating variables that are being incorporated into insurers’ predictive models include homeowners’ home rates by peril, homeowners’ home rating by building characteristics, vehicle history, usage-based auto insurance, and credit characteristics.

Data quality within and communication about models are of key importance with predictive modeling. Depending on definitional boundaries, predictive modeling can sometimes overlap with the field of machine learning. In the modeling space, predictive modeling is often referred to as predictive analytics.

Insurers’ use of predictive analytics along with big data has significant potential benefits to both consumers and insurers. Predictive analytics can reveal insights into the relationship between consumer behavior and the cost of insurance, lower the cost of insurance for many, and provide incentives for consumers to better control and mitigate loss. However, predictive analytic techniques are evolving rapidly and leaving many regulators without the necessary tools to effectively review insurers’ use of predictive models in insurance applications. To aid the regulator in the review of predictive models, best practices have been developed for generalized linear models or "GLMs". GLMs are commonly used in personal automobile and home insurance applications.

The term “predictive model” refers to a set of models that use statistics to predict outcomes. When applied to insurance, the model is chosen to estimate the probability or expected value of an outcome given a set amount of input data; for example, models can predict the frequency of loss, the severity of loss, or the pure premium.

To further complicate regulatory review of models in the future, modeling technology and methods are evolving rapidly. GLMs are relatively transparent and their output and consequences are much clearer than many other complex models. But as computing power grows exponentially, it is opening up the modeling world to more sophisticated forms of data acquisition and data analysis. Insurance actuaries and data scientists seek increased predictiveness by using even more complex predictive modeling methods. Examples of these are predictive models utilizing logistic regression, k-nearest neighbor classification, random forests, decision trees, neural networks, or combinations of available modeling methods (often referred to as ensembles). These evolving techniques will make the regulators’ understanding and oversight of filed rating plans even more challenging.

A. Generalized Linear Models

The generalized linear model (GLM) is a commonly used predictive model in insurance applications, particularly in building an insurance product’s rating plan. Because of this and the fact most Property and Casualty regulators are most concerned...
about personal lines. NAIC has developed a white paper for guidance in reviewing GLMs for personal automobile and home insurance.

Before GLMs became vogue, rating plans were built using univariate methods. Univariate methods were considered easy to understand and easy to demonstrate the relationship to costs (loss and/or expense). However, many consider univariate methods too simplistic since they do not take into account the interaction (or dependencies) of the selected input variables. GLMs introduce significant improvements over univariate-based rating plans by automatically adjusting for correlations among input variables. Today, the majority of predictive models used in personal automobile and home insurance rating plans are GLMs. But, GLM results are not always easy to understand and the relationship to costs may be difficult to explain.

A GLM consists of three elements:

- A target variable, which is a random variable that is independent and follows a probability distribution from the exponential family, defined by a selected variance function and dispersion parameter.
- An input variable, which is a function such that \( E(Y) = \mu = g^{-1}(p) \).

As can be seen in the description of the three GLM components above, it may take more than a casual introduction to statistics to comprehend the construction of a GLM. As stated earlier, a downside to GLMs is that it is more challenging to interpret the GLMs output than with univariate models.

B. Credibility of GLM Output

If the underlying data is not credible no model will improve that credibility, and segmentation methods could make credibility worse. GLM software provides point estimates and allows the modeler to consider standard errors and confidence intervals. GLMs effectively assume that the underlying datasets are 100% credible no matter their size. If some segments have little data, the resulting uncertainty would not be reflected in the GLM parameter estimates themselves (although it might be reflected in the standard errors, confidence intervals, etc.). Even though the process of selecting relativities often includes adjusting the raw GLM output, the resultant selections are not typically credibility-weighted with any complement of credibility. [New footnote: “This is not always true. Sometimes insurers do review complements of credibility and further weight the GLM output with those complements. While this may not be a standard practice today, new techniques could result in this becoming more standard in the future.”] GLMs provide confidence intervals; credibility methods do not. There are techniques such as penalized regression that blend credibility with a GLM and improve a model’s ability to generalize. Nevertheless, selected relativities based on GLM model output may differ from GLM point estimates.

Because of this presumption in credibility, which may or may not be valid in practice, the modeler and the regulator reviewing the model would need to engage in thoughtful consideration when incorporating GLM output into a rating plan to ensure that model predictiveness is not compromised by any lack of actual credibility. Therefore, to mitigate the risk that model credibility or predictiveness is lacking, a complete filing for a rating plan that incorporates GLM output should include validation evidence for the rating plan, not just the statistical model.

C. What is a “Best Practice”?

A best practice is a form of program evaluation in public policy. At its most basic level, a practice is a “tangible and visible behavior... [based on] an idea about how the actions... will solve a problem or achieve a goal.” Best practices can maintain quality as an alternative to mandatory legislated standards and can be based on self-assessment or benchmarking. Therefore, a best practice represents an effective method of problem solving. The “problem” regulators want to solve is probably better posed as seeking an answer to this question: How can regulators determine that predictive models, as used in rate filings, are compliant with state laws and regulations? However, best practices are not intended to create standards for filings that include predictive models.

[Commented [WL7]: The lack of credibility WOULD be reflected in inappropriate/poor parameter estimates but could only be DETECTED in the standard errors and confidence intervals.]

12 Refer to NAIC’s white paper titled Regulatory Review of Predictive Models, found at the NAIC website.

© 2019 National Association of Insurance Commissioners
As adopted by the Casualty Actuarial and Statistical (C) Task Force on XX/XX/XX

Best practices are based on the following principles that promote a comprehensive and coordinated review of predictive models across states:

- State insurance regulators will maintain their current rate regulatory authority.
- State insurance regulators will be able to share information to aid companies in getting insurance products to market more quickly.
- State insurance regulators will share expertise and discuss technical issues regarding predictive models.
- State insurance regulators will maintain confidentiality, where appropriate, regarding predictive models.

D. Regulatory Review of Predictive Models

The legal and regulatory constraints (including state variations) are likely to be more evolved, and challenging, for personal automobile and home insurance. Through review of these personal lines, the knowledge needed to review predictive models and guidance regarding GLMs may be transferable when the review involves GLMs applied to other lines of business. Modeling depends on context, so the GLM reviewer has to be alert for data challenges and business applications that differ from the more familiar personal lines. For example, compared to personal lines, modeling rates in commercial lines is more likely to encounter low volumes of historical data, dependence on advisory loss costs, unique large accounts with large deductibles, and package products that create policies from numerous line-of-business and coverage building blocks. Commercial lines commonly use individual risk modifications following experience, judgment, and/or expense considerations. A regulator may never see how models impact commercial excess and surplus lines filings.

Guidance offered here and in the NAIC's white paper might be useful (with deeper adaptations) when starting to review different types of predictive models. If the model is not a GLM, however, some of the GLM guidance might not apply. For example, not all predictive models generate p-values or F tests. Depending on the model type under review, other considerations might be important that were not as important in the review of a GLM. Also, when transferring GLM guidance to other lines of business, unique considerations may arise depending on the context in which a predictive model is proposed to be deployed, the uses to which it is proposed to be put, and the potential consequences for the insurer, its customers and its competitors. This guidance does not delve into these possible considerations, but regulators should be prepared to address them as they arise.

Best practices will help the regulator understand if a predictive model is cost based, if the predictive model is compliant with state law, and how the model improves the company’s rating plan. Best practices can also increase the consistency among the regulatory review processes used across states and improve the efficiency of each regulator’s review thereby assisting companies in getting their products to market faster. With this in mind, the regulator's review of predictive models should:

1. Ensure that the selected rating factors based on the model or other analysis produce rates that are not excessive, inadequate, or unfairly discriminatory.
   a. Review the overall rate level impact of the proposed revisions to rate level indications provided by the filer.
   b. Review the premium discount for individual policyholders and how the discounts can be explained to individual consumers.
   c. Review the individual input characteristics to and output factors from the predictive model (and its sub-models), as well as, associated selected relativities to ensure they are not unfairly discriminatory.

2. Obtain a clear understanding of how the data used to build and validate the model, and thoroughly review all other aspects of the model, including assumptions, adjustments, variables, submodels used as input, and resulting output.
   a. Determine that individual input characteristics to a predictive model and their resulting rating factors are related to the expected loss or expense differences in risk.
   b. Determine that the data used as input to the predictive model is accurate, including a clear understanding how missing values, erroneous values and outliers are handled.
   c. Determine that any adjustments to the raw data are handled appropriately, including but not limited to, trending, development, capping, removal of catastrophes.
   d. Obtain a clear understanding of how often each risk characteristic, used as input to the model, is updated and whether the model is periodically rerun, so model output reflects changes to non-static risk characteristics.
   e. Obtain a clear understanding of how the selected predictive model was built.
   f. Determine whether internal and external data used in relation to the model is compatible with practices allowed in the jurisdiction and do not reflect characteristics prohibited in the state.

3. Evaluate how the model interacts with and improves the rating plan.
As adopted by the Casualty Actuarial and Statistical (C) Task Force on XX/XX/XX

a. Obtain a clear understanding of the characteristics that are input to a predictive model (and its sub-models), their relationship to each other and their relationship to non-modeled characteristics/variables used to calculate a risk’s premium.
b. Obtain a clear understanding why the insurer believes this type of model works in an insurance risk application.
c. Obtain a clear understanding of how model output interacts with non-modeled characteristics/variables used to calculate a risk’s premium.
d. Obtain a clear understanding of how the predictive model was integrated into the insurer’s state rating plan and how it improves that plan.
e. For predictive model refreshes, determine whether sufficient validation was performed to ensure the model is still a good fit.

4. Enable competition and innovation to promote the growth, financial stability, and efficiency of the insurance marketplace.
   a. Enable innovation in the pricing of insurance through acceptance of predictive models, provided they are actuarially sound and in compliance with state law.
   b. Protect the confidentiality of filed predictive models and supporting information in accordance with state law.
   c. Review predictive models in a timely manner to enable reasonable speed to market.

E. Information Needed to Follow Best Practices

To assist the regulator in following each best practice, the Casualty Actuarial and Statistical Task Force created a white paper titled "Regulatory Review of Predictive Models." The paper contains a list of information elements and considerations that should be useful during the review of a model underlying a rating plan. To further assist the regulator, the information elements were mapped into the best practices listed above in Section XV of the paper.

Note that, in the white paper, CASTF focused on the GLM since it is a commonly used predictive model in insurance applications, particularly in building an insurance product’s rating plan. Combined with the fact most property and casualty regulators are very concerned about personal lines, the white paper is focused on the review of GLMs for personal auto mobile and home insurance rate making applications.

Guidance offered here might be useful (with deeper adaptations) when starting to review different types of predictive models. If the model is not a GLM, some listed items might not apply. For example, not all predictive models generate p-values or F-tests. Depending on the model type, other considerations might be important. When transferring guidance to other lines of business and other types of model, unique considerations may arise depending on the context in which a predictive model is proposed to be employed, the uses to which it is proposed to be put, and the potential consequences for the insurer, its customers and its competitors. This paper does not delve into these possible considerations, but regulators should be prepared to address them as they arise.

F. Confidentiality

Regulatory reviewers are required to protect confidential information in accordance with applicable State law. However, insurers should be aware that a rate filing might become part of the public record. Each state determines the confidentiality of a rate filing, supplemental material to the filing, when filing information might become public; the procedure to request that filing information be held confidentially, and the procedure by which a public records request is made. It is incumbent on an insurer to be familiar with each state’s laws regarding the confidentiality of information submitted with their rate filing.

Advisory Organizations – (No change is proposed.)

Workers’ Compensation Special Rules – (No change is proposed.)

Premium Selection Decisions

- Indicated Rate Change vs. Selected Rate Change

After applying credibility, the indicated rate change should reflect the company’s best estimate of their premium needs given their current or expected book of business. However, insurance companies also have other business considerations including competition, marketing, legal concerns, impact of the rate change on retention, etc. A company might wish to deviate from their indicated rate change and should justify those decisions, within the constraints of the law.
Capping and Transition Rules

With advances in technology, it is possible for companies to introduce capping of rates on individual policies with an aim toward gradually increasing policyholders’ rates, rather than making large modifications all at one time. Similarly, premiums are often proposed to be modified when an insurer acquires another company’s book of business or decides to move from or to an advisory organization’s plan. These types of proposed capping are sometimes called “renewal premium capping,” “rate capping,” “a rate stability program,” or “transition rules.”

Transition rules for individual policyholders can get quite complex and you need to be aware of your state’s positions on premium capping rules. Any premium capping and transition rules require weighing the pros and cons of the potential for unfair discrimination (with some customers not paying the rate commensurate with the risks they have) vs. rate stability for existing policyholders.

If premium capping or transition rules are allowed, additional decisions will need to be made:
- Which rates should get capped?
- Do rate decreases get capped? If so, what is the impact if the policyholder asks to be quoted as new business?
- Do all rate increases get capped or only above a certain percentage?
- How much time will lapse or how many renewal cycles will occur before the new rates are in place or different rating plans are merged?
- Should the insured be told what the final premium will be once no more capping is applied?
- How would exposure change be addressed? If the policyholder buys a new car or changes their liability limits, what is the impact on their rate capping?
- How many rate-capping rules can be implemented at any given time?

When premium capping or transition rules have been incorporated, future indicated rate changes and rating factor analyses need to properly reflect the fully approved rate changes. If the overall approved rate change was +10%, yet capping resulted in only 8% being implemented in the first year, the remaining amount to recognize the full 10% should be reflected in the premium on-level adjustment. Otherwise, the indicated rate would be redundant.

Some states encourage more frequent filing of rate changes that can help to avoid the need of premium capping and transition rules. Some states might prefer capping of individual rating variables, rather than capping for individual policyholders.

Installment Plans – (No change is proposed.)

Policy Fees – (No change is proposed.)

Potential Questions to Ask Oneself as a Regulator

Every filing will be different and will result in different regulatory analyses. But the following are some questions the regulator might ask oneself in a rate filing review:

1. Regarding data:
   a. Is the data submitted with the filing enough information for a regulatory review?
   b. Is the number of years of experience appropriate?
   c. Did the company sufficiently analyze and control their quality of data?

2. Regarding the support and justification of rates:
   a. Did they propose rate changes without justification?
   b. Are proposals based on judgment or competitive analysis? If so, are the results reasonable and acceptable? Are there inappropriate marketing practices?
   c. Are the assumptions (loss development, trend, expense load, profit provision, credibility etc.) used to develop the rate indication appropriate? Are they supported with data and are deviations from data results sufficiently explained?
As adopted by the Casualty Actuarial and Statistical (C) Task Force on XX/XX/XX

d. Is the weighting of data by year (or credibility) properly justified or does it appear random?
   • Is there more weight being placed on data in one year solely because it produces a higher indicated rate change?
   • If there are two indications being weighted together and one is for a rate increase and one is a rate decrease, is the weighting justified?

e. Is there satisfactory explanation about why a proposed rate change deviates from the indicated rate change?

3. Regarding differences in assumptions from previous filings:
   a. Have methodologies changed significantly?
   b. Are assumptions for the weighting of years or credibility significantly different? Or does there appear to be some manipulation to the rate indication?

4. Is there unfair discrimination?
   a. Do classifications comply with state requirements?
   b. Are proposed rates established so that different classes will produce the same underwriting results?
   c. If predictive models are used in the rating plan, are there concerns related to input variables that are prohibited or proxies for prohibited variables?

5. What do you need to communicate?
   a. Can you explain why you are taking a specific action on the filing?
   b. What do you need to tell the Consumer Services Department?
      • Can you explain the impact of the rate change on current business? How big is the company and how much of the market is impacted?
      • What are the biggest changes in the filing (and the ones on which consumer calls might be expected)?
      • What is the maximum rate change impact on any one policyholder?

Questions to Ask a Company

If you remain unsatisfied that the company has satisfactorily justified the rate change, then consider asking additional questions of the company. Questions should be asked of the company when they have not satisfied statutory or regulatory requirements in the state or when any current justification is inadequate and could have an impact on the rate change approval or the amount of the approval.

If there are additional items of concern, the company can be notified so they will make appropriate modifications in future filings.

The CASTF white paper, Regulatory Review of Predictive Models, documents questions that a regulator may want to ask when reviewing a model. These questions are listed in the Predictive Model – Information for Regulatory Review section of the white paper. Note that although the white paper focuses on GLMs for personal automobile and home insurance, some of the concepts may be transferable to other types of models and other lines of business.

Additional Ratemaking Information
The Casualty Actuarial Society (CAS) and the Society of Actuaries (SOA) have extensive examination syllabi that contain a significant amount of ratemaking information, on both the basic topics covered in this chapter and on advanced ratemaking topics. The CAS and SOA websites contain links to many of the papers included in the syllabus. Recommended reading is the Foundations of Casualty Actuarial Science, which contains chapters on ratemaking, risk classification, and individual risk rating.

Other Reading

Some additional background reading is recommended:

  - Chapter 1: Introduction
  - Chapter 3: Ratemaking
  - Chapter 6: Risk Classification
  - Chapter 9: Investment Issues in Property-Liability Insurance
  - Chapter 10: Only the section on Regulating an Insurance Company, pp. 777–787
- Casualty Actuarial Society (CAS) Statements of Principles, especially regarding property and casualty ratemaking.
- Association of Insurance Compliance Professionals: “Ratemaking—What the State Filer Needs to Know.”
- Review of filings and approval of insurance company rates.

Summary

Rate regulation for property/casualty lines of business requires significant knowledge of state rating laws, rating standards, actuarial science, statistical modeling and many data concepts.

- Rating laws vary by state, but the rating laws are usually grouped into prior approval, file and use or use and file (competitive), no file (open competition), and flex rating.
- Rate standards typically included in the state rating laws require that “Rates shall not be inadequate, excessive, or unfairly discriminatory.”
- A company will likely determine their indicated rate change by starting with historical years of underwriting data (earned premiums, incurred loss and loss adjustment expenses, general expenses) and adjusting that data to reflect the anticipated ultimate level of costs for the future time period covered by the policies. Numerous adjustments are made to the data. Common premium adjustments are on-level premium, audit, and trend. Common loss adjustments are trend, loss development, Catastrophe/large loss provisions, and an adjusting and other (A&O) loss adjustment expense provision. A profit/contingency provision is also calculated to determine the indicated rate change.
- Once an overall rate level is determined, the rate change gets allocated to the classifications and other rating factors.
- Individual risk rating allows manual rates to be modified by an individual policyholder’s own experience.
- Advisory organizations provide the underlying loss costs for companies to be able to add their own expenses and profit provisions (with loss cost multipliers) to calculate their insurance rates.
- Casualty Actuarial Society’s Statement of Principles Regarding Property and Casualty Insurance Ratemaking provides guidance and guidelines for the numerous actuarial decisions and standards employed during the development of rates.
- NAIC model laws also include special provisions for workers’ compensation business, penalties for not complying with laws, and competitive market analysis to determine whether rates should be subject to prior approval provisions.
- Best practices for reviewing predictive models are provided in the CASTF white paper titled Regulatory Review of Predictive Models. Although the white paper focuses on GLMs for personal automobile and home insurance, some of the concepts may be transferrable to other types of models and other lines of insurance.

While this chapter provides an overview of the rate determination/actuarial process and regulatory review, state statutory or administrative rule may require the examiner to adopt different standards or guidelines than the ones described.
IX. PROPOSED STATE GUIDANCE

TBD - placeholder for guidance for rate filings that are based on predictive model

This paper acknowledges that different states will apply the guidance within it differently, based on variations in the legal environment pertaining to insurance regulation in those states, as well as the extent of available resources, including staff members with actuarial and/or statistical expertise, the workloads of those staff members, and the time that can be reasonably allocated to reviews of predictive models. States with prior approval authority over personal lines rate filings often already require answers in connection with many of the information elements expressed in this paper. However, states – including those with and without price approval authority – may also use the guidance in this paper to choose which model elements to focus on in their reviews and/or to train new reviewers, as well as to gain an enhanced understanding of how predictive models are developed, supported, and deployed in their markets. Ultimately, the insurance regulators within each state will decide how best to tailor the guidance within this paper to achieve the most effective and successful implementation, subject to the framework of statutes, regulations, precedents, and processes that comprise the insurance regulatory framework in that state.

X. OTHER CONSIDERATIONS

During the development of this guidance, topics arose that are not addressed in this paper. These topics may need addressing during the regulator’s review of a predictive model. A few of these topics may be discussed elsewhere within the NAIC as either technical or policy matters. All of these topics should probably be addressed and be handled by each state on a case-by-case basis. A sampling of topics for consideration in this section includes: Below is a listing of topics that CASTF thought might be important for future discussion and consideration but are beyond the scope of this paper, as well as CASTF’s current charges.

- TBD: Discuss when are rating variables or rating plans become too granular? How is granularity handled during the development of the model and during the selection of rate relativities file in a rating plan supported by a model?
  - The granularity of data refers to the size in which data fields are sub-divided. For example, data could be at the state level or could be subdivided into county or further into zip code or even census tracks. Insurers have been instituting data warehouse initiatives that greatly improved the granularity and accessibility of data that could be analyzed for ratemaking purposes. So, despite the fact that sophisticated statistical techniques existed much earlier than these data warehouses, it was the circumstances of enhanced computing power and better data that enabled their usage in classification ratemaking. Perhaps the most important trigger in the widespread adoption of multivariate methods was competitive pressure. When one or more companies implement improved classification ratemaking, they gain a competitive advantage and put the rest of the industry in a position of adverse selection and decreased profitability. [footnote: Basic Ratemaking, Fifth Edition, May 2016; Geoff Werner, FCAS, MAAA and Claudine Modlin, FCAS, MAAA]
  - The science of classification requires balancing two objectives: grouping risks into a sufficient number of levels to ensure the risks within each group are homogeneous while being careful not to create too many granularly defined groups that may lead to instability in the estimated costs. [footnote: Basic Ratemaking, Fifth Edition, May 2016; Geoff Werner, FCAS, MAAA and Claudine Modlin, FCAS, MAAA]
  - Concern has been expressed that when fields are sub-divided too finely, model results may be less reliable. It is commonly assumed that having a larger volume of data is preferable. However, even with a larger volume of data, if the model is overly granular the more data you have, the better. But, the more granular the data, it may be the harder to see the forest for the trees. More granular data used as input to predictive models may make it easier to measure short-term effects, but it can also make it harder to measure long-term effects, due to a relatively greater noise in the data. However, more granular data may make anomalies in the data more apparent and make it easier to scrub the data.
  - Therefore, it may be of value to provide guidance around granularity, such as: When are rating variables or rating plans too granular? How is granularity handled during the development of the model or during the selection of rate relativities?

No additional changes are proposed to the Product Filing Review Handbook.

Commented [WL13]: Prior approval should not be hyphenated.

Commented [WL14]: Personal lines should not be hyphenated.

Commented [WL15]: "is" or "are" may be appropriate here, depending on the reference: "Below is a listing..." or "Below is a listing of topics that CASTF thought might be important..." but they [the topics] ARE beyond the scope..."

Commented [WL16]: No hyphen needed in "sub-divided"

Commented [WL17]: What is meant by short-term versus long-term effects. Perhaps an example of each here?

Commented [WL18]: This paragraph appears to be confusing granularity of the data and granularity of the model. The data can be very granular – always good – provides more flexibility. But that doesn’t mean the model should be as granular as the data. We suggest a rewrite of this paragraph to clearly separate the granularity of data (which is good), and the granularity of the model (which can be good or bad, for the reasons cited here).
Discuss the regulator’s scientific mindset of unbiased and open inquiry and its relevance to the best practice white paper.

- **TBD:** Discuss correlation vs causality in general and in relation to Actuarial Standard of Practice (ASOP) 12.
  - There were many criticisms during each exposure of this white paper that this paper goes beyond the requirement of Actuarial Standard of Practice #12 and establishes a new standard for the company's actuaries. This topic may need to be explored further by states collectively (through NAIC) or on a case-by-case state basis. What a state does with the results of a discussion of rational or logical connections between particular attributes and the risk of insurance loss is subject to the framework of statutes, regulations, precedents, and processes that comprise the insurance regulatory framework in that state.

The very act of discussion of the rational, logical, or plausible relationships of individual risk attributes to the risk of insurance loss — and all related implications, such as perception by consumers, legislatures, and media; philosophical considerations of fairness; interactions with public policy as determined by the relevant policymaking bodies; and relevance to the evolution of the insurance industry, consumer products, and overall impacts on the incentives and opportunities available to consumers — is crucial to engage in and continue to do so for as long as new predictive models are being developed, new variables are being introduced, and consumer premiums as well as insurer underwriting decisions are being affected. In other words, the discussion needs to continue indefinitely in a variety of venues and evolve along with the industry and the broader society. We, as insurance professionals, cannot insulate ourselves from participation in the conceptual discourse.

- **TBD:** Discuss correlation vs causality in general and in relation to Actuarial Standard of Practice (ASOP) 12.
  - This white paper, in general, establishes that a rating/modeled variable should not only be correlated to expected costs but that there should be a rational explanation as to why the correlation exists. While it is difficult to prove causation, and such a proof is not a standard against which rate filings are evaluated in any jurisdiction, there is an immense difference of both degree and kind between proving causation and discussing a rational or logical connection between a particular variable and the risk of insurance loss. It is a non sequitur to assert that the lack of requirement for the former (proof) confers immunity upon insurers in regard to the latter (discussion and expression of plausibility).

Discussion of the Actuarial Standards of Practice has been consciously excluded from this paper for a number of reasons. Firstly, the Actuarial Standards of Practice (ASOPs) are principles that are not mandatory and should not be considered in a position to be the torchbearers for the scientific approach to unbiased view, by maintaining the commitment to open but rigorous, systematic, and principled inquiry and exploration. Such answers cannot be "synthesized" without considering the context of a given jurisdiction’s and marketplace, and the specific nature of insurers’ proposals. Therefore, to preempt any arguments by some interested parties that the paper may prescribe specific solutions or restrictions — it clearly does not.

- **TBD:** Discuss correlation vs causality in general and in relation to Actuarial Standard of Practice (ASOP) 12.
  - This white paper does not prescribe any specific answers regarding which treatments are to be considered logical or rational. Such answers cannot be synthesized without considering the context of a given jurisdiction’s, marketplace, and the specific nature of insurers’ proposals. Therefore, to preempt any arguments by some interested parties that the paper may prescribe specific solutions or restrictions — it clearly does not.

Initially, we understood this language to refer to “scientific mindset” as meaning the regulator would be the developer of the scientific model. Upon reading this section more closely, we understand that the “scientific approach” is intended to mean the rigorous and unbiased exploration of the models developed by the insurance industry.

Can we revise the paragraph to be a little more clear as to what is meant by “scientific mindset?”

Commented [WL19]: This header is a bit cerebral for the tone of the rest of this section. Can we “layperson-ize” it?

Commented [WL20]: Commitment to open but rigorous inquiry should be no greater or lesser on predictive models than any other item under regulatory review.

Commented [WL21]: Initially, we understood this language to refer to “scientific mindset” as meaning the regulator would be the developer of the scientific model. Upon reading this section more closely, we understand that the “scientific approach” is intended to mean the rigorous and unbiased exploration of the models developed by the insurance industry.

Commented [WL22]: Not all regulators are actuaries. Isn’t this a best practices white paper for regulators, whether they be actuaries or not?

Commented [WL23]: Do the ASOPs also apply to actuarial analysts, or more generally, anyone pursuing an actuarial designation and working in an actuarial capacity?

Commented [WL24]: Keep with same format of other bullets.
Throughout this white paper, the regulator asks the modeler to go beyond correlation and document their basic, causal understanding of how variables used in a model or rating plan are related to risk. A correlation alone is not the final arbiter of the validity of findings, but causal understanding can be employed to assess which correlations may be entirely due to chance, what are non-causal relationships, and which are most likely to be enduring causal relationships. Though this white paper does not delve deeply into these relationships can be identified and documented, the paper does ask the modeler to provide their understanding of causal relationships. The future consideration is whether the regulator should take a deeper dive into the causal relationships of variables used in a model or rating plan.

The American Statistical Association (ASA) expressed some degree of alarm at approaches similar to data mining (Wasserstein and Lazer, 2016). In a formal statement of the ASA, the association warned against a purely “cookbook” approach to statistics... a pea-pot near .05 taken by itself offers only weak evidence of the null hypothesis” (page 129). Lastly, the ASA warned strongly against an over reliance on data mining: “Cherry-picking promising findings, also known by such terms as data dredging, significance chasing... and “p-hacking,” leads to a spurious excess of statistically significant results...and should be vigorously avoided” (page 131).

Another problem that will increase significantly with the increased adoption of data mining techniques and the increasing growth of very large data sets that dwarf anything available even just a decade ago is that data mining will dramatically increase the rate of “false positives” - the technique Data mining will inevitably churn up numerous associations between variables that are simply random, non-meaningful correlations resulting purely from chance. The apparent disregard of causality that seems common among practitioners of data mining techniques will significantly magnify the problem. Causality forms the basis of the standard model of all natural and social sciences. Evaluations of models should consider the nature of observed relationships within the context of prior substantive knowledge.

Because of these issues regarding data mining and false positives stated in the prior paragraphs, throughout this white paper, the regulator asks the modeler to go beyond correlation and document their basic, causal understanding of how variables used in a model or rating plan are related to risk. A correlation alone is not the final arbiter of the validity of findings, but causal understanding can be employed to assess which correlations may be entirely due to chance, what are non-causal relationships, and which are most likely to be enduring causal relationships. Though this white paper does not delve deeply into these relationships can be identified and documented, the paper does ask the modeler to provide their understanding of causal relationships. The future consideration is whether the regulator should take a deeper dive into the causal relationships of variables used in a model or rating plan.

The white paper identified the following best practices:

- C.2.a Provide an explanation how the characteristics/rating variables, included in the filed rating plan, logically and intuitively relate to the risk of insurance loss (or expense) for the type of insurance product being priced. Include a discussion of the relevance each characteristic/rating variable has on consumer behavior that would lead to a difference in risk of loss (or expense).
- C.2.b Review the premium disruption for individual policyholders and how the disruptions can be explained to individual consumers, and information elements that may assist the regulator's and consumer's understanding of the premium being charged.
- C.2.c Identify sources to be used at “point of sale” to place individual risks within the matrix of rating system classifications. How can a consumer verify their own “point-of-sale” data and correct any errors?
- C.2.d Explain how the insurer will help educate consumers to mitigate their risk. Discuss the multitude of Regulators are often responding to consumer inquiries to which regulators respond regarding how a policy premium is calculated and why the premium, or the change in premium, is so high.

The main challenge to consumers is lack of transparency: trying to understand the data and analytics being used to determine their eligibility for products and the price they are being charged. It may not be clear to the consumer how they are being underwritten or what behaviors they can modify or steps they can take to get a better rate. A potential issue with pricing based on predictive analytics is that it can lead to more granular
Discuss revision to model laws regarding advisory organizations.

- Organizations not licensed or supervised as advisory organizations are engaging in precisely the same type of activities as licensed advisory organizations—collecting data from insurers, analyzing the data and combining it with other data and information, and producing collective pricing and claim settlement recommendations in the form of algorithms. The vendors of algorithms are providing the same type of guidance as the archetype of advisory organizations, the Insurance Services Office, by producing loss cost classifications. How can a consumer verify their own “point-of-sale” data and correct any errors?

Commented [WL28]: if we have addressed these topics in the white paper, why are they reiterated in this section of “other considerations” not addressed in the white paper?

If this section is kept, the bullets should be rephrased to be action verbs in the bullet list. We’ve tried to do the latter here.

- TBD: Discuss guidelines for insurers’ handling of consumer-generated data in insurance transactions.
  - Does a consumer have the right to know what data is being used to determine the consumer’s premium, where that data came from, and how the consumer can address errors in the data? To what extent is the insurer accountable for the quality of the data used to calculate a consumer’s premium, whether that data is internal or external to the insurer’s operations? To what extent should the insurer inform the consumer (transparency) and when should the insurer inform the consumer how their premium is calculated? If the consumer is properly informed, the consumer may make physical and behavioral changes to lower their risk, and subsequently their premium. “This issue deals with consumers’ ownership and control of the data they create through interactions with the insurer or devices provided by or monitored by the insurer as well as the permissible uses of those data by insurers.” [Center for Economic Justice, comments to the NAIC Accelerated Underwriting (A) Working Group, September 29, 2019]

- Discuss the development of new tools and techniques for monitoring consumer market outcomes resulting from insurers’ use of Big Data analytics in property and casualty rating plans.
  - Given an insurer’s rating plan relies on a predictive model and knowing all characteristics of a risk, a regulator should be able to audit/calculate the risk’s premium without consultation with the insurer. Does a consumer have the right to know when each risk characteristic (used as input to the model or is in the rating plan) is updated or if the risk characteristic is static.

- TBD: Determine the extent to which the model causes premium disruption for individual policyholders, and how the insurer will explain the disruption to individual consumers that inquire about it.
- TBD: Discuss cost to filing company and state to have expertise and resources adequate to document and review all knowledge elements identified in this white paper.

Given an insurer’s rating plan relies on a predictive model and knowing all characteristics of a risk, a regulator should be able to audit/calculate the risk’s premium without consultation with the insurer.

- As a future consideration, NAIC or a state may want to explore, with insurers, how to improve communications with the consumer on these topics:
  - TBD: Identify sources to be used at “point of sale” to place individual risks within the matrix of rating system classifications. How can a consumer verify their own “point-of-sale” data and correct any errors?
  - TBD: Discuss cost to filing company and state to have expertise and resources adequate to document and review all knowledge elements identified in this white paper.
  - Other TBDs

Commented [WL28]: if we have addressed these topics in the white paper, why are they reiterated in this section of "other considerations" not addressed in the white paper?

If this section is kept, the bullets should be rephrased to be action verbs in the bullet list. We’ve tried to do the latter here.
recommendations. To ensure that data brokers and vendors of algorithms who are engaged in advisory organization activities are properly licensed and supervised, advisory organization model laws could be revised. [Center for Economic Justice, comments to the NAIC Accelerated Underwriting (A) Working Group, September 29, 2019]

- TBD: Discuss the need for NAIC to update and strengthen information-sharing platforms and protocols.
- TBD: Discuss paper topics beyond GLMs and personal automobile and home insurance applications.
- TBD: The scope of this white paper was narrowed to GLMs as used in personal automobile and home insurance rating applications. Many commenters expressed concern that the paper’s scope is too narrow. NAIC may want to expand these best practices or create new best practices for other lines of business, other insurance applications (other than personal automobile and home filings), and other types of models.

XI. RECOMMENDATIONS GOING FORWARD

The following are examples of topics that may be included in the recommendations:

- TBD: Discuss confidentiality as it relates to filings submitted via SERFF.
- TBD: Discuss confidentiality as it relates to state statutes and regulations.
- TBD: Discuss policyholder disclosure when complex predictive model underlies a rating plan.
- TBD: Discuss the need for NAIC to update and strengthen information-sharing platforms and protocols.
- TBD: Determine the means available to a consumer to correct or contest individual data input values that may be in error.
- TBD: Given an insurer’s rating plan relies on a predictive model and knowing all characteristics of a risk, discuss a regulator’s ability/need to audit/calculate the risk’s premium without consultation with the insurer.
- Other TBDs.
APPENDIX A – BEST PRACTICE DEVELOPMENT

Best-practices development is a method for reviewing public policy processes that have been effective in addressing particular issues and could be applied to a current problem. This process relies on the assumptions that top performance is a result of good practices and these practices may be adapted and emulated by others to improve results16.

The term “best practice” can be a misleading one due to the slippery nature of the word “best”. When proceeding with policy research of this kind, it may be more helpful to frame the project as a way of identifying practices or processes that have worked exceptionally well and the underlying reasons for their success. This allows for a mix-and-match approach for making recommendations that might encompass pieces of many good practices17.

Researchers have found that successful best-practice analysis projects share five common phases:

A. **Scope**

The focus of an effective analysis is narrow, precise and clearly articulated to stakeholders. A project with a broader focus becomes unwieldy and impractical. Furthermore, Bardach urges the importance of realistic expectations in order to avoid improperly attributing results to a best practice without taking into account internal validity problems.

B. **Identify Top Performers**

Identify outstanding performers in this area to partner with and learn from. In this phase, it is key to recall that a best practice is a tangible behavior or process designed to solve a problem or achieve a goal (i.e. reviewing predictive models contributes to insurance rates that are not unfairly discriminatory). Therefore, top performers are those who are particularly effective at solving a specific problem or regularly achieve desired results in the area of focus.

C. **Analyze Best Practices**

Once successful practices are identified, analysts will begin to observe, gather information and identify the distinctive elements that contribute to their superior performance. Bardach suggests it is important at this stage to distill the successful elements of the process down to their most essential idea. This allows for flexibility once the practice is adapted for a new organization or location.

D. **Adapt**

Analyze and adapt the core elements of the practice for application in a new environment. This may require changing some aspects to account for organizational or environmental differences while retaining the foundational concept or idea. This is also the time to identify potential vulnerabilities of the new practice and build in safeguards to minimize risk.

E. **Implementation and evaluation**

The final step is to implement the new process and carefully monitor the results. It may be necessary to make adjustments, so it is likely prudent to allow time and resources for this. Once implementation is complete, continued evaluation is important to ensure the practice remains effective.

---

APPENDIX B - GLOSSARY OF TERMS

Adjusting Data - Adjusting data refers to any changes made to the raw data. For example, capping losses, on-leveling, binning, transformation of the data, etc. This term includes scrubbing of the data.

Aggregated Data - Aggregated data is from the insurer's data banks without modification (e.g., not scrubbed or transformed). Aggregated datasets are those compiled prior to data selection and model building.

Composite Characteristic - A composite characteristic is a combination of two or more individual risk characteristics. Composite characteristics are used to create composite variables.

Composite Score - A composite score is a number arrived at by combining multiple variables by means of a sequence of mathematical steps. For example, a credit-based insurance scoring model.

Composite Variable - A composite variable is a variable created by combining two or more individual risk characteristics of the insured into a single variable.

Continuous Variable - A continuous variable is a numeric variable that represents a measurement on a continuous scale. Examples include age, amount of insurance (in dollars), and population density.

Control Variable - Control variables are variables whose relativities are not used in the final rating algorithm but are included when building the model. They are included in the model so that other correlated variables do not pick up their signal. For example, state and year are frequently included in countrywide models as control variables so that the different experiences and distributions between states and across time do not influence the rating factors used in the final rating algorithm.

Correlation Matrix - A correlation matrix is a table showing correlation coefficients between sets of variables. Each random variable (X) in the table is correlated with each of the other random variables in the table. Knowing the correlation coefficients of the correlation matrix, one can determine which pairs of variables have the highest correlations. Below is a sample correlation matrix showing correlation coefficients for combinations of 5 variables B1:B5. The table shows that variables B2 and B4 have the highest correlation coefficient (0.96) in this example. The diagonal of the table is always set to ones, because the correlation coefficient between a variable and itself is always 1. You could fill in the upper-right triangle, but there would be a mirror image of the lower-left triangle (because correlation between B1 and B2 is the same as between B2 and B1). In other words, a correlation matrix is also a symmetric matrix.

Commented [WL29]: "Aggregation" implies that data is summarized or compiled in some way, whether or not it comes straight from the insurer’s data banks, whether or not it has been modified. Perhaps the author confused between aggregation and raw? Raw data is defined below.

Commented [WL30]: Is there another way to say this? Seems unclear.
The process of data dredging involves automatically testing huge numbers of hypotheses about a single data set by exhaustive search—perhaps for combinations of significant results before the analysis and then conducting a single test for it. Data dredging is also referred to as data fishing, data snooping, data butchery, and p-hacking. It is the misuse of data analysis to find patterns in data that can be presented as statistically significant when, in fact, there is no real underlying effect. This is done by performing many statistical tests on the data and only paying attention to those that come back with significant results. The analysis is performed without stating a single hypothesis about an underlying effect before the analysis and then conducting a single test for it.

Data dredging is done by performing many statistical tests on the data and only focusing on those that come back with statistically significant results. This is in conflict with hypothesis testing, which entails performing at most a handful of tests to determine the validity of the hypothesis about an underlying effect, instead of stating a single hypothesis about an underlying effect before the analysis and then conducting a single test for it.

Data dredging involves automatically testing huge numbers of hypotheses about a single data set by exhaustive search—perhaps for combinations of significant results before the analysis and then conducting a single test for it. Data dredging is also referred to as data fishing, data snooping, data butchery, and p-hacking. It is the misuse of data analysis to find patterns in data that can be presented as statistically significant when, in fact, there is no real underlying effect. This is done by performing many statistical tests on the data and only paying attention to those that come back with significant results. The analysis is performed without stating a single hypothesis about an underlying effect before the analysis and then conducting a single test for it.

Conventional tests of statistical significance are based on the probability that a particular result would arise if chance alone were at work, and necessarily accept some risk of mistaken conclusions of a certain type (mistaken rejections of the null hypothesis). This level of risk is called the significance. When large numbers of tests are performed, some false results of this type, hence 5% of randomly chosen hypotheses turn out to be significant at the 5% level, 1% turn out to be significant at the 1% significance level, and so on, by chance alone. When enough hypotheses are tested, it is virtually certain that some will be statistically significant but misleading, since almost every data set with any degree of randomness is likely to contain (for example) some spurious correlations. If they are not cautious, researchers using data mining techniques can be easily misled by these results.

The multiple comparisons hazard is common in data dredging. Moreover, subgroups are sometimes explored without alerting the reader to the number of questions at issue, which can lead to misinformed conclusions.

A data source is the original repository of the information used to build the model. For example, information from internal insurance databases, an application, vendor, credit bureaus, government websites, a sub-model, verbal information provided to agents, external sources, consumer information databases, etc.

A discrete variable is a variable that can only take on a countable number of values or categories. Examples include number of claims, marital status, and gender.

Double lift charts are similar to simple quantile plots, but rather than sorting based on the predicted loss cost of each model, the double lift chart sorts based on the ratio of the two models' predicted loss costs. Double lift charts directly compare the results of two models.

The exponential family is a class of distributions that share the same density form and have certain properties that are used in fitting GLMs. It includes many well-known distributions, such as the Normal, Poisson, Gamma, Tweedie, and Binomial distributions, to name a few.

The Fair Credit Reporting Act (FCRA), 15 U.S.C. § 1681 (FCRA) is U.S. Federal Government legislation enacted to promote the accuracy, fairness, and privacy of consumer information contained in the files of consumer reporting agencies. It was intended to protect consumers from the willful and/or negligent inclusion of inaccurate information in their credit reports. To that end, the FCRA regulates the collection, dissemination, and use of consumer information, including consumer credit information. Together with the Fair Debt Collection Practices Act (FDCPA), the FCRA forms the foundation of consumer rights law in the United States. It was originally passed in 1970 and is enforced by the US Federal Trade Commission, the Consumer Financial Protection Bureau, and private litigants.
Generalized Linear Model - Generalized linear models (GLMs) are a means of modeling the relationship between a variable whose outcome we wish to predict and one or more explanatory variables. The predicted variable is called the target variable and is denoted $y$. In property/casualty insurance ratemaking applications, the target variable is typically one of the following:

- Claim count (or claims per exposure)
- Claim severity (i.e., dollars of loss per claim or occurrence)
- Pure premium (i.e., dollars of loss per exposure)
- Loss ratio (i.e., dollars of loss per dollar of premium)

For quantitative target variables such as those above, the GLM will produce an estimate of the expected value of the outcome. For other applications, the target variable may be the occurrence or non-occurrence of a certain event. Examples include:

- Whether or not a policyholder will renew his/her policy.
- Whether a submitted claim contains fraud.

For such variables, a GLM can be applied to estimate the probability that the event will occur.

The explanatory variables, or predictors, are denoted $x_1, \ldots, x_p$, where $p$ is the number of predictors in the model. Potential predictors are typically any policy term or policyholder characteristic that an insurer may wish to include in a rating plan. Some examples are:

- Type of vehicle, age, or marital status for personal auto insurance.
- Construction type, building age, or amount of insurance (AOI) for home insurance. [15]

Geodemographic - Geodemographics is the study of the population and its characteristics, divided according to regions on a geographical basis. This involves application of clustering techniques to group statistically similar neighbourhoods and areas with the assumption that the differences within any group should be less than the differences between groups. While the main source of data for a geodemographic study is the census data, the use of other sources of relevant data is also prevalent. Geodemographic segmentation (or analysis) is a multivariate statistical classification technique for discovering whether the individuals of a population fall into different groups by making quantitative comparisons of multiple characteristics with the assumption that the differences within any group should be less than the differences between groups.

Geodemographic segmentation is based on two principles:

1. People who live in the same neighborhood are more likely to have similar characteristics than are two people chosen at random.
2. Neighborhoods can be categorized in terms of the characteristics of the population that they contain. Any two neighborhoods can be placed in the same category, i.e., they contain similar types of people, even though they are widely separated.
Granularity of Data - divided

Granularity of data is the level of segmentation at which the data is grouped or summarized. It reflects the level of detail used to slice and dice the data. The granularity of data refers to the size in which data fields are sub-divided. [yy]

For example, a postal address can be recorded, with coarse granularity, as a single field:
- address = 200 2nd Ave. South #358, St. Petersburg, FL 33701-4313 USA

Or, with fine granularity, as multiple fields:
- street address = 200 2nd Ave. South #358
- city = St. Petersburg
- state = FL
- postal code = 33701-4313
- country = USA

Or, even finer granularity:
- street = 2nd Ave. South
- address number = 200
- suite/apartment number = #358
- city = St. Petersburg
- state = FL
- postal code = 33701
- postal code add-on = 4313
- country = USA

Home Insurance - Home insurance covers damage to the property, contents, and outstanding structures (if applicable), as well as loss of use, liability and medical coverage. The perils covered, and the amount of insurance provided and other policy characteristics are detailed in the policy contract. [16]

Insurance Data - Data collected by the insurance company.

Interaction Term - Two predictor variables are said to interact if the effect of one of the predictors on the target variable depends on the level of the other. A GLM modeler could account for this interaction by including an interaction term of the form $X_1X_2$ in the formula for the linear predictor. For instance, rather than defining the linear predictor as $\eta = \beta_0 + \beta_1X_1 + \beta_2X_2$, they could set $\eta = \beta_0 + \beta_1X_1 + \beta_2X_2 + \beta_3X_1X_2$.

The following two plots of modeled personal auto bodily injury pure premium by age and gender illustrate this effect. The plots are based on two otherwise identical log-link GLMs, built using the same fictional dataset, with the only difference between the two being that the second model includes the Age*Gender interaction term while the first does not. Notice that the male curve in the first plot is a constant multiple of the female curve, while in the second plot the ratios of the male to female values differ from age to age.

Lift Chart - See definition of quantile plot.
Linear Predictor - A linear predictor is the linear combination of explanatory variables ($X_1, X_2, ... X_k$) in the model, e.g., $\sum_{j=1}^{k} \beta_j X_j$.

Link Function - The link function, $\eta$ or $g(\eta)$, specifies the link between random and systematic components. It describes how the expected value of the response relates to the linear predictor of explanatory variables; e.g., $g(E(Y)) = E(Y)$ for linear regression, or $\eta = \log(n)$ for logistic regression.

Missing data - Missing data occurs when some records contain blanks or "Not Available" or "Null" where variable values should be.

Non-Insurance Data - Non-insurance data is data provided by another party other than the insurance company.

Offset Variable - Offset variables (or factors) are model variables with a known or pre-specified coefficient. Their relativities are included in the model and the final rating algorithm, but they are generated from other studies outside the multivariate analysis, and are fixed (not allowed to change) in the model when it is run. The model does not estimate any coefficients for the offset variables, and they are included in the model, so that the estimated coefficients for other variables in the model would be optimal in their presence. Examples of offset variables include limit and deductible relativities that are more appropriately derived via loss elimination analysis. The resulting relativities are then included in the multivariate model as offsets. Another example is using an offset factor to account for the exposure in the records; this does not get included in the final rating algorithm.

Overfitting - Overfitting is the production of an analysis that corresponds too closely or exactly to a particular set of data and may, therefore, fail to fit additional data or predict future observations reliably.

PCA Approach (Principal Component Analysis) - The PCA method creates multiple new variables from correlated groups of predictors. Those new variables exhibit little or no correlation between them—thereby making them potentially more useful in a GLM. A PCA in a filing can be described as "a GLM within a GLM." One of the more common applications of PCA is geodemographic analysis, where many attributes are used to modify territorial differentials on, for example, a census block level.

Personal Automobile Insurance - Personal automobile insurance is insurance for privately owned motor vehicles and trailers for use on public roads not owned or used for commercial purposes. This includes personal auto combinations of private passenger auto, motorcycle, financial responsibility bonds, recreational vehicles and/or other personal auto. Policies include any combination of coverage such as the following: auto liability, personal injury protection (PIP), medical payments (MP), uninsured/underinsured motorist (UM/UIM), specified causes of loss, comprehensive, and collision.

Post-model Adjustment - Post-model adjustment is any adjustment made to the output of the model including but not limited to adjusting rating factors or removal of variables.

Probability Distribution - A probability distribution is a statistical function that describes all the possible values and likelihoods that a random variable can take within a given range. The chosen probability distribution is supposed to best represent the likely outcomes.

Proxy Variable - A proxy variable is any characteristic of interest that is used instead of a variable of interest (when that variable of interest cannot be measured or used directly), to indirectly capture the effect of another characteristic represented by the variable of interest. Whether or not that characteristic is used in the insurer's rating plan is not relevant.
Quantile Plot - A quantile plot is a visual representation of a model’s ability to accurately differentiate between the best and the worst risks. Data is sorted by predicted values from smallest to largest, and the data is then bucketed into quantiles with the same volume of exposures. Within each bucket, calculate the average predicted value and the average actual value are calculated, and also for each quantile the actual and the predicted values are plotted. The first quantile contains the risks that the model predicts have the best experience and the last quantile contains the risks predicted to have the worst experience. The plot shows two things: how well the model predicts actual values by quantile, the predicted value should be increasing as the quantile increases, and the lift of the model, the difference between the first and last quantile, which is a reflection of the model’s ability to distinguish between the best and worst risks. By definition, the average predicted values would be monotonically increasing, but the average actual values may show reversals. [23] An example follows:

Rating Algorithm – A rating algorithm is the mathematical or computational component of the rating plan used to calculate an insured’s premiums.

Rating Category - A rating category is the same as a rating characteristic, and can be quantitative or qualitative.

Rating Characteristic - A rating characteristic is a specific risk criterion of the insured used to define the level of the rating variable that applies to the insured. Ex. Rating variable: Driver age, Rating characteristic: Age 42

Rating Factor – A rating factor is the numerical component included in the rate pages of the rating plan’s manual. Rating factors are used together with the rating algorithm to calculate the insured’s premiums.

Rating Plan – The rating plan describes in detail how to combine the various components in the rules and rate pages to calculate the overall premium charged for any risk that is not specifically pre-printed in a rate table. The rating plan is very specific and includes explicit instructions, such as:

- the order in which rating variables should be considered;
- how the effect of rating variables is applied in the calculation of premium (e.g., multiplicative, additive, or some unique mathematical formula);
- the existence of maximum and minimum premiums (or in some cases the maximum discount or surcharge that can be applied);
- specifics associated with any rounding that takes place.

If the insurance product contains multiple coverages, then separate rating plans by coverage may apply [24]

Rating System - The rating system is the insurance company’s IT infrastructure that produces the rates derived from the rating algorithm.

Commented [WL36]: The graph looks like a regression line. A graph showing pure premium or loss ratio by decile based on both the average predicted and the average actual values may be a more appropriate example for the purposes of this white paper.
Rating Tier - A rating tier is rating based on a combination of rating characteristics rather than a single rating characteristic resulting in a separation of groups of insureds into different rate levels within the same or separate companies. Often, rating tiers are used to differentiate quality of risk, e.g., substandard, standard, or preferred.

Rating Treatment - Rating treatment is the manner in which an aspect of the rating affects an insured’s premium.

Rating Variable - A rating variable is a risk criterion of the insured used to modify the base rate in a rating algorithm. [https://www.casact.org/library/studynotes/werner_modlin_ratemaking.pdf]

Raw Data - Raw data is data before scrubbing, transformation etc. takes place ... “as is” when received from a source.

Sample Record - A sample record is one line of data from a data source including all variables. For example:

```
1 04251
parkway.ment $25,900
sponsored single 1880
  210\00 FORCING BOTT WAT 1880
  1 Ranch 3
```

Scrubbed Data - Scrubbed data is data reviewed for errors, where “N/A” has been replaced with a value, and where most transformations have been performed. Data that has been “scrubbed” is now in a useable format to begin building the model.

Scrubbing Data - Scrubbing is the process of editing, amending, or removing data in a dataset that is incorrect, incomplete, improperly formatted, or duplicated.

SME - Subject Matter Expert.

Sub-Model - A sub-model is any model that provides input into another model.

Variable Transformation - A variable transformation is a change to a variable by taking a function of that variable, for example, when age’s value is replaced by the value \( (age)^2 \). The result is called a transformation variable.

Voluntarily Reported Data - Voluntarily reported data is data directly obtained by a company from a consumer. Examples would be data taken directly from an application for insurance or obtained verbally by a company representative.

Univariate Model - A univariate model is a model that only has one independent variable.

Adjusting Data - TBD

Control Factor - TBD

Data source - TBD

Double-lift chart - TBD

Exponential Family - TBD

Fair Credit Reporting Act - The Fair Credit Reporting Act (FCRA), 15 U.S.C. § 1681 (FCRA) is U.S. Federal Government legislation enacted to promote the accuracy, fairness and privacy of consumer information contained in the files of consumer reporting agencies. It was intended to protect consumers from the willful and/or negligent inclusion of inaccurate information in their credit reports. To that end, the FCRA regulates the collection, dissemination and use of consumer information, including...
